   i. Second story additions to existing single story dwelling units.
   j. Small family child care/day care facilities (up to 8 children), in accordance with the City's Development Code.

6.6.1.3 Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues.
2. Large family child/day care facilities (between 8-14 children), in accordance with the City's Development Code.

6.6.1.4 Temporary Uses

1. Temporary uses shall be permitted pursuant to Article 13 of the City's Development Code.

6.6.1.5 Free Standing Satellite Dish / Antennas

1. Free standing satellite dishes and/or antennas are permitted pursuant to Article 32, Section 9.1.3289 of the City of Ontario Development Code.

6.6.1.6 Recreational Vehicle Storage and Parking

1. Recreational Vehicle (RV) storage is prohibited on public and private streets and in private alleys. RV parking on public and private streets is limited to 72 hours.

NOTES:

1. *Architectural projections may project a maximum of 3 feet into required front, rear or side setback areas; however, in no case shall such projection be closer than 3 feet to any property line. An architectural projection is defined as an element that articulates the building elevation such as eaves, window and door pop-out surrounds, media niches, bay windows, pot shelves, chimneys, enhanced window sills, shutter details, window trim, balconies and entry gates, and other similar elements.*
2. *The minimum depth of a porch shall be 7 feet with a minimum clear area of 70 square feet.*
3. *Minimum 20' for front facing/ garage forward design.*
4. *RD-3, RD-4, RD-5 and RD-6 with shared-use easement sideyards.*
5. *Solid masonry walls or wood fencing materials may be permitted on the front property line. Fences, walls, hedges or similar view obstructing structures or plants that reduce safe ingress or egress of vehicles or pedestrians shall not exceed three feet in height in any required front yard.*
6. *Walls may exceed six feet in height for noise attenuation purposes subject to an Acoustical Study and Planning Department approval.*
7. *All parking spaces to be within an enclosed garage (minimum 20' x 20' clear inside dimension) for two spaces and 10' x 20' for single spaces.*
8. *For single story homes only, the maximum lot coverage may increase up to a maximum of 60%.*

6.6.2 Residential Attached (RD-7 and RD-8)

6.6.2.1 General

This category includes the development of attached type residential dwelling units such as townhomes, and other attached multi-family products.

6.6.2.2 Permitted Uses

1. Single family attached row townhomes, motorcourt townhomes, paired homes, condominiums, apartments, and duplexes.
2. Public or private parks, recreational buildings, greenbelts, pocket parks, and/or open space.
3. Accessory uses to include the following:
   - Garages.
   - Home occupations in accordance with the City's Development Code.
   - Swimming pools, spas, tennis courts, sports courts, and other similar outdoor recreational amenities.
   - Patios and patio covers.
   - Mailboxes.
   - Recreation center buildings.
   - Maintenance storage buildings.
   - Monument signage.
   - Model units, sales offices, and subdivision sales trailers, temporary construction offices and facilities, real estate signs, signage indicating future development and directional signage in accordance with the City's Development Code.
   - Small family child care facilities/day care facilities, up to 8 children in accordance with the City's Development Code.
   - Permanent Leasing Offices.

6.6.2.3 Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues.
2. Large family child care facilities/day care facilities (8-14 children) in accordance with the City's Development Code.

6.6.2.4 Temporary Uses

1. Temporary uses shall be permitted pursuant to Article 13 of the City's Development Code.

6.6.2.5 Free Standing Satellite Dish/Antennas

1. Free standing satellite dishes and/or antennas are permitted pursuant to Article 32, Section 9.1.3289 of the City of Ontario Development Code.

6.6.2.6 Recreational Vehicle Storage and Parking

1. Recreational Vehicle (RV) storage is prohibited on public and private streets and in private alleys. RV parking on public and private streets is limited to 72 hours.

6.6.2.7 Open Space

1. A minimum of 150 square feet of private open space shall be provided per dwelling unit as follows:
   a. Private open space features may include fenced yards, patio areas, and balconies.
   b. At least one-half (½) of the required open space area must be provided at the ground level, not including front yard setbacks, and not more than ½ of the open space requirement is to be satisfied by balconies or roof decks. For the Row Townhome product (RD-6) open space may be satisfied by balconies for up to 33% of the units proposed.

c. Private open space located at ground level shall have a minimum contiguous area of one hundred and fifty (150) square feet in area with a minimum dimension ten (10) feet in any one direction and shall be landscaped. Open space located on roof decks or balconies must have a minimum contiguous area of fifty (50) square feet in area and a minimum dimension of five (5) feet in any one direction.

d. Private, ground level open space on the street side of a structure is to be suitably screened from streets by a fence, densely planted shrub, or combination of both.

2. A minimum of 250 square feet of common open space shall be provided per unit as follows:

a. Common Open space features include, but are not limited to, landscaping, picnic and barbecue areas, pools and spas, tennis and sport courts, clubhouse, tot lots or playgrounds, paseos, and trails.

b. Common open space shall have a minimum contiguous area of three hundred (300) square feet with no dimension less than 15 feet in any direction.

c. All required ground level common open spaces shall be planted with permanent landscaping or be devoted to recreational facilities, such as swimming pools, tennis courts, tot lots, patios or similar open space and/or recreational facilities.

d. Common and private open spaces are to be permanently maintained in an orderly fashion.

e. Parking areas, driveways or service areas shall not be counted in the minimum open space requirement.

5. *All parking spaces within an enclosed garage shall have a minimum 20'x20' clear inside dimension for double spaces and 10' x 20' single spaces.*

TABLE 4
Residential Attached Site Development Standards (cont.)

6.7 LANDSCAPE STANDARDS

6.7.1 General Provisions

1. All landscape and irrigation plans for streetscapes and graphic designs with regard to the identity of Esperanza, neighborhood identity or entry monuments shall conform to the Design Guidelines and regulations as set forth herein and shall be subject to review and approval by the City of Ontario at the time of Development Plan review. The form and content of landscape plans for streets, parks, and other common areas shall conform to the requirements of the City's Development Plan application requirements.
2. The Landscape/Streetscape improvements for the Esperanza Specific Plan shall establish a landscape theme reminiscent of the regional landscape character of the surrounding area.
3. The design and improvement of all parks, including landscape and irrigation plans, within Esperanza shall be reviewed and approved by the City at the time of Development Plan review and shall conform with the requirements of the City's Parks and Maintenance Department.
4. Installation of landscaping and automatic irrigation within the front yards of all residential areas will be provided by the home builder. At a minimum, the builder will install turf and appropriate shrubs and trees in the front yards of homes within residential areas. At a minimum two trees shall be installed, of which at least one, is a shade tree. A variety of front yard landscape designs shall be provided by the developer for use by homeowners. Within multi-family residential areas the builder shall be responsible for the installation of full landscape improvements within the multi-family development. Areas not used for hardscape shall be fully landscaped. All landscape plans shall be reviewed and approved by the City at the time of Development Plan review.

6.7.2 Landscape Standards

1. Landscaping within the Esperanza Specific Plan area shall be provided in accordance with the Design Guidelines utilizing plant materials specified on the Plant Palette included in Section 8, "Design Guidelines" established for the Esperanza Specific Plan.
2. Boundary landscaping will be required adjacent to residential areas. Landscaping shall generally be placed along the entire perimeter property line.
3. Landscaping and automatic irrigation systems within the public rights of way of the Esperanza Specific Plan area shall be installed by the developer.
4. Freestanding perimeter walls and view fencing shall be provided within, and at the perimeter of the Specific Plan area as specified in the Wall and Fence Master Plan contained within, Section 8, "Design Guidelines." Such walls and fences will be constructed concurrently with the construction of improvements required for development of the neighborhoods of the Specific Plan.
5. Walls and Fencing - Perimeter walls shall be constructed in locations and of a design consistent with the "Wall Master Plan" and "Wall Details" Exhibits located within Section 8, "Design Guidelines." Perimeter walls shall not exceed six feet in height from finished grade. If required for sound attenuation, perimeter walls may exceed six feet in height, subject to the recommendations of an acoustical study and approval by the Planning Department. Perimeter walls shall be constructed of either masonry or other permanent, durable, low maintenance material. Thematic perimeter fencing shall be constructed of all durable materials, which may include materials with a wood-like appearance, or tubular steel subject to approval by the City. In no instance shall wooden fencing be permitted along perimeters.

Individual residential lot side and rear yard walls and fencing shall not exceed six feet in height from highest adjacent finished grade. Side and rear walls may exceed six feet (6') in height if required by the City for sound attenuation pursuant to the recommendations of an Acoustical Report. Walls and fencing within the residential front yard setback area shall not exceed three feet in height. Side and rear yard walls shall be of decorative masonry construction on both sides of the wall or other permanent low maintenance materials. Front yard fences may be constructed of either wood, or any other durable materials with a wood like appearance, subject to approval by the Planning Department. View fencing may be of a decorative wrought iron, tubular steel/aluminum glass panels, or other durable material approved by the City.

6. All perimeter wall and fence materials throughout Esperanza will be of uniform manufacture with colors specified for the overall design theme.
7. The developer will provide site inspection of all construction and installation of open space areas in accordance with City of Ontario requirements.
8. Non-toxic vegetation shall be utilized adjacent to all public open space areas.

6.8 Signage

A Master Sign Program shall be submitted by the developer(s) of Esperanza and approved by the City of Ontario pursuant to Article 31 of the City's Development Code to address residential project entries, residential neighborhood identification signs, and way finding signs within Esperanza. No project signs shall be permitted in the public right-of-way. All other signs shall be subject to the approval of a sign permit pursuant to the City's Development Code.

6.8.1 Master Sign Program Contents

All sign programs shall address, at a minimum, the following:

1. Permitted signs.
2. Prohibited signs.
3. The hierarchy of signage.
4. Definition of types of signs.
5. Locations and dimensions for monument signs, neighborhood identification signs, and public facilities signs.
6. Locations and dimensions of directional signage.
7. Provisions for size, location, and duration of display of temporary signs.
8. Permitted sign types, styles, construction materials, colors, and lettering styles.
9. Requirements for a sign permit application.
   a. Procedures for obtaining approval of a sign permit.
   b. Procedures for amendments to the sign program.

6.9 Lighting

6.9.1 Street Lights along Public Streets

Streetlights along public streets, within the Esperanza Specific Plan shall be high-pressure sodium vapor. Design of fixtures shall be approved by the City as part of the City's Development Plan Review.

6.9.2 Alley Lighting Fixtures

Alley lighting fixtures shall be on sensors for automatic nighttime lighting. Style and specifications for alley lights shall be approved by the City as part of the City's Development Plan Review.

6.9.3 Lighting within Parks, Paseos, Tot Lots and Other Recreational Areas

Lighting within Parks, paseos, tot lots and other recreational areas shall be approved by the City as part of the City's Development Plan Review of these facilities.

6.10 Park Furniture

Park furniture, including but not limited to, benches, barbeques and picnic tables, shall be approved as part of the City's Development Plan Review of parks, paseos and other public gathering places.

6.11 Bus Shelters

Bus shelters shall be installed in a number of locations designated by OmniTrans and shall be compatible with the architectural character established at the project entries to Esperanza.

6.12 Mailboxes

Within RD-3 through RD-8 Residential Planning areas mailboxes shall be clustered and installed in locations approved by the City as part of the City Development Plan Review of each resident project within Esperanza.

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

SECTION 7. IMPLEMENTATION

The City of Ontario will adopt the Esperanza Specific Plan by ordinance. Following approval by the City, the Esperanza Specific Plan will serve as the implementation tool for the ~~NMC~~ Ontario Ranch General Plan as well as the zoning for the Specific Plan area. Concurrently with the adoption of the Specific Plan, the City Planning Commission will also approve tentative tract maps establishing legal residential lots within the Esperanza Specific Plan area.

7.1 METHODS AND INTERPRETATION

Development within the Esperanza Specific Plan shall be implemented through the approval by the City of tentative and final tract maps and through development plans approved through the Development Plan Review process as established in the City of Ontario Development Code. The implementation process described below provides the mechanisms for review and approval of development projects within the Esperanza Specific Plan area.

7.2 APPLICABILITY

All development proposals within the Esperanza Specific Plan shall be subject to the implementation procedures established herein. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of the Esperanza Specific Plan shall take precedence.

7.3 INTERPRETATION

Unless otherwise provided, any ambiguity concerning the content or application of the Esperanza Specific Plan shall be resolved by the City of Ontario Planning Director (Director) or his/her designee in a manner consistent with the goals, policies, purpose and intent established in this Specific Plan.

7.4 SEVERABILITY

If any portion of these regulations is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining portions thereof. The legislative body hereby declares that they would have enacted these regulations and each portion thereof irrespective of the fact that any one or more portions be declared invalid or ineffective.

7.5 IMPLEMENTATION OF DESIGN GUIDELINES

Adoption of the Esperanza Specific Plan by the City includes adoption of the design guidelines contained herein, which shall be the design criteria by which development projects within the Specific Plan area will be reviewed during Development Plan Review. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during Development Plan Review.
Any major deviation from the design guidelines within the Esperanza Specific Plan shall require approval by the Planning Commission. The determination of a major deviation from the design guidelines shall be made by the Director.

7.6 DEVELOPMENT REVIEW PROCESS

7.6.1 Subdivision Maps

Approval of tentative tract maps may occur concurrently with the adoption of the Esperanza Specific Plan. All tentative and final tract maps will be reviewed and approved pursuant to applicable provisions of the City of Ontario Subdivision Ordinance and consistent with the applicable provisions of Land Use, Infrastructure, Design Guidelines, and Development Regulations contained within the Esperanza Specific Plan.

7.6.2 Development Plan

All development projects within Esperanza shall be subject to the Development Plan Review Process as established in Article 8 of the City's Development Code. Pursuant to these provisions, the Development Plan process constitutes a design review of project architecture, site plans, and landscape plans. Adoption of the Specific Plan by the City includes adoption of the design guidelines contained within the Specific Plan and which provide direction for the design of development projects within Esperanza. Where the Esperanza Specific Plan development regulations and design guidelines are silent, the applicable development regulations and design guidelines contained within the City's Development Code shall apply. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during design review.

All development project applications shall include a landscape and irrigation plan describing plant materials and their growth habits, plant size and spacing, methods of irrigation and landscaping maintenance, site plans, architectural elevations, floor plans, grading plans and other requirements as specified by the City.

7.6.3 Additional Entitlement Requirements

All entitlement applications shall prepare and submit a Conceptual Utilities Systems Map, Integrated Waste Management Report, and Solid Waste Handling Plan in accordance with requirements of the Development Application.

7.7 Dwelling Unit Allocations

The Esperanza Land Use Plan allocates a maximum number of dwelling units to each residential Planning Area. Variations in number of dwelling units, per Planning Area, may occur at the time of final design of the Planning Area subject to approval by the City and agreement by affected property owners/developers, depending upon the residential product identified for development. Variations in allocation of units within the Planning Areas of the Esperanza Specific Plan are permitted provided the increased number of dwelling units in a Planning Area does not exceed 15% and the maximum dwelling unit count for the entire Specific Plan area does not exceed that established for Esperanza.

1. Water and Sewer Technical Studies shall be prepared to study how the transfers change the quantity and locations of sewer and water demands and how those changes impact the Water and Sewer Master Plan Systems and local sewer and water systems.
2. If unit transfers result in net changes to the overall projected water demands, then the initializing project shall be responsible for processing an Amendment to the Water Master Plan as part of the entitlement process of Implementation.
3. If unit transfers result in net changes to the overall projected sewer demands or the sewer demands are transferred between different Master Plan Trunk Sewer Tributary Areas and Specific Plan Sewer Tributary Areas, then the initializing project shall be responsible for processing an Amendment to the Sewer Master Plan as part of the entitlement process of Implementation.

7.8 Specific Plan Modifications and Amendments

7.8.1 Minor Modifications

The following constitute minor modifications to the Specific Plan, not requiring a Specific Plan Amendment, and are subject to review and approval by the Zoning Administrator. The Zoning Administrator shall have the discretion to refer any such request for modification to the Planning Commission or the City Council.

1. Change in utility and/or public service provider.
2. Collector roadway alignment when the change results in a centerline shift of less than 250 feet.
3. An increase of more than fifteen percent (15%) in the number of units within an individual Planning Area are subject to approval of the City and agreement of the property owners, provided the total number of units for the entire Specific Plan area does not exceed that established in the Specific Plan.
4. Adjustment of a Planning Area boundary or acreage designated for a Planning Area provided the total acreage of the affected Planning Area does not increase by more than 15%.
5. Minor changes to landscape materials, wall materials, wall alignment, entry design, and streetscape design which are consistent with the conceptual design set forth in the design guidelines contained within the Specific Plan.
6. Minor changes to the design guidelines, which are intended to be conceptual in nature only, and are intended to be flexible in implementation.
7. Other modifications of a similar nature to those listed above, which are deemed minor by the Zoning Administrator, which are in keeping with the purpose and intent of the approved Esperanza Specific Plan and which are in conformance with the ~~NMC~~ Ontario Ranch General Plan.

7.8.2 Reversion of Planning Area 11 to Residential Uses

The ~~NMC~~ Ontario Ranch General Plan establishes a total residential unit allocation of ~~1,456~~ 1,652 units for the Esperanza Specific Plan. The Land Use Plan for Esperanza designates a total of ~~1,410~~ 1,491 residential dwelling units within Planning Areas 1-10 and reserves Planning Area 11, a 10.02 acre site, ~~for~~ was not purchased ~~and use~~ by the Mountain View School District (School District). ~~of an elementary school. In the event the School District does not purchase Planning Area 11 for development of an elementary school,~~ Planning Area 11 ~~may revert~~ will be converted to a Residential – Medium Density zoning district permitting development of a maximum of ~~46~~ 161 residential dwelling units subject to approval by the City of a Specific Plan Amendment. On ~~XX XX, 2020~~ 10-20-2020 a request for an increase in density for Planning Area 4, from 6.26 gross DU/AC to 14.0 gross DU/AC and an accompanying general plan amendment to increase the density from low density residential (2.1-5 DU/AC) to medium density residential (11.1-25 DU/AC) was approved, which increased the total residential allocation of ~~1,640~~ 1,652 units (~~1,594~~ 1,491 units if the school remains a school). The Environmental Impact Report prepared for the Esperanza Specific Plan has evaluated the impacts of development of Planning Area 11 alternatively for ~~46~~ 161 residential dwelling units in conjunction with the analysis of all other project related impacts. Development of Planning Area 11 for residential land uses shall be subject to all other review and administrative and discretionary approvals requirements required for residential land uses as established within the Esperanza Specific Plan.

7.8.3 Specific Plan Amendments

Amendments to the Esperanza Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65453(a) of the Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for Specific Plan Amendments. In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) are responsible for preparing the necessary CEQA documentation.

7.9 VARIANCES

Variances and Administrative Exceptions to the development regulations contained in the Esperanza Specific Plan with respect to landscaping, screening, site area, site dimensions, yards and projects into yards, heights of structures, distances between buildings, open space and off-street parking and loading can be considered pursuant to Article 10, "Variances and Administrative Exceptions" of the City of Ontario Development Code.

7.10 CONDITIONAL USE PERMITS

Uses specified as conditionally permitted uses within Section 6, "Development Regulations, of the Esperanza Specific Plan shall be reviewed and approved by the City pursuant to the requirements of Article 9, "Conditional Use Permits."

7.11 COMPLIANCE WITH MITIGATION MONITORING PLAN

Certification of an Environmental Impact Report (EIR) shall be required prior to approval of the Esperanza Specific Plan. Development within the Esperanza Specific Plan area shall comply with all approved mitigation measures as described in the Mitigation Monitoring Program included as part of the Esperanza EIR.

7.12 PROJECT PHASING

Phasing of the Esperanza Specific Plan will meet the following objectives:

- Orderly build-out of the community based upon market and economic conditions.
- Provision of adequate infrastructure and public facilities as determined and deemed necessary by the City Engineer concurrent with development of each phase.
- Protection of public health, safety and welfare.
- Accommodation of continued agricultural operations within the proposed Specific Plan area.

7.12.1 Residential Development

The phasing of residential development areas will be determined by the developer. The development of residential uses will be implemented through the approval of tentative and final tract maps and development permits for each Planning Area as developed. Appropriate levels of infrastructure and community facilities shall be subject to the review and approval of the City Engineer and shall be installed and available to serve each subsequent phase of residential development as it occurs.

7.12.2 Infrastructure

Backbone infrastructure to serve all areas of Esperanza shall be installed by the developer in accordance with the City's adopted Master Plan or any approved amendments to it. Infill service mains will be installed and constructed in phases as development proceeds and conditioned by the City Engineer's office to support individual phases of development, which may require installation of offsite infrastructure improvements beyond a given phase boundary.

Grading and installation of infrastructure to serve Esperanza are anticipated to be completed in three phases. Following completion of grading and infrastructure installation, the developer will construct models for each product type within each neighborhood. Phase I will include installation of infrastructure adequate to serve Planning Areas 5-9 located south of Eucalyptus Avenue between Hamner Avenue and Mill Creek Avenue. Phase II will include installation of infrastructure adequate to serve Planning Areas 4A and 10. Phase III will include installation of infrastructure adequate to serve Planning Areas 1-4B and the Neighborhood Park. As the Specific Plan is Phased, the following minimum criteria shall be met for each Subdivision and Development of each Phase:

1. For Domestic Water, all the Master Plan, Regional and Local Infrastructure identified in Section 5 and the Conceptual Domestic Water Plan for the Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any domestic water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria and fire fl ow shall be completed as part of the Phase's infrastructure requirements.
2. For Recycled Water, all the Master Plan, Regional and Local Infrastructure identified in Section 5 and the Conceptual Recycled Water Plan for the Recycled Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any recycled water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.
3. For Sewer, all the Master Plan, Regional and Local Infrastructure identified in Section 5 and the Conceptual Sewer Plan for the Master Plan Sewer Tributary Area that the Phase is within and upstream of shall be completed as part of the Phase's infrastructure requirements. Also, any sewer infrastructure necessary to meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.

7.12.4 Parks

Following issuance of Certificates of Occupancy for no more than 50% of the total dwelling units within Esperanza, Park 1, the Neighborhood Park, will be developed. The timing for installation of infrastructure and utilities and the provision of public services will be determined as part of the City's approval of tentative maps or development plans. Facilities will be constructed and services made available in a timely manner as development progresses. Pocket Park 2 will be developed at the time of issuance of 50% of Certificates of Occupancy for Planning Area 5. Pocket Park 3 will be developed at the time of build-out of Planning Areas 6 and 7 combined. Pocket Park 4 will be developed at the time of issuance of 50% of Certificates of Occupancy for Planning Areas 8 and 9. Pocket Park 5 will be developed at the time of issuance of 50% of Certificates of Occupancy for Planning Area 10.

7.12.4 Community Facilities and Services

The timing for installation of community facilities and payment of impact fees for public improvements and services for the Esperanza Specific Plan will be determined as part of the City's approval of tentative tract maps in accordance with the provisions of the existing City development impact fee ordinances. Community facilities such as bike trails will be developed in conjunction with construction of the public street improvements.

7.13 APPEALS

Appeals from any determination of the City Planning Director, Zoning Administrator or the Planning Commission, may be made by the applicant or any other aggrieved party filing an application on forms provided by the City of Ontario and accompanied by the appropriate filing fee, where applicable, within ten (10) days following the final date of action for which an appeal is made. Appeals shall be processed consistent with the provisions of Article 5, "Appeals" of the City of Ontario Development Code.

7.14 PROJECT FINANCING

The financing of construction, operation, and maintenance of public improvements and facilities (the "facilities"), and public services will include funding through a combination of financing mechanisms. Final determination as to the facilities to be constructed and as to maintenance responsibilities, whether publicly or privately maintained, will be made prior to recordation of final maps. In order for the project to be fiscally self sufficient, the following financing options can be considered for implementation:

7.14.1 Facilities and Services

- Private capital investment for the construction of facilities.
- Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district, to provide funding for the construction of a variety of public facilities and the provision of public services.

7.14.2 Operation and Maintenance

- By individual private property owner.
- By private property owners or Home Owners Association (HOA).
- By Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district.

City Council approval is a prerequisite for the implementation and establishment of any and all special district-financing mechanisms. The use of the Mello-Roos Community Facilities District Act of 1982 (the "Act") to finance public facilities and services will be at the City's sole discretion. Moreover, the use of the Act must be consistent with the City's adopted goals and policies concerning the use of the Act.

7.15 MAINTENANCE RESPONSIBILITIES

The public and private improvements constructed within Esperanza will be maintained through a combination of public and private entities as described below and in Table 5.

7.15.1 Public Maintenance

1. All streets and sidewalks serving residential product areas RD–1 through RD–6 single family detached or attached residential will be dedicated as public streets to the City of Ontario and will be maintained by the City.
2. Landscape improvements within the public right-of-way of Master Plan streets, neighborhood edges, community and neighborhood entries, and public street lights within Esperanza shall be maintained through a landscape and lighting district or other special maintenance district established by the City for the ~~New Model Colony~~ Ontario Ranch.
3. All on site water, sewer, and storm drain facilities that meet public improvement design criteria within the public streets or easements dedicated to the City shall be constructed by the developer and, upon acceptance, shall be maintained by the City.
4. Offsite infrastructure improvements such as water, sewer and storm drain facilities will be maintained by the City. The City intends to participate in a Regional Water Quality Basin. In the event permanent on site basins are developed within Esperanza as an alternative to a regional water quality basin, such facilities shall be maintained by the HOA.
5. NPDES facilities within public streets and/or easements. Operation and Maintenance (O&M) requirements for all NPDES storm water runoff source control and treatment control Best Management Practices (BMP's) shall be identified in the approved Water Quality Management Plan for the project. An O&M Plan shall be created to ensure ongoing long-term maintenance of all structural and non-structure BMP's.

7.15.2 Homeowner Association

A Homeowner Association will be established for the maintenance of common area landscape improvements within residential areas of Esperanza. Improvements to be maintained by the Homeowner Association include: Designated private alleys and adjacent landscaping.

- Designated private streets and landscaping. During the course of maintenance of public utilities within public streets, private streets, private drive aisles, or alleys, the City will restore the streets to City standards for trench backfill, pavement repair, and hardscape or landscape, as applicable. Restoration of any enhancements above and beyond City standards, including but not limited to architectural paving, hardscape and landscape enhancements shall be the responsibility of the HOA or other entity maintaining those enhancements.
- Courts, parkways and landscaping within the residential areas.
- Parkways of Interior Local Streets including sidewalks, landscaping and street lights as well as common areas distinct to individual residential types and neighborhoods.
- Maintenance of interior local streets including landscaping and associated architectural monument elements required to restore these areas to their condition as originally installed.
- Internal slopes fronting streets and slope areas in the rear of homes.
- All internal open spaces, parks, and common areas.
- NPDES facilities within private streets and/or common areas.

	City CFD	Private Homeowners Association (HOA)	Private Homeowner	Utility Entity
Master Plan Roadways (Bellegrave Avenue, ~~Milliken~~ Hamner Avenue, Mill Creek Avenue, ~~Merrill~~ Eucalyptus Avenue)	●			
Interior Public Project Streets (curb to curb for primary entry streets, secondary entry streets, and neighborhood streets)	●			
Parkways of Master Plan Roadways and Neighborhood Edges (curb to perimeter walls, including landscape, sidewalks and street lights)	●			
Parkways of Interior Project Streets (landscaping and sidewalks)		●		
Traffic Signals and Street Lights	●			
Traffic Control Signs	●			
Alleys and Drive Aisles		●		
Interior Streets within Single Family Attached (Multi-Family) Developments		●		
Off -site and In-Tract Water, Sewer, and Storm Drain Improvements (only those facilities in public roads and those in private streets within public utilities easements that meet public improvement design criteria)				●
On-site water, sewer, and storm drain improvements (improvements that are: private, laterals, and lines behind meters and /or DCDAs, improvements serving only one lot/parcel, not within public or private roads, not within public utility easements, or not meeting public improvement design criteria)		●		
Neighborhood Park		●		
Pocket Parks		●		
Linear Parks		●		
Private Recreation Areas		●		
Front Yard and Corner Streetside Landscaping for Single Family Detached Areas RD-1 through RD-4			●	
Front Yard and Corner Streetside Landscaped Areas RD-5 through RD-8		●		
Community Theme Wall on Master Planned Roadways (outside face for graffiti removal and paint)	●			
Community Theme Wall on Master Planned Roadways: Surface (interior) opposite streetside (structural integrity and face repair)		●		
Private Interior Yard Walls		●	●	
Alley Landscaping and Lighting		●		
Police and Fire	●			
Electricity and Natural Gas				●
Communication Systems	●			●
NPDES Facilities (onsite) W.Q.M.P. (1)	●			
NPDES Facilities/Interim Detention Basin on Private Property		●		

NOTES:

(1) Only those facilities in public roads and/or easements, including restoration work following public street repair.

TABLE 5
Maintenance Responsibilities

SECTION 8. DESIGN GUIDELINES

8.1 INTRODUCTION

On a sunny morning in the fall of 1882, George Chaffey stands on a mesa between the floodwater washes of Cucamonga Canyon to the east and San Antonio Canyon on the west, gazing at the country directly in front of him lying at the foot of snow-capped Old Baldy, beneath the Sierra Madre Mountain Range. Having little capital, George would rely on his powers of leadership and vision and, at that moment, would throw his heart and soul into the new colonizing movement sweeping Southern California. With help of his brother William and surveyor J. C. Dunlap, he would purchase 6,218 acres and design what would become the "City of Ontario," named after his former home in Ontario, Canada. His vision of a model colony featured the first reclamation irrigation system, abundant electricity power and a beautiful parkway that captured the imagination and interest of people throughout the world. His vision was one of hope for a great community. "Esperanza," which means "hope" in Spanish and accurately describes the original vision intended for the "new" Ontario.

Ontario is a thriving city today, although the orchards and packing houses have since given way to new landmarks such as Ontario Mills, Ontario Convention Center and Ontario International Airport. Hundreds of new businesses have discovered that Ontario is "The Gateway" to Southern California, conveniently located 35 miles east of Los Angeles, and easily accessible to I-10, I-15 and I-60 freeways.

Ontario spans nearly 28,000 square miles, with a population of over 168,000, and is one of Southern California's fastest growing cities. Ontario's sun-belt mild weather and 312 days of sunshine, allows you to enjoy the many parks as well as the nearby mountains, beaches, and deserts. The world-class Empire Lakes Golf Course, designed by Arnold Palmer, will challenge the avid golfer. The wine aficionados will love sampling California's finest at Galleano Winery, Joseph Filippi Winery, and Vineyards.

8.2 DESIGN GUIDELINES FOR ARCHITECTURAL CHARACTER

Architectural design should provide for high quality neighborhoods.

- Residential project design should consider the total context of the site with the incorporation of appropriate scale and proportions of building massing and details.
- The use of transitional spaces between common and private areas such as entry courtyards, private patios, low walls, and porches is encouraged.
- The variation of both front and rear building setbacks should be implemented to create visual variety.
- The variation of garage placement on adjacent lots is encouraged to provide a more diverse street scene.
- Residential structures should be varied in massing and articulation to provide visual interest.

Neighborhoods should be sustained over time.

- Architectural design themes should reflect historic Southern California styles.
- The use of natural indigenous building materials and colors is encouraged.
- Structures should incorporate genuine architectural details and decorative features.
- Architectural design should relate to human scale.
- The location of doors and windows should consider indoor/outdoor relationships to create intimate and secure spaces.
- Architectural designs should create a cohesive community without dominating the overall street scene.

Building design should be sensitive to climatic conditions and context.

- Building elevations should consider sun orientation by including shaded and sheltered areas.
- Variation of architectural designs should include methods of protection from inclement weather.
- Residential structures should be compatible with, and responsive to, the environmental setting.
- Building designs should incorporate spaces that encourage outdoor use to take advantage of temperate climatic conditions.

Architectural design should incorporate materials and techniques that are cost effective.

- The use of building materials should reflect the implementation of efficient construction methods.
- Building elevations should include compatible window and doors sizes that create a consistent design theme.
- Construction techniques should incorporate the use of standard components and dimensions.

Varied floor plans and elevations in single-family detached residential architectural packages should be incorporated as follows:

Reverse elevations and floor plans are considered as a separate elevation and floor plan. Reverse floor plans and elevations are considered as a separate floor plan and/or elevation for purposes of implementing the table below.

Diversity is a fundamental guiding principle at Esperanza. This ensures that neighborhoods are varied and that blanket uniformity is avoided.

Builders are required to produce a minimum of two styles for a 3-plan design program, and three styles for a 4-plan or more design program.

Number of Dwelling Units	Number of Differing Floor Plans and Elevations
5-10	As required by Planning Commission
11-25	2
26-50	3
51-75	3
76-100	4
Over 100	4; +1 additional floor plan with 4 elevations for each additional 50 units exceeding 100

8.3 Architectural Context

The original model colony of Ontario has a rich agricultural legacy of farming including citrus orchards, grape vineyards and alfalfa fields. Typical of Southern California farming communities, Ontario has a variety of traditional architectural styles. Western European and East Coast architectural details and forms were incorporated into the farm houses and local styles evolved from Country French and Tuscan styles and new interpretations of Monterey, Traditional, Craftsman and Ranch styles were erected. Architectural styles, elements and massing were reinvented utilizing available indigenous building materials. Plan designs and elements such as window sizes and proportions were modified to address local climatic conditions which were warmer and drier. Materials were plaster, stucco and siding with brick, stone or other masonry accent materials. The sunny Southern California climate allowed year round use of outdoor spaces and inspired covered porches and balconies.

Southern California was also influenced by Spanish architectural styles brought to the region by Spanish settlers and missionaries. These homes were well suited for the temperate climate of Southern California. The architectural theme for Esperanza is based upon these historical styles found in Ontario and the architectural styles have been selected in order to be reflective of older neighborhoods of historic Ontario.

Each architectural style outlined in these guidelines should be detailed with elements that represent the authentic character of that particular style.

Together the styles should be designed to create a neighborhood character that will be sustainable over time. Each home should contribute to the architectural character of the neighborhood. Design elements such as porches, recessed windows, architectural details and accents, alternate garage configurations / orientations, covered balconies, and articulated elevations are encouraged to enhance individual homes and to promote the overall neighborhood character.

8.3.1 Residential Design Objectives

- Interpret architectural styles that are authentic and reflect the historical character of the region.
- Emphasize styles of architecture that are compatible, yet vary enough to create interest and diversity.
- Create visually interesting neighborhood streets by varying elevation and floor plan plotting.
- Utilize authentic materials and colors that reinforce the overall design theme.
- Emphasize front elevations that relate strongly to the street and contribute to the livability of that realm.
- Provide alternative garage configurations.

The Esperanza Design Guidelines are to be used as a tool to ensure the character and design quality anticipated for the Community. The Guidelines express objectives and approaches rather than formulas and standards, allowing certain architectural creativity and flexibility. The images and sketches illustrated in the Guidelines are intended to be conceptual in nature and are to be used as general visual aids in understanding the basic architectural design intent of Esperanza. They are not meant to depict specific floor plans or architectural elevations.

These Guidelines are organized into the following sections:

- Architectural Styles
- Massing Principles
- Materials & Detailing
- Home Types
- Landscape Design

8.3.2 Architectural Styles

The architectural character within each neighborhood shall consist of complementary traditional architectural styles. The materials and colors of these home styles shall complement the overall neighborhood design.

Architectural styles within each neighborhood and product area within each neighborhood should be compatible with one another and blend with the character of each neighborhood.

Within cluster court style residential products, a consistent architectural style shall be used throughout the individual cluster.

Acceptable architectural styles within Esperanza include:

- Country French
- Tuscany
- Monterey
- Spanish Colonial
- Craftsman
- Traditional
- Western Ranch

The styles selected share similar design attributes and have been selected in response to the following considerations:

- They have a historic relevance to the region.
- They are compatible and complementary.
- They can be interpreted in a variety of ways.
- They are generally accepted by the market.
- They can be constructed using current building materials and methods.

Note: Additional styles proposed by the homebuilder must be submitted to, and approved by, the City of Ontario. Builders may submit home designs using alternative architectural styles that meet the design objectives of the specific plan, provided they are appropriate to the region and compatible with the character of Esperanza.

8.3.2.1 Country French

History and Character:

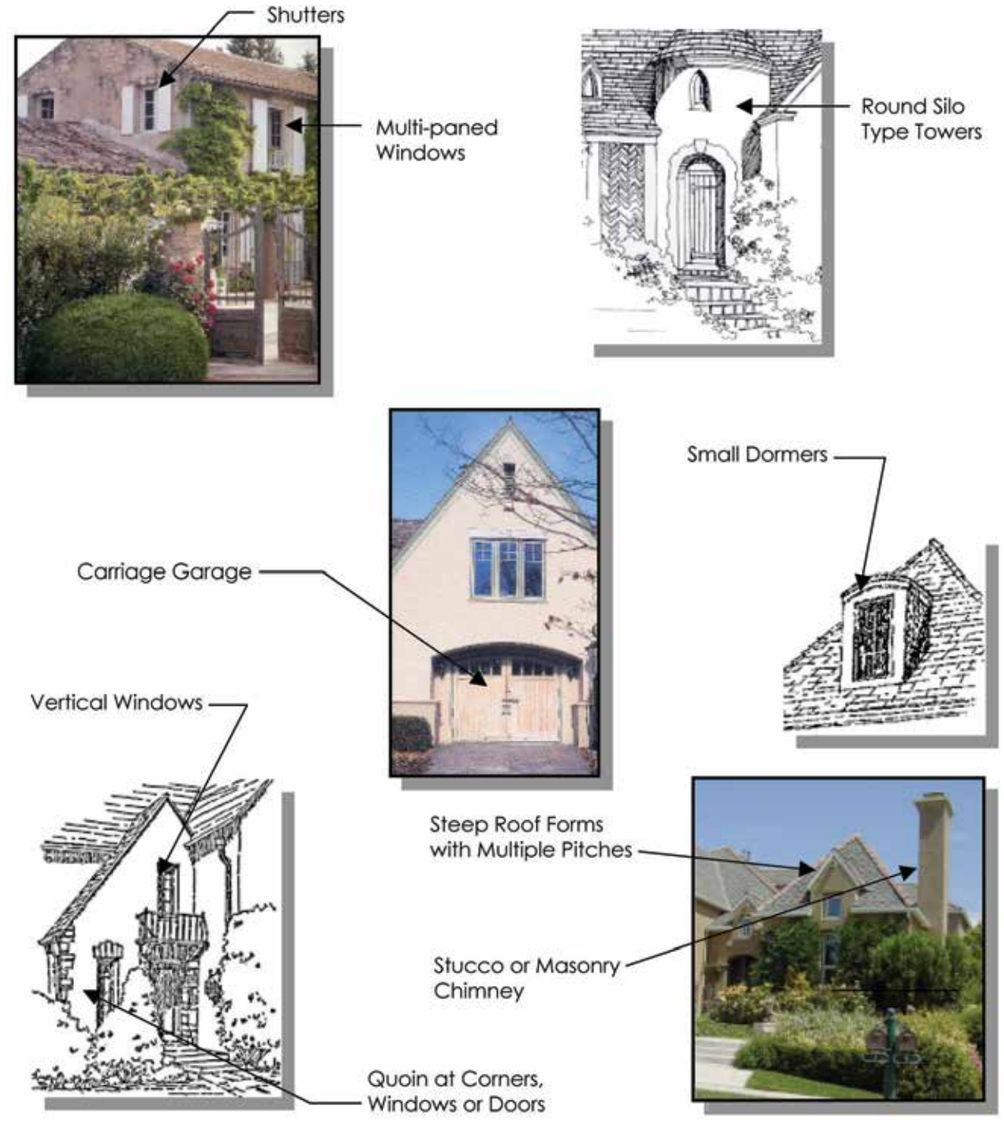
French Country architectural style is based upon early American interpretations of French Medieval architecture that made their way across the United States from the Mississippi regions around the turn of the century. Usually taking the form of larger manor homes and estates, this architectural style was adapted to fit smaller rural homes. The French Country style conveys a romantic and picturesque architecture. American interpretations include houses with simple forms with steeply-pitched roofs.

Massing:

- Simple massing with asymmetrical forms and gable roofs.

General Materials:

- Stucco finished walls.
- Deep recessed accents.
- Vertical windows.
- Simple detailing.
- Stucco or masonry chimneys.
- Decorative chimney caps.
- Carriage garage doors or roll-up doors with a variety of panel patterns to reflect architectural style.



Country French

Roof Materials and Forms:

- Small dormers.
- Steep roof forms with multiple pitches.
- Gable roof forms, accented with flared roof treatments.
- Large, simple roof planes. • Gable end venting in various styles.
- Rooflines may extend below window.
- Extended roof overhangs.
- Flat concrete tile to simulate slate materials.
- Round silo type towers.

Detail Elements:

- Decorative shutters.
- Wood balcony railings.
- Deep recessed windows.
- Multi-paned windows.
- Quoin at corners, windows or doors.

8.3.2.2 Tuscany

History and Character:

Tuscan-inspired homes began appearing at the turn of the 20th Century in Southern California as an interpretation of the picturesque movement in art where the architecture was less formalized and more responsive to the natural environs. Arranged building forms of predominantly stucco and stone with tile roofs reflecting the architectural styles of Northern Italy took root in informal plan arrangements and massing.

Massing:

- Simple massing with assembled forms and varied roof forms.

General Materials:

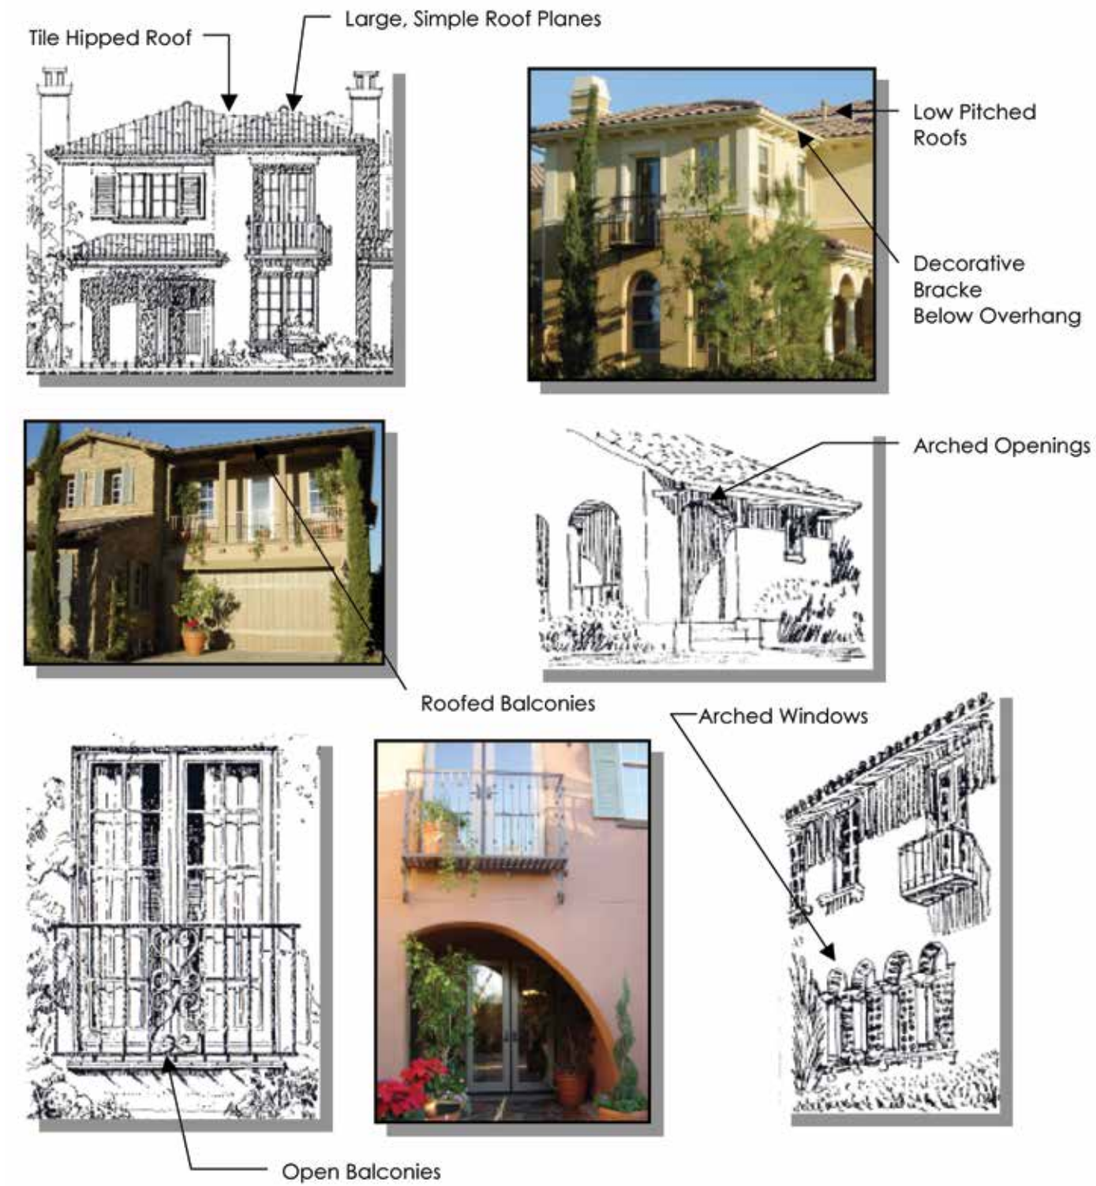
- Stucco finished walls and columns.
- Large, simple roof planes.
- Extended roof overhangs.
- Wood posts or masonry columns.
- Simple stucco chimneys.
- Decorative columns accents.
- Simple wrought iron, metal railings and details.
- Shutters as occasional accent.
- Deep recessed openings.
- Covered patios /porches.

Roof Materials and Forms:

- Tile hipped roofs.
- Low-pitched roofs.
- Stucco eave details or wood corbeled rafter tails.
- Gable end roof vents with decorative stucco accents.
- Gables and appropriate hip roofs.
- Shallow sloped, concrete 'S' tile roofs.

Detail Elements:

- Barrel/S-Tile roof.
- Varied stucco finish.
- Shallow pitch roof.
- Exposed rafter tails.
- Arched openings.
- Recessed windows.
- Wrought iron accents below windows.
- Vertical proportioned or arched windows.
- Balconies opened or roofed.
- Decorative brackets below roof overhangs.



Tuscany

8.3.2.3 Monterey

History and Character:

The Monterey style is a combination of Spanish construction methods and the basic two-story Eastern Colonial house. The wooden second story enabled single story Spanish Adobe homes to be developed as two story homes. Cantilevered balcony elements defined the front of the house which originally used adobe wall construction. Exposed rafters, gable or hipped roof, simple wood posts and side chimneys that anchor one end of the house, accompany the balcony as Monterey design elements.

Massing:

- Simple, straightforward rectangular or "L" shaped building forms.
- Cantilevered balcony and covered colonnades.

General Materials:

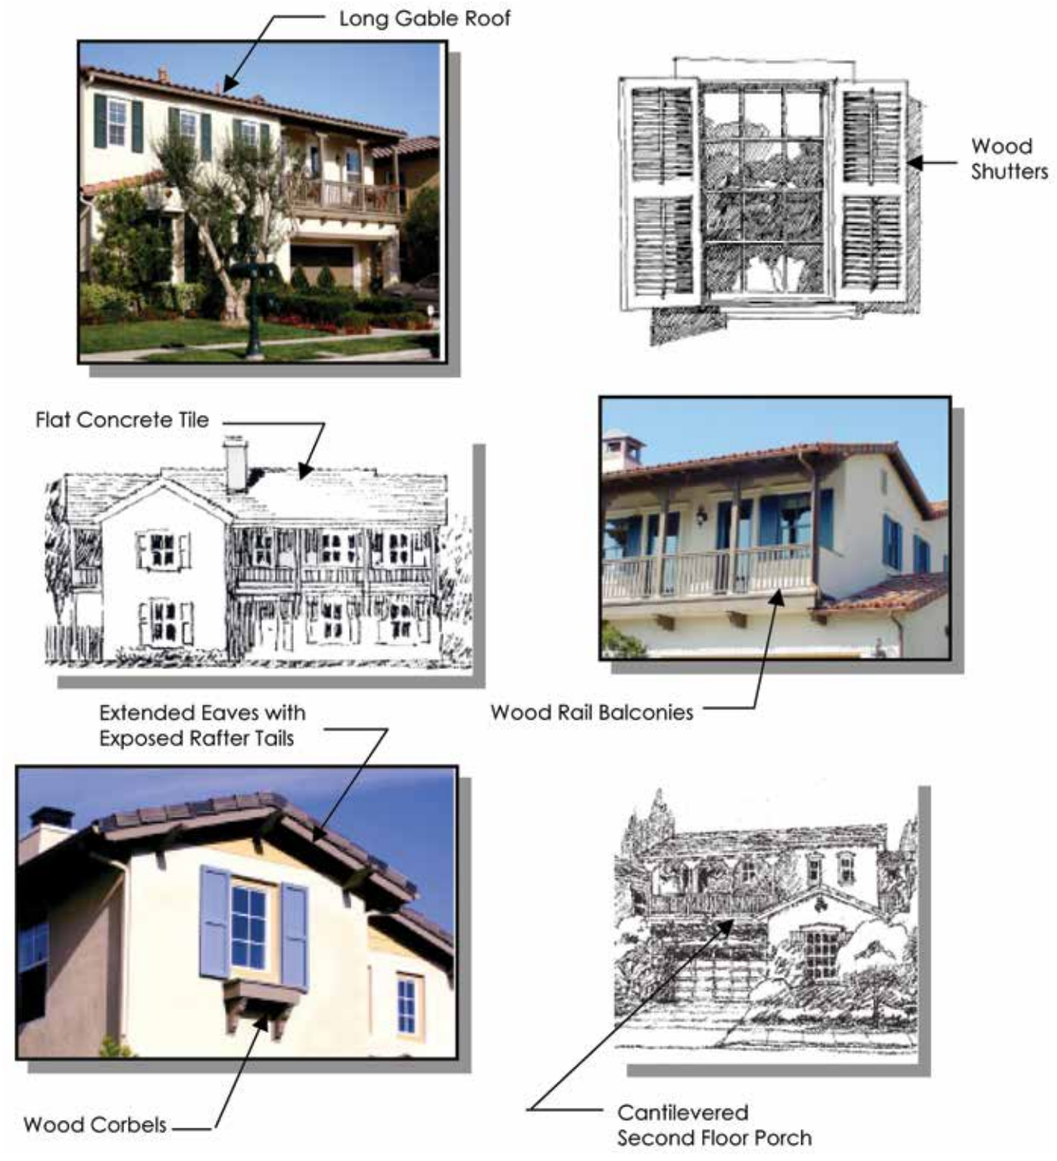
- Stucco on first level.
- Siding on second floor.
- Use of brick or stone on first level.
- Shutter accents.
- Wood or stucco trim.
- Brick and siding used to accent stucco forms.

Roof Materials and Forms:

- Flat concrete tile.
- Simple forms with low pitch.
- Gable forms are predominant. (Long gable roof)
- Tight rake ends.
- Extended eaves with exposed rafter tails.

Detail Elements:

- Wood balcony railing.
- Recessed windows, single hung.
- Wood corbels.
- Accent shutters.
- Cantilevered second floor porch.



Monterey

8.3.2.4 Spanish Colonial

History and Character:

Spanish Colonial homes are an adaptation of the Mission Revival style, reflecting features such as strong form and mass, plain wall surfaces, and tile roofs. The Spanish Colonial style is often characterized by a semi-formal plan arrangement such as a courtyard design.

Massing:

- Simple massing and forms and varied roof forms.

General Materials:

- Stucco finished walls.
- Wood / stucco columns.
- Decorative stucco chimneys.
- Round arches.
- Decorative columns and trim.
- Ornate wrought iron railing and accents.
- Wood shutter accents.
- Thick walls.
- Deep recessed openings.
- Stucco or tile details at gable ends.

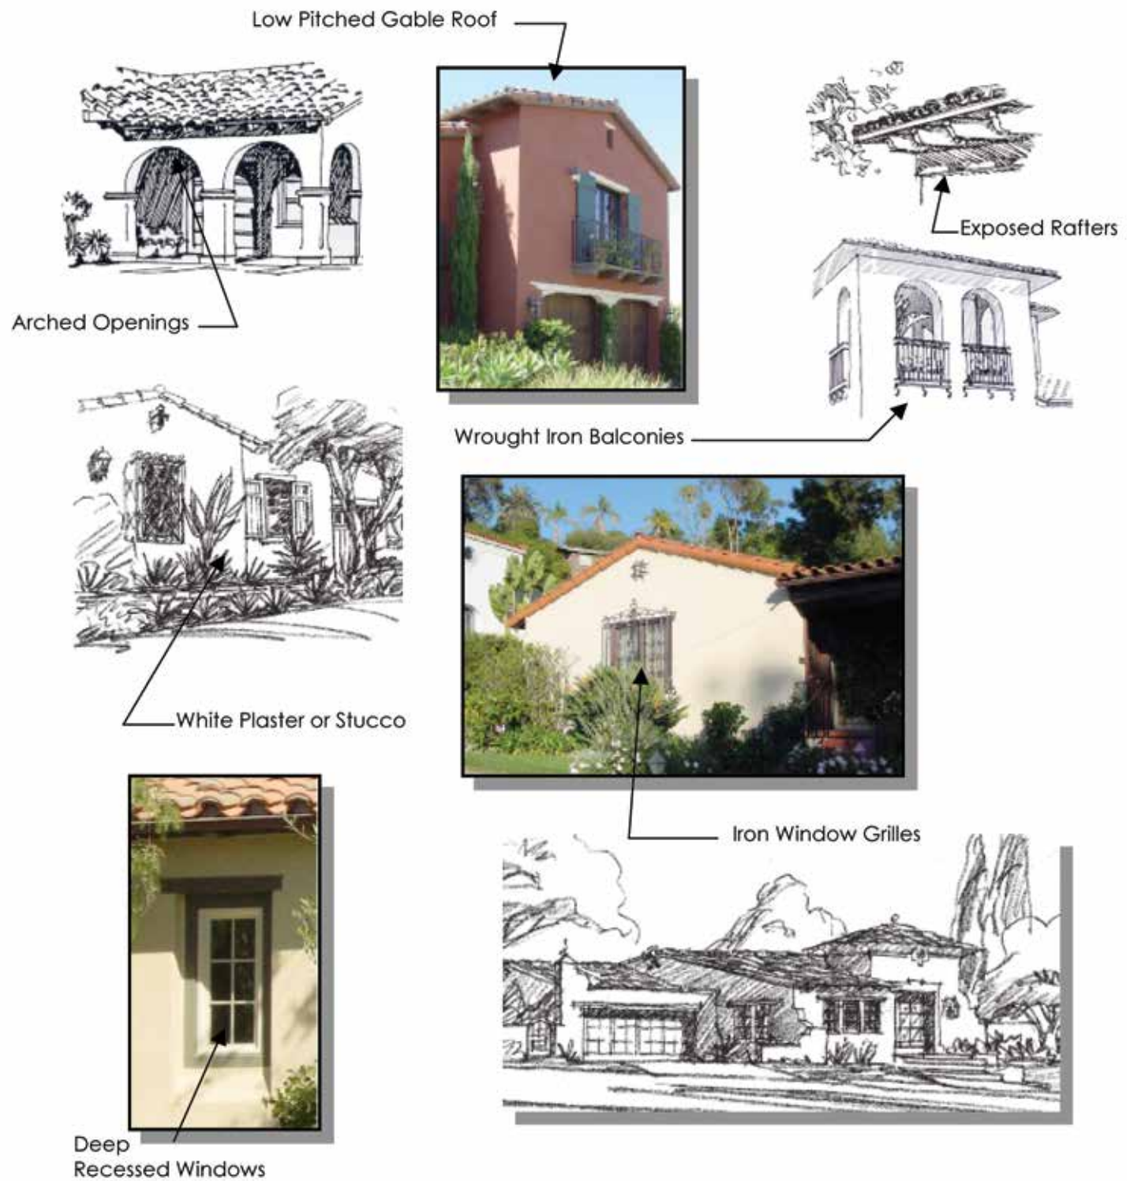
Roof Materials and Forms:

- Low-pitched roofs, with minimal overhang.
- Tight rake ends.
- Extended eaves with exposed rafter tails.
- Gables and hip roofs typical.
- Shallow sloped, concrete 'S' tile roofs.

Detail Elements:

- S-Tile roof.
- Arched window/door openings.
- Recessed window.
- Ornamental wrought iron details.
- Vertical proportioned windows.
- Wrought iron window. Grilles on windows.

Section 8. DESIGN GUIDELINES



Spanish Colonial

8.3.2.5 Craftsman

History and Character:

The Craftsman style home evolved from the late 19th century American Arts and Crafts movement. These moderately detailed buildings are characterized by the use of handcrafted architectural elements and details. Broad open porches, low sloping roofs, deep overhangs, multiple gables, trellis features, oversized first floor windows, expressive trim, rafters, brackets, and wood columns with masonry bases characterize the Craftsman style.

Massing:

- Horizontal proportions simple massing often asymmetrical at the second level.

General Materials:

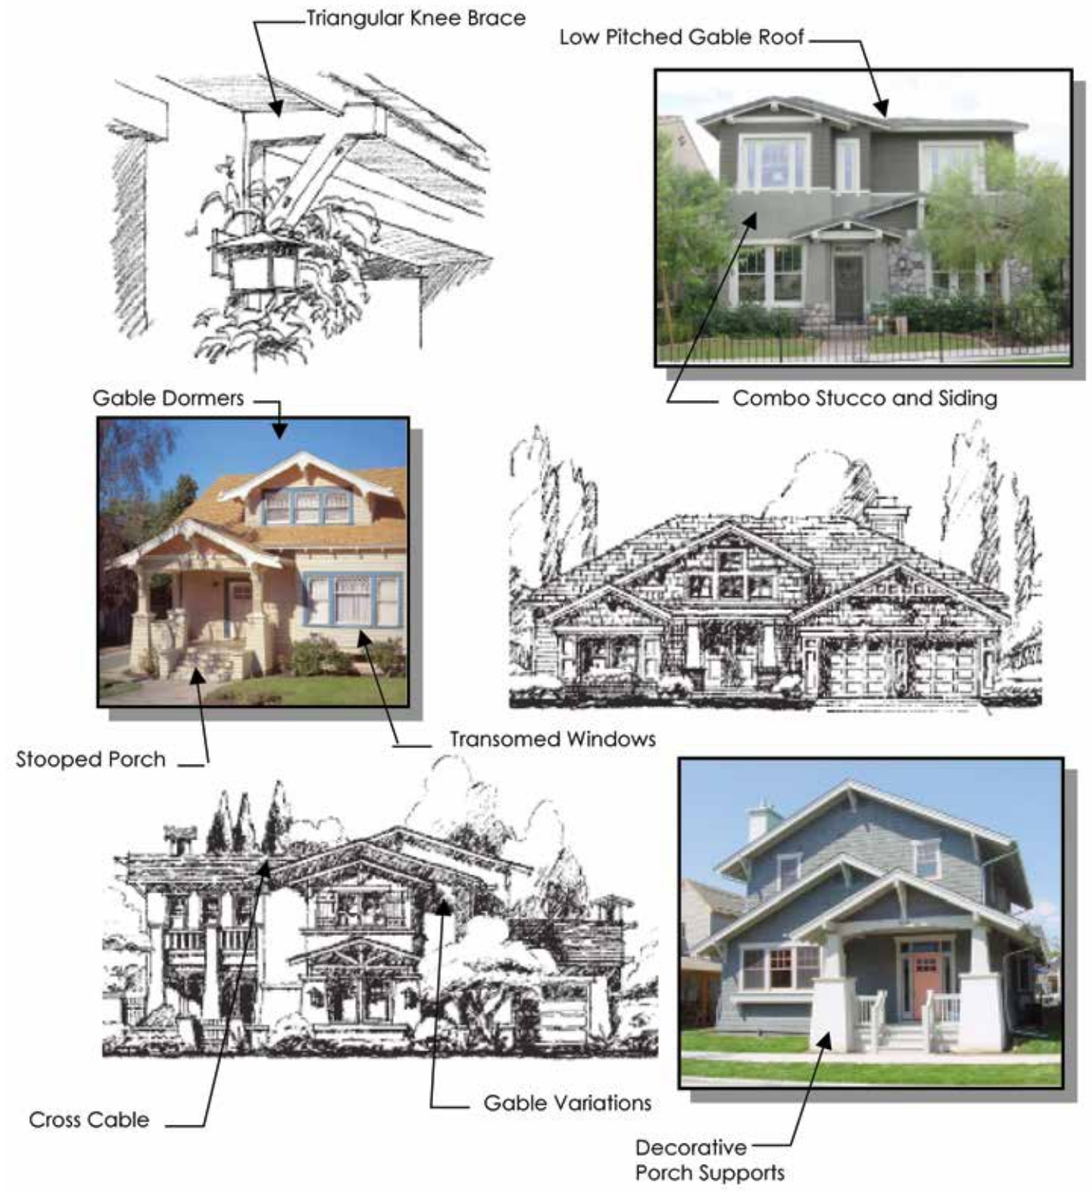
- Simple roof lines with wide projecting gables.
- Covered entry and roofed porches.
- Deep, broad porch elements.
- Expressive structural elements such as rafters, posts, and columns.
- Use of wood, stone or brick at porch columns typical.
- A mixture of materials such as stucco, stone, brick and shingle siding.
- Asymmetrical window and door compositions.

Roof Materials and Forms:

- Predominantly low-pitched gabled roofs, occasional hipped or shed roofs.
- Shallow-pitched roofs with deep overhangs.
- Roof dormers.
- Flat concrete tile or architectural grade asphalt shingle.
- Variation of the gable roof (i.e.: cross gable).

Detail Elements:

- Large gables
- Low pitch roofs with flat concrete tile.
- Windows with accent mullions.
- Exposed rafters and outlookers, triangular knee brace.
- Decorative gable vent detail.
- Decorative porch supports and railings.
- Transomed Windows.



Craftsman

8.3.2.6 Traditional

History and Character:

The Traditional style is based on classical design principles established the American Colonial period and interpreted or blended with the Prairie and Bungalow regional styles. Massing is horizontal in appearance with vertical proportioned windows and door surrounds. Front porches are common. The houses are composed of simple forms with centered entry elements over the front door.

Massing:

- Simple, symmetrical massing.
- Typical two story rectangular masses with added one-story elements such as porches forming more complex building configurations.

General Materials:

- Symmetrical and asymmetrical composition of doors and windows are common.
- Simple classical details such as columns.
- Siding or stucco with brick veneer accents.
- Front porches with wood columns and railings.
- Porches that extend length of the front elevation.
- Stone and brick veneer.

Roof Materials and Forms:

- Medium roof pitch with pitched roof dormer.
- Shallow roof pitch used over the porch.
- Flat concrete roof tile.
- Dormers reinforce symmetrical elevations.
- Bay windows and shed roofed elements added to simple building forms.
- Cupolas, weather vanes and other decorative roof ornamentations.

Detail Elements:

- Symmetrical or centered entry feature.
- Shutters accented with color.
- Columns at entries and porches.
- Roof dormers.
- Stooped porches.

Traditional

8.3.2.7 Western Ranch

History and Character:

The Western Ranch style is reminiscent of the early ranchers and farmers of Southern California. The Ranch Style evolved regionally in response to available building materials and environmental considerations. The distinctive porch covered terrace elements are a natural response to the temperate Southern California climate. Ranch style homes utilized simplified architectural details inspired by Spanish Colonial, Colonial and Monterey architecture.

Massing:

- Simple horizontal massing and rectilinear forms.

General Materials:

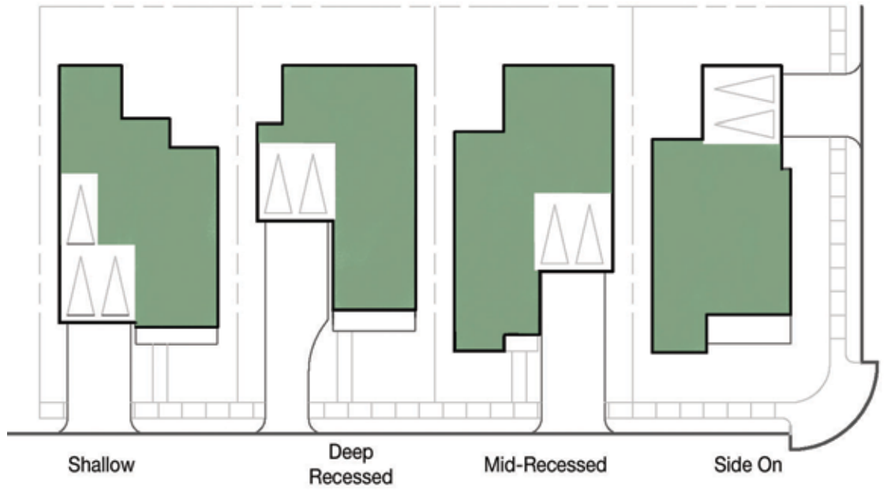
- Stucco, board and batten, and horizontal siding.
- Porches along front and rear elevations with a shallow roof break.
- Decorative shutters at windows.
- Wood window trim surrounds.
- Simple column and railing detailing.
- Substantial (8" x 8" min.) wood columns.

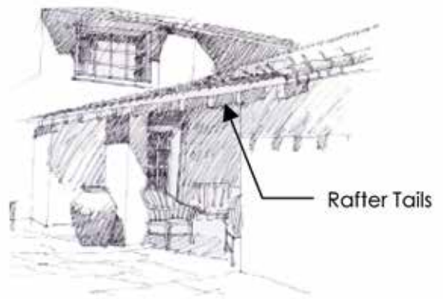
Roof Materials and Forms:

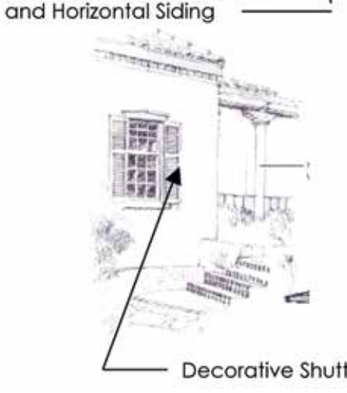
- Horizontal gable roofs with medium pitch and deep overhangs.
- Porches with shallow roof pitch.
- Gabled dormers.

Detail Elements:

- Corbeled wood columns.
- Heavy rafter elements.
- Simple accent shutters.
- Minimum 8" x 8" wood posts.







Western Ranch

8.4 Massing Principles

This section provides suggestions for creating neighborhoods and street scenes that have a variety of building forms that are proportionate to a human-scale and inviting to the pedestrian.

General Elements:

The general elements of building massing include:

- Front Articulation.
- Rear Articulation.
- Garage Placement.
- Roof Form.
- Balconies and Projections.
- Building Offsets/Variable Setbacks.

Objectives:

- Incorporate single-story elements.
- Avoid large flat two-story walls.
- Minimize two-story dominance on street scene, sidewalks and open spaces.
- Vary building setbacks along the street.
- Minimize visual impact of garages.

8.4.1 Front Articulation

Intent:

The front elevation of the home is an important element in creating a quality community at Esperanza. Close attention will be placed on the elevations and how they address the streetscene. Emphasis on location and entry designs, living areas and garages will provide a special street appeal. Emphasis on a variety of building massing will create a diverse street scene.

Guidelines:

- Building massing should reflect the architectural style.
- Massing elements should project enough to avoid elevations that appear to be "tacked on."
- Building details such as doors and windows should be in proportion to the overall massing.
- Building form is encouraged to reflect the interior uses of the home.
- Front elevations for two-story homes should incorporate a single-story element.
- Recessed two-story elements should create human-scale buildings.
- All homes should have at least two plane variations (excluding the garage) in front elevation massing.

8.4.2 Rear Articulation

Intent:

Special attention shall be given to the design of those dwellings adjacent to, or in close proximity of, major community roadways, common areas, open spaces, or entry features. Whether viewed from distant or close range, massing requirements will be implemented to ensure positive community character in these conditions. Generally, repetitious elements such as similar building profiles and continuous gable ends are to be avoided.

Guidelines:

- Architectural massing and articulation should be consistent with the style of the home.
- Plans shall incorporate projections and/or offsets that extend from the main wall lane.
- Vertical and horizontal plane breaks are encouraged.
- Homes directly adjacent to arterial roadways, collector roads, entry drives, common areas, and open spaces should be given particular attention in their rear articulation, contributing positively to these edges.

8.5 Garage Placement

Intent:

The configuration, location and orientation of the garage on the lot are integral design elements, both for the composition of the home and its contribution to the streetscene. Deemphasizing the garage is important in order to maintain the overall community design. Emphasizing the living areas of the home as they address the street will achieve this goal.

Placing living areas forward promotes social interaction and facilitates 'eyes on the street' for neighborhood security, while at the same time establishing neighborhood orientation to the pedestrian instead of the automobile.

Guidelines:

- Garage door patterns should vary among elevation types and reinforce the architectural theme of the home.
- Standard 3-car garage configurations are discouraged.

8.5.1 Garage Treatments

The home and the yard rather than the garage must be the primary emphasis of the elevation as seen from the street. Each plan shall incorporate one of the garage design techniques listed below and each parcel shall include at least two of these techniques to reduce the emphasis on the garage; and therefore, enhance the variable massing of the streetscene.

8.5.1.1 Shallow Recessed Garages

Setting the garage back a minimum of three feet in relationship to the front of the house/ or porch is intended to reduce the overall visual mass of the garage. The number of homes with shallow recess garage configurations shall be limited to 25% of the total number of units in each builder package.

8.5.1.2 Mid or Deep Recessed Garages

Setting the garage back to the middle or rear of the lot. This design treatment is intended to expose more living space areas toward the street, further reducing the visual impact of the garage along the street.

8.5.1.3 Alley Loaded

The use of the alleyways locates garages off a main loop road and creates a more traditional streetscene, with the fronts of the houses facing the street.

8.5.1.4 Split Garage

This treatment de-emphasizes the garage by reducing the length of the continuous door. Typically a one car garage and a one or two car garage are split to provide a variation in the appearance of the home. The single car garage elements in this split condition may option into living space that further enhances the streetscene by replacing the garage door with windows.

8.5.1.5 Tandem Garage

This garage layout de-emphasizes the third garage by concealing it behind a standard two-car garage condition. The tandem space is located so that it may option into living space. The two car garage is typically either shallow or deeply recessed into the lot and incorporated into the architecture of the home.

8.5.1.6 Setbacks

A varied setback is encouraged along the street frontage. Refrain from strict compliance to the minimum garage setback so as not to contribute to a repetitious and monotonous appearance along the street.

Where garages are adjacent to one another at common property lines, a two-foot minimum difference in setbacks shall occur.

8.6 Accessory Structures

Intent:

Accessory structures should be designed to reinforce the architectural style of the primary residence.

Guidelines:

- Detached structures, such as casitas, pool cabanas and guest quarters associated with the single-family lot shall be designed to match the style, detail, roof material/pitch and massing criteria of the primary home.
- Detached garages, storage buildings and outdoor sheds should incorporate design features, materials and colors compatible with the primary home.

8.7 Roof Form/Pitch

Intent:

- Roof form is another important design element as it relates to the character of the community, observed from both the external edges and inside the neighborhood.
- Variety of roof form along streets creates a positive visual edge.
- Appropriate massing of roof forms helps to create human scale architecture to the street.

Guidelines:

- Roof forms/pitch should reinforce the architectural style of the homes.
- Roofs shall be composed of a series of simple roof forms.
- Primary roof forms should be gable or hip designs.
- Roofs shall vary in massing along street scene and open spaces.
- Changes in the primary roof (ridge) orientation are encouraged.
- Flat roof elements should be minimized and incorporated only if appropriate to the architectural style.

8.8 Balconies And Projections

Intent:

As part of the overall design of a two-story dwelling, balconies and projections provide relief and interest at the second story. Balcony projections shall be consistent with the architectural character of the home. Additionally, these elements create ideal outdoor spaces.

8.9 Building Offsets/ Variable Setbacks

Intent:

Quality neighborhood design orients the 'living' areas of the home towards the street. To encourage this orientation, alternative setbacks are allowed for living areas as measured from the back of walk.

The development standards for each planning area/home type including building setbacks are established by the Esperanza Specific Plan. Additionally, building offsets or variable setbacks for both living and garages are encouraged to create variety in street scenes.

Guidelines:

- Setbacks shall be appropriate and proportionate to the housing type and lot size.
- Front setback should be varied along the street. A front offset of a minimum of two feet (2') is encouraged between the front walls of adjacent homes.
- Edge conditions such as homes backing to collector roads and back-to-back homes should incorporate variable rear setbacks to create variety.

8.10 Materials and Details

Architectural materials and detailing are central elements to creating quality communities. Appropriate focus should be given to the architectural details and the design of the details and architectural elements of the home.

General Elements:

The general elements comprising the materials and details of a building are:

- Wall Materials/Finishes.
- Doors and Windows.
- Roofing Materials and Slope.
- Fascias, Eaves and Rakes.
- Accent Materials.
- Exterior Colors.

8.10.1 Wall Materials/Finishes

Approved Materials:

- Board and batten siding.
- Cement plank siding.
- Stucco.
- Exposed masonry walls (brick, slump block, etc.)
- Stone, brick, brick veneers (accent materials).

Approved Finishes:

- Stucco finishes appropriate to the architectural style of the home.
- Smooth or sand finishes are encouraged. Heavy or Spanish Lace stucco finishes are prohibited.

Guidelines:

- Building materials should reflect the architectural style of the home.
- Siding materials should be wrapped beyond front elevations and should terminate at an inside corner or extend to the location of the lateral fence.
- Masonry elements and accents should reflect building forms and not appear as an applied veneer.
- Footings shall be exposed no higher than six inches (6") above finished grade.

8.10.2 Accent Materials

Accent materials promote individuality in each home and ensure diverse character within the neighborhood. Accents can be used to reinforce the architectural theme of the home.

Guidelines:

- Accent materials should complement the overall color and style of the home.
- Accent materials shall terminate at inside corners and be wrapped to coincide with an architectural element.
- Accent materials may terminate at location of the lateral fence or at logical end.
- Architectural trim applied to all elevations should be consistent with front elevation of the home.

8.10.3 Doors and Windows

The design and detail of the doors and windows on a home reinforce the architectural style and are key elements in the composition of the exterior elevation of the home.

Guidelines:

- Door designs shall be consistent with the architectural style of the home.
- Doors should be protected by porch elements or recessed entries.
- Garage and entry door design shall be appropriate to the style of the home.
- Maximum garage door height shall be eight feet (8').
- Garage doors should be recessed a minimum of twelve inches (12") from building plane.
- Alignment and proportions of windows shall be appropriate to the architectural style of the home.
- All windows (including garage door windows) are to be consistent with the architectural style of the home.
- Divided light windows are encouraged in keeping with the architectural style.
- Highly reflective glazing is not permitted.
- Window details such as shutters, trim surrounds, window boxes and window recesses are encouraged in keeping with the architectural style.

8.10.4 Roofing Materials and Details

Roofing materials as well as roof forms, pitch and design details are integral elements that reinforce the intended architectural style of the home.

Proposed roofs should be reflective of the architectural style of the home.

Attention should be given to address the context of the roof of each home relative to the adjacent homes along the street.

Approved Roofing Materials:

(Subject to compatibility with the intended architectural style)

- Concrete tile (flat or curved profile)
- Clay tile
- Slate
- High profile composition shingle (3-Dimensional)

Prohibited Roof Materials:

- Wood Shake
- Wood Shingle
- Low Profile Asphalt Composition
- Corrugated Metal

Guidelines:

- Roof materials and roof pitches need to be selected to reinforce the architectural style.
- Standing seam metal roofs painted in non-reflective neutral colors are allowed in appropriate architectural styles.
- Avoid repetition in continuous gable-ends and similar ridge heights.
- Skylights are not allowed on the sloped roofs of the front elevations of the building.

8.10.5 Roof Options

8.10.5.1 Eaves, Fascias and Rakes

Guidelines:

- Eave, fascia and rake proportions are to be appropriate to the architectural style.
- Larger eave overhangs provide opportunities for shading and should be used in appropriate architectural styles.
- Exposed rafter tails shall be a minimum of four inches (4") in thickness.
- Wood fascias and rafters shall be painted or stained to reinforce the style of the home.
- Attention shall be given to rake return detail.

8.10.5.2 Color

Intent:

Home colors are important to establishing a blended community at Esperanza, yet they should give the impression that each home was designed on its own.

Appropriate color selections make each home unique, but still look natural and in place in the neighborhood context.

Guidelines:

- Diversity of color is encouraged.
- Color shall contribute to distinguishing the overall architectural style of the home.
- Colors should reflect the natural hues found in Southern California.
- Color and hue variation in adjacent homes shall be provided to create neighborhood diversity.

8.10.6 Additional Design Elements

Intent:

Design elements that are utilitarian in nature should be designed as integral features that support the intended architectural style.

Guidelines:

- Exposed gutters and downspouts shall match roof or wall color.
- Faux copper patina is acceptable.
- Rooftop mechanical equipment is prohibited.
- Air conditioning/heating equipment shall be screened from the street and neighboring views and shall be ground mounted.
- Pool, spa, and water softening equipment shall be screened from neighboring views.
- Meters shall be screened from public view to the extent possible.

8.11 HOME TYPES

A variety of housing types, utilizing an architectural program composed of detached and attached housing, are offered at Esperanza. This diversity ensures a range of choices and a mix of homes within each neighborhood. Residences ranging from attached row townhomes and motorcourt townhome/condominiums to alley loaded and traditional single family homes along with innovative home types such as "two-pack" homes and courtyard homes, shall be articulated in traditional architectural styles. Providing a variety of housing programs allows homeowners the opportunity to move-up within the community as their lifestyles and needs change over time.

All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Locations of Collection Area, Accessibility for Collection Vehicles and Collection of Sorted/ Diverted Waste Types.

The following pages provide graphic and written information that describes the general appearance of each anticipated home type. Future homebuilders within Esperanza should use these descriptive pages as a guide when designing the home type designated for the appropriate planning area.

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

8.11.1 Row Townhomes

ROW TOWNHOMES

- Neo-traditional design places garages onto alleys, hidden from streets.
- Grid street pattern reinforces traditional neighborhood pattern.
- Front doors and porches face onto streets and/or greenbelts.
- Neighborhood open space provides a focal point of the neighborhood.

8.12 DESIGN GUIDELINES FOR LANDSCAPE ARCHITECTURAL CHARACTER

Careful consideration has been given to the design of the community landscape architectural character for the Ontario Esperanza Specific Plan. The following design guidelines are organized to help define the basic landscape design principles for the Ontario Esperanza Specific Plan. Observing these guidelines will help to assure the "design vision" and integrity of this planned community.

All landscape plans, streetscape plans, and graphic designs with regard to community identity, neighborhood identity, or entry monumentation shall conform to the guidelines as set forth herein, and shall be subject to review and approval by the City of Ontario.

The "Conceptual Landscape Master Plan," Exhibit 30 on the next page shows the perimeter streetscape design, Community entries and monumentation, neighborhood park and mini parks, pedestrian greenbelts, and general landscape features of the Ontario Esperanza Specific Plan area.

8.12.1 Perimeter Streetscape Design

Streetscape design guidelines establish a hierarchy for the landscape development along the surrounding roadways, as well as establishing a framework for consistency of design. Three major arterial roadways surround the Ontario Esperanza Specific Plan area: Hamner Avenue to the West, Bellegrave Avenue to the North, and Mill Creek Avenue to the East. Landscape easements associated with these roadways have been defined, as noted in the City of Ontario Ontario Ranch General Plan.

Landscape development surrounding this community will help to set the character, while maintaining consistency with the City of Ontario's pedestrian pathway system illustrated in the Trails and Bikeways section of the Ontario Ranch General Plan. The following section discusses the streetscapes for the Esperanza Specific Plan area. Exhibit 31, "Streetscapes Legend" provides a guide to the location of the streetscapes discussed below.

8.12.2 Hamner Avenue

Hamner Avenue streetscape shall include the following:

- A landscaped parkway (15' wide min.) with a row of street trees (24" Box min.) along both sides of the street.
- A 5' wide sidewalk along west side of the street.
- A 14' wide landscaped median with a single row of street trees.
- A landscape easement (neighborhood edge) of 45' taken from face of curb to perimeter wall.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 32, "Hamner Avenue" section for streetscape illustration."

Exhibit 30

Conceptual Landscape Master Plan

Exhibit 31

Streetscapes Legend

8.12.3 Bellegrave Avenue

Bellegrave Avenue streetscape shall include the following:

- A 5 foot wide lineal sidewalk and a 7 foot wide landscaped parkway along north side of the street.
- A landscape easement (neighborhood edge) of 35' taken from face of curb to perimeter wall on both sides of the street.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in the Conceptual Landscape Master Plan, Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 33, "Bellegrave Avenue" section below for streetscape illustration.
- Additional landscaping requirements for well sites along Bellegrave Avenue may include: landscape screening, earth berming or combination of both to screen undesirable views from public.

8.12.4 Mill Creek Avenue

Mill Creek Avenue streetscape shall include the following:

- A 12 foot wide landscaped parkway on the west with an additional 23' landscape easement include a single row of street trees (24" Box min.) along both sides of the street. The east side of Mill Creek Avenue includes a 12 foot wide landscaped parkway with an additional 50' Southern California Edison (SCE) easement taken from back of improved street right-of-way.
- Provide drought tolerant large shrub (max. 15') and drought tolerant landscaping within the SCE easement.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 34, "Mill Creek Avenue" and Exhibit 35 "Mill Creek Avenue at the SCE Corridor" for streetscape illustration."

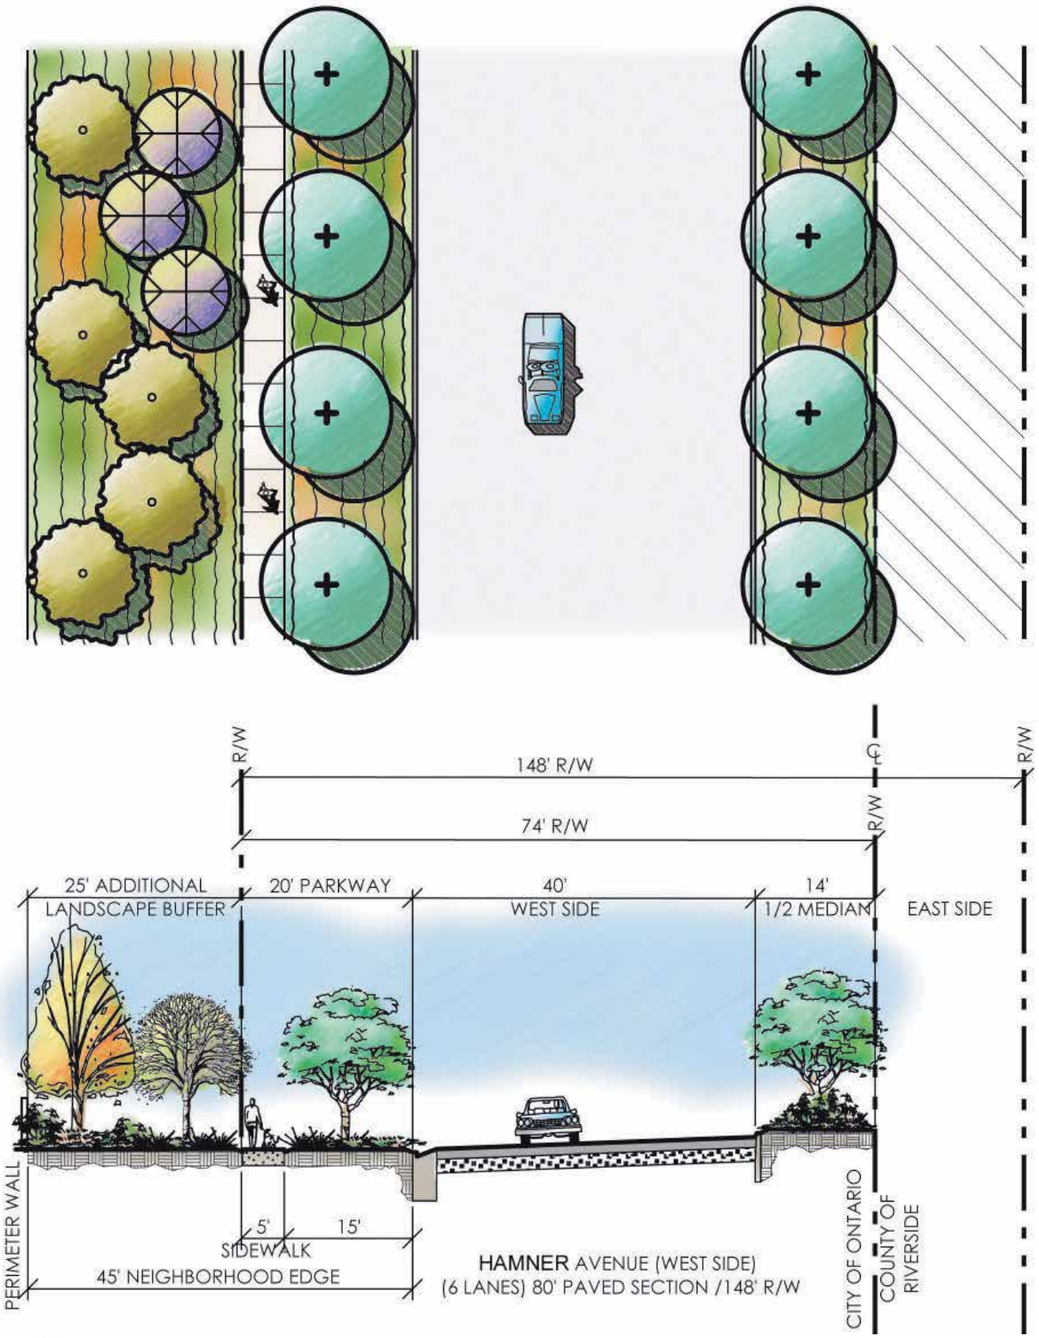

EXHIBIT 32
~~Milliken~~ Hamner Avenue

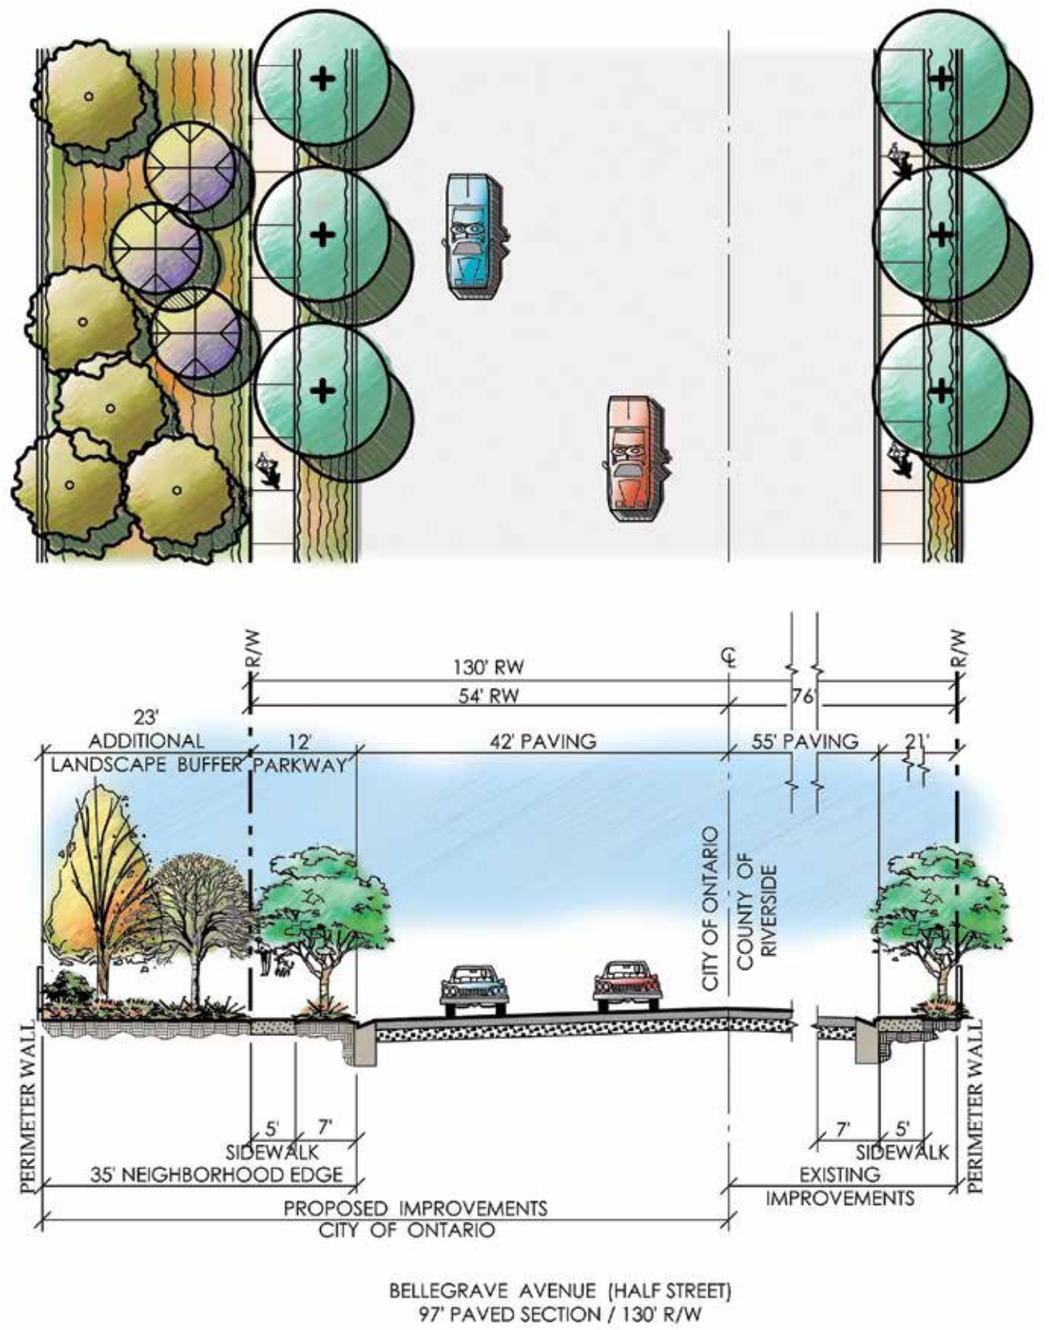

Exhibit 33
Bellegrave Avenue

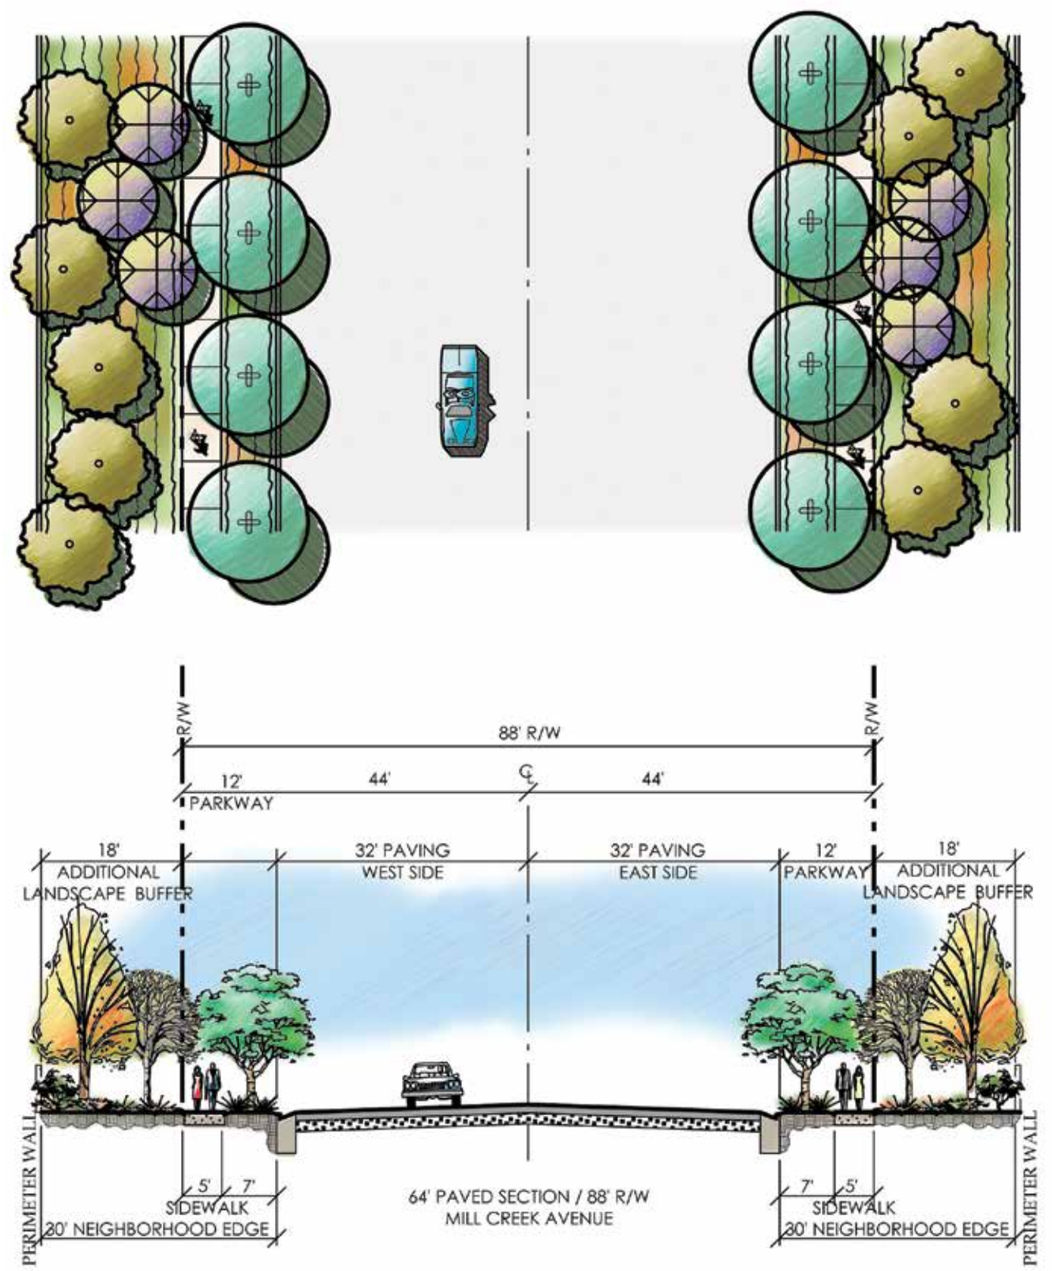

Exhibit 34
Mill Creek Avenue

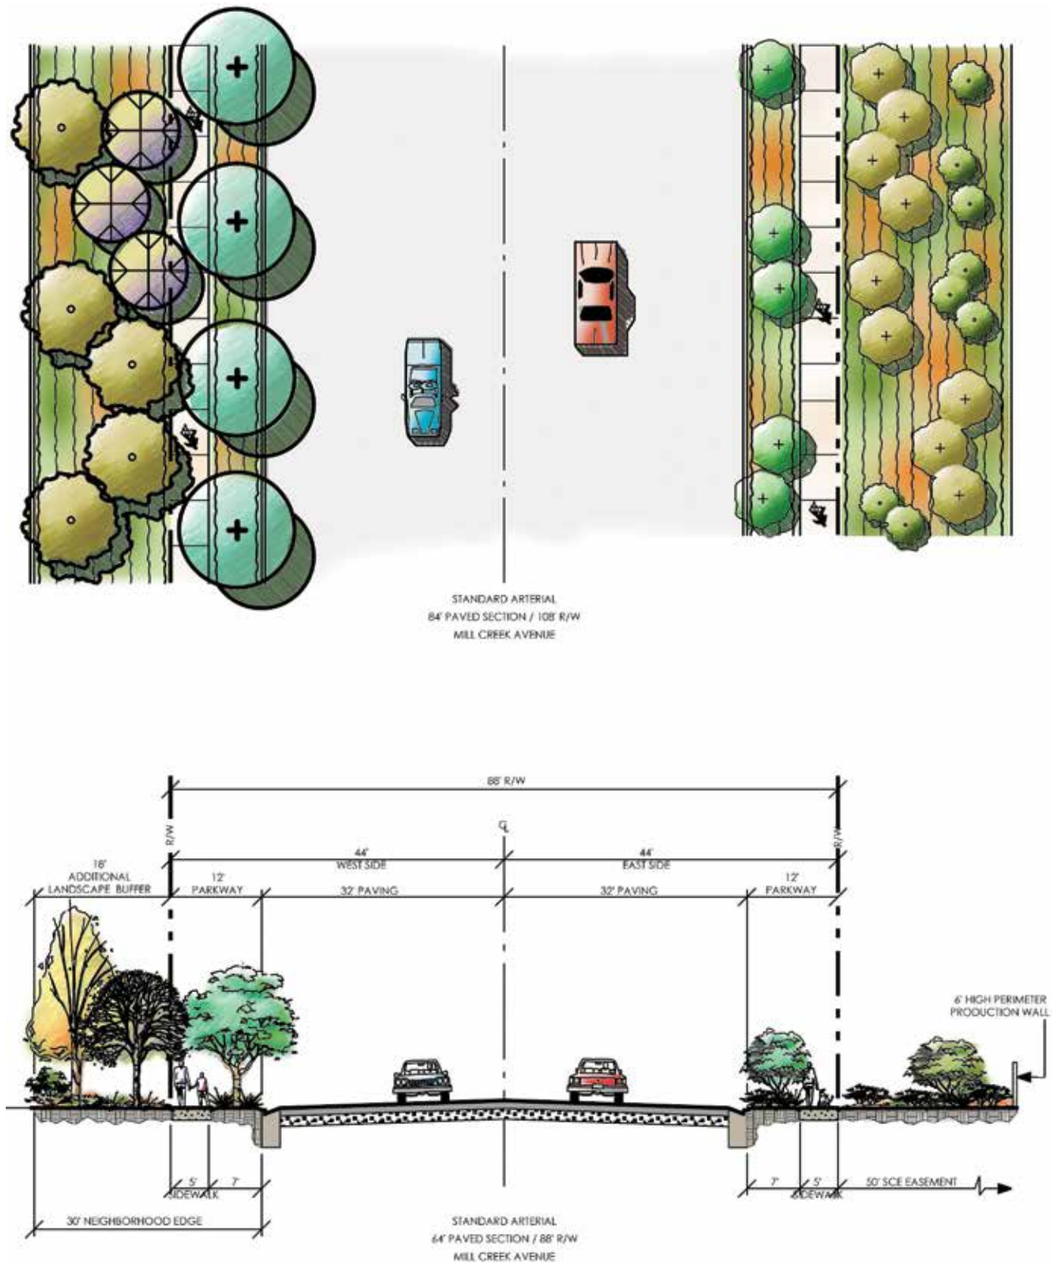

Exhibit 35
Mill Creek Avenue at the SCE Corridor

8.12.5 Interior Streetscape Design

Streetscape design within the interior of the Ontario Esperanza Specific Plan community shall be consistent in character with the perimeter streetscapes and should help to promote pedestrian circulation into the "Community Core."

Where interior streetscapes interface with neighborhood/mini parks and open space, special consideration should be taken to integrate pedestrian circulation into these areas via a streetside pedestrian system that links city sidewalks to active walking trails and open space uses. This is especially important within the multi-family/high density residential planning areas.

Two interior roadways bring residents into the "Community Core," Eucalyptus Avenue, running East/West, and "Street A" that intersects with Eucalyptus Avenue, running North/South.

8.12.6 Eucalyptus Avenue

Eucalyptus Avenue streetscape shall include the following:

- A 7 foot wide landscaped parkway with a single row of street trees (24" Box min.) along both sides of the street.
- A 5' wide concrete sidewalk with a 7' wide decomposed granite multi-purpose trail.
- A 7 foot wide Class II striped on-street bicycle trail within the right of way on both sides of the street.
- A landscape easement (neighborhood edge) of 35' taken from face of curb to perimeter wall on both sides of the street.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 36, "Eucalyptus Avenue" section for streetscape illustration.

8.12.7 "A" Street

"A" Street streetscape shall include the following:

- A landscaped parkway (7' wide minimum) with a single row of street trees (24" box minimum) along both sides of the street.
- A 5' sidewalk separated from the street by a 7 foot wide landscaped parkway on both sides of the street.
- A landscaped buffer of 6' to 10' taken from the back of sidewalk to the perimeter wall on both sides of the street.
- Background trees and shrub masses planted in a series of layers (foreground, midground and background) to help define borders and plant groupings while combining interesting textures and colors.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 37, "A Street" section for streetscape illustration.

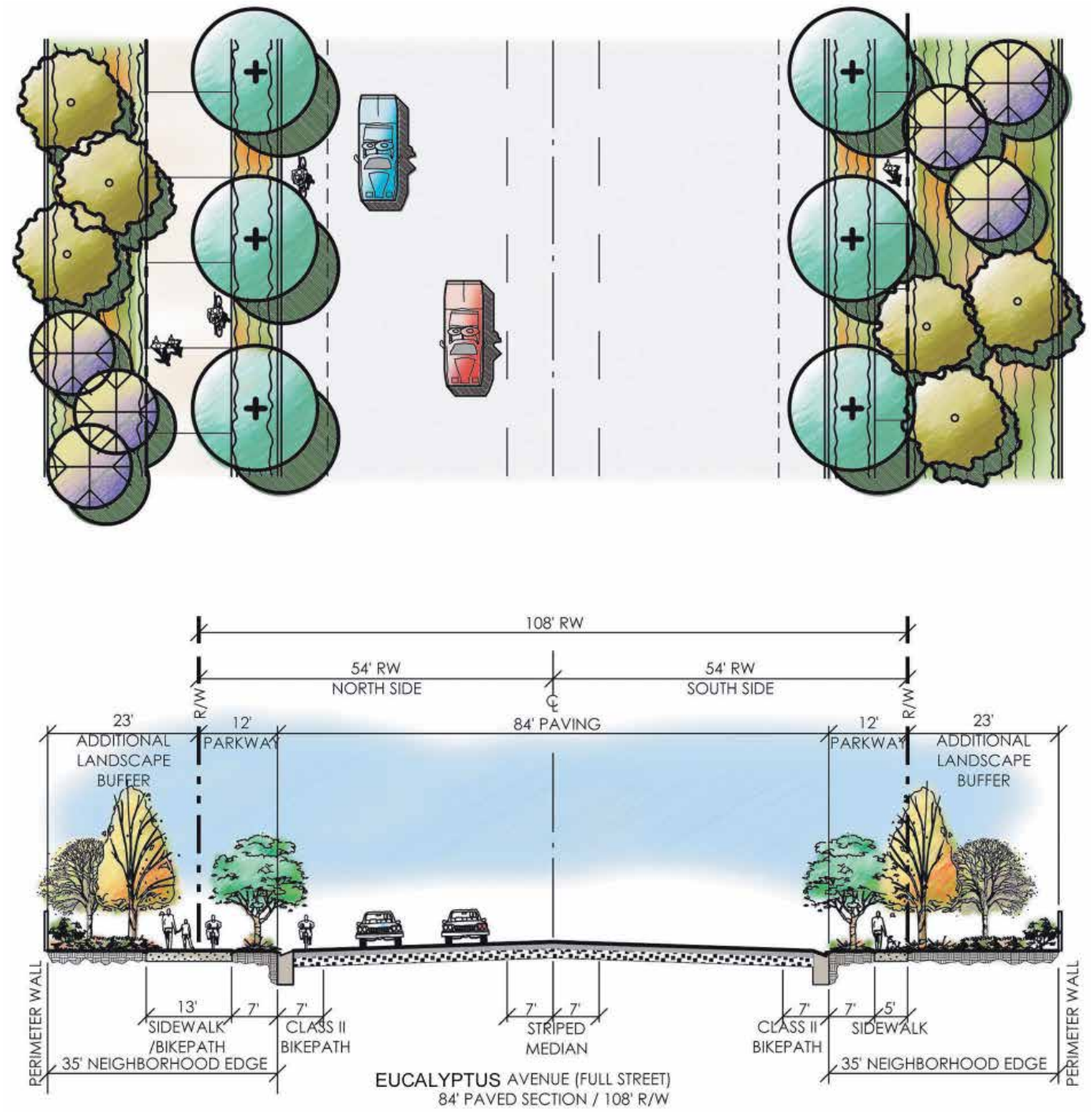

Exhibit 36
Eucalyptus Avenue

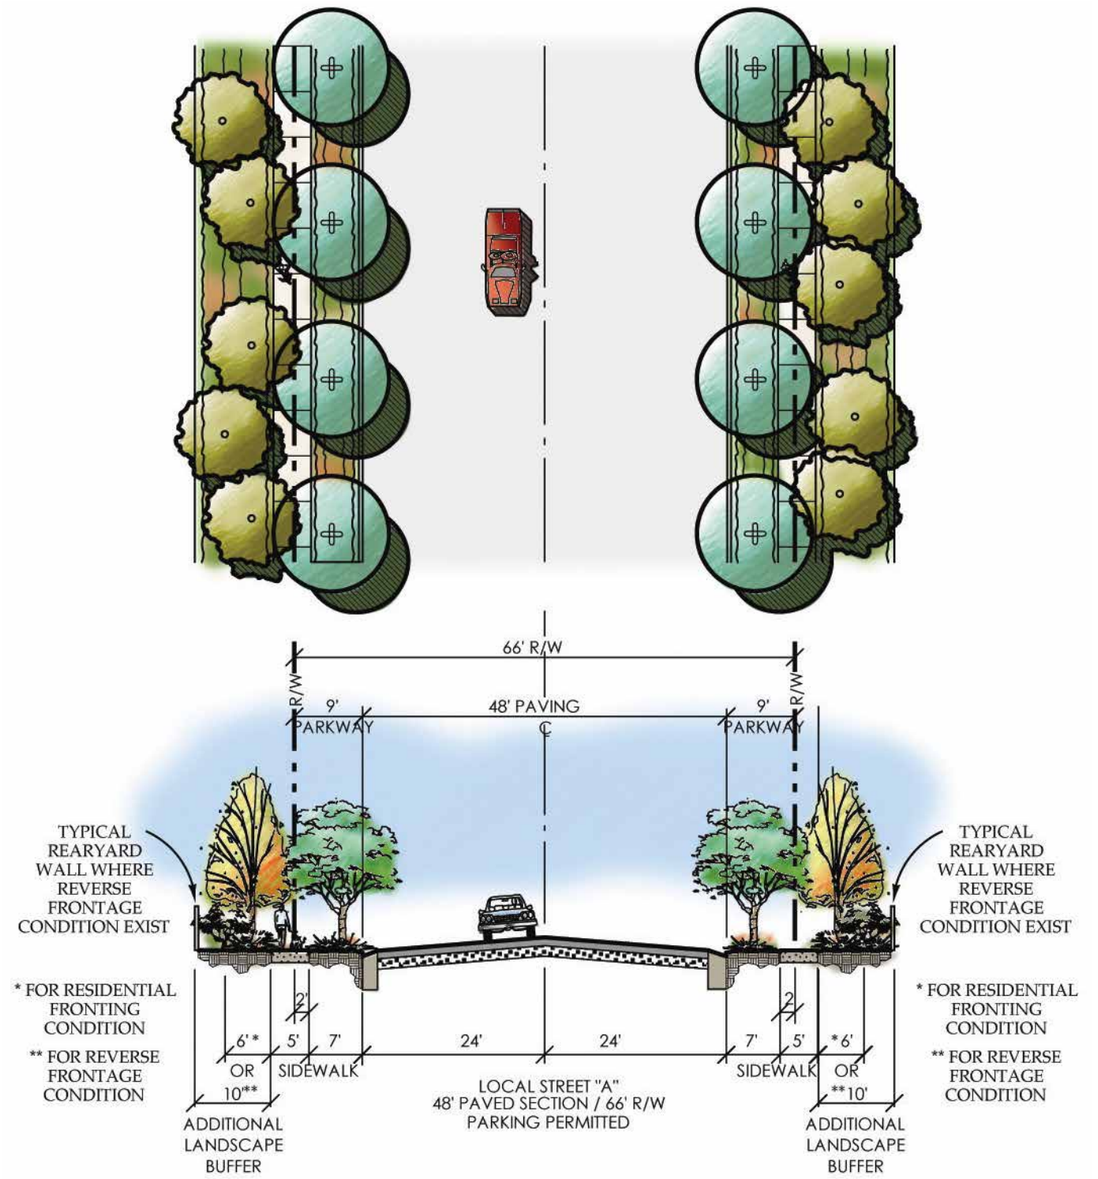

Exhibit 37
"A" Street

8.12.8 Local Streets, Private Alleys, and Private Neighborhood Streets

Local Streets

Local Street streetscapes shall include the following:

- A landscaped parkway (7' wide minimum) with a single row of street trees, 24" box minimum, along both sides of the street.
- A 5' wide sidewalk on both sides of the street.
- A 5' wide minimum planter area from sideyard wall to back of sidewalk along reverse frontage conditions.
- Refer to Exhibit 38, "Local Street and Cul-de-Sac" for streetscape illustration.

Private Neighborhood Streets

Private Neighborhood streets shall include the following:

- A landscaped parkway (7' wide minimum) with a single row of street trees, 24" box minimum, along both sides of the street.
- A 4' wide sidewalk on both sides of the street.
- A 7' wide minimum planter area from sideyard wall to back of sidewalk along reverse frontage conditions.
- Refer to Exhibit 39, "Private Neighborhood Street Section" for streetscape illustration.

Private Alleys

Private Alleys shall include a 5' wide landscaped area on both sides of the alley when the paved area is a maximum of 20' in width. Landscaping will be provided as appropriate in areas of less than 5' in width depending upon the final design of the private alley. Refer to Exhibit 40, "Private Alleys" for illustration.

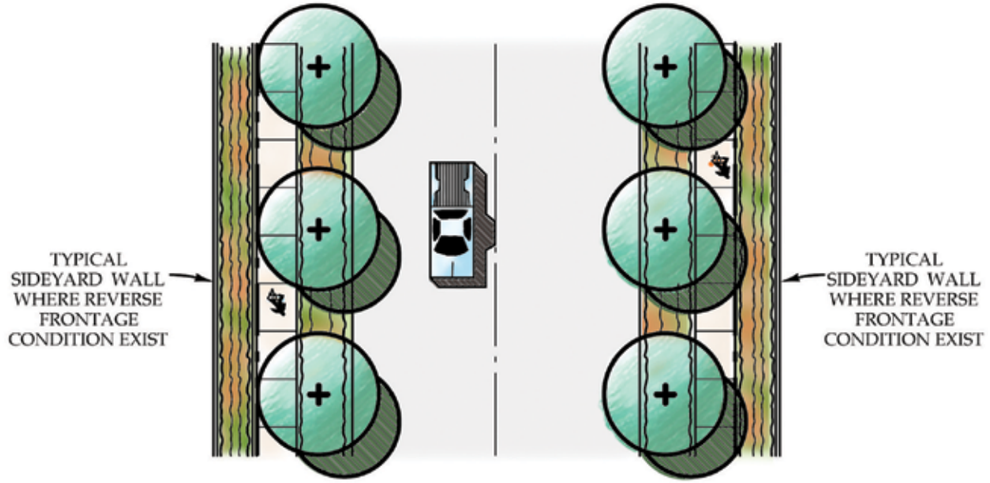

EXHIBIT 38
Local Street and Cul-de-Sac

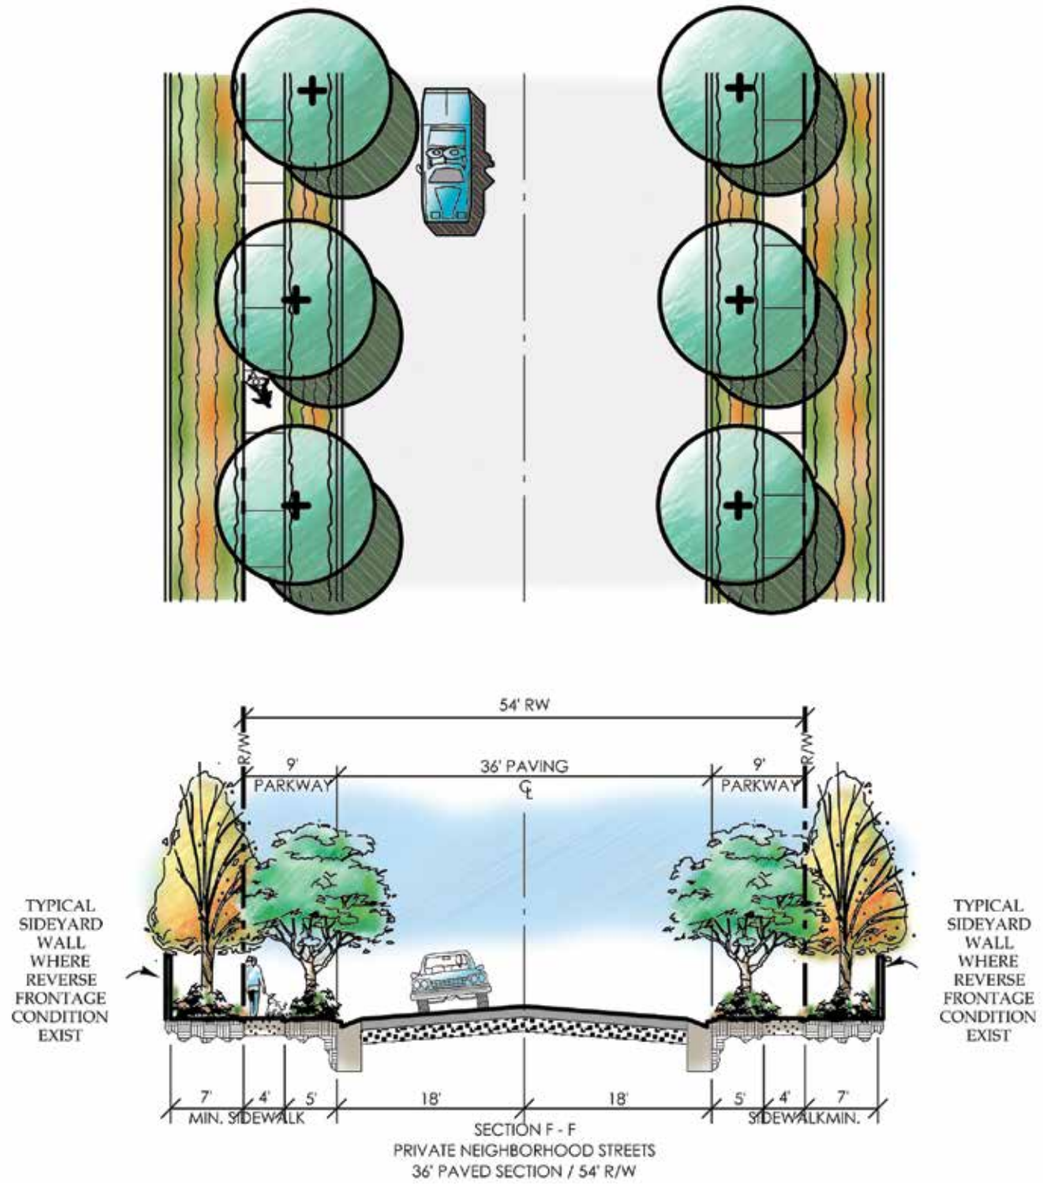

Exhibit 39
Private Neighborhood Street Section

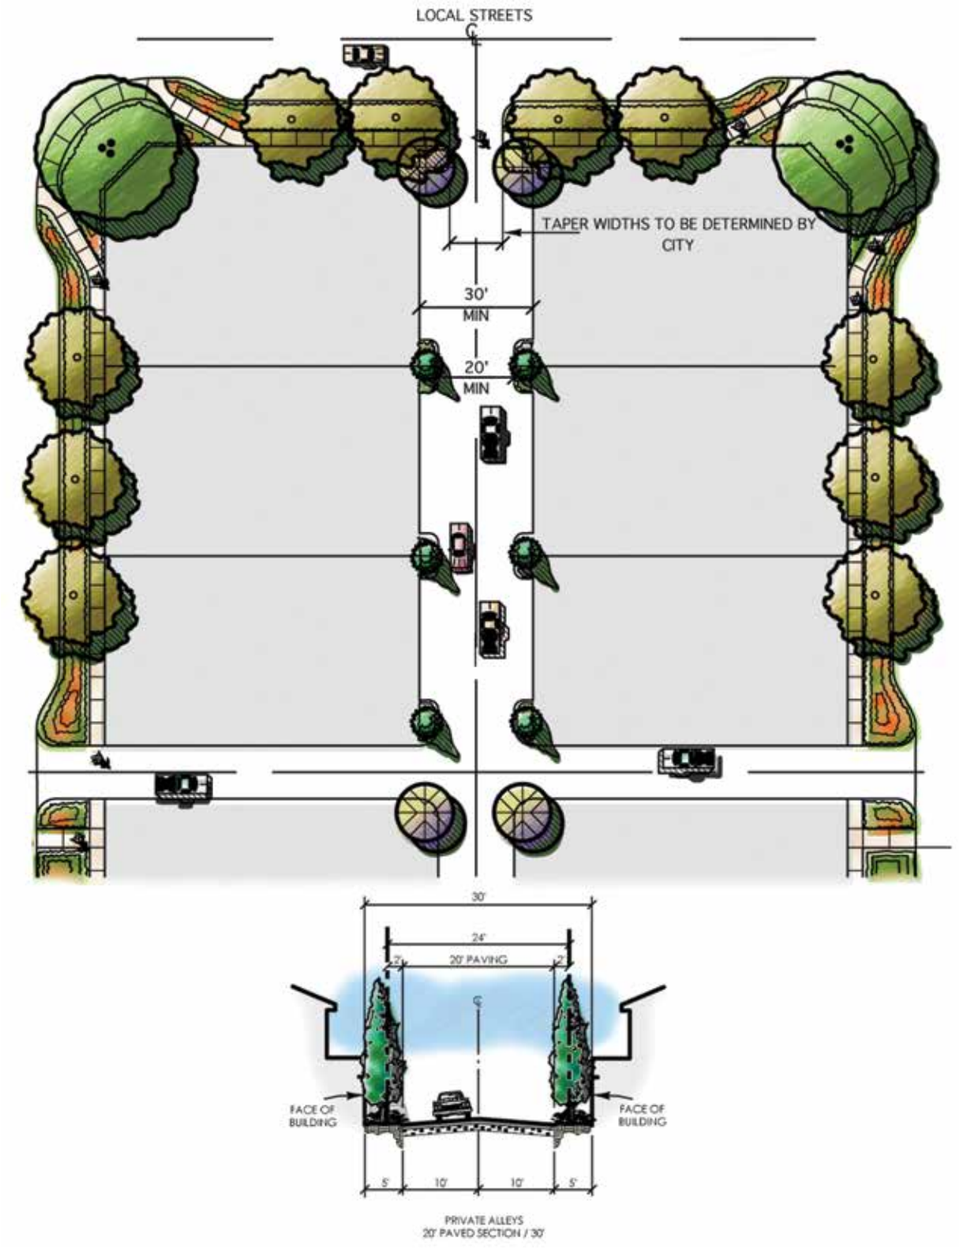

Exhibit 40
Private Alleys

8.13 City of Ontario "Gateway" Monument

At the corner of Hamner Avenue and Bellegrave Avenue, a city "Gateway" monument will be located. Special consideration should be made to integrate the perimeter landscaping along Hamner and Bellegrave Avenue into the final monument design and landscape character. The City of Ontario is currently developing the "Gateway" monument program for the Ontario Ranch. Additional coordination with the City of Ontario will be needed prior to developing this area.

8.14 Entries and Monumentation

Monumentation occurs throughout the Ontario Esperanza Specific Plan community and is designed to establish a basic hierarchy for entering each area of the community. Along the perimeter edges there are several entry points into the community. At key entries a landscape and monumentation program will be utilized to help identify the community as well as convey a "welcoming" feeling for both vehicular and pedestrian traffic. Inspired by the local historical village of "Guasti," home of the Italian Vineyard Company, the project monuments for Ontario Esperanza embody some of the character of this Ontario icon, through the use of similar materials, architectural styles/detailing and landscaping.

Three basic monument treatments are used to set the hierarchy of the entries and monumentation: the Primary Community Entry and Monumentation, the Secondary Community Entry and Monumentation, and the Neighborhood Entry and Monumentation.

8.14.1 Primary Community Entry and Monumentation

The Primary Community Entry and Monumentation shall include the following:

- Freestanding curved monument walls at each corner with highlighted pedestrian portal.
- Identification field for potential sign lettering placement.
- Architectural concrete caps, trim, and bases to help delineate architectural detailing and veneer material used.
- Use of "real" veneer materials instead faux concrete veneers.
- Use of large specimen native trees to anchor each side of entry drive at site entry.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.
- Handicapped ramps designed to City standards.
- Refer to Exhibit 30, "Conceptual Landscape Master Plan" and Exhibits 41-43, "Primary Community Entry and Monumentation" and, "Primary Community Entry and Monumentation – Hamner Avenue, and, "Primary Community Entry and Monumentation – Mill Creek Avenue" for detailed conceptual illustration.

8.14.2 Secondary Community Entry and Monumentation

The Secondary Community Entry and Monumentation shall include the following:

- Freestanding curved walls at each corner with anchoring entry pilaster.
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall.
- Architectural concrete caps, trim, and bases to help delineate architectural detailing and veneer material used
- Enhancement of corner cut wall and use of accent pilasters to balance each side.
- Use of "real" veneer materials instead faux concrete veneers.
- Use of large specimen native trees to anchor each side of entry drive at site entry.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.
- Handicapped ramps designed to City standards.
- Refer to Exhibit 30, "Conceptual Landscape Master Plan" and Exhibit 44, "Secondary Community Entry and Monumentation Elevation/Plan" for detailed conceptual illustration.

8.14.3 Neighborhood Entry and Monumentation

Neighborhood entries and monumentation should occur on interior corner entries within the Ontario Esperanza Specific Plan Community. These entries should be used to help continue the landscape character theme to the "core" of the community. Each neighborhood built within the project will have the opportunity to identify their individual project character while providing the basic design features of the other monuments. Refer to The Neighborhood Entry and Monumentation shall include the following:

- Freestanding large entry pilaster set within the landscaped parkway. This pilaster should embody the same character as that of the Primary Community Entry Monument portal, but is reduced in scale to create a "pedestrian gateway" into each neighborhood. Project identification plaque or icon can be located at this pilaster
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall.
- Architectural concrete caps, trim, and bases to help delineate architectural detailing and veneer material used.
- Enhancement of corner cut wall and use of accent pilasters to anchor each side.
- Use of "real" veneer materials instead faux concrete veneers.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.
- Handicapped ramps designed to City standards.
- Refer to Exhibit 30, "Conceptual Landscape Master Plan" and Exhibit 45, "Neighborhood Entry and Monumentation" for detailed conceptual illustration.

Exhibit 45

Neighborhood Entry and Monumentation Elevation/Plan

8.15 Parks and Open Space

The Ontario Esperanza Specific Plan Community will have a central "Community Core" that centers on the Neighborhood Park and the School. Exterior walkways and trails should lead to this centralized area. Exhibit 46, "Pedestrian Circulation Plan" illustrates the pedestrian accessibility and connectivity throughout the Esperanza Specific Plan area. Exhibits 47 through 50 illustrate the planning concepts for the Neighborhood Park and Mini-Parks planned for the Esperanza Specific Plan area.

- All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

8.15.1 The Neighborhood Park

Park 1, the Neighborhood Park, consists of the following:

- Parking - Parking shall be adequate to accommodate daily use of the park, and should be screened from public view using a combination of berming and landscaping. In addition, the parking configuration should take into consideration alignment with proposed neighborhood streets and provide a minimum of (15) fifteen to (20) twenty parking stalls (including one van accessible handicap stall/unloading area).
- Children's Tot Lot Play Area - A Tot Lot will be located within close proximity to the parking lot and Restroom Building. Play structures and equipment should be staged to allow for separated use based on age (2-5 yr. and 5-12 yr.). The Tot Lot should also follow ADA guidelines and provide access based off of equipment selected. Play areas and fall zones shall be constructed with synthetic surfacing per ADA standards with wood fiber ("Fibar") being available as an alternative in non-fall zone areas. Seating areas shall be located near the Tot Lot to provide areas for parental supervision.
- Open turf area/Barbecue Picnic Facilities - The Neighborhood Park should provide an open turf area and barbecue picnic facilities scattered throughout a looped concrete walkway system. Barbecue facilities (minimum of 50%) should be located adjacent to the walkway system for ADA accessibility; the remaining percentage set in open turf areas. Each barbecue picnic facility shall provide a picnic table, freestanding barbecue, and trash receptacle. These barbecue facilities can be placed on concrete or any other ADA acceptable surfacing. The design of the Neighborhood Park open space should take into account pedestrian circulation and the linkage to the two adjacent roads as well as the surrounding community.
- Sports Fields for unorganized play – The open space turf area should be arranged to accommodate two baseball/softball fields and a soccer field overlay. Sports lighting should be discouraged at the park. Wherever feasible a minimum distance of 20 feet should be provided between streets and play areas. Sports fields will be improved in accordance with the City's Parks and Maintenance Department requirements.
- Landscaping – Landscaping within the Neighborhood Park shall harmonize with the surrounding streetscapes. Large specimen trees should be used within the open turf areas to help provide shade and screening of unwanted views. Accent trees should also be used at pedestrian entries and around the Tot Lot for color and seasonal interest. The park shall be irrigated with reclaimed water by an automated system per the City Standard Specifications for irrigation systems.
- Lighting – Security walkway lighting shall be provided in accordance with City requirements and the design guidelines contained herein.

- Restroom Building – A restroom building shall be located adjacent to the tot lot in clear view of the public streets surrounding the park. The building should be designed to provide separate restroom facilities for both sexes and shall conform to ADA design guidelines. Additional provisions for a storage room for the City of Ontario maintenance personnel shall also be designed (all designs shall be submitted to the City of Ontario and County Health Department for approval).
- Park monumentation/signage and a lockable trash enclosure area.
- Refer to Exhibit 47, "Neighborhood Park" for detailed conceptual illustrations.

8.15.2 Mini Parks and Pedestrian Trails

Pedestrian circulation is highly encouraged within the Ontario Esperanza Specific Plan Community. Landscape easements are provided along major roadways and are encouraged within the neighborhood communities.

- Interior walkways should be designed to provide connections to adjacent neighborhoods as well as linking the Neighborhood Park and School to dedicated neighborhood edge treatments and enhanced landscaped areas.
- Exhibit 47, shows a Neighborhood Park example (5 Acre)."
- Enhanced paving at pedestrian connections where pedestrian circulation crosses roadways.
- Paseos should provide strong connections to "Community Core" (~~school~~/5 AC neighborhood park).
- Connection of neighborhood pocket parks to community. The pocket parks are intended to provide minimal amenities, and should designed with strong neighborhood "eyes-on" approach. Pocket Parks should range between 3/4 – 1 acre in size.

Mini parks for children's play areas may contain the following amenities:

- Paseo walkway (meandering encouraged/ ADA accessible).
- Landscaping - Landscaping shall harmonize with the surrounding streetscapes and utilize trees, shrubs, and groundcovers identified in the plant matrix.
- Lighting – Pole mounted fixtures spaced at appropriate intervals for safety and security.
- Open turf play area

The Mini Parks might contain one or more of the following amenities:

- Barbecue Picnic Facilities
- Basketball/Volleyball Courts
- Tot Lots
- Rose Garden
- Covered Picnic Structures
- Seatwalls/benches
- Community Garden
- Refer to Exhibits 48 through 51 for detailed conceptual illustrations.

Mini Park Example (Park 4)

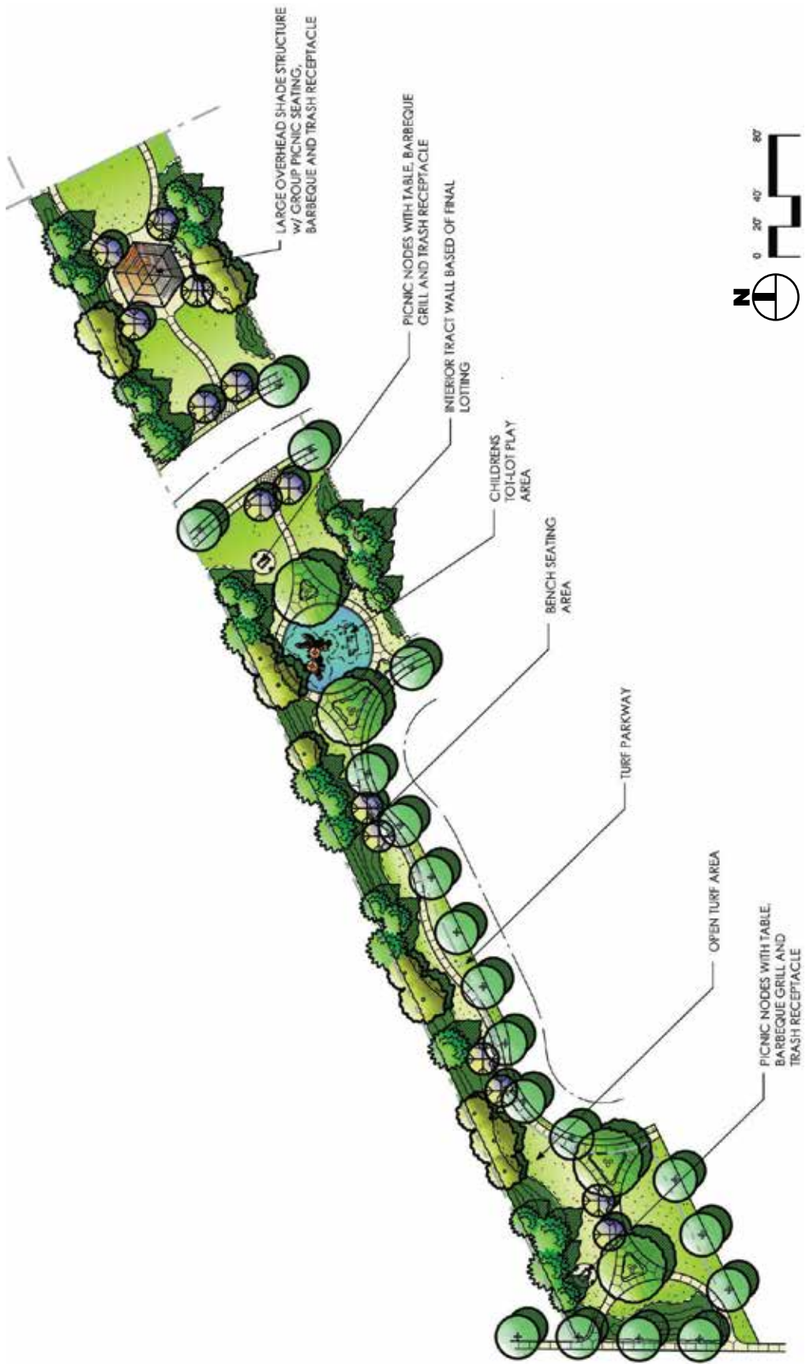

Exhibit 51
Mini Park Example (Park 5)

8.16 Community Walls and Fencing

Walls are a major component in achieving an overall community theme within the Ontario Esperanza Specific Plan. A strong cohesive appearance is achieved through the use of "community walls" and general overall wall guidelines as illustrated in Exhibit 52, "Master Walls and Fence Plan" and Exhibit 53, "Wall and Fence Details."

All walls that adjoin community street scenes (major streetscapes identified under Perimeter/ Interior Streetscapes) shall be deemed "community walls." All wall and fencing designs and layout shall be approved by the City of Ontario prior to construction.

8.16.1 Community Walls

Community walls shall be decorative in nature. Community walls shall incorporate the use of pilasters of a design consistent with the materials of the community walls. The location and spacing of pilasters shall be subject to Planning Department review and approval.

8.16.2 Solid Walls and Fencing

Solid walls shall be decorative. The use of vinyl fencing and wood fencing is prohibited. Reverse frontage walls and any wall return that is visible from public view, shall be constructed of split-face block or precision block that is veneered, burnished (using color other than common gray), plastered or stuccoed, and should complement color scheme dictated in Ontario Esperanza Specific Plan color palette. Decorative caps and the use of pilasters to help enhance the perimeter appeal of the walls are encouraged. Walls visible from the community streets may not be made of exposed or painted precision block or slumped block.

8.16.3 View Fencing

If applicable, view fences should be located in the rear yards of those properties abutting large slope areas where the adjacent property is a minimum of 15' above/below the house pad. These fences allow open views but not physical access; they shall be 5'-6" high and made of tubular steel or lexan glass panel construction. Areas where view fencing occurs will be subject to review by the City of Ontario. The use of tubular steel view fencing shall incorporate pilasters utilizing materials consistent with adjacent walls.

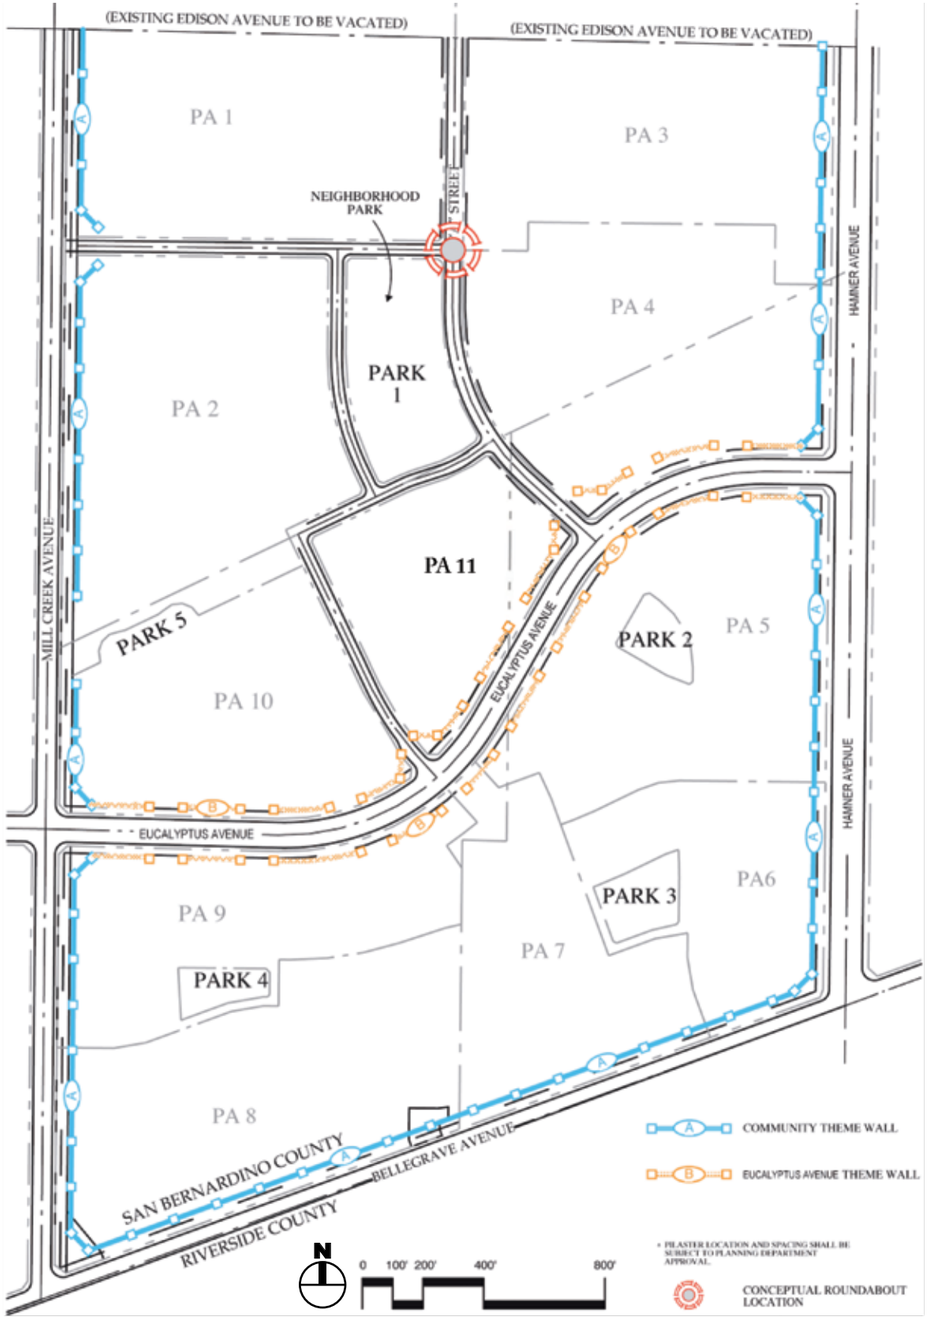

Exhibit 52
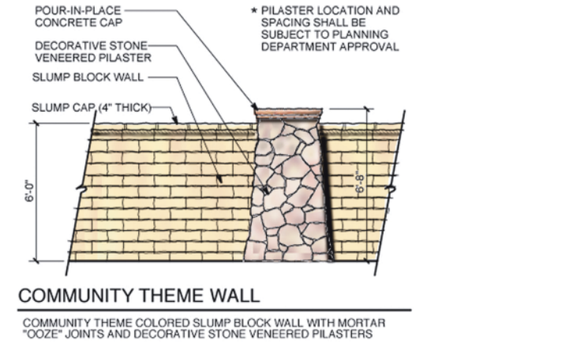
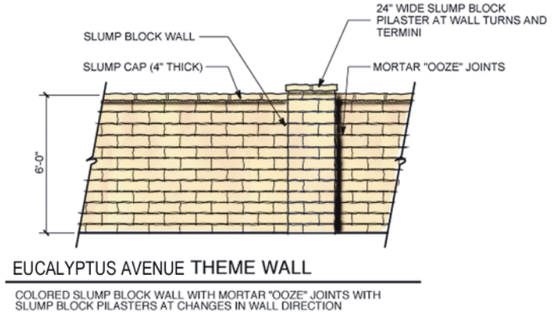
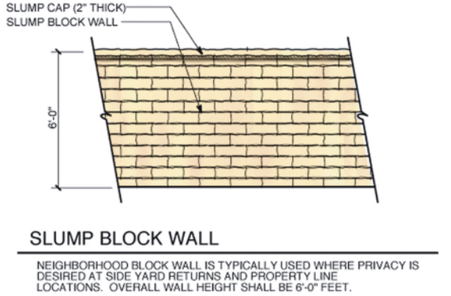
Master Walls and Fence Plan







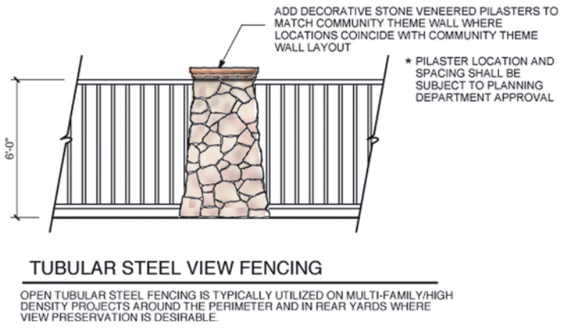


Exhibit 53
Wall and Fence Details

8.17 OUTDOOR LIGHTING

Lighting standards within the Ontario Esperanza community shall be consistent in style, color, and materials in order to maintain uniformity throughout. Lighting should be subtle, providing a soft wash of light over illuminated objects such as monumentation. Hierarchy shall be established by using a variety of lighting fixtures and illumination levels based off of lighting design intent. Lighting styles shall tie into architectural styles and provide sufficient illumination for the safety and well being of the community. Preservation of "Night-Sky" should be considered in lighting design layout and fixture selection. Use of "cutoff" or louvered lamps to preserve ambiance of "Night-Sky" is highly encouraged. Fixture locations should be designed so that light source is not visible by pedestrian or vehicular traffic. Frosted, louvered, or prismatic lens should be considered where decorative lighting fixtures are visible and part of the aesthetic lighting program. Accent lighting of landscape and monumentation shall be incorporated into the following areas:

8.17.1 Entry Monument Lighting:

Avoid intensely bright or "hot" lighting of monuments; rather, each should be lit to provide a soft wash of light across the monument signage. Specimen trees should be up-lit with several fixtures into the canopy to avoid creating dark sides of the trees.

8.17.2 Neighborhood Park/ Mini Parks/ Walkway Lighting

Lighting of the walkways, tot lots, restroom facility, and parking areas within the Parks should be considered for safety and security. All planned parking areas shall have a minimum maintained lighting level of one-foot candle (1 F.C.) or greater. The lighting shall be from sunset to sunrise and be operated by a photocell. The site plan shall be provided to the Police Department. It shall show all buildings, parking areas, walkways, detailed landscape areas and point-by-point photometry calculation of required light levels. Utilization of a traditional Globe/Acorn Post mounted light fixture should be considered for both the park open space areas as well as interior street lighting fixtures. Keeping with the character of traditional materials, (like those found in the "Model Colony" in Downtown Ontario) this will help to create a better sense of scale to the pedestrian. Fixtures shall be vandal resistant, not less than (8) eight feet from ground level. Luminaries of not less than (42") may be utilized to illuminate a walkway if adjacent landscaping is of a variety which does not mature higher than (2) two feet.

8.18 LANDSCAPE DESIGN

8.18.1 Public Landscapes

- Landscape plantings in public areas should reflect a commitment to both developing a "sense of place" and maintaining harmony with the Ontario Ranch.
- Community Facilities District (CFD) areas shall be separated with a 6" by 6" concrete mow strip when adjacent to private property.
- A landscape architect licensed in California shall be retained to prepare planting and irrigation plans for all public areas. Arrangement of plants should incorporate the concepts of mass planting; plants should be placed to allow them to grow to their natural sizes and forms, and sheared hedges should be kept to a minimum.

The plant matrix at the end of this section offers a suggested plant palette for Ontario Esperanza; while it is by no means all-inclusive, plantings in public areas should draw primarily from this palette for visual community continuity.

8.18.2 Front Yard Landscapes

Plantings in front yards may vary substantially from the Ontario Esperanza palette, but should retain some of the character and style of the public plantings. ~~No more than 25% of the total square footage of any front yard shall be lawn~~ Turf shall not exceed 25% of the landscape area in residential front yards; the balance shall be composed of shrubs and groundcovers, with an emphasis on drought tolerant plant species. No more than ~~55%~~ 45% of the front yard area shall be hardscape. Turf areas shall be sized and shaped to optimize irrigation efficiency. If turf is used in isolated areas such as driveway strips, subsurface irrigation or microspray heads shall be required to avoid overspraying of these areas. Irregular shapes that cannot be irrigated should be avoided.

- Each single-family lot shall be provided with front yard landscaping and a permanent automatic irrigation system. At a minimum, a seeded turf lawn, appropriate shrubs and trees shall be provided as landscaping materials. A variety of typical landscape designs shall be provided for use on each lot within the subdivision.
- Multiple family residential product areas shall be provided with full landscape improvements throughout the development. At a minimum, a seeded turf lawn, appropriate shrubs and trees, and a permanent irrigation system shall be provided.
- Landscape and irrigation drawings for each development shall be submitted in conjunction with house construction plans. The plans shall be approved by the Planning Department and the Landscape Planning Division prior to the issuance of building permits.
- Areas of a lot or site which are not used for drive entries, parking, or approved outdoor uses shall be fully landscaped; all unpaved areas shall be landscaped; and all future development phase areas shall be hydroseeded.

8.18.3 Soil Testing

Soil samples shall be taken from several locations after the completion of rough grading operations, and a reputable soil-testing laboratory shall perform an agronomic soils test. The test shall assess soil fertility needs for water-wise California native and Mediterranean plant types. No planting shall take place until the soil has been properly prepared based on the recommendations of the soils testing laboratory. Organic soils amendments shall be incorporated as necessary to achieve a recommended percolation rate of one inch per hour.

8.18.4 Slope Landscaping

All manufactured and cut/fill slopes which exceed 3' in height shall be planted with an effective mixture of groundcover, shrubs, trees, and include jute matting. Such slopes shall also be irrigated as necessary to ensure germination and establishment. Landscape slopes shall not exceed 3:1 or greater and shall include the installation of jute matting. Where 2:1 landscape slopes are unavoidable, erosion blankets shall be installed with a 3-year durability.

8.18.5 Interior Slopes: Residential Interior

- Interior slopes may be more ornamental in character than exterior slopes. They may have a somewhat broader range of plant materials than exterior slopes, but should still be chosen primarily from the Ontario Esperanza plant palette and are subject to the same fuel modification restrictions.
- All manufactured and cut/fill slopes which exceed 3' in height shall be planted with an effective mixture of groundcover, shrubs, and trees. Such slopes shall also be irrigated as necessary to ensure germination and establishment.

8.18.6 Streetscape Landscaping

Streetscape Development Standards

- Turf grass ~~shall only be used in areas with street side parking and shall be located adjacent to the sidewalk or curb line.~~ is only permitted within streetscapes where streetside parking is identified and recycled water is available.
- All new plantings within the Ontario Esperanza planned community shall draw substantially from the Ontario Esperanza Plant List included in this document.
- All streetscape landscaping within the Ontario Esperanza planned community will be implemented by the Developer in accordance with this Specific Plan.
- The Developer shall install all primary and secondary improvements concurrently with the construction of the roadway on which they front. Neighborhood intersections shall be constructed as each neighborhood street is built.
- The Developer shall provide site inspection of all construction and installation of entries and intersections in accordance the City of Ontario requirements.

8.18.7 Irrigation Design

Irrigation for both public and private landscapes should be designed to be as water-efficient as possible. All irrigation systems shall have automatic controllers designed to properly water plant materials given the site's soil conditions, and irrigation systems for all public landscapes shall have automatic rain shut-off devices. Drip irrigation is not permitted with CFD landscape areas. Spray systems shall have low volume (gpm) matched-precipitation heads. All CFD areas are to be controlled with a central control irrigation system and all trees are to be irrigated utilizing a flush grade bubbler system on a separate valve. All CFD areas shall be designed to City Standard Specifications.

All irrigation products specified shall achieve an irrigation operational distribution uniformity of ~~70%~~ 65% or greater in all turf areas and ~~80%~~ in all other landscaped areas. Turf areas shall be irrigated with equipment that has a precipitation rate of one inch or less per hour as specified by the manufacturer. Stream rotator heads or low volume spray heads are acceptable for turf areas. Use of standard spray heads shall be avoided. Non turf shrub areas shall be irrigated with low volume micro spray or point application devices, where manufacturer's specification indicates output measured and expressed in gallons per hour.

Plant Matrix - Shrubs

Section 9. General Plan Consistency

California Government Code (Title 7, Division 1, Section 3, Article 8, Section 65440- 65457) permits the adoption and administration of Specific Plans as an implementation tool for elements contained within a jurisdiction's local General Plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan.

The Esperanza Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario General Plan. The "~~City of Ontario New Model Colony~~ Ontario Ranch Specific Plan Policy Matrix" which follows, describes the manner in which the Specific Plan complies with the General Plan.

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

The Ontario Plan 2050
Specific Plan Policy Matrix

Following are policies from the Ontario Plan 2050. The Ontario Plan establishes the direction and vision for the City of Ontario and provides a single comprehensive document to shape its future. The Ontario Plan provides for policies to accommodate change over its 30 year lifespan. The Ontario Plan consists of a six (6) part Component Framework: ***1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback****. The following matrix is intended to determine the adequacy of the proposed Specific Plan in meeting the polices of the Ontario Plan. The checklist shall be completed and submitted with the Specific Plan application. Check if the Specific Plan fully complies or partially complies with each respective policy, or if not applicable.*

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LAND USE ELEMENT					
LU-1 Balance					
Goal	**A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.**				
LU-1.1	**Strategic Growth.** We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	X		4 and 7	
Comments:					
LU-1.2	**Sustainable Community Strategy.** We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.	X		7	
Comments:					
LU-1.3	**Adequate Capacity.** We require adequate infrastructure and services for all development.	X		5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-1.4	**Multimodal Mobility.** We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities.	X		5	
Comments:					
LU-1.5	**Jobs-Housing Balance.** We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.	X		4 and 7	
Comments:					
LU-1.6	**Complete Community.** We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	X		4 and 7	
Comments:					
LU-1.7	**Revenues and Costs.** We require future amendments to our Land Use Plan to be accompanied by analyses of fiscal impacts.	X		7	
Comments:					
LU-2 Compatibility					
Goal	**Compatibility between a wide range of uses and resultant urban patterns and forms.**				
LU-2.1	**Land Use Decisions.** We minimize adverse impacts on adjacent properties when considering land use and zoning requests.	X		3 and 4	
Comments:					
LU-2.2	**Buffers.** We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.	X		4 and 5	
Comments:					
LU-2.3	**Hazardous Uses.** We regulate the development of industrial and similar uses that use, store, produce, or transport toxic substances, air emissions, other pollutants, or hazardous materials.				X
Comments:	*The General Plan does not designate the Esperanza Specific Plan for industrial land uses.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-2.4	**Regulation of Nuisances.** We regulate the location, concentration, and operation of potential nuisances.	X		4	
Comments:					
LU-2.5	**Regulation of Uses.** We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.	X		4	
Comments:					
LU-2.6	**Infrastructure Compatibility.** We require infrastructure to be aesthetically pleasing and in context with the community character.	X		4, 5 and 8	
Comments:					
LU-2.7	**Inter-jurisdictional Coordination.** We maintain an ongoing liaison with ONT, Caltrans, Public Utilities Commission, the railroads, and other agencies to help minimize impacts and improve the operations and aesthetics of their facilities.	X		7	
Comments:					
LU-2.8	**Transitional Areas.** We require development in transitional areas to protect the quality of life of current residents.	X		4	
Comments:					
LU-2.9	**Methane Gas Sites.** We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	X		4 and 7	
Comments:					
LU-2.10	**Sensitive Uses.** We monitor and share information with the community about stationary and non-stationary emission sources. We encourage siting and design of facilities to minimize health and safety risks on existing and proposed sensitive uses, especially in environmental justice areas.	X		7	
Comments:					
LU-2.11	**Context-Aware Transitions and Connections.** We require new development projects and land-planning efforts to provide context-aware and appropriate transitions and connections between existing and planned neighborhoods, blocks, sites, and buildings.	X		4	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-3 Flexibility					
Goal	**Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.**				
LU-3.1	**Development Standards.** We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes.	X		6 and 7	
Comments:					
LU-3.2	**Design Incentives.** We offer design incentives to help projects achieve the Vision.	X		6, 7 and 8	
Comments:					
LU-3.3	**Land Use Flexibility.** We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.	X		6 and 8	
Comments:					
LU-4 Phased Growth					
Goal	**Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.**				
LU-4.1	**Commitment to Vision.** We are committed to achieving our Vision but realize that it may take time and several interim steps to get there.	X		4 and 7	
Comments:					
LU-4.2	**Interim Development.** We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision.				X
Comments:	*The plan does not include the development of urban, mixed use, or transit-oriented Place Types.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-4.3	**Infrastructure Timing.** We require that the necessary infrastructure and services be in place prior to or concurrently with development.	X		4 and 5	
Comments:					
LU-4.4	**Shared Infrastructure.** We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.	X		4 and 5	
Comments:					
LU-5 Airport Planning					
Goal	**Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.**				
LU-5.1	**Coordination with Airport Authorities.** We collaborate with FAA, Caltrans Division of Aeronautics, airport owners, neighboring jurisdictions, and other shareholders in the preparation, update, and maintenance of airport-related plans.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.2	**Airport Planning Consistency.** We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans, and airport land use compatibility plans for ONT and Chino Airport.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.3	**Airport Impacts.** We work with agencies to maximize resources to mitigate the impacts and hazards related to airport operations – their homes.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.4	**ONT Growth Forecast.** We support and promote an ONT that accommodates 30 million annual passengers and 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.5	**Airport Compatibility Planning for ONT.** We create and maintain the Airport Land Use Compatibility Plan for ONT.				X
Comments:	*The plan is not within the airport impact zone.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-5.6	**Alternative Process.** We fulfill our responsibilities and comply with state law with regard to the Alternative Process for proper airport land use compatibility planning.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.7	**ALUCP Consistency with Land Use Regulations.** We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.8	**Chino Airport.** We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.				X
Comments:	*The plan is not within the airport impact zone.*				
HOUSING ELEMENT					
H-1 Neighborhoods & Housing					
Goal	**Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.**				
H-1.1	**Housing Rehabilitation.** We support the rehabilitation, maintenance, and improvement of single-family, multiple-family, and mobile homes through code compliance, removal of blight where necessary, and provision of rehabilitation assistance where feasible.	X		4 and 8	
Comments:					
H-1.2	**Neighborhood Conditions.** We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.	X		4 and 8	
Comments:					
H-1.3	**Community Amenities.** We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes and public safety for neighborhoods consistent with City master plans and neighborhood plans.	X		4 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-1.4	**Historical Preservation.** We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.	X		3	
Comments:					
H-1.5	**Neighborhood Identity.** We strengthen neighborhood identity through creating parks and recreational outlets, sponsoring neighborhood events, and encouraging resident participation in the planning and improvement of their neighborhoods.	X		4 and 8	
Comments:					
H-2 Housing Supply & Diversity					
Goal	**Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.**				
H-2.1	**Corridor Housing.** We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.	X		3 and 4	
Comments:					
H-2.2	**Historic Downtown.** We foster a vibrant historic downtown through facilitating a wide range of housing types and affordability levels for households of all ages, housing preferences, and income levels.				X
Comments:	*The plan does not include the development of a historic downtown.*				
H-2.3	**Ontario Airport Metro Center.** We foster a vibrant, urban, intense, and highly amenitized community in the Ontario Airport Metro Center Area through a mix of residential, entertainment, retail, and office-oriented uses.				X
Comments:	*The plan does not include the development of a Ontario airport metro center.*				
H-2.4	**Ontario Ranch.** We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	X		4 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-2.5	**Housing Design.** We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.	X		6 and 8	
Comments:					
H-2.6	**Infill Development.** We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.	X		3 and 4	
Comments:					
H-3 Governmental Regulations					
Goal	**A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.**				
H-3.1	**Incentives.** We maintain incentive programs that can be offered to projects that provide benefits to the community such as exceptional design quality, economic advantages, environmental sustainability, or other benefits that would otherwise be unrealized.	X		7	
Comments:					
H-3.2	**Flexible Standards.** We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.	X		6 and 8	
Comments:					
H-3.3	**Development Review.** We maintain a residential development review process that provides certainty and transparency for project stakeholders and the public, yet allows for the appropriate review to facilitate quality housing development.	X		4 and 7	
Comments:					
H-3.4	**Financial Incentives.** We consider financial incentives to facilitate and encourage the production, rehabilitation or improvement of housing, or provision of services where such activity furthers housing and community-wide goals.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-4 Housing Assistance					
Goal	**Increased opportunities for low- and moderate-income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities. Inclusive communities, racial equity, fair housing choice, and access to opportunity.**				
H-4.1	**Preservation of Affordable Apartments.** We strive to facilitate the preservation of the affordability of publicly assisted apartments for lower-income households through financial assistance, technical assistance, rehabilitation, and collaborative partnerships.				X
Comments:					
H-4.2	**Homeownership Opportunities.** We increase and expand homeownership rates for lower- and moderate-income households by offering financial assistance, low-interest loans, and educational resources, and by working in collaboration with partnerships.		X	4 and 7	
Comments:	*The plan provides a variety of homeowner ownership opportunities but does not include any affordable housing units.*				
H-4.3	**Rental Assistance.** We support the provision of rental assistance for individuals and families earning extremely low, very low, and low income with funding from the state and federal government.	X		7	
Comments:					
H-4.4	**Mixed-income Housing.** We encourage the integration of affordable housing in the Ontario Ranch, Ontario Airport Metro Center Area, and existing neighborhoods.	X		4 and 7	
Comments:					
H-4.5	**Collaborative Partnerships.** We support collaborative partnerships of nonprofit organizations, affordable housing developers, major employers, and for-profit developers to produce affordable housing.	X		7	
Comments:					
H-4.6	**Fair Housing.** We further fair housing by prohibiting discrimination in the housing market, lifting barriers that restrict access to housing, and providing education, support, and enforcement services to address discriminatory practices.	X		4 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-5 Special Needs					
Goal	**A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.**				
H-5.1	**Senior Housing.** We support the development of accessible and affordable senior housing and provide financial assistance for seniors to maintain and improve their homes.	X		4 and 7	
Comments:	*The plan does not include the development of senior housing.*				
H-5.2	**Family Housing.** We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.				X
Comments:					
H-5.3	**Disabled People.** We increase the supply of permanent, affordable, and accessible housing for people with disabilities, and provide assistance to allow them to maintain and improve their homes.				X
Comments:	*The plan meets all current ADA requirements but does not include any affordable housing units.*				
H-5.4	**Homeless People.** We partner with nonprofit partners to provide emergency shelters, transitional housing, permanent supportive housing, and supportive services for people who are homeless.				X
Comments:	*The plan does not include any emergency or homeless shelters.*				
H-5.5	**Supportive Services.** We financially support organizations, as feasible, that provide support services that meet the needs of those with special needs and further the greatest level of independence.				X
Comments:					
H-5.6	**Partnerships.** We collaborate with nonprofit organizations, private developers, employers, government agencies, and other interested parties to develop affordable housing and provide support services.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
PARKS & RECREATION ELEMENT					
PR-1 Planning & Design					
Goal	**A system of safe and accessible parks that meets the needs of the community.**				
PR-1.1	**Access to Parks.** In all new residential development areas, we strive to provide a park and/or recreational facility within walking distance (¼ mile) of every residence and prioritize the establishment of parks in environmental justice areas that do not have adequate access to parks.	X		4 and 8	
Comments:					
PR-1.2	**Adjacency to Schools.** We examine locating parks adjacent to school sites to promote joint-use opportunities.				X
Comments:	*The plan no longer includes plans to develop a school site.*				
PR-1.3	**Funding.** We shall seek outside, one-time sources of funding for capital improvements and reserve ongoing City funds primarily for operations and maintenance.	X		7	
Comments:					
PR-1.4	**Joint-use Opportunities.** In areas where there is a need but no City recreational facility, we explore joint-use opportunities. (e.g., school sites).	X		7	
Comments:					
PR-1.5	**Acreage Standard.** We strive to provide 5 acres of parkland (public and private) per 1,000 residents.	X		4 and 7	
Comments:					
PR-1.6	**Private Parks.** We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	X		4 and 7	
Comments:	*The Project developers will participate in the development impact fee program a s required for park fees.*				
PR-1.7	**Special Needs/Universal Design.** We attempt to provide recreational opportunities at parks for people of all ages and abilities.	X		7 and 8	
Comments:					
PR-1.8	**Renovation.** We examine renovating existing facilities prior to building replacement facilities.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
PR-1.9	**Phased Development. We require parks be built in new communities before a significant proportion of residents move in.**	X		4 and 7	
Comments:					
PR-1.10	**Master Plans for Individual Park Facilities.** We require an individual park master plan for parks in excess of 10 acres.				X
Comments:	*The plan does not include any parks in excess of 10 acres. The City of Ontario is the entity responsible for updating the Parks & Recreational Facilities Master Plan.*				
PR-1.11	**Environmental Function of Parks.** We require new parks to meet environmental management objectives.	X		4 and 7	
Comments:					
PR-1.12	**Trails.** We promote connections between parks and local trails including those managed by other public agencies.	X		4 and 7	
Comments:	*The plan includes parks and trails that connect to Citywide planned trails.*				
PR-1.13	**Equestrian Trails.** We require the design, construction, and maintenance of equestrian trails in Rural Residential designated areas.				X
Comments:	*The plan does not include any equestrian trails.*				
PR-1.14	**Multi-family Residential Developments.** We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.				X
Comments:	*The project developers will participate in the development impact fee program as required for park fees.*				
PR-1.15	**Trail Connectivity.** We strengthen and improve equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	X		4 and 7	
Comments:	*The plan includes multipurpose trails that connect to Citywide planned trails.*				
PR-1.16	**Equestrian Master Plan.** We use Homer Briggs Park as the primary focal point for the development of a Master Plan of Equestrian Trails in the Rural Residential area.				X
Comments:	*The plan does not include any equestrian trails.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
PR-2 Programming					
Goal	**A range of recreational programs provided by public, private, and nonprofit organizations that meet the needs of the community's varied interests, age groups, and abilities.**				
PR-2.1	**Participation.** We program park facilities to maximize utilization and participation, while considering park size, location, and population served.	X		4 and 8	
Comments:					
PR-2.2	**Needs Assessment.** We track the needs and priorities for recreational programming and look for ways to meet demand.	X		7	
Comments:					
PR-2.3	**Community Involvement.** We involve the local community in planning programs for neighborhood and community park facilities.	X		7	
Comments:					
PR-2.4	**Access to Programs.** We provide a range of recreational and physical exercise programs that are accessible to residents of all income levels throughout the community and prioritize establishing and maintaining equitable access for residents in environmental justice areas.	X		7	
Comments:					
PR-2.5	**Partnerships.** We partner with local and regional agencies, nonprofit organizations, and the private sector to provide a comprehensive range of recreational programs.	X		7	
Comments:					
PR-2.6	**Crime Deterrents.** We promote and participate in recreational programming as part of our crime prevention effort.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ENVIRONMENTAL RESOURCES ELEMENT					
ER-1 Water & Wasterwater					
Goal	**A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.**				
ER-1.1	**Local Water Supply.** We increase local water supplies to reduce our dependence on imported water. New and redevelopment projects are aligned with our available water supply and/or to enhance our available water supply.	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.2	**Matching Supply to Use.** We match water supply and quality to the appropriate use.	X		3 and 5	
Comments:					
ER-1.3	**Conservation and Sustainable Water Supply.** We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.4	**Supply-Demand Balance.** We require that available water supply and demands be balanced.	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.5	**Water Resource Management.** Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.6	**Urban Run-off Quantity.** We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	X		3 and 5	
Comments:					
ER-1.7	**Urban Run-off Quality.** We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	X		3 and 5	
Comments:	*The plan will comply with the City's Master Plan requirements for Wastewater management.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-1.8	**Wastewater Management.** We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	X		3 and 5	
Comments:	*The plan will comply with the City's Master Plan requirements for Wastewater management.*				
ER-2 Solid Waste & Recycling					
Goal	**A cost effective, integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates.**				
ER-2.1	**Waste Diversion.** We shall meet or exceed AB 939 requirements.	X		3 and 5	
Comments:					
ER-2.2	**Hazardous and Electronic Wastes.** We prohibit the disposal of hazardous and electronic waste into the municipal waste stream pursuant to state law.	X		3 and 5	
Comments:					
ER-2.3	**Purchase Products Made from Recycled Materials.** We purchase recycled-content products where it is cost effective.	X		3 and 5	
Comments:					
ER-3 Energy					
Goal	**Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**				
ER-3.1	**Conservation Strategy.** We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	X		3 and 5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-3.2	**Green Development– Communities.** We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	X		3 and 5	
Comments:					
ER-3.3	**Building and Site Design.** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	X		3 and 5	
Comments:					
ER-3.4	**Green Development– Public Buildings.** We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	X		3 and 5	
Comments:					
ER-3.5	**Fuel-Efficient and Alternative Energy Vehicles and Equipment.** We require purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.	X		3 and 5	
Comments:					
ER-3.6	**Generation- Renewable Sources.** We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	X		3 and 5	
Comments:					
ER-4 Air Quality					
Goal	**Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.**				
ER-4.1	**Land Use.** We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	X		3 and 5	
Comments:					
ER-4.2	**Sensitive Land Uses.** We prohibit the future siting of sensitive land uses within the distances defined by the California Air Resources Board for specific source categories, without sufficient mitigation.	X		3 and 5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-4.3	**Greenhouse Gases (GHG) Emissions Reductions.** We will reduce GHG emissions in accordance with regional, state, and federal regulations.	X		3 and 5	
Comments:					
ER-4.4	**Indoor Air Quality.** We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	X		3 and 5	
Comments:					
ER-4.5	**Transportation.** We promote mass transit and non-motorized mobility options (walking, biking) to reduce air pollutant emissions.	X		3 and 5	
Comments:					
ER-4.6	**Particulate Matter.** We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.	X		3 and 5	
Comments:					
ER-4.7	**Other Agency Collaboration.** We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source, with a particular focus on sources that affect environmental justice areas in Ontario.	X		3 and 5	
Comments:					
ER-4.8	**Tree Planting.** We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.	X		3 and 5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-4.9	**New Localized Air Pollution Sources Near Existing Sensitive Receptors.** We require new developments to conduct a Health Risk Assessment for land uses that generate more than 100 trucks per day or 40 trucks per day by trucks operating transportation refrigeration units (TRU's) within 1,000 feet from sensitive land uses (California Health and Safety Code § 42705.5(a)(5)). If the health risk assessment determines the new development poses health hazards that increase the incremental cancer risk above the threshold established by the South Coast Air Quality Management District (AQMD), we will only approve permits upon the condition that adequate mitigation measures are proposed and implemented for potential impacts on the sensitive uses around the site and along the route within Ontario taken by the trucks to and from freeways. We require new developments that must perform a health risk assessment to conduct additional public outreach by sending notifications in multiple languages to all residents living within 500 feet, and encourage hosting a public meeting.	X		3 and 5	
Comments:					
ER-5 Biological, Mineral & Agricultural Resources					
Goal	**Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.**				
ER-5.1	**Habitat Conservation Areas.** We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.				X
Comments:	*The Plan area is not within or near any habitat conservation areas.*				
ER-5.2	**Entitlement and Permitting Process.** We comply with state and federal regulations regarding protected species.	X		3 and 5	
Comments:					
ER-5.3	**Right to Farm.** We support the right of existing farms to continue their operations within the Ontario Ranch.				X
Comments:					
ER-5.4	**Transition of Farms.** We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	X		3, 4, 5, 6 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-5.5	**Mining Operations.** We prohibit future mining operations where the resource extraction activities are incompatible with existing or proposed adjacent land uses.	X		3 and 5	
Comments:					
COMMUNITY ECONOMICS ELEMENT					
CE-1 Complete Community					
Goal	**A complete community that provides for all incomes and stages of life.**				
CE-1.1	**Jobs-Housing Balance.** We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.				X
Comments:					
CE-1.2	**Jobs and Workforce Skills.** We use our economic development resources to: 1. Attract jobs suited for the skills and education of current and future City residents; 2. Work with regional partners to provide opportunities for the labor force to improve its skills and education; and 3. Attract businesses that increase Ontario's stake and participation in growing sectors of the regional and global economy.				X
Comments:					
CE-1.3	**Regional Approach to Workforce Development.** We work with our partners to provide workforce training and development services throughout the region, recognizing that Ontario employers rely on workers living outside of the City.				X
Comments:					
CE-1.4	**Business Retention and Expansion.** We continuously improve two-way communication with the Ontario business community and emphasize customer service to existing businesses as part of our competitive advantage.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-1.5	**Business Attraction.** We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.				X
Comments:					
CE-1.6	**Diversity of Housing.** We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	X		4 and 7	
Comments:					
CE-1.7	**Retail Goods and Services.** We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.				X
Comments:					
CE-1.8	**Regional Attraction.** We encourage the development and programming of regional, cultural, and entertainment destinations in Ontario.				X
Comments:					
CE-1.9	**Regional Leadership.** We provide leadership for public, quasi-public, and private-sector partners that help Ontario and its residents and businesses realize our goals and achieve our Vision.				X
Comments:					
CE-1.10	**Life-Long Education.** We work with our partners who provide life-long learning to ensure that our residents and workforce have access to education at all stages of life.				X
Comments:					
CE-1.11	**Socioeconomic Trends.** We continuously monitor, plan for, and respond to changing socioeconomic trends.				X
Comments:					
CE-1.12	**Circulation.** We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles.	X		4 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-1.13	**Safety and Security.** We invest in public safety and communicate our successes because the perception and reality of safety and security are necessary prerequisites for private investment and economic growth.				X
Comments:					
CE-2 Placemaking					
Goal	**A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.**				
CE-2.1	**Development Projects.** We require new development and redevelopment to create unique, high-quality places that add value to the community.	X		6 and 8	
Comments:					
CE-2.2	**Development Review.** We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	X		6 and 8	
Comments:					
CE-2.3	**Interim Development.** We require interim development that does not reflect the long-term Vision, be limited in scale of development so that the investment can be sufficiently amortized to make Vision-compatible redevelopment financially feasible.				X
Comments:					
CE-2.4	**Protection of Investment.** We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	X		6 and 8	
Comments:					
CE-2.5	**Private Maintenance.** We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-2.5	**Public Maintenance.** We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	X		7	
Comments:					
CE-3 Fiscal Decision-making					
Goal	**Decision-making deliberations that incorporate the full short-term and long-term economic and fiscal implications of proposed City Council actions.**				
CE-3.1	**Fiscal Impact Disclosure.** We require requests for City Council action to disclose the full fiscal impacts, including direct and indirect costs.				X
Comments:					
CE-3.2	**General Plan Amendments.** We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.				X
Comments:					
CE-3.3	**Long-Term Funding Disclosure.** We require those requesting City support or funding for projects or programs to disclose if and how they can be continued without further City support.				X
Comments:					
CE-3.4	**Improving Fiscal Decision-Making.** We periodically assess the accuracy of projections for staff time and City resources and use the assessment results to improve our fiscal decision-making process.				X
Comments:					
CE-3.5	**Sustainable Development.** We recognize impacts to municipal finances as an element of sustainability, and we require claims of sustainability to assess fiscal impacts.				X
Comments:					
CE-3.6	**Fully Funded Liability.** We require long-term liabilities, such as retiree medical benefits, employee accrued leave balances, and self-insured liability claims to be fully funded to ensure sound, long-term fiscal health.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-3.7	**Programmatically Balanced Budget.** We require that the annual budget include appropriations allocated in a manner to meet the goal of the programmatically balanced budget.			7	X
Comments:					
CE-3.8	**Budget Margins.** We require that the adopted budget for revenue and expenditures reflect sufficient budget margins to minimize negative impacts to City services due to economic uncertainties.			7	X
Comments:					
SAFETY ELEMENT					
S-1 Seismic & Geologic Hazards					
Goal	**Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.**				
S-1.1	**Implementation of Regulations and Standards.** We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	X		6 and 8	
Comments:					
S-1.2	**Entitlement and Permitting Process.** We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.	X		7	
Comments:					
S-1.3	**Continual Update of Technical Information.** We maintain up-to-date California Geological Survey seismic hazard maps.				X
Comments:					
S-1.4	**Seismically Vulnerable Structures.** We conform to state law regarding unreinforced masonry structures and coordinate with not-for-profits to facilitate seismic retrofits in environmental justice areas and for low-income households.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-2 Flood Hazards					
Goal	**Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.**				
S-2.1	**Entitlement and Permitting Process.** We require hydrological studies prepared by a state-certified engineer when new development is located in a 100-year or 500-year floodplain to assess the impact that the new development will have on the flooding potential of existing development down-gradient.	X		7	
Comments:	*Per project EIR.*				
S-2.2	**Floodplain Mapping.** We require any new development partially or entirely in 100-year flood zones to provide detailed floodplain mapping for 100- and 200-year storm events as part of the development approval process.	X		7	
Comments:					
S-2.3	**Facilities that Use Hazardous Materials.** We comply with state and federal law and do not permit facilities using, storing, or otherwise involved with substantial quantities of onsite hazardous materials to be located in the 100-year flood zone or 500-year flood zone unless all standards of elevation, floodproofing, and storage have been implemented to the satisfaction of the Building Department.				X
Comments:					
S-2.4	**Prohibited Land Uses.** We prohibit the development of new essential and critical facilities in the 100-year floodplain and discourage the development of new essential and critical facilities in the 500-year floodplain unless all standards of elevation and flood proofing demonstrate that a facility can be safe and operational during a flood event, implemented to the satisfaction of the Building Department.				X
Comments:					
S-2.5	**Stormwater Management.** We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces.	X		5 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-2.6	**Use of Flood Control Facilities.** We encourage joint use of flood control facilities as open space or other types of recreational facilities.				X
Comments:					
S-2.7	**Collaboration Between Agencies.** Collaborate with the San Bernardino County Flood Control District and other state and federal agencies to maintain flood-control infrastructure to minimize flood damage.				X
Comments:					
S-3 Fire & Rescue Hazards					
Goal	**Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.**				
S-3.1	**Prevention Services.** We proactively mitigate or reduce the negative effects of fire, hazardous materials release, and structural collapse by implementing the regularly adopted California Fire Code and California Building Code.	X		7	
Comments:					
S-3.2	**Community Outreach.** We provide education to local schools and community groups to promote personal and public safety.				X
Comments:					
S-3.3	**Fire and Emergency Medical Services.** We maintain sufficient fire stations, equipment and staffing to respond effectively to emergencies and meet the needs of the community and state requirements.				X
Comments:					
S-3.4	**Special Team Services.** We maintain effective special rescue services.				X
Comments:	*The City of Ontario is the entity responsible for maintaining effective special rescue services.*				
S-3.5	**Emergency Notifications.** We maintain a public alert notification system that efficiently conveys information about imminent, developing, ongoing, and concluding emergency events to residents and visitors, working with network providers that translate information into other languages.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-3.6	**Interagency Cooperation.** In order to back up and supplement our capabilities to respond to emergencies, we participate in the California Fire Rescue and Mutual Aid Plan.				X
Comments:					
S-3.7	**Water Supply and System Redundancy.** We monitor our water system to manage and ensure adequate firefighting water supplies.				X
Comments:					
S-3.8	**Fire Prevention through Environmental Design.** We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.	X		4, 5, 6, 7 and 8	
Comments:					
S-3.9	**Resource Allocation.** We analyze fire data to evaluate the effectiveness of our fire prevention and reduction strategies and allocate resources accordingly.				X
Comments:					
S-4 Noise Hazards					
Goal	**An environment where noise does not adversely affect the public's health, safety, and welfare.**				
S-4.1	**Noise Mitigation.** We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	X		6, 7 and 8	
Comments:	*Per project EIR noise study.*				
S-4.2	**Coordination with Transportation Authorities.** We collaborate with airport owners, FAA, Caltrans, SBCTA, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of, and updates to transportation-related plans to minimize noise impacts and provide appropriate mitigation measures.				X
Comments:					
S-4.3	**Airport Noise Mitigation.** We aggressively pursue funding and utilize programs to reduce effects of aircraft noise in impacted areas of our community.				X
Comments:	*The plan is not within the airport impact zone.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-4.4	**Truck Traffic.** We manage truck traffic to minimize noise impacts on sensitive land uses.	X		3, 5 and 6	
Comments:					
S-4.5	**Roadway Design.** We design streets and highways to minimize noise impacts.	X		3, 5 and 6	
Comments:					
S-4.6	**Airport Noise Compatibility.** We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise-sensitive land uses within airport noise impact zones.				X
Comments:	*The plan is not within the airport impact zone.*				
S-4.7	**Rail Noise Mitigation.** We require residential and mixed use development of vibration-sensitive uses in areas within 200 feet of rail to evaluate for indoor vibration levels and mitigate any exceedances of the Federal Transit Administration vibration-annoyance criteria.				X
Comments:	*The plan is not within 200 feet of any rail system.*				
S-5 Wind-Related Hazards					
Goal	**Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.**				
S-5.1	**Dust Control Measures.** We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	X		7	
Comments:					
S-5.2	**Grading in High Winds.** We prohibit excavation and grading during strong wind conditions, as defined by the Building Code.	X		7	
Comments:					
S-5.3	**Public Safety Power Shutoffs.** We coordinate with utility companies to minimize service interruptions, such as Public Safety Power Shutoffs, before, during, and after windstorms and wind-related hazards.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-6 Hazardous Materials & Waste					
Goal	**Reduced potential for hazardous materials exposure and contamination.**				
S-6.1	**Disclosure and Notification.** We enforce disclosure laws that require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use, or transport.				X
Comments:					
S-6.2	**Response to Hazardous Materials Releases.** We respond to hazardous materials incidents and coordinate these services with other jurisdictions.				X
Comments:					
S-6.3	**Safer Alternatives.** We minimize our use of pesticides and other hazardous materials by choosing non-toxic alternatives that do not pose a threat to the environment, especially when it could affect public park facilities and open spaces.	X		7	
Comments:					
S-6.4	**Safe Storage and Maintenance Practices.** We require that the users of hazardous materials be adequately prepared to prevent and mitigate hazardous materials releases.				X
Comments:					
S-6.5	**Location of Hazardous Material Facilities.** We regulate facilities that will be involved in the production, use, storage, or disposal of hazardous materials, pursuant to federal, state, county, and local regulations, so that impacts to the environment and sensitive land uses are mitigated. We prohibit new hazardous waste facilities in close proximity to sensitive land uses and environmental justice areas.				X
Comments:					
S-6.6	**Location of Sensitive Land Uses.** We prohibit new sensitive land uses from locating within airport safety zones and near existing sites that use, store, or generate large quantities of hazardous materials.				X
Comments:	*The plan does not have any sensitive land uses.*				
S-6.7	**Household Hazardous Waste.** We support the proper disposal of household hazardous substances.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-6.8	**Mitigation and Remediation of Groundwater Contamination.** We actively participate in local and regional efforts directed at both mitigating environmental exposure to contaminated groundwater and taking action to clean up contaminated groundwater once exposure occurs.	X		7	
Comments:					
S-6.9	**Remediation of Methane.** We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	X		7	
Comments:					
S-7 Law Enforcement					
Goal	**Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.**				
S-7.1	**Police Unit Response.** We respond to calls for service in a timely manner.				X
Comments:					
S-7.2	**Community Oriented Problem Solving (C.O.P.S.).** We support and maintain the mission of COPS to identify and resolve community problems.				X
Comments:					
S-7.3	**Prevention Services.** We provide crime prevention programs targeted to youth, parents, seniors, businesses, and neighborhoods.				X
Comments:	*The City of Ontario is the entity responsible for providing crime prevention programs.*				
S-7.4	**Crime Prevention through Environmental Design (CPTED).** We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.	X		4, 6 and 8	
Comments:					
S-7.5	**Interdepartmental Coordination.** We utilize all City departments to help reduce crime and promote public safety.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-7.6	**Partnerships.** We partner with other local, state, and federal law enforcement agencies and private security providers to enhance public safety services in Ontario.				X
Comments:					
S-7.7	**Resource Allocation.** We analyze crime data to evaluate the effectiveness of crime prevention and reduction strategies and allocate resources accordingly.				X
Comments:					
S-7.8	**Social Services.** We support behavioral health and social services as part of the public safety solution.				X
Comments:					
S-8 Emergency Management					
Goal	**Disaster resilient, prepared community through effective emergency/disaster preparedness, response, mitigation, and recovery.**				
S-8.1	**State and Federal Mandates.** We maintain emergency management programs that meet the requirements of the State of California Standardized Emergency Management System (SEMS) and the National Incident Management System (NIMS).				X
Comments:					
S-8.2	**Emergency Management Plans.** We maintain, update, and adopt the Emergency Operations Plan (EOP) and incorporate, by reference the City's Hazard Mitigation Plan (HMP).				X
Comments:					
S-8.3	**Emergency/Disaster Training Exercises.** We conduct training and exercises to prepare for and evaluate emergency/disaster response and recovery procedures.				X
Comments:					
S-8.4	**Interagency Collaboration.** We maintain partnerships, including automatic aid agreements, with fire protection, police and sheriff departments, and emergency management agencies in San Bernardino and Riverside County to strengthen emergency response.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-8.5	**Interdepartmental Coordination.** We utilize all City departments to help support emergency/disaster preparedness, response, mitigation, and recovery.				X
Comments:	*The City of Ontario is the entity responsible for interdepartmental coordination to support emergency/disaster situations.*				
S-8.6	**Community Outreach.** We provide education to the community to promote personal, family, and community emergency preparedness to both natural and human-generated hazards.				X
Comments:	*The City of Ontario is the entity responsible for providing education to the community.*				
S-8.7	**Extreme Heat and Air Quality.** We work to ensure that all community members are informed about and have access to community cooling centers and clean air centers during extreme heat events or wildfires, with a focus on serving environmental justice communities. We support the development of extreme heat emergency response policies and practices to address these critical health risks in the community.				X
Comments:	*The City of Ontario is the entity responsible for providing the community with information and access to situations of extreme heat and air quality conditions.*				
S-8.8	**Regional Partnerships for Climate Adaptation.** We partner with local governments in San Bernardino County, Riverside County, and Inland Southern California Climate Collaborative to develop regional climate change adaptation strategies and programs.				X
Comments:	*The City of Ontario is the entity responsible for local and regional partnerships for climate change adaptation strategies and programs.*				
S-8.9	**Backup Power in Critical Facilities.** We require backup power be maintained in critical facilities. We encourage backup power solutions that include renewable energy components.				X
Comments:	*The City of Ontario is the entity responsible for maintaining/providing backup power in critical facilities.*				
S-9 Energy Resiliency					
Goal	**Incorporate energy efficient practices and renewable energy systems to improve air quality, comfort, and energy reliability during temporary power outages.**				
S-9.1	**Solar Energy.** We support and may incentivize the installation of residential and commercial solar panels and battery storage systems that can provide electricity during power outages.	X		7	
Comments:	*The City of Ontario is the entity responsible for supporting and incentivizing the installation and use of solar energy.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-9.2	**Renewable Energy.** Renovate existing city-owned facilities and plan future facilities to include renewable energy generation capacity and battery storage as part of an effort to make public facilities and services greener and more resilient to power outages.				X
Comments:					
S-9.3	**Energy Efficiency Retrofits.** We support and may incentivize retrofits to residential and commercial buildings that improve energy efficiency and insulation from extreme temperatures, giving priority towards low-income applicants.				X
Comments:					
MOBILITY ELEMENT					
M-1 Roadway System					
Goal	**A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.**				
M-1.1	**Roadway Design and Maintenance.** We require our roadways to: 1. Comply with federal, state, and local design and safety standards; 2. Meet the needs of multiple transportation modes and users; 3. Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; 4. Be maintained in accordance with best practices; 5. Be compatible with the streetscape and surrounding land uses; and 6. Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.	X		5, 7 and 8	
Comments:	*Per project EIR traffic study.*				
M-1.2	**Mitigation of Impacts.** We require development to mitigate its traffic impacts.	X		5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-1.3	**Agency Coordination on Roadway Improvements.** We work with Caltrans, SBCTA, and others to identify, fund, and implement needed improvements to roadways when necessary. We work with neighboring jurisdictions to promote regional connectivity, access, and meet operational level of service standards at the City limits.				X
Comments:					
M-1.4	**Complete Streets.** We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	X		5 and 8	
Comments:					
M-1.5	**Level of Service.** Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).				X
Comments:					
M-1.6	**Reduce Vehicle Miles Traveled.** We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-2 Active Transportation					
Goal	A system of trails and corridors that facilitate and encourage active modes of transportation.				
M-2.1	**Active Transportation.** We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	X		5 and 8	
Comments:					
M-2.2	**Bicycle System.** We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	X		5 and 8	
Comments:					
M-2.3	**Pedestrian Walkways.** We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	X		5 and 8	
Comments:					
M-2.4	**Network Opportunities.** We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed- use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.	X		5 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-3 Public Transit					
Goal	**A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.**				
M-3.1	**Transit Partners.** We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available, cost-efficient, and convenient, particularly for residents in environmental justice areas.				X
Comments:					
M-3.2	**Alternative Transit Facilities at New Development.** We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.				X
Comments:					
M-3.3	**Transit-Oriented Development.** We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use and reduce vehicle miles traveled.	X		4, 5, and 8	
Comments:					
M-3.4	**Bus Rapid Transit (BRT) Corridors.** We work with regional transit agencies to implement BRT service and reduce vehicle miles traveled by targeting destinations and corridors with the highest number of potential riders.				X
Comments:					
M-3.5	**Light Rail.** We support extension of the Metro Rail Gold Line to Ontario, and will work to secure station locations at the proposed multimodal transit center.				X
Comments:	*The plan is not within proximity of a light rail station location.*				
M-3.6	**Metrolink Expansion.** We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center.				X
Comments:	*The plan is not within proximity of a multimodal transit center or Downtown.*				
M-3.7	**High Speed Rail.** We encourage the development of high-speed rail systems that would enhance regional mobility in Southern California and serve the City of Ontario.				X
Comments:	*The plan is not within proximity of the high speed rail system.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-3.8	**Feeder Systems.** We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario.				X
Comments:					
M-3.9	**Ontario Airport Metro Center Circulator.** We will explore development of a convenient mobility system, including but not limited to shuttle service, people mover, and shared car system, for the Ontario Airport Metro Center.				X
Comments:	*The plan is not within proximity of the Ontario Airport.*				
M-3.10	**Multimodal Transportation Center.** We intend to ensure the development of a multimodal transportation center near ONT airport to serve as a transit hub with amenities for transit riders, pedestrians, and bicyclists transitioning to local buses, BRT, the Gold Line, high-speed rail, the proposed Ontario Airport Metro Center Circulator, and other future transit modes. We support locations for the multimodal transportation center that are north of ONT airport, between Vineyard Avenue and Interstate 15.				X
Comments:	*The plan is not within proximity of the ONT airport.*				
M-3.11	**Transit and Community Facilities.** We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit. Conversely, we plan (and coordinate with other transit agencies to plan) future transit routes to serve existing community facilities.				X
Comments:					
M-4 Goods Movement					
Goal	**An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.**				
M-4.1	**Truck Routes.** We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-4.2	**Regional Participation.** We work with regional and subregional transportation agencies and adjacent cities to plan and implement goods movement strategies, including regional truck routes, plans and projects that improve mobility, support the efficient movement of goods, and minimize negative environmental impacts.				X
Comments:					
M-4.3	**Railroad Grade Separations.** We eliminate at-grade rail crossings identified on Exhibit M-01, Roadway Classifications.				X
Comments:	*The plan is not within proximity of a railroad.*				
M-4.4	**Environmental Considerations.** We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	X		5 and 7	
Comments:					
M-4.5	**Air Cargo.** We support and promote a ONT airport that accommodates 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.				X
Comments:	*The plan is not within proximity of the ONT airport.*				
M-5 Regional Transportation					
Goal	**A proactive leadership role in helping identify and facilitate implementation of strategies that address regional transportation challenges.**				
M-5.1	**Regional Leadership.** We maintain a leadership role to help identify and implement potential solutions to long-term regional transportation problems.				X
Comments:					
M-5.2	**Land Use Compatibility with Regional Transportation Facilities.** We work with ONT, railroads, Caltrans, SBCTA, and other transportation agencies to minimize impacts.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
COMMUNITY DESIGN ELEMENT					
CD-1 Image & Identity					
Goal	**A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.**				
CD-1.1	**City Identity.** We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.	X		7	
Comments:					
CD-1.2	**Place Types.** We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.				X
Comments:					
CD-1.3	**Existing Neighborhoods.** We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.				X
Comments:					
CD-1.4	**Transportation Corridors.** We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.	X		7	
Comments:					
CD-1.5	**View Corridors.** We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2 Design Quality					
Goal	**A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.**				
CD-2.1	**Quality Building Design and Architecture.** We encourage all development projects to convey visual interest and character through: 1. Building volume, massing, and height to provide context-appropriate scale and proportion; 2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and 3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.	X		6 and 8	
Comments:					
CD-2.2	**Neighborhood Design.** We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as: 1. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services; 2. Varied parcel sizes and lot configurations to accommodate a diversity of housing types; 3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access; 4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and 5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	X		6 and 8	
Comments:					
CD-2.3	**Commercial Areas.** We desire commercial areas and centers to be distinctive, pedestrian friendly, functional, and vibrant with a range of businesses, places to gather, and connectivity to the neighborhoods they serve.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2.4	**Urban, Mixed Use, and Transit-oriented Areas.** We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type.				X
Comments:					
CD-2.5	**Streetscapes.** We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	X		6 and 8	
Comments:					
CD-2.6	**Connectivity.** We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: 1. Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic; 2. A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and 3. Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.	X		6 and 8	
Comments:					
CD-2.7	**Sustainability.** We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.	X		6 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2.8	**Safe Design.** We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.	X		6 and 8	
Comments:					
CD-2.9	**Landscape Design.** We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	X		6 and 8	
Comments:					
CD-2.10	**Parking Areas.** We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include: 1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field. 2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping. 3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	X		6 and 8	
Comments:					
CD-2.11	**Entry Statements.** We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	X		6 and 8	
Comments:					
CD-2.12	**Site and Building Signage.** We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	X		6 and 8	
Comments:					
CD-2.13	**Entitlement Process.** We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2.14	**Availability of Information.** We provide easy access to information for developers, builders and the public about design quality, construction quality, and sustainable building practices.				X
Comments:					
CD-2.15	**Leverage Professional and Trade Organizations.** We support excellence in design and construction quality through collaboration with trade and professional organizations that provide expertise, resources and programs for developers, builders, and the public.				X
Comments:					
CD-2.16	**Transit Stops.** We require transit stops be conveniently located, well lit, safe, and clearly accessible to pedestrians, bicyclists, and people of all abilities.				X
Comments:					
CD-3 Urban, Mixed Use, and Transit-Oriented Place Types					
Goal	**Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.**				
CD-3.1	**Unique Identity.** We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.				X
Comments:					
CD-3.2	**Comfortable, Human-Scale Public Realm.** We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-3.3	**Complete and Connected Network.** We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	X		6 and 8	
Comments:					
CD-3.4	**Context-Aware and Appropriate Design.** We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.	X		6 and 8	
Comments:					
CD-3.5	**Active Frontages.** We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	X		6 and 8	
Comments:					
CD-3.6	**Managed Infrastructure.** We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.	X		6 and 8	
Comments:					
CD-4 Historic Preservation					
Goal	**Historic buildings, streets, landscapes, and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, have been preserved and serve as a focal point for civic pride and identity.**				
CD-4.1	**Cultural Resource Management.** We update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-4.2	**Collaboration with Property Owners and Developers.** We educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and unique neighborhoods.				X
Comments:					
CD-4.3	**Collaboration with Outside Agencies.** We pursue opportunities to team with other agencies, local organizations, and nonprofits in order to preserve and promote Ontario's heritage.				X
Comments:					
CD-4.4	**Incentives.** We use the Mills Act and other federal, state, regional and local programs to assist property owners with the preservation of select properties and structures.				X
Comments:					
CD-4.5	**Adaptive Reuse.** We actively promote and support the adaptive reuse of historic sites and buildings to preserve and maintain their viability.				X
Comments:					
CD-4.6	**Promotion of Public Involvement in Preservation.** We engage in programs to publicize and promote the City's and the public's involvement in preservation efforts.				X
Comments:					
CD-4.7	**Public Outreach.** We provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, the Ontario Museum of History and Art, and the Robert E. Ellingwood Model Colony History Room.				X
Comments:					
CD-5 Protection of Investment					
Goal	**A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.**				
CD-5.1	**Maintenance of Buildings and Property.** We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-5.2	**Maintenance of Infrastructure.** We require the continual maintenance of infrastructure.				X
Comments:					
CD-5.3	**Improvements to Property & Infrastructure.** We provide programs to improve property and infrastructure.				X
Comments:					
CD-5.4	**Neighborhood Involvement.** We encourage active community involvement to implement programs aimed at the beautification and improvement of neighborhoods.				X
Comments:					
SOCIAL RESOURCES ELEMENT					
SR-1 Health					
Goal	**Residents have access to information, services and goods that improve their health and wellbeing.**				
SR-1.1	**Partnering for Healthcare.** We work with healthcare providers, and local, regional, state, and federal agencies to attract and retain a diversity of affordable, quality healthcare and facilities for the entire community.				X
Comments:					
SR-1.2	**Nutrition Choices.** We support the promotion of equitable access to affordable healthy food choices in the community, including community gardens, farmers markets, and cooking classes.				X
Comments:					
SR-1.3	**Health Education.** We promote equitable access to health education, including disease prevention, mental health, nutrition, and physical fitness.				X
Comments:					
SR-1.4	**Physical Activity.** We encourage activities and community design that improve the physical fitness of our community members, with an emphasis on the provision of activities and facilities in environmental justice areas.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-2 Education					
Goal	**A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.**				
SR-2.1	**Educational Partners.** We partner with educational institutions throughout the region in order to expand the range and quality of educational offerings available to the community.				X
Comments:					
SR-2.2	**Workforce Training.** We will work with industrial organizations, businesses, and educational institutions to create opportunities for workforce training.				X
Comments:					
SR-2.3	**Joint Use of Facilities.** We partner with public and private educational institutions to jointly use facilities for both City and educational purposes.				X
Comments:					
SR-2.4	**Access to Schools.** We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.				X
Comments:					
SR-2.5	**School Facilities.** We plan and coordinate with school districts for designing and locating school facilities to meet the City's goals, such as for health, walkability, and safety and to minimize impacts to existing neighborhoods.				X
Comments:					
SR-2.6	**Language.** We promote broad outreach in languages used by the community for proposed projects that could negatively affect environmental justice areas.				X
Comments:					
SR-2.7	**Community Engagement.** We promote targeted outreach and education to historically underrepresented groups to encourage meaningful participation in decision-making process for projects whose outcomes will affect land use in environmental justice areas.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-3 Community & Leisure Activities					
Goal	**A range of community and leisure programs and activities provided by public, private, and nonprofit organizations that meet the needs of the community's varied interests, age groups and abilities.**				
SR-3.1	**Partnerships.** We partner with local and regional agencies, nonprofit organizations, and the private sector to provide a comprehensive range of community activities and events to citizens.				X
Comments:					
SR-3.2	**Needs Assessment.** We track the needs and priorities for community services and look for ways to meet demands and avoid duplication of offerings.				X
Comments:					
SR-3.3	**Program Outreach.** We promote information about leisure activities, classes, special events, and other services and activities to our community.				X
Comments:					
SR-3.4	**Community Events.** We plan and actively participate in regularly scheduled community events and seasonal or yearly citywide events.				X
Comments:					
SR-3.5	**Community Activities as Crime Deterrents.** We promote and participate in community activities as part of our crime prevention efforts.				X
Comments:					
SR-4 Library					
Goal	**City libraries that connect community members of all ages and abilities to a broad range of programs, communication, and informational resources.**				
SR-4.1	**Community Needs.** We identify and monitor community needs for library services, technology, and facilities, and tailor them to effectively meet those needs.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-4.2	**Interagency Coordination.** We leverage relationships with outside agencies, educational institutions, and neighboring jurisdictions to share library resources to the benefit of Ontario residents.				X
Comments:					
SR-4.3	**Library Outreach.** We outreach to the community to increase the patronage of the library.				X
Comments:					
SR-4.4	**Coordination with Other Community Services.** We coordinate library programs with other recreational and community programs and facilities.				X
Comments:					
SR-4.5	**Focal Points of the Community.** We design and program Ontario's libraries as focal points of community engagement, including public outreach and community events.				X
Comments:					
SR-4.6	**Robert E. Ellingwood Model Colony History Room.** We work with the Ontario Museum of History and Art in order to collect, preserve, and display artifacts and images from Ontario's heritage and connect the City's past to the present through the History Room.				X
Comments:					
SR-5 Entertainment & Culture					
Goal	**Local heritage, entertainment, and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.**				
SR-5.1	**Provision of Entertainment and Culture.** We support equitable access to a range of entertainment and cultural experiences such as public art, exhibitions, and performances.				X
Comments:					
SR-5.2	**Local Heritage Education.** We partner with educational providers to promote culture and heritage.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-5.3	**Public Art.** We encourage public art in buildings, parks, open spaces, and other public and private spaces.				X
Comments:					
SR-5.4	**Private-Public Sector Events.** We partner with private and nonprofit sectors to provide and promote participation in cultural activities including fairs, festivals, and other events geared to neighborhoods, the City as a whole, and the region.				X
Comments:					
SR-5.5	**Promotion of Ontario Artists and Musicians.** We promote awareness of entertainment and culture produced in Ontario.				X
Comments:					

RESOLUTION NO. PC25-050

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PMTT24-008, A TENTATIVE TRACT MAP TO SUBDIVIDE FOR CONDOMINIUM PURPOSES APPROXIMATELY 10.02 ACRES OF LAND INTO 28 NUMBERED LOTS FOR 161 MULTIPLE-FAMILY UNITS AND 15 LETTERED LOTS FOR PRIVATE STREETS, LANDSCAPE EDGES, AND COMMON OPEN SPACE, LOCATED SOUTH OF CHATHAM STREET, WEST OF CLIFTON AVENUE, EAST OF AMHERST AVENUE, AND NORTH OF EUCALYPTUS AVENUE, WITHIN PLANNING AREA 11 (RD-7 / ROW TOWNHOMES) OF THE ESPERANZA SPECIFIC PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1073-101-050

WHEREAS, GDC Investments 13, LP (Applicant) filed an Application for the approval of a Tentative Tract Map (TTM 20730), File No. PMTT24-008, as described in the title of this Decision (hereinafter referred to as Application or Project); and

WHEREAS, the Application applies to approximately 10.02 acres of land generally located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue, within Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan, identified as Assessor's Parcel Number 1073-101-050, and presently vacant; and

WHEREAS, the property to the north of the Project site is within the Esperanza Specific Plan, designated Park, and developed with residential uses; the property to the east is within the Esperanza Specific Plan, designated PA-4 (RD-6 / 6-Pack Courtyard), and developed with residential uses; the property to the south is within the Esperanza Specific Plan, designated PA-7 (RD-1 / SFD 50' wide lots), and developed with residential uses; and the property to the west is within the Esperanza Specific Plan, designated PA-10 (RD-3 / SFD 2-Pack), and developed with residential uses; and

WHEREAS, Tentative Tract Map No. 20730 (File No. PMTT24-008) is consistent with the RD-7 (Row Townhome) land use designation and development standards of the Esperanza Specific Plan, including density, setbacks, height, and open space requirements; and

WHEREAS, Tentative Tract Map No. 20730 (File No. PMTT24-008) proposes to subdivide the 10.02-acre site into 28 numbered lots for a total of 161 multiple family units and 15 lettered lots for private streets, landscape edges, and common open space; and

WHEREAS, the Tentative Tract Map is consistent with the land use designation, density, and development standards of the Esperanza Specific Plan; and

WHEREAS, The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (SEIR)(SCH No. 2021070364, certified by the City Council on August 16, 2022, hereinafter referred to as Certified SEIR), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as EIR Addendum) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as CEQA); and

WHEREAS, the environmental impacts of this Project were thoroughly analyzed in the SEIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for Implementing the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000, et seq. — (hereinafter referred to as CEQA) and an SEIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of TOP 2050, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as ALUCP), which applies only to jurisdictions within San

Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on September 15, 2025, the Development Advisory Board of the City of Ontario conducted a hearing to consider the Addendum and the Project, and concluded said hearing on that date, voting to issue Decision Nos. DAB25-031 AND DAB25-032, respectively, recommending that the Planning Commission approve the Application; and

WHEREAS, as the first action on the Project, on September 23, 2025, the Planning Commission issued a Resolution adopting the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on September 23, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to TOP 2050 Supplemental Environmental Impact Report (SEIR)(State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Local Guidelines for Implementing the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the SEIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified SEIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of TOP 2050, as the Project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan (ALUCP) Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670, et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission therefore finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing,

and upon the specific findings set forth in the Sections above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Tentative Tract Map is consistent with the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050, and applicable area and specific plans, and planned unit developments.*** The proposed Tentative Tract Map is located within the Medium Density land use district of the Policy Plan Land Use Map, and Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan zoning district. The proposed subdivision is consistent with the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of TOP, as the project will contribute to providing "a spectrum of housing types and price ranges that match the jobs in the City, and that make it possible for people to live and work in Ontario and maintain a quality of life" (Goal LU-1). Furthermore, the Project will promote the City's policy to "incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop, and recreate within Ontario" (Policy LU-1.6 Complete Community).

(2) ***The design or improvement of the proposed Tentative Tract Map is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050, and applicable specific plans and planned unit developments.*** The proposed Tentative Tract Map is located within the Medium Density Residential land use district of the Policy Plan Land Use Map, and Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan. The proposed design or improvement of the subdivision is consistent with the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of TOP, as the project will contribute to providing "[a] high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct" (Goal CD-2). Furthermore, the Project will promote the City's policy to "create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:

- A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
- Varied parcel sizes and lot configurations to accommodate a diversity of housing types;
- Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;
- Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor

living room"), as appropriate; and

- Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users." (Policy CD-2.2 *Neighborhood Design*).

(3) ***The site is physically suitable for the type of development proposed.*** The project site meets the minimum lot area and dimensions of Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan and is physically suitable for the type of residential development proposed in terms of zoning, land use and development activity proposed, and existing and proposed site conditions.

(4) ***The site is physically suitable for the density/intensity of development proposed.*** The project site is proposed for residential development at 16.7 DUs/acre. The project site meets the minimum lot area and dimensions of the Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan and is physically suitable for this proposed density of development.

(5) ***The design of the subdivision or the proposed improvements thereon, are not likely to cause substantial environmental damage, or substantially and avoidably injure fish or wildlife, or their habitat.*** The Project site is not located in an area that has been identified as containing species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service, nor does the site contain any riparian habitat or other sensitive natural community, and no wetland habitat is present on site; therefore, the design of the subdivision, or improvements proposed thereon, are not likely to cause substantial environmental damage, or substantially and avoidably injure fish or wildlife, or their habitat.

(6) ***The design of the subdivision, or the type of improvements thereon, are not likely to cause serious public health problems.*** The design of the proposed subdivision, and the residential improvements existing or proposed on the project site, are not likely to cause serious public health problems, as the project is not anticipated to involve the transport, use, or disposal of hazardous materials during either construction or project implementation, include the use of hazardous materials or volatile fuels, nor are there any known stationary commercial or industrial land uses within close proximity to the subject site that use/store hazardous materials to the extent that they would pose a significant hazard to visitors or occupants to the project site.

(7) ***The design of the subdivision, or the type of improvements thereon, will not conflict with easements acquired by the public at large for access through, or use of property within, the proposed subdivision.*** The proposed subdivision has provided for all necessary public easements and dedications for access through, or use of property within, the proposed subdivision. Furthermore, all such public easements and

dedications have been designed pursuant to: (a) the requirements of the Policy Plan component of TOP 2050 and applicable area plans; (b) applicable specific plans or planned unit developments; (c) applicable provisions of the City of Ontario Development Code; (d) applicable master plans and design guidelines of the City; and (e) applicable Standard Drawings of the City.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in the Sections above, the Planning Commission hereby APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East B Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 23rd day of September 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nicola Ricci
Planning Commission Chairman

ATTEST:

Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC25-050, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on September 23, 2025, by the following roll call vote, to wit:

AYES: Anderson, DeDiemar, Lampkin, Marks, Ricci

NOES: Gage

Project Description: A Tentative Tract Map to subdivide approximately 10.02 acres of land into 28 numbered lots for 161 multiple-family units and 15 lettered lots for private streets, landscape edges, and common open space, located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue, within Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan; (APN: 1073-101-050).; **submitted by GDC Investments 13.**

Prepared By: Robert Morales, Associate Planner
Phone: 909.395.2432 (direct)
Email: Rmorales@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Time Limits.

(a) Tentative Tract Map approval shall become null and void 2 years following the effective date of application approval, unless the final parcel/tract map has been recorded, or a time extension has been approved by the Planning Commission pursuant to Development Code Section 2.02.025 (Time Limits and Extensions). This Permit does not supersede any individual time limits specified herein for performance of specific conditions or improvements.

(b) Development Plan approval shall become null and void 2 years following the effective date of application approval, unless a building permit is issued and construction is commenced, and diligently pursued toward completion, or a time extension has been approved by the Planning Director. This condition does not supersede any individual time limits specified herein, or any other departmental conditions of approval applicable to the Project, for the performance of specific conditions or improvements.

2.2 Subdivision Map.

(a) The Final Tract Map shall be in conformance with the approved Tentative Tract/Parcel Map on file with the City. Variations from the approved Tentative Tract/Parcel Map may be reviewed and approved by the Planning Department. A substantial variation from the approved Tentative Tract/Parcel Map may require review and approval by the Planning Commission, as determined by the Planning Director.

(b) Tentative Tract Map approval shall be subject to all conditions, requirements and recommendations from all other departments/agencies provided on the attached reports/memorandums.

(c) The subject Tentative Tract Map for condominium purposes shall require the recordation of a condominium plan concurrent with the recordation of the Final Tract/Parcel Map and CC&Rs.

(d) Pursuant to California Government Section 66474.9, the subdivider agrees that it will defend, indemnify, and hold harmless the City of Ontario or its agents, officers and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul any approval of the City of Ontario, whether by its City Council, Planning Commission or other authorized board or officer of this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The City of Ontario shall promptly notify the subdivider of any such claim, action or proceeding and the City of Ontario shall cooperate fully in the defense.

2.3 General Requirements. The Project shall comply with the following general requirements:

(a) All construction documentation shall be coordinated for consistency, including, but not limited to, architectural, structural, mechanical, electrical, plumbing, landscape and irrigation, grading, utility and street improvement plans. All such plans shall be consistent with the approved entitlement plans on file with the Planning Department.

(b) The project site shall be developed in conformance with the approved plans on file with the City. Any variation from the approved plans must be reviewed and approved by the Planning Department prior to building permit issuance.

(c) The herein-listed conditions of approval from all City departments shall be included in the construction plan set for the project, which shall be maintained on site during project construction.

2.4 Landscaping.

(a) The Project shall provide and continuously maintain landscaping and irrigation systems in compliance with the provisions of Ontario Development Code Division 6.05 (Landscaping).

(b) Comply with the conditions of approval of the Planning Department, Landscape Planning Division.

(c) Landscaping shall not be installed until the Landscape and Irrigation Construction Documentation Plans required by Ontario Development Code Division 6.05 (Landscaping) have been approved by the Landscape Planning Division.

(d) Changes to approved Landscape and Irrigation Construction Documentation Plans, which affect the character or quantity of the plant material or irrigation system design, shall be resubmitted for approval of the revision by the Landscape Planning Division, prior to the commencement of the changes.

2.5 Walls and Fences. All Project walls and fences shall comply with the requirements of Ontario Development Code Division 6.02 (Walls, Fences and Obstructions).

2.6 Parking, Circulation and Access.

(a) The Project shall comply with the applicable off-street parking, loading and lighting requirements of the Esperanza Specific Plan.

(b) All drive approaches shall be provided with an enhanced pavement treatment. The enhanced paving shall extend from the back of the approach apron, into the site, to the first intersecting drive aisle or parking space.

s

(c) Areas provided to meet the City's parking requirements, including off-street parking and loading spaces, access drives, and maneuvering areas, shall not be used for the outdoor storage of materials and equipment, nor shall it be used for any other purpose than parking.

(d) The required number of off-street parking spaces and/or loading spaces shall be provided at the time of site and/or building occupancy. All parking and loading spaces shall be maintained in good condition for the duration of the building or use.

(e) Parking spaces specifically designated and conveniently located for use by the physically disabled shall be provided pursuant to current accessibility regulations contained in State law (CCR Title 24, Part 2, Chapters 2B71, and CVC Section 22507.8).

(f) Bicycle parking facilities, including bicycle racks, lockers, and other secure facilities, shall be provided in conjunction with development projects pursuant to current regulations contained in CALGreen (CAC Title 24, Part 11). The final design and placement of bicycle parking facilities shall be subject to Planning Department review and approval.

(g) All off-street parking facilities shall be provided with nighttime security lighting pursuant to Ontario Municipal Code Section 4-11.08 (Special Residential Building Provisions) and Section 4-11.09 (Special Commercial/Industrial Building Provisions), designed to confine emitted light to the parking areas. Parking facilities shall be lit from sunset until sunrise, daily, and shall be operated by a photocell switch.

(h) Unless intended as part of a master lighting program, no operation, activity, or lighting fixture shall create illumination on any adjacent property.

2.7 Mechanical and Rooftop Equipment.

(a) All exterior roof-mounted mechanical, heating and air conditioning equipment, and all appurtenances thereto, shall be completely screened from public view by parapet walls or roof screens that are architecturally treated so as to be consistent with the building architecture.

(b) All ground-mounted utility equipment and structures, such as tanks, transformers, HVAC equipment, and backflow prevention devices, shall be located out of view from a public street, or adequately screened through the use of landscaping and/or decorative low garden walls.

2.8 Security Standards. The Project shall comply with all applicable requirements of Ontario Municipal Code Title 4 (Public Safety), Chapter 11 (Security Standards for Buildings).

2.9 Signs.

(a) All Project signage shall comply with the requirements of Ontario Development Code Division 8.1 (Sign Regulations).

2.10 Sound Attenuation. The Project shall be constructed and operated in a manner so as not to exceed the maximum interior and exterior noise levels set forth in Ontario Municipal Code Title 5 (Public Welfare, Morals, and Conduct), Chapter 29 (Noise).

2.11 Covenants, Conditions and Restrictions (CC&Rs)/Mutual Access and Maintenance Agreements.

(a) CC&Rs shall be prepared for the Project and shall be recorded prior to the issuance of a building permit.

(b) The CC&Rs shall be in a form and contain provisions satisfactory to the City. The articles of incorporation for the property owner's association and the CC&Rs shall be reviewed and approved by the City.

(c) CC&Rs shall ensure reciprocal parking and access between parcels.

(d) CC&Rs shall ensure reciprocal parking and access between parcels, and common maintenance of:

(i) Landscaping and irrigation systems within common areas;

(ii) Landscaping and irrigation systems within parkways adjacent to the project site, including that portion of any public highway right-of-way between the property line or right-of-way boundary line and the curb line and also the area enclosed within the curb lines of a median divider (Ontario Municipal Code Section 7-3.03), pursuant to Ontario Municipal Code Section 5-22-02;

(iii) Shared parking facilities and access drives; and

(iv) Utility and drainage easements.

(e) CC&Rs shall include authorization for the City's local law enforcement officers to enforce City and State traffic and penal codes within the project area.

(f) The CC&Rs shall grant the City of Ontario the right to enforce the CC&R provisions.

(g) A specific methodology/procedure shall be established within the CC&Rs for enforcement of its provisions by the City of Ontario, if adequate maintenance of the development does not occur, such as, but not limited to, provisions that would grant the City the right of access to correct maintenance issues and assess the property owner's association for all costs incurred.

2.12 Disclosure Statements.

(a) A copy of the Public Report from the Department of Real Estate, prepared for the subdivision pursuant to Business and Professions Code Section 11000 et seq., shall be provided to each prospective buyer of the residential units and shall include a statement to the effect that:

(i) This tract is subject to noise from the Ontario International Airport and may be more severely impacted in the future.

(ii) Some of the property adjacent to this tract is zoned for agricultural uses and there could be fly, odor, or related problems due to the proximity of animals.

(iii) The area south of Riverside Drive lies within the San Bernardino County Agricultural Preserve. Dairies currently existing in that area are likely to remain for the foreseeable future.

(iv) This tract is part of a Landscape Maintenance District. The homeowner(s) will be assessed through their property taxes for the continuing maintenance of the district.

2.13 Environmental Requirements.

(a) If human remains are found during project grading/excavation/construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and Native American consultation has been completed (if deemed applicable).

(b) If any archeological or paleontological resources are found during project grading/excavation/construction, the area shall not be disturbed until the significance of the resource is determined. If determined to be significant, the resource shall be recovered by a qualified archeologist or paleontologist consistent with current standards and guidelines, or other appropriate measures implemented.

2.14 Indemnification. The applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul any approval of the City of Ontario, whether by its City Council, Planning Commission or other authorized board or officer. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

2.15 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

(b) After the Project's entitlement approval, and prior to issuance of final building permits, the Planning Department's Plan Check and Inspection fees shall be paid at the rate established by resolution of the City Council.

2.16 Related Applications. PMTT24-008 approval shall not be final and complete until such time that related File Nos. PGPA24-003, PSPA24-004, have been approved by the City Council and PDEV24-017 has been approved by the Planning Commission.

2.17 Final Occupancy. The Project Architect of record will certify that construction of each building site and the exterior elevations of each structure shall be completed in compliance with the approved plans. Any deviation to approved plans shall require a resubmittal to the Planning Department for review and approval prior to construction. The Occupancy Release Request Form/Architect Certificate of Compliance shall be provided prior to final occupancy. After the receipt of this Certification, the Planning Department will conduct a final site and exterior elevations inspection. The Owner's Representative and Contractor shall be present.

2.18 Additional Requirements.

(a) All applicable conditions of approval of Development Agreement (File No. PDA25-003) shall apply to this tract.

(b) The project is contingent on the City Council approval of File Nos. PGPA24-003 & PSPA24-004.

(c) All parks shall be constructed prior to the final occupancy of the 80th unit.

APPLICANT:	**GDC Investments 13, L.P.**	
REVIEWED BY:	JEFFREY TANG P.E. PRINCIPAL ENGINEER **Raymond Lee, P.E.** **Assistant City Engineer**	9/9/25 **Date**
APPROVED BY:	FOR **Khoi Do, P.E.** **City Engineer**	9-10-25 **Date**

THIS PROJECT SHALL COMPLY WITH THE REQUIREMENTS SET FORTH IN THE GENERAL STANDARD CONDITIONS OF APPROVAL ADOPTED BY THE CITY COUNCIL (RESOLUTION NO. 2017-027) AND THE PROJECT SPECIFIC CONDITIONS OF APPROVAL SPECIFIED HEREIN. ONLY APPLICABLE CONDITIONS OF APPROVAL ARE CHECKED. THE APPLICANT SHALL BE RESPONSIBLE FOR THE COMPLETION OF ALL APPLICABLE CONDITIONS OF APPROVAL PRIOR TO FINAL MAP OR PARCEL MAP APPROVAL, ISSUANCE OF PERMITS AND/OR OCCUPANCY CLEARANCE, AS SPECIFIED IN THIS REPORT.

1. PRIOR TO FINAL MAP OR PARCEL MAP APPROVAL, APPLICANT SHALL:

			Check When Complete
☐	1.01	Dedicate to the City of Ontario, the right-of-way, described below to achieve: _____ feet on _____ Property line corner 'cut-back' required at the intersection of _____ and _____.	☐
☐	1.02	Dedicate to the City of Ontario, the following easement(s): _____ _____	☐
☐	1.03	Restrict vehicular access to the site as follows: _____	☐
☒	**1.04**	**Vacate the following street(s) and/or easement(s):** **A. All interfering on-site easements shall be quitclaimed, vacated, and/or submit non-interference letter from affected owner/utility company.**	☐
☐	1.05	Submit a copy of a recorded private reciprocal use agreement or easement. The agreement or easement shall ensure, at a minimum, common ingress and egress and joint maintenance of all common access areas and drive aisles.	☐
☒	**1.06**	**Provide (original document) Covenants, Conditions and Restrictions (CC&Rs) as applicable to the project and as approved by the City Attorney and the Engineering and Planning Departments, ready for recordation with the County of San Bernardino. The CC&Rs shall provide for, but not be limited to, common ingress and egress, joint maintenance responsibility for all common access improvements, common facilities, parking areas, utilities, median and landscaping improvements and drive approaches, in addition to maintenance requirements established in the Water Quality Management Plan (WQMP), as applicable to the project. The CC&Rs shall also address the maintenance and repair responsibility for public improvements/utilities (sewer, water, storm drain, recycled water, etc.) located within open space/easements. In the event of any maintenance or repair of these facilities, the City shall only restore disturbed areas to current City Standards.**	☐
☒	**1.07**	**For all development occurring south of the Pomona Freeway (60-Freeway) and within the specified boundary limits (per Boundary Map found at *http://tceplumecleanup.com/*), the property developer/owner is made aware of the South Archibald Trichloroethylene (TCE) Plume "Disclosure Letter". Property owner may wish to provide this Letter as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq. This may include notifications in the Covenants, Conditions and Restrictions (CC&Rs) or other documents related to property transfer and disclosures. Additional information on the plume is available from the Santa Ana Regional Water Quality Control Board at *http://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658*.**	☐
☐	1.08	File an application for Reapportionment of Assessment, together with payment of a reapportionment processing fee, for each existing assessment district listed below. Contact the Financial Services Department at (909) 395-2124 regarding this requirement. (1) _____ (2) _____	☐

☒ 1.09 **Prepare a fully executed Subdivision Agreement (on City approved format and forms) with accompanying security as required, or complete all public improvements.** ☐

☒ 1.10 **Provide a monument bond (i.e. cash deposit) in an amount calculated by the City's approved cost estimate spreadsheet (available for download on the City's website: www.ontarioca.gov) or as specified in writing by the applicant's Registered Engineer or Licensed Land Surveyor of Record and approved by the City Engineer, whichever is greater.** ☐

☒ 1.11 **Provide a preliminary title report current to within 30 days.** ☐

☒ 1.12 **File an application, together with an initial deposit (if required), to establish a Community Facilities District (CFD) pursuant to the Mello-Roos Community Facilities District Act of 1982. The application and fee shall be submitted a minimum of four (4) months prior to final subdivision map approval, and the CFD shall be established prior to final subdivision map approval or issuance of building permits, whichever occurs first. The CFD shall be established upon the subject property to provide funding for various City services. An annual special tax shall be levied upon each parcel or lot in an amount to be determined. The special tax will be collected along with annual property taxes. The City shall be the sole lead agency in the formation of any CFD. Contact Financial Services Agency at (909) 395-2015 or email CFD@ontarioca.gov to initiate the CFD application process.** ☐

☒ 1.13 **Ontario Ranch Developments:** ☐

☒ 1) Provide evidence of final cancellation of Williamson Act contracts associated with this tract, prior to approval of any final subdivision map. Cancellation of contracts shall have been approved by the City Council.

☒ 2) Provide evidence of sufficient storm water capacity availability equivalents (Certificate of Storm Water Treatment Equivalents).

☒ 3) Provide evidence of sufficient water availability equivalents (Certificate of Net MDD Availability).

☒ 1.14 **Other conditions:** ☐

1. **Developer/applicant shall ensure that the project is developed in accordance with all applicable requirements of Tract Map No. 18380 and the Esperanza Specific Plan.**

2. PRIOR TO ISSUANCE OF ANY PERMITS, APPLICANT SHALL:

A. GENERAL
(Permits includes Grading, Building, Demolition and Encroachment)

☒ 2.01 **Record Tract Map No. 20730 pursuant to the Subdivision Map Act and in accordance with the City of Ontario Municipal Code.** ☐

☒ 2.02 **Submit a PDF of the recorded map to the City Engineer's office.** ☐

☐ 2.03 Note that the subject parcel is a recognized parcel in the City of Ontario per _____. ☐

☐ 2.04 Note that the subject parcel is an 'unrecognized' parcel in the City of Ontario and shall require a Certificate of Compliance to be processed unless a deed is provided confirming the existence of the parcel prior to the date of March 4, 1972. ☐

☐ 2.05 Apply for a: ☐

☐ Certificate of Compliance with a Record of Survey;

☐ Lot Line Adjustment (Record a Conforming Deed with the County of San Bernardino within six months of the recordation of the Lot Line Adjustment to conform the new LLA legal description. Submit a copy of the recorded Conforming Deed to the Engineering Department.);

☐ Make a Dedication of Easement.

☐ 2.06 Provide (original document) Covenants, Conditions and Restrictions (CC&R's), as applicable to the project, and as approved by the City Attorney and the Engineering and Planning Departments, ready for recordation with the County of San Bernardino. The CC&R's shall provide for, but not be limited to, common ingress and egress, joint maintenance of all common access improvements, common facilities, parking areas, utilities and drive approaches in addition to maintenance requirements established in the Water Quality Management Plan (WQMP), as applicable to the project. ☐

☐ 2.07 For all development occurring south of the Pomona Freeway (60-Freeway) and within the specified boundary limits (per Boundary Map found at http://tceplumecleanup.com/), the property developer/owner is made aware of the South Archibald Trichloroethylene (TCE) Plume "Disclosure Letter". Property owner may wish to provide this Letter as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq. This may include notifications in the Covenants, Conditions and Restrictions (CC&Rs) or other documents related to property transfer and disclosures. Additional information on the plume is available from the Santa Ana Regional Water Quality Control Board at http://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658. ☐

☒ **2.08 Submit a soils/geology report.** ☐

☐ 2.09 Other Agency Permit/Approval: Submit a copy of the approved permit and/or other form of approval of the project from the following agency or agencies: ☐

- ☐ State of California Department of Transportation (Caltrans)
- ☐ San Bernardino County Road Department (SBCRD)
- ☐ San Bernardino County Flood Control District (SBCFCD)
- ☐ Federal Emergency Management Agency (FEMA)
- ☐ Cucamonga Valley Water District (CVWD) for sewer/water service
- ☐ United States Army Corps of Engineers (USACE)
- ☐ California Department of Fish & Game
- ☐ Inland Empire Utilities Agency (IEUA)
- ☐ Other: _____

☐ 2.10 Dedicate to the City of Ontario the right-of-way described below: ☐

_____ feet on _____

Property line corner 'cut-back' required at the intersection of _____ and _____.

☐ 2.11 Dedicate to the City of Ontario the following easement(s):_____ ☐

_____

☐ 2.12 Vacate the following street(s) and/or easement(s): ☐

A. All interfering on-site easements shall be quitclaimed, vacated, and/or submit non-interference letter from affected owner/utility company.

☐ 2.13 Ontario Ranch Developments: ☐

☐ 1) Submit a copy of the permit from the San Bernardino County Health Department to the

Engineering Department and the Ontario Municipal Utilities Company (OMUC) for the destruction/abandonment of the on-site water well. The well shall be destroyed/abandoned in accordance with the San Bernardino County Health Department guidelines.

☐ 2) Make a formal request to the City of Ontario Engineering Department for the proposed temporary use of an existing agricultural water well for purposes other than agriculture, such as grading, dust control, etc. Upon approval, the Applicant shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by said agreement.

☐ 3) Design proposed retaining walls to retain up to a maximum of three (3) feet of earth. In no case shall a wall exceed an overall height of nine (9) feet (i.e. maximum 6-foot high wall on top of a maximum 3-foot high retaining wall.

☐ 2.14 Submit a security deposit to the Engineering Department to guarantee construction of the public improvements required herein valued at 100% of the approved construction cost estimate. Security deposit shall be in accordance with the City of Ontario Municipal Code. Security deposit will be eligible for release, in accordance with City procedure, upon completion and acceptance of said public improvements. ☐

☒ **2.15 The applicant/developer shall submit all necessary survey documents prepared by a Licensed Surveyor registered in the State of California detailing all existing survey monuments in and around the project site. These documents are to be reviewed and approved by the City Survey Office.** ☐

☒ **2.16 Pay all Development Impact Fees (DIF) to the Building Department. Storm Drain Development Impact Fee shall be paid to the Building Department. Final fee shall be determined based on the approved site plan and the DIF rate at the time of payment.** ☐

☐ 2.17 Other conditions: _____ ☐

B. PUBLIC IMPROVEMENTS
(See attached Exhibit 'A' for plan check submittal requirements.)

☒ **2.18 Design and construct full public improvements in accordance with the City of Ontario Municipal Code, current City standards and specifications, master plans and the adopted specific plan for the area, if any. These public improvements shall include, but not be limited to, the following (checked boxes):**

Improvement	Amherst Ave.	Chatham St.	S. Clifton St.	Eucalyptus Ave.
Curb and Gutter	☐ New; ___ ft. from C/L ☐ Replace damaged ☐ Remove and replace	☐ New; ___ ft. from C/L ☐ Replace damaged ☐ Remove and replace	☐ New; ___ ft. from C/L ☐ Replace damaged ☐ Remove and replace	☐ New; ___ ft. from C/L ☐ Replace damaged ☐ Remove and replace
AC Pavement	☐ Replacement ☐ Widen ____ additional feet along frontage, including pavm't transitions	☐ Replacement ☐ Widen ____ additional feet along frontage, including pavm't transitions	☐ Replacement ☐ Widen ____ additional feet along frontage, including pavm't transitions	☐ New ☐ Widen ____ additional feet along frontage, including pavm't transitions
PCC Pavement (Truck Route Only)	☐ New ☐ Modify existing	☐ New ☐ Modify existing	☐ New ☐ Modify existing	☐ New ☐ Modify existing
Drive Approach	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace
Sidewalk	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace	☒ **New** ☐ Remove and replace	☐ New ☐ Remove and replace
ADA Access Ramp	☐ New ☐ Remove and replace	☒ **New[1]** ☐ Remove and replace	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace
Parkway	☒ **Trees** ☒ **Landscaping (w/irrigation)**	☒ **Trees** ☒ **Landscaping (w/irrigation)**	☒ **Trees** ☒ **Landscaping (w/irrigation)**	☒ **Trees** ☐ **Landscaping (w/irrigation)**
Raised Landscaped Median	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace	☐ New ☐ Remove and replace
Fire Hydrant	☐ New / Upgrade ☐ Relocation	☐ New / Upgrade ☐ Relocation	☐ New / Upgrade ☐ Relocation	☒ **New** ☐ Relocation

Sewer (see Sec. 2.C)	☒ **Main** ☒ **Lateral**	☐ Main ☐ Lateral	☐ Main ☐ Lateral	☐ Main ☐ Lateral
Water (see Sec. 2.D)	☒ **Main** ☐ Service	☒ **Main** ☒ **Service**	☒ **Main** ☐ Service	☐ Main ☐ Service
Recycled Water (see Sec. 2.E)	☐ Main ☐ Service	☐ Main ☐ Service	☒ **Main** ☒ **Service**	☐ Main ☒ **Service**
Traffic Signal System (see Sec. 2.F)	☐ New ☐ Modify existing	☐ New ☐ Modify existing	☐ New ☐ Modify existing	☐ New ☐ Modify existing
Traffic Signing and Striping (see Sec. 2.F)	☐ New ☐ Modify existing	☒ **New[2]** ☐ Modify existing	☐ New ☐ Modify existing	☐ New ☐ Modify existing
Street Light (see Sec. 2.F)	☐ New / Upgrade ☐ Relocation	☐ New / Upgrade ☐ Relocation	☐ New / Upgrade ☐ Relocation	☐ New / Upgrade ☐ Relocation
Bus Stop Pad or Turn-out (see Sec. 2.F)	☐ New ☐ Modify existing	☐ New ☐ Modify existing	☐ New ☐ Modify existing	☐ New ☐ Modify existing
Storm Drain (see Sec. 2G)	☐ Main ☒ **Lateral**	☐ Main ☐ Lateral	☐ Main ☐ Lateral	☐ Main ☐ Lateral
Fiber Optics (see Sec. 2K)	☐ Conduit / Appurtenances	☒ **Conduit / Appurtenances**	☐ Conduit / Appurtenances	☐ Conduit / Appurtenances
Overhead Utilities	☐ Underground ☐ Relocate	☐ Underground ☐ Relocate	☐ Underground ☐ Relocate	☐ Underground ☐ Relocate
Removal of Improvements	_____ _____ _____	_____ _____ _____	_____ _____ _____	_____ _____ _____
Other Improvements	☒ **Intersection Chokers[3]**	☒ **Intersection Chokers[3]**	☒ **Intersection Chokers[3]**	_____ _____ _____

Improvement	Private Streets[4]
Curb and Gutter	☒ **New** ☐ Replace damaged ☐ Remove and replace
AC Pavement	☒ **New** ☐ Widen ____ additional feet along frontage, including pavm't transitions
PCC Pavement (Truck Route Only)	☐ New ☐ Modify existing
Drive Approach	☐ New ☐ Remove and replace
Sidewalk	☐ New ☐ Remove and replace
ADA Access Ramp	☐ New ☐ Remove and replace
Parkway	☐ Trees ☐ Landscaping (w/irrigation)
Raised Landscaped Median	☐ New ☐ Remove and replace
Fire Hydrant	☐ New / Upgrade ☐ Relocation
Sewer (see Sec. 2.C)	☐ Main ☐ Lateral
Water (see Sec. 2.D)	☐ Main ☐ Service

Traffic Signal System (see Sec. 2.F)	☐ New ☐ Modify existing
Traffic Signing and Striping (see Sec. 2.F)	☐ New ☐ Modify existing
Street Light (see Sec. 2.F)	☐ New / Upgrade ☐ Relocation
Bus Stop Pad or Turn-out (see Sec. 2.F)	☐ New ☐ Modify existing
Storm Drain (see Sec. 2G)	☐ Main ☐ Lateral
Fiber Optics (see Sec. 2K)	☒ **Conduit / Appurtenances**
Overhead Utilities	☐ Underground ☐ Relocate
Removal of Improvements	_____ _____ _____
Other Improvements	_____ _____ _____

Specific notes for improvements listed in item no. 2.18, above:
[1]See Transportation Division Condition of Approval No. 2
[2]See Transportation Division Condition of Approval No. 5
[3]See Transportation Division Condition of Approval No. 3
[4]Tilt-sections with widths varying from 25 ft. to 27 ft.

☐ 2.19 Construct a 2" asphalt concrete (AC) grind and overlay on the existing section of the following street(s): _____ ☐

☒ **2.20 Reconstruction of the full pavement structural section, per City of Ontario Standard Drawing number 1011, may be required based on the existing pavement condition and final street design. Minimum limits of reconstruction shall be along property frontage, from street centerline to curb/gutter.** ☐

☒ **2.21 Depending on site conditions and number of utility service cuts at time of construction, additional pavement restoration may be required.** ☐

☐ 2.22 Make arrangements with the Cucamonga Valley Water District (CVWD) to provide ☐ water service ☐ sewer service to the site. This property is within the area served by the CVWD and Applicant shall provide documentation to the City verifying that all required CVWD fees have been paid. ☐

☐ 2.23 Overhead utilities shall be under-grounded, in accordance with Title 7 of the City's Municipal Code (Ordinance No. 2804 and 2892). Developer may pay in-lieu fee, approximately _____, for undergrounding of utilities in accordance with Section 7-7.302.e of the City's Municipal Code. ☐

☒ **2.24 Other conditions:** ☐
- **Private street improvements shall be designed and constructed per current City Standards. Applicable plan check and inspection fees shall be required.**

C. SEWER

☐ 2.25 An ____inch sewer main is available for connection by this project in _____. ☐

☐ 2.26 Design and construct a sewer main extension. A sewer main is not available for direct connection. The closest main is approximately _____ feet away. ☐

☐ 2.27 Submit documentation that shows expected peak loading values for modeling the impact of the subject project to the existing sewer system. The project site is within a deficient public sewer system area. Applicant shall be responsible for all costs associated with the preparation of the model. Based on the results of the analysis, Applicant may be required to mitigate the project impact to the deficient public sewer system, including, but not limited to, upgrading of existing sewer main(s), construction of new sewer main(s) or diversion of sewer discharge to another sewer. ☐

☒ **2.28 Other conditions:** ☐
- **See attached for Ontario Municipal Utilities Company (OMUC) conditions of approval.**

D. WATER

☐ 2.29 A _____inch water main is available for connection by this project in _____ (Ref: Water Drawing Number: _____) ☐

☐ 2.30 Design and construct a water main extension. A water main is not available for direct connection. The closest main is approximately _____ feet away. ☐

☒ **2.31 Other conditions:** ☐
- **See attached for Ontario Municipal Utilities Company (OMUC) conditions of approval.**

E. RECYCLED WATER

☐ 2.32 An _____inch recycled water main is available for connection by this project in _____. ☐

☒ **2.33 Design and construct an on-site recycled water system for this project. A recycled water main does exist in the vicinity of this project.** ☐

☐ 2.34 Design and construct an on-site recycled water ready system for this project. A recycled water main does not currently exist in the vicinity of this project but is planned for the near future. If Applicant would like to connect to this recycled water main when it becomes available, the cost for the connection shall be borne solely by the Applicant. ☐

☒ **2.35 Submit one (1) electronic copy, in PDF format, of the Supplemental Engineering Report (ER), for the use of recycled water to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and subsequent submittal to the California State Water Board (Division of Drinking Water) for final approval.** ☐

Note: The Division of Drinking Water review and approval process may take up to four (4) months. Contact the OMUC's Water Quality Programs at (909) 395-2678 or email OMUCWQPlanCheck@ontarioca.gov regarding this requirement. *Failure to obtain an approval letter from the Division of Drinking Water authorizing the use of recycled water will delay meter installation and if applicable, occupancy release for new developments.*

☒ **2.36 Submit one (1) electronic copy, in PDF format, of the Landscape Plans (on-site & off-site) to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and approval.**

☒ **2.37 Other conditions:** ☐
- **See attached for Ontario Municipal Utilities Company (OMUC) conditions of approval.**

F. TRAFFIC / TRANSPORTATION

☐ 2.38 Submit a focused traffic impact study, prepared and signed by a Traffic/Civil Engineer registered in the State of California. The study shall address, but not be limited to, the following issues as required by the City Engineer: ☐
1. On-site and off-site circulation
2. Traffic level of service (LOS) at 'build-out' and future years
3. Impact at specific intersections as selected by the City Engineer

☐ 2.39 New traffic signal installations shall be added to Southern California Edison (SCE) customer account number # 2-20-044-3877. ☐

☒ **2.40 Other conditions:** ☐
- **See attached for Transportation Division conditions of approval.**

G. DRAINAGE / HYDROLOGY

☒ **2.41 A 36-inch storm drain main is available to accept flows from this project in Amherst Avenue.** ☐

☒ **2.42 Submit a hydrology study and drainage analysis, prepared and signed by a Civil Engineer registered in the State of California. The study shall be prepared in accordance with the San Bernardino County Hydrology Manual and City of Ontario standards and guidelines. Additional drainage facilities, including, but not limited to, improvements beyond the project frontage, may be required to be designed and constructed, by Applicant, as a result of the findings of this study.** ☐

☐ 2.43 An adequate drainage facility to accept additional runoff from the site does not currently exist downstream of the project. Design and construct a storm water detention facility on the project site. 100-year post-development peak flow shall be attenuated such that it does not exceed 80% of pre-development peak flows, in accordance with the approved hydrology study and improvement plans. ☐

☐ 2.44 Submit a copy of a recorded private drainage easement or drainage acceptance agreement to the Engineering Department for the acceptance of any increase to volume and/or concentration of historical drainage flows onto adjacent property, prior to approval of the grading plan for the project. ☐

☐ 2.45 Comply with the City of Ontario Flood Damage Prevention Ordinance (Ordinance No. 2409). The project site or a portion of the project site is within the Special Flood Hazard Area (SFHA) as indicated on the Flood Insurance Rate Map (FIRM) and is subject to flooding during a 100-year frequency storm. The site plan shall be subject to the provisions of the National Flood Insurance Program. ☐

☐ 2.46 Other conditions: _____ ☐

H. STORM WATER QUALITY / NATIONAL POLLUTANT DISCHARGE AND ELIMINATION SYSTEM (NPDES)

☐ 2.47 401 Water Quality Certification/404 Permit – Submit a copy of any applicable 401 Certification or 404 Permit for the subject project to the City project engineer. Development that will affect any body of surface water (i.e. lake, creek, open drainage channel, etc.) may require a 401 Water Quality Certification from the California Regional Water Quality Control Board, Santa Ana Region (RWQCB) and a 404 Permit from the United States Army Corps of Engineers (USACE). The groups of water bodies classified in these requirements are perennial (flow year round) and ephemeral (flow during rain conditions, only) and include, but are not limited to, direct connections into San Bernardino County Flood Control District (SBCFCD) channels. ☐
If a 401 Certification and/or a 404 Permit are not required, a letter confirming this from Applicant's engineer shall be submitted.
Contact information: USACE (Los Angeles District) (213) 452-3414; RWQCB (951) 782-4130.

☒ 2.48 **Submit a Water Quality Management Plan (WQMP). This plan shall be approved by the Engineering Department prior to approval of any grading plan. The WQMP shall be submitted, utilizing the current San Bernardino County Stormwater Program template, available at: http://www.sbcounty.gov/dpw/land/npdes.asp.** ☐

☐ 2.49 Design and construct a Connector Pipe Trash Screen or equivalent Trash Treatment Control Device, per catch basin located within or accepting flows tributary of a Priority Land Use (PLU) area that meets the Full Capture System definition and specifications, and is on the Certified List of the State Water Resources Control Board. The device shall be adequately sized per catch basin and include a deflector screen with vector control access for abatement application, vertical support bars, and removable component to facilitate maintenance and cleaning. ☐

☒ 2.50 **Other conditions:** ☐

1. **The project applicant shall submit a Certificate of Storm Water Treatment Capcity for the Net Acreage (Including Chatham Street, Clifton Avenue, and Amherst Avenue portions) Availability in Mill Creek Wetland facility (MCW) for water quality compliance.**
2. **Activities resulting in land disturbance of one acre or more is required to obtain coverage under the Construction General Permit (CGP). The owner is the legally responsible person (LRP) of the site and shall have a Stormwater Pollution Prevention Plan (SWPPP) developed and submitted through the SMARTS website at https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml**

J. SPECIAL DISTRICTS

☒ 2.51 **File an application, together with an initial deposit (if required), to establish a Community Facilities District (CFD) pursuant to the Mello-Roos Community Facilities District Act of 1982. The application and fee shall be submitted a minimum of four (4) months prior to final subdivision map approval, and the CFD shall be established prior to final subdivision map approval or issuance of building permits, whichever occurs first. The CFD shall be established upon the subject property to provide funding for various City services. An annual special tax shall be levied upon each parcel or lot in an amount to be determined. The special tax will be collected along with annual property taxes. The City shall be the sole lead agency in the formation of any CFD. Contact Financial Services Agency at (909) 395-2015 or email CFD@ontarioca.gov to initiate the CFD application process.** ☐

☐ 2.52 Other conditions: _____ ☐

K. FIBER OPTIC

☒ 2.53 **A fiber optic line is available for connection by this project in Clifton Avenue.** ☐

☒ 2.54 **Design and construct fiber optic system to provide access to the City's conduit and fiber optic system per the City's Fiber Optic Master Plan. Building entrance conduits shall start from the closest OntarioNet hand hole constructed along the project frontage in the ROW and shall terminate in the main telecommunications room for each building. Conduit infrastructure shall interconnect with the primary and/or secondary backbone fiber optic conduit system at the nearest OntarioNet hand hole. Generally located in Clifton Avenue.** ☐

☒ 2.55 **Refer to the City's Fiber Optic Master Plan for design and layout guidelines. Contact the Broadband Operations Department at (909) 395-2000, regarding this requirement.** ☐

3. PRIOR TO ISSUANCE OF A CERTIFICATE OF OCCUPANCY, APPLICANT SHALL:

☒ 3.01 **Set new monuments in place of any monuments that have been damaged or destroyed as a result of construction of the subject project. Monuments shall be set in accordance with City of Ontario standards and to the satisfaction of the City Engineer.** ☐

☒ 3.02 **Complete all requirements for recycled water usage.** ☐

☒ **1) Procure from OMUC a copy of the letter of confirmation from the California State Water Board (Division of Drinking Water) that the Engineering Report (ER) has been reviewed and the subject site is approved for the use of recycled water.**

☒ **2) Obtain clearance from the OMUC confirming completion of recycled water improvements and passing of shutdown tests and cross connection inspection, upon availability/usage of recycled water.**

☒ **3) Complete Site Supervisor training of on-site personnel in the use of recycled water, in accordance with the ER, upon availability/usage of recycled water.**

☒ **3.03 The applicant/developer shall submit all final survey documents prepared by a Licensed Surveyor registered in the State of California detailing all survey monuments that have been preserved, revised, adjusted or set along with any maps, corner records or Records of Survey needed to comply with these Conditions of Approvals and the latest edition of the California Professional Land Survey Act. These documents are to be reviewed and approved by the City Survey Office.** ☐

☐ 3.04 Ontario Ranch Projects: For developments located at an intersection of any two collector or arterial streets, the applicant/developer shall set a monument if one does not already exist at that intersection. Contact the City Survey office for information on reference benchmarks, acceptable methodology and required submittals. ☐

☒ **3.05 Confirm payment of all Development Impact Fees (DIF) to the Building Department.** ☐

☒ **3.06 Submit electronic copies (PDF and Auto CAD format) of all approved improvement plans, studies and reports (i.e. hydrology, traffic, WQMP, etc.).** ☐

4. PRIOR TO FINAL ACCEPTANCE, APPLICANT SHALL:

☒ **4.01 Complete all Conditions of Approval listed under Sections 1-3 above.** ☐

☒ **4.02 Pay all outstanding fees pursuant to the City of Ontario Municipal Code, including but not limited to, plan check fees, inspection fees and Development Impact Fees.** ☐

☒ **4.03 The applicant/developer shall submit a written request for the City's final acceptance of the project addressed to the City Project Engineer. The request shall include a completed Acceptance and Bond Release Checklist, state that all Conditions of Approval have been completed and shall be signed by the applicant/developer. Upon receipt of the request, review of the request shall be a minimum of 10 business days. Conditions of Approval that are deemed incomplete by the City will cause delays in the acceptance process.** ☐

☒ **4.04 Submit record drawings (PDF) for all public improvements identified within Section 2 of these Conditions of Approval.** ☐

EXHIBIT 'A'

ENGINEERING DEPARTMENT
First Plan Check Submittal Checklist

Project Number: PMTT24-008; PDEV24-017, and Tract Map No. 20730

All plan check submittals are to be done digitally through the City Of Ontario Citizen Portal Access. The following items are to be included with the first plan check submittal:

1. ☒ **A copy of this check list**
2. ☒ **Payment of fee for Plan Checking**
3. ☒ **Engineering Cost Estimate (on City form) with engineer's wet signature and stamp.**
4. ☒ **Project Conditions of Approval**
5. ☒ **Potable and Recycled Water demand calculations (include water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size).**
6. ☒ **Public Street improvement plan with street cross-sections**
7. ☒ **Public Sewer improvement plan[1]**
8. ☒ **Public Water improvement plan[1] (include water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size)**
9. ☒ **Recycled Water improvement plan[1] (include recycled water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size and an exhibit showing the limits of areas being irrigated by each recycled water meter)**
10. ☒ **Private Street improvement plan with street cross-sections.**
11. ☒ **Public Storm Drain improvement plan (delta to existing storm drain plan)**
12. ☐ Public Street Light improvement plan
13. ☒ **Signing and Striping improvement plan**
14. ☒ **Fiber Optic plan (include Auto CAD electronic submittal)**
15. ☒ **HOA Landscape improvement plans. Show corner sight line distance per engineering standard drawing 1309.**
16. ☒ **CFD Landscape improvement plans. Show corner sight line distance per engineering standard drawing 1309.**
17. ☒ **Dry Utility plans within public right-of-way (at a minimum the plans must show existing and ultimate right-of-way, curb and gutter, proposed utility location including centerline dimensions, wall to wall clearances between proposed utility and adjacent public line, street work repaired per Standard Drawing No. 1306. Include Auto CAD electronic submittal)**
18. ☐ Traffic Signal improvement plan and One (1) copy of Traffic Signal Specifications with modified Special Provisions. Please contact the Traffic Division at (909) 395-2154 to obtain Traffic Signal Specifications.
19. ☒ **Water Quality Management Plan (WQMP), including one (1) copy of the approved Preliminary WQMP (PWQMP).**
20. ☒ **Hydrology/Drainage study**

21. ☒ **Soils/Geology report**

22. ☒ **Payment for Final Map/Parcel Map processing fee**

23. ☒ **Final Map/Parcel Map**

24. ☒ **Approved Tentative Map**

25. ☒ **Preliminary Title Report (current within 30 days)**

26. ☒ **Traverse Closure Calculations**

27. ☒ **Set of supporting documents and maps (legible copies): referenced improvement plans (full size), referenced record final maps/parcel maps (full size, 18"x26"), Assessor's Parcel map (full size, 11"x17"), recorded documents such as deeds, lot line adjustments, easements, etc.**

28. ☒ **Supplemental Engineering Report, in electronic format (PDF format), for recycled water use only. Must be reviewed and submitted to the Division of Drinking Water by OMUC Water Quality Programs before clearing plan check workflows (includes grading and landscape plan reviews). *Approval letter issued by the Division of Drinking Water must be obtained before meter installation and if applicable, occupancy release.***

29. ☒ **Other:**
[1]If public main line infrastructure is accepted by the time of construction, this project may submit a minor offsite improvement plan for domestic water and recycled water services and for sewer lateral.

CITY OF ONTARIO
MEMORANDUM

ONTARIO MUNICIPAL UTILITIES COMPANY

DATE:	September 4, 2025
TO:	Henry Pham, Engineering Department
CC:	Robert Morales, Planning Department
FROM:	Heather Young, Utilities Engineering Division
	Christy Stevens, Utilities Engineering Division
SUBJECT:	DPR#4 - Utilities Engineering Conditions of Approval (COA)
PROJECT NO.:	TM-20730 (PMTT24-008), PDEV24-017, PGPA24-003, PSPA24-004

BRIEF DESCRIPTION:

TM-20730 (PMTT24-008): *A Tentative Tract Map (TTM 20730) for Common Interest Subdivision purposes, to subdivide 13.2 acres of land into 28 numbered lots and 15 lettered lots, generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue within the Planning Area 11 of the Esperanza Specific Plan (APN(s): 1073-101-05). Related File(s): PGPA24-003, PSPA24-004, PDEV24-017).*

PDEV24-017: *A Development Plan to construct 161 multiple-family dwellings on approximately 13.2 acres of land generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue, within Planning Area 11 of the Esperanza Specific Plan (APN(s): 1073-101-050). Related File(s): PGPA24-003, PSPA24-004, PMTT24-008.*

PGPA24-003: *An Amendment to the Land Use Element of the Policy Plan (General Plan) component of The Ontario Plan, changing the land use designation on 13.2 acres of land from PS (Public School) to MDR (Medium Density Residential) generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue within the Planning Area 11 of the Esperanza Specific Plan and modifying Exhibit LU-03 (Future Buildout Table) to be consistent with this land use designation change (APN(s): 1073-101-050). Related File(s): PSPA24-004, PMTT24-008, PDEV24-017).*

PSPA24-004: *An Amendment to the Esperanza Specific Plan; [1] Modifying the land use designation for Planning Area 11 from Public School to Residential Development 7 (RD-7); [2] Introduce a new Residential Development 7 (RD-7) designation within the Specific Plan; [3] Establish development standards for a new 3-story residential product type within the residential land use designations; [4] Implement various updates to the Specific Plan, including modifications to the land use map, land use tables, development standards, exhibits, and related text, to reflect the proposed land use changes. (APN(s): 1073-101-050). Related File(s): PGPA24-003, PMTT24-008, PDEV24-017.*

OMUC UTILITIES ENGINEERING DIVISION
CONDITIONS OF APPROVAL

CONDITIONS OF APPROVAL: *The Ontario Municipal Utilities Company (OMUC) Utilities Engineering Division recommends this application for approval subject to the Conditions of Approval outlined below and compliance with the City's Design Development Guidelines, Specifications Design Criteria, and City Standards. The Applicant shall be responsible for the compliance with and the completion of all the following applicable Conditions of Approval prior to the following milestones and subject to compliance with City's Design Development Guidelines, Specifications Design Criteria, and City Standards:*

General Conditions:

1. Standard Conditions of Approval: Project shall comply with the requirements set forth in the Amendment to the Standard Conditions of Approval for New Development Projects adopted by the City Council (Resolution No. 2017-027) on April 18, 2017, or as amended or superseded by Council Resolution; as well as project-specific conditions/requirements as outlined below.

Prior to Issuance of Any Permits (Grading, Building, Demolition and Encroachment), unless other timeline milestones are specified by individual conditions below, the Applicant Shall:

General Conditions (Section 2.A, Other conditions): The Applicant shall comply with the following:

2. Inherited Requirements and Conditions of Approval: This project is subject to all the Requirements and Conditions of Approval of related entitlements TM-18380, PDA25-003, and the Esperanza Specific Plan PSP05-002, PSPA24-004 (as amended). For any conflict in Conditions of Approval and requirements, the Conditions of Approval below for this Project will supersede.
3. Final Utilities Systems Map (USM): Submit a Final Utilities Systems Map (USM) as part of the precise grading plan submittal that meets all the City's USM requirements. These requirements include to show and label all existing and proposed utilities (including all appurtenances such as backflow devices, DCDAs, etc.), sizes, points of connection, and any easements. The final utility design shall comply with all Division of Drinking Water (CCR §64572) Separation Requirements. See Utility Systems Map (USM) Requirements document for details.
4. Public Utilities and Public Right-of-Way including Public Utility Easements (PUE): All City of Ontario Public Utilities shall be installed within a Public Right-of-Way (RoW), or within a Public Utility Easements (PUE), or within a combination of RoW and PUE. In this case, Public Utilities is referring to the mains and connected appurtenances of the following City of Ontario/OMUC Utilities: Public Potable Water; Public Recycled Water; and Public Sanitary Sewer. Public Utilities shall be subject to the Minimum RoW/PUE Area Requirements and PUE Restrictions:
    a. Minimum RoW Area Requirements: Public Utilities shall be installed within in existing RoW/PUE in alignments/locations that meet the following minimum RoW/PUE areas surrounding the Public Utilities, and/or additional RoW/PUE shall be dedicated/granted to the City to provide the following minimum RoW/PUE areas surrounding the Public Utilities:
        i. For each main, the RoW/PUE Area shall be a minimum of 20 feet wide, centered on the utility main with a minimum of 10 feet of RoW/PUE on each side of the main and this minimum area shall extend a minimum for 10 feet past the end of a main;
        ii. For each Service/Lateral, the RoW/PUE Area shall be a minimum of 10 feet wide, centered on the service/lateral with a minimum of 5 feet of RoW on each side of each service/lateral;
        iii. For each water meter box, the RoW/PUE Area shall be a minimum of 5 feet behind and 5 feet on each side of a water meter box;
        iv. For each water appurtenances (fire hydrants, blowoffs, airvacs, etc), the RoW/PUE Area shall be a minimum of 5 feet on each side surrounding the water appurtenances (fire hydrants, blowoffs, airvacs, etc);
        v. The RoW/PUE minimum areas for separate Public Utilities may overlap, provide that all minimum separations and PUE Restrictions are met.
    b. PUE Restrictions: The Minimum PUE Area required surrounding Public Utilities shall be subject to the following restrictions:
        i. The Minimum PUE Area required surrounding Public Utilities shall not contain:
            A. Any storm water quality improvements (infiltration, detention, retention, bioswale, etc);
            B. Landscaping with thick or intrusive root structures,
            C. Any trees;
            D. Any private utilities, plumbing lines, private fire system, or irrigation lines; or,
            E. Any permanent structures or overhangs of permanent structures.
        ii. The PUE surface shall be designed to allow vehicle access over and along the full length of the utility main by any City maintenance vehicle.
        iii. Minimum Separations: Within a PUE, all Department of Drinking Water (DDW) Water Main Separations per California Code of Regulations (CCR) §64572 shall be met for all Public Potable Water Mains and Services between: all Public City Utilities; Non-City Utilities; and Private Utilities. Additionally, the following Minimum Separations shall be met:
            A. At minimum there shall be a 4 feet horizontal separation between each utility as measured between the outside walls of the utility pipelines, or in the case of a Joint Utility Trench, between the outside edge of the Joint Utility Trench and the outside wall of the Utility Pipeline. The minimum 4 feet horizontal separation also includes between services and service appurtenances and: other utilities (public or private) and utility appurtenances; any other objects or potentials obstructions (boxes, handholes, vaults, transformers, panels, poles and standards, signs, driveway

approaches and wings/curb returns, trees, controllers, etc.); and any other items, as determined by the Ontario Municipal Utilities Company (OMUC).

B. Public Utility mains shall not be located behind curb or under curb & gutter and shall be located at minimum of 8 feet from curbface. With specific written permission of OMUC Management Staff, in rare circumstances, this 8 feet minimum can be reduced to 5 feet in specific locations where the 8 feet is not feasible, but at all locations the utilities alignments shall be optimized to meet this minimum location, while still maintaining all other minimum separation.

5. Well Abandonment: All existing Ground Water Wells shall be abandoned per County and State requirements prior to grading if they are not authorized to remain in service by the City's Water Resources Section.

6. Septic Tank Abandonment: All existing septic tank(s) on the property shall be abandoned per City, County, and State regulations and standards.

7. Minor Offsite Improvement Plan: Submit a Minor Offsite Improvement Plan for construction or abandonment of any water services and sewer laterals for the Project. The Minor Offsite Improvement Plan shall be included with the first plan check submittal to the Engineering Department.

    a. The abandonment of recycled water main per the Project's conditions below shall be included on the Minor Offsite Improvement Plan.

8. Unused Service Abandonment: All adjacent water services (along with connected appurtenances) and sewer laterals along the frontages of the project site not used to provide service to this Development Project shall be abandoned back to the main in accordance with City Standards and Practices.

Sanitary Sewer Conditions (Section 2.C): The Applicant shall comply with the following:

9. Sanitary Sewer Infrastructure: Sanitary sewer infrastructure in TM-18380 is required to support this development. If the sanitary sewer infrastructure is not completed by TM-18380, this development is subject to the improvements required. The Project is limited to Public Sewer Mains within Public Streets in Publicly Dedicated Right-of-way for Streets and Public Sewer Mains are not allowed within private property or private streets/private drive aisles. The Project is required to install the following Public Sewer Mains and only to the extent necessary to serve the Project:

    a. Install 8-inch sewer main in Amherst Avenue from the Project's point of connection at the intersection of Shelburne Street and extending south to connect to the existing sewer main in Eucalyptus Avenue.

10. Sanitary Sewer Service:

    a. Sewer Lateral: Multifamily attached residential buildings or single-family attached residences: the residences and buildings shall share an onsite private sewer system that discharges wastewater to the Public Sanitary Sewer System through a shared Public Sewer Lateral per Standard #2003. The quantity of Public Sewer Laterals for the Project shall be limited to the minimum necessary to meet all of the conditions of approval and as limited by the City.

        i. Sewer Lateral Connection: The Project shall connect to the 8-inch public sewer main in Amherst Avenue.

        ii. Public Sewer Laterals and Storm Water Quality Improvements: No storm water quality improvements (infiltration, detention, retention, bioswale, etc) shall be installed above or within 5 feet of any Public Sewer Lateral.

        iii. Unused Service Abandonment: The Project shall utilize any unused sewer lateral along the Project's frontages on Amherst Avenue when feasible. Any sewer lateral along the frontages of the project site not used to provide service shall be abandoned back to the main in accordance with City Standards and Practices.

    b. Private Onsite Sewer System and Plumbing: The Onsite Sewer System shall be privately maintained by the property owner. If not under one ownership, the maintenance of the shared onsite private sewer system shall be established through Covenants, Conditions, and Restrictions (CC&Rs). The Private Onsite Sewer System shall meet the following requirements:

        i. Private Onsite Sewer and Storm Water Quality Improvements: No storm water quality improvements (infiltration, detention, retention, bioswale, etc) shall be installed above or within 5 feet of any Private Onsite Sewer pipes.

Potable Water Conditions (Section 2.D): The Applicant shall comply with the following:

11. Potable Water Infrastructure: The Project is limited to Public Potable Water Mains within Public Streets in Publicly Dedicated Right-of-way for Streets and Public Potable Water Mains are not allowed within private property or private streets/private drive aisles. The Project is required to install the following Public Potable Water Mains and only to the extent necessary to serve the Project and achieve required looping:
    a. Install 8-inch potable water main in Clifton Avenue from Eucalyptus Avenue to Chatham Street.
    b. Install 8-inch potable water main in Chatham Street from Clifton Avenue to Amherst Avenue.
    c. Install 8-inch potable water main in Amherst Avenue from Chatham Street to Eucalyptus Avenue.
12. Potable Water Service:
    a. Domestic Service:
        i. Multifamily attached residential buildings or single-family attached residences: the residences shall be sub-metered and share an onsite private domestic water system that connects to the Public Potable Water System through a shared a domestic potable water service and public master meter connected to the Public Potable Water System with onsite private backflow prevention device. Maintenance of the shared onsite private domestic water system shall be established through Covenants, Conditions, and Restrictions (CC&Rs).
    b. Irrigation Service: For landscape irrigation uses that are not served by Recycled Water, the landscape irrigation uses shall have a separate irrigation water service and meter with backflow prevention device connected to the Public Potable Water System separate from the domestic water uses and the onsite plumbing systems shall be also separate from each other.
        i. Community Service District (CFD) Maintained Irrigation Areas: Any irrigated areas that are to be maintained by a Community Service District (CFD) and not by the property owner or owners association require irrigation services and meters separate from those that are maintained by the property owner or owners association.
    c. Backflow Prevention:
        i. A Backflow Prevention Device is required for each Meter connected to the Public Potable Water System that: serves any residential use that is more than one (1) single family residential unit; or, any non-residential use; or, only irrigation use.
        ii. Backflow Prevention Device Location: In order to reduce the risk of contamination to the Public Potable Water System, a Backflow Prevention Device location shall comply with the following requirements:
            1. As measured along the pipe connecting to the Backflow Prevention Device, the backflow concrete pad shall be located a minimum of 3 feet and a maximum of 5 feet from:
                1. The Right-Of-Way line for Publicly Dedicated Streets; or,
                2. The back of the sidewalk or the meter box (where there is no sidewalk), whichever is closer, for mains within PUEs and not within Right-Of-Way for Publicly Dedicated Streets.
            2. Only one single bend of up to 90 degrees maximum is allowed along the pipe to the Backflow and the single bend must be located at one of the following places: either the along the 90-degree riser connecting at the backflow assembly; or, at the end of the 12-inch stub at the back of the meter box.
            3. All the minimum DDW Separations also apply to the pipeline connecting between the Main/Meter-Box to a Backflow Device (or DCDA) and any Backflow Device (or DCDA). This also includes storm water quality improvements (infiltration, detention, retention, bioswale, etc). Also, no public or private non-potable water conveyances (private utilities, plumbing lines, sewer, private fire system, storm drain) shall cross the pipeline connecting between the Main/Meter-Box to a Backflow Device (or DCDA) or under any Backflow Device (or DCDA).
    d. Fire Water Service: For onsite private Fire System uses: Where the domestic water service and meters connected to the Public Potable Water System that serves any use that is more than one (1) single

family detached residential unit, or any non-residential use: if an onsite private fire system is required, then a separate Fire Service with Double Check Detector Assembly (DCDA) per City Standard #4208 connected to the Public Potable Water System is required, to serve the onsite private fire system. The onsite fire system and onsite domestic water plumbing system shall be separate. The DCDA location shall be the same as the Backflow Prevention Device above.

i. In certain residential cases where a separate fire service with DCDA connected to the Public Potable Water System is not required by above the requirement, and approved by the City Fire Department and the City Building Department, then the California Residential Code must be followed for the residential buildings; if the California Residential Code is not followed for the residential buildings; then a separate fire service with DCDA is required.

e. Fire Hydrants: Install public fire hydrants per City Standard along the public potable water mains fronting the Project with adequate spacing and in locations as required by the Fire Department.

Recycled Water Conditions (Section 2.E): The Applicant shall comply with the following:

13. City Ordinance 2689: This development shall comply with City Ordinance 2689 and make use of recycled water for all approved uses, including but not limited to landscape irrigation. Appropriately sized public and private mains shall be installed throughout the Project to meet this requirement, as approved by the City.

14. Recycled Water Infrastructure: Recycled water infrastructure in TM-18380 is required to support this development. If the recycled water infrastructure is not completed by TM-18380, this development is subject to the improvements required. The Project is limited to Public Recycled Water Mains within Public Streets in Publicly Dedicated Right-of-way for Streets and Public Recycled Water Mains are not allowed within private property or private streets/private drive aisles. In order to comply with City Ordinance 2689, the Project is required to install the following Public Recycled Water Mains and only to the extent necessary to serve the Project:

    a. Install 8-inch recycled water main in Clifton Avenue from Eucalyptus Avenue to Chatham Street.

    b. Abandon unused recycled water main and its associated appurtenances in Amherst Avenue from Eucalyptus Avenue to the end of the main approximately at the intersection of Shelburne Street.

15. RW Program Requirements: In order to receive RW service, the applicant shall comply with each of the following:

    a. Prior to Precise Grading Plan Approval and Building Permits Issuance:

        i. Submit one (1) electronic copy, in PDF format, of the Landscape Plans (on-site & off-site) to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and approval.

        ii. Submit one (1) electronic copy, in PDF format, of the Supplemental Engineering Report (ER), for the use of recycled water to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and subsequent submittal to the California State Water Board (Division of Drinking Water) for final approval.

        Note: The Division of Drinking Water review and approval process may take up to four (4) months. Contact the OMUC's Water Quality Programs at (909) 395-2678 or email OMUCWQPlanCheck@ontarioca.gov regarding this requirement. Failure to obtain an approval letter from the Division of Drinking Water authorizing the use of recycled water will delay meter installation and if applicable, occupancy release for new developments.

    b. Prior to Occupancy Release/Finalizing:

        i. Procure from OMUC a copy of the letter of confirmation from the California State Water Board (Division of Drinking Water) that the Engineering Report (ER) has been reviewed and the subject site is approved for the use of recycled water.
        ii. Obtain clearance from the OMUC confirming completion of recycled water improvements and passing of shutdown tests and cross connection inspection, upon availability/usage of recycled water.
        iii. Complete Site Supervisor training of on-site personnel in the use of recycled water, in accordance with the ER, upon availability/usage of recycled water.

16. Recycled Water Service: The Project's recycled water services shall connect to the public recycled water main in Clifton Avenue or Eucalyptus Avenue.

a. Recycled Water Services: In order to comply with City Ordinance 2689:

   i. Private Property Owner Maintained Uses: Each parcel/lot shall have its own separate Recycled Water Service with Meter connected to the Public Recycled Water System to serve the parcel/lot's private property owner-maintained landscape irrigation uses. If Recycled Water is going to be used for uses other than landscape irrigation, then a separate Recycled Water Service with Meter is required to serve the non-landscape irrigation uses.
   ii. Community Service District (CFD) Maintained Irrigation Areas: Any irrigated areas that are to be maintained by a Community Service District (CFD) and not by the property owner or owners association require irrigation services and meters separate from those that are maintained by the property owner or owners association.

b. Unused Service Abandonment: The Project shall utilize any unused recycled water services along the Project's frontages on Clifton Avenue or Eucalyptus Avenue when feasible. Any recycled water services (along with connected appurtenances) along the frontages of the project site not used to provide service shall be abandoned back to the main in accordance with City Standards and Practices.

CITY OF ONTARIO
MEMORANDUM

Development Plan Review

Project: PDEV24-017/PMTT24-008/PSPA24-004/PGPA24-003 (Esperanza Specific Plan)

Date: September 10, 2025

Location: Northeast Corner of Amherst Avenue and Eucalyptus Ave

By: Diego Tapia

The Transportation Division please mends the following to be incorporated into the Project's Conditions-of-Approval:

Conditions:

1. The Applicant/Developer shall comply with the Conditions of Approval issued for TM-20285, TM-20160, TM-1793, Esperanza Specific Plan and related Development Agreements.

2. The Applicant/Developer shall install ADA ramps for pedestrian crossings at the following locations per City of Ontario Standard Drawing No. 1213.

    a. Southwest corner of Chatham Street and Clifton Avenue
    b. Southeast corner of Chatham Street and Amherst Avenue
    c. Northwest corner of Chatham Street and Clifton Avenue

3. The Applicant/Developer shall be responsible to design and construct intersection chokers at the following locations per City of Ontario Standard Drawing No. 1110:

    a. East side of the intersection on Amherst Avenue at tract entrance
    b. Southwest/southeast corners of the intersection on Chatham Street at tract entrance
    c. Northwest and southwest corner of Chatham Street and Clifton Avenue
    d. Top of the T-intersection at Clifton Avenue and Chatham Avenue (similar to the intersection of Sage Paseo and Clifton Avenue)

    This traffic calming measure is being required to reduce speeds on Clifton Avenue.

4. The Applicant/Developer shall be responsible to design and construct street improvements along property frontages of Eucalyptus Avenue, Amherst Avenue, Chatham Street, and Clifton Avenue in accordance with conditions issued by City's Land Development Division. These, and all other street improvements required herein, shall include, but not be limited to, concrete curb and gutter, sidewalk, LED streetlights, signing and striping, and parkway landscaping.

5. The Applicant/Developer shall install a ramp and crosswalk on Chatham Street east of Ventura Avenue and appropriate parking restrictions for sight distance.

6. Existing parking restrictions along Eucalyptus Avenue and Amherst Avenue shall remain in place.

7. All landscaping, block walls, and other obstructions shall be compatible with the stopping sight distance requirements per City of Ontario Standard Drawing No. 1309.

8. The Applicant/Developer's engineer-of-record shall meet with City Engineering staff prior to designing and submitting for plan check the signing and striping design plans to define limits of improvements.

☐	**Preliminary Plans (dated 01/28/2025) meet the Standard Conditions for New Development and have been approved considering that the following conditions below be met upon submittal of the landscape construction documents.**
☒	**Preliminary Plans (dated) have not been approved. Corrections noted below are required before Preliminary Landscape Plan approval.**

A RESPONSE SHEET IS REQUIRED WITH RESUBMITTAL OR PLANS WILL BE RETURNED AS INCOMPLETE.
DIGITAL SUBMITTALS MUST BE 10MB OR LESS.

Development Plan and Tract Map

Civil/ Site Plans

1. Sheet C-1.1 Section D-D: Show an 8' decomposed granite multipurpose trail.
2. Before permit issuance, stormwater infiltration devices located in landscape areas shall be reviewed and plans approved by the Landscape Planning Division. Any stormwater devices in parkway areas shall not displace street trees.
3. Show and dimension transformers set back 5' from paving all sides. Coordinate with landscape plans.
4. Show and dimension backflow devices set back 4' from paving on all sides. Locate on level grade. Relocate away from corners.
5. Locate utilities including light standards, fire hydrants, water, drain, and sewer lines to not conflict with required tree locations—coordinate civil plans with landscape plans.
6. Provide a utility clear space 8' wide in parkways and 30' apart for street trees. Move water meters, drain lines, and light standards to the utility minimum spacing and show utility lines at the edges of the parkway, toward the driveway apron, to allow space for street trees.
7. Finished grade shall be no more/no less than 8" from the stucco/plaster face of the wall.
8. Dimension, show and call out for step-outs at parking spaces adjacent to planters; a 12" wide monolithic concrete curb, DG paving or pavers with edging.
9. Show parking lot island tree planters 1 for every ten parking spaces and at each row end.
10. Identify that all landscape areas shall be HOA-maintained landscape.
11. Note and show on plans: all AC units shall be located in residential side yards, opposite the main back yard access path with gate, or a second gate and solid surface path on the opposite side shall be added for access.
12. Add Note to Grading and Landscape Plans: Landscape areas where compaction has occurred due to grading activities and where trees or stormwater infiltration areas are located

shall be loosened by soil fracturing. For trees, a 12'x12'x18" deep area; for stormwater infiltration, the entire area shall be loosened. Add the following information on the plans: The backhoe method of soil fracturing shall be used to break up compaction. A 4" layer of Compost is spread over the soil surface before fracturing is begun. The backhoe shall dig into the soil lifting and then drop the soil immediately back into the hole. The bucket then moves to the adjacent soil and repeats. The Compost falls into the spaces between the soil chunks created. Fracturing shall leave the soil surface quite rough with large soil clods. These must be broken by additional tilling. Tilling in more Compost to the surface after fracturing per the soil report will help create an A horizon soil. Imported or reused Topsoil can be added on top of the fractured soil as needed for grading. The Landscape Architect shall be present during this process and provide certification of the soil fracturing. For additional reference, see Urban Tree Foundation – Planting Soil Specifications.

Landscape Plans

13. Locate light standards, fire hydrants, water, and sewer lines to not conflict with required tree locations. Coordinate civil plans with landscape plans
14. Show all utilities on the landscape plans. Coordinate so utilities are clear of tree locations.
15. Locate trees for shade on in open turf areas, parking lots/end island fingers, seating areas, and paving, screen blank walls and adjacent properties where missing, accent trees to entries and driveways. Locate trees 50% of canopy width from walls, buildings, and existing trees.
16. Show 6' diameter of mulch only at new trees. Detail irrigation dripline outside of mulched root zone.
17. Overhead spray systems shall be designed for plant material less than the height of the spray head.
18. Show minimum on-site tree sizes per the Landscape Development standards; see the Landscape Planning website. 5% 48" box, 10% 36 box, 30% 24" box, 55% 15 gallon. Palms are not considered trees.
19. Show 25% of trees as California native (Platanus racemosa, Quercus agrifolia, Quercus wislizenii, Quercus douglasii, Cercis occidentalis, etc.) in appropriate locations.
20. Landscape construction plans shall meet the requirements of the Landscape Development Guidelines. See https://www.ontarioca.gov/Planning/Landscape
21. Provide phasing map for multi-phase projects.
22. After a project's entitlement approval, the applicant shall pay all applicable fees for landscape plan check and inspections at a rate established by resolution of the City Council.

Specific Plan Amendment

23. Change any "New Model Colony" references to "Ontario Ranch." Page 7.6, 7.15.1 #2. Public Maintenance.
24. Pg. 8.61 & 8.64, All Exhibits: Verify with Engineering if "Pedestrian Entry Portal Gateway" and "Pedestrian Entry Monument" will be permitted within the ROW. Page 8.63, Exhibit 42, Primary Community Entry and Monumentation – Hamner Avenue.

The following are Standard Building Department Conditions of Approval.
Items with checked boxes are applicable to this Project:

Specific Conditions:

1) -

Specific Comments:
(Note: These comments are NOT Conditions)

1) -

GENERAL CONDITIONS		
☐	1	The address for the project is:
☑	2	Prior to, or at the time of plan check submittal, provide a site plan showing all buildings and the addresses assigned to them as stipulated in (1) above, and a list of these buildings and their assigned addresses on 8-1/2" x 11" paper.
☑	3	Structures must be designed for 110-mph wind exposure C (per City Ordinance).
☑	4	Shall comply with the latest adopted edition of the following codes as applicable: A. California Building Code B. California Residential Code C. California Existing Building Code D. California Electrical Code E. California Mechanical Code F. California Plumbing Code G. California Energy Code. H. California Fire Code I. California Green Building Standards Code.
☑	5	The property owner/business operator shall comply with all applicable City of Ontario Municipal Codes and Ordinances.
☐	6	The requirements of the Department of Environmental Health Services and the Air Quality Management District shall be satisfied prior to the issuance of any permit if hazardous materials are stored and/or used.
☑	7	Pursuant to the California Business and Professions Code Section 6737, most projects are required to be designed by a California Licensed Architect or Engineer. The project owner or developer should review the section of the California Codes and comply with the regulation.
☑	8	All perimeter/boundary walls/fences shall be designed and constructed so that the outer/exterior face of the wall/fence is as close as possible to the lot line. In any case, the outer/exterior face of the wall shall be within two (2) inches of the lot line. Distances greater than two (2) inches may be approved prior to construction by the Building Official on a case-by-case basis for extenuating circumstances.
☐	9	All lot lines, easement lines, etc. shall be located and/or relocated in such a manner as to not cause any existing structure to become nonconforming with the requirements of the latest adopted edition of the Building Code, or any other applicable law, ordinance, or code.
	10	Non-buildable easement(s) needed for this project. Show on plans and provide easement(s) prior to building permits.
☑	11	The Developer/Owner is responsible for the coordination of the final occupancy. The Developer/Owner shall obtain clearances from each reviewing department and division prior to requesting a final building inspection from the Building Department. Each reviewing department shall sign off in the Building Department permit software.
☐	12	All signs shall be Underwriters Laboratories, or equal, approved.
☐	13	Permits are required prior to the removal and/or demolition of structures.
☐	14	In addition to approval from Building Department, approval is required from the County of San Bernardino, Department of Public Health and the California Regional Water Quality Control Board, Santa Ana Region for the Private Sewage Disposal System.
☐	15	The existing private sewage system will have to be modified as required to accommodate the new use. Plans and/or supporting data will have to be submitted to, and approved by, the Building Department regarding the new use and necessary modifications. Additionally, approval from the Regional Water Quality Control Board, Santa Ana Region, is required for the new use.
☐	16	The coach shall bear a State of California, Department of Housing and Community Development (HCD) insignia indicating the occupancy group and design loads that the coach conforms to, and other relevant information regarding exiting, fire safety, electrical, plumbing and mechanical. The foundation system, porch and awning shall comply with plans that bear the HCD "Standard Plan

		Approval" stamp. The coach, foundation system, porch and awning shall comply with the City of Ontario's design loads and site-specific conditions.
☐	17	The conversion of the existing single-family dwelling(s) into a commercial use changes the occupancy group classification, and therefore the existing buildings must be made to comply with the requirements of all applicable codes for the new occupancy classification. Complete plans, calculations and other specifications shall be submitted to the Building Department for review, approval and subsequent permit issuance. The plans, calculations and other specifications shall be prepared by an Architect or Registered Civil/Structural Engineer licensed by the State of California who is qualified to perform said wo
☐	18	The site, or a portion of the site, is in a flood hazard area. Justification that the proposed development does not adversely affect the location or carrying capacity of the floodway, nor does it adversely affect upstream or downstream sites shall be provided to Building Department. Additionally, all provisions must be taken to protect the site from flood damage.
☐	19	All exterior lighting shall be orientated, directed, and/or shielded as much as possible so that direct illumination does not infringe onto adjoining properties
☑	20	Site facilities such as parking open or covered, recreation facilities, and trash dumpster areas, and common use areas shall be accessible per the CBC, Chapter 11.
☑	21	Trash Enclosure shall be covered, and the interior clearances shall be designed to accommodate the following: • 4' min. side access entrance • 3' min. wide clear pathway along rear of enclosure between trash bins and back wall. • Trash bins must be oriented sideways to allow access from the narrow dimension. • Use of curbs or wheel stops shall be provided within the enclosure to maintain access clearances and bin orientations.
☑	22	The applicant/developer shall include the conditions of approval of this resolution on the construction plans.
☑	23	Site development and grading shall be designed to provide access to all entrances and exterior ground floors exits and access to normal paths of travel, and where necessary to provide access. Paths of travel shall incorporate (but not limited to) exterior stairs, landings, walks and sidewalks, pedestrian ramps, curb ramps, warning curbs, detectable warning, signage, gates, lifts and walking surface materials. The accessible route(s) of travel shall be the most practical direct route between accessible building entrances, site facilities, accessible parking, public sidewalks, and the accessible entrance(s) to the site, California Building Code, (CBC) Chapter 11, Sec, 11A and 11B.
☐	24	Commercial/Industrial gated site must have at least one pedestrian emergency gate, 3'-0' x 6'-8" min. gate size, equipped with panel hardware on the inside, and gate must swing out. Pedestrian emergency gates can be installed integrated with vehicular gates.
☑	25	New residential single-family dwelling (SFD's): • The side yard gate must swing out toward the street. • The gas meter shall not obstruct side yard access gates. • Air Conditioning unit located at side yard shall maintain 3' min. clearance from property line wall to AC unit. • Provide a continuous concrete walk between garage side door to driveway or sidewalk.
☑	26	New development projects located in the Ontario Ranch specific plan are required to submit a **methane assessment report**. This report shall be submitted to the Building Department for review and approval at grading plan submittal. Comply with the METHANE ASSESSMENT FOR PROJECTS IN THE ONTARIO RANCH SPECIFIC PLAN guideline. This guideline is available on the Building Department website
☐	27	If hazardous substances are used and/or stored, a technical opinion and report, identifying and developing methods of protection from the hazards presented by the hazardous materials may be required. This report shall be prepared by a qualified person, firm, or corporation and submitted to Building Department. This report shall also explain the proposed facility's intended methods of

		operation and list all of the proposed materials, their quantities, classifications, and the effects of any chemical (material) intermixing in the event of an accident or spill.
☐	28	The property owner/business operator shall provide a grease interceptor at a location where it shall be easily accessible for inspection, cleaning, and removal of accumulated grease. The sizing and installation shall conform to the current California Plumbing Code. The grease interceptor shall be constructed in accordance with plans approved by the Director of Public Works and the Building Official. The property owner/business operator shall contract with a maintenance company for maintenance and cleaning of the grease interceptor.
☑	29	Onsite private sewer, domestic water, and storm drainage systems shall be designed in accordance with the CPC/UPC requirements, including but not limited to, the sizing of pipes. These systems must be reviewed, approved, and inspected by the Building Department. Design standards used by other departments for off-site sewer, water, and storm drainage systems shall not be used for such onsite systems.
☑	30	The design for public domestic water, sewer, and storm drainage on any private streets shall be reviewed and approved by the Engineering Department. Such design need not be submitted to the Building Department for approval.
☐	31	Conditions of approvals shall be reproduced onto the plans submitted for permits.
☑	32	Development Impact fees are due on this project at permit issuance
☑	33	Provide accessible path of travel between buildings.
☑	34	When submitting permit applications for new single-family dwellings master/stock plan in the New Model Colony, a table summarizing lots/tract, models, square footage, and number of plumbing fixtures, electrical, and mechanical shall be included on the plan.
☑	35	When submitting permit applications for production homes, include two sets of site plans showing the setback from property lines and the model number/type.
SITE CONSTRUCTION REQUIREMENTS		
☑	36	All construction sites must be protected by a security fence and screening. The fencing and screening shall always maintained to protect pedestrians
☑	37	Temporary toilet facilities shall be provided for construction workers. The toilet facilities shall be maintained in a sanitary condition. Construction toilet facilities of the non-sewer type shall conform to ANSI ZA.3
☑	38	Construction projects which require temporary electrical power shall obtain an Electrical Permit from Building Department. No temporary electrical power will be granted to a project unless one of the following items is in place and approved by Building Department and the Planning Department. (A) Installation of a construction trailer, or (B) Security fenced area where the electrical power will be located
☑	39	Installation of construction/sales trailers must be located on private property. No trailers can be in the public street right of way.
☑	40	Any temporary building, trailer, commercial coach, etc. installed and/or used in connection with a construction project shall comply with City Code.
☑	41	Prior to issuance of a Building Permit all of the following must be in place: portable toilet with hand wash station, all BMP's, fencing and signage on each adjacent street saying "If there is any dust or debris coming from this site please contact (superintendent number here) or the AQMD if the problem is not being resolved" or something similar to this.
PRIOR TO ISSUANCE OF BUILDING/CONSTRUCTION PERMITS		
☑	42	The following grading items shall be completed and/or submitted – as applicable – prior to the issuance of building permits for this project: A. Precise grading plans shall be approved B. Rough grading completed

		C. Compaction certification completed D. Pad elevation certification completed E. Rough grade inspection signed off by a City's Building
☑	43	Prior to the issuance of a Building Permit, the applicant shall pay all Development Improvement Fees to the City. Copies of receipts shall be provided to the Building Department prior to permit issuance.
☑	44	The Tract or Parcel map shall be recorded prior to the issuance of any permits.
☐	45	The existing parcels shall be combined into a single parcel, or a lot line adjustment shall be done so that the proposed structure(s) does not cross any lot line and complies with all requirements of the California Building Code, prior to any building permits being issued.
☑	46	Fire sprinklers, fire alarm systems and fire hydrant plans shall be submitted for plan review concurrently with building plans and shall be approved prior to permit issuance.
☑	47	Prior to issuance of Building Permits, school fees need to be paid to school district where project is located.

CITY OF ONTARIO
MEMORANDUM

TO: **Robert Morales, Associate Planner**
Planning Department

FROM: **Paul Ehrman, Sr. Deputy Fire Chief/Fire Marshal**
Fire Department

DATE: **September 19, 2024**

SUBJECT: **PDEV24-017 - A Development Plan to construct 161 multiple-family dwellings on approximately 13.2 acres of land generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue, within Planning Area 11 of the Esperanza Specific Plan (APN(s): 1073-101-050). Related File(s): PGPA24-003, PSPA24-004, PMTT24-008.**

☒ The plan **does** adequately address Fire Department requirements at this time.

☒ Standard Conditions of Approval apply, as stated below.

SITE AND BUILDING FEATURES:

A. 2022 CBC Type of Construction: Type V-B

B. Type of Roof Materials: Ordinary

C. Ground Floor Area(s): Varies

D. Number of Stories: 2 + 3

E. Total Square Footage: Varies, Approx. 1,600 Sq. Ft.

F. 2022 CBC Occupancy Classification(s): R3

CONDITIONS OF APPROVAL:

1.0 GENERAL

☒ 1.1 The following are the Ontario Fire Department ("Fire Department") requirements for this development project, based on the current edition of the California Fire Code (CFC), and the current versions of the Fire Prevention Standards ("Standards.") It is recommended that the applicant or developer transmit a copy of these requirements to the on-site contractor(s) and that all questions or concerns be directed to the Bureau of Fire Prevention, at (909) 395-2029. For copies of Ontario Fire Department Standards please access the City of Ontario web site at www.ontarioca.gov/Fire/Prevention.

☒ 1.2 These Fire Department conditions of approval are to be included on any and all construction drawings.

2.0 FIRE DEPARTMENT ACCESS

☒ 2.1 Fire Department vehicle access roadways shall be provided to within one hundred and fifty feet (150') of all portions of the exterior walls of the first story of any building, unless specifically approved. Roadways shall be paved with an all-weather surface and shall be a minimum of twenty-four (24) ft. wide. See Standard #B-004.

☒ 2.2 In order to allow for adequate turning radius for emergency fire apparatus, all turns shall be designed to meet the minimum twenty-five feet (25') inside and forty-five feet (45') outside turning radius per Standard #B-005.

☒ 2.3 Fire Department access roadways that exceed one hundred and fifty feet (150') in length shall have an approved turn-around per Standard #B-002.

☒ 2.4 Access drive aisles which cross property lines shall be provided with CC&Rs, access easements, or reciprocating agreements, and shall be recorded on the titles of affected properties, and copies of same shall be provided at the time of building plan check.

☒ 2.5 "No Parking-Fire Lane" signs and /or red painted curbs with lettering are required to be installed in interior access roadways, in locations where vehicle parking would obstruct the minimum clear width requirement. Installation shall be per Standard #B-001.

☒ 2.6 Security gates or other barriers on fire access roadways shall be provided with a Knox brand key switch or padlock to allow Fire Department access. See Standards #B-003, B-004 and H-001.

☒ 2.7 Any time PRIOR to on-site combustible construction and/or storage, a minimum twenty-four feet (24') wide circulating all weather access roads shall be provided to within one hundred and fifty feet (150') of all portions of the exterior walls of the first story of any building, unless specifically approved by fire department and other emergency services.

3.0 WATER SUPPLY

☒ 3.1 The required fire flow per Fire Department standards, based on the 2019 California Fire Code, Appendix B, is 1500 gallons per minute (g.p.m.) for 2 hours at a minimum of 20 pounds per square inch (p.s.i.) residual operating pressure.

☒ 3.2 Off-site (public) fire hydrants are required to be installed on all frontage streets, at a maximum spacing of three hundred feet (300') apart, on alternating sides of the street. Streets with a center median shall require public hydrants spaced five hundred feet (500') apart, on the same side of the street.

☒ 3.4 The water supply, including water mains and fire hydrants, shall be tested and approved by the Engineering Department and Fire Department prior to combustible construction to assure availability and reliability for firefighting purposes.

4.0 FIRE PROTECTION SYSTEMS

☒ 4.1 On-site private fire hydrants are required per Standard #D-005, and identified in accordance with Standard #D-002. Installation and locations(s) are subject to the approval of the Fire Department. An application with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.2 Underground fire mains which cross property lines shall be provided with CC & R, easements, or reciprocating agreements, and shall be recorded on the titles of affected properties, and copies of same shall be provided at the time of fire department plan check. The shared use of private fire mains or fire pumps is allowable only between immediately adjacent properties and shall not cross any public street.

☒ 4.3 An automatic fire sprinkler system is required. The system design shall be in accordance with National Fire Protection Association (NFPA) Standard 13. All new fire sprinkler systems, except those in single family dwellings, which contain twenty (20) sprinkler heads or more shall be monitored by an approved listed supervising station. An application along with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.4 Wood frame buildings that are to be sprinkled shall have these systems in service (but not necessarily finaled) before the building is enclosed.

☒ 4.7 Portable fire extinguishers are required to be installed prior to occupancy per Standard #C-001. Please contact the Fire Prevention Bureau to determine the exact number, type and placement required.

5.0 BUILDING CONSTRUCTION FEATURES

☒ 5.1 The developer/general contractor is to be responsible for reasonable periodic cleanup of the development during construction to avoid hazardous accumulations of combustible trash and debris both on and off the site.

☒ 5.2 Approved numbers or addresses shall be placed on all new and existing buildings in such a position as to be plainly visible and legible from the street or road fronting the property. Multi-tenant or building projects shall have addresses and/or suite numbers provided on the rear of the building. Address numbers shall contrast with their background. See Section 9-1 6.06 of the Ontario Municipal Code and Standards #H-003 and #H-002.

☒ 5.3 Single station smoke alarms and carbon monoxide alarms are required to be installed per the California Building Code and the California Fire Code.

☒ 5.4 Multiple unit building complexes shall have building directories provided at the main entrances. The directories shall be designed to the requirements of the Fire Department, see Section 9-1 6.06 of the Ontario Municipal Code and Standard #H-003.

☒ 5.5 All residential chimneys shall be equipped with an approved spark arrester meeting the requirements of the California Building Code.

☒ 5.6 Knox ® brand key-box(es) shall be installed in location(s) acceptable to the Fire Department. All Knox boxes shall be monitored for tamper by the building fire alarm system. See Standard #H-001 for specific requirements.

CITY OF ONTARIO
MEMORANDUM

FROM: **Heather Lugo, MA, Police Department**

DATE: **September 9, 2025**

SUBJECT: **PDEV24-017 - A Development Plan to construct 161 multiple-family dwellings on approximately 13.2 acres of land generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue, within Planning Area 11 of the Esperanza Specific Plan (APN(s): 1073-101-050). Related File(s): PGPA24-003, PSPA24-004, PMTT24-008.**

The "Standard Conditions of Approval" contained in Resolution No. 2017-027 apply. The applicant shall read and be thoroughly familiar with these conditions, including, but not limited to, the requirements below.

- Required lighting for all walkways, driveways, doorways, parking lots, hallways and other areas used by the public shall be provided. Lights shall operate via photosensor. Planned landscaping shall not obstruct lighting.
- The Applicant shall comply with construction site security requirements as stated in the Standard Conditions.
- All exterior electrical outlets in common areas shall be secured and locked (if accessible to the public).
- All exterior water spigots / water supply sources in common areas shall be secured and locked (if accessible to the public).
- Trash enclosure (if applicable) shall be fully secured/enclosed by locks, mesh, and screen grate to reduce crime and encampment opportunities for homeless persons.

The Applicant is invited to contact Heather Lugo at (909) 408-1074 with any questions or concerns regarding these conditions.

RESOLUTION NO. PC25-051

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PDEV24-017, A DEVELOPMENT PLAN TO CONSTRUCT 161 CONDOMINIUM UNITS, ON APPROXIMATELY 10.02 ACRES OF LAND LOCATED SOUTH OF CHATHAM STREET, WEST OF CLIFTON AVENUE, EAST OF AMHERST AVENUE, AND NORTH OF EUCALYPTUS AVENUE, WITHIN PLANNING AREA 11 (RD-7 / ROW TOWNHOMES) OF THE ESPERANZA SPECIFIC PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1073-101-050

WHEREAS, GDC Investments 13, LP (Applicant) filed an Application for the approval of a Development Plan, File No. PDEV24-017, as described in the title of this Decision (hereinafter referred to as Application" or "Project); and

WHEREAS, the Application applies to approximately 10.02 acres of land generally located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue, within Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan, identified as Assessor's Parcel Number 1073-101-050, and presently vacant; and

WHEREAS, the property to the north of the Project site is within the Esperanza Specific Plan, designated Park, and developed with residential uses; the property to the east is within the Esperanza Specific Plan, designated PA-4 (RD-6 / 6-Pack Courtyard), and developed with residential uses; the property to the south is within the Esperanza Specific Plan, designated PA-7 (RD-1 / SFD 50' wide lots), and developed with residential uses; and the property to the west is within the Esperanza Specific Plan, designated PA-10 (RD-3 / SFD 2-Pack), and developed with residential uses; and

WHEREAS, the Project includes private streets, a recreation area with a pool, common open space, private open space, and landscaping improvements, all consistent with the requirements of the Esperanza Specific Plan; and

WHEREAS, the Project provides a total of 433 vehicle parking spaces, exceeding the 414 spaces required by the Esperanza Specific Plan, through a combination of garage, driveway, uncovered, and parallel spaces; and

WHEREAS, the Project incorporates 2 Transitional architectural styles, Farmhouse and Spanish, applied across the 2- and 3-story buildings, consistent with the architectural standards and objectives of the Esperanza Specific Plan; and

WHEREAS, the Development Plan is consistent with the density, development standards, and design guidelines of the Esperanza Specific Plan; and

WHEREAS, The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (SEIR)(SCH No. 2021070364, certified by the City Council on August 16, 2022 (hereinafter referred to as Certified SEIR), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified SEIR (hereinafter referred to as SEIR Addendum) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as CEQA); and

WHEREAS, the environmental impacts of this Project were thoroughly analyzed in the SEIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for Implementing the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000, et seq. — (hereinafter referred to as CEQA) and an SEIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of TOP 2050, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan

(hereinafter referred to as ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on September 15, 2025, the Development Advisory Board of the City of Ontario conducted a hearing to consider the Addendum and the Project, and concluded said hearing on that date, voting to issue Decision Nos. DAB25-031 and DAB25-033, respectively, recommending that the Planning Commission approve the Application; and

WHEREAS, as the first action on the Project, on September 23, 2025, the Planning Commission issued a Resolution adopting the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on September 23, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to TOP 2050 Supplemental Environmental Impact Report (SEIR)(State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002;

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Local Guidelines for Implementing the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the SEIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of TOP 2050, as the Project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan (ALUCP) Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670, et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission therefore finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in the Sections above, the Planning Commission hereby concludes as follows:

(1) ***The proposed development at the proposed location is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.*** The proposed Project is located within the Medium Density Residential land use district of the Policy Plan Land Use Map, and Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan The development standards and conditions under which the proposed Project will be constructed and maintained is consistent with the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of TOP.

(2) ***The proposed development is compatible with those on adjoining sites in relation to location of buildings, with particular attention to privacy, views, any physical constraint identified on the site and the characteristics of the area in which the site is located.*** The Project has been designed consistent with the requirements of the City of Ontario Development Code and Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan including standards relative to the particular land use proposed residential project, as-well-as building intensity, building and parking setbacks, building height, number of off-street parking and loading spaces, on-site and off-site landscaping, and fences, walls and obstructions.

(3) ***The proposed development will complement and/or improve upon the quality of existing development in the vicinity of the Project and the minimum safeguards necessary to protect the public health, safety and general welfare have been required of the proposed Project.*** The Development Advisory Board has required certain safeguards, and imposed certain conditions of approval, which have been established to ensure that: [i] the purposes of the Esperanza Specific Plan are maintained; [ii] the project will not endanger the public health, safety or general welfare; [iii] the project will not result in any significant environmental impacts; [iv] the project will be in harmony with the area in which it is located; and [v] the project will be in full conformity with the Vision, City Council Priorities and Policy Plan components of TOP, and the Esperanza Specific Plan.

(4) ***The proposed development is consistent with the development standards and design guidelines set forth in the Development Code, or applicable specific plan or planned unit development.*** The proposed Project has been reviewed for consistency with the general development standards and guidelines of the Esperanza Specific Plan that are applicable to the proposed Project, including building intensity, building and parking setbacks, building height, amount of off-street parking and loading spaces, parking lot dimensions, design and landscaping, bicycle parking, on-site

landscaping, and fences and walls, as-well-as those development standards and guidelines specifically related to the particular land use being proposed residential project. As a result of this review, the Planning Commission has determined that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the development standards and guidelines described in the Esperanza Specific Plan.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in the Sections above, the Planning Commission hereby APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East B Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 23rd day of September 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nicola Ricci
Planning Commission Chairman

ATTEST:

Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)

Project Description: A Development Plan to construct 161 condominium units, on approximately 10.02 acres of land located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue, within Planning Area 11 (RD-7 / Row Townhomes) of the Esperanza Specific Plan; (APN: 1073-101-050)**; submitted by GDC Investments 13.**

Prepared By: Robert Morales, Associate Planner
Phone: 909.395.2432 (direct)
Email: Rmorales@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Time Limits.

(a) Development Plan approval shall become null and void 2 years following the effective date of application approval, unless a building permit is issued and construction is commenced, and diligently pursued toward completion, or a time extension has been approved by the Planning Director. This condition does not supersede any individual time limits specified herein, or any other departmental conditions of approval applicable to the Project, for the performance of specific conditions or improvements.

2.2 General Requirements. The Project shall comply with the following general requirements:

(a) All construction documentation shall be coordinated for consistency, including, but not limited to, architectural, structural, mechanical, electrical, plumbing, landscape

and irrigation, grading, utility and street improvement plans. All such plans shall be consistent with the approved entitlement plans on file with the Planning Department.

(b) The project site shall be developed in conformance with the approved plans on file with the City. Any variation from the approved plans must be reviewed and approved by the Planning Department prior to building permit issuance.

(c) The herein-listed conditions of approval from all City departments shall be included in the construction plan set for the project, which shall be maintained on site during project construction.

2.3 Landscaping.

(a) The Project shall provide and continuously maintain landscaping and irrigation systems in compliance with the provisions of Ontario Development Code Division 6.05 (Landscaping).

(b) Comply with the conditions of approval of the Planning Department, Landscape Planning Division.

(c) Landscaping shall not be installed until the Landscape and Irrigation Construction Documentation Plans required by Ontario Development Code Division 6.05 (Landscaping) have been approved by the Landscape Planning Division.

(d) Changes to approved Landscape and Irrigation Construction Documentation Plans, which affect the character or quantity of the plant material or irrigation system design, shall be resubmitted for approval of the revision by the Landscape Planning Division, prior to the commencement of the changes.

2.4 Walls and Fences. All Project walls and fences shall comply with the requirements of Ontario Development Code Division 6.02 (Walls, Fences and Obstructions).

2.5 Parking, Circulation and Access.

(a) The Project shall comply with the applicable off-street parking, loading and lighting requirements of the Esperanza Specific Plan.

(b) All drive approaches shall be provided with an enhanced pavement treatment. The enhanced paving shall extend from the back of the approach apron, into the site, to the first intersecting drive aisle or parking space.

(c) Areas provided to meet the City's parking requirements, including off-street parking and loading spaces, access drives, and maneuvering areas, shall not be used for the outdoor storage of materials and equipment, nor shall it be used for any other purpose than parking.

(d) The required number of off-street parking spaces and/or loading spaces shall be provided at the time of site and/or building occupancy. All parking and loading spaces shall be maintained in good condition for the duration of the building or use.

(e) Parking spaces specifically designated and conveniently located for use by the physically disabled shall be provided pursuant to current accessibility regulations contained in State law (CCR Title 24, Part 2, Chapters 2B71, and CVC Section 22507.8).

(f) Bicycle parking facilities, including bicycle racks, lockers, and other secure facilities, shall be provided in conjunction with development projects pursuant to current regulations contained in CALGreen (CAC Title 24, Part 11). The final design and placement of bicycle parking facilities shall be subject to Planning Department review and approval.

(g) All off-street parking facilities shall be provided with nighttime security lighting pursuant to Ontario Municipal Code Section 4-11.08 (Special Residential Building Provisions) and Section 4-11.09 (Special Commercial/Industrial Building Provisions), designed to confine emitted light to the parking areas. Parking facilities shall be lit from sunset until sunrise, daily, and shall be operated by a photocell switch.

(h) Unless intended as part of a master lighting program, no operation, activity, or lighting fixture shall create illumination on any adjacent property.

2.6 Mechanical and Rooftop Equipment.

(a) All exterior roof-mounted mechanical, heating and air conditioning equipment, and all appurtenances thereto, shall be completely screened from public view by parapet walls or roof screens that are architecturally treated so as to be consistent with the building architecture.

(b) All ground-mounted utility equipment and structures, such as tanks, transformers, HVAC equipment, and backflow prevention devices, shall be located out of view from a public street, or adequately screened through the use of landscaping and/or decorative low garden walls.

2.7 Security Standards. The Project shall comply with all applicable requirements of Ontario Municipal Code Title 4 (Public Safety), Chapter 11 (Security Standards for Buildings).

2.8 Signs.

(a) All Project signage shall comply with the requirements of Ontario Development Code Division 8.1 (Sign Regulations).

2.9 Sound Attenuation. The Project shall be constructed and operated in a manner so as not to exceed the maximum interior and exterior noise levels set forth in Ontario Municipal Code Title 5 (Public Welfare, Morals, and Conduct), Chapter 29 (Noise).

2.10 Covenants, Conditions and Restrictions (CC&Rs)/Mutual Access and Maintenance Agreements.

(a) CC&Rs shall be prepared for the Project and shall be recorded prior to the issuance of a building permit.

(b) The CC&Rs shall be in a form and contain provisions satisfactory to the City. The articles of incorporation for the property owner's association and the CC&Rs shall be reviewed and approved by the City.

(c) CC&Rs shall ensure reciprocal parking and access between parcels.

(d) CC&Rs shall ensure reciprocal parking and access between parcels, and common maintenance of:

(i) Landscaping and irrigation systems within common areas;
(ii) Landscaping and irrigation systems within parkways adjacent to the project site, including that portion of any public highway right-of-way between the property line or right-of-way boundary line and the curb line and also the area enclosed within the curb lines of a median divider (Ontario Municipal Code Section 7-3.03), pursuant to Ontario Municipal Code Section 5-22-02;
(iii) Shared parking facilities and access drives; and
(iv) Utility and drainage easements.

(e) CC&Rs shall include authorization for the City's local law enforcement officers to enforce City and State traffic and penal codes within the project area.

(f) The CC&Rs shall grant the City of Ontario the right to enforce the CC&R provisions.

(g) A specific methodology/procedure shall be established within the CC&Rs for enforcement of its provisions by the City of Ontario, if adequate maintenance of the development does not occur, such as, but not limited to, provisions that would grant the City the right of access to correct maintenance issues and assess the property owner's association for all costs incurred.

2.11 Disclosure Statements.

(a) A copy of the Public Report from the Department of Real Estate, prepared for the subdivision pursuant to Business and Professions Code Section 11000 et seq., shall be provided to each prospective buyer of the residential units and shall include a statement to the effect that:

(i) This tract is subject to noise from the Ontario International Airport and may be more severely impacted in the future.
(ii) Some of the property adjacent to this tract is zoned for agricultural uses and there could be fly, odor, or related problems due to the proximity of animals.
(iii) The area south of Riverside Drive lies within the San Bernardino County Agricultural Preserve. Dairies currently existing in that area are likely to remain for the foreseeable future.
(iv) This tract is part of a Landscape Maintenance District. The homeowner(s) will be assessed through their property taxes for the continuing maintenance of the district.

2.12 Environmental Requirements.

(a) If human remains are found during project grading/excavation/construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and Native American consultation has been completed (if deemed applicable).

(b) If any archeological or paleontological resources are found during project grading/excavation/construction, the area shall not be disturbed until the significance of the resource is determined. If determined to be significant, the resource shall be recovered by a qualified archeologist or paleontologist consistent with current standards and guidelines, or other appropriate measures implemented.

2.13 Indemnification. The applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul any approval of the City of Ontario, whether by its City Council, Planning Commission or other authorized board or officer. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

2.14 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

(b) Within 5 days following final application approval, the Notice of Exemption ("NOE") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). The filing of a NOE is voluntary; however, failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

(c) After the Project's entitlement approval, and prior to issuance of final building permits, the Planning Department's Plan Check and Inspection fees shall be paid at the rate established by resolution of the City Council.

2.15 Related Applications. PDEV24-017 approval shall not be final and complete until such time that related File Nos. PGPA24-003, PSPA24-004, have been approved by the City Council and PMTT24-008 has been approved by the Planning Commission.

2.16 Final Occupancy. The Project Architect of record will certify that construction of each building site and the exterior elevations of each structure shall be completed in compliance with the approved plans. Any deviation to approved plans shall require a resubmittal to the Planning Department for review and approval prior to construction. The Occupancy Release Request Form/Architect Certificate of Compliance shall be provided prior to final occupancy.

After the receipt of this Certification, the Planning Department will conduct a final site and exterior elevations inspection. The Owner's Representative and Contractor shall be present.

2.17 Additional Requirements.

(a) Prior to final inspection, the applicant shall demonstrate that all exterior materials and colors are consistent with the approved architectural elevations, to the satisfaction of the Planning Department.

(i) A physical material sample board showing all proposed exterior finishes (including stucco texture, stone/brick veneers, roof materials, trim, railing, and paint colors) shall be submitted and approved prior to issuance of building permits.

(b) Exterior downspouts shall be located at inside corners of two walls. Roof and balcony drains shall be placed in locations minimally visible from public view and installed to prevent wall stains.

(c) Exterior vents for mechanical systems, including but not limited to water heaters, dryers, kitchen and bathroom exhaust fans, and HVAC equipment, shall not be located on street-facing elevations or primary building facades.

(i) Air conditioning condensers shall not be visible from public rights-of-way or primary pedestrian paths. Condensers shall be fully screened from view using a combination of landscaping, fencing, or decorative garden walls integrated into the site design.

(d) Transitions between stucco and siding materials shall include a decorative cap, sill, or trim detail that projects from the building face to provide a defined separation.

(e) Final design and placement of interior perimeter walls shall be reviewed and approved by the Planning Department during plan check review.

(f) At all key architectural openings, including but not limited to arched entryways and recessed portals, stucco finishes shall be hand-troweled to achieve a smooth plaster surface. All other stucco applications shall utilize a 20/30 sand finish or finer.

PROJECT NAME / DESCRIPTION:	**A Tentative Tract Map for condominium purposes to subdivide 13.2 acres of land into 28 numbered lots and 15 lettered lots to develop 161 multi-family dwellings**	
LOCATION:	**North of the intersection of Eucalyptus Ave. and S. Amherst Ave.**	
APPLICANT:	**GDC Investments 13, L.P.**	
REVIEWED BY:	JEFFREY TANG P.E. PRINCIPAL ENGINEER **Raymond Lee, P.E.** **Assistant City Engineer**	9/9/25 **Date**
APPROVED BY:	FOR **Khoi Do, P.E.** **City Engineer**	9-10-25 **Date**

THIS PROJECT SHALL COMPLY WITH THE REQUIREMENTS SET FORTH IN THE GENERAL STANDARD CONDITIONS OF APPROVAL ADOPTED BY THE CITY COUNCIL (RESOLUTION NO. 2017-027) AND THE PROJECT SPECIFIC CONDITIONS OF APPROVAL SPECIFIED HEREIN. ONLY APPLICABLE CONDITIONS OF APPROVAL ARE CHECKED. THE APPLICANT SHALL BE RESPONSIBLE FOR THE COMPLETION OF ALL APPLICABLE CONDITIONS OF APPROVAL PRIOR TO FINAL MAP OR PARCEL MAP APPROVAL, ISSUANCE OF PERMITS AND/OR OCCUPANCY CLEARANCE, AS SPECIFIED IN THIS REPORT.

1. PRIOR TO FINAL MAP OR PARCEL MAP APPROVAL, APPLICANT SHALL:

Check When Complete

☐ 1.01 Dedicate to the City of Ontario, the right-of-way, described below to achieve: ☐

_____ feet on _____

Property line corner 'cut-back' required at the intersection of _____ and _____.

☐ 1.02 Dedicate to the City of Ontario, the following easement(s): _____ ☐

_____

☐ 1.03 Restrict vehicular access to the site as follows: _____ ☐

☒ **1.04 Vacate the following street(s) and/or easement(s):** ☐

A. All interfering on-site easements shall be quitclaimed, vacated, and/or submit non-interference letter from affected owner/utility company.

☐ 1.05 Submit a copy of a recorded private reciprocal use agreement or easement. The agreement or easement shall ensure, at a minimum, common ingress and egress and joint maintenance of all common access areas and drive aisles. ☐

☒ **1.06 Provide (original document) Covenants, Conditions and Restrictions (CC&Rs) as applicable to the project and as approved by the City Attorney and the Engineering and Planning Departments, ready for recordation with the County of San Bernardino. The CC&Rs shall provide for, but not be limited to, common ingress and egress, joint maintenance responsibility for all common access improvements, common facilities, parking areas, utilities, median and landscaping improvements and drive approaches, in addition to maintenance requirements established in the Water Quality Management Plan (WQMP), as applicable to the project. The CC&Rs shall also address the maintenance and repair responsibility for public improvements/utilities (sewer, water, storm drain, recycled water, etc.) located within open space/easements. In the event of any maintenance or repair of these facilities, the City shall only restore disturbed areas to current City Standards.** ☐

☒ **1.07 For all development occurring south of the Pomona Freeway (60-Freeway) and within the specified boundary limits (per Boundary Map found at *http://tceplumecleanup.com/*), the property developer/owner is made aware of the South Archibald Trichloroethylene (TCE) Plume "Disclosure Letter". Property owner may wish to provide this Letter as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq. This may include notifications in the Covenants, Conditions and Restrictions (CC&Rs) or other documents related to property transfer and disclosures. Additional information on the plume is available from the Santa Ana Regional Water Quality Control Board at *http://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658*.** ☐

☐ 1.08 File an application for Reapportionment of Assessment, together with payment of a reapportionment processing fee, for each existing assessment district listed below. Contact the Financial Services Department at (909) 395-2124 regarding this requirement. ☐

(1) _____

(2) _____

☒ 1.09 **Prepare a fully executed Subdivision Agreement (on City approved format and forms) with accompanying security as required, or complete all public improvements.** ☐

☒ 1.10 **Provide a monument bond (i.e. cash deposit) in an amount calculated by the City's approved cost estimate spreadsheet (available for download on the City's website: www.ontarioca.gov) or as specified in writing by the applicant's Registered Engineer or Licensed Land Surveyor of Record and approved by the City Engineer, whichever is greater.** ☐

☒ 1.11 **Provide a preliminary title report current to within 30 days.** ☐

☒ 1.12 **File an application, together with an initial deposit (if required), to establish a Community Facilities District (CFD) pursuant to the Mello-Roos Community Facilities District Act of 1982. The application and fee shall be submitted a minimum of four (4) months prior to final subdivision map approval, and the CFD shall be established prior to final subdivision map approval or issuance of building permits, whichever occurs first. The CFD shall be established upon the subject property to provide funding for various City services. An annual special tax shall be levied upon each parcel or lot in an amount to be determined. The special tax will be collected along with annual property taxes. The City shall be the sole lead agency in the formation of any CFD. Contact Financial Services Agency at (909) 395-2015 or email CFD@ontarioca.gov to initiate the CFD application process.** ☐

☒ 1.13 **Ontario Ranch Developments:** ☐

☒ 1) Provide evidence of final cancellation of Williamson Act contracts associated with this tract, prior to approval of any final subdivision map. Cancellation of contracts shall have been approved by the City Council.

☒ 2) Provide evidence of sufficient storm water capacity availability equivalents (Certificate of Storm Water Treatment Equivalents).

☒ 3) Provide evidence of sufficient water availability equivalents (Certificate of Net MDD Availability).

☒ 1.14 **Other conditions:** ☐

1. **Developer/applicant shall ensure that the project is developed in accordance with all applicable requirements of Tract Map No. 18380 and the Esperanza Specific Plan.**

2. PRIOR TO ISSUANCE OF ANY PERMITS, APPLICANT SHALL:

A. GENERAL
(Permits includes Grading, Building, Demolition and Encroachment)

☒ 2.01 **Record Tract Map No. 20730 pursuant to the Subdivision Map Act and in accordance with the City of Ontario Municipal Code.** ☐

☒ 2.02 **Submit a PDF of the recorded map to the City Engineer's office.** ☐

☐ 2.03 Note that the subject parcel is a recognized parcel in the City of Ontario per _____. ☐

☐ 2.04 Note that the subject parcel is an 'unrecognized' parcel in the City of Ontario and shall require a Certificate of Compliance to be processed unless a deed is provided confirming the existence of the parcel prior to the date of March 4, 1972. ☐

☐ 2.05 Apply for a: ☐

☐ Certificate of Compliance with a Record of Survey;

☐ Lot Line Adjustment (Record a Conforming Deed with the County of San Bernardino within six months of the recordation of the Lot Line Adjustment to conform the new LLA legal description. Submit a copy of the recorded Conforming Deed to the Engineering Department.);

☐ Make a Dedication of Easement.

☐ 2.06 Provide (original document) Covenants, Conditions and Restrictions (CC&R's), as applicable to the project, and as approved by the City Attorney and the Engineering and Planning Departments, ready for recordation with the County of San Bernardino. The CC&R's shall provide for, but not be limited to, common ingress and egress, joint maintenance of all common access improvements, common facilities, parking areas, utilities and drive approaches in addition to maintenance requirements established in the Water Quality Management Plan (WQMP), as applicable to the project. ☐

☐ 2.07 For all development occurring south of the Pomona Freeway (60-Freeway) and within the specified boundary limits (per Boundary Map found at http://tceplumecleanup.com/), the property developer/owner is made aware of the South Archibald Trichloroethylene (TCE) Plume "Disclosure Letter". Property owner may wish to provide this Letter as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq. This may include notifications in the Covenants, Conditions and Restrictions (CC&Rs) or other documents related to property transfer and disclosures. Additional information on the plume is available from the Santa Ana Regional Water Quality Control Board at http://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658. ☐

☒ **2.08 Submit a soils/geology report.** ☐

☐ 2.09 Other Agency Permit/Approval: Submit a copy of the approved permit and/or other form of approval of the project from the following agency or agencies: ☐

- ☐ State of California Department of Transportation (Caltrans)
- ☐ San Bernardino County Road Department (SBCRD)
- ☐ San Bernardino County Flood Control District (SBCFCD)
- ☐ Federal Emergency Management Agency (FEMA)
- ☐ Cucamonga Valley Water District (CVWD) for sewer/water service
- ☐ United States Army Corps of Engineers (USACE)
- ☐ California Department of Fish & Game
- ☐ Inland Empire Utilities Agency (IEUA)
- ☐ Other: _____

☐ 2.10 Dedicate to the City of Ontario the right-of-way described below: ☐

_____ feet on _____

Property line corner 'cut-back' required at the intersection of _____ and _____.

☐ 2.11 Dedicate to the City of Ontario the following easement(s):_____ ☐

_____

☐ 2.12 Vacate the following street(s) and/or easement(s): ☐

A. All interfering on-site easements shall be quitclaimed, vacated, and/or submit non-interference letter from affected owner/utility company.

☐ 2.13 Ontario Ranch Developments: ☐

☐ 1) Submit a copy of the permit from the San Bernardino County Health Department to the

Engineering Department and the Ontario Municipal Utilities Company (OMUC) for the destruction/abandonment of the on-site water well. The well shall be destroyed/abandoned in accordance with the San Bernardino County Health Department guidelines.

☐ 2) Make a formal request to the City of Ontario Engineering Department for the proposed temporary use of an existing agricultural water well for purposes other than agriculture, such as grading, dust control, etc. Upon approval, the Applicant shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by said agreement.

☐ 3) Design proposed retaining walls to retain up to a maximum of three (3) feet of earth. In no case shall a wall exceed an overall height of nine (9) feet (i.e. maximum 6-foot high wall on top of a maximum 3-foot high retaining wall.

☐ 2.14 Submit a security deposit to the Engineering Department to guarantee construction of the public improvements required herein valued at 100% of the approved construction cost estimate. Security deposit shall be in accordance with the City of Ontario Municipal Code. Security deposit will be eligible for release, in accordance with City procedure, upon completion and acceptance of said public improvements. ☐

☒ **2.15 The applicant/developer shall submit all necessary survey documents prepared by a Licensed Surveyor registered in the State of California detailing all existing survey monuments in and around the project site. These documents are to be reviewed and approved by the City Survey Office.** ☐

☒ **2.16 Pay all Development Impact Fees (DIF) to the Building Department. Storm Drain Development Impact Fee shall be paid to the Building Department. Final fee shall be determined based on the approved site plan and the DIF rate at the time of payment.** ☐

☐ 2.17 Other conditions: _____ ☐

B. PUBLIC IMPROVEMENTS
(See attached Exhibit 'A' for plan check submittal requirements.)

☒ **2.18 Design and construct full public improvements in accordance with the City of Ontario Municipal Code, current City standards and specifications, master plans and the adopted specific plan for the area, if any. These public improvements shall include, but not be limited to, the following (checked boxes):**

Improvement	Amherst Ave.	Chatham St.	S. Clifton St.	Eucalyptus Ave.

Specific notes for improvements listed in item no. 2.18, above:
[1]See Transportation Division Condition of Approval No. 2
[2]See Transportation Division Condition of Approval No. 5
[3]See Transportation Division Condition of Approval No. 3
[4]Tilt-sections with widths varying from 25 ft. to 27 ft.

☐ 2.19 Construct a 2" asphalt concrete (AC) grind and overlay on the existing section of the following street(s): _____ ☐

☒ **2.20 Reconstruction of the full pavement structural section, per City of Ontario Standard Drawing number 1011, may be required based on the existing pavement condition and final street design. Minimum limits of reconstruction shall be along property frontage, from street centerline to curb/gutter.** ☐

☒ **2.21 Depending on site conditions and number of utility service cuts at time of construction, additional pavement restoration may be required.** ☐

☐ 2.22 Make arrangements with the Cucamonga Valley Water District (CVWD) to provide ☐ water service ☐ sewer service to the site. This property is within the area served by the CVWD and Applicant shall provide documentation to the City verifying that all required CVWD fees have been paid. ☐

☐ 2.23 Overhead utilities shall be under-grounded, in accordance with Title 7 of the City's Municipal Code (Ordinance No. 2804 and 2892). Developer may pay in-lieu fee, approximately _____, for undergrounding of utilities in accordance with Section 7-7.302.e of the City's Municipal Code. ☐

☒ **2.24 Other conditions:** ☐
- **Private street improvements shall be designed and constructed per current City Standards. Applicable plan check and inspection fees shall be required.**

C. SEWER

☐ 2.25 An ____inch sewer main is available for connection by this project in _____. ☐

☐ 2.26 Design and construct a sewer main extension. A sewer main is not available for direct connection. The closest main is approximately _____ feet away. ☐

☐ 2.27 Submit documentation that shows expected peak loading values for modeling the impact of the subject project to the existing sewer system. The project site is within a deficient public sewer system area. Applicant shall be responsible for all costs associated with the preparation of the model. Based on the results of the analysis, Applicant may be required to mitigate the project impact to the deficient public sewer system, including, but not limited to, upgrading of existing sewer main(s), construction of new sewer main(s) or diversion of sewer discharge to another sewer. ☐

☒ **2.28 Other conditions:** ☐
- **See attached for Ontario Municipal Utilities Company (OMUC) conditions of approval.**

D. WATER

☐ 2.29 A _____inch water main is available for connection by this project in _____ (Ref: Water Drawing Number: _____) ☐

☐ 2.30 Design and construct a water main extension. A water main is not available for direct connection. The closest main is approximately _____ feet away. ☐

☒ **2.31 Other conditions:** ☐
- **See attached for Ontario Municipal Utilities Company (OMUC) conditions of approval.**

E. RECYCLED WATER

☐ 2.32 An _____inch recycled water main is available for connection by this project in _____. ☐

☒ **2.33 Design and construct an on-site recycled water system for this project. A recycled water main does exist in the vicinity of this project.** ☐

☐ 2.34 Design and construct an on-site recycled water ready system for this project. A recycled water main does not currently exist in the vicinity of this project but is planned for the near future. If Applicant would like to connect to this recycled water main when it becomes available, the cost for the connection shall be borne solely by the Applicant. ☐

☒ **2.35 Submit one (1) electronic copy, in PDF format, of the Supplemental Engineering Report (ER), for the use of recycled water to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and subsequent submittal to the California State Water Board (Division of Drinking Water) for final approval.** ☐

Note: The Division of Drinking Water review and approval process may take up to four (4) months. Contact the OMUC's Water Quality Programs at (909) 395-2678 or email OMUCWQPlanCheck@ontarioca.gov regarding this requirement. *Failure to obtain an approval letter from the Division of Drinking Water authorizing the use of recycled water will delay meter installation and if applicable, occupancy release for new developments.*

☒ **2.36 Submit one (1) electronic copy, in PDF format, of the Landscape Plans (on-site & off-site) to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and approval.**

☒ **2.37 Other conditions:** ☐
- **See attached for Ontario Municipal Utilities Company (OMUC) conditions of approval.**

F. TRAFFIC / TRANSPORTATION

☐ 2.38 Submit a focused traffic impact study, prepared and signed by a Traffic/Civil Engineer registered in the State of California. The study shall address, but not be limited to, the following issues as required by the City Engineer: ☐
1. On-site and off-site circulation
2. Traffic level of service (LOS) at 'build-out' and future years
3. Impact at specific intersections as selected by the City Engineer

☐ 2.39 New traffic signal installations shall be added to Southern California Edison (SCE) customer account number # 2-20-044-3877. ☐

☒ **2.40 Other conditions:** ☐
- **See attached for Transportation Division conditions of approval.**

G. DRAINAGE / HYDROLOGY

☒ **2.41 A 36-inch storm drain main is available to accept flows from this project in Amherst Avenue.** ☐

☒ **2.42 Submit a hydrology study and drainage analysis, prepared and signed by a Civil Engineer registered in the State of California. The study shall be prepared in accordance with the San Bernardino County Hydrology Manual and City of Ontario standards and guidelines. Additional drainage facilities, including, but not limited to, improvements beyond the project frontage, may be required to be designed and constructed, by Applicant, as a result of the findings of this study.** ☐

☐ 2.43 An adequate drainage facility to accept additional runoff from the site does not currently exist downstream of the project. Design and construct a storm water detention facility on the project site. 100-year post-development peak flow shall be attenuated such that it does not exceed 80% of pre-development peak flows, in accordance with the approved hydrology study and improvement plans. ☐

☐ 2.44 Submit a copy of a recorded private drainage easement or drainage acceptance agreement to the Engineering Department for the acceptance of any increase to volume and/or concentration of historical drainage flows onto adjacent property, prior to approval of the grading plan for the project. ☐

☐ 2.45 Comply with the City of Ontario Flood Damage Prevention Ordinance (Ordinance No. 2409). The project site or a portion of the project site is within the Special Flood Hazard Area (SFHA) as indicated on the Flood Insurance Rate Map (FIRM) and is subject to flooding during a 100-year frequency storm. The site plan shall be subject to the provisions of the National Flood Insurance Program. ☐

☐ 2.46 Other conditions: _____ ☐

H. STORM WATER QUALITY / NATIONAL POLLUTANT DISCHARGE AND ELIMINATION SYSTEM (NPDES)

☐ 2.47 401 Water Quality Certification/404 Permit – Submit a copy of any applicable 401 Certification or 404 Permit for the subject project to the City project engineer. Development that will affect any body of surface water (i.e. lake, creek, open drainage channel, etc.) may require a 401 Water Quality Certification from the California Regional Water Quality Control Board, Santa Ana Region (RWQCB) and a 404 Permit from the United States Army Corps of Engineers (USACE). The groups of water bodies classified in these requirements are perennial (flow year round) and ephemeral (flow during rain conditions, only) and include, but are not limited to, direct connections into San Bernardino County Flood Control District (SBCFCD) channels. ☐
If a 401 Certification and/or a 404 Permit are not required, a letter confirming this from Applicant's engineer shall be submitted.
Contact information: USACE (Los Angeles District) (213) 452-3414; RWQCB (951) 782-4130.

☒ 2.48 **Submit a Water Quality Management Plan (WQMP). This plan shall be approved by the Engineering Department prior to approval of any grading plan. The WQMP shall be submitted, utilizing the current San Bernardino County Stormwater Program template, available at: http://www.sbcounty.gov/dpw/land/npdes.asp.** ☐

☐ 2.49 Design and construct a Connector Pipe Trash Screen or equivalent Trash Treatment Control Device, per catch basin located within or accepting flows tributary of a Priority Land Use (PLU) area that meets the Full Capture System definition and specifications, and is on the Certified List of the State Water Resources Control Board. The device shall be adequately sized per catch basin and include a deflector screen with vector control access for abatement application, vertical support bars, and removable component to facilitate maintenance and cleaning. ☐

☒ 2.50 **Other conditions:** ☐

1. **The project applicant shall submit a Certificate of Storm Water Treatment Capcity for the Net Acreage (Including Chatham Street, Clifton Avenue, and Amherst Avenue portions) Availability in Mill Creek Wetland facility (MCW) for water quality compliance.**
2. **Activities resulting in land disturbance of one acre or more is required to obtain coverage under the Construction General Permit (CGP). The owner is the legally responsible person (LRP) of the site and shall have a Stormwater Pollution Prevention Plan (SWPPP) developed and submitted through the SMARTS website at https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml**

J. SPECIAL DISTRICTS

☒ 2.51 **File an application, together with an initial deposit (if required), to establish a Community Facilities District (CFD) pursuant to the Mello-Roos Community Facilities District Act of 1982. The application and fee shall be submitted a minimum of four (4) months prior to final subdivision map approval, and the CFD shall be established prior to final subdivision map approval or issuance of building permits, whichever occurs first. The CFD shall be established upon the subject property to provide funding for various City services. An annual special tax shall be levied upon each parcel or lot in an amount to be determined. The special tax will be collected along with annual property taxes. The City shall be the sole lead agency in the formation of any CFD. Contact Financial Services Agency at (909) 395-2015 or email CFD@ontarioca.gov to initiate the CFD application process.** ☐

☐ 2.52 Other conditions: _____ ☐

K. FIBER OPTIC

☒ 2.53 **A fiber optic line is available for connection by this project in Clifton Avenue.** ☐

☒ 2.54 **Design and construct fiber optic system to provide access to the City's conduit and fiber optic system per the City's Fiber Optic Master Plan. Building entrance conduits shall start from the closest OntarioNet hand hole constructed along the project frontage in the ROW and shall terminate in the main telecommunications room for each building. Conduit infrastructure shall interconnect with the primary and/or secondary backbone fiber optic conduit system at the nearest OntarioNet hand hole. Generally located in Clifton Avenue.** ☐

☒ 2.55 **Refer to the City's Fiber Optic Master Plan for design and layout guidelines. Contact the Broadband Operations Department at (909) 395-2000, regarding this requirement.** ☐

3. PRIOR TO ISSUANCE OF A CERTIFICATE OF OCCUPANCY, APPLICANT SHALL:

☒ 3.01 **Set new monuments in place of any monuments that have been damaged or destroyed as a result of construction of the subject project. Monuments shall be set in accordance with City of Ontario standards and to the satisfaction of the City Engineer.** ☐

☒ 3.02 **Complete all requirements for recycled water usage.** ☐

☒ **1) Procure from OMUC a copy of the letter of confirmation from the California State Water Board (Division of Drinking Water) that the Engineering Report (ER) has been reviewed and the subject site is approved for the use of recycled water.**

☒ **2) Obtain clearance from the OMUC confirming completion of recycled water improvements and passing of shutdown tests and cross connection inspection, upon availability/usage of recycled water.**

☒ **3) Complete Site Supervisor training of on-site personnel in the use of recycled water, in accordance with the ER, upon availability/usage of recycled water.**

☒ 3.03 **The applicant/developer shall submit all final survey documents prepared by a Licensed Surveyor registered in the State of California detailing all survey monuments that have been preserved, revised, adjusted or set along with any maps, corner records or Records of Survey needed to comply with these Conditions of Approvals and the latest edition of the California Professional Land Survey Act. These documents are to be reviewed and approved by the City Survey Office.** ☐

☐ 3.04 Ontario Ranch Projects: For developments located at an intersection of any two collector or arterial streets, the applicant/developer shall set a monument if one does not already exist at that intersection. Contact the City Survey office for information on reference benchmarks, acceptable methodology and required submittals. ☐

☒ 3.05 **Confirm payment of all Development Impact Fees (DIF) to the Building Department.** ☐

☒ 3.06 **Submit electronic copies (PDF and Auto CAD format) of all approved improvement plans, studies and reports (i.e. hydrology, traffic, WQMP, etc.).** ☐

4. PRIOR TO FINAL ACCEPTANCE, APPLICANT SHALL:

☒ 4.01 **Complete all Conditions of Approval listed under Sections 1-3 above.** ☐

☒ 4.02 **Pay all outstanding fees pursuant to the City of Ontario Municipal Code, including but not limited to, plan check fees, inspection fees and Development Impact Fees.** ☐

☒ 4.03 **The applicant/developer shall submit a written request for the City's final acceptance of the project addressed to the City Project Engineer. The request shall include a completed Acceptance and Bond Release Checklist, state that all Conditions of Approval have been completed and shall be signed by the applicant/developer. Upon receipt of the request, review of the request shall be a minimum of 10 business days. Conditions of Approval that are deemed incomplete by the City will cause delays in the acceptance process.** ☐

☒ 4.04 **Submit record drawings (PDF) for all public improvements identified within Section 2 of these Conditions of Approval.** ☐

EXHIBIT 'A'

ENGINEERING DEPARTMENT
First Plan Check Submittal Checklist

Project Number: PMTT24-008; PDEV24-017, and Tract Map No. 20730

All plan check submittals are to be done digitally through the City Of Ontario Citizen Portal Access. The following items are to be included with the first plan check submittal:

1. ☒ **A copy of this check list**
2. ☒ **Payment of fee for Plan Checking**
3. ☒ **Engineering Cost Estimate (on City form) with engineer's wet signature and stamp.**
4. ☒ **Project Conditions of Approval**
5. ☒ **Potable and Recycled Water demand calculations (include water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size).**
6. ☒ **Public Street improvement plan with street cross-sections**
7. ☒ **Public Sewer improvement plan[1]**
8. ☒ **Public Water improvement plan[1] (include water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size)**
9. ☒ **Recycled Water improvement plan[1] (include recycled water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size and an exhibit showing the limits of areas being irrigated by each recycled water meter)**
10. ☒ **Private Street improvement plan with street cross-sections.**
11. ☒ **Public Storm Drain improvement plan (delta to existing storm drain plan)**
12. ☐ Public Street Light improvement plan
13. ☒ **Signing and Striping improvement plan**
14. ☒ **Fiber Optic plan (include Auto CAD electronic submittal)**
15. ☒ **HOA Landscape improvement plans. Show corner sight line distance per engineering standard drawing 1309.**
16. ☒ **CFD Landscape improvement plans. Show corner sight line distance per engineering standard drawing 1309.**
17. ☒ **Dry Utility plans within public right-of-way (at a minimum the plans must show existing and ultimate right-of-way, curb and gutter, proposed utility location including centerline dimensions, wall to wall clearances between proposed utility and adjacent public line, street work repaired per Standard Drawing No. 1306. Include Auto CAD electronic submittal)**
18. ☐ Traffic Signal improvement plan and One (1) copy of Traffic Signal Specifications with modified Special Provisions. Please contact the Traffic Division at (909) 395-2154 to obtain Traffic Signal Specifications.
19. ☒ **Water Quality Management Plan (WQMP), including one (1) copy of the approved Preliminary WQMP (PWQMP).**
20. ☒ **Hydrology/Drainage study**

21. ☒ **Soils/Geology report**

22. ☒ **Payment for Final Map/Parcel Map processing fee**

23. ☒ **Final Map/Parcel Map**

24. ☒ **Approved Tentative Map**

25. ☒ **Preliminary Title Report (current within 30 days)**

26. ☒ **Traverse Closure Calculations**

27. ☒ **Set of supporting documents and maps (legible copies): referenced improvement plans (full size), referenced record final maps/parcel maps (full size, 18"x26"), Assessor's Parcel map (full size, 11"x17"), recorded documents such as deeds, lot line adjustments, easements, etc.**

28. ☒ **Supplemental Engineering Report, in electronic format (PDF format), for recycled water use only. Must be reviewed and submitted to the Division of Drinking Water by OMUC Water Quality Programs before clearing plan check workflows (includes grading and landscape plan reviews). *Approval letter issued by the Division of Drinking Water must be obtained before meter installation and if applicable, occupancy release.***

29. ☒ **Other:**
[1]If public main line infrastructure is accepted by the time of construction, this project may submit a minor offsite improvement plan for domestic water and recycled water services and for sewer lateral.

CITY OF ONTARIO
MEMORANDUM

ONTARIO MUNICIPAL UTILITIES COMPANY

DATE:	September 4, 2025
TO:	Henry Pham, Engineering Department
CC:	Robert Morales, Planning Department
FROM:	Heather Young, Utilities Engineering Division
	Christy Stevens, Utilities Engineering Division
SUBJECT:	DPR#4 - Utilities Engineering Conditions of Approval (COA)
PROJECT NO.:	TM-20730 (PMTT24-008), PDEV24-017, PGPA24-003, PSPA24-004

BRIEF DESCRIPTION:

TM-20730 (PMTT24-008): *A Tentative Tract Map (TTM 20730) for Common Interest Subdivision purposes, to subdivide 13.2 acres of land into 28 numbered lots and 15 lettered lots, generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue within the Planning Area 11 of the Esperanza Specific Plan (APN(s): 1073-101-05). Related File(s): PGPA24-003, PSPA24-004, PDEV24-017).*

PDEV24-017: *A Development Plan to construct 161 multiple-family dwellings on approximately 13.2 acres of land generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue, within Planning Area 11 of the Esperanza Specific Plan (APN(s): 1073-101-050). Related File(s): PGPA24-003, PSPA24-004, PMTT24-008.*

PGPA24-003: *An Amendment to the Land Use Element of the Policy Plan (General Plan) component of The Ontario Plan, changing the land use designation on 13.2 acres of land from PS (Public School) to MDR (Medium Density Residential) generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue within the Planning Area 11 of the Esperanza Specific Plan and modifying Exhibit LU-03 (Future Buildout Table) to be consistent with this land use designation change (APN(s): 1073-101-050). Related File(s): PSPA24-004, PMTT24-008, PDEV24-017).*

PSPA24-004: *An Amendment to the Esperanza Specific Plan; [1] Modifying the land use designation for Planning Area 11 from Public School to Residential Development 7 (RD-7); [2] Introduce a new Residential Development 7 (RD-7) designation within the Specific Plan; [3] Establish development standards for a new 3-story residential product type within the residential land use designations; [4] Implement various updates to the Specific Plan, including modifications to the land use map, land use tables, development standards, exhibits, and related text, to reflect the proposed land use changes. (APN(s): 1073-101-050). Related File(s): PGPA24-003, PMTT24-008, PDEV24-017.*

OMUC UTILITIES ENGINEERING DIVISION
CONDITIONS OF APPROVAL

CONDITIONS OF APPROVAL: *The Ontario Municipal Utilities Company (OMUC) Utilities Engineering Division recommends this application for approval subject to the Conditions of Approval outlined below and compliance with the City's Design Development Guidelines, Specifications Design Criteria, and City Standards. The Applicant shall be responsible for the compliance with and the completion of all the following applicable Conditions of Approval prior to the following milestones and subject to compliance with City's Design Development Guidelines, Specifications Design Criteria, and City Standards:*

General Conditions:

1. Standard Conditions of Approval: Project shall comply with the requirements set forth in the Amendment to the Standard Conditions of Approval for New Development Projects adopted by the City Council (Resolution No. 2017-027) on April 18, 2017, or as amended or superseded by Council Resolution; as well as project-specific conditions/requirements as outlined below.

Prior to Issuance of Any Permits (Grading, Building, Demolition and Encroachment), unless other timeline milestones are specified by individual conditions below, the Applicant Shall:

General Conditions (Section 2.A, Other conditions): The Applicant shall comply with the following:

2. Inherited Requirements and Conditions of Approval: This project is subject to all the Requirements and Conditions of Approval of related entitlements TM-18380, PDA25-003, and the Esperanza Specific Plan PSP05-002, PSPA24-004 (as amended). For any conflict in Conditions of Approval and requirements, the Conditions of Approval below for this Project will supersede.
3. Final Utilities Systems Map (USM): Submit a Final Utilities Systems Map (USM) as part of the precise grading plan submittal that meets all the City's USM requirements. These requirements include to show and label all existing and proposed utilities (including all appurtenances such as backflow devices, DCDAs, etc.), sizes, points of connection, and any easements. The final utility design shall comply with all Division of Drinking Water (CCR §64572) Separation Requirements. See Utility Systems Map (USM) Requirements document for details.
4. Public Utilities and Public Right-of-Way including Public Utility Easements (PUE): All City of Ontario Public Utilities shall be installed within a Public Right-of-Way (RoW), or within a Public Utility Easements (PUE), or within a combination of RoW and PUE. In this case, Public Utilities is referring to the mains and connected appurtenances of the following City of Ontario/OMUC Utilities: Public Potable Water; Public Recycled Water; and Public Sanitary Sewer. Public Utilities shall be subject to the Minimum RoW/PUE Area Requirements and PUE Restrictions:
    a. Minimum RoW Area Requirements: Public Utilities shall be installed within in existing RoW/PUE in alignments/locations that meet the following minimum RoW/PUE areas surrounding the Public Utilities, and/or additional RoW/PUE shall be dedicated/granted to the City to provide the following minimum RoW/PUE areas surrounding the Public Utilities:
        i. For each main, the RoW/PUE Area shall be a minimum of 20 feet wide, centered on the utility main with a minimum of 10 feet of RoW/PUE on each side of the main and this minimum area shall extend a minimum for 10 feet past the end of a main;
        ii. For each Service/Lateral, the RoW/PUE Area shall be a minimum of 10 feet wide, centered on the service/lateral with a minimum of 5 feet of RoW on each side of each service/lateral;
        iii. For each water meter box, the RoW/PUE Area shall be a minimum of 5 feet behind and 5 feet on each side of a water meter box;
        iv. For each water appurtenances (fire hydrants, blowoffs, airvacs, etc), the RoW/PUE Area shall be a minimum of 5 feet on each side surrounding the water appurtenances (fire hydrants, blowoffs, airvacs, etc);
        v. The RoW/PUE minimum areas for separate Public Utilities may overlap, provide that all minimum separations and PUE Restrictions are met.
    b. PUE Restrictions: The Minimum PUE Area required surrounding Public Utilities shall be subject to the following restrictions:
        i. The Minimum PUE Area required surrounding Public Utilities shall not contain:
            A. Any storm water quality improvements (infiltration, detention, retention, bioswale, etc);
            B. Landscaping with thick or intrusive root structures,
            C. Any trees;
            D. Any private utilities, plumbing lines, private fire system, or irrigation lines; or,
            E. Any permanent structures or overhangs of permanent structures.
        ii. The PUE surface shall be designed to allow vehicle access over and along the full length of the utility main by any City maintenance vehicle.
        iii. Minimum Separations: Within a PUE, all Department of Drinking Water (DDW) Water Main Separations per California Code of Regulations (CCR) §64572 shall be met for all Public Potable Water Mains and Services between: all Public City Utilities; Non-City Utilities; and Private Utilities. Additionally, the following Minimum Separations shall be met:
            A. At minimum there shall be a 4 feet horizontal separation between each utility as measured between the outside walls of the utility pipelines, or in the case of a Joint Utility Trench, between the outside edge of the Joint Utility Trench and the outside wall of the Utility Pipeline. The minimum 4 feet horizontal separation also includes between services and service appurtenances and: other utilities (public or private) and utility appurtenances; any other objects or potentials obstructions (boxes, handholes, vaults, transformers, panels, poles and standards, signs, driveway

approaches and wings/curb returns, trees, controllers, etc.); and any other items, as determined by the Ontario Municipal Utilities Company (OMUC).

B. Public Utility mains shall not be located behind curb or under curb & gutter and shall be located at minimum of 8 feet from curbface. With specific written permission of OMUC Management Staff, in rare circumstances, this 8 feet minimum can be reduced to 5 feet in specific locations where the 8 feet is not feasible, but at all locations the utilities alignments shall be optimized to meet this minimum location, while still maintaining all other minimum separation.

5. Well Abandonment: All existing Ground Water Wells shall be abandoned per County and State requirements prior to grading if they are not authorized to remain in service by the City's Water Resources Section.

6. Septic Tank Abandonment: All existing septic tank(s) on the property shall be abandoned per City, County, and State regulations and standards.

7. Minor Offsite Improvement Plan: Submit a Minor Offsite Improvement Plan for construction or abandonment of any water services and sewer laterals for the Project. The Minor Offsite Improvement Plan shall be included with the first plan check submittal to the Engineering Department.

    a. The abandonment of recycled water main per the Project's conditions below shall be included on the Minor Offsite Improvement Plan.

8. Unused Service Abandonment: All adjacent water services (along with connected appurtenances) and sewer laterals along the frontages of the project site not used to provide service to this Development Project shall be abandoned back to the main in accordance with City Standards and Practices.

Sanitary Sewer Conditions (Section 2.C): The Applicant shall comply with the following:

9. Sanitary Sewer Infrastructure: Sanitary sewer infrastructure in TM-18380 is required to support this development. If the sanitary sewer infrastructure is not completed by TM-18380, this development is subject to the improvements required. The Project is limited to Public Sewer Mains within Public Streets in Publicly Dedicated Right-of-way for Streets and Public Sewer Mains are not allowed within private property or private streets/private drive aisles. The Project is required to install the following Public Sewer Mains and only to the extent necessary to serve the Project:

    a. Install 8-inch sewer main in Amherst Avenue from the Project's point of connection at the intersection of Shelburne Street and extending south to connect to the existing sewer main in Eucalyptus Avenue.

10. Sanitary Sewer Service:

    a. Sewer Lateral: Multifamily attached residential buildings or single-family attached residences: the residences and buildings shall share an onsite private sewer system that discharges wastewater to the Public Sanitary Sewer System through a shared Public Sewer Lateral per Standard #2003. The quantity of Public Sewer Laterals for the Project shall be limited to the minimum necessary to meet all of the conditions of approval and as limited by the City.

        i. Sewer Lateral Connection: The Project shall connect to the 8-inch public sewer main in Amherst Avenue.

        ii. Public Sewer Laterals and Storm Water Quality Improvements: No storm water quality improvements (infiltration, detention, retention, bioswale, etc) shall be installed above or within 5 feet of any Public Sewer Lateral.

        iii. Unused Service Abandonment: The Project shall utilize any unused sewer lateral along the Project's frontages on Amherst Avenue when feasible. Any sewer lateral along the frontages of the project site not used to provide service shall be abandoned back to the main in accordance with City Standards and Practices.

    b. Private Onsite Sewer System and Plumbing: The Onsite Sewer System shall be privately maintained by the property owner. If not under one ownership, the maintenance of the shared onsite private sewer system shall be established through Covenants, Conditions, and Restrictions (CC&Rs). The Private Onsite Sewer System shall meet the following requirements:

        i. Private Onsite Sewer and Storm Water Quality Improvements: No storm water quality improvements (infiltration, detention, retention, bioswale, etc) shall be installed above or within 5 feet of any Private Onsite Sewer pipes.

Potable Water Conditions (Section 2.D): The Applicant shall comply with the following:

11. Potable Water Infrastructure: The Project is limited to Public Potable Water Mains within Public Streets in Publicly Dedicated Right-of-way for Streets and Public Potable Water Mains are not allowed within private property or private streets/private drive aisles. The Project is required to install the following Public Potable Water Mains and only to the extent necessary to serve the Project and achieve required looping:
    a. Install 8-inch potable water main in Clifton Avenue from Eucalyptus Avenue to Chatham Street.
    b. Install 8-inch potable water main in Chatham Street from Clifton Avenue to Amherst Avenue.
    c. Install 8-inch potable water main in Amherst Avenue from Chatham Street to Eucalyptus Avenue.
12. Potable Water Service:
    a. Domestic Service:
        i. Multifamily attached residential buildings or single-family attached residences: the residences shall be sub-metered and share an onsite private domestic water system that connects to the Public Potable Water System through a shared a domestic potable water service and public master meter connected to the Public Potable Water System with onsite private backflow prevention device. Maintenance of the shared onsite private domestic water system shall be established through Covenants, Conditions, and Restrictions (CC&Rs).
    b. Irrigation Service: For landscape irrigation uses that are not served by Recycled Water, the landscape irrigation uses shall have a separate irrigation water service and meter with backflow prevention device connected to the Public Potable Water System separate from the domestic water uses and the onsite plumbing systems shall be also separate from each other.
        i. Community Service District (CFD) Maintained Irrigation Areas: Any irrigated areas that are to be maintained by a Community Service District (CFD) and not by the property owner or owners association require irrigation services and meters separate from those that are maintained by the property owner or owners association.
    c. Backflow Prevention:
        i. A Backflow Prevention Device is required for each Meter connected to the Public Potable Water System that: serves any residential use that is more than one (1) single family residential unit; or, any non-residential use; or, only irrigation use.
        ii. Backflow Prevention Device Location: In order to reduce the risk of contamination to the Public Potable Water System, a Backflow Prevention Device location shall comply with the following requirements:
            1. As measured along the pipe connecting to the Backflow Prevention Device, the backflow concrete pad shall be located a minimum of 3 feet and a maximum of 5 feet from:
                1. The Right-Of-Way line for Publicly Dedicated Streets; or,
                2. The back of the sidewalk or the meter box (where there is no sidewalk), whichever is closer, for mains within PUEs and not within Right-Of-Way for Publicly Dedicated Streets.
            2. Only one single bend of up to 90 degrees maximum is allowed along the pipe to the Backflow and the single bend must be located at one of the following places: either the along the 90-degree riser connecting at the backflow assembly; or, at the end of the 12-inch stub at the back of the meter box.
            3. All the minimum DDW Separations also apply to the pipeline connecting between the Main/Meter-Box to a Backflow Device (or DCDA) and any Backflow Device (or DCDA). This also includes storm water quality improvements (infiltration, detention, retention, bioswale, etc). Also, no public or private non-potable water conveyances (private utilities, plumbing lines, sewer, private fire system, storm drain) shall cross the pipeline connecting between the Main/Meter-Box to a Backflow Device (or DCDA) or under any Backflow Device (or DCDA).
    d. Fire Water Service: For onsite private Fire System uses: Where the domestic water service and meters connected to the Public Potable Water System that serves any use that is more than one (1) single

family detached residential unit, or any non-residential use: if an onsite private fire system is required, then a separate Fire Service with Double Check Detector Assembly (DCDA) per City Standard #4208 connected to the Public Potable Water System is required, to serve the onsite private fire system. The onsite fire system and onsite domestic water plumbing system shall be separate. The DCDA location shall be the same as the Backflow Prevention Device above.

i. In certain residential cases where a separate fire service with DCDA connected to the Public Potable Water System is not required by above the requirement, and approved by the City Fire Department and the City Building Department, then the California Residential Code must be followed for the residential buildings; if the California Residential Code is not followed for the residential buildings; then a separate fire service with DCDA is required.

e. Fire Hydrants: Install public fire hydrants per City Standard along the public potable water mains fronting the Project with adequate spacing and in locations as required by the Fire Department.

Recycled Water Conditions (Section 2.E): The Applicant shall comply with the following:

13. City Ordinance 2689: This development shall comply with City Ordinance 2689 and make use of recycled water for all approved uses, including but not limited to landscape irrigation. Appropriately sized public and private mains shall be installed throughout the Project to meet this requirement, as approved by the City.

14. Recycled Water Infrastructure: Recycled water infrastructure in TM-18380 is required to support this development. If the recycled water infrastructure is not completed by TM-18380, this development is subject to the improvements required. The Project is limited to Public Recycled Water Mains within Public Streets in Publicly Dedicated Right-of-way for Streets and Public Recycled Water Mains are not allowed within private property or private streets/private drive aisles. In order to comply with City Ordinance 2689, the Project is required to install the following Public Recycled Water Mains and only to the extent necessary to serve the Project:

    a. Install 8-inch recycled water main in Clifton Avenue from Eucalyptus Avenue to Chatham Street.

    b. Abandon unused recycled water main and its associated appurtenances in Amherst Avenue from Eucalyptus Avenue to the end of the main approximately at the intersection of Shelburne Street.

15. RW Program Requirements: In order to receive RW service, the applicant shall comply with each of the following:

    a. Prior to Precise Grading Plan Approval and Building Permits Issuance:

        i. Submit one (1) electronic copy, in PDF format, of the Landscape Plans (on-site & off-site) to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and approval.

        ii. Submit one (1) electronic copy, in PDF format, of the Supplemental Engineering Report (ER), for the use of recycled water to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and subsequent submittal to the California State Water Board (Division of Drinking Water) for final approval.

        Note: The Division of Drinking Water review and approval process may take up to four (4) months. Contact the OMUC's Water Quality Programs at (909) 395-2678 or email OMUCWQPlanCheck@ontarioca.gov regarding this requirement. Failure to obtain an approval letter from the Division of Drinking Water authorizing the use of recycled water will delay meter installation and if applicable, occupancy release for new developments.

    b. Prior to Occupancy Release/Finalizing:

        i. Procure from OMUC a copy of the letter of confirmation from the California State Water Board (Division of Drinking Water) that the Engineering Report (ER) has been reviewed and the subject site is approved for the use of recycled water.
        ii. Obtain clearance from the OMUC confirming completion of recycled water improvements and passing of shutdown tests and cross connection inspection, upon availability/usage of recycled water.
        iii. Complete Site Supervisor training of on-site personnel in the use of recycled water, in accordance with the ER, upon availability/usage of recycled water.

16. Recycled Water Service: The Project's recycled water services shall connect to the public recycled water main in Clifton Avenue or Eucalyptus Avenue.

a. Recycled Water Services: In order to comply with City Ordinance 2689:

   i. Private Property Owner Maintained Uses: Each parcel/lot shall have its own separate Recycled Water Service with Meter connected to the Public Recycled Water System to serve the parcel/lot's private property owner-maintained landscape irrigation uses. If Recycled Water is going to be used for uses other than landscape irrigation, then a separate Recycled Water Service with Meter is required to serve the non-landscape irrigation uses.
   ii. Community Service District (CFD) Maintained Irrigation Areas: Any irrigated areas that are to be maintained by a Community Service District (CFD) and not by the property owner or owners association require irrigation services and meters separate from those that are maintained by the property owner or owners association.

b. Unused Service Abandonment: The Project shall utilize any unused recycled water services along the Project's frontages on Clifton Avenue or Eucalyptus Avenue when feasible. Any recycled water services (along with connected appurtenances) along the frontages of the project site not used to provide service shall be abandoned back to the main in accordance with City Standards and Practices.

CITY OF ONTARIO
MEMORANDUM

Development Plan Review

Project: PDEV24-017/PMTT24-008/PSPA24-004/PGPA24-003 (Esperanza Specific Plan)

Date: September 10, 2025

Location: Northeast Corner of Amherst Avenue and Eucalyptus Ave

By: Diego Tapia

The Transportation Division please mends the following to be incorporated into the Project's Conditions-of-Approval:

Conditions:

1. The Applicant/Developer shall comply with the Conditions of Approval issued for TM-20285, TM-20160, TM-1793, Esperanza Specific Plan and related Development Agreements.

2. The Applicant/Developer shall install ADA ramps for pedestrian crossings at the following locations per City of Ontario Standard Drawing No. 1213.

    a. Southwest corner of Chatham Street and Clifton Avenue
    b. Southeast corner of Chatham Street and Amherst Avenue
    c. Northwest corner of Chatham Street and Clifton Avenue

3. The Applicant/Developer shall be responsible to design and construct intersection chokers at the following locations per City of Ontario Standard Drawing No. 1110:

    a. East side of the intersection on Amherst Avenue at tract entrance
    b. Southwest/southeast corners of the intersection on Chatham Street at tract entrance
    c. Northwest and southwest corner of Chatham Street and Clifton Avenue
    d. Top of the T-intersection at Clifton Avenue and Chatham Avenue (similar to the intersection of Sage Paseo and Clifton Avenue)

    This traffic calming measure is being required to reduce speeds on Clifton Avenue.

4. The Applicant/Developer shall be responsible to design and construct street improvements along property frontages of Eucalyptus Avenue, Amherst Avenue, Chatham Street, and Clifton Avenue in accordance with conditions issued by City's Land Development Division. These, and all other street improvements required herein, shall include, but not be limited to, concrete curb and gutter, sidewalk, LED streetlights, signing and striping, and parkway landscaping.

5. The Applicant/Developer shall install a ramp and crosswalk on Chatham Street east of Ventura Avenue and appropriate parking restrictions for sight distance.

6. Existing parking restrictions along Eucalyptus Avenue and Amherst Avenue shall remain in place.

7. All landscaping, block walls, and other obstructions shall be compatible with the stopping sight distance requirements per City of Ontario Standard Drawing No. 1309.

8. The Applicant/Developer's engineer-of-record shall meet with City Engineering staff prior to designing and submitting for plan check the signing and striping design plans to define limits of improvements.

Newport Beach, CA 92660

☐	**Preliminary Plans (dated 01/28/2025) meet the Standard Conditions for New Development and have been approved considering that the following conditions below be met upon submittal of the landscape construction documents.**
☒	**Preliminary Plans (dated) have not been approved. Corrections noted below are required before Preliminary Landscape Plan approval.**

A RESPONSE SHEET IS REQUIRED WITH RESUBMITTAL OR PLANS WILL BE RETURNED AS INCOMPLETE.
DIGITAL SUBMITTALS MUST BE 10MB OR LESS.

Development Plan and Tract Map

Civil/ Site Plans

1. Sheet C-1.1 Section D-D: Show an 8' decomposed granite multipurpose trail.
2. Before permit issuance, stormwater infiltration devices located in landscape areas shall be reviewed and plans approved by the Landscape Planning Division. Any stormwater devices in parkway areas shall not displace street trees.
3. Show and dimension transformers set back 5' from paving all sides. Coordinate with landscape plans.
4. Show and dimension backflow devices set back 4' from paving on all sides. Locate on level grade. Relocate away from corners.
5. Locate utilities including light standards, fire hydrants, water, drain, and sewer lines to not conflict with required tree locations—coordinate civil plans with landscape plans.
6. Provide a utility clear space 8' wide in parkways and 30' apart for street trees. Move water meters, drain lines, and light standards to the utility minimum spacing and show utility lines at the edges of the parkway, toward the driveway apron, to allow space for street trees.
7. Finished grade shall be no more/no less than 8" from the stucco/plaster face of the wall.
8. Dimension, show and call out for step-outs at parking spaces adjacent to planters; a 12" wide monolithic concrete curb, DG paving or pavers with edging.
9. Show parking lot island tree planters 1 for every ten parking spaces and at each row end.
10. Identify that all landscape areas shall be HOA-maintained landscape.
11. Note and show on plans: all AC units shall be located in residential side yards, opposite the main back yard access path with gate, or a second gate and solid surface path on the opposite side shall be added for access.
12. Add Note to Grading and Landscape Plans: Landscape areas where compaction has occurred due to grading activities and where trees or stormwater infiltration areas are located

shall be loosened by soil fracturing. For trees, a 12'x12'x18" deep area; for stormwater infiltration, the entire area shall be loosened. Add the following information on the plans: The backhoe method of soil fracturing shall be used to break up compaction. A 4" layer of Compost is spread over the soil surface before fracturing is begun. The backhoe shall dig into the soil lifting and then drop the soil immediately back into the hole. The bucket then moves to the adjacent soil and repeats. The Compost falls into the spaces between the soil chunks created. Fracturing shall leave the soil surface quite rough with large soil clods. These must be broken by additional tilling. Tilling in more Compost to the surface after fracturing per the soil report will help create an A horizon soil. Imported or reused Topsoil can be added on top of the fractured soil as needed for grading. The Landscape Architect shall be present during this process and provide certification of the soil fracturing. For additional reference, see Urban Tree Foundation – Planting Soil Specifications.

Landscape Plans

13. Locate light standards, fire hydrants, water, and sewer lines to not conflict with required tree locations. Coordinate civil plans with landscape plans
14. Show all utilities on the landscape plans. Coordinate so utilities are clear of tree locations.
15. Locate trees for shade on in open turf areas, parking lots/end island fingers, seating areas, and paving, screen blank walls and adjacent properties where missing, accent trees to entries and driveways. Locate trees 50% of canopy width from walls, buildings, and existing trees.
16. Show 6' diameter of mulch only at new trees. Detail irrigation dripline outside of mulched root zone.
17. Overhead spray systems shall be designed for plant material less than the height of the spray head.
18. Show minimum on-site tree sizes per the Landscape Development standards; see the Landscape Planning website. 5% 48" box, 10% 36 box, 30% 24" box, 55% 15 gallon. Palms are not considered trees.
19. Show 25% of trees as California native (Platanus racemosa, Quercus agrifolia, Quercus wislizenii, Quercus douglasii, Cercis occidentalis, etc.) in appropriate locations.
20. Landscape construction plans shall meet the requirements of the Landscape Development Guidelines. See https://www.ontarioca.gov/Planning/Landscape
21. Provide phasing map for multi-phase projects.
22. After a project's entitlement approval, the applicant shall pay all applicable fees for landscape plan check and inspections at a rate established by resolution of the City Council.

Specific Plan Amendment

23. Change any "New Model Colony" references to "Ontario Ranch." Page 7.6, 7.15.1 #2. Public Maintenance.
24. Pg. 8.61 & 8.64, All Exhibits: Verify with Engineering if "Pedestrian Entry Portal Gateway" and "Pedestrian Entry Monument" will be permitted within the ROW. Page 8.63, Exhibit 42, Primary Community Entry and Monumentation – Hamner Avenue.

The following are Standard Building Department Conditions of Approval.
Items with checked boxes are applicable to this Project:

Specific Conditions:

1) -

Specific Comments:
(Note: These comments are NOT Conditions)

1) -

GENERAL CONDITIONS		
☐	1	The address for the project is:
☑	2	Prior to, or at the time of plan check submittal, provide a site plan showing all buildings and the addresses assigned to them as stipulated in (1) above, and a list of these buildings and their assigned addresses on 8-1/2" x 11" paper.
☑	3	Structures must be designed for 110-mph wind exposure C (per City Ordinance).
☑	4	Shall comply with the latest adopted edition of the following codes as applicable: A. California Building Code B. California Residential Code C. California Existing Building Code D. California Electrical Code E. California Mechanical Code F. California Plumbing Code G. California Energy Code. H. California Fire Code I. California Green Building Standards Code.
☑	5	The property owner/business operator shall comply with all applicable City of Ontario Municipal Codes and Ordinances.
☐	6	The requirements of the Department of Environmental Health Services and the Air Quality Management District shall be satisfied prior to the issuance of any permit if hazardous materials are stored and/or used.
☑	7	Pursuant to the California Business and Professions Code Section 6737, most projects are required to be designed by a California Licensed Architect or Engineer. The project owner or developer should review the section of the California Codes and comply with the regulation.
☑	8	All perimeter/boundary walls/fences shall be designed and constructed so that the outer/exterior face of the wall/fence is as close as possible to the lot line. In any case, the outer/exterior face of the wall shall be within two (2) inches of the lot line. Distances greater than two (2) inches may be approved prior to construction by the Building Official on a case-by-case basis for extenuating circumstances.
☐	9	All lot lines, easement lines, etc. shall be located and/or relocated in such a manner as to not cause any existing structure to become nonconforming with the requirements of the latest adopted edition of the Building Code, or any other applicable law, ordinance, or code.
	10	Non-buildable easement(s) needed for this project. Show on plans and provide easement(s) prior to building permits.
☑	11	The Developer/Owner is responsible for the coordination of the final occupancy. The Developer/Owner shall obtain clearances from each reviewing department and division prior to requesting a final building inspection from the Building Department. Each reviewing department shall sign off in the Building Department permit software.
☐	12	All signs shall be Underwriters Laboratories, or equal, approved.
☐	13	Permits are required prior to the removal and/or demolition of structures.
☐	14	In addition to approval from Building Department, approval is required from the County of San Bernardino, Department of Public Health and the California Regional Water Quality Control Board, Santa Ana Region for the Private Sewage Disposal System.
☐	15	The existing private sewage system will have to be modified as required to accommodate the new use. Plans and/or supporting data will have to be submitted to, and approved by, the Building Department regarding the new use and necessary modifications. Additionally, approval from the Regional Water Quality Control Board, Santa Ana Region, is required for the new use.
☐	16	The coach shall bear a State of California, Department of Housing and Community Development (HCD) insignia indicating the occupancy group and design loads that the coach conforms to, and other relevant information regarding exiting, fire safety, electrical, plumbing and mechanical. The foundation system, porch and awning shall comply with plans that bear the HCD "Standard Plan

		Approval" stamp. The coach, foundation system, porch and awning shall comply with the City of Ontario's design loads and site-specific conditions.
☐	17	The conversion of the existing single-family dwelling(s) into a commercial use changes the occupancy group classification, and therefore the existing buildings must be made to comply with the requirements of all applicable codes for the new occupancy classification. Complete plans, calculations and other specifications shall be submitted to the Building Department for review, approval and subsequent permit issuance. The plans, calculations and other specifications shall be prepared by an Architect or Registered Civil/Structural Engineer licensed by the State of California who is qualified to perform said wo
☐	18	The site, or a portion of the site, is in a flood hazard area. Justification that the proposed development does not adversely affect the location or carrying capacity of the floodway, nor does it adversely affect upstream or downstream sites shall be provided to Building Department. Additionally, all provisions must be taken to protect the site from flood damage.
☐	19	All exterior lighting shall be orientated, directed, and/or shielded as much as possible so that direct illumination does not infringe onto adjoining properties
☑	20	Site facilities such as parking open or covered, recreation facilities, and trash dumpster areas, and common use areas shall be accessible per the CBC, Chapter 11.
☑	21	Trash Enclosure shall be covered, and the interior clearances shall be designed to accommodate the following: • 4' min. side access entrance • 3' min. wide clear pathway along rear of enclosure between trash bins and back wall. • Trash bins must be oriented sideways to allow access from the narrow dimension. • Use of curbs or wheel stops shall be provided within the enclosure to maintain access clearances and bin orientations.
☑	22	The applicant/developer shall include the conditions of approval of this resolution on the construction plans.
☑	23	Site development and grading shall be designed to provide access to all entrances and exterior ground floors exits and access to normal paths of travel, and where necessary to provide access. Paths of travel shall incorporate (but not limited to) exterior stairs, landings, walks and sidewalks, pedestrian ramps, curb ramps, warning curbs, detectable warning, signage, gates, lifts and walking surface materials. The accessible route(s) of travel shall be the most practical direct route between accessible building entrances, site facilities, accessible parking, public sidewalks, and the accessible entrance(s) to the site, California Building Code, (CBC) Chapter 11, Sec, 11A and 11B.
☐	24	Commercial/Industrial gated site must have at least one pedestrian emergency gate, 3'-0' x 6'-8" min. gate size, equipped with panel hardware on the inside, and gate must swing out. Pedestrian emergency gates can be installed integrated with vehicular gates.
☑	25	New residential single-family dwelling (SFD's): • The side yard gate must swing out toward the street. • The gas meter shall not obstruct side yard access gates. • Air Conditioning unit located at side yard shall maintain 3' min. clearance from property line wall to AC unit. • Provide a continuous concrete walk between garage side door to driveway or sidewalk.
☑	26	New development projects located in the Ontario Ranch specific plan are required to submit a **methane assessment report**. This report shall be submitted to the Building Department for review and approval at grading plan submittal. Comply with the METHANE ASSESSMENT FOR PROJECTS IN THE ONTARIO RANCH SPECIFIC PLAN guideline. This guideline is available on the Building Department website
☐	27	If hazardous substances are used and/or stored, a technical opinion and report, identifying and developing methods of protection from the hazards presented by the hazardous materials may be required. This report shall be prepared by a qualified person, firm, or corporation and submitted to Building Department. This report shall also explain the proposed facility's intended methods of

		operation and list all of the proposed materials, their quantities, classifications, and the effects of any chemical (material) intermixing in the event of an accident or spill.
☐	28	The property owner/business operator shall provide a grease interceptor at a location where it shall be easily accessible for inspection, cleaning, and removal of accumulated grease. The sizing and installation shall conform to the current California Plumbing Code. The grease interceptor shall be constructed in accordance with plans approved by the Director of Public Works and the Building Official. The property owner/business operator shall contract with a maintenance company for maintenance and cleaning of the grease interceptor.
☑	29	Onsite private sewer, domestic water, and storm drainage systems shall be designed in accordance with the CPC/UPC requirements, including but not limited to, the sizing of pipes. These systems must be reviewed, approved, and inspected by the Building Department. Design standards used by other departments for off-site sewer, water, and storm drainage systems shall not be used for such onsite systems.
☑	30	The design for public domestic water, sewer, and storm drainage on any private streets shall be reviewed and approved by the Engineering Department. Such design need not be submitted to the Building Department for approval.
☐	31	Conditions of approvals shall be reproduced onto the plans submitted for permits.
☑	32	Development Impact fees are due on this project at permit issuance
☑	33	Provide accessible path of travel between buildings.
☑	34	When submitting permit applications for new single-family dwellings master/stock plan in the New Model Colony, a table summarizing lots/tract, models, square footage, and number of plumbing fixtures, electrical, and mechanical shall be included on the plan.
☑	35	When submitting permit applications for production homes, include two sets of site plans showing the setback from property lines and the model number/type.
SITE CONSTRUCTION REQUIREMENTS		
☑	36	All construction sites must be protected by a security fence and screening. The fencing and screening shall always maintained to protect pedestrians
☑	37	Temporary toilet facilities shall be provided for construction workers. The toilet facilities shall be maintained in a sanitary condition. Construction toilet facilities of the non-sewer type shall conform to ANSI ZA.3
☑	38	Construction projects which require temporary electrical power shall obtain an Electrical Permit from Building Department. No temporary electrical power will be granted to a project unless one of the following items is in place and approved by Building Department and the Planning Department. (A) Installation of a construction trailer, or (B) Security fenced area where the electrical power will be located
☑	39	Installation of construction/sales trailers must be located on private property. No trailers can be in the public street right of way.
☑	40	Any temporary building, trailer, commercial coach, etc. installed and/or used in connection with a construction project shall comply with City Code.
☑	41	Prior to issuance of a Building Permit all of the following must be in place: portable toilet with hand wash station, all BMP's, fencing and signage on each adjacent street saying "If there is any dust or debris coming from this site please contact (superintendent number here) or the AQMD if the problem is not being resolved" or something similar to this.
PRIOR TO ISSUANCE OF BUILDING/CONSTRUCTION PERMITS		
☑	42	The following grading items shall be completed and/or submitted – as applicable – prior to the issuance of building permits for this project: A. Precise grading plans shall be approved B. Rough grading completed

		C. Compaction certification completed D. Pad elevation certification completed E. Rough grade inspection signed off by a City's Building
☑	43	Prior to the issuance of a Building Permit, the applicant shall pay all Development Improvement Fees to the City. Copies of receipts shall be provided to the Building Department prior to permit issuance.
☑	44	The Tract or Parcel map shall be recorded prior to the issuance of any permits.
☐	45	The existing parcels shall be combined into a single parcel, or a lot line adjustment shall be done so that the proposed structure(s) does not cross any lot line and complies with all requirements of the California Building Code, prior to any building permits being issued.
☑	46	Fire sprinklers, fire alarm systems and fire hydrant plans shall be submitted for plan review concurrently with building plans and shall be approved prior to permit issuance.
☑	47	Prior to issuance of Building Permits, school fees need to be paid to school district where project is located.

CITY OF ONTARIO
MEMORANDUM

TO: **Robert Morales, Associate Planner**
Planning Department

FROM: **Paul Ehrman, Sr. Deputy Fire Chief/Fire Marshal**
Fire Department

DATE: **September 19, 2024**

SUBJECT: **PDEV24-017 - A Development Plan to construct 161 multiple-family dwellings on approximately 13.2 acres of land generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue, within Planning Area 11 of the Esperanza Specific Plan (APN(s): 1073-101-050). Related File(s): PGPA24-003, PSPA24-004, PMTT24-008.**

☒ The plan **does** adequately address Fire Department requirements at this time.

☒ Standard Conditions of Approval apply, as stated below.

SITE AND BUILDING FEATURES:

A. 2022 CBC Type of Construction: Type V-B

B. Type of Roof Materials: Ordinary

C. Ground Floor Area(s): Varies

D. Number of Stories: 2 + 3

E. Total Square Footage: Varies, Approx. 1,600 Sq. Ft.

F. 2022 CBC Occupancy Classification(s): R3

CONDITIONS OF APPROVAL:

1.0 GENERAL

☒ 1.1 The following are the Ontario Fire Department ("Fire Department") requirements for this development project, based on the current edition of the California Fire Code (CFC), and the current versions of the Fire Prevention Standards ("Standards.") It is recommended that the applicant or developer transmit a copy of these requirements to the on-site contractor(s) and that all questions or concerns be directed to the Bureau of Fire Prevention, at (909) 395-2029. For copies of Ontario Fire Department Standards please access the City of Ontario web site at www.ontarioca.gov/Fire/Prevention.

☒ 1.2 These Fire Department conditions of approval are to be included on any and all construction drawings.

2.0 FIRE DEPARTMENT ACCESS

☒ 2.1 Fire Department vehicle access roadways shall be provided to within one hundred and fifty feet (150') of all portions of the exterior walls of the first story of any building, unless specifically approved. Roadways shall be paved with an all-weather surface and shall be a minimum of twenty-four (24) ft. wide. See Standard #B-004.

☒ 2.2 In order to allow for adequate turning radius for emergency fire apparatus, all turns shall be designed to meet the minimum twenty-five feet (25') inside and forty-five feet (45') outside turning radius per Standard #B-005.

☒ 2.3 Fire Department access roadways that exceed one hundred and fifty feet (150') in length shall have an approved turn-around per Standard #B-002.

☒ 2.4 Access drive aisles which cross property lines shall be provided with CC&Rs, access easements, or reciprocating agreements, and shall be recorded on the titles of affected properties, and copies of same shall be provided at the time of building plan check.

☒ 2.5 "No Parking-Fire Lane" signs and /or red painted curbs with lettering are required to be installed in interior access roadways, in locations where vehicle parking would obstruct the minimum clear width requirement. Installation shall be per Standard #B-001.

☒ 2.6 Security gates or other barriers on fire access roadways shall be provided with a Knox brand key switch or padlock to allow Fire Department access. See Standards #B-003, B-004 and H-001.

☒ 2.7 Any time PRIOR to on-site combustible construction and/or storage, a minimum twenty-four feet (24') wide circulating all weather access roads shall be provided to within one hundred and fifty feet (150') of all portions of the exterior walls of the first story of any building, unless specifically approved by fire department and other emergency services.

3.0 WATER SUPPLY

☒ 3.1 The required fire flow per Fire Department standards, based on the 2019 California Fire Code, Appendix B, is 1500 gallons per minute (g.p.m.) for 2 hours at a minimum of 20 pounds per square inch (p.s.i.) residual operating pressure.

☒ 3.2 Off-site (public) fire hydrants are required to be installed on all frontage streets, at a maximum spacing of three hundred feet (300') apart, on alternating sides of the street. Streets with a center median shall require public hydrants spaced five hundred feet (500') apart, on the same side of the street.

☒ 3.4 The water supply, including water mains and fire hydrants, shall be tested and approved by the Engineering Department and Fire Department prior to combustible construction to assure availability and reliability for firefighting purposes.

4.0 FIRE PROTECTION SYSTEMS

☒ 4.1 On-site private fire hydrants are required per Standard #D-005, and identified in accordance with Standard #D-002. Installation and locations(s) are subject to the approval of the Fire Department. An application with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.2 Underground fire mains which cross property lines shall be provided with CC & R, easements, or reciprocating agreements, and shall be recorded on the titles of affected properties, and copies of same shall be provided at the time of fire department plan check. The shared use of private fire mains or fire pumps is allowable only between immediately adjacent properties and shall not cross any public street.

☒ 4.3 An automatic fire sprinkler system is required. The system design shall be in accordance with National Fire Protection Association (NFPA) Standard 13. All new fire sprinkler systems, except those in single family dwellings, which contain twenty (20) sprinkler heads or more shall be monitored by an approved listed supervising station. An application along with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.4 Wood frame buildings that are to be sprinkled shall have these systems in service (but not necessarily finaled) before the building is enclosed.

☒ 4.7 Portable fire extinguishers are required to be installed prior to occupancy per Standard #C-001. Please contact the Fire Prevention Bureau to determine the exact number, type and placement required.

5.0 BUILDING CONSTRUCTION FEATURES

☒ 5.1 The developer/general contractor is to be responsible for reasonable periodic cleanup of the development during construction to avoid hazardous accumulations of combustible trash and debris both on and off the site.

☒ 5.2 Approved numbers or addresses shall be placed on all new and existing buildings in such a position as to be plainly visible and legible from the street or road fronting the property. Multi-tenant or building projects shall have addresses and/or suite numbers provided on the rear of the building. Address numbers shall contrast with their background. See Section 9-1 6.06 of the Ontario Municipal Code and Standards #H-003 and #H-002.

☒ 5.3 Single station smoke alarms and carbon monoxide alarms are required to be installed per the California Building Code and the California Fire Code.

☒ 5.4 Multiple unit building complexes shall have building directories provided at the main entrances. The directories shall be designed to the requirements of the Fire Department, see Section 9-1 6.06 of the Ontario Municipal Code and Standard #H-003.

☒ 5.5 All residential chimneys shall be equipped with an approved spark arrester meeting the requirements of the California Building Code.

☒ 5.6 Knox ® brand key-box(es) shall be installed in location(s) acceptable to the Fire Department. All Knox boxes shall be monitored for tamper by the building fire alarm system. See Standard #H-001 for specific requirements.

CITY OF ONTARIO
MEMORANDUM

FROM: **Heather Lugo, MA, Police Department**

DATE: **September 9, 2025**

SUBJECT: **PDEV24-017 - A Development Plan to construct 161 multiple-family dwellings on approximately 13.2 acres of land generally located South of Chatham Street, West of Clifton Street, East of Amherst Avenue, and North of Eucalyptus Avenue, within Planning Area 11 of the Esperanza Specific Plan (APN(s): 1073-101-050). Related File(s): PGPA24-003, PSPA24-004, PMTT24-008.**

The "Standard Conditions of Approval" contained in Resolution No. 2017-027 apply. The applicant shall read and be thoroughly familiar with these conditions, including, but not limited to, the requirements below.

- Required lighting for all walkways, driveways, doorways, parking lots, hallways and other areas used by the public shall be provided. Lights shall operate via photosensor. Planned landscaping shall not obstruct lighting.
- The Applicant shall comply with construction site security requirements as stated in the Standard Conditions.
- All exterior electrical outlets in common areas shall be secured and locked (if accessible to the public).
- All exterior water spigots / water supply sources in common areas shall be secured and locked (if accessible to the public).
- Trash enclosure (if applicable) shall be fully secured/enclosed by locks, mesh, and screen grate to reduce crime and encampment opportunities for homeless persons.

The Applicant is invited to contact Heather Lugo at (909) 408-1074 with any questions or concerns regarding these conditions.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING THE USE OF AN ADDENDUM TO THE ONTARIO PLAN 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT, IN ACCORDANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NOS. PGPA24-003 AND PSPA24-004.

WHEREAS, GDC Investments 13, LP (Applicant) filed an Applications for the following: [1] An General Plan Amendment (File No. PGPA24-003) to The Ontario Plan (TOP) 2050 Policy Plan (General Plan) Land Use Map to change the land use designation on approximately 10.02 acres of land, located south of Chatham Street, west of Clifton Avenue, east of Amherst Avenue, and north of Eucalyptus Avenue, from Public School to Medium Density Residential; [2] A Specific Plan Amendment (File No. PSPA24-004) to the Esperanza Specific Plan to revise the specific plan for consistency with TOP Policy Plan (General Plan) Land Use Map. The amendment includes [i] revising the allowed uses within Planning Area 11 from School to RD-7/Row Townhomes; and [ii] modifying the Specific Plan land use map, development standards, exhibits, and text to reflect the proposed land use changes; and

WHEREAS, the City of Ontario certified the Environmental Impact Report prepared for TOP and associated Statement of Overriding Considerations, and issued Resolution No. 2010-003; and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of the component framework for TOP on January 27, 2010, and issued Resolution No. 2010-004; and

WHEREAS, the City of Ontario certified the Supplemental Environmental Impact Report (SEIR), for the General Plan Amendment for TOP 2050 Technical Update on August 16, 2022; and

WHEREAS, TOP 2050 Supplemental Environmental Impact Report (SEIR)(State Clearinghouse No. 2021070364) was certified on August 16, 2022 (hereinafter referred to as Certified SEIR), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the SEIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified SEIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental SEIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental SEIR would occur from the Project, and that preparation of an Addendum to the Certified SEIR was appropriate; and

WHEREAS, on September 23, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Addendum and concluded said hearing on that date, voting to issue Resolution No. PC25-047 recommending that the City Council concluded that none of the conditions requiring preparation of a subsequent or supplemental SEIR have occurred, and further recommending that the City Council take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the City Council is the decision-making authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the City Council has reviewed and considered the SEIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent or supplemental SEIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the SEIR Addendum for the Project are on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making authority for the Project, The City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this Project were reviewed in conjunction with an Addendum to TOP 2050 Supplemental Environmental Impact Report (SEIR)(State Clearinghouse No. 2021070364), certified by the Ontario City Council on August16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the City Council hereby finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified SEIR, and does hereby approve the SEIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

PASSED, APPROVED, AND ADOPTED this 4th day of November 2025.

May 2025

1. Project Title/File Nos.: Esperanza PA-11 SPA/File Nos.: PPA24-0139, PGPA24-004, PSPA24-004, PDEV24-017, PMTT24-008, PDA25-003

2. Lead Agency: City of Ontario-Planning Department, 303 East B Street, Ontario, CA 91764

3. Contact Person: Robert Morales, Phone: (909) 395-2432, Email: rmorales@ontarioca.gov

4. Project Sponsor: GDC Investments 14, LP; 12770 El Camino Real, Suite 220, San Diego, CA 92130

5. Project Location: The Project site is located in southwestern San Bernardino County, within the City of Ontario. Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. Please refer to Figure 1, *Regional Location Map.* As shown in Figure 2, *Aerial Site Photograph*, the Project site is bound by Eucalyptus Avenue to the south, South Amherst Avenue to the west, Chatham Street to the north, and Clifton Avenue to the east. Regional access is provided via Interstate 15 (I-15) and State Route 60 (SR-60).

6. Policy Plan (General Plan) Designation: Existing - Public School (PS); Proposed – Medium Density Residential (MRD).

7. Zoning Designation: Existing – School under the Ontario Esperanza Specific Plan; Proposed – Planning Area 11 (RD-7 / Row Townhomes of the Esperanza Specific Plan

8. Description of Project: The Project proposed the following entitlements:

    1. A General Plan Amendment (File No. PGPA24-004) to change the land use designation of the Project site from Public School (PS) to Medium Density Residential (MDR).

    2. A Specific Plan Amendment (File No. PSPA24-004) to the Ontario Ezperanza Specific Plan (adopted on February 6, 2007) to change the land use designation of approximately 10.02 net acres of land from School to MDR 25. The amended Specific Plan is presented as Appendix A to this Addendum.

    3. A Development Plan (File No. PDEV24-017) to construct 161 multi-family residential units on approximately 10.02 net acres (APN: 1073-101-05). The Project would also include amenities including a pool/spa, playground, shaded barbecue/picnic area, fitness stations, and open turf areas. Refer to Figure 3, *Site Plan*.

    4. Tentative Parcel Map (File No. PMTT24-008).

    5. Development Agreement (PDA25-003) between the City of Ontario and the Project Applicant pursuant to California Government Code Sections 65864 et seq.

    Building Characteristics and Operations

    The Project proposes a mix of 2-story (69) and 3-story (92) units. Units would range in size from 1,350 to 1,717 square feet. Representative elevations of each building type are presented in Figures 4 and 5. Although color schemes would vary on each of the buildings, the color palette of the Project features neutral building tones, accented with siding, stucco, and wall tile accents. Buildings would range from approximately 28’ to 39’ high.

    Circulation and Parking

    Vehicular access will be provided via a driveway off of Chatham Street and another off Amherst Avenue. The Project also includes a total of 433 parking spaces, comprised of 322 garage spaces, 45 uncovered spaces, 17 driveway spaces, and 49 off-site parallel spaces.

Site Summary:

2- & 3-Story Row Townhomes

Total Homes

2-Story Townhome	: 69
3-Story Townhome	: 92
Total	: 161

Gross Site Area	: ± 10.02 Acres
Gross Density	: ± 16.1 Homes per Acre

Parking Required:

2.5 Spaces / 3BR x 161	: 403
1.0 Guest Space / 6 Units x 161	: 27
Total Required	: 430 (2.67:1)

Parking Provided:

Garage Spaces	: 322
Uncovered Spaces	: 45
Driveway Spaces	: 17
Parallel Spaces (Off-site)	: 49
Total Provided	: 433 (2.69:1)

Open Space:

Private Open Space Required:

150 SF / Unit x 161	: 24,150 SF
Total Required	: 24,150 SF
Provided	: 37,149 SF

Common Open Space Required:

250 SF / Unit x 161	: 40,250 SF
Total Required	: 40,250 SF
Provided	: 58,878 SF

Total Open Space Required	: 64,400 SF
Total Open Space Provided	: 96,027 SF

Private Courtyard Areas

- Unit 1 : 249 SF min.
- Unit 2 : 234 SF min.
- Unit 3 : 191 SF min.
- Unit 4 : 289 SF min.
- Unit 4 ACC : 300 SF min.
- Unit 5 : 221 SF min.
- Unit 6 : 152 SF min.

Landscaping, Walls, and Lighting

The landscape concept proposes California-friendly plant materials consistent with the Esperanza Specific Plan. As depicted in Figure 6, *Landscape Plan*, a variety of trees, shrubs, accent plants, and ground cover are proposed along the perimeter of the Project site, and throughout the community. A total of 494 trees are proposed on-site. Accent specimen 36" box and 48" box trees would be provided at corners and entries. Consistent with City standards, 25 percent of tree species planted on-site would be California natives.

The Project would construct a 6-foot community theme wall along Eucalyptus Avenue. Corner entry monuments would be implemented at the corners of Eucalyptus Avenue/Amherst Avenue and Eucalyptus Avenue/Clifton Avenue. The Project's primary entry off Chatham Street would be flanked by entry monuments on either side.

Exterior lighting would be installed on-site, as necessary, for safety, security, and wayfinding. Decorative architectural lighting as well as landscape lighting would also be installed to accent building entries as focal points throughout the site. Ornamental landscaping, lighting, walls, and utility infrastructure improvements/connections would be installed per compliance with the City's Municipal Code.

Infrastructure Improvements

Currently, the Project site is fully graded. Adjacent streets have been previously constructed, and no off-site roadways are anticipated as part of the Project. Peripheral improvements such as sidewalk and curb upgrades will be completed as part of the Project. Utility stubs currently exist adjacent to the site.

Water service to the Project site would be provided by the Ontario Municipal Utilities Company (OMUC). The Project on-site water system would connect to existing 8-inch water lines in Amherst Avenue and Chatham Street adjacent to the site. See Figure 7, *Water Plan*.

Water Plan

Sanitary sewer service to the Project site would be provided by Inland Empire Utilities Agency (IEUA). Proposed on-site sewer lines would connect to an existing 8-inch line in South Amherst Avenue, adjacent to the site. See Figure 8, *Sewer Plan*.

The Project site currently drains in a southwesterly direction towards the intersection of Eucalyptus Avenue and Amherst Avenue where an on-site detention basin is located. The basin has a 36-inch inlet that joins a public storm drain in Amherst Avenue. The Project would implement an on-site storm drain system that generally maintains the existing drainage pattern and connects to the existing storm drain in Amherst Avenue. The Projects on-site storm drainage system would function as a flow restriction by oversizing the on-site capacity and providing on-site storage to ensure outflow would be consistent with the capacity of the surrounding storm drainage system.

Dry utilities serving the Project area include Southern California Edison, Southern California Gas Company, and various telecommunication providers. The Project would include installation of on-site dry utility infrastructure that is anticipated to connect with the existing infrastructure available in the vicinity. It is noted that the Project would not require natural gas infrastructure or service.

GHG-Reduction Features

The Project includes the following design features aimed at reducing the Project's GHG emissions.

- Building Electrification
  - Electric Space Heater
  - Electric Water Heater
  - Electric Stove
  - Electric Dryer
  - Electric Pool Heater
  - Electric Spa Heater
  - Lack of Natural Gas Infrastructure

Source(s): Dexter Wilson Engineering, Inc. (04-17-2025)

Figure 8

Not to Scale

Sewer Plan

- Vehicle Electrification
  - Installation of Level 2 EV or higher charging stations at a rate of 30% or more of required vehicle spaces.

- Waste Diversion
  - Storage and collection of green waste, organic waste, and recyclables.

- Water Conservation
  - Water efficient showerheads and faucets
  - Outdoor landscaping consists of drought tolerant, low maintenance plants with a drip irrigation or weather-based controller sprinkler system.

Please also refer to Checklist item 8, *Greenhouse Gas Emissions*.

Project Construction Characteristics:

Phased construction is expected to commence in early 2025 and would last through the remainder of the year. Construction activities are as follows:

- Demolition
- Site Preparation & Grading
- Building Construction
- Paving
- Architectural Coating & Landscaping

The site would not require any import/export of soils to accommodate the Project.

9. Project Setting: As shown in previous Figure 2, the Project site is currently vacant, undeveloped property. The site is surrounded by existing and/or approved residential uses, as well as an approved park use. Although sidewalks, curbs, gutters, and streetlights are in place along the site's perimeter, upgrades will occur to better accommodate the Project.

10. Background: On January 27, 2010, the Ontario City Council adopted The Ontario Plan ("TOP"). An Environmental Impact Report ("EIR") was prepared for TOP (State Clearinghouse No. 2008101140) and certified by the City Council on January 27, 2010 (hereinafter referred to as "Certified EIR"), which included Mitigation, Findings and a Statement of Overriding Considerations pursuant to the requirements of the California Environmental Quality Act, commencing with Public Resources Code Section 21000 ("CEQA"). Subsequently, on August 16, 2022, the Ontario City Council adopted The Ontario Plan 2050 ("TOP 2050"), an update to TOP. TOP 2050 serves as the framework for the City's business plan and provides a foundation for the City to operate as a municipal corporation that consists of six (6) distinct components: 1) Vision; 2) Governance Manual; 3) Policy Plan; 4) Council Priorities; 5) Implementation; and 6) Tracking and Feedback. The Policy Plan component of TOP 2050 meets the functional and legal mandate of a General Plan and contains nine elements: Land Use, Housing, Parks and Recreation, Environmental Resources, Community Economics, Safety, Mobility, Community Design and Social Resources.

    A Supplemental Environmental Impact Report ("SEIR") was prepared for TOP 2050 (State Clearinghouse No. 2021070364) and was certified by the City Council on August 16, 2022 (hereinafter referred to as "Certified SEIR"). The Certified SEIR analyzed the direct and physical changes in the environment that would be caused by TOP 2050; focusing on changes to land use associated with the buildout of the proposed land use plan compared to the TOP, and in the Policy Plan and impacts resultant of population and employment growth in the City.

    The Project site was analyzed in the Certified SEIR as a school use.

It is also noted that the Project site is located within the Ezperanza Specific Plan area. As originally envisioned, the 223-acre Specific Plan area included 916 single-family residential dwelling units, 494 cluster/town home dwelling units, a 10-acre elementary school site, and a total of nine acres of park land. The Specific Plan included a caveat that if the Mountain View School District chose not to utilize the school site, up to 46 residential units could be developed in place of the school. An EIR was prepared for the Specific Plan in 2006.

Since the time of the Specific Plan EIR, the School District has decided not to acquire the 10-acre site. As such, the Specific Plan Amendment (SPA) analyzed within this Addendum reflects the use of the previous school site for the development of the residential uses proposed by the Project.

Because of the age of the Specific Plan EIR (2006), this document tiers off the SEIR prepared for TOP 2050 (2022) in an effort to reflect more current environmental conditions and study methodologies. Notwithstanding, the Esperanza Specific Plan EIR included various mitigation measures for the entire Specific Plan area. Some of these mitigation measures remain applicable to the Project considered herein. Appendix B to this Addendum contains a complete listing of all mitigation required within the Esperanza Specific Plan EIR and provides an applicability determination for the Esperanza PA-11 SPA Project. The City would require the implementation of the applicable measures as Conditions of Approval for the Project.

11. CEQA Requirements for an Addendum: If changes to a project or its circumstances occur or new information becomes available after adoption of a previous EIR or negative declaration, the lead agency may: (1) prepare a subsequent EIR if the criteria of State CEQA Guidelines Section 15162(a) are met, (2) prepare a subsequent negative declaration, (3) prepare an addendum, or (4) prepare no further documentation. (State CEQA Guidelines Section 15162(b)). When only minor technical changes or additions to the previous EIR or negative declaration are necessary and none of the conditions described in section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred, CEQA allows the lead agency to prepare and adopt an addendum. (State CEQA Guidelines Section 15164(b).)

Under Section 15162, a subsequent EIR or negative declaration is required only when:

1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of any new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR or negative declaration was adopted, shows any of the following:

    a) The project will have one or more significant effects not discussed in the previous EIR;

    b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

    c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

    d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Thus, if the Project does not result in any of the circumstances listed in Section 15162 (i.e., no new or substantially greater significant impacts), the City may properly adopt an addendum to the Certified SEIR.

12. Analysis: According to CEQA Guidelines Section 15164, an Addendum to a previously certified EIR may be used if some changes or additions are necessary, but none of the conditions described in Section 15162 requiring the preparation of a subsequent Negative Declaration or EIR have occurred. The CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR or Negative Declaration are needed for further discretionary approval. These findings are described below:

    1) *Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified significant effects*.

    Substantial changes are not proposed by the Project and Project implementation will not require revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. The Certified SEIR analyzed the direct and physical changes in the environment that would be caused by TOP 2050, focusing on changes to land use associated with the buildout of the proposed land use plan. In addition, all applicable adopted mitigation measures are a condition of Project approval and are incorporated herein by reference. This Addendum provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

    2) *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, that would require major revisions of the previous Environmental Impact Report due to the involvement of new significant*

environmental effects or a substantial increase in the severity of previously identified significant effects.

Substantial changes have not occurred with respect to the circumstances under which the project was undertaken, that would require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. In addition, all applicable adopted mitigation measures are a condition of Project approval and are incorporated herein by reference. This Addendum provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

3) *Required Finding. No new information has been provided that would indicate that the proposed project would result in one or more significant effects not discussed in the previous EIR.*

No new information that was not known and could not have been known with the exercise of reasonable diligence at the time SEIR was certified shows that the proposed Project would result in any new significant effects not previously discussed in the Certified SEIR, that significant effects previously examined will be substantially more severe than shown in the previous EIR, that mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects on the environment, or that mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment. The Certified SEIR assumed buildout of the site. No proposed changes or revisions to the Certified SEIR are required. In addition, all applicable previously adopted mitigation measures are a condition of Project approval and are incorporated herein by reference. This Addendum provides an analysis of the

Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

13. Conclusion: The Certified SEIR, as certified by City Council on August 16, 2022, was prepared as a Program EIR in accordance with CEQA, the State CEQA Guidelines, and the City's Rules for the Implementation of CEQA and in accordance with Section 15121(a) of the State CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3). The Certified SEIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by TOP 2050. Consequently, the Certified SEIR focused on impacts from changes to land use associated with buildout of the City's land use plan, and impacts from the resulting population and employment growth in the City. The proposed Project coordinates with the existing uses of the properties and uses within the surrounding areas.

    Accordingly, and based on the findings and information contained in the Certified SEIR, the analysis in this document, and CEQA statute and State CEQA Guidelines, including Sections 15164 and 15162, the Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

14. Surrounding Land Uses:

	Existing Land Use	General Plan Designation	Zoning Designation	Specific Plan Land Use
Site:	Vacant, graded land	Public School (PS)	SP, Specific Plan	School
North:	Vacant, graded land	Low Density Residential (LDR)	SP, Specific Plan	Single Family Detached/Park
South:	Single Family Residential	Low Density Residential (LDR)	SP, Specific Plan	Single Family Detached
East:	Vacant, graded land/ Attached Residential	Medium Density/Low Density Residential (MDR/LDR)	SP, Specific Plan	Single Family Detached
West:	Vacant, graded land/Single Family Residential	Low Density Residential (LDR)	SP, Specific Plan	Single Family Detached

15. Other public agencies whose approval is anticipated include (e.g., permits, financing approval or participation agreement):

- Santa Ana Regional Water Quality Control Board (Issuance of a National Pollutant Discharge Elimination System Permit; Issuance of a Construction General Permit);
- State Water Resources Control Board (Stormwater Pollution Prevention Plan);
- South Coast Air Quality Management District (Issuance of Air Quality permits to construct and operation, if necessary)

16. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1?

☒Yes ☐ No

If “yes”, has consultation begun? ☐ Yes ☐ No ☒ Completed

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture/Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology / Soils
☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use / Planning	☐ Mineral Resources	☐ Noise
☐ Population / Housing	☐ Public Services	☐ Recreation
☐ Transportation	☐ Utilities / Service Systems	☐ Mandatory Findings of Significance
☐ Tribal Cultural Resources	☐ Wildfire	☐ Energy

DETERMINATION (To be completed by the Lead Agency)

On the basis of this initial evaluation, I find that the proposed project will not require any major revisions of the previously certified SEIR due to the involvement of any new significant environmental effects or a substantial increase in the severity of previously identified significant effects, that the proposed Project does not trigger any of the conditions set forth in State CEQA Guidelines section 15162, and that an addendum to the previously certified SEIR is appropriate pursuant to State CEQA Guidelines section 15164.

EVALUATION OF ENVIRONMENTAL IMPACTS

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
1. **AESTHETICS.** Except as provided in Public Resources Code section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?)	☐	☐	☐	☒
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☐	☒
2. **AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land,				

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒
3. **AIR QUALITY.** Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☒

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☐	☒
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☐	☒
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☐	☒
4. **BIOLOGICAL RESOURCES.** Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological	☐	☐	☐	☒

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
resources, such as a tree preservation policy or ordinance?				
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒
5. **CULTURAL RESOURCES.** Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☐	☒
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☐	☒
6. **ENERGY.** Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☒
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☒
7. **GEOLOGY AND SOILS.** Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to	☐	☐	☐	☒

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
Division of Mines and Geology Special Publication 42.				
ii) Strong seismic ground shaking?	☐	☐	☐	☒
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☐	☒
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☐	☒
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☐	☒
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒
8. **GREENHOUSE GAS EMISSIONS.** Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☐	☒
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☐	☒

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
9. **HAZARDS AND HAZARDOUS MATERIALS.** Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒
10. **HYDROLOGY AND WATER QUALITY.** Would the project:				

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☐	☒
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☒
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☐	☒
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	☐	☐	☐	☒
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☒
d) Impede or redirect flood flows?	☐	☐	☐	☒
e) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
f) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒
11. **LAND USE AND PLANNING.** Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒
12. **MINERAL RESOURCES.** Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒
13. **NOISE.** Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☐	☒
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☐	☒
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
14. **POPULATION AND HOUSING.** Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other	☐	☐	☐	☒

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
infrastructure)?				
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
15. **PUBLIC SERVICES.** Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☐	☒
ii) Police protection?	☐	☐	☐	☒
iii) Schools?	☐	☐	☐	☒
iv) Parks?	☐	☐	☐	☒
v) Other public facilities?	☐	☐	☐	☒
16. RECREATION.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒
17. **TRANSPORTATION.** Would the project:				
a) Conflict with a program plan, ordinance or	☐	☐	☐	☒

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?				
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☐	☒
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
d) Result in inadequate emergency access?	☐	☐	☐	☒
18. **TRIBAL CULTURAL RESOURCES.** Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☐	☒
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☒
19. **UTILITIES AND SERVICE SYSTEMS.** Would the project:				
a) Require or result in the relocation or	☐	☐	☐	☒

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?				
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☐	☒
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☐	☒
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒
20. **WILDFIRE.** If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c) Require the installation or maintenance of	☐	☐	☐	☒

Issues	*New Significant Impact or Substantial Increase in Severity of Previously Identified Significant impact*	*Substantial Increase in Severity of Previously Identified Significant impact*	*Changed Circumstan-ces or New Info requiring a subsequent EIR*	*No New Significant Impact or Substantial Increase in Severity of Impacts Previously Analyzed in TOP 2050 SEIR*
associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?				
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒
21. **MANDATORY FINDINGS OF SIGNIFICANCE.** (State CEQA Guidelines section 15065(a).)				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	☒
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☐	☒
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☐	☒

EXPLANATION OF ISSUES

1. **AESTHETICS. Would the project:**

a. **Have a substantial adverse effect on a scenic vista?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that increased development under TOP 2050 would occur within the City limits and already urbanized areas of the City. The scale and design of the City under TOP 2050 would not deter views of the San Gabriel Mountains. Therefore, impacts to scenic vistas would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, pp. 5.1-4 – 5.1-10).

Project Impacts: TOP 2050 does not identify scenic vistas within the City. However, the Policy Plan (Policy CD-1.5) requires all major north-south streets be designed and developed to feature views of the San Gabriel Mountains. The Project site is not located along any major north-south streets, as identified in Figure M-01, *Roadway Classifications*, of the City's Mobility Element. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

b. **Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that there are no State Scenic highways through or in the vicinity of the City. The closest designated State scenic highway is a portion of State Route 142 in Chino Hills, approximately five miles west of the Ontario city limit. Therefore, no impacts to scenic highways would occur and TOP 2050 would not result in new or a substantial increase in

magnitude of impacts compared to the Certified SEIR (Certified SEIR, pp. 5.1-4 – 5.1-10).

Project Impacts: The Project is not located near a scenic highway, nor does the site contain any scenic resources. The Project would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

c. **In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?**

Summary of Certified SEIR Finding: The Certified SEIR recognizes that buildout of the City would alter the visual character of the City. The Certified SEIR concludes that compliance with the City Municipal Code and applicable TOP 2050 Policies would ensure that potential aesthetics impacts of development anticipated under TOP 2050 would be less than significant (Certified SEIR, pp. 5.1-4 – 5.1-10).

Project Impacts: Final designs of the Project facilities including, but not limited to, the proposed buildings, landscape/hardscape features, and lighting configurations would be required to conform to the Esperanza Specific Plan Development Regulations and Design Guidelines, and applicable provisions of the City Municipal Code. Final designs of all uses would be subject to City review and approval. As such, the Project would not conflict with applicable zoning or other regulations governing scenic quality. Impacts of the Project in these regards would be less than significant. On this basis, when compared to the Certified SEIR

findings, no new or substantially increased aesthetic impacts would result from the Project.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

d. **Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 would result in additional sources of light and glare; however, adherence to the design standards of the City of Ontario Development Code would ensure that light and glare from new developments would be minimized and that significant impacts would not occur. Therefore, impacts to light and glare would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, pp. 5.1-4 – 5.1-10).

Project Impacts: The Project site is surrounded by existing and/or proposed urban uses. Street lighting is currently located along the entire periphery of the site. New lighting will be introduced to the site as part of the Project. Pursuant to the requirements of the City's Municipal Code, Project on-site lighting would be shielded, diffused or indirect, to avoid glare to pedestrians or motorists. In addition, lighting fixtures will be selected and located to confine the area of illumination to within the Project site and minimize light spillage.

Furthermore, consistent with the findings of the Certified SEIR, site lighting plans will be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, implementation of the Project would not result in a significant source of light or glare that would adversely affect daytime or nighttime views. The Project would not result in any new, increased or substantially different impacts, beyond those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

2. **AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a. **Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?**

Summary of Certified SEIR Finding: Under TOP 2050, the City of Ontario no longer has land designated for agricultural uses. Because TOP 2050 is the baseline for the Certified SEIR, TOP 2050 would not result in the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to nonagricultural uses. TOP 2050 would therefore have no impact on land zoned for agricultural purposes (Certified SEIR, p. 5.2-12).

Project Impacts: The Project site is not designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland). According to the California Department of Conservation, the Project site is designated as "Other Land." This designation is used for properties that are not included in any other mapping category. Vacant and non-agricultural land surrounded on all sides by

urban development is commonly mapped as Other Land (DOC, 2022). As such, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

b. **Conflict with existing zoning for agricultural use, or a Williamson Act contract?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of the Land Use Plan would not adversely affect agriculturally zoned properties (Certified SEIR, p. 5.2-12).

Implementation of TOP 2050 would affect all active Williamson Act contracts within the City. The Certified SEIR concluded, however, that impacts to Williamson Act contract properties under TOP 2050 would not be greater than, or different than, would result from TOP 2009. On this basis, the Certified SEIR concluded that TOP 2050 impacts to Williamson Act Contract properties would be less than significant (Certified SEIR, p. 5.2-13).

Project Impacts: The Project site is not zoned for agricultural use. The Project site is zoned Specific Plan and would involve a Specific Plan Amendment to change the land use designation from School to MDR 25. The Project's proposed Specific Plan Amendment would not result in a loss of land zoned for agricultural use. Furthermore, there is no Williamson Act contract in effect on the Project site. Therefore, no impacts to agricultural uses are anticipated, nor will there be any conflict with existing Williamson Act contracts. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

c. **Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?**

Summary of Certified SEIR Finding: There are no City land uses zoned for forest land, timberland, or timberland zoned Timberland Production. There are no properties in the City considered to be forestland. As such, implementation of TOP 2050 would have no impact on land uses zoned for forest land, timberland, or timberland zoned Timberland Production; nor would TOP 2050 result in the loss or conversion of timberland or forest land to non-forest uses (Certified SEIR, p. 5.2-13).

Project Impacts: The Project site is not zoned for forest land or timberland. As concluded in the Certified SEIR, the City's Zoning Map does not designate any parcels of land in the Project area for forest land, timberland, or timberland zoned Timberland Production. Therefore, implementation of the Project would not conflict with, or cause the rezoning of, forest land or timberland. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

d. **Result in the loss of forest land or conversion of forest land to non-forest use?**

Summary of Certified SEIR Finding: There are no City land uses zoned for forest land. There are no properties in the City considered to be forest land. As such,

implementation of TOP 2050 would have no impact on land uses zoned for forest land; nor would TOP 2050 result in the loss or conversion of forest land to non-forest uses (Certified SEIR, p. 5.2-13).

Project Impacts: There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither the Policy Plan nor the City's Zoning Code provide designations for forest land. Consequently, the Project would not result in the loss or conversion of forest land. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

e. **Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?**

Summary of Certified SEIR Finding: Under TOP 2050, the City Ontario no longer has land designated for agricultural uses. Because TOP 2050 is the baseline for the Certified SEIR, TOP 2050 would not result in the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to nonagricultural uses. TOP 2050 would therefore have no impact on land zoned for agricultural purposes (Certified SEIR, p. 5.2-12).

Project Impacts: As previously mentioned, the Project site does not include Farmland (defined as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance) or forest land and, therefore, the Project would not result in the conversion of Farmland to non-agricultural use or forest land to non-forest use. The Project would not result in any impacts to agricultural and/or forestry resources. The Project would not result in any new, increased or substantially

different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation Required:

Certified SEIR Measure(s)	Project Applicability
None.	-

3. **AIR QUALITY.** The analysis in this section is based on the following technical analysis:

- *Esperanza Specific Plan Amendment Air Quality Assessment* (Urban Crossroads, Inc.) March 28, 2025.

This report (Urban Crossroads, 2025a) is provided in its entirety as Appendix C of this Addendum.

a. **Conflict with or obstruct implementation of the applicable air quality plan?**

Summary of Certified SEIR Finding: The Certified EIR evaluated conformance with the South Coast Air Quality Management District (SCAQMD) Air Quality Management Plan (AQMP) based on the following criteria: 1. Whether the project would exceed the assumptions in the AQMP, and 2. Whether the project would result in an increase in the frequency or severity of existing air quality violations, cause, or contribute to new violations, or delay timeline attainment of air quality standards. The Certified SEIR concluded that buildout of TOP 2050 would be consistent with the AQMP under the first criteria. However, air pollutant emissions associated with buildout of TOP 2050 would cumulatively contribute to the nonattainment designations in the South Coast Air Basin (SCAB). Incorporation of Mitigation Measures 3-2 and AQ-1 (see discussion under checklist item b, below) into future development projects for the operation phase would reduce criteria air pollutant emissions associated with buildout of TOP 2050. Additionally, goals and policies in TOP 2050 would promote increased capacity for alternative transportation modes. However, no additional mitigation measures that would reduce impacts below SCAQMD thresholds were identified. Therefore, impacts would remain significant and unavoidable (Certified SEIR, p. 5.3-40).

Project Impacts: The Project site is located within the SCAB. Currently, State, and federal air quality standards are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the State and federal ambient air quality standards. AQMPs are regularly updated to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. In December 2022, the SCAQMD released the Final 2022 AQMP. The 2022 AQMP continues to evaluate current integrated strategies and control measures to meet the California Ambient Air Quality Standards, as well as explore new and innovative methods to reach its goals. Current AQMP consistency criteria include:

Consistency Criterion No. 1: The Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

Consistency Criterion No. 2: The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The 2022 AQMP assumed buildout of the Project site consistent with existing General Plan designations. Although a General Plan Amendment would be required to accommodate the Project, operational-source emissions would not exceed the applicable SCAQMD regional thresholds for emissions of any criteria pollutant (see Table 3-2, presented subsequently). Additionally, the Project would be subject to all applicable mitigation and would be developed consistent with TOP 2050 goals and policies.

The City adopted a Statement of Overriding Considerations in regard to pollutant emissions associated with buildout of TOP 2050. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None. The Certified SEIR did not propose specific measures under this item, but stated that mitigation measures applied to a development project's construction and operational phases (presented subsequently) would reduce impacts associated with consistency with the SCAQMD.	See measures 3-1, 3-2, and AQ-1, presented subsequently.

b. **Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that buildout of TOP 2050 would generate short-term and long-term air pollutant emissions exceeding SCAQMD regional significance thresholds for VOC, CO, NOx, PM_{10}, and $PM_{2.5}$. These exceedances would cumulatively contribute to the SCAB nonattainment designations for O3, PM_{10} and $PM_{2.5}$. Even with the implementation of mitigation measures, nonattainment air quality impacts resulting from buildout of TOP 2050 would be significant and unavoidable (Certified SEIR, pp. 5.3-54 – 5.3-57).

Project Impacts:

Construction

To analyze the emissions associated with construction, regional Project-generated emissions were developed and compared to applicable SCAQMD thresholds. Table 3-1 presents the regional emissions that can be expected from Project construction.

Table 3-1
Regional Construction Impacts

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2026	3.91	34.72	32.28	0.06	23.78	12.01
2027	1.60	11.05	22.06	0.03	2.01	0.73
2028	1.54	10.51	21.48	0.03	1.98	0.69
Winter						
2026	3.47	30.11	29.79	0.06	11.93	5.11
2027	1.57	11.12	20.15	0.03	2.01	0.73
2028	1.51	10.54	19.70	0.03	1.98	0.69
2029	29.05	17.78	32.37	0.05	2.70	1.02
Maximum Daily Emissions	**29.05**	**34.72**	**32.37**	**0.06**	**23.78**	**12.01**
SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	NO	NO	NO	NO	NO	NO

Source: Urban Crossroads, 2025a

As shown above, regional emissions associated with Project construction would not exceed applicable SCAQMD thresholds, and therefore, would not result in a cumulatively considerable net increase of any criteria pollutant beyond that anticipated and evaluated in the Certified SEIR during construction.

Operations

Operational activities associated with the Project would result in emissions of CO, VOCs, NO_X, SO_X, PM_{10}, and $PM_{2.5}$. Operational-related emissions are expected from the following primary sources: area source emissions, energy source emissions, and mobile source emissions. The Project-related operational air quality impacts derive primarily from vehicle trips generated by buildout associated with the net increase in residential units.

The SCAQMD has developed regional operational significance thresholds for criteria pollutants, as summarized in Table 3-2. The SCAQMD's CEQA Air Quality Significance Thresholds (March 2023) indicate that any projects in the SCAB with

daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

Table 3-2
SCAQMD Regional Threshold of Significance

Pollutant	Operational Regional Thresholds
NO_X	55 lbs/day
VOC	55 lbs/day
PM_{10}	150 lbs/day
$PM_{2.5}$	55 lbs/day
SO_X	150 lbs/day
CO	550 lbs/day

Source: Urban Crossroads, 2025a

Table 3-3 compares the emissions associated with the proposed Project and the approved school use against the SCAQMD thresholds presented above.

Table 3-3
Operational Emissions Comparison

	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
Proposed Project	8.44	7.52	53.35	0.14	11.69	3.22
Approved School Use	6.21	5.76	55.04	0.13	11.43	2.99
Net Emissions	**2.24**	**1.76**	**-1.68**	**0.01**	**0.26**	**0.23**
Threshold	55	55	550	150	150	55
Threshold Exceeded?	No	No	No	No	No	No
Winter						
Proposed Project	7.45	7.74	36.28	0.14	11.68	3.22
Approved School Use	5.48	6.15	42.64	0.13	11.42	2.98
Net Emissions	**1.97**	**1.59**	**-6.37**	**0.01**	**0.26**	**0.23**
Threshold	55	55	550	150	150	55
Threshold Exceeded?	No	No	No	No	No	No

Source: Urban Crossroads, 2025a

As shown above, operational-source emissions would not exceed the applicable SCAQMD regional thresholds for emissions of any criteria pollutant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
MM 3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include: • Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as: o Requiring use of nontoxic soil stabilizers to reduce wind erosion. o Applying water every four hours to active soil disturbing activities. o Tarping and/or maintaining a minimum of 24 inches of	**Implemented.** The Project-specific Air Quality Impact Analysis is summarized within this Addendum and provided in its entirety as Appendix C. Project construction would not exceed SCAQMD thresholds; further mitigation is not required.

freeboard on trucks hauling dirt, sand, soil, or other loose materials. • Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits. • Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards. • Limiting nonessential idling of construction equipment to no more than five consecutive minutes. • Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf. These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.	
MM 3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths	**Applicable.** Omnitrans Route 87 currently provides transit service to the Project area, with a stop located at the corner of Eucalyptus Avenue and Hamner Avenue, less than 1,000 feet from the Project site. The Project would provide internal driveways and pedestrian paths that connect to the

(e.g. sidewalks).	existing street and sidewalk network surrounding the Project site.
AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following: • For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and	**Implemented.** The Project-specific Air Quality Impact Analysis is summarized within this Addendum and provided in its entirety as Appendix C. Project operations would not exceed SCAQMD thresholds; further mitigation is not required.

emissions. • Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use. • Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485). • Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures). • Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures). • Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures). • Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures). • Applicant-provided appliances shall be Energy Star–certified	

appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.	

c. **Expose sensitive receptors to substantial pollutant concentrations?**

Summary of Certified SEIR Finding: The Certified SEIR notes that individual development projects within the City would be required to achieve the incremental risk thresholds established by SCAQMD, and on this basis, potential Toxic Air Contaminant (TAC) impacts from individual developments would be less than significant. TOP 2050 Policy ER4-9, New Localized Air Pollution Sources Near Existing Sensitive Receptors, ensures that mobile sources of TACs not covered under South Coast AQMD permits are considered during subsequent project-level environmental review by the City of Ontario. Other air quality mitigation measures implemented under TOP 2050 would further reduce air pollutant emissions, thereby minimizing effects of pollutants at sensitive receptors.

The Certified SEIR nonetheless concludes that buildout of TOP 2050 would generate TACs that could contribute to elevated levels of TAC pollutants in the air basin. On this basis, the Certified SEIR concluded that TOP 2050 TAC emission impacts at sensitive receptors would be cumulatively significant (Certified SEIR, p. 5.3-57).

Project Impacts:

Construction

To analyze Project impacts to vicinity sensitive receptors, the localized emissions associated with Project construction were developed and compared to applicable SCAQMD thresholds. Peak site preparation and grading activities were used for analysis, since this phase represents the maximum localized emissions that would occur. Table 3-4 presents the localized construction emissions of the Project, along with the applicable thresholds.

Table 3-4
Localized Construction Impacts

	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Site Preparation				
Maximum Daily Emissions	34.61	31.01	7.43	4.31
SCAQMD Threshold	220	1,713	11	7
Threshold Exceeded?	No	No	No	No
Grading				
Maximum Daily Emissions	29.95	28.67	4.05	2.25
SCAQMD Threshold	237	1,873	13	8
Threshold Exceeded?	No	No	No	No

Source: Urban Crossroads, 2025a

As shown above, localized emissions associated with Project construction would not exceed applicable SCAQMD thresholds.

Toxic Air Contaminants

Residential uses proposed by the Project would not result in toxic air contaminants (TACs) during operation. The Certified SEIR, which evaluated regional emissions from mobile sources resulting from implementation of TOP 2050, concluded that the implementation of 2050 would not produce the volume of traffic required to generate a CO hotspot, and CO hotspots impacts would be less than significant. As identified in Checklist item 17, *Traffic*, the proposed Project would generate fewer vehicular trips than anticipated and evaluated in the Certified SEIR. Therefore, the proposed Project would not expose sensitive receptors to substantial localized CO concentrations, consistent with the conclusion of the TOP Final SEIR. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of Project operations.

Based on the foregoing, the Project would not expose sensitive receptors near the Project site to significant pollutant concentrations during construction and operation. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

d. **Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?**

Summary of Certified SEIR Finding: The Certified SEIR notes that development pursuant to TOP 2050 would be required to comply with SCAQMD Rule 402. SCAQMD Rule 402 acts to generally control and regulate odors and odor sources, thereby minimizing potential effects of construction-source and operational-source odors from other than industrial land uses (Certified SEIR, p. 5.3-46).

The Certified SEIR also acknowledges that certain types of industrial land uses (e.g., compost facilities, landfills, solid-waste transfer stations, fiberglass manufacturing facilities, paint/coating operations, asphalt batch manufacturing plants, chemical manufacturing, and food manufacturing facilities) warrant focused odor impact analyses. The City would require site- and development-specific analyses to ensure that any odors generated by these types of land uses would not adversely affect a substantial number of people (Certified SEIR, p. 5.3-46).

Based on the preceding, the Certified SEIR concluded that the potential for TOP 2050 to create or result in odors that would adversely affect a substantial number of people would be less than significant.

Project Impacts: Land uses generally associated with odor complaints include uses such as agricultural uses, wastewater treatment plants, chemical plants, composting operations, refineries, landfills, and dairies. The Project does not propose land uses typically associated with emitting objectionable odors. Potential odor sources associated with the Project may result from construction equipment exhaust and the application of concrete and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the Project's (long-term operational) uses. Standard

construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant.

Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the Project construction and operations would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

4. **BIOLOGICAL RESOURCES.** Would the project:

a. **Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?**

Summary of Certified SEIR Finding: The Certified SEIR recognizes that development in accordance with TOP 2050 could impact sensitive species. Projects considered for approval under TOP 2050 would be subject to independent CEQA review to determine whether there is potential habitat on-site for sensitive species. The Certified SEIR did not identify any significant impacts in this regard (Certified SEIR, pp. 5.4-28 – 5.4-34).

Project Impacts: A General Biological Resources Assessment was conducted for the entire Esperanza Specific Plan area, inclusive of the Project site, as part of the Esperanza DEIR. The Assessment concluded that no natural or native plant communities were present within the Specific Plan area, and only a few scattered remnants of native vegetation remained due to long-standing agricultural uses. No special-status plant species were identified within the Specific Plan area, nor were any expected to occur due to the overall absence of suitable habitat.

Several special-status wildlife species were either recorded during the Assessment or had the potential to occur within the Specific Plan area. These species included the loggerhead shrike (*Lanius ludovicianus*), burrowing owl (*Athene cunicularia*), white-tailed kite (*Elanus leucurus*), Northern harrier (*Circus cyaneus*), Ferruginous hawk (*Buteo regalis*), Golden eagle (*Aquila chrysaetos*), California horned lark (*Eremophila alpestfis actia*), and the San Diego black-tailed jackrabbit (*Lepus californicus benettii*). Impacts to these species, and potential foraging/nesting habitat within the Specific Plan area, were reduced to less than significant through the application of mitigation.

All mitigation measures protecting biological resources required of the Esperanza Specific Plan (see Appendix B) would be implemented by the Project, precluding the Project's potential to have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

b. **Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?**

c. **Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that individual projects subject to CEQA environmental review would be required to determine whether there is potential habitat on-site for sensitive species. The Certified SEIR did not identify any significant impacts in this regard (Certified SEIR, p. 5.4-28).

Project Impacts: The Esperanza Specific Plan DEIR concluded that no riparian or wetlands were located within the Specific Plan area, inclusive of the Project site. The site is surrounded by roadways, including gutters. No drainage courses or streams exist within the Project site. Therefore, the Project would not result in significant impacts to riparian habitat, wetlands, or other sensitive natural communities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

d. **Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?**

Summary of Certified SEIR Finding: The Certified SEIR states that no regional wildlife movement corridors have been identified in the City, and most of the City is ill-suited for the purposes of wildlife movement. Additionally, compliance with existing policies and regulations ensures impacts in this regard would be maintained at levels that would be less than significant (Certified SEIR, p. 5.4-30).

Project Impacts: No wildlife corridors or linkages are located on-site. Further, the site is bounded on all sides by roads and/or urban development, diminishing its potential to function as a wildlife movement corridor. Consistent with the conclusion of the Certified SEIR, the Project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

e. **Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?**

f. **Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?**

Summary of Certified SEIR Finding: The Certified SEIR did not identify any conflicts with any local policies or ordinances protecting biological resources, adopted Habitat Conservation Plan, Natural Community Plan, or other approved local, regional, or state habitat conservation plan (Certified SEIR, pp. 5.4-30 – 5.4-31).

Project Impacts: Section 10-2 of the Ontario Municipal Code addresses tree protection, maintenance, and replacement policies for trees within the City's parkways and rights-of-way. Additionally, the City has published landscape guidelines that must be followed when developing new or existing sites. The Project would be implemented consistent with all applicable guidelines in this regard.

The Project site is not part of an adopted HCP, NCCP or other approved habitat conservation plan (CDFW, 2019). As a result, no adverse environmental impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

5. **CULTURAL RESOURCES.** The analysis in this section is based on the following technical analysis:

    - *Cultural Resources Study for the Eucalyptus and Amherst Avenues Project, City of Ontario, San Bernardino County, California* (BFSA Environmental Services) April 1, 2025.

The report (BFSA, 2025a) is provided in its entirety as Appendix D of this Addendum.

a. **Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?**

Summary of Certified SEIR Finding: Historic resources in the City include historic districts, historic landmarks or points of historical interest, and other buildings, structures, objects, and sites that appear eligible for listing on the National, California, or Local Registers of Historic Places. The Certified SEIR concluded that adoption of TOP 2050 would not itself directly affect any historical structures; however, identified and potential historic structures and sites may be vulnerable as development occurs. Mitigation Measure 5-1 would require historic or potentially historic resources to be evaluated for historic significance through the City's Development Code tier system. Impacts to historical resources would remain significant and unavoidable (Certified SEIR, pp. 5.5-18 – 5.5-23).

Project Impacts: No on-site historical resources were identified as part of the Project-specific Cultural Resources Study. The Cultural Resources Study concluded that no further study or mitigation would be required (BFSAa, 2025). Therefore, the Project would not cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5, and no impacts would occur. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	**Project Applicability**
5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals. Pursuant to City's Development Code (Chapter 4, Permits, Actions, and Decisions, and Chapter 7, Historic Preservation) mitigation measures for all Tier III Historic Resources shall include the following: a) Each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record of the resource, including, but not limited to: [i] the preparation of site plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs, etc.); and [ii]	**Not Applicable.** No historical resources are located on-site, nor would any historic resources be affected by the Project.

photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.). b) A mitigation fee established pursuant to Section 7.01.030 (Historic Preservation Mitigation Fee) shall be paid to the City prior to the issuance of a demolition permit for Tier III historic resources. Fees for Tier I and II historic resources shall be determined during the Environmental Impact Report process. The fees established for Tier III will be used as a reference point for establishing fees for Tier I and II historic resources. c) A Certificate of Appropriateness shall not be issued for the demolition of an historic resource, either in whole or in part, until such time that a demolition permit application and a replacement structure has been approved by the City, and appropriate permits have been issued for its construction, unless: [i] a waiver is granted pursuant to Subsection H (Replacement Structure Waiver for Historic Resources Located within Industrial Zoning Districts) of Section 4.02.050; [ii] a deferral of the replacement structure requirement is granted pursuant to Subsection G (Replacement Structure Deferral) of Section 4.02.050; or [iii] demolition is required pursuant to Section	

7.01.050 (Unsafe or Dangerous Conditions) of this Development Code. In an effort to preserve features and artifacts from historic resources, a determination whether items within or on the resource should be salvaged must be made by the Planning Department and may include the local historical society prior to the issuance of the demolition permit. The applicant shall be responsible for the removal, relocation, storage, and donation of such items selected for salvaging. The applicant shall provide an inventory of salvaged items to the Planning Department, and shall include a list of each item name, description, and dimension (as necessary), and the location of each item on a floor plan.	

b. **Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?**

Summary of Certified SEIR Finding: Adoption of TOP 2050 would not of itself directly affect archaeological resources. However, buildout of TOP 2050 land use plan would allow development activities and ground disturbance affecting known and potential areas of archaeological sensitivity. These activities could potentially cause the disturbance of archeological resources. Therefore, future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources; see Mitigation Measure 5-2, below. (Certified SEIR, p. 5.5-19).

Project Impacts: No cultural resources were identified within the Project site during the Cultural Resources Study. Further, no natural resources associated with archaeological sites, such as natural water sources or bedrock outcroppings are present within the Project site. Due to the prior ground disturbance and the

absence of identified cultural resources within the Project site vicinity, the potential for any significant resources to be present or impacted by the Project was determined to be minimal. Given that no archaeological sites, features, or artifacts have been identified within or directly adjacent to the Project site, the Cultural Resources Study determined that no potential impacts to cultural resources are anticipated. The Cultural Resources Study concluded that no further archaeological study or mitigation would be required (BFSA, 2025a).

The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	**Project Applicability**
MM 5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements: a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities. b) Should any cultural resources be discovered, no further grading shall	**Not Applicable.** No archaeological resources would be affected by the Project. Please refer to Checklist item 7, *Geology and Soils*, for a discussion of Project paleontological resource impacts and mitigation.

occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources. c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/ Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.	

c. **Disturb any human remains, including those interred outside of dedicated cemeteries?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that compliance with existing regulations would ensure that the potential for TOP 2050 to disturb any human remains, including those interred outside of formal cemeteries was less than significant (Certified SEIR, p. 5.5-21).

Project Impacts: The Project would be required to comply with all existing regulations, including the California Public Resources Code Section 5097.98, which would provide protection for any human remains discovered during development activities. On this basis, the potential for the Project to result in disturbance of any human remains, including those interred outside of formal cemeteries would be less than significant. When compared to the Certified SEIR findings, no new or substantially increased impacts related to potential disturbance of human remains would result from the Project.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

6. **ENERGY.** Would the project:

a. **Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that regulatory compliance under TOP 2050 buildout conditions would promote building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, TOP 2050 includes policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that would contribute to enhanced building and transportation-related energy efficiencies and thereby reduce demands on nonrenewable sources of energy. Implementation of TOP 2050 Policies, energy efficiency and conservation measures articulated in the Community Climate Action Plan (CCAP), and compliance with regulatory requirements would ensure that energy consumption resulting from TOP 2050 buildout would not be inefficient, wasteful, or unnecessary. On this basis, the potential for TOP 2050 to result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources would be less than significant (Certified SEIR, pp. 5.6-9 – 5.6-12).

Project Impacts: The Project would be implemented consistent with all applicable regulations in this regard, including applicable efficiency/conservation provisions of the CCAP and applicable CCAP updates. Additionally, the Project would adhere to all applicable TOP 2050 policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that would contribute to enhanced building and transportation-related energy efficiencies and thereby reduce demands on nonrenewable sources of energy. Based on the preceding, the Project would not

result in or cause wasteful, inefficient, and unnecessary consumption of energy. When compared to impacts addressed in the Certified SEIR, no new or substantially increased energy impacts would occur under the Project.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

b. **Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?**

Summary of Certified SEIR Finding: The Certified SEIR notes that TOP 2050 would comply with applicable provisions of the California Renewables Portfolio Standard Program (RPS); and current and future iterations of CALGreen. Additionally TOP 2050 includes policies supporting statewide goals to transition the electricity grid to renewable sources. Mandated compliance with the CCAP and its updates would also be required for all new development under TOP 2050. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to conflict with or obstruct a state or local plan for renewable energy or energy efficiency would be less than significant (Certified SEIR, pp. 5.6-13, 5.6-14).

Project Impacts: The Project would be required to comply with incumbent Building Energy Efficiency Standards contained in the California Code of Regulations (CCR), Title 24, Part 6, Energy Efficiency Standards, including applicable CALGreen provisions. CALGreen supports the goals of the State's greenhouse gas reduction and building energy efficiency programs. The Project would also be required to implement applicable energy efficiency/conservation measures of the CCAP and its updates. Based on the preceding, the Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

7. **GEOLOGY & SOILS.** The following discussions are based primarily on information presented in the following analyses:

- *Geotechnical Evaluation of Mass Graded Site and Grading Plan Review of Proposed 10-Acre "Esperanza Townhomes" Residential Development, Buildings 1 through 28, Tentative Tract No. 20730, located North of Eucalyptus & Amherst Avenues, City of Ontario, County of San Bernardino, California* (LGC Geotechnical, Inc.) April 18, 2025.

- *Paleontological Assessment for the Eucalyptus and Amherst Avenues Project, City Of Ontario, San Bernardino County, California* (BFSA Environmental Services) April 1, 2025.

These reports are presented as Appendix E and F, respectively.

a. **Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:**

i. **Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.**

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City of Ontario is not within any Alquist-Priolo Earthquake Fault Zone. Therefore, impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, pp. 5.7-18 – 5.7-19).

Project Impacts: Ground rupture is the visible offset of the ground surface when an earthquake rupture along a fault affects the Earth's surface. Southern California, including the City of Ontario, is subject to the effects of seismic activity due to the active faults that traverse the area. Active faults are defined as those that have experienced surface displacement within Holocene time (approximately the last 11,000 years) and/or are in a State-designated Alquist-Priolo Earthquake Fault Zone. The Project site is not located with an Alquist-Priolo Earthquake Fault Zone; no known active faults traverse the Project site. The Geotechnical Evaluation concluded that the possibility of damage due to ground rupture is considered low since no active faults are known to cross the site (LGC Geotechnical, 2025). The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

ii. **Strong seismic ground shaking?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that projects considered for approval under TOP 2050 would be required to comply with seismic safety provisions of the CBC (Title 24, Part 2 of the California Code of Regulations). Such compliance would reduce hazards arising from ground shaking to less than significant. Therefore, impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, pp. 5.7-18 – 5.7-19).

Project Impacts: Southern California is a seismically active area and properties in the City of Ontario, including the Project site, are subject to periodic ground shaking and other effects from earthquake activity along nearby regional faults. The Project site is not at an increased risk relative to the surrounding areas.

Ontario Municipal Code Section 1803.2 requires a geotechnical investigation to evaluate soil classification, slope stability, soil strength, position and adequacy of load-bearing soils, the effect of moisture variation on soil-bearing capacity, compressibility, liquefaction, and expansiveness, as necessary, determined by the City building official. To this end, the Geotechnical Evaluation includes site-specific recommendations that would be implemented during grading and earthwork operations at the Project site. The geotechnical recommendations would provide adequate protection for the proposed development to the extent required to reduce seismic risk to an "acceptable level," as defined by the California Code of Regulations.

Additionally, the City requires compliance with the CBC through Title 8, Chapter 1, Section 8-1.01 of the Ontario Municipal Code. The CBC contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock on-site, and the probable strength of ground motion.

As structures would be designed to meet or exceed CBC standards for earthquake resistance, development of the Project would not create significant impacts related to seismic ground shaking. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

iii. **Seismic-related ground failure, including liquefaction?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that there is currently no potential for liquefaction based on groundwater levels throughout the City being greater than 50 feet below ground surface. Therefore, no impact would occur (Certified SEIR, pp. 5.7-18 – 5.7-19).

Project Impacts: Liquefaction occurs when three general conditions coexist: 1) shallow groundwater, 2) low-density non-cohesive (granular) soils and 3) high-

intensity ground motion. Groundwater at the Project site is estimated to be at a depth of approximately 120 to 130 feet below ground surface based on available water well data. As such, the Geotechnical Evaluation concluded that the on-site soils are generally not susceptible to liquefaction due to a lack of groundwater and the relatively dense native soils in the upper 50 feet, and liquefaction potential is considered very low (LGC Geotechnical, 2025).Therefore, consistent with the findings in the Certified SEIR, the Project does not have the potential to expose people or structures to significant seismic-related liquefaction. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	**Project Applicability**
None.	-

iv. **Landslides?**

Summary of Certified SEIR Finding: The Certified SEIR did not identify any specific constraints regarding landslides (Certified SEIR, pp. 5.7-20 – 5.7-21).

Project Impacts: The Project site and surrounding area are generally flat with no significant slopes. Additionally, the Esperanza Specific Plan DEIR concluded that no significant landslide risk exists within the Specific Plan area. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	**Project Applicability**
None.	-

b. **Result in substantial soil erosion or the loss of topsoil?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that the young alluvial sediment and wind-blown sand underlying the City are generally granular, poorly consolidated, and very susceptible to erosion. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur. In addition, construction activities on project sites larger than one acre are required to prepare a Stormwater Pollution Prevention Plan (SWPPP) that details best management practices (BMPs) to reduce the potential for erosion during construction activities. Furthermore, TOP 2050 includes policies addressing erosion and loss of topsoil. Therefore, impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, pp. 5.7-19 – 5.7-20).

Project Impacts: The State Water Resources Control Board (SWRCB) Order No. 2009-0009-DWQ (General Construction Permit) contains water quality standards and stormwater discharge requirements that apply to construction projects of one acre or more. The General Construction Permit was issued pursuant to the National Pollutant Discharge Elimination System (NPDES) regulations for implementing part of the federal Clean Water Act. The General Construction Permit requires preparation of a SWPPP that identifies the sources of pollution that may affect the quality of stormwater discharges and describes and ensures the implementation of BMPs to reduce the pollutants, including silt and soil, in construction stormwater discharges.

The Project would be required to comply with the NPDES permit by preparing and implementing a SWPPP specifying BMPs for minimizing pollution of stormwater with soil and sediment during Project construction.

Implementation of site-specific BMPs, as well as mandatory compliance with the recommendations set forth in the Geotechnical Evaluation, would reduce, prevent, or minimize soil erosion from Project-related demolition, site preparation and grading, and construction activities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

c. **Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that the thick alluvial deposits comprising the Chino Subbasin may be susceptible to compaction, with resulting subsidence at the surface, in the event of rapid groundwater withdrawal. Projects considered for approval under TOP 2050 could expose structures or persons to potentially significant hazards from ground subsidence. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur.

Additionally, the young sediments underlying the City are generally dry and loose in the upper few feet, and therefore are susceptible to compression. Much of the Ontario Ranch has been intensively farmed and is especially susceptible to compression. Developments approved pursuant to TOP 2050 could expose persons or structures to potentially significant hazards from compressible soils. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur. Therefore, impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR. (Certified SEIR, pp. 5.7-20 – 5.7-21).

Project Impacts: The Project Geotechnical Evaluation provides recommendations that would ensure the Project would not be adversely affected by any unstable soils that may be encountered during the course of Project development. The Evaluation concludes that the Project is feasible from a geotechnical standpoint, provided the recommendations are undertaken (LGC Geotechnical, 2025). Additionally, the City requires compliance with the CBC through Title 8, Chapter

1, Section 8-1.01 of the Ontario Municipal Code. Mandatory compliance with the recommendations of the Geotechnical Evaluation and CBC requirements, as well as review of grading plans by the City Engineer would reduce, prevent, or minimize unstable soil conditions that may be present at the site. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

d. **Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that expansive soils are likely in the southern parts of the City, where there are silts, sandy silts, and silty clays. Projects in the southern part of the City under TOP 2050 could expose persons or structures to potentially significant hazards from expansive soils. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur. Therefore, impacts related to expansive soils would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, p. 5.7-21).

Project Impacts: Expansive soils are defined as soils possessing clay particles that react to moisture changes by shrinking or swelling. Based on the results of the expansion index testing presented in the Project Geotechnical Evaluation, on-site soils are anticipated to have a “very low” expansion potential (LGC Geotechnical, 2025). As such, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

e. **Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?**

Summary of Certified SEIR Finding: Wastewater generated by new development pursuant to buildout of TOP 2050 would be conveyed to and treated at wastewater treatment facilities owned and operated by the Inland Empire Utilities Agency (Regional Plant No. 1 in the City of Ontario and Regional Plant No. 5 in the City of Chino).

The use of septic tanks for new development would be restricted to areas not "in practical proximity existing sewer mains . . ." (Certified SEIR, p. 5.7-22).

Based on the preceding, the Certified SEIR concluded that TOP 2050 would not result in adverse impacts related to use of septic tanks or alternative wastewater disposal systems and ability of soils to accept these systems.

Project Impacts: No septic tanks will be used as part of the proposed Project. The Project would connect to the existing wastewater disposal system. Accordingly, no impact would occur. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

f. **Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City is underlain by deposits of Quaternary and upper-Pleistocene sediments deposited during Pliocene and early Pleistocene time. Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are therefore considered to have high sensitivity. Older Pleistocene alluvial sediments can yield fossil remains, often found at depths of 10 feet or more below existing ground surface. As a result, the possibility of finding additional paleontological resources within City boundaries is moderate to high at depths of 10 feet or more below ground surface. Therefore, future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources. Mitigation Measure 5-2 requires that in the event of an unanticipated discovery of paleontological resources during grading and excavation of the site, a qualified paleontologist would assess the find and develop a course of action to preserve the find. With application of mitigation, the Certified SEIR concluded that TOP 2050 impacts to paleontological resources would be less than significant (Certified SEIR, pp. 5.7-22 – 5.7-25).

Project Impacts: The Paleontological Assessment identified potentially fossiliferous late Pleistocene alluvial wash or fan deposits at a depth below the Project site. The occurrence of terrestrial vertebrate fossils at shallow depths from Pleistocene alluvial fan sediments across the Inland Empire is well documented. Due to the high paleontological sensitivity rating typically assigned to Pleistocene alluvial fan sediments, the Paleontological Assessment concluded that paleontological monitoring should be implemented during mass grading and excavation activities in undisturbed Pleistocene alluvial fan sediments, as required by Mitigation Measure 7-1, below.

With the incorporation of Mitigation Measure 7-1, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
MM 5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements: a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities. b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources. c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/ Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum	Pursuant to Certified SEIR MM 5-2, and consistent with the recommendations of the Project-specific Paleontological Resources Assessment, the following Project-specific mitigation is required (and negates the applicability of MM 5-2): **7-1** A Paleontological Resources Impact Mitigation Program (PRIMP) shall be prepared, in accordance with TOP Certified SEIR MM 5-2. The PRIMP shall be approved by the City Planning Department prior to the issuance of a grading permit. Additionally, full-time paleontological monitoring starting at a depth of four feet below the surface during earth disturbance activities shall be conducted. A proposed paleontological monitoring plan is presented within the report titled *Paleontological Assessment for the Eucalyptus and Amherst Avenues Project, City Of Ontario, San Bernardino County, California* (BFSA Environmental Services) April 1, 2025.

for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.	

8. **GREENHOUSE GAS EMISSIONS.** Would the project:

Information presented within the section is summarized from:

- *Esperanza Specific Plan Amendment Greenhouse Gas Assessment* (Urban Crossroads, Inc.) March 28, 2025.

The Project-specific Greenhouse Gas Assessment (Urban Crossroads, 2025b) is presented in its entirety as Appendix G to this Addendum.

a. **Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

b. **Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?**

Summary of Certified SEIR Finding: The Certified SEIR substantiates that TOP 2050 would yield a net decrease in GHG emissions when compared to the previous General Plan (TOP 2009) GHG emissions forecasts. Further, under TOP 2050 and the Community Climate Action Plan (CCAP), the City would achieve State emissions reductions targets and would progress toward attainment of the State's carbon neutrality goals. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to generate greenhouse gas emissions, either directly or indirectly, that may have an adverse impact on the environment would be less than significant (Certified SEIR, pp. 5.8-25, 5.8-26).

Project Impacts: The Project's annual GHG emissions are summarized in Table 8-1, *Project GHG Emissions*.

Table 8-1
Project GHG Emissions

Source	Emissions (lbs/day)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Annual construction-related emissions amortized over 30 years	50.28	1.79E-03	1.40E-03	2.30E-02	50.77
Mobile Source	1,800.46	0.07	0.08	2.09	1,828.80
Area Source	41.21	0.00	0.00	0.00	41.26
Energy Source	260.76	0.02	0.00	0.00	261.84
Water Source	10.91	0.22	0.01	0.00	17.97
Waste Source	10.62	1.06	0.00	0.00	37.17
Refrigerants Source	0.00	0.00	0.00	0.18	0.18
Total CO_2e (All Sources)	**2,238.00**				

Source: Urban Crossroads, 2025b

As shown in Table 8-1, the Project will result in total GHG emissions of approximately 2,238.00 MTCO_2e/yr.

There are currently no published Statewide thresholds of significance for measuring the impact of GHG emissions generated by a proposed project. CEQA Guidelines § 15064.7(b) indicates "each public agency is encouraged to develop and publish thresholds of significance that the agency uses in the determination of the significance of environmental effects." To this end, the City's 2022 CCAP contains guidance on the City of Ontario's GHG Inventory reduction goals, policies, guidelines, and implementation programs.

The CCAP contains Screening Tables which assign points for each option incorporated into a project as mitigation or a project design feature. The point values correspond to the minimum emissions reduction expected from each feature. The menu of features allows flexibility and options for how development projects can implement the GHG reduction measures. Projects that achieve at least 100 points per applicable Screening Table will be consistent with the reduction quantities consistent with the CCAP. Consistent with CEQA Guidelines, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions.

As presented previously in the Project Description (and required by the Project-specific Greenhouse Gas Assessment), the Project includes certain design features aimed at reducing GHG emissions. Table 8-2 lists the Project features along with the assigned points from the Ontario CCAP.

Table 8-2
Project Design GHG-Reduction Features

Feature	CCAP Points
Building Electrification	
Electric Space Heater	6
Electric Water Heater	8
Electric Stove	5
Electric Dryer	1
Electric Pool Heater	1
Electric Spa Heater	1
Lack of Natural Gas Infrastructure	10
Vehicle Electrification	
Installation of Level 2 EV or higher charging stations at a rate of 30% or more of required vehicle spaces.	30
Waste Diversion	
Storage and collection of green waste, organic waste, and recyclables.	33
Water Conservation	
Water efficient showerheads and faucets	1
Outdoor landscaping consists of drought tolerant, low maintenance plants with a drip irrigation or weather-based controller sprinkler system.	4
Total Points	***100***

Source: City of Ontario; Project plans.

As demonstrated above, the Project would achieve the required points for consistency with the reduction quantities presented in the CCAP. As such, the Project would have a less than significant individual and cumulative impact for GHG emissions. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

9. **HAZARDS & HAZARDOUS MATERIALS.**

Project site information presented in the following discussions is summarized from:

- *Phase I Environmental Site Assessment Report, 10.02 Acre Site at Northeast Corner of Amherst and Eucalyptus Avenues, Ontario, California 91761* (SCS Engineers) March 14, 2025.

The Phase I Environmental Site Assessment (ESA) is provided as Addendum Appendix H.

a. **Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?**

b. **Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?**

Summary of Certified SEIR Finding: The Certified SEIR determined that buildout in accordance with TOP 2050 would involve the transport, use, and/or disposal of hazardous materials. However, federal and State regulations, City ordinances, and TOP 2050 Policies would appropriately control handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to result in adverse impacts related to transport, use, and/or disposal of hazardous materials; creation of significant hazards, or result in hazardous emissions affecting schools, would be less than significant (Certified SEIR, pp. 5.1-4 – 5.1-10).

Project Impacts:

Historical Uses of the Project Site

According to the Phase I ESA prepared for the Project site, the site was historically used for agricultural purposes from approximately 1902 through 2012. Around 2016, grading activities were first visible on the eastern portion of the site, associated with activities on the adjoining site to the east. Following 2016, much more extensive grading occurred and in 2020, hundreds of soil stockpiles were placed on the central and northern portions of the site. The appearance of the stockpiles coincided with the grading and paving of the adjoining streets, it is likely that the soil was from sites with similar history (undeveloped and/or agricultural land). Further grading occurred in 2021, which likely resulted in the export or blending of that that stockpiled soil.

Current Conditions

The site is currently a vacant, undeveloped lot. A chain-link fence surrounds the site with gate access in the northeastern corner. The site is covered in low, grassy vegetation and bare soil, with small amounts of wind-blown trash observed on the outer edges of the Property (against the fence).

Regulatory database information did not identify known or suspected contamination sites in the area surrounding the Project site. No evidence of hazardous materials was noted on-site; and the Phase I determined that it was unlikely the site had been affected by activities or releases of hazardous substances from surrounding properties.

The Phase I concluded that no recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the site exist, and no further investigation is warranted (SCS, 2025).

Project Construction

During the normal course of construction and operation activities, there would be limited transport of potentially hazardous materials (e.g., gasoline, diesel fuel, paints, solvents, fertilizer, etc.) to and from the Project site. However, as presented within the Certified SEIR, the Project would be required to comply with all City and County Hazardous Materials Management Plans and regulations addressing transport, use, storage and disposal of these materials. The Project does not propose or require uses or activities that would result in atypical transportation, use, storage, or disposal of hazardous or potentially hazardous materials not addressed under current regulations and policies.

Project Operation

The Project would not result in or cause exposure(s) to hazards or potentially hazardous conditions. That is, uses proposed by the Project are not considered hazardous. Nor does the Project propose or require facilities or operations involving inherent substantial hazards.

Consistent with the findings of the Certified SEIR, with mandatory compliance City and County Hazardous Materials regulations, potential hazardous materials impacts associated with the Project is not expected to pose a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials, nor would the Project increase the potential for accident operations which could result in the release of hazardous materials into the environment. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

c. **Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?**

Summary of Certified SEIR Finding: The Certified SEIR determined that buildout in accordance with TOP 2050 would involve the transport, use, and/or disposal of hazardous materials. However, federal and state regulations, City ordinances, and TOP 2050 Policies would appropriately control handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to result in adverse impacts related to transport, use, and/or disposal of hazardous materials; creation of significant hazards, or result in hazardous emissions affecting schools, would be less-than-significant (Certified SEIR, pp. 5.1-4 – 5.1-10).

Project Impacts: The Project site is not located within one quarter mile of an existing or proposed school. The closest school to the Project site is Colony High School, located approximately 1.5 miles to the north. The Project does not propose or require uses that would handle hazardous or acutely hazardous materials, substances, or waste. Implementation of the Project would not have the potential to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one quarter mile of an existing or proposed school. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

d. **Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?**

Summary of Certified SEIR Finding: Development in accordance with TOP 2050 would involve redevelopment and reuse of some sites listed as hazardous materials sites on environmental databases. The environmental databases document the presence of hazardous materials on those sites, but do not document hazardous releases. Redevelopment of the affected sites could potentially expose future residents and workers to hazards from known hazardous materials releases on and near the sites. Should environmental database listed sites be proposed for development, site assessments for hazardous materials and remediation of hazardous materials releases would be required in accordance with TOP 2050 Policies, federal, state, and local regulations. On this basis, the Certified SEIR concluded that the potential for development pursuant to TOP 2050 to be located on hazardous materials sites, and thereby create adverse hazard impacts affecting the public or environment would be less than significant (Certified SEIR, pp. 5.9-38, 5.9-39).

Project Impacts: A records review conducted as part of the Phase I Environmental Site Assessment did not identify the site as a hazardous material site pursuant to Government Code Section 65962.5. Additionally, no adjacent sites were identified as potentially affecting the Project site (SCS, 2025). Therefore, the Project would not create a hazard to the public or the environment and no impact is anticipated. When compared to the Certified SEIR findings, no new or substantially increased impacts related to development affecting Government Code Section 65962.5-listed sites would result from the Project.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

e. **For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?**

Summary of Certified SEIR Finding: Ontario International Airport (ONT), as well as a small portion of the Chino Airport property, is located within the City of Ontario. The Certified SEIR determined that TOP 2050 Policies and established processes for consistency reviews of new development with the appropriate Airport Land Use Compatibility Plan (ALUCP) would be sufficient to prevent significant impacts (Certified SEIR, p. 5.8-27).

Project Impacts: The Project site is located approximately four miles south of the Ontario International Airport (ONT). The ONT Airport Land Use Compatibility Plan (ALUCP) was adopted by Ontario City Council on April 19, 2011 (amended 2018) to promote compatibility between the airport and the land uses that surround it. The Project site is located within the area subject to provisions of The ONT ALUCP, which defines the ONT Airport Influence Area (AIA) as an area in which current and future airport-related noise, overflight, safety, and airspace protection factors may significantly affect land uses or necessitate restriction on those uses. The Project site is located outside the ONT safety zones (see: TOP 2050 Policy Plan Figure LU-06, *Airport Safety Zones & Influence Areas*). As with the development anticipated under TOP 2050, and evaluated in the Certified SEIR, the Project would comply with all requirements set forth within the ALUCP. Based on the preceding, the potential for the Project to result in airport-related safety hazard impacts would be less than significant.

The Project site is located approximately 2.5 miles east of the Chino Airport (CNO). The Project site is located outside the CNO airport influence area and airport safety zones. At this distance, airport hazards from CNO would be less than significant.

The Project would not result in a safety hazard for people residing or working in the Project area. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

f. **Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?**

Summary of Certified SEIR Finding: In 2018, the City of Ontario prepared a Local Hazard Mitigation Plan (LHMP) to identify the City's hazards, review and assess past disaster occurrences, estimate the probability of future occurrences, and set goals to reduce or eliminate long-term risk to people and property from natural and man-made hazards. Wildfire hazard is rated the highest risk of the 23 hazards evaluated, followed by flooding. Under the LHMP, interstate highways would serve as major emergency response and evacuation routes. TOP 2050 Policies and local roadways are designed and constructed so as to facilitate access under normal and emergency conditions.

A review of emergency access is included as part of the standard City's Design Review process. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance.

Based on the preceding, the Certified SEIR concluded that buildout of the City in accordance with TOP 2050 would not impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan. Impacts in these regards would be less than significant (Certified SEIR, p. 5.9-41).

Project Impacts: The Project does not propose or require permanent alteration of vehicle circulation routes, and would not interfere with any identified emergency response or emergency evacuation plan. Standard City design review processes include coordination with fire and police departments during pre-construction review of plans to ensure that potential interference with emergency response plans and evacuation plans are avoided. Based on the preceding, the Project

would not impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan. Impacts in these regards would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

g. **Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?**

Summary of Certified SEIR Finding: The Certified SEIR identifies available resources addressing wildland fires and associated potential impacts. These resources include: CAL FIRE 2019 Strategic Fire Plan for California, the California Fire Code, County of San Bernardino Multi-jurisdiction Hazard Management Plan, the Ontario LHMP, and fire services from the Ontario Fire Department. The Certified SEIR determined that adherence to existing regulations and review of building plans by the Ontario Fire Department, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards. No significant impacts were identified (Certified SEIR, p. 5.9-41).

Project Impacts: The Project site is located in an urbanized area, and no wildlands are located in the vicinity of the site. Fire protection services are provided by the Ontario Fire Department. Pre-construction coordination with Ontario Fire Department staff and adherence to local fire department regulations during construction and operation of the Project would be required. As such, no new or substantially increased impacts related to wildland fire impacts would result from the Project. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

10. **HYDROLOGY & WATER QUALITY**. Would the project:

Project-specific information presented in the following discussions is primarily based on information contained within the following documents:

- *Drainage Study for Tract No. 20730 Esperanza – PA 11, Eucalyptus Avenue & Amherst Avenue, Ontario, CA* (Walden & Associates) March 2025.

- *Preliminary Water Quality Management Plan (PWQMP),* March 12, 2025.

These reports are presented as Appendices I1 and I2 to this Addendum.

a. **Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?**

Summary of Certified SEIR Finding: The Certified SEIR recognizes that buildout of the City pursuant to TOP 2050 would increase concentrations of pollutants during construction and post-construction activities. To address potential water quality impacts resulting from project construction and operations, projects are required to comply with provisions of the City's National Pollutant Discharge Elimination System (NPDES) permit. NPDES permit requirements include, but are not limited to, mandated preparation of a Stormwater Pollution Prevention Plan (SWPPP) and Water Quality Management Plan (WQMP). Mandated SWPPPs and WQMPs are required to develop and implement Best Management Practices (BMPs) to reduce construction-source and operational-source stormwater pollutant discharges. Based on compliance with the City NPDES Permit and implementation of required SWPPPs and WQMPs, the Certified SEIR did not identify any significant water quality impacts (Certified SEIR, p. 5.10-21).

Project Impacts: Consistent with City requirements, a Preliminary WQMP has been prepared for the Project. The WQMP identifies the Source Control and Treatment Control BMPs to be implemented by the Project, including:

Source Control BMPs

- Minimize non-stormwater site runoff through efficient irrigation system design and controllers.
- Minimize trash and debris in storm runoff through a regular parking lot, storage yard and roadway sweeping program.
- Provide solid roofs over all trash enclosures.
- Site Owner(s)/Property Manager/HOA or POA will be familiar with the Project WQMP and stormwater BMPs.
- Owner or HOA or POA to provide education/training of site occupants and employees on stormwater BMPs.
- Install stormwater placards/stenciled messages with a "No Dumping" message on all on-site/off-site storm drain inlets.

Treatment Control BMPs

- Proprietary Filter Inserts for on-site storm drain inlets or retention basin/trench overflow drains

City review and approval of the WQMP and SWPPP documents is required prior to issuance of grading permits. As determined by the Certified SEIR, implementation of an approved SWPPP and WQMP would reduce the potential for the development under the Project to violate water quality standards or otherwise adversely affect water quality to levels that would be less than significant.

Based on the preceding, the Project's potential to violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality is considered less than significant. When compared to the Certified SEIR findings, no new or substantially increased water quality impacts would result from the Project.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

b. **Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?**

Summary of Certified SEIR Finding: As discussed in the Certified SEIR, "[a]pproximately 46 percent of the City's water supply is groundwater pumped by the City from the Chino Groundwater Basin; groundwater pumping is managed by OMUC so that domestic demands do not exceed the safe yield for the basin, consistent with the Chino Basin Watermaster's Optimum Basin Management Program, commonly called the 'OBMP Peace Agreement'" (Certified SEIR, p. 5.10-22). The Certified SEIR notes further "the Chino Groundwater Basin is adjudicated and is considered by DWR to be a very low priority groundwater basin. Each water purveyor has an allotted amount of water that can be pumped from the basin so that the safe yield is not exceeded. The City has access to additional water supplies that can accommodate the proposed increase in growth with buildout of [TOP 2050] and would not interfere with sustainable management of the groundwater basin" (Certified SEIR, p. 5.10-22).

The Certified SEIR recognizes that development pursuant to TOP 2050 would increase the amount of impervious surface within the City. However, groundwater recharge efforts would not be hindered. To these ends, all development projects within the City would be required to prepare project-specific hydrology studies, implement low impact development BMPs and comply with NPDES regulations supporting TOP 2050 Policies promoting infiltration of runoff and groundwater recharge.

Based on the preceding, TOP 2050 would not result in substantial adverse impacts affecting groundwater supplies, groundwater recharge, or groundwater sustainability (Certified SEIR, p. 5.10-23).

Project Impacts: Direct additions to or withdrawals of groundwater are not proposed or required by the Project. Construction proposed by the Project would not involve massive substructures at depths that would significantly impair or alter the direction or rate of flow of groundwater. The Project does not propose or require uses or facilities that would affect designated groundwater recharge areas. The Project has prepared a Drainage Study and Preliminary WQMP, and would comply with NPDES regulations supporting TOP 2050 Policies promoting groundwater recharge.

Based on the preceding, the Project would not result in substantial adverse impacts affecting groundwater supplies, groundwater recharge, or groundwater sustainability. When compared to the Certified SEIR findings, no new or substantially increased water quality impacts would result from the Project.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

c. **Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would?**

i. **Result in substantial erosion or siltation on- or off-site;**

Summary of Certified SEIR Finding: Consistent with NPDES requirements, runoff quantities would not be permitted to substantially increase as a result of a development under TOP 2050. In this regard, projects would be required to prepare project-specific hydrology studies. Further, existing City policies encourage the use of low impact development strategies to intercept runoff, reduce stormwater discharge rates, increase infiltration and ultimately reduce discharge volumes to traditional storm drain systems.

The Certified SEIR notes that while the amount of impervious surfaces would be increased under TOP 2050 (and thus surface water flows into drainage systems),

compliance with existing City and County requirements would ensure significant impacts related to alteration of drainage patterns do not occur. Additionally, City policies and regulations act to minimize or avoid development or other actions that would potentially result in impedance or redirection of flood flows (Certified SEIR, pp. 5.10-23 – 5.10-27).

Project Impacts: The Project site currently drains in a southwesterly direction towards the intersection of Eucalyptus Avenue and Amherst Avenue where an onsite detention basin is located. The basin has a 36-inch inlet that joins a public storm drain in Amherst Avenue. The Project would implement an on-site storm drain system that generally maintains the existing drainage pattern and connects to the existing storm drain in Amherst Avenue.

Additionally, compliance with construction-related BMPs and the SWPPP would control and minimize erosion and siltation, resulting in a less than significant impact. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

ii. **Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site;**

Summary of Certified SEIR Finding: The Certified SEIR concluded that future development would increase the amount of impermeable surfaces in the City, which could result in future on- and off-site flooding. The City's standard conditions of approval for new development also require the preparation of hydrology studies and drainage analyses that document the peak runoff rates from the developed site and evaluate the capacity of the storm drain system to accept these flow rates. Additionally, TOP 2050 policies would direct the City to incorporate strategies to capture, slow, or treat run-off and to reduce the flooding

potential down-gradient of new development. These policies would reduce the potential for on- and off-site flooding during the operational phase of future development projects. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR pp. 5.10-23 – 5.10-26).

Project Impacts: Based on the capacity of the surrounding storm drain system, the maximum permitted outflow from the developed site is 15.64 cubic feet per second (cfs). The Project-specific Drainage Study documents the post-development peak runoff rates and verifies that the Projects on-site storm drainage system would function as a flow restriction by oversizing the on-site system capacity and providing on-site storage. Outflow would be released from the site at no more than 15.64 cfs at any time. As such, runoff from the Project site would not have an adverse effect to the existing storm drain system downstream. The Project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

iii. **Create or contribute runoff water which would exceed the capacity or existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;**

Summary of Certified SEIR Finding: The Certified SEIR concluded that projects considered for approval under TOP 2050 would be required to prepare project-specific hydrology and hydraulic studies as required by the City. In compliance with the MS4 Permit and San Bernardino County Stormwater Program, new development projects would also be mandated to install stormwater treatment BMPs that retain the 2-year, 24-hour rainfall event. Because new development in the City would be required to prepare a hydrology study and drainage analysis

in accordance with the San Bernardino County Hydrology Manual, no significant impacts would occur. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR pp. 5.10-23 – 5.10-26).

Project Impacts: As stated above, the proposed on-site storm drainage system would function as a flow restriction by oversizing the on-site system capacity and providing on-site storage. Outflow would be released from the site consistent with the capacity of the surrounding storm drain system.

Accordingly, the Project would not create or contribute runoff that would exceed the capacity of any existing stormwater drainage system. Consistent with the finding of the Certified SEIR, stormwater generated by the Project will be discharged in compliance with the Statewide NPDES General Construction Activities Stormwater Permit and San Bernardino County MS4 permit requirements.

The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

iv. **Impede or redirect flood flows?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that only small portions of the City adjacent to flood control channels, detention basins, and creeks are in the 100-year floodplain. The western portion of Ontario Ranch is labeled Zone D, undetermined flood hazard, and no hazard analysis has been completed for this area. TOP 2050 includes policies to reduce impacts of potential development within 100-year flood zones. Additionally, Chapter 13 of the Ontario Municipal Code requires that a development permit be obtained prior to development in a special flood hazard area to ensure that the site is reasonably safe from flooding and flood hazards. With implementation of existing policies, the

potential for the project to impede or redirect flood flows is considered less than significant. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR pp. 5.10-23 – 5.10-26).

Project Impacts: According to the Federal Emergency Management Agency (FEMA) flood map No. 06071C9375J, the Project site is located within Zone X, an area of minimal flood hazard (FEMA, 2024). Additionally, as shown in Figure 5.10-2 of the Certified SEIR, the Project site is not located within an identified flood hazard zone. Therefore, the Project would not impede or redirect flood flows and no impact would occur. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

d. **In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?**

Summary of Certified SEIR Finding: As discussed in the Certified SEIR, "there are no large bodies of water that would result in a seiche during seismic activity. Additionally, the reservoirs/aboveground water tanks within the City are enclosed, thereby minimizing the possibility of a seiche. The [City] is inland and approximately 30 miles from the ocean and is not at risk of flooding due to tsunamis.

The western and southern portions of the City are in the dam inundation zone of San Antonio Dam. The probability of dam failure is very low, and Ontario has never been impacted by a major dam failure. In addition, dam owners are required to maintain emergency action plans that include procedures for damage assessment and emergency warnings. Because the likelihood of catastrophic failure of the San Antonio Dam is very low and the City has emergency action

plan (EAP) notification procedures, impacts of release of pollutants due to dam inundation are considered less than significant.

Based on the preceding, the Certified SEIR concluded that TOP 2050 would not result in adverse impacts related to flood hazard, tsunami, or seiche zones, risk release of pollutants due to inundation (Certified SEIR, pp. 5.10-26, 5.10-27).

Project Impacts: Conditions at the Project site with regard flood hazard impacts, tsunami hazard impacts, or seiche hazard impacts have not changed since preparation of the Certified SEIR – the site remains unaffected by substantial potential flood hazards, tsunami hazards, or seiche hazards. The potential for the Project to result in release of pollutants due to an inundation event would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

e. **Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?**

Summary of Certified SEIR Finding: As discussed in the Certified SEIR, "[p]rojects approved under TOP 2050 would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from post-construction activities under NPDES Permit No. CAS618036 through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment BMPs. Therefore, [TOP 2050] would not obstruct or conflict with the RWQCB's Basin Plan or any groundwater management plan, and impacts would be less than significant" (Certified SEIR, p. 5.10-27).

Project Impacts: Project-related construction and operational activities would be required to comply with the Santa Ana RWQCB's Santa Ana River Basin Water Quality Control Plan by preparing and adhering to an SWPPP and WQMP.

The Project site is located within the Chino Groundwater Basin. Upon development, the Project site will be connected to the City's public water supply and there will be no on-site wells for use of groundwater. The City manages both the potable and non-potable supplies to ensure withdrawals from the Chino Groundwater Basin do not exceed the safe yield for the Basin, as per the Chino Basin Watermaster's Optimum Basin Management Program (OBMP). Therefore, the Project would not obstruct or conflict with the OBMP. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

11. **LAND USE & PLANNING.** Would the project:

a. **Physically divide an established community?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that the changes in land use that would occur upon the implementation of TOP 2050 Land Use Plan would not result in the physical division of an established community. The Land Use Element of TOP 2050 contains policies and programs that encourage the preservation or enhancement of the existing, primarily residential community through infill development, open space opportunities, and development of compatible uses that would reduce the amount of conflict between contradicting land uses and enhance the existing character of Ontario. TOP 2050 would avoid conflicting land uses and would not divide an established community (Certified SEIR, p. 5.11-6).

Project Impacts: The Project site is currently vacant; No established community is located within the site. The Esperanza Specific Plan assumed the site would be developed with residential uses, should the Mountain View School District choose not to acquire the site. The site is surrounded by existing/proposed residential development, and the Project represents the logical continuation of such uses. The Project would not otherwise result in potential division of an established community. The Project would have no impacts in this regard.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

b. **Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 would not result in significant land use impacts (Certified SEIR, p. 5.11-11).

Project Impacts: The Project site is designated for School use by the TOP 2050 and the Esperanza Specific Plan. To accommodate the proposed uses, the Project would require a General Plan Amendment and Specific Plan Amendment to redesignate the site as Medium Density Residential (MDR). The Project would be implemented consistent with all Design Guidelines and Development Regulations presented in the Esperanza Specific Plan for MDR uses. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

12. **MINERAL RESOURCES.** Would the project:

a. **Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?**

b. **Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 would have a less than significant potential to result in the loss of a known mineral resource of value to the region or the state; or result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan (Certified SEIR, p. 5.12-6).

Project Impacts: Underlying conditions at the subject site have not changed since preparation of the Certified SEIR or the Esperanza Specific Plan DEIR. The Project site is located within a mostly developed area surrounded by urban land uses. As shown in Figure 5.12-1 of the Ontario Plan 2050 Draft SEIR, the Project site is designated as MRZ-3. The Certified SEIR states, "[d]evelopment in an MRZ-3 area would not result in significant impacts because mineral resources of statewide or local importance are not identified on the California Geological Survey's P-C maps." Additionally, the Esperanza Specific Plan DEIR concluded that buildout of the Specific Plan area would not result in significant impacts to mineral resources. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

13. **NOISE.**

The information presented within this section is summarized from:

- *Esperanza Specific Plan Amendment Noise Impact Analysis, City of Ontario* (Urban Crossroads, Inc.) April 24, 2025.

The Noise Impact Analysis (Urban Crossroads, 2025c) is presented in its entirety as Appendix J to this Addendum.

a. **Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

Summary of Certified SEIR Finding: The Certified SEIR determined that new development implemented pursuant to TOP 2050 would result in temporary noise increases at sensitive receptors during construction activities (Certified SEIR, p. 5.13-28). Certified SEIR Mitigation Measure 12-4, below, would reduce construction noise but would not avoid this impact or reduce the impact to levels that would be less than significant. No other significant impacts in this regard were identified.

Project Impacts:

Noise Standards

Noise impacts would be considered significant if any of the following criteria shown in Table 13-1 were exceeded.

Table 13-1
Significance Criteria Summary

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
Off-Site Traffic	All	If ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
		If ambient is 60 - 64 dBA CNEL	≥ 3 dBA CNEL Project increase	
		If ambient is >= 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
On-Site Traffic	All	See Exhibit 3-A of the Noise Impact Analysis.		
Operational	Noise-Sensitive	Exterior Noise Level Standards	65 dBA L_{eq}	45 dBA L_{eq}
		if ambient is < 60 dBA L_{eq}	≥ 5 dBA L_{eq} Project increase	
		if ambient is 60 - 65 dBA L_{eq}	≥ 3 dBA L_{eq} Project increase	
		if ambient is > 65 dBA L_{eq}	≥ 1.5 dBA L_{eq} Project increase	
Construction	Noise-Sensitive	Noise Level Threshold	80 dBA L_{eq}	
		Vibration Level Threshold	0.3 PPV (in/sec)	

Source: Urban Crossroads, 2025c

Sensitive Receivers

The following receiver locations, shown at Noise Impact Analysis Exhibit 9-A, Receiver Locations, were identified as representative noise impact analysis locations.

R1: Location R1 represents the future residential area east of Clifton Avenue, approximately 83 feet east of the Project site. Receptor R1 is placed at the nearest potential location for future housing facing the Project site.

R2: Location R2 represents the future residential area northeast of the intersection of Clifton Avenue and Chatham Street, approximately 92 feet northeast of the Project site. Receptor R2 is placed at the nearest potential location for future housing facing the Project site.

R3: Location R3 represents the future park north of Chatham Street, approximately 75 feet north of the Project site. Receptor R3 is placed at the nearest potential location within the park use facing the Project site.

R4: Location R4 represents an existing residence at 4508 S. Amherst Avenue, approximately 130 feet west of the Project site. Receptor R4 is placed at the private outdoor living areas (backyards) facing the Project site.

R5: Location R5 represents the existing residence at 4095 E. Amigos Privado, approximately 202 feet south of the Project site. Receptor R5 is placed at the private outdoor living areas (backyards) facing the Project site.

R6: Location R6 represents the existing residence at 4556 S. Afton Privado, approximately 142 feet southeast of the Project site. Receptor R6 is placed at the private outdoor living areas (backyards) facing the Project site.

Construction-Source Noise Impacts

In the evaluation of construction-source noise impacts, the Noise Impact Analysis employs empirical reference noise measurements obtained from similar construction activities. Based on the reference construction noise levels, maximum received noise levels attributable to the Project construction activities were calculated and are summarized at Table 13-2. Compliance with applicable significance thresholds is also presented.

Table 13-2
Construction Noise Level Compliance

Location	Highest Construction Noise Levels	Threshold	Threshold Exceeded
R1	67.6	80	No
R2	66.1	80	No
R3	66.6	80	No
R4	63.3	80	No
R5	59.5	80	No
R6	64.3	80	No

Source: Urban Crossroads, 2025c

As shown at Table 13-2, received construction-source noise levels would not exceed the applicable threshold and would therefore be less than significant.

Operational-Source Noise Impacts

The Project is considered a noise-sensitive receiving land use and is not expected to include any specific type of operational noise levels beyond those typically associated with residential land uses in the Project study area. Additionally, Section 21085 of the California Public Resources Code states in part, "...for residential projects, the effects of noise generated by project occupants and their guests on human beings is not a significant effect on the environment." A review of the legislative record indicates the author's intent for Section 21085 was to "remove the potential for litigants to challenge residential development based on the speculation that the new residents will create unwanted noises. It would also reestablish existing precedent that minor and intermittent noise nuisances, such as from unamplified human voices, be addressed through local nuisance ordinances and not via CEQA. Consequently, activities solely associated with occupants and quests, such as the swimming pool/spa activities, dog park activities, and outdoor activities in common spaces, are not considered part of this operational noise analysis for CEQA."

Based on the intent of the author of Section 21085, the operational noise sources are limited to the mechanical and non-verbal noise sources that occur on-site, including air conditioning units, trash enclosure activity, and parking lot movements. The Noise Impact Analysis employs empirical reference noise measurements obtained from similar operational activities. Based on the reference noise levels, maximum received noise levels attributable to the Project operational activities were calculated and are summarized at Table 13-3. Compliance with applicable significance thresholds is also presented.

Table 13-3
Operational Noise Level Compliance

Location	Project Operational Noise Levels (dBA Leq)		Noise Level Standard (dBA Leq)		Noise Level Exceeded?	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	46.4	44.1	65	45	No	No
R2	38.3	36.0	65	45	No	No
R3	40.3	37.8	65	45	No	No
R4	43.8	41.3	65	45	No	No
R5	39.4	36.8	65	45	No	No
R6	38.4	35.8	65	45	No	No

Source: Urban Crossroads, 2025c

As shown above, the operational noise levels associated with the Project will satisfy the City of Ontario 65 dBA Leq daytime and 45 dBA Leq nighttime exterior noise level standards at all the nearest receiver locations. Therefore, the operational noise impacts are considered less than significant at the nearest noise-sensitive receiver locations.

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise level measurements for the nearest receiver locations potentially impacted by Project operational noise sources. Noise levels that would be experienced at receiver locations when Project-source noise is added to the daytime and nighttime ambient conditions are presented in Tables 13-4 and 13-5, respectively.

Table 13-4
Daytime Project Operational Noise Level Increases

Location	Total Operational Noise Level	Ambient	Combined	Project Increase	Increase Criteria	Exceeded?
R1	46.4	67.9	67.9	0.0	1.5	No
R2	38.3	45.1	45.9	0.8	5.0	No
R3	40.3	47.4	48.2	0.8	5.0	No
R4	43.8	53.2	53.7	0.5	5.0	No
R5	39.4	60.3	60.3	0.0	3.0	No
R6	38.4	66.0	66.0	0.0	1.5	No

Source: Urban Crossroads, 2025c

Table 13-5
Nighttime Project Operational Noise Level Increases

Location	Total Operational Noise Level	Ambient	Combined	Project Increase	Increase Criteria	Exceeded?
R1	44.1	55.3	55.6	0.3	5.0	No
R2	36.0	36.9	39.5	2.6	5.0	No
R3	37.8	34.9	39.6	4.7	5.0	No
R4	41.3	53.3	53.6	0.3	5.0	No
R5	36.8	53.4	53.5	0.1	5.0	No
R6	35.8	45.2	45.7	0.5	5.0	No

Source: Urban Crossroads, 2025c

Vehicular-Source Noise Impacts

Off-Site Traffic Noise

Based on the Project trip generation analysis, the Project's traffic volumes would not result in an increase on vicinity roadways greater than those assumed under TOP 2050 or analyzed within the Esperanza Specific Plan DEIR. As such, off-site traffic noise impacts would be less than significant.

On-Site Traffic Noise

An on-site noise impact analysis has been completed to determine the noise exposure levels resulting from adjacent transportation noise sources in the Project study area and identify potential noise attenuation measures that would achieve acceptable Project exterior and interior noise levels.

The on-site exterior traffic noise analysis indicates that all buildings would experience exterior noise levels ranging from 59.3 to 64.4 CNEL. Based on the City of Ontario Land Use Compatibility for Community Noise Exposure (Noise Impact Analysis Exhibit 3-A), the Project land uses would be considered clearly acceptable to normally acceptable with exterior noise levels of less than 65 dBA CNEL.

To ensure that the interior noise levels comply with the interior noise level standards, future exterior noise levels were calculated at the first, second, and

third floor building façade/balcony locations. The interior noise level is the difference between the predicted exterior noise level at the building facade and the noise reduction of the structure. Typical building construction will provide a noise reduction of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." With standard construction, the following interior noise levels are expected:

- First Floor: 33.9 to 39.4 dBA CNEL
- Second Floor: 38.5 to 40.5 dBA CNEL
- Third Floor: 35.4 to 40.3 dBA CNEL

Based on the preceding, on-site interior traffic noise levels will not exceed the City of Ontario 45 dBA CNEL interior noise level standard for residential development.

Summary

As demonstrated in the preceding analysis, Project construction-source, operational-source, and/or vehicular-source noise would not result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

Mitigation:

Certified SEIR Measure(s)	**Project Applicability**
MM 12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building	**Applicable.** Project construction noise has been evaluated consistent with MM 12-4; No significant impacts have been identified. Regardless, the construction requirements listed within MM 12-4 shall be implemented during construction of the Project.

Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits. • Construction activity is limited to the hours between 7:00 am and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09. • During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds). • Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools. • Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses. • Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors. • Construction traffic shall be limited, to the extent feasible, to approved	

haul routes established by the City's Engineering Department. • At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City. • Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes. • During the entire active construction period and to the extent feasible, the use of noise producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws. Erect temporary noise barriers (at least	

as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.	

b. **Generation of excessive groundborne vibration or groundborne noise levels?**

Summary of Certified SEIR Finding: The Certified SEIR determined that mobile-source and stationary/area-source vibration impacts associated with buildout of TOP 2050 would be less-than-significant. However, construction activities associated with buildout of the individual land uses could expose sensitive uses to strong levels of groundborne vibration. The Certified SEIR concluded even with the implementation of Mitigation Measure 12-2, construction-source groundborne vibration impacts would be significant and unavoidable (Certified SEIR, pp. 5.13-38 – 5.13-41).

Project Impacts: Using reference vibration levels and methods defined by the FTA, Table 13-6 presents the expected Project-related vibration levels at the nearby receiver locations.

Table 13-6
Project Construction Vibration Levels

Location	Distance	Small Bulldozer	Jackhammer	Loaded Trucks	Large Bulldozer	Highest Vibration Level	Thresholds PPV (in/sec)	Thresholds Exceeded
R1	82'	0.00	0.01	0.01	0.01	0.01	0.30	No
R2	92'	0.00	0.00	0.01	0.01	0.01	0.30	No
R3	75'	0.00	0.01	0.01	0.02	0.02	0.30	No
R4	130'	0.00	0.00	0.01	0.01	0.01	0.30	No
R5	202'	0.00	0.00	0.00	0.00	0.00	0.30	No
R6	142'	0.00	0.00	0.01	0.01	0.01	0.30	No

Source: Urban Crossroads, 2025c

As shown above, at distances ranging from 75 to 202 feet from Project construction activities, construction vibration velocity levels are estimated to range from less than 0.01 to 0.02 in/sec PPV. Based on the Caltrans maximum acceptable continuous vibration threshold of 0.30 PPV (in/sec), the typical Project construction vibration levels will fall below applicable thresholds at all the receiver locations. Moreover, the vibration levels at the sensitive receiver locations are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter.

Based on the preceding, the Project would not result in any new or increased groundborne vibration or groundborne noise impacts than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
12-2 Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources,	**Implemented.** The Project has been evaluated consistent with Certified SEIR Measure 12-2. No further mitigation is necessary.

within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.	

c. **For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that Chino Airport does not significantly affect sensitive receptors within the City of Ontario. However, sensitive land uses within the 65 dBA CNEL noise contour of the Ontario International Airport would be exposed to substantial levels of airport-related

noise. Even with the implementation of Mitigation Measure 12-1, airport-related noise was deemed a significant and unavoidable impact of TOP 2050 (Certified SEIR, pp. 5.13-38 – 5.13-41).

Project Impacts: The Project site is located approximately four miles south of the Ontario International Airport (ONT). The Ontario International Airport Land Use Compatibility Plan was adopted by Ontario City Council on April 19, 2011 (amended 2018) to promote compatibility between the airport and the land uses that surround it. The Project site is located within the ONT airport influence area, but is not located within a designated noise impact zone. The Project would therefore not be exposed to excessive airport/airfield-source noise levels associated with ONT operations.

The Project site is located approximately 2.5 miles east of the Chino Airport (CNO). The Project site is not located within a designated CNO noise impact zone. At this distance, airport noise level impacts would be less than significant.

The Project would not otherwise be exposed to potentially adverse airport/airfield-source noise levels, nor does the Project propose or require uses that would contribute to or exacerbate airport-source noise impacts. Based on the preceding, the Project would not be adversely affected by airport/airfield noise, nor would the Project contribute to or result in adverse airport/airfield noise impacts. When compared to the Certified SEIR findings, no new or substantially increased airport/airfield noise impacts would result from the Project.

Mitigation:

Certified SEIR Measure(s)	**Project Applicability**
12-1 Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where	**Not Applicable.** The Project site is not located within a designated airport noise impact zone. As such, Certified SEIR Measure 12-1 is not applicable to the Project.

appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations).	

14. **POPULATION & HOUSING.** Would the project:

a. **Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 accommodates population growth through land use designations, goals, and policies that provide a vision and guide growth in the City. TOP 2050 would increase population, dwelling units, and nonresidential buildings but would result in a small decrease in employment. Although the increase in population, housing, and employment under TOP 2050 would exceed SCAG's regional forecasts for the City of Ontario, TOP 2050 would improve the job-housing balance. Consequently, impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, pp. 5.14-9 – 5.14-12).

Project Impacts: The Project would result in the development of 161 residential units. The Esperanza Specific Plan noted that 46 residential units could be developed within the Project site, should the school not be developed. This means that the Project would result in 115 residential units not originally anticipated by the Specific Plan.

According to the SCAG's Connect SoCal 2024, housing production within the region has historically lagged behind the growing population. While housing unit production has increased since 2000, the region still has a backlog of unmet

housing needs from previous decades. (SCAG, 2024) As further detailed in the Certified SEIR, the City of Ontario has an imbalanced jobs-housing ratio of 2.3 (ideal range is 1.3 to 1.7). The population in Ontario is expected to increase from 172,200 in 2020 to 269,100 persons, a difference of 96,900 persons (a 56.3 percent increase) between 2016 and 2045. The number of housing units in the City are forecast to increase from 48,269 to 78,174, a difference of 29,906 (a 62 percent increase) between 2016 and 2045.

The addition of the 161 residential units proposed by the Project in a jobs-rich region such as Ontario would not induce substantial unplanned population growth in the area. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

b. **Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that land use changes under TOP 2050 would increase opportunities for housing in the City. The TOP 2050 Land Use Plan would provide land use designations for a variety of housing types and provide for additional residential opportunities throughout Ontario. TOP 2050 includes policies supporting an increase in the provision of housing and diversity of housing opportunities in the City. Therefore, impacts would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, pp. 5.14-9 – 5.14-12).

Project Impacts: The Project site does not contain any housing and there are no people living at the Project site that would be displaced by the Project. Therefore, no impacts are anticipated. The Project would not result in any new, increased or

substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

15. **PUBLIC SERVICES**. Would the project:

a. **Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:**

i. **Fire protection?**

Summary of Certified SEIR Finding The Certified SEIR concluded that existing Ontario Fire Department facilities would not be adequate to meet increased demands from the implementation of TOP 2050. While the construction of future facilities could result in potential environmental impacts, future environmental review would occur once specific locations have been determined. Without a definitive location for the development of future facilities, the analysis of potential impacts is too speculative to conduct. Future projects would be reviewed by the City and the Ontario Fire Department on an individual basis and would be required to comply with requirements in effect at the time building permits are issued, including the payment of Development Impact Fees that contribute to funding for additional staffing, facilities, and equipment. Therefore, impacts to fire protection services would be less than significant (Certified SEIR, pp. 5.15-3 5.15-5).

Project Impacts: The Project does not propose or require construction or modification of fire protection facilities. The Project site is not designated or

proposed as the location for new or modified fire protection facilities. Incremental fire protection service demands generated by the Project are offset through the payment of Development Impact Fees. A portion of the City's Development Impact Fees are allocated for fire protection services. The Project Applicant would pay incumbent City Development Impact Fees at issuance of building permit(s).

To the satisfaction of the Ontario Fire Department, the Project would comply with City and Fire Department fire prevention and suppression requirements, including building/site design requirements, fire flow adequacy, and provisions for emergency access, thereby reducing potential increased demands for fire protection services.

Based on the preceding, the potential for the Project to result in substantial adverse physical impacts associated with the provision of the new or physically altered fire protection facilities is considered less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

ii. **Police protection?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that the Ontario Police Department has enough staffing to meet current demands, but would require additional staffing as population increases to accommodate buildout of TOP 2050. While the construction of future facilities could result in potential environmental impacts, future environmental review would occur once specific locations have been determined. Without a definitive location for the development of future facilities, the analysis of potential impacts is too speculative to conduct. Future development would also be subject to development impact fees which pay for police services. Therefore, impacts to police protection services would be less than significant (Certified SEIR pp. 5.15-6 – 5.15-7).

Project Impacts: The Project does not propose or require construction or modification of police protection facilities. The Project site is not designated or proposed as the location for new or modified police protection facilities. Incremental police protection service demands generated by the Project are offset through the payment of Development Impact Fees. A portion of the City's Development Impact Fees are allocated for police protection services. The Project Applicant would pay incumbent City Development Impact Fees at issuance of building permit(s).

Additionally, the Project site plan concept and proposed building designs would be reviewed by the Ontario Police Department to ensure incorporation of appropriate safety and security elements. Such design features would include secure building designs, defensible spaces, and area and facility security lighting. These design features would act to reduce Project demands for police protection services.

Based on the preceding, the potential for the Project to result in substantial adverse physical impacts associated with the provision of the new or physically altered police protection facilities is considered less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

iii. **Schools?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that although the increased demand on school facilities would have the potential to impact one or more of the school districts that serve Ontario, payment of impact fees in compliance with SB 50 would reduce the impacts to an acceptable level. Therefore, impacts to school services would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, p. 5.15-14)

Project Impacts: The Project would develop 161 residential units that could result in populations of resident school-aged children. As determined by the Certified SEIR, Project incremental impacts to school services would be offset through payment of school impact fees. The Project Applicant would pay incumbent school impact fees at issuance of building permit(s). Payment of school impact fees would reduce the Project's potential impacts to school services to levels that would be less than significant.

The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

iv. **Parks?**

Summary of Certified SEIR Finding: Park service was discussed under the Recreation section of the Certified SEIR. The Certified SEIR concluded that impacts to recreation would be less than significant, and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified SEIR (Certified SEIR, pp. 5.16-12 – 5.16-14). Details of the summary findings are discussed below in Section 16, *Recreation*.

Project Impacts: As discussed in Section 16, *Recreation*, the Project proposes residential uses that could increase the use of neighborhood and regional parks or other recreational facilities. As presented within the Certified SEIR, the Project would be required to provide sufficient public parkland or pay in-lieu fees. Additionally, the development would provide on-site recreational amenities to serve future residents, including a pool/spa, playground, shaded barbeque/picnic area, fitness stations, and open turf areas. As such, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

v. **Other public facilities?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 would not result in potentially significant other public services impacts (Certified SEIR, pp. 5.15-17 – 5.15-18)

Project Impacts: Development of the Project would require established public agency oversight including, but not limited to, various plan check and permitting actions by the City. Impacts of the Project would fall within routine tasks of these agencies/departments and are paid for via plan check and inspection fees. Impacts of the Project would not be of such magnitude that new or physically altered facilities would be required. There are no known or probable other public facilities that would be substantially affected by the Project. Based on the preceding, the potential for the Project to result in substantial adverse physical impacts associated with the provision of the new or physically altered other public facilities is considered less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

RECREATION. Would the project:

b. **Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that future growth in the City in accordance with buildout of TOP 2050 would increase the demand for parks and increase existing park usage. The Certified SEIR determined that because new development would be required to provide sufficient public parkland or pay in-lieu fees, impacts to recreational facilities would be less than significant (Certified SEIR, pp. 5.16-12 – 5.16-14).

Project Impacts: The Project proposes residential uses that could increase the use of neighborhood and regional parks or other recreational facilities. As presented within the Certified SEIR, the Project would be required to provide sufficient public parkland or pay in-lieu fees. Additionally, the development would provide on-site recreational amenities to serve future residents, including a pool/spa, playground, shaded barbeque/picnic area, fitness stations, and open turf areas. In total, these active common open space amenities would encompass 60,950 sf (1.40 acre). As such, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.
Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

c. **Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 includes planned park facilities; however, it is speculative to determine the location of proposed park facilities in the City and impacts arising from development of individual park projects. Existing federal, State, and local regulations as well as goals, policies, and actions in TOP 2050 would mitigate potential adverse impacts to the environment that may result from buildout of TOP 2050, including expansion of parks, recreational facilities, and multiuse trails. Furthermore, subsequent environmental review would be required for development of park projects under the TOP 2050 Land Use Plan. Therefore,

impacts would be less than significant (Certified SEIR, pp. 5.16-12 – 5.16-14).

Project Impacts: As mentioned above, the Project would include recreational amenities to serve future residents, including a pool/spa, playground, shaded barbeque/picnic area, fitness stations, and open turf areas. These amenities are part of the Project; the disturbance footprint, construction techniques, and associated impacts have been accounted for within this Addendum (and associated technical analyses). Potential impacts addressed within this Addendum are substantiated to be less than significant, or less than significant as mitigated. As such, implementation of the Project would not result in any adverse physical effects on the environment due to the construction of recreational facilities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

16. **TRANSPORTATION/TRAFFIC.**

Project-specific information presented under this topic is summarized from:

- *Esperanza Specific Plan Trip Generation Assessment* (Urban Crossroads, Inc.) May 29, 2024.

- *PA-11 of the Esperanza Specific Plan Vehicle Miles Traveled (VMT) Analysis* (Urban Crossroads, Inc.) May 29, 2024.

The Project's Trip Generation Assessment (Urban Crossroads, 2024d) and VMT Analysis (Urban Crossroads, 2024e) are presented as Addendum Appendices K1 and K2, respectively.

a. **Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?**

Summary of Certified SEIR Finding: TOP 2050 includes policies to encourage and provide access to the regional transit network, to enhance connectivity to the City's nonmotorized transportation network, and proposes the changes to the Mobility Element that have the potential to affect infrastructure projects identified in the Regional Transportation Plan. As such, Certified SEIR Section 5.17, Transportation, concluded that implementation of TOP 2050 would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities (Certified SEIR, pp. 5.17-18 – 5.17-23).

Project Impacts:

Project Trip Generation

Trip generation represents the amount of traffic that is attracted to and produced by a development project. The Project's Trip Generation Assessment compared the trips anticipated from the proposed Project with those of the approved elementary school use, as shown in Table17-1.

Table 17-1
Trip Generation Comparison

Use	AM Peak Hour			PM Peak Hour			Daily
	In	Out	Total	In	Out	Total	
Elementary School	169	140	309	96	110	206	949
Multifamily Residential	27	81	108	72	53	125	944
Net Change	-142	-59	-201	-24	-57	-81	-5

Source: Urban Crossroads, 2024d

As shown, the Project is anticipated to generate a net reduction of 5 two-way trips per day with a reduction of 201 AM peak hour trips and 81 fewer PM peak hour trips as compared to the approved elementary school use.

Alternative Transportation

The Project does not propose elements or aspects that would conflict with adopted alternative transportation policies. Transit services are currently provided to the City and the Project vicinity by Omnitrans, with a stop located at the corner of Eucalyptus Avenue and Hamner Avenue, less than 1,000 feet from the Project site. The Project would provide internal driveways and pedestrian paths that connect to the existing street and sidewalk network surrounding the Project site.

Transit agencies routinely review and adjust their ridership schedules to accommodate shifts in demand for services. As part of the City's standard development review processes, the need for transit-related facilities, bicycle, and pedestrian access would be coordinated between the City and the Applicant.

The Project would not interfere with the City Multipurpose Trails and Bikeway Corridor Plan. The Project would provide internal and perimeter pedestrian and bicycle amenities consistent with provisions of Esperanza Specific Plan and City Conditions of Approval.

Goals and Policies

Applicable goals and policies addressing the circulation system are established under TOP 2050. Project consistency with applicable provisions of TOP 2050 is summarized in Table 5 of the VMT Analysis provided as Addendum Appendix K2. As presented therein, no conflicts would occur.

Conclusion

Based on the preceding, the potential for the Project to conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

b. **Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that there is a net increase in citywide Boundary VMT primarily due to the increase in population accommodated by TOP 2050. Mitigation Measure T-1 would reduce potential impacts for future development projects to the extent feasible. Future development projects consistent with TOP 2050 would need to consider transportation demand management (TDM) measures consistent with those identified in the Mobility Element. TDM techniques include incentives to use transit; incentives to form carpools rather than drive alone; and making home, work, and shopping closer together to shorten travel distances. Because the VMT impact is citywide, mitigation measures to reduce VMT would need to focus on changing or improving the citywide travel patterns, transportation network, or infrastructure. Given the uncertainty of the effectiveness of implementing these types of mitigation measures at a citywide level and of their effectiveness at reducing citywide VMT, VMT impacts would remain significant and unavoidable (Certified SEIR, p. 5.17-34).

Project Impacts: The City of Ontario developed and adopted their own VMT methodologies and thresholds (Resolution No. 2020-071) (City Guidelines) in June 2020. Projects that do not result in significant VMT impacts per City Guidelines would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).

Project-generated VMT has been estimated using the Origin/Destination Method and Boundary Method, consistent with City Guidelines, VMT has been presented as total VMT and total VMT per Service Population (i.e., population and employees). Total VMT encompasses all VMT generated in the City of Ontario or by the Project on a typical weekday, while total VMT per Service Population (SP)

is an efficiency metric representing VMT generated on a typical weekday per person who resides and/or works in the City or who resides within the Project.

The City of Ontario has adopted the following thresholds of significance related to VMT for land use projects:

- A significant impact would occur if the project VMT per SP exceeds the Citywide average VMP per SP under General Plan Buildout Conditions.

- A significant impact would occur if the project caused total daily VMT per SP within the City to be higher than the no project scenario under cumulative conditions.

The City of Ontario's average VMT per SP under General Plan Buildout conditions was calculated using the TOP General Plan Buildout (2050) model, and is presented in Table 17-2.

Table 17-2
TOP 2050 Buildout
Citywide VMT Per Service Population

Service Population	707,369
VMT	19,506,377
VMT per SP	27.6

Source: Urban Crossroads, 2024e

VMT impacts of the Project employing the Origin/Destination VMT Methodology are presented at Table 17-3.

Table 17-3
Project VMT Impacts
Origin/Destination VMT Methodology

	Baseline	General Plan Buildout Year (2050)
Service Population	564	564
OD VMT	12,582	13,364
OD VMT/SP	22.3	23.7

Table 17-3
Project VMT Impacts
Origin/Destination VMT Methodology

	Baseline	General Plan Buildout Year (2050)
City Threshold	27.6	27.6
Threshold Exceeded	No	No

Source: Urban Crossroads, 2024e

VMT impacts of the Project employing the Boundary Method are presented at Table 17-4.

Table 17-4
Project VMT Impacts
Boundary VMT Methodology

	City Boundary		10-Mile Boundary	
	No Project	With Project	No Project	With Project
Service Population	706,494	707,058	2,579,062	2,579,626
Boundary VMT	9,602,250	9,598,040	41,605,554	41,614,834
VMT per SP	13.6	13.6	16.1	16.1
Change in VMT	0.0		0.0	
Threshold Exceeded	No		No	

Source: Urban Crossroads, 2024e

Based on the preceding, the following findings are made:

- Project-generated VMT per SP was found to be below the City's adopted impact threshold of Citywide average VMT per SP under General Plan Buildout Conditions and is considered less than significant.

- Total daily VMT per SP within the City is forecast to remain unchanged with the addition of the proposed Project and is considered less than significant.

Based on the preceding discussion, no new significant, substantially increased, or substantially different VMT impacts would occur as a result of the Project. No changed or new information has been identified to indicate that any potential VMT impacts resulting from the Project would be different from those that would result under the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	**Project Applicability**
T-1 Prior to approval of discretionary projects subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) Final Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (2021) and approved by the City of Ontario (if applicable). Examples of measures include but are not limited to: • Pedestrian Network Improvements: constructing new sidewalks and/or improving damaged or substandard sidewalks that connect to a larger pedestrian network. • Construct or Improve Bike Facilities: constructing new or enhancing a single existing Class	**Implemented.** The Project's VMT Analysis (Addendum Appendix K2) fulfills Certified SEIR Mitigation Measure T-1.

I, II or IV bike facility that connects to a larger bike network. • Construct or Improve Bike Boulevards: implementing a Class III bike boulevard on a local or collector street that is one travel lane in each direction, has a design speed of 25 mph or less and a design volume of 5,000 ADT or less. • Expand Bikeway Networks: constructing a network of interconnected new Class I, II, or IV bike facilities. • Provide End of Trip Bicycle Facilities: constructing facilities that support cyclists such as bike parking, lockers, and showers. • Implement Transit-Supportive Roadway Treatments: funding infrastructure improvements such as traffic signal modifications and roadway signing and striping that are dedicated to improving transit travel times and reliability. • Transit Passes: proving discounted or free transit fare to a specific geographic area, population group, or to the general public. • Vanpool Program: providing groups of 5 to 15 people with direct shuttle service between their workplace and residence. • Carshare Program (conventional or EV): providing access to a shared fleet of on-demand vehicles for short-term use/rental. Best practice is to discount carshare membership and provide priority parking for	

carshare vehicles to encourage use of the service. • Bikeshare Program (conventional or EV): providing access to a shared fleet of on-demand bicycles for short-term use/rental. Best practice is to discount bikeshare membership and dedicate bikeshare parking to encourage use of the service. • Rideshare Program: providing access to and encouraging the use of a ridesharing platform or service. This could be an app, website, or other service that provides ride-matching coordination services. • Community-Based Travel Planning (CBTP): CBTP is a residential based approach to outreach, performed by trained advisors, that provides households within a targeted geographic area with customized information, incentives, and support to encourage the use of transportation alternatives in place of single occupancy vehicles. Commute Trip Reduction (CTR) Program: CTR programs can be mandatory or voluntary, and involve providing information, coordination, services, infrastructure, and/or incentives for alternative modes such as ridesharing, vanpool, transit passes, and cycling.	

c. **Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?**

d. **Result in inadequate emergency access?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that buildout of the City pursuant to TOP 2050 would result in changes to the circulation network. Such changes would however be implemented consistent with City roadway classification and roadway design standards, acting to preclude potential design hazards. Additionally, City Design Review processes ensure that adequate emergency access is provided for all new development projects. On this basis, there would be no impacts related to hazardous design features, or emergency access provisions (Certified SEIR, pp. 5.17-25, 5.17-26).

Project Impacts: The Project does not propose elements or aspects that would substantially increase transportation/traffic hazards. Moreover, all improvements under the Project would be designed and implemented consistent with City traffic engineering and safety standards, thereby minimizing the potential to result in or cause hazardous traffic/transportation conditions.

The Project would generate urban traffic comparable to and compatible with the vehicle mix and vehicle categories present within the area roadway system. Residential uses proposed by the Project would therefore not cause or result in incompatible vehicle movements or traffic that would substantively increase hazards. Further, based on the projected trip generation under the Project, no new or different traffic hazards would occur when compared to the Certified SEIR.

All Project plans would be reviewed and approved by the Ontario Fire Department to ensure design standards related to adequate emergency access are met. Based on the preceding, the potential for the Project to substantially increase hazards due to a geometric design feature, incompatible uses, or inadequate emergency access is considered less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

17. **TRIBAL CULTURAL RESOURCES.** Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a. **Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?**

b. **A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision(c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision(c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.**

Summary of Certified SEIR Finding: The Certified SEIR concluded that grading and construction activities in undeveloped areas or redevelopment that requires deeper soil excavation than in the past have the potential to disturb tribal cultural resources. With the implementation of mitigation, the Certified SEIR concluded that impacts to prehistoric archeological resources, including tribal cultural resources, would be less than significant (Certified SEIR, pp. 5.18-8 – 5.18-11).

Project Impacts: No resources that are eligible for listing in the California Register of Historical Resources or in a local register of historical resources as defined by Public Resources Code Section 5020.1(k) were identified as part of the Cultural Resources Study conducted for the Project site. Implementation of the Project would not result in a substantial adverse change in the significance of a listed historical resource.

Senate Bill 18 (SB 18) requires local (city and county) governments to consult with California Native American tribes to aid in the protection of traditional tribal cultural places ("cultural places") through local land use planning. The consultation and notice requirements apply to adoption and amendment of both general plans (defined in Government Code Section 65300 et seq.) and specific plans (defined in Government Code 65450 et seq.), and not the CEQA process. To this end, outreach letters were sent to 21 individuals representing local Native American tribal groups to elicit information on Native American cultural resources that may be in the vicinity of the Project site. In response, the Gabrieleno Band of Mission Indians – Kizh Nation (Kizh Nation) requested consultation with the City.

Similar to the findings of the Certified SEIR, the Kizh Nation has requested mitigation measures be implemented to preclude impacts in this regard. Specifically, the Tribe has proposed Measures 18-1 through 18-3, which require Native American monitoring of ground-disturbing activities, as well as protocol for the treatment and disposition of tribal cultural resources should they be discovered during Project development. These Tribe-specific measures shall replace Certified SEIR Measures 5-4, TCR-1, and TCR-2.

As a result, consistent with the findings of the Certified SEIR, mitigation would preclude potential impacts to tribal cultural resources as defined in Public Resources Code 5024.1(c). Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	**Project Applicability**
MM 5-3 Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient	**Implemented.** The City has consulted with the responding Tribe. Additionally, a Project-specific Cultural Resources Assessment has been prepared and the results incorporated herein.

evidence is provided to reasonably ascertain that the site is within a tribal culturally sensitive area, an archaeologist shall prepare then a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed.	
MM 5-4 Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.	**Revised.** At the request of the Kizh Nation (the consulting Tribe), Measures 5-4 and TCR-1 are replaced with Measure 18-1. **18-1: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities** A. The Project Applicant shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject Project at all Project locations (i.e., both on-site and any off-site locations that are included in the Project description/definition and/or required in connection with the Project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching. B. A copy of the executed monitoring agreement shall be submitted to the Lead Agency prior to the earlier of the

	commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc. (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the Project Applicant/ Lead Agency upon written request to the Tribe. D. On-site tribal monitoring shall conclude upon the latter of the following: (1) written confirmation to the Kizh from a designated point of contact for the Project Applicant/Lead Agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the Project site or in connection with the Project are complete; or (2) a determination and written notification by the Kizh to the Project Applicant/Lead Agency that no future, planned construction activity and/or development/ construction phase at the Project site possesses the potential to impact Kizh

	TCRs.
TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include: 1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling; 2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the on-site Native American Tribal Monitor for the proposed project); 3. The protocols and stipulations	See Measure 18-1, above.

that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resource's evaluation. At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.	
TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries: 1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the	**Revised.** At the request of the Kizh Nation (the consulting Tribe), Measure TCR-2 is replaced with Measures 18-2 and 18-3. **18-2: Unanticipated Discovery of Tribal Cultural Resource Objects (Non-Funerary/Non-Ceremonial)** A. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs

project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process; 2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same: a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;	in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural, and/or historic purposes. **18-3: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects** A. Native American human remains are defined in PRC 5097.98(d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute. B. If Native American human remains and/or grave goods are discovered or recognized on the Project site, then Public Resource Code 5097.9 as well as Health and Safety Code Section 7050.5 shall be followed. C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code Section 5097.98(d)(1) and (2). D. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. E. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.

b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/ researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation; c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default; At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled;	

document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.	

18. **UTILITIES AND SERVICE SYSTEMS.**

Information presented within the following discussions was obtained from the following Project-specific analyses:

- *Water System Analysis For The Esperanza PA 11 Project in Ontario Ranch in the City of Ontario* (Dexter Wilson Engineering, Inc.) April 17, 2025.

- *Sewer System Analysis for the Esperanza PA 11 Project in Ontario Ranch in the City Of Ontario* (Dexter Wilson Engineering, Inc.) April 17, 2025.

These reports are provided as Appendices L and M, respectively, to this Addendum.

a. **Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that, although buildout of TOP 2050 would generate additional wastewater, it would be adequately treated in accordance with Regional Water Quality Control Board and California Department of Public Health requirements. City sanitary sewer

systems, and stormwater management would be expanded to accommodate growth associated with the buildout of TOP 2050.

Other utilities systems would be extended and improved consistent with purveyor master plans and as warranted by market conditions. Compliance with regulatory requirements and standard conditions of approval acts to reduce impacts on utilities systems generally, improve system efficiencies, and reduce system maintenance requirements. Collectively, this diminishes the requirement to construct new systems or replace existing systems.

Construction of utilities systems serving the City under TOP 2050 buildout conditions would not result in substantially different impacts than would result from development of TOP 2050 land uses generally.

The Certified SEIR concluded that with implementation of regulatory requirements and standard conditions of approval, the potential for TOP 2050 to require or result in the relocation or construction of new or expanded utilities systems, the construction or relocation of which would result in adverse environmental impacts would be less than significant (Certified SEIR, p. 5.19-11).

Project Impacts:

Water and Wastewater

The Project would include the installation of water and wastewater lines within the Project site. The Project on-site water system would connect to two existing 8-inch water lines in Amherst Avenue and Chatham Street, adjacent to the site. The Water System Analysis concluded that the existing and proposed water infrastructure has adequate capacity to serve the Project and necessary fire flow.

The proposed on-site sewer collection system would connect to an existing 8-inch line located in south Amherst Avenue, adjacent to the site. The Sewer System Analysis concluded that all existing and proposed sewer lines have adequate capacity to convey peak flows from existing development plus the proposed Project while maintaining City criteria.

Although the Project would result in new water and wastewater line connections, these connections would occur on-site and would be part of the Project's construction phase, which is evaluated throughout this Addendum. The construction of the Project's water and wastewater lines necessary to serve the Project would not result in any significant physical effects on the environment that are not already identified and disclosed as part of this Addendum. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Stormwater Drainage

The Project site currently drains in a southwesterly direction towards the intersection of Eucalyptus Avenue and Amherst Avenue where an on-site detention basin is located. The basin has a 36-inch inlet that joins a public storm drain in Amherst Avenue. The Project would implement an on-site storm drain system that generally maintains the existing drainage pattern and connects to the existing storm drain in Amherst Avenue. The Projects on-site storm drainage system would function as a flow restriction by oversizing the on-site capacity and providing on-site storage to ensure outflow would be consistent with the capacity of the surrounding storm drainage system. As such, the Project would not require relocation or construction of new or expanded storm water drainage infrastructure which could cause significant environmental effects. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Dry Utilities

Dry utilities serving the Project area include Southern California Edison, Southern California Gas Company (although natural gas service is not required for the Project), and various telecommunication providers. The Project would include installation of on-site dry utility infrastructure that is anticipated to connect with the existing infrastructure available in the vicinity.

Connection is inherent to the Project's construction phase and has been evaluated throughout this Addendum. The Project would not result in any new,

increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

b. **Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?**

Summary of Certified SEIR Finding: The City of Ontario 2020 Urban Water Management Plan (UWMP) substantiates that there would be sufficient and reliable water supplies available to the City through 2045. The Certified SEIR concludes that buildout of the City under TOP 2050 would incrementally increase water demands. However, water demands of the City would remain below 2020 UWMP water demand projections. On this basis, there would be sufficient water supplies available to the City under TOP 2050 buildout conditions. The potential for there to be insufficient water supplies available to serve the City and reasonably foreseeable future development during normal, dry and multiple dry years is therefore considered less than significant (Certified SEIR, pp. 5.19-30, 5.19-31).

Project Impacts: Ontario Municipal Utilities Company (OMUC) is responsible for supplying potable water to the Project site. The UWMP includes an analysis of water supply reliability projected through 2045 under normal years, single dry year, and multiple dry years. As stated above, the City is anticipated to have adequate water supplies to meet all its demands from the implementation of TOP 2050 at buildout until the year 2045 under a normal year, single dry year, and multiple dry years.

Based on the Water System Analysis calculations, the water demand of the proposed residential uses can be compared to that of the approved school use, as shown in Table 19-1.

Table 19-1
Water Demand Comparison

Use	Size	Demand Factor	Total Demand
Approved Elementary School	10.02 acres	3,500 gpd/acre[1]	35,070 gpd
Multifamily Residential	161 units	323 gpd/du[2]	52,003 gpd

[1] City of Ontario Water Master Plan, Table 4-8
[2] Dexter Wilson, 2025a

As shown above, the Project would result in an increased water demand of 16,933 gpd.

The Water Supply Assessment (WSA) prepared for the New Model Colony (NMC) determined that water demand for the NMC, as a whole, would be approximately 10.2 mgd. The City's projected 2025 water demand is 100.9 mgd, and the 2025 supply is projected at 166.1 mgd (Esperanza SP DEIR, p.III-12-14).

Based on the City's surplus water supply, as determined by the WSA for the NMC, sufficient water supply exists to accommodate the Project-related increase. As such, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

c. **Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?**

Summary of Certified SEIR Finding: The Certified SEIR recognizes that buildout of the City under TOP 2050 would result in increased wastewater treatment demands. However, existing wastewater treatment plants have excess capacity sufficient to meet these increased demands. Planned wastewater treatment

plant expansion would provide additional capacity available to serve the City under TOP 2050 buildout conditions. Treated wastewater meets or exceeds RWQCB and NPDES standards and requirements. On this basis, the Certified SEIR concluded that the potential for buildout of City under TOP 2050 to result in or cause insufficient or inadequate wastewater treatment would be less than significant.

Project Impacts: Based on the Sewer System Analysis prepared for the Project, Table 19-2 presents a comparison of the wastewater generation associated with the approved elementary school and the Project.

Table 19-2
Wastewater Generation Comparison

Use	Size	Generation Factor[1]	Total Generation
Approved Elementary School	10.02 acres	2,000 gpd/acre[1]	20,000 gpd
Multifamily Residential	161 units	174 gpd/du[2]	28,014 gpd

[1] Esperanza Specific Plan DEIR, Table III-12-A

[2] Dexter Wilson, 2025b

As shown above, the Project would result in a wastewater generation increase of 8,014 gpd when compared to the approved school use.

Wastewater from the site would be treated at IEUA Regional Water Recycling Plant No. 5 (RP-5) located in Chino. RP-5 currently treats about 9 million gallons per day (mgd), with a total treatment capacity of 16.3 mgd. RP-5 is currently undergoing an expansion which will increase capacity to 22.5 mgd. Ultimately, RP-5 will treat 30 mgd with a peak flow of 60 mgd. (IEUA, 2024)

The Project increase represents approximately 0.05 percent of RP-5's current treatment capacity. Given the existing freeboard, in addition to the ongoing expansion of RP-5, the IEUA's existing wastewater treatment facilities are anticipated to have adequate capacity to serve the Project's demand in addition to its existing commitments. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

d. **Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?**

e. **Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?**

Summary of Certified SEIR Finding: The Certified SEIR concluded that buildout of TOP 2050 would be served by landfills with sufficient permitted capacities to accommodate all solid waste disposal needs. Additionally, no conflicts with federal, State, and local management and reduction statutes and regulations related to solid waste were identified. The Certified SEIR determined that impacts related to solid waste would be less than significant (Certified SEIR, p. 5.17-31).

Project Impacts: Using a solid waste generation factor from CalRecycle, the operational solid waste anticipated from the proposed Project can be compared to that of the approved school use, as evaluated in the Esperanza Specific Plan DEIR (p. III-12-16). This comparison is presented in Table 19-3.

Table 19-3
Solid Waste Generation Comparison

Use	Size	Disposal Factor	Tons/Year
Approved Elementary School	65,000 sq. ft.	0.0013 tons/sq. ft./year[1]	84.5
Multifamily Residential	161 units	4 lbs./dwelling unit/day[2]	117.5

[1]https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/Reports/environmental-reports/esperanza_potentially_significant_environmental_effects_deir.pdf
[2]https://www2.calrecycle.ca.gov/wastecharacterization/general/rates

As shown above, the Project represents an increase in solid waste generation for the site. According to the Certified SEIR, solid waste collected from the City of Ontario is taken to either the Badlands Sanitary Landfill in Moreno Valley or the El

Sobrante Sanitary Landfill in Corona. Table 19-4 presents the disposal overview of both landfills.

Table 19-4
Landfill Overview

	Badlands Sanitary Landfill	El Sobrante Sanitary Landfill
Max Permitted Throughput (tons/day)	4,800	16,054
2020 Average Daily Disposal (tons/day)	2,813	10,995
Excess Daily Capacity (tons/day)	1,987	5,059
Remaining Capacity (cubic yards)	15,748,799	143,977,170
Estimated Closing Date	2073	2051

Source: TOP 2050 Certified SEIR

Solid waste generation anticipated by the Project represents approximately 0.065 percent (0.32 ton/day) of the current daily maximum throughput for the Badlands Landfill and 0.002 percent of the current daily maximum throughput for the El Sobrante Landfill. Given the excess daily capacity, solid waste generated by the proposed uses can be accommodated by either of these existing landfill facilities.

Additionally, the Project would comply with applicable solid waste management and reduction statutes and regulations (summarized below), acting to reduce solid waste management impacts of the Project.

- *City of Ontario Construction & Demolition Recycling Plan (CDRP)*
  Pursuant to Ontario Municipal Ordinance (OMC) Sec. 6-3.602 Construction & Demolition Recycling Plan and the 2016 California Green Building Standards Code (CALGreen), all building and demolition permit applicants are required to prepare and submit a Construction & Demolition Recycling Plan (CDRP) and a CDRP Summary Report. OMC Sec. 6-3.602 and CALGreen require all construction and qualifying renovation and demolition projects to divert at least 65% of all generated waste materials. The City oversees compliance with OMC Sec. 6-3.602 and CALGreen construction waste diversion mandates.

- *AB 939 - California Integrated Waste Management Act of 1989*
  Solid waste management is guided by the California Integrated Waste Management Act of 1989 (AB 939), which emphasizes resource conservation through reduction, recycling, and reuse of solid waste. AB 939 requires that localities conduct a Solid Waste Generation Study (SWGS) and develop a Source Reduction Recycling Element (SRRE), providing for a minimum 50 percent reduction in waste sent to landfills. Diversion rates are calculated and tracked by the California Integrated Waste Management Board (Board). Alternatively, the Board can determine that a jurisdiction's "good faith efforts" to implement comprehensive diversion programs have satisfied the requirement even if diversion levels are below 50 percent.

  To reduce waste disposal, AB 939 requires every California city and county to divert 50 percent of its waste from landfills. Residential, commercial and governmental waste recycling programs in support of the SRRE have been implemented by the City. The City is currently meeting or exceeding all AB 939 solid waste diversion targets.

- *AB 341 - Commercial Recycling*
  Assembly Bill 341 mandates recycling for businesses producing four or more cubic yards of solid waste per week, and multifamily dwellings of five units or more. Under the law, business must separate recyclables from trash and then either subscribe to City of Ontario recycling services, self-haul their recyclables, or contract with a permitted private recycler.

- *SB 1383 - Organic Waste Management Requirements*
  SB 1383 establishes targets to achieve a 50 percent reduction in the level of the Statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. The law grants CalRecycle the regulatory authority required to achieve the organic waste disposal reduction targets and establishes an additional target that not less than 20 percent of currently disposed edible food is recovered for human consumption by 2025.

The City is currently developing programs and strategies to address the requirements of SB 1383, the Project would be required to ultimately abide by those requirements.

As stated in the Certified SEIR, impacts to solid waste services and facilities from new development are further addressed through the payment of development impact fees as outlined in the City of Ontario Development Impact Fee Calculation and Nexus Fee Schedules. With the payment of required development impact fees and compliance with existing solid waste regulations, the Project would not result in any new or substantially increased solid waste impacts not previously identified within the Certified SEIR.

Based on the preceding, the Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals would be less than significant. Additionally, the Project would comply with applicable solid waste management and reduction statutes and regulations. On this basis, the Project would result in less than significant solid waste management impacts. The Project would not result in solid waste management impacts substantially greater than solid waste management impacts considered and addressed in the Certified SEIR.

Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

19. **WILDFIRE.** If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

a. **Substantially impair an adopted emergency response plan or emergency evacuation plan?**

b. **Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a**

wildfire or the uncontrolled spread of a wildfire?

c. **Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?**

d. **Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?**

Summary of Certified SEIR Finding: As discussed in the Certified SEIR, CAL FIRE has determined that the City contains no areas subject to very high wildfire risk. The City recognizes that even though fuel loading is light in Ontario and fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires. There are many resources available to address wildland fires should they arise - CAL FIRE's 2019 Strategic Fire Plan for California, the CFC, County of San Bernardino MJHMP, City of Ontario LHMP, and fire services from the City of Ontario Fire Department. With adherence to these building practices, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards (e.g., landslides, mudflows, and flooding). In addition, TOP 2050 incorporates policies to prevent wildfire hazards and support the community during wildfire events (Certified SEIR, pp. 5.20-15, 5.20-16). On this basis, the Certified SEIR concluded that potential wildfire impacts resulting from TOP 2050 would be less than significant.

Project Impacts: Development of the site has been anticipated under TOP 2050. By extension, potential wildfire impacts affecting the Project site are reflected in the assessment of wildfire impacts affecting the City under TOP 2050, as considered and addressed in the Certified SEIR. Per CAL FIRE, *Fire Hazard Severity Zone Maps*, the City and the Project site are not located within or near a state responsibility area, or within an area classified as a very high fire hazard severity zone.

Fire protection services for the Project site and vicinity are currently provided by the Ontario Fire Department. Adherence to Fire Department building and site

design requirements, and compliance with codified fire protection and prevention measures during construction and operation of the Project are required. On this basis, when compared to the Certified SEIR findings, no new or substantially increased wildfire impacts would result from the Project.
Mitigation:

Certified SEIR Measure(s)	Project Applicability
None.	-

20. **MANDATORY FINDINGS OF SIGNIFICANCE.**

a. **Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?**

b. **Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)**

c. **Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?**

Project Impacts: This Addendum defines, describes, compares, and contrasts potential environmental impacts of the Project in the context of the environmental impacts assessed in the Certified SEIR. In so doing, this Addendum substantiates consistency with applicable CEQA Guidelines provisions addressing preparation of an Addendum to a previously-Certified SEIR.

As supported by the discussions presented herein, the Project would not result in or cause any new significant impacts, substantively increased impacts, or

substantively different environmental impacts than those previously considered and addressed in the Certified SEIR. Analysis beyond that presented in this Addendum is not required or warranted.

EARLIER ANALYSES

(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D)):

Mitigation Monitoring and Reporting Program

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
Air Quality				
The Ontario Plan 2050 Supplemental EIR Mitigation Measures				
Air Quality	**MM 3-1** Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include: • Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as: o Requiring use of nontoxic soil stabilizers to reduce wind erosion. o Applying water every four hours to active soil disturbing activities. o Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials. • Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits. • Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards. • Limiting nonessential idling of construction equipment to no more than five consecutive minutes. • Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf.	Project Applicant/ City Planning Department and Building Department	n/a	This measure has been implemented as part of the Addendum. The Project-specific Air Quality Impact Analysis is provided in its entirety as Addendum Appendix C. Project construction would not exceed SCAQMD thresholds; further mitigation is not required.

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.			
	MM 3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g. sidewalks).	Project Applicant/City Planning Department	Prior to discretionary approval	
	MM AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following: • For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions. • Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use. • Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).	Project Applicant/ City Planning Department	n/a	This measure has been implemented as part of the Addendum. The Project-specific Air Quality Impact Analysis is provided in its entirety as Addendum Appendix C. Project operations would not exceed SCAQMD thresholds; further mitigation is not required.

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	• Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures). • Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures). • Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures). • Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures). • Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.			
Biological Resources				
Esperanza Specific Plan EIR Mitigation Measures				
Biological Resources	**MM BIO-1** There is a possibility of owl colonization within the project site prior to site grading. To ensure that no direct loss of individuals occurs, mitigation will be carried prior to initiation of on-site grading activities for each development phase. A pre-construction survey for resident burrowing owls shall be conducted by a qualified biologist. The survey shall be conducted 30 days prior to construction activities. If ground-disturbing activities are delayed or suspended for more than 30 days after the preconstruction survey, the site shall be resurveyed for owls. If owls are determined to be present within the construction footprint, they shall be captured and relocated. If non-breeding owls must be moved away from the disturbance area, passive relocation techniques will be used. The pre-construction survey and any relocation activity shall be conducted in accordance with the CDFG Report on Burrowing Owl Mitigation, 1995. According to CDFG guidelines, mitigation actions will be conducted from September 1 to January 31, which is prior to the nesting season. However, burrowing owl nesting activity is variable, and as such the time frame will be adjusted accordingly. Should eggs or fledglings be discovered in any owl burrow, the burrow cannot be disturbed (pursuant to CDFG guidelines) until	Project Applicant and Biologist/City Planning Department	Prior to ground-disturbing activities	

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	the young have hatched and fledged (matured to a stage that they can leave the nest on their own). Occupied burrows shall not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by the Department of Fish and Game verifies through non-invasive methods that either: a) the adult birds have not begun egg-laying and incubation; or b) the juveniles from the occupied burrows are foraging independently and are capable of independent survival. If a biologist is unable to verify one of the above conditions, then no disturbance shall occur within 300 feet of the burrowing owl's nest during the breeding season to avoid abandonment of the young. Passive relocation can be used to exclude owls from their burrows (outside the breeding season or once the young are able to leave the nest and fly) by installing one-way doors in burrow entrances. These one-way doors allow the owl to exit the burrow, but not enter it. These doors should be left in place 48 hours to ensure owls have left the burrow. Artificial burrows should be provided nearby. The project area should be monitored daily for one week to confirm owl use of burrows before excavating burrows in the impact area. Burrows should be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible pipe should be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow.			
	MM BIO-2 The project proponent shall be required to pay City of Ontario open space mitigation fees. Fees collected will be used "to acquire and restore mitigation lands to offset impacts to species now living in the New Model Community and impacts to existing open space", according to the City of Ontario Development Impacts Fee Calculation Report and the Settlement and general Release Agreement.	Project Proponent/City Planning Department	Prior to discretionary approval	
Cultural Resources				
Esperanza Specific Plan EIR Mitigation Measures				
Cultural Resources	**MM CUL-1** Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be a historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, then procedures outlined in Section 15064.5 of the CEQA Guidelines shall be followed. Additionally, Ontario's Local CEQA Guidelines provide that curation may be an	Project Developer or Contractor, Project Archaeologist/City Planning Department	During construction activities	

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	appropriate mitigation measure for an artifact that must be removed during project excavation or testing. (Local CEQA Guidelines, Section 5.13.)			
	MM CUL-2 If human remains are uncovered at any time, all activities in the area of the find shall be halted by the developer or its contractor and the County Coroner shall be notified immediately pursuant to CA Health & Safety Code Section 7050.5 and CA PRC Section 5097.98. If the Coroner determines that the remains are of Native American origin, the Coroner shall proceed as directed in Section 15064.5(e) of the CEQA Guidelines.	Project Developer or Contractor/City Planning Department or County Coroner	If human remains are uncovered	
Geology and Soils				
Project-Specific Mitigation Measure				
Geology and Soils	**MM 7-1** A Paleontological Resources Impact Mitigation Program (PRIMP) shall be prepared, in accordance with TOP Certified SEIR MM 5-2. The PRIMP shall be approved by the City Planning Department prior to the issuance of a grading permit. Additionally, full-time paleontological monitoring starting at a depth of four feet below the surface during earth disturbance activities shall be conducted. A proposed paleontological monitoring plan is presented within the report titled *Paleontological Assessment for the Eucalyptus and Amherst Avenues Project, City Of Ontario, San Bernardino County, California* (BFSA Environmental Services) April 1, 2025.	Project Applicant, Project Paleontologist/City Planning Department	Prior to issuance of grading permit	
Esperanza Specific Plan EIR Mitigation Measure				
Geology and Soils	**MM Geo-1** To address potential wind erosion effects, prior to construction, all grading and other construction activities will apply for and adhere to the permit given by the City of Ontario and enforced by the Building Official found in Title 6, Chapter 12, sections 6-12.01 – 6-12.07. The permit lasts for one (1) year, therefore, all construction lasting for a period of more than one calendar year from the date of issue will reapply for the permit and pay the current annual fee. At a minimum, the permit prohibits the disturbance of the surface or subsurface of more than one (1) acre of land without meeting permit requirements which can include such things as the application of soil stabilizers and limitations on grading activities during wind events.	Project Applicant/City Building Department	Prior to construction activities	
Noise				
The Ontario Plan 2050 Supplemental EIR Mitigation Measures				
Noise	**MM 12-4** Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building	Project Contractor/City Planning and Building Department	During construction activities	Project construction noise has been evaluated consistent with MM 12-4; No

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits. • Construction activity is limited to the hours between 7:00 am and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09. • During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds). • Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools. • Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses. • Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors. • Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department. • At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City. • Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.			significant impacts have been identified. Regardless, the construction requirements listed within MM 12-4 shall be implemented during construction of the Project.

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	• During the entire active construction period and to the extent feasible, the use of noise producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws. Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.			
	MM 12-2 Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.	Project Applicant and Project Acoustical Consultant/City Planning Department	n/a	This measure has been implemented as part of the Addendum; No significant impacts have been identified. No further mitigation is necessary.
Esperanza Specific Plan EIR Mitigation Measures				
Noise	**MM Noi-1** The construction activities of the proposed project shall comply with the City of Ontario Noise Ordinance that prohibits construction activities on Sundays, federal holidays, and other days between the hours of 7:00 p.m. and 7:00 a.m.	Project Applicant and Project Contractor/City Planning Department	During construction activities	

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	MM Noi-2 Construction staging areas shall not be located within 150 feet of existing sensitive receptors and construction equipment shall be fitted with properly operating and maintained mufflers.	Project Applicant and Project Contractor/City Planning Department	During construction activities	
	MM Noi-6 Architectural plans shall be submitted to the City of Ontario for an acoustical plan check prior to the issuance of building permits to assure that second story windows are upgraded for sound reduction and proper ventilation systems are incorporated. Plans shall include a final acoustical report to be reviewed and approved by the Planning Department prior to building permit issuance to ensure that City standards are maintained (45 dB CNEL interior and 65 dB CNEL exterior).	Project Applicant and Project Acoustical Consultant/City Planning Department	Prior to issuance of building permit	
Public Services				
Esperanza Specific Plan EIR				
Public Services	**MM Serv 2** To reduce fire hazards, adequate fire hydrant locations and water main sizes shall meet standards established by the City of Ontario Fire Department and reviewed and implemented by the Engineering Department.	Project Applicant/City Fire Department and Engineering Department	Prior to discretionary approval	
	MM Serv 3 To reduce fire hazards, adequate fire flow pressure shall be provided for residential areas and non-residential projects in accordance with currently adopted City standards.	Project Applicant/City Engineering Department	Prior to discretionary approval	
	MM Serv 4 To reduce fire hazards, adequate water supply shall be provided as approved by the Fire Department prior to the framing stages of construction.	Project Applicant/City Fire Department	Prior to the framing stages of construction	
	MM Serv 5 To reduce fire hazards, houses located on cul-de-sacs longer than 300 feet shall be constructed with residential fire sprinklers.	Project Applicant/City Engineering Department	Prior to discretionary approval	
	MM Serv 6 To reduce fire hazards, access roadways designed in accordance with Fire Department standards to within 150' of all structures, shall be provided prior to the framing stages of construction. This access is to be maintained in an unobstructed manner throughout construction.	Project Applicant/City Fire Department	Prior to the framing stages of construction	

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	MM Serv 7 To mitigate for potential impacts to library, police, and fire departments, the developer shall pay library, police, and fire service development impacts fees.	Project Developer/City Planning Department	Prior to issuance of building permit	
	MM Serv 9 The developer shall pay school fees or otherwise meet project obligations to schools, as approved by Mountain View School and Chaffey Joint Union High School Districts.	Project Developer/City Planning Department	Prior to issuance of building permit	
	MM Serv 10 To adequately address the need for recreation within the City, park development impact fees, Quimby fees, and/or developed parkland shall be provided to the City commensurate with the requirements of the General Plan equivalent to 24 acres total. The park fees shall be paid on a pro-rata share as building permits are issued in accordance with the negotiated DIF agreement. (Note: parkland shall be provided to the City commensurate with the requirements of the General Plan equivalent to 25 acres, if 46 additional homes are built in lieu of the school.)	Project Developer/City Planning Department	Prior to issuance of building permit	
Transportation				
The Ontario Plan 2050 Supplemental EIR Mitigation Measures				
Transportation	**MM T-1** Prior to approval of discretionary projects subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) Final Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (2021) and approved by the City of Ontario (if applicable). Examples of measures include but are not limited to: • Pedestrian Network Improvements: constructing new sidewalks and/or improving damaged or substandard sidewalks that connect to a larger pedestrian network. • Construct or Improve Bike Facilities: constructing new or enhancing a single existing Class I, II or IV bike facility that connects to a larger bike network. • Construct or Improve Bike Boulevards: implementing a Class III bike boulevard on a local or collector street that is one travel lane in each	Project Applicant/City Planning Department	n/a	This measure has been implemented as part of the Addendum. The Project's VMT Analysis (Addendum Appendix K2) fulfills Certified SEIR Mitigation Measure T-1.

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	direction, has a design speed of 25 mph or less and a design volume of 5,000 ADT or less. • Expand Bikeway Networks: constructing a network of interconnected new Class I, II, or IV bike facilities. • Provide End of Trip Bicycle Facilities: constructing facilities that support cyclists such as bike parking, lockers, and showers. • Implement Transit-Supportive Roadway Treatments: funding infrastructure improvements such as traffic signal modifications and roadway signing and striping that are dedicated to improving transit travel times and reliability. • Transit Passes: proving discounted or free transit fare to a specific geographic area, population group, or to the general public. • Vanpool Program: providing groups of 5 to 15 people with direct shuttle service between their workplace and residence. • Carshare Program (conventional or EV): providing access to a shared fleet of on-demand vehicles for short-term use/rental. Best practice is to discount carshare membership and provide priority parking for carshare vehicles to encourage use of the service. • Bikeshare Program (conventional or EV): providing access to a shared fleet of on-demand bicycles for short-term use/rental. Best practice is to discount bikeshare membership and dedicate bikeshare parking to encourage use of the service. • Rideshare Program: providing access to and encouraging the use of a ridesharing platform or service. This could be an app, website, or other service that provides ride-matching coordination services. • Community-Based Travel Planning (CBTP): CBTP is a residential based approach to outreach, performed by trained advisors, that provides households within a targeted geographic area with customized information, incentives, and support to encourage the use of transportation alternatives in place of single occupancy vehicles.			

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	• Commute Trip Reduction (CTR) Program: CTR programs can be mandatory or voluntary, and involve providing information, coordination, services, infrastructure, and/or incentives for alternative modes such as ridesharing, vanpool, transit passes, and cycling.			
Esperanza Specific Plan EIR Mitigation Measures				
Transportation	**MM Trans 1** Install traffic signal at the intersection of Mill Creek Avenue/Merrill Avenue with the following geometrics: Northbound: One left-turn lane. One shared through and right-turn lane. Southbound: One left-turn lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One shared through and right-turn lane. (These developments to be constructed by development located west of the Specific Plan.) Westbound: One left-turn lane. One shared through and right-turn lane.	Project Developer/City Planning Department	Prior to issuance of building permit	
	MM Trans 2 Install traffic signal at the intersection of Project Street (W)/Merrill Avenue with the following geometrics: Northbound: One shared left, through and right-turn lane. Southbound: One shared left, through and right-turn lane. Eastbound: One left-turn lane. One shared through and right-turn lane. Westbound: One left-turn lane. One shared through and right-turn lane.	Project Developer/City Planning Department	Prior to issuance of building permit	
	MM Trans 3 Install traffic signal at the intersection of Project Street (E)/Merrill Avenue with the following geometrics: Northbound: One shared left, through and right-turn lane. Southbound: One shared left, through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	Project Developer/City Planning Department	Prior to issuance of building permit	
	MM Trans 4 Install traffic signal at the intersection of Milliken/Hamner Avenue/Merrill Avenue with the following geometrics: Northbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Southbound: One left-turn lane. Three through lanes. One right-turn lane. Eastbound: Two left-turn lanes. One shared through and right-turn lane. Westbound: (This leg of the intersection to be constructed by development in Riverside County.) One left-turn lane. One shared through and right-turn lane.	Project Developer/City Planning Department	Prior to issuance of building permit	

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	MM Trans 5 Install traffic signal at the intersection of Mill Creek Avenue/Bellegrave Avenue with the following geometrics (Note: Riverside County encroachment permits required for some improvements.): Northbound: One shared left, through and right-turn lane. Southbound: One shared left, through and right-turn lane. Eastbound: One left-turn lane. One shared through and right-turn lane. Westbound: Two left-turn lanes. One shared through and right-turn lane.	Project Developer/City Planning Department	Prior to issuance of building permit	
	MM Trans 6 Modify the intersection of Milliken/Hamner Avenue/Bellegrave Avenue to include the following geometrics (Note: Riverside County encroachment permits required for some improvements.): Northbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Southbound: Two left-turn lanes. Two through lanes. One shared through and right-turn lane. Eastbound: One left-turn lane. Two through lanes. One right-turn lane. Westbound: Two left-turn lanes. Two through lanes. One right-turn lane.	Project Developer/City Planning Department	Prior to issuance of building permit	
	MM Trans 7 Sight distance at the project entrance roadways should be reviewed with respect to the City of Ontario Standard Drawing for Sight Distance in effect at the time of preparation of final grading, landscape and street improvement plans.	Project Applicant/City Planning Department	Prior to approval of final grading, landscape, and street improvement plans	
	MM Trans 8 Signing/striping should be implemented in conjunction with detailed construction plans for the project site.	Project Applicant/City Planning Department	Prior to approval of construction plans	
	MM Trans 9 Intersection, median opening and traffic signal spacing shall be in accordance with the City of Ontario New Model Colony Access Guidelines.	Project Applicant/City Planning Department	Prior to approval of street improvement plans	
	MM Trans 10 Construction of full width of internal roadways and part width of the following roadways shall comply with City of Ontario Standards:	Project Developer/City Planning Department	Prior to issuance of building permit	

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	• Construct partial width improvements on the easterly side of Mill Creek Avenue at its ultimate cross-section as a collector street (88' right-of-way) adjacent to project boundary line. • Construct partial width improvements on the westerly of Milliken/Hamner Avenue at its ultimate cross-section as a divided arterial parkway 1 (140' or more right-of-way) adjacent to project boundary line. • Construct partial width improvements on the northerly side of Bellegrave Avenue at its ultimate cross-section as a standard arterial (100' right-of-way) adjacent to project boundary line.			
	MM Trans 13 The project will participate in the cost of off-site improvements through fairshare payment of the Development Impact fee as established by the City of Ontario. These fees should be collected and utilized by the City to construct the improvements necessary to maintain the required level of service.	Project Developer/City Planning Department	Potential fairshare fees to be collected prior to issuance of building permit	
	MM Trans 14 Reconfigure Milliken Avenue/SR 60 WB Ramps to include the following geometrics: Northbound: Two left turn lanes and two through lanes. Southbound: Two through lanes and one right-turn lane. Eastbound: NA Westbound: One left-turn lane. One shared left and through lane. One right-turn lane.	Project Developer/City Planning Department	Potential fairshare fees to be collected prior to issuance of building permit	
	MM Trans 15 Reconfigure Milliken Avenue/SR 60 EB Ramps to include the following geometrics: Northbound: Three through lanes. One right-turn lane. Southbound: One left turn lane. Three through lanes. Eastbound: One shared left and through lane. One through lane. Two right-turn lanes. Westbound: NA	Project Developer/City Planning Department	Potential fairshare fees to be collected prior to issuance of building permit	
	MM Trans 16 Reconfigure Milliken/Hamner Avenue/Riverside Avenue intersection to include the following geometrics: Northbound: One left-turn lane. Three through lanes. One shared right-turn and through lane. Southbound: Two left-turn lanes. Four through lanes. One right-turn lane. Eastbound: Two left-turn lanes. Two through lanes. One shared through and right-turn lane. Westbound: One left-turn lane. Two through lanes. One right-turn lane.	Project Developer/City Planning Department	Potential fairshare fees to be collected prior to issuance of building permit

Tribal Cultural Resources				
The Ontario Plan 2050 Supplemental EIR Mitigation Measures				
Tribal Cultural Resources	**MM 5-3** Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a tribal culturally sensitive area, an archaeologist shall prepare then a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed.	Project Applicant and Project Archaeologist/City Planning Department	n/a	This measure has been implemented as part of the Addendum. The City has consulted with the responding Tribe. Additionally, a Project-specific Cultural Resources Assessment has been prepared and the results incorporated within the Addendum.
Project-Specific Mitigation Measures				
Tribal Cultural Resources	**MM 18-1** Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities A. The Project Applicant shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject Project at all Project locations (i.e., both on-site and any off-site locations that are included in the Project description/definition and/or required in connection with the Project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching. B. A copy of the executed monitoring agreement shall be submitted to the Lead Agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.	Project Applicant/Native American Monitor	Prior to ground-disturbing activities	

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc. (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the Project Applicant/ Lead Agency upon written request to the Tribe. D. On-site tribal monitoring shall conclude upon the latter of the following: (1) written confirmation to the Kizh from a designated point of contact for the Project Applicant/Lead Agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the Project site or in connection with the Project are complete; or (2) a determination and written notification by the Kizh to the Project Applicant/Lead Agency that no future, planned construction activity and/or development/ construction phase at the Project site possesses the potential to impact Kizh TCRs.			
	MM 18-2 Unanticipated Discovery of Tribal Cultural Resource Objects (Non-Funerary/Non-Ceremonial) A. A. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural, and/or historic purposes.	Project Archaeologist/Native American Monitor	Upon discovery of any Tribal Cultural Resources	
	MM 18-3 Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects A. Native American human remains are defined in PRC 5097.98(d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute. B. If Native American human remains and/or grave goods are discovered or recognized on the Project site, then Public Resource Code 5097.9 as well as Health and Safety Code Section 7050.5 shall be followed.	Project Archaeologist/Native American Monitor	Upon discovery of any Human Remains and Associated Funerary or Ceremonial Objects	

Impact Heading	Mitigation Measure	Responsible Party/Monitoring Party	Implementation Stage	Compliance Date and Signature
	C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code Section 5097.98(d)(1) and (2). D. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. E. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.			
Utilities and Service Systems				
Esperanza Specific Plan EIR				
Utilities and Service Systems	**MM Util 1** To provide adequate water and sewer service, all water and sewer pipelines within and adjacent to the project boundaries, as required and conditioned to serve the associated Tentative Tract Maps, shall be constructed by the developer based on the NMC Infrastructure Master Plans phased by tract and to the satisfaction of the City.	Project Developer/City Planning Department	Prior to approval of Tentative Tract Map	
	MM Util 2 To ensure that adequate sewer facilities are in place to serve the proposed project, the Archibald trunk sewer line off-site connection to the IEUA Kimbal Avenue interceptor shall be completed by IEUA and operational prior to the City of Ontario's issuance of the first certificates of occupancy. The applicant shall participate on a fair share basis in the development of the necessary sewer facilities.	Project Developer/City Planning Department	Prior to issuance of first certificate of occupancy	
	MM Util 3 To ensure adequate water service to the project, off-site water lines, tanks, interconnectors and other facilities required in the Water Master Plan for the Francis loop to provide water to the site shall be constructed by the City and be in place and operational prior to the City of Ontario's issuance of the first certificate of occupancy. The applicant shall participate on a fair share basis in the development of these off-site facilities.	Project Developer/City Planning Department	Prior to issuance of first certificate of occupancy	
	MM Util 4 To mitigate for possible conflicts with existing utilities, prior to obtaining grading permit(s), the project proponent shall coordinate with the applicable natural gas, electrical, and telephone utility providers for the project site to ensure that all existing underground and overhead lines are not damaged during project construction.	Project Developer/City Planning Department	Prior to issuance of grading permit	
	MM Util 5 To reduce the quantity of energy used and to conserve water resources, the project developer and City of Ontario should work to include sustainable systems for use of water and energy within the project design. One source of assistance in this regard is Southern California Gas Company Commercial/ Industrial Support Center at 1-800-GAS-2000, which should be contacted at the time of development of the commercial center located within the project.	Project Developer/City Planning Department	Prior to issuance of building permit

The Ontario Plan 2050
Specific Plan Policy Matrix 9.3

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

Section 1. Executive Summary

The Esperanza Specific Plan is a proposal for the development of approximately 223 acres located within the City of Ontario ~~New Model Colony (NMC)~~ Ontario Ranch. The master plan for Esperanza will provide for development of a distinctive residential planned community offering a variety of housing types within walking distance to parks and private recreational amenities. The regional context and local setting of the Esperanza Specific Plan are illustrated in Exhibit 1, "Regional Location Map" and Exhibit 2, "Vicinity Map."

The Esperanza Specific Plan comprises all of Planning Subarea 25 as depicted on the City of Ontario ~~New Model Colony (NMC)~~ Ontario Ranch General Plan Land Use Map. The Esperanza Specific Plan reflects the current Land Use Plan in The Ontario Plan (General Plan). It encompasses the eastern edge of The Ontario Ranch Master Planned Community. The Specific Plan is bounded by Bellegrave Avenue to the south, ~~Milliken~~ Hamner Avenue to the east, and Mill Creek Avenue to the west. Old Edison Road abuts the Specific Plan area on the north. Approximately 174.10 net acres of Esperanza are proposed for residential uses along with 9.89 net acres of park uses.

The Esperanza Specific Plan establishes the regulations and guidelines which will govern development of the master planned community within the Ontario Ranch General Plan. The development plan as illustrated in Exhibit 3 "Land Use Plan," is consistent with the goals and policies of the ~~NMC~~ Ontario Ranch General Plan combining livable residential neighborhoods served by public and recreational facilities as well as active open space offering opportunities for social interaction among residents.

Pedestrian accessibility is provided throughout Esperanza, through a system of sidewalks separated from the street by landscaped parkways and landscaped buffer areas. Bicycle mobility is provided within the community through a system of on-street bicycle trails.

~~The NMC~~ The Ontario Ranch General Plan, adopted by the City of Ontario, designates The Esperanza Specific Plan for development of up to 1,456 residential dwelling units, however, ~~46~~ 161 residential dwelling units will be developed within the Specific Plan area originally anticipated to be a 10.02 acre school site within Esperanza. On ~~XX-XX-2020~~ 10-20-2020, a request to increase PA4 to 14DU/AC was approved in order to accommodate a more efficient, economical sized design, and more appropriate product type. The increase allows for the development of up to ~~1,640~~ 1,652 units.

Governing Documents

Development of Esperanza will be governed by the following:

- The City of Ontario ~~NMC~~ Ontario Ranch General Plan, as amended, which establishes policies governing land use, circulation, housing, conservation and open space, noise, safety, and public facilities within the Esperanza Specific Plan area.
- The Esperanza Specific Plan which includes a Land Use Plan, Infrastructure Plan, Design Guidelines, and Development Regulations. Where the Esperanza Specific Plan is silent, the City of Ontario Development Code shall govern.
- The City of Ontario Subdivision Ordinance regulating the subdivision of land within the Esperanza Specific Plan area.
- A development agreement to include methods for financing, acquisition, and construction of infrastructure, acquisition and development of parks and schools, as well as the provision for housing opportunities consistent with the regional housing needs assessment.
- Covenants, Conditions, and Restrictions (CC&R's) to be established by the developers of Esperanza as a means of ensuring and enforcing quality design and development of the master planned community.

Specific Plan Components

The Esperanza Specific Plan is organized into the following sections in addition to Section 1, Executive Summary.

Section 2
Introduction

The Introduction serves to acquaint the reader with:

- Community vision and objectives,
- The project setting,
- A general description of the project proposal,
- The goals and policies of the Esperanza Specific Plan,
- The entitlements to accompany the Esperanza Specific Plan; and
- The relationship of the Esperanza Specific Plan to the City of Ontario ~~NMC~~ Ontario Ranch General Plan, and the City of Ontario Development Code.

Section 3
Existing Conditions

The physical setting for Esperanza is described in this section outlining the existing physical conditions on and around the Specific Plan area.

Section 4
Land Use

The Land Use Section describes residential planning areas and residential types, allocations of residential dwelling units per planning area as well as the system of parks and public facilities planned within the community.

Section 5
Infrastructure and Services

This section provides information on circulation improvements, planned backbone water, sewer, and storm drain systems, the grading concept for the development of the project, and a discussion of public utilities and services to serve the Specific Plan.

Section 6
Development Regulations

Development Regulations established in this section will govern the permitted uses and the standards regulating the development of various residential types within the Esperanza Specific Plan area. The relationship of the Esperanza Specific Plan development regulations to the City of Ontario Development Code is also provided. The policies and procedures for the City's review and approval of specific development proposals within Esperanza are presented in this section as well as the methods and procedures for interpreting and amending the Esperanza Specific Plan as necessary.

Section 7
Implementation

The policies and procedures for the City's review and approval of specific development proposals, within Esperanza, are presented in this section. This section provides the methods and procedures for interpreting and amending the Esperanza Specific Plan as necessary. A summary of project financing and project maintenance responsibilities for new development within the Specific Plan area is provided in this section.

Section 8
Design Guidelines

The Esperanza Design Guidelines are intended to direct the site planning, landscaping, and architectural quality of the development. Streetscapes, entries, edge treatments, walls and fencing, lighting, signage, and architectural design are some of the features to be addressed in the Design Guidelines.

Exhibit 1
Regional Location Map

Section 9
General Plan Consistency

This section includes the City of Ontario General Plan consistency matrix describing the relationship of the Esperanza Specific Plan to each policy of the ~~NMC~~ Ontario Ranch General Plan.

Land Use Table

Section 2. Introduction

The Esperanza Specific Plan (Specific Plan) includes 223 acres of land designated for residential uses as part of the Ontario Ranch area within the City of Ontario. Esperanza, at build out will be a residential master planned community within the City of Ontario with a traditional neighborhood design similar to that found in older established communities.

2.1 Community Vision and Objectives

The community vision for the Esperanza Specific Plan is implemented through the application of key design objectives guiding the development of the Specific Plan as discussed below.

Objective: Create a Livable Environment

The Esperanza Specific Plan combines residential, recreation and public facilities designed to create a livable community and includes features such as:

- A design which allows for alternative modes of travel such as biking and walking.
- Opportunities for informal neighborhood interaction.
- Diverse architectural design of a high quality.
- Connectivity among neighborhoods.
- Diversity and choice of housing types and opportunities to address a variety of lifestyles and economic segments of the marketplace.
- Residential neighborhoods developed at a human scale oriented to pedestrian activities with connectivity among residential neighborhoods, parks, and schools.
- A simple and well-designed street system providing street separated sidewalks and active and passive recreational opportunities allowing residents to experience increased outdoor living opportunities.
- A variety of housing types incorporated into the land use plan addressing lifestyle considerations of singles, families, and empty nesters.
- Residential neighborhoods designed around a network of centrally located parks, promoting outdoor activity and casual social interaction among neighbors.

Objective: Plan for a Circulation System Serving Motorists, Bicyclists and Pedestrians

The circulation plan for the Esperanza Specific Plan provides a comprehensive system of arterial, collector, and local streets accommodating bicycle and pedestrian travel as well as the safe and efficient movement of automobiles within the Specific Plan area:

- Street design includes landscaped buffer areas and pedestrian walkways, separated from the street, to create an intimate environment promoting social interaction.
- Internal project streets are designed to slow vehicular traffic through the use of traffic calming devices such as a roundabout at "A" Street adjacent to the neighborhood park, landscaped areas adjacent to local streets, and narrowed intersections to influence a driver's peripheral vision and encourage drivers to proceed more slowly.
- A system of bikeways is integrated into the design of the community to encourage bicycle travel as an alternative to the automobile.

Objective: Provide for Adequate Public Community Facilities

The Esperanza Specific Plan provides for the development of needed public facilities to serve the community as follows:

- New water, sewer, and storm drain facilities to serve the Specific Plan area.
- New planned bike paths connecting to the City of Ontario bikeway master plan bike paths.

Objective: Provision of New Parks and Open Space

New public park and open space amenities are provided to enhance outdoor recreational opportunities to residents of Esperanza and the surrounding community.

- Provision of approximately 9.89 acres of public parks, distributed throughout the community, will offer active and passive recreational opportunities within walking distance of all residential areas.
- Approximately 4.4 acres adjacent to Mill Creek Avenue, including a Southern California Edison Easement, will be landscaped for use as linear open space.
- Approximately 6.62 acres of landscaped open space to include pedestrian trails adjacent to public arterial and collector streets will be provided.
- A bicycle/pedestrian trail system will be developed within the street system of the Specific Plan area connecting the residential areas of the Specific Plan to parks and points surrounding the community providing accessibility to bicyclists and pedestrians throughout the community.

Objective: Promote Exceptional Architecture and Site Planning

Diverse and varied architecture combined with comprehensive site planning within the Esperanza Specific Plan will produce neighborhoods that have aesthetic and functional harmony, preserve residents privacy, and encourage neighborhood interaction.

- Streets will be linked together in a manner, which is pedestrian friendly, but also auto-accessible connecting homes with other neighborhoods, open space, public facilities, and recreational areas for residents to either walk, bike, or drive to.
- A variety of housing types, including attached and detached single family homes, will be provided within the Specific Plan area, all of which are located close to parks and open space.
- Residential planning areas include a variety of housing types oriented toward the street adding interest and encouraging neighborhood interaction along the street.
- Residential neighborhoods are designed with houses addressing the street by:
  - Designing homes to a more human level with porches, stoops, and walkways creating opportunities for neighborly interaction.
  - Homes fronting the street with garages accessed from rear alleys.
  - Minimizing views of garage doors through setback requirements, location, design elements, and landscaping.
  - Incorporating varied architectural styles and elements within each neighborhood.

2.2 SPECIFIC PLAN PURPOSE

The City of Ontario will adopt the Esperanza Specific Plan by ordinance thereby establishing the land use plan, development standards, infrastructure requirements, and implementation requirements for the Specific Plan area. The Esperanza Specific Plan establishes the type and distribution of residential land uses, defines the development regulations and design guidelines for residential land use, establishes appropriate locations for development of public parks, and describes the infrastructure requirements and the level of improvements necessary to support development of the Specific Plan area. The Esperanza Specific Plan establishes the procedures and requirements to approve new development within the Specific Plan area and identifies, where applicable, City of Ontario Development Code requirements.

2.3 SPECIFIC PLAN PROPOSAL

2.3.1 Project Summary

The Esperanza Land Use Plan is described below and in the Specific Plan "Statistical Summary," Table 1.

2.3.1.1 Residential Uses

Esperanza will provide for development of a variety of residential housing types oriented toward open space amenities and designed to promote walkability and interaction among residents. Residential development within the approximately 223 acre Specific Plan area will contain up to ~~1,594~~ 1,652 residential dwelling units, providing a mix of single family detached and single family attached housing types as described below. In the event Planning Area 11, reserved as for a 10.02 acre school site, is not purchased by the Mountain View School District Planning Area 11 may revert to a residential zoning district for development of up to ~~46~~ 161 additional dwelling units subject to approval by the City of a Specific Plan Amendment.

2.3.1.2.2 Residential Detached

Esperanza offers six different types of single family detached residential products for development within the Specific Plan area.

- SFD Conventional – Conventional single family detached residential units are proposed on lots ranging from 3,900 square feet to 4,900 square feet in size. Vehicular access is provided from interior streets and garages are set back from the front of the residence emphasizing the architectural elements forming the streetscene. These residential types will be developed at density levels between 5.56 to 6.18 dwelling units per net acre.
- SFD Cottage – Alley served single family detached residential dwelling units will be developed in two planning areas designed with an architectural orientation to the street by locating garages to the rear of residential units. Alley loaded residential areas will be developed at an average density of 7.89 dwelling units per net acre with a minimum lot size of 2,400 square feet.
- SFD 2 Pack – Residential single family detached development on minimum lots of 3,400 square feet in size will be developed in a 2 Pack configuration. Residential 2 Pack housing will be developed at a density of 6.84 dwelling units per net acre. Garages within this housing type are alternately placed to the rear of the lot or placed a significant distance from the street maintaining an architecture forward streetscene.

- SFD Courtyard – Two types of single family detached courtyard housing types are planned for Esperanza. Courtyard single family residential consisting of four units per courtyard will be developed at approximately 8.9 dwelling units per net acre. This type of housing will be developed around a 1 acre public park and will be served by public streets with private drive aisles accessing residential units developed around a common motorcourt. Courtyard single family residential courts of six units per courtyard will be developed at approximately 7.48 dwelling units per net acre. This type of courtyard housing will be developed around private streets and parks with private drive aisles serving residential units developed around a common motorcourt. The courtyard design planned for both housing types places garages in alternating side on and street facing conditions either minimizing or eliminating visibility of garages from the street.

2.3.1.3 Residential Attached

Two types of single family attached residential development products are planned within Esperanza. Alley loaded row townhomes designed around a private common green will be developed at approximately 14.05 dwelling units per net acre within PA 3 and at approximately 16.07 dwelling units per net acre in PA 11. Single family attached motorcourt townhomes will be developed at approximately 13.76 dwelling units per net acre. The motorcourt townhome residential housing type will be served by private streets with drive aisles providing access to a motorcourt serving 10 to 12 residential dwelling units. Both the alley loaded row townhome and the motorcourt townhome residential housing types are designed with garages located to the rear or turned to side on to the street preserving an architecturally interesting streetscene.

2.3.1.4 Parks, Trails, and Open Space

A centrally located 5.36 acre neighborhood park is planned to serve the Specific Plan area providing opportunities for informal active recreation such as soccer and baseball. Four additional parks ranging in size from .84 to 1.39 acres are provided offering opportunities for active and passive recreation and informal gathering among neighbors. Approximately 6.62 acres of the Specific Plan area will be developed as enhanced landscaped parkways along major streets serving the community. These enhanced parkways will include pedestrian walkways providing connectivity to and from the Specific Plan area and to the pedestrian network to be developed within the community, connecting all residential neighborhoods to parks. Within the townhome residential areas, private open space as well as private active recreation centers, including swimming pools and spas, will be provided.

2.4 AUTHORITY AND REQUIREMENTS

2.4.1 Authority

State of California Government Code, Title 7, Division 1, Chapter 3, Article 8, Section 65450-57 grants authority to cities to adopt Specific Plans for purposes of implementing the goals and policies of their General Plans. The Government Code specifies that Specific Plans may be adopted either by resolution or by ordinance and that the Specific Plan is required to be consistent with the General Plan. The City of Ontario will adopt the Esperanza Specific Plan by ordinance thereby establishing the zoning regulations for development of the Specific Plan area. The requirements of the Esperanza Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Esperanza Specific Plan is silent, the City of Ontario Development Code shall prevail.

LAND USE	ACRES
Residential Detached	**Residential Acres are Net [1]**
• RD 1 - 50 foot wide lots/PA-7 and PA-9	25.83 AC
• RD 2 – Typical 55 foot wide lots/ PA-8	19.26 AC
• RD 3 – 2 Pack lots/PA-10	14.62 AC
• RD 4 – Cottages 2,640 sf lots/PA-2 and PA-6	27.36 AC
• RD 5 – 4 Pack Courtyard/ PA-5	17.64 AC
• RD 6 – 6 Pack Courtyard & Rowtown/ PA-2 and PA-4	19.30 AC
Residential Attached	
• RD 7 – Row Townhomes/ PA-1, PA-3 and PA-11	30.67 AC
• RD 8 – Motorcourt Townhomes / PA-1 and PA-3	19.42 AC
Subtotal Residential:	**174.10 AC**
Other	
Neighborhood Park	5.36 AC
Pocket Parks	4.53 AC
Neighborhood Edge Buffers	6.62 AC
Roadways [2]	28.25 AC
SCE Easements and Well Sites	4.14 AC
Subtotal Other:	**48.90 AC**
PROJECT TOTAL	**223.00 AC**

NOTES:

1. *Net acres excludes all streets and uses listed as "Other Uses" but includes interior local streets and drive aisles.*
2. *Includes all Master Plan Streets, Street 'A' and Local Streets serving the Neighborhood Park and School Site.*

TABLE 1

Specific Plan Statistical Summary

2.4.2 Requirements of the Specific Plan

California Government Code Section 65451 sets forth the minimum requirements and review procedures for Specific Plans as follows.

A Specific Plan shall include a text and a diagram or diagrams, which specify all of the following in detail:

1. The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan;
2. The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;
3. Standards and criteria by which improvements will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable;
4. A program of implementation measures including regulations, programs, public works projects and the financing measures necessary to carry out paragraphs 1, 2, and 3 above.
5. A statement of the relationship of the Specific Plan to the General Plan.

The Esperanza Specific Plan meets the requirements of the State of California Government Code.

2.5 DEVELOPMENT APPROVAL COMPONENTS

The components of the development approval process for Esperanza are discussed below.

2.5.1 Specific Plan

The Esperanza Specific Plan, when adopted, provides the zoning for the Specific Plan area. It serves as a "blueprint" for development by establishing the distribution of land use and criteria for development as set forth herein. The Esperanza Specific Plan also serves as the legal document to implement the City's General Plan.

2.5.2 Development Agreement

Unless done in a coordinated manner and with adequate fiscal planning, development projects within the ~~NMC~~ Ontario Ranch are likely to present a challenge in their implementation because of the lack of existing public facilities including street, sewerage, transportation, drinking water, school and utility facilities. California law has established a mechanism for ensuring the adequate provision of such facilities while at the same time providing assurances to applicants that, upon approval of the project, the applicants can proceed with their projects. Approval of this Specific Plan without a development agreement may result in a waste of resources, escalate the cost of housing to the consumer, and discourage investment in and commitment to comprehensive planning as envisioned by the City, which seeks to make maximum efficient utilization of resources at the least economic cost to the public.

Therefore, a statutory development agreement, authorized pursuant to California Government Code sections 65864 et seq., shall be required as part of the approval of this Specific Plan. For the above-mentioned reasons, the development agreement for this Specific Plan shall include, among other things, methods for financing acquisition and construction of infrastructure, acquisition and development of adequate levels of parkland, and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the regional housing needs assessment. Such development agreement shall have been fully approved before the issuance of the first building permit for this project.

2.5.3 Subdivision Maps

A tentative tract map(s) will be approved by the City of Ontario for the Specific Plan area indicating the approximate location of lot lines, streets, and proposed grading. Following approval by the City of the tentative tract map(s), a final map(s) will be prepared. The final map(s) becomes a legal document that is recorded and defines legal parcels and lots that can be sold for development.

2.5.4 Development Plan Review

All development proposals for individual Planning Areas within the Specific Plan will be subject to the Development Plan Review process pursuant to Article 8 of the City's Development Code.

2.6 CEQA COMPLIANCE

A Project Environmental Impact Report (EIR) prepared by the City of Ontario for the Esperanza Specific Plan, in accordance with the California Environmental Quality Act (CEQA), addresses impacts associated with the Specific Plan and subdivision map(s). The EIR recommends mitigation measures to reduce impacts of the project to a less than significant level. The EIR has been prepared as a basis for the environmental review for all subsequent discretionary and ministerial actions.

2.7 RELATIONSHIP TO GENERAL PLAN AND ZONING

The City of Ontario ~~NMC~~ Ontario Ranch General Plan designates the Specific Plan area for development of the following land uses:

Land Use Designation	Approximate Acres (Gross)
Residential – Low Density (4.6 d.u. per gross acre)	95.1 AC
Residential – Medium Density (12.0 d.u. per gross acre)	114.8 AC
Residential – High Density (18.0 d.u. per gross acre)	13.1 AC
Total	**223 AC**

The General Plan establishes a target development capacity of ~~1,456~~ 1,652 residential dwelling units as further described below:

Single Family	878 dwelling units
Multi-Family	774 dwelling units
Total	**1,652 dwelling units**

The table below provides a summary of how the Esperanza Specific Plan land use plan implements the General Plan target development capacity.

GENERAL PLAN TARGET DEVELOPMENT CAPACITY			
Land Use	**Target DUs**	**Gross Acres**	**Gross Density**
Residential Medium Density	1,535 DU	127.9 AC	12.0 DU/AC
Residential Low Density	285 DU	95.1 AC	3.0 DU/AC
Total	**1,820 DU**	**223.0 AC**	8.2 **DU/AC**
ESPERANZA SPECIFIC PLAN LAND USE DISTRIBUTION			
Land Use	**Target DUs**	**Gross Acres**	**Gross Density**
Residential Medium Density	1,209 DU	127.9 AC	9.5 DU/AC
Residential Low Density	443 DU	95.1 AC	4.7 DU/AC
Total	**1,652 DU**	**223.0 AC**	7.4 **DU/AC**

The General Plan allows for development of multi-family residential units as small lot, single family detached units with a variety of parcel sizes and product types on property designated for multi-family uses, including "Residential-Medium" and "Residential-High" density housing.

The City of Ontario has pre-zoned the Specific Plan area as SP/AG (Specific Plan AG preserve). The zoning designation of "SP" requires the Specific Plan area to implement the objectives of the ~~NMC~~ Ontario Ranch General Plan land uses.

The Esperanza Specific Plan is designed to meet the requirements of the State of California Government Code and the City of Ontario ~~NMC~~ Ontario Ranch General Plan. The City of Ontario will adopt the Esperanza Specific Plan by ordinance, thereby establishing the zoning regulations for the development of the Specific Plan area. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.

Section 3. Existing Conditions

This section describes the existing physical conditions within and surrounding the Esperanza Specific Plan area.

3.1 Property Ownerships

The Specific Plan area is comprised of approximately 223 gross acres. Richland Communities owns approximately 85 gross acres and RCCD Development owns the remaining 138 acres of the Specific Plan Area. Exhibit 4, "Existing Property Ownerships and Williamson Act Contract Status" illustrates the property ownerships within the Esperanza Specific Plan boundary.

3.2 Williamson Act Contracts

Exhibit 4, "Existing Property Ownerships and Williamson Act Contract Status" illustrates the status of Williamson Act Contracts within the Esperanza Specific Plan boundary.

3.3 Existing Improvements

The Specific Plan area historically has been used for agricultural purposes, primarily dairy and crop farming, and is currently in development as illustrated on Exhibit 5, "Existing and Surrounding Land Uses." Existing improvements within northern and eastern portions of the Specific Plan area controlled by RCCD Development, are currently in development. All dairy related structures in this area have been demolished and removed. Existing agricultural related facilities such as modular structures and feedlots located within the properties owned by Richland Communities have also been demolished and removed in preparation for development.

3.4 Surrounding Land Use Characteristics

Land uses adjacent to the Specific Plan area include:

North	Future Planned Residential Community and Mixed Use Development
West	Rural Residential and Dairy Operations
South	Planned Residential Communities
East	Commercial, Industreial, and Vacant Land

The City of Ontario ~~NMC~~ Ontario Ranch General Plan designates the undeveloped areas located directly to the west of the Specific Plan area as "LMDR - Low Medium Density Residential" and "MDR - Medium Density Residential". The undeveloped areas located to the north of the Specific Plan are designated as "MDR - Medium Density Residential" and "MU - Mixed Use". Land adjacent to the Specific Plan area to the east is located within Riverside County and is developed as a mixed use/retail center. Land south of the Specific Plan area is also located in Riverside County and developed with single family and low density residential land uses. Exhibit 6, "Land Use Designations" illustrates the proposed land uses adjacent to the Specific Plan area within the ~~NMC~~ Ontario Ranch and the County of Riverside.

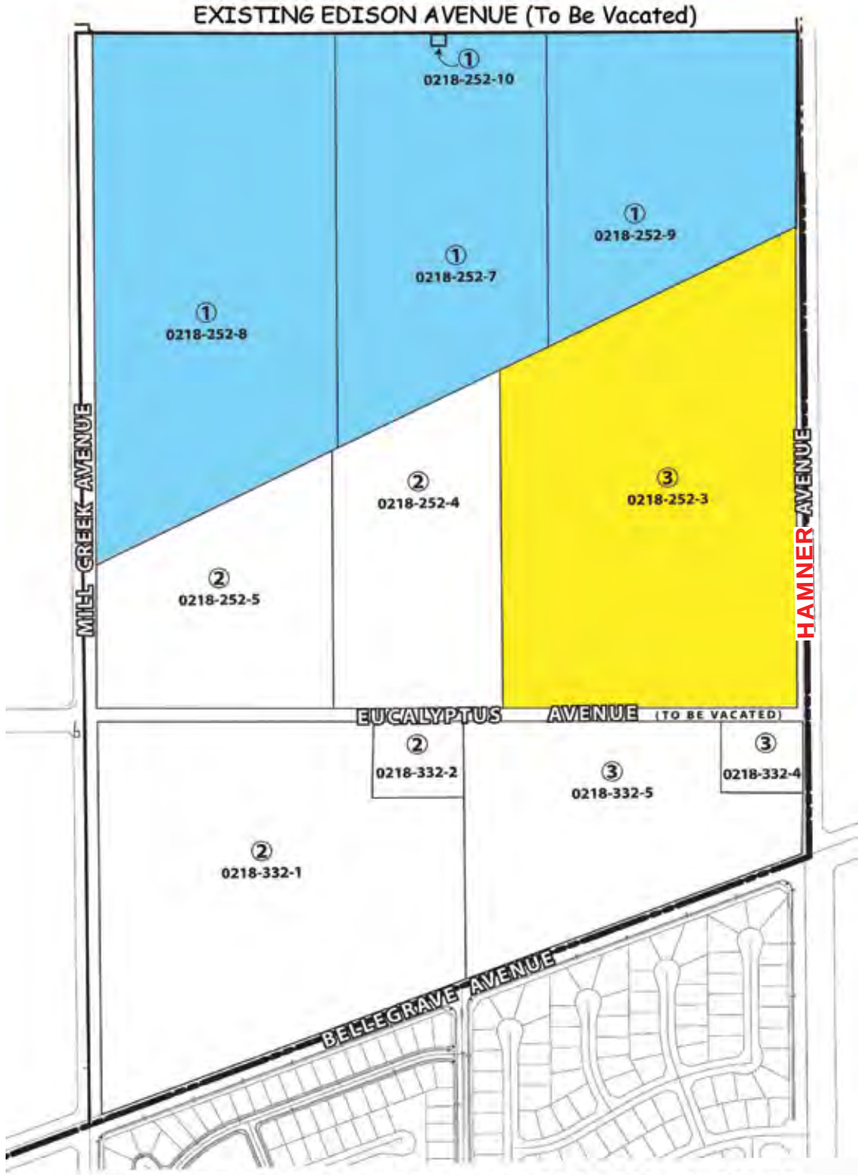

EXHIBIT 4

Existing Property Ownerships and Williamson Act Contract Status

EXHIBIT 5

Existing and Surrounding Land Uses

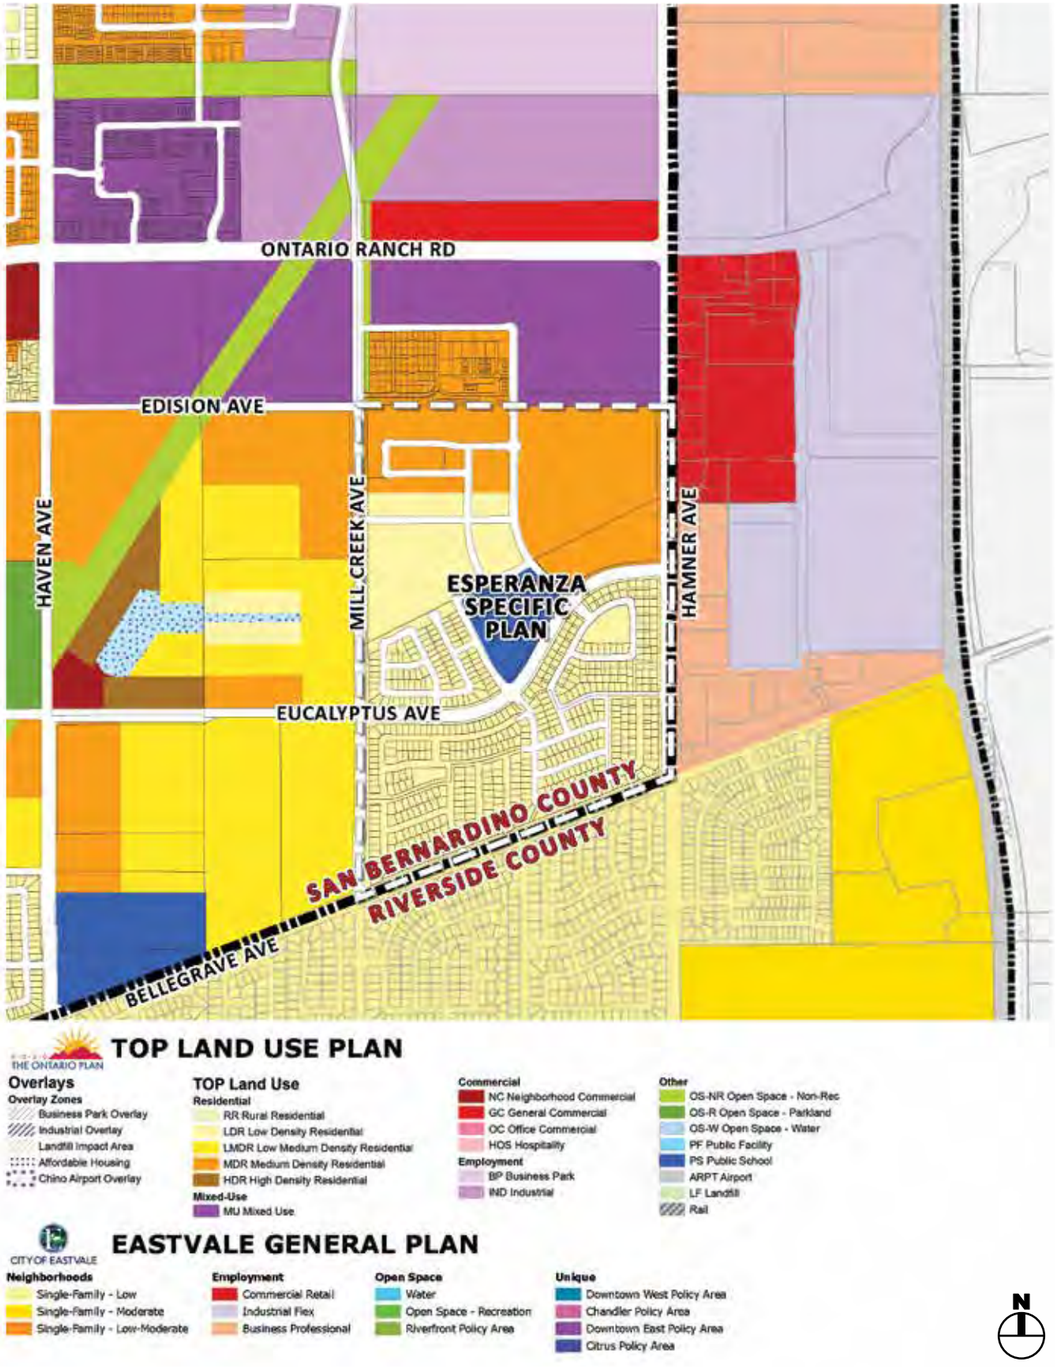

Exhibit 6
Land Use Designations

3.5 Topography

The Specific Plan area is relatively flat and generally slopes from the northeast to southwest as illustrated on Exhibit 7, "Existing Site Topography and Well Locations." The site falls at an average slope of approximately two percent (2%). There is an existing earthen drainage interceptor ditch paralleling the southerly boundary of the site and an existing drainage basin located in the southwest corner of the Specific Plan area.

3.6 Existing Circulation and Access

Interstate 15 (I-15) is located one-half mile east of the Specific Plan area. Access to I-15 is located approximately 1.5 miles southeast of the Specific Plan area, via Hamner and Limonite Avenues. The Specific Plan area is approximately 1.8 miles south of State Route 60.

Bellegrave Avenue, designated as a "Standard Arterial" in the City of Ontario's ~~NMC~~ Ontario Ranch General Plan, borders the Specific Plan on the south. The south half of Bellegrave Avenue within Riverside County has been improved with 55 feet of paving and a 21-foot parkway as part of the residential development to the south. ~~Milliken~~ Hamner Avenue, designated as a "Divided Arterial Parkway 1-1" borders the Specific Plan area on the east. ~~Milliken~~ Hamner Avenue is partially improved with two lanes for traffic and 38 feet of paving. Mill Creek Avenue, designated as a "Collector" street, borders the Specific Plan area to the west. Mill Creek Avenue is partially improved, north of Eucalyptus Avenue with two lanes for traffic and 20 feet of paving. Existing Edison Avenue borders the Specific Plan to the north and is partially improved with two lanes for traffic and 20 feet of paving. Existing Eucalyptus Avenue bisects the Specific Plan area and is partially improved with two lanes for traffic and 20 feet of paving.

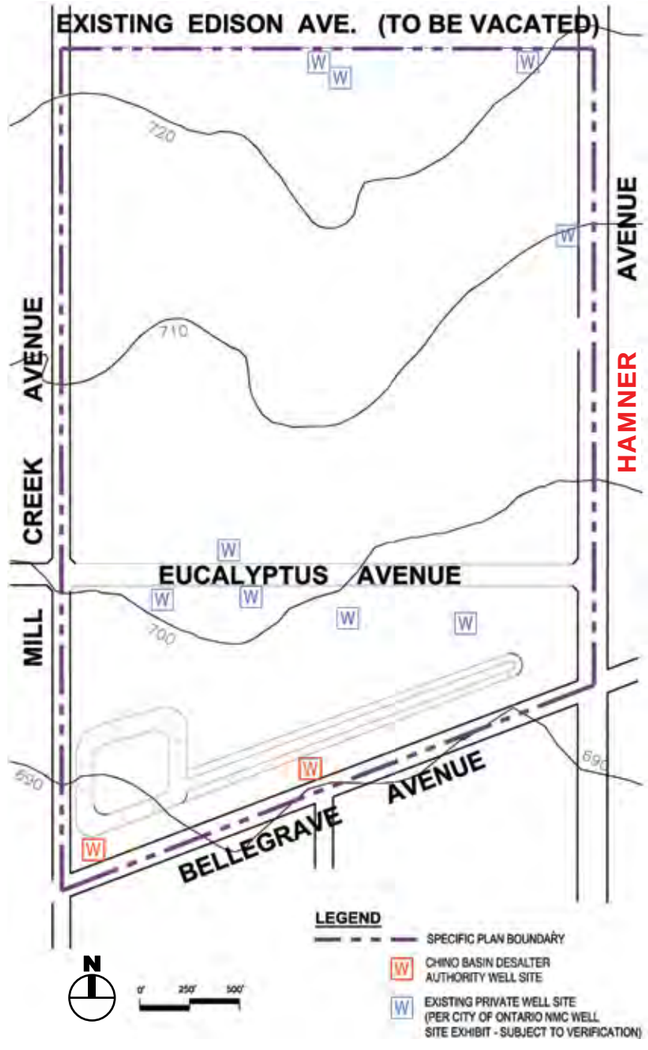

Exhibit 7
Existing Site Topography and Well Locations

3.7 EXISTING INFRASTRUCTURE / UTILITIES / PUBLIC SERVICES

3.7.1 Water

The Specific Plan area is located within the 925' Zone. The City of Ontario does not have water facilities in the vicinity of the project. The nearest City of Ontario water mains are in Riverside Drive, approximately 1.5 miles north of the Specific Plan area. These existing water mains have not been sized to serve development in the 925' Zone. On site residential use on the site are served by private wells. Existing well locations within the Specific Plan area are illustrated on Exhibit 7, "Existing Site Topography and Well Locations." A well use/destruction plan and schedule for all existing private or agricultural wells shall be submitted prior to issuance of permits for any construction activity. If a private well is actively used for water supply, the developer shall submit a plan to abandon the well and connect residential users to the City's domestic water system and agricultural users to the City's recycled water system when available. Well destruction requires permitting from the County Health Department. A copy of the permit and Well Completion Report DWR form 188 shall be provided to the City's Development Engineering Department and the Utilities Engineering Department prior to issuance of grading and/or building permits. If the developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading or dust control during project construction, the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for the construction activity. Upon approval, the developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

An existing 16" high-pressure water main is located along the east side of ~~Milliken~~ Hamner Avenue, adjacent to the Specific Plan area, in the County of Riverside, and is owned by Jurupa Community Services District, (JCSD). JCSD also owns a 30" water main in Bellegrave Avenue east of ~~Milliken~~ Hamner Avenue and a 30" water main in Hamner Avenue south of Bellegrave Avenue which provides water to the existing residential areas on the south side of Bellegrave Avenue.

3.7.2 Sewer

The City of Ontario does not have sewer facilities in the vicinity of the Specific Plan area. Existing on site residences utilize private septic systems. Prior to grading operations, existing septic tanks and subsurface disposal fields will need to be abandoned in accordance with Department of Health Services requirements. An existing 42" Santa Ana Regional Interceptor (SARI) sewer main extends southerly in Hamner Avenue south of Bellegrave Avenue. The SARI line is primarily available for industrial wastewater, which is conveyed to Orange County for treatment and disposal. JCSD is currently utilizing the SARI line for the disposal of residential wastewater, and has excess capacity for this purpose.

3.7.3 Drainage

The County Line Channel is located within Bellegrave Avenue. The channel is a City of Ontario Master Plan facility intended to carry urban runoff from those properties tributary to the north, to the Cucamonga Creek Channel. With the exception of the County Line Channel, the existing storm drain system throughout the Specific Plan area, is generally unimproved and consists primarily of open earthen swales along area roadways and the earthen drainage interceptor ditch paralleling the southerly boundary of the Specific Plan area which outlets into the existing drainage basin located at the southwest corner of the site. The drainage basin outlets into an existing Riverside County storm drain line in Mill Creek Avenue, formerly known as Cleveland Avenue. The on site basin and the connection to the Riverside County storm drain line are interim improvements. Upon development of the Specific Plan area the basin will be eliminated and the storm flows from the Specific Plan area will be tributary to the County Line Channel.

3.7.4 Recycled Water

The Specific Plan area is located within the 930 Zone. The City of Ontario does not have recycled water facilities in the vicinity of the project. As a part of the development of the Specific Plan area, the construction of new recycled water system facilities will be required by the developer consistent with the City's approved Recycled Water Master Plan.

3.7.5 Electricity

The Esperanza Specific Plan is located within the service territory of Southern California Edison Company.

3.7.6 Natural Gas

The Southern California Gas Company provides natural gas service within the Specific Plan area. Facilities in this area include an existing 6-inch main on ~~Milliken~~ Hamner Avenue; an existing 2-inch main on Eucalyptus Avenue; and an existing 2inch main on Cleveland Avenue (future Mill Creek Avenue).

3.7.7 Communication Systems

Verizon provides telephone service within the Specific Plan area.

3.7.8 Solid Waste

The City of Ontario Public Works Agency currently, by request, provides solid waste collection and disposal to the ~~NMC~~ Ontario Ranch.

3.8 HYDROLOGY

Since most of the Specific Plan area has been in agricultural use, only a limited portion of the Specific Plan area is now covered with impervious surfaces. Normal rainfall to the area is able to percolate through on-site soils and does not result in high volumes of surface runoff as is typically associated with urban use. During periods of heavy rainfall, when ground surfaces are saturated, surface runoff is collected in the existing storm drains, culverts, and retention basins located within the Specific Plan area.

With the exception of major regional flood control channels such as the Cucamonga Creek Channel, intended primarily to carry urban runoff, the existing storm drain system throughout the Specific Plan area is generally unimproved and consists primarily of open earthen swales along area roadways or curbed roadway surfaces.

Ground waters within the ~~NMC~~ Ontario Ranch; as a whole, contain high concentrations of salt, attributable to historic agricultural activities such as dairy farming. The high organic content of on-site soils has contributed incrementally to the degradation of surface and groundwater quality. Removal of the organic materials, which constitute by-products of those dairy operations, and compliance with National Pollution Discharge Elimination System (NPDES) and other storm water permit requirements, will beneficially impact regional water quality.

3.9 GEOLOGY AND SOILS

The City of Ontario ~~NMC~~ Ontario Ranch General Plan EIR identifies the Specific Plan area as underlain by Pleistocene age (older than 12,000 years) and Holocene age (less than 12,000 years old) alluvial deposits. The youngest surficial deposit is eolian sands (Qhs), comprising wind-blown sands having fine- to medium-sized grains.

These loose sands form sheets and low-dune deposits that have been stabilized by vegetation. These deposits are exposed in the eastern portion of the ~~NMC~~ Ontario Ranch area and extend westward to an area defined generally by a diagonal line extending from Harrison Avenue, within Riverside County, on the south to Vineyard Avenue on the north.

It is expected that most of these materials will be uncemented and subject to consolidation when saturated under structural loads. Erosion potential is considered high. Foundation and backfill suitability should be satisfactory with proper over-excavation, mixing with a finer-grained binder material, and compaction.

The Specific Plan area contains delhi series soils, as mapped by the United States Department of Agriculture, Soil Conservation Service in 1971 and 1980. Delhi series soils have been used for agriculture, primarily for grapes and citrus, since the 1800's. As part of the EIR prepared for the Esperanza Specific Plan additional geologic and soils information for the Specific Plan area will be provided.

3.10 Seismicity

The City of Ontario ~~NMC~~ Ontario Ranch General Plan EIR identified numerous earthquake faults within a 50-mile radius of the Specific Plan area. Major mapped faults include, but are not limited to, the Chino, Whittier and North Elsinore, and Cucamonga Faults. For the "maximum probable earthquake" (MPE), defined as the 100-year event normally considered in the design of noncritical structures, the values range from about 0.13 to 0.20 g (i.e., the unit force of gravity). In the design of certain critical or important facilities such as hospitals and dams, the "maximum credible earthquake" (MCE) event is considered. For the three faults, the MCE should yield an estimated peak horizontal acceleration in the range of 0.33 to 0.52 g.

A zone of concentrated, relatively low-magnitude seismicity extends to the southwest from the San Jacinto fault zone (Rialto-Colton branch) along what is referred to an "inferred fault near Fontana." Where the "inferred fault" (Fontana trend) stops, this zone of micro-seismicity continues in a southwesterly to westerly direction terminating in the Sphere of Influence area. It is expected that the MPE for this fault structure could produce horizontal accelerations in the range of 0.3 to 0.5g. More distant faults are capable of larger earthquakes with a higher probability of occurrence. The San Andreas fault is expected to generate a MCE event every 150 to 200 years, yielding a peak horizontal ground acceleration of approximately 0.21 to 0.26 g in the ~~NMC~~ Ontario Ranch.

In accordance with the "Uniform Building Code" (UBC), the Esperanza Specific Plan area is located within Seismic Zone No. 4. UBC procedures have been designed to ensure that all subsequent development occurs in a safe manner relative to those known hazards. As part of the EIR prepared for the Esperanza Specific Plan, additional seismicity analysis will be prepared.

3.11 Vegetation

The Specific Plan area has been extensively used for agricultural operations including dairy use. Those areas not in active agricultural production are occupied by rural residential housing. The natural vegetation and soils conditions that once occurred throughout the Specific Plan area have been significantly altered through agricultural uses, leaving little or no native vegetation. As part of the EIR prepared for the Esperanza Specific Plan, additional vegetation analysis will be prepared.

Section 4. Land Use

4.1 Introduction

The Esperanza Specific Plan offers a variety of residential housing types within a community designed around a system of parks located within easy walking distance from each residential Planning Area. Pedestrian and bicycle connectivity is provided through a system of street separated walkways and on-street bicycle trails linking each residential Planning Area and connecting to parks located within Esperanza.

Residential development, comprised of approximately ~~164.08~~ 174.10 net acres, is designed to address a variety of lifestyles, such as singles, families, executives and "empty nesters." Single family detached housing types will include conventional detached homes on lots varying between 3,900 and 4,900 square feet in size, homes designed in a 2-Pack configuration, alley loaded cottage homes, and two types of courtyard homes. Attached housing will include row townhomes and motorcourt townhomes designed around a common motorcourt.

Parks comprise approximately 9.89 net acres of Esperanza and are distributed throughout the community offering recreational opportunities within close proximity to each residential neighborhood.

The Land Use Plan shown in Exhibit 8, "Land Use Plan" depicts the proposed land uses for Esperanza. The "Land Use Summary," Table 2, provides a tabulation of land uses by acreage and residential density.

4.2 Residential Use

The Esperanza Specific Plan permits the development of up to ~~1,594~~ 1,652 residential dwelling units providing single-family detached homes and single family attached homes. Residential land use areas are contained within 11 distinctive Planning Areas linked by a network of street separated sidewalks and on-street bicycle paths connecting all the Planning Areas to a centrally located park.

4.2.1 Variety of Housing Types

Esperanza provides a mix of housing types to address a variety of lifestyle choices and economic segments. Single family detached and single family attached residential products, with a variety of architectural styles, will be offered within Esperanza. Altogether, a total of ~~1,594~~ 1,652 residential dwelling units will be developed at an overall average density of ~~7.65~~ 7.41 dwelling units per gross acre.

4.2.1.1 Single Family Detached – RD-1 (50' wide lots)

The Esperanza Specific Plan allows for the development of approximately 158 conventional single-family detached dwelling units at an average density of approximately 6.12 dwelling units per net acre. The RD-1 neighborhoods will be designed with access to homes from the local street with an emphasis on architectural orientation toward the street. Garage configurations will include shallow recessed garages, mid or deep recessed garages, split garages, and tandem garages, to highlight the home's architecture and create a more attractive streetscene. RD-1 homes are located within Planning Areas 7 and 9.

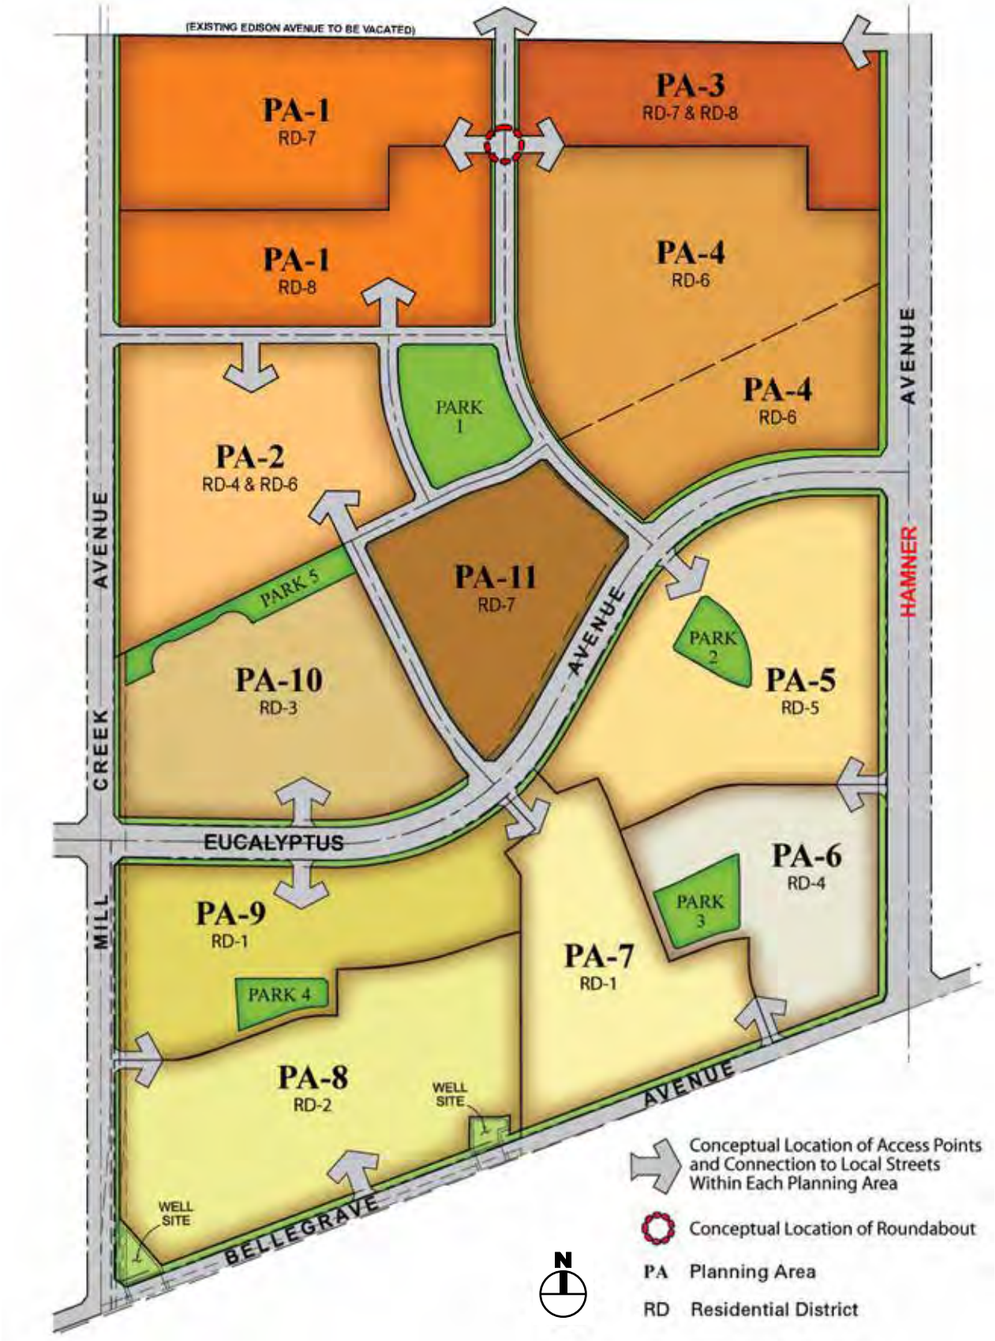

EXHIBIT 8
Land Use Plan

NOTES:

1. *Gross residential acres do not include the 13.10 gross acres for a school site.*
2. *Net residential acres are gross acres less parks, neighborhood edge buffers, roadways, and easements and net area for school site.*

** PA-2 includes 3.45 AC of Park 1*

TABLE 2
Land Use Summary

4.2.1.2 Single Family Detached – RD-2 (55' wide lots)

The Esperanza Specific Plan allows for the development of approximately 107 conventional single-family dwelling units at a density of approximately 5.56 dwelling units per net acre. The RD-2 neighborhood is designed with access from the local street with garage configurations which include recessed garages, mid or deep recessed garages, split garages and tandem garages to present an architecture forward streetscene. RD-2 homes are planned within Planning Area 8.

4.2.1.3 Single Family Detached – RD-3 (2-Pack)

Approximately 100 residential 2-Pack dwelling units will be developed on approximately 14.62 acres at a density of 6.84 dwelling units per net acre with a minimum lot size of 3,400 square feet. By configuring the units in a 2 Pack design, a larger usable sideyard area is provided for each unit and garages can be either located to the rear of the lot or set back from the front of the homes at a distance, which preserves the streetscene for home frontage. Residential housing in a 2 Pack design is planned for Planning Area 10.

4.2.1.4 Single Family Detached – RD-4 (Cottage Homes)

Esperanza will allow for approximately 243 single family detached cottage home residential dwelling units developed on approximately 30.81 acres on lots of approximately 2,400 minimum square feet at an average density of 7.89 dwelling units per net acre. This alley loaded residential development will be designed to embrace the street and maintain an architectural orientation for the street. Cottage single family detached residential dwelling units are proposed for Planning Areas 2 and 6 within Esperanza.

4.2.1.5 Single Family Detached or Attached – RD-5 and RD-6 (Courtyard & Row-Townhomes)

Two types of single family detached housing in a courtyard design are proposed for Esperanza. A total of 157 dwelling units will be developed as RD-5 residential housing within a module comprised of 4 residential units surrounding a common motorcourt. RD-5 residential products are proposed for 17.64 acres of Esperanza within Planning Area 5 at a density of 8.90 dwelling units per net acre. A total of 303 dwelling units will be developed as RD-6 residential housing within a module comprised of 6 residential units surrounding a common motorcourt or row townhomes. RD-6 residential products are proposed for 19.92 acres of Esperanza within Planning Areas 2 and 4 at a density of 16.72 dwelling units per net acre. Garages are accessed from the motorcourt or alley, which allows for the fronts of garages to be turned away from the street or set back far enough from the street that the residential architecture is the predominant streetscene feature.

4.2.1.6 Single Family Attached – RD-7 (Row Townhomes)

RD-7 residential product proposed for Esperanza consists of 319 units of attached row and motorcourt townhomes within Planning Area 1, 156 units of attached row townhomes to be developed on approximately 11.1 acres at density of 14.05 dwelling units per net acre within Planning Area 3 and ~~46~~ 161 row townhomes at approximately 16.07 dwelling units per net acre in PA 11. RD-7 residential product is designed with alley access maintaining an architectural streetscene.

4.2.1.7 Single Family Attached – RD-8 (Motorcourt Townhomes)

RD-8 residential product proposed for Esperanza consists of 238 units of attached townhomes designed around a common motorcourt. RD-8 residential product will be developed on approximately 19.42 acres at a density of 13.76 dwelling units per net acre within Planning Area 3.

4.2.2 Neighborhood Design

The community plan for Esperanza offers a neighborhood design reminiscent of older traditional Southern California neighborhoods. The design features described below are intended to create a strong identity and sense of neighborhood for the residents of Esperanza.

A "modified grid" style of street design in residential neighborhoods with sidewalks separated by landscaped parkways provide visual interest, slow traffic on each street by providing alternate routes, and enhance a pedestrian orientation for neighborhoods. Sidewalks separated from streets by landscaped parkways promote pedestrian mobility and encourage opportunities for neighbors to meet and greet each other along the street.

A human scale of architecture within Esperanza will enhance the pedestrian friendly character of the community. Architectural features such as front porches, railings, enhanced entries, a mix of materials and textures, and authentic detailing on elements such as windows and doors, columns, balconies, and lighting combine to create a human scale of residential architecture.

Innovative garage designs will be utilized in order to de-emphasize the visual impact of garage doors on the streetscene. Such design techniques will include shallow, mid, or deep recessed garages , split-garages, turn-in garages, tandem garages, garages located on rear alleys, and garages located around a common courtyard in order to de-emphasize their view from the street.

4.3 Parks

Parks are provided throughout the Esperanza Specific Plan area within easy walking distance to any residential neighborhood. Exhibit 9, "Master Plan of Parks," illustrates the types and locations of parks planned for Esperanza.

4.3.1 Neighborhood Park

An approximately 5.39 net acre centrally located neighborhood park will be developed as part of Esperanza. The neighborhood park will include picnic areas, tot lots, trails, and open play fields.

4.3.2 Pocket Parks

An approximately .84 net acre park will be provided for recreational use within Planning Area 9. An approximately 1.29 net acre park will be located within Planning Area 6, a one acre park will be provided within Planning Area 5, and an approximately 1.39 net acre linear park will be provided in Planning Area 10. Private open space areas of approximately ½ acre in size will be provided as part of the development of Planning Areas 1, 3 and 4. The exact size and locations of these private open space areas will be determined as part of the final site design for these neighborhoods.

4.4 School Site

A 10.02 net acre site was originally reserved within the Esperanza Specific Plan for the development of an elementary school to serve the K-5 school age needs of the Ontario community. In the event the school site in Esperanza is not purchased by the Mountain View School District the 10.02 acre site may revert to a residential zone for the development of an additional ~~46~~ 161 row townhome residential dwelling units pursuant to the provisions established in Section 7, "Implementation."

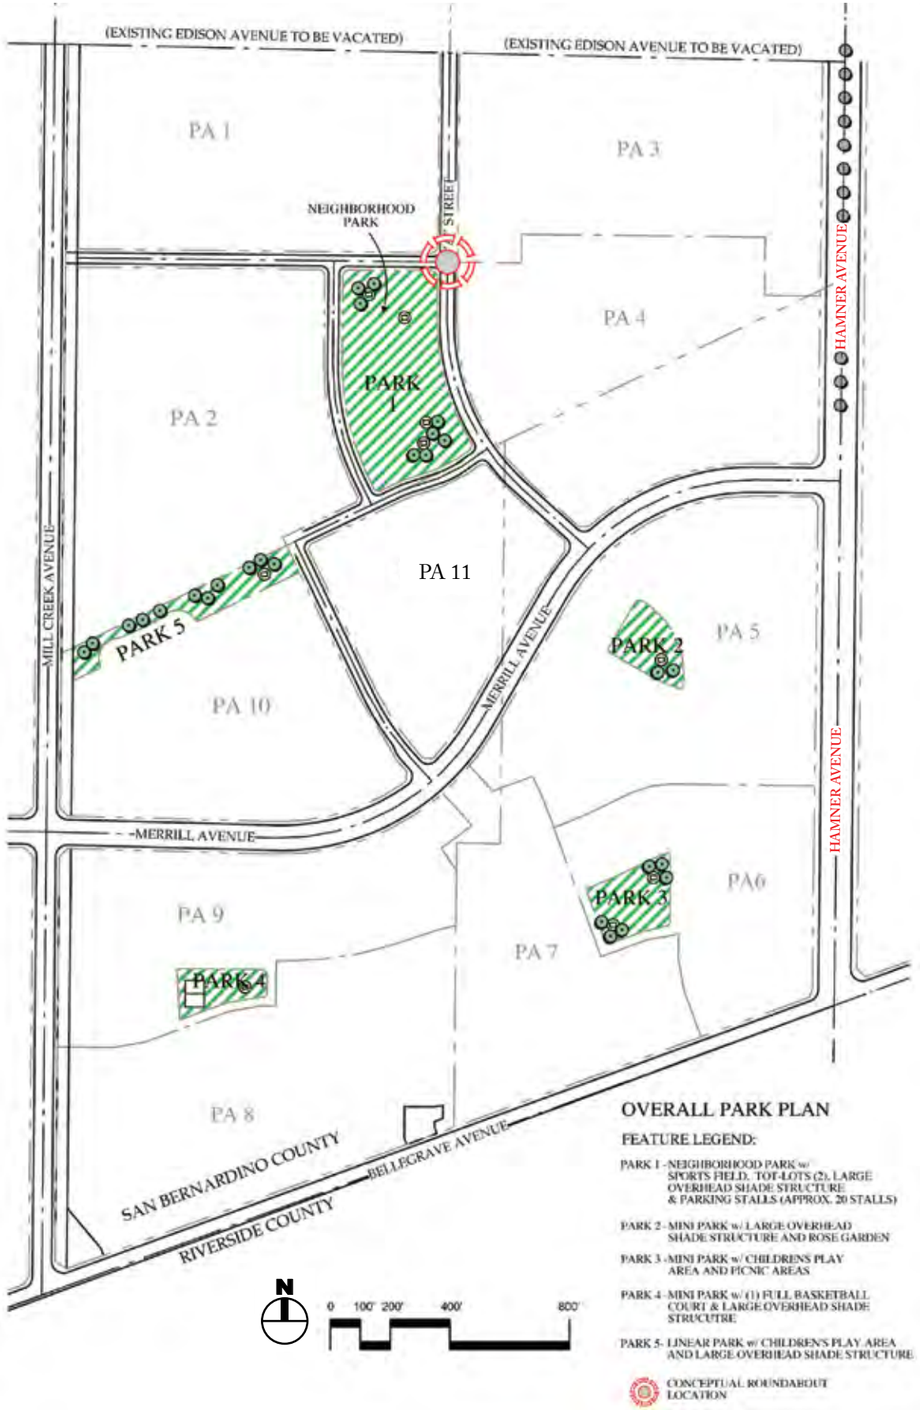

Exhibit 9
Master Plan of Parks

Section 5. Infrastructure and Services

The infrastructure, utilities, and public services to be provided as part of the development of the Esperanza Specific Plan are discussed in this section.

5.1 Circulation

The circulation plan for Esperanza reinforces the objectives of providing a traditional neighborhood design. In addition to providing safe and efficient movement of vehicular traffic through the project, the Circulation Plan also provides a safe environment for pedestrian movement and bicycle traffic reducing the reliance on the automobile as a means of travel. In addition, transit stops and bus turnouts will be provided as required by Omnitrans, along the Master Plan streets, which are a part of the Esperanza community. The "Master Circulation Plan," Exhibit 10 establishes the hierarchy and general location of roadways within Esperanza.

The minimum design speeds to be used for centerline curve radii, super elevation, corner sight distance; vertical and horizontal alignment and sight distance, etc. are listed below:

Hamner Avenue	50 m.p.h.
Eucalyptus Avenue	40 m.p.h.
Bellegrave Avenue	45 m.p.h.
Mill Creek Avenue	40 m.p.h.
"A" Street	45 m.p.h.

5.1.1 Master Planned Roadways

The Esperanza Specific Plan is bounded on the east, south, west, and is bisected by four City of Ontario Master Plan roadways, which will provide access to and from the Specific Plan area. Additional rights of way may be needed at critical intersections to accommodate additional left and right turn lanes pursuant to the recommendations of the traffic study prepared for the Ontario Ranch. Hamner Avenue bounds the Specific Plan area to the east and is the county line between San Bernardino and Riverside Counties; Bellegrave Avenue bounds the Specific Plan area to the south and is also the county line between San Bernardino and Riverside Counties; Mill Creek Avenue bounds the Specific Plan area to the west, and Eucalyptus Avenue bisects the Specific Plan area in an east/west direction.

Where the Specific Plan limits extend to the centerline of any roadway, the development project shall construct the full half-width street improvement, plus a 14-foot travel lane with a 5-foot paved shoulder beyond the centerline. If the roadway includes a raised median, the project shall construct the full median, and the additional 14-foot travel lane with a 5-foot paved shoulder. The 14-foot travel lane is a minimum that may be increased as necessary pursuant to the requirements of the City Engineer.

5.1.1.1 Hamner Avenue

Hamner Avenue abuts the Specific Plan area on the east. Hamner Avenue is a designated Divided Arterial Parkway 1-1 roadway with a total right-of-way of 148 feet. Hamner Avenue will carry regional traffic to and from Esperanza and will provide access to the specific plan area along the eastern boundary of the specific plan area. Exhibit 11, "Hamner Avenue" illustrates the improvements for Hamner Avenue. The developer of the Specific Plan area adjacent to Hamner Avenue will be responsible for all on site improvements for the westerly half of Hamner Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and the Conditions of Approval established on the approved tentative maps for the project. Bus turnouts will be required along Hamner Avenue to the satisfaction of the City Engineering Department and Omnitrans. Parking will be prohibited on Hamner Avenue.

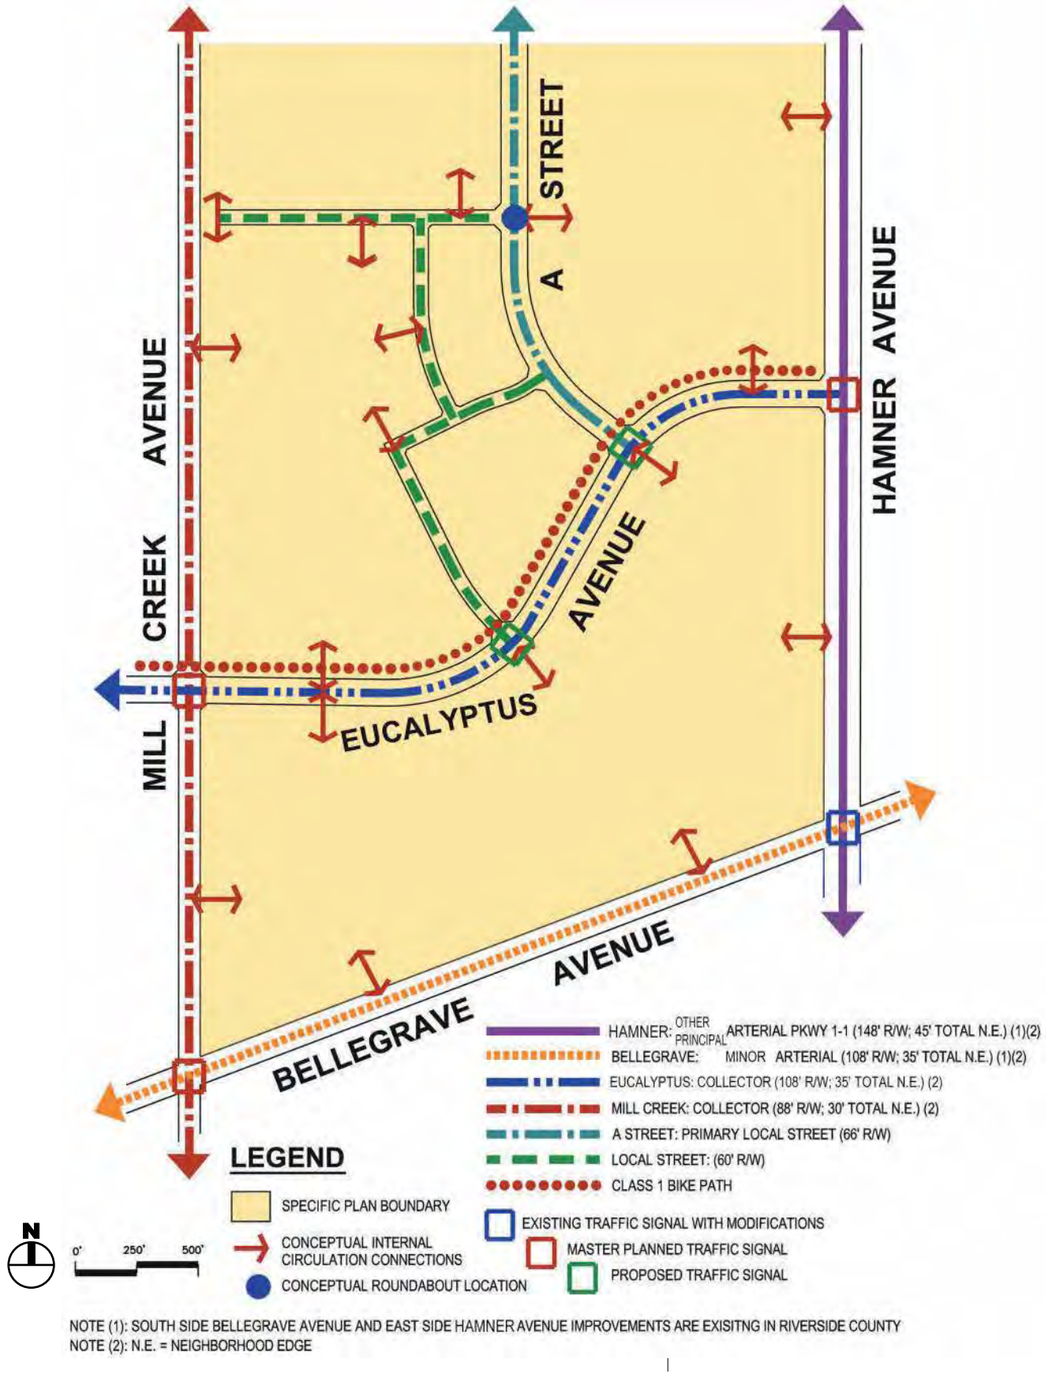

Exhibit 10
Master Circulation Plan

5.1.1.2 Bellegrave Avenue

Bellegrave Avenue, a Standard Arterial roadway, abuts the Specific Plan area on the south and carries regional east/west traffic to and from Esperanza. Improvements to the south side of Bellegrave Avenue currently exist. Exhibit 12, "Bellegrave Avenue" illustrates the half-street improvements for Bellegrave Avenue. The developer will be responsible for all on site improvements for the northerly half of Bellegrave Avenue. Phasing of the improvements will be determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and the Conditions of Approval established on the approved tentative maps for the project. Bus turnouts will be required along Bellegrave Avenue to the satisfaction of the City and Omnitrans.

5.1.1.3 Mill Creek Avenue

Mill Creek Avenue abuts the Specific Plan area on the west. Mill Creek Avenue is a designated Collector Street with an ultimate right-ofway of 88 feet, with 64 feet of paved area and a 12-foot parkway on each side of the street, to include a 5-foot sidewalk separated from the street by a 7-foot landscaped area. In addition a landscaped buffer of 18 feet in width will be provided between the back of the sidewalk and the residential community wall. The rightof-way improvements required to Mill Creek Avenue are illustrated in Exhibit 13, "Mill Creek Avenue." The developer(s) will be responsible for the off site improvements as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and the Conditions of Approval established on the approved tentative maps for the project. Bus turnouts will be required along Mill Creek Avenue to the satisfaction of the City and Omnitrans. Parking will be prohibited on Mill Creek Avenue. Exhibit 13, "Mill Creek Avenue" illustrates these improvements.

5.1.1.4 Eucalyptus Avenue

Eucalyptus Avenue bisects the Specific Plan area and is designated as a Standard Arterial roadway. Exhibit 14, "Eucalyptus Avenue" illustrates the Eucalyptus Avenue full-street improvements. The developer will be responsible for all improvements to Eucalyptus Avenue. The phasing of these improvements will be determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and the Conditions of Approval established on the tentative maps for the project. Parking will be prohibited on Eucalyptus Avenue.

5.1.2 Local Streets and Alleys

Within the Specific Plan area neighborhood streets of varying design will provide access and circulation through the community. Many of the neighborhoods will be served by private alleys, which are located in the rear of residences, in order to maintain a traditional, "architecture forward" streetscape for the community. Public and private local streets within residential areas are designed to distribute vehicular traffic from the public arterial and collector streets adjacent to the Specific Plan area into and through residential neighborhoods. Local streets and private alleys proposed for Esperanza are illustrated on Exhibit 15, "A Street" – Primary Local Street" Exhibit 16, "Local Streets and Cul-De-Sac Sections;" Exhibit 17, "Private Neighborhood Streets;" and Exhibit 18, "Private Alley and Drive Aisle Sections;" and discussed below.

5.1.2.1 "A" Street

"A Street" bisects the Specific Plan area in a north/south direction and is designated as a Primary Local Street. "A Street" will provide internal access and connectivity between residential areas and the Neighborhood Park. Exhibit 15, "A Street" – Primary Local Street" illustrates the improvements planned for "A Street."

5.1.2.2 Local Neighborhood Streets and Cul-De-Sac Streets

A network of local public neighborhood streets and cul-de-sac streets will provide internal circulation throughout Esperanza for residents. Exhibit 16, "Local Streets and Cul-de-sac Sections" illustrates these street concepts.

5.1.2.3 Private Neighborhood Streets

Private neighborhood streets will provide internal circulation within single family attached and single family courtyard product areas. Water, recycled water, and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed per City standards and contained within acceptable easements. The CC&Rs for the project shall contain language requiring all work proposed by the HOA within such easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within alleys, parking areas or driveways. The extent to which said utilities will be accepted as public utilities shall be at the full discretion of the City during final design review. Private Neighborhood Streets planned for Esperanza are illustrated in Exhibit 17, "Private Neighborhood Streets."

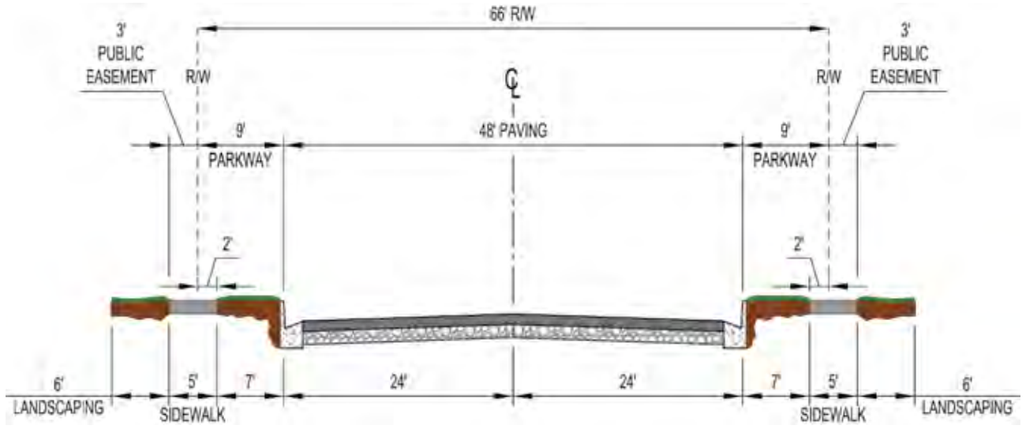
5.1.2.4 Private Alleys

Private alleys within the residential development will have a minimum of 20 feet of paved area with 5 feet of landscaping on each side. In areas where fire access is required, the minimum paved area will be 24 feet with 3 feet of landscaping on each side. Alleys with "dead end" conditions will be a maximum length of 150 feet. Parking is prohibited along alleys. Tapers will be incorporated at the point where private alleys intersect with public streets. The taper width will be determined per the approval of City of Ontario Fire Department, Engineering Department and Planning Department.

5.1.2.5 Private Drive Aisles

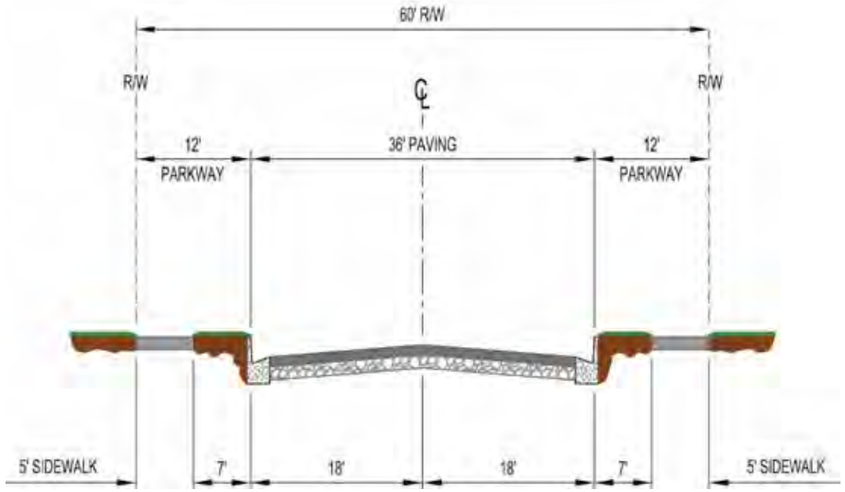
Private drive aisles are planned with a total paved width of 24 feet and an 18 foot deep parking area on each side.

Water, recycled water, and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed per City standards and contained within acceptable easements. The CC&Rs for the project shall contain language requiring all work proposed by the HOA within such easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within alleys, parking areas or driveways. The extent to which said utilities will be accepted as public utilities shall be at the full discretion of the City during final design review. Private Alleys and Private Drive Aisles planned for Esperanza are illustrated in Exhibit 18, "Private Alley and Drive Aisle Sections."



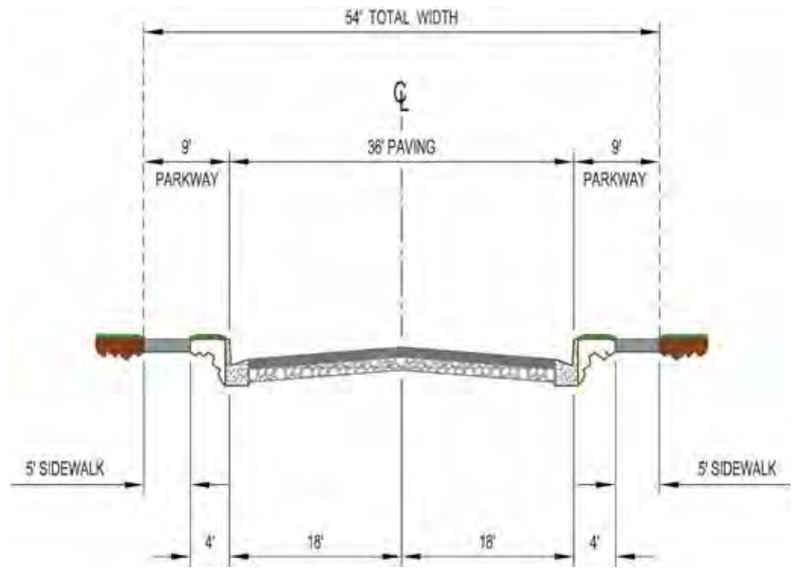
"A" Street
(Parking Permitted)

Exhibit 15
"A" Street - Primary Local Street



Note: Parking may be restricted within 100-150 feet of ~~Merrill~~ Eucalyptus Avenue, 'A' Street, Mill Creek Avenue and Hamner Avenue Intersections.

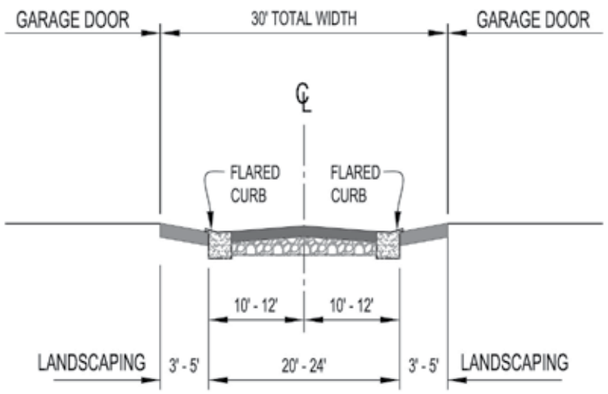
Exhibit 16
Local Street and Cul-De-Sac Sections



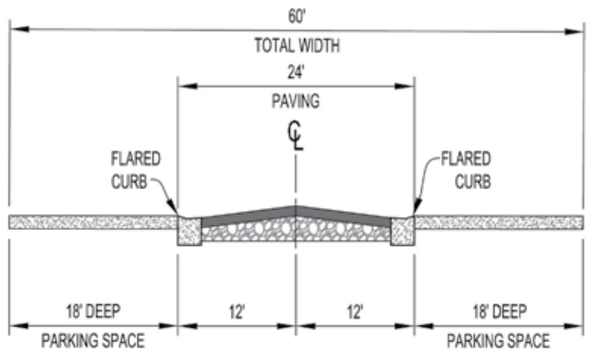
Private Neighborhood Streets
(Located in Planning Areas 1, 3, 4, 5 & 11)

Note: All public utilities within private streets shall be designed per City standards and contained within acceptable easements. The extent to which said utilities will be accepted as public utilities shall be determined at the full discretion of the City during final design reviews.

Exhibit 17
Private Neighborhood Streets



Private Alley
(On Street Parking is Prohibited)



Private Drive Aisle

Notes:

1. *Final Alley Design is subject to approval by the City Engineer, Fire Department and Planning Department.*
2. *All public utilities within private streets shall be designed per City standards and contained within acceptable easements. The extent to which said utilities will be accepted as public utilities shall be determined at the full discretion of the City during final design review.*

Exhibit 18
Private Alley and Drive Aisle Sections

5.1.3 Traffic Calming

The Esperanza Specific Plan includes design features within residential neighborhoods to encourage drivers to proceed slowly and reduce traffic noise on streets contributing to safe and livable neighborhoods in which to walk, bike, and drive.

Traffic calming within the Esperanza Specific Plan is designed to address the following goals:

- Reduction in traffic speeds.
- Reduction in traffic related noise.
- A safe and pedestrian friendly circulation system to encourage walking.

The following design features will be implemented in the roadways within Esperanza.

Local Neighborhood Street Design

Neighborhood streets within Esperanza are designed in a "modified grid" with landscaping on either side within parkways to add interest in the street encouraging drivers to slow their travel speed and observe their surroundings. Incorporating tapered intersections for local streets as illustrated in Exhibit 19, "Neighborhood Street Tapers," may reduce traffic speeds on local residential streets.

Alleys Tapers

Private alleys within Esperanza will consist of 20-24 feet of paved travel area with 3-5 feet of landscaping on each side. Speeds for traffic entering the alleys and cut through traffic can be reduced by incorporating tapers at the entrance to these alleys as illustrated on Exhibit 20, "Alley Tapers."

Landscaping

Landscaping adjacent to streets within the Specific Plan area will combine the use of shade trees, shrubs, and groundcover adjacent to sidewalks to create a more intimate streetscape encouraging drivers to reduce driving speeds. The landscape concept for Esperanza is designed to contribute to a sense of the street system as a pedestrian protected area to promote slower traffic speeds.

Roundabouts

A roundabout will be incorporated into the street design at the intersection of two local streets as illustrated in Exhibit 10, "Master Circulation Plan." The use of a roundabout rather than a conventional all-way stop at this intersection will maintain traffic flow by requiring traffic entering the roundabout to yield to traffic traveling within the roundabout. The lack of a stop sign allows entering traffic to merge with the flow of traffic.

5.1.4 Pedestrian Circulation

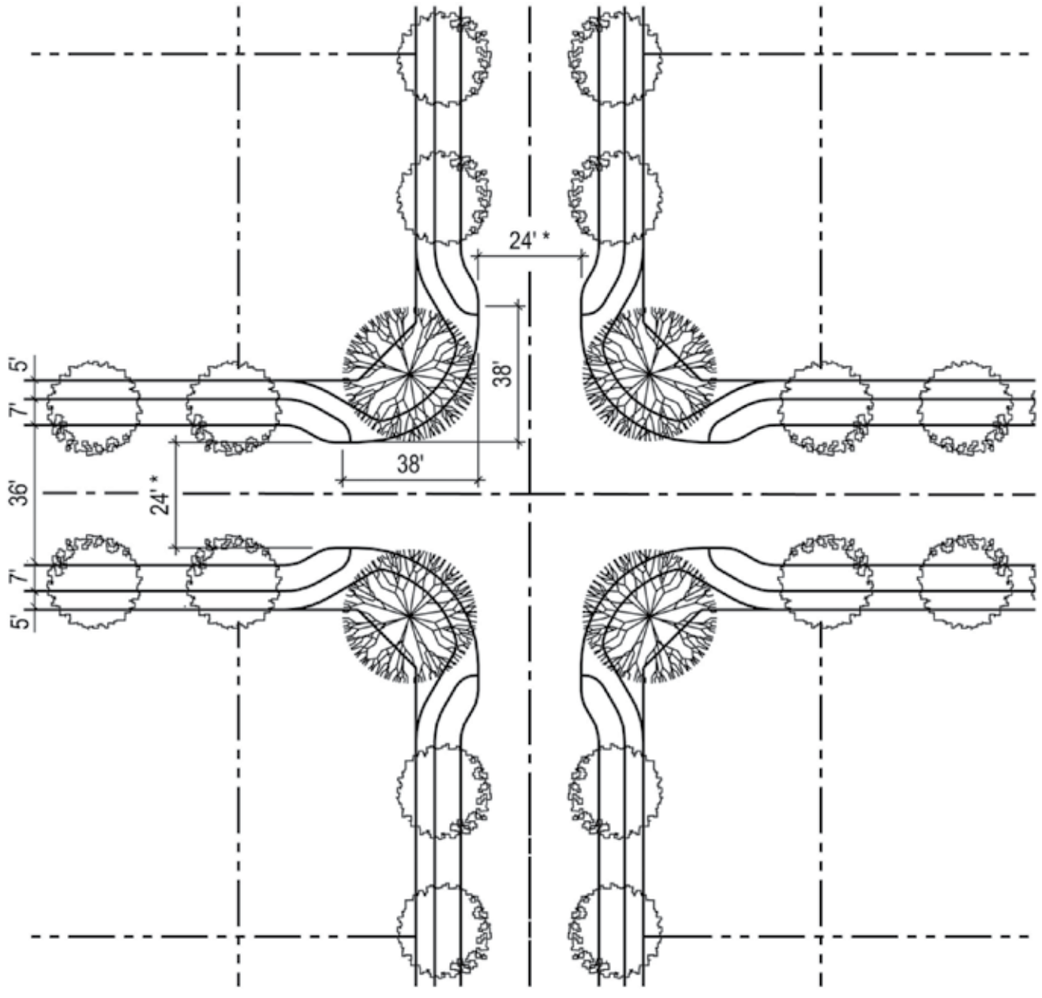
Off-street pedestrian circulation will be available throughout Esperanza by means of the interconnected, paved sidewalk system within the roadway right-of-way, separated from vehicular travel lanes by a landscaped parkway. The Esperanza pedestrian system provides connectivity among residential neighborhoods to the Neighborhood Park and pocket parks within the Specific Plan area.

5.1.5 Bicycle Trails

Bicycle trails are an integral element to creating accessibility and mobility within Esperanza. A Class 1 bike trail will be provided within the parkway on the north side of Eucalyptus Avenue and an on-street bike trail will be provided on both sides of Eucalyptus Avenue connecting to on-street bike trails provided on local residential streets within the Specific Plan to connect all residential neighborhoods to one another, and to the Neighborhood Park located towards the center of the Specific Plan boundary.

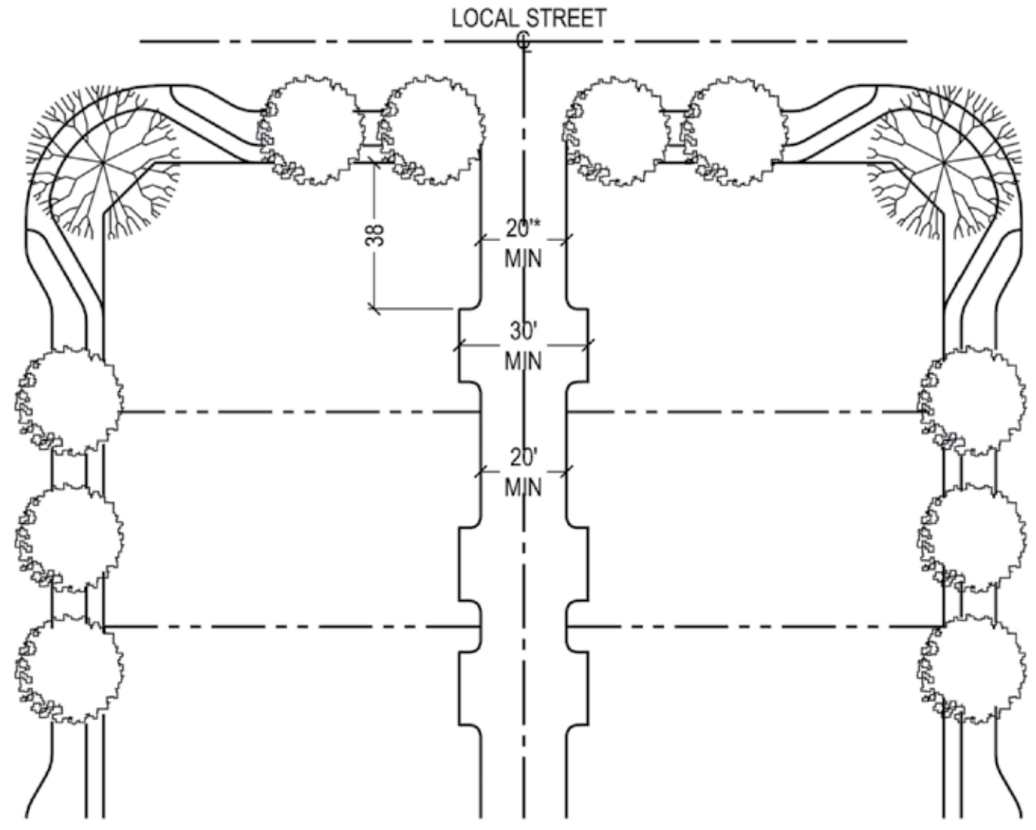
Class II on-street striped bike lanes shall be provided on roadways within the Esperanza Specific Plan area as determined by City Engineer.

The Master Plan for pedestrian and bicycle circulation for Esperanza is illustrated on Exhibit 21, "Pedestrian and Bicycle Circulation Plan."



* (TAPER WIDTHS SUBJECT TO PLANNING, ENGINEERING, & FIRE DEPARTMENT APPROVAL)

Exhibit 19
Neighborhood Street Tapers



(*) TAPER WIDTHS ARE SUBJECT TO PLANNING, ENGINEERING, & FIRE DEPARTMENT APPROVAL

Exhibit 20
Alley Tapers

Exhibit 21
Pedestrian and Bicycle Circulation Plan

5.2 Domestic and Recycled Water Master Plan

Domestic water will be provided by the City of Ontario. The Ontario Ranch Water Master Plan Phase 1 (Phases 1a–1d) identifies new water facilities to include one reservoir, three groundwater wells and potable and reclaimed transmission water lines. Construction of the on site and off site Master Plan water service improvements shall be the responsibility of the developer(s) and is required prior to issuance of building permits for Esperanza. Two of the waterlines included in the Phase 1 improvements are a 24 inch water line in Hamner Avenue, adjacent to the site on the east, and a 24-inch water main in Eucalyptus Avenue, which goes through the center of the project.

5.2.1 Domestic Water

The project lies within the 925 Zone. New domestic water mains to be constructed as part of the development of Esperanza will include a 12-inch Master Plan water main in Mill Creek Avenue, from the northerly boundary of the Specific Plan to Eucalyptus Avenue. Within the Specific Plan area, a network of 8-inch and 12' inch water lines will be installed. The On Site water system will include connections to two different transmission mains.

The City is in the process of updating the Water Master Plan. Any changes resulting from the updated Master Plan will be incorporated into the Esperanza Water Master Plan.

There are two groundwater wells located adjacent to Bellegrave Avenue to the north. These wells and water transmission lines in Bellegrave Avenue, are owned and operated by the Chino Basin Desalter Authority (CDA). As part of the development of the Specific Plan area, improvements shall be made, to the satisfaction of the CDA and the City of Ontario, surrounding the two existing well sites located at the north side of the ultimate right of way of Bellegrave Avenue. Improvements shall include, but are not limited to, perimeter fencing, relocation of existing utilities within the ultimate right of way, street landscaping within the right of way fronting the project, and driveway approaches. The Master Plan for domestic water for Esperanza is illustrated on Exhibit 22, "Conceptual Domestic Water Master Plan." The conceptual on site domestic water system is illustrated on Exhibit 23 "On Site Domestic Water Plan."

5.2.2 Recycled Water System

The Inland Empire Utilities Agency (IEUA) will ultimately provide recycled water from IEUA's RP-1 and RP-1 outfall parallel located in Carpenter Avenue via City of Ontario recycled water mains as presented in the Water Master Plan for the Ontario Ranch. The Specific Plan area is located within the 930 Zone. The construction phase source of recycled water to serve the Specific Plan area will be conveyed to the 930 Zone from the 1050 Zone via a Master Plan pressure reducing station located in Archibald Avenue north of Chino Avenue. The master planned recycled water mains to be constructed as part of the development of Esperanza will include the following:

- A 12-inch recycled water line in Mill Creek Avenue from the northerly boundary of the Specific Plan area to Eucalyptus Avenue.
- An 8-inch recycled water line in Hamner Avenue from the northern boundary of the Specific Plan area to Eucalyptus Avenue.
- An 8-inch recycled water line in Eucalyptus Avenue from Hamner Avenue to Mill Creek Avenue.
- A 12-inch line in Eucalyptus Avenue from Mill Creek Avenue to Haven Avenue.
- A 16-inch line in Eucalyptus Avenue from Haven Avenue to Archibald Avenue.
- A 16-inch line in Archibald Avenue from Eucalyptus Avenue to Edison Avenue.
- A 20-inch line in Archibald Avenue from Edison Avenue to Schaefer Avenue.
- A 36-inch line in Archibald Avenue reducing to a 24-inch line from Schaefer Avenue to Chino Avenue.
- Utilization of the existing 10-inch main which extends from the IEUA facility adjacent to Westwind Park to the intersection of Archibald Avenue and Schaefer Avenue.

The developer will provide all recycled water lines required to serve the Specific Plan area.

Within the Specific Plan area, 8-inch recycled water mains are proposed to serve the development. The City's goal is to maximize the use of recycled water including but not limited to irrigation of parks, schools, street landscaping, recreation trails, common area residential landscaping and commercial/industrial landscaping edges. The parks and landscaped areas that will be irrigated with recycled water and the calculated recycled water demand are contained in the report titled, "Esperanza Water and Recycled Water Hydraulic Analysis." An Engineer's Report approved by the City and the Department of Health is required prior to the use of recycled water.

The conceptual Master Plan for recycled water for Esperanza is illustrated on Exhibit 24, "Conceptual Recycled Water Plan." The conceptual on site recycled water system is illustrated on Exhibit 25, "Conceptual On Site Recycled Water System."

5.3 Sewer Master Plan

Sewer service for Esperanza will be provided by the City of Ontario. The City's Sewer Master Plan identifies ultimate sewer facilities from the Specific Plan area to the Eastern Trunk Sewer. These Master Planned facilities include a 15inch sewer main extending from the northerly boundary of the Specific Plan area, along Mill Creek Avenue increasing to a 21-inch sewer main at Eucalyptus Avenue and a 24-inch sewer main along Bellegrave Avenue westerly to the Master Planned Eastern Trunk Sewer. Completion of these Master Plan improvements is required to provide the ultimate sewer service to Esperanza. Within the Specific Plan area a network of 8-inch and 15-inch sewer lines will be installed. The sizing and alignment of all off site sewer improvements necessary for mitigation of impacts shall follow the results of the approved Sanitary Sewer Technical Study.

The Conceptual Sewer Master Plan for Esperanza is illustrated on Exhibit 26, "Sewer Master Plan." The conceptual on site sewer lines are illustrated on Exhibit 27, "Conceptual On Site Sewer."

5.4 Drainage

The City's Storm Drain Master Plan identifies new storm drain facilities to serve the Specific Plan area extending northerly from the County Line Channel within Mill Creek Avenue. Completion of these Master Plan improvements will provide permanent storm drain service to Esperanza.

That portion of the Master Planned line, which lies within Esperanza, will be constructed as a part of the development of the project. These improvements include a 90-inch storm drain in Mill Creek Avenue transitioning to a 102inch storm drain, connecting to the County Line Channel.

On site storm drains will be constructed to convey the on site flows to the proposed Master Planned storm drain line in Mill Creek Avenue. The locations and size of on site storm drains within Esperanza will be established in accordance with City requirements as part of the approval by the City of Ontario of tentative tract maps for the Esperanza Specific Plan area.

The Drainage Master Plan for Esperanza is illustrated in Exhibit 28, "Storm Drain Master Plan." The size and location of the proposed storm drain may change based on the final design.

5.4.1 NPDES Compliance

The grading and drainage of the Esperanza Specific Plan area shall be designed to detain, filter and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Storm Water Program's Quality Management (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMP's) and/or either on-site Structural Treatment Control BMP's, or participation in regional or watershed-based Treatment Control BMP's.

Prior to the issuance of a grading or construction permit, a Storm Water Pollution Prevention Plan (SWPPP) will also be prepared. The SWPPP will be prepared to comply with the California State Water Resources Control Board's (State Water Board) current, "General Permit to Discharge Storm Water Associated With Construction Activity" and the current Area Wide Urban Storm Water Runoff (Regional NPDES Permit). The SWPPP will identify and detail all appropriate Best Management Practices (BMP's) to be implemented or installed during construction of the project.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, the applicant will be required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMP's, Source Control BMP's and Treatment Control BMP's to be implemented or installed at this site in order to reduce storm water pollutants and site runoff.

An off site regional stormwater runoff treatment facility with capacity to accept and treat drainage from portions of the Specific Plan Area has been constructed. This regional treatment facility will be part of an overall solution for storm water treatment within this planned development area. Projects with reserved treatment capacity allocations sin the regional facility will utilize this off-site facility as their primary BMP for addressing urban runoff water quality and hydro-modification impacts, in their respective WQMPs. If a project cannot obtain treatment capacity in the regional stormwater treatment facility, alternative on-site or off-site Low Impact Design BMBs will be required based on the must current MS4 Permit requirements.

5.5 Schools

The Mountain View School District is the school district serving the K-8 school needs of Esperanza. The Chaffey Joint Union High School District serves the 9-12 school age needs of the Specific Plan area. Additional elementary, middle, and high schools are needed to serve the needs of school age children within the Ontario Ranch. An elementary school site has been proposed within the Esperanza Specific Plan and a middle school site has been proposed in Planning Subarea 24. Colony High School is located at the southwest intersection of Mill Creek Avenue and Riverside Drive and a future high school has been proposed in Planning Subarea 23. Development of the Esperanza Specific Plan area will generate an estimated student population as follows (based on student generation numbers supplied by the City of Ontario, "School Generation for Ontario Ranch Subareas," July 2, 2004. The developer(s) of Esperanza will be required to pay school fees as required by State of California.

Grades K- 5
Generation Factor 0.38/D.U.
0.38 x 1594 = 606

Grades 6-8
Generation Factor 0.22/D.U.
0.22 x 1594 = 351

Grades 9-12
Generation Factor 0.20/D.U.
0.20 x 1594 = 319

5.6 Public Utilities

5.6.1 Natural Gas

The Gas Company will provide natural gas to the Specific Plan area. Gas mains will be installed to the Specific Plan area by the Gas Company as necessary.

5.6.2 Electricity

Southern California Edison will provide electricity to the Specific Plan area from existing facilities in the vicinity of the Specific Plan area. Proposed new facilities to serve the project will be owned and operated by the City of Ontario and located underground. Existing lines within the Specific Plan area shall be placed underground by developer and according to the City of Ontario adopted ordinance.

5.6.3 Telecommunications

The City of Ontario will be providing OntarioNet, fiber-to-the-home. OntarioNet is a fiber-optic telecommunications system capable of providing advanced Internet/data services to all homes and businesses within the Ontario Ranch. OntarioNet will provide community related services including: traffic management; on-line civic services; meter reading; educational services; and a variety of other community services. Based on the demographics of the Ontario Ranch and the traffic issues into Orange and Los Angeles Counties, the demand for telecommuting in the Ontario Ranch is anticipated to be significant. OntarioNet and the high-speed data services it provides will allow residents of the Esperanza Specific Plan to effectively telecommute to their jobs and in general provide a significant economic benefit to Ontario. Verizon currently provides telephone service within the Specific Plan area and can provide telecommunication service if they choose to do so.

5.6.4 Solid Waste

The City of Ontario provides solid waste collection services for the Ontario Ranch and will service the Specific Plan area. The project will comply with Municipal Code Section 6-3.314, "Commercial Storage Standards" and Section 6-3.601, "Business Recycling Plan" for the use of any commercial bin service for apartment development. All residential development shall comply with Municipal Code Section 6-3.308.9 (a) and (d), "Residential Receptacles, Placement" for curbside automated container service. The project shall comply with Municipal Code Article 6, "Recycling Requirements for Specified Business Activity", Section 6-3.601 Business Recycling Plan, and Section 6-3.602, "Construction and Demolition Recycling Plan." All site development shall comply with the City of Ontario refuse collection standards. All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/ Diverted Waster Types including Organics.

5.7 Grading Concept

The site falls at an average slope of approximately two percent (2%). The Grading Concept for Esperanza is to work with the existing topography to maintain natural grade and elevations wherever possible. The grading operation for the Specific Plan area will generally consist of the removal of any manure remaining from dairy operations, clearing and grubbing, demolition of existing structures, and moving of surface soils to construct building pads and streets. Additionally, where slope conditions are present, the property shall be located at the top of the slope. In areas adjacent to a ridgeline or in moderate slope areas, dwelling units and structures should be sited to:

- Use the natural ridgeline as a backdrop for structures;
- Use landscape plant materials as a backdrop; and
- Use structure to maximize concealment of cut slope.

If retaining walls are required, the following criteria shall be used:

- Exposed walls and fences facing roadways shall be no greater than 3-feet retaining (9-foot total wall) in height, except as necessary for acoustical purposes to satisfy the intent of the noise ordinance.
- Where retaining walls or fences face roadways, they shall be built, when feasible, of decorative materials consistent with the wall theme of the neighborhood.

The Conceptual Grading Plan, as illustrated in Exhibit 29, "Conceptual Grading Plan," will provide for a balance of cut/fills for the site Grading plans for each tract in the Specific Plan area will be reviewed and approved by the City of Ontario Building, Planning, and Engineering Departments prior to the issuance of grading permits. All grading plans and activities will conform to the City grading ordinance and dust and erosion control requirements.

Section 6. Development Regulations

6.1 Introduction

The provisions contained herein will regulate design and development within the Esperanza Specific Plan.

6.2 Definition of Terms

The meaning and construction of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code Article 2, "Definitions," unless otherwise specifically provided herein. The definitions of product types shall be those defined in Section 4, "Land Use" within the discussion of each respective product type. The definition of architectural and design terms shall be the same as those provided in the City of Ontario Glossary of Design Terms which follows the City of Ontario Development Code.

6.3 Applicability

The development regulations contained herein provide specific standards for land use development within the Esperanza Specific Plan area. Regulations address residential land uses and provide for general landscaping regulations. Application of the following regulations is intended to encourage the most appropriate use of the land, ensure the highest quality of development, and protect the public health, safety, and general welfare. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of the Esperanza Specific Plan shall take precedence. Where the Esperanza Specific Plan is silent, City codes shall apply. These regulations shall reinforce specific site planning, architectural design, and landscape design guidelines contained in Section 8, "Design Guidelines" of the Esperanza Specific Plan.

6.4 Administration

The Esperanza Specific Plan, upon adoption, will serve as the implementation tool for the General Plan as well as the zoning for the Specific Plan area. The Esperanza Specific Plan Development Regulations address general provisions, permitted uses, and development standards for the community.

6.5 General Site Development Criteria

The following general site development criteria shall apply to all land development proposed in Esperanza.

1. **Gross Acres** - Except as otherwise indicated, gross acres for all development areas are measured to the centerline of streets.
2. **Grading** - Development within the Specific Plan area shall utilize grading techniques as approved by the City of Ontario. Grading concepts shall respond to the design guidelines included in the Esperanza Specific Plan which guide the development of land use toward the goal of providing for a livable community with streets and entries designed for walking and resident interaction.
3. **Building Modification** - Additions and alterations permitted by the Esperanza Specific Plan shall match the architectural style of the primary unit and shall be constructed of the same materials, details, and colors as the primary unit.
4. **Utilities** - All new and existing public utility distribution lines of 35.5kV or less shall be subsurface throughout the planned community.
5. **Technology** - All homes and businesses shall accommodate modern telecommunications technology (OntarioNet) for computer internet access, phone, fax, and television. Broadband fiber optics cable will be installed to all the properties per the approved Fiber Optic Master Plan.

6. **Transfer of Dwelling Units** -The Esperanza Specific Plan allocates a total number of units to each Planning Area as indicated in the "Land Use Summary" Table 2, Section 4, of the Esperanza Specific Plan. Variations in the number and type of dwelling units within each residential Planning Area may occur at the time of final design of the neighborhood depending upon the residential product identified for development. Changes in allocation of residential units, up to a maximum of fifteen percent (15%), are permitted among the residential planning areas within the Esperanza Specific Plan, subject to approval by the City and upon agreement of each respective property owner/developer, provided the total number of units established for the Esperanza Specific Plan area is not exceeded.

7. **Best Management Practices –** Development of storm water runoff improvements, within the Esperanza Specific Plan, shall adhere to currently adopted Best Management Practices (BMP's). The Site Design BMP's may include but not be limited to creating landscape strips and landscaped setback areas that can be swaled and depressed to retain and infiltrate irrigation water and runoff from smaller storm events, drain rooftops into rain gutters which would drain into an area of porous subgrade, and depressing the park areas to provide storm water infiltration and water quality treatment. Common area landscaping and parks shall be designed to function as a series of shallow storm water treatment basins and infiltration zones for storm water runoff from surrounding areas wherever moderately well draining soils exist. Currently the City of Ontario is considering construction of a regional storm water runoff treatment facility for the sub-watershed area that this project lies within. If the treatment facility is constructed, it may satisfy the requirement for on-site treatment control BMP's for the Esperanza project.

8. **Maximum Number of Dwelling Units** - The maximum number of residential dwelling units permitted within the Esperanza Specific Plan is ~~1,594~~ 1,491 unless the 10.02 acre elementary school site is not purchased by the Mountain View School District. Pursuant to approval of a Specific Plan Amendment the total permitted residential dwelling units within the Esperanza Specific Plan area shall be ~~1,640~~ 1,652 dwelling units.

9. **Agricultural Buffer** - A minimum 100-foot separation shall be required between a new residential structure and an existing animal feed trough, corral/pen or an existing dairy/feed lot including manure stockpiles and related wastewater detention basins. The 100-foot separation requirement may be satisfied through an off-site easement with adjacent properties, acceptable to the Planning Director, submitted with a final map, and recorded prior to or concurrent with a final map.

10. **Solid Waste/Recycling** - Development within the Esperanza Specific Plan area shall comply with City of Ontario requirements for the provision and placement of solid waste and recycling receptacles.

6.6 RESIDENTIAL DEVELOPMENT STANDARDS

6.6.1 Residential Detached (RD-1 through RD-6)

6.6.1.1 General

This category includes the development of single family detached dwelling units. The purpose of the residential standards for single family detached housing is to establish the minimum criteria for the development of these product types on individual lots within the neighborhoods specified within Esperanza.

6.6.1.2 Permitted Uses

1. Single family detached dwellings.
2. Public or private parks, recreational buildings, greenbelts, and open space.
3. Accessory uses to include the following:
   a. Garages.
   b. Granny Flats (i.e. Second Dwelling Units, in accordance the City's Development Code.)
   c. Home occupations.
   d. Swimming pools, spas, sports courts, and other similar outdoor recreational amenities.
   e. Patios and patio covers.
   f. Storage, garden structures, cabanas, and greenhouses.
   g. Monument signage.
   h. Model home and subdivision sales trailers; temporary construction parking, offices, and facilities; real estate signs, signage indicating future development and directional signage in accordance with the City's Development Code.
   i. Second story additions to existing single story dwelling units.
   j. Small family child care/day care facilities (up to 8 children), in accordance with the City's Development Code.

6.6.1.3 Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues.
2. Large family child/day care facilities (between 8-14 children), in accordance with the City's Development Code.

6.6.1.4 Temporary Uses

1. Temporary uses shall be permitted pursuant to Article 13 of the City's Development Code.

6.6.1.5 Free Standing Satellite Dish / Antennas

1. Free standing satellite dishes and/or antennas are permitted pursuant to Article 32, Section 9.1.3289 of the City of Ontario Development Code.

6.6.1.6 Recreational Vehicle Storage and Parking

1. Recreational Vehicle (RV) storage is prohibited on public and private streets and in private alleys. RV parking on public and private streets is limited to 72 hours.

PRODUCT TYPE	RD-1	RD-2	RD-3	RD-4	RD-5	RD-6

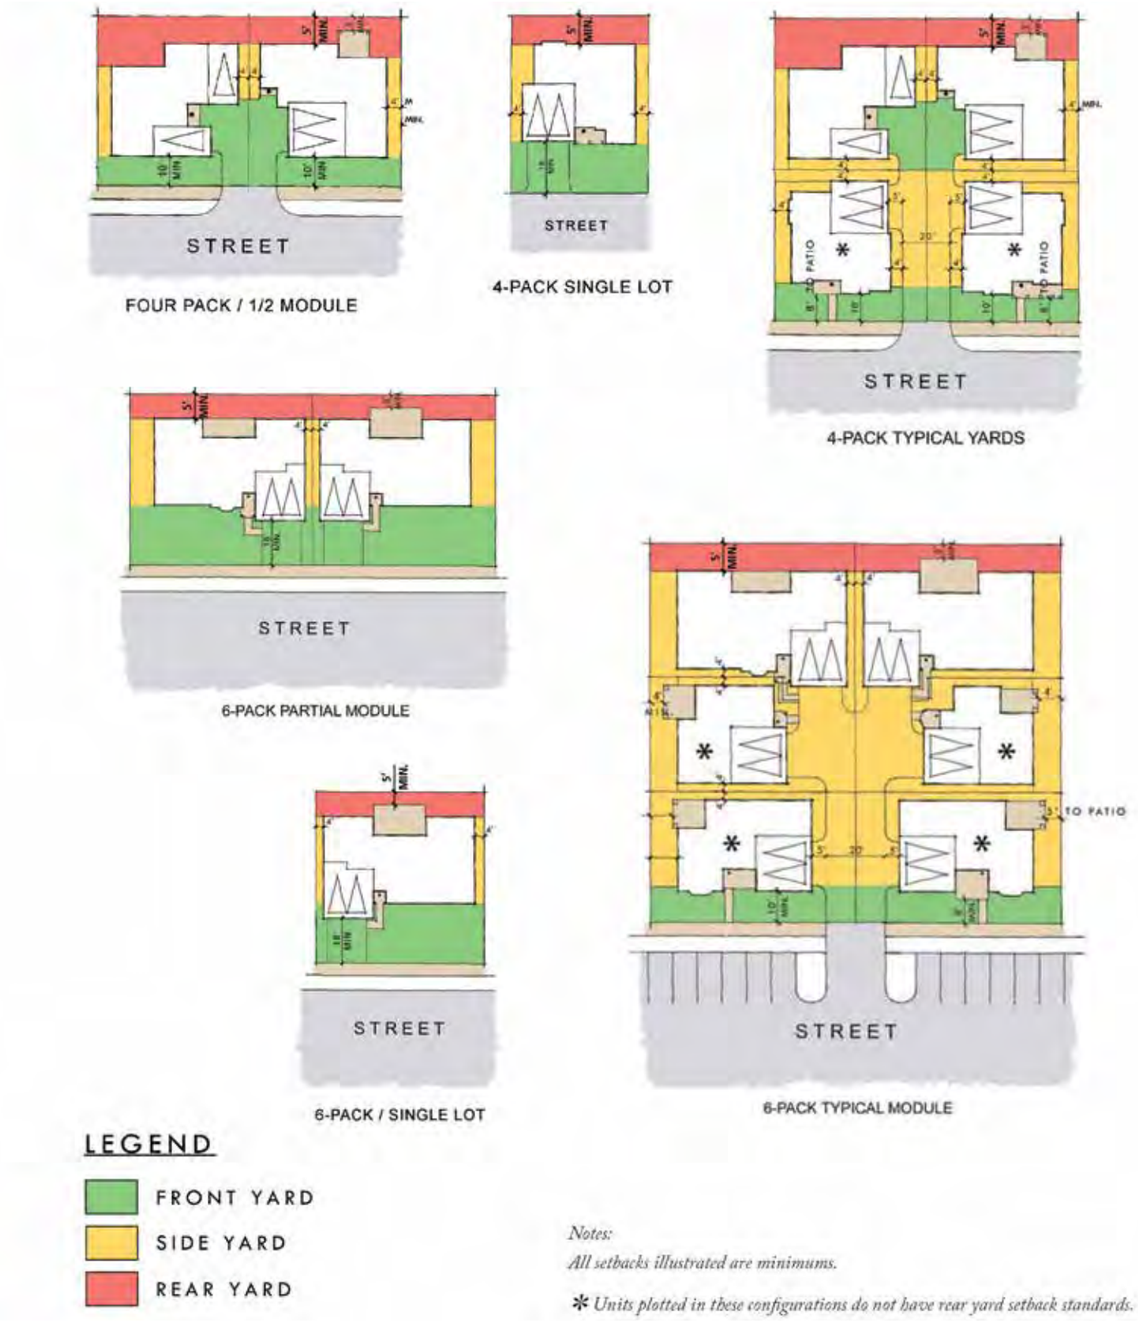
PARKING						
Min. Number of Parking Spaces Required Per Unit [7]	2	2	2	2	2	2

NOTES:

1. *Architectural projections may project a maximum of 3 feet into required front, rear or side setback areas; however, in no case shall such projection be closer than 3 feet to any property line. An architectural projection is defined as an element that articulates the building elevation such as eaves, window and door pop-out surrounds, media niches, bay windows, pot shelves, chimneys, enhanced window sills, shutter details, window trim, balconies and entry gates, and other similar elements.*
2. *The minimum depth of a porch shall be 7 feet with a minimum clear area of 70 square feet.*
3. *Minimum 20' for front facing/ garage forward design.*
4. *RD-3, RD-4, RD-5 and RD-6 with shared-use easement sideyards.*
5. *Solid masonry walls or wood fencing materials may be permitted on the front property line. Fences, walls, hedges or similar view obstructing structures or plants that reduce safe ingress or egress of vehicles or pedestrians shall not exceed three feet in height in any required front yard.*
6. *Walls may exceed six feet in height for noise attenuation purposes subject to an Acoustical Study and Planning Department approval.*
7. *All parking spaces to be within an enclosed garage (minimum 20' x 20' clear inside dimension) for two spaces and 10' x 20' for single spaces.*
8. *For single story homes only, the maximum lot coverage may increase up to a maximum of 60%.*

TABLE 3
Residential Detached Site Development Standards (cont.)



4-Pack and 6-Pack Typical Plotting

6.6.2 Residential Attached (RD-7 and RD-8)

6.6.2.1 General

This category includes the development of attached type residential dwelling units such as townhomes, and other attached multi-family products.

6.6.2.2 Permitted Uses

1. Single family attached row townhomes, motorcourt townhomes, paired homes, condominiums, apartments, and duplexes.
2. Public or private parks, recreational buildings, greenbelts, pocket parks, and/or open space.
3. Accessory uses to include the following:
   - Garages.
   - Home occupations in accordance with the City's Development Code.
   - Swimming pools, spas, tennis courts, sports courts, and other similar outdoor recreational amenities.
   - Patios and patio covers.
   - Mailboxes.
   - Recreation center buildings.
   - Maintenance storage buildings.
   - Monument signage.
   - Model units, sales offices, and subdivision sales trailers, temporary construction offices and facilities, real estate signs, signage indicating future development and directional signage in accordance with the City's Development Code.
   - Small family child care facilities/day care facilities, up to 8 children in accordance with the City's Development Code.
   - Permanent Leasing Offices.

6.6.2.3 Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues.
2. Large family child care facilities/day care facilities (8-14 children) in accordance with the City's Development Code.

6.6.2.4 Temporary Uses

1. Temporary uses shall be permitted pursuant to Article 13 of the City's Development Code.

6.6.2.5 Free Standing Satellite Dish/Antennas

1. Free standing satellite dishes and/or antennas are permitted pursuant to Article 32, Section 9.1.3289 of the City of Ontario Development Code.

6.6.2.6 Recreational Vehicle Storage and Parking

1. Recreational Vehicle (RV) storage is prohibited on public and private streets and in private alleys. RV parking on public and private streets is limited to 72 hours.

6.6.2.7 Open Space

1. A minimum of 150 square feet of private open space shall be provided per dwelling unit as follows:
   a. Private open space features may include fenced yards, patio areas, and balconies.
   b. At least one-half (½) of the required open space area must be provided at the ground level, not including front yard setbacks, and not more than ½ of the open space requirement is to be satisfied by balconies or roof decks. For the Row Townhome product (RD-6) open space may be satisfied by balconies for up to 33% of the units proposed.

c. Private open space located at ground level shall have a minimum contiguous area of one hundred and fifty (150) square feet in area with a minimum dimension ten (10) feet in any one direction and shall be landscaped. Open space located on roof decks or balconies must have a minimum contiguous area of fifty (50) square feet in area and a minimum dimension of five (5) feet in any one direction.

d. Private, ground level open space on the street side of a structure is to be suitably screened from streets by a fence, densely planted shrub, or combination of both.

2. A minimum of 250 square feet of common open space shall be provided per unit as follows:

a. Common Open space features include, but are not limited to, landscaping, picnic and barbecue areas, pools and spas, tennis and sport courts, clubhouse, tot lots or playgrounds, paseos, and trails.

b. Common open space shall have a minimum contiguous area of three hundred (300) square feet with no dimension less than 15 feet in any direction.

c. All required ground level common open spaces shall be planted with permanent landscaping or be devoted to recreational facilities, such as swimming pools, tennis courts, tot lots, patios or similar open space and/or recreational facilities.

d. Common and private open spaces are to be permanently maintained in an orderly fashion.

e. Parking areas, driveways or service areas shall not be counted in the minimum open space requirement.

5. *All parking spaces within an enclosed garage shall have a minimum 20'x20' clear inside dimension for double spaces and 10' x 20' single spaces.*

TABLE 4
Residential Attached Site Development Standards (cont.)

6.7 LANDSCAPE STANDARDS

6.7.1 General Provisions

1. All landscape and irrigation plans for streetscapes and graphic designs with regard to the identity of Esperanza, neighborhood identity or entry monuments shall conform to the Design Guidelines and regulations as set forth herein and shall be subject to review and approval by the City of Ontario at the time of Development Plan review. The form and content of landscape plans for streets, parks, and other common areas shall conform to the requirements of the City's Development Plan application requirements.
2. The Landscape/Streetscape improvements for the Esperanza Specific Plan shall establish a landscape theme reminiscent of the regional landscape character of the surrounding area.
3. The design and improvement of all parks, including landscape and irrigation plans, within Esperanza shall be reviewed and approved by the City at the time of Development Plan review and shall conform with the requirements of the City's Parks and Maintenance Department.
4. Installation of landscaping and automatic irrigation within the front yards of all residential areas will be provided by the home builder. At a minimum, the builder will install turf and appropriate shrubs and trees in the front yards of homes within residential areas. At a minimum two trees shall be installed, of which at least one, is a shade tree. A variety of front yard landscape designs shall be provided by the developer for use by homeowners. Within multi-family residential areas the builder shall be responsible for the installation of full landscape improvements within the multi-family development. Areas not used for hardscape shall be fully landscaped. All landscape plans shall be reviewed and approved by the City at the time of Development Plan review.

6.7.2 Landscape Standards

1. Landscaping within the Esperanza Specific Plan area shall be provided in accordance with the Design Guidelines utilizing plant materials specified on the Plant Palette included in Section 8, "Design Guidelines" established for the Esperanza Specific Plan.
2. Boundary landscaping will be required adjacent to residential areas. Landscaping shall generally be placed along the entire perimeter property line.
3. Landscaping and automatic irrigation systems within the public rights of way of the Esperanza Specific Plan area shall be installed by the developer.
4. Freestanding perimeter walls and view fencing shall be provided within, and at the perimeter of the Specific Plan area as specified in the Wall and Fence Master Plan contained within, Section 8, "Design Guidelines." Such walls and fences will be constructed concurrently with the construction of improvements required for development of the neighborhoods of the Specific Plan.
5. Walls and Fencing - Perimeter walls shall be constructed in locations and of a design consistent with the "Wall Master Plan" and "Wall Details" Exhibits located within Section 8, "Design Guidelines." Perimeter walls shall not exceed six feet in height from finished grade. If required for sound attenuation, perimeter walls may exceed six feet in height, subject to the recommendations of an acoustical study and approval by the Planning Department. Perimeter walls shall be constructed of either masonry or other permanent, durable, low maintenance material. Thematic perimeter fencing shall be constructed of all durable materials, which may include materials with a wood-like appearance, or tubular steel subject to approval by the City. In no instance shall wooden fencing be permitted along perimeters.

Individual residential lot side and rear yard walls and fencing shall not exceed six feet in height from highest adjacent finished grade. Side and rear walls may exceed six feet (6') in height if required by the City for sound attenuation pursuant to the recommendations of an Acoustical Report. Walls and fencing within the residential front yard setback area shall not exceed three feet in height. Side and rear yard walls shall be of decorative masonry construction on both sides of the wall or other permanent low maintenance materials. Front yard fences may be constructed of either wood, or any other durable materials with a wood like appearance, subject to approval by the Planning Department. View fencing may be of a decorative wrought iron, tubular steel/aluminum glass panels, or other durable material approved by the City.

6. All perimeter wall and fence materials throughout Esperanza will be of uniform manufacture with colors specified for the overall design theme.
7. The developer will provide site inspection of all construction and installation of open space areas in accordance with City of Ontario requirements.
8. Non-toxic vegetation shall be utilized adjacent to all public open space areas.

6.8 Signage

A Master Sign Program shall be submitted by the developer(s) of Esperanza and approved by the City of Ontario pursuant to Article 31 of the City's Development Code to address residential project entries, residential neighborhood identification signs, and way finding signs within Esperanza. No project signs shall be permitted in the public right-of-way. All other signs shall be subject to the approval of a sign permit pursuant to the City's Development Code.

6.8.1 Master Sign Program Contents

All sign programs shall address, at a minimum, the following:

1. Permitted signs.
2. Prohibited signs.
3. The hierarchy of signage.
4. Definition of types of signs.
5. Locations and dimensions for monument signs, neighborhood identification signs, and public facilities signs.
6. Locations and dimensions of directional signage.
7. Provisions for size, location, and duration of display of temporary signs.
8. Permitted sign types, styles, construction materials, colors, and lettering styles.
9. Requirements for a sign permit application.
   a. Procedures for obtaining approval of a sign permit.
   b. Procedures for amendments to the sign program.

6.9 Lighting

6.9.1 Street Lights along Public Streets

Streetlights along public streets, within the Esperanza Specific Plan shall be high-pressure sodium vapor. Design of fixtures shall be approved by the City as part of the City's Development Plan Review.

6.9.2 Alley Lighting Fixtures

Alley lighting fixtures shall be on sensors for automatic nighttime lighting. Style and specifications for alley lights shall be approved by the City as part of the City's Development Plan Review.

6.9.3 Lighting within Parks, Paseos, Tot Lots and Other Recreational Areas

Lighting within Parks, paseos, tot lots and other recreational areas shall be approved by the City as part of the City's Development Plan Review of these facilities.

6.10 Park Furniture

Park furniture, including but not limited to, benches, barbeques and picnic tables, shall be approved as part of the City's Development Plan Review of parks, paseos and other public gathering places.

6.11 Bus Shelters

Bus shelters shall be installed in a number of locations designated by OmniTrans and shall be compatible with the architectural character established at the project entries to Esperanza.

6.12 Mailboxes

Within RD-3 through RD-8 Residential Planning areas mailboxes shall be clustered and installed in locations approved by the City as part of the City Development Plan Review of each resident project within Esperanza.

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

SECTION 7. IMPLEMENTATION

The City of Ontario will adopt the Esperanza Specific Plan by ordinance. Following approval by the City, the Esperanza Specific Plan will serve as the implementation tool for the ~~NMC~~ Ontario Ranch General Plan as well as the zoning for the Specific Plan area. Concurrently with the adoption of the Specific Plan, the City Planning Commission will also approve tentative tract maps establishing legal residential lots within the Esperanza Specific Plan area.

7.1 METHODS AND INTERPRETATION

Development within the Esperanza Specific Plan shall be implemented through the approval by the City of tentative and final tract maps and through development plans approved through the Development Plan Review process as established in the City of Ontario Development Code. The implementation process described below provides the mechanisms for review and approval of development projects within the Esperanza Specific Plan area.

7.2 APPLICABILITY

All development proposals within the Esperanza Specific Plan shall be subject to the implementation procedures established herein. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of the Esperanza Specific Plan shall take precedence.

7.3 INTERPRETATION

Unless otherwise provided, any ambiguity concerning the content or application of the Esperanza Specific Plan shall be resolved by the City of Ontario Planning Director (Director) or his/her designee in a manner consistent with the goals, policies, purpose and intent established in this Specific Plan.

7.4 SEVERABILITY

If any portion of these regulations is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining portions thereof. The legislative body hereby declares that they would have enacted these regulations and each portion thereof irrespective of the fact that any one or more portions be declared invalid or ineffective.

7.5 IMPLEMENTATION OF DESIGN GUIDELINES

Adoption of the Esperanza Specific Plan by the City includes adoption of the design guidelines contained herein, which shall be the design criteria by which development projects within the Specific Plan area will be reviewed during Development Plan Review. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during Development Plan Review.
Any major deviation from the design guidelines within the Esperanza Specific Plan shall require approval by the Planning Commission. The determination of a major deviation from the design guidelines shall be made by the Director.

7.6 DEVELOPMENT REVIEW PROCESS

7.6.1 Subdivision Maps

Approval of tentative tract maps may occur concurrently with the adoption of the Esperanza Specific Plan. All tentative and final tract maps will be reviewed and approved pursuant to applicable provisions of the City of Ontario Subdivision Ordinance and consistent with the applicable provisions of Land Use, Infrastructure, Design Guidelines, and Development Regulations contained within the Esperanza Specific Plan.

7.6.2 Development Plan

All development projects within Esperanza shall be subject to the Development Plan Review Process as established in Article 8 of the City's Development Code. Pursuant to these provisions, the Development Plan process constitutes a design review of project architecture, site plans, and landscape plans. Adoption of the Specific Plan by the City includes adoption of the design guidelines contained within the Specific Plan and which provide direction for the design of development projects within Esperanza. Where the Esperanza Specific Plan development regulations and design guidelines are silent, the applicable development regulations and design guidelines contained within the City's Development Code shall apply. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during design review.

All development project applications shall include a landscape and irrigation plan describing plant materials and their growth habits, plant size and spacing, methods of irrigation and landscaping maintenance, site plans, architectural elevations, floor plans, grading plans and other requirements as specified by the City.

7.6.3 Additional Entitlement Requirements

All entitlement applications shall prepare and submit a Conceptual Utilities Systems Map, Integrated Waste Management Report, and Solid Waste Handling Plan in accordance with requirements of the Development Application.

7.7 Dwelling Unit Allocations

The Esperanza Land Use Plan allocates a maximum number of dwelling units to each residential Planning Area. Variations in number of dwelling units, per Planning Area, may occur at the time of final design of the Planning Area subject to approval by the City and agreement by affected property owners/developers, depending upon the residential product identified for development. Variations in allocation of units within the Planning Areas of the Esperanza Specific Plan are permitted provided the increased number of dwelling units in a Planning Area does not exceed 15% and the maximum dwelling unit count for the entire Specific Plan area does not exceed that established for Esperanza.

1. Water and Sewer Technical Studies shall be prepared to study how the transfers change the quantity and locations of sewer and water demands and how those changes impact the Water and Sewer Master Plan Systems and local sewer and water systems.
2. If unit transfers result in net changes to the overall projected water demands, then the initializing project shall be responsible for processing an Amendment to the Water Master Plan as part of the entitlement process of Implementation.
3. If unit transfers result in net changes to the overall projected sewer demands or the sewer demands are transferred between different Master Plan Trunk Sewer Tributary Areas and Specific Plan Sewer Tributary Areas, then the initializing project shall be responsible for processing an Amendment to the Sewer Master Plan as part of the entitlement process of Implementation.

7.8 Specific Plan Modifications and Amendments

7.8.1 Minor Modifications

The following constitute minor modifications to the Specific Plan, not requiring a Specific Plan Amendment, and are subject to review and approval by the Zoning Administrator. The Zoning Administrator shall have the discretion to refer any such request for modification to the Planning Commission or the City Council.

1. Change in utility and/or public service provider.
2. Collector roadway alignment when the change results in a centerline shift of less than 250 feet.
3. An increase of more than fifteen percent (15%) in the number of units within an individual Planning Area are subject to approval of the City and agreement of the property owners, provided the total number of units for the entire Specific Plan area does not exceed that established in the Specific Plan.
4. Adjustment of a Planning Area boundary or acreage designated for a Planning Area provided the total acreage of the affected Planning Area does not increase by more than 15%.
5. Minor changes to landscape materials, wall materials, wall alignment, entry design, and streetscape design which are consistent with the conceptual design set forth in the design guidelines contained within the Specific Plan.
6. Minor changes to the design guidelines, which are intended to be conceptual in nature only, and are intended to be flexible in implementation.
7. Other modifications of a similar nature to those listed above, which are deemed minor by the Zoning Administrator, which are in keeping with the purpose and intent of the approved Esperanza Specific Plan and which are in conformance with the ~~NMC~~ Ontario Ranch General Plan.

7.8.2 Reversion of Planning Area 11 to Residential Uses

The ~~NMC~~ Ontario Ranch General Plan establishes a total residential unit allocation of ~~1,456~~ 1,652 units for the Esperanza Specific Plan. The Land Use Plan for Esperanza designates a total of ~~1,410~~ 1,491 residential dwelling units within Planning Areas 1-10 and reserves Planning Area 11, a 10.02 acre site, ~~for~~ was not purchased ~~and use~~ by the Mountain View School District (School District). ~~of an elementary school. In the event the School District does not purchase Planning Area 11 for development of an elementary school,~~ Planning Area 11 ~~may revert~~ will be converted to a Residential – Medium Density zoning district permitting development of a maximum of ~~46~~ 161 residential dwelling units subject to approval by the City of a Specific Plan Amendment. On ~~XX-XX-2020~~ 10-20-2020 a request for an increase in density for Planning Area 4, from 6.26 gross DU/AC to 14.0 gross DU/AC and an accompanying general plan amendment to increase the density from low density residential (2.1-5 DU/AC) to medium density residential (11.1-25 DU/AC) was approved, which increased the total residential allocation of ~~1,640~~ 1,652 units (~~1,594~~ 1,491 units if the school remains a school). The Environmental Impact Report prepared for the Esperanza Specific Plan has evaluated the impacts of development of Planning Area 11 alternatively for ~~46~~ 161 residential dwelling units in conjunction with the analysis of all other project related impacts. Development of Planning Area 11 for residential land uses shall be subject to all other review and administrative and discretionary approvals requirements required for residential land uses as established within the Esperanza Specific Plan.

7.8.3 Specific Plan Amendments

Amendments to the Esperanza Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65453(a) of the Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for Specific Plan Amendments. In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) are responsible for preparing the necessary CEQA documentation.

7.9 VARIANCES

Variances and Administrative Exceptions to the development regulations contained in the Esperanza Specific Plan with respect to landscaping, screening, site area, site dimensions, yards and projects into yards, heights of structures, distances between buildings, open space and off-street parking and loading can be considered pursuant to Article 10, "Variances and Administrative Exceptions" of the City of Ontario Development Code.

7.10 CONDITIONAL USE PERMITS

Uses specified as conditionally permitted uses within Section 6, "Development Regulations, of the Esperanza Specific Plan shall be reviewed and approved by the City pursuant to the requirements of Article 9, "Conditional Use Permits."

7.11 COMPLIANCE WITH MITIGATION MONITORING PLAN

Certification of an Environmental Impact Report (EIR) shall be required prior to approval of the Esperanza Specific Plan. Development within the Esperanza Specific Plan area shall comply with all approved mitigation measures as described in the Mitigation Monitoring Program included as part of the Esperanza EIR.

7.12 PROJECT PHASING

Phasing of the Esperanza Specific Plan will meet the following objectives:

- Orderly build-out of the community based upon market and economic conditions.
- Provision of adequate infrastructure and public facilities as determined and deemed necessary by the City Engineer concurrent with development of each phase.
- Protection of public health, safety and welfare.
- Accommodation of continued agricultural operations within the proposed Specific Plan area.

7.12.1 Residential Development

The phasing of residential development areas will be determined by the developer. The development of residential uses will be implemented through the approval of tentative and final tract maps and development permits for each Planning Area as developed. Appropriate levels of infrastructure and community facilities shall be subject to the review and approval of the City Engineer and shall be installed and available to serve each subsequent phase of residential development as it occurs.

7.12.2 Infrastructure

Backbone infrastructure to serve all areas of Esperanza shall be installed by the developer in accordance with the City's adopted Master Plan or any approved amendments to it. Infill service mains will be installed and constructed in phases as development proceeds and conditioned by the City Engineer's office to support individual phases of development, which may require installation of offsite infrastructure improvements beyond a given phase boundary.

Grading and installation of infrastructure to serve Esperanza are anticipated to be completed in three phases. Following completion of grading and infrastructure installation, the developer will construct models for each product type within each neighborhood. Phase I will include installation of infrastructure adequate to serve Planning Areas 5-9 located south of Eucalyptus Avenue between Hamner Avenue and Mill Creek Avenue. Phase II will include installation of infrastructure adequate to serve Planning Areas 4A and 10. Phase III will include installation of infrastructure adequate to serve Planning Areas 1-4B and the Neighborhood Park. As the Specific Plan is Phased, the following minimum criteria shall be met for each Subdivision and Development of each Phase:

1. For Domestic Water, all the Master Plan, Regional and Local Infrastructure identified in Section 5 and the Conceptual Domestic Water Plan for the Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any domestic water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria and fire fl ow shall be completed as part of the Phase's infrastructure requirements.
2. For Recycled Water, all the Master Plan, Regional and Local Infrastructure identified in Section 5 and the Conceptual Recycled Water Plan for the Recycled Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any recycled water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.
3. For Sewer, all the Master Plan, Regional and Local Infrastructure identified in Section 5 and the Conceptual Sewer Plan for the Master Plan Sewer Tributary Area that the Phase is within and upstream of shall be completed as part of the Phase's infrastructure requirements. Also, any sewer infrastructure necessary to meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.

7.12.4 Parks

Following issuance of Certificates of Occupancy for no more than 50% of the total dwelling units within Esperanza, Park 1, the Neighborhood Park, will be developed. The timing for installation of infrastructure and utilities and the provision of public services will be determined as part of the City's approval of tentative maps or development plans. Facilities will be constructed and services made available in a timely manner as development progresses. Pocket Park 2 will be developed at the time of issuance of 50% of Certificates of Occupancy for Planning Area 5. Pocket Park 3 will be developed at the time of build-out of Planning Areas 6 and 7 combined. Pocket Park 4 will be developed at the time of issuance of 50% of Certificates of Occupancy for Planning Areas 8 and 9. Pocket Park 5 will be developed at the time of issuance of 50% of Certificates of Occupancy for Planning Area 10.

7.12.4 Community Facilities and Services

The timing for installation of community facilities and payment of impact fees for public improvements and services for the Esperanza Specific Plan will be determined as part of the City's approval of tentative tract maps in accordance with the provisions of the existing City development impact fee ordinances. Community facilities such as bike trails will be developed in conjunction with construction of the public street improvements.

7.13 APPEALS

Appeals from any determination of the City Planning Director, Zoning Administrator or the Planning Commission, may be made by the applicant or any other aggrieved party filing an application on forms provided by the City of Ontario and accompanied by the appropriate filing fee, where applicable, within ten (10) days following the final date of action for which an appeal is made. Appeals shall be processed consistent with the provisions of Article 5, "Appeals" of the City of Ontario Development Code.

7.14 PROJECT FINANCING

The financing of construction, operation, and maintenance of public improvements and facilities (the "facilities"), and public services will include funding through a combination of financing mechanisms. Final determination as to the facilities to be constructed and as to maintenance responsibilities, whether publicly or privately maintained, will be made prior to recordation of final maps. In order for the project to be fiscally self sufficient, the following financing options can be considered for implementation:

7.14.1 Facilities and Services

- Private capital investment for the construction of facilities.
- Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district, to provide funding for the construction of a variety of public facilities and the provision of public services.

7.14.2 Operation and Maintenance

- By individual private property owner.
- By private property owners or Home Owners Association (HOA).
- By Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district.

City Council approval is a prerequisite for the implementation and establishment of any and all special district-financing mechanisms. The use of the Mello-Roos Community Facilities District Act of 1982 (the "Act") to finance public facilities and services will be at the City's sole discretion. Moreover, the use of the Act must be consistent with the City's adopted goals and policies concerning the use of the Act.

7.15 MAINTENANCE RESPONSIBILITIES

The public and private improvements constructed within Esperanza will be maintained through a combination of public and private entities as described below and in Table 5.

7.15.1 Public Maintenance

1. All streets and sidewalks serving residential product areas RD–1 through RD–6 single family detached or attached residential will be dedicated as public streets to the City of Ontario and will be maintained by the City.
2. Landscape improvements within the public right-of-way of Master Plan streets, neighborhood edges, community and neighborhood entries, and public street lights within Esperanza shall be maintained through a landscape and lighting district or other special maintenance district established by the City for the ~~New Model Colony~~ Ontario Ranch.
3. All on site water, sewer, and storm drain facilities that meet public improvement design criteria within the public streets or easements dedicated to the City shall be constructed by the developer and, upon acceptance, shall be maintained by the City.
4. Offsite infrastructure improvements such as water, sewer and storm drain facilities will be maintained by the City. The City intends to participate in a Regional Water Quality Basin. In the event permanent on site basins are developed within Esperanza as an alternative to a regional water quality basin, such facilities shall be maintained by the HOA.
5. NPDES facilities within public streets and/or easements. Operation and Maintenance (O&M) requirements for all NPDES storm water runoff source control and treatment control Best Management Practices (BMP's) shall be identified in the approved Water Quality Management Plan for the project. An O&M Plan shall be created to ensure ongoing long-term maintenance of all structural and non-structure BMP's.

7.15.2 Homeowner Association

A Homeowner Association will be established for the maintenance of common area landscape improvements within residential areas of Esperanza. Improvements to be maintained by the Homeowner Association include: Designated private alleys and adjacent landscaping.

- Designated private streets and landscaping. During the course of maintenance of public utilities within public streets, private streets, private drive aisles, or alleys, the City will restore the streets to City standards for trench backfill, pavement repair, and hardscape or landscape, as applicable. Restoration of any enhancements above and beyond City standards, including but not limited to architectural paving, hardscape and landscape enhancements shall be the responsibility of the HOA or other entity maintaining those enhancements.
- Courts, parkways and landscaping within the residential areas.
- Parkways of Interior Local Streets including sidewalks, landscaping and street lights as well as common areas distinct to individual residential types and neighborhoods.
- Maintenance of interior local streets including landscaping and associated architectural monument elements required to restore these areas to their condition as originally installed.
- Internal slopes fronting streets and slope areas in the rear of homes.
- All internal open spaces, parks, and common areas.
- NPDES facilities within private streets and/or common areas.

	City CFD	Private Homeowners Association (HOA)	Private Homeowner	Utility Entity
Master Plan Roadways (Bellegrave Avenue, ~~Milliken~~ Hamner Avenue, Mill Creek Avenue, ~~Merrill~~ Eucalyptus Avenue)	●			
Interior Public Project Streets (curb to curb for primary entry streets, secondary entry streets, and neighborhood streets)	●			
Parkways of Master Plan Roadways and Neighborhood Edges (curb to perimeter walls, including landscape, sidewalks and street lights)	●			
Parkways of Interior Project Streets (landscaping and sidewalks)		●		
Traffic Signals and Street Lights	●			
Traffic Control Signs	●			
Alleys and Drive Aisles		●		
Interior Streets within Single Family Attached (Multi-Family) Developments		●		
Off -site and In-Tract Water, Sewer, and Storm Drain Improvements (only those facilities in public roads and those in private streets within public utilities easements that meet public improvement design criteria)				●
On-site water, sewer, and storm drain improvements (improvements that are: private, laterals, and lines behind meters and /or DCDAs, improvements serving only one lot/parcel, not within public or private roads, not within public utility easements, or not meeting public improvement design criteria)		●		
Neighborhood Park		●		
Pocket Parks		●		
Linear Parks		●		
Private Recreation Areas		●		
Front Yard and Corner Streetside Landscaping for Single Family Detached Areas RD-1 through RD-4			●	
Front Yard and Corner Streetside Landscaped Areas RD-5 through RD-8		●		
Community Theme Wall on Master Planned Roadways (outside face for graffiti removal and paint)	●			
Community Theme Wall on Master Planned Roadways: Surface (interior) opposite streetside (structural integrity and face repair)		●		
Private Interior Yard Walls		●	●	
Alley Landscaping and Lighting		●		
Police and Fire	●			
Electricity and Natural Gas				●
Communication Systems	●			●
NPDES Facilities (onsite) W.Q.M.P. (1)	●			
NPDES Facilities/Interim Detention Basin on Private Property		●		

NOTES:

(1) Only those facilities in public roads and/or easements, including restoration work following public street repair.

TABLE 5
Maintenance Responsibilities

SECTION 8. DESIGN GUIDELINES

8.1 INTRODUCTION

On a sunny morning in the fall of 1882, George Chaffey stands on a mesa between the floodwater washes of Cucamonga Canyon to the east and San Antonio Canyon on the west, gazing at the country directly in front of him lying at the foot of snow-capped Old Baldy, beneath the Sierra Madre Mountain Range. Having little capital, George would rely on his powers of leadership and vision and, at that moment, would throw his heart and soul into the new colonizing movement sweeping Southern California. With help of his brother William and surveyor J. C. Dunlap, he would purchase 6,218 acres and design what would become the "City of Ontario," named after his former home in Ontario, Canada. His vision of a model colony featured the first reclamation irrigation system, abundant electricity power and a beautiful parkway that captured the imagination and interest of people throughout the world. His vision was one of hope for a great community. "Esperanza," which means "hope" in Spanish and accurately describes the original vision intended for the "new" Ontario.

Ontario is a thriving city today, although the orchards and packing houses have since given way to new landmarks such as Ontario Mills, Ontario Convention Center and Ontario International Airport. Hundreds of new businesses have discovered that Ontario is "The Gateway" to Southern California, conveniently located 35 miles east of Los Angeles, and easily accessible to I-10, I-15 and I-60 freeways.

Ontario spans nearly 28,000 square miles, with a population of over 168,000, and is one of Southern California's fastest growing cities. Ontario's sun-belt mild weather and 312 days of sunshine, allows you to enjoy the many parks as well as the nearby mountains, beaches, and deserts. The world-class Empire Lakes Golf Course, designed by Arnold Palmer, will challenge the avid golfer. The wine aficionados will love sampling California's finest at Galleano Winery, Joseph Filippi Winery, and Vineyards.

8.2 DESIGN GUIDELINES FOR ARCHITECTURAL CHARACTER

Architectural design should provide for high quality neighborhoods.

- Residential project design should consider the total context of the site with the incorporation of appropriate scale and proportions of building massing and details.
- The use of transitional spaces between common and private areas such as entry courtyards, private patios, low walls, and porches is encouraged.
- The variation of both front and rear building setbacks should be implemented to create visual variety.
- The variation of garage placement on adjacent lots is encouraged to provide a more diverse street scene.
- Residential structures should be varied in massing and articulation to provide visual interest.

Neighborhoods should be sustained over time.

- Architectural design themes should reflect historic Southern California styles.
- The use of natural indigenous building materials and colors is encouraged.
- Structures should incorporate genuine architectural details and decorative features.
- Architectural design should relate to human scale.
- The location of doors and windows should consider indoor/outdoor relationships to create intimate and secure spaces.
- Architectural designs should create a cohesive community without dominating the overall street scene.

Building design should be sensitive to climatic conditions and context.

- Building elevations should consider sun orientation by including shaded and sheltered areas.
- Variation of architectural designs should include methods of protection from inclement weather.
- Residential structures should be compatible with, and responsive to, the environmental setting.
- Building designs should incorporate spaces that encourage outdoor use to take advantage of temperate climatic conditions.

Architectural design should incorporate materials and techniques that are cost effective.

- The use of building materials should reflect the implementation of efficient construction methods.
- Building elevations should include compatible window and doors sizes that create a consistent design theme.
- Construction techniques should incorporate the use of standard components and dimensions.

Varied floor plans and elevations in single-family detached residential architectural packages should be incorporated as follows:

Reverse elevations and floor plans are considered as a separate elevation and floor plan. Reverse floor plans and elevations are considered as a separate floor plan and/or elevation for purposes of implementing the table below.

Diversity is a fundamental guiding principle at Esperanza. This ensures that neighborhoods are varied and that blanket uniformity is avoided.

Builders are required to produce a minimum of two styles for a 3-plan design program, and three styles for a 4-plan or more design program.

Number of Dwelling Units	Number of Differing Floor Plans and Elevations
5-10	As required by Planning Commission
11-25	2
26-50	3
51-75	3
76-100	4
Over 100	4; +1 additional floor plan with 4 elevations for each additional 50 units exceeding 100

8.3 ARCHITECTURAL CONTEXT

The original model colony of Ontario has a rich agricultural legacy of farming including citrus orchards, grape vineyards and alfalfa fields. Typical of Southern California farming communities, Ontario has a variety of traditional architectural styles. Western European and East Coast architectural details and forms were incorporated into the farm houses and local styles evolved from Country French and Tuscan styles and new interpretations of Monterey, Traditional, Craftsman and Ranch styles were erected. Architectural styles, elements and massing were reinvented utilizing available indigenous building materials. Plan designs and elements such as window sizes and proportions were modified to address local climatic conditions which were warmer and drier. Materials were plaster, stucco and siding with brick, stone or other masonry accent materials. The sunny Southern California climate allowed year round use of outdoor spaces and inspired covered porches and balconies.

Southern California was also influenced by Spanish architectural styles brought to the region by Spanish settlers and missionaries. These homes were well suited for the temperate climate of Southern California. The architectural theme for Esperanza is based upon these historical styles found in Ontario and the architectural styles have been selected in order to be reflective of older neighborhoods of historic Ontario.

Each architectural style outlined in these guidelines should be detailed with elements that represent the authentic character of that particular style.

Together the styles should be designed to create a neighborhood character that will be sustainable over time. Each home should contribute to the architectural character of the neighborhood. Design elements such as porches, recessed windows, architectural details and accents, alternate garage configurations / orientations, covered balconies, and articulated elevations are encouraged to enhance individual homes and to promote the overall neighborhood character.

8.3.1 Residential Design Objectives

- Interpret architectural styles that are authentic and reflect the historical character of the region.
- Emphasize styles of architecture that are compatible, yet vary enough to create interest and diversity.
- Create visually interesting neighborhood streets by varying elevation and floor plan plotting.
- Utilize authentic materials and colors that reinforce the overall design theme.
- Emphasize front elevations that relate strongly to the street and contribute to the livability of that realm.
- Provide alternative garage configurations.

The Esperanza Design Guidelines are to be used as a tool to ensure the character and design quality anticipated for the Community. The Guidelines express objectives and approaches rather than formulas and standards, allowing certain architectural creativity and flexibility. The images and sketches illustrated in the Guidelines are intended to be conceptual in nature and are to be used as general visual aids in understanding the basic architectural design intent of Esperanza. They are not meant to depict specific floor plans or architectural elevations.

These Guidelines are organized into the following sections:

- Architectural Styles
- Massing Principles
- Materials & Detailing
- Home Types
- Landscape Design

8.3.2 Architectural Styles

The architectural character within each neighborhood shall consist of complementary traditional architectural styles. The materials and colors of these home styles shall complement the overall neighborhood design.

Architectural styles within each neighborhood and product area within each neighborhood should be compatible with one another and blend with the character of each neighborhood.

Within cluster court style residential products, a consistent architectural style shall be used throughout the individual cluster.

Acceptable architectural styles within Esperanza include:

- Country French
- Tuscany
- Monterey
- Spanish Colonial
- Craftsman
- Traditional
- Western Ranch

The styles selected share similar design attributes and have been selected in response to the following considerations:

- They have a historic relevance to the region.
- They are compatible and complementary.
- They can be interpreted in a variety of ways.
- They are generally accepted by the market.
- They can be constructed using current building materials and methods.

Note: Additional styles proposed by the homebuilder must be submitted to, and approved by, the City of Ontario. Builders may submit home designs using alternative architectural styles that meet the design objectives of the specific plan, provided they are appropriate to the region and compatible with the character of Esperanza.

8.3.2.1 Country French

History and Character:

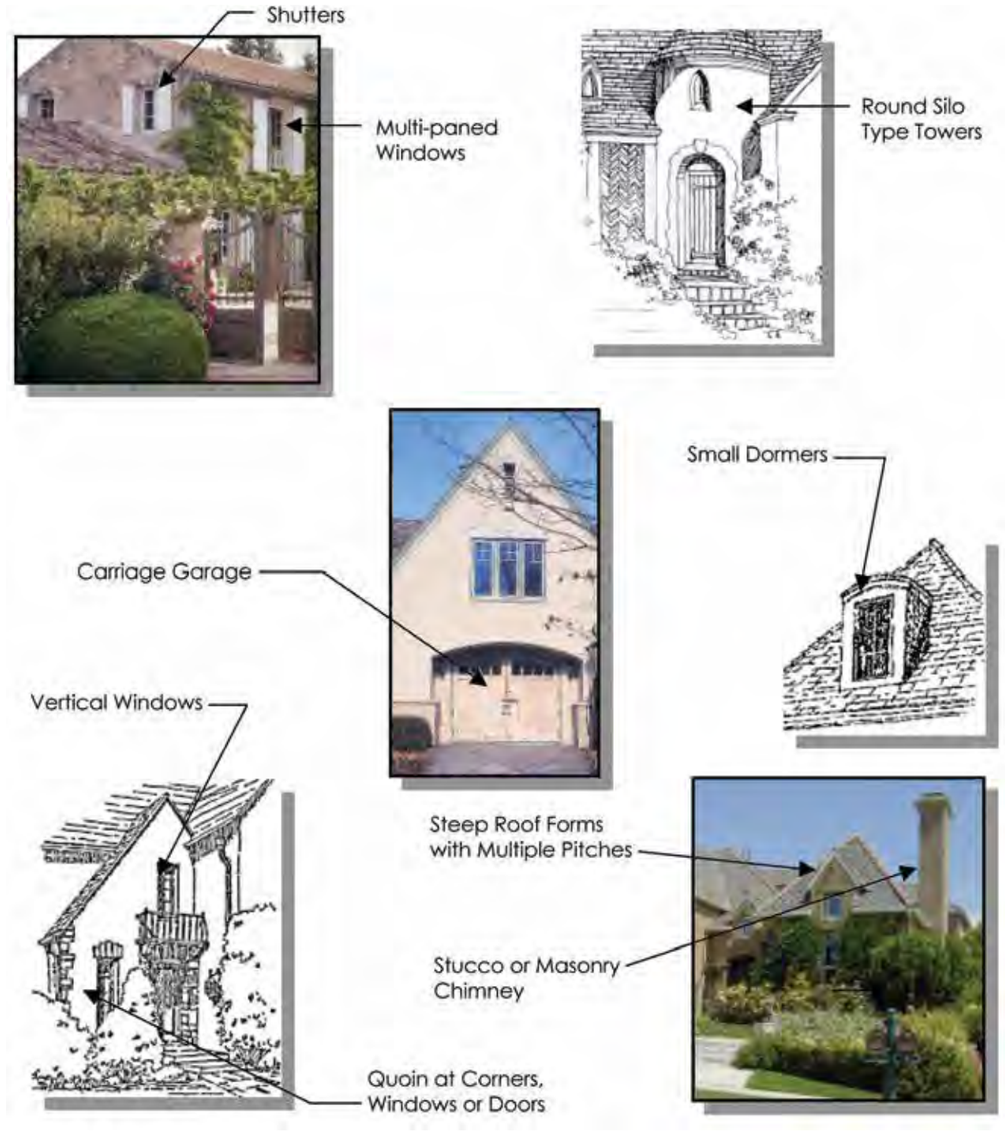
French Country architectural style is based upon early American interpretations of French Medieval architecture that made their way across the United States from the Mississippi regions around the turn of the century. Usually taking the form of larger manor homes and estates, this architectural style was adapted to fit smaller rural homes. The French Country style conveys a romantic and picturesque architecture. American interpretations include houses with simple forms with steeply-pitched roofs.

Massing:

- Simple massing with asymmetrical forms and gable roofs.

General Materials:

- Stucco finished walls.
- Deep recessed accents.
- Vertical windows.
- Simple detailing.
- Stucco or masonry chimneys.
- Decorative chimney caps.
- Carriage garage doors or roll-up doors with a variety of panel patterns to reflect architectural style.



Country French

Roof Materials and Forms:

- Small dormers.
- Steep roof forms with multiple pitches.
- Gable roof forms, accented with flared roof treatments.
- Large, simple roof planes. • Gable end venting in various styles.
- Rooflines may extend below window.
- Extended roof overhangs.
- Flat concrete tile to simulate slate materials.
- Round silo type towers.

Detail Elements:

- Decorative shutters.
- Wood balcony railings.
- Deep recessed windows.
- Multi-paned windows.
- Quoin at corners, windows or doors.

8.3.2.2 Tuscany

History and Character:

Tuscan-inspired homes began appearing at the turn of the 20th Century in Southern California as an interpretation of the picturesque movement in art where the architecture was less formalized and more responsive to the natural environs. Arranged building forms of predominantly stucco and stone with tile roofs reflecting the architectural styles of Northern Italy took root in informal plan arrangements and massing.

Massing:

- Simple massing with assembled forms and varied roof forms.

General Materials:

- Stucco finished walls and columns.
- Large, simple roof planes.
- Extended roof overhangs.
- Wood posts or masonry columns.
- Simple stucco chimneys.
- Decorative columns accents.
- Simple wrought iron, metal railings and details.
- Shutters as occasional accent.
- Deep recessed openings.
- Covered patios /porches.

Roof Materials and Forms:

- Tile hipped roofs.
- Low-pitched roofs.
- Stucco eave details or wood corbeled rafter tails.
- Gable end roof vents with decorative stucco accents.
- Gables and appropriate hip roofs.
- Shallow sloped, concrete 'S' tile roofs.

Detail Elements:

- Barrel/S-Tile roof.
- Varied stucco finish.
- Shallow pitch roof.
- Exposed rafter tails.
- Arched openings.
- Recessed windows.
- Wrought iron accents below windows.
- Vertical proportioned or arched windows.
- Balconies opened or roofed.
- Decorative brackets below roof overhangs.

Tuscany

8.3.2.3 Monterey

History and Character:

The Monterey style is a combination of Spanish construction methods and the basic two-story Eastern Colonial house. The wooden second story enabled single story Spanish Adobe homes to be developed as two story homes. Cantilevered balcony elements defined the front of the house which originally used adobe wall construction. Exposed rafters, gable or hipped roof, simple wood posts and side chimneys that anchor one end of the house, accompany the balcony as Monterey design elements.

Massing:

- Simple, straightforward rectangular or "L" shaped building forms.
- Cantilevered balcony and covered colonnades.

General Materials:

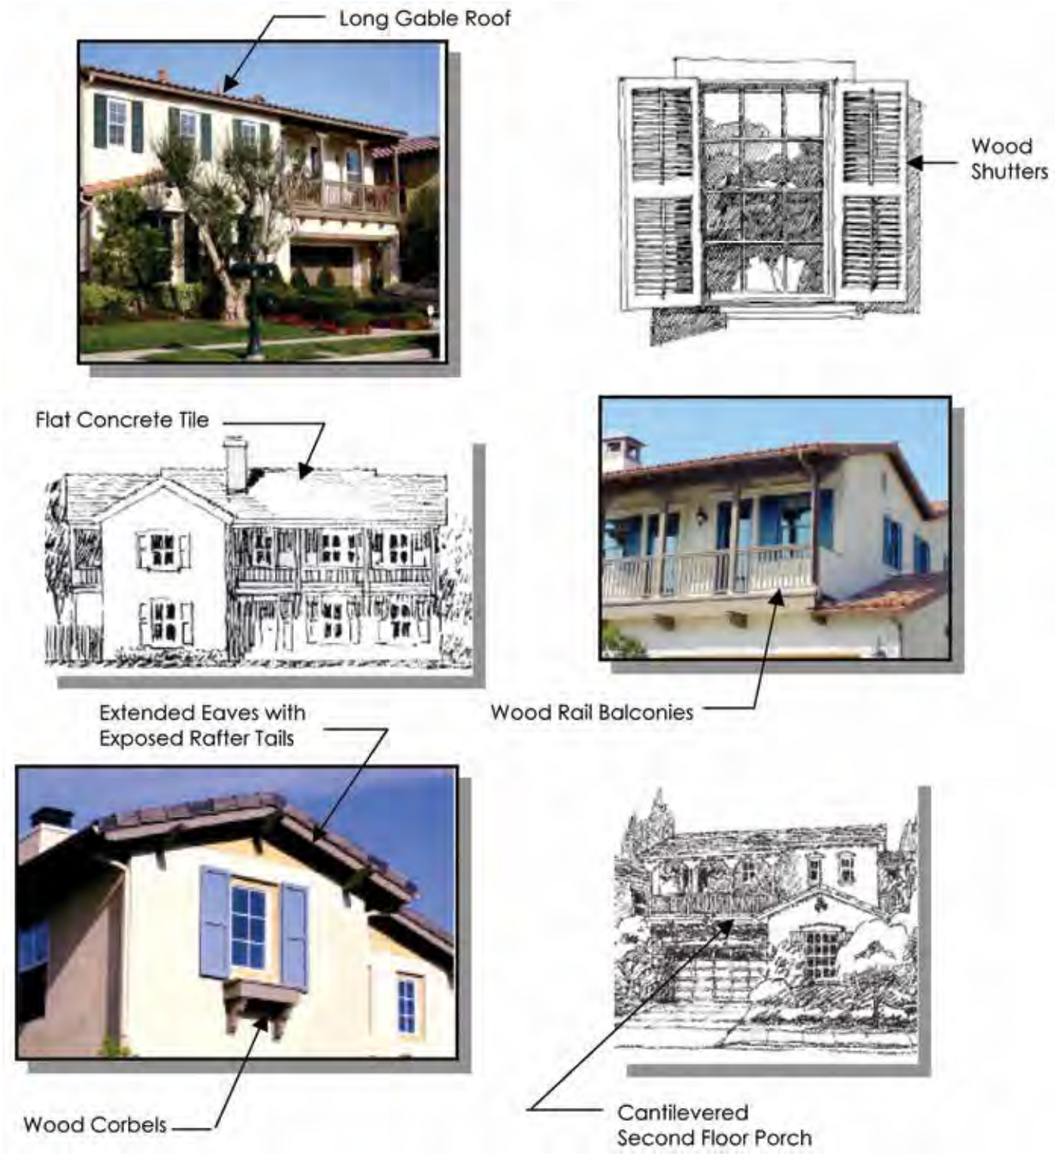
- Stucco on first level.
- Siding on second floor.
- Use of brick or stone on first level.
- Shutter accents.
- Wood or stucco trim.
- Brick and siding used to accent stucco forms.

Roof Materials and Forms:

- Flat concrete tile.
- Simple forms with low pitch.
- Gable forms are predominant. (Long gable roof)
- Tight rake ends.
- Extended eaves with exposed rafter tails.

Detail Elements:

- Wood balcony railing.
- Recessed windows, single hung.
- Wood corbels.
- Accent shutters.
- Cantilevered second floor porch.



Monterey

8.3.2.4 Spanish Colonial

History and Character:

Spanish Colonial homes are an adaptation of the Mission Revival style, reflecting features such as strong form and mass, plain wall surfaces, and tile roofs. The Spanish Colonial style is often characterized by a semi-formal plan arrangement such as a courtyard design.

Massing:

- Simple massing and forms and varied roof forms.

General Materials:

- Stucco finished walls.
- Wood / stucco columns.
- Decorative stucco chimneys.
- Round arches.
- Decorative columns and trim.
- Ornate wrought iron railing and accents.
- Wood shutter accents.
- Thick walls.
- Deep recessed openings.
- Stucco or tile details at gable ends.

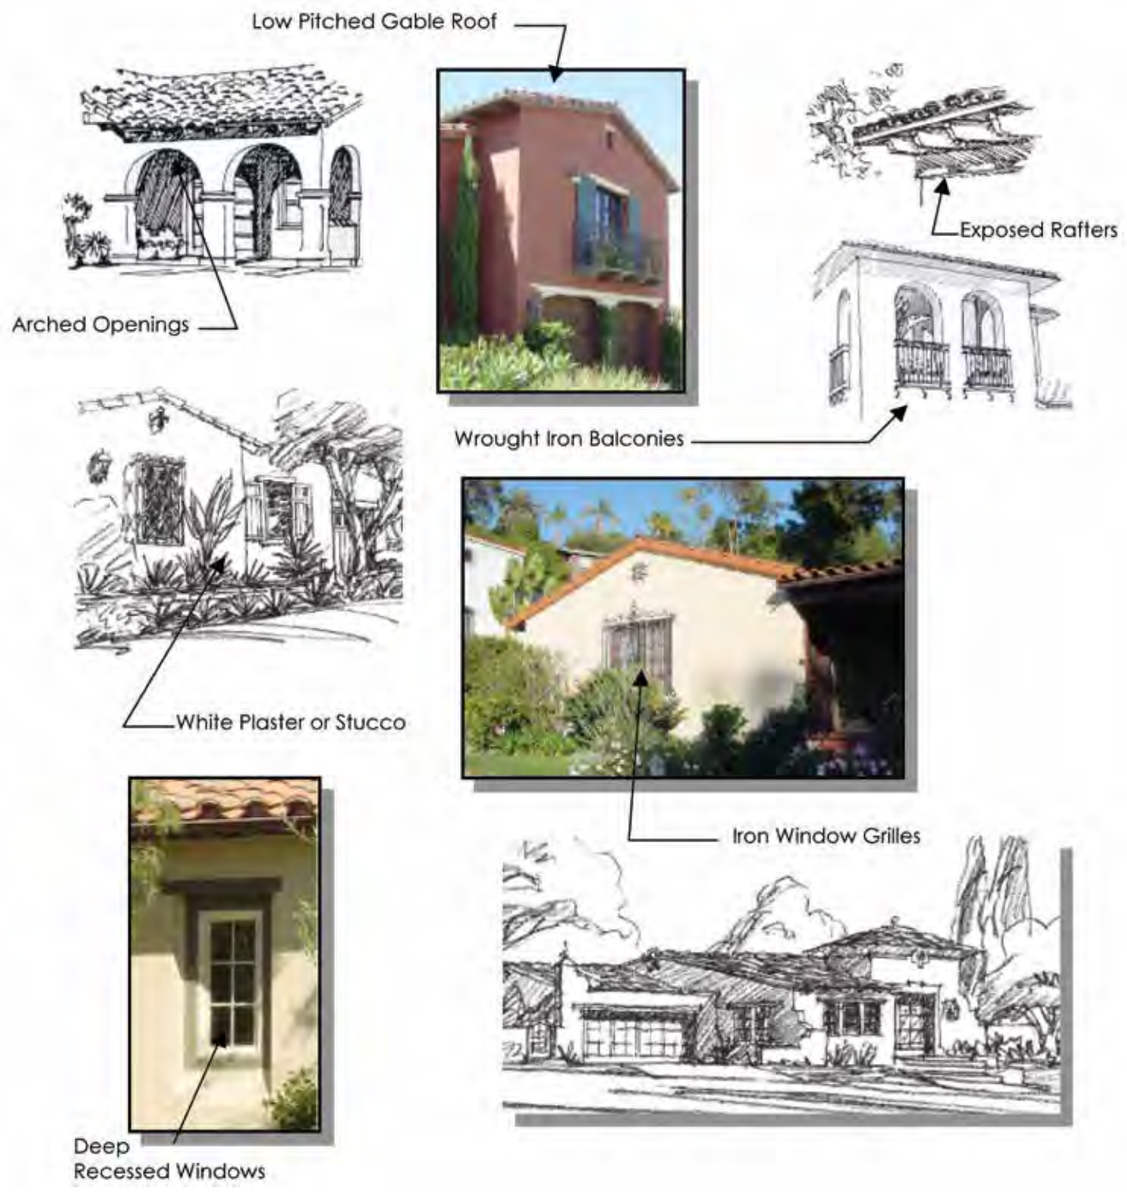
Roof Materials and Forms:

- Low-pitched roofs, with minimal overhang.
- Tight rake ends.
- Extended eaves with exposed rafter tails.
- Gables and hip roofs typical.
- Shallow sloped, concrete 'S' tile roofs.

Detail Elements:

- S-Tile roof.
- Arched window/door openings.
- Recessed window.
- Ornamental wrought iron details.
- Vertical proportioned windows.
- Wrought iron window. Grilles on windows.

Section 8. DESIGN GUIDELINES



Spanish Colonial

8.3.2.5 Craftsman

History and Character:

The Craftsman style home evolved from the late 19th century American Arts and Crafts movement. These moderately detailed buildings are characterized by the use of handcrafted architectural elements and details. Broad open porches, low sloping roofs, deep overhangs, multiple gables, trellis features, oversized first floor windows, expressive trim, rafters, brackets, and wood columns with masonry bases characterize the Craftsman style.

Massing:

- Horizontal proportions simple massing often asymmetrical at the second level.

General Materials:

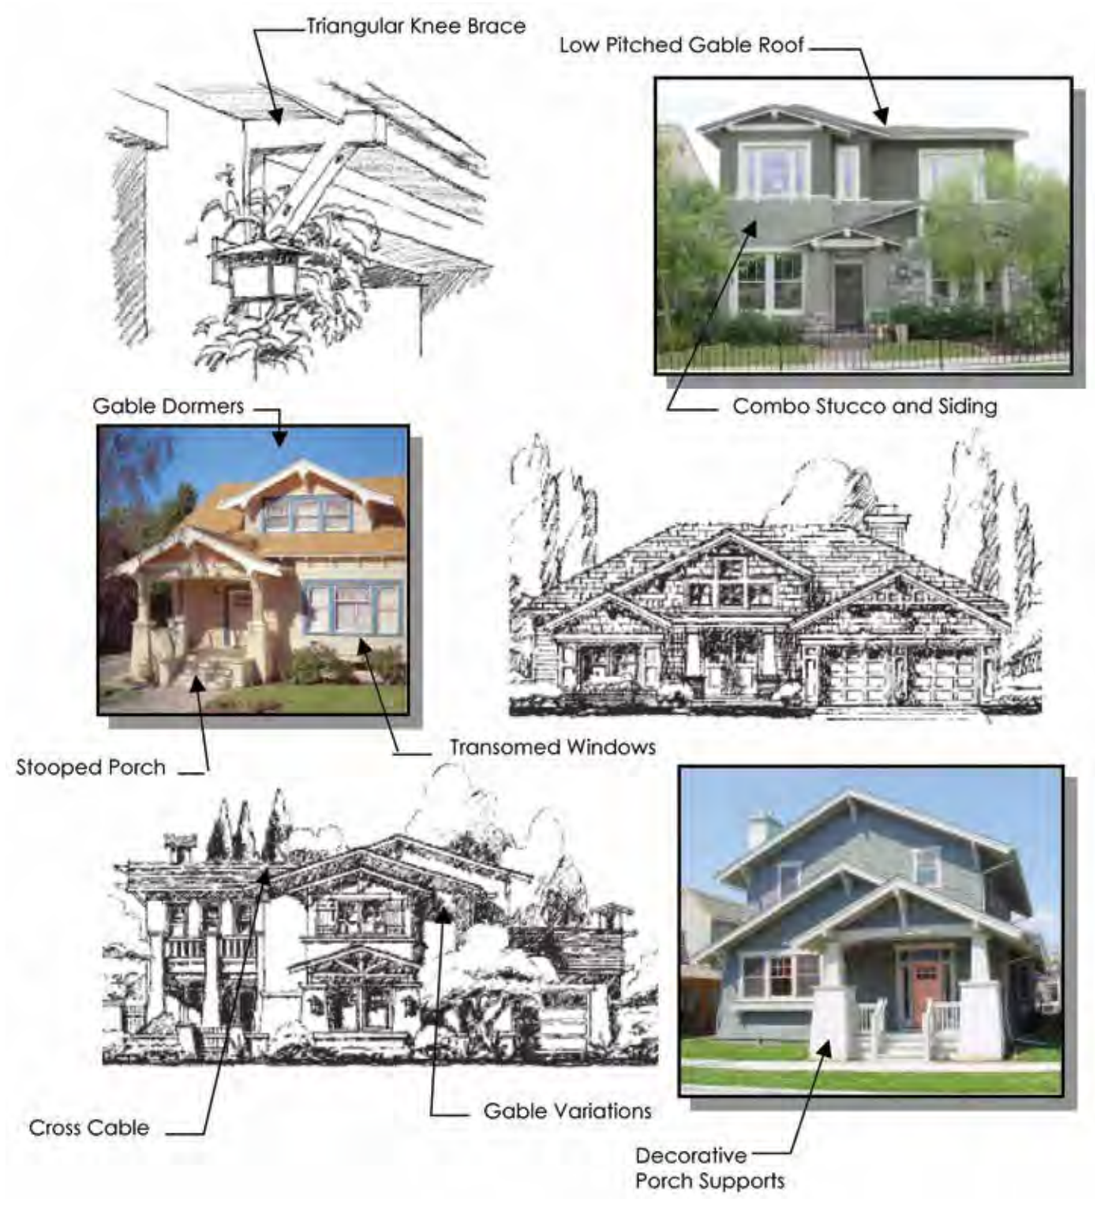
- Simple roof lines with wide projecting gables.
- Covered entry and roofed porches.
- Deep, broad porch elements.
- Expressive structural elements such as rafters, posts, and columns.
- Use of wood, stone or brick at porch columns typical.
- A mixture of materials such as stucco, stone, brick and shingle siding.
- Asymmetrical window and door compositions.

Roof Materials and Forms:

- Predominantly low-pitched gabled roofs, occasional hipped or shed roofs.
- Shallow-pitched roofs with deep overhangs.
- Roof dormers.
- Flat concrete tile or architectural grade asphalt shingle.
- Variation of the gable roof (i.e.: cross gable).

Detail Elements:

- Large gables
- Low pitch roofs with flat concrete tile.
- Windows with accent mullions.
- Exposed rafters and outlookers, triangular knee brace.
- Decorative gable vent detail.
- Decorative porch supports and railings.
- Transomed Windows.



Craftsman

8.3.2.6 Traditional

History and Character:

The Traditional style is based on classical design principles established the American Colonial period and interpreted or blended with the Prairie and Bungalow regional styles. Massing is horizontal in appearance with vertical proportioned windows and door surrounds. Front porches are common. The houses are composed of simple forms with centered entry elements over the front door.

Massing:

- Simple, symmetrical massing.
- Typical two story rectangular masses with added one-story elements such as porches forming more complex building configurations.

General Materials:

- Symmetrical and asymmetrical composition of doors and windows are common.
- Simple classical details such as columns.
- Siding or stucco with brick veneer accents.
- Front porches with wood columns and railings.
- Porches that extend length of the front elevation.
- Stone and brick veneer.

Roof Materials and Forms:

- Medium roof pitch with pitched roof dormer.
- Shallow roof pitch used over the porch.
- Flat concrete roof tile.
- Dormers reinforce symmetrical elevations.
- Bay windows and shed roofed elements added to simple building forms.
- Cupolas, weather vanes and other decorative roof ornamentations.

Detail Elements:

- Symmetrical or centered entry feature.
- Shutters accented with color.
- Columns at entries and porches.
- Roof dormers.
- Stooped porches.

Traditional

8.3.2.7 Western Ranch

History and Character:

The Western Ranch style is reminiscent of the early ranchers and farmers of Southern California. The Ranch Style evolved regionally in response to available building materials and environmental considerations. The distinctive porch covered terrace elements are a natural response to the temperate Southern California climate. Ranch style homes utilized simplified architectural details inspired by Spanish Colonial, Colonial and Monterey architecture.

Massing:

- Simple horizontal massing and rectilinear forms.

General Materials:

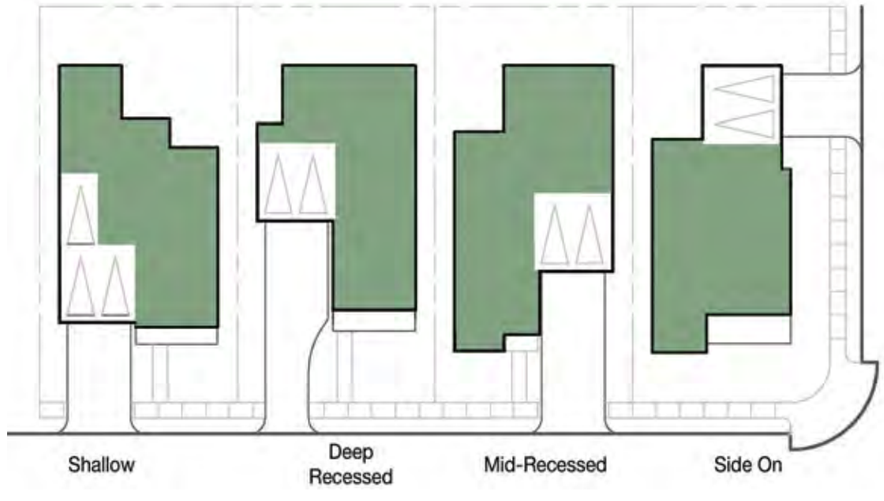
- Stucco, board and batten, and horizontal siding.
- Porches along front and rear elevations with a shallow roof break.
- Decorative shutters at windows.
- Wood window trim surrounds.
- Simple column and railing detailing.
- Substantial (8" x 8" min.) wood columns.

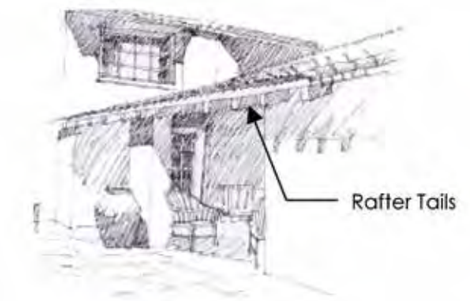
Roof Materials and Forms:

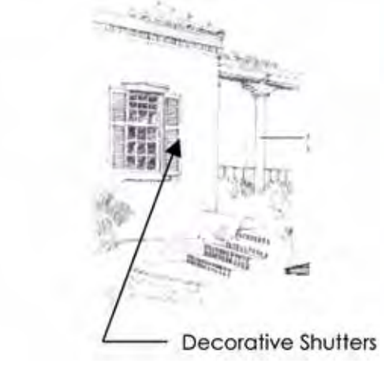
- Horizontal gable roofs with medium pitch and deep overhangs.
- Porches with shallow roof pitch.
- Gabled dormers.

Detail Elements:

- Corbeled wood columns.
- Heavy rafter elements.
- Simple accent shutters.
- Minimum 8" x 8" wood posts.







Western Ranch

8.4 Massing Principles

This section provides suggestions for creating neighborhoods and street scenes that have a variety of building forms that are proportionate to a human-scale and inviting to the pedestrian.

General Elements:

The general elements of building massing include:

- Front Articulation.
- Rear Articulation.
- Garage Placement.
- Roof Form.
- Balconies and Projections.
- Building Offsets/Variable Setbacks.

Objectives:

- Incorporate single-story elements.
- Avoid large flat two-story walls.
- Minimize two-story dominance on street scene, sidewalks and open spaces.
- Vary building setbacks along the street.
- Minimize visual impact of garages.

8.4.1 Front Articulation

Intent:

The front elevation of the home is an important element in creating a quality community at Esperanza. Close attention will be placed on the elevations and how they address the streetscene. Emphasis on location and entry designs, living areas and garages will provide a special street appeal. Emphasis on a variety of building massing will create a diverse street scene.

Guidelines:

- Building massing should reflect the architectural style.
- Massing elements should project enough to avoid elevations that appear to be "tacked on."
- Building details such as doors and windows should be in proportion to the overall massing.
- Building form is encouraged to reflect the interior uses of the home.
- Front elevations for two-story homes should incorporate a single-story element.
- Recessed two-story elements should create human-scale buildings.
- All homes should have at least two plane variations (excluding the garage) in front elevation massing.

8.4.2 Rear Articulation

Intent:

Special attention shall be given to the design of those dwellings adjacent to, or in close proximity of, major community roadways, common areas, open spaces, or entry features. Whether viewed from distant or close range, massing requirements will be implemented to ensure positive community character in these conditions. Generally, repetitious elements such as similar building profiles and continuous gable ends are to be avoided.

Guidelines:

- Architectural massing and articulation should be consistent with the style of the home.
- Plans shall incorporate projections and/or offsets that extend from the main wall lane.
- Vertical and horizontal plane breaks are encouraged.
- Homes directly adjacent to arterial roadways, collector roads, entry drives, common areas, and open spaces should be given particular attention in their rear articulation, contributing positively to these edges.

8.5 Garage Placement

Intent:

The configuration, location and orientation of the garage on the lot are integral design elements, both for the composition of the home and its contribution to the streetscene. Deemphasizing the garage is important in order to maintain the overall community design. Emphasizing the living areas of the home as they address the street will achieve this goal.

Placing living areas forward promotes social interaction and facilitates 'eyes on the street' for neighborhood security, while at the same time establishing neighborhood orientation to the pedestrian instead of the automobile.

Guidelines:

- Garage door patterns should vary among elevation types and reinforce the architectural theme of the home.
- Standard 3-car garage configurations are discouraged.

8.5.1 Garage Treatments

The home and the yard rather than the garage must be the primary emphasis of the elevation as seen from the street. Each plan shall incorporate one of the garage design techniques listed below and each parcel shall include at least two of these techniques to reduce the emphasis on the garage; and therefore, enhance the variable massing of the streetscene.

8.5.1.1 Shallow Recessed Garages

Setting the garage back a minimum of three feet in relationship to the front of the house/ or porch is intended to reduce the overall visual mass of the garage. The number of homes with shallow recess garage configurations shall be limited to 25% of the total number of units in each builder package.

8.5.1.2 Mid or Deep Recessed Garages

Setting the garage back to the middle or rear of the lot. This design treatment is intended to expose more living space areas toward the street, further reducing the visual impact of the garage along the street.

8.5.1.3 Alley Loaded

The use of the alleyways locates garages off a main loop road and creates a more traditional streetscene, with the fronts of the houses facing the street.

8.5.1.4 Split Garage

This treatment de-emphasizes the garage by reducing the length of the continuous door. Typically a one car garage and a one or two car garage are split to provide a variation in the appearance of the home. The single car garage elements in this split condition may option into living space that further enhances the streetscene by replacing the garage door with windows.

8.5.1.5 Tandem Garage

This garage layout de-emphasizes the third garage by concealing it behind a standard two-car garage condition. The tandem space is located so that it may option into living space. The two car garage is typically either shallow or deeply recessed into the lot and incorporated into the architecture of the home.

8.5.1.6 Setbacks

A varied setback is encouraged along the street frontage. Refrain from strict compliance to the minimum garage setback so as not to contribute to a repetitious and monotonous appearance along the street.

Where garages are adjacent to one another at common property lines, a two-foot minimum difference in setbacks shall occur.

8.6 Accessory Structures

Intent:

Accessory structures should be designed to reinforce the architectural style of the primary residence.

Guidelines:

- Detached structures, such as casitas, pool cabanas and guest quarters associated with the single-family lot shall be designed to match the style, detail, roof material/pitch and massing criteria of the primary home.
- Detached garages, storage buildings and outdoor sheds should incorporate design features, materials and colors compatible with the primary home.

8.7 Roof Form/Pitch

Intent:

- Roof form is another important design element as it relates to the character of the community, observed from both the external edges and inside the neighborhood.
- Variety of roof form along streets creates a positive visual edge.
- Appropriate massing of roof forms helps to create human scale architecture to the street.

Guidelines:

- Roof forms/pitch should reinforce the architectural style of the homes.
- Roofs shall be composed of a series of simple roof forms.
- Primary roof forms should be gable or hip designs.
- Roofs shall vary in massing along street scene and open spaces.
- Changes in the primary roof (ridge) orientation are encouraged.
- Flat roof elements should be minimized and incorporated only if appropriate to the architectural style.

8.8 Balconies And Projections

Intent:

As part of the overall design of a two-story dwelling, balconies and projections provide relief and interest at the second story. Balcony projections shall be consistent with the architectural character of the home. Additionally, these elements create ideal outdoor spaces.

8.9 Building Offsets/ Variable Setbacks

Intent:

Quality neighborhood design orients the 'living' areas of the home towards the street. To encourage this orientation, alternative setbacks are allowed for living areas as measured from the back of walk.

The development standards for each planning area/home type including building setbacks are established by the Esperanza Specific Plan. Additionally, building offsets or variable setbacks for both living and garages are encouraged to create variety in street scenes.

Guidelines:

- Setbacks shall be appropriate and proportionate to the housing type and lot size.
- Front setback should be varied along the street. A front offset of a minimum of two feet (2') is encouraged between the front walls of adjacent homes.
- Edge conditions such as homes backing to collector roads and back-to-back homes should incorporate variable rear setbacks to create variety.

8.10 Materials and Details

Architectural materials and detailing are central elements to creating quality communities. Appropriate focus should be given to the architectural details and the design of the details and architectural elements of the home.

General Elements:

The general elements comprising the materials and details of a building are:

- Wall Materials/Finishes.
- Doors and Windows.
- Roofing Materials and Slope.
- Fascias, Eaves and Rakes.
- Accent Materials.
- Exterior Colors.

8.10.1 Wall Materials/Finishes

Approved Materials:

- Board and batten siding.
- Cement plank siding.
- Stucco.
- Exposed masonry walls (brick, slump block, etc.)
- Stone, brick, brick veneers (accent materials).

Approved Finishes:

- Stucco finishes appropriate to the architectural style of the home.
- Smooth or sand finishes are encouraged. Heavy or Spanish Lace stucco finishes are prohibited.

Guidelines:

- Building materials should reflect the architectural style of the home.
- Siding materials should be wrapped beyond front elevations and should terminate at an inside corner or extend to the location of the lateral fence.
- Masonry elements and accents should reflect building forms and not appear as an applied veneer.
- Footings shall be exposed no higher than six inches (6") above finished grade.

8.10.2 Accent Materials

Accent materials promote individuality in each home and ensure diverse character within the neighborhood. Accents can be used to reinforce the architectural theme of the home.

Guidelines:

- Accent materials should complement the overall color and style of the home.
- Accent materials shall terminate at inside corners and be wrapped to coincide with an architectural element.
- Accent materials may terminate at location of the lateral fence or at logical end.
- Architectural trim applied to all elevations should be consistent with front elevation of the home.

8.10.3 Doors and Windows

The design and detail of the doors and windows on a home reinforce the architectural style and are key elements in the composition of the exterior elevation of the home.

Guidelines:

- Door designs shall be consistent with the architectural style of the home.
- Doors should be protected by porch elements or recessed entries.
- Garage and entry door design shall be appropriate to the style of the home.
- Maximum garage door height shall be eight feet (8').
- Garage doors should be recessed a minimum of twelve inches (12") from building plane.
- Alignment and proportions of windows shall be appropriate to the architectural style of the home.
- All windows (including garage door windows) are to be consistent with the architectural style of the home.
- Divided light windows are encouraged in keeping with the architectural style.
- Highly reflective glazing is not permitted.
- Window details such as shutters, trim surrounds, window boxes and window recesses are encouraged in keeping with the architectural style.

8.10.4 Roofing Materials and Details

Roofing materials as well as roof forms, pitch and design details are integral elements that reinforce the intended architectural style of the home.

Proposed roofs should be reflective of the architectural style of the home.

Attention should be given to address the context of the roof of each home relative to the adjacent homes along the street.

Approved Roofing Materials:

(Subject to compatibility with the intended architectural style)

- Concrete tile (flat or curved profile)
- Clay tile
- Slate
- High profile composition shingle (3-Dimensional)

Prohibited Roof Materials:

- Wood Shake
- Wood Shingle
- Low Profile Asphalt Composition
- Corrugated Metal

Guidelines:

- Roof materials and roof pitches need to be selected to reinforce the architectural style.
- Standing seam metal roofs painted in non-reflective neutral colors are allowed in appropriate architectural styles.
- Avoid repetition in continuous gable-ends and similar ridge heights.
- Skylights are not allowed on the sloped roofs of the front elevations of the building.

8.10.5 Roof Options

8.10.5.1 Eaves, Fascias and Rakes

Guidelines:

- Eave, fascia and rake proportions are to be appropriate to the architectural style.
- Larger eave overhangs provide opportunities for shading and should be used in appropriate architectural styles.
- Exposed rafter tails shall be a minimum of four inches (4") in thickness.
- Wood fascias and rafters shall be painted or stained to reinforce the style of the home.
- Attention shall be given to rake return detail.

8.10.5.2 Color

Intent:

Home colors are important to establishing a blended community at Esperanza, yet they should give the impression that each home was designed on its own.

Appropriate color selections make each home unique, but still look natural and in place in the neighborhood context.

Guidelines:

- Diversity of color is encouraged.
- Color shall contribute to distinguishing the overall architectural style of the home.
- Colors should reflect the natural hues found in Southern California.
- Color and hue variation in adjacent homes shall be provided to create neighborhood diversity.

8.10.6 Additional Design Elements

Intent:

Design elements that are utilitarian in nature should be designed as integral features that support the intended architectural style.

Guidelines:

- Exposed gutters and downspouts shall match roof or wall color.
- Faux copper patina is acceptable.
- Rooftop mechanical equipment is prohibited.
- Air conditioning/heating equipment shall be screened from the street and neighboring views and shall be ground mounted.
- Pool, spa, and water softening equipment shall be screened from neighboring views.
- Meters shall be screened from public view to the extent possible.

8.11 HOME TYPES

A variety of housing types, utilizing an architectural program composed of detached and attached housing, are offered at Esperanza. This diversity ensures a range of choices and a mix of homes within each neighborhood. Residences ranging from attached row townhomes and motorcourt townhome/condominiums to alley loaded and traditional single family homes along with innovative home types such as "two-pack" homes and courtyard homes, shall be articulated in traditional architectural styles. Providing a variety of housing programs allows homeowners the opportunity to move-up within the community as their lifestyles and needs change over time.

All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Locations of Collection Area, Accessibility for Collection Vehicles and Collection of Sorted/ Diverted Waste Types.

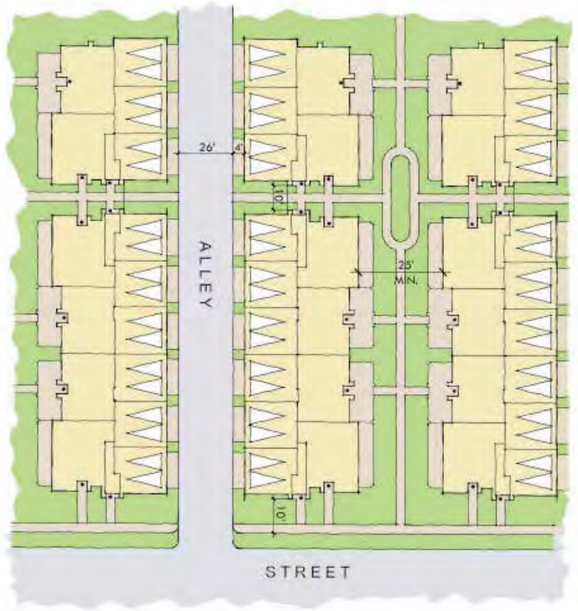
The following pages provide graphic and written information that describes the general appearance of each anticipated home type. Future homebuilders within Esperanza should use these descriptive pages as a guide when designing the home type designated for the appropriate planning area.

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

8.11.1 Row Townhomes

ROW TOWNHOMES

- Neo-traditional design places garages onto alleys, hidden from streets.
- Grid street pattern reinforces traditional neighborhood pattern.
- Front doors and porches face onto streets and/or greenbelts.
- Neighborhood open space provides a focal point of the neighborhood.



ROW TOWNHOMES

8.12 DESIGN GUIDELINES FOR LANDSCAPE ARCHITECTURAL CHARACTER

Careful consideration has been given to the design of the community landscape architectural character for the Ontario Esperanza Specific Plan. The following design guidelines are organized to help define the basic landscape design principles for the Ontario Esperanza Specific Plan. Observing these guidelines will help to assure the "design vision" and integrity of this planned community.

All landscape plans, streetscape plans, and graphic designs with regard to community identity, neighborhood identity, or entry monumentation shall conform to the guidelines as set forth herein, and shall be subject to review and approval by the City of Ontario.

The "Conceptual Landscape Master Plan," Exhibit 30 on the next page shows the perimeter streetscape design, Community entries and monumentation, neighborhood park and mini parks, pedestrian greenbelts, and general landscape features of the Ontario Esperanza Specific Plan area.

8.12.1 Perimeter Streetscape Design

Streetscape design guidelines establish a hierarchy for the landscape development along the surrounding roadways, as well as establishing a framework for consistency of design. Three major arterial roadways surround the Ontario Esperanza Specific Plan area: Hamner Avenue to the West, Bellegrave Avenue to the North, and Mill Creek Avenue to the East. Landscape easements associated with these roadways have been defined, as noted in the City of Ontario Ontario Ranch General Plan.

Landscape development surrounding this community will help to set the character, while maintaining consistency with the City of Ontario's pedestrian pathway system illustrated in the Trails and Bikeways section of the Ontario Ranch General Plan. The following section discusses the streetscapes for the Esperanza Specific Plan area. Exhibit 31, "Streetscapes Legend" provides a guide to the location of the streetscapes discussed below.

8.12.2 Hamner Avenue

Hamner Avenue streetscape shall include the following:

- A landscaped parkway (15' wide min.) with a row of street trees (24" Box min.) along both sides of the street.
- A 5' wide sidewalk along west side of the street.
- A 14' wide landscaped median with a single row of street trees.
- A landscape easement (neighborhood edge) of 45' taken from face of curb to perimeter wall.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 32, "Hamner Avenue" section for streetscape illustration."

Exhibit 30

Conceptual Landscape Master Plan

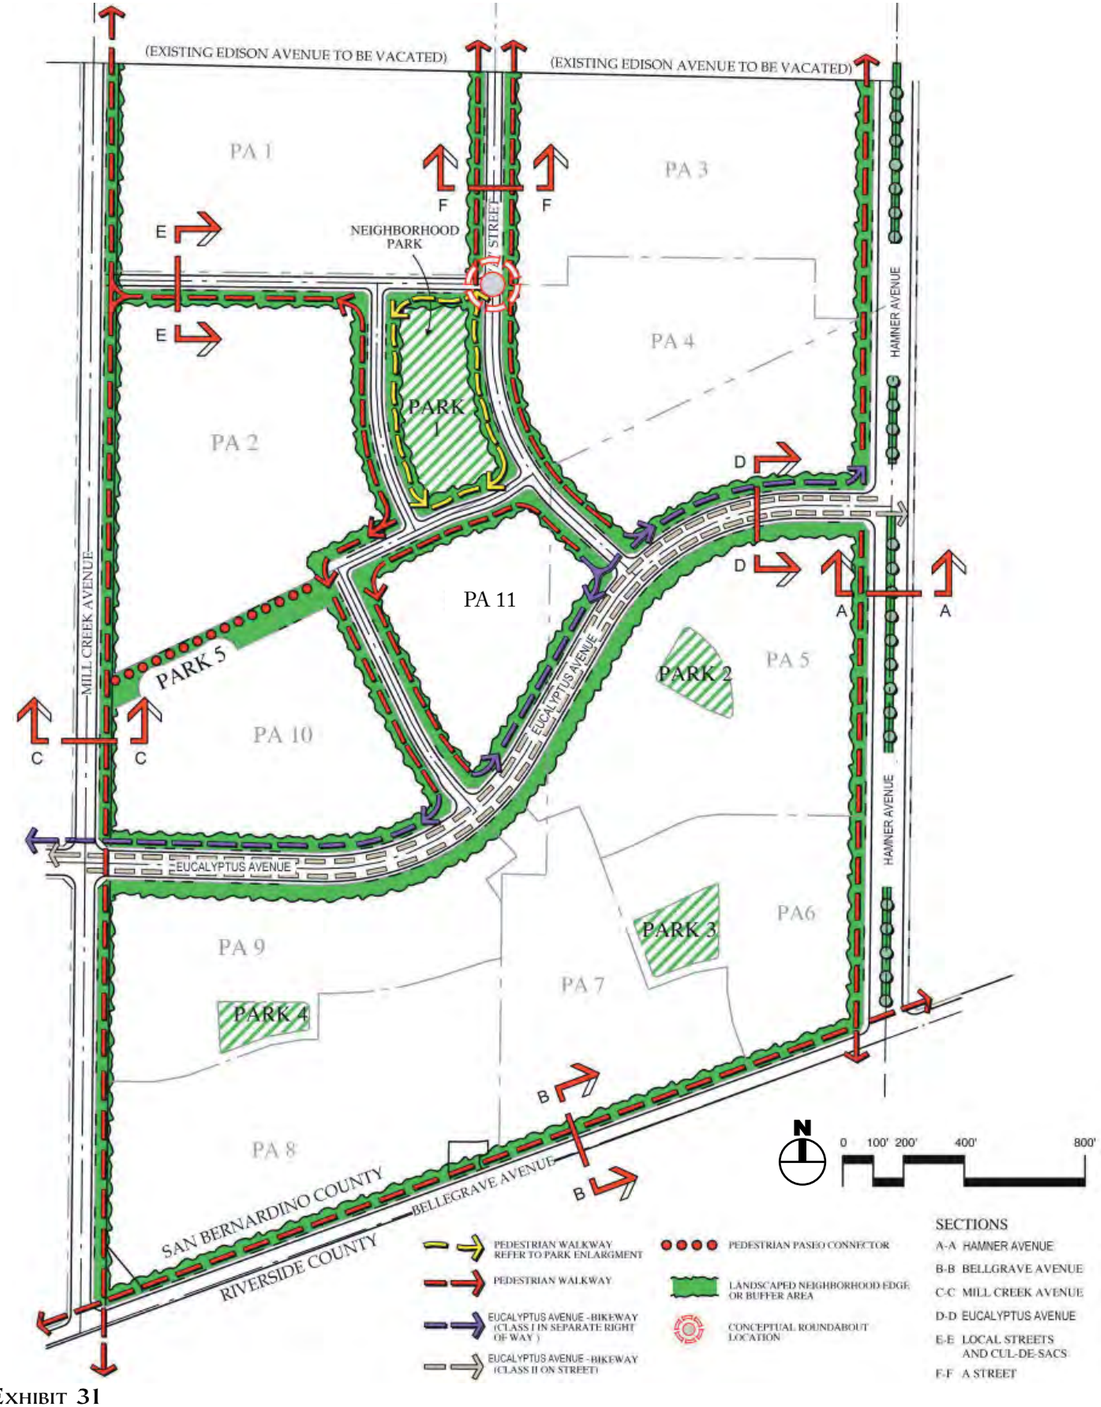

Exhibit 31

Streetscapes Legend

8.12.3 Bellegrave Avenue

Bellegrave Avenue streetscape shall include the following:

- A 5 foot wide lineal sidewalk and a 7 foot wide landscaped parkway along north side of the street.
- A landscape easement (neighborhood edge) of 35' taken from face of curb to perimeter wall on both sides of the street.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in the Conceptual Landscape Master Plan, Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 33, "Bellegrave Avenue" section below for streetscape illustration.
- Additional landscaping requirements for well sites along Bellegrave Avenue may include: landscape screening, earth berming or combination of both to screen undesirable views from public.

8.12.4 Mill Creek Avenue

Mill Creek Avenue streetscape shall include the following:

- A 12 foot wide landscaped parkway on the west with an additional 23' landscape easement include a single row of street trees (24" Box min.) along both sides of the street. The east side of Mill Creek Avenue includes a 12 foot wide landscaped parkway with an additional 50' Southern California Edison (SCE) easement taken from back of improved street right-of-way.
- Provide drought tolerant large shrub (max. 15') and drought tolerant landscaping within the SCE easement.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 34, "Mill Creek Avenue" and Exhibit 35 "Mill Creek Avenue at the SCE Corridor" for streetscape illustration."

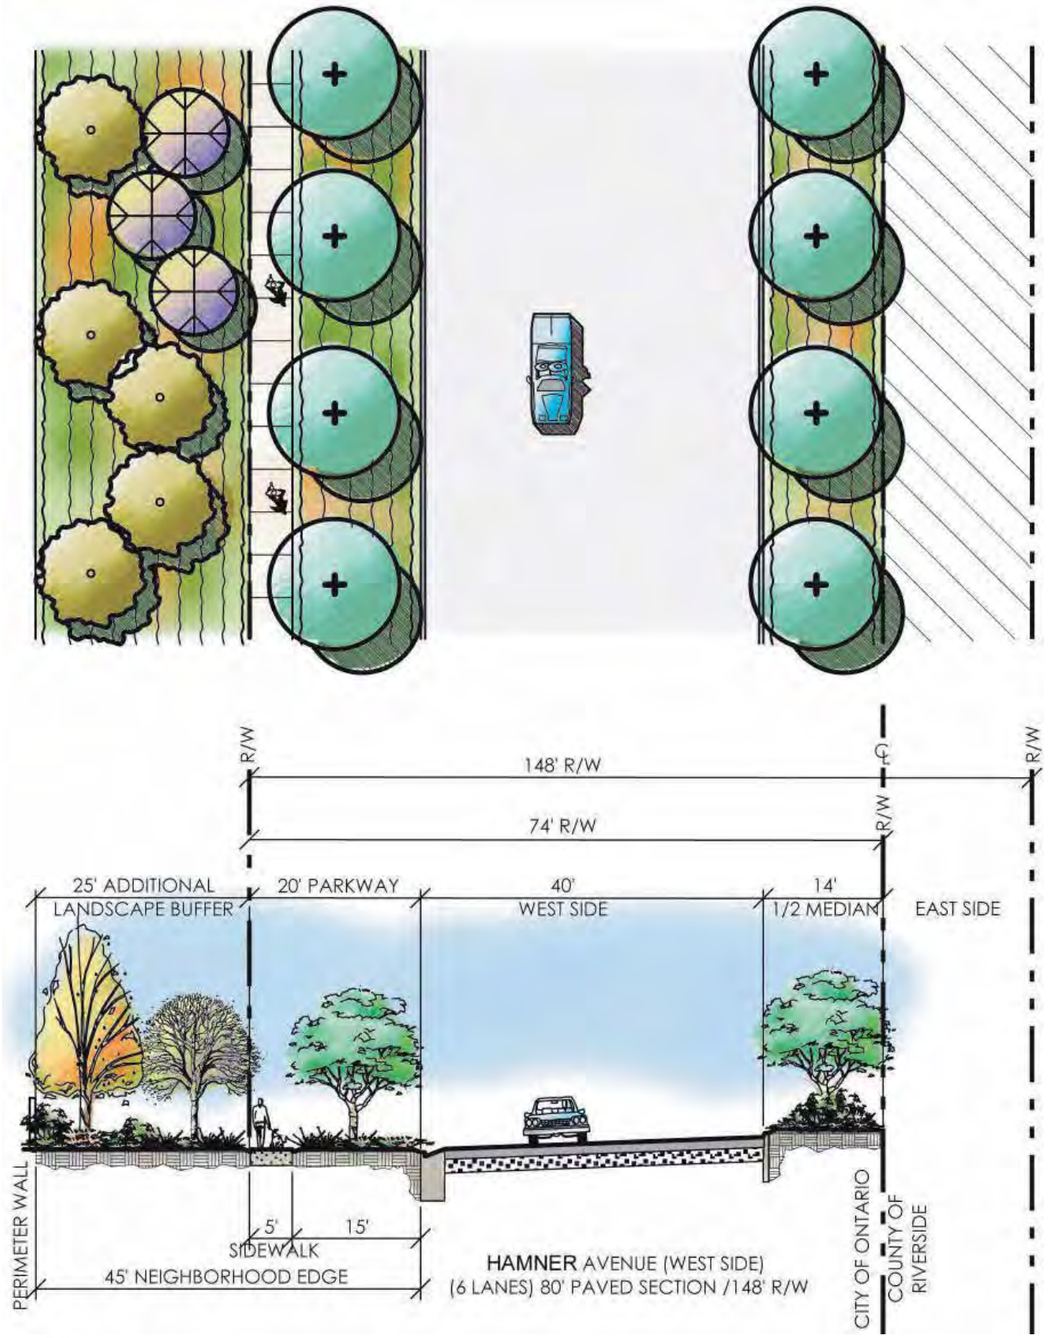

EXHIBIT 32
~~Milliken~~ Hamner Avenue

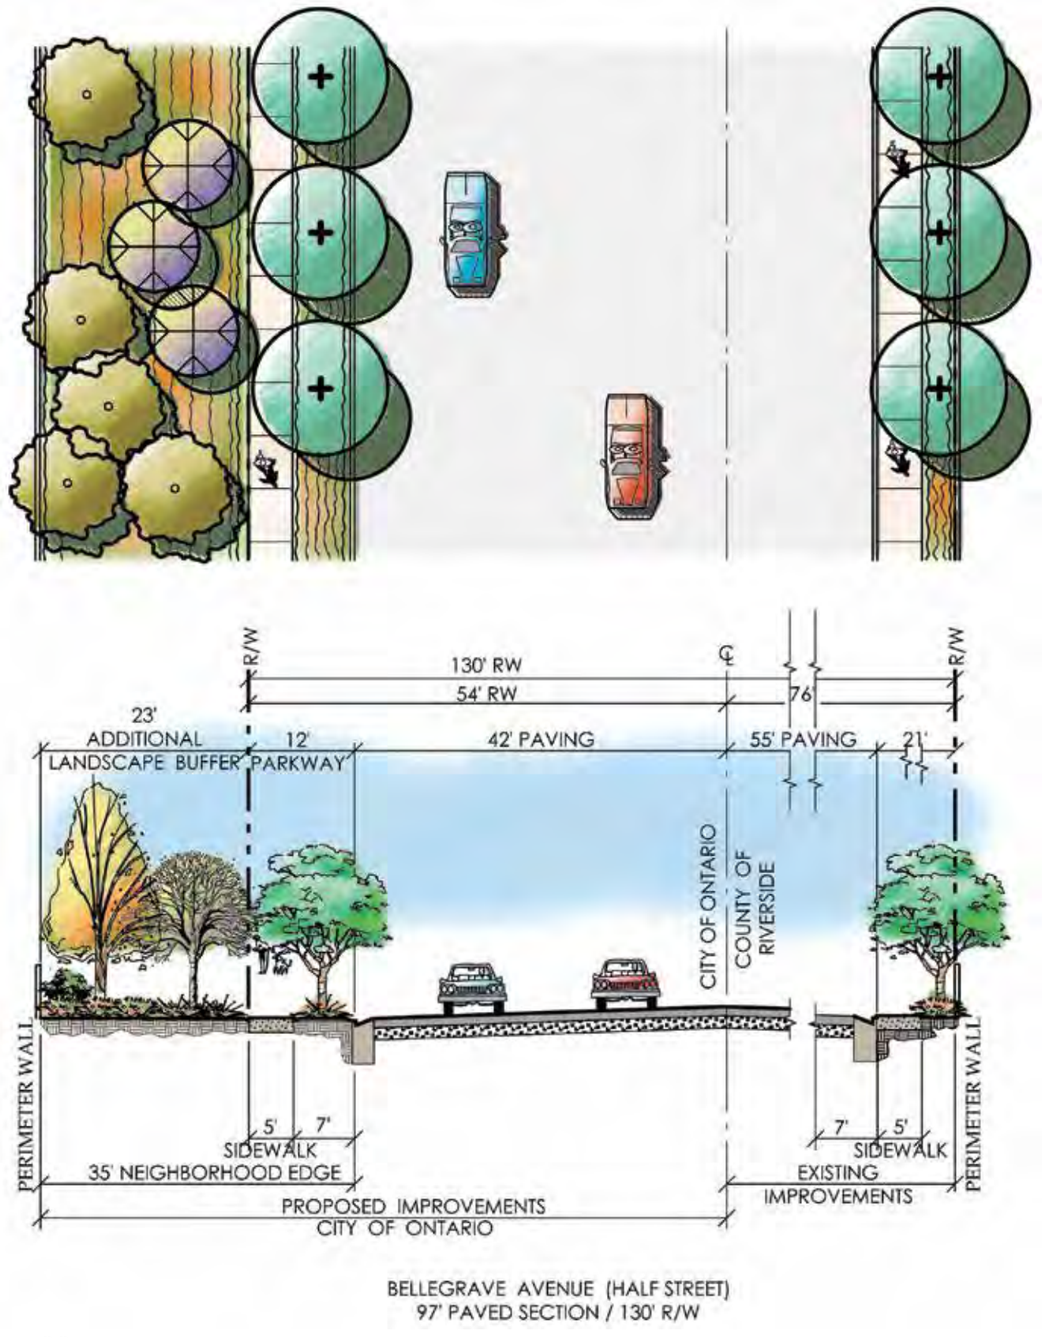

Exhibit 33
Bellegrave Avenue

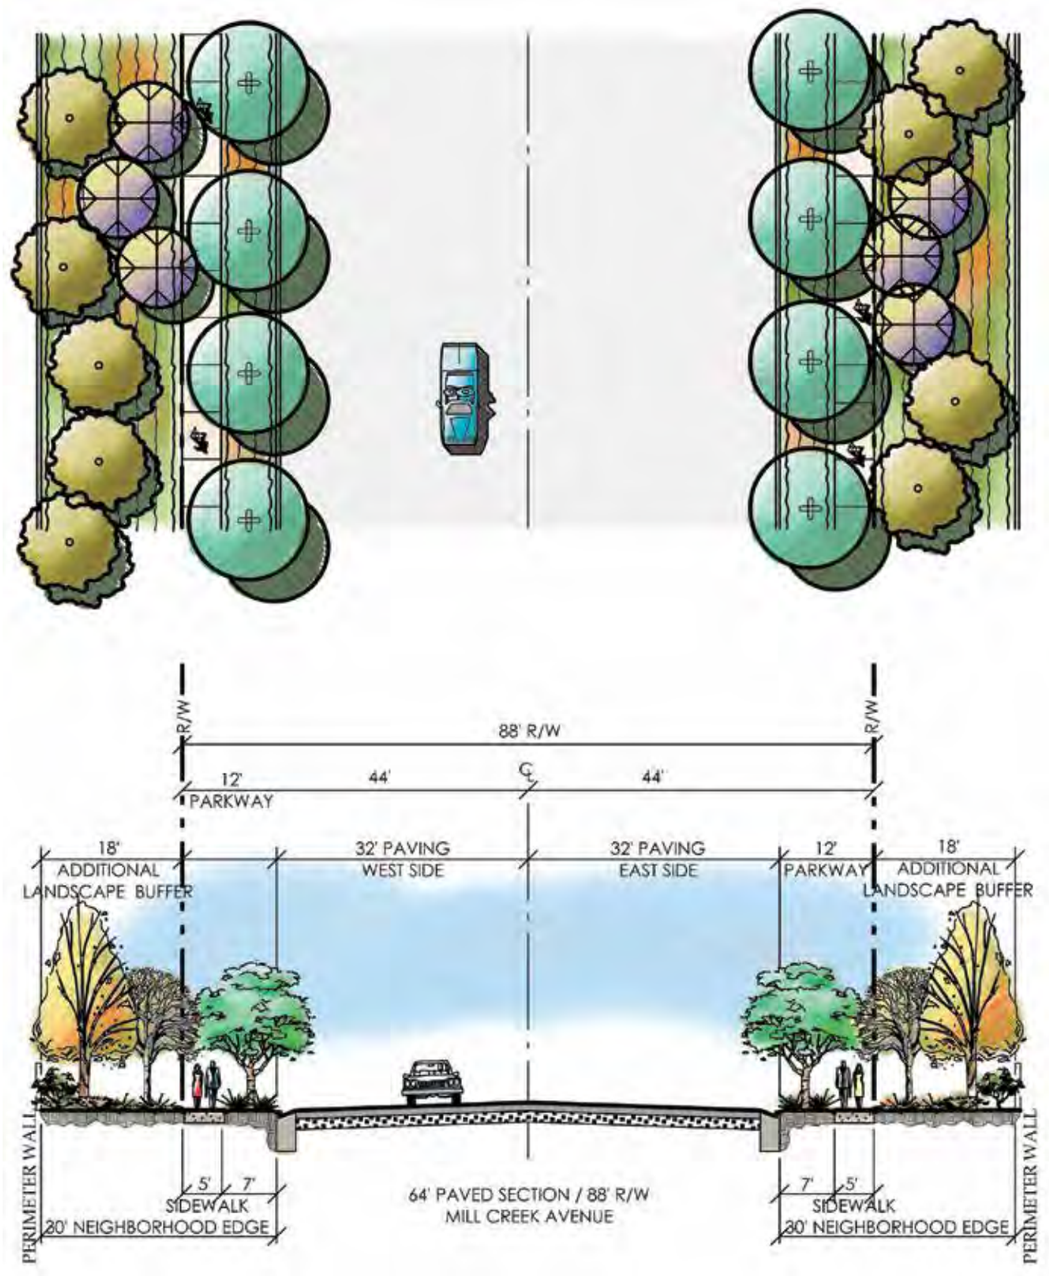

Exhibit 34
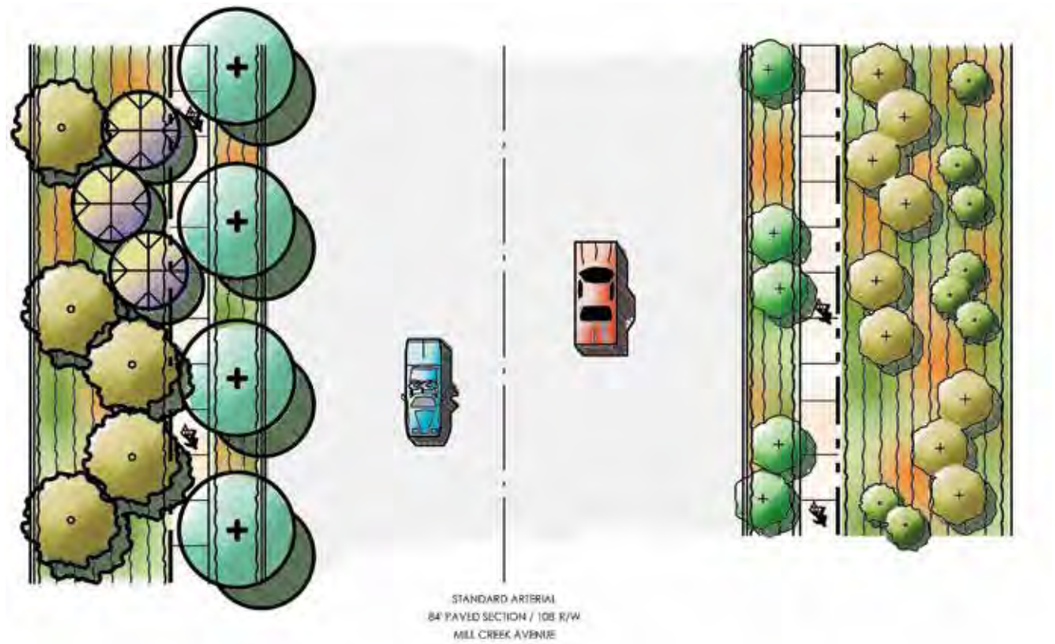
Mill Creek Avenue



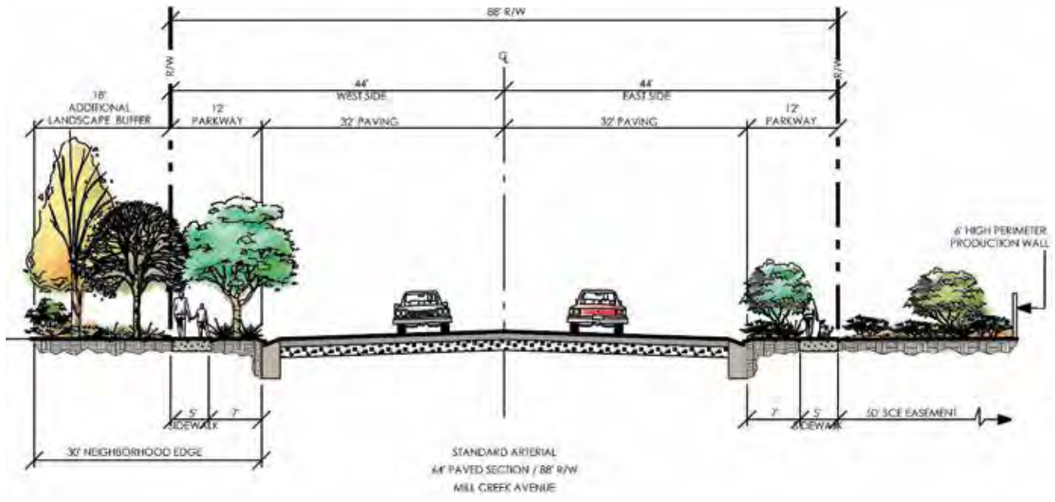


Exhibit 35
Mill Creek Avenue at the SCE Corridor

8.12.5 Interior Streetscape Design

Streetscape design within the interior of the Ontario Esperanza Specific Plan community shall be consistent in character with the perimeter streetscapes and should help to promote pedestrian circulation into the "Community Core."

Where interior streetscapes interface with neighborhood/mini parks and open space, special consideration should be taken to integrate pedestrian circulation into these areas via a streetside pedestrian system that links city sidewalks to active walking trails and open space uses. This is especially important within the multi-family/high density residential planning areas.

Two interior roadways bring residents into the "Community Core," Eucalyptus Avenue, running East/West, and "Street A" that intersects with Eucalyptus Avenue, running North/South.

8.12.6 Eucalyptus Avenue

Eucalyptus Avenue streetscape shall include the following:

- A 7 foot wide landscaped parkway with a single row of street trees (24" Box min.) along both sides of the street.
- A 5' wide concrete sidewalk with a 7' wide decomposed granite multi-purpose trail.
- A 7 foot wide Class II striped on-street bicycle trail within the right of way on both sides of the street.
- A landscape easement (neighborhood edge) of 35' taken from face of curb to perimeter wall on both sides of the street.
- Background trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 36, "Eucalyptus Avenue" section for streetscape illustration.

8.12.7 "A" Street

"A" Street streetscape shall include the following:

- A landscaped parkway (7' wide minimum) with a single row of street trees (24" box minimum) along both sides of the street.
- A 5' sidewalk separated from the street by a 7 foot wide landscaped parkway on both sides of the street.
- A landscaped buffer of 6' to 10' taken from the back of sidewalk to the perimeter wall on both sides of the street.
- Background trees and shrub masses planted in a series of layers (foreground, midground and background) to help define borders and plant groupings while combining interesting textures and colors.
- Monumentation as shown in Exhibit 30, "Conceptual Landscape Master Plan."
- Refer to Exhibit 37, "A Street" section for streetscape illustration.

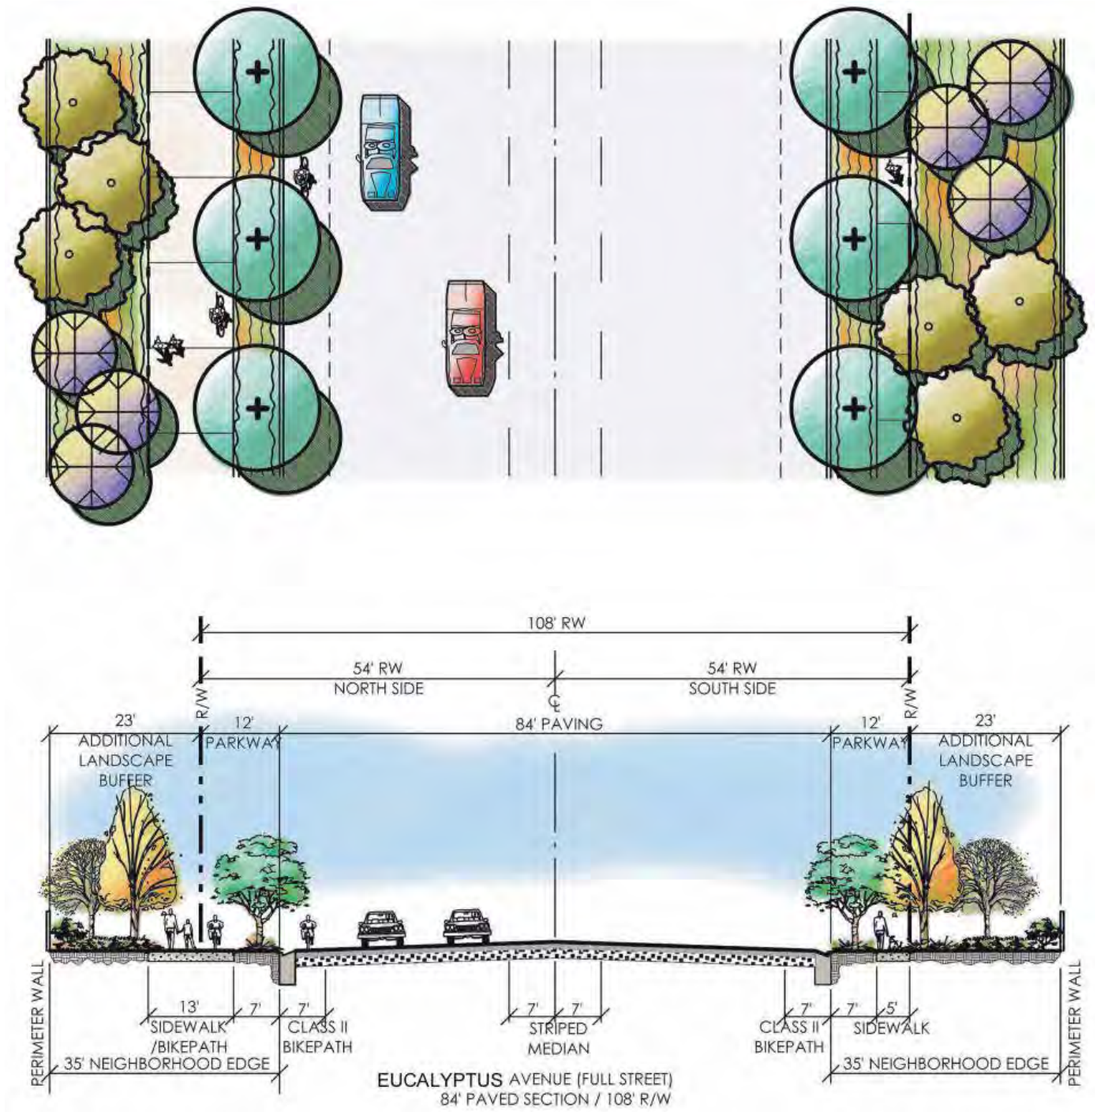

Exhibit 36
Eucalyptus Avenue

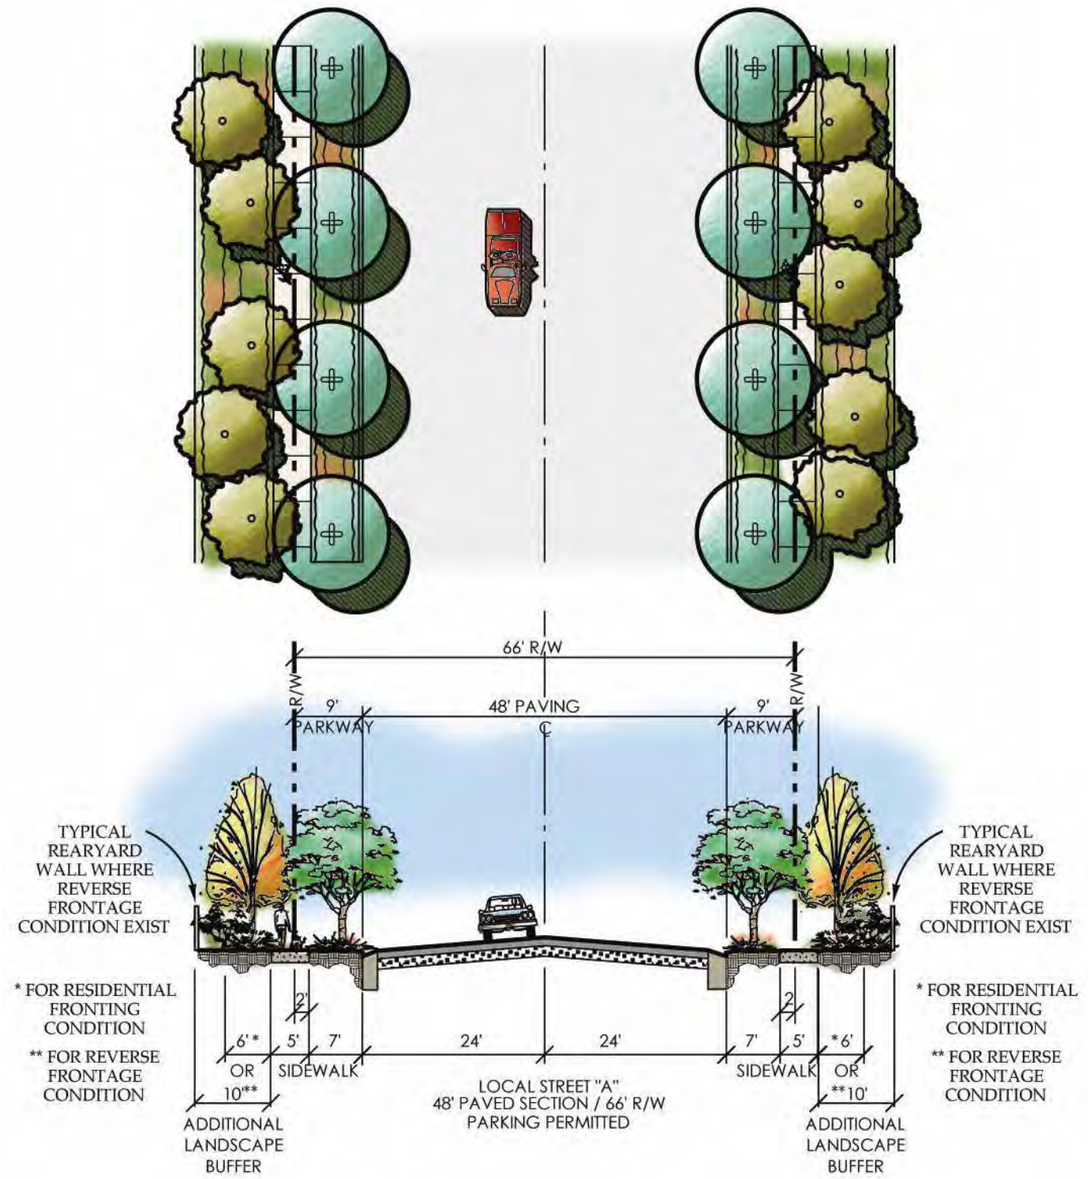

Exhibit 37
"A" Street

8.12.8 Local Streets, Private Alleys, and Private Neighborhood Streets

Local Streets

Local Street streetscapes shall include the following:

- A landscaped parkway (7' wide minimum) with a single row of street trees, 24" box minimum, along both sides of the street.
- A 5' wide sidewalk on both sides of the street.
- A 5' wide minimum planter area from sideyard wall to back of sidewalk along reverse frontage conditions.
- Refer to Exhibit 38, "Local Street and Cul-de-Sac" for streetscape illustration.

Private Neighborhood Streets

Private Neighborhood streets shall include the following:

- A landscaped parkway (7' wide minimum) with a single row of street trees, 24" box minimum, along both sides of the street.
- A 4' wide sidewalk on both sides of the street.
- A 7' wide minimum planter area from sideyard wall to back of sidewalk along reverse frontage conditions.
- Refer to Exhibit 39, "Private Neighborhood Street Section" for streetscape illustration.

Private Alleys

Private Alleys shall include a 5' wide landscaped area on both sides of the alley when the paved area is a maximum of 20' in width. Landscaping will be provided as appropriate in areas of less than 5' in width depending upon the final design of the private alley. Refer to Exhibit 40, "Private Alleys" for illustration.

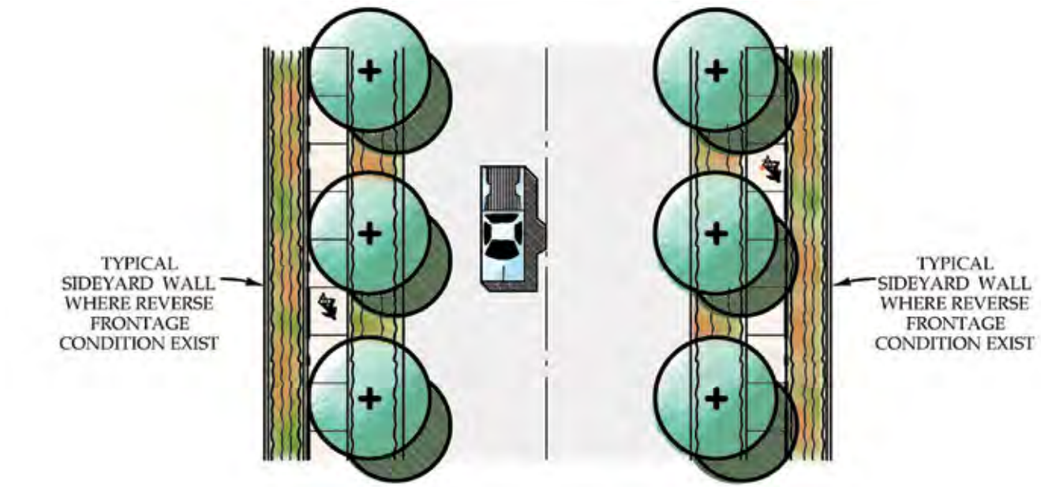

EXHIBIT 38
Local Street and Cul-de-Sac

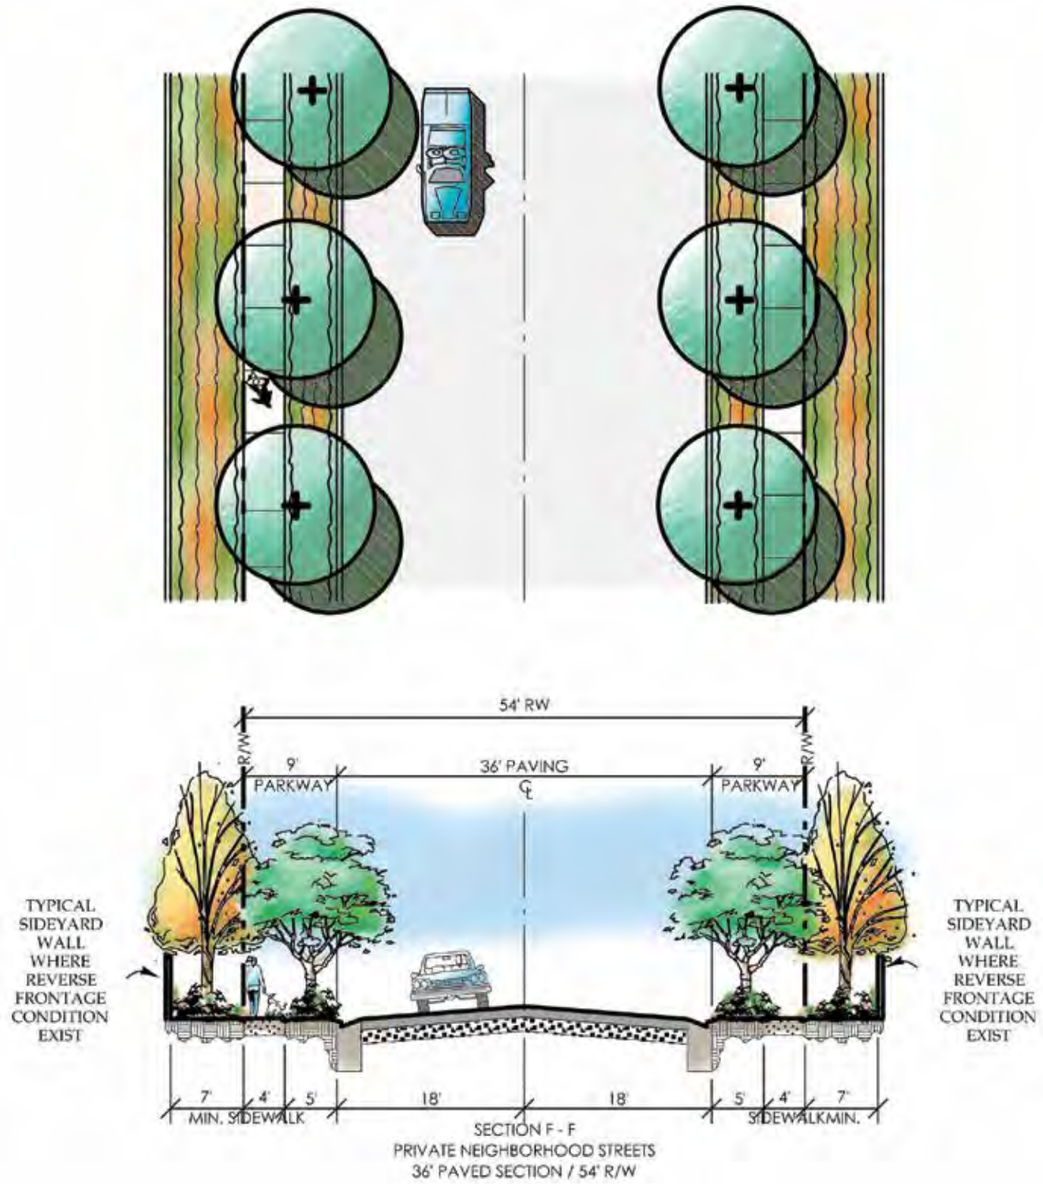

Exhibit 39
Private Neighborhood Street Section

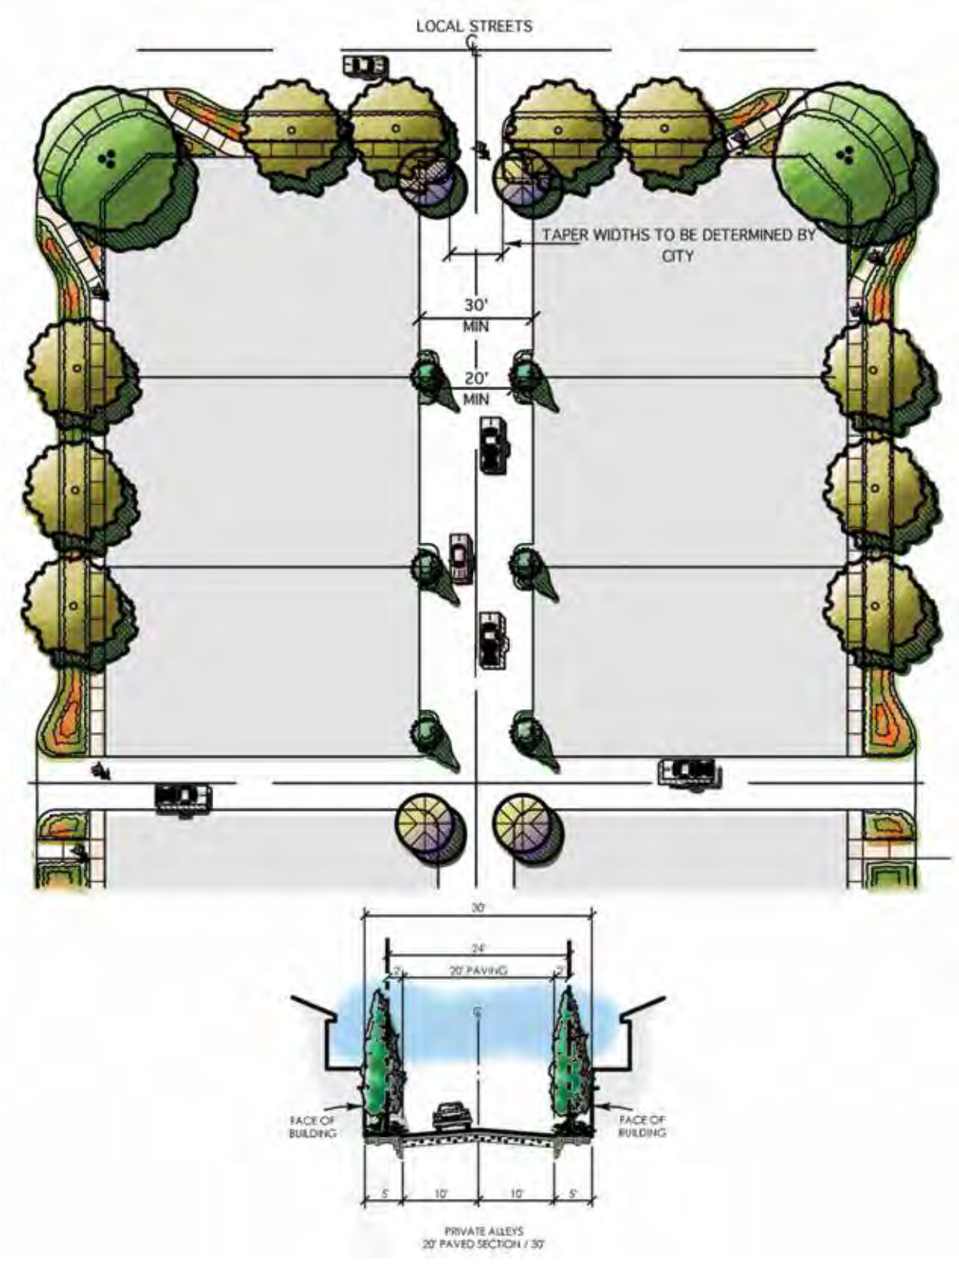

Exhibit 40
Private Alleys

8.13 City of Ontario "Gateway" Monument

At the corner of Hamner Avenue and Bellegrave Avenue, a city "Gateway" monument will be located. Special consideration should be made to integrate the perimeter landscaping along Hamner and Bellegrave Avenue into the final monument design and landscape character. The City of Ontario is currently developing the "Gateway" monument program for the Ontario Ranch. Additional coordination with the City of Ontario will be needed prior to developing this area.

8.14 Entries and Monumentation

Monumentation occurs throughout the Ontario Esperanza Specific Plan community and is designed to establish a basic hierarchy for entering each area of the community. Along the perimeter edges there are several entry points into the community. At key entries a landscape and monumentation program will be utilized to help identify the community as well as convey a "welcoming" feeling for both vehicular and pedestrian traffic. Inspired by the local historical village of "Guasti," home of the Italian Vineyard Company, the project monuments for Ontario Esperanza embody some of the character of this Ontario icon, through the use of similar materials, architectural styles/detailing and landscaping.

Three basic monument treatments are used to set the hierarchy of the entries and monumentation: the Primary Community Entry and Monumentation, the Secondary Community Entry and Monumentation, and the Neighborhood Entry and Monumentation.

8.14.1 Primary Community Entry and Monumentation

The Primary Community Entry and Monumentation shall include the following:

- Freestanding curved monument walls at each corner with highlighted pedestrian portal.
- Identification field for potential sign lettering placement.
- Architectural concrete caps, trim, and bases to help delineate architectural detailing and veneer material used.
- Use of "real" veneer materials instead faux concrete veneers.
- Use of large specimen native trees to anchor each side of entry drive at site entry.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.
- Handicapped ramps designed to City standards.
- Refer to Exhibit 30, "Conceptual Landscape Master Plan" and Exhibits 41-43, "Primary Community Entry and Monumentation" and, "Primary Community Entry and Monumentation – Hamner Avenue, and, "Primary Community Entry and Monumentation – Mill Creek Avenue" for detailed conceptual illustration.

8.14.2 Secondary Community Entry and Monumentation

The Secondary Community Entry and Monumentation shall include the following:

- Freestanding curved walls at each corner with anchoring entry pilaster.
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall.
- Architectural concrete caps, trim, and bases to help delineate architectural detailing and veneer material used
- Enhancement of corner cut wall and use of accent pilasters to balance each side.
- Use of "real" veneer materials instead faux concrete veneers.
- Use of large specimen native trees to anchor each side of entry drive at site entry.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.
- Handicapped ramps designed to City standards.
- Refer to Exhibit 30, "Conceptual Landscape Master Plan" and Exhibit 44, "Secondary Community Entry and Monumentation Elevation/Plan" for detailed conceptual illustration.

8.14.3 Neighborhood Entry and Monumentation

Neighborhood entries and monumentation should occur on interior corner entries within the Ontario Esperanza Specific Plan Community. These entries should be used to help continue the landscape character theme to the "core" of the community. Each neighborhood built within the project will have the opportunity to identify their individual project character while providing the basic design features of the other monuments. Refer to The Neighborhood Entry and Monumentation shall include the following:

- Freestanding large entry pilaster set within the landscaped parkway. This pilaster should embody the same character as that of the Primary Community Entry Monument portal, but is reduced in scale to create a "pedestrian gateway" into each neighborhood. Project identification plaque or icon can be located at this pilaster
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall.
- Architectural concrete caps, trim, and bases to help delineate architectural detailing and veneer material used.
- Enhancement of corner cut wall and use of accent pilasters to anchor each side.
- Use of "real" veneer materials instead faux concrete veneers.
- Seasonal perennial flowering to allow for seasonal flowering interest throughout the year.
- Enhanced pedestrian paving at street crossing and at monument location as approved by the City Engineer.
- Accent trees and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color.
- Accent lighting of landscape/monumentation.
- Handicapped ramps designed to City standards.
- Refer to Exhibit 30, "Conceptual Landscape Master Plan" and Exhibit 45, "Neighborhood Entry and Monumentation" for detailed conceptual illustration.

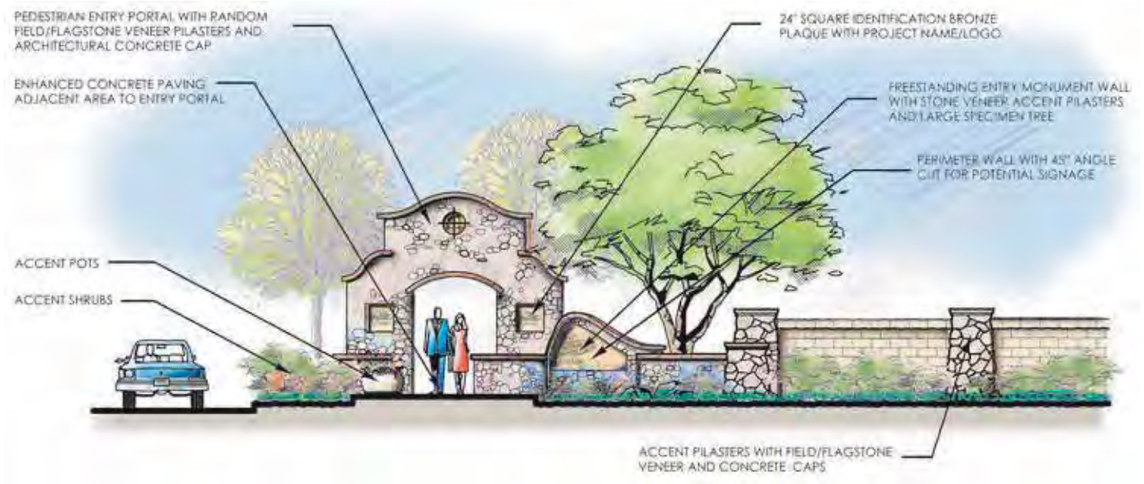

EXHIBIT 41

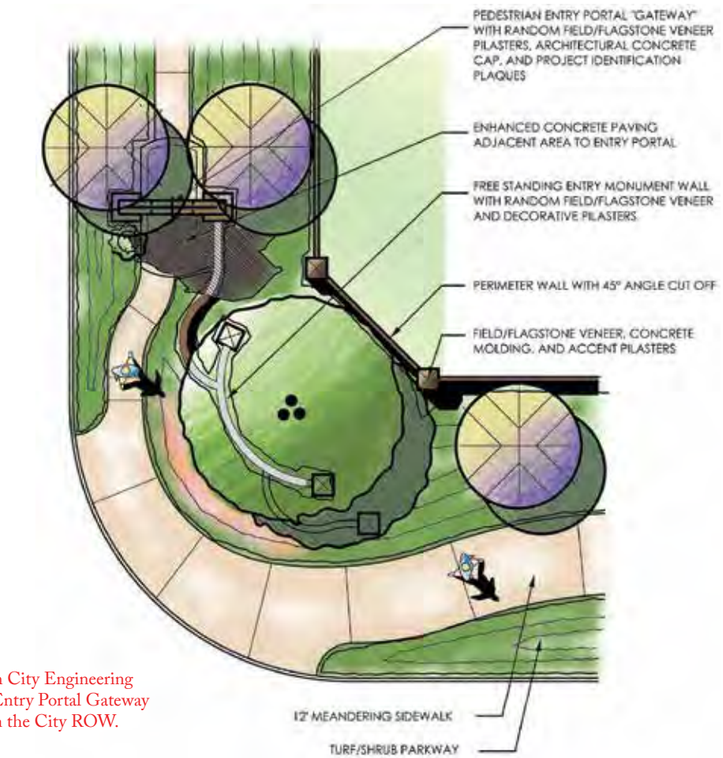
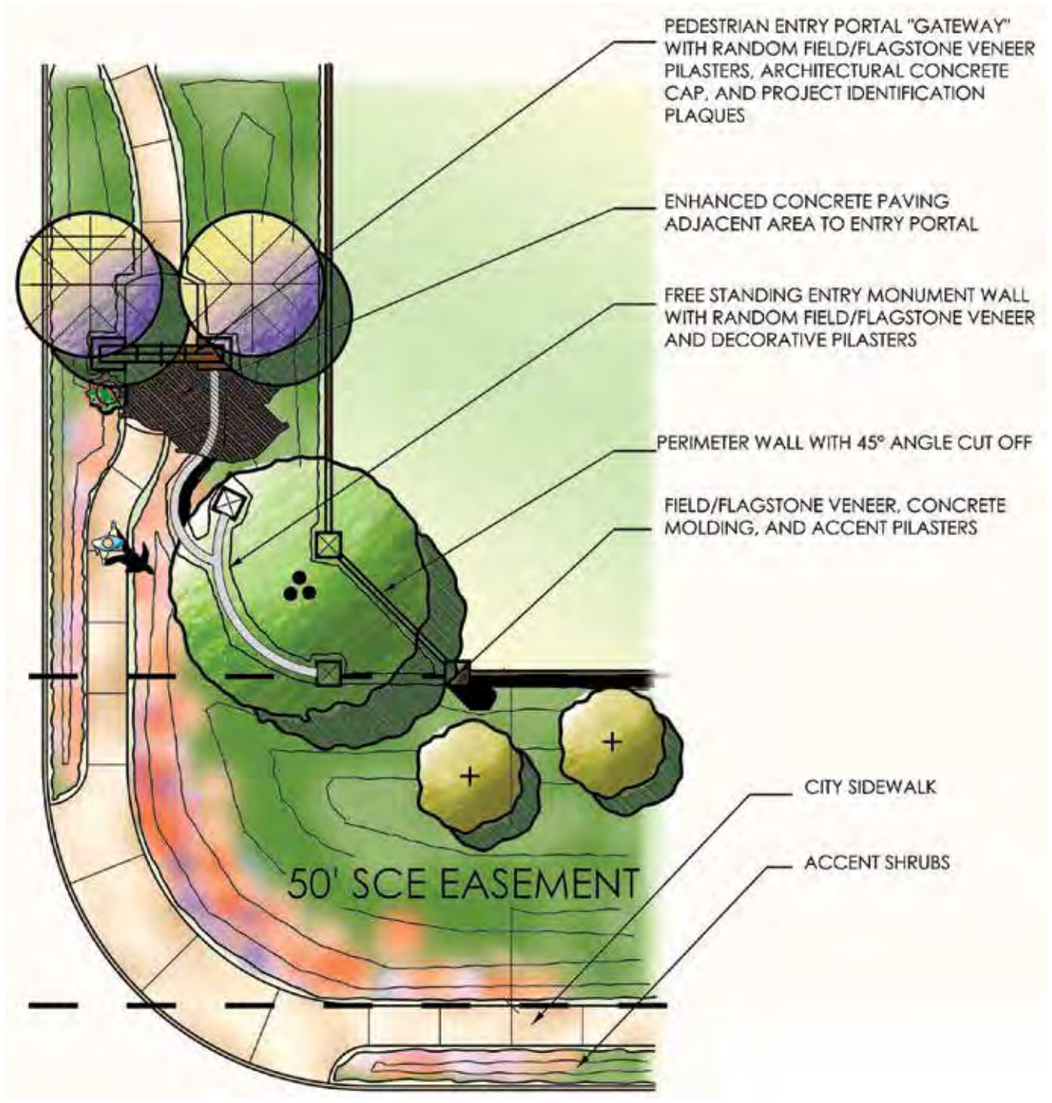
Primary Community Entry and Monumentation



Developer to verify with City Engineering Development that the Entry Portal Gateway will be permitted within the City ROW.

EXHIBIT 42

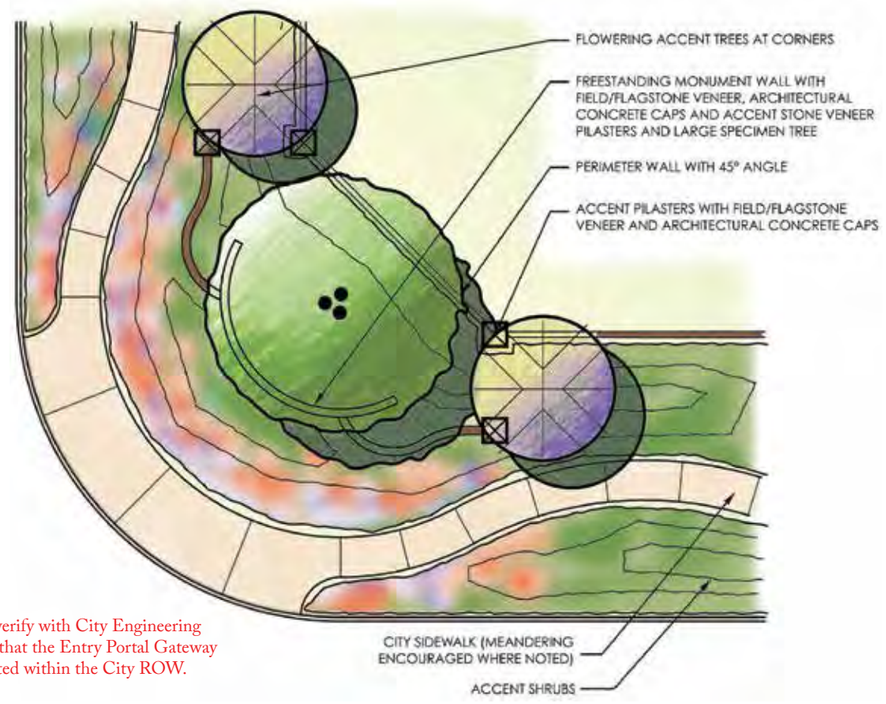
Primary Community Entry and Monumentation – Hamner Avenue



Developer to verify with City Engineering Development that the Entry Portal Gateway will be permitted within the City ROW.

Exhibit 43

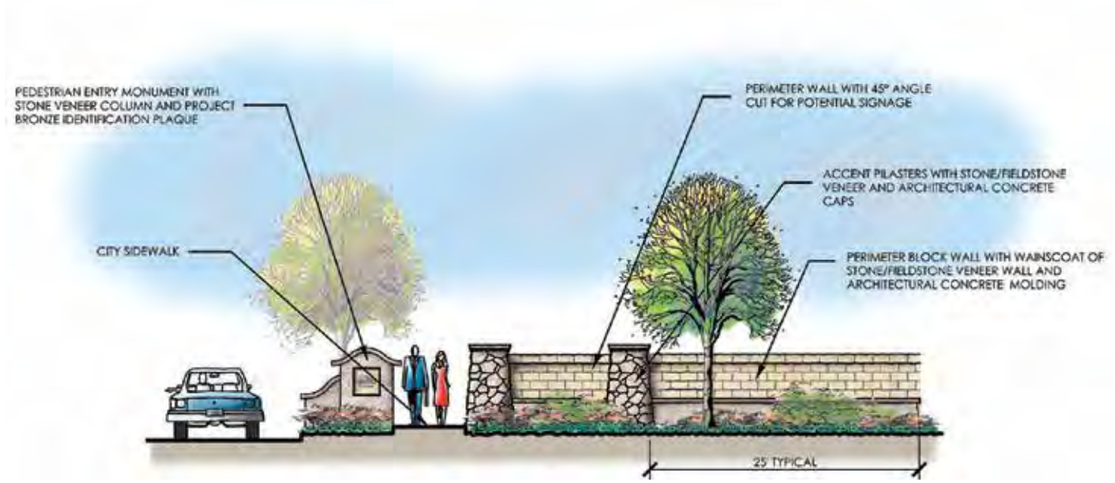
Primary Community Entry and Monumentation – Mill Creek Avenue

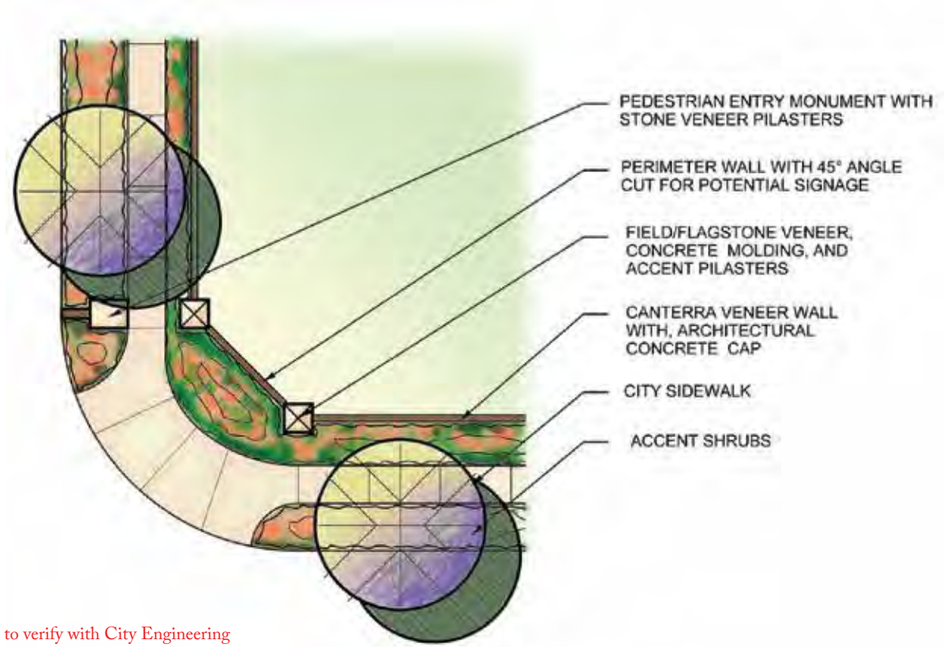


Developer to verify with City Engineering Development that the Entry Portal Gateway will be permitted within the City ROW.

Exhibit 44

Secondary Community Entry and Monumentation Elevation/Plan





Developer to verify with City Engineering Development that the Entry Portal Gateway will be permitted within the City ROW.

Exhibit 45

Neighborhood Entry and Monumentation Elevation/Plan

8.15 Parks and Open Space

The Ontario Esperanza Specific Plan Community will have a central "Community Core" that centers on the Neighborhood Park and the School. Exterior walkways and trails should lead to this centralized area. Exhibit 46, "Pedestrian Circulation Plan" illustrates the pedestrian accessibility and connectivity throughout the Esperanza Specific Plan area. Exhibits 47 through 50 illustrate the planning concepts for the Neighborhood Park and Mini-Parks planned for the Esperanza Specific Plan area.

- All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

8.15.1 The Neighborhood Park

Park 1, the Neighborhood Park, consists of the following:

- Parking - Parking shall be adequate to accommodate daily use of the park, and should be screened from public view using a combination of berming and landscaping. In addition, the parking configuration should take into consideration alignment with proposed neighborhood streets and provide a minimum of (15) fifteen to (20) twenty parking stalls (including one van accessible handicap stall/unloading area).
- Children's Tot Lot Play Area - A Tot Lot will be located within close proximity to the parking lot and Restroom Building. Play structures and equipment should be staged to allow for separated use based on age (2-5 yr. and 5-12 yr.). The Tot Lot should also follow ADA guidelines and provide access based off of equipment selected. Play areas and fall zones shall be constructed with synthetic surfacing per ADA standards with wood fiber ("Fibar") being available as an alternative in non-fall zone areas. Seating areas shall be located near the Tot Lot to provide areas for parental supervision.
- Open turf area/Barbecue Picnic Facilities - The Neighborhood Park should provide an open turf area and barbecue picnic facilities scattered throughout a looped concrete walkway system. Barbecue facilities (minimum of 50%) should be located adjacent to the walkway system for ADA accessibility; the remaining percentage set in open turf areas. Each barbecue picnic facility shall provide a picnic table, freestanding barbecue, and trash receptacle. These barbecue facilities can be placed on concrete or any other ADA acceptable surfacing. The design of the Neighborhood Park open space should take into account pedestrian circulation and the linkage to the two adjacent roads as well as the surrounding community.
- Sports Fields for unorganized play – The open space turf area should be arranged to accommodate two baseball/softball fields and a soccer field overlay. Sports lighting should be discouraged at the park. Wherever feasible a minimum distance of 20 feet should be provided between streets and play areas. Sports fields will be improved in accordance with the City's Parks and Maintenance Department requirements.
- Landscaping – Landscaping within the Neighborhood Park shall harmonize with the surrounding streetscapes. Large specimen trees should be used within the open turf areas to help provide shade and screening of unwanted views. Accent trees should also be used at pedestrian entries and around the Tot Lot for color and seasonal interest. The park shall be irrigated with reclaimed water by an automated system per the City Standard Specifications for irrigation systems.
- Lighting – Security walkway lighting shall be provided in accordance with City requirements and the design guidelines contained herein.

- Restroom Building – A restroom building shall be located adjacent to the tot lot in clear view of the public streets surrounding the park. The building should be designed to provide separate restroom facilities for both sexes and shall conform to ADA design guidelines. Additional provisions for a storage room for the City of Ontario maintenance personnel shall also be designed (all designs shall be submitted to the City of Ontario and County Health Department for approval).
- Park monumentation/signage and a lockable trash enclosure area.
- Refer to Exhibit 47, "Neighborhood Park" for detailed conceptual illustrations.

8.15.2 Mini Parks and Pedestrian Trails

Pedestrian circulation is highly encouraged within the Ontario Esperanza Specific Plan Community. Landscape easements are provided along major roadways and are encouraged within the neighborhood communities.

- Interior walkways should be designed to provide connections to adjacent neighborhoods as well as linking the Neighborhood Park and School to dedicated neighborhood edge treatments and enhanced landscaped areas.
- Exhibit 47, shows a Neighborhood Park example (5 Acre)."
- Enhanced paving at pedestrian connections where pedestrian circulation crosses roadways.
- Paseos should provide strong connections to "Community Core" (~~school~~/5 AC neighborhood park).
- Connection of neighborhood pocket parks to community. The pocket parks are intended to provide minimal amenities, and should designed with strong neighborhood "eyes-on" approach. Pocket Parks should range between 3/4 – 1 acre in size.

Mini parks for children's play areas may contain the following amenities:

- Paseo walkway (meandering encouraged/ ADA accessible).
- Landscaping - Landscaping shall harmonize with the surrounding streetscapes and utilize trees, shrubs, and groundcovers identified in the plant matrix.
- Lighting – Pole mounted fixtures spaced at appropriate intervals for safety and security.
- Open turf play area

The Mini Parks might contain one or more of the following amenities:

- Barbecue Picnic Facilities
- Basketball/Volleyball Courts
- Tot Lots
- Rose Garden
- Covered Picnic Structures
- Seatwalls/benches
- Community Garden
- Refer to Exhibits 48 through 51 for detailed conceptual illustrations.

Mini Park Example (Park 4)

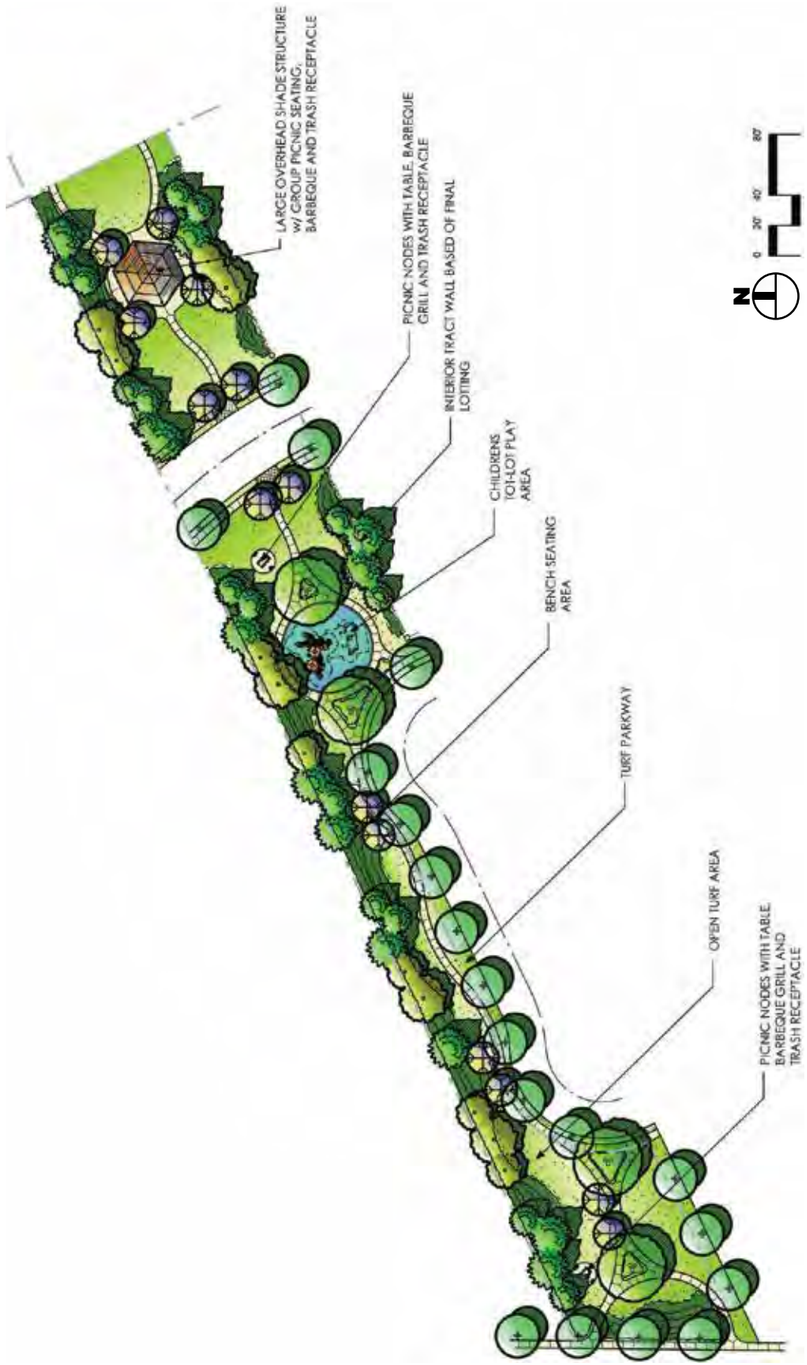

Exhibit 51
Mini Park Example (Park 5)

8.16 Community Walls and Fencing

Walls are a major component in achieving an overall community theme within the Ontario Esperanza Specific Plan. A strong cohesive appearance is achieved through the use of "community walls" and general overall wall guidelines as illustrated in Exhibit 52, "Master Walls and Fence Plan" and Exhibit 53, "Wall and Fence Details."

All walls that adjoin community street scenes (major streetscapes identified under Perimeter/ Interior Streetscapes) shall be deemed "community walls." All wall and fencing designs and layout shall be approved by the City of Ontario prior to construction.

8.16.1 Community Walls

Community walls shall be decorative in nature. Community walls shall incorporate the use of pilasters of a design consistent with the materials of the community walls. The location and spacing of pilasters shall be subject to Planning Department review and approval.

8.16.2 Solid Walls and Fencing

Solid walls shall be decorative. The use of vinyl fencing and wood fencing is prohibited. Reverse frontage walls and any wall return that is visible from public view, shall be constructed of split-face block or precision block that is veneered, burnished (using color other than common gray), plastered or stuccoed, and should complement color scheme dictated in Ontario Esperanza Specific Plan color palette. Decorative caps and the use of pilasters to help enhance the perimeter appeal of the walls are encouraged. Walls visible from the community streets may not be made of exposed or painted precision block or slumped block.

8.16.3 View Fencing

If applicable, view fences should be located in the rear yards of those properties abutting large slope areas where the adjacent property is a minimum of 15' above/below the house pad. These fences allow open views but not physical access; they shall be 5'-6" high and made of tubular steel or lexan glass panel construction. Areas where view fencing occurs will be subject to review by the City of Ontario. The use of tubular steel view fencing shall incorporate pilasters utilizing materials consistent with adjacent walls.

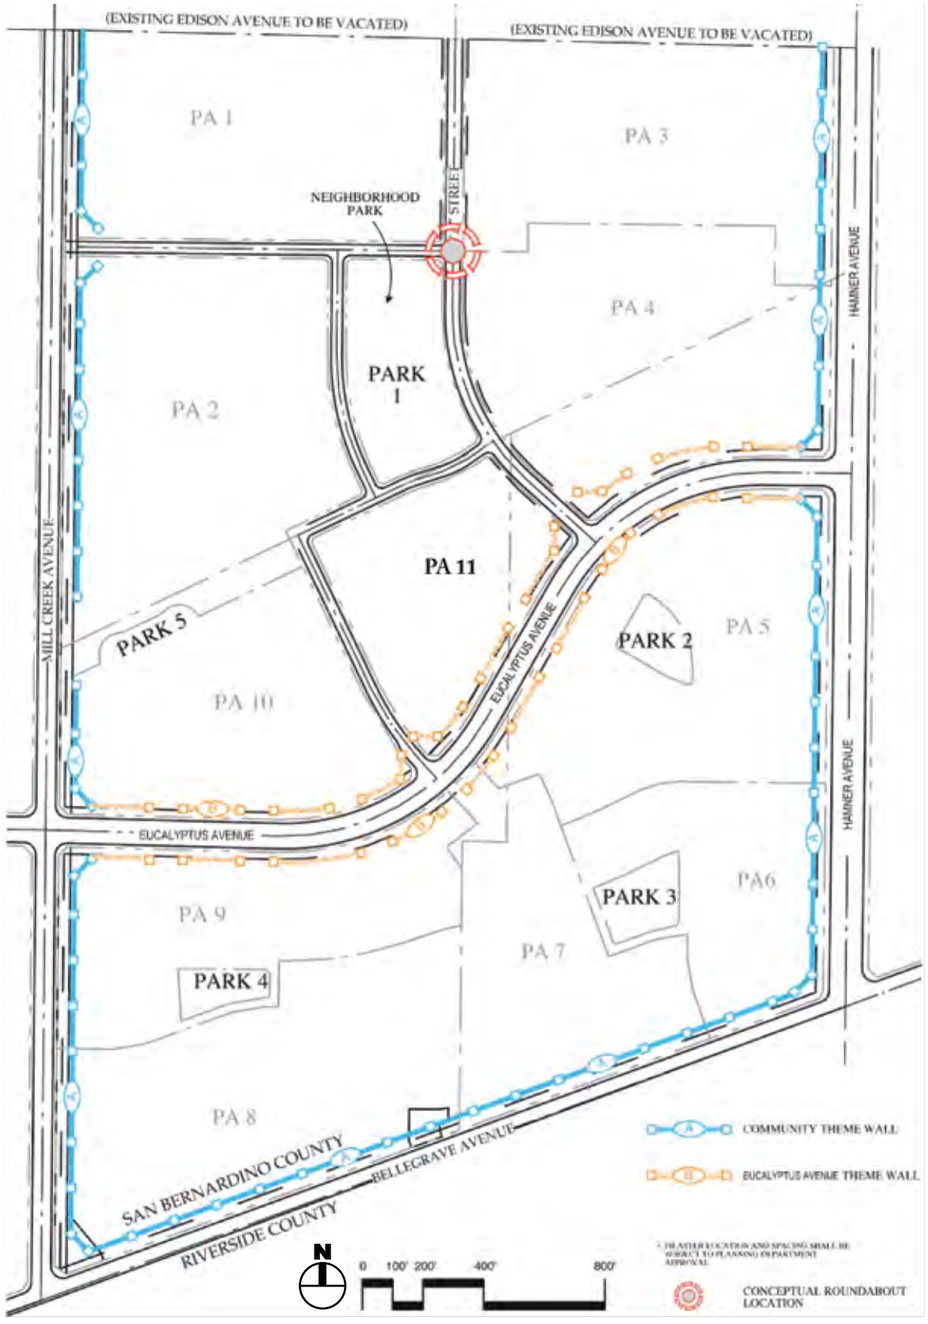

Exhibit 52
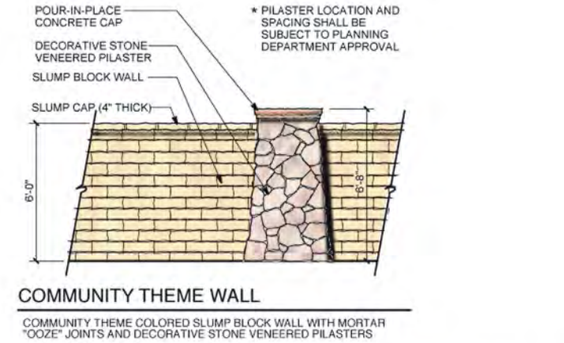
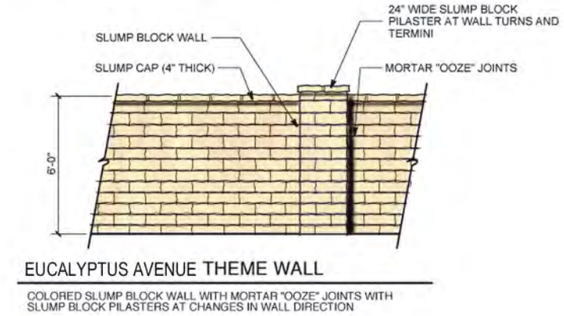
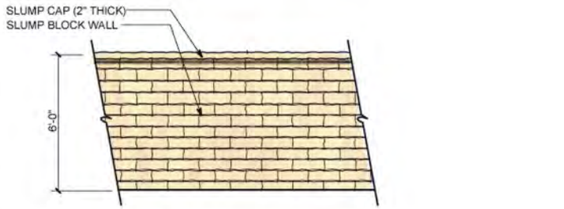
Master Walls and Fence Plan







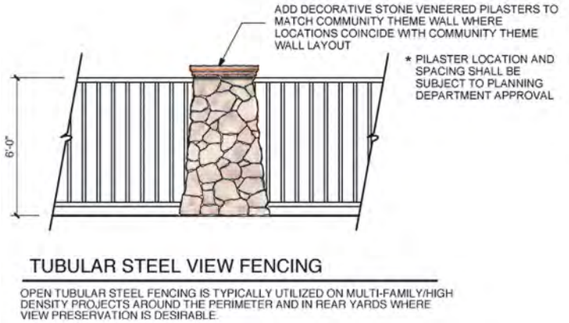


Exhibit 53
Wall and Fence Details

8.17 OUTDOOR LIGHTING

Lighting standards within the Ontario Esperanza community shall be consistent in style, color, and materials in order to maintain uniformity throughout. Lighting should be subtle, providing a soft wash of light over illuminated objects such as monumentation. Hierarchy shall be established by using a variety of lighting fixtures and illumination levels based off of lighting design intent. Lighting styles shall tie into architectural styles and provide sufficient illumination for the safety and well being of the community. Preservation of "Night-Sky" should be considered in lighting design layout and fixture selection. Use of "cutoff" or louvered lamps to preserve ambiance of "Night-Sky" is highly encouraged. Fixture locations should be designed so that light source is not visible by pedestrian or vehicular traffic. Frosted, louvered, or prismatic lens should be considered where decorative lighting fixtures are visible and part of the aesthetic lighting program. Accent lighting of landscape and monumentation shall be incorporated into the following areas:

8.17.1 Entry Monument Lighting:

Avoid intensely bright or "hot" lighting of monuments; rather, each should be lit to provide a soft wash of light across the monument signage. Specimen trees should be up-lit with several fixtures into the canopy to avoid creating dark sides of the trees.

8.17.2 Neighborhood Park/ Mini Parks/ Walkway Lighting

Lighting of the walkways, tot lots, restroom facility, and parking areas within the Parks should be considered for safety and security. All planned parking areas shall have a minimum maintained lighting level of one-foot candle (1 F.C.) or greater. The lighting shall be from sunset to sunrise and be operated by a photocell. The site plan shall be provided to the Police Department. It shall show all buildings, parking areas, walkways, detailed landscape areas and point-by-point photometry calculation of required light levels. Utilization of a traditional Globe/Acorn Post mounted light fixture should be considered for both the park open space areas as well as interior street lighting fixtures. Keeping with the character of traditional materials, (like those found in the "Model Colony" in Downtown Ontario) this will help to create a better sense of scale to the pedestrian. Fixtures shall be vandal resistant, not less than (8) eight feet from ground level. Luminaries of not less than (42") may be utilized to illuminate a walkway if adjacent landscaping is of a variety which does not mature higher than (2) two feet.

8.18 LANDSCAPE DESIGN

8.18.1 Public Landscapes

- Landscape plantings in public areas should reflect a commitment to both developing a "sense of place" and maintaining harmony with the Ontario Ranch.
- Community Facilities District (CFD) areas shall be separated with a 6" by 6" concrete mow strip when adjacent to private property.
- A landscape architect licensed in California shall be retained to prepare planting and irrigation plans for all public areas. Arrangement of plants should incorporate the concepts of mass planting; plants should be placed to allow them to grow to their natural sizes and forms, and sheared hedges should be kept to a minimum.

The plant matrix at the end of this section offers a suggested plant palette for Ontario Esperanza; while it is by no means all-inclusive, plantings in public areas should draw primarily from this palette for visual community continuity.

8.18.2 Front Yard Landscapes

Plantings in front yards may vary substantially from the Ontario Esperanza palette, but should retain some of the character and style of the public plantings. ~~No more than 25% of the total square footage of any front yard shall be lawn~~ Turf shall not exceed 25% of the landscape area in residential front yards; the balance shall be composed of shrubs and groundcovers, with an emphasis on drought tolerant plant species. No more than ~~55%~~ 45% of the front yard area shall be hardscape. Turf areas shall be sized and shaped to optimize irrigation efficiency. If turf is used in isolated areas such as driveway strips, subsurface irrigation or microspray heads shall be required to avoid overspraying of these areas. Irregular shapes that cannot be irrigated should be avoided.

- Each single-family lot shall be provided with front yard landscaping and a permanent automatic irrigation system. At a minimum, a seeded turf lawn, appropriate shrubs and trees shall be provided as landscaping materials. A variety of typical landscape designs shall be provided for use on each lot within the subdivision.
- Multiple family residential product areas shall be provided with full landscape improvements throughout the development. At a minimum, a seeded turf lawn, appropriate shrubs and trees, and a permanent irrigation system shall be provided.
- Landscape and irrigation drawings for each development shall be submitted in conjunction with house construction plans. The plans shall be approved by the Planning Department and the Landscape Planning Division prior to the issuance of building permits.
- Areas of a lot or site which are not used for drive entries, parking, or approved outdoor uses shall be fully landscaped; all unpaved areas shall be landscaped; and all future development phase areas shall be hydroseeded.

8.18.3 Soil Testing

Soil samples shall be taken from several locations after the completion of rough grading operations, and a reputable soil-testing laboratory shall perform an agronomic soils test. The test shall assess soil fertility needs for water-wise California native and Mediterranean plant types. No planting shall take place until the soil has been properly prepared based on the recommendations of the soils testing laboratory. Organic soils amendments shall be incorporated as necessary to achieve a recommended percolation rate of one inch per hour.

8.18.4 Slope Landscaping

All manufactured and cut/fill slopes which exceed 3' in height shall be planted with an effective mixture of groundcover, shrubs, trees, and include jute matting. Such slopes shall also be irrigated as necessary to ensure germination and establishment. Landscape slopes shall not exceed 3:1 or greater and shall include the installation of jute matting. Where 2:1 landscape slopes are unavoidable, erosion blankets shall be installed with a 3-year durability.

8.18.5 Interior Slopes: Residential Interior

- Interior slopes may be more ornamental in character than exterior slopes. They may have a somewhat broader range of plant materials than exterior slopes, but should still be chosen primarily from the Ontario Esperanza plant palette and are subject to the same fuel modification restrictions.
- All manufactured and cut/fill slopes which exceed 3' in height shall be planted with an effective mixture of groundcover, shrubs, and trees. Such slopes shall also be irrigated as necessary to ensure germination and establishment.

8.18.6 Streetscape Landscaping

Streetscape Development Standards

- Turf grass ~~shall only be used in areas with street side parking and shall be located adjacent to the sidewalk or curb line.~~ is only permitted within streetscapes where streetside parking is identified and recycled water is available.
- All new plantings within the Ontario Esperanza planned community shall draw substantially from the Ontario Esperanza Plant List included in this document.
- All streetscape landscaping within the Ontario Esperanza planned community will be implemented by the Developer in accordance with this Specific Plan.
- The Developer shall install all primary and secondary improvements concurrently with the construction of the roadway on which they front. Neighborhood intersections shall be constructed as each neighborhood street is built.
- The Developer shall provide site inspection of all construction and installation of entries and intersections in accordance the City of Ontario requirements.

8.18.7 Irrigation Design

Irrigation for both public and private landscapes should be designed to be as water-efficient as possible. All irrigation systems shall have automatic controllers designed to properly water plant materials given the site's soil conditions, and irrigation systems for all public landscapes shall have automatic rain shut-off devices. Drip irrigation is not permitted with CFD landscape areas. Spray systems shall have low volume (gpm) matched-precipitation heads. All CFD areas are to be controlled with a central control irrigation system and all trees are to be irrigated utilizing a flush grade bubbler system on a separate valve. All CFD areas shall be designed to City Standard Specifications.

All irrigation products specified shall achieve an irrigation operational distribution uniformity of ~~70%~~ 65% or greater in all turf areas and ~~80%~~ in all other landscaped areas. Turf areas shall be irrigated with equipment that has a precipitation rate of one inch or less per hour as specified by the manufacturer. Stream rotator heads or low volume spray heads are acceptable for turf areas. Use of standard spray heads shall be avoided. Non turf shrub areas shall be irrigated with low volume micro spray or point application devices, where manufacturer's specification indicates output measured and expressed in gallons per hour.

Plant Matrix - Shrubs

Section 9. General Plan Consistency

California Government Code (Title 7, Division 1, Section 3, Article 8, Section 65440- 65457) permits the adoption and administration of Specific Plans as an implementation tool for elements contained within a jurisdiction's local General Plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan.

The Esperanza Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario General Plan. The "~~City of Ontario New Model Colony~~ Ontario Ranch Specific Plan Policy Matrix" which follows, describes the manner in which the Specific Plan complies with the General Plan.

THIS PAGE WAS INTENTIONALLY LEFT BLANK.

The Ontario Plan 2050
Specific Plan Policy Matrix

Following are policies from the Ontario Plan 2050. The Ontario Plan establishes the direction and vision for the City of Ontario and provides a single comprehensive document to shape its future. The Ontario Plan provides for policies to accommodate change over its 30 year lifespan. The Ontario Plan consists of a six (6) part Component Framework: ***1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback****. The following matrix is intended to determine the adequacy of the proposed Specific Plan in meeting the polices of the Ontario Plan. The checklist shall be completed and submitted with the Specific Plan application. Check if the Specific Plan fully complies or partially complies with each respective policy, or if not applicable.*

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LAND USE ELEMENT					
LU-1 Balance					
Goal	**A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.**				
LU-1.1	**Strategic Growth.** We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	X		4 and 7	
Comments:					
LU-1.2	**Sustainable Community Strategy.** We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.	X		7	
Comments:					
LU-1.3	**Adequate Capacity.** We require adequate infrastructure and services for all development.	X		5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-1.4	**Multimodal Mobility.** We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities.	X		5	
Comments:					
LU-1.5	**Jobs-Housing Balance.** We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.	X		4 and 7	
Comments:					
LU-1.6	**Complete Community.** We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	X		4 and 7	
Comments:					
LU-1.7	**Revenues and Costs.** We require future amendments to our Land Use Plan to be accompanied by analyses of fiscal impacts.	X		7	
Comments:					
LU-2 Compatibility					
Goal	**Compatibility between a wide range of uses and resultant urban patterns and forms.**				
LU-2.1	**Land Use Decisions.** We minimize adverse impacts on adjacent properties when considering land use and zoning requests.	X		3 and 4	
Comments:					
LU-2.2	**Buffers.** We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.	X		4 and 5	
Comments:					
LU-2.3	**Hazardous Uses.** We regulate the development of industrial and similar uses that use, store, produce, or transport toxic substances, air emissions, other pollutants, or hazardous materials.				X
Comments:	*The General Plan does not designate the Esperanza Specific Plan for industrial land uses.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-2.4	**Regulation of Nuisances.** We regulate the location, concentration, and operation of potential nuisances.	X		4	
Comments:					
LU-2.5	**Regulation of Uses.** We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.	X		4	
Comments:					
LU-2.6	**Infrastructure Compatibility.** We require infrastructure to be aesthetically pleasing and in context with the community character.	X		4, 5 and 8	
Comments:					
LU-2.7	**Inter-jurisdictional Coordination.** We maintain an ongoing liaison with ONT, Caltrans, Public Utilities Commission, the railroads, and other agencies to help minimize impacts and improve the operations and aesthetics of their facilities.	X		7	
Comments:					
LU-2.8	**Transitional Areas.** We require development in transitional areas to protect the quality of life of current residents.	X		4	
Comments:					
LU-2.9	**Methane Gas Sites.** We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	X		4 and 7	
Comments:					
LU-2.10	**Sensitive Uses.** We monitor and share information with the community about stationary and non-stationary emission sources. We encourage siting and design of facilities to minimize health and safety risks on existing and proposed sensitive uses, especially in environmental justice areas.	X		7	
Comments:					
LU-2.11	**Context-Aware Transitions and Connections.** We require new development projects and land-planning efforts to provide context-aware and appropriate transitions and connections between existing and planned neighborhoods, blocks, sites, and buildings.	X		4	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-3 Flexibility					
Goal	**Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.**				
LU-3.1	**Development Standards.** We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes.	X		6 and 7	
Comments:					
LU-3.2	**Design Incentives.** We offer design incentives to help projects achieve the Vision.	X		6, 7 and 8	
Comments:					
LU-3.3	**Land Use Flexibility.** We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.	X		6 and 8	
Comments:					
LU-4 Phased Growth					
Goal	**Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.**				
LU-4.1	**Commitment to Vision.** We are committed to achieving our Vision but realize that it may take time and several interim steps to get there.	X		4 and 7	
Comments:					
LU-4.2	**Interim Development.** We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision.				X
Comments:	*The plan does not include the development of urban, mixed use, or transit-oriented Place Types.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-4.3	**Infrastructure Timing.** We require that the necessary infrastructure and services be in place prior to or concurrently with development.	X		4 and 5	
Comments:					
LU-4.4	**Shared Infrastructure.** We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.	X		4 and 5	
Comments:					
LU-5 Airport Planning					
Goal	**Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.**				
LU-5.1	**Coordination with Airport Authorities.** We collaborate with FAA, Caltrans Division of Aeronautics, airport owners, neighboring jurisdictions, and other shareholders in the preparation, update, and maintenance of airport-related plans.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.2	**Airport Planning Consistency.** We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans, and airport land use compatibility plans for ONT and Chino Airport.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.3	**Airport Impacts.** We work with agencies to maximize resources to mitigate the impacts and hazards related to airport operations – their homes.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.4	**ONT Growth Forecast.** We support and promote an ONT that accommodates 30 million annual passengers and 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.5	**Airport Compatibility Planning for ONT.** We create and maintain the Airport Land Use Compatibility Plan for ONT.				X
Comments:	*The plan is not within the airport impact zone.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
LU-5.6	**Alternative Process.** We fulfill our responsibilities and comply with state law with regard to the Alternative Process for proper airport land use compatibility planning.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.7	**ALUCP Consistency with Land Use Regulations.** We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.				X
Comments:	*The plan is not within the airport impact zone.*				
LU-5.8	**Chino Airport.** We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.				X
Comments:	*The plan is not within the airport impact zone.*				
HOUSING ELEMENT					
H-1 Neighborhoods & Housing					
Goal	**Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.**				
H-1.1	**Housing Rehabilitation.** We support the rehabilitation, maintenance, and improvement of single-family, multiple-family, and mobile homes through code compliance, removal of blight where necessary, and provision of rehabilitation assistance where feasible.	X		4 and 8	
Comments:					
H-1.2	**Neighborhood Conditions.** We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.	X		4 and 8	
Comments:					
H-1.3	**Community Amenities.** We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes and public safety for neighborhoods consistent with City master plans and neighborhood plans.	X		4 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-1.4	**Historical Preservation.** We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.	X		3	
Comments:					
H-1.5	**Neighborhood Identity.** We strengthen neighborhood identity through creating parks and recreational outlets, sponsoring neighborhood events, and encouraging resident participation in the planning and improvement of their neighborhoods.	X		4 and 8	
Comments:					
H-2 Housing Supply & Diversity					
Goal	**Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.**				
H-2.1	**Corridor Housing.** We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.	X		3 and 4	
Comments:					
H-2.2	**Historic Downtown.** We foster a vibrant historic downtown through facilitating a wide range of housing types and affordability levels for households of all ages, housing preferences, and income levels.				X
Comments:	*The plan does not include the development of a historic downtown.*				
H-2.3	**Ontario Airport Metro Center.** We foster a vibrant, urban, intense, and highly amenitized community in the Ontario Airport Metro Center Area through a mix of residential, entertainment, retail, and office-oriented uses.				X
Comments:	*The plan does not include the development of a Ontario airport metro center.*				
H-2.4	**Ontario Ranch.** We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	X		4 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-2.5	**Housing Design.** We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.	X		6 and 8	
Comments:					
H-2.6	**Infill Development.** We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.	X		3 and 4	
Comments:					
H-3 Governmental Regulations					
Goal	**A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.**				
H-3.1	**Incentives.** We maintain incentive programs that can be offered to projects that provide benefits to the community such as exceptional design quality, economic advantages, environmental sustainability, or other benefits that would otherwise be unrealized.	X		7	
Comments:					
H-3.2	**Flexible Standards.** We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.	X		6 and 8	
Comments:					
H-3.3	**Development Review.** We maintain a residential development review process that provides certainty and transparency for project stakeholders and the public, yet allows for the appropriate review to facilitate quality housing development.	X		4 and 7	
Comments:					
H-3.4	**Financial Incentives.** We consider financial incentives to facilitate and encourage the production, rehabilitation or improvement of housing, or provision of services where such activity furthers housing and community-wide goals.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-4 Housing Assistance					
Goal	**Increased opportunities for low- and moderate-income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities. Inclusive communities, racial equity, fair housing choice, and access to opportunity.**				
H-4.1	**Preservation of Affordable Apartments.** We strive to facilitate the preservation of the affordability of publicly assisted apartments for lower-income households through financial assistance, technical assistance, rehabilitation, and collaborative partnerships.				X
Comments:					
H-4.2	**Homeownership Opportunities.** We increase and expand homeownership rates for lower- and moderate-income households by offering financial assistance, low-interest loans, and educational resources, and by working in collaboration with partnerships.		X	4 and 7	
Comments:	*The plan provides a variety of homeowner ownership opportunities but does not include any affordable housing units.*				
H-4.3	**Rental Assistance.** We support the provision of rental assistance for individuals and families earning extremely low, very low, and low income with funding from the state and federal government.	X		7	
Comments:					
H-4.4	**Mixed-income Housing.** We encourage the integration of affordable housing in the Ontario Ranch, Ontario Airport Metro Center Area, and existing neighborhoods.	X		4 and 7	
Comments:					
H-4.5	**Collaborative Partnerships.** We support collaborative partnerships of nonprofit organizations, affordable housing developers, major employers, and for-profit developers to produce affordable housing.	X		7	
Comments:					
H-4.6	**Fair Housing.** We further fair housing by prohibiting discrimination in the housing market, lifting barriers that restrict access to housing, and providing education, support, and enforcement services to address discriminatory practices.	X		4 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
H-5 Special Needs					
Goal	**A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.**				
H-5.1	**Senior Housing.** We support the development of accessible and affordable senior housing and provide financial assistance for seniors to maintain and improve their homes.	X		4 and 7	
Comments:	*The plan does not include the development of senior housing.*				
H-5.2	**Family Housing.** We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.				X
Comments:					
H-5.3	**Disabled People.** We increase the supply of permanent, affordable, and accessible housing for people with disabilities, and provide assistance to allow them to maintain and improve their homes.				X
Comments:	*The plan meets all current ADA requirements but does not include any affordable housing units.*				
H-5.4	**Homeless People.** We partner with nonprofit partners to provide emergency shelters, transitional housing, permanent supportive housing, and supportive services for people who are homeless.				X
Comments:	*The plan does not include any emergency or homeless shelters.*				
H-5.5	**Supportive Services.** We financially support organizations, as feasible, that provide support services that meet the needs of those with special needs and further the greatest level of independence.				X
Comments:					
H-5.6	**Partnerships.** We collaborate with nonprofit organizations, private developers, employers, government agencies, and other interested parties to develop affordable housing and provide support services.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
PARKS & RECREATION ELEMENT					
PR-1 Planning & Design					
Goal	**A system of safe and accessible parks that meets the needs of the community.**				
PR-1.1	**Access to Parks.** In all new residential development areas, we strive to provide a park and/or recreational facility within walking distance (¼ mile) of every residence and prioritize the establishment of parks in environmental justice areas that do not have adequate access to parks.	X		4 and 8	
Comments:					
PR-1.2	**Adjacency to Schools.** We examine locating parks adjacent to school sites to promote joint-use opportunities.				X
Comments:	*The plan no longer includes plans to develop a school site.*				
PR-1.3	**Funding.** We shall seek outside, one-time sources of funding for capital improvements and reserve ongoing City funds primarily for operations and maintenance.	X		7	
Comments:					
PR-1.4	**Joint-use Opportunities.** In areas where there is a need but no City recreational facility, we explore joint-use opportunities. (e.g., school sites).	X		7	
Comments:					
PR-1.5	**Acreage Standard.** We strive to provide 5 acres of parkland (public and private) per 1,000 residents.	X		4 and 7	
Comments:					
PR-1.6	**Private Parks.** We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	X		4 and 7	
Comments:	*The Project developers will participate in the development impact fee program a s required for park fees.*				
PR-1.7	**Special Needs/Universal Design.** We attempt to provide recreational opportunities at parks for people of all ages and abilities.	X		7 and 8	
Comments:					
PR-1.8	**Renovation.** We examine renovating existing facilities prior to building replacement facilities.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
PR-1.9	**Phased Development. We require parks be built in new communities before a significant proportion of residents move in.**	X		4 and 7	
Comments:					
PR-1.10	**Master Plans for Individual Park Facilities.** We require an individual park master plan for parks in excess of 10 acres.				X
Comments:	*The plan does not include any parks in excess of 10 acres. The City of Ontario is the entity responsible for updating the Parks & Recreational Facilities Master Plan.*				
PR-1.11	**Environmental Function of Parks.** We require new parks to meet environmental management objectives.	X		4 and 7	
Comments:					
PR-1.12	**Trails.** We promote connections between parks and local trails including those managed by other public agencies.	X		4 and 7	
Comments:	*The plan includes parks and trails that connect to Citywide planned trails.*				
PR-1.13	**Equestrian Trails.** We require the design, construction, and maintenance of equestrian trails in Rural Residential designated areas.				X
Comments:	*The plan does not include any equestrian trails.*				
PR-1.14	**Multi-family Residential Developments.** We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.				X
Comments:	*The project developers will participate in the development impact fee program as required for park fees.*				
PR-1.15	**Trail Connectivity.** We strengthen and improve equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	X		4 and 7	
Comments:	*The plan includes multipurpose trails that connect to Citywide planned trails.*				
PR-1.16	**Equestrian Master Plan.** We use Homer Briggs Park as the primary focal point for the development of a Master Plan of Equestrian Trails in the Rural Residential area.				X
Comments:	*The plan does not include any equestrian trails.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
PR-2 Programming					
Goal	**A range of recreational programs provided by public, private, and nonprofit organizations that meet the needs of the community's varied interests, age groups, and abilities.**				
PR-2.1	**Participation.** We program park facilities to maximize utilization and participation, while considering park size, location, and population served.	X		4 and 8	
Comments:					
PR-2.2	**Needs Assessment.** We track the needs and priorities for recreational programming and look for ways to meet demand.	X		7	
Comments:					
PR-2.3	**Community Involvement.** We involve the local community in planning programs for neighborhood and community park facilities.	X		7	
Comments:					
PR-2.4	**Access to Programs.** We provide a range of recreational and physical exercise programs that are accessible to residents of all income levels throughout the community and prioritize establishing and maintaining equitable access for residents in environmental justice areas.	X		7	
Comments:					
PR-2.5	**Partnerships.** We partner with local and regional agencies, nonprofit organizations, and the private sector to provide a comprehensive range of recreational programs.	X		7	
Comments:					
PR-2.6	**Crime Deterrents.** We promote and participate in recreational programming as part of our crime prevention effort.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ENVIRONMENTAL RESOURCES ELEMENT					
ER-1 Water & Wasterwater					
Goal	**A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.**				
ER-1.1	**Local Water Supply.** We increase local water supplies to reduce our dependence on imported water. New and redevelopment projects are aligned with our available water supply and/or to enhance our available water supply.	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.2	**Matching Supply to Use.** We match water supply and quality to the appropriate use.	X		3 and 5	
Comments:					
ER-1.3	**Conservation and Sustainable Water Supply.** We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.4	**Supply-Demand Balance.** We require that available water supply and demands be balanced.	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.5	**Water Resource Management.** Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	X		3 and 5	
Comments:	*The plan incorporates the City's Master Plan for water.*				
ER-1.6	**Urban Run-off Quantity.** We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	X		3 and 5	
Comments:					
ER-1.7	**Urban Run-off Quality.** We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	X		3 and 5	
Comments:	*The plan will comply with the City's Master Plan requirements for Wastewater management.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-1.8	**Wastewater Management.** We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	X		3 and 5	
Comments:	*The plan will comply with the City's Master Plan requirements for Wastewater management.*				
ER-2 Solid Waste & Recycling					
Goal	**A cost effective, integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates.**				
ER-2.1	**Waste Diversion.** We shall meet or exceed AB 939 requirements.	X		3 and 5	
Comments:					
ER-2.2	**Hazardous and Electronic Wastes.** We prohibit the disposal of hazardous and electronic waste into the municipal waste stream pursuant to state law.	X		3 and 5	
Comments:					
ER-2.3	**Purchase Products Made from Recycled Materials.** We purchase recycled-content products where it is cost effective.	X		3 and 5	
Comments:					
ER-3 Energy					
Goal	**Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**				
ER-3.1	**Conservation Strategy.** We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	X		3 and 5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-3.2	**Green Development– Communities.** We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	X		3 and 5	
Comments:					
ER-3.3	**Building and Site Design.** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	X		3 and 5	
Comments:					
ER-3.4	**Green Development– Public Buildings.** We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	X		3 and 5	
Comments:					
ER-3.5	**Fuel-Efficient and Alternative Energy Vehicles and Equipment.** We require purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.	X		3 and 5	
Comments:					
ER-3.6	**Generation- Renewable Sources.** We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	X		3 and 5	
Comments:					
ER-4 Air Quality					
Goal	**Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.**				
ER-4.1	**Land Use.** We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	X		3 and 5	
Comments:					
ER-4.2	**Sensitive Land Uses.** We prohibit the future siting of sensitive land uses within the distances defined by the California Air Resources Board for specific source categories, without sufficient mitigation.	X		3 and 5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-4.3	**Greenhouse Gases (GHG) Emissions Reductions.** We will reduce GHG emissions in accordance with regional, state, and federal regulations.	X		3 and 5	
Comments:					
ER-4.4	**Indoor Air Quality.** We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	X		3 and 5	
Comments:					
ER-4.5	**Transportation.** We promote mass transit and non-motorized mobility options (walking, biking) to reduce air pollutant emissions.	X		3 and 5	
Comments:					
ER-4.6	**Particulate Matter.** We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.	X		3 and 5	
Comments:					
ER-4.7	**Other Agency Collaboration.** We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source, with a particular focus on sources that affect environmental justice areas in Ontario.	X		3 and 5	
Comments:					
ER-4.8	**Tree Planting.** We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.	X		3 and 5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-4.9	**New Localized Air Pollution Sources Near Existing Sensitive Receptors.** We require new developments to conduct a Health Risk Assessment for land uses that generate more than 100 trucks per day or 40 trucks per day by trucks operating transportation refrigeration units (TRU's) within 1,000 feet from sensitive land uses (California Health and Safety Code § 42705.5(a)(5)). If the health risk assessment determines the new development poses health hazards that increase the incremental cancer risk above the threshold established by the South Coast Air Quality Management District (AQMD), we will only approve permits upon the condition that adequate mitigation measures are proposed and implemented for potential impacts on the sensitive uses around the site and along the route within Ontario taken by the trucks to and from freeways. We require new developments that must perform a health risk assessment to conduct additional public outreach by sending notifications in multiple languages to all residents living within 500 feet, and encourage hosting a public meeting.	X		3 and 5	
Comments:					
ER-5 Biological, Mineral & Agricultural Resources					
Goal	**Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.**				
ER-5.1	**Habitat Conservation Areas.** We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.				X
Comments:	*The Plan area is not within or near any habitat conservation areas.*				
ER-5.2	**Entitlement and Permitting Process.** We comply with state and federal regulations regarding protected species.	X		3 and 5	
Comments:					
ER-5.3	**Right to Farm.** We support the right of existing farms to continue their operations within the Ontario Ranch.				X
Comments:					
ER-5.4	**Transition of Farms.** We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	X		3, 4, 5, 6 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
ER-5.5	**Mining Operations.** We prohibit future mining operations where the resource extraction activities are incompatible with existing or proposed adjacent land uses.	X		3 and 5	
Comments:					
COMMUNITY ECONOMICS ELEMENT					
CE-1 Complete Community					
Goal	**A complete community that provides for all incomes and stages of life.**				
CE-1.1	**Jobs-Housing Balance.** We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.				X
Comments:					
CE-1.2	**Jobs and Workforce Skills.** We use our economic development resources to: 1. Attract jobs suited for the skills and education of current and future City residents; 2. Work with regional partners to provide opportunities for the labor force to improve its skills and education; and 3. Attract businesses that increase Ontario's stake and participation in growing sectors of the regional and global economy.				X
Comments:					
CE-1.3	**Regional Approach to Workforce Development.** We work with our partners to provide workforce training and development services throughout the region, recognizing that Ontario employers rely on workers living outside of the City.				X
Comments:					
CE-1.4	**Business Retention and Expansion.** We continuously improve two-way communication with the Ontario business community and emphasize customer service to existing businesses as part of our competitive advantage.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-1.5	**Business Attraction.** We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.				X
Comments:					
CE-1.6	**Diversity of Housing.** We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	X		4 and 7	
Comments:					
CE-1.7	**Retail Goods and Services.** We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.				X
Comments:					
CE-1.8	**Regional Attraction.** We encourage the development and programming of regional, cultural, and entertainment destinations in Ontario.				X
Comments:					
CE-1.9	**Regional Leadership.** We provide leadership for public, quasi-public, and private-sector partners that help Ontario and its residents and businesses realize our goals and achieve our Vision.				X
Comments:					
CE-1.10	**Life-Long Education.** We work with our partners who provide life-long learning to ensure that our residents and workforce have access to education at all stages of life.				X
Comments:					
CE-1.11	**Socioeconomic Trends.** We continuously monitor, plan for, and respond to changing socioeconomic trends.				X
Comments:					
CE-1.12	**Circulation.** We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles.	X		4 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-1.13	**Safety and Security.** We invest in public safety and communicate our successes because the perception and reality of safety and security are necessary prerequisites for private investment and economic growth.				X
Comments:					
CE-2 Placemaking					
Goal	**A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.**				
CE-2.1	**Development Projects.** We require new development and redevelopment to create unique, high-quality places that add value to the community.	X		6 and 8	
Comments:					
CE-2.2	**Development Review.** We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	X		6 and 8	
Comments:					
CE-2.3	**Interim Development.** We require interim development that does not reflect the long-term Vision, be limited in scale of development so that the investment can be sufficiently amortized to make Vision-compatible redevelopment financially feasible.				X
Comments:					
CE-2.4	**Protection of Investment.** We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	X		6 and 8	
Comments:					
CE-2.5	**Private Maintenance.** We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-2.5	**Public Maintenance.** We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	X		7	
Comments:					
CE-3 Fiscal Decision-making					
Goal	**Decision-making deliberations that incorporate the full short-term and long-term economic and fiscal implications of proposed City Council actions.**				
CE-3.1	**Fiscal Impact Disclosure.** We require requests for City Council action to disclose the full fiscal impacts, including direct and indirect costs.				X
Comments:					
CE-3.2	**General Plan Amendments.** We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.				X
Comments:					
CE-3.3	**Long-Term Funding Disclosure.** We require those requesting City support or funding for projects or programs to disclose if and how they can be continued without further City support.				X
Comments:					
CE-3.4	**Improving Fiscal Decision-Making.** We periodically assess the accuracy of projections for staff time and City resources and use the assessment results to improve our fiscal decision-making process.				X
Comments:					
CE-3.5	**Sustainable Development.** We recognize impacts to municipal finances as an element of sustainability, and we require claims of sustainability to assess fiscal impacts.				X
Comments:					
CE-3.6	**Fully Funded Liability.** We require long-term liabilities, such as retiree medical benefits, employee accrued leave balances, and self-insured liability claims to be fully funded to ensure sound, long-term fiscal health.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CE-3.7	**Programmatically Balanced Budget.** We require that the annual budget include appropriations allocated in a manner to meet the goal of the programmatically balanced budget.			7	X
Comments:					
CE-3.8	**Budget Margins.** We require that the adopted budget for revenue and expenditures reflect sufficient budget margins to minimize negative impacts to City services due to economic uncertainties.			7	X
Comments:					
SAFETY ELEMENT					
S-1 Seismic & Geologic Hazards					
Goal	**Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.**				
S-1.1	**Implementation of Regulations and Standards.** We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	X		6 and 8	
Comments:					
S-1.2	**Entitlement and Permitting Process.** We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.	X		7	
Comments:					
S-1.3	**Continual Update of Technical Information.** We maintain up-to-date California Geological Survey seismic hazard maps.				X
Comments:					
S-1.4	**Seismically Vulnerable Structures.** We conform to state law regarding unreinforced masonry structures and coordinate with not-for-profits to facilitate seismic retrofits in environmental justice areas and for low-income households.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-2 Flood Hazards					
Goal	**Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.**				
S-2.1	**Entitlement and Permitting Process.** We require hydrological studies prepared by a state-certified engineer when new development is located in a 100-year or 500-year floodplain to assess the impact that the new development will have on the flooding potential of existing development down-gradient.	X		7	
Comments:	*Per project EIR.*				
S-2.2	**Floodplain Mapping.** We require any new development partially or entirely in 100-year flood zones to provide detailed floodplain mapping for 100- and 200-year storm events as part of the development approval process.	X		7	
Comments:					
S-2.3	**Facilities that Use Hazardous Materials.** We comply with state and federal law and do not permit facilities using, storing, or otherwise involved with substantial quantities of onsite hazardous materials to be located in the 100-year flood zone or 500-year flood zone unless all standards of elevation, floodproofing, and storage have been implemented to the satisfaction of the Building Department.				X
Comments:					
S-2.4	**Prohibited Land Uses.** We prohibit the development of new essential and critical facilities in the 100-year floodplain and discourage the development of new essential and critical facilities in the 500-year floodplain unless all standards of elevation and flood proofing demonstrate that a facility can be safe and operational during a flood event, implemented to the satisfaction of the Building Department.				X
Comments:					
S-2.5	**Stormwater Management.** We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces.	X		5 and 7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-2.6	**Use of Flood Control Facilities.** We encourage joint use of flood control facilities as open space or other types of recreational facilities.				X
Comments:					
S-2.7	**Collaboration Between Agencies.** Collaborate with the San Bernardino County Flood Control District and other state and federal agencies to maintain flood-control infrastructure to minimize flood damage.				X
Comments:					
S-3 Fire & Rescue Hazards					
Goal	**Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.**				
S-3.1	**Prevention Services.** We proactively mitigate or reduce the negative effects of fire, hazardous materials release, and structural collapse by implementing the regularly adopted California Fire Code and California Building Code.	X		7	
Comments:					
S-3.2	**Community Outreach.** We provide education to local schools and community groups to promote personal and public safety.				X
Comments:					
S-3.3	**Fire and Emergency Medical Services.** We maintain sufficient fire stations, equipment and staffing to respond effectively to emergencies and meet the needs of the community and state requirements.				X
Comments:					
S-3.4	**Special Team Services.** We maintain effective special rescue services.				X
Comments:	*The City of Ontario is the entity responsible for maintaining effective special rescue services.*				
S-3.5	**Emergency Notifications.** We maintain a public alert notification system that efficiently conveys information about imminent, developing, ongoing, and concluding emergency events to residents and visitors, working with network providers that translate information into other languages.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-3.6	**Interagency Cooperation.** In order to back up and supplement our capabilities to respond to emergencies, we participate in the California Fire Rescue and Mutual Aid Plan.				X
Comments:					
S-3.7	**Water Supply and System Redundancy.** We monitor our water system to manage and ensure adequate firefighting water supplies.				X
Comments:					
S-3.8	**Fire Prevention through Environmental Design.** We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.	X		4, 5, 6, 7 and 8	
Comments:					
S-3.9	**Resource Allocation.** We analyze fire data to evaluate the effectiveness of our fire prevention and reduction strategies and allocate resources accordingly.				X
Comments:					
S-4 Noise Hazards					
Goal	**An environment where noise does not adversely affect the public's health, safety, and welfare.**				
S-4.1	**Noise Mitigation.** We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	X		6, 7 and 8	
Comments:	*Per project EIR noise study.*				
S-4.2	**Coordination with Transportation Authorities.** We collaborate with airport owners, FAA, Caltrans, SBCTA, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of, and updates to transportation-related plans to minimize noise impacts and provide appropriate mitigation measures.				X
Comments:					
S-4.3	**Airport Noise Mitigation.** We aggressively pursue funding and utilize programs to reduce effects of aircraft noise in impacted areas of our community.				X
Comments:	*The plan is not within the airport impact zone.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-4.4	**Truck Traffic.** We manage truck traffic to minimize noise impacts on sensitive land uses.	X		3, 5 and 6	
Comments:					
S-4.5	**Roadway Design.** We design streets and highways to minimize noise impacts.	X		3, 5 and 6	
Comments:					
S-4.6	**Airport Noise Compatibility.** We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise-sensitive land uses within airport noise impact zones.				X
Comments:	*The plan is not within the airport impact zone.*				
S-4.7	**Rail Noise Mitigation.** We require residential and mixed use development of vibration-sensitive uses in areas within 200 feet of rail to evaluate for indoor vibration levels and mitigate any exceedances of the Federal Transit Administration vibration-annoyance criteria.				X
Comments:	*The plan is not within 200 feet of any rail system.*				
S-5 Wind-Related Hazards					
Goal	**Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.**				
S-5.1	**Dust Control Measures.** We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	X		7	
Comments:					
S-5.2	**Grading in High Winds.** We prohibit excavation and grading during strong wind conditions, as defined by the Building Code.	X		7	
Comments:					
S-5.3	**Public Safety Power Shutoffs.** We coordinate with utility companies to minimize service interruptions, such as Public Safety Power Shutoffs, before, during, and after windstorms and wind-related hazards.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-6 Hazardous Materials & Waste					
Goal	**Reduced potential for hazardous materials exposure and contamination.**				
S-6.1	**Disclosure and Notification.** We enforce disclosure laws that require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use, or transport.				X
Comments:					
S-6.2	**Response to Hazardous Materials Releases.** We respond to hazardous materials incidents and coordinate these services with other jurisdictions.				X
Comments:					
S-6.3	**Safer Alternatives.** We minimize our use of pesticides and other hazardous materials by choosing non-toxic alternatives that do not pose a threat to the environment, especially when it could affect public park facilities and open spaces.	X		7	
Comments:					
S-6.4	**Safe Storage and Maintenance Practices.** We require that the users of hazardous materials be adequately prepared to prevent and mitigate hazardous materials releases.				X
Comments:					
S-6.5	**Location of Hazardous Material Facilities.** We regulate facilities that will be involved in the production, use, storage, or disposal of hazardous materials, pursuant to federal, state, county, and local regulations, so that impacts to the environment and sensitive land uses are mitigated. We prohibit new hazardous waste facilities in close proximity to sensitive land uses and environmental justice areas.				X
Comments:					
S-6.6	**Location of Sensitive Land Uses.** We prohibit new sensitive land uses from locating within airport safety zones and near existing sites that use, store, or generate large quantities of hazardous materials.				X
Comments:	*The plan does not have any sensitive land uses.*				
S-6.7	**Household Hazardous Waste.** We support the proper disposal of household hazardous substances.	X		7	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-6.8	**Mitigation and Remediation of Groundwater Contamination.** We actively participate in local and regional efforts directed at both mitigating environmental exposure to contaminated groundwater and taking action to clean up contaminated groundwater once exposure occurs.	X		7	
Comments:					
S-6.9	**Remediation of Methane.** We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	X		7	
Comments:					
S-7 Law Enforcement					
Goal	**Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.**				
S-7.1	**Police Unit Response.** We respond to calls for service in a timely manner.				X
Comments:					
S-7.2	**Community Oriented Problem Solving (C.O.P.S.).** We support and maintain the mission of COPS to identify and resolve community problems.				X
Comments:					
S-7.3	**Prevention Services.** We provide crime prevention programs targeted to youth, parents, seniors, businesses, and neighborhoods.				X
Comments:	*The City of Ontario is the entity responsible for providing crime prevention programs.*				
S-7.4	**Crime Prevention through Environmental Design (CPTED).** We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.	X		4, 6 and 8	
Comments:					
S-7.5	**Interdepartmental Coordination.** We utilize all City departments to help reduce crime and promote public safety.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-7.6	**Partnerships.** We partner with other local, state, and federal law enforcement agencies and private security providers to enhance public safety services in Ontario.				X
Comments:					
S-7.7	**Resource Allocation.** We analyze crime data to evaluate the effectiveness of crime prevention and reduction strategies and allocate resources accordingly.				X
Comments:					
S-7.8	**Social Services.** We support behavioral health and social services as part of the public safety solution.				X
Comments:					
S-8 Emergency Management					
Goal	**Disaster resilient, prepared community through effective emergency/disaster preparedness, response, mitigation, and recovery.**				
S-8.1	**State and Federal Mandates.** We maintain emergency management programs that meet the requirements of the State of California Standardized Emergency Management System (SEMS) and the National Incident Management System (NIMS).				X
Comments:					
S-8.2	**Emergency Management Plans.** We maintain, update, and adopt the Emergency Operations Plan (EOP) and incorporate, by reference the City's Hazard Mitigation Plan (HMP).				X
Comments:					
S-8.3	**Emergency/Disaster Training Exercises.** We conduct training and exercises to prepare for and evaluate emergency/disaster response and recovery procedures.				X
Comments:					
S-8.4	**Interagency Collaboration.** We maintain partnerships, including automatic aid agreements, with fire protection, police and sheriff departments, and emergency management agencies in San Bernardino and Riverside County to strengthen emergency response.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-8.5	**Interdepartmental Coordination.** We utilize all City departments to help support emergency/disaster preparedness, response, mitigation, and recovery.				X
Comments:	*The City of Ontario is the entity responsible for interdepartmental coordination to support emergency/disaster situations.*				
S-8.6	**Community Outreach.** We provide education to the community to promote personal, family, and community emergency preparedness to both natural and human-generated hazards.				X
Comments:	*The City of Ontario is the entity responsible for providing education to the community.*				
S-8.7	**Extreme Heat and Air Quality.** We work to ensure that all community members are informed about and have access to community cooling centers and clean air centers during extreme heat events or wildfires, with a focus on serving environmental justice communities. We support the development of extreme heat emergency response policies and practices to address these critical health risks in the community.				X
Comments:	*The City of Ontario is the entity responsible for providing the community with information and access to situations of extreme heat and air quality conditions.*				
S-8.8	**Regional Partnerships for Climate Adaptation.** We partner with local governments in San Bernardino County, Riverside County, and Inland Southern California Climate Collaborative to develop regional climate change adaptation strategies and programs.				X
Comments:	*The City of Ontario is the entity responsible for local and regional partnerships for climate change adaptation strategies and programs.*				
S-8.9	**Backup Power in Critical Facilities.** We require backup power be maintained in critical facilities. We encourage backup power solutions that include renewable energy components.				X
Comments:	*The City of Ontario is the entity responsible for maintaining/providing backup power in critical facilities.*				
S-9 Energy Resiliency					
Goal	**Incorporate energy efficient practices and renewable energy systems to improve air quality, comfort, and energy reliability during temporary power outages.**				
S-9.1	**Solar Energy.** We support and may incentivize the installation of residential and commercial solar panels and battery storage systems that can provide electricity during power outages.	X		7	
Comments:	*The City of Ontario is the entity responsible for supporting and incentivizing the installation and use of solar energy.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
S-9.2	**Renewable Energy.** Renovate existing city-owned facilities and plan future facilities to include renewable energy generation capacity and battery storage as part of an effort to make public facilities and services greener and more resilient to power outages.				X
Comments:					
S-9.3	**Energy Efficiency Retrofits.** We support and may incentivize retrofits to residential and commercial buildings that improve energy efficiency and insulation from extreme temperatures, giving priority towards low-income applicants.				X
Comments:					
MOBILITY ELEMENT					
M-1 Roadway System					
Goal	**A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.**				
M-1.1	**Roadway Design and Maintenance.** We require our roadways to: 1. Comply with federal, state, and local design and safety standards; 2. Meet the needs of multiple transportation modes and users; 3. Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; 4. Be maintained in accordance with best practices; 5. Be compatible with the streetscape and surrounding land uses; and 6. Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.	X		5, 7 and 8	
Comments:	*Per project EIR traffic study.*				
M-1.2	**Mitigation of Impacts.** We require development to mitigate its traffic impacts.	X		5	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-1.3	**Agency Coordination on Roadway Improvements.** We work with Caltrans, SBCTA, and others to identify, fund, and implement needed improvements to roadways when necessary. We work with neighboring jurisdictions to promote regional connectivity, access, and meet operational level of service standards at the City limits.				X
Comments:					
M-1.4	**Complete Streets.** We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	X		5 and 8	
Comments:					
M-1.5	**Level of Service.** Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).				X
Comments:					
M-1.6	**Reduce Vehicle Miles Traveled.** We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-2 Active Transportation					
Goal	A system of trails and corridors that facilitate and encourage active modes of transportation.				
M-2.1	**Active Transportation.** We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	X		5 and 8	
Comments:					
M-2.2	**Bicycle System.** We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	X		5 and 8	
Comments:					
M-2.3	**Pedestrian Walkways.** We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	X		5 and 8	
Comments:					
M-2.4	**Network Opportunities.** We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed- use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.	X		5 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-3 Public Transit					
Goal	**A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.**				
M-3.1	**Transit Partners.** We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available, cost-efficient, and convenient, particularly for residents in environmental justice areas.				X
Comments:					
M-3.2	**Alternative Transit Facilities at New Development.** We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.				X
Comments:					
M-3.3	**Transit-Oriented Development.** We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use and reduce vehicle miles traveled.	X		4, 5, and 8	
Comments:					
M-3.4	**Bus Rapid Transit (BRT) Corridors.** We work with regional transit agencies to implement BRT service and reduce vehicle miles traveled by targeting destinations and corridors with the highest number of potential riders.				X
Comments:					
M-3.5	**Light Rail.** We support extension of the Metro Rail Gold Line to Ontario, and will work to secure station locations at the proposed multimodal transit center.				X
Comments:	*The plan is not within proximity of a light rail station location.*				
M-3.6	**Metrolink Expansion.** We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center.				X
Comments:	*The plan is not within proximity of a multimodal transit center or Downtown.*				
M-3.7	**High Speed Rail.** We encourage the development of high-speed rail systems that would enhance regional mobility in Southern California and serve the City of Ontario.				X
Comments:	*The plan is not within proximity of the high speed rail system.*				

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-3.8	**Feeder Systems.** We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario.				X
Comments:					
M-3.9	**Ontario Airport Metro Center Circulator.** We will explore development of a convenient mobility system, including but not limited to shuttle service, people mover, and shared car system, for the Ontario Airport Metro Center.				X
Comments:	*The plan is not within proximity of the Ontario Airport.*				
M-3.10	**Multimodal Transportation Center.** We intend to ensure the development of a multimodal transportation center near ONT airport to serve as a transit hub with amenities for transit riders, pedestrians, and bicyclists transitioning to local buses, BRT, the Gold Line, high-speed rail, the proposed Ontario Airport Metro Center Circulator, and other future transit modes. We support locations for the multimodal transportation center that are north of ONT airport, between Vineyard Avenue and Interstate 15.				X
Comments:	*The plan is not within proximity of the ONT airport.*				
M-3.11	**Transit and Community Facilities.** We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit. Conversely, we plan (and coordinate with other transit agencies to plan) future transit routes to serve existing community facilities.				X
Comments:					
M-4 Goods Movement					
Goal	**An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.**				
M-4.1	**Truck Routes.** We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
M-4.2	**Regional Participation.** We work with regional and subregional transportation agencies and adjacent cities to plan and implement goods movement strategies, including regional truck routes, plans and projects that improve mobility, support the efficient movement of goods, and minimize negative environmental impacts.				X
Comments:					
M-4.3	**Railroad Grade Separations.** We eliminate at-grade rail crossings identified on Exhibit M-01, Roadway Classifications.				X
Comments:	*The plan is not within proximity of a railroad.*				
M-4.4	**Environmental Considerations.** We support both local and regional efforts to reduce/ eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	X		5 and 7	
Comments:					
M-4.5	**Air Cargo.** We support and promote a ONT airport that accommodates 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.				X
Comments:	*The plan is not within proximity of the ONT airport.*				
M-5 Regional Transportation					
Goal	**A proactive leadership role in helping identify and facilitate implementation of strategies that address regional transportation challenges.**				
M-5.1	**Regional Leadership.** We maintain a leadership role to help identify and implement potential solutions to long-term regional transportation problems.				X
Comments:					
M-5.2	**Land Use Compatibility with Regional Transportation Facilities.** We work with ONT, railroads, Caltrans, SBCTA, and other transportation agencies to minimize impacts.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
COMMUNITY DESIGN ELEMENT					
CD-1 Image & Identity					
Goal	**A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.**				
CD-1.1	**City Identity.** We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.	X		7	
Comments:					
CD-1.2	**Place Types.** We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.				X
Comments:					
CD-1.3	**Existing Neighborhoods.** We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.				X
Comments:					
CD-1.4	**Transportation Corridors.** We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.	X		7	
Comments:					
CD-1.5	**View Corridors.** We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2 Design Quality					
Goal	**A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.**				
CD-2.1	**Quality Building Design and Architecture.** We encourage all development projects to convey visual interest and character through: 1. Building volume, massing, and height to provide context-appropriate scale and proportion; 2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and 3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.	X		6 and 8	
Comments:					
CD-2.2	**Neighborhood Design.** We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as: 1. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services; 2. Varied parcel sizes and lot configurations to accommodate a diversity of housing types; 3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access; 4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and 5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	X		6 and 8	
Comments:					
CD-2.3	**Commercial Areas.** We desire commercial areas and centers to be distinctive, pedestrian friendly, functional, and vibrant with a range of businesses, places to gather, and connectivity to the neighborhoods they serve.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2.4	**Urban, Mixed Use, and Transit-oriented Areas.** We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type.				X
Comments:					
CD-2.5	**Streetscapes.** We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	X		6 and 8	
Comments:					
CD-2.6	**Connectivity.** We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: 1. Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic; 2. A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and 3. Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.	X		6 and 8	
Comments:					
CD-2.7	**Sustainability.** We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.	X		6 and 8	
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2.8	**Safe Design.** We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.	X		6 and 8	
Comments:					
CD-2.9	**Landscape Design.** We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	X		6 and 8	
Comments:					
CD-2.10	**Parking Areas.** We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include: 1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field. 2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping. 3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	X		6 and 8	
Comments:					
CD-2.11	**Entry Statements.** We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	X		6 and 8	
Comments:					
CD-2.12	**Site and Building Signage.** We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	X		6 and 8	
Comments:					
CD-2.13	**Entitlement Process.** We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-2.14	**Availability of Information.** We provide easy access to information for developers, builders and the public about design quality, construction quality, and sustainable building practices.				X
Comments:					
CD-2.15	**Leverage Professional and Trade Organizations.** We support excellence in design and construction quality through collaboration with trade and professional organizations that provide expertise, resources and programs for developers, builders, and the public.				X
Comments:					
CD-2.16	**Transit Stops.** We require transit stops be conveniently located, well lit, safe, and clearly accessible to pedestrians, bicyclists, and people of all abilities.				X
Comments:					
CD-3 Urban, Mixed Use, and Transit-Oriented Place Types					
Goal	**Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.**				
CD-3.1	**Unique Identity.** We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.				X
Comments:					
CD-3.2	**Comfortable, Human-Scale Public Realm.** We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-3.3	**Complete and Connected Network.** We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	X		6 and 8	
Comments:					
CD-3.4	**Context-Aware and Appropriate Design.** We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.	X		6 and 8	
Comments:					
CD-3.5	**Active Frontages.** We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	X		6 and 8	
Comments:					
CD-3.6	**Managed Infrastructure.** We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.	X		6 and 8	
Comments:					
CD-4 Historic Preservation					
Goal	**Historic buildings, streets, landscapes, and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, have been preserved and serve as a focal point for civic pride and identity.**				
CD-4.1	**Cultural Resource Management.** We update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-4.2	**Collaboration with Property Owners and Developers.** We educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and unique neighborhoods.				X
Comments:					
CD-4.3	**Collaboration with Outside Agencies.** We pursue opportunities to team with other agencies, local organizations, and nonprofits in order to preserve and promote Ontario's heritage.				X
Comments:					
CD-4.4	**Incentives.** We use the Mills Act and other federal, state, regional and local programs to assist property owners with the preservation of select properties and structures.				X
Comments:					
CD-4.5	**Adaptive Reuse.** We actively promote and support the adaptive reuse of historic sites and buildings to preserve and maintain their viability.				X
Comments:					
CD-4.6	**Promotion of Public Involvement in Preservation.** We engage in programs to publicize and promote the City's and the public's involvement in preservation efforts.				X
Comments:					
CD-4.7	**Public Outreach.** We provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, the Ontario Museum of History and Art, and the Robert E. Ellingwood Model Colony History Room.				X
Comments:					
CD-5 Protection of Investment					
Goal	**A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.**				
CD-5.1	**Maintenance of Buildings and Property.** We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
CD-5.2	**Maintenance of Infrastructure.** We require the continual maintenance of infrastructure.				X
Comments:					
CD-5.3	**Improvements to Property & Infrastructure.** We provide programs to improve property and infrastructure.				X
Comments:					
CD-5.4	**Neighborhood Involvement.** We encourage active community involvement to implement programs aimed at the beautification and improvement of neighborhoods.				X
Comments:					
SOCIAL RESOURCES ELEMENT					
SR-1 Health					
Goal	**Residents have access to information, services and goods that improve their health and wellbeing.**				
SR-1.1	**Partnering for Healthcare.** We work with healthcare providers, and local, regional, state, and federal agencies to attract and retain a diversity of affordable, quality healthcare and facilities for the entire community.				X
Comments:					
SR-1.2	**Nutrition Choices.** We support the promotion of equitable access to affordable healthy food choices in the community, including community gardens, farmers markets, and cooking classes.				X
Comments:					
SR-1.3	**Health Education.** We promote equitable access to health education, including disease prevention, mental health, nutrition, and physical fitness.				X
Comments:					
SR-1.4	**Physical Activity.** We encourage activities and community design that improve the physical fitness of our community members, with an emphasis on the provision of activities and facilities in environmental justice areas.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-2 Education					
Goal	**A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.**				
SR-2.1	**Educational Partners.** We partner with educational institutions throughout the region in order to expand the range and quality of educational offerings available to the community.				X
Comments:					
SR-2.2	**Workforce Training.** We will work with industrial organizations, businesses, and educational institutions to create opportunities for workforce training.				X
Comments:					
SR-2.3	**Joint Use of Facilities.** We partner with public and private educational institutions to jointly use facilities for both City and educational purposes.				X
Comments:					
SR-2.4	**Access to Schools.** We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.				X
Comments:					
SR-2.5	**School Facilities.** We plan and coordinate with school districts for designing and locating school facilities to meet the City's goals, such as for health, walkability, and safety and to minimize impacts to existing neighborhoods.				X
Comments:					
SR-2.6	**Language.** We promote broad outreach in languages used by the community for proposed projects that could negatively affect environmental justice areas.				X
Comments:					
SR-2.7	**Community Engagement.** We promote targeted outreach and education to historically underrepresented groups to encourage meaningful participation in decision-making process for projects whose outcomes will affect land use in environmental justice areas.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-3 Community & Leisure Activities					
Goal	**A range of community and leisure programs and activities provided by public, private, and nonprofit organizations that meet the needs of the community's varied interests, age groups and abilities.**				
SR-3.1	**Partnerships.** We partner with local and regional agencies, nonprofit organizations, and the private sector to provide a comprehensive range of community activities and events to citizens.				X
Comments:					
SR-3.2	**Needs Assessment.** We track the needs and priorities for community services and look for ways to meet demands and avoid duplication of offerings.				X
Comments:					
SR-3.3	**Program Outreach.** We promote information about leisure activities, classes, special events, and other services and activities to our community.				X
Comments:					
SR-3.4	**Community Events.** We plan and actively participate in regularly scheduled community events and seasonal or yearly citywide events.				X
Comments:					
SR-3.5	**Community Activities as Crime Deterrents.** We promote and participate in community activities as part of our crime prevention efforts.				X
Comments:					
SR-4 Library					
Goal	**City libraries that connect community members of all ages and abilities to a broad range of programs, communication, and informational resources.**				
SR-4.1	**Community Needs.** We identify and monitor community needs for library services, technology, and facilities, and tailor them to effectively meet those needs.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-4.2	**Interagency Coordination.** We leverage relationships with outside agencies, educational institutions, and neighboring jurisdictions to share library resources to the benefit of Ontario residents.				X
Comments:					
SR-4.3	**Library Outreach.** We outreach to the community to increase the patronage of the library.				X
Comments:					
SR-4.4	**Coordination with Other Community Services.** We coordinate library programs with other recreational and community programs and facilities.				X
Comments:					
SR-4.5	**Focal Points of the Community.** We design and program Ontario's libraries as focal points of community engagement, including public outreach and community events.				X
Comments:					
SR-4.6	**Robert E. Ellingwood Model Colony History Room.** We work with the Ontario Museum of History and Art in order to collect, preserve, and display artifacts and images from Ontario's heritage and connect the City's past to the present through the History Room.				X
Comments:					
SR-5 Entertainment & Culture					
Goal	**Local heritage, entertainment, and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.**				
SR-5.1	**Provision of Entertainment and Culture.** We support equitable access to a range of entertainment and cultural experiences such as public art, exhibitions, and performances.				X
Comments:					
SR-5.2	**Local Heritage Education.** We partner with educational providers to promote culture and heritage.				X
Comments:					

Policy		Fully Complies	Partially Complies	SP Sec. No.	N/A
SR-5.3	**Public Art.** We encourage public art in buildings, parks, open spaces, and other public and private spaces.				X
Comments:					
SR-5.4	**Private-Public Sector Events.** We partner with private and nonprofit sectors to provide and promote participation in cultural activities including fairs, festivals, and other events geared to neighborhoods, the City as a whole, and the region.				X
Comments:					
SR-5.5	**Promotion of Ontario Artists and Musicians.** We promote awareness of entertainment and culture produced in Ontario.				X

JN 12182-001

MEMORANDUM

TO: Robert Morales, Associate Planner
City of Ontario

FROM: Amy Flores

DATE: April 24, 2025

RE: Esperanza PA-11 SPA Project

The following matrix presents all mitigation required within the Esperanza Specific Plan EIR and provides an applicability determination for the Esperanza PA-11 SPA Project (File Nos.: PPA24-0139, PGPA24-004, PSPA24-004, PDEV24-017, PMTT24-008, PDA25-003). Measures that are not applicable are noted in ~~strikeout~~ format.

Esperanza Measure	Project Applicability
Aesthetics	
None.	-
Agriculture and Forest Resources	
~~MM Ag 1: In order to minimize conflicts between urban and agricultural land uses, each Specific Plan developed for properties within the NMC must comply with the Agricultural Overlay District requirements for urban development in proximity to existing agricultural operations. The proposed project shall establish a minimum 100-foot separation between active agricultural operations and new, non-agricultural development, or an equivalent easement that is approved by the City of Ontario~~.	**Not Applicable.** Ag 1 was developed as part of the NMC General Plan Amendment. The Esperanza Specific Plan was developed pursuant to Ag 1. Additionally, there are no active agricultural operations adjacent to the Project site.
~~MM Ag 2: In order to minimize conflicts between urban and agricultural land uses, all residential units in the Subarea 29 Specific Plan shall be provided with a deed disclosure, or similar notice, approved by the City Attorney regarding the proximity and nature, including odors, of neighboring agricultural uses.~~	**Not Applicable.** The Project site is not located within Subarea 29, as referenced in Ag 2.
Air Quality	
~~MM Air 1: During all construction activities, construction contractors shall use low emission mobile construction~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.

Esperanza Measure	Project Applicability
~~equipment where feasible to reduce the release of undesirable emissions.~~	
~~MM Air 2: During all construction activities, construction contractors shall encourage rideshare and transit programs for project construction personnel to reduce automobile emissions.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 3: During all grading and site disturbance activities, construction contractors shall water active grading sites at least twice a day, and clean construction equipment in the morning and/or evening to reduce particulate emissions and fugitive dust.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 4: During all construction activities, construction contractors shall, as necessary, wash truck tires leaving the site to reduce the amount of particulate matter transferred to paved streets as required by SCAQMD Rule 403.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 5: During all construction activities, construction contractors shall sweep on and off site streets (recommend water sweepers with reclaimed water) if visible soil is carried over to adjacent public thoroughfares, as determined by the City Engineer to reduce the amount of particulate matter on public streets.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 6: During all construction activities, construction contractors shall limit traffic speeds on all unpaved road surfaces to 15 miles per hour or less to reduce fugitive dust.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 7: During grading and all site disturbances activities, construction contractors shall suspend all grading operations during first and second stage smog alerts to reduce fugitive dust and combustion related emissions.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 8: During grading and all site disturbances activities, construction contractors shall suspend all grading operations when wind speeds (including instantaneous gusts) exceed 25 miles per hour to reduce fugitive dust.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 9: During all construction activities, the construction contractors shall maintain construction~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.

Esperanza Measure	Project Applicability
~~equipment engines by keeping them tuned according to manufacturers' specifications.~~	
~~MM Air 10: During construction, mobile construction equipment will be properly maintained at an off-site location, which includes proper tuning and timing of engines. Equipment maintenance records and equipment design specification data sheets shall be kept on-site during construction.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 11: During construction, all contractors will be advised to prohibit all vehicles from idling in excess of five minutes, both on-site and off-site.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 12: Configure construction parking to minimize traffic interference.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 13: Contractors shall use high-pressure-low-volume (HPLV) paint applicators with a minimum transfer efficiency of at least 50% or other application techniques with equivalent or higher transfer efficiency, where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 14: Use architectural coatings with a VOC content lower than required under Rule 1113, where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 15: Construct/build with materials that do not require painting, where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 16: Use pre-painted construction materials, where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 17: The contractor shall provide truck drivers with materials showing where sensitive receptors, such as schools, are located, and when congestion can be expected so that the drivers can avoid these routes and/or times of day.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 18: Require construction equipment that meet or exceed Tier 2 standards; use emulsified diesel fuels; and equip construction equipment with oxidation catalysts, particulate traps, or other verified/certified retrofit technologies, etc., where feasible.~~	**Not Applicable.** Project construction would not exceed SCAQMD thresholds; further mitigation is not required.
~~MM Air 19: Local transit agencies shall be contacted to determine bus routing in the project area that can accommodate bus stops at the project access points and the project shall provide bus passenger benches and shelters at these project access points.~~	**Not Applicable.** The Project area is already served by transit services; Omnitrans Route 87 serves the area, with a stop located at the corner of Eucalyptus Avenue and Hamner Avenue, less than 1,000 feet from the Project site. The Project would provide internal

Esperanza Measure	Project Applicability
	driveways and pedestrian paths that connect to the existing street and sidewalk network surrounding the Project site.
Biological Resources	
MM Bio 1: There is a possibility of owl colonization within the project site prior to site grading. To ensure that no direct loss of individuals occurs, mitigation will be carried prior to initiation of on-site grading activities for each development phase. A pre-construction survey for resident burrowing owls shall be conducted by a qualified biologist. The survey shall be conducted 30 days prior to construction activities. If ground-disturbing activities are delayed or suspended for more than 30 days after the preconstruction survey, the site shall be resurveyed for owls. If owls are determined to be present within the construction footprint, they shall be captured and relocated. If non-breeding owls must be moved away from the disturbance area, passive relocation techniques will be used. The pre-construction survey and any relocation activity shall be conducted in accordance with the CDFG Report on Burrowing Owl Mitigation, 1995. According to CDFG guidelines, mitigation actions will be conducted from September 1 to January 31, which is prior to the nesting season. However, burrowing owl nesting activity is variable, and as such the time frame will be adjusted accordingly. Should eggs or fledglings be discovered in any owl burrow, the burrow cannot be disturbed (pursuant to CDFG guidelines) until the young have hatched and fledged (matured to a stage that they can leave the nest on their own). Occupied burrows shall not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by the Department of Fish and Game verifies through non-invasive methods that either: a) the adult birds have not begun egg-laying and incubation; or b) the juveniles from the occupied	**Applicable.** The Project would conduct a pre-construction survey for resident burrowing owls, and follow the protocol set forth in this measure.

Esperanza Measure	Project Applicability
burrows are foraging independently and are capable of independent survival. If a biologist is unable to verify one of the above conditions, then no disturbance shall occur within 300 feet of the burrowing owl's nest during the breeding season to avoid abandonment of the young. Passive relocation can be used to exclude owls from their burrows (outside the breeding season or once the young are able to leave the nest and fly) by installing one-way doors in burrow entrances. These one-way doors allow the owl to exit the burrow, but not enter it. These doors should be left in place 48 hours to ensure owls have left the burrow. Artificial burrows should be provided nearby. The project area should be monitored daily for one week to confirm owl use of burrows before excavating burrows in the impact area. Burrows should be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible pipe should be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow.	
MM Bio 2: The project proponent shall be required to pay City of Ontario open space mitigation fees. Fees collected will be used "to acquire and restore mitigation lands to offset impacts to species now living in the New Model Community and impacts to existing open space", according to the City of Ontario Development Impacts Fee Calculation Report and the Settlement and general Release Agreement.	**Applicable.** The Project would pay City of Ontario open space mitigation fees.
~~MM Bio 3: Construction and/or removal of windrow trees will occur outside of the nesting season (February 1 through August 31). If tree removal activities must occur during the breeding season, the mitigation measure in MM Bio 4 shall be implemented.~~	**Not Applicable.** The Project site has been graded, no windrow trees exist on the site.
~~MM Bio 4: If project construction activities involving heavy equipment and/or windrow tree removal are to occur during the nesting/breeding season (between February 1st and August 31st) of potentially occurring sensitive bird species, a pre-construction field survey shall be conducted by a qualified biologist to determine~~	**Not Applicable.** The Project site has been graded, no windrow trees exist of the site.

Esperanza Measure	Project Applicability
~~if active nests of species protected by MBTA or CDFG are present in the construction zone or within a buffer of 500 feet. Pre-construction nesting/breeding surveys shall be conducted in all CDFG jurisdictional areas and within windrow trees. If no active nests are found during the survey, construction activities may proceed.~~ ~~If active nests are located during the pre-construction surveys, no grading, heavy equipment, or tree removal activities shall take place within at least 500 feet of an active listed species or raptor nest, 300 feet of other sensitive bird nests (non-listed), and 100 feet of most common songbird nests.~~	
Cultural Resources	
MM Cul 1: Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be a historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, then procedures outlined in Section 15064.5 of the CEQA Guidelines shall be followed. Additionally, Ontario's Local CEQA Guidelines provide that curation may be an appropriate mitigation measure for an artifact that must be removed during project excavation or testing. (Local CEQA Guidelines, Section 5.13.)	**Applicable.** Although the site-specific Cultural Resources Study determined that no further archaeological study or mitigation would be required, this measure is directed at resources that may be inadvertantly found during Project construction. The Project would implement this measure.
MM Cul 2: If human remains are uncovered at any time, all activities in the area of the find shall be halted by the developer or its contractor and the County Coroner shall be notified immediately pursuant to CA Health & Safety Code Section 7050.5 and CA PRC Section 5097.98. If the Coroner determines that the remains are of Native American origin, the Coroner shall proceed as directed in Section 15064.5(e) of the CEQA Guidelines.	**Applicable.** The Project would be required to comply with all existing regulations, including the California Public Resources Code Section 5097.98, which would provide protection for any human remains discovered during development activities.
Energy	
None. (This topic was added to the CEQA Guidelines after the certification of the Esperanza Specific Plan DEIR.)	-

Esperanza Measure	Project Applicability
Geology and Soils	
MM Geo 1: To address potential wind erosion effects, prior to construction, all grading and other construction activities will apply for and adhere to the permit given by the City of Ontario and enforced by the Building Official found in Title 6, Chapter 12, sections 6-12.01 – 6-12.07. The permit lasts for one (1) year, therefore, all construction lasting for a period of more than one calendar year from the date of issue will reapply for the permit and pay the current annual fee. At a minimum, the permit prohibits the disturbance of the surface or subsurface of more than one (1) acre of land without meeting permit requirements which can include such things as the application of soil stabilizers and limitations on grading activities during wind events.	**Applicable.** The Project would obtain all required permits prior to any construction activities.
~~MM Geo 2: To assure soils suitable for construction, site materials should be tested for organics and excavated to a minimum of 4 feet where soils generally become denser. Actual removal depths will be determined during grading when subsurface conditions are exposed. GeoSoils, Inc (10/12/01) also recommends that soft and compressible colluvial and alluvial soils be removed prior to grading.~~ ~~Per recommendations of GeoSoils Inc. in the Updated Geotechnical Study, partial to complete removal of manure will be required, as soils with high concentrations of cow manure are generally unsuitable to be used as fill. On-site soils may be used for fill if the organic matter content is diluted to less than 2 percent using underlying soils with no more than 1 percent of the organic content being from manure.~~	**Not Applicable.** As part of the site-specific Geotechnical Evaluation, soil samples throughout the site were tested to determine their organic content. The majority of samples ranged from approximately 1.2 percent to 2.7 percent, indicating relatively low organics. Two areas of the site indicated higher levels (8.8 percent and 4.8 percent). The Geotechnical Evaluation provides remedial grading recommendations in those areas with a higher percentage of organic content. Mandatory compliance with the recommendations of the site-specific Geotechnical Evaluation negates the need for this mitigation measure.
~~MM Geo 3: Any soil to be used as fill, whether currently on-site or imported, should be approved by the soil engineer or his/her representative prior to their placement. To properly assess and address the suitability of on-site soils to be used as fill, a geotechnical evaluation shall be performed by a qualified professional prior to the approval of the Tentative Tract map or site plan for a given phase of~~	**Not Applicable.** On-site soils were evaluated for suitability as part of the site-specific Geotechnical Evaluation. Mandatory compliance with the recommendations of the site-specific Geotechnical Evaluation negates the need for this mitigation measure.

Esperanza Measure	Project Applicability
~~development. This evaluation will include an analysis of the organic matter content of soils on the site. If the organic matter content of the soils is greater than 2 percent when mixed with subsurface soils and/or imported fill, then manure will be removed from the site prior to grading operations.~~	
~~MM Geo 4: To reduce the risk of ground cracking, manure shall be removed from the site, such that the organic matter content of on-site soils shall not exceed 2 percent (a 2 percent total organic content is allowed, of which no more than 1 percent can be manure) in the building foundation areas when mixed with underlying clean soils and imported fill. On-site soils that will be used as on-site fill that contain organic contents will be diluted by mixing with underlying clean soils. The mix will be continuously sampled and tested during grading so that the fill does not exceed the recommended limit of 2 per cent of organics per total volume of fill. The soil engineer will observe the placement of all fill and take sufficient tests to monitor the moisture content and the uniformity and degree of compaction obtained.~~	**Not Applicable.** As part of the site-specific Geotechnical Evaluation, soil samples throughout the site were tested to determine their organic content. The majority of samples ranged from approximately 1.2 percent to 2.7 percent, indicating relatively low organics. Two areas of the site indicated higher levels (8.8 percent and 4.8 percent). The Geotechnical Evaluation provides remedial grading recommendations in those areas with a higher percentage of organic content. Mandatory compliance with the recommendations of the site-specific Geotechnical Evaluation negates the need for this mitigation measure.
~~MM Cul 3: Since grading plans have not yet been prepared to establish how deep excavation is needed, prior to the issuance of grading permits, and as recommended in the Phase I Cultural and Paleontological Resources Assessment for this site, a qualified paleontologist shall be retained to prepare a Paleontological Resources Survey of the project site, for approval by the City. Following City approval of the PRMTP, grading and construction activities may proceed in compliance with the provisions of the approved PRMTP.~~ ~~The PRMTP shall include the following measures:~~ ~~a. Identification of those locations within the project site where paleontological resources are likely to be uncovered during grading.~~ ~~b. A monitoring program specifying the procedures for the monitoring of grading activities by a qualified paleontologist or qualified designee.~~	**Not Applicable**. Consistent with the recommendations of the Project-specific Paleontological Resources Assessment, new Mitigation Measure 7-1 shall be implemented in place of MM Cul 3. Measure 7-1 requires the preparation of a PRIMP, as well as full-time paleontological monitoring starting at a depth of four feet below the surface during earth disturbance activities.

Esperanza Measure	Project Applicability
~~c. If fossil remains large enough to be seen are uncovered by earth-moving activities, a qualified paleontologist or qualified designee shall temporarily divert earth-moving activities around the fossil site until the remains have been evaluated for significance and, if appropriate, have been recovered; and the paleontologist or qualified designee allows earth-moving activities to proceed through the site. If potentially significant resources are encountered, a letter of notification shall be provided in a timely manner to the City, in addition to the report (described below) that is filed at completion of grading.~~ ~~d. If a qualified paleontologist or qualified designee is not present when fossil remains are uncovered by earth-moving activities, these activities shall be stopped and a qualified paleontologist or qualified designee shall be called to the site immediately to evaluate the significance of the fossil remains.~~ ~~e. At a qualified paleontologist or qualified designee's discretion and to reduce any construction delay, a construction worker shall assist in removing fossiliferous rock samples to an adjacent location for temporary stockpiling pending eventual transport to a laboratory facility for processing.~~ ~~f. A qualified paleontologist or qualified designee shall collect all significant identifiable fossil remains. All fossil sites shall be plotted on a topographic map of the project site.~~ ~~g. If the qualified paleontologist or qualified designee determines that insufficient fossil remains have been found after fifty percent of earthmoving activities have been completed, monitoring can be reduced or discontinued.~~ ~~h. Any significant fossil remains recovered in the field as a result of monitoring or by processing rock samples shall be prepared, identified, catalogued, curated, and accessioned into the fossil collections of the San Bernardino County Museum, or another museum repository complying with the Society of Vertebrate Paleontology standard guidelines. Accompanying~~	

Esperanza Measure	Project Applicability
~~specimen and site data, notes, maps, and photographs also shall be archived at the repository.~~ ~~i. Within 6 months following completion of the above tasks, a qualified paleontologist or qualified designee shall prepare a final report summarizing the results of the mitigation program and presenting an inventory and describing the scientific significance of any fossil remains accessioned into the museum repository. The report shall be submitted to the City Planning Department and the museum repository. The report shall comply with the Society of Vertebrate Paleontology standard guidelines for assessing and mitigating impacts on paleontological resources.~~	
Greenhouse Gases	
None. (This topic was added to the CEQA Guidelines after the certification of the Esperanza Specific Plan DEIR.)	-
Hazards and Hazardous Materials	
~~MM Haz 1: To the extent not previously prepared and to properly assess and address potential hazardous materials, including pesticide residues, within the specific plan area, a Phase I Environmental Site Assessment (ESA) shall be performed by a registered environmental assessor (REA) prior to the approval of a site plan for a given phase of development. Pursuant to mitigation measure HM-1 in the GPA for the NMC Final EIR, page 5.10-6, the Phase I ESA shall, at a minimum, meet with the requirements and current standards of investigation established by the American Society of Testing and Materials (ASTM Standard E 1527). If potential hazardous materials or conditions are identified in the Phase I report, an in-depth evaluation shall be performed including surficial sampling and chemical analysis within agricultural areas or where soil staining was observed. The Phase I ESA shall be provided to the City of Ontario and shall be included in any CEQA analysis prepared in connection with the consideration of the discretionary approval for development. All identified hazardous materials will be removed or remedial action taken prior to grading operations~~	**Not Applicable.** A Phase I ESA has been prepared for the Project site to evaluate the potential for on-site hazards. The Phase I determined that that no evidence of contamination or hazardous waste is located on the Project site. No further investigation was recommended.

Esperanza Measure	Project Applicability
~~pursuant to the recommendations of the Phase I ESA and appropriate City, county, state and federal laws and guidelines under the oversight of the San Bernardino County Fire Department's Hazardous materials Division Site Remediation/Local Oversight Program.~~	
~~MM Haz 2: Much of the site located south of Eucalyptus Avenue has been covered by undocumented fill and used as a dump site by the local community. To address possible contamination and remove appropriately all previously identified and unidentified types of hazardous waste on site, clearing and grading activities in this area shall be monitored by a Registered Environmental Assessor (REA), or other professional personnel approved by the City, and any known items of concern and those not previously identified which are uncovered can be removed or remediated per the appropriate regulations (see MM Haz 3 and 4, below).~~	**Not Applicable.** See above.
~~MM Haz 3: If, while performing any excavation as part of project construction, material that is believed to be hazardous waste is discovered, as defined in Section 25117 of the California Health & Safety Code, the developer shall contact the City of Ontario Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped or redirected to another location on site until the material has been tested and the presence of hazardous waste has been confirmed. If no hazardous waste is present, excavation may continue. If hazardous waste is determined to be present, the California Department of Toxic Substances Control shall be contacted and the material shall be removed and disposed of pursuant to applicable provisions of California law under the oversight of the San Bernardino County Fire Department's Hazardous materials Division Site Remediation/Local Oversight Program. Fill material imported from other areas shall be tested prior to placement on-site to assess that it is suitable to be used as fill, including testing for unsafe levels of hazardous materials.~~	**Not Applicable.** See above.

Esperanza Measure	Project Applicability
~~MM Haz 4: The biologically active materials, such as animal carcasses, should be removed and legally disposed of prior to any clearing and grubbing.~~	**Not Applicable.** The recent site visit conducted as part of the Phase I verified that no biologically active materials, such as animal carcasses, are present on the Project site.
~~MM Haz 5: All on-site buildings and remaining foundations that were built before 1979 shall be tested for the presence of asbestos, mercury and lead-based paint and those materials shall be removed according to the applicable regulations and guidelines established by the South Coast Management District, Department of Toxic Substances Control, and the United States Environmental Protection Agency. As per HM-2 in the GPA for the NMC Final EIR, page 5.10-6, the developer shall submit documentation to the City Building Department that asbestos, mercury and lead based paint are not present on their site, or that the above removal process has occurred.~~	**Not Applicable.** The recent site visit conducted as part of the Phase I verified that no buildings or foundations are present on the Project site.
~~MM Haz 6: All septic tanks on the project site will be properly removed and disposed of, per City and State procedures, prior to site development. All water wells on the project site will be properly destroyed in accordance with MM Util 8 in Section 12, Utilities, of this EIR. These activities will occur subject to City of Ontario Building Safety requirements.~~	**Not Applicable.** No septic tanks were identified onsite as part of the Phase I ESA conducted for the Project.
~~MM Haz 7: Pursuant to the City of Ontario Municipal Code Section 9-2.0435 (L), "a methane gas assessment shall be prepared by a licensed professional with expertise in soil gas assessments for subdivisions proposed on former dairies, poultry ranches, hog ranches, livestock feed operations and similar facilities to determine the presence of methane gas within the project boundary. The methane gas assessment shall identify monitoring and mitigation strategies and approaches. All mitigation measures/plans and specifications shall be reviewed and approved by the City of Ontario."~~ ~~Such an "assessment" may take two steps. A preliminary assessment should be done prior to grading to determine exactly where dairies have existed in the past~~	**Not Applicable.** Due to the extensive soil stockpiling, grading, and blending that has taken place on the Project site as part of surrounding development, the Phase I determined that no further investigation is warranted.

Esperanza Measure	Project Applicability
~~so that the post grading assessment/mitigation measures can be focused on the portions of the specific plan area that have included dairies. The second step may include actual testing of graded pads no sooner than 30 days after construction to determine if methane is detected above 5,000 ppm. If so, the types of mitigation measures described below, or those approved by the City, shall be implemented in the areas exceeding this limit. If the developer chooses not to do the post grading assessment, then mitigation as described below shall be required on all lots within former dairy areas of the specific plan.~~ ~~Mitigation shall include: 1) install a minimum 60-mil high density polyethylene (HDPE) membrane barrier (or equivalent), 2) install a subslab passive venting system, 3) seal utility or other penetrations through the membrane, 4) seal utility conduits where they enter a structure, and 4) construct a utility "dam" at the point where a "dry" utility trench approaches a structure. Liquid Boot, applied to a minimum 60-mil dry thickness per manufacturer's recommendations, may be substituted for the HDPE membrane.~~	
Hydrology and Water Quality	
~~MM Hydro 1: In order to ensure that construction activities associated with the Subarea 25 Esperanza Specific Plan will not cause a violation of any water quality standard or waste discharge requirements and to assure no substantial degradation of water quality occurs, and to implement the intent of mitigation measures included in the Final Environmental Impact Report for the NMC, the development within the project area shall comply with all applicable provisions of the State's General Permit for Construction Activities (Order No. 99-08-DWQ, or most recent version) during all phases of construction. A copy of evidence of the receipt of a Waste Discharge Identification Number from the State Regional Water Quality Control Board shall be filed with the City Engineer along with a copy of the Storm Water Pollution Prevention Plan (SWPPP) maps and~~	**Not Applicable.** The Esperanza Specific Plan EIR stated that measures Hydro 1 through 7 should be implemented, unless the Regional Water Quality Treatment Facility is complete and operational prior to project construction (p. III-7-21). The Regional Water Quality Facility referenced in the Esperanza SP DEIR (Regional Plant No. 5) was constructed in 2004. As such, these measures are not applicable to the Project.

Esperanza Measure	Project Applicability
~~BMPs. According to Title 6, Chapter 6, Section 6 of the City's code, the City Engineer shall review and approve the provisions of the SWPPP prior to implementation of any SWPPP provision or starting any construction activity.~~	
~~MM Hydro 2: In order to ensure the development within the Subarea 25 Esperanza Specific Plan will not cause or contribute to violations of any water quality standard or waste discharge requirements, and to assure no substantial degradation of water quality occurs, the project will complete a Water Quality Management Plan (WQMP) pursuant to the MS4 permit (Order No. 2002-0012) under which the City of Ontario is a permitee. The City adopted storm water management code Section 6-6.101 et seq. to implement the provisions of the permit. The project shall incorporate Site Design BMPs and Source Control BMPs, and potentially Treatment Control BMPs. The following table (III-7-F) provides guidelines and possible BMPs that may be incorporated into the project design (on construction drawings) and/or project specifications. Prior to acceptance of the WQMP, the City shall assure that maintenance responsibilities of BMPs approved for the project are identified and enforceable. Table III-7-G correlates each BMP to the pollutants of concern which it removes/reduces and/or meets the design objectives for the BMP.~~	**Not Applicable.** See above.
~~MM Hydro 5: In order to conserve water and to mitigate for any potential unforeseen adverse impacts to a reduction in ground water recharge, the following measure has been recommended by the Chino Basin Water Conservation District: Landscaping within individual development projects will retain and percolate both applied irrigation water and storm water in vegetated areas of parking lots and other areas, where appropriate; "depressed" planted areas bordered by shrubbery screens will be implemented rather than "mounded" grass and shrubbery planted screens. Neighborhood Edges and parks will be irrigated via reclaimed water.~~	**Not Applicable.** See above.

Esperanza Measure	Project Applicability
~~MM Hydro 3: In order to reduce the risk of flooding and to implement mitigation measures included in the Final Environmental Impact Report for the NMC prior to the issuance of a grading permit, the development within the Specific Plan, a final drainage plan for the proposed project shall be submitted for review and approval by the City Engineer and shall construct all necessary storm drain facilities internal to the development which are designed to connect with the City's master planned drainage system.~~	**Not Applicable.** See above.
~~MM Hydro 4: In order to reduce the risk of flooding and to implement mitigation measures included in the GPA for the NMC Final EIR, prior to issuance of grading permits, the City of Ontario shall coordinate with the San Bernardino County Flood Control District to ensure that the project meets County Flood Control requirements such as those established for encroachment permits.~~	**Not Applicable.** See above.
~~MM Hydro 6: In order to reduce pollutants in post construction run-off and to implement mitigation measures included in the Final Environmental Impact Report for the NMC, the individual project owners and operators (e.g., homeowner associations, parks department, etc.) shall ensure that all pest control, herbicide, insecticide and other similar substances used as part of maintenance of project features are handled, stored, applied and disposed of by those conducting facility maintenance in a manner consistent with all applicable federal, state and local regulations. According to Title 6, Chapter 6, Section 6 of the City's code, the City Engineer shall monitor and enforce this provision.~~	**Not Applicable.** See above.
~~MM Hydro: 7: To mitigate possible temporary run-off from undeveloped properties located north (up-gradient) of all or a portion of the project site, drainage from properties north of the developed portions of the project site shall be conveyed to appropriate drainage facilities, as approved by the City Engineer.~~	**Not Applicable.** See above.
Mineral Resources	
None.	-

Esperanza Measure	Project Applicability
Noise	
MM Noi 1: The construction activities of the proposed project shall comply with the City of Ontario Noise Ordinance that prohibits construction activities on Sundays, federal holidays, and other days between the hours of 7:00 p.m. and 7:00 a.m.	**Applicable.** The Project would comply with the permitted hours of construction, as set forth in the City of Ontario Noise Ordinance.
MM Noi 2: Construction staging areas shall not be located within 150 feet of existing sensitive receptors and construction equipment shall be fitted with properly operating and maintained mufflers.	**Applicable.** The Project would ensure that construction staging areas would not be located within 150 feet of existing sensitive receptors. Additionally, all construction equipment would be fitted with properly operating and maintained mufflers.
~~MM Noi 3: A sound wall at least 6 feet high shall be constructed along perimeter lots adjacent to Hamner/Milliken Avenue. If any residential structures are two stories high, then windows facing Hamner/Milliken Avenue would need upgraded sound-rated glazing products and the rooms would need supplemental ventilation. A final acoustical report shall be submitted to address wall heights based on final grading and site plans. The report shall be reviewed and approved by the Planning Department prior to building permit issuance to ensure that City standards are maintained (45 dB CNEL interior and 65 dB CNEL exterior).~~	**Not Applicable.** The Project site is not located adjacent to Hamner/Milliken Avenue.
~~MM Noi 4: A sound wall at least 6 feet high shall be constructed along perimeter lots adjacent to Bellegrave Avenue. If any residential structures are two stories high, then windows facing Bellegrave Avenue would need upgraded sound-rated glazing products and the rooms would need supplemental ventilation. A final acoustical report shall be submitted to address wall heights based on final grading and site plans. The report shall be reviewed and approved by the Planning Department prior to building permit issuance to ensure that City standards are maintained (45 dB CNEL interior and 65 dB CNEL exterior).~~	**Not Applicable.** The Project site is not located adjacent to Bellegrave Avenue.
~~MM Noi 5: A sound wall at least 6 feet high shall be constructed along perimeter lots adjacent to Merrill Avenue. If any residential structures are two stories high, then windows facing Merrill Avenue would need~~	**Not Applicable.** The Project site is not located adjacent to Merrill Avenue.

Esperanza Measure	Project Applicability
~~upgraded sound-rated glazing products and the rooms would need supplemental ventilation. A final acoustical report shall be submitted to address wall heights based on final grading and site plans. The report shall be reviewed and approved by the Planning Department prior to building permit issuance to ensure that City standards are maintained (45 dB CNEL interior and 65 dB CNEL exterior).~~	
MM Noi 6: Architectural plans shall be submitted to the City of Ontario for an acoustical plan check prior to the issuance of building permits to assure that second story windows are upgraded for sound reduction and proper ventilation systems are incorporated. Plans shall include a final acoustical report to be reviewed and approved by the Planning Department prior to building permit issuance to ensure that City standards are maintained (45 dB CNEL interior and 65 dB CNEL exterior).	**Applicable.** The Project Noise Impact Analysis verifies that City standards would be maintained. The Project would submit architectural plans in this regard.
Public Services	
~~MM Serv 1: To reduce fire hazards, wood-shingled and shake-shingled roofs are prohibited.~~	**Not Applicable.** No wood-shingled or shake-shingled roofs are proposed.
MM Serv 2: To reduce fire hazards, adequate fire hydrant locations and water main sizes shall meet standards established by the City of Ontario Fire Department and reviewed and implemented by the Engineering Department.	**Applicable.** All fire water lines and hydrants would meet the standards established by the City of Ontario Fire Department, and reviewed and approved by the Engineering Department.
MM Serv 3: To reduce fire hazards, adequate fire flow pressure shall be provided for residential areas and non-residential projects in accordance with currently adopted City standards.	**Applicable.** Adequate fire flow pressure would be provided in accordance with currently adopted City standards.
MM Serv 4: To reduce fire hazards, adequate water supply shall be provided as approved by the Fire Department prior to the framing stages of construction.	**Applicable.** Adequate water supply would be provided, as approved by the Fire Department.
MM Serv 5: To reduce fire hazards, houses located on cul-de-sacs longer than 300 feet shall be constructed with residential fire sprinklers.	**Applicable.** Residential fire sprinklers would be installed, as appropriate.
MM Serv 6: To reduce fire hazards, access roadways designed in accordance with Fire Department standards to within 150' of all structures, shall be provided prior to the framing stages of construction. This access is to be	**Applicable.** Fire access roadways would be provided prior to framing, and remain unobstructed throughout construction.

Esperanza Measure	Project Applicability
maintained in an unobstructed manner throughout construction.	
MM Serv 7: To mitigate for potential impacts to library, police, and fire departments, the developer shall pay library, police, and fire service development impacts fees.	**Applicable.** The Project Applicant would pay all required development impact fees.
~~MM Serv 8: To reduce the risks associated with inadequate fire service, one of the two fire stations described above (Edison/Archibald or Edison/Mill Creek) shall be in operation prior to the issuance of the first certificate of occupancy within the Esperanza Specific Plan area. The details of where and how this will be accomplished shall be included in the development agreement between the City and the developer. Potential impacts associated with the construction of these stations is evaluated in the EIRs prepared for their respective GPA Subareas.~~	**Not Applicable.** This measure has already been implemented.
MM Serv 9: The developer shall pay school fees or otherwise meet project obligations to schools, as approved by Mountain View School and Chaffey Joint Union High School Districts.	**Applicable.** The Project would pay all required school fees, as directed by the City.
MM Serv 10: To adequately address the need for recreation within the City, park development impact fees, Quimby fees, and/or developed parkland shall be provided to the City commensurate with the requirements of the General Plan equivalent to 24 acres total. The park fees shall be paid on a pro-rata share as building permits are issued in accordance with the negotiated DIF agreement. (Note: parkland shall be provided to the City commensurate with the requirements of the General Plan equivalent to 25 acres, if 46 additional homes are built in lieu of the school.)	**Applicable.** The Project would pay all required park fees, as directed by the City.
~~MM Serv 11: To ensure adequate parks are built commensurate with development, the pocket park located within Planning Area 9 of the Esperanza Specific Plan shall be constructed no later than the issuance of certificates of occupancy for 50 percent of the units within Planning Areas 8, 9 and 10 combined; the pocket park located within Planning Area 7 of the Esperanza Specific Plan shall be constructed no later than the~~	**Not Applicable.** The Project site is located within Planning Area 11, which is not reflected in this measure.

Esperanza Measure	Project Applicability
~~issuance of certificates of occupancy for 50 percent of the units within Planning Areas 6 and 7 combined; the pocket park located within Planning Area 5 of the Esperanza Specific Plan shall be constructed no later than the issuance of certificates of occupancy for 50 percent of the units within Planning Areas 4b and 5 combined; the 5-acre Neighborhood Park shall be constructed no later than the issue of the certificates of occupancy for 50 percent of the units within Planning Areas 1, 2, 3, and 4a combined.~~	
Recreation	
See MM Serv 10 and 11, above.	See MM Serv 10 and 11, above.
Transportation/Traffic	
MM Trans 1: Install traffic signal at the intersection of Mill Creek Avenue/Merrill Avenue with the following geometrics: Northbound: One left-turn lane. One shared through and right-turn lane. Southbound: One left-turn lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One shared through and right-turn lane. (These developments to be constructed by development located west of the Specific Plan.) Westbound: One left-turn lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 2: Install traffic signal at the intersection of Project Street (W)/Merrill Avenue with the following geometrics: Northbound: One shared left, through and right-turn lane. Southbound: One shared left, through and right-turn lane. Eastbound: One left-turn lane. One shared through and right-turn lane. Westbound: One left-turn lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 3: Install traffic signal at the intersection of Project Street (E)/Merrill Avenue with the following geometrics:	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Northbound: One shared left, through and right-turn lane. Southbound: One shared left, through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	
MM Trans 4: Install traffic signal at the intersection of Milliken/Hamner Avenue/Merrill Avenue with the following geometrics: Northbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Southbound: One left-turn lane. Three through lanes. One right-turn lane. Eastbound: Two left-turn lanes. One shared through and right-turn lane. Westbound: (This leg of the intersection to be constructed by development in Riverside County.) One left-turn lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 5: Install traffic signal at the intersection of Mill Creek Avenue/Bellegrave Avenue with the following geometrics (Note: Riverside County encroachment permits required for some improvements.): Northbound: One shared left, through and right-turn lane. Southbound: One shared left, through and right-turn lane. Eastbound: One left-turn lane. One shared through and right-turn lane. Westbound: Two left-turn lanes. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 6: Modify the intersection of Milliken/Hamner Avenue/Bellegrave Avenue to include the following geometrics (Note: Riverside County encroachment permits required for some improvements.): Northbound: One left-turn lane. Two through lanes. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Southbound: Two left-turn lanes. Two through lanes. One shared through and right-turn lane. Eastbound: One left-turn lane. Two through lanes. One right-turn lane. Westbound: Two left-turn lanes. Two through lanes. One right-turn lane.	
MM Trans 7: Sight distance at the project entrance roadways should be reviewed with respect to the City of Ontario Standard Drawing for Sight Distance in effect at the time of preparation of final grading, landscape and street improvement plans.	**Applicable.** All proposed sight distances would be reviewed and approved by the City, consistent with current City of Ontario Standard Drawing for Sight Distance.
MM Trans 8: Signing/striping should be implemented in conjunction with detailed construction plans for the project site.	**Applicable.** All proposed signing and striping plans would be reviewed and approved by the City in conjunction with construction plans.
MM Trans 9: Intersection, median opening and traffic signal spacing shall be in accordance with the City of Ontario New Model Colony Access Guidelines.	**Applicable.** All roadway improvements would be implemented consistent with applicable City standards.
MM Trans 10: Construction of full width of internal roadways and part width of the following roadways shall comply with City of Ontario Standards: • Construct partial width improvements on the easterly side of Mill Creek Avenue at its ultimate cross-section as a collector street (88' right-of-way) adjacent to project boundary line. • Construct partial width improvements on the westerly of Milliken/Hamner Avenue at its ultimate cross-section as a divided arterial parkway 1 (140' or more right-of-way) adjacent to project boundary line. • Construct partial width improvements on the northerly side of Bellegrave Avenue at its ultimate cross-section as a standard arterial (100' right-of-way) adjacent to project boundary line.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
~~MM Trans 11: In order to provide alternative modes of transportation and reduce vehicle trips, the City shall work with Omnitrans to develop additional routes and service to the project area.~~	**Not Applicable.** Measure Trans 11 applies to City staff, not a specific project within the Specific Plan area.
~~MM Trans 12: In order to ease traffic flow, reduce trips, and implement GPA for the NMC Final EIR mitigation measures, the City shall establish a Transportation~~	**Not Applicable.** Measure Trans 12 applies to City staff, not a specific project within the Specific Plan area.

Esperanza Measure	Project Applicability
~~System Management (TSM) Program with the goal of reducing vehicle trips to and from land uses within the City, and particularly focusing on the reduction of drive-alone vehicle use in work commuting.~~	
MM Trans 13: The project will participate in the cost of off-site improvements through fairshare payment of the Development Impact fee as established by the City of Ontario. These fees should be collected and utilized by the City to construct the improvements necessary to maintain the required level of service.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 14: Reconfigure Milliken Avenue/SR 60 WB Ramps to include the following geometrics: Northbound: Two left turn lanes and two through lanes. Southbound: Two through lanes and one right-turn lane. Eastbound: NA Westbound: One left-turn lane. One shared left and through lane. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 15: Reconfigure Milliken Avenue/SR 60 EB Ramps to include the following geometrics: Northbound: Three through lanes. One right-turn lane. Southbound: One left turn lane. Three through lanes. Eastbound: One shared left and through lane. One through lane. Two right-turn lanes. Westbound: NA	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 16: Reconfigure Milliken/Hamner Avenue/Riverside Avenue intersection to include the following geometrics: Northbound: One left-turn lane. Three through lanes. One shared right-turn and through lane. Southbound: Two left-turn lanes. Four through lanes. One right-turn lane. Eastbound: Two left-turn lanes. Two through lanes. One shared through and right-turn lane. Westbound: One left-turn lane. Two through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 17: Reconfigure Milliken/Hamner Avenue/Chino Avenue intersection to include the following geometrics: Northbound: Two left-turn lanes. Two through lanes. One shared right-turn and through lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Southbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	
MM Trans 18: Install traffic signal at the intersection of Archibald Avenue/Schaefer Avenue and configure with the following geometrics: Northbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Southbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Eastbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 19: Reconfigure Archibald Avenue/Edison Avenue intersection to include the following geometrics: Northbound: Two left-turn lanes. Four through lanes. One right-turn lane. Southbound: Two left-turn lanes. Four through lanes. One right-turn lane. Eastbound: Two left-turn lanes. Three through lanes. Two shared right-turn/shared lanes. Westbound: Two left-turn lanes. Three through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 20: Install traffic signal at the intersection of Schaefer Avenue/Edison Avenue and reconfigure with the following geometrics: Northbound: NA Southbound: One shared left and right-turn lane. Eastbound: One left-turn lane. One through lane. Westbound: One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 21: Install traffic signal at the intersection of Haven Avenue/Edison Avenue and reconfigure with the following geometrics:	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Northbound: One left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One left-turn lane. One through lane. One right-turn lane. Eastbound: Two left-turn lanes. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	
MM Trans 22: Install traffic signal at the intersection of Archibald Avenue/Merrill Avenue and reconfigure with the following geometrics: Northbound: One left-turn lane. Three through lanes. One shared through and right-turn lane. Southbound: Two left-turn lanes. Three through lanes. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: Two left-turn lanes. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 23: Install traffic signal at the intersection of Haven Avenue/Merrill Avenue and reconfigure with the following geometrics: Northbound: One left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. Two through lanes. One shared through and right-turn lane. Westbound: One left-turn lane. Two through lanes. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 24: Install traffic signal at the intersection of Mill Creek (Cleveland) Avenue/Merrill Avenue and reconfigure with the following geometrics: Northbound: One left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	
MM Trans 25: Install traffic signal at the intersection of Project Street West/Merrill Avenue and reconfigure with the following geometrics: Northbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 26: Install traffic signal at the intersection of Project Street East/Merrill Avenue and reconfigure with the following geometrics: Northbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 27: Install traffic signal at the intersection of Milliken/Hamner Avenue/Merrill Avenue and reconfigure with the following geometrics: Northbound: One left-turn lane. Three through lanes. One shared through and right-turn lane. Southbound: One left-turn lane. Three through lanes. One right-turn lane. Eastbound: Two left-turn lanes. One through lane. One shared through and right-turn lane. Westbound: One left-turn lane. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
MM Trans 28: Install traffic signal at the intersection of Mill Creek (Cleveland) Avenue/Bellegrave Avenue and reconfigure with the following geometrics: Northbound: One shared left-turn lane. One through lane. One shared through and right-turn lane. Southbound: One shared through and left-turn lane. One through lane. One shared through and right-turn lane. Eastbound: One left-turn lane. One through lane. One shared through and right-turn lane. Westbound: Two left-turn lanes. One through lane. One shared through and right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 29: Reconfigure Milliken/Hamner Avenue/Bellegrave Avenue intersection to include the following geometrics: Northbound: One left-turn lane. Three through lanes. One shared through and right-turn lane. Southbound: Two left-turn lanes. Three through lanes. One shared through and right-turn lane. Eastbound: One left-turn lane. Two through lanes. One right-turn lane. Westbound: Two left-turn lanes. Two through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 30: Reconfigure Hamner Avenue/Limonite Avenue intersection to include the following geometrics: Northbound: Two left-turn lanes. Three through lanes. One right-turn lane. Southbound: Two left-turn lanes. Three through lanes. One right-turn lane. Eastbound: Two left-turn lanes. Three through lanes. One right-turn lane. Westbound: Two left-turn lanes. Three through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Trans 31: Reconfigure I-15/Limonite SB Ramps to include the following geometrics: Northbound: NA Southbound: One left-turn lane. One shared left, through, and right-turn lane. One right-turn lane. Eastbound: Three through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.

Esperanza Measure	Project Applicability
Westbound: Three through lanes. One free-right-turn lane.	
MM Trans 32: Reconfigure I-15/Limonite NB Ramps to include the following geometrics: Northbound: One left-turn lane. One shared left, through, and right-turn lane. One right-turn lane. Southbound: NA. Eastbound: Three through lanes. One free right-turn lane. Westbound: Three through lanes. One right-turn lane.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
Tribal Cultural Resources

Utilities & Service Systems	
MM Util 1: To provide adequate water and sewer service, all water and sewer pipelines within and adjacent to the project boundaries, as required and conditioned to serve the associated Tentative Tract Maps, shall be constructed by the developer based on the NMC Infrastructure Master Plans phased by tract and to the satisfaction of the City.	**Applicable.** All water and sewer improvements proposed by the Project would be reviewed and approved by the City, and implemented pursuant to current City infrastructure plans.
MM Util 2: To ensure that adequate sewer facilities are in place to serve the proposed project, the Archibald trunk sewer line off-site connection to the IEUA Kimbal Avenue interceptor shall be completed by IEUA and operational prior to the City of Ontario's issuance of the first certificates of occupancy. The applicant shall participate on a fair share basis in the development of the necessary sewer facilities.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Util 3: To ensure adequate water service to the project, off-site water lines, tanks, interconnectors and other facilities required in the Water Master Plan for the Francis loop to provide water to the site shall be constructed by the City and be in place and operational prior to the City of Ontario's issuance of the first certificate of occupancy. The applicant shall participate on a fair share basis in the development of these off-site facilities.	**Applicable.** The Project would pay fair share fees towards the improvements listed in the Esperanza SP DEIR and requisite City Development Impact Fees, as determined by the City.
MM Util 4: To mitigate for possible conflicts with existing utilities, prior to obtaining grading permit(s), the project proponent shall coordinate with the applicable natural	**Applicable.** The Project Applicant would coordinate with affected purveyers to prevent potential impacts to existing utility facilities.

Esperanza Measure	Project Applicability
gas, electrical, and telephone utility providers for the project site to ensure that all existing underground and overhead lines are not damaged during project construction.	
MM Util 5: To reduce the quantity of energy used and to conserve water resources, the project developer and City of Ontario should work to include sustainable systems for use of water and energy within the project design. One source of assistance in this regard is Southern California Gas Company Commercial/ Industrial Support Center at 1-800-GAS-2000, which should be contacted at the time of development of the commercial center located within the project.	**Applicable.** As detailed within the Project Description, the Project includes design features aimed at reducing energy and water usage, such as water efficient fixtures and irrigation methods, and a lack of natural gas infrastructure.
~~MM Util 6: To reduce the need for potable water and ensure adequate water supply, the project applicant shall plan and construct a dual pipe system to supply recycled water when available in the future (GP Policy 5.1.4). An Engineer's Report approved by the City and the Department of Health Services is required prior to the use of recycled water.~~	**Not Applicable.** This measure has already been implemented/completed.
~~MM Util 7: To reduce risks associated with improperly abandoned wells and the potential need for temporary water supplies, all existing agricultural wells on the project site will be destroyed/ abandoned per the California Department of Water Resources Standards (Bulletin 74-90). A well use/destruction plan and schedule for all existing agricultural wells on the project site shall be prepared and submitted for approval, prior to the issuance of grading permits. This plan shall also include a temporary water supply plan, as applicable, in order to avoid potential significant temporary impacts resulting from the disruption of current water supply through the abandonment of on-site wells. Construction of any temporary pipes or facilities needed to provide water to the existing uses which are to temporarily remain shall be installed per City requirements at the developer's expense.~~	**Not Applicable.** No wells are located on the Project site.
Wildfire	
None. (This topic was added to the CEQA Guidelines after the certification of the Esperanza Specific Plan DEIR.)	-

MEMORANDUM

URBAN CROSSROADS

DATE: March 28, 2025
TO: Dave Waters, Genstar Development Company/GDCI-13
FROM: Haseeb Qureshi, Shannon Wong
JOB NO: 15662-05 AQ Assessment

ESPERANZA SPECIFIC PLAN AMENDMENT OPERATIONAL AIR QUALITY ASSESSMENT

Dave Waters,

Urban Crossroads, Inc. is pleased to submit the following Operational Air Quality Assessment for Esperanza Specific Plan Amendment development (referred to as **Project**) to support the proposed Specific Plan Amendment (**SPA**), which is located on the northeast corner of Eucalyptus Avenue and Amherst Avenue in the City of Ontario. The purpose of this work effort is to determine if the Project would result in new or substantially different Air Quality Impacts than those considered and addressed in the Esperanza Specific Plan (**Approved Specific Plan**) Environmental Impact Report (EIR) and The Ontario Plan 2050 Supplemental EIR (SEIR).

As required by *The Ontario Plan 2050 Final Supplemental Environmental Impact Report* (SCH No. 2021070364) (TOP Final SEIR) mitigation measure MM AQ-1, Urban Crossroads, Inc. is pleased to provide the following Operational Air Quality Assessment for the Esperanza Specific Plan Amendment (**Project**), located in the City of Ontario.

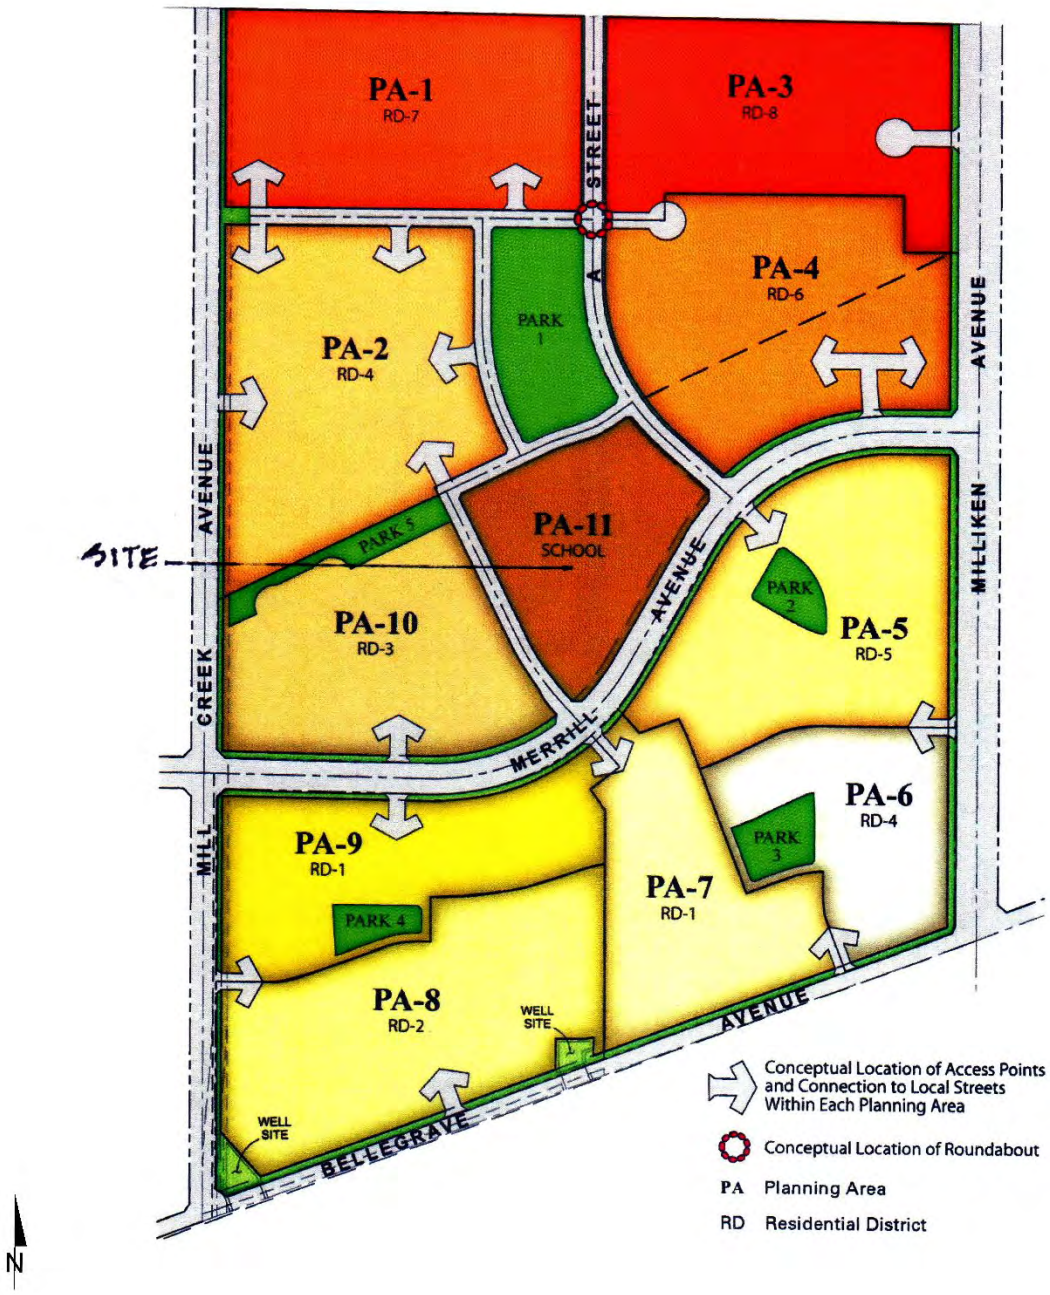
PROPOSED PROJECT

It is our understanding that the proposed Project is to consist of 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre). The Project is located within the Esperanza Specific Plan. The original Specific Plan that was approved contemplated a 736-student elementary school within Planning Area 11. The land use will be updated from "School" to "MDR Medium Density Residential" consistent with the adjacent land use to the northeast. The Project is anticipated to be constructed in a single phase by the year 2029.

Exhibit 1 shows the preliminary site plan. For comparison purposes, Exhibit 2 shows the currently approved land use plan identifying Planning Area 11 with a school.

EXHIBIT 1: PRELIMINARY SITE PLAN

EXHIBIT 2: CURRENTLY APPROVED LAND USE PLAN



PROJECT AIR QUALITY EMISSIONS

METHODOLOGY

The California Air Pollution Control Officers Association (CAPCOA) in conjunction with other California air districts, including SCAQMD, released CalEEMod 2022 in May 2022. CalEEMod periodically releases updates, as such the latest version available at the time of this report has been utilized in this analysis. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (1). Accordingly, the latest version of CalEEMod has been used for this Project to determine operational air quality emissions.

AIR QUALITY REGIONAL EMISSIONS THRESHOLDS

The SCAQMD has developed regional operational significance thresholds for criteria pollutants, as summarized at Table 1 (2). The SCAQMD's CEQA Air Quality Significance Thresholds (March 2023) indicate that any projects in the South Coast Air Basin (SCAB) with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 1: MAXIMUM DAILY REGIONAL EMISSIONS THRESHOLDS

Pollutant	Operations
NO_X	55 lbs/day
VOC	55 lbs/day
PM_{10}	150 lbs/day
$PM_{2.5}$	55 lbs/day
SO_X	150 lbs/day
CO	550 lbs/day

lbs/day – Pounds Per Day

AIR QUALITY LOCALIZED EMISSIONS THRESHOLDS

Sensitive Receptor Locations

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as "sensitive receptors". These structures typically include uses such as residences, hotels, and hospitals where an individual can remain for 24 hours. Consistent with the LST Methodology, the nearest land use where an individual could remain for 24 hours to the Project site has been used to determine construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$, since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time.

Receptors in the Project study area are described below. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site. Receptors in the Project study area are shown on Exhibit 2 under the Localized Construction Emissions section later in the report.

- Receptor R1 represents the future residential area east of Clifton Avenue, approximately 83 feet east of the Project site.
- Receptor R2 represents the future residential area northeast of the intersection of Clifton Avenue and Chatham Street, approximately 106 feet northeast of the Project site.
- Receptor R3 represents the future park north of Chatham Street, approximately 66 feet north of the Project site.
- Receptor R4 represents the existing residence at 4508 S. Amherst Avenue, approximately 130 feet west of the Project site.
- Receptor R5 represents the 095 E. Amigos Privado, approximately 202 feet south of the Project site.
- Receptor R6 represents the existing residence at 4556 S. Afton Privado, approximately 143 feet southeast of the Project site.

For this Project, the appropriate SRA for the LST analysis is the SCAQMD Southwest San Bernardino Valley monitoring station (SRA 33). LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size. The SCAQMD's screening look-up tables are utilized in determining localized impacts. It should be noted that since the look-up tables identify thresholds at only 1 acre, 2 acres, and 5 acres, linear regression has been utilized to determine localized significance thresholds. Consistent with SCAQMD guidance, the thresholds presented in Table 2 were calculated by interpolating the threshold values for the Project's disturbed acreage.

The acres disturbed is based on the equipment list and days in the site preparation and grading phase according to the anticipated maximum number of acres a given piece of equipment can pass over in an 8-hour workday. The equipment-specific grading rates are summarized in the CalEEMod user's guide, Appendix A: Calculation Details for CalEEMod (4). It should be noted that the disturbed area per day is representative of a piece of equipment making multiple passes over the same land area. In other words, one Rubber Tired Dozer can make multiple passes over the same land area totaling 0.5 acres in a given 8-hour day. Appendix A of the CalEEMod User Manual only identifies equipment-specific grading rates for Crawler Tractors, Graders, Rubber Tired Dozers, and Scrapers; therefore, Tractors/Loaders/Backhoes equipment that was included in the site preparation and grading phase was replaced with Crawler Tractors. For analytical purposes, emissions associated with peak site preparation and grading activities are considered for purposes of localized significance thresholds (LSTs) since this phase represents the maximum localized emissions that would occur. The Project's construction activities could disturb a maximum of approximately 3.5 acres per day for site preparation and 4 acres per day for grading activities. Any other construction phases of development would result in lesser emissions and consequently lesser impacts than what is disclosed herein. As such, Table 2 presents thresholds for localized construction and operational emissions.

TABLE 2: MAXIMUM DAILY LOCALIZED EMISSIONS THRESHOLDS

Source	Activity	Emissions (lbs/day)			
		VOC	NO_X	PM_{10}	$PM_{2.5}$
Construction	Site Preparation	220 lbs/day	1,713 lbs/day	11 lbs/day	7 lbs/day
	Grading	237 lbs/day	1,873 lbs/day	13 lbs/day	8 lbs/day

[1]Source of localized significance threshold (LSTs) is provided on page 7.

SENSITIVE RECEPTORS

The analysis uses the methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (6). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4[1]. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual or cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ is represented by the existing residence at 4516 Amherst Ave, approximately 52 feet (16 meters) west of the Project site.

As previously stated, and consistent with LST Methodology, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assume that an individual could be present at these sites for periods of one to 8 hours. It should be noted that the existing residence is located at a closer distance than the nearest industrial/commercial use. As such, the same receptor will be used for evaluation of localized NO_x and CO.

It should be noted that the *LST Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the*

1 The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

nearest receptor should use the LSTs for receptors located at 25 meters (18)." As such, for evaluation of localized PM_{10}, $PM_{2.5}$, NO_X, and CO, a 25-meter distance will be used.

LOCALIZED CONSTRUCTION EMISSIONS

Table 3 identifies the localized impacts at the nearest receptor location in the vicinity of Project construction activities. Outputs from the model runs for construction LSTs are provided in Attachment A. For analytical purposes, emissions associated with peak site preparation and grading activities are considered for purposes of LSTs since these phases represent the maximum localized emissions that would occur. As shown in Table 3, emissions resulting from construction activity will not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for localized construction-source emissions and no mitigation is required.

TABLE 3: LOCALIZED CONSTRUCTION IMPACTS

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Site Preparation				
Maximum Daily Emissions	34.61	31.01	7.43	4.31
SCAQMD Localized Threshold	220	1,713	11	7
Threshold Exceeded?	NO	NO	NO	NO
Grading				
Maximum Daily Emissions	29.95	28.67	4.05	2.25
SCAQMD Localized Threshold	237	1,873	13	8
Threshold Exceeded?	NO	NO	NO	NO

REGIONAL CONSTRUCTION EMISSIONS

The proposed Project is to consist of 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre) on 10.5 acres.

The estimated maximum daily construction emissions without mitigation are summarized in Table 4. Detailed construction model outputs are presented in Attachment A. Under the assumed scenarios, emissions resulting from the Project construction will not exceed thresholds established by the SCAQMD for emissions of any criteria pollutant.

TABLE 4: REGIONAL CONSTRUCTION EMISSIONS SUMMARY

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$

SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	NO	NO	NO	NO	NO	NO

REGIONAL OPERATIONAL EMISSIONS

Operational activities associated with the Project would result in emissions of CO, VOCs, NO_X, SO_X, PM_{10}, and $PM_{2.5}$. Operational related emissions are expected from the following primary sources: area source emissions, energy source emissions, and mobile source emissions.

The Project related operational air quality impacts derive primarily from vehicle trips generated by buildout associated with the net increase in residential units. Trip characteristics available from the *Esperanza Specific Plan Amendment Trip Generation* were utilized in this analysis (3).

The estimated operation-source emissions associated with the net increase of 161 multifamily residential dwelling units, and reduction in a 736-student elementary school are summarized on Table 5. Detailed operational model outputs are presented in Attachments A and B. As shown on Table 5, operational-source emissions would not exceed the applicable SCAQMD regional thresholds for emissions of any criteria pollutant and no mitigation is required.

TABLE 5: OPERATIONAL EMISSIONS COMPARISON

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	345,587	115,196	0.00	0.00	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Preparation	—	—	70.0	0.00	—
Grading	—	—	240	0.00	—
Paving	0.00	0.00	0.00	0.00	—

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Low Rise	—	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	346	0.03	< 0.005
2027	0.00	346	0.03	< 0.005
2028	0.00	346	0.03	< 0.005
2029	0.00	346	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Apartments Low Rise	943	733	621	316,575	15,986	12,412	10,530	5,363,927

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Apartments Low Rise	—
Wood Fireplaces	0
Gas Fireplaces	161

Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	0

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
345586.5	115,196	0.00	0.00	—

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	250

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Apartments Low Rise	754,406	346	0.0330	0.0040	2,681,706

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Apartments Low Rise	6,710,669	1,933,654

2622

5.13. Operational Waste Generation

5.13.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	3.10	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	6.78	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3

2625

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	77.1
AQ-PM	93.4
AQ-DPM	57.1
Drinking Water	100.0
Lead Risk Housing	17.5
Pesticides	84.9
Toxic Releases	67.6
Traffic	18.1
Effect Indicators	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	72.0
Healthy Places Index Score for Project Location (b)	55.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic Analysis
Operations: Hearths	SCAQMD Rule 445 no wood burning devices. Wood burning devices added to gas devices.
Operations: Refrigerants	Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.

Construction: Construction Phases	Based on client provided data, construction schedule to begin Q3 2026 and completed Q1 2029 Building Construction, Paving, and Architectural Coating overlap to present a conservative analysis
Construction: Off-Road Equipment	T/L/B replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases. Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Site Preparation, Grading, and Building Construction

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	3.10	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	6.78	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	77.1
AQ-PM	93.4
AQ-DPM	57.1
Drinking Water	100.0
Lead Risk Housing	17.5
Pesticides	84.9
Toxic Releases	67.6
Traffic	18.1
Effect Indicators	—
CleanUp Sites	80.3
Groundwater	98.1

2656

Haz Waste Facilities/Generators	86.6
Impaired Water Bodies	87.0
Solid Waste	98.9
Sensitive Population	—
Asthma	16.5
Cardio-vascular	29.1
Low Birth Weights	49.0
Socioeconomic Factor Indicators	—
Education	52.9
Housing	59.3
Linguistic	68.9
Poverty	35.4
Unemployment	36.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	73.60451687
Employed	6.274862056
Median HI	76.55588349
Education	—
Bachelor's or higher	64.85307327
High school enrollment	100
Preschool enrollment	66.93186193
Transportation	—
Auto Access	63.41588605

Active commuting	24.5989991
Social	—
2-parent households	66.95752598

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	72.0
Healthy Places Index Score for Project Location (b)	55.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic Analysis
Operations: Architectural Coatings	SCAQMD Rule 1113

Operations: Refrigerants	As of 1 January 2022, new commercial refrigeration equipment may not use refrigerants with a GWP of 150 or greater. Further, R-404A (the CalEEMod default) is unacceptable for new supermarket and cold storage systems as of 1 January 2019 and 2023, respectively. Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.

MANAGEMENT SUMMARY/ABSTRACT

In response to a request from the project applicant, a cultural resources study was conducted by BFSA Environmental Services, a Perennial Company (BFSA), for the proposed Eucalyptus and Amherst Avenues Project bound by Chatham Street, Clifton Avenue, South Amherst Avenue, and East Eucalyptus Avenue, within the city of Ontario, in San Bernardino County, California. The 10.02-acre property (Assessor's Parcel Number 1073-101-05) is situated within Section 13, Township 2 South, Range 7 West of the San Bernardino Baseline and Meridian on the United States Geological Survey (USGS) (7.5-minute) *Corona North* topographic quadrangle maps. As designed, the applicant proposes to clear the property for the construction of a multi-family residential development with associated landscape, hardscape, and infrastructure.

The purpose of this investigation was to locate and record cultural resources present within the project and subsequently evaluate any resources that will be impacted by the development as part of the City of Ontario's environmental review process conducted in compliance with California Environmental Quality Act (CEQA). The cultural resources investigation included the review of an archaeological records search conducted at the South Central Coastal Information Center (SCCIC) at California State University, Fullerton (CSU Fullerton), in order to assess previous archaeological studies and identify any recorded archaeological sites within the project. The records search identified 11 resources within one mile of the proposed project, none of which are located within the subject property. The records search also identified 38 previous studies conducted within one mile of the project, one of which overlaps the subject property (Dice 2002). A review of historic maps and aerial photographs illustrate that the subject property was utilized for agricultural purposes as early as 1938. Additionally, the property was entirely graded in 2018 resulting in the development of a water catchment basin and a graded pad. A Sacred Lands File (SLF) search was requested from the Native American Heritage Commission (NAHC). The SLF search results were negative for recorded Native American sacred sites or locations of religious or ceremonial importance within the project vicinity.

BFSA archaeologist Parker Sheriff conducted the archaeological survey of the project on February 27, 2025. The cultural resources survey did not identify any cultural resources within the project. Due to the previous ground-disturbing activities and the absence of identified cultural resources within the project boundaries, the potential for any significant resources to be present or impacted by the proposed project is minimal. Given that no archaeological sites, features, or artifacts have been identified within or directly adjacent to the project, no potential impacts to cultural resources associated with the proposed development are anticipated. Based upon the results of this study, no further archaeological study or mitigation measures are recommended.

A copy of this report will be permanently filed with the SCCIC at CSU Fullerton. All notes, photographs, and other materials related to this project will be curated at the BFSA archaeological laboratory in Poway, California.

1.0 INTRODUCTION

1.1 Project Description

The archaeological survey program for the proposed Eucalyptus and Amherst Avenues Project was conducted in order to comply with CEQA regulatory requirements and City of Ontario environmental requirements. The proposed project is bound by Chatham Street, Clifton Avenue, South Amherst Avenue, and East Eucalyptus Avenue, within the city of Ontario, in San Bernardino County, California (Figure 1.1–1). The 10.02-acre property (APN 1073-101-05) is located within Section 13, Township 2 South, Range 7 West as shown on the USGS 1:24,000-scale (7.5-minute) *Corona North* topographic quadrangle maps (Figure 1.1–2). As designed, the applicant proposes to clear the property for the construction of a multi-family residential development with associated landscape, hardscape, and infrastructure (Figures 1.1–3).

The decision to request this investigation was based upon the cultural resource sensitivity of the locality as suggested by known site density and predictive modeling. Sensitivity for prehistoric cultural resources in a given area is usually indicated by known settlement patterns, which, in southwestern San Bernardino County, were focused around freshwater resources and a food supply. Within the city of Ontario, historic resources tend to be associated with the historic agricultural, industrial, or residential development of the region.

1.2 Environmental Setting

The Eucalyptus and Amherst Avenues Project is situated in the Peninsular Ranges Geologic Province of southern California. The Peninsular Ranges are a series of northwest- to southeast-trending mountain ranges separated by similarly trending valleys, which make up the southernmost segment of a chain of North American Mesozoic batholiths that extend from Alaska to the southern tip of Baja California. Geologically, the project is mapped as Holocene and late Pleistocene-aged young eolian deposits (Morton et al. 2002). These surficial sediments are described as "chiefly unconsolidated, moderately well sorted, fine- to medium-grained sand" (Morton et al. 2002). The specific soil types found within the project are mapped as Delhi fine sand (Db) and Hilmar loamy fine sand (NRCS 2023). The average elevation within the project is approximately 700 feet above mean sea level.

The proposed project is situated approximately three miles north of the Santa Ana River. Historically, the property was utilized for agriculture. In 2018, the property was completely graded. The vegetation found within the property consists of non-native weeds and grasses.

1.3 Cultural Setting

1.3.1 Prehistoric Period

Paleo Indian, Archaic Period Milling Stone Horizon, and the Late Prehistoric Shoshonean groups are the three general cultural periods represented in San Bernardino County. The following discussion of the cultural history of San Bernardino County references the San Dieguito Complex, the Encinitas Tradition, the Milling Stone Horizon, the La Jolla Complex, the Pauma Complex, and the San Luis Rey Complex, since these culture sequences have been used to describe archaeological manifestations in the region. The Late Prehistoric component in the southwestern area of San Bernardino County was represented by the Gabrielino and Serrano Indians. According to Kroeber (1976), the Serrano probably owned a stretch of the Sierra Madre from Cucamonga east to above Mentone and halfway up to San Timoteo Canyon, including the San Bernardino Valley and just missing Riverside County. However, Kroeber (1976) also states that this area has been assigned to the Gabrielino, "which would be a more natural division of topography, since it would leave the Serrano pure mountaineers."

Absolute chronological information, where possible, will be incorporated into this discussion to examine the effectiveness of continuing to use these terms interchangeably. Reference will be made to the geologic framework that divides the culture chronology of the area into four segments: late Pleistocene (20,000 to 10,000 years before the present [YBP]), early Holocene (10,000 to 6,650 YBP), middle Holocene (6,650 to 3,350 YBP), and late Holocene (3,350 to 200 YBP).

Paleo Indian Period (Late Pleistocene: 11,500 to circa 9,000 YBP)

The Paleo Indian Period is associated with the terminus of the late Pleistocene (12,000 to 10,000 YBP). The environment during the late Pleistocene was cool and moist, which allowed for glaciation in the mountains and the formation of deep, pluvial lakes in the deserts and basin lands (Moratto 1984). However, by the terminus of the late Pleistocene, the climate became warmer, which caused glaciers to melt, sea levels to rise, greater coastal erosion, large lakes to recede and evaporate, extinction of Pleistocene megafauna, and major vegetation changes (Moratto 1984; Martin 1967, 1973; Fagan 1991). The coastal shoreline at 10,000 YBP, depending upon the particular area of the coast, was near the 30-meter isobath, or two to six kilometers further west than its present location (Masters 1983).

Paleo Indians were likely attracted to multiple habitat types, including mountains, marshlands, estuaries, and lakeshores. These people likely subsisted using a more generalized hunting, gathering, and collecting adaptation, utilizing a variety of resources including birds, mollusks, and both large and small mammals (Erlandson and Colten 1991; Moratto 1984; Moss and Erlandson 1995).

Archaic Period (Early and Middle Holocene: circa 9000 to 1300 YBP)

The Archaic Period of prehistory began with the onset of the Holocene around 9,000 YBP. The transition from the Pleistocene to the Holocene was a period of major environmental change

throughout North America (Antevs 1953; Van Devender and Spaulding 1979). The general warming trend caused sea levels to rise, lakes to evaporate, and drainage patterns to change. In southern California, the general climate at the beginning of the early Holocene was marked by cool/moist periods and an increase in warm/dry periods and sea levels. The coastal shoreline at 8,000 YBP, depending upon the particular area of the coast, was near the 20-meter isobath, or one to four kilometers further west than its present location (Masters 1983).

The rising sea level during the early Holocene created rocky shorelines and bays along the coast by flooding valley floors and eroding the coastline (Curray 1965; Inman 1983). Shorelines were primarily rocky with small littoral cells, as sediments were deposited at bay edges but rarely discharged into the ocean (Reddy 2000). These bays eventually evolved into lagoons and estuaries, which provided a rich habitat for mollusks and fish. The warming trend and rising sea levels generally continued until the late Holocene (4,000 to 3,500 YBP).

At the beginning of the late Holocene, sea levels stabilized, rocky shores declined, lagoons filled with sediment, and sandy beaches became established (Gallegos 1985; Inman 1983; Masters 1994; Miller 1966; Warren and Pavesic 1963). Many former lagoons became saltwater marshes surrounded by coastal sage scrub by the late Holocene (Gallegos 2002). The sedimentation of the lagoons was significant in that it had profound effects upon the types of resources available to prehistoric peoples. Habitat was lost for certain large mollusks, namely *Chione* and *Argopecten,* but habitat was gained for other small mollusks, particularly *Donax* (Gallegos 1985; Reddy 2000). The changing lagoon habitats resulted in the decline of larger shellfish, the loss of drinking water, and the loss of Torrey Pine nuts, causing a major depopulation of the coast as people shifted inland to reliable freshwater sources and intensified their exploitation of terrestrial small game and plants, including acorns (originally proposed by Rogers 1929; Gallegos 2002).

The Archaic Period in southern California is associated with a number of different cultures, complexes, traditions, and horizons, including San Dieguito, La Jolla, Encinitas, Milling Stone, and Pauma, as well as the Intermediate Period.

Late Prehistoric Period (Late Holocene: 1,300 YBP to 1790)

Approximately 1,350 YBP, a Shoshonean-speaking group from the Great Basin region moved into San Bernardino County, marking the transition to the Late Prehistoric Period. This period has been characterized by higher population densities and elaborations in social, political, and technological systems. Economic systems diversified and intensified during this period, with the continued elaboration of trade networks, the use of shell-bead currency, and the appearance of more labor-intensive, yet effective, technological innovations. Technological developments during this period included the introduction of the bow and arrow between A.D. 400 and 600 and the introduction of ceramics. Atlatl darts were replaced by smaller arrow darts, including the Cottonwood series points. Other hallmarks of the Late Prehistoric Period include extensive trade networks as far reaching as the Colorado River Basin and cremation of the dead.

Protohistoric Period (Late Holocene: 1790 to Present)

Gabrielino

At the time of Spanish contact, the territory of the Gabrielino, also known ethnographically as the Tongva, covered much of present-day Los Angeles and Orange counties. The southern extent of this culture area is bounded by Aliso Creek, the eastern extent is located east of present-day San Bernardino along the Santa Ana River, the northern extent includes the San Fernando Valley, and the western extent includes portions of the Santa Monica Mountains. The Gabrielino also occupied several Channel Islands including Santa Barbara Island, Santa Catalina Island, San Nicholas Island, and San Clemente Island. Because of their access to certain resources, including a steatite source from Santa Catalina Island, this group was among the wealthiest and most populous aboriginal groups in all of southern California. Trade of materials and resources controlled by the Gabrielino extended as far north as the San Joaquin Valley, as far east as the Colorado River, and as far south as Baja California (Bean and Smith 1978a; Kroeber 1976).

The Gabrielino lived in permanent villages and smaller resource gathering camps occupied at various times of the year depending upon the seasonality of the resource. Larger villages were comprised of several families or clans, while smaller, seasonal camps typically housed smaller family units. The coastal area between San Pedro and Topanga Canyon was the location of primary subsistence villages, while secondary sites were located near inland sage stands, oak groves, and pine forests. Permanent villages were located along rivers and streams, as well as in sheltered areas along the coast. As previously mentioned, the Channel Islands were also the locations of relatively large settlements (Bean and Smith 1978a; Kroeber 1976).

Resources procured along the coast and on the islands were primarily marine in nature and included tuna, swordfish, ray, shark, California sea lion, Stellar sea lion, harbor seal, northern elephant seal, sea otter, dolphin, porpoise, various waterfowl species, numerous fish species, purple sea urchin, and mollusks such as rock scallop, California mussel, and limpet. Inland resources included oak acorn, pine nut, Mohave yucca, cacti, sage, grass nut, deer, rabbit, hare, rodent, quail, duck, and a variety of reptiles such as western pond turtle and several different species of snakes (Bean and Smith 1978a; Kroeber 1976).

Little is known about the social structure of the Gabrielino; however, there appears to have been at least three social classes: 1) the elite, which included the rich, chiefs, and their immediate family; 2) a middle class, which included people of relatively high economic status or long-established lineages; and 3) a class of people that included most other individuals in the society. Villages were politically autonomous units comprised of several lineages. During times of the year when certain seasonal resources were available, the village would divide into lineage groups and move out to exploit them, returning to the village between forays (Bean and Smith 1978a; Kroeber 1976).

Each lineage had its own leader, with the village chief coming from the dominant lineage. Several villages might be allied under a paramount chief. Chiefly positions were of an ascribed status, most often passed to the eldest son. Chiefly duties included providing village cohesion, leading warfare and peace negotiations with other groups, collecting village tributes, and arbitrating disputes within the village(s). The status of the chief was legitimized by safekeeping of the sacred bundle, a representation of the link between the material and spiritual realms and the embodiment of power (Bean and Smith 1978a; Kroeber 1976).

Shamans were leaders in the spirit realm. The duties of the shaman included conducting healing and curing ceremonies, guarding the sacred bundle, locating lost items, identifying and collecting poisons for arrows, and making rain (Bean and Smith 1978a; Kroeber 1976).

Marriages were made between individuals of equal social status and, in the case of powerful lineages, marriages were arranged to establish political ties between the lineages (Bean and Smith 1978a; Kroeber 1976).

Men conducted the majority of the heavy labor, hunting, fishing, and trading with other groups. Women's duties included gathering and preparing plant and animal resources, and making baskets, pots, and clothing (Bean and Smith 1978a; Kroeber 1976).

Gabrielino houses were domed, circular structures made of thatched vegetation. Houses varied in size and could house from one to several families. Sweathouses (semicircular, earth-covered buildings) were public structures used in male social ceremonies. Other structures included menstrual huts and a yuvar, an open-air, ceremonial structure built near the chief's house (Bean and Smith 1978a; Kroeber 1976).

Clothing was minimal; men and children most often went naked, while women wore deerskin or bark aprons. In cold weather, deerskin, rabbit fur, or bird skin (with feathers intact) cloaks were worn. Island and coastal groups used sea otter fur for cloaks. In areas of rough terrain, yucca fiber sandals were worn. Women often used red ochre on their faces and skin for adornment or protection from the sun. Adornment items included feathers, fur, shells, and beads (Bean and Smith 1978a; Kroeber 1976).

Hunting implements included wood clubs, sinew-backed bows, slings, and throwing clubs. Maritime implements included rafts, harpoons, spears, hooks and lines, and nets. A variety of other tools included deer scapulae saws, bone and shell needles, bone awls, scrapers, bone or shell flakers, wedges, stone knives and drills, metates, mullers, manos, shell spoons, bark platters, and wooden paddles and bowls. Baskets were made from rush, deer grass, and skunkbush. Baskets were fashioned for hoppers, plates, trays, and winnowers for leaching, straining, and gathering. Baskets were also used for storing, preparing, and serving food, and for keeping personal and ceremonial items (Bean and Smith 1978a; Kroeber 1976).

The Gabrielino had exclusive access to soapstone, or steatite, procured from Santa Catalina Island quarries. This highly prized material was used for making pipes, animal carvings, ritual objects, ornaments, and cooking utensils. The Gabrielino profited well from trading steatite since it was valued so much by groups throughout southern California (Bean and Smith 1978a; Kroeber 1976).

Serrano

Aboriginally, the Serrano occupied an area east of present-day Los Angeles. According to Bean and Smith (1978b), definitive boundaries are difficult to place for the Serrano due to their sociopolitical organization and a lack of reliable data:

> The Serrano were organized into autonomous localized lineages occupying definite, favored territories, but rarely claiming any territory far removed from the lineage's home base. Since the entire dialectical group was neither politically united nor amalgamated into supralineage groups, as many of their neighbors were, one must speak in terms of generalized areas of usage rather than pan-tribal holdings. (Strong [1971] in Bean and Smith 1978b)

However, researchers place the Serrano in the San Bernardino Mountains east of Cajon Pass and at the base of and north of the mountains near Victorville, east to Twentynine Palms, and south to the Yucaipa Valley (Bean and Smith 1978b). Serrano has been used broadly for languages in the Takic family including Serrano, Kitanemuk, Vanyume, and Tataviam.

The Serrano were part of "exogamous clans, which in turn were affiliated with one of two exogamous moieties, *tuk^{w}utam* (Wildcat) and *wahiʔiam* (Coyote)" (Bean and Smith 1978b). According to Strong (1971), details such as number, structure, and function of the clans are unknown. Instead, he states that clans were not political, but were rather structured based upon "economic, marital, or ceremonial reciprocity, a pattern common throughout Southern California" (Bean and Smith 1978b). The Serrano formed alliances amongst their own clans and with Cahuilla, Chemehuevi, Gabrielino, and Cupeño clans (Bean and Smith 1978b). Clans were large, autonomous political and landholding units formed patrilineally, with all males descending from a common male ancestor, including all wives and descendants of the males. However, even after marriage, women would still keep their original lineage and would still participate in those ceremonies (Bean and Smith 1978b).

According to Bean and Smith (1978b), the cosmogony and cosmography of the Serrano are very similar to those of the Cahuilla:

> There are twin creator gods, a creation myth told in "epic poem" style, each local group having its own origin story, water babies whose crying foretells death, supernatural beings of various kinds and on various hierarchically arranged power-access levels, an Orpheus-like myth, mythical deer that no one can kill, and tales relating the adventures (and misadventures) of Coyote, a tragicomic trickster-transformer culture hero. (Bean [1962-1972] and Benedict [1924] in Bean and Smith 1978b)

The Serrano had a shaman who acquired powers through dreams, which were induced through ingestion of the hallucinogen datura. The shaman was mostly a curer/healer, using herbal remedies and "sucking out the disease-causing agents" (Bean and Smith 1978b).

Serrano village locations were typically located near water sources. Individual family dwellings were likely circular, domed structures. Daily household activities would either take place outside of the house out in the open, or under a ramada constructed of a thatched willow pole roof held up by four or more poles inserted into the ground. Families could consist of a husband, wife/wives, unmarried female children, married male children, the husband's parents, and/or widowed aunts and uncles. Rarely, an individual would occupy his own house, typically in the mountains. Serrano villages also included a large ceremonial house where the lineage leader would live, which served as the religious center for lineages or lineage-sets, granaries, and sweathouses (Bean and Smith 1978b).

The Serrano were primarily hunter/gatherers. Vegetal staples varied with locality. Acorns and piñon nuts were found in the foothills, and mesquite, yucca roots, cacti fruits, and piñon nuts were found in or near the desert regions. Diets were supplemented with other roots, bulbs, shoots, and seeds (Heizer 1978). Deer, mountain sheep, antelopes, rabbits, and other small rodents were among the principal food packages. Various game birds, especially quail, were also hunted. The bow and arrow was used for large game, while smaller game and birds were killed with curved throwing sticks, traps, and snares. Occasionally, game was hunted communally, often during mourning ceremonies (Benedict 1924; Drucker 1937; Heizer 1978). Earth ovens were used to cook meat, bones were boiled to extract marrow, and blood was either drunk cold or cooked to a thicker consistency and then eaten. Some meat and vegetables were sun-dried and stored. Food acquisition and processing required the manufacture of additional items such as knives, stone or bone scrapers, pottery trays and bowls, bone or horn spoons, and stirrers. Mortars, made of either stone or wood, and metates were also manufactured (Strong 1971; Drucker 1937; Benedict 1924).

The Serrano were very similar technologically to the Cahuilla. In general, manufactured goods included baskets, some pottery, rabbit-skin blankets, awls, arrow straighteners, sinew-backed bows, arrows, fire drills, stone pipes, musical instruments (rattles, rasps, whistles, bull-roarers, and flutes), feathered costumes, mats for floor and wall coverings, bags, storage pouches, cordage (usually comprised of yucca fiber), and nets (Heizer 1978).

1.3.2 Historic Period

Traditionally, the history of the state of California has been divided into three general periods: the Spanish Period (1769 to 1821), the Mexican Period (1822 to 1846), and the American Period (1848 to present) (Caughey 1970). The American Period is often further subdivided into additional phases: the nineteenth century (1848 to 1900), the early twentieth century (1900 to 1950), and the Modern Period (1950 to present). From an archaeological standpoint, all of these phases can be referred to together as the Ethnohistoric Period. This provides a valuable tool for archaeologists, as ethnohistory is directly concerned with the study of indigenous or non-Western peoples from a combined historical/anthropological viewpoint, which employs written documents,

oral narrative, material culture, and ethnographic data for analysis.

European exploration along the California coast began in 1542 with the landing of Juan Rodríguez Cabrillo and his men at San Diego Bay. Sixty years after the Cabrillo expeditions, an expedition under Sebastián Vizcaíno made an extensive and thorough exploration of the Pacific coast. Although the voyage did not extend beyond the northern limits of the Cabrillo track, Vizcaíno had the most lasting effect upon the nomenclature of the coast. Many of his place names have survived, whereas practically every one of the names created by Cabrillo have faded from use. For instance, Cabrillo named the first (now) United States port he stopped at "San Miguel"; 60 years later, Vizcaíno changed it to "San Diego" (Rolle 1969). The early European voyages observed Native Americans living in villages along the coast but did not make any substantial, long-lasting impact. At the time of contact, the Luiseño population was estimated to have ranged from 4,000 to as many as 10,000 individuals (Bean and Shipek 1978; Kroeber 1976).

The historic background of the project area began with the Spanish colonization of Alta California. The first Spanish colonizing expedition reached southern California in 1769 with the intention of converting and civilizing the indigenous populations, as well as expanding the knowledge of and access to new resources in the region (Brigandi 1998). As a result, by the late eighteenth century, a large portion of southern California was overseen by Mission San Luis Rey (San Diego County), Mission San Juan Capistrano (Orange County), and Mission San Gabriel (Los Angeles County), who began colonizing the region and surrounding areas (Chapman 1921).

Native Californians may have first coalesced with Europeans around 1769 when the first Spanish mission was established in San Diego. In 1771, Father Francisco Garcés first searched the Californian desert for potential mission sites. Interactions between local tribes and Franciscan priests occurred by 1774 when Juan Bautista de Anza made an exploration of Alta California.

Serrano contact with the Europeans may have occurred as early as 1771 or 1772, but it was not until approximately 1819 that the Spanish directly influenced the culture. The Spanish established asistencias in San Bernardino, Pala, and Santa Ysabel. Between the founding of the asistencia and secularization in 1834, most of the Serranos in the San Bernardino Mountains were moved to the nearby missions (Beattie and Beattie 1939:366) while the Cahuilla maintained a high level of autonomy from Spain (Bean 1978).

Each mission gained power through the support of a large, subjugated Native American workforce. As the missions grew, livestock holdings increased and became increasingly vulnerable to theft. In order to protect their interests, the southern California missions began to expand inland to try and provide additional security (Beattie and Beattie 1939; Caughey 1970). In order to meet their needs, the Spaniards embarked upon a formal expedition in 1806 to find potential locations within what is now the San Bernardino Valley. As a result, by 1810, Father Francisco Dumetz of Mission San Gabriel had succeeded in establishing a religious site, or capilla, at a Cahuilla rancheria called Guachama (Beattie and Beattie 1939). San Bernardino Valley received its name from this site, which was dedicated to San Bernardino de Siena by Father Dumetz. The Guachama rancheria was located in present-day Bryn Mawr in San Bernardino County.

These early colonization efforts were followed by the establishment of estancias at Puente (circa 1816) and San Bernardino (circa 1819) near Guachama (Beattie and Beattie 1939). These efforts were soon mirrored by the Spaniards from Mission San Luis Rey, who in turn established a presence in what is now Lake Elsinore, Temecula, and Murrieta (Chapman 1921). The indigenous groups who occupied these lands were recruited by missionaries, converted, and put to work in the missions (Pourade 1961). Throughout this period, the Native American populations were decimated by introduced diseases, a drastic shift in diet resulting in poor nutrition, and social conflicts due to the introduction of an entirely new social order (Cook 1976).

Mexico achieved independence from Spain in 1822 and became a federal republic in 1824. As a result, both Baja and Alta California became classified as territories (Rolle 1969). Shortly thereafter, the Mexican Republic sought to grant large tracts of private land to its citizens to begin to encourage immigration to California and to establish its presence in the region. Part of the establishment of power and control included the desecularization of the missions circa 1832. These same missions were also located on some of the most fertile land in California and, as a result, were considered highly valuable. The resulting land grants, known as "ranchos," covered expansive portions of California and, by 1846, more than 600 land grants had been issued by the Mexican government. Rancho Jurupa was the first rancho to be established and was issued to Juan Bandini in 1838. Although Bandini primarily resided in San Diego, Rancho Jurupa was located in what is now Riverside County (Pourade 1963). A review of Riverside County place names quickly illustrates that many of the ranchos in Riverside County lent their names to present-day locations, including Jurupa, El Rincon, La Sierra, El Sobrante de San Jacinto, La Laguna (Lake Elsinore), Santa Rosa, Temecula, Pauba, San Jacinto Nuevo y Potrero, and San Jacinto Viejo (Gunther 1984). As was typical of many ranchos, these were all located in the valley environments within western Riverside County.

The treatment of Native Americans grew worse during the Rancho Period. Most of the Native Americans were forced off of their land or put to work on the now privately-owned ranchos, most often as slave labor. In light of the brutal ranchos, the degree to which Native Americans had become dependent upon the mission system is evident when, in 1838, a group of Native Americans from Mission San Luis Rey petitioned government officials in San Diego to relieve suffering at the hands of the rancheros:

> We have suffered incalculable losses, for some of which we are in part to be blamed for because many of us have abandoned the Mission … We plead and beseech you … to grant us a Rev. Father for this place. We have been accustomed to the Rev. Fathers and to their manner of managing the duties. We labored under their intelligent directions, and we were obedient to the Fathers according to the regulations, because we considered it as good for us. (Brigandi 1998:21)

Native American culture had been disrupted to the point where they could no longer rely upon prehistoric subsistence and social patterns. Not only does this illustrate how dependent the Native Americans had become upon the missionaries, but it also indicates a marked contrast in the way the Spanish treated the Native Americans as compared to the Mexican and United States ranchers. Spanish colonialism (missions) is based upon utilizing human resources while integrating them into their society. The ranchers, both Mexican and American, did not accept Native Americans into their social order and used them specifically for the extraction of labor, resources, and profit. Rather than being incorporated, they were either subjugated or exterminated (Cook 1976).

By 1846, tensions between the United States and Mexico had escalated to the point of war (Rolle 1969). In order to reach a peaceful agreement, the Treaty of Guadalupe Hidalgo was put into effect in 1848, which resulted in the annexation of California to the United States. Once California opened to the United States, waves of settlers moved in searching for gold mines, business opportunities, political opportunities, religious freedom, and adventure (Rolle 1969; Caughey 1970). By 1850, California had become a state and was eventually divided into 27 separate counties. While a much larger population was now settling in California, this was primarily in the central valley, San Francisco, and the Gold Rush region of the Sierra Nevada mountain range (Rolle 1969; Caughey 1970). During this time, southern California grew at a much slower pace than northern California and was still dominated by the cattle industry that was established during the earlier rancho period.

Although the first orange trees were planted in Riverside County circa 1871, it was not until a few years later when a small number of Brazilian navel orange trees were established that the citrus industry truly began in the region (Patterson 1971). The Brazilian navel orange was well suited to the climate of Riverside County and thrived with assistance from several extensive irrigation projects. At the close of 1882, an estimated half a million citrus trees were present in California, nearly half of which were estimated to be in Riverside County. Population growth and 1880s tax revenue from the booming citrus industry prompted the official formation of Riverside County in 1893 out of portions of what was once San Bernardino County (Patterson 1971).

General History of the City of Ontario

In late 1881, Canadian brothers George and William Chaffey (Plates 1.3–1 and 1.3–2) purchased 6,218 acres of land in the Cucamonga Desert known as the "San Antonio lands." The Chaffey brothers soon expanded to the Southern Pacific Railroad tracks on the south and into the San Antonio Canyon to the north (City of Ontario n.d.). The Chaffey brothers intended to establish a "model colony" for migrants coming to the region and named the area "Ontario" after their hometown. Before the land could be used, however, water had to be found and brought into the town. Because of this, George laid miles of cement pipe leading from San Antonio Canyon, which was later tapped into by the San Antonio Water Company. The need for electric power to lift the water from the deep wells in San Antonio Canyon led to the establishment of the first commercially successful hydroelectric plant in the country, the Ontario Power Company (City of Ontario n.d.).

During the late nineteenth century, anyone purchasing land within the Ontario Colony automatically received shares in the water company, which ensured that water would be pumped to their property. This development aided in establishing agricultural properties, primarily citrus groves, within Ontario (Plate 1.3–3). The Ontario Colony was officially incorporated as a city in 1891 and continued to grow throughout the twentieth century (City of Ontario n.d.). The city became known for air flight after Judge Archie Mitchell, Waldo Waterman, and other airplane enthusiasts established Latimer Field in 1923. Urban growth pushed the airfield further and further east until it reached its present location, which currently functions as the Ontario International Airport. During World War II, the airport served as a busy training center for fighter jet pilots (City of Ontario n.d.).

Plate 1.3–1: George Chaffey. ***(Photograph courtesy of Ontario City Library, Robert E. Ellingwood Model Colony History Room n.d.)***

Agriculture played a vital role in the development of the region. The area surrounding the subject property was historically tied to wine production. The most notable wine producer in the area was Secundo Guasti, an Italian immigrant who planted vineyards in the area in 1902. Guasti purchased a town site called Zucker in 1900, which had begun to grow around the 1875 Southern Pacific Railroad's South Cucamonga Station. Guasti established the Italian Vineyard Company and "His innovations in dry cultivation and processing techniques made the winemaking very productive" (Thirtieth Street Architects, Inc. 2011). Guasti organized the emigration of "experienced workers, coopers and craftsmen" and their families from Italy to work and live at his winery; by 1910, the Guasti vineyards consisted of 5,000 acres, which extended from the foothills of the San Gabriel Mountains to the valley floor, and Zucker was renamed Guasti (Thirtieth Street Architects, Inc. 2011). The vineyard cultivated a large variety of grapes specifically suited for wine, particularly for sherry and port varietals and "In spite of Prohibition and two World Wars, Guasti Winery remained in production until about 1962 when wine-making operations were relocated" (Thirtieth Street Architects, Inc. 2011). In 1975, the Guasti Winery was designated a California Point of Historical Interest (Meighan 1975).

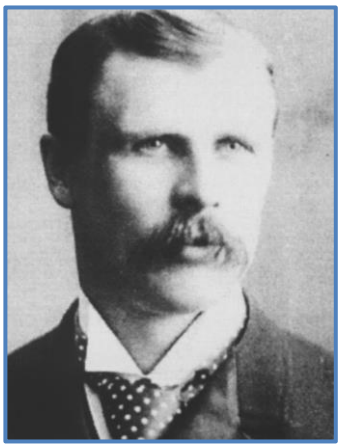

Plate 1.3–2: William Chaffey. ***(Photograph courtesy of the City of Ontario 2013)***

Between the 1950s and 1980s, the dairy industry flourished in other agricultural areas surrounding Ontario. Concerned with what many viewed as a decline in suitable agricultural land, the San Bernardino County Board of Supervisors designated 14,000 acres of agricultural land south and west of the city of Ontario as an "agricultural preserve" (City of Ontario 2006). With the dairy-friendly zoning in the southwest corner of San Bernardino County, many Dutch, Basque,

and Portuguese families relocated to the region and became the cornerstone of the dairy industry. By the 1980s, the area was recognized as having more cows per acre and higher milk yields than anywhere else in the world (City of Ontario 2006). Starting in the late twentieth century, much of the preserve began to be annexed by neighboring cities due to a housing boom and increased operating costs for dairies. In 1999, 8,200 acres were annexed by the City of Ontario with the remaining land annexed by either the City of Chino or Chino Hills. The portion annexed by the City of Ontario was labeled the "New Model Colony," creating a connection with the Chaffey brothers' original "Model Colony of Ontario" (Galvin and Associates 2004; City of Ontario 2006).

1.4 Results of the Archaeological Records Search

An archaeological records search was conducted by BFSA at the SCCIC (Appendix B). The records search identified 11 resources within one mile of the project, none of which are located within the subject property (Table 1.4–1). All of the recorded resources are historic and are primarily associated with the historic occupation and agricultural use of the project vicinity. These resources include four farm and single-family properties, two farms, one single-family property, one trash scatter, two transmission lines, and one site containing a trash scatter, water conveyance system, utility pole stumps, a cistern, and a possible well.

Table 1.4–1
Cultural Resources Located Within One Mile of the Project

Site Number(s)/Name	Resource Type
RIV-1848	Historic trash scatter
P-33-023815 and P-36-023626	Historic farm
RIV-12,624	Historic trash scatter, water conveyance system, utility pole stumps, cistern, and possible well
P-36-012622, P-36-012623, P-36-023625, and P-36-023627	Historic farm and single-family property
P-36-025440 and P-36-026051	Historic transmission line
11111 Edison Avenue	Historic single-family property

The records search also identified 38 previous studies which have been conducted within one mile of the proposed project, one of which overlaps the subject property (Dice 2002). The Dice (2002) study conducted an archaeological survey and records search that covered the western half of the subject property and did not identify any cultural resources within the subject property.

The following historic sources were also reviewed by BFSA:

- Historic USGS topographic maps (1942 to 1975)
- Historic aerial photographs (1938 to2025)
- The NRHP Index
- The Office of Historic Preservation (OHP), Archaeological Determinations of Eligibility (ADOE)
- The OHP, Built Environment Resources Directory (BERD)

Additionally, a review of historic maps and aerial photographs for the project illustrates that the subject property was developed for agricultural uses as early as 1938. Between 1938 and 2014, the subject property primarily consisted of cultivated fields. By 2018, the entire subject

property was graded during the development of the surrounding area which resulted in the creation of a water catchment basin in the northwest portion of the project. Subsequent aerial photographs demonstrate that as the surrounding neighborhood transitioned to residential development, the subject property remained vacant but at times was cleared of vegetation.

BFSA also requested a SLF search from the NAHC. This request is not part of any Assembly Bill 52 Native American consultation. The SLF search results were negative for recorded Native American sacred sites or locations of religious or ceremonial importance within the project vicinity. All correspondence with the NAHC is provided in Appendix C.

1.5 Applicable Regulations

Resource importance is assigned to districts, sites, buildings, structures, and objects that possess exceptional value or quality illustrating or interpreting the heritage of San Bernardino County in history, architecture, archaeology, engineering, and culture. A number of criteria are used in demonstrating resource importance. Specifically, the criteria outlined in CEQA provide the guidance for making such a determination. The following sections detail the criteria that a resource must meet in order to be determined important.

1.5.1 California Environmental Quality Act

According to CEQA (§ 15064.5a), the term "historical resource" includes the following:

1) A resource listed in or determined to be eligible by the State Historical Resources Commission for listing in the CRHR (Public Resources Code SS5024.1, Title 14 CCR [California Code of Regulations]. Section 4850 et seq.).
2) A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code, or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3) Any object, building, structure, site, area, place, record, or manuscript, which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the CRHR (Public Resources Code SS5024.1, Title 14, Section 4852) including the following:

    a) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

b) Is associated with the lives of persons important in our past;
c) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
d) Has yielded, or may be likely to yield, information important in prehistory or history.

4) The fact that a resource is not listed in, or determined eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to Section 5020.1[k] of the Public Resources Code), or identified in a historical resources survey (meeting the criteria in Section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be a historical resource as defined in Public Resources Code Section 5020.1(j) or 5024.1.

According to CEQA (§ 15064.5b), a project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment. CEQA defines a substantial adverse change as:

1) Substantial adverse change in the significance of a historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired.
2) The significance of a historical resource is materially impaired when a project:

a) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its inclusion in, or eligibility for inclusion in the CRHR; or
b) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the Public Resources Code or its identification in a historical resources survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or,
c) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the CRHR as determined by a lead agency for purposes of CEQA.

Section 15064.5(c) of CEQA applies to effects on archaeological sites and contains the following additional provisions regarding archaeological sites:

1) When a project will impact an archaeological site, a lead agency shall first determine whether the site is a historical resource, as defined in subsection (a).
2) If a lead agency determines that the archaeological site is a historical resource, it shall refer to the provisions of Section 21084.1 of the Public Resources Code, Section 15126.4 of the guidelines, and the limits contained in Section 21083.2 of the Public Resources Code do not apply.
3) If an archaeological site does not meet the criteria defined in subsection (a) but does meet the definition of a unique archaeological resource in Section 21083.2 of the Public Resources Code, the site shall be treated in accordance with the provisions of Section 21083.2. The time and cost limitations described in Public Resources Code Section 21083.2(c-f) do not apply to surveys and site evaluation activities intended to determine whether the project location contains unique archaeological resources.
4) If an archaeological resource is neither a unique archaeological nor historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment. It shall be sufficient that both the resource and the effect on it are noted in the Initial Study or Environmental Impact Report, if one is prepared to address impacts on other resources, but they need not be considered further in the CEQA process.

Section 15064.5(d) and 15064.5(e) contain additional provisions regarding human remains. Regarding Native American human remains, paragraph (d) states:

(d) When an Initial Study identifies the existence of, or the probable likelihood of, Native American human remains within the project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code SS5097.98. The applicant may develop an agreement for treating or disposing of, with appropriate dignity, the human remains and any items associated with Native American burials with the appropriate Native Americans as identified by the NAHC. Action implementing such an agreement is exempt from:

    1) The general prohibition on disinterring, disturbing, or removing human remains from any location other than a dedicated cemetery (Health and Safety Code Section 7050.5).
    2) The requirements of CEQA and the Coastal Act.

2.0 RESEARCH DESIGN

The primary goal of the research design is to attempt to understand the way in which humans have used the land and resources within the project through time, as well as to aid in the determination of resource significance. For the current project, the study area under investigation is southwestern San Bernardino County. The scope of work for the cultural resources study conducted for the Eucalyptus and Amherst Avenues Project included the survey of a 10.02-acre property. Given the area involved, the research design for this project was focused upon realistic study options. Since the main objective of the investigation was to identify the presence of and potential impacts to cultural resources, the goal here is not necessarily to answer wide-reaching theories regarding the development of early southern California, but to investigate the role and importance of identified resources. The assessment of the significance of a resource must take into consideration a variety of factors, as well as the ability of a resource to address regional research topics and issues.

Although elementary resource evaluation programs are limited in terms of the amount of information available, several specific research questions were developed that could be used to guide the initial investigations of any observed cultural resources. The following research questions consider the small size and location of the project discussed above.

Research Questions:

- Can located cultural resources be associated with a specific time period, population, or individual?
- Do the types of any located cultural resources allow a site activity/function to be determined from a preliminary investigation? What are the site activities? What is the site function? What resources were exploited?
- How do located sites compare to others reported from different surveys conducted in the area?
- How do located sites fit existing models of settlement and subsistence for mountainous environments of the region?

Data Needs

At the survey level, the principal research objective is a generalized investigation of changing settlement patterns in both the prehistoric and historic periods within the study area. The overall goal is to understand settlement and resource procurement patterns of the project occupants. Therefore, adequate information on site function, context, and chronology from an archaeological perspective is essential for the investigation. The fieldwork and archival research were undertaken with the following primary research goals in mind:

1) To identify cultural resources occurring within the project;
2) To determine, if possible, site type and function, context of the resource(s), and chronological placement of each cultural resource identified;
3) To place each cultural resource identified within a regional perspective; and
4) To provide recommendations for the treatment of each cultural resources identified.

3.0 ANALYSIS OF PROJECT EFFECTS

The cultural resources study of the project consisted of an institutional records search, archival research, and an intensive cultural resources survey of the 10.02-acre property, along with the preparation of this technical report. This study was conducted in conformance with Section 21083.2 of the California Public Resources Code and CEQA. Regulatory requirements of CEQA (Section 15064.5) were followed for the identification and evaluation of resources. Specific definitions for archaeological resource type(s) used in this report are those established by the State Historic Preservation Office (SHPO 1995).

3.1 Survey Methods

The survey methodology employed during the current investigation followed standard archaeological field procedures and was sufficient to accomplish a thorough assessment of the project. The field methodology employed for the project included walking evenly spaced survey transects set approximately 15 meters apart when not obstructed by the current development within the property. Photographs documenting survey areas and overall survey conditions were taken frequently.

3.2 Results of the Field Survey

BFSA archaeologist Parker Sheriff conducted the archaeological survey of the project and off-site infrastructure improvement areas on February 27, 2025. Visibility of the natural ground surface was characterized as moderate to good (Plates 3.2–1 to 3.2–3). The vegetation within the property is dominated by non-native grasses and weeds. The survey confirmed that the entire property has been previsouly graded. Grading resulted in the devlopment of a water catchment basin within the northwest portion of the property and a pad within the southern half of the property (Plates 3.2–4 to 3.2–5). Additionally, within the southern corner of the project, a modern storm drain is present (Plate 3.2–6). No cultural resources were identified during the survey.

Plate 3.2–1: Overview of the project from the eastern corner, facing west.

Plate 3.2–2: Overview of the project from the southern corner, facing north.

Plate 3.2–3: Overview of the project from the northern corner, facing south.

Plate 3.2–4: Overview of the water catchment basin from the western corner of the project, facing east.

Plate 3.2–5: Western overview of the water catchment basin and graded pad, facing northeast.

Plate 3.2–6: Overview of the modern storm drain in the southern corner of the project, facing southeast.

4.0 RECOMMENDATIONS

The archaeological study for the Eucalyptus and Amherst Avenues Project was completed in accordance with City of Ontario environmental policies and CEQA regulatory requirements. No cultural resources were identified within the project during the survey. Further, no natural resources associated with archaeological sites such as natural water sources or bedrock outcroppings were present within the project. A review of historic aerial photographs demonstrate that the subject property was developed for agricultural uses as early as 1938. Further, in 2018, the entire subject property was graded resulting in the development of a water catchment basin and a graded pad.

Due to the prior ground disturbance and the absence of identified cultural resources within the project vicinity, the potential for any significant resources to be present or impacted by the proposed project is minimal. Given that no archaeological sites, features, or artifacts have been identified within or directly adjacent to the project, no potential impacts to cultural resources associated with the proposed development are anticipated. Based upon the results of this study, no further archaeological study or mitigation measures are recommended. A copy of this report will be submitted to the SCCIC at CSU Fullerton.

5.0 LIST OF PREPARERS AND ORGANIZATIONS CONTACTED

The archaeological survey program for the Eucalyptus and Amherst Avenues Project was directed by Principal Investigator Tracy A. Stropes, M.A., RPA. The archaeological fieldwork was conducted by BFSA archaeologists Parker Sheriff. The report text was prepared by Kathleen Krogh and Tracy A. Stropes. Graphics were created by Kathleen Krogh. Technical editing and report production was conducted by Payton Swanson. The archaeological records search was conducted by Emily Soong at the SCCIC at CSU Fullerton.

6.0 CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this archaeological report, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Master of Arts, Anthropology, San Diego State University, California **2007**

Bachelor of Science, Anthropology, University of California, Riverside **2000**

Professional Memberships

Register of Professional Archaeologists
Society for California Archaeology
Archaeological Institute of America
Association of Oregon Archaeologists

Experience

Vice President of Cultural Resources/Principal Archaeologist **March 2009–Present**
BFSA Environmental Services, a Perennial Company
Poway, California

Tracy A. Stropes has over 33 years of experience in cultural resource management, with experience in project management, report authorship, lithic analysis, laboratory management, Native American consultation, and technical report editing for numerous projects throughout the western United States. Mr. Stropes has conducted cultural resource surveys, archaeological site testing and evaluations for National Register eligibility and CEQA compliance, mitigation of resources through data recovery for archaeological sites, budget and report preparation, and direction of crews of all sizes for projects ranging in duration from a single-day site visit to multiple years. Mr. Stropes is a Registered Professional Archaeologist (RPA) and is on the list of archaeological consultants qualified to conduct archaeological investigations in the city and county of San Diego, county of Riverside, State of Oregon, State of Arizona, and on Arizona and California BLM lands. He has served as project archaeologist for hundreds of projects and composed data recovery and preservation programs for sites throughout the western United States for both CEQA- and NEPA-level compliance.

Archaeological Principal Investigator **June 2008–February 2009**
TRC Solutions **Irvine, California**

Cultural resource segment of Natural Sciences and Permitting Division; management of archaeological investigations for private companies and local, state, and federal agencies, personnel management, field and laboratory supervision, lithic analysis, Native American consultation and reporting, NRHP and CEQA site evaluations, and authoring/coauthoring cultural resource management reports.

Principal Investigator and Project Archaeologist **June 2006–May 2008**
Archaeological Resource Analysts **Oceanside, California**

As a sub consultant, served as Principal Investigator and Project Archaeologist for several projects for SRS Inc., including field direction, project and personnel management, lab analysis, and authorship of company reports.

Project Archaeologist **September 1996–June 2006**
Gallegos & Associates **Carlsbad, California**

Project management, laboratory management, lithic analysis, field direction, Native American consultation, report authorship/technical editing, and composition of several data recovery/preservation programs for both CEQA and NEPA level compliance.

Project Archaeologist **September 1993–September 1996**
Macko Inc. **Santa Ana, California**

Project management, laboratory management, lithic analysis, field supervision, and report authorship/technical editing.

Archaeological Field Technician **January 1993–September 1993**
Chambers Group Inc. **Irvine, California**

Archaeological excavation, surveying, monitoring, wet screen facilities management, and project logistics.

Archaeological Field Technician **May 1992–September 1992**
John Minch and Associates **San Juan Capistrano, California**

Archaeological excavation, surveying, monitoring, wet screen facilities management, and project logistics.

Subject: ***Geotechnical Evaluation of Mass Graded Site and Grading Plan Review of Proposed 10-Acre "Esperanza Townhomes" Residential Development, Buildings 1 through 28, Tentative Tract No. 20730, located North of Eucalyptus & Amherst Avenues, City of Ontario, County of San Bernardino, California***

In accordance with your request, LGC Geotechnical, Inc. has performed a geotechnical site evaluation of the mass graded site and grading plan review for the proposed "Esperanza Townhomes" multi-family residential development, Buildings 1 through 28, 161 unit, Tentative Tract No. 20730, located north of the intersection of Eucalyptus and Amherst Avenues in the City of Ontario, County of San Bernardino, California. This report summarizes the current geotechnical conditions and presents our findings, conclusions, and preliminary recommendations with regards to the proposed development.

If you should have any questions regarding this report, please do not hesitate to contact our office. We appreciate this opportunity to be of service.

Respectfully Submitted,

LGC Geotechnical, Inc.

1.0 INTRODUCTION

1.1 Purpose and Scope of Services

This report presents the results of our geotechnical evaluation for the proposed multi-family residential site, Buildings 1 through 28 and associated improvements of Tract 18380, located in the City of Ontario, California. The approximately 10-acre site is bound by residential development and existing streets including Eucalyptus and Amherst Avenues to the south and Chatham and Clifton to the north. Refer to the Site Location Map (Figure 1).

The purpose of our study was to provide a preliminary geotechnical evaluation of the mass graded pad conditions relative to the proposed residential development. As part of our scope of work, we have: 1) reviewed available geotechnical background information including in-house regional geologic maps and published geotechnical literature pertinent to the site (Appendix A); 2) performed excavation, testing, and sampling of regular-spaced test pits with backhoe across the site for evaluation of mass graded conditions; 3) nuclear gauge testing of in-situ graded fill placed under observation and testing by others; 4) laboratory testing of samples for design parameters and organic content testing of the compacted fill soils; and 5) prepared this geotechnical summary report presenting our findings and preliminary conclusions and recommendations for the proposed development.

1.2 Background

The subject site was originally part of the larger overall proposed "Esperanza West" residential development that covered areas north and south of a previous alignment of Eucalyptus Avenue. The northern portion of the area, encompassing the subject site, was reportedly used for agriculture since 1938, specifically "row crops", while the offsite southern portion was utilized as a dairy farm. Previous uses of the overall area were reviewed as part of the referenced methane site assessment by LGC Geo-Environmental (2014). The methane site assessment concluded that the subject parcel was not impacted by previous dairy farm uses and is not within the limits of a Methane Gas Potential Area.

As the surrounding areas have been developed over time, it is our understanding that the southern portion of the subject site was utilized as a borrow area for the surrounding developments. The site was eventually entitled for development with the referenced Updated Geotechnical Report and Manure Evaluation by LGC Geo-Environmental (2017) for the larger "Esperanza West" and "Esperanza East" proposed development. The report further confirmed that the subject parcel was not a part of previous dairy uses in the region. Recommendations were provided for earthwork of the site, aka Lot 1 (School Site) of Tract 18380, to a mass grade design with drainage to the southmost corner.

Mass grading of the site commenced during approximately 2020 as documented in the referenced Reliance Letter by LGC Geo-Environmental (2020). The mass grading operations reportedly included remedial grading to elevations between 695 feet and 698 feet and placement of compacted fill to existing grades, with exception of the northwest quadrant left low for intermittent soils import. Excess soils from specifically identified nearby development sites were reportedly end-dumped in the area left low, and presumably properly compacted over time. No as-graded report was available for review, therefore LGC Geotechnical's site

evaluation presented herein was focused on quality of the removals, quality of the fill to the existing grades, and verification of organics percentage within the compacted fill.

1.3 Project Description

The site is currently vacant, with a generally tightly compacted surface throughout, with light grasses. Drainage across the mass graded pad area flows from the northeast at elevation 708 to a low of approximately 700 at the southwest, to an existing storm drain inlet on-site. Based on the Preliminary Grading Plan by Walden & Associates dated January 24, 2025, the proposed development will consist of 161 units within 28 multi-family buildings, associated streets, recreation center, pool, and park.

Design grades for the proposed development are relatively close to existing mass graded elevations and will be achieved with minor cut-fill grading and import of soils for low areas.

PROJECT NAME	Genstar, Ontario

Site Location Map

1.4 Subsurface Geotechnical Evaluation

A subsurface evaluation was performed by LGC Geo-Environmental for a larger overall area prior to mass grading of the subject site (2017). Their investigation included excavation of test pits and a boring on-site and two closely adjacent. The boring logs are provided in Appendix B, approximate locations provided on the Geotechnical Map (Sheet 1).

The recent site evaluation by LGC Geotechnical consisted of excavation of a total of 16 test pits in an approximate grid formation throughout the site by a project geologist, using a Caterpillar backhoe with a three-feet wide bucket to expose the compacted fill and the contact with native soils. Existing fill soils were visually evaluated and probed, and a soil technician took intermittent field density tests with a nuclear gauge to gain an opinion about fill compaction. Numerous samples were collected at vertical intervals within test pits in order to perform laboratory testing for moisture content and organic content. Results of field density testing are presented in Appendix C along with laboratory test results, and moisture and organic content testing results are presented on the test pit logs, Appendix B. Recommendations for remedial measures during future rough grading to project design grades were determined based on a combination of observations during test pit evaluation and results of field and laboratory testing.

Test pits were backfilled and compacted back to existing grades at completion of the field evaluation.

1.5 Laboratory Testing

Laboratory testing on samples collected during the recent subsurface investigation was performed including organic percentage, expansion index, maximum density and optimum moisture, and corrosion testing.

The following is a summary of the laboratory test results:

- Forty-eight organic content tests were performed in an approximate grid pattern within compacted fill soils. Results are presented on test pit logs, Appendix B. The average organic testing percentage for the total of 48 tests performed was approximately 2 percent.
- Three expansion potential tests were performed on finished grade soils and indicated an expansion index value ranged approximately 2 to 5, corresponding to “Very Low” expansion potential.
- Maximum density tests on three bulk samples indicated maximum densities of previously placed compacted fill soils ranges from 125.5 to 129.5 pcf, with optimum moistures from 8.5 to 11.5 percent.
- Corrosion testing of finished grade soils indicated soluble sulfate content less than approximately 0.01 percent by weight or less and a chloride content of 0.006 percent by weight or less.

A summary of the laboratory test results is presented in Appendix C.

2.0 GEOTECHNICAL CONDITIONS

2.1 Geologic Conditions

The subject site is located south of the San Gabriel Mountains within the broad alluvial plain of the Santa Ana River Basin, within the Peninsular Ranges Geomorphic Province. Specifically, the site is located within the northern portion of the Perris Block, a geologic zone consisting of granitics overlain by sedimentary deposits that are bounded by active faults including the northwest-trending Whittier-Elsinore Fault Zone at the southwest and the northwest-trending San Jacinto Fault Zone at the northeast (Morton, 2002). The roughly rectangular Perris Block is transected by the southwest-trending Santa Ana River that passes several miles south of the subject site.

2.2 Site-Specific Geology & Generalized Subsurface Conditions

The site generally consists of engineered fill placed over alluvial deposits. Mass grading of the site was performed under observation and testing by LGC Geo-Environmental (2020). Based on previous reports and regional mapping (Morton, 2002), the subject site is underlain by Holocene- to Pleistocene-age eolian (wind-blown) sedimentary deposits over young alluvium. The material is described on-site as sand and silty sand, with some sandy silt, generally fine to medium grained, yellowish brown, gray, and olive, dry to damp, medium dense to dense. The materials below the eolian deposits are young alluvial fan deposits, described on-site as sand, silty sand and sandy silt, generally fine-grained, yellowish to orangish brown, gray, olive, dry to very moist, medium dense to very dense and stiff to very stiff.

During rough grading, the upper, potentially compressible soils were recommended to be removed to competent alluvium (LGC Geo-Environmental, 2017), as was generally confirmed/observed in our test pits. As indicated on our field exploration logs, compacted fill soils generally consist of silty sand with localized areas of clayey to gravelly sand, medium dense to very dense, slightly moist. The thickness of existing engineered fill was encountered at depths of approximately 3.5 feet to greater than 10 feet within the mass graded pad.

2.3 Groundwater

Groundwater was not encountered during the site investigation to 51 feet below ground (LGC Geo-Environmental, 2017). Groundwater was reportedly estimated to be at a depth of 120 to 130 feet below ground based on available water well data compiled by LGC Geo-Environmental, 2017.

Seasonal fluctuations of groundwater elevations should be expected over time. In general, groundwater levels fluctuate with the seasons and local zones of perched groundwater may be present due to local seepage caused by irrigation and/or recent precipitation. Local perched groundwater conditions or surface seepage may develop once site development is completed.

2.3 Seismic Design Criteria

The site seismic characteristics were evaluated per the guidelines set forth in Chapter 16, Section 1613 of the 2022 California Building Code (CBC) and applicable portions of ASCE 7-16 which has been adopted by the CBC. **Please note that the following seismic parameters are only applicable for code-based acceleration response spectra and are not applicable for where site-specific ground motion procedures are required by ASCE 7-16.** Representative site coordinates of latitude 33.9908 degrees north and longitude -117.5629 degrees west were utilized in our analyses. The maximum considered earthquake (MCE) spectral response accelerations (S_{MS} and S_{M1}) and adjusted design spectral response acceleration parameters (S_{DS} and S_{D1}) for Site Class D are provided in Table 1 on the following page. Since site soils are Site Class D, additional adjustments are required to code acceleration response spectrums as outlined below and provided in ASCE 7-16. The structural designer should contact the geotechnical consultant if structural conditions (e.g., number of stories, seismically isolated structures, etc.) require site-specific ground motions.

A deaggregation of the PGA based on a 2,475-year average return period (MCE) indicates that an earthquake magnitude of 6.68 at a distance of 13.60 km from the site would contribute the most to this ground motion. A deaggregation of the PGA based on a 475-year average return period (Design Earthquake) indicates that an earthquake magnitude of 6.70 at a distance of 17.23 km from the site would contribute the most to this ground motion (USGS, 2014).

Section 1803.5.12 of the 2022 CBC (per Section 11.8.3 of ASCE 7) states that the maximum considered earthquake geometric mean (MCE_G) Peak Ground Acceleration (PGA) should be used for liquefaction potential. The PGA_M for the site is equal to 0.735g (SEAOC, 2025). The design PGA is equal to 0.490g (2/3 of PGA_M).

TABLE 1

Seismic Design Parameters

Selected Parameters from 2022 CBC, Section 1613 - Earthquake Loads	Seismic Design Values	Notes/Exceptions
Distance to applicable faults classifies the site as a "Near-Fault" site.		Section 11.4.1 of ASCE 7
Site Class	D*	Chapter 20 of ASCE 7
Ss (Risk-Targeted Spectral Acceleration for Short Periods)	1.614g	From SEAOC, 2025
S_1 (Risk-Targeted Spectral Accelerations for 1-Second Periods)	0.582g	From SEAOC, 2025
F_a (per Table 1613.2.3(1))	1.000	For Simplified Design Procedure of Section 12.14 of ASCE 7, F_a shall be taken as 1.4 (Section 12.14.8.1)
F_v (per Table 1613.2.3(2))	1.718	Value is only applicable per requirements/exceptions per Section 11.4.8 of ASCE 7
S_{MS} for Site Class D [Note: $S_{MS} = F_aS_S$]	1.614g	-
S_{M1} for Site Class D [Note: $S_{M1} = F_vS_1$]	0.999g	Value is only applicable per requirements/exceptions per Section 11.4.8 of ASCE 7
S_{DS} for Site Class D [Note: $S_{DS} = (^2/_3)S_{MS}$]	1.076g	-
S_{D1} for Site Class D [Note: $S_{D1} = (^2/_3)S_{M1}$]	0.666g	Value is only applicable per requirements/exceptions per Section 11.4.8 of ASCE 7
C_{RS} (Mapped Risk Coefficient at 0.2 sec)	0.941	ASCE 7 Chapter 22
C_{R1} (Mapped Risk Coefficient at 1 sec)	0.918	ASCE 7 Chapter 22
*Since site soils are Site Class D and S_1 is greater than or equal to 0.2, the seismic response coefficient Cs is determined by Eq. 12.8-2 for values of $T \leq 1.5T_s$ and taken equal to 1.5 times the value calculated in accordance with either Eq. 12.8-3 for $T_L \geq T > T_s$, or Eq. 12.8-4 for $T > T_L$. Refer to ASCE 7-16.		

2.4 Faulting

Prompted by damaging earthquakes in Northern and Southern California, State legislation and policies concerning the classification and land-use criteria associated with faults have been developed. Their purpose was to prevent the construction of urban developments across the trace of active faults, resulting in the Alquist-Priolo Earthquake Fault Zoning Act. Earthquake Fault Zones have been delineated along the traces of active faults within California. Where developments for human occupation are proposed within these zones, the state requires detailed fault evaluations be performed so that engineering geologists can mitigate the hazards

associated with active faulting by identifying the location of active faults and allowing for a setback from the zone of previous ground rupture.

The subject site is not located within a State of California Earthquake Fault Zone (Alquist-Priolo) and no faults are identified on the site (CGS, 2025). The possibility of damage due to ground rupture is considered low since no active faults are known to cross the site. The closest known active faults that may impact the site include the Whittier-Elsinore, Cucamonga, San Jacinto, and San Andreas Fault Zones, among others.

Secondary effects of seismic shaking resulting from large earthquakes on the major faults in the Southern California region, which may affect the site, include ground lurching and shallow ground rupture, soil liquefaction, and dynamic settlement. These secondary effects of seismic shaking are a possibility throughout the Southern California region and are dependent on the distance between the site and causative fault and the onsite geology. A discussion of these secondary effects is provided in the following sections.

2.4.1 Liquefaction and Dynamic Settlement

Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to a fluid when subject to high-intensity ground shaking. Liquefaction occurs when three general conditions coexist: 1) shallow groundwater; 2) low density non-cohesive (granular) soils; and 3) high-intensity ground motion. Studies indicate that saturated, loose near surface cohesionless soils exhibit the highest liquefaction potential, while dry, dense, cohesionless soils and cohesive soils exhibit low to negligible liquefaction potential. In general, cohesive soils are not considered susceptible to liquefaction, depending on their plasticity and moisture content. Effects of liquefaction on level ground include settlement, sand boils, and bearing capacity failures below structures. Dynamic settlement of dry loose sands can occur as the sand particles tend to settle and densify as a result of a seismic event.

Based on the previous field evaluation data performed by others (references), the site soils are generally not susceptible to liquefaction due to a lack of groundwater and the relatively dense native soils in the upper 50 feet; therefore, liquefaction potential is considered very low.

2.4.2 Lateral Spreading

Lateral spreading is a type of liquefaction-induced ground failure associated with the lateral displacement of surficial blocks of sediment resulting from liquefaction in a subsurface layer. Once liquefaction transforms the subsurface layer into a fluid mass, gravity plus the earthquake inertial forces may cause the mass to move downslope towards a free face (such as a river channel or an embankment). Lateral spreading may cause large horizontal displacements and such movement typically damages pipelines, utilities, bridges, and structures.

Due to the lack of groundwater in the upper 50 feet, very low potential for liquefaction, and lack of a nearby "free face" condition, the potential for lateral spreading is considered very low.

2.5 Oversized Material

Oversized materials (material larger than 8 inches in maximum dimension) are not expected to be encountered during the minor site grading. If encountered, recommendations are provided for appropriate handling of oversized materials in Appendix D. If feasible, exporting oversized materials may be considered. Incorporating oversized materials into "rock fills" (windrows, rock blankets or individual rock burial) is not feasible due to the limited depth of rough grading.

2.6 Expansion Potential

Based on the results of previous laboratory testing (LGC Geo-Environmental, 2017), our experience in the area, and results of recent expansion index testing presented herein, site soils are anticipated to have a "Very Low" expansion potential. Final expansion potential of site soils should be confirmed at the completion of grading. Results of expansion testing at finish grades should be utilized to confirm final foundation design.

2.7 Organic Rich Soils

Based on our review of the geotechnical design report (LGC Geo-Environmental, 2017), the consultant who graded the site recommended that the high and low organic "soils" be blended and mixed to achieve 2 percent organics or less in the compacted fill. To verify the results of the mass grading operation, we collected a total of 48 soil samples throughout the existing on-site fill to determine their organic content (based on ASTM 2974). Organic percentage is indicated on test pit logs at the depths of collection, presented in Appendix B. The organic content of the majority of samples ranged from approximately 1.2 percent to 2.7 percent, indicating relatively low organics, with locally higher organic contents of 8.8 percent within TP-13 and 4.8 percent within TP-11. Remedial grading is recommended for field evaluation of the two locally high percentage of organic content (Refer to Geotechnical Map), and the upper two inches of existing grasses and rootlets that have accumulated over time are recommended to be cleared and removed from the site prior to future rough grading operations in order to avoid blending additional organics into future fill. Refer to Section 4.1.1 for recommendations.

3.0 CONCLUSIONS

Based on the results of our geotechnical evaluation, it is our opinion that the proposed development is feasible from a geotechnical standpoint, provided the following conclusions and recommendations are implemented.

The following is a summary of the primary geotechnical factors that may affect future development of the site:

- On site soils consist of engineered fill placed over alluvial deposits under observation and testing by LGC Geo-Environmental, as nominally reported in the referenced letter (2020). Compacted fill materials observed by LGC Geotechnical generally consist of silty sand with localized areas of clayey to gravelly sand, medium dense to very dense, slightly moist.
- Based on the previously mass-graded condition of the site, recommended remedial measures are limited to removal and recompaction of weathered, near-surface, previously placed engineered fill, and few localized areas of removal as deep as 6 feet. Locally deeper removals were determined based on field observations, field density testing, and laboratory test results.
- The subject site is not located within a State of California Earthquake Fault Zone (aka "AP Zone"); and no "Holocene-active" faults have been identified to cross the site. The main seismic hazard that may affect the site is ground shaking from one of the active regional faults. The subject site will likely experience strong seismic ground shaking during its design life.
- From a geotechnical perspective, onsite soils are anticipated to be suitable for use as general compacted fill provided, they are screened of organic materials, construction debris and oversized material (8 inches in greatest dimension).
- Groundwater was not encountered during previous subsurface evaluations and was estimated to be a depth of more than 120 feet below existing grade.
- Based on the previous field evaluation data performed by others (references), the site soils are generally not susceptible to liquefaction due to a lack of groundwater and the relatively dense native soils in the upper 50 feet; therefore, liquefaction potential is considered very low.
- Based on the results of preliminary laboratory testing, site soils are anticipated to have "Very Low" expansion potential. Final design expansion potential must be confirmed at the completion of rough/precise grading.

4.0 PRELIMINARY RECOMMENDATIONS

The following recommendations are to be considered preliminary and should be confirmed upon completion of grading and earthwork operations. In addition, they should be considered minimal from a geotechnical viewpoint, as there may be more restrictive requirements from the architect, structural engineer, building codes, governing agencies, or the owner.

It should be noted that the following geotechnical recommendations are intended to provide sufficient information to develop the site in general accordance with the 2022 CBC requirements. With regard to the potential occurrence of potentially catastrophic geotechnical hazards such as fault rupture, earthquake-induced landslides, liquefaction, etc. the following geotechnical recommendations should provide adequate protection for the proposed development to the extent required to reduce seismic risk to an "acceptable level." The "acceptable level" of risk is defined by the California Code of Regulations as "that level that provides reasonable protection of the public safety, though it does not necessarily ensure continued structural integrity and functionality of the project" [Section 3721(a)]. Therefore, repair and remedial work of the proposed improvements may be required after a significant seismic event. With regards to the potential for less significant geologic hazards to the proposed development, the recommendations contained herein are intended as a reasonable protection against the potential damaging effects of geotechnical phenomena such as expansive soils, fill settlement, groundwater seepage, etc. It should be understood, however, that although our recommendations are intended to maintain the structural integrity of the proposed development and structures given the site geotechnical conditions, they cannot preclude the potential for some cosmetic distress or nuisance issues to develop as a result of the site geotechnical conditions.

The geotechnical recommendations contained herein must be confirmed to be suitable or modified based on the actual as-graded conditions.

4.1 Site Earthwork

We anticipate that earthwork at the subject site will consist of minor grading, import of soils, utility installation, street improvements, and foundation construction. We recommend that earthwork onsite be performed in accordance with the following recommendations, the City of Ontario grading requirements, and the 2022 CBC. In case of conflict, the following recommendations shall supersede previous recommendations.

4.1.1 Site Preparation, Remedial Grading, and Fill Processing

Because the subject site was already mass graded as nominally reported in LGC Geo-Environmental, 2020, and generally verified with our recent site investigation, it is our opinion that the majority of fill placed to the current mass grade design remains acceptable for the intended uses with exception of specific localized areas of recommended removals as follows.

The site has undergone near-surface weathering and limited vegetation growth over the last five years of vacancy. In general, we recommend that the upper, organic-rich couple of inches (vegetation and dense rootlets) should be fully cleared and removed/exported

from the site. Additionally, soils with organic contents higher than 3 percent are recommended to be temporarily removed, mixed and blended with "clean" soils, and placed as compacted fill with an organic content of approximately 2 percent or less. Several areas have been identified as high concentrations of organics including the soils in the vicinity of test pits TP-11 and TP-13, refer to our Test Pit Logs (Appendix B) and our Geotechnical Map (Sheet 1) for recommendations. Import should consist of "clean" soils with organic contents 2 percent or less. We recommend the geotechnical consultant be present during grading to observe the mixing of the onsite soils and perform periodic testing of the compacted fill. Organic materials shall be thoroughly mixed such that no nesting of organic materials occurs.

Based on near-surface weathering, a minimum of 1 foot of the existing grades on-site will require temporary removal and re-compaction to achieve design grades. Areas of recommended removal depths greater 1 feet were identified from our field observations within test pits, results of field density testing, and results of organic content and moisture content testing. Therefore, temporary removal and recompaction is recommended to range from approximately 1 to 6 feet below existing grades, refer to Geotechnical Map (Sheet 1) for recommended depths. Alternatively, if the design cut is determined to exceed the removal of unsuitable weathered near-surface older fill materials, the cut may be left at grade. The temporary removal and recompaction depths will need to be confirmed by the geotechnical consultant during rough/precise grading based on the observed field conditions.

Removal bottoms and/or reprocessing of acceptable near-surface soils should be observed and accepted by the geotechnical consultant prior to fill placement or construction. Areas prepared to receive structural fill and/or other surface improvements should be scarified to a minimum of 6 to 8 inches, brought to at least optimum-moisture content, and recompacted to at least 90 percent relative compaction (based on ASTM Test Method D1557). Deeper reprocessing of the previously placed compacted fill may be required based on the conditions observed during post-grading.

4.1.2 Material for Fill

From a geotechnical perspective, the onsite soils are generally suitable for use as compacted fill, provided they are screened of organic materials, construction debris and oversized materials (material greater than 8 inches in maximum dimension).

From a geotechnical viewpoint, any required import soils should consist of clean, free draining, relatively granular soils of very low expansion potential (expansion index 20 or less based on ASTM D4829) and no particles larger than 3 inches in greatest dimension. Source samples of planned importation should be provided to the geotechnical consultant for laboratory testing a minimum of 4 working days prior to any planned importation for required laboratory testing.

Retaining wall backfill should consist of imported sandy soils with a maximum of 35 percent fines (passing the No. 200 sieve) per ASTM Test Method D1140 (or ASTM D6913/D422) and a "Very Low" expansion potential (EI of 20 or less per ASTM D4829). Soils should also be screened of organic materials, construction debris, and any material

greater than 3 inches in maximum dimension. Portions of the onsite soil may not be suitable for retaining wall backfill due to their fines content (i.e., silt and clay content). Therefore, either select grading and stockpiling and/or import of suitable sandy soils meeting the criteria outlined above will be required.

Aggregate base should conform to the requirements of Section 200-2 of the Standard Specifications for Public Works Construction ("Greenbook") for untreated base materials, Caltrans Class 2 aggregate base and/or the City of Ontario/County of San Bernardino requirements.

4.1.3 Placement and Compaction of Fills

Material to be placed as fill should be brought to near-optimum moisture content (generally within optimum and 2 percent above optimum moisture content) and recompacted to at least 90 percent relative compaction (per ASTM D1557). Moisture conditioning of site soils will be required in order to achieve adequate compaction. Soils are present that will require additional moisture in order to achieve the required compaction. Drying and/or mixing the very moist soils may also be required prior to reusing the materials in compacted fills.

The optimum lift thickness to produce a uniformly compacted fill will depend on the type and size of compaction equipment used. In general, fill should be placed in uniform lifts not exceeding 8 inches in compacted thickness. Each lift should be thoroughly compacted and accepted prior to subsequent lifts. Generally, placement and compaction of fill should be performed in accordance with local grading ordinances and with observation and testing performed by the geotechnical consultant. Oversized material as previously defined should be removed from site fills.

Fill placed on any slopes greater than 5:1 (horizontal to vertical) should be properly keyed and benched into firm and competent soils as it is placed in lifts. During backfill of temporary excavations, fill should be properly benched into firm and competent soils as it is placed in lifts and compacted.

Aggregate base material should be compacted to a minimum of 95 percent relative compaction at or slightly above optimum moisture content per ASTM D1557. Subgrade below aggregate base should be compacted to a minimum of 90 percent relative compaction (or per the city requirements, whichever is higher) at or slightly above optimum moisture content per ASTM D1557.

If gap-graded ¾-inch rock is used for backfill (around storm drain storage chambers, retaining wall backfill, etc.) it will require compaction. Rock shall be placed in thin lifts (typically not exceeding 6 inches) and mechanically compacted with observation by geotechnical consultant. Backfill rock shall meet the requirements of ASTM D2321. Gap-graded rock is required to be entirely wrapped in filter fabric (Mirafi 140N or approved alternative) or at the very minimum to be vertically separated from the trench backfill with filter fabric to prevent the migration of fines into the rock backfill.

4.1.4 Trench and Conventional Retaining Wall Backfill and Compaction

The onsite materials may generally be suitable as trench backfill provided the soils are screened of organic matter, rocks greater than 6 inches in diameter and construction debris. Trench backfill should be compacted in uniform lifts (generally not exceeding 12 inches in compacted thickness) by mechanical means to at least 90 percent relative compaction (per ASTM Test Method D1557). A representative from LGC Geotechnical should observe and test the backfill to verify compliance with the project recommendations.

If trenches are shallow or the use of conventional equipment may result in damage to the utilities, sand having a sand equivalent (SE) of 20 or greater (per California Test Method [CTM] 217) may be used to bed and shade the pipes. Sand backfill within the pipe bedding zone may be densified by jetting or flooding and then tamped to ensure adequate compaction. Sand grains should be from a natural source with rounded shape. Manufactured sand from crushed rock or recycled material is not suitable for jetting/flooding as the grains are typically angular in shape and do not densify well enough with these methods. Manufactured sand can be used as shading material when mechanical compaction efforts are used. Subsequent trench backfill should be compacted in uniform thin lifts by mechanical means to at least a minimum 90 percent relative compaction (per ASTM D1557). If any ¾-inch rock is used for backfill, see Section 4.1.3 for filter fabric requirements.

Retaining wall backfill should consist of sandy soils as outlined in preceding Section 4.1.2. The limits of select sandy backfill should extend at minimum ½ the height of the retaining wall or the width of the heel (if applicable), whichever is greater (Figure 2). Retaining wall backfill soils should be compacted in relatively uniform thin lifts to at least 90 percent relative compaction (per ASTM D1557). Jetting or flooding of retaining wall backfill materials should not be permitted.

In backfill areas where mechanical compaction of soil backfill is impractical due to space constraints, typically sand-cement slurry may be substituted for compacted backfill. The slurry should contain about one sack of cement per cubic yard. When set, such a mix typically has the consistency of compacted soil. Sand cement slurry placed near the surface within landscape areas should be evaluated for potential impacts on planned improvements.

A representative from LGC Geotechnical should observe, probe, and test the backfill to verify compliance with the project recommendations.

4.1.5 Temporary Excavations

Temporary excavations should be performed in accordance with project plans, specifications, and all Occupational Safety and Health Administration (OSHA) requirements. Excavations should be laid back or shored in accordance with OSHA requirements before personnel or equipment are allowed to enter. Based on the reference geotechnical reports, site soils are anticipated to be OSHA Type "B" soils. Sandy soils are present and should be considered susceptible to caving. Soil conditions should

be regularly evaluated during construction to verify conditions are as anticipated. The contractor shall be responsible for providing the "competent person," required by OSHA standards, to evaluate soil conditions. Close coordination with the geotechnical consultant should be maintained to facilitate construction while providing safe excavations. Excavation safety is the sole responsibility of the contractor.

Vehicular traffic, stockpiles, and equipment storage should be set back from the perimeter of excavations a distance equivalent to a 1:1 projection from the bottom of the excavation. Once an excavation has been initiated, it should be backfilled as soon as practical. Prolonged exposure of temporary excavations may result in some localized instability. Excavations should be planned so that they are not initiated without sufficient time to shore/fill them prior to weekends, holidays, or forecasted rain.

It should be noted that any excavation that extends below a 1:1 (horizontal to vertical) projection of an existing foundation will remove existing support of the structure foundation. If requested, temporary shoring and/or ABC slot cut parameters will be provided.

4.2 Preliminary Foundation Recommendations

Provided that the remedial grading recommendations provided herein are implemented, the site may be considered suitable for the support of the residential structures using a conventional or post-tensioned foundation system. Laboratory testing indicates that the site soils have a "Very Low" expansion potential (EI of 20 or less per ASTM D4829), however, the foundation designer should take into consideration the total and differential settlement in his/her design. Please note that the following foundation recommendations are preliminary and must be confirmed by LGC Geotechnical at the completion of grading.

Preliminary foundation recommendations are provided in the following sections. Recommended soil bearing and estimated settlement due to structural loads are provided in Section 4.4.

4.2.1 Provisional Conventional Foundation Design Parameters

Due to the very low expansion potential of the onsite soils, the foundation/structural engineer may design a conventional foundation system that is tied together based upon the anticipated dead and live loads (wind, seismic) that will be imparted by the structure. The recommendations provided in the "Soil Bearing and Lateral Resistance" section may be utilized in the design of a rigid slab-on-grade conventional foundation designed in accordance with Section 1808 of the 2022 C.B.C.

4.2.2 Provisional Post-Tensioned Foundation Design Parameters

The geotechnical parameters provided herein may be used for post-tensioned slab foundations. These parameters have been determined in general accordance with the Post-Tensioning Institute (PTI, 2012) Standard Requirements (PTI DC 10.5), referenced in Chapter 18 of the 2022 CBC. In utilizing these parameters, the foundation engineer

should design the foundation system in accordance with the allowable deflection criteria of applicable codes and the requirements of the structural designer/architect. Other types of stiff slabs may be used in place of the CBC post-tensioned slab design provided that, in the opinion of the foundation structural designer, the alternative type of slab is at least as stiff and strong as that designed by the CBC/PTI method to resist expansive soils.

Our design parameters are based on our experience with similar residential projects and the anticipated nature of the soil (with respect to expansion potential). Please note that implementation of our recommendations will not eliminate foundation movement (and related distress) should the moisture content of the subgrade soils fluctuate. It is the intent of these recommendations to help maintain the integrity of the proposed structures and reduce (not eliminate) movement, based upon the anticipated site soil conditions. Should future owners not properly maintain the areas surrounding the foundation, for example by overwatering, then we anticipate for expansive soils the maximum differential movement of the perimeter of the foundation to the center of the foundation to be on the order of a couple of inches. Soils of lower expansion potential are anticipated to show less movement.

TABLE 2

Provisional Geotechnical Parameters for Post-Tensioned Foundation Slab Design

Parameter	PT Slab with Perimeter Footing	PT Mat with Thickened Edge
Expansion Index	Very Low[1]	Very Low[1]
Thornthwaite Moisture Index	-20	-20
Constant Soil Suction	PF 3.9	PF 3.9
Center Lift Edge moisture variation distance, e_m Center lift, y_m	 9.0 feet < 0.25 inch	 9.0 feet 0.25 inch
Edge Lift Edge moisture variation distance, e_m Edge lift, y_m	 6.1 feet 0.25 inch	 6.1 feet 0.25 inch
Modulus of Subgrade Reaction, k (assuming presoaking as indicated below)	200 pci	200 pci
Minimum perimeter footing/thickened edge embedment below finish grade	12 inches	6 inches
Perimeter foundation reinforcement	N/A[2]	N/A[2]
Presoak (moisture conditioning)	100% of Optimum to 12 inches	100% of Optimum to 12 inches

1. Assumed for preliminary design purposes. Further evaluation is needed at the completion of grading.
2. Recommendations for foundation reinforcement and slab thickness are ultimately the purview of the foundation engineer/structural engineer based upon geotechnical criteria and structural engineering considerations.
3. Recommendations for sand below slabs have traditionally been included with geotechnical foundation recommendations, although they are not the purview of the geotechnical consultant. The sand layer requirements are the purview of the foundation engineer/structural engineer, and should be provided in accordance with ACI Publication 302 "Guide for Concrete Floor and Slab Construction".
4. Recommendations for vapor retarders below slabs are also the purview of the foundation engineer/structural engineer and should be provided in accordance with applicable code requirements.

4.2.3 Foundation Subgrade Preparation and Maintenance

Moisture conditioning of the subgrade soils is recommended prior to trenching the foundation. The duration of this process varies greatly based on the chosen method and is also dependent on factors such as soil type and weather conditions. Time duration for presoaking from completion of rough grading to trenching of foundations should be accounted for in the construction schedule (typically a few days for Very Low expansion soils). The recommendations specific to the anticipated site soil conditions, including recommended presoak, are presented in Table 2. The subgrade moisture condition of

the building pad soils should be maintained at near-optimum moisture content up to the time of concrete placement. This moisture content should be maintained around the immediate perimeter of the slab during construction and up to occupancy of the homes.

The geotechnical parameters provided herein assume that if the areas adjacent to the foundation are planted and irrigated, these areas will be designed with proper drainage and adequately maintained so that ponding, which causes significant moisture changes below the foundation, does not occur. Our recommendations do not account for excessive irrigation and/or incorrect landscape design. Plants should only be provided with sufficient irrigation for life and not overwatered to saturate subgrade soils. Sunken planters placed adjacent to the foundation should either be designed with an efficient drainage system or liners to prevent moisture infiltration below the foundation. Some lifting of the perimeter foundation beam should be expected even with properly constructed planters.

In addition to the factors mentioned above, future owners/property management personnel should be made aware of the potential negative influences of trees and/or other large vegetation. Roots that extend near the vicinity of foundations can cause distress to foundations. Future owners (and the owner's landscape architect) should not plant trees/large shrubs closer to the foundations than a distance equal to half the mature height of the tree or 20 feet, whichever is more conservative unless specifically provided with root barriers to prevent root growth below the building foundation.

It is the owner's responsibility to perform periodic maintenance during hot and dry periods to ensure that adequate watering has been provided to keep soil from separating or pulling back from the foundation. Future owners and property management personnel should be informed and educated regarding the importance of maintaining a constant level of soil-moisture. The owners should be made aware of the potential negative consequences of both excessive watering, as well as allowing potentially expansive soils to become too dry. Expansive soils can undergo shrinkage during drying, and swelling during the rainy winter season, or when irrigation is resumed. This can result in distress to building structures and hardscape improvements. The builder should provide these recommendations to future owners and property management personnel.

4.2.4 Slab Underlayment Guidelines

The following recommendations are for informational purposes since they are unrelated to the geotechnical performance of the foundation. Some post-construction moisture migration should be expected below the foundation; the foundation engineer must assume soil moisture to be present below the slab. The following recommendations may be superseded by the foundation engineer and/or owner.

In general, interior floor slabs with moisture sensitive floor coverings should be underlain by a minimum 10-15 mil thick vapor retarder, which has a water vapor transmission rate (permeance) of less than 0.3 perms, as determined by ASTM E 96, and meets the applicable code requirements (ASTM E 1745).

It is the responsibility of the contractor to ensure that the moisture/vapor retarder systems are properly installed in accordance with the project plans and manufacturer's specifications, and that the moisture/vapor retarder materials are free of tears and punctures prior to and as a result of concrete placement. Additional moisture reduction and/or prevention measures may be needed, depending on the performance requirements of future interior floor coverings.

The foundation engineer/architect should determine whether the use of a capillary break (sand or gravel layer) in conjunction with the vapor retarder is necessary or required by code. Sand layer thickness and location (above and/or below vapor retarder) should also be determined by the foundation engineer/architect. However, we often observe the membrane to be sandwiched between a layer of sand, 1-inch above and 1-inch below. Sand layers should be installed, where applicable, in accordance with ACI Publication 302 – "Guide for Concrete Floor and Slab Construction."

4.3 Soil Bearing and Lateral Resistance

Provided our earthwork recommendations are implemented, an allowable soil bearing pressure of 2,000 pounds per square foot (psf) may be used for the design of footings having a minimum width of 12 inches and minimum embedment of 12 inches below lowest adjacent ground surface. This value may be increased by 300 psf for each additional foot of embedment and 150 psf for each additional foot of foundation width to a maximum value of 3,000 psf. A post-tensioned mat foundation a minimum of 6 inches below lowest adjacent grade may be designed for an allowable soil bearing pressure of 1,200 psf. These allowable bearing pressures are applicable for level (ground slope equal to or flatter than 5H:1V) conditions only. Bearing values indicated are for total dead loads and frequently applied live loads and may be increased by ⅓ for short duration loading (i.e., wind or seismic loads).

In utilizing the above-mentioned allowable bearing capacity and provided our earthwork recommendations are implemented, foundation settlement due to structural loads is anticipated to be 1-inch or less. Differential static settlement may be taken as half of the static settlement (i.e., ½-inch over a horizontal span of 40 feet).

Resistance to lateral loads can be provided by friction acting at the base of foundations and by passive earth pressure. For concrete/soil frictional resistance, an allowable coefficient of friction of 0.35 may be assumed with dead-load forces. For slabs constructed over a moisture retarder, the allowable friction coefficient should be provided by the manufacturer. An allowable passive lateral earth pressure of 250 psf per foot of depth (or pcf) to a maximum of 2,500 psf may be used for the sides of footings poured against properly compacted fill. Allowable passive pressure may be increased to 340 pcf (maximum of 3,400 psf) for short duration seismic loading. This passive pressure is applicable for level (ground slope equal to or flatter than 5H:1V) conditions only. For a 2:1 sloping condition an allowable passive lateral earth pressure of 100 psf per foot of depth (or pcf) to a maximum of 1,000 psf may be used for lateral resistance. Allowable passive pressure may be increased to 130 pcf to a maximum of 1,300 psf for short duration seismic or wind loading. Frictional resistance and passive pressure may be used in combination without reduction. We recommend that the upper foot of passive resistance be neglected if finished grade will not be covered with concrete or asphalt. The provided allowable passive pressures are based on a factor of safety of 1.5 and 1.1 for static and seismic loading conditions,

respectively. The structural designer should incorporate appropriate factors of safety and/or load factors in their design.

4.4 Lateral Earth Pressures for Retaining Walls

Lateral earth pressures for approved sandy soils meeting indicated project recommendations (Section 4.1.2) are provided below. Lateral earth pressures are provided as equivalent fluid unit weights, in psf per foot of depth (or pcf). These values do not contain an appreciable factor of safety, so the retaining wall designer should apply the applicable factors of safety and/or load factors during design. A soil unit weight of 120 pcf may be assumed for calculating the actual weight of soil over the wall footing.

The following lateral earth pressures are presented on Table 3 are for backfilled retaining walls using approved select granular soils with a maximum of 35 percent fines (passing the No. 200 sieve per ASTM D-421/422) and a maximum Expansion Index of 20 (per ASTM D-4829). Portions of the onsite soil may not be suitable for retaining wall backfill due to their fines content (i.e., silt and clay content). Therefore, either select grading and stockpiling and/or import of suitable sandy soils meeting the criteria outlined above will be required. The retaining wall designer should clearly indicate on the retaining wall plans the required sandy soil backfill criteria.

TABLE 3

Lateral Earth Pressures – Approved On-site or Imported Sandy Soils

Conditions	Equivalent Fluid Weight (pcf)	Equivalent Fluid Weight (pcf)
	Level Backfill	2:1 Sloped Backfill
	Approved Sandy Soils	Approved Sandy Soils
Active	35	55
At-Rest	55	70

If the wall can yield enough to mobilize the full shear strength of the soil, it can be designed for "active" pressure. If the wall cannot yield under the applied load, the earth pressure will be higher. This would include 90-degree corners of retaining walls. Such walls should be designed for "at-rest." The equivalent fluid pressure values assume free-draining conditions. If conditions other than those assumed above are anticipated, the equivalent fluid pressure values should be provided on an individual-case basis by the geotechnical engineer.

Surcharge loading effects from any adjacent structures should be evaluated by the retaining wall designer. In general, structural loads within a 1:1 (horizontal to vertical) upward projection from the bottom of the proposed retaining wall footing will surcharge the proposed retaining wall. In addition to the recommended earth pressure, retaining walls adjacent to streets should be designed to resist a uniform lateral pressure of 85 pounds per square foot (psf) due to normal street vehicle traffic, if applicable. The retaining wall designer should contact the geotechnical consultant for any required geotechnical input in estimating surcharge

loads.

Retaining wall structures should be provided with appropriate drainage and appropriately waterproofed. To reduce, but not eliminate, saturation of near-surface (upper approximate 1-foot) soils in front of the retaining walls, the perforated subdrain pipe should be located as low as possible behind the retaining wall. The outlet pipe should be sloped to drain to a suitable outlet. In general, we do not recommend retaining wall outlet pipes be connected to area drains. If subdrains are connected to area drains, special care and information should be provided to homeowners to maintain these drains. Typical retaining wall drainage is illustrated in Figure 3. It should be noted that the recommended subdrain does not provide protection against seepage through the face of the wall and/or efflorescence. Efflorescence is generally a white crystalline powder (discoloration) that results when water containing soluble salts migrates over a period of time through the face of a retaining wall and evaporates. If such seepage or efflorescence is undesirable, retaining walls should be waterproofed to reduce this potential.

If retaining walls greater than 6 feet in height are proposed, the retaining wall designer should contact LGC Geotechnical for specific seismic lateral earth pressure increments based on the configuration and height of the planned retaining wall structures.

Soil bearing and lateral resistance (friction coefficient and passive resistance) are provided in Section 4.4. Earthwork considerations (temporary backcuts, backfill, compaction, etc.) for retaining walls are provided in Section 4.1 (Site Earthwork) and the subsequent earthwork related sub-sections.

4.5 Soil Corrosivity

Although not corrosion engineers (LGC Geotechnical is not a corrosion consultant), several governing agencies in Southern California require the geotechnical consultant to determine the corrosion potential of soils to buried concrete and metal facilities. We therefore present the results of our testing with regard to corrosion for the use of the client and other consultants, as they determine necessary.

Corrosion testing of near-surface bulk samples indicated a soluble sulfate content ranging from approximately 0.006 to 0.010 percent and chloride content ranging from approximately 37 to 60 parts per million (ppm). Based on Caltrans Corrosion Guidelines (Caltrans, 2021), soils are considered corrosive to structural elements if the chloride concentration is 500 ppm or greater, or the sulfate concentration is 2,000 ppm (0.2 percent) or greater. Based on test results, soils are not considered corrosive using Caltrans criteria. Note that based on minimum resistivity the soils are considered corrosive to metallic improvements. If improvements that may be susceptible to corrosion are proposed, it is recommended that further evaluation by a corrosion engineer be performed.

Based on laboratory sulfate test results, the near surface soils are designated to a class “S0” per ACI 318, Table 19.3.1.1 with respect to sulfates. Concrete in direct contact with the onsite soils can be designed according to ACI 318, Table 19.3.2.1 using the “S0” sulfate classification.

Laboratory testing may need to be performed at the completion of grading by the project corrosion engineer to further evaluate the as-graded soil corrosivity characteristics including sulfate, chloride, pH, minimum resistivity, etc. and provide design level recommendations. Accordingly, revision of the corrosion potential may be needed, should future test results differ substantially from the conditions reported herein. The client and/or other members of the development team should consider this during the design and planning phase of the project and formulate an appropriate course of action.

4.6 Control of Surface Water and Drainage Control

From a geotechnical perspective, positive drainage of surface water away from structures is very important. Water should not be allowed to pond adjacent to buildings or to flow freely down a graded slope. Per section 1804.4 of the 2022 CBC, positive drainage may be accomplished by providing drainage away from buildings at a gradient of at least 5 percent for earthen surfaces for a distance of at least 10 feet away from the face of wall. If a distance of 10 feet cannot be achieved, an alternative of a gradient of at least 5 percent to an area drain or swale having a gradient of 2 percent is acceptable. Where necessary, drainage paths may be shortened by use of area drains and collector pipes. Eave gutters are recommended and should reduce water infiltration into the subgrade soils if the downspouts are properly connected to appropriate outlets. Ultimately surface drainage and code compliance are the purview of the project civil engineer.

Planters with open bottoms adjacent to buildings should be avoided. Planters should not be designed adjacent to buildings unless provisions for drainage, such as catch basins, liners, and/or area drains, are made. Overwatering must be avoided.

Planters adjacent to a building or structure should be avoided wherever possible or be properly designed (e.g., lined with a membrane), to reduce the penetration of water into the adjacent footing subgrades and thereby reduce moisture related damage to the foundation. Planting areas at grade should be provided with appropriate positive drainage. Wherever possible, exposed soil areas should be above adjacent paved grades to facilitate drainage. Planters should not be depressed below adjacent paved grades unless provisions for drainage, such as multiple depressed area drains, are constructed. Adequate drainage gradients, devices, and curbing should be provided to prevent runoff from adjacent pavement or walks into the planting areas. Irrigation methods should promote uniformity of moisture in planters and beneath adjacent concrete flatwork. Overwatering and underwatering of landscape areas must be avoided.

Area drain inlets should be maintained and kept clear of debris in order to properly function. Homeowners should also be made aware that excessive irrigation of neighboring properties can cause seepage and moisture conditions on adjacent lots. Homeowners should be furnished with these recommendations communicating the importance of maintaining positive drainage away from structures, towards streets, when they design their improvements.

The impact of heavy irrigation or inadequate runoff gradients can create perched water conditions. This may result in seepage or shallow groundwater conditions where previously none existed. Maintaining adequate surface drainage and controlled irrigation will significantly reduce the potential for nuisance-type moisture problems. To reduce differential earth

movements such as heaving and shrinkage due to the change in moisture content of foundation soils, which may cause distress to a residential structure and associated improvements, moisture content of the soils surrounding the structure should be kept as relatively constant as possible.

Subdrains and v-ditches must be properly maintained, and their outlets kept free draining and clear of any potential obstructions. Routine maintenance should be performed, especially prior to and during the rainy season. Failure to properly maintain these elements may result in slope failures, slumps, excessive erosion, localized saturated zones, nuisance type water issues, etc.

Any future trenches excavated on a slope face for utility or irrigation lines and/or for any purpose should be properly backfilled and compacted to the slope face. Observation/testing and acceptance by the geotechnical consultant during trench backfill are recommended.

A program for the elimination of burrowing animals in both native and graded slope areas must be established and properly maintained to protect slope stability by reducing the potential for surface water to penetrate into the soil. Continuous erosion control, rodent control, and maintenance are essential to the long-term stability of all slopes.

4.7 Preliminary Asphalt Concrete Pavement Sections

The following provisional minimum asphalt concrete (AC) street sections are provided in Table 4 on the following page for Traffic Indices (TI) of 5.5 (or less) and 8.0. These sections are based on an assumed R-value of 40. These recommendations must be confirmed with R-value testing of representative near-surface soils at the completion of grading and after underground utilities have been installed and backfilled. Final pavement sections should be confirmed by the project civil engineer based upon the final design Traffic Index. The final Traffic Index is determined by the Civil Engineer or City Engineer. We are not responsible for selecting a design Traffic Index. If requested, LGC Geotechnical will provide sections for alternate TI values. The city of Ontario minimum pavement sections have been incorporated into our preliminary recommendations.

TABLE 4

Preliminary Asphalt Concrete Pavement Section Options

Assumed Traffic Index	5.5 (or less)	8.0
R -Value Subgrade	40	40
AC Thickness	4.0 inches	6.0 inches
Aggregate Base Thickness	6.0 inches	8.0 inches

Due to anticipated heavy construction traffic during installation of utilities and home construction, we recommend that the total thickness (base course and capping course) of AC be placed at essentially the same time. Allowing heavy construction traffic loading on only the base course of the AC will increase the potential for pavement distress. It should be noted that construction traffic such as concrete trucks will likely exceed traffic loading after completion of construction.

The pavement section thicknesses provided above are considered minimum thicknesses. Increasing the thickness of any of the above layers will reduce the likelihood of the pavement experiencing distress during its service life. The above recommendations assume that proper maintenance and irrigation of the areas adjacent to the roadway will occur throughout the design life of the pavement. Failure to maintain a proper maintenance and/or irrigation program may jeopardize the integrity of the pavement.

Earthwork recommendations regarding aggregate base and subgrade are provided in Section 4.1 "Site Earthwork" and the related sub-sections of this report.

4.8 Nonstructural Concrete Flatwork

Nonstructural concrete flatwork (such as walkways, private drives, patio slabs, etc.) has a potential for cracking due to changes in soil volume related to soil-moisture fluctuations. To reduce the potential for excessive cracking and lifting, concrete may be designed in accordance with the minimum guidelines outlined in Table 5. These guidelines will reduce the potential for irregular cracking and promote cracking along construction joints but will not eliminate all cracking or lifting. Thickening the concrete and/or adding additional reinforcement will further reduce cosmetic distress.

TABLE 5

Nonstructural Concrete Flatwork Guidelines for Very Low Expansion Potential

	Community Sidewalks (≤4 feet wide)	**Patios/ Walkways** (adjacent to homes or flatwork >4 feet wide)	**Private Vehicular Driveways**	**City Sidewalk Curb and Gutters**
Minimum Thickness (in.)	4 (full)	4 (full)	4 (full)	City/Agency Standard
Presoaking	Wet down prior to placing	Wet down prior to placing	Wet down prior to placing	City/Agency Standard
Reinforcement	—	No. 3 at 36 inches on centers	No. 3 at 36 inches on centers	City/Agency Standard
Thickened Edge (in.)	—	—	8 x 8	City/Agency Standard
Crack Control Joints	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	Saw cut or deep open tool joint to a minimum of $^1/_3$ the concrete thickness	City/Agency Standard
Maximum Joint Spacing	5 feet	6 feet	10 feet or quarter cut whichever is closer	City/Agency Standard

To reduce the potential for driveways to separate from the garage slab, the builder may elect to install dowels to tie these two elements together. Similarly, future homeowners should consider the use of dowels to connect flatwork to the foundation.

4.9 Geotechnical Plan Review

When available, grading, retaining wall and foundation plans should be reviewed by LGC Geotechnical in order to verify our geotechnical recommendations are implemented. Updated recommendations and/or additional fieldwork may be necessary.

4.10 Geotechnical Observation and Testing During Construction

The recommendations provided in this report are based on limited subsurface observations and geotechnical analysis. The interpolated subsurface conditions should be checked in the field during construction by a representative of LGC Geotechnical. Geotechnical observation and testing is required per Section 1705 of the 2022 California Building Code (CBC).

Geotechnical observation and/or testing should be performed by LGC Geotechnical at the following stages:

- During grading (removal bottoms, fill placement, etc.);
- During retaining wall backfill and compaction;
- During utility trench backfill and compaction;
- After presoaking building pads and other concrete-flatwork subgrades, and prior to placement of aggregate base or concrete;
- Preparation of pavement subgrade and placement of aggregate base;
- After building and wall footing excavation and prior to placing steel reinforcement and/or concrete; and
- When any unusual soil conditions are encountered during any construction operation subsequent to issuance of this report.

5.0 LIMITATIONS

Our services were performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable soils engineers and geologists practicing in this or similar localities. No other warranty, expressed or implied, is made as to the conclusions and professional advice included in this report.

This report is based on data obtained from limited observations of the site, which have been extrapolated to characterize the site. While the scope of services performed is considered suitable to adequately characterize the site geotechnical conditions relative to the proposed development, no practical evaluation can completely eliminate uncertainty regarding the anticipated geotechnical conditions in connection with a subject site. Variations may exist and conditions not observed or described in this report may be encountered during grading and construction.

This report is issued with the understanding that it is the responsibility of the owner, or of his/her representative, to ensure that the information and recommendations contained herein are brought to the attention of the other consultants (at a minimum the civil engineer, structural engineer, landscape architect) and incorporated into their plans. The contractor should properly implement the recommendations during construction and notify the owner if they consider any of the recommendations presented herein to be unsafe, or unsuitable.

The findings of this report are valid as of the present date. However, changes in the conditions of a site can and do occur with the passage of time, whether they be due to natural processes or the works of man on this or adjacent properties. The findings, conclusions, and recommendations presented in this report can be relied upon only if LGC Geotechnical has the opportunity to observe the subsurface conditions during grading and construction of the project, in order to confirm that our preliminary findings are representative for the site. This report is intended exclusively for use by the client, any use of or reliance on this report by a third party shall be at such party's sole risk.

In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and modification.

Appendix C
Field and Laboratory Test Results

APPENDIX C

Laboratory Test Results

Samples collected by PSE that are considered representative of site conditions were generally tested in accordance with American Society for Testing and Materials (ASTM) procedures, where applicable. The following summary is a brief outline of the test type and a table summarizing the test results.

Expansion Index: The expansion potential of selected representative samples was evaluated by the Expansion Index Test per ASTM D4829.

Sample Location	Expansion Index	Expansion Potential*
TP-1 (B-1)	4	Very Low
TP-4 (B-1)	5	Very Low
TP-12 (B-1)	2	Very Low

*Per ASTM D 4829

Maximum Density Tests: The maximum dry density and optimum moisture content of materials were determined in accordance with ASTM Test Method D1557. The results of these tests are presented in the table below.

Sample Location (Soil Type)	Sample Description	Maximum Dry Density (pcf)	Optimum Moisture Content (%)
TP-1 (B-1); "1"	Pale Brown Silty Sand	125.5	11.5
TP-4 (B-1); "4"	Pale Brown Silty Sand	127.5	9.5
TP-12 (B-1); "12"	Pale Brown Silty Sand	129.5	8.5

Organic Content: The organic content of selected samples was determined by standard ASTM D 2974 (Test Methods A & C). Results of organic content testing are presented on Test Pit logs, Appendix B.

Laboratory Testing Procedures and Test Results

Chloride Content: Chloride content was tested in accordance with Caltrans Test Method (CTM) 422. The results are presented below.

Sample Location	Chloride Content (% by Weight)
TP-1 (B-1)	0.004
TP-4 (B-1)	0.004
TP-12 (B-1)	0.006

Soluble Sulfates: The soluble sulfate contents of selected samples were determined by standard geochemical methods (CTM 417). The soluble sulfate content is used to determine the appropriate cement type and maximum water-cement ratios. The test results are presented in the table below.

Sample Location/Number	Sulfate Content (% by Weight)
TP-1 (B-1)	0.008
TP-4 (B-1)	0.010
TP-12 (B-1)	0.006

Appendix B

Appendix D
General Earthwork and Grading Specifications

General Earthwork and Grading Specifications for Rough Grading

1.0 General

1.1 Intent

These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 The Geotechnical Consultant of Record

Prior to commencement of work, the owner shall employ a qualified Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultant shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to confirm that the attained level of compaction is being accomplished as specified. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.

1.3 The Earthwork Contractor

The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The Contractor shall be solely responsible for performing the grading in accordance with the project plans and specifications. The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of “equipment” of work and the estimated quantities of daily earthwork

contemplated for the site prior to commencement of grading. The Contractor shall inform the owner and the
Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate personnel will be available for observation and testing. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified. It is the contractor's sole responsibility to provide proper fill compaction.

2.0 Preparation of Areas to be Filled

2.1 Clearing and Grubbing

Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed. The contractor is responsible for all hazardous waste relating to his work. The Geotechnical Consultant does not have expertise in this area. If hazardous waste is a concern, then the Client should acquire the services of a qualified environmental assessor.

2.2 Processing

Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be over-excavated as specified in the following section. Scarification shall continue until soils are broken down and free of oversize material and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.

2.3 Over-excavation

In addition to removals and over-excavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be over-excavated to competent ground as evaluated by the Geotechnical Consultant during grading.

2.4 Benching

Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. Please see the Standard Details for a graphic illustration. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise over-excavated to provide a flat subgrade for the fill.

2.5 Evaluation/Acceptance of Fill Areas

All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

3.0 Fill Material

3.1 General

Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 Oversize

Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.

3.3 Import

If importing of fill material is required for grading, proposed import material shall meet the requirements of the geotechnical consultant. The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

4.0 Fill Placement and Compaction

4.1 Fill Layers

Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 Fill Moisture Conditioning

Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557).

4.3 Compaction of Fill

After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.

4.4 Compaction of Fill Slopes

In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557.

4.5 Compaction Testing

Field tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.6 Frequency of Compaction Testing

Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soils embankment. In addition, as a guideline, at least one test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.7 Compaction Test Locations

The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than
5 feet apart from potential test locations shall be provided.

5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan, and the Standard Details. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

6.0 Excavation

Excavations, as well as over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical plans are estimates only. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 Trench Backfills

7.1 The Contractor shall follow all OHSA and Cal/OSHA requirements for safety of trench excavations.

7.2 All bedding and backfill of utility trenches shall be done in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over

the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum of 90 percent of maximum from 1 foot above the top of the conduit to the surface.

7.3 The jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.

7.4 The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill.

7.5 Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

I. INTRODUCTION AND LOCATION

A paleontological resource assessment has been completed for the Eucalyptus and Amherst Avenues Project, located within the city of Ontario, San Bernardino County, California (Figures 1 and 2). The project, bounded by Chatham Street, Clifton Avenue, South Amherst Avenue, and East Eucalyptus Avenue, consists of one 10.02-acre parcel (Assessor's Parcel Number [APN] 1073-101-05) and is located within Section 13, Township 2 South, Range 7 West, as shown on the United States Geological Survey 1:24,000-scale (7.5-minute) *Corona North* topographic quadrangle maps (see Figure 2). As designed, the applicant proposes to clear the property for the construction of a multi-family residential development with associated landscape, hardscape, and infrastructure (Figure 3). The parcel is currently vacant and was previously graded.

As the lead agency, the City of Ontario has required the preparation of a paleontological assessment to evaluate the project's potential to yield paleontological resources. The paleontological assessment of the project included a review of paleontological literature and fossil locality records for a previous project in the area, a review of the underlying geology, and recommendations to mitigate impacts to potential paleontological resources.

II. REGULATORY SETTING

The California Environmental Quality Act (CEQA), which is patterned after the National Environmental Policy Act, is the overriding environmental regulation that sets the requirement for protecting California's paleontological resources. CEQA mandates that governing permitting agencies (lead agencies) set their own guidelines for the protection of nonrenewable paleontological resources under their jurisdiction.

State of California

Under "Guidelines for Implementation of the California Environmental Quality Act," as amended in December 2018 (California Code of Regulations [CCR] Title 14, Division 6, Chapter 3, Sections 15000 et seq.), procedures define the types of activities, persons, and public agencies required to comply with CEQA. Section 15063 of the CCR provides a process by which a lead agency may review a project's potential impact to the environment, determine whether the impacts are significant, and, if necessary, provide recommendations.

Project Development Map

The Eucalytpus and Amherst Avenues Project

In CEQA's Environmental Checklist Form, a question to respond to is, "Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?" (Appendix G, Section VII, Part f). This is to ensure compliance with California Public Resources Code Section 5097.5, the law that protects nonrenewable resources, including fossils, which is paraphrased below:

a) A person shall not knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands.
b) As used in this section, "public lands" means lands owned by, or under the jurisdiction of, the state, or any city, county, district, authority, or public corporation, or any agency thereof.
c) A violation of this section is a misdemeanor.

City of Ontario

The Ontario Plan (TOP) 2050 Final Supplemental Environmental Impact Report (FSEIR) sets forth goals and policies for the City to manage future growth and land uses. According to Impact 5.7-6 of the FSEIR:

> Ontario is underlain by deposits of Quaternary and upper-Pleistocene sediments deposited during Pliocene and early Pleistocene time. Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are therefore considered to have high sensitivity. Older Pleistocene alluvial sediments can yield fossil remains, often found at depths of 10 feet or more below existing ground surface. As previously discussed, for the Approved TOP, the San Bernardino County Museum, Division of Geological Sciences, conducted the paleontological records search and found one previously known paleontological resource locality recorded by the Regional Paleontologic Locality Inventory, a computer database with positional and contextual data for more than 3,000 fossil localities throughout California and the southwestern United States. This review found one paleontological locality for the City area (SBCM 5.1.8). This locality yielded the remains of a mammoth from approximately 20 feet below the ground surface. As a result, the possibility of finding additional paleontological resources within City boundaries is moderate to high at depths of 10 feet or more below ground surface. (PlaceWorks 2022a)

To mitigate the potential impacts identified in Impact 5.7-6, the FSEIR proposes the following mitigation measures. These measures are also stated in the Mitigation Monitoring and Reporting Program of TOP 2050 (PlaceWorks 2022b):

> **Mitigation Measure MM 5-2:** In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:
>
> a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
>
> b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.
>
> c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers. (PlaceWorks 2022a, 2022b)

III. GEOLOGY

Surficial sediments below the project are mapped by Morton and Miller (2006) as Holocene and late Pleistocene eolian (wind-blown) deposits, with nearby sandy alluvial sediments of similar age (Figure 4). These surficial units overlie the ancestral Santa Ana River flood plain deposits mapped as lower to middle Pleistocene very old sandy alluvial channel deposits that are exposed on the surface to the south of the project and closer to the present course of the Santa Ana River.

IV. PALEONTOLOGICAL RESOURCES

Definition

Paleontological resources are the remains of prehistoric life that have been preserved in geologic strata. These remains are called fossils and include bones, shells, teeth, and plant remains (including their impressions, casts, and molds) in the sedimentary matrix, as well as trace fossils such as footprints and burrows. Fossils are considered older than 5,000 years of age (Society of Vertebrate Paleontology 2010) but may include younger remains (subfossils) when viewed in the context of local extinction of the organism or habitat, for example. Fossils are considered a nonrenewable resource under state and local guidelines (see Section II).

Fossil Locality Records Search

A paleontological literature review and collections and locality records search was conducted for the project using records obtained for prior projects from the Division of Geological Sciences at the San Bernardino County Museum (SBCM), the Natural History Museum of Los Angeles County (LACM), and the Western Science Center (WSC) in Hemet, and data from published and unpublished paleontological literature. The nearest recorded fossil locality is situated about a mile southwest of the project in Eastvale, consisting of the bones of a Pleistocene snake (LACM locality no. (loc.) 7811). Farther southwest, between one and two miles, Pleistocene vertebrate fossils were discovered during trenching activities along the nearby County Line Channel Project by BFSA paleontological monitors (Kennedy et al. 2005). Fossils occurred at depths ranging from 11 to 17 feet deep, and consisted of fragmentary bones from a camel, *Camelops* sp. cf. *C. hesternus*, a fragmentary jaw of a bighorn sheep, *Ovis canadensis*, and several unidentifiable bone fragments of large mammals. These fossils were deposited at the WSC.

More Pleistocene fossils have been recovered from a number of completed and ongoing projects by BFSA, all within two miles of the current project. The Vernola Ranch project to the east in Jurupa Valley and the TTM 20472 and Merril Commerce Center projects to the west have all recently yielded the fossil bones of yet-unidentified large mammals and await curation. Fossil bones from these projects were variously collected from depths ranging from 2.5 to 25 feet. At the Ontario 432 Project, two miles to the west of the current project, the sacrum from a large artiodactyl (hoofed grazer) and other unidentified mammalian remains were discovered, at depths ranging from five to seven feet. These specimens have been deposited at the WSC (Wirths 2021).

The nearest known fossil localities held by the SBCM are situated between two and three miles northwest of the project, containing several isolated fossil bones of camels (*Camelops* sp.) and a mastodon (*Mammut pacificus*) rib fragment (SBCM localities 5.1.23 – 5.1.27; Kottkamp 2022). Kottkamp (2022) indicates that the deposits mapped at the surface of this area are unlikely to yield fossils, but the underlying, older deposits "have been found to be highly

fossiliferous in the local area." It should be noted that all of these discoveries post-date the research materials used for paleontological resources in the FSEIR (PlaceWorks 2022a) and, therefore, the document can be construed as out-of-date in that regard.

Project Survey

On February 27, 2025, BFSA staff, under the supervision of Principal Investigator Todd A. Wirths, conducted an intuitive review of the property to determine if any paleontological resources were visible. The field methodology employed for the project included walking evenly spaced survey transects set approximately 15 meters apart while visually inspecting the ground surface, when possible. All potentially sensitive areas where paleontological resources might be located were closely inspected. Visibility of the natural ground surface was characterized as moderate to good. The vegetation within the property is dominated by non-native grasses and weeds. The survey confirmed that the entire property has been previously graded. Grading resulted in the development of a water catchment basin within the northwest portion of the property and a pad at the property's south half. No bedrock outcrops were exposed that might indicate the presence of fossils. No paleontological resources, or evidence of paleontological resources, were observed during the survey.

V. PALEONTOLOGICAL SENSITIVITY

Overview

The degree of paleontological sensitivity of any particular area is based upon a number of factors, including the documented presence of fossiliferous resources on a site or in nearby areas, the presence of documented fossils within a particular geologic formation or lithostratigraphic unit, and whether or not the original depositional environment of the sediments is one that might have been conducive to the accumulation of organic remains that may have become fossilized over time. Holocene alluvium is generally considered to be geologically too young to contain significant nonrenewable paleontological resources (*i.e.,* fossils) and thus is typically assigned a low paleontological sensitivity. Pleistocene (over 11,700 years old) alluvial and alluvial fan deposits in the Inland Empire, however, often yield important terrestrial vertebrate fossils such as extinct mammoths, mastodons, and giant ground sloths, as well as extinct species of horse, bison, camel, saber-toothed cats, and others (Jefferson 1991). These Pleistocene sediments are thus accorded a high paleontological resource sensitivity.

Professional Standards

The Society of Vertebrate Paleontology (2010) has drafted guidelines that include four categories of paleontological sensitivity for geologic units (formations) that might be impacted by a proposed project, and are summarized below:

- *High Potential:* Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered.
- *Undetermined Potential:* Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment, and further study is needed to determine the potential of the rock unit.
- *Low Potential:* Rock units that are poorly represented by fossil specimens in institutional collections or, based on a general scientific consensus, that only preserve fossils in rare circumstances.
- *No Potential:* Rock units that have no potential to contain significant paleontological resources, such as high-grade metamorphic rocks and plutonic igneous rocks.

Using these criteria, based upon nearby fossil localities in southern and eastern Ontario and western Jurupa Valley, and the mapped geology, the Holocene eolian deposits at the surface of the project may be considered to have a low potential for paleontological resources. However, with increasing depth and age, this potential increases to a high potential for yielding significant paleontological resources.

City of Ontario Assessment of Paleontological Sensitivity

The City of Ontario considers strata at depths of 10 feet or greater as having a moderate to high paleontological sensitivity. As such, the potential to uncover undiscovered paleontological resources is considered high (PlaceWorks 2022a: 5.7-17).

VI. CONCLUSIONS AND RECOMMENDATIONS

Potentially fossiliferous late Pleistocene alluvial wash or fan deposits likely occur at a depth below the project. These deposits underlie the Holocene eolian deposits mapped at the surface ("Qye" on Figure 4). The occurrence of terrestrial vertebrate fossils at shallow depths from Pleistocene alluvial fan sediments across the Inland Empire is well documented. The high paleontological sensitivity rating typically assigned to Pleistocene alluvial fan sediments for yielding paleontological resources supports the recommendation that paleontological monitoring be implemented during mass grading and excavation activities in undisturbed Pleistocene alluvial fan sediments to mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources.

On the basis of these statements, a Paleontological Resources Impact Mitigation Program (PRIMP) is recommended, in accordance with Mitigation Measure (MM) 5-2 of the City of Ontario (PlaceWorks 2022a, 2022b). The PRIMP shall be approved by the Planning Department of the City of Ontario prior to the issuance of the project's grading permit. Based upon these findings, **full-time monitoring starting at a depth of four feet below the surface** during earth disturbance activities is strongly recommended. A proposed paleontological monitoring plan is

detailed below. When implemented with the provisions of CEQA, the City of Ontario (PlaceWorks 2022a, 2022b), and the guidelines of the Society of Vertebrate Paleontology (2010), this paleontological monitoring plan would mitigate any adverse impacts (loss or destruction) to potential nonrenewable paleontological resources (fossils), if present, to a level below significant.

Paleontological Monitoring Plan

1. All mitigation programs shall be performed by a qualified professional (project) paleontologist, defined as an individual with an M.S. or Ph.D. in paleontology or geology who has proven experience and who is knowledgeable in professional paleontological procedures and techniques. Fieldwork may be conducted by a qualified paleontological monitor, defined as an individual who has experience in the collection and salvage of fossil materials. The paleontological monitor shall always work under the direction of a qualified paleontologist.
2. Monitoring of mass grading and excavation activities shall be performed by a qualified paleontologist or paleontological monitor. Starting at a depth of four feet, monitoring will be conducted full-time in areas of grading or excavation in undisturbed sediments. Monitoring of artificial fill is not recommended.
3. If a fossil(s) is found at a shallower depth, earth disturbance activities should be halted within a radius of 50 feet from the location of the fossil, and a project-level paleontologist shall be consulted to determine the significance of the fossilized remains. If the fossil is deemed significant by the project-level paleontologist, full-time monitoring should be initiated at the project.
4. Paleontological monitors will be equipped to salvage fossils as they are unearthed to avoid construction delays. The monitor must be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens in a timely manner. Monitoring may be reduced if the potentially fossiliferous units are not present in the subsurface or, if present, are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources. The monitor shall notify the project paleontologist, who will then notify the concerned parties of the discovery.
5. Paleontological salvage during trenching and boring activities is typically from the generated spoils and does not delay the trenching or drilling activities. Fossils will be collected and placed in cardboard flats or plastic buckets and identified by field number, collector, and date collected. Notes will be taken on the map location and stratigraphy of the site, which will be photographed before it is vacated, and the fossils are removed to a safe place. On mass grading projects, discovered fossil sites will be protected by flagging to prevent them from being overrun by earthmovers (scrapers) before salvage begins. Fossils will be collected in a similar manner, with

notes and photographs being taken before removing the fossils. The precise location of the site is determined with the use of electronic handheld devices. If the site involves remains from a large terrestrial vertebrate, such as large bone(s) or a mammoth tusk, that is/are too large to be easily removed by a single monitor, a fossil recovery crew shall excavate around the find, encase the find within a plaster and burlap jacket, and remove it after the plaster is set. For large fossils, use of the contractor's construction equipment may be solicited to help move the jacket to a safe location.

6. Isolated fossils will be collected by hand, wrapped in protective materials, and placed in temporary collecting flats or five-gallon buckets. Notes will be taken on the map location and stratigraphy of the site, which will be photographed before it is vacated, and the fossils are moved to a safe place.
7. Particularly small invertebrate fossils typically represent multiple specimens of a limited number of organisms, and a scientifically suitable sample can be obtained from one to several five-gallon buckets of fossiliferous sediment. If it is possible to dry screen the sediment in the field, a concentrated sample may consist of one or two buckets of material.
8. In accordance with the "Microfossil Salvage" section of the SVP guidelines (2010:7), bulk sampling and screening of fine-grained sedimentary deposits (including carbonate-rich paleosols) must be performed if the deposits are identified to possess indications of producing fossil "microvertebrates" to test the feasibility of the deposit to yield fossil bones and teeth. If indicators of potential microvertebrate fossils are found, screening of a test sample (approximately 600 pounds) is recommended, according to the SVP guidelines. If feasible, wet screening shall be conducted on the project site. If screening yields significant fossils, then removing and processing a "standard sample" of 6,000 pounds shall be performed.
9. In the laboratory, individual fossils will be cleaned of extraneous matrix, any breaks will be repaired, and the specimen, if needed, will be stabilized by soaking in an archivally approved acrylic hardener (*e.g.,* a solution of acetone and Paraloid B-72).
10. Recovered specimens will be prepared to a point of identification and permanent preservation (not display), including screen-washing sediments to recover small invertebrates and vertebrates. Preparation of individual vertebrate fossils is often more time-consuming than for accumulations of invertebrate fossils.
11. Recovered specimens will be identified and curated into a professional, accredited public museum repository with a commitment to archival conservation and permanent retrievable storage (*e.g.,* the San Bernardino County Museum). The paleontological program should include a written repository agreement prior to the initiation of mitigation activities. Prior to curation, the lead agency (the City of Ontario) will be consulted on the repository/museum to receive the fossil material.

12. A final report of findings and significance will be prepared, including lists of all fossils recovered and necessary maps and graphics to accurately record their original location(s). The report, when submitted to and accepted by the appropriate lead agency, will signify satisfactory completion of the project program to mitigate impacts to any potential nonrenewable paleontological resources (*i.e.,* fossils) that might have been lost or otherwise adversely affected without such a program in place.

VII. CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this paleontological report, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief and have been compiled in accordance with CEQA criteria.

MEMORANDUM

URBAN CROSSROADS

DATE: March 28, 2025
TO: Dave Waters, Genstar Development Company/GDCI-13
FROM: Haseeb Qureshi, Shannon Wong
JOB NO: 15662-05 GHG Assessment

ESPERANZA SPECIFIC PLAN AMENDMENT GREENHOUSE GAS ASSESSMENT

Dave Waters,

Urban Crossroads, Inc. is pleased to submit the following Greenhouse Gas Assessment for Esperanza Specific Plan Amendment development (referred to as **Project**) to support the proposed Specific Plan Amendment (**SPA**), which is located on the northeast corner of Eucalyptus Avenue and Amherst Avenue in the City of Ontario. The purpose of this work effort is to determine if the Project would result in new or substantially different Greenhouse Gas Impacts than those considered and addressed in the Esperanza Specific Plan (**Approved Specific Plan**) Environmental Impact Report (EIR) and The Ontario Plan 2050 Supplemental EIR (SEIR).

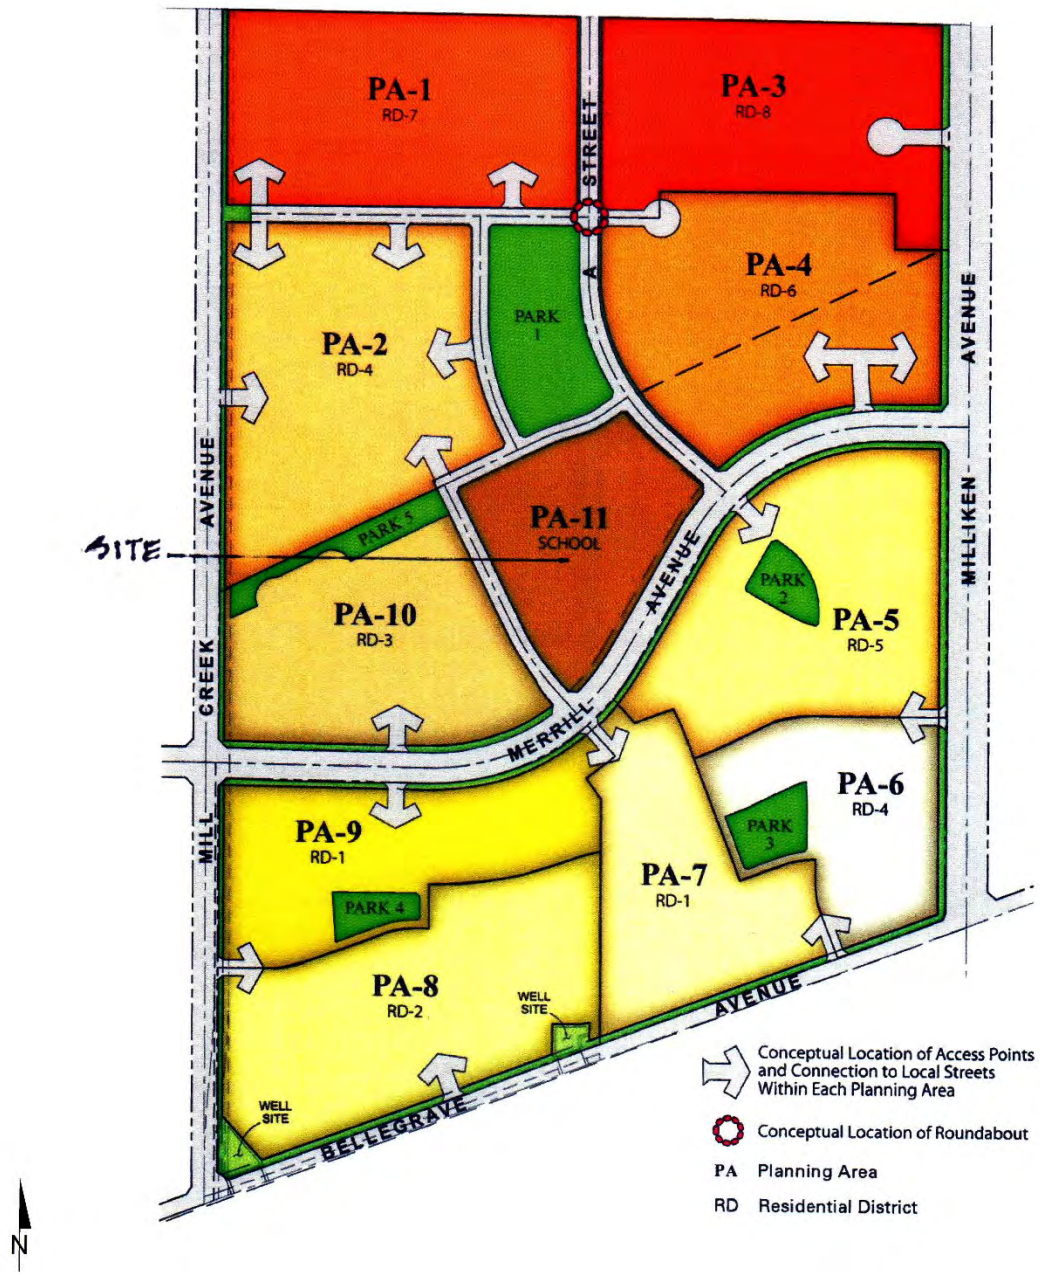
PROPOSED PROJECT

It is our understanding that the proposed Project is to consist of 161 multifamily residential dwelling units (with a density of approximately 16.1 dwelling units per net acre). The Project is located within the Esperanza Specific Plan. The original Specific Plan that was approved contemplated a 736-student elementary school within Planning Area 11. The land use will be updated from "School" to "MDR Medium Density Residential" consistent with the adjacent land use to the northeast. The Project is anticipated to be constructed in a single phase by the year 2029.

Exhibit 1 shows the preliminary site plan. For comparison purposes, Exhibit 2 shows the currently approved land use plan identifying Planning Area 11 with a school.

EXHIBIT 1: PRELIMINARY SITE PLAN

EXHIBIT 2: CURRENTLY APPROVED LAND USE PLAN



PROJECT GHG ANALYSIS

City of Ontario Community Climate Action Plan

The City of Ontario adopted the Community Climate Action Plan (CCAP) on December 16, 2014. The CAP contains further guidance on the City of Ontario's GHG Inventory reduction goals, policies, guidelines, and implementation programs. The purpose of the CAP is to provide guidance on how to analyze GHG emissions and determine significance during the CEQA review of proposed development projects within the City of Ontario (1). The CAP builds upon the Reduction Plan to address City-specific information and City-specific GHG reduction measures. To address the state's requirement to reduce GHG emissions, the City prepared its CAP with the goal of reducing GHG emissions within the City by 15% below 2008 levels by the year 2020. The City's target is consistent with the AB 32 target and ensures that the City of Ontario achieves GHG reductions locally that complement and are consistent with state efforts to reduce GHG emissions.

As part of the CAP, the City of Ontario published a guidance document titled "Greenhouse Gas Emissions, CEQA Thresholds and Screening Tables" (December 2014). As part of this guidance, the City determined that if GHG emissions of a given project exceeds 3,000 $MTCO_2e$/yr, then project emissions would need to be reduced by 25 percent when compared to year 2008 emissions levels. Alternatively, the project would need to achieve a minimum of 100 points pursuant to measures identified in the Screening Tables.

The Ontario Plan (TOP) 2050 includes an update to the City's Community Climate Action Plan (CCAP Update) which was adopted in 2014. The CCAP Update is a plan to reduce greenhouse gas (GHG) emissions and improve community resilience to hazardous conditions associated with climate change. The update to the CCAP includes updated emissions inventories; updated emissions forecasts; identifies GHG emissions reduction targets to achieve the GHG reduction goals of the City of Ontario consistent with Senate Bill 32, Executive Order S-03-05, and substantial progress toward the State's carbon neutrality goals of Executive Order B-55-18; and measures, that when quantified, achieve the GHG reduction targets for the City. As noted in The Ontario Plan 2050 Final Supplemental Environmental Impact Report (SCH No. 2021070364) certified by the City in 2022 (TOP 2050 SEIR), the measures included in the 2022 CCAP Update are not substantially different than that of the 2014 CCAP and therefore there is no change in the environmental impacts associated with the CCAP.

GHG IMPACTS

Standards of Significance

According to the CEQA Guidelines Appendix G thresholds, to determine whether impacts from GHG emissions are significant. Would the project:

- **Threshold 1**: Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?
- **Threshold 2**: Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?

The evaluation of an impact under CEQA requires measuring data from a project against both existing conditions and a "threshold of significance." For establishing significance thresholds, the Office of

Planning and Research's amendments to the CEQA Guidelines Section 15064.7(c) state "[w]hen adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence."

CEQA Guidelines Section 15064.4(a) further states, ". . . A lead agency shall have discretion to determine, in the context of a particular project, whether to: (1) Use a model or methodology to quantify greenhouse gas emissions resulting from a project, and which model or methodology to use . . .; or (2) Rely on a qualitative analysis or performance-based standards."

CEQA Guidelines Section 15064.4 provides that a lead agency should consider the following factors, among others, in assessing the significance of impacts from greenhouse gas emissions:

- **Consideration #1:** The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting.
- **Consideration #2:** Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
- **Consideration #3:** The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such regulations or requirements must be adopted by the relevant public agency through a public review process and must reduce or mitigate the project's incremental contribution of greenhouse gas emissions. In determining the significance of impacts, the lead agency may consider a project's consistency with the State's long-term climate goals or strategies, provided that substantial evidence supports the agency's analysis of how those goals or strategies address the project's incremental contribution to climate change and its conclusion that the project's incremental contribution is not cumulatively considerable.

As noted above, the update to the CCAP includes updated emissions inventories; updated emissions forecasts; identifies GHG emissions reduction targets to achieve the GHG reduction goals of the City of Ontario consistent with Senate Bill 32, Executive Order S-03-05, and substantial progress toward the State's carbon neutrality goals of Executive Order B-55-18; and measures, that when quantified, achieve the GHG reduction targets for the City. As noted in the TOP EIR, the measures included in the 2022 update to the CCAP are not substantially different than that of the 2014 CCAP. Because the 2022 Update to the CCAP addresses GHG emissions reductions and is consistent with the requirements of AB 32, SB 32, and international efforts to reduce GHG emissions, Projects that comply with the CCAP Update would have a less than significant GHG impact.

PROJECT GHG EMISSIONS

The estimated GHG emissions for the Project are summarized in Table 1. The estimated GHG emissions include emissions from Carbon Dioxide (CO_2), Methane (CH_4), Nitrous Oxide (N_2O), and Refrigerants (R). As shown on Table 1, the Project would generate a total of approximately 2,238.00 $MTCO_2e$/yr.

TABLE 1: TOTAL PROJECT GHG EMISSIONS

Source	Emissions (MT/year)				
	CO_2	CH_4	N_2O	Refrigerants	Total CO_2e
Annual construction-related emissions amortized over 30 years	50.28	1.79E-03	1.40E-03	2.30E-02	50.77
Mobile Source	1,800.46	0.07	0.08	2.09	1,828.80
Area Source	41.21	0.00	0.00	0.00	41.26
Energy Source	260.76	0.02	0.00	0.00	261.84
Water	10.91	0.22	0.01	0.00	17.97
Waste	10.62	1.06	0.00	0.00	37.17
Refrigerants	0.00	0.00	0.00	0.18	0.18
Total CO_2e (All Sources)	**2,238.00**				

GHG IMPACT ANALYSIS

Would the Project have the potential to generate direct or indirect GHG emissions that would result in a significant impact on the environment?

Would the Project have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs?

The purpose of the 2022 CCAP Update is to provide guidance on how to analyze GHG emissions and determine significance during the CEQA review of proposed development projects within the City. Because the 2022 CCAP Update addresses GHG emissions reductions and is consistent with the requirements of AB 32, SB 32, and international efforts to reduce GHG emissions, compliance with the CAP Update fulfills the description of mitigation found in the State CEQA Guidelines.

The Project will implement Screening Table Measures providing for the required points pursuant to the City Screening Tables. As such, the Project would be consistent with the GHG Development Review Process' requirement to achieve the requisite number of points and thus the Project is considered to have a less than significant individual and cumulatively considerable impact on GHG emissions.

LEVEL OF SIGNIFICANCE BEFORE MITIGATION

Potentially Significant.

MM GHG-1

Project development proposals shall implement Screening Table Measures that achieve the requisite points per the City's Community Climate Action Plan (CCAP) Screening Tables. The City shall verify that Screening Table Measures achieving the requisite points are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented.

LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than Significant

GREENHOUSE GAS CONCLUSION

Results of the assessment indicate that the Project is not anticipated to result in a significant impact during operational activities associated with greenhouse gas and with implementation of MM GHG-1 a less than significant impact is expected.

Data Field	Value
Project Name	15662 - Esperanza Specific Plan Amendment (Proposed)
Construction Start Date	8/3/2026
Operational Year	2029
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.60
Precipitation (days)	18.8
Location	33.992352, -117.563101
County	San Bernardino-South Coast
City	Ontario
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5260
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Low Rise	161	Dwelling Unit	10.5	170,660	98,516	—	533	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	3.10	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	6.78	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3

2860

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	77.1
AQ-PM	93.4
AQ-DPM	57.1
Drinking Water	100.0
Lead Risk Housing	17.5

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	72.0
Healthy Places Index Score for Project Location (b)	55.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic Analysis
Operations: Hearths	SCAQMD Rule 445 no wood burning devices. Wood burning devices added to gas devices.
Operations: Refrigerants	Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.

Construction: Construction Phases	Based on client provided data, construction schedule to begin Q3 2026 and completed Q1 2029 Building Construction, Paving, and Architectural Coating overlap to present a conservative analysis
Construction: Off-Road Equipment	T/L/B replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases. Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Site Preparation, Grading, and Building Construction

EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by GDC Investments to prepare a Phase I Environmental Site Assessment (Phase I ESA) of a 10.02-acre site located at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California (the "Subject Property" or "Property"). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-21.

The Property is located on the northeastern side of Amherst Avenue, immediately north of the intersection with Eucalyptus Avenue. According to tax assessor information reviewed, it is 10.02 acres and is currently undeveloped, vacant land.

Based on the historical records reviewed, SCS identified no historical structures on the Property. It was undeveloped or agricultural land from at least 1902 through 2012. A row of trees functioning as a windbreak (likely eucalyptus trees) extended north-south across the eastern portion of the Property. Around 2016, grading activities were first visible on the eastern portion of the Property, associated with activities on the adjoining site to the east. Following 2016, much more extensive grading occurred and in 2020, hundreds of soil stockpiles were visible on the central and northern portions of the Property. The appearance of the stockpile coincided with the grading and paving of the adjoining streets and SCS considers it likely that the soil was from sites with similar history (undeveloped and/or agricultural land). Further grading occurred in 2021, which likely resulted in the export or blending of that that stockpiled soil. Since 2021, the Property has remained vacant and undeveloped, with relative low points at the northwestern and southeastern corners.

The Property was vacant and undeveloped at the time of the site inspection. A chain-link fence surrounds the Property with gate access in the northeastern corner. The Property is covered in low, grassy vegetation and bare soil, with small amounts of wind-blown trash observed on the outer edges of the Property (against the fence). A depression likely due to former grading activities was observed in the northwestern portion of the Property. Rumble grates were also noted in the northeastern corner. A sloped area was observed on the southeastern boundary of the Property. A storm drain was noted in the southwestern corner of the Property.

Regulatory database information identified no known and suspected contamination sites in the area surrounding the Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Property.

Conclusions

In summary, SCS performed a Phase I ESA of a 10.02-acre site located at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-21. Any exceptions or deviations are described in Section 8 of this report.

In the opinion of the Environmental Professional, this assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the Property. Further investigation is not recommended.

1 INTRODUCTION

SCS Engineers (SCS) was retained by GDC Investments (the "User") to prepare a Phase I Environmental Site Assessment (Phase I ESA) of a 10.02-acre site located at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California (the "Subject Property" or "Property"). A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries (AAI), and in general conformance with ASTM International (ASTM) E1527-21.

PURPOSE

This Phase I ESA is intended to constitute appropriate inquiry into the previous ownership and uses of the Property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively, the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA, a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

The purpose of this investigation was to identify conditions indicative of the presence of hazardous substances as defined in CERCLA Section 101, and petroleum products, in, on, or at the Subject Property due to a release, likely release, or material threat of a future release to the environment.

If known or suspected contamination is identified, a User seeking to maintain LLPs has responsibilities in addition to completion of an AAI-compliant Phase I ESA. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances or petroleum products during the term of property ownership. In addition to these requirements under federal law, there are different requirements under state law with respect to liability protections. If warranted, SCS can provide support for clients with continuing obligations, as appropriate.

SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspection of the Subject Property and adjoining sites performed on February 27, 2025.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, previous environmental reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel, review of readily available agency files and documents, interviews with other knowledgeable persons, etc.).
- Degree of obviousness of the presence or likely presence of releases or threatened releases of hazardous substances or petroleum products at the Subject Property and the ability to detect releases or threatened releases by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

- Review of environmental liens, if provided or authorized to obtain by the User.

SPECIAL TERMS AND CONDITIONS

This Phase I ESA for the 10.02-acre site at the northeast corner of Amherst Avenue and Eucalyptus Avenue, located in Ontario, California, has been prepared specifically for GDC Investments. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this report. Third parties use this report at their own risk. SCS assumes no liability of any kind with respect to such use. Third party reliance letters may be issued on request to SCS subject to approval of GDC Investments and payment to SCS of a fee for such letters.

LIMITATIONS AND ASSUMPTIONS

The assessment focuses on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by applicable regulatory authorities) or due to the potential for contaminant migration through exposure pathways (e.g., soil vapor migration or groundwater ingestion). Materials that may contain substances not currently deemed hazardous by the U.S. Environmental Protection Agency (U.S. EPA) or the California Environmental Protection Agency (CalEPA) were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials (ACMs), lead-based paint (LBP), water supply plumbing, mold, indoor air quality, and similar matters are not part of this assessment. SCS did not evaluate the Subject Property for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, radon, etc.) are not typically considered in a Phase I ESA. Similarly, construction debris (e.g., discarded concrete, asphalt, etc.) is not considered a concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, including regulatory agency listings. SCS assumes that information collected during this Phase I ESA is accurate and correct, unless SCS determines that reliable information exists to the contrary or the information is obviously inaccurate. Additional information subsequently provided, discovered, or produced may alter findings or conclusions made in this Phase I ESA report. Unless warranted, information collected has not been independently validated as part of this assessment. SCS is not responsible for consequences or conditions arising from facts that were not fully disclosed to SCS during the assessment.

PHASE I ESA VIABILITY

This Phase I ESA is based on conditions at the time the individual elements of the report were completed. A Phase I ESA that meets or exceeds the requirements of ASTM E1527-21 and 40 CFR 312 is presumed to be viable when it is conducted within 180 days of the date of the intended transaction (acquisition, lease, refinance, etc.). The completion dates for the Phase I ESA components with a 180-day shelf life are identified below.

Component of Phase I ESA with Shelf Life Requirement	Completion Date
Interviews	March 7, 2025
Review of Governmental and Historical Records	February 25, 2025
Visual Inspection	February 27, 2025
Declaration of Environmental Professional	March 14, 2025
Environmental Lien Search	Not provided by User

2 GENERAL SITE CHARACTERISTICS

SUBJECT PROPERTY LOCATION

The Property is located on the northeastern side of Amherst Avenue, immediately north of the intersection with Eucalyptus Avenue. It has been assigned San Bernardino County tax assessor parcel number (APN) 1073-101-05. An APN map is provided as **Figure 2** in **Appendix A**.

GENERAL SUBJECT PROPERTY DESCRIPTION

According to tax assessor information reviewed, the Property is 10.02 acres. It is currently undeveloped, vacant land.

ADJOINING SITE USE

- Northwest – Chatham Street immediately adjoins the Property to the northwest. Vacant lots are located across the street to the northwest.
- Northeast – Clifton Avenue immediately adjoins the Property to the northeast. Newly constructed townhomes and private roads are located across the street to the northeast.
- Southeast – Eucalyptus Avenue immediately adjoins the Property to the southeast. Multiple residential homes are located across the street to the southeast.
- Southwest – South Amherst Avenue immediately adjoins the Property to the southwest. Multiple residential homes are located across the street to the southwest.

PHYSICAL SETTING

Physiographic Setting

According to the U.S. Geological Survey (USGS), Corona North, California 7.5-minute topographic maps (**Appendix C**), the Property is located in the eastern portion of San Bernardino County at an

elevation of 713 feet above mean sea level. Site topography is generally flat with a slight regional slope to the south.

Geologic Characteristics

The Property is located within the Chino Basin, which is underlain by Pleistocene and Recent Age alluvial and terrace deposits. Younger alluvium varies in thickness from a few feet at the northern portion of the basin to more than 100 feet in the southern portion. Older alluvium can be more than 1,100 feet in thickness, and averages 500 feet in thickness across the basin.

Hydrogeologic Characteristics

According to Bulletin 118 - California's Groundwater of the California Department of Water Resources (CDWR), the Upper Santa Ana Valley Subbasin underlies the City of Ontario and is bounded by the Rialto-Colton Fault to the east. The Santa Ana Valley Subbasin sediment units include Holocene and Upper Pleistocene alluvium. According to information reviewed on the State Water Resource Control Board (SWRCB) GeoTracker website for a the Exelsior Farms leaking underground storage tank (LUST) case located at 7401 Hamner Avenue (approximately 3,000 feet southeast of the Property), in 2003, first groundwater was reported to be approximately 25 feet below ground surface (bgs) and flow direction was reported to be to the west. Based on its proximity and comparable elevation, first groundwater is likely at a similar depth beneath the Property. Groundwater flow direction likely follows the regional surface topography to the south, potentially with a westerly component.

3 SITE RECONNAISSANCE

Maddie Peterson of SCS conducted a reconnaissance of the Property and surrounding area on February 27, 2025. An aerial image showing the Property is provided as **Figure 3** in **Appendix A**. Photographs taken during the site reconnaissance are included in **Appendix B**.

GENERAL SITE INFORMATION

The Property was vacant and undeveloped at the time of the site inspection. A chain-link fence surrounds the Property with gate access in the northeastern corner. The Property is covered in low, grassy vegetation and bare soil, with wind-blown trash observed on the outer edges of the Property (up against the fence). A depression likely due to former grading activities was observed in the northwestern portion of the Property. Rumble grates were also noted in the northeastern corner.

A sloped area was observed on the southeastern boundary of the Property. A storm drain was noted in the southwestern corner of the Property.

POTABLE WATER SUPPLY

Drinking water is not currently supplied to the Property.

SEWAGE DISPOSAL SYSTEM

Sanitary wastewater is not currently generated at the Property.

PROCESS WASTEWATER

No industrial wastewater is generated on the Property.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

No hazardous substances or hazardous wastes were observed at the Property.

STORAGE TANKS

No evidence (fill ports, vent lines, or dispensers) of underground storage tanks (USTs) was observed on the Property. No aboveground storage tanks (ASTs) were observed on the Property.

ELECTRICAL EQUIPMENT (POLYCHLORINATED BIPHENYLS)

One dry-type transformer was found on the northeastern side of the Property.

ELEVATORS AND OTHER HYDRAULIC EQUIPMENT

No elevators or other hydraulic equipment were observed at the Property.

PITS, PONDS, OR LAGOONS

No pits, ponds, or lagoons were observed at the Property.

WELLS

No water supply wells or groundwater monitoring wells were observed on the Property or in the immediately surrounding area.

NATURAL DRAINAGE

Natural waterways are not currently located on the Property. Stormwater runoff from the Property flows to a stormwater drain found on the southwestern corner of the Property or the adjoining streets.

SOLID WASTE DUMPING, LANDFILLING, OR SUSPECTED FILL MATERIAL

No indication of solid waste dumping, landfilling or buried material was observed during the site reconnaissance.

VISUAL INSPECTION OF ADJOINING SITES

SCS viewed the adjoining sites from the Property and/or publicly accessible areas (e.g., public roadways, etc.). No obvious evidence of a REC or indications of contamination (e.g. remediation equipment, staining, USTs, etc.), were observed on adjoining sites during the site inspection.

4 INTERVIEWS

An Owner Questionnaire was provided to and completed by the owner of the Property, Mr. David Waters, and is included in **Appendix F**. Mr. Waters has owned the Property since 2010. Mr. Waters indicated that there have been no underground storage tanks, no knowledge of spills or releases to the Property, and the site was historically associated with a dairy farm but had ceased operations in the early 2000's (a reference to the historically adjoining dairy to the north). The site was graded around 2018 but no other site improvements were installed.

5 HISTORICAL RESEARCH

Site history was evaluated from the following sources:

- Historical aerial photographs provided by Environmental Data Resources (EDR; February 25, 2025).
- USGS topographic maps provided by EDR (February 25, 2025).
- A search was made of EDR-Sanborn fire insurance map collection and no maps of the Property were found (February 25, 2025).
- A city directory review report provided by EDR (February 25, 2025).
- As the Property has never before been developed with structures, no building permit information was identified. SCS searched the City of Ontario Department of Building and Safety online records database using the APN number and identified no records.

Copies of aerial photographs, topographic maps, and city directories are included in **Appendix C**.

Year	Description	Source
1897	The Property and adjoining sites were shown to be unmapped.	Topographic map
1900	The Property and adjoining sites were shown to be unmapped.	Topographic map
1902	The Property and adjoining sites were shown to be undeveloped land.	Topographic map
1903	The Property and adjoining sites were shown to be unmapped.	Topographic map
1931	The Property was undeveloped or agricultural land, with a row of trees crossing the eastern side north-south, likely functioning as a windbreak. Agricultural fields were noted on the adjoining sites to the northwest, southwest, southeast, and southwest.	Aerial photo
1938	No significant changes from the 1931 aerial photo were noted. A portion of the southern corner of the Property was not photographed. Agricultural fields were noted on the adjoining sites to the northwest, southwest, northeast and southeast. Portions of the adjoining site to the southwest and southeast were not photographed.	Aerial photo
1941	The Property and adjoining sites were shown to be unmapped.	Topographic map
1942	The Property and adjoining sites were shown to be undeveloped land. An unnamed road was noted to the south of the Property.	Topographic map
1944 and 1947	The Property was shown to be undeveloped land with a road depicted on the southwestern corner of the Property.	Topographic map

1948	The Property was agricultural, planted with row crops.	Aerial photo
1953	No significant changes from the 1948 aerial photo were noted on the Property or adjoining sites.	Topographic map and Aerial photo
1954	The Property and adjoining sites appeared to be unmapped.	Topographic map
1966	The Property appeared to be undeveloped land, with a trail running centrally through the Property. The previous unnamed road, known currently as Eucalyptus Avenue, was shown to the south of the Property.	Topographic map
1967	No significant changes from the 1953 aerial photo or 1966 topographic map were noted on the Property. A dirt path was noted separating the agricultural fields on the adjoining site to the southwest. The adjoining site to the northeast appeared to be graded.	Topographic map and Aerial photo
1973	The Property was shown to be an agricultural. The adjoining sites to the southwest and south were shown to be agricultural, with a structure noted on the adjoining site to the southwest. Long rectangular structures were depicted on the adjoining site to the northwest.	Topographic map
1975	The Property remained agricultural land. A new residential structure was noted on the adjoining site to the southwest. A dairy farm with feeding troughs and a central milking area was visible on the adjoining site to the northwest. Furrer L A was listed as an occupant on the adjoining site to the southeast under historical address 11121 Eucalyptus Avenue. Sherwin Westra was listed as an occupant on the adjoining site to the southwest under historical address 11022 Eucalyptus Avenue from 1975 to 1985. Jake J Westra was listed as an occupant on the adjoining site to the southwest under historical address 11060 Eucalyptus Avenue from 1975 to 1995.	Topographic map, Aerial photo, and City directory
1976	The Property and adjoining sites were shown to be unmapped.	Topographic map
1981	No significant changes from the 1975 topographic map were noted on the Property.	Topographic map
1985	No significant changes from the 1975 aerial photo were noted on the Property or adjoining sites. Diana Furrer was listed as an occupant on the adjoining site to the southeast under historical address 11121 Eucalyptus Avenue.	Aerial photo and City directory
1989	No significant changes from the 1985 aerial photo were noted on the Property or adjoining sites.	Aerial photo

1990	No significant changes from the 1989 aerial photo were noted on the Property or adjoining sites. The Furniture Shop and Irrer LA were listed as occupants on the adjoining site to the southeast under historical address 11121 Eucalyptus Avenue. Calvin Westra was listed as an occupant on the adjoining site to the southwest under historical address 11022 Eucalyptus Avenue from 1990 to 1995.	Aerial photo and City directory
1992	Harvey Hettinga was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue from 1992 to 1995.	City directory
1994	No significant changes from the 1990 aerial photo were noted on the Property or adjoining sites.	Aerial photo
1995	Pete Hettinga was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue from 1995 to 2000. Weirama Philip & Sandy were listed as occupants on the adjoining site to the southeast under historical address 11121 Eucalyptus Avenue.	City directory
2000	Hettinga Harvey Milk was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue.	City directory
2002	No significant changes from the 1994 aerial photo were noted on the Property or adjoining sites.	Aerial photo
2005	Wheelin and Deelin was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue.	City directory
2006	No significant changes from the 2002 aerial photo were noted on the Property or adjoining sites.	Aerial photo
2009	The agricultural field and vegetation on the Property was removed. The Property appeared to be graded. The adjoining site to the southwest appeared to be graded.	Aerial photo
2010	Occupant Unknown was listed as an occupant on the adjoining site to the southeast under historical address 11101 Eucalyptus Avenue.	City directory
2012	The 2012 topographic map does not include Site-specific details. The western side of the Property was fallow agricultural land. The eastern side of the Property was still part of agricultural field, separated by a dirt path that runs north to south, where the windbreak trees were historically located.	Topographic map and Aerial photo
2015	The 2015 topographic map does not include Site-specific details.	Topographic map
2016	The Property was undeveloped land and no longer appeared to be used for agriculture purposes. Grading activities were visible on the eastern portion of the Property, associated with additional grading activities offsite to the east.	Aerial photo

	With the exception of grading to the east-southeast, no other significant changes were noted on the adjoining sites.	
2018	The 2018 topographic map does not include Site-specific details.	Topographic map
2020	The Property had been much more extensively graded, with a depression filled with rainwater on its northwestern side. Hundreds of soil stockpiles were present on the central and north-central portions of the Property. Eucalyptus Avenue was developed in its current configuration to the southeast of the Property. Amherst Avenue was newly paved to the southwest of the Property. Residential homes were under developed across the streets to the southwest and southeast.	Aerial photo
2021 and 2022	The 2021 topographic map does not include Site-specific details. Google Earth aerial photographs showed that Property was further graded and the stockpiles present in the 2020 aerial photo were no longer visible. They were either removed from the Property or blended into it during further onsite grading. Additional residential development on adjoining sites was visible.	Topographic map and Google Earth aerial photos
2023	No significant changes from the 2020 aerial photo was noted on the Property. The dairy farm on the adjoining site to the northwest was removed. Grading activities were observed on the adjoining sites to the northwest and the northeast. Multiple residential homes were developed on the adjoining sites to the southwest and southeast.	Google Earth aerial photo
2024	The Property remains undeveloped land that appeared to be graded. Residential homes were constructed on the adjoining sites to the northwest and northeast. A small park is located on the adjoining site to the northwest.	Google Earth aerial photo

SUBJECT PROPERTY HISTORICAL USE SUMMARY

Based on the historical records reviewed, SCS identified no historical structures on the Property. It was undeveloped or agricultural land from at least 1902 through 2012. A row of trees functioning as a windbreak (likely eucalyptus trees) extended north-south across the eastern portion of the Property. Around 2016, grading activities were first visible on the eastern portion of the Property, associated with activities on the adjoining site to the east. Following 2016, much more extensive grading occurred and in 2020, hundreds of soil stockpiles were visible on the central and northern portions of the Property. The appearance of the stockpile coincided with the grading and paving of the adjoining streets and SCS considers it likely that the soil was from sites with similar history (undeveloped and/or agricultural land). Further grading occurred in 2021, which likely resulted in the export or blending of that that stockpiled soil. Since 2021, the Property has remained vacant and undeveloped, with relative low points at the northwestern and southeastern corners.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. In SCS's experience, it is not uncommon to find trace levels of pesticides in soils at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. Additionally, Department of Toxic Substances Control (DTSC) has issued an Interim Guidance for Sampling Agricultural Properties (DTSC, August 7, 2008) which states that the guidance "does not apply to disturbed land, such as, land that has been graded in preparation for construction, areas where imported soil has been brought in, or any other activity that would redistribute or impact the soil, other than normal agricultural practices, such as disking and plowing." It is our opinion that, given the extensive grading that has occurred at the Property and without specific evidence of bulk pesticide storage or mismanagement on the Property, past use for agricultural purposes does not represent a significant environmental concern and collection and analysis of soil samples for pesticides is unwarranted.

HISTORICAL USE OF ADJOINING SITES

The adjoining sites were undeveloped from at least 1902 to 1931. Between the 1930s and early 2000s, they were primarily used for agriculture. Around 1973, a dairy farm was established on the adjoining site to the northwest, and a structure was observed on the adjoining site to the southwest. The sites continued as agricultural land until at least 2016, when the adjoining sites to the southwest, northeast, and southeast appeared to be graded. The dairy farm remained operational on the northwest site until approximately 2022. In 2023, new residential homes were built on the adjoining sites to the southwest and southeast, followed by additional residential construction on the northwest and northeast sites in 2024.

6 RECORD REVIEW

PREVIOUS ENVIRONMENTAL REPORTS

The User provided the following two previous environmental reports to SCS:

- David J. Tanner & Associates, Inc., January 9, 2003. Phase I Environmental Site Assessment, Assesors Parcel No's 0128-252-03, 05, 05, 0128-332-01, 02, 03 & 04, City of Ontario, California.

- LGC Geo-Environmental, Inc., August 26, 2014. Updated Methane Site Assessment for the Proposed "Esperanza West" Residential Development, Located at the Northeast Corner of Cleveland Avenue and Bellgrave Avenue, APN's 0218-332-11 and 0218-252-17, City of Ontario, San Bernardino County, California.

The Tanner & Associates 2003 Phase I ESA was prepared for Forecast PPI and covered a much larger land area (139 acres) extending from Mill Creek Avenue to the west to Hamner Avenue to the east, and from Bellegrave Avenue to the south to what is now Chatham Avenue to the north. Tanner & Associated identified multiple residences (with suspected lead-based paint and asbestos), diesel fuel tanks, diesel pumps, a few 55-gallon drums, diesel farm equipment, animal carcasses, unauthorized dumping (primarily south of Eucalyptus Avenue), etc. None of these features appears to have been related to the Subject Property of the current Phase I ESA. The report concluded that there was no obvious evidence of a REC.

The Methane report included coverage of the Property, but identified only areas to the south of Eucalyptus Avenue as areas associated with historical Dairy operations that might have potential

methane gas. SCS concurs with this conclusion. SCS identified no evidence that the Property was historically used for dairy operations.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were reviewed in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal, which might have resulted in soil and/or groundwater contamination, or volatile organic compound (VOC) vapor migration to the Subject Property. Generally, this includes records for the Property and adjacent parcels, although relevant information for other sites of possible interest in the area (up to one mile) may also be included. Within the City of Ontario, the San Bernardino County Fire Department (SBCFD) generally acts as the lead enforcement agency for UST compliance. If a tank has leaked and groundwater contamination is suspected, the Santa Ana Regional Water Quality Control Board (SARWQCB) generally becomes the lead agency in supervising contaminant characterization and cleanup.

California Environmental Protection Agency

The Property is not a listed site on the California Environmental Protection Agency (CalEPA) Regulated Site Portal website (**Appendix D**).

Santa Ana Regional Water Quality Control Board

The Property does not appear as a listed site on the State Water Resources Control Board (SWRCB) GeoTracker website. Recent SARWQCB case files, if any, would be listed on this website (**Appendix D**).

A request to review SARWQCB files was submitted and no files were found for the APN associated with the Property (**Appendix D**).

Department of Toxic Substances Control

The Property does not appear as a listed site on the California Department of Toxic Substances Control (DTSC) EnviroStor website. Recent DTSC case files, if any, would be listed on this website (**Appendix D**).

A request to review DTSC files was submitted and no files were found for the APN associated with the Property (**Appendix D**).

South Coast Air Quality Management District

The Property does not appear as a listed facility on the South Coast Air Quality Management District (AQMD) online Facility INformation Detail (FIND) website (**Appendix D**).

San Bernardino County Fire Department Files

Since the Property has never been developed and has no history of activities of concern, a request for records was not submitted to the SBCFD.

San Bernardino County Department of Environmental Health

A request to review San Bernardino County Department of Environmental Health (SBCDEH) files were submitted and no files were found for the APN associated with the Property. (**Appendix D**).

California Department of Conservation, Geologic Energy Management Division

Available oil and gas well maps from the California Department of Conservation, Geologic Energy Management Division (CalGEM) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the CalGEM Well Finder online database, the Property is not located within the boundaries of a delineated oil and gas field.

A map showing the location of the Property relative to nearby oil and gas wells is provided in **Appendix D**. One oil and gas production well was drilled approximately 0.77 miles to the southeast of the Property. It is identified as a dry, plugged well. No other oil or gas wells were identified within one mile of the Property. Based on the available information, no significant environmental impacts to the Property are anticipated from oil and gas wells.

National Pipeline Mapping System

SCS reviewed the National Pipeline Mapping System (NPMS) website for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines, as well as gas transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, one West Coast Terminals pipeline (Pipeline ID No.: 1825) is located along Edison Avenue that was permanently abandoned in 1957, approximately 0.33 miles to the north of the Property (**Appendix D**). The website does not contain any information about releases from these pipelines. Based on the available information, no negative environmental affects to the Property are anticipated from these pipelines.

DATABASE SEARCH

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR (February 25, 2025). A description of each of the databases searched is included in the report, which is attached as **Appendix E**. Among the databases

included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-21.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to **Appendix E** for further information on these sites.

Property Listings

The Subject Property is not listed in any of the databases searched by EDR.

Adjoining Site Listings

The adjoining sites are not listed in any of the databases searched by EDR.

Other Database Sites

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including standard environmental records, additional environmental records, high risk historical records, and recovered governmental records. This summary table is provided beginning on Page 4 of the EDR report (**Appendix E**).

Several sites located within 0.25 miles of the Property are listed in databases associated with known releases of hazardous substances such as LUST, UST FINDER RELEASE, and ENVIROSTOR, but are located relatively cross- or downgradient, or based on case status and/or distance are not anticipated to negatively affect the environmental condition of the Property. Several sites located within 0.25 miles also appear in databases not typically associated with documented releases, such as Cortese, Hist Cortese, CERS, ENF, San Bern Co. Permit, WDS, CIWQS, PFAS, SCH, and Notify 65. Based on a review of the database information, none of these sites are known to have any contamination at this time; therefore, none are anticipated to have negatively affected the

environmental condition of the Property. None of the sites situated beyond 0.25 miles are anticipated to have impacted the Property.

Unmappable or Orphan Sites

Three unmappable sites were identified in the EDR report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable sites in relation to the Property, it appears unlikely that the unmappable sites have adversely affected the environmental condition of the Property.

7 USER PROVIDED INFORMATION

The following information is the responsibility of the User (40 CFR 312.22) and is addressed in a questionnaire provided to the User and attached to this report as **Appendix F**:

- Identification of environmental cleanup liens against the Subject Property.
- Specialized knowledge or experience of the User.
- The relationship of the purchase price to the fair market value of the Subject Property.

A User Questionnaire was completed by Mr. David Waters and is included in **Appendix F**. The provided information is discussed below.

TITLE RECORDS

No title report was provided to SCS for review.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding environmental liens or activity and use limitations was provided to SCS. No environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

SPECIALIZED KNOWLEDGE OR EXPERIENCE

As described above, Mr. Waters indicated specialized knowledge of the Property in which the Property was historically a dairy farm operation, however, this appears to be a reference to its relationship with a much larger land area. Mr. Waters indicated that the dairy operations ceased sometime in the early 2000s, prior to their ownership. During their ownership the site was graded along with the surrounding land, however, no improvements other than those currently in place on the perimeter were installed. No other specialized knowledge regarding RECs or other environmental issues that could materially impact the current or future use of the Subject Property or have an impact on the current real estate transaction was noted by Mr. Waters.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Mr. Waters is not aware of any environmental issues that would dimmish the Property value. No other property valuation information was provided to SCS.

8 DATA GAPS AND DEVIATIONS

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – None.
- Physical Obstructions to Observations – None.
- Outstanding Information Requests – None.
- Historical Data Sources Failure – SCS attempted to review the referenced historical sources (i.e., aerial photographs, topographic maps, city directories, etc.) in a minimum of five-year increments. Breaches in the sequence of reviewed sources are due to the limitations of the referenced collections. Based on the available information, this is not considered a significant data gap.
- Other Limitations – None.

9 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

SCS was retained by GDC Investments to prepare a Phase I ESA of a 10.02-acre site located at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California (the "Subject Property" or "Property"). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-21.

The Property is located on the northeastern side of Amherst Avenue, immediately north of the intersection with Eucalyptus Avenue. According to tax assessor information reviewed, it is 10.02 acres and is currently undeveloped, vacant land.

Based on the historical records reviewed, SCS identified no historical structures on the Property. It was undeveloped or agricultural land from at least 1902 through 2012. A row of trees functioning as a windbreak (likely eucalyptus trees) extended north-south across the eastern portion of the Property. Around 2016, grading activities were first visible on the eastern portion of the Property, associated with activities on the adjoining site to the east. Following 2016, much more extensive grading occurred and in 2020, hundreds of soil stockpiles were visible on the central and northern portions of the Property. The appearance of the stockpile coincided with the grading and paving of the adjoining streets and SCS considers it likely that the soil was from sites with similar history (undeveloped and/or agricultural land). Further grading occurred in 2021, which likely resulted in the export or blending of that that stockpiled soil. Since 2021, the Property has remained vacant and undeveloped, with relative low points at the northwestern and southeastern corners.

The Property was vacant and undeveloped at the time of the site inspection. A chain-link fence surrounds the Property with gate access in the northeastern corner. The Property is covered in low, grassy vegetation and bare soil, with small amounts of wind-blown trash observed on the outer edges of the Property (against the fence). A depression likely due to former grading activities was observed in the northwestern portion of the Property. Rumble grates were also noted in the northeastern corner. A sloped area was observed on the southeastern boundary of the Property. A storm drain was noted in the southwestern corner of the Property.

Regulatory database information identified no known and suspected contamination sites in the area surrounding the Property. Based on a review of the available information, it is unlikely that any of these sites has negatively affected the environmental condition of the Property.

10 CONCLUSIONS

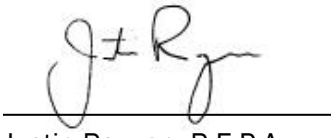
In summary, SCS performed a Phase I ESA of the property located at the 10.02-acre site at the northeast corner of Amherst Avenue and Eucalyptus Avenue, located in Ontario, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-21. Any exceptions or deviations are described in Section 8 of this report.

In the opinion of the Environmental Professional, this assessment has revealed no recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps in connection with the Property. Further investigation is not recommended.

11 DECLARATION OF ENVIRONMENTAL PROFESSIONAL

This Phase I ESA report for the property located at the 10.02-acre site at the northeast corner of Amherst Avenue and Eucalyptus Avenue, Ontario, California dated March 14, 2024, was prepared by Maddie Peterson and reviewed by Justin Rauzon.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. The resume for the individual below is included in **Appendix G.**



Justin Rauzon, R.E.P.A.
Senior Project Manager
SCS ENGINEERS

13 GLOSSARY

AAI – All Appropriate Inquiry

AUL – Activity and Use Limitations

BER – Business environmental risk. As defined in ASTM E1527-21, a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in the ASTM E1527-21 practice.

BTEX – Benzene, toluene, ethylbenzene, and total xylenes

CERCLA – Comprehensive, Environmental Response, Compensation, and Liability Act

CERCLIS – Comprehensive Environmental Response, Compensation, and Liability Information System

CFR – Code of Federal Regulations

CORRACTS – Corrective Action Against Responsible Parties at a RCRA site

CREC – Controlled Recognized Environmental Condition. As defined in ASTM E1527-21, a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority, or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity use limitations, or other property use limitations).

De Minimis Condition – A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a *de minimis condition* is not a recognized environmental condition nor a controlled recognized environmental condition.

DTSC – California EPA Department of Toxic Substances Control

EDR – Environmental Data Resources, Inc.

ERNS – Emergency Response Notification System

ESA – Environmental Site Assessment

FINDS – Facility Index System

HAZNET – California EPA Hazardous Waste Facility and Manifest Data

HREC – Historical Recognized Environmental Condition. As defined in ASTM E1527-21, a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or

authorities without subjecting the subject property to any controls (for example, activity use limitations or other property use limitations).

LQG – Large Quantity Hazardous Waste Generator

LUST – Leaking Underground Storage Tank

MCL – Maximum contaminant level

MTBE – Methyl-tert-butyl-ether

NFA – No Further Action determination

NFRAP – No Further Remedial Action Planned

NPL – National Priority List (Superfund)

PAHs – Polynuclear aromatic hydrocarbons

PCBs – Polychlorinated biphenyls

RCRA – Resource Conservation and Recovery Act

RCRIS – Resource Conservation and Recovery Information System

REC – Recognized environmental condition. As defined by ASTM E1527-21, a REC means (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A *de minimis condition* is not a recognized environmental condition.

ROD – Record of Decision

RBSLs – Risk-based Screening Levels

RSLs – Regional Screening Levels

RWQCB -- Regional Water Quality Control Board

SARA – Superfund Amendments and Reauthorization Act

SLIC -- Spills, Leaks, Investigations, and Cleanups database

SQG – Small Quantity Hazardous Waste Generator

SWIS – Solid Waste Information System

SWLF – Solid Waste Facility/Landfills

TPH – Total Petroleum Hydrocarbons

TRIS – Toxic Release Inventory System

TSD – Treatment, Storage, and/or Disposal Facility

User – As defined in ASTM E1527-21, the party seeking to use Practice E1527 to complete an environmental site assessment of the subject property.

U.S. EPA – United States Environmental Protection Agency

USGS – United States Geologic Survey

UST – Underground Storage Tank

VCP – Voluntary Cleanup Program

VOCs – Volatile organic compounds

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 3ADF-461D-86D6

PO # 01225043.00 T1

Project Armherst Ave & Eucalyptus Ave

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 3ADF-461D-86D6

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

PR4-022425-03

Dear Requestor:

On Jan 24, 2025, the Department of Toxic Substances Control (DTSC) received your email requesting records under the Public Records Act. After a thorough review of our files, *no site records* were found pertaining to the sites/facilities referenced below.

1073-101-05 Ontario

We were unable to locate an address in the county database using the APNs provided and we are unable to search our records using APNs as our databases do not include this information.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at 714.484.5336 or via email at jone.barrio@dtsc.ca.gov .

Sincerely,
Jone Barrio

Subject: RE: Records Request

This email originated from outside of SCS Engineers. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good morning,

Unfortunately, we do not use APNs or cross streets to maintain our files. We only use facility names and/or physical address numbers to locate files. If you can provide a numerical address or facility name, we can carry out your request.

If we can be of further assistance, please do not hesitate to contact us again.

Thank you,
File Review Desk

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/21/2024 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CHAFFEY HIGH SCHOOL	***EDISON AVENUE / HAVE***	***WNW 1/2 - 1 (0.737 mi.)***	***6***	***31***

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER RELEASE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WESTRA DAIRY FARMS	11009 EUCALYPTUS AVE	SW 0 - 1/8 (0.110 mi.)	A1	9

EXECUTIVE SUMMARY

PFAS: A listing of PFAS sites included in the Envirostor and GeoTracker databases. Locations of potential sources of per - and polyfluoroalkyl substances (PFAS). This does not mean that PFAS has been produced, used, or discharged at these sites.

A review of the PFAS list, as provided by EDR, and dated 12/02/2024 has revealed that there is 1 PFAS site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WELL II-3		S 1/8 - 1/4 (0.229 mi.)	4	19

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 09/16/2024 has revealed that there is 1 Cortese site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WESTRA DAIRY FARMS	***11009 EUCALYPTUS AVE***	***SW 0 - 1/8 (0.110 mi.)***	***A2***	***9***
Cleanup Status: COMPLETED - CASE CLOSED				

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there is 1 HIST CORTESE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WESTRA DAIRY FARMS	***11009 EUCALYPTUS AVE***	***SW 0 - 1/8 (0.110 mi.)***	***A2***	***9***

San Bern. Co. Permit: San Bernardino County Fire Department Hazardous Materials Division.

A review of the San Bern. Co. Permit list, as provided by EDR, and dated 08/13/2024 has revealed that there is 1 San Bern. Co. Permit site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
MILK MAID DAIRY	***10869 EUCALYPTUS AVE***	***SW 1/8 - 1/4 (0.190 mi.)***	***3***	***13***
Facility Status: INACTIVE				
Facility Id: FA0000570				

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 09/05/2024 has revealed that there is 1 Notify 65 site within approximately 1 mile of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/19/2024
Date Data Arrived at EDR: 01/02/2025

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/19/2024

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/19/2024

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

Next Scheduled EDR Contact: 04/14/2025
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills
This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health
