# CITY OF ONTARIO
## CITY COUNCIL/HOUSING AUTHORITY
## AGENDA
## JUNE 15, 2021

**Paul S. Leon**
**Mayor**

**Alan D. Wapner**
**Mayor pro Tem**

**Jim W. Bowman**
**Council Member**

**Debra Dorst-Porada**
**Council Member**

**Ruben Valencia**
**Council Member**

**Sheila Mautz**
**City Clerk**

**James R. Milhiser**
**Treasurer**

**Scott Ochoa**
**City Manager**

**Ruben Duran**
**City Attorney**

**WELCOME to a meeting of the Ontario City Council.**

- **All documents for public review are on file with the Records Management/City Clerk's Department located at 303 East B Street, Ontario, CA 91764.**
- **Anyone wishing to speak during public comment or on a particular item will be required to fill out a blue slip. Blue slips must be turned in prior to public comment beginning or before an agenda item is taken up. The Clerk will not accept blue slips after that time.**
- **Comments will be limited to 3 minutes. Speakers will be alerted when they have 1 minute remaining and when their time is up. Speakers are then to return to their seats and no further comments will be permitted.**
- **In accordance with State Law, remarks during public comment are to be limited to subjects within Council's jurisdiction. Remarks on other agenda items will be limited to those items.**
- **Remarks from those seated or standing in the back of chambers will not be permitted. All those wishing to speak including Council and Staff need to be recognized by the Chair before speaking.**

**ORDER OF BUSINESS**

**The regular City Council and Housing Authority meeting begins with Closed Session and Closed Session Comment at 5:00 p.m., Public Comment at 6:30 p.m. immediately followed by the Regular Meeting and Public Hearings. No agenda item will be introduced for consideration after 10:00 p.m. except by majority vote of the City Council.**

**(EQUIPMENT FOR THE HEARING IMPAIRED AVAILABLE IN THE RECORDS MANAGEMENT OFFICE)**

## CALL TO ORDER *(OPEN SESSION)*

***ROLL CALL***

Wapner, Bowman, Dorst-Porada, Valencia, Mayor/Chairman Leon

**CLOSED SESSION PUBLIC COMMENT**
**The Closed Session Public Comment portion of the Council/Housing Authority meeting is limited to a maximum of 3 minutes for each speaker and comments will be limited to matters appearing on the Closed Session. Additional opportunities for further Public Comment will be given during and at the end of the meeting.**

***REPORT ON CLOSED SESSION***

City Attorney

**PUBLIC COMMENTS** **6:30 p.m.**

**The Public Comment portion of the Council/Housing Authority meeting is limited to 30 minutes with each speaker given a maximum of 3 minutes. An opportunity for further Public Comment may be given at the end of the meeting. Under provisions of the Brown Act, Council is prohibited from taking action on oral requests.**

**As previously noted -- if you wish to address the Council, fill out one of the blue slips at the rear of the chambers and give it to the City Clerk.**

**AGENDA REVIEW/ANNOUNCEMENTS**

**The City Manager will go over all updated materials and correspondence received after the Agenda was distributed to ensure Council Members have received them. He will also make any necessary recommendations regarding Agenda modifications or announcements regarding Agenda items to be considered.**

**SPECIAL CEREMONIES**

***TWENTY-FIRST ANNUAL MODEL COLONY AWARDS***

That the City Council present the 2021 "Model Colony" Awards for Historic Preservation.

**CONSENT CALENDAR**
**All matters listed under CONSENT CALENDAR will be enacted by one motion in the form listed below – there will be no separate discussion on these items prior to the time Council votes on them, unless a member of the Council requests a specific item be removed from the Consent Calendar for a separate vote.**

**Each member of the public wishing to address the City Council on items listed on the Consent Calendar will be given a total of 3 minutes.**

***1. APPROVAL OF MINUTES***

Minutes for the regular meeting of the Ontario City Council and Housing Authority of May 18, 2021 and approving same as on file in the Records Management Department.

***ATTACHMENT:*** 20210518 Minutes (Not official until approved).pdf

***2. BILLS & PAYROLL***

Bills May 20, 2021 through May 27, 2021 and Payroll May 9, 2021 through May 22, 2021 when audited by the Finance Committee.

***3. AN AMENDMENT TO THE LEASE AND OPERATING AGREEMENT BETWEEN THE WESEE COLLECTIVE, LLC AND THE CITY ON ONTARIO, FOR THE PURPOSE OF EXERCISING A ONE YEAR EXTENSION***

That the City Council:

A. Approve an amendment to the Lease Agreement (on file in the Records Management Department) between The WESEE Collective, LLC and the City of Ontario for the purpose of extending the lease for one year and for a reduction in yearly fees.
B. Authorize the City Manager to execute a one-year extension to the Operating Agreement (on file in the Records Management Department) with The WESEE Collective, LLC for the purpose of operating a Business Incubator, Accelerator and Co-working space, in the amount of $200,000 annually, with the option to extend for one additional one-year period.

***4. AN AMENDMENT TO PROFESSIONAL SERVICES AGREEMENTS FOR ON-CALL APPRAISAL, ENVIRONMENTAL, LAND ACQUISITION, RELOCATION AND PROPERTY MANAGEMENT SERVICES***

That the City Council ("City") and Ontario Housing Authority Board ("Authority") approve and authorize the City Manager/Executive Director to execute Amendment No. 1 to Professional Services Agreements with R.P. Laurain & Associates in the amount of $80,000, Converse Consultants in the amount of $75,000, and Property Specialist Inc., (dba CPSI) in the amount of $320,000.

***5. AN AMENDMENT TO THE CONSTRUCTION CONTRACT FOR THE BON VIEW AVENUE STORM DRAIN PROJECT***

That the City Council approve an amendment (on file in the Records Management Department) to Contract No. SM1701 with Christensen Brothers General Engineering, Inc., of Apple Valley, California, (Contractor) for the Bon View Avenue Storm Drain Project in the amount of $165,867, resulting in a revised total authorized expenditure of $2,889,028.

***ATTACHMENT:*** 20210615 Bon View Storm Drain Construction Contract^01 EXH A

***6. A RESOLUTION APPROVING FINAL PARCEL MAP NO. 20126, LOCATED AT THE SOUTHWEST CORNER OF SAN ANTONIO AVENUE AND FRANCIS STREET***

That the City Council adopt a resolution approving Final Parcel Map No. 20126, located at the southwest corner of San Antonio Avenue and Francis Street within the Low-Density Residential zoning district.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FINAL PARCEL MAP NO. 20126, LOCATED AT THE SOUTHWEST CORNER OF SAN ANTONIO AND FRANCIS STREET.

***ATTACHMENT:*** 20210615 Parcel Map No. 20126^01 EXH A
***ATTACHMENT:*** 20210615 Parcel Map No. 20126^02 RESO^RM

### *7. PROFESSIONAL SERVICES AGREEMENT FOR COLLECTION AGENCY SERVICES*

That the City Council authorize the City Manager to execute a professional services agreement with Ray Klein Inc., dba Professional Credit Service of Vancouver, Washington to perform collection agency services for delinquent accounts for a period of one year, with two, one-year extension options to continue providing collection agency services for various City Agencies.

### *8. CHANGE ORDER TO CONSTRUCTION CONTRACT FOR ON-CALL MAINTENANCE, REHABILITATION, INSPECTIONS, AND EMERGENCY WELL REPAIRS*

That the City Council approve and authorize the City Manager to execute Change Order No. 3 to Construction Contract No. UTOP 1819-01 (on file in the Records Management Department) to General Pump Company Inc. of San Dimas, California for on-call maintenance, rehabilitation, inspection and emergency well repairs for $730,000 for FY 2021-22; and authorize the annual cost of $730,000 consistent with the City Council approved budgets.

### *9. A CONSTRUCTION CONTRACT, A PROFESSIONAL SERVICES AGREEMENT, AND TWO AMENDMENTS FOR THE WATER MAIN REPLACEMENT PROJECT*

That the City Council take the following actions:

A. Reject Big Ben Engineering's bid for the Water Main Replacement Project as being nonresponsive.
B. Approve the plans and specifications and award Contract No. UT 1027 (on file in the Records Management Department) to Gentry Brothers, Inc. of Irwindale, California, for the construction of the Water Main Replacement Project, in the amount of $3,671,129 plus a 15% contingency of $550,670 for a total amount of $4,221,799; and authorize the City Manager to execute said contract and file a notice of completion at the conclusion of all construction activities related to the project.
C. Approve and authorize the City Manager to execute a Professional Services Agreement (on file in the Records Management Department) with SA Associates of Arcadia, California, in the amount of $100,000 plus a 15% contingency of $15,000 for a total amount of $115,000 for construction engineering services.
D. Approve and authorize the City Manager to execute two amendments (on file in the Records Management Department) with Group Delta Inc. of Ontario, California, in the amount of $80,558 plus a 15% contingency of $12,084 for a total amount of $92,642 for geotechnical and material testing services; and Wallace & Associates Consulting, Inc. of Murrieta, California, in the amount of $114,436 plus a 15% contingency of $17,165 for a total amount of $131,601 for construction management services.

***ATTACHMENT:*** 20210615 Water Main Replacement Project Map^01 EXH A

### *10. PURCHASE OF POLICE DEPARTMENT FRONTLINE PATROL EQUIPMENT*

That the City Council approve and authorize the sole source purchase of training and duty equipment for frontline police personnel, not to exceed $355,000 over two fiscal years, from San Diego Police Equipment Co., Inc of San Diego, California and Dooley Enterprise of Anaheim, California.

***11. A PROFESSIONAL SERVICES AGREEMENT FOR LEGAL SERVICES RELATED TO PERSONNEL AND EMPLOYMENT RELATED MATTERS***

That the City Council authorize the City Manager to execute a two (2) year Professional Services Agreement (on file in the Records Management Department) with the law firm of Liebert Cassidy Whitmore, of Los Angeles, California for on-going legal services; and authorize the extension of the contract term for up to two, one-year periods.

***12. AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, AMENDING CHAPTER 10 OF TITLE 2 SECTIONS 2-10.06, OF THE ONTARIO MUNICIPAL CODE RELATING TO CAMPAIGN CONTRIBUTION LIMITS***

That the City Council adopt an Ordinance amending Chapter 10 of Title 2 Sections 2-10.06, of the Ontario Municipal Code relating to Campaign Contribution Limits.

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, AMENDING CHAPTER 10 OF TITLE 2 OF THE ONTARIO MUNICIPAL CODE RELATING TO CAMPAIGN CONTRIBUTION LIMITS.

***ATTACHMENT:*** AB 571 Fact Sheet Final^01
***ATTACHMENT:*** 20210615 Local Campaign Contribution Limits^02 ORD^RM

***13.. MAINTENANCE SERVICES AGREEMENT FOR ON-CALL HEATING, VENTILATION, AND AIR CONDITIONING (HVAC) MAINTENANCE AND REPAIR SERVICES***

That the City Council authorize the City Manager to execute a three-year Maintenance Services Agreement (on file in the Records Management Department) with Western Allied Corporation of Santa Fe Springs, California for HVAC maintenance and repair services in an amount not to exceed $1,425,000; and authorize the option to extend the agreement for up to two additional one-year terms.

***14. AMENDMENT TO THE MAINTENANCE SERVICES AGREEMENT WITH MERCHANTS LANDSCAPE SERVICES, INC.***

That the City Council authorize the City Manager to execute Amendment No. 1 to the existing Maintenance Services Agreement with Merchants Landscape Services, Inc. of Rancho Cucamonga, California (on file with the Records Management Department) to perform landscape maintenance services for two newly acquired parkway planter areas located in the Ontario Ranch area, by an amount not to exceed $128,136.

**PUBLIC HEARINGS**
**Pursuant to Government Code Section 65009, if you challenge the City's zoning, planning or any other decision in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the City Council at, or prior to the public hearing. Affidavits of posting compliance, for all items below, are on file with the Records Management Department.**

***15. A PUBLIC HEARING TO CONSIDER ADOPTING A RESOLUTION OF NECESSITY FOR THE ACQUISITION OF PERMANENT EASEMENT AND TEMPORARY CONSTRUCTION EASEMENT INTERESTS IN PORTIONS OF REAL PROPERTY, AMENDING RESOLUTION OF NECESSITY NO. 2018-083, TO APPLY NUNC PRO TUNC (RETROACTIVELY) TO JUNE 19, 2018***

That the City Council conduct a public hearing and:

A. Adopt an Amended Resolution of Necessity to confirm the acquisitions sought by the City's previously adopted Resolution of Necessity No. 2018-083, including the type, scope and durations of the acquisitions sought therein for the Mountain Avenue and Holt Boulevard Intersection Widening Project, applying the proposed amendment *nunc pro tunc* (to apply the Amended Resolution of Necessity retroactive as of June 19, 2018);
B. Consider the adoption of an Amended Resolution of Necessity and provide all parties interested in the affected properties, their attorneys or representatives, an opportunity to be heard on the issues relevant to the Amended Resolution of Necessity;
C. Make the following findings as hereinafter described in this report:
    1. The public interest and necessity require the proposed project;
    2. The project is planned or located in a manner that will be most compatible with the greatest public good and the least private injury;
    3. The real property to be acquired is necessary for the project; and
    4. The offers of just compensation have been made to the property owners; and
    5. Adopt a Resolution of Necessity declaring that the acquisition of permanent and temporary easement interests in certain real property, more particularly described as Assessor Parcel No.'s 1010-522-13, 1010-522-06, 1010-522-12, 1010-522-11, 1010-522-10, 1010-502-13, 1010-502-12, 1010-502-11, 1010-502-10, 1010-502-09, 1010-502-08, 1010-502-07, 1010-502-06, 1011-131-02, 1011-131-03, 1011-131-04, 1011-131-19, 1011-132-06, and 1011-132-07 by eminent domain is necessary for public right-of-way and the construction of the Mountain Avenue and Holt Boulevard Intersection Widening Project ("Project") and related public infrastructure improvements in the City of Ontario, San Bernardino County, amending Resolution of Necessity No. 2018-083, to apply *nunc pro tunc* (retroactively) to June 19, 2018.

A RESOLUTION OF NECESSITY OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, FOR THE ACQUISITION OF PERMANENT EASEMENT AND TEMPORARY CONSTRUCTION EASEMENT INTERESTS IN PORTIONS OF REAL PROPERTY AMENDING RESOLUTION 2018-083, TO APPLY *NUNC PRO TUNC* (RETROACTIVELY) TO JUNE 19, 2018.

***ATTACHMENT:*** 20210615 Memorandum to the City Council^01 RESO - Amending RON 2018-083 Nunc Pro Tunc

**3. A RESOLUTION APPROVING A SUPERCHARGER AGREEMENT WITH TESLA, INC. FOR THE INSTALLATION OF EIGHT TESLA SUPERCHARGING STATIONS AND NINE LEVEL 2 CHARGING STATIONS FOR A TOTAL OF SEVENTEEN CHARGING STATIONS, PURSUANT TO A SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT GRANT, AT THE PARKING STRUCTURE BEING CONSTRUCTED DOWNTOWN AT LEMON AVENUE AND C STREET**

The City Council:

1. Adopted a resolution approving a supercharger agreement, with Tesla, Inc. for the installation of eight Tesla Supercharging Stations and nine Level 2 Charging Stations for a total of seventeen charging stations, at the parking structure being constructed Downtown at Lemon Avenue and C Street.
2. Authorized the City Manager to make any necessary program adjustments and execute all necessary documents to implement the Agreement.

**RESOLUTION NO. 2021-044** A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING A SUPERCHARGER AGREEMENT WITH TESLA, INC. FOR THE INSTALLATION, OPERATION, AND MAINTENANCE OF EIGHT TESLA SUPERCHARGING STATIONS AND NINE LEVEL 2 CHARGING STATIONS, FOR A TOTAL OF SEVENTEEN CHARGING STATIONS, AT THE PARKING STRUCTURE BEING CONSTRUCTED DOWNTOWN AT LEMON AVENUE AND C STREET.

**4. AMENDMENT TO PROFESSIONAL SERVICES AGREEMENT FOR HAZARDOUS MATERIALS COLLECTION AND DISPOSAL**

The City Council approved Amendment No. 1 to increase the contracted dollar amount with Environmental Logistics, Inc. of Bloomington, California by $100,000. The current expenditure is $88,500 and it is the recommendation to increase the contract not-to-exceed amount to $188,500.

**5. AN AGREEMENT WITH INTERPERSONAL FREQUENCY FOR WEB DEVELOPMENT AND HOSTING**

The City Council authorized the City Manager to execute an agreement with Interpersonal Frequency, LLC, of McLean, Virginia, for City website support and cloud hosting in the amount of $149,300 for one (1) year; and authorized an extension of the agreement for two additional years subject to City Council approved budget. Total contract value not to exceed $470,669 over three (3) years, allowing a 5% increase in years two (2) and three (3).

**6. PRE-AUTHORIZED LIST OF VENDORS TO PROVIDE SPECIALIZED COMPUTER AND NETWORK EQUIPMENT AND SERVICES**

The City Council approved a pre-authorized vendor list to provide computer and network hardware, software, and services to maintain and support the City's technology infrastructure.

**7. AUTHORIZE THE PURCHASE AND INSTALLATION OF FURNITURE FOR THE ANTHONY MUNOZ COMMUNITY CENTER RENOVATION**

The City Council took the following actions:

A. Authorized a cooperative purchase agreement for the D&C18-004 Anthony Munoz Community Center Renovation – Furniture Purchase and Installation in the amount of $342,419.55 for the acquisition and installation of furniture and workstations for the Anthony Munoz Community Center from Kirksey & Co., Inc. of Irvine, California, consistent with the terms and conditions of the OMNIA 2021 Contracts R191804 and R191803; and
B. Authorized the City Manager to execute all documents required for the completion of the project including, but not limited to, contracts, agreements, reduction of retention accounts, and filing of a notice of completion at the conclusion of all construction related activities.

**8. CONSTRUCTION CONTRACT FOR THE REPLACEMENT AND INSTALLATION OF TREMCO ROOF SYSTEMS AT VARIOUS CITY FACILITIES**

The City Council awarded Bid No. 1412 and approved a Construction Contract with Letner Roofing Company located at 1490 N. Glassell St. Orange, California, for the replacement and installation of new Tremco Roof Systems at the City Hall Annex Roof and Vineyard Park Pool Room Roof in the amount of $546,997 plus a 10% contingency of $54,699 for a total amount of $601,696; authorize the City Manager to execute said contract and authorize the filing of the notice of completion at the conclusion of all construction activities related to the project.

**9. CONCLUSION OF THE MEMORANDUM OF UNDERSTANDING BETWEEN THE CITY OF ONTARIO AND VARIOUS CHINO BASIN PARTIES FOR THE EVALUATION AND DEVELOPMENT OF THE CHINO BASIN PROGRAM**

The City Council approved the conclusion of the Memorandum of Understanding entered by and between the City of Ontario and various Chino Basin parties on April 16, 2019.

**10. A CONSTRUCTION CONTRACT AND TWO AMENDMENTS FOR THE WELL HOUSE ROOF REPLACEMENT PROJECT**

The City Council took the following actions:

A. Rejected Modern Construction Management Inc.'s bid for Well House Roof Replacement Project as being nonresponsive.
B. Approved the plans and specifications and awarded Contract No. UT 1036 to Corner Keystone Construction Corp. of Walnut, California, for the construction of the Well House Roof Replacement Project, in the amount of $370,460 plus a 15% contingency of $55,569, for a total amount of $426,029; and authorized the City Manager to execute said contract and file a notice of completion at the conclusion of all construction activities related to the project.
C. Approved and authorized the City Manager to execute two amendments with Group Delta Inc. of Ontario California, in the amount of $30,162, and Wallace and Associates Consulting, Inc. of Murrieta, California, in the amount of $61,892, for on-call support services of the Well House Roof Replacement Project.

**11. A GOODS AND SERVICES AGREEMENT WITH WILLIAMS SCOTSMAN INC. FOR THE ONTARIO MUNICIPAL SERVICES CENTER MODULAR PURCHASE**

The City Council approved a Goods and Services Agreement with Williams Scotsman Inc. of Baltimore, Maryland, for the Ontario Municipal Services Center (OMSC) Modular Purchase in the amount of $825,554.49; and authorized the City Manager to execute the agreement and any future amendments within the authorization limits.

**12. AN AMENDMENT TO THE PROFESSIONAL SERVICES AGREEMENT FOR UTILITY ENGINEERING SERVICES**

The City Council approved and authorized the City Manager to execute Amendment No. 2 to the Professional Services Agreement with AKM Consulting Engineers of Irvine, California, in the amount of $150,000, and extend the agreement term for one year.

**PUBLIC HEARINGS**

**13. A PUBLIC HEARING TO CONSIDER: [1] GENERAL PLAN AMENDMENT (FILE NO. PGPA19-005) TO MODIFY POLICY PLAN (GENERAL PLAN) EXHIBIT LU-01, OFFICIAL LAND USE PLAN, CHANGING THE LAND USE DESIGNATION ON 105.4 ACRES OF LOW DENSITY RESIDENTIAL (2.1 - 5 DU/AC), 66.01 ACRES OF MIXED USE (9 - NMC EAST) AND 10.36 ACRES OF OPEN SPACE - NON RECREATION DESIGNATED PROPERTY, TO 23.41 ACRES OF LOW DENSITY RESIDENTIAL (2.1 - 5 DU/AC), 24.16 ACRES OF LOW-MEDIUM DENSITY RESIDENTIAL (5.1 - 11 DU/AC), 57.83 ACRES OF**

**MEDIUM DENSITY RESIDENTIAL (11.1 - 25 DU/AC), 20.46 ACRES OF MIXED USE (9 - NMC EAST), 48.61 ACRES OF INDUSTRIAL, AND 7.3 ACRES OF OPEN SPACE - NON RECREATION DESIGNATED PROPERTY AND MODIFY POLICY PLAN (GENERAL PLAN) EXHIBIT LU-03, FUTURE BUILDOUT, TO BE CONSISTENT WITH THE LAND USE CHANGES; AND [2] AN AMENDMENT (FILE NO. PSPA19-006) TO THE RICH-HAVEN SPECIFIC PLAN, WHICH INCLUDES THE FOLLOWING: [A] CHANGE THE LAND USE DESIGNATION ON 110.1 GROSS ACRES OF LAND FROM PLANNING AREA 1A - 1F (RESIDENTIAL - SFD), TO 25.5 GROSS ACRES OF PLANNING AREA 1A (RESIDENTIAL - SFD), 24.5 GROSS ACRES OF PLANNING AREA 1B (RESIDENTIAL - SFD/SFA) AND 60.6 GROSS ACRES OF PLANNING AREA 1C (RESIDENTIAL - SFD/SFA); [B] CHANGE THE LAND USE DESIGNATION ON 81.1 GROSS ACRES OF LAND WITHIN PLANNING AREA 7 (STAND-ALONE RESIDENTIAL OVERLAY, MIXED-USE OVERLAY, REGIONAL COMMERCIAL, AND SCE EASEMENT/GAS EASEMENT) TO, PLANNING AREA 7A (49.4 GROSS ACRES OF LIGHT INDUSTRIAL AND 6.6 GROSS ACRES OF OPEN SPACE - NON RECREATION) AND PLANNING AREA 7B (25.1 GROSS ACRES OF REGIONAL COMMERCIAL); [C] CHANGE THE LAND USE DESIGNATION ON 4.13 ACRES OF LAND WITHIN PLANNING AREA 6A FROM REGIONAL COMMERCIAL TO STAND-ALONE RESIDENTIAL OVERLAY; [D] CHANGE THE LAND USE DESIGNATION ON 4.13 ACRES OF LAND WITHIN PLANNING AREA 9A FROM STAND-ALONE RESIDENTIAL OVERLAY TO REGIONAL COMMERCIAL; AND [E] VARIOUS CHANGES TO THE SPECIFIC PLAN DEVELOPMENT STANDARDS, EXHIBITS, AND TEXT, TO REFLECT THE PROPOSED LAND USES. THE RICH-HAVEN SPECIFIC PLAN IS GENERALLY BOUNDED BY RIVERSIDE DRIVE, COLONY HIGH SCHOOL AND THE SCE SUBSTATION TO THE NORTH, HAMNER AVENUE TO THE EAST, OLD EDISON ROAD TO THE SOUTH, AND HAVEN AVENUE TO THE WEST. (APNS: 0218-161-04, 0218-161-05, 0218-161-10, 0218-161-11, 0218-211-17, 0218-211-24, 0218-211-27, 0218-211-01 AND 0218-393-10)**

The City Council considered and adopted:

A. A resolution approving the use of an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140);
B. A resolution approving File No. PGPA19-005, a General Plan Amendment modifying Policy Plan Exhibit LU-01, Land Use Plan, changing the land use designation on 105.4 acres of Low Density Residential (2.1 – 5 du/ac), 66.01 acres of Mixed Use (9 – NMC East) and 10.36 acres of Open Space – Non Recreation designated property to 23.41 acres of Low Density Residential (2.1 – 5 du/ac), 24.16 acres of Low-Medium Density Residential (5.1 – 11 du/ac), 57.83 acres of Medium Density Residential (11.1 – 25 du/ac), 20.46 acres of Mixed Use (9 – NMC East), 48.61 acres of Industrial, and 7.3 acres of Open Space – Non Recreation designated property, and modify the Policy Plan (General Plan) Exhibit LU-03, Future Buildout, to be consistent with the proposed land use changes; and

C. A resolution approving File No. PSPA19-006, an amendment to the Rich-Haven Specific Plan, which includes the following: [A] Change the land use designation on 110.1 gross acres of land from Planning Area 1A – 1F (Residential - SFD), to 25.5 gross acres of Planning Area 1A (Residential - SFD), 24.5 gross acres of Planning Area 1B (Residential – SFD/SFA) and 60.6 gross acres of Planning Area 1C (Residential - SFD/SFA); [B] Change the land use designation on 81.1 gross acres of land within Planning Area 7 (Stand-Alone Residential Overlay, Mixed-Use Overlay, Regional Commercial, and SCE Easement/Gas Easement) to, Planning Area 7A (49.4 gross acres of Light Industrial and 6.6 gross acres of Open Space – Non Recreation) and Planning Area 7B (25.1 gross acres of Regional Commercial); [C] Change the land use designation on 4.13 acres of land within Planning Area 6A from Regional Commercial to Stand-Alone Residential Overlay; [D] Change the land use designation on 4.13 acres of land within Planning Area 9A from Stand-Alone Residential Overlay to Regional Commercial; and [E] Various changes to the Specific Plan development standards, exhibits, and text, to reflect the proposed land uses.

**RESOLUTION NO. 2021-045** A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING AN ADDENDUM TO THE ONTARIO PLAN CERTIFIED ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2008101140), PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED.

**RESOLUTION NO. 2021-046** A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PGPA19-005, AN AMENDMENT TO THE LAND USE ELEMENT OF THE POLICY PLAN (GENERAL PLAN), REVISING EXHIBIT LU-01 (OFFICIAL LAND USE PLAN) AND EXHIBIT LU-03 (FUTURE BUILDOUT), AFFECTING PROPERTIES LOCATED AT THE SOUTHEAST CORNER OF RIVERSIDE DRIVE AND HAVEN AVENUE, FROM 105.4 ACRES OF LOW DENSITY RESIDENTIAL (2.1 - 5 DU/AC) TO 23.41 ACRES OF LOW DENSITY RESIDENTIAL (2.1 - 5 DU/AC), 24.16 ACRES OF LOW-MEDIUM DENSITY RESIDENTIAL (5.1 - 11 DU/AC), 57.83 ACRES OF MEDIUM DENSITY RESIDENTIAL (11.1 - 25 DU/AC), AND AFFECTING PROPERTIES LOCATED AT THE NORTHWEST CORNER OF HAMNER AVENUE AND ONTARIO RANCH ROAD, FROM 66.01 ACRES OF MIXED USE (9 - NMC EAST) AND 10.36 ACRES OF OPEN SPACE - NON RECREATION TO 20.46 ACRES OF MIXED USE (9 - NMC EAST), 48.61 ACRES OF INDUSTRIAL, AND 7.3 ACRES OF OPEN SPACE - NON RECREATION, AND MAKING FINDINGS IN SUPPORT THEREOF - APNS: 0218-161-04, 0218-161-05, 0218-161-10, 0218-161-11, 0218-211-17, 0218-211-24 AND 0218-211-27. (SEE ATTACHMENTS 1 AND 2) (PART OF CYCLE 2 FOR THE 2021 CALENDAR YEAR).

**RESOLUTION NO. 2021-047** A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA19-006, AN AMENDMENT TO THE RICH-HAVEN SPECIFIC PLAN TO: 1) CHANGE THE LAND USE DESIGNATION ON 110.1 GROSS ACRES OF LAND FROM PLANNING AREA 1A - 1F (RESIDENTIAL - SFD), TO 25.5 GROSS ACRES OF PLANNING AREA 1A (RESIDENTIAL - SFD), 24.5 GROSS ACRES OF PLANNING AREA 1B (RESIDENTIAL - SFD/SFA) AND 60.6 GROSS ACRES OF PLANNING AREA 1C (RESIDENTIAL - SFD/SFA) ON FOUR PROPERTIES LOCATED AT THE SOUTHWEST CORNER OF RIVERSIDE DRIVE AND HAMNER AVENUE; 2) CHANGE THE LAND USE DESIGNATION ON 81.1 GROSS ACRES OF LAND WITHIN PLANNING AREA 7 (STAND-ALONE RESIDENTIAL OVERLAY, MIXED-USE OVERLAY, REGIONAL COMMERCIAL, AND SCE EASEMENT/GAS EASEMENT) TO, PLANNING AREA 7A (49.4 GROSS ACRES OF LIGHT INDUSTRIAL AND 6.6 GROSS ACRES OF OPEN SPACE - NON RECREATION) AND PLANNING AREA 7B (25.1 GROSS ACRES OF REGIONAL COMMERCIAL) ON THREE PROPERTIES LOCATED AT THE NORTHWEST CORNER OF ONTARIO RANCH ROAD AND HAMNER AVENUE; 3) CHANGE THE LAND USE DESIGNATION ON 4.13 ACRES OF LAND WITHIN PLANNING AREA 6A FROM REGIONAL COMMERCIAL TO STAND-ALONE RESIDENTIAL OVERLAY FOR ONE PROPERTY LOCATED ON THE NORTHEAST CORNER ONTARIO RANCH ROAD AND HAVEN AVENUE; 4) CHANGE THE LAND USE DESIGNATION ON 4.13 ACRES OF LAND WITHIN PLANNING AREA 9A FROM STAND-ALONE RESIDENTIAL OVERLAY TO REGIONAL COMMERCIAL FOR ONE PROPERTY LOCATED ON THE SOUTHEAST CORNER ONTARIO RANCH ROAD AND HAVEN AVENUE; AND 5) AMEND THE SPECIFIC PLAN TO UPDATE THE DEVELOPMENT STANDARDS, EXHIBITS, AND TEXT CHANGES TO REFLECT THE PROPOSED LAND USES, AND MAKING FINDINGS IN SUPPORT THEREOF - APNS: 0218-161-04, 0218-161-05, 0218-161-10, 0218-161-11, 0218-211-17, 0218-211-24, 0218-211-27, 0218-211-01 AND 0218-393-10.

**MOTION:** Moved by Mayor pro Tem Wapner, seconded by Council Member Bowman, and carried by unanimous vote to waive further reading of the title.

Notice of public hearing was duly given and affidavits of compliance were on file in the Records Management Department.

There were no written communications. Mayor Leon opened the public hearing asking those persons interested in this item to speak. Hearing no one, Mayor Leon closed the public hearing.

**MOTION:** Moved by Council Member Dorst-Porada, seconded by Council Member Bowman, and carried by unanimous vote to adopt Resolution Nos. 2021-045, 2021-046, and 2021-047.

**14. A PUBLIC HEARING TO CONSIDER AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PDA20-002, A DEVELOPMENT AGREEMENT BETWEEN THE CITY OF ONTARIO AND RICH HAVEN MARKETPLACE LLC., TO ESTABLISH THE TERMS AND CONDITIONS FOR THE DEVELOPMENT OF PLANNING AREAS 7A AND 7B PURSUANT TO THE PROPOSED RICH-HAVEN SPECIFIC PLAN AMENDMENT (FILE NO. PSPA19-006), AN 81.1 ACRE PROPERTY LOCATED AT THE NORTHWEST CORNER OF HAMNER AVENUE AND ONTARIO RANCH ROAD, WITHIN THE PROPOSED LIGHT INDUSTRIAL AND REGIONAL COMMERCIAL LAND USE DISTRICTS OF THE RICH-HAVEN SPECIFIC PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF - APNS: 0218-211-17; 0218-211-24; AND 0218-211-27**

The City Council introduced and waived further reading of an ordinance approving the Development Agreement (File No. PDA20-002) between the City of Ontario and Rich Haven Marketplace, LLC., to establish the terms and conditions for the development of Planning Areas 7A and 7B, pursuant to the proposed Rich-Haven Specific Plan Amendment (File No. PSPA19-006), an 81.1 acre property located at the northwest corner of Hamner Avenue and Ontario Ranch Road, within the proposed Light Industrial and Regional Commercial land use districts of the Rich-Haven Specific Plan.

**ORDINANCE NO. 3184** AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PDA20-002, A DEVELOPMENT AGREEMENT BETWEEN THE CITY OF ONTARIO AND RICH HAVEN MARKETPLACE LLC., TO ESTABLISH THE TERMS AND CONDITIONS FOR THE DEVELOPMENT OF PLANNING AREAS 7A AND 7B PURSUANT TO THE PROPOSED RICH-HAVEN SPECIFIC PLAN AMENDMENT (FILE NO. PSPA19-006), AN 81.1 ACRE PROPERTY LOCATED AT THE NORTHWEST CORNER OF HAMNER AVENUE AND ONTARIO RANCH ROAD, WITHIN THE PROPOSED LIGHT INDUSTRIAL AND REGIONAL COMMERCIAL LAND USE DISTRICTS OF THE RICH-HAVEN SPECIFIC PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0218-211-17; 0218-211-24; AND 0218-211-27.

Notice of public hearing was duly given and affidavits of compliance were on file in the Records Management Department.

There were no written communications. Mayor Leon opened the public hearing asking those persons interested in this item to speak. Hearing no one, Mayor Leon closed the public hearing.

**MOTION:** Moved by Council Member Dorst-Porada, seconded by Council Member Bowman, and carried by unanimous vote to introduce Ordinance No. 3184.

**15. A PUBLIC HEARING TO CONSIDER A GENERAL PLAN AMENDMENT (FILE NO. PGPA19-006) REVISING THE LAND USE ELEMENT OF THE POLICY PLAN (GENERAL PLAN) COMPONENT OF THE ONTARIO PLAN, MODIFYING EXHIBIT LU-01, LAND USE PLAN, TO CHANGE THE LAND USE DESIGNATION ON 14.29 ACRES OF LAND FROM OFFICE COMMERCIAL TO INDUSTRIAL, AND MODIFYING EXHIBIT LU-03, FUTURE BUILDOUT, TO BE CONSISTENT WITH THE LAND USE DESIGNATION CHANGE, IN CONJUNCTION WITH A SPECIFIC PLAN AMENDMENT (FILE NO. PSPA19-008) REVISING THE HAVEN GATEWAY CENTRE SPECIFIC PLAN LAND USE PLAN, TO CHANGE THE LAND USE DESIGNATION ON THE PROJECT SITE FROM COMMERCIAL/OFFICE TO INDUSTRIAL, GENERALLY LOCATED AT THE NORTHEAST CORNER OF HAVEN AVENUE AND SR-60 FREEWAY (APN:0108-332-01)**

The City Council considered and adopted the following:

A. A resolution approving the use of an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140); and
B. A resolution approving a General Plan Amendment (File No. PGPA19-006) to modify the Policy Plan (General Plan) Land Use Plan (Exhibit LU-01), changing the land use designation on 14.29 acres of land from Office Commercial to Industrial, and modify the Future Buildout Table (Exhibit LU-03) to be consistent with the land use designation changes; and
C. A resolution approving a Specific Plan Amendment (File No. PSPA19-008) revising the Haven Gateway Centre Specific Plan Land Use Plan, to change the land use designation on the project site from Commercial/Office to Industrial.

**RESOLUTION NO. 2021-048** A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING AN ADDENDUM TO THE ONTARIO PLAN CERTIFIED ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2008101140), PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED.

**RESOLUTION NO. 2021-049** A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PGPA19-006, AN AMENDMENT TO THE LAND USE ELEMENT OF THE POLICY PLAN (GENERAL PLAN), REVISING EXHIBIT LU-01 (OFFICIAL LAND USE PLAN) AND EXHIBIT LU-03 (FUTURE BUILDOUT), AFFECTING PROPERTY LOCATED AT THE NORTHEAST CORNER OF HAVEN AVENUE AND SR-60 FREEWAY, FROM OFFICE COMMERCIAL TO INDUSTRIAL, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1083-321-01. (SEE ATTACHMENTS A AND B) (PART OF CYCLE 2 FOR THE 2021 CALENDAR YEAR).

**RESOLUTION NO. 2021-050** A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA19-008, AN AMENDMENT TO THE HAVEN GATEWAY CENTRE SPECIFIC PLAN LAND USE PLAN, TO CHANGE THE LAND USE DESIGNATION ON 14.29 ACRES OF LAND FROM COMMERCIAL/OFFICE TO INDUSTRIAL, AFFECTING PROPERTY GENERALLY LOCATED AT THE NORTHEAST CORNER OF HAVEN AVENUE AND SR-60 FREEWAY, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 1083-321-01.

Notice of public hearing was duly given and affidavits of compliance were on file in the Records Management Department.

There were no written communications. Mayor Leon opened the public hearing asking those persons interested in this item to speak. Hearing no one, Mayor Leon closed the public hearing.

**MOTION:** Moved by Council Member Bowman, seconded by Council Member Valencia, and carried by unanimous vote to adopt Resolution Nos. 2021-048, 2021-049, and 2021-050.

**ADMINISTRATIVE REPORTS/DISCUSSION/ACTION**

**16. A RESOLUTION AUTHORIZING THE ISSUANCE OF CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 13 (CALIFORNIA COMMERCE CENTER- PHASE IV) SPECIAL TAX REFUNDING BONDS, SERIES 2021, IN AN AGGREGATE PRINCIPAL AMOUNT NOT TO EXCEED $4,500,000 AND RELATED MATTERS**

The City Council considered and adopted a resolution authorizing the issuance of City of Ontario Community Facilities District No. 13 (California Commerce Center- Phase IV) Special Tax Refunding Bonds, Series 2021.

A. Authorized the issuance of special tax refunding bonds to defease and redeem prior bonds issued to finance the California Commerce Center- Phase IV project;
B. Approved the forms of the Indenture, the Escrow Agreement, the Bond Purchase Agreement, the Continuing Disclosure Agreement, and the Preliminary Official Statement;
C. Authorized a negotiated sale of the special tax refunding bonds to Stifel, Nicolaus & Company, Incorporated (the "Underwriter") in accordance with the terms of the Bond Purchase Agreement; and
D. Authorized the execution of the Indenture, the Escrow Agreement, the Bond Purchase Agreement, the Continuing Disclosure Agreement, a deemed final certification in connection with the Preliminary Official Statement, a final Official Statement and other documents in connection with the issuance of the bonds by the City Manager or the other specified authorized officers.

**RESOLUTION NO. 2021-051** A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, AUTHORIZING THE ISSUANCE OF COMMUNITY FACILITIES DISTRICT NO. 13 OF THE CITY ONTARIO (CALIFORNIA COMMERCE CENTER- PHASE IV) SPECIAL TAX REFUNDING BONDS, SERIES 2021, IN AN AGGREGATE PRINCIPAL AMOUNT OF NOT TO EXCEED $4,500,000, AUTHORIZING THE EXECUTION AND DELIVERY OF AN INDENTURE, AN ESCROW AGREEMENT, A BOND PURCHASE AGREEMENT AND A CONTINUING DISCLOSURE AGREEMENT, AUTHORIZING THE DISTRIBUTION OF AN OFFICIAL STATEMENT IN CONNECTION THEREWITH AND AUTHORIZING THE EXECUTION OF NECESSARY DOCUMENTS AND CERTIFICATES AND RELATED ACTIONS.

**MOTION:** Moved by Council Member Bowman, seconded by Council Member Dorst-Porada, and carried by unanimous vote to adopt Resolution No. 2021-051.

**17. A BID PROTEST BY FLEET SALES & CONSULTING, INC., DBA BILL & WAG'S, INC., OF THE CITY COUNCIL'S ACTION OF NOVEMBER 17, 2020 TO GRANT TOWING CARRIER PERMITS AND AUTHORIZE THE CITY MANAGER TO EXECUTE CITY CONTRACT TOWING SERVICES AGREEMENT, FOR A PERIOD OF FIVE YEARS, WITH CERTIFIED TOWING, INC.; FOGLESONG TOWING & STORAGE, INC.; PEPE'S TOWING SERVICES; AND DIETZ TOWING, INC.**

The City Council reviewed and considered the written bid protest presented and the information provided in the report to either uphold or deny Fleet Sales & Consulting, Inc.'s protest.

City Manager Ochoa introduced the item.

Robert Hicks and Casey Williams, counsel for Bill and Wag's presented the protest.

**MOTION:** Moved by Council Member Dorst-Porada, seconded by Council Member Bowman, and carried by unanimous vote to uphold the previous decision and reject Bill & Wag's protest.

**STAFF MATTERS**

City Manager Ochoa made no announcements.

**COUNCIL COMMENTS**

Council Member Dorst-Porada made no comments.

Mayor pro Tem Wapner made no comments.

Council Member Bowman made no comments.

**SUBJECT: AN AMENDMENT TO THE LEASE AND OPERATING AGREEMENT BETWEEN THE WESEE COLLECTIVE, LLC AND THE CITY ON ONTARIO, FOR THE PURPOSE OF EXERCISING A ONE YEAR EXTENSION**

**RECOMMENDATION:** That the City Council:

A. Approve an amendment to the Lease Agreement (on file in the Records Management Department) between The WESEE Collective, LLC and the City of Ontario for the purpose of extending the lease for one year and for a reduction in yearly fees.
B. Authorize the City Manager to execute a one-year extension to the Operating Agreement (on file in the Records Management Department) with The WESEE Collective, LLC for the purpose of operating a Business Incubator, Accelerator and Co-working space, in the amount of $200,000 annually, with the option to extend for one additional one-year period.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Invest in the Growth and Evolution of the City's Economy**
**Operate in a Businesslike Manner**
**Focus Resources in Ontario's Commercial and Residential Neighborhoods**

**FISCAL IMPACT:**

A. The lease rate for the portion of the property to be used as a Business Incubator, Accelerator and Co-working space is proposed at $1.00 per month, in return for the business creation efforts and downtown activity generated by the occupants of the space.
B. The lease rate for the portion of the property to be used as a coffee shop and beer taproom is proposed at $1.00 per square foot per month, which is comparable to recent market-rate leasing activity in the downtown area. Lease revenue for the 500 square foot space is anticipated at approximately $6,000 annually.
C. The cost of the Operating Agreement is $200,000 annually. Total not-to-exceed funding in the amount of $200,000 has been appropriated in the General Fund for FY 2021-22.

**BACKGROUND & ANALYSIS:** In January 2017, the City completed the purchase of the commercial properties located at 404-424 N. Euclid Avenue. As Staff began to analyze potential uses of the space and how to generate business activity in downtown, work began with WESEE Collective, LLC (Operator) to develop an office space concept that would support and grow existing small businesses, help budding entrepreneurs create new businesses, and foster technology innovation in the commerce and logistics sector. These efforts culminated in the establishment of 4th Sector Innovations,

a Business Incubator, Accelerator and Co-working space in the heart of the historic downtown at 404 N. Euclid Ave. It included a Lease Agreement for $1/month at 404 N. Euclid Avenue and an Operating Agreement of $250,000 for a three-year period to operate an Accelerator, Incubator, and Co-working space. There are two, one-year options to extend this Operating Agreement and Lease, which will both expire on June 30, 2021.

Lease Agreements: As part of this proposal, WESEE is leasing approximately 14,000 square feet at 404 N. Euclid Avenue. The majority of this space (13,500 square feet) is being used to house the Incubator, Accelerator, and Co-working functions.

Together, these three uses are critical to supporting and growing the local entrepreneurship community, while also bringing in a steady stream of new patrons to Downtown.

Co-working spaces are business locations that offer cost-effective shared workspace in an open, professional environment, often times with amenities such as conference rooms, kitchens, networking opportunities and social activities. Participants in co-working spaces are typically freelancers, start-ups, and other small companies that do not need to undertake the expense of dedicated office space. Co-working participants also benefit from the ability to interact, brainstorm and socialize with other businesses. Co-working participants can purchase a variety of membership options in order to utilize the space and amenities at 404.

The purpose of a Business Incubator is to support the growth and success of entrepreneurial companies through an array of business resources and services that may include physical space, access to capital, coaching, and networking connections. Participants in incubators are generally start-up or early stage businesses and take part in an incubation program.

The purpose of a Business Accelerator is similar to that of a Business Incubator, but accelerator companies have typically moved beyond the earliest phases of business development, but are still in need of services in order to accelerate their growth and viability.

Approximately 500 square feet along Euclid Avenue frontage is being leased at a market-rate rent of $1.00 per square foot per month, based on recent comparable lease rates in downtown, and used to house a coffee shop and beer taproom. Due to the COVID-19 pandemic, this coffee shop is not yet open, however, this establishment will not only serve as an amenity to the incubator patrons, but will be open to the public and generate additional business activity in downtown.

The City is looking to amend the term of this lease and extend it by one additional year. This additional year will further enable the Operator to deliver on the programming described in their Scope of Work presented in 2017. The official launch of the program was slated for March 2020, but their programming was impacted by the global pandemic. WESEE had to postpone its grand opening and instead host their programs virtually. This one-year extension will enable the Operator to not only deliver on its previously stated Scope of Work, which included a requirement to provide services to at least four incubating businesses annually and eight accelerating businesses annually in the logistics and commerce sectors, but to also further expand its service offerings to entrepreneurs throughout the community across all sectors. The change will better support their co-working function, and ultimately lead to greater revenue generation potential. It is anticipated that this change will also provide support to a greater range of local start-ups that exist across the Ontario community.

Operating Agreement: Under the terms of the Operating Agreement, WESEE will operate and manage the Business Incubator, Accelerator and Co-working space. The scope of these duties, which has been

amended since the first Agreement executed in 2017, include, but are not limited to:

- Provision for at least four incubating businesses annually.
- Provision for at least eight accelerating businesses annually.
- Active promotion and management of co-working space in order to maximize membership options and the number of businesses utilizing the space.
- Host small business development events and services to the business community at large.
- Host and coordinate business networking activities and opportunities for 4th Sector participants, including events where start-ups can pitch their ideas.
- Promote entrepreneurship through school partnerships and special events.
- Engage existing businesses for the development of new technologies and innovation.
- Establish partnerships with higher education for the purpose of technology transfer.
- Establish partnerships with other business incubators to create reciprocal membership options.
- Identify angel and other funding sources for the purpose of investing in the incubating and accelerating businesses at 4th Sector.

In exchange for the City's participation in the financial support of this operation, the City will have the opportunity to receive a share of the revenue generated by the activities of the Incubator, Accelerator and Co-working space. Net profits received by WESEE, after the first ten percent of such profits will be shared with the City. City will receive sixty percent and WESEE will receive forty percent of any profits. The City will also have the ability to utilize the space for special events and other business related seminars and workshops.

In addition, WESEE will be required to monitor and submit quarterly reports to the City showing the outcomes of activity generated by the space, including the number of new businesses in downtown and the associated number of jobs and economic impact created by those activities.

**SUBJECT: AN AMENDMENT TO PROFESSIONAL SERVICES AGREEMENTS FOR ON-CALL APPRAISAL, ENVIRONMENTAL, LAND ACQUISITION, RELOCATION AND PROPERTY MANAGEMENT SERVICES**

**RECOMMENDATION:** That the City Council ("City") and Ontario Housing Authority Board ("Authority") approve and authorize the City Manager/Executive Director to execute Amendment No. 1 to Professional Services Agreements with R.P. Laurain & Associates in the amount of $80,000, Converse Consultants in the amount of $75,000, and Property Specialist Inc., (dba CPSI) in the amount of $320,000.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Operate in a Businesslike Manner**
**Focus Resources in Ontario's Commercial and Residential Neighborhoods**

**FISCAL IMPACT:** The Fiscal Year 2020-21 Adopted Budget includes, and any subsequent Adopted Budget shall include, appropriations from the Water Capital Fund, Housing Authority Fund, and General Fund for these services. This proposed amendment will increase all of these on-call services by $475,000. The R.P. Laurain & Associates agreement not-to-exceed will increase from $90,000 to $170,000, the Converse Consultants agreement not-to-exceed will increase from $75,670 to $150,670, and the Property Specialist Inc., (dba CPSI) agreement not-to-exceed will increase from $475,813 to $795,813. The consultants/firms have agreed to the proposed fixed billing rates and will be compensated for the scope of work at the approved billing rates, as set forth in the subject agreements.

**BACKGROUND & ANALYSIS:** On August 19, 2019, after an extensive solicitation and procurement selection process, the City and Authority entered into on-call Professional Services Agreements with R.P. Laurain & Associates for appraisal services; Converse Consultants for environmental services; and CPSI for land acquisition, relocation and property management services. The selection was based on the firm experience, knowledge and qualifications.

The City and the Authority have continued working on high-profile projects that require the need for land valuation estimates, appraisal reports, environmental assessments, property acquisition activities, and title and escrow services.

The Professional Services Agreements are currently in the second (2) year of a three (3) year term. Each of the Professional Services Agreements allows for options to extend for a period of up to two (2) additional years.

There is a current need to amend these on-call Professional Services Agreements to increase the not-to-exceed amounts and continue to use these firms for ongoing projects.

**SUBJECT: AN AMENDMENT TO THE CONSTRUCTION CONTRACT FOR THE BON VIEW AVENUE STORM DRAIN PROJECT**

**RECOMMENDATION:** That the City Council approve an amendment (on file in the Records Management Department) to Contract No. SM1701 with Christensen Brothers General Engineering, Inc., of Apple Valley, California, (Contractor) for the Bon View Avenue Storm Drain Project in the amount of $165,867, resulting in a revised total authorized expenditure of $2,889,028.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Focus Resources in Ontario's Commercial and Residential Neighborhoods**
**Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)**

**FISCAL IMPACT:** The Fiscal Year 2020-21 Adopted Budget allocated funds for the construction of the Bon View Avenue Storm Drain Project in the amount of $2,700,000 from Old Model Colony Local Adjacent Storm Drain Development Impact Fees and $225,000 from the Water Capital Fund, for a total combined allocation of $2,925,000. The recommended revised total authorized expenditure amount is within the adopted budget.

**BACKGROUND & ANALYSIS:** On April 7, 2020, Contract No. SM1701 was awarded to the Contractor for the construction of storm drain improvements on Bon View Avenue from Riverside Drive to State Route 60 in the amount of $2,367,966 plus a 15% contingency of $355,195, for a total authorized expenditure of $2,723,161. A location map of the project is provided for reference (see Exhibit "A").

As construction of the storm drain improvements progressed on Bon View Avenue, the Contractor encountered a significant number of unanticipated utility impacts which necessitated additional compensation within the contingency amount and extension of contract days. The unanticipated utility impacts comprised of: utilities not disclosed at all or not identified in the correct location by utility owners during design, utilities not marked in the field, conflicting utilities discovered during construction, utilities requiring relocation, and substandard parallel utility trenches. The four previously executed change orders for utility impacts substantially exhausted the 15% contingency and an additional $165,867 is needed to finance the final change order in the amount of $195,632.

The final change order encompasses additional costs related to City directed change to an inlet type and associated plan revision; sewer bypass and reconstruction of a crossing sewer main due to additional

flows not shown on the design plan; and additional street restoration costs resulting from the additional trench width due to the aforementioned utility impacts. A contract extension of 5 days is also included to account for the additional time required to complete the change order work.

**SUBJECT: A RESOLUTION APPROVING FINAL PARCEL MAP NO. 20126, LOCATED AT THE SOUTHWEST CORNER OF SAN ANTONIO AVENUE AND FRANCIS STREET**

**RECOMMENDATION:** That the City Council adopt a resolution approving Final Parcel Map No. 20126, located at the southwest corner of San Antonio Avenue and Francis Street within the Low-Density Residential zoning district.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Invest in the Growth and Evolution of the City's Economy**
**Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)**
**Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch**

**FISCAL IMPACT:** There is not a direct fiscal impact associated with this action. All public infrastructure improvements required for this subdivision will be constructed by the Developer at its sole cost.

**BACKGROUND & ANALYSIS:** A Final Parcel Map (No. 20126) consisting of two (2) numbered lots on approximately 0.48 acres, as shown on Exhibit A, has been submitted by Concepcion Valenzuela (Owner). The Tentative Parcel Map (No. 20126) was approved by the Planning Commission (6 to 0, 1 absent) on September 24, 2019.

Improvements will include AC pavement, curb, gutter, sidewalk, and parkway landscaping with irrigation. Improvements in the parkway will be consistent with current City approved drought measures.

The Developer has posted adequate security to ensure construction of the required improvements. The map meets all conditions of the Subdivision Map Act and the Ontario Municipal Code and has been reviewed and approved by the City Engineer.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FINAL PARCEL MAP NO. 20126 LOCATED AT THE SOUTHWEST CORNER OF SAN ANTONIO AVENUE AND FRANCIS STREET.

WHEREAS, Tentative Parcel Map No. 20126 submitted for approval by Fernando Valenzuela ("Applicant"), was approved by the Planning Commission of the City of Ontario on September 24, 2019; and

WHEREAS, Tentative Parcel Map No. 20126 consists of 2 numbered lots within the Low-Density Residential zoning district; and

WHEREAS, Tentative Parcel Map No. 20126 being a subdivision of a portion of Lot 44 in Section 31, Township 1 South, Range 7 West, San Bernardino Base and Meridian, as shown on A Map of Subdivision of part of Rancho Santa Ana Del Chino filed in Book 6 Page 15 of Maps, as described in Instrument No. 2005-0178066, Recorded March 15, 2005 in Official Records, both in the Office of the County Recorded of said County; and

WHEREAS, to meet the requirements established as prerequisite to final approval of Final Parcel Map No. 20126, Concepcion Valenzuela ("Owner") has posted sufficient improvement security; and

NOW, THEREFORE, BE IT RESOLVED, by the City Council of the City of Ontario, California, that Final Parcel Map No. 20126, be approved and that the City Clerk be authorized to execute the statement thereon on behalf of said City.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 15th day of June 2021.

**SUBJECT: PROFESSIONAL SERVICES AGREEMENT FOR COLLECTION AGENCY SERVICES**

**RECOMMENDATION:** That the City Council authorize the City Manager to execute a professional services agreement with Ray Klein Inc., dba Professional Credit Service of Vancouver, Washington to perform collection agency services for delinquent accounts for a period of one year, with two, one-year extension options to continue providing collection agency services for various City Agencies.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Operate in a Businesslike Manner**

**FISCAL IMPACT:** There is no fiscal impact for this agreement. Pursuant to Ontario's Municipal Code Section 1-2.06 "Fees, charges, and taxes made a civil debt", any fees or interest charged by the collection agency will be added to the debt and become part of the total due. The collection rates negotiated with Professional Credit Service are: regular/first placement 18%, second placement 25%, and legal services 25%. Pursuant to the agreement with Professional Credit Service, their collection rate will be added to the original amount that was referred from the City. Professional Credit Service will pay the City on a monthly basis.

**BACKGROUND & ANALYSIS:** The Financial Services Agency wishes to procure a citywide collection agency for all Departments to utilize. The goal of this procurement is to centralize the majority of citywide collection functions under one contract with the intent of maximizing recovered revenues from delinquent debtors, bringing efficiencies of scale to the collections process, and enhancing the reporting and oversight capabilities of City staff administering the citywide collections program.

Staff prepared and issued a Request for Proposals (RFP) on March 22, 2021. The RFP was posted on Planetbids and the following five firms responded back with their proposals:

Vendor
- FEDChex Recovery, LLC
- Professional Credit Service
- RSI Enterprises
- Sequoia Financial Services
- States Recovery Systems, Inc.

The selection committee for the procurement consisted of individuals from Police, Fire, Utilities,

Community Improvement, and Financial Services Agencies. The selection committee reviewed and analyzed all five proposals based on experience, background, qualifications, references and proposed collection fee rates. The top two firms, Professional Credit Service and States Recovery Systems, Inc. were selected for further screening and advanced to the interview process.

At the completion of the interview process, the selection committee reviewed and discussed each firm's capabilities based upon relevant factors, such as: data transmittal requirements, collections procedures, reporting capabilities, and online client portal. Following a detailed review and discussion of the relative strengths and weaknesses of both firms, a consensus was reached by the committee that, based upon the aforementioned relevant factors, Professional Credit Service best meets the overall needs of the City.

Professional Credit Service has 87 years of experience in debt collections for government entities and currently provides collection services for over 950 state, county, municipal, healthcare, and business clients. Some of their municipal clients include: City of Anaheim, City of Burbank, City of Glendale, and City of Corona.

Professional Credit Service offers technological advantages by providing convenient access and full transparency to collection activities and account management through their secure client-facing online portal. Clients can access recordings or transcripts of any consumer call, create reports, and manage accounts. Professional Credit Service provides real-time translation between collectors and consumers through Certified Languages International which allows them to communicate with consumers in 200+ languages, including Spanish, Chinese Mandarin, Japanese, and Vietnamese. The firm adheres to the Fair Debt Collection Practices Act and is TCPA (Telephone Consumer Protection Act) compliant.

Staff respectfully recommends that the City Council approve a motion authorizing a one-year agreement with Professional Credit Service, with the option to renew for two additional one-year terms.

**SUBJECT: CHANGE ORDER TO CONSTRUCTION CONTRACT FOR ON-CALL MAINTENANCE, REHABILITATION, INSPECTIONS, AND EMERGENCY WELL REPAIRS**

**RECOMMENDATION:** That the City Council approve and authorize the City Manager to execute Change Order No. 3 to Construction Contract No. UTOP 1819-01 (on file in the Records Management Department) to General Pump Company Inc. of San Dimas, California for on-call maintenance, rehabilitation, inspection and emergency well repairs for $730,000 for FY 2021-22; and authorize the annual cost of $730,000 consistent with the City Council approved budgets.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Operate in a Businesslike Manner**
**Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)**

**FISCAL IMPACT:** The Proposed Fiscal Year 2021-22 Budget will include appropriations in the Water Operating Fund in the amount of $730,000 for the proposed maintenance services. In July of 2018, City Council approved the original contract to General Pump Company Inc., with an original term of July 1, 2018 to June 30, 2019, that included an option to extend for four (4) successive one (1) year periods. The term of the contract has been extended for two (2) successive one (1) year periods (FY 2019-20 and FY 2020-21). The proposed Change Order No. 3, is the third, one (1) year extension with one (1), one (1) year extension remaining.

Should the City exercise all four (4) successive one (1) year extensions, the projected total amount to be expensed for the five years would amount to a not-to-exceed of $3,650,000. Actual expenditures will be based on work completed at established contract rates. Pricing for the fixed billing rates for additional years will be negotiated and any proposed fee increases will not exceed 3%. There is no impact to the General Fund.

**BACKGROUND & ANALYSIS:** The City's water system utilizes twenty groundwater wells and six (6) booster stations with motors that have 800 horsepower range and pumps capable of producing up to 3,500 gallons of water per minute. These facilities are critical to the City's water supply and need to be rehabilitated periodically to ensure reliable operation and extend the useful life of the capital investment. In addition, this work maintains the energy efficiency of the facilities which result in lower

energy usage for one of the largest operating costs of the City's water system.

In July of 2018, after a formal bidding process, the City awarded a construction contract to General Pump Company Inc. This firm has continuously provided the City with on-call maintenance, rehabilitation, inspections and emergency well repairs, and has an excellent performance record.

**SUBJECT: A CONSTRUCTION CONTRACT, A PROFESSIONAL SERVICES AGREEMENT, AND TWO AMENDMENTS FOR THE WATER MAIN REPLACEMENT PROJECT**

**RECOMMENDATION:** That the City Council take the following actions:

A. Reject Big Ben Engineering's bid for the Water Main Replacement Project as being nonresponsive.
B. Approve the plans and specifications and award Contract No. UT 1027 (on file in the Records Management Department) to Gentry Brothers, Inc. of Irwindale, California, for the construction of the Water Main Replacement Project, in the amount of $3,671,129 plus a 15% contingency of $550,670 for a total amount of $4,221,799; and authorize the City Manager to execute said contract and file a notice of completion at the conclusion of all construction activities related to the project.
C. Approve and authorize the City Manager to execute a Professional Services Agreement (on file in the Records Management Department) with SA Associates of Arcadia, California, in the amount of $100,000 plus a 15% contingency of $15,000 for a total amount of $115,000 for construction engineering services.
D. Approve and authorize the City Manager to execute two amendments (on file in the Records Management Department) with Group Delta Inc. of Ontario, California, in the amount of $80,558 plus a 15% contingency of $12,084 for a total amount of $92,642 for geotechnical and material testing services; and Wallace & Associates Consulting, Inc. of Murrieta, California, in the amount of $114,436 plus a 15% contingency of $17,165 for a total amount of $131,601 for construction management services.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)**

**FISCAL IMPACT:** The Fiscal Year 2020-21 Capital Improvement Program includes appropriations from the Water Capital Fund for this project to cover the cost of construction and construction related services.

The recommended contract award to Gentry Brothers, Inc. is for $3,671,129 plus a 15% contingency of $550,670 for a total amount of $4,221,799. The proposed Professional Services Agreement with SA

Associates is for $100,000 plus a 15% contingency of $15,000 for a total amount of $115,000. The second amendment with Group Delta increases the agreement amount from $363,671 to $456,313 an increase of $92,642. The proposed amendment with Wallace & Associates Consulting, Inc. increases the agreement amount from $317,824 to $449,425, an increase of $131,601. The total cost for the recommended action is $4,561,042. There is no impact to the General Fund.

**BACKGROUND & ANALYSIS:** The City's potable water system includes approximately 596 miles of pipeline. The City's Water Master Plan and aging asset review are used to identify and replace undersized and aging pipelines to maintain the reliability of water service to the community and to improve service pressure and fire flow availability. Improvements are prioritized based on capacity deficiencies, condition assessments, and current level of maintenance activities required to provide adequate and reliable water service.

The work under this project will consist of the replacement of approximately 8,250 lineal feet of 8-inch diameter and 1,420 lineal feet of 12-inch diameter potable water mains. The work will also include installation of water appurtenances; installation of water service laterals and connection to new water meters; making multiple water main connections at various street intersections; installation of cathodic test stations; abandonment of existing waterline in place; pavement repairs and street restoration; and other improvements as described in the plans and technical specifications. A location map is provided for reference.

On March 22, 2021, thirteen (13) bids were received for Bid No. 1407, Water Main Replacement Project, OMUC Contract No. UT 1027. The bids ranged from a low bid amount of $3,542,089.92 to a high bid amount of $6,703,120. The lowest five (5) bids are summarized below.

| **Bidder** | **Location** | **Amount** |
|---|---|---|
| Big Ben Engineering *(Non-Responsive)* | Irvine, CA | $3,542,090 |
| Gentry Brothers, Inc. | Irwindale, CA | $3,671,129 |
| Norstar Plumbing & Engineering, Inc. | Alta Loma, CA | $3,848,477 |
| All Cities Engineering, Inc. | Jurupa Valley, CA | $4,075,322 |
| Ferreira Coastal Construction Company | Rancho Cucamonga, CA | $4,152,512 |

During Staff review of the Big Ben Engineering's bid, it was revealed that Big Ben Engineering failed to submit a fully signed original bid bond to the City prior to bid closing, in accordance with the project specifications, which renders Big Ben Engineering's bid non-responsive. Based on Big Ben Engineering's failure to adhere to the project specifications, and in consultation with the City Attorney, Staff recommends the City Council reject the bid submitted by Big Ben Engineering as non-responsive and award the contract to Gentry Brothers, Inc., the lowest responsible bidder submitting a responsive bid.

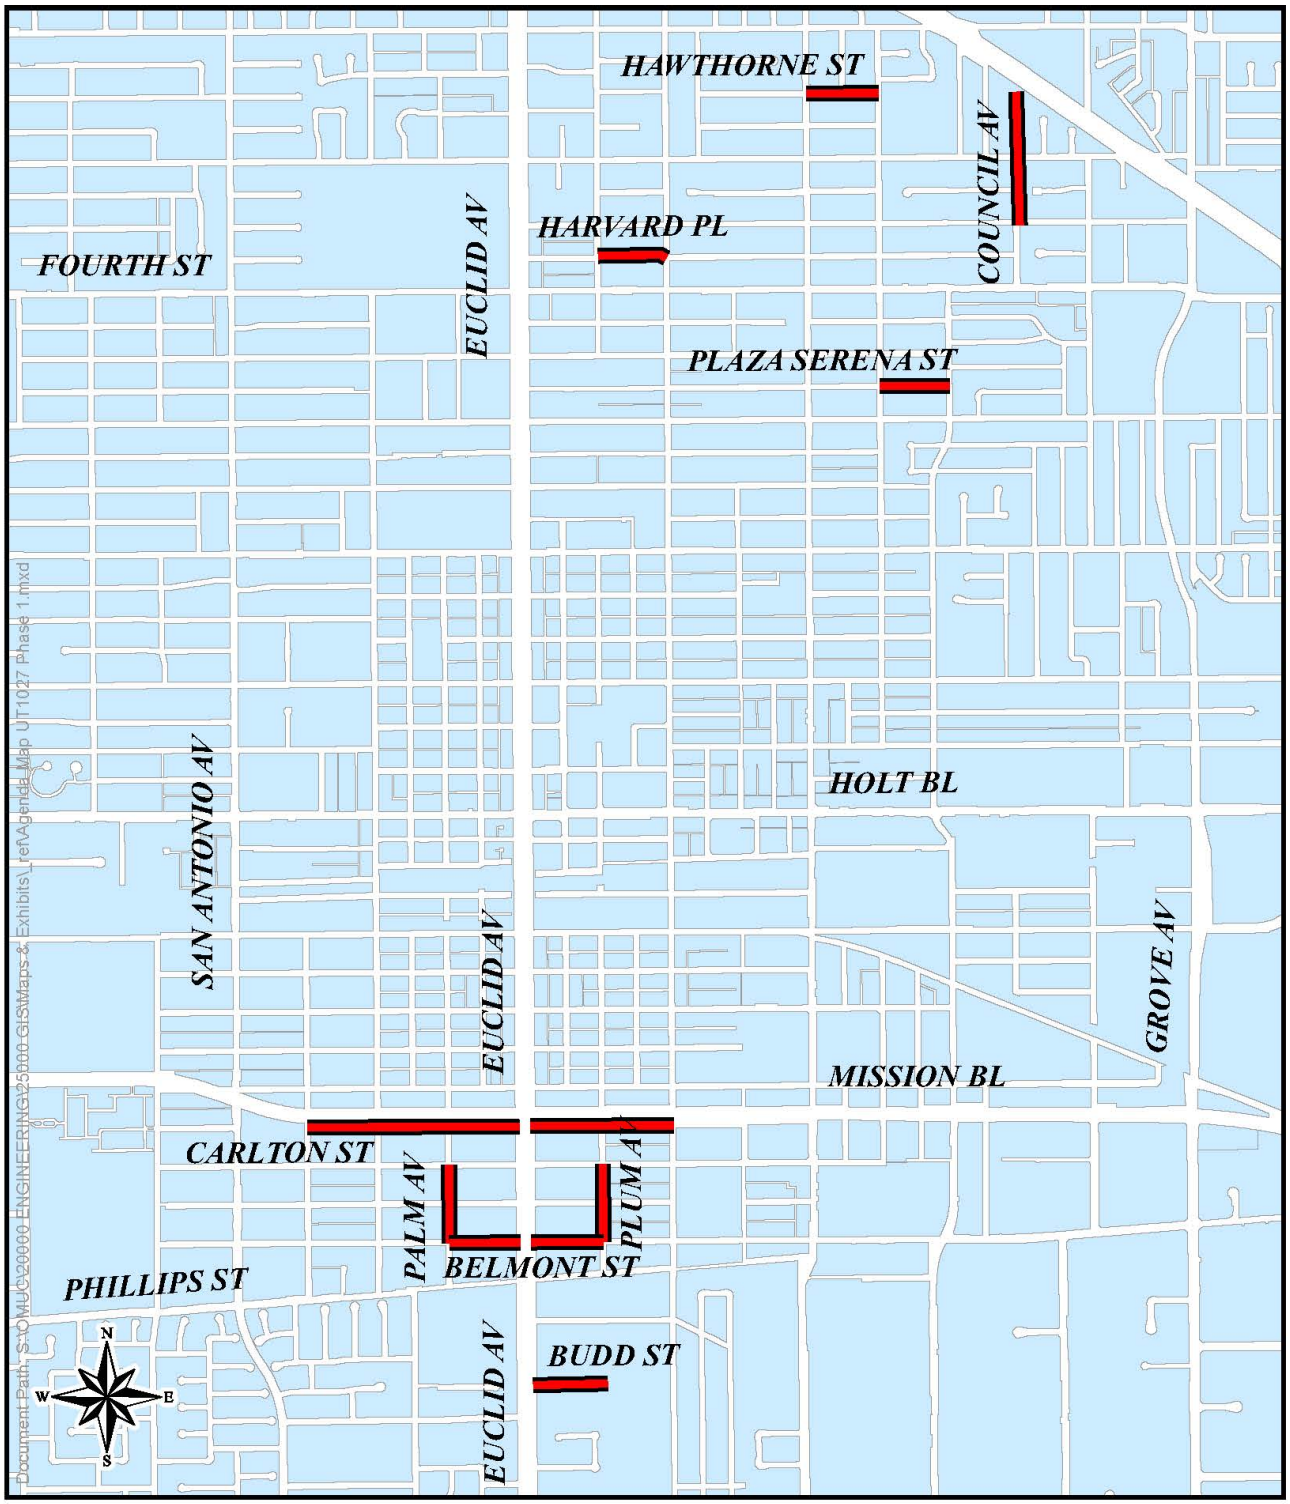
Support services will be required during construction of the Water Main Replacement Project. Group Delta Inc. will provide on-call material testing and geotechnical engineering services and Wallace & Associates Consulting Inc. will provide construction management services. The City first contracted with Group Delta Inc. in December of 2017 and with Wallace & Associates Consulting, Inc. in October of 2019 after an extensive Request for Proposal selection process for On-Call Support Services. OMUC

Staff also solicited a scope and fee from SA Associates, the Engineer of Record for the Project, for a sole source Professional Services Agreement for Construction Engineering Services as they developed the project's plans and specifications.

**ENVIRONMENTAL REVIEW:** The project has been reviewed pursuant to the California Environmental Quality Act (CEQA) and has been determined to be categorically exempt from CEQA pursuant to Article 19 Section 15031, which states that operation, repair, maintenance, permitting, leasing, licensing, or minor alteration of existing public or private structures, facilities, mechanical equipment, or topographical features, involving negligible or no expansion of Class 1 "Existing Facilities" are exempt from the requirements of CEQA. Thus, no further CEQA analysis is required.

ONTARIO MUNICIPAL UTILITIES COMPANY

# OMUC Contract No. UT1027 (PHASE 1)
# CITY OF ONTARIO
# WATER MAIN IMPROVEMENT PROJECT



| *CITY OF ONTARIO*<br>*Agenda Report*<br>**June 15, 2021** | **SECTION:**<br>**CONSENT CALENDAR** |
|---|---|
| Department: Police Department<br>Prepared By: Nicole Alvarez<br>Staff Member Presenting:<br>Mike Lorenz, Chief of Police<br>Approved By: | Submitted To: Council/OHA<br>Approved: _____<br>Continued To: _____<br>Denied: _____<br>Item No: 10 |

**SUBJECT: PURCHASE OF POLICE DEPARTMENT FRONTLINE PATROL EQUIPMENT**

**RECOMMENDATION:** That the City Council approve and authorize the sole source purchase of training and duty equipment for frontline police personnel, not to exceed $355,000 over two fiscal years, from San Diego Police Equipment Co., Inc of San Diego, California and Dooley Enterprise of Anaheim, California.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Maintain the Current High Level of Public Safety**
**Operate in a Businesslike Manner**

**FISCAL IMPACT:** The Fiscal Year 2020-21 Adopted Operating Budget includes appropriations in the General Fund and Asset Seizure Fund for the purchase of the required supplies. Appropriations are included in the FY 2021-22 for the exact threshold and same funding sources. The recommended agreement is for a not-to-exceed amount of $177,500 annually, for a total not-to-exceed amount of $355,000 over a two year term.

**BACKGROUND & ANALYSIS:** The sole source procurement includes the replacement of firearms ammunition inventory which will continue to maintain compliance with Department policy, the California Commission on Peace Officers and Standard Training (P.O.S.T.), and established best practices. San Diego Police Equipment, Co., Inc. is the only factory-authorized law enforcement distributor for the Federal firearm ammunition. Dooley Enterprise is the only Law Enforcement Winchester distributor.

Ontario Municipal Code Section 2-6.23(b) and 2-6.23(c) authorizes the Purchasing Officer to make sole source purchases whenever (1) the goods can be obtained from only one source, and/or (2) a breakdown in machinery, equipment or an essential service which requires an immediate purchase of supplies and equipment to protect public health, safety and welfare generates circumstances that a competitive process would be unavailing or would not produce an advantage, and the advertisement for competitive bid would thus be undesirable, impractical, or impossible.

**SUBJECT: A PROFESSIONAL SERVICES AGREEMENT FOR LEGAL SERVICES RELATED TO PERSONNEL AND EMPLOYMENT RELATED MATTERS**

**RECOMMENDATION:** That the City Council authorize the City Manager to execute a two (2) year Professional Services Agreement (on file in the Records Management Department) with the law firm of Liebert Cassidy Whitmore, of Los Angeles, California for on-going legal services; and authorize the extension of the contract term for up to two, one-year periods.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Operate in a Businesslike Manner**

**FISCAL IMPACT:** The proposed Agreement authorizes services to be provided on an ongoing basis, as needed, with expenditures limited to a not-to-exceed contract amount of $800,000 for the first two (2) years and an option to extend the contract for two (2) additional years, for $300,000 per year. Funding has been proposed in the Fiscal Year 2021-22 Operating Budget. These amounts may increase due to unforeseen circumstances and if such conditions should occur, Staff will present to City Council for approval.

**BACKGROUND & ANALYSIS:** The City has had an agreement for personnel and employment related legal services with the law firm of Liebert Cassidy Whitmore (LCW) since 2009. The firm provides a variety of employer and employee relations legal services including advice on labor relations issues, defending the City in grievance and disciplinary appeal hearings, and litigation defense. The expertise and services provided by LCW continues to assist the City in navigating through complex and sensitive labor and employment matters. Specifically, the depth and diversity of their experience, coupled with their ability to provide practical applications to the myriad of laws in this area, has proven extremely helpful, and give reason to continue utilizing their services.

Additionally, LCW provides the City with the opportunity to participate in the West Inland Empire Employment Relations Consortium and Liebert Library Subscription which provides on-going supervisory educational materials and workshops on a variety of public employment related topics such as the Fair Labor Standards Act (FLSA), the Americans with Disabilities Act (ADA), the Fair Employment and Housing Act (FEHA), Cal/OSHA COVID-19 compliance, and much more.

**SUBJECT: AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, AMENDING CHAPTER 10 OF TITLE 2 SECTIONS 2-10.06, OF THE ONTARIO MUNICIPAL CODE RELATING TO CAMPAIGN CONTRIBUTION LIMITS**

**RECOMMENDATION:** That the City Council adopt an Ordinance amending Chapter 10 of Title 2 Sections 2-10.06, of the Ontario Municipal Code relating to Campaign Contribution Limits.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Operate in a Businesslike Manner**
**Pursue City's Goals and Objectives by Working with Other Governmental Agencies**

**FISCAL IMPACT:** Staff anticipates a minimal fiscal impact associated with monitoring, and when necessary, enforcing the City's local campaign limits and regulations.

**BACKGROUND & ANALYSIS:** Assembly Bill ("AB") 571 was signed by the Governor on October 8, 2019, and became effective on January 1, 2021, allowing cities and counties with no local campaign contribution limit to either set a local limit or default to the limit set for certain State elected offices (e.g., State Assembly or Senate). The current State default limit on contributions from an individual per election is $4,900, effective January 1, 2021. This amount is subject to adjustment by the Fair Political Practices Commission (FPPC) in January of each odd year based upon the Consumer Price Index, rounded to the nearest hundred dollars.

In response to AB 571, on November 17, 2020, the City Council adopted Ordinance No. 03170, setting individual annual contribution limits to a candidate for elective city office at the then-current State default limit on contributions from an individual per election. The limit is to be increased by the Deputy City Clerk in January of every year to reflect any increase in the Consumer Price Index. The increase to be rounded to the nearest one hundred dollars ($100). Additionally, Ordinance No. 03170 established duties of the Deputy City Clerk to administer related campaign finance disclosure requirements and established and defined violations of campaign contribution limits and disclosure requirements as noncriminal infractions, punishable by administrative fines pursuant to the City's adopted administrative fine schedule.

Subsequent to the City's introduction of Ordinance No. 03170, the FPPC issued a fact sheet clarifying the ability of cities and counties to set no contribution limits under AB 571. In response, some cities

have set no contribution limits. This may have been to address concerns that adopting a contribution limit may funnel money into local political action committees ("PACs"), which do not have to disclose their donors. This ordinance was first read and introduced at a regular City Council meeting on June 1, 2021.

Fair Political Practices Commission

# Contribution Limits: City and County Candidates[1]

## Introduction

Pursuant to Assembly Bill 571 (Stats. 2019, Ch. 556, AB 571 Mullin), beginning January 1, 2021 a state campaign contribution limit will by default apply to city and county candidates when the city or county has not already enacted a contribution limit on such candidates. Along with the new campaign contribution limit, there are also other related provisions that formerly applied only to state level candidates that will now apply to city and county candidates. Please note that none of the provisions of AB 571 discussed in this fact sheet apply to candidates in cities or counties for which the city or county has enacted campaign contribution limits.

## Current State Contribution Limit

The contribution limit that will now apply to city and county candidates pursuant to AB 571 is updated biennially for inflation. Contribution limits can be found in Regulation 18545(a)[2] and on the FPPC website here. The default limit for contributions to city and county candidates subject to AB 571 for 2021-2022 is set at $4,900 per election.

## Other Amended Provisions Affecting City and County Candidates

Several other provisions will now apply to city and county candidates in jurisdictions that have not enacted campaign contribution limits, including the following:

- A candidate may not make a contribution over the AB 571 limit to another candidate in jurisdictions subject to the AB 571 limit.

- Candidates may transfer campaign funds from one candidate-controlled committee to another committee controlled by the same candidate if the committee receiving the transfer is for an elective state, county or city office. However, contributions transferred must be transferred using the “last in, first out” or “first in, first out” accounting method and shall not exceed the applicable contribution limit per contributor.

[1] This fact sheet is informational only and contains only highlights of selected provisions of the law. It does not carry the weight of the law. For further information, consult the Political Reform Act and its corresponding regulations, advice letters, and opinions.

[2] The Political Reform Act is contained in Government Code Sections 81000 through 91014. All statutory references are to the Government Code, unless otherwise indicated. The regulations of the Fair Political Practices Commission are contained in Sections 18110 through 18997 of Title 2 of the California Code of Regulations. All regulatory references are to Title 2, Division 6 of the California Code of Regulations, unless otherwise indicated.

- Candidates may not personally loan to a candidate's campaign an amount for which the outstanding balance exceeds $100,000. A candidate may not charge interest on any such loan the candidate made to the candidate's campaign.

- Candidates may establish a committee to oppose the qualification of a recall measure and the recall election when the candidate receives a notice of intent to recall. Campaign funds raised to oppose the qualification of a recall measure and/or the recall election would not be subject to any campaign contribution limit under the Act.

- Contributions after the date of the election may be accepted to the extent contributions do not exceed net debts outstanding from the election, and contributions do not otherwise exceed applicable contribution limits for that election.

- Candidates may carry over contributions raised in connection with one election to pay for campaign expenditures incurred in connection with a subsequent election for the same office.

- Candidates are permitted to raise contributions for a general election before the primary election and may establish separate campaign contribution accounts for the primary and general so long as candidates set aside contributions and use them for the general or special general election as raised. If the candidate is defeated in the primary election or otherwise withdraws from the general election, the general election funds must be refunded to contributors on a pro rata basis less any expenses associated with the raising and administration of the general election contributions.

**FAQs**

**A. If a city or county does not currently have contribution limits set within their ordinance would the state contribution limit be the default?**

Yes. The state contribution limit stated above would be the default contribution limit if the city or county ordinance is silent on whether there are contribution limits within that jurisdiction or if there is no city or county ordinance in place.

**B. Is there a way for a city or county to adopt "no" contribution limits for city or county elective city and county offices?**

Yes. A city or county may elect to have “no” contribution limits. To do so, it must explicitly state in the city or county ordinance that there are no limits on contributions. If it is explicit that the city or county has implemented “no” contribution limits, the state contribution limit will not apply as a default for that jurisdiction.

**C. Can a city or county ordinance be less restrictive than the AB 571 limit (e.g., the city or county limit is set higher than the state limit)?**

Yes. A city or county can set contribution limits higher than the default state limit.

**D. If a city or county imposes contribution limits, is the Commission responsible for enforcing those limits?**

No. The Commission will not regulate the administration or enforcement of the penalties. Cities or counties with existing limits or that adopt their own limits are not subject to the state limit and may impose their own penalties for violations, as.

**E. If a city or county has voluntary contribution limits, but no mandatory limits will the state limit be applicable?**

Yes. A city or county must enact mandatory limits to avoid the state limit applying to elective city and county offices.

**F. Does the default contribution limit also include judicial candidates?**

No. Elective city and county offices do not include judicial offices.

**G. If a city or county has imposed contribution limits for particular city or county offices (e.g., Board of Supervisors), do those limits also apply to other positions such as the District Attorney or would the default state limit apply if a particular position is not specifically addressed by the city or county?**

The default state limit would apply to other positions for which the city or county has not set contribution limits. A city or county ordinance must explicitly state the city or county contribution limits and for which elective offices those limits will apply. A city or county may adopt a general provision implementing a contribution limit for all elective city and county offices in that jurisdiction. As noted above, a city or county may also adopt an ordinance that states the city or county is adopting no contribution limits for any offices to avoid the default state limit applying.

**H. Does AB 571 apply to special district or school district elections?**

No. AB 571 applies only to city and county elections for offices that a city or county has not implemented its own contribution limit.

**I. Does AB 571 allow candidates to open an officeholder committee?**

No. For those candidates subject to AB 571, officeholder committees are not permitted. However, a candidate may use a committee for the officeholder's future election for officeholder expenses.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, AMENDING CHAPTER 10 OF TITLE 2 OF THE ONTARIO MUNICIPAL CODE RELATING TO CAMPAIGN CONTRIBUTION LIMITS.

WHEREAS, Assembly Bill (AB) 571, which went into effect statewide on January 1, 2021, required the City to set its own local campaign contribution limits or otherwise be subject to the Statewide default contribution limits set for elected officers of the State Assembly and Senate; and

WHEREAS, under AB 571, the Fair Political Practices Commission (FPPC) has administration and enforcement authority regarding the default contribution limits for cities and counties without their own local contribution limits, and makes violations of default contribution limits within the FPPC's purview punishable as a misdemeanor; unless local campaign contribution limits are adopted by the City, in which case enforcement authority rests with the City; and

WHEREAS, the City Council of the City of Ontario adopted Ordinance No. 3170 on November 17, 2020, setting annual contribution limits for individuals at $4,700 per calendar year, to increase in January of every year to reflect any increase in the Consumer Price Index; and

WHEREAS, subsequent to the City's introduction of Ordinance No. 3170, the FPPC issued additional information clarifying the ability of cities and counties to set no contribution limits under AB 571; and

WHEREAS, the City Council of the City of Ontario wishes to preserve local control and revise the City's campaign contribution limits that are more precisely tailored to the needs of the Ontario community.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1. The City Council hereby finds and determines that the recitals set forth above are true and correct and are hereby incorporated and adopted as findings and determinations by the City Council as if fully set forth herein.

SECTION 2. Chapter 10, of Title 2 of the Municipal Code, is hereby revised at Section 2-10.06, to read in its entirety as follows:

**Sec. 2-10.06 Local Campaign Contribution Limits**.

A person may make to a candidate for elective city office, and a candidate for elective city office may accept from a person, a contribution of any amount, and hereby imposes no limit on the campaign contributions a candidate for elective city office can receive per election.

SECTION 3. If any section, subsection, subdivision, sentence, clause, or phrase in this Ordinance or any part thereof is for any reason held to be unconstitutional, invalid or ineffective by any court of competent jurisdiction, such decision shall not affect the validity or effectiveness of the remaining portions of this ordinance or any part thereof. The City Council hereby declares that it would have adopted each section irrespective of the fact that any one or more subsections, subdivisions, sentences, clauses, or phrases be declared unconstitutional, invalid or ineffective.

SECTION 4. This Ordinance shall become effective thirty (30) days after its adoption by the City Council.

SECTION 5. The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this 15th day of June 2021.

**SUBJECT: MAINTENANCE SERVICES AGREEMENT FOR ON-CALL HEATING, VENTILATION, AND AIR CONDITIONING (HVAC) MAINTENANCE AND REPAIR SERVICES**

**RECOMMENDATION:** That the City Council authorize the City Manager to execute a three-year Maintenance Services Agreement (on file in the Records Management Department) with Western Allied Corporation of Santa Fe Springs, California for HVAC maintenance and repair services in an amount not to exceed $1,425,000; and authorize the option to extend the agreement for up to two additional one-year terms.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Operate in a Businesslike Manner**
**Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)**

**FISCAL IMPACT:** Appropriations are included in the Facilities Maintenance Fund, Water Operating Fund, and Information Technology Broadband Fund for a not to exceed amount of $475,000 annually or $1,425,000 over the initial three-year term for HVAC maintenance and repair services. The total compensation paid by the City will be contingent upon actual services provided based upon the fee structures set forth in the three-year maintenance services agreement.

**BACKGROUND & ANALYSIS:** The on-call agreement will provide for regularly scheduled preventive maintenance services and urgent repairs of HVAC equipment in accordance with manufacturer's warranties and specifications at all City operated facilities, well sites, and booster stations.

In April 2021, the City solicited proposals for on-call HVAC maintenance and repair services. Staff received three bids. The bid responses included the bid amount for normal preventative maintenance, as well as an hourly rate for any required repair work. After evaluating each vendor's proposal, credentials, pricing, and history of providing service to the City, Staff recommends awarding the contract to Western Allied Corporation of Santa Fe Springs, California for on-call HVAC maintenance and repair services.

| Vendor | Location | Bid Amount | Hourly Rate |
|---|---|---|---|
| Western Allied Corporation | Santa Fe Springs, California | $209,112 | $144 |
| A & H Refrigeration Inc. | Garden Grove, California | $248,600 | $85 |
| F.M. Thomas Air Conditioning, Inc. | Brea, California | $290,112 | $130 |

**SUBJECT: AMENDMENT TO THE MAINTENANCE SERVICES AGREEMENT WITH MERCHANTS LANDSCAPE SERVICES, INC.**

**RECOMMENDATION:** That the City Council authorize the City Manager to execute Amendment No. 1 to the existing Maintenance Services Agreement with Merchants Landscape Services, Inc. of Rancho Cucamonga, California (on file with the Records Management Department) to perform landscape maintenance services for two newly acquired parkway planter areas located in the Ontario Ranch area, by an amount not to exceed $128,136.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)**

**FISCAL IMPACT:** The recommended amendment increases the authorized contract by an amount of $64,068 yearly and $128,136 for two years. The recommended amendment would bring the total contract amount from July 1, 2020 through June 30, 2023 to a not to exceed amount of $495,336. Appropriations are included in the department budget.

**BACKGROUND & ANALYSIS:** The City is responsible for the landscape maintenance of public parkways and medians throughout the Ontario Ranch area. On May 19, 2020, the City Council authorized a three-year maintenance services agreement with Merchants Landscape Services, Inc. for landscape maintenance services of parkways and medians in Ontario Ranch. The City recently accepted two new parkway planter areas within this area. The proposed amendment to the existing agreement with Merchants Landscape Services, Inc. will provide necessary landscape maintenance services to these areas.

| Department: Engineering<br>Prepared By: Jaime Maciel-Carrera<br>Staff Member Presenting:<br>Scott Murphy, Executive Director Community Development<br>Approved By: | Submitted To: Council/OHA<br>Approved: _____<br>Continued To: _____<br>Denied: _____<br>Item No: 15 |

**SUBJECT: A PUBLIC HEARING TO CONSIDER ADOPTING A RESOLUTION OF NECESSITY FOR THE ACQUISITION OF PERMANENT EASEMENT AND TEMPORARY CONSTRUCTION EASEMENT INTERESTS IN PORTIONS OF REAL PROPERTY, AMENDING RESOLUTION OF NECESSITY NO. 2018-083, TO APPLY NUNC PRO TUNC (RETROACTIVELY) TO JUNE 19, 2018**

**RECOMMENDATION:** That the City Council conduct a public hearing and:

A. Adopt an Amended Resolution of Necessity to confirm the acquisitions sought by the City's previously adopted Resolution of Necessity No. 2018-083, including the type, scope and durations of the acquisitions sought therein for the Mountain Avenue and Holt Boulevard Intersection Widening Project, applying the proposed amendment *nunc pro tunc* (to apply the Amended Resolution of Necessity retroactive as of June 19, 2018);
B. Consider the adoption of an Amended Resolution of Necessity and provide all parties interested in the affected properties, their attorneys or representatives, an opportunity to be heard on the issues relevant to the Amended Resolution of Necessity;
C. Make the following findings as hereinafter described in this report:
    1. The public interest and necessity require the proposed project;
    2. The project is planned or located in a manner that will be most compatible with the greatest public good and the least private injury;
    3. The real property to be acquired is necessary for the project; and
    4. The offers of just compensation have been made to the property owners; and
    5. Adopt a Resolution of Necessity declaring that the acquisition of permanent and temporary easement interests in certain real property, more particularly described as Assessor Parcel No.'s 1010-522-13, 1010-522-06, 1010-522-12, 1010-522-11, 1010-522-10, 1010-502-13, 1010-502-12, 1010-502-11, 1010-502-10, 1010-502-09, 1010-502-08, 1010-502-07, 1010-502-06, 1011-131-02, 1011-131-03, 1011-131-04, 1011-131-19, 1011-132-06, and 1011-132-07 by eminent domain is necessary for public right-of-way and the construction of the Mountain Avenue and Holt Boulevard Intersection Widening Project ("Project") and related public infrastructure improvements in the City of Ontario, San Bernardino County, amending Resolution of Necessity No. 2018-083, to apply *nunc pro tunc* (retroactively) to June 19, 2018.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Pursue City's Goals and Objectives by Working with Other Governmental Agencies**
**Focus Resources in Ontario's Commercial and Residential Neighborhoods**

**Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)**

**FISCAL IMPACT:** As set forth in the City's June 18, 2018 Agenda Report, the adopted Five-Year Capital Improvement Program Budget includes appropriations in the amount of $7,000,000 to complete all phases of the Project including design, right of way acquisition and construction. Per the San Bernardino County Transportation Authority (SBCTA) Valley Major Street Program Arterial Subprogram, the City's share of the Project is 44.4% from Old Model Colony Local Street Development Impact Fees and SBCTA's Measure I share is 55.6%. The split is in accordance with SBCTA's approved Measure I 2010-2040 Strategic Plan. Deposits to file the Resolution of Necessity total $534,000, with the City's share of $237,096 to come from Old Model Colony Local Street Development Impact Fee funds.

**BACKGROUND & ANALYSIS:** The Mountain Avenue and Holt Boulevard Intersection Widening Project and related public infrastructure improvements are required and will benefit the community by widening Holt Boulevard to its ultimate configuration per The Ontario Plan (General Plan) recommendations with the installation of additional turn lanes, thereby increasing travel efficiency on Mountain Avenue and Holt Boulevard.

The City obtained appraisals of the affected properties from Bender Rosenthal, Inc. Offers of just compensation were made to the property owners pursuant to California Government Code section 7267.2. The consulting firm of Bender Rosenthal, Inc., negotiated on behalf of the City to purchase certain properties. Certain agreements had been reached, yet there remained outstanding parcels for which agreements had not yet been reached. Therefore, on June 19, 2018, the City adopted Resolution No. 2018-083 to acquire, by eminent domain, certain interests in the properties described therein. However, due to a clerical error, the documents and exhibits compiled for Resolution of Necessity No. 2018-083 failed to include all correct exhibits and documents that were intended to be made part of Resolution of Necessity No. 2018-083. Therefore, an Amended Resolution of Necessity No. 2018-083 is proposed to confirm the nature and scope of the acquisition areas intended to be acquired for the Mountain Avenue and Holt Boulevard Intersection Widening Project and to apply retroactively to June 19, 2018.

Preliminary title reports were ordered to determine and confirm the identities of the record owners. Following standard public records and due diligence searches for ownership information, a notice of this public hearing was mailed to the property owners.

The power of eminent domain is used by the City only as a last resort to obtain interests necessary for projects after 1) negotiations have stalled; or 2) the owner has requested that the City proceed directly to eminent domain for tax or other advantages; or 3) the eminent domain process is necessary to clear title to the property. In this case, offers of just compensation were made to the owners for the full Fair Market Value as determined by appraisals. City staff attempted to negotiate amicable settlements in good faith, and will continue to do so throughout the process. California's definition of Fair Market Value is one of the most inclusive definitions in the United States and requires the appraiser to consider the highest and best use of the property, and to consider the highest price a willing buyer and seller would agree to. The City's appraisals must use this definition of Fair Market Value.

California eminent domain law provides that a public entity may not commence with eminent domain proceedings until its governing body has adopted a resolution of necessity, which may only be adopted after the governing body has given each party with an interest in the affected property, or their representatives, a reasonable opportunity to appear and be heard on the following matters:

1. The public interest and necessity require the proposed Project;
2. The Project is planned or located in a manner that will be most compatible with the greatest public good and the least private injury;
3. The real property to be acquired is necessary for the Project; and
4. The offers of just compensation have been made to the property owner.

Since agreements have not been reached with the remaining property owners, it was determined that the acquisition of properties through eminent domain was necessary to meet critical project deadlines. To that end, the City adopted Resolution of Necessity No. 2018-083. It was later determined that certain documents and exhibits compiled and attached to Resolution of Necessity No. 2018-083 did not contain all the correct documents and exhibits that were intended to make up the Resolution of Necessity No. 2018-083. For that reason, Amended Resolution of Necessity No. 2018-083 is proposed to apply *nunc pro tunc* (retroactively) to July 19, 2018.

The eminent domain process begins with the adoption of a Resolution of Necessity declaring intent to acquire permanent and temporary easement interests in portions of real property through eminent domain proceedings for public right-of-way and the construction of the Mountain Avenue and Holt Boulevard Intersection Widening Project and related public infrastructure improvements. The purpose of the instant Resolution is to confirm and certify the correct documents and exhibits depicting the true and correct acquisition areas, including their nature and scope, as was contemplated and intended in Resolution of Necessity 2018-083. Neither the Adoption of Resolution of Necessity No. 2018-083 nor the adoption of the instant Resolution of Necessity should affect any negotiations or agreements reached with the property owners. In either instance, record owners must be afforded an opportunity to appear at the hearing and lodge objections. Pursuant to Section 1245.235 of the California Code of Civil Procedures, notice of this hearing was sent by first class mail on May 29, 2021, to each record owner and known representative or attorney, and stated the City's intent to consider the adoption of a resolution, the right of the property owner to appear and be heard on these issues, and notice that failure to file a written request to appear would result in a waiver of the right to appear and be heard. The City scheduled this hearing, at which time all persons who filed a written request in compliance with applicable law may appear and be heard.

**DESCRIPTION OF PROPERTY TO BE ACQUIRED:** The affected properties ("Properties") are located on both sides of Mountain Avenue from Holt Boulevard to 500' north of Holt Boulevard, and both sides of Holt Boulevard from 520' west of Mountain Avenue to 680' east of Mountain Avenue. (Exhibits "A" through "N").

The following table provides greater detail on the Properties, and identifies the legal descriptions and exhibit numbers which properties are also attached to the Amended Resolution:

**HEARINGS AND REQUIRED FINDINGS:** The recommended actions of the City Council pertain to the acquisition of permanent and temporary easement interests in the Properties.

California eminent domain law provides that a public entity may not commence an eminent domain proceeding until its governing body has adopted a Resolution of Necessity, which resolution may only be adopted after the governing body has given each party with an interest in the affected property or their representatives a reasonable opportunity to appear and be heard.

The City's Resolution of Necessity No. 2018-083 confirmed the four required findings below. The purpose of the Amended Resolution is to confirm that the following four findings do in fact pertain to the property interests described and depicted in the attached Exhibits A through N and that the same

findings apply *nunc pro tunc* (retroactively) to June 19, 2018:

1. **The Public Interest and Necessity Require the Proposed Project:** The Mountain Avenue and Holt Boulevard Intersection Widening Project in the City of Ontario, San Bernardino County, California, will eliminate traffic and congestion along Mountain Avenue and Holt Boulevard; and will improve motorist and pedestrian safety, reduce accidents and delays to motorists, and improve air quality.
2. **The Project is Planned or Located in a Manner that will be Most Compatible with the Greatest Public Good and the Least Private Injury:** The intersection improvements are designed to minimize impacts and maximize the efficiency of the City's transportation system. The Project provides an improved intersection level of service and improves traffic circulation in the area. The Properties to be acquired are best suited for the Project and will cause the least private injury. To move this Project elsewhere would require significant reconstruction of street infrastructure, cause a greater impact in the new location as well as to nearby residents, be much more costly at the expense of local taxpayers, and not improve the intersection level of service.
3. **The Real Property to be Acquired is Necessary for the Proposed Project:** The properties described and depicted in Exhibits "A through N", portions of APNs 1010-522-13, 1010-522-06, 1010-522-12, 1010-522-11, 1010- 522-10, 1010-502-13, 1010-502-12, 1010-502-11, 1010-502-10, 1010-502-09, 1010-502-08, 1010-502-07, 1010-502-06, 1011-131-02, 1011-131-03, 1011-131-04, 1011-131-19, 1011-132-06, and 1011-132-07 are necessary for the City's street widening and improvements to Mountain Avenue and Holt Boulevard.
4. **The Offer of Just Compensation Has Been Made:** Appraisals were prepared by Bender Rosenthal, Inc. to establish the fair market value of the real property the City is seeking to acquire. Offers of just compensation were made to the property owners to purchase the permanent and temporary easement interests as established by the approved appraisal and as required by Section 7267.2 of the California Government Code. Although a negotiated settlement may still be possible for the real properties cited above, it would be appropriate to commence the procedures to acquire the property through eminent domain, to ensure that the City has possession of the real property, which is necessary in order for the City to begin construction of the project.

The date of the offer, the assessor parcel number, and the party to whom the offer was made is provided in the following table:

| **Assessor Parcel No.** | **Record Owner** | **Date of Offer** |
|---|---|---|
| 1010-522-13 | The Culhane Family Trust, dated February 10, 1988 | 12/26/2017 |

| 1011-132-07 | Paint Bucket, Inc. | 12/26/2017 |

**ENVIRONMENTAL ANALYSIS:** Pursuant to CEQA section 21166 and sections 15162 and 15163 of the CEQA Guidelines, an addendum to the Ontario Plan EIR was prepared by the City with regard to the Mountain Avenue and Holt Boulevard Intersection Widening ("Addendum"). The Addendum incorporates, by reference, the analysis contained in the Ontario Plan EIR, and addresses only those issues specific to the Mountain Avenue and Holt Boulevard Intersection Widening. The City proposes to approve the Resolution as an activity within the TOP, as the activity proposed under the Resolution is within the scope of TOP, and, as described in the Addendum and the Initial Study, the TOP EIR adequately describes the activity proposed under the Resolution for the purposes of CEQA. The

Addendum concludes that the Project will not result in new, or substantially more adverse, significant environmental impacts than those disclosed in the Ontario Plan EIR.

Copy of the Addendum, and supporting documents are available for review at the Office Records Management Office and the Ontario Planning Department.

Because the adoption of the proposed Resolution of Necessity merely confirms and amends the previously adopted Resolution of Necessity No. 2018-083 and does not result in any substantial changes in the Project or substantial changes in the circumstances under which the Project will be undertaken that would require major revisions to the Addendum, and because there is no new information about the Project that wasn't previously known when the Addendum was approved, no further CEQA review is necessary for the Resolution of Necessity. (See Public Resources Code Section 21166.)

MEMORANDUM

TO: MAYOR AND THE MEMBERS OF CITY COUNCIL
CITY OF ONTARIO, CALIFORNIA

FROM: GREGORY G SNARR, LEGAL COUNSEL

RE: A RESOLUTION OF NECESSITY OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, FOR THE ACQUISITION OF PERMANENT EASEMENT AND TEMPORARY CONSTRUCTION EASEMENT INTERESTS IN PORTIONS OF REAL PROPERTY, AMENDING RESOLUTION OF NECESSITY NO. 2018-083 TO APPLY *NUNC PRO TUNC* (RETROACTIVELY) TO JUNE 19, 2018

The City of Ontario is considering the adoption of a Resolution of Necessity to confirm the acquisitions sought by the City's previously adopted Resolution of Necessity No. 2018-083, including the type, scope and durations of the acquisitions sought therein for the Mountain Avenue and Holt Boulevard Intersection Widening Project located in the City of Ontario, San Bernardino County, California and to apply the same *nunc pro tunc* (to apply the Amended Resolution of Necessity retroactive as of June 19, 2018) . The hearing is set for **Tuesday, June 15, 2021 at 6:30 p.m.** A notice of this hearing has been sent to the affected property owners and other interested parties.

After the hearing is opened, the City Clerk will note for the record the proof of mailing of the notices of hearing to the Affected Parties. The notice of hearing invited the Affected Parties to appear and be heard on the matters described below. If a written request to

appear at the hearing is made, then the Affected Party and/or their representative must be allowed to speak.

Under Eminent Domain Law, no one other than a person with an interest in the property is legally entitled to speak at the hearing. However, the Brown Act also provides that the public is entitled to speak at the hearing. We recommend that the City Council initially limit all public comment to the Affected Parties. This is advisable because the purpose of the hearing is to give the Affected Parties an opportunity to present their position, discuss any comments and concerns, or ask questions. After the Affected Parties have had the opportunity to speak, the public may participate.

The only issues to be addressed at the hearing are:

(a) Whether the public interests and necessity require the proposed project;
(b) Whether the proposed project is planned or located in the manner that will be most compatible with the greatest public good and least private injury;
(c) Whether the real property described in the resolutions is necessary for the proposed project; and
(d) Whether the required offers to purchase the real property were made.[1]

The hearing will begin with me explaining the nature and scope of the hearing, followed by the City Clerk noting the proof of mailing as mentioned above. Thereafter, one member of the City Project Team will make a presentation, giving the basis for acquiring the real property and explaining the Project. Each of the findings listed above will be addressed in the report.

I'm sure it goes without saying that in the course of the public hearing, no members of the City Council should suggest that they have prejudged whether or not to adopt the Amended

[1] NOTE: The fair market value of the property is not an issue to be discussed at the hearing.

Resolution of Necessity. The purpose of the hearing is to review that very question. The hearing should be conducted in a way that provides a full and fair opportunity for the Affected Parties to present their views on the subject matter.

After the hearing is closed, a vote should be taken on adoption of the RON. The City Council cannot go into closed session to consider how to vote on the RON. The RON will only be adopted if two-thirds of the entire City Council (not just those in attendance) vote affirmatively. That means that at least four members of the City Council must vote in favor of the Amended RON for it to be adopted. If there will not be a sufficient number of City Council members at the hearing, we would need to continue the hearing. In this regard, it is also important for counsel to be informed if any member of the City Council has an interest in any property or business that may be affected by the proposed Project or acquisition.

If the RON is adopted, counsel will file a motion for leave to amend the complaint in the eminent domain lawsuit, *City of Ontario v. John M. Culhane, et al.*, Riverside Superior Court Case Number RIC 1901791.

Attached to this memorandum is a proposed agenda for conducting the hearing, which we will provide to the City Clerk for inclusion in the Mayor's Agenda. The proposed RON is attached to the agenda packet. The original notices of hearing that were sent to the Affected Parties and proofs of mailing are on file with the City Clerk's office.

GREGORY G SNARR

Attachment: Script for RON Hearing

1. PRESIDING OFFICER OPENS HEARING.

2. THIS IS A HEARING ON A PROPOSED RESOLUTION OF NECESSITY OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, FOR THE ACQUISITION OF PERMANENT EASEMENT AND TEMPORARY CONSTRUCTION EASEMENT INTERESTS IN PORTIONS OF REAL PROPERTY TO AMENDING RESOLUTION OF NECESSITY NO. 2018-083 AND APPLYING THE SAME *NUNC PRO* TUNC (RETROACTIVELY) TO JUNE 19, 2018

3. I CALL UPON THE CITY'S LEGAL COUNSEL, GREGORY SNARR OF BEST BEST & KRIEGER, TO EXPLAIN THE NATURE AND SCOPE OF HEARING.

4. NEXT, I'LL ASK THE CITY CLERK TO CONFIRM THAT NOTICE OF THIS HEARING WAS MAILED TO THE AFFECTED PROPERTY OWNER.

5. NOW, WE'LL HAVE KHOI DO, CITY ENGINEER, PROVIDE A REPORT ON HOW THE REAL ESTATE INTERESTS TO BE ACQUIRED RELATE TO THE CITY'S PURPOSES.

6. NEXT, I ASK THE CITY CLERK TO NOTE ALL WRITTEN OBJECTIONS AND REQUESTS TO BE HEARD THAT HAVE BEEN RECEIVED.

7. NOW, I INVITE ANY PERSONS WITH AN INTEREST WHO WISH TO BE HEARD TO COME FORWARD.

8. NOW, ARE THERE ANY MEMBERS OF THE PUBLIC WHO WISH TO BE HEARD.

9. AT THIS POINT, THE PRESIDING OFFICER CAN GIVE STAFF AND/OR LEGAL COUNSEL THE OPPORTUNITY TO COMMENT/RESPOND TO ANY OBJECTIONS. ALTERNATIVELY, THE PRESIDING OFFICER CAN SIMPLY OPEN THE MATTER UP FOR DISCUSSION/QUESTIONS WITH THE OTHER CITY COUNCIL MEMBER.

10. IF THERE ARE NO OTHER QUESTIONS OR COMMENTS, I WILL CLOSE THE HEARING. IS THERE A MOTION?

11. PRESIDING OFFICER CLOSES HEARING.

12. THE MOTION IS MADE AND VOTE IS TAKEN AS TO WHETHER TO ADOPT THE RESOLUTIONS OF NECESSITY.

RESOLUTION NO. _____

A RESOLUTION OF NECESSITY OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, FOR THE ACQUISITION OF PERMANENT EASEMENT AND TEMPORARY CONSTRUCTION EASEMENT INTERESTS IN PORTIONS OF REAL PROPERTY AMENDING RESOLUTION 2018-083, TO APPLY *NUNC PRO TUNC* (RETROACTIVELY) TO JUNE 19, 2018.

WHEREAS, the City of Ontario ("City") proposes to acquire permanent easement and temporary construction easement interests in portions of certain real property, located in San Bernardino County, California, more particularly described as Assessor Parcel Nos 1010-522-13, 1010-522-06, 1010-522-12, 1010-522-11, 1010-522-10, 1010-502-13, 1010-502-12, 1010-502-11, 1010-502-10, 1010-502-09, 1010-502-08, 1010-502-07, 1010-502-06, 1011-131-02, 1011-131-03, 1011-131-04, 1011-131-19, 1011-132-06, and 1011-132-07, for street widening and improvements on Mountain Avenue and Holt Boulevard located in the City of Ontario, San Bernardino County, California, pursuant to the authority granted to it by section 37350.5 of the California Government Code; and

WHEREAS, pursuant to section 1245.235 of the California Code of Civil Procedure, the City scheduled a public hearing for June 15, 2021, at 6:30 p.m., at the Ontario City Hall Council Chambers, located at 303 East B Street, Ontario, California, 91764, and gave to each person whose property is to be acquired and whose name and address appeared on the last equalized county assessment roll, notice and a reasonable opportunity to appear at said hearing and be heard on the matters referred to in section 1240.030 of the California Code of Civil Procedure; and

WHEREAS, said hearing has been held by the City, and the affected property owners were afforded an opportunity to be heard on said matters; and

WHEREAS, the City may now adopt a Resolution of Necessity pursuant to section 1240.040 of the California Code of Civil Procedure.

NOW, THEREFORE, THE CITY DOES HEREBY RESOLVE AND DECLARE AS FOLLOWS:

SECTION 1. Compliance with California Code of Civil Procedure. There has been compliance by the City with the requirements of section 1245.235 of the California Code of Civil Procedure regarding notice and hearing.

SECTION 2. Public Use. The public use for the permanent easements and temporary construction easements interests in the properties to be acquired is for The City of Ontario's street widening and improvements to Holt Boulevard in the City of Ontario, San Bernardino, California. Section 37350.5 of the California Government Code authorizes the City to acquire, by eminent domain, property necessary for such purposes.

SECTION 3. Description of Property. Attached and marked as Exhibits "A" through "N" are the legal definitions, legal descriptions and plat maps, respectively, of the interest to be acquired by the City, which describe the general location and extent of the property with sufficient detail for reasonable identification.

SECTION 4. Findings. The City hereby finds and determines each of the following:

(a) The public interest and necessity require the proposed project;
(b) The proposed project is planned or located in the manner that will be most compatible with the greatest public good and least private injury;
(c) The properties defined, described and depicted in Exhibits "A" through "N" are necessary for the proposed project; and
(d) The offers required by section 7267.2 of the California Government Code were made.

SECTION 5. Use Not Unreasonably interfering with Existing Public Use. Some or all of the real property affected by the interest to be acquired is subject to easements and rights-of-way appropriated to existing public uses. The legal descriptions of these easements and rights-of-way are on file with the City and describe the general location and extent of the easements and rights-of-way with sufficient detail for reasonable identification. In the event the herein described use or uses will not unreasonably interfere with or impair the continuance of the public use as it now exists or may reasonably be expected to exist in the future, counsel for the City is authorized to acquire the herein described interest subject to such existing public use(s) pursuant to section 1240.510 of the California Code of Civil Procedure.

SECTION 6. More Necessary Public Use. Some or all of the real property affected by the interests to be acquired is subject to easements and rights-of-way appropriated to existing public uses. To the extent that the herein described use or uses will unreasonably interfere with or impair the continuance of the public use as it now exists or may reasonably be expected to exist in the future, the City finds and determines that the herein described use or uses are more necessary than said existing public use. Counsel for the City is authorized to acquire the herein described real property appropriated to such existing public uses pursuant to section 1240.610 of the California Code of Civil Procedure. Staff is further authorized to make such improvements to the affected real property that it determines are reasonably necessary to mitigate any adverse impact upon the existing public use.

SECTION 7. Further Activities. Counsel for the City is hereby authorized to acquire the hereinabove described real property in the name of and on behalf of the City by eminent domain, and counsel is authorized to institute and prosecute such legal proceedings as may be required in connection therewith. Legal counsel is further authorized to take such steps as may be authorized and required by law, and to make such security deposits as may be required by order of court, to permit the City to take possession of and use said real property at the earliest possible time. Counsel is further authorized to correct any errors or to make or agree to non-material changes in the legal description of the real property that are deemed necessary for the conduct of the

condemnation action, or other proceedings or transactions required to acquire the subject real property. Counsel is further authorized to reduce or modify the extent of the interests or property to be acquired so as to reduce the compensation payable in the action where such change would not substantially impair the construction and operation for the project for which the real property is being acquired.

SECTION 8. Effective Date. Upon adoption, this Resolution shall take effect *nunc pro tunc* (retroactively) as of June 19, 2018.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 15th day of June 2021.

# Exhibit A

## Legal Definitions of Property to be Acquired

The following is the definition of legal rights to be acquired by the City of Ontario:

**"Permanent Easement"** refers to a non-exclusive permanent and perpetual easement and right of way in favor of City of Ontario, and to its successors, and assigns, hereinafter described together with the right to forever construct, maintain, improve, alter, relocate, inspect, occupy, and use for the construction and maintenance of streets and underground lines, power poles, public utilities, and other public uses, as determined necessary by City of Ontario together with all necessary rights incidental thereto, on, over, under, and across the property in connection with the exercise of any easement rights described herein.

Property Owner shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over, or under any portion of the easement, or plant trees or any other vegetation on any portion of the easement except with the prior written consent of City of Ontario, its successors and assigns.

City of Ontario shall have the right to trim, cut or clear away any trees, brush, or other vegetation from time to time as determined in its sole discretion, without payment of additional compensation.

No other easements shall be granted on, under or over the easement without the prior written consent of City of Ontario, its successors and assigns.

The ground elevations of the roadway upon completion of construction shall not be further increased or decreased without the prior written consent of City of Ontario.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

**"Temporary Construction Easement"** or **"TCE"** grants to the City of Ontario, its contractors, successors, and assigns, to engage in construction and related activities related to the Mountain Avenue and Holt Boulevard Intersection Widening Project, together with all necessary rights of ingress and egress to the non- exclusive easement area in connection with such construction and related activities.

**Permitted Activities by Property Owners:**

Prior to termination of this easement, property owners shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over or under any portion of the easement, nor shall property owners plant any tree or trees or plant any other vegetation or flora on any portion of the easement except at the written consent of the City of

Ontario, its successors and assigns.

**Non-Permitted Activities by Property Owners:**

No other easement or easements shall be granted on, under, or over this easement without obtaining the prior written consent of City of Ontario, its successors and assigns.

**Permitted Activities by Condemning City:**

The City of Ontario shall be entitled to trim, cut, or clear away any trees, brush, or other vegetation or flora from time to time as plaintiff determines in its sole discretion without payment of any additional compensation to property owners.

The TCE shall commence on the date the contractor is issued the Notice to Proceed letter and will terminate upon recording of the Notice of Completion of the City of Ontario Mountain Avenue and Holt Boulevard Intersection Widening Project by the City of Ontario. The use of the TCE area is anticipated to be required for a period of 8 months within the described timeline unless the term of the TCE is extended by written agreement of the parties.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

**EXHIBIT "A"**

**Easement Deed of Right of Way Dedication**
**Legal Description**

**APN 1010-522-13**

Being a portion of the West 55.00 feet of the east 507 feet of Lot 1002 of the Map of Ontario, in the City of Ontario, County of San Bernardino, State of California, per map recorded in Book 11 of Maps, Page 6 in the Office of the County Recorder of said County, more particularly described as follows:

**COMMENCING** at the intersection of Holt Boulevard and Mountain Avenue;

Thence along the centerline of said Holt Boulevard, South 89°36'04" West 501.31 feet;

Thence North 00°23'56" West 40.00 feet to a point on a line parallel with and 40 feet distant from the centerline of Holt Boulevard, also being a point on the westerly line of the east 452 feet of said Lot 1002 and the **TRUE POINT OF BEGINNING**;

Thence along said parallel line South 89°36'04" West 55.00 feet to the westerly line of east 507 feet of said Lot 1002;

Thence along said westerly line North 00°23'30" West 8.50 feet to a point parallel with and 48.50 feet distant from said centerline of Holt Boulevard;

Thence North 89°36'04" East 19.48 feet;

Thence North 87°27'12" East 35.54 feet to a point on said westerly line of the east 452 feet of said Lot 1002;

Thence along said westerly line South 00°23'29" East 9.83 feet to the **TRUE POINT OF BEGINNING**;

Parcel contains 491 square feet more or less.

## Legal Definitions of Property to be Acquired

The following is the definition of legal rights to be acquired by the City of Ontario:

**"Permanent Easement"** refers to a non-exclusive permanent and perpetual easement and right of way in favor of City of Ontario, and to its successors, and assigns, hereinafter described together with the right to forever construct, maintain, improve, alter, relocate, inspect, occupy, and use for the construction and maintenance of streets and underground lines, power poles, public utilities, and other public uses, as determined necessary by City of Ontario together with all necessary rights incidental thereto, on, over, under, and across the property in connection with the exercise of any easement rights described herein.

Property Owner shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over, or under any portion of the easement, or plant trees or any other vegetation on any portion of the easement except with the prior written consent of City of Ontario, its successors and assigns.

City of Ontario shall have the right to trim, cut or clear away any trees, brush, or other vegetation from time to time as determined in its sole discretion, without payment of additional compensation.

No other easements shall be granted on, under or over the easement without the prior written consent of City of Ontario, its successors and assigns.

The ground elevations of the roadway upon completion of construction shall not be further increased or decreased without the prior written consent of City of Ontario.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

**"Temporary Construction Easement"** or **"TCE"** grants to the City of Ontario, its contractors, successors, and assigns, to engage in construction and related activities related to the Mountain Avenue and Holt Boulevard Intersection Widening Project, together with all necessary rights of ingress and egress to the non- exclusive easement area in connection with such construction and related activities.

**Permitted Activities by Property Owners:**

Prior to termination of this easement, property owners shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over or under any portion of the easement, nor shall property owners plant any tree or trees or plant any other vegetation or flora on any portion of the easement except at the written consent of the City of

vegetation or flora on any portion of the easement except at the written consent of the City of Ontario, its successors and assigns.

**Non-Permitted Activities by Property Owners:**

No other easement or easements shall be granted on, under, or over this easement without obtaining the prior written consent of City of Ontario, its successors and assigns.

**Permitted Activities by Condemning City:**

The City of Ontario shall be entitled to trim, cut, or clear away any trees, brush, or other vegetation or flora from time to time as plaintiff determines in its sole discretion without payment of any additional compensation to property owners.

The TCE shall commence on the date the contractor is issued the Notice to Proceed letter and will terminate upon recording of the Notice of Completion of the City of Ontario Mountain Avenue and Holt Boulevard Intersection Widening Project by the City of Ontario. The use of the TCE area is anticipated to be required for a period of 8 months within the described timeline unless the term of the TCE is extended by written agreement of the parties.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

## Legal Definitions of Property to be Acquired

The following is the definition of legal rights to be acquired by the City of Ontario:

**"Permanent Easement"** refers to a non-exclusive permanent and perpetual easement and right of way in favor of City of Ontario, and to its successors, and assigns, hereinafter described together with the right to forever construct, maintain, improve, alter, relocate, inspect, occupy, and use for the construction and maintenance of streets and underground lines, power poles, public utilities, and other public uses, as determined necessary by City of Ontario together with all necessary rights incidental thereto, on, over, under, and across the property in connection with the exercise of any easement rights described herein.

Property Owner shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over, or under any portion of the easement, or plant trees or any other vegetation on any portion of the easement except with the prior written consent of City of Ontario, its successors and assigns.

City of Ontario shall have the right to trim, cut or clear away any trees, brush, or other vegetation from time to time as determined in its sole discretion, without payment of additional compensation.

No other easements shall be granted on, under or over the easement without the prior written consent of City of Ontario, its successors and assigns.

The ground elevations of the roadway upon completion of construction shall not be further increased or decreased without the prior written consent of City of Ontario.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

**"Temporary Construction Easement"** or **"TCE"** grants to the City of Ontario, its contractors, successors, and assigns, to engage in construction and related activities related to the Mountain Avenue and Holt Boulevard Intersection Widening Project, together with all necessary rights of ingress and egress to the non- exclusive easement area in connection with such construction and related activities.

**Permitted Activities by Property Owners:**

Prior to termination of this easement, property owners shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over or under any portion of the easement, nor shall property owners plant any tree or trees or plant any other vegetation or flora on any portion of the easement except at the written consent of the City of

vegetation or flora on any portion of the easement except at the written consent of the City of Ontario, its successors and assigns.

**Non-Permitted Activities by Property Owners:**

No other easement or easements shall be granted on, under, or over this easement without obtaining the prior written consent of City of Ontario, its successors and assigns.

**Permitted Activities by Condemning City:**

The City of Ontario shall be entitled to trim, cut, or clear away any trees, brush, or other vegetation or flora from time to time as plaintiff determines in its sole discretion without payment of any additional compensation to property owners.

The TCE shall commence on the date the contractor is issued the Notice to Proceed letter and will terminate upon recording of the Notice of Completion of the City of Ontario Mountain Avenue and Holt Boulevard Intersection Widening Project by the City of Ontario. The use of the TCE area is anticipated to be required for a period of 8 months within the described timeline unless the term of the TCE is extended by written agreement of the parties.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

## Legal Definitions of Property to be Acquired

The following is the definition of legal rights to be acquired by the City of Ontario:

"**Temporary Construction Easement**" or "**TCE**" grants to the City of Ontario, its contractors, successors, and assigns, to engage in construction and related activities related to the Mountain Avenue and Holt Boulevard Intersection Widening Project, together with all necessary rights of ingress and egress to the non- exclusive easement area in connection with such construction and related activities.

**Permitted Activities by Property Owners:**

Prior to termination of this easement, property owners shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over or under any portion of the easement, nor shall property owners plant any tree or trees or plant any other vegetation or flora on any portion of the easement except at the written consent of the City of Ontario, its successors and assigns.

**Non-Permitted Activities by Property Owners:**

No other easement or easements shall be granted on, under, or over this easement without obtaining the prior written consent of City of Ontario, its successors and assigns.

**Permitted Activities by Condemning City:**

The City of Ontario shall be entitled to trim, cut, or clear away any trees, brush, or other vegetation or flora from time to time as plaintiff determines in its sole discretion without payment of any additional compensation to property owners.

The TCE shall commence on the date the contractor is issued the Notice to Proceed letter and will terminate upon recording of the Notice of Completion of the City of Ontario Mountain Avenue and Holt Boulevard Intersection Widening Project by the City of Ontario. The use of the TCE area is anticipated to be required for a period of 8 months within the described timeline unless the term of the TCE is extended by written agreement of the parties.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

## Legal Definitions of Property to be Acquired

The following is the definition of legal rights to be acquired by the City of Ontario:

**"Permanent Easement"** refers to a non-exclusive permanent and perpetual easement and right of way in favor of City of Ontario, and to its successors, and assigns, hereinafter described together with the right to forever construct, maintain, improve, alter, relocate, inspect, occupy, and use for the construction and maintenance of streets and underground lines, power poles, public utilities, and other public uses, as determined necessary by City of Ontario together with all necessary rights incidental thereto, on, over, under, and across the property in connection with the exercise of any easement rights described herein.

Property Owner shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over, or under any portion of the easement, or plant trees or any other vegetation on any portion of the easement except with the prior written consent of City of Ontario, its successors and assigns.

City of Ontario shall have the right to trim, cut or clear away any trees, brush, or other vegetation from time to time as determined in its sole discretion, without payment of additional compensation.

No other easements shall be granted on, under or over the easement without the prior written consent of City of Ontario, its successors and assigns.

The ground elevations of the roadway upon completion of construction shall not be further increased or decreased without the prior written consent of City of Ontario.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

**"Temporary Construction Easement"** or **"TCE"** grants to the City of Ontario, its contractors, successors, and assigns, to engage in construction and related activities related to the Mountain Avenue and Holt Boulevard Intersection Widening Project, together with all necessary rights of ingress and egress to the non- exclusive easement area in connection with such construction and related activities.

**Permitted Activities by Property Owners:**

Prior to termination of this easement, property owners shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over or under any portion of the easement, nor shall property owners plant any tree or trees or plant any other vegetation or flora on any portion of the easement except at the written consent of the City of

vegetation or flora on any portion of the easement except at the written consent of the City of Ontario, its successors and assigns.

**Non-Permitted Activities by Property Owners:**

No other easement or easements shall be granted on, under, or over this easement without obtaining the prior written consent of City of Ontario, its successors and assigns.

**Permitted Activities by Condemning City:**

The City of Ontario shall be entitled to trim, cut, or clear away any trees, brush, or other vegetation or flora from time to time as plaintiff determines in its sole discretion without payment of any additional compensation to property owners.

The TCE shall commence on the date the contractor is issued the Notice to Proceed letter and will terminate upon recording of the Notice of Completion of the City of Ontario Mountain Avenue and Holt Boulevard Intersection Widening Project by the City of Ontario. The use of the TCE area is anticipated to be required for a period of 8 months within the described timeline unless the term of the TCE is extended by written agreement of the parties.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

**EXHIBIT "A"**

**Easement Deed of Right of Way Dedication**
**Legal Description**

**APN 1011-131-03**

Being a portion of Lots 3 and 4 and the East 2 feet of Lot 2 of Tract No. 2950 Roberta Tract, in the City of Ontario, County of San Bernardino, State of California, as per map recorded in Book 40 of Maps, Page 50 in the Office of the County Recorder of said County, more particularly described as follows:

**COMMENCING** at the intersection of Holt Boulevard (formerly A Street) and Mountain Avenue;

Thence along the centerline of said Holt Boulevard, South 89°36'04" West 356.77 feet;

Thence South 00°23'56" East 50.00 feet to a point on the southerly right of way line of Holt Boulevard (50 feet half width) said point also being the northeast corner of said Lot 4 and the **TRUE POINT OF BEGINNING**;

Thence along the easterly line of said Lot 4, South 00°23'56" East 10.00 feet to a point on a line parallel with and 60.00 feet distant from said centerline of Holt Boulevard;

Thence along said parallel line, South 89°36'04" West 6.72 feet;

Thence North 88°15'05" West 135.82 feet to a point on the westerly line of said Lot 3;

Thence along said westerly line North 00°23'56" West 4.91 feet to said southerly right of way line of Holt Avenue;

Thence along said southerly right of way line North 89°36'04" East 142.44 feet to the northeast corner of said Lot 4 and the **TRUE POINT OF BEGINNING**;

Parcel contains 1,079 square feet more or less.

This real property description has been prepared by me, or under my direction, in conformance with the Professional Land Surveyors Act.

## Legal Definitions of Property to be Acquired

The following is the definition of legal rights to be acquired by the City of Ontario:

**"Permanent Easement"** refers to a non-exclusive permanent and perpetual easement and right of way in favor of City of Ontario, and to its successors, and assigns, hereinafter described together with the right to forever construct, maintain, improve, alter, relocate, inspect, occupy, and use for the construction and maintenance of streets and underground lines, power poles, public utilities, and other public uses, as determined necessary by City of Ontario together with all necessary rights incidental thereto, on, over, under, and across the property in connection with the exercise of any easement rights described herein.

Property Owner shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over, or under any portion of the easement, or plant trees or any other vegetation on any portion of the easement except with the prior written consent of City of Ontario, its successors and assigns.

City of Ontario shall have the right to trim, cut or clear away any trees, brush, or other vegetation from time to time as determined in its sole discretion, without payment of additional compensation.

No other easements shall be granted on, under or over the easement without the prior written consent of City of Ontario, its successors and assigns.

The ground elevations of the roadway upon completion of construction shall not be further increased or decreased without the prior written consent of City of Ontario.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

**"Temporary Construction Easement"** or **"TCE"** grants to the City of Ontario, its contractors, successors, and assigns, to engage in construction and related activities related to the Mountain Avenue and Holt Boulevard Intersection Widening Project, together with all necessary rights of ingress and egress to the non- exclusive easement area in connection with such construction and related activities.

**Permitted Activities by Property Owners:**

Prior to termination of this easement, property owners shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over or under any portion of the easement, nor shall property owners plant any tree or trees or plant any other vegetation or flora on any portion of the easement except at the written consent of the City of

vegetation or flora on any portion of the easement except at the written consent of the City of Ontario, its successors and assigns.

**Non-Permitted Activities by Property Owners:**

No other easement or easements shall be granted on, under, or over this easement without obtaining the prior written consent of City of Ontario, its successors and assigns.

**Permitted Activities by Condemning City:**

The City of Ontario shall be entitled to trim, cut, or clear away any trees, brush, or other vegetation or flora from time to time as plaintiff determines in its sole discretion without payment of any additional compensation to property owners.

The TCE shall commence on the date the contractor is issued the Notice to Proceed letter and will terminate upon recording of the Notice of Completion of the City of Ontario Mountain Avenue and Holt Boulevard Intersection Widening Project by the City of Ontario. The use of the TCE area is anticipated to be required for a period of 8 months within the described timeline unless the term of the TCE is extended by written agreement of the parties.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

## Legal Definitions of Property to be Acquired

The following is the definition of legal rights to be acquired by the City of Ontario:

"**Temporary Construction Easement**" or "**TCE**" grants to the City of Ontario, its contractors, successors, and assigns, to engage in construction and related activities related to the Mountain Avenue and Holt Boulevard Intersection Widening Project, together with all necessary rights of ingress and egress to the non- exclusive easement area in connection with such construction and related activities.

**Permitted Activities by Property Owners:**

Prior to termination of this easement, property owners shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over or under any portion of the easement, nor shall property owners plant any tree or trees or plant any other vegetation or flora on any portion of the easement except at the written consent of the City of Ontario, its successors and assigns.

**Non-Permitted Activities by Property Owners:**

No other easement or easements shall be granted on, under, or over this easement without obtaining the prior written consent of City of Ontario, its successors and assigns.

**Permitted Activities by Condemning City:**

The City of Ontario shall be entitled to trim, cut, or clear away any trees, brush, or other vegetation or flora from time to time as plaintiff determines in its sole discretion without payment of any additional compensation to property owners.

The TCE shall commence on the date the contractor is issued the Notice to Proceed letter and will terminate upon recording of the Notice of Completion of the City of Ontario Mountain Avenue and Holt Boulevard Intersection Widening Project by the City of Ontario. The use of the TCE area is anticipated to be required for a period of 8 months within the described timeline unless the term of the TCE is extended by written agreement of the parties.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

## Legal Definitions of Property to be Acquired

The following is the definition of legal rights to be acquired by the City of Ontario:

**"Permanent Easement"** refers to a non-exclusive permanent and perpetual easement and right of way in favor of City of Ontario, and to its successors, and assigns, hereinafter described together with the right to forever construct, maintain, improve, alter, relocate, inspect, occupy, and use for the construction and maintenance of streets and underground lines, power poles, public utilities, and other public uses, as determined necessary by City of Ontario together with all necessary rights incidental thereto, on, over, under, and across the property in connection with the exercise of any easement rights described herein.

Property Owner shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over, or under any portion of the easement, or plant trees or any other vegetation on any portion of the easement except with the prior written consent of City of Ontario, its successors and assigns.

City of Ontario shall have the right to trim, cut or clear away any trees, brush, or other vegetation from time to time as determined in its sole discretion, without payment of additional compensation.

No other easements shall be granted on, under or over the easement without the prior written consent of City of Ontario, its successors and assigns.

The ground elevations of the roadway upon completion of construction shall not be further increased or decreased without the prior written consent of City of Ontario.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

**"Temporary Construction Easement"** or **"TCE"** grants to the City of Ontario, its contractors, successors, and assigns, to engage in construction and related activities related to the Mountain Avenue and Holt Boulevard Intersection Widening Project, together with all necessary rights of ingress and egress to the non- exclusive easement area in connection with such construction and related activities.

**Permitted Activities by Property Owners:**

Prior to termination of this easement, property owners shall not erect or construct, or permit to be erected or constructed, any building, structure or improvement on, over or under any portion of the easement, nor shall property owners plant any tree or trees or plant any other vegetation or flora on any portion of the easement except at the written consent of the City of

vegetation or flora on any portion of the easement except at the written consent of the City of Ontario, its successors and assigns.

**Non-Permitted Activities by Property Owners:**

No other easement or easements shall be granted on, under, or over this easement without obtaining the prior written consent of City of Ontario, its successors and assigns.

**Permitted Activities by Condemning City:**

The City of Ontario shall be entitled to trim, cut, or clear away any trees, brush, or other vegetation or flora from time to time as plaintiff determines in its sole discretion without payment of any additional compensation to property owners.

The TCE shall commence on the date the contractor is issued the Notice to Proceed letter and will terminate upon recording of the Notice of Completion of the City of Ontario Mountain Avenue and Holt Boulevard Intersection Widening Project by the City of Ontario. The use of the TCE area is anticipated to be required for a period of 8 months within the described timeline unless the term of the TCE is extended by written agreement of the parties.

Property Owner shall not cause, directly, indirectly or negligently, any interference with or harm to the rights conveyed hereunder.

**EXHIBIT "A"**

**Easement Deed of Right of Way Dedication**
**Legal Description**

**APN 1011-132-07**

Being a portion of Lots 9, 10 and 11 of Tract No. 2950 Roberta Tract, in the City of Ontario, County of San Bernardino, State of California, as per map recorded in Book 40 of Maps, Page 50 in the Office of the County Recorder of said County, more particularly described as follows:

**COMMENCING** at the intersection of Holt Boulevard (formerly A Street) and Mountain Avenue;

Thence along the centerline of said Holt Boulevard North 89°36'04" East 175.02 feet;

Thence South 00°23'56" East 50.00 feet to a point on the southerly right of way line of Holt Boulevard (50 feet half width) also being a point on the westerly line of the East 20.96 feet of said Lot 9 and the **TRUE POINT OF BEGINNING**;

Thence along said southerly right of way line North 89°36'04" East 151.57 feet to the easterly line of the West 54.00 feet of said Lot 11;

Thence along said easterly line South 00°29'25" East 3.96 feet;

Thence South 87°27'12" West 151.68 feet to said westerly line;

Thence along said westerly line North 00°23'05" West 9.64 feet to the said southerly right of way line and the **TRUE POINT OF BEGINNING**;

Parcel contains 1,031 square feet more or less.

This real property description has been prepared by me, or under my direction, in conformance with the Professional Land Surveyors Act.

Resolution No. 2021-___

| *CITY OF ONTARIO*<br>*Agenda Report*<br>**June 15, 2021** | **SECTION:**<br>**PUBLIC HEARINGS** |
|---|---|
| Department: Planning<br>Prepared By: Diane Ayala<br>Staff Member Presenting:<br>Scott Murphy, Executive Director Community Development<br>Approved By: | Submitted To: Council/OHA<br>Approved: _____<br>Continued To: _____<br>Denied: _____<br>Item No: 16 |

**SUBJECT: A PUBLIC HEARING TO CONSIDER AN AMENDMENT TO THE EMPORIA FAMILY HOUSING PLANNED UNIT DEVELOPMENT ("PUD"), AMENDING CERTAIN PROVISIONS TO: [1] EXPAND THE PROJECT AREA FROM APPROXIMATELY 2.80 ACRES OF LAND TO 4.95 ACRES OF LAND; [2] ESTABLISH MINIMUM BUILDING SETBACKS FROM PALM AVENUE AND TRANSIT STREET RIGHTS-OF-WAY; [3] MODIFY MINIMUM PARKING REQUIREMENTS; [4] ALLOW ON-STREET LOADING; AND [5] UPDATE THE PLANTING PALETTE**

**RECOMMENDATION:** That the City Council consider and adopt a resolution approving the use of an Addendum to the Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140) and introduce and waive further reading of an ordinance approving File No. PUD21-001, an amendment to the Emporia Family Housing Planned Unit Development to expand the project area, establish certain building setback requirements, modify parking requirements, allow on-street loading, and update the plant palette.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Invest in the Growth and Evolution of the City's Economy**
**Operate in a Businesslike Manner**
**Focus Resources in Ontario's Commercial and Residential Neighborhoods**

**FISCAL IMPACT:** There is no fiscal impact anticipated. The proposed amendment to the Emporia Family Housing Planned Unit Development (PUD) proposes to amend the development standards and guidelines to facilitate the development of high density residential apartments. Implementation of the PUD would result in an increase in property taxes from future residential development.

**BACKGROUND & ANALYSIS:** On June 6, 2017, the City Council approved the Emporia Family Housing Planned Unit Development ("PUD"), File No. PUD17-001, establishing development standards and guidelines for the development of a high density residential apartment project on 2.95 acres of land bordered by Fern Avenue on the east, Vine Avenue on the west, Holt Boulevard on the north, and Emporia Street on the south. Construction of "Emporia Place (Phase 1)," consisting of 75 multiple-family dwelling units, has been completed.

On February 23, 2021, the Related Companies of California, LLC, in collaboration with the City of Ontario, submitted an Amendment to the Emporia Family Housing PUD, File No. PUD21-001, to expand the PUD project area by 2.15 acres of land, to include one-block bordered by Transit Street on

the north, Fern Avenue on the west, Palm Avenue on the east, Emporia Street on the south, and 2 lots on the south side of Emporia Street, to facilitate the construction of 50 multiple-family affordable apartment units, known as "Emporia Place (Phase 2)."

The PUD Amendment proposes to allow 50 apartment units in a stacked flat configuration, at an overall residential density of 25.25 dwelling units per acre. This meets The Ontario Plan Policy Plan Mixed Use land use designation requirement of minimum 25.1 dwelling units per acre.

The PUD will continue to utilize a combination of on-site and on-street parking to provide an adequate parking supply to meet the anticipated parking demand for the project. All resident parking will be provided on-site or on an off-street parking lot, while guest parking spaces will be provided on-street. New parking ratios to reduce minimum parking requirements for one-bedroom units (from 1.75 spaces per dwelling unit to one space per dwelling unit), 2-bedroom units (from 2 spaces per dwelling unit to 1.65 spaces per dwelling unit), and create a new parking requirement for 3-bedroom units, at a ratio of 2 spaces per dwelling unit, are proposed. The PUD Amendment will eliminate the covered parking requirement and introduces a new off-street parking lot, comprised of 53 parking spaces, which is located on the south side of Emporia Street. Additionally, the use of tandem parking spaces is proposed with the same dwelling unit assigned to both tandem spaces.

In order to connect Phases 1 and 2 as one development, the PUD proposes to allow the adjoining section of Fern Avenue, bound by Transit Street on the north and Emporia Street on the south, to be vacated. Vehicular access to the fully developed Phase 1 area will be maintained. A new vehicular access for Phase 2 will be provided from Palm Avenue. Additionally, vehicular access to a new off-street parking facility will be provided from Emporia Street. The PUD will continue to provide separate east-west and north-south pedestrian paseos and connecting walkway links to the residential units, parking, and common areas throughout the site, increasing walkability.

Trees located in street, parking lot, building perimeter, and patio areas listed in the PUD Table 4-5-Planting Palette, have been replaced with a new planting palette to meet requirements of the Development Code and the California Department of Water Resources Model Water-Efficient Landscape Ordinance (MWELO). The existing Silk Oaks and California Fan Palms located within the Emporia Street parkway will remain in place. Areas that are void of street trees will be planted with Silk Oak and California Fan Palm as not to disrupt or alter the existing historic street tree planting pattern. The proposed amendment meets the goals and objectives as established in the PUD.

On May 25, 2021, the Planning Commission conducted a public hearing to consider the project and concluded the hearing on that date. After considering all public testimony on the application, the Planning Commission voted unanimously (6-0) to approve a resolution recommending that the City Council approve the amendment to the Emporia Family Housing Planned Unit Development.

**HOUSING ELEMENT COMPLIANCE**: The Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The project site is one of the properties listed in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix, and the proposed project exceeds the 31-dwelling units and density of 25.1 dwelling units per acre as specified in the Available Land Inventory.

**AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE:** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted

Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the ALUCP. Any special conditions of approval associated with uses in close proximity to the airport are included in the conditions of approval provided with the attached Resolution.

**ENVIRONMENTAL REVIEW:** The environmental impacts of this project were reviewed in conjunction with an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the Ontario City Council on January 27, 2010 in conjunction with File No. PGPA06-001. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures, as identified in Addendum and Mitigation Monitoring Program, are incorporated herein by this reference.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING THE USE OF AN ADDENDUM TO THE ONTARIO PLAN ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2008101140), PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO. PUD21-001.

WHEREAS, THE RELATED COMPANIES OF CALIFORNIA, LLC. (hereinafter referred to as "Applicant") has filed an Application for the approval of an amendment to the Emporia Family Housing Planned Unit Development, File No. PUD21-001 which consists of an expansion of the Project area from approximately 2.80 acres of land to 4.95 acres of land, establish minimum building setbacks from Palm Avenue and Transit Street rights-of-way, modify minimum parking requirements, allow on-street loading, and update the planting palette, within a 3-block area bound by Holt Boulevard and Transit Street on the north, Vine Avenue on the west, Fern and Palm Avenues on the east, Emporia Street on the south, and 2 lots located at 303 and 309 West Emporia Street in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140) was certified on January 27, 2010 (hereinafter referred to as “Certified EIR”), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as “EIR Addendum”) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as “CEQA”); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, on May 25, 2021, the Planning Commission of the City of Ontario conducted a hearing to consider the Addendum and concluded said hearing on that date,

voting to issue Resolution No. PC21-033, recommending that the City Council concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and further recommending that the City Council take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the City Council is the decision-making authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the City Council has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project are on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making authority for the Project, The City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the Ontario City Council on January 27, 2010 in conjunction with File No. PGPA06-001.

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts.

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference.

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts; and

SECTION 2. ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the City Council hereby finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby approve the use of the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

PASSED, APPROVED, AND ADOPTED this 15th day of June 2021.

# PLANNING COMMISSION STAFF REPORT

May 25, 2021

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

**FILE NO:** PUD21-001

**SUBJECT:** An Amendment to the Emporia Family Housing Planned Unit Development to expand the Project area from approximately 2.80-acres of land to 4.95-acres of land, establish minimum building setbacks from Palm Avenue and Transit Street rights-of-way, modify minimum parking requirements, allow on-street loading, and update the planting palette; (APNs: 1049-051-04, 1049-054-02, 1049-054-03, 1049-054-04, 1049-054-06, 1049-059-06, and 1049-059-07) **submitted by The Related Companies of California, LLC. City Council action is required.**

**PROPERTY OWNER:** City of Ontario Housing Authority and American Legion Post No. 112

---

**RECOMMENDED ACTION:** That the Planning Commission consider and adopt resolutions recommending that the City Council: [1] approve the use of an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140); and [2] approve File No. PUD21-001, pursuant to the facts and reasons contained in the staff report and attached resolution.

**PROJECT SETTING:** The Project site is comprised of 4.95-acres of land and encompasses a 3-block area bordered by Holt Boulevard and Transit Street on the north, Vine Avenue on the west, Fern Avenue and Palm Avenue on the east, and Emporia Street on the south, and 2 lots located at 303 and 309 West Emporia Street, within LUA2-N (Arts District- North) and LUA-3 (Holt Boulevard District) of the MU-1 (Downtown Mixed Use) zoning district, and is depicted in Figure 1: Project Location.

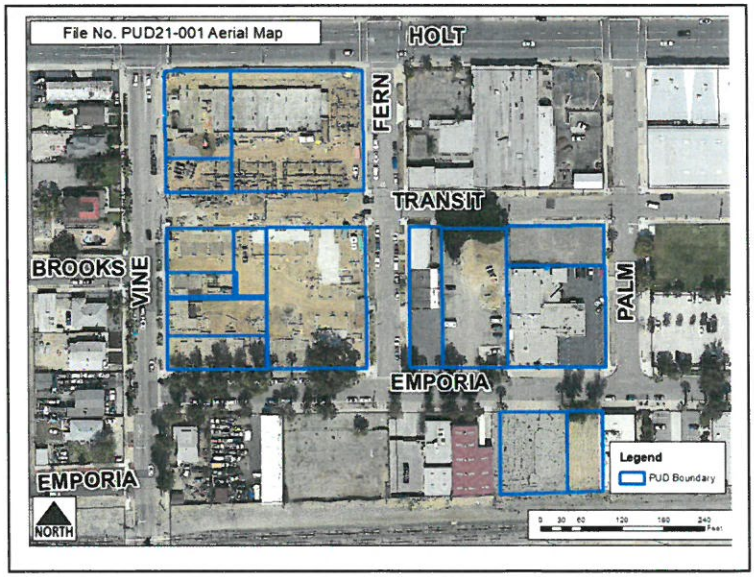

***Figure 1: Project Location***

Existing land uses on the Project site includes a 75-unit affordable housing development known as Emporia Family Housing — Phase 1,

unimproved land and two single-story commercial buildings that have been determined to be Tier III historic resources and are listed on the local register of historic properties. The existing land uses south of Emporia Street, within the project site, are unimproved. Land uses surrounding the project site are characterized by a mixture of legal nonconforming residential uses, light industrial, and commercial uses. The existing surrounding land uses, zoning, and general plan land use designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report.

## PROJECT ANALYSIS:

(1) Background — The project site is located within the Center City Redevelopment Project Area, established in 1983. And while the redevelopment practice was eliminated by the State, the Center City Redevelopment Project Area Plan is still in effect and encourages the development of a high intensity, multi-use central business district. In addition, The Ontario Plan contains goals and policies for the City's original downtown and the Downtown Mixed Use District, which further support the goals of the Center City Redevelopment Project Area Plan. The Center City Redevelopment Project Area Plan envisions revitalization of the City's downtown area, in part, by infusing high-density residential and mixed-use developments into the downtown core. The Ontario Plan ("TOP") was established to further this vision and is intended to create an intensive mixture of retail, office, and residential uses in a pedestrian friendly atmosphere, ensure the historic character of the district is enhanced, and concentrate the most intense/dense development along Euclid Avenue and Holt Boulevard. Furthermore, The Ontario Plan specifies a residential density range of 25 to 75 units per acre and a maximum floor area ratio of 2.0 for commercial office and retail developments within the Downtown Mixed Use District.

On May 23, 2017, the Planning Commission approved a Tentative Parcel Map (File No. PMTT17-005) to consolidate lots and vacate a portion of Transit Street, in conjunction with a Development Plan (File No. PDEV17-017) to construct 75 multiple-family residential affordable apartment units on 2.95-acres of land generally located south of Holt Boulevard, east of Fern Avenue, north of Emporia Street, and west of Vine Avenue. The Tentative Parcel Map and Development Plan approvals were contingent upon City Council approval of the Emporia Family Housing Planned Unit Development ("PUD").

On June 6, 2017, the City Council approved the Emporia Family Housing PUD, File No. PUD17-001, establishing development standards and guidelines for the development of a high density residential apartment project on 2.95 acres of land bordered by Fern Avenue on the east, Vine Avenue on the west, Holt Boulevard on the north, and Emporia Street on the south. Construction of Emporia Family Housing - Phase 1, consisting of 75 multiple-family dwelling units, has been completed.

On February 23, 2021, the Applicant submitted an Amendment to the Emporia Family Housing PUD (File No. PUD21-001), in conjunction with Tentative Parcel Map (File No. PMTT21-004), and Development Plan (File No. PDEV21-008) applications to expand the

PUD project area by 2.15-acres of land, consolidate parcels of land, vacate a portion of Fern Avenue south of Transit Street and north of Emporia Street, and construct 50 multiple-family affordable apartment units (known as "Emporia Family Housing- Phase 2"), and a Certificate of Appropriateness application (File No. PHP21-003) to allow the demolition of two Tier III historic resources to accommodate the proposed multiple-family residential development.

(2) Site Design/Building Layout — The PUD Amendment proposes to allow 50 walk-up units in a stacked flat configuration, at an overall residential density of 25.25 dwelling units per acre, meeting TOP's Mixed Use land use designation requirement of minimum 25.1 dwelling units per acre. Minimum building setbacks proposed along Palm Avenue and Transit Street are 5-feet and are consistent with current PUD setback requirements.

(3) Site Access/Circulation/Utilities — In order to create a single development site connecting Phase 1 and Phase 2, Fern Avenue, between Transit and Emporia Streets, will be vacated. Existing public utilities in Fern Avenue will be relocated to adjacent streets. However, a 30-foot wide public utilities easement will be reserved within the vacated street right-of-way.

Vehicular access to the fully developed Phase 1 area will be maintained. A new vehicular access for Phase 2 will be provided from Palm Avenue. Additionally, vehicular access to a new off-street parking facilities will be provided from Emporia Street. The PUD will continue to provide separate east-west and north-south pedestrian paseos and connecting walkway links to the residential units, parking, and common areas throughout the site, for an increase in walkability (see Figure 2: Circulation Plan).

(4) Parking — Special consideration of reduced parking requirements for affordable housing projects is given by the State of California. On November 29, 2018, the California Department of Housing and Community Development (HCD) released the guidelines for the Streamlined Ministerial Approval Process created by Senate Bill No. 35 (SB 35 Guidelines), for eligible affordable housing projects. SB 35 allows local jurisdictions to reduce parking requirements for eligible projects to a maximum of one space per dwelling unit or waive all parking requirements for Project sites located within one-half mile of public transit. While the proposed Project is not

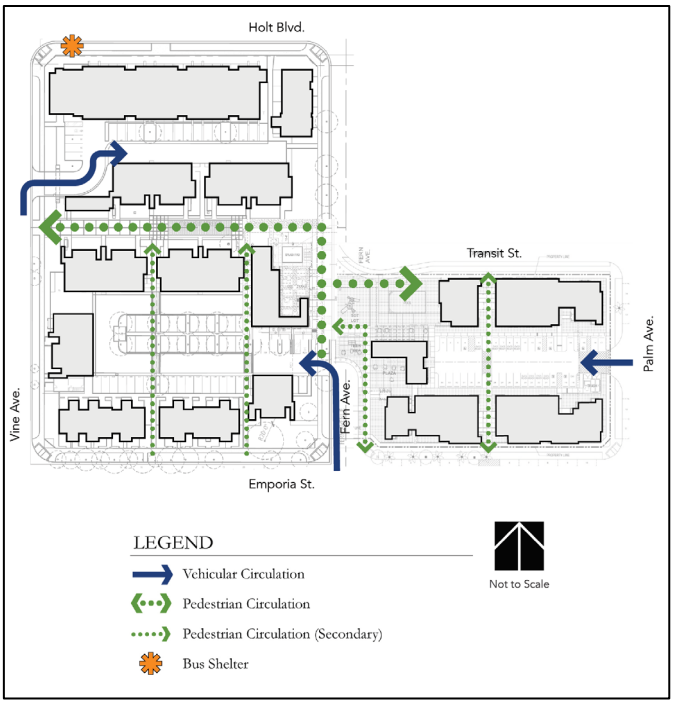

***Figure 2—Circulation Plan***

pursuing ministerial action under SB 35, it will provide 50-dwelling units that meet the affordable housing threshold and the Project site is located within the one-half mile of OmniTrans Bus Route 61 on Holt Boulevard. Parking standards for affordable housing should be customized to create alignment between parking needs and the requirements. Overall affordable housing projects tend to have fewer vehicles per household when compared to market rate housing. Efficiency-based parking, which also considers proximity to transit, can be tailored to the demand to minimize an oversupply of parking, an increase in development cost, and reduction of on-site amenities.

The PUD will continue to utilize a combination of on-site and on-street parking to provide an adequate parking supply to meet the anticipated parking demand for the project. All resident parking will be provided on site or on an off-street parking lot, while guest parking spaces will be provided on-street. New parking ratios and elimination of the covered parking requirement is proposed in the Amendment and are shown in the table below. A new off-street parking lot, comprised of 53 parking spaces, is located on the south side of Emporia Street. In addition, the use of tandem parking spaces is proposed, with the same dwelling unit assigned to both tandem spaces. Tandem parking for guest/visitor use is prohibited.

| ***PUD Parking Requirements*** | | |
|---|---|---|
| ***Type of Use*** | ***Current Parking Ratio*** | ***Proposed Parking Ratio*** |
| 1-bedroom units | 1.75 spaces per dwelling, including one space in a garage | 1 space per dwelling |
| 2 or more-bedroom units | 2.0 spaces per dwelling, including one space in a garage or carport | 1.65 spaces per dwelling |
| 3 or more-bedroom units | N/A | 2.0 spaces per dwelling |
| Visitor | 1 Space Per 5 | No change |

(5) Landscaping —Street, parking lot, building perimeter, and patio area trees listed in PUD Table 4-5, Planting Palette, were replaced with a new planting palette to meet requirements of the Development Code and the California Department of Water Resources Model Water-Efficient Landscape Ordinance (MWELO). The existing Silk Oaks and California Fan Palms located within the Emporia Street parkway will remain in place and areas that are void of street trees will be planted with Silk Oak and California Fan Palm as not to disrupt or alter the existing historic street tree planting pattern.

(6) Historic Preservation — The Amendment identifies two new historic resources within the Project site. On August 10, 2010, the Historic Preservation Subcommittee approved a Tier III Determination, File No. PHP10-004, for a 4,000 square foot, one-story commercial/office building located at 201-215 South Fern Avenue. On January 11, 2011, the Historic Preservation Subcommittee approved a Tier III Determination, File No. PHP10-011, for a 10,000 square foot, one-story commercial building, commonly known as the

American Legion Building, located at 310 West Emporia Street. Issuance of a Certificate of Appropriateness is required prior to demolition of the historic buildings and as described in the "Background" section of this report, is being processed concurrently with this PUD Amendment request.

The proposed Amendment meets the goals and objectives as established in the Emporia Family Housing PUD. All proposed modifications to the PUD are identified by colored text in Attachment A of the resolution included with this staff report.

**COMPLIANCE WITH THE ONTARIO PLAN:** The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

(2) Vision.

**Distinctive Development:**

- Commercial and Residential Development

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

**Decision Making:**

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

➢ G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

**Land Use Element:**

- Goal LU1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

**Housing Element:**

- Goal H2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

  - H2-1 Corridor Housing. We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.

  - H2-2 Historic Downtown. We foster a vibrant historic downtown through facilitating a wide range of housing types and affordability levels for households of all ages, housing preferences, and income levels.

  - H2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

  - H2-6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.

Goal H5: A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.

  - H5-2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.

**Community Economics Element:**

- Goal CE1: A complete community that provides for all incomes and stages of life.

  - CE1-6 Diversity of Housing. We collaborate with residents, housing providers and the development community to provide housing opportunities for every stage of life;

we plan for a variety of housing types and price points to support our workforce, attract business and foster a balanced community.

**Community Design Element:**

- Goal CD1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.

  - CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing the diverse character of our existing viable neighborhoods.

  - CD1-2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.

  - CD1-3 Neighborhood Improvement. We require viable existing residential and non-residential neighborhoods to be preserved, protected, and enhanced in accordance with our land use policies.

- Goal CD2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional, and distinct.

  - CD2-1 Quality Architecture. We encourage all development projects to convey visual interest and character through:

    - Building volume, massing, and height to provide appropriate scale and
    - A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
    - Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.

  - CD2-7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.

  - CD2-8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of visibility and accessibility, and use of lighting.

- CD2-9 Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD2-10 Surface Parking Areas. We require parking areas visible to or used by the public to be landscaped in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.

- CD2-11 Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

- Goal CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics.

- CD3-2 Connectivity Between Streets, Sidewalks, Walkways and Plazas. We require landscaping and paving be used to optimize visual connectivity between streets, sidewalks, walkways, and plazas for pedestrians.

- CD3-6 Landscaping. We utilize landscaping to enhance the aesthetics, functionality and sustainability of streetscapes, outdoor spaces and buildings.

**HOUSING ELEMENT COMPLIANCE:** The Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The project site is one of the properties listed in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix, and the proposed project exceeds the 31-dwelling units and density of 25.1 dwelling units per acre as specified in the Available Land Inventory.

**AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE:** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino,

Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. The proposed Project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the ALUCP. Any special conditions of approval associated with uses in close proximity to the airport are included in the conditions of approval provided with the attached Resolution.

**ENVIRONMENTAL REVIEW:** The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the Ontario City Council on January 27, 2010, in conjunction with File No. PGPA06-001. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of project approval and are incorporated herein by this reference.

RESOLUTION NO. PC21-033

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO APPROVING THE USE OF AN ADDENDUM TO THE ONTARIO PLAN ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NOS. PUD21-001, PHP21-003, PMTT21-004, AND PDEV21-004.

WHEREAS, The Related Companies of California, LLC, (hereinafter referred to as "Applicant") has filed Applications for the approval of certain entitlements, including: [1] an Amendment to the Emporia Family Housing Planned Unit Development “PUD”, File No. PUD21-001, which consists of amending certain provisions to: [a] expand the project boundary area from approximately 2.95-acres of land to 4.95-acres of land; [b] establish minimum building setbacks; [c] modify minimum parking requirements; [d] allow on-street loading; [e] update the planting palette; and [f] make various revisions necessary to the internal consistency of the PUD; [2] a Certificate of Appropriateness, File No. PHP21-003, for the demolition of two Tier III historic resources; [3] Tentative Parcel Map, File No. PMTT21-004 (TPM 20339), to consolidate four lots and the vacation of an adjoining section of Fern Avenue, for a total of 1.71 acres of land; and [4] a Development Plan, File No. PDEV21-008, to construct 50 multiple-family affordable housing dwelling units, along with the improvement of a 0.44-acre off-site parking facility, on approximately 4.95 acres of land, bordered by Holt Boulevard and Transit Street on the north, Vine Avenue on the west, Fern Avenue and Palm Avenue on the east, Emporia Street on the south, and two lots on the south side of Emporia Street, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, The Ontario Plan Environmental Impact Report, State Clearinghouse No. 2008101140, was certified by City Council on January 27, 2010 (hereinafter referred to as “Certified EIR”), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as “EIR Addendum”) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as “CEQA”); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the recommending authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the Planning Commission has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project are on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the Ontario City Council on January 27, 2010, in conjunction with File No. PGPA06-001.

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines.

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts.

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference.

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the Planning Commission hereby recommends the City Council finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby approve the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 6: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of May 2021, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage
Planning Commission Chairman

ATTEST:

Rudy Zeledon
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA )
COUNTY OF SAN BERNARDINO )
CITY OF ONTARIO )

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC21-033, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on May 25, 2021, by the following roll call vote, to wit:

AYES: DeDiemar, Gage, Gregorek, Lampkin, Ricci, Willoughby

NOES: None

ABSENT: None

ABSTAIN: None

***California Environmental Quality Act***

# *Addendum to The Ontario Plan Environmental Impact Report*

**Project Title/File Nos.**: PUD21-001, PHP21-003, PMTT21-004 and PDEV21-008

**Lead Agency:** City of Ontario, 303 East "B" Street, Ontario, California 91764, (909) 395-2036

**Contact Person:** Diane Ayala, Senior Planner, (909) 395-2428

**Project Sponsor:** The Related Companies of California, LLC., c/o Randy Mai, 18201 Von Karmen Ave, Suite 900, Irvine, CA 92612; Phone: 510-421-2999; Email: Randy.Mai@related.com

**Project Location:** The Project site is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. As illustrated on Figures 1 through 3, below, the Project site is generally located at the northwest corner of Emporia Street and Palm Avenue on Assessor Parcel Numbers ("APNs"): 1049-051-04, 1049-054-02, 1049-054-03, 1049-054-04, 1049-054-06, 1049-059-06, and 1049-059-07.

Figure 1: REGIONAL LOCATION MAP

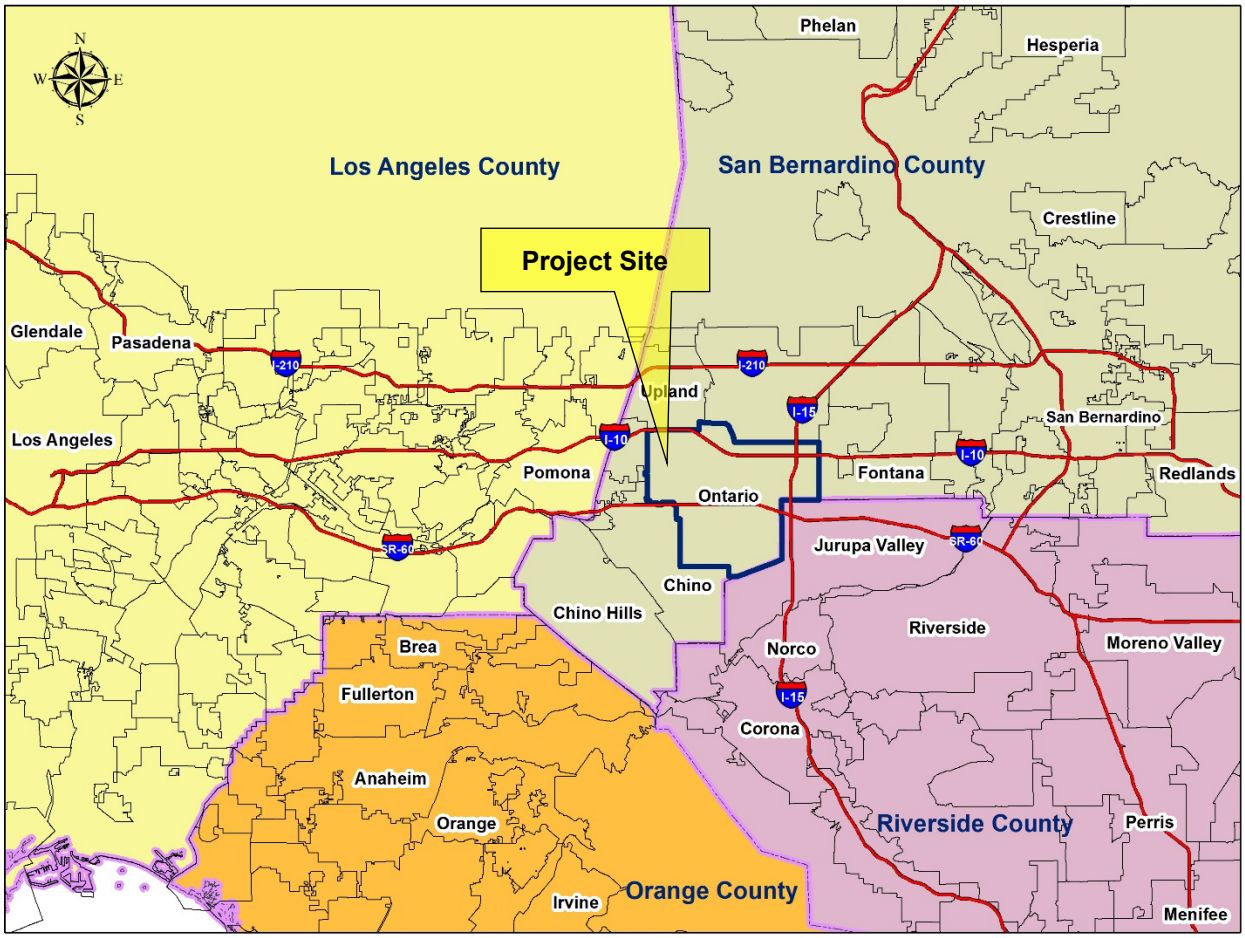

Figure 2: VICINITY MAP

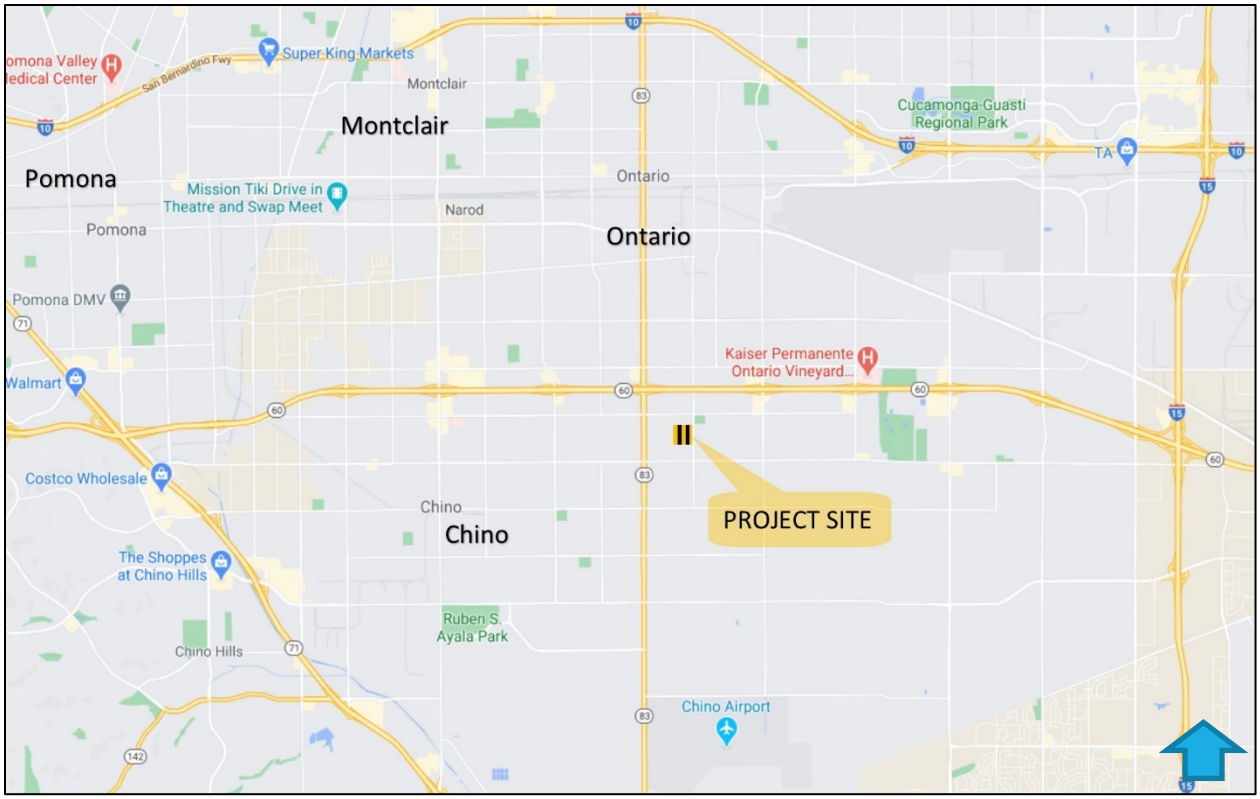

Figure 3: AERIAL PHOTOGRAPH

**General Plan Designation:** Mixed Use

**Zoning:** LUA2-N (Arts District- North) and LUA-3 (Holt Boulevard District) of the MU-1 (Downtown Mixed-Use) zoning district.

**Description of Project**: A request for approval of certain entitlements to facilitate the construction of an affordable multiple-family residential development project (Ontario Emporia Family Housing Project- Phase 2). The Project is proposed on approximately 2.15 acres of land within the Downtown Mixed Use District. Requested entitlements include the following:

1. An **Amendment to the Emporia Family Housing Planned Unit Development** (File No. PUD21-001) to expand the Project boundary area from approximately 2.80 acres of land to 4.95 acres of land, establish minimum building setbacks, modify minimum parking requirements, allow on-street loading, and update the planting palette.

2. A **Certificate of Appropriateness** (File No. PHP21-003) to demolish two historic Tier III buildings located within the Project site.

3. A **Tentative Parcel Map** (File No. PMTT21-004/ TPM 20339) to consolidate four lots and the vacation of an adjoining section of Fern Avenue, for a total of 1.71 acres of land.

4. A **Development Plan** (File No. PDEV21-008) to allow for the construction of 50 multiple-family affordable dwelling units on 2.15 acres of land, which includes the Tentative Parcel Map property in conjunction with an adjacent 0.44-acre property designated for off-street parking, located across Emporia Street, for a total project area of 2.15 acres of land.

5. A **Demolition Permit** to allow for the demolition of buildings located at 201 to 215 South Fern Avenue and 310 West Emporia Street, and determine appropriate hazardous materials (if any) and construction waste reduction measures; and

6. **A Street Vacation** to allow for the vacation of a segment of Fern Avenue, between Transit Street on the north and Emporia Street on the south , and a 30-foot wide storm drain easement will be established to allow an existing public storm drain in Fern Avenue to remain in place.

7. A **Disposition and Development Agreement (DDA)** with the Related Companies (Developer) for the development of this site as an affordable housing project. It is the intention of the parties that the Authority will sell the site to the Developer to develop a multifamily affordable rental housing project containing a total of the 50 dwelling units comprised of 6 one-bedroom units, 29 two-bedroom units, and 15 three-bedroom units. The units will be restricted to extremely low-income, very low-income, and low-income families, and will have a 55-year covenant recorded against the property to ensure the affordability and maintenance of the development.

**Discretionary and Nondiscretionary Approvals Associated with Project:** CEQA Guidelines Section 15124 states in pertinent part that if . . . "a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed . . ." Discretionary actions necessary to realize the project include, but are not limited to the following:

1. Planned Unit Development approval consistent with the requirements of The Ontario Plan and the Ontario Development Code;

2. Approval of a Development Plan subject to the requirements of the Development Code;

3. Approval of a Tentative and Final Parcel Map subject to the requirements of the Ontario Development Code;

4. Approval of a Certificate of Appropriateness Map subject to the requirements of the Ontario Development Code;

5. Approval of Demolition Permits;

6. Approval of rough and final grading plans;

7. Approval of infrastructure improvement plans, including but not limited to, roads, sewer, water, and storm water management systems;

8. Approval of architectural and structural building plans; and

9. Approval of landscape and irrigation plans.

**Project Setting:** The Project site encompasses a one-block area within the Mixed Use land use district of the Policy Plan (General Plan) and the MU-1 (Downtown Mixed Use) zoning district. The Project site is comprised of approximately 2.15 acres of land generally bordered by Transit Street to the north, Emporia Street, and the Southern Pacific Railroad Corridor to the south, Fern Avenue to the west and Palm Avenue to the east.

Existing land uses on the Project site includes unimproved land and two single-story commercial buildings that have been determined to be Tier III historic resources and are listed on the local register of historic properties. The existing properties south of Emporia Street, within the Project site, are unimproved.

Land uses surrounding the Project site are characterized by a mixture of legal nonconforming residential uses, light industrial, and commercial uses across Emporia Street to the south; retail, light industrial uses, and vacant property across Transit Street to the north; parking lot and unimproved land across Palm Avenue to the east; and a 75-unit affordable housing development (known as "Emporia Family Housing Phase 1") to the west. The surrounding existing land uses, Policy Plan (General Plan), and zoning information are summarized below.

| | *Existing Land Use* | *General Plan Designation* | *Zoning Designation* |
|---|---|---|---|
| Site: | Office, Commercial, Assembly, and Undeveloped | Mixed Use | LUA-3 (Holt Boulevard District) of MU-1 (Downtown Mixed Use) |
| North: | Retail and Undeveloped | Mixed Use | LUA-3 (Holt Boulevard District) of MU-1 (Downtown Mixed Use) |
| South: | Wholesale Machinery and Undeveloped | Mixed Use | LUA2-N (Arts District- North) of MU-1 (Downtown Mixed Use) |
| East: | Parking Lot and Undeveloped | Mixed Use | LUA2-N (Arts District- North) of MU-1 (Downtown Mixed Use) |
| West: | Multiple-Family Residential | Mixed Use | LUA-3 (Holt Boulevard District) of MU-1 (Downtown Mixed Use) |

**Cultural Resources Regulatory Setting:** The City of Ontario Historic Preservation Ordinance addresses the alteration of historic resources under the "Certificate of Appropriateness" guidelines that regulate the proposed "demolition, in whole or part" of any historic building. Development Code Section 4.02.040 (Historic Preservation – Local Historic Landmark and Local District Designations, Historic Resource Tiering, and Architectural Conservation Areas) ranks historic properties under a three-tiered system to determine their significance.

1. Tier I properties should not be demolished or significantly altered under any circumstances. Tier I properties are considered Ontario's most significant historical or cultural resources. In order for a property to be considered a Tier I it must meet the following criteria, [a] be listed as a local Eligible Historical Resource, [b] meet at least one of the criterion in the architecture category and three criteria in the historical category, or [c] be a contributor to a district and meet at least one architecture criterion and three historical criterion.

2. Demolition of Tier II properties should be avoided. In order for a property to be considered a Tier II

resource, the property must meet the following criteria, [a] be listed, or determined to be eligible for listing, in the National Register of Historic Places, or [b] be listed in the City's List of Eligible Historic Resources and determined to be eligible for listing in the California Register of Historic Places, or [c] be listed in the City's List of Eligible Historic Resources and meet at least two of the criterion in either architecture or history categories; and [4] be a contributing structure in a Eligible Historic District where the district meets at least two criterion on either the architecture or historic categories.

3. Tier III properties consist of [a] Designated Historic Landmarks; [b] contributing structures in Designated Historic Districts; or [c] historic resources listed in the Ontario Register, as defined in Development Code Section 4.02.045 (Historic Preservation – Rescind or Amend the Status of a Historic Resource). Demolition of these properties should be avoided where possible but may be appropriate under certain circumstances.

4. The City of Ontario Historic Preservation Commission makes recommendations to the Historic Preservation Subcommittee regarding the Tiers assigned to eligible historic properties. Pursuant to Development Code Section 4.02.040 (Historic Preservation – Local Historic Landmark and Local District Designations, Historic Resource Tiering, and Architectural Conservation Areas), the historic resource tiering criteria for individual properties is as follows:

**a.** Architecture/Form:

(i) The resource is prototypical, or one of the finest examples, of a period style, architectural movement, or construction in the City of a particular style of architecture, building type, or historical or archeological object. Only preeminent examples should be considered. Good representative examples of a style, period or method of construction are not appropriate; or
(ii) The resource is the first, last, only, or one of the finest examples, notable works, or the best surviving work by an architect or designer of major importance to the City, State or Nation.

**b.** History:

(i) The resource is the location of a historic event(s) that has significantly contributed to the history of the City, State, or Nation;
(ii) The resource is associated with a business, company, or individual that has made a significant cultural, social, or scientific contribution to the City, State, or Nation;
(iii) The resource is identified with a person(s) who has exerted a major influence on the heritage or history of the City, State, or Nation;
(iv) The resource embodies the ideals or principles of the "Model Colony" or furthers the ideals or principals established by the Chaffey Brothers;
(v) The resource has a direct relationship to one of the principal historic contexts in the City's history, including the "Model Colony," (includes the Chaffey Brothers, the Ontario Land and Improvement Company, or the citrus industry), the Guasti Winery or the wine industry, or the Dairy Preserve or the dairy industry;
(vi) The resource is related with a business, company, or individual significant in the agricultural history of the City; or
(vii) The resource is related to the archeological past of the region.

On August 10, 2010, the Historic Preservation Subcommittee approved a Tier III Determination (File No. PHP10-004) for the 4,000 square foot, one-story commercial building, a historic resource, located at 201-215 South Fern Avenue, within the Project site. On January 11, 2011, the Historic Preservation Subcommittee approved a Tier III Determination (File No. PHP10-011) for the 10,000 square foot, one-story commercial building, a historic resource, located at 310 West Emporia Street, also within the Project site.

**Background:** On January 27, 2010, the Ontario City Council adopted The Ontario Plan ("TOP"). TOP serves as the framework for the City's business plan and provides a foundation for the City to operate as a municipal corporation that consists of six (6) distinct components: 1) Vision; 2) Governance Manual; 3) Policy Plan; 4) Council Priorities; 5) Implementation; and 6) Tracking and Feedback. The Policy Plan

component of TOP meets the functional and legal mandate of a General Plan and contains nine elements: Land Use, Housing, Parks and Recreation, Environmental Resources, Community Economics, Safety, Mobility, Community Design and Social Resources.

An Environmental Impact Report ("EIR") was prepared for TOP (State Clearinghouse No. 2008101140) and certified by the City Council on January 27, 2010, that included Mitigation Findings and a Statement of Overriding Considerations pursuant to CEQA. The Certified TOP EIR analyzed the direct and physical changes in the environment that would be caused by TOP; focusing on changes to land use associated with the buildout of the proposed land use plan, in the Policy Plan and impacts resultant of population and employment growth in the City. The significant unavoidable adverse impacts that were identified in the EIR included agriculture resources, air quality, cultural resources, greenhouse gas emissions, noise, and transportation/traffic.

**Analysis:** According to the California Environmental Quality Act Guidelines Section 15164, an Addendum to a previously Certified EIR may be used if some changes or additions are necessary, but none of the conditions described in Section 15162 requiring the preparation of a subsequent Negative Declaration or EIR have occurred. The CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR or Negative Declaration are needed for further discretionary approval. These findings are described below:

1. *Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified effects*.

Substantial changes are not proposed by the Project and Project implementation will not require revisions to the Certified TOP EIR. The Certified TOP EIR analyzed the direct and physical changes in the environment that would be caused by TOP; focusing on changes to land use associated with the buildout of the proposed land use plan. In addition, all previously adopted mitigation measures are a condition of Project approval and are incorporated herein by reference. The attached Initial Study provides and analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

2. *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, that would require major revisions of the previous Environmental Impact Report due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.*

Substantial changes have not occurred with respect to the circumstances under which the Project was undertaken, that would not require major revisions to the Certified TOP EIR in that the proposed changes would be in keeping with the surrounding area. Therefore, no proposed changes or revisions to the EIR are required.

In addition, all previously adopted mitigation measures of the Certified TOP EIR are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

3. *Required Finding: No new information has been provided that would indicate that the proposed project would result in one or more significant effects not discussed in the previous EIR.*

No new information has been provided that would indicate the proposed Project would result in any new significant effects not previously discussed in the Certified TOP EIR. Therefore, no proposed changes or revisions to the EIR are required. In addition, all previously adopted mitigation measures of the Certified TOP EIR are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

**CEQA Requirements for an Addendum:** If changes to a Project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency may: (1) prepare a subsequent EIR if the criteria of State CEQA Guidelines Section 15162(a) are met, (2) prepare a subsequent negative declaration, (3) prepare an addendum, or (4) prepare no further documentation. (State CEQA Guidelines Section 15162(b)). When only minor technical changes or additions to the negative declaration are necessary and none of the conditions described in section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred, CEQA allows the lead agency to prepare and adopt an addendum. (State CEQA Guidelines Section 15164(b).)

Under Section 15162, a subsequent EIR or negative declaration is required only when:

1) Substantial changes are proposed in the project which will require major revisions of the previous negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the negative declaration due to the involvement of any new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the negative declaration was adopted, shows any of the following:

a) The project will have one or more significant effects not discussed in the previous negative declaration;

b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Thus, if the Project does not result in any of the circumstances listed in Section 15162 (i.e., no new or substantially greater significant impacts), the City may properly adopt an addendum to the Certified TOP EIR.

**Conclusion**: The Ontario Plan Environmental Impact Report (TOP EIR), certified by City Council on January 27, 2010, was prepared as a Program EIR in accordance with CEQA, the State CEQA Guidelines, and the City's Rules for the Implementation of CEQA and in accordance with Section 15121(a) of the State CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3).The Certified TOP EIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by the Ontario Plan. Subsequent activities within the TOP Program EIR have been evaluated to determine whether an additional CEQA documents needs to be prepared.

Accordingly, and based on the findings and information contained in the Certified TOP EIR, the analysis above, the attached Initial Study, and CEQA statute and State CEQA Guidelines, including Sections 15164 and 15162, the Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified EIR. No changes or additions to the Certified TOP EIR analyses are necessary, nor is there a need for any additional mitigation measures; therefore, pursuant to State CEQA Guidelines Section 15164, the Ontario City Council hereby adopts this Addendum to the Certified EIR.

**Other public agencies whose approval is required (e.g., permits, financing approval or participation agreement):** Permitting may be required by/through the Regional Water Quality Control Board (RWQCB) pursuant to requirements of the City's National Pollutant Discharge Elimination System (NPDES) Permit; Permitting may be required by/through the South Coast Air Quality Management District (SCAQMD) for certain equipment or land uses that may be implemented within the Project area; and Various construction, grading, and encroachment permits allowing implementation of the Project.

**Tribal Consultation:** Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1?

☐ Yes ☐ No ☒ N/A

If "yes," has consultation begun? ☐ Yes ☐ No ☐ Completed

## *ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED*

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

| | | |
|---|---|---|
| ☐ Aesthetics | ☐ Agriculture/Forestry Resources | ☐ Air Quality |
| ☐ Biological Resources | ☐ Cultural Resources | ☐ Geology / Soils |
| ☐ Greenhouse Gas Emissions | ☐ Hazards & Hazardous Materials | ☐ Hydrology / Water Quality |
| ☐ Land Use / Planning | ☐ Mineral Resources | ☐ Noise |
| ☐ Population / Housing | ☐ Public Services | ☐ Recreation |
| ☐ Transportation | ☐ Utilities / Service Systems | ☐ Mandatory Findings of Significance |
| ☐ Tribal Cultural Resources | ☐ Wildfire | ☐ Energy |

## ***DETERMINATION*** *(To be completed by the Lead Agency)*

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards; (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project; and (c) a Statement of Overriding Consideration was adopted for demolition of Tier III historic resources finding that the demolition of Tier III historic resources results in significant and unavoidable impacts that cannot be

fully mitigated to a level of less than significant, despite the imposition of all feasible mitigation measures identified in the EIR, and nothing further is required.

## *EVALUATION OF ENVIRONMENTAL IMPACTS*

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4. "Negative Declaration: Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from the "Earlier Analyses" Section may be cross-referenced).

5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

a. Earlier Analyses Used. Identify and state where they are available for review.

b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

c. Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7. Supporting Information Sources. A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.

8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9. The explanation of each issue should identify:

a. The significance criteria or threshold, if any, used to evaluate each question; and

b. The mitigation measure identified, if any, to reduce the impact to less than significance.

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **1. AESTHETICS.** Would the project: | | | | |
| **a.** Have a substantial adverse effect on a scenic vista? | ☐ | ☐ | ☐ | ☒ |
| **b.** Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? | ☐ | ☐ | ☐ | ☒ |
| **c.** In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality? | ☐ | ☐ | ☐ | ☒ |
| **d.** Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area? | ☐ | ☐ | ☐ | ☒ |
| **2. AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project: | | | | |
| **a.** Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? | ☐ | ☐ | ☐ | ☒ |
| **b.** Conflict with existing zoning for agricultural use, or a Williamson Act contract? | ☐ | ☐ | ☐ | ☒ |
| **c.** Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? | ☐ | ☐ | ☐ | ☒ |
| **d.** Result in the loss of forest land or conversion of forest land to non-forest use? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **e.** Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? | ☐ | ☐ | ☐ | ☒ |
| **3. AIR QUALITY.** Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project: | | | | |
| **a.** Conflict with or obstruct implementation of the applicable air quality plan? | ☐ | ☐ | ☐ | ☒ |
| **b.** Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard? | ☐ | ☐ | ☐ | ☒ |
| **c.** Expose sensitive receptors to substantial pollutant concentrations? | ☐ | ☐ | ☐ | ☒ |
| **d.** Result in other emissions (such as those leading to odors adversely affecting a substantial number of people? | ☐ | ☐ | ☐ | ☒ |
| **4. BIOLOGICAL RESOURCES.** Would the project: | | | | |
| **a.** Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☒ |
| **b.** Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☒ |
| **c.** Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? | ☐ | ☐ | ☐ | ☒ |
| **d.** Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? | ☐ | ☐ | ☐ | ☒ |
| **e.** Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? | ☐ | ☐ | ☐ | ☒ |
| **f.** Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **5. CULTURAL RESOURCES.** Would the project: | | | | |
| **a.** Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5? | ☐ | ☐ | ☐ | ☒ |
| **b.** Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5? | ☐ | ☐ | ☐ | ☒ |
| **c.** Disturb any human remains, including those interred outside of dedicated cemeteries? | ☐ | ☐ | ☐ | ☒ |
| **6. ENERGY.** Would the project: | | | | |
| **a.** Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation? | ☐ | ☐ | ☐ | ☒ |
| **b.** Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? | ☐ | ☐ | ☐ | ☒ |
| **7. GEOLOGY AND SOILS.** Would the project: | | | | |
| **a.** Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving: | ☐ | ☐ | ☐ | ☒ |
| **i.** Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. | ☐ | ☐ | ☐ | ☒ |
| **ii.** Strong seismic ground shaking? | ☐ | ☐ | ☐ | ☒ |
| **iii.** Seismic-related ground failure, including liquefaction? | ☐ | ☐ | ☐ | ☒ |
| **iv.** Landslides? | ☐ | ☐ | ☐ | ☒ |
| **b.** Result in substantial soil erosion or the loss of topsoil? | ☐ | ☐ | ☐ | ☒ |
| **c.** Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? | ☐ | ☐ | ☐ | ☒ |
| **d.** Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code, creating substantial direct or indirect risks to life or property? | ☐ | ☐ | ☐ | ☒ |
| **e.** Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water? | ☐ | ☐ | ☐ | ☒ |
| **f.** Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **8. GREENHOUSE GAS EMISSIONS.** Would the project: | | | | |
| **a.** Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? | ☐ | ☐ | ☐ | ☒ |
| **b.** Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases? | ☐ | ☐ | ☐ | ☒ |
| **9. HAZARDS AND HAZARDOUS MATERIALS.** Would the project: | | | | |
| **a.** Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? | ☐ | ☐ | ☐ | ☒ |
| **b.** Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? | ☐ | ☐ | ☐ | ☒ |
| **c.** Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? | ☐ | ☐ | ☐ | ☒ |
| **d.** Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? | ☐ | ☐ | ☐ | ☒ |
| **e.** For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area? | ☐ | ☐ | ☐ | ☒ |
| **f.** Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |
| **g.** Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires? | ☐ | ☐ | ☐ | ☒ |
| **10. HYDROLOGY AND WATER QUALITY.** Would the project: | | | | |
| **a.** Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality? | ☐ | ☐ | ☐ | ☒ |
| **b.** Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? | ☐ | ☐ | ☐ | ☒ |
| **c.** Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **i.** result in substantial erosion or siltation on- or off-site; | ☐ | ☐ | ☐ | ☒ |
| **ii.** substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; | ☐ | ☐ | ☐ | ☒ |
| **iii.** create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or | ☐ | ☐ | ☐ | ☒ |
| **iv.** impede or redirect flood flows? | ☐ | ☐ | ☐ | ☒ |
| **d.** In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation? | ☐ | ☐ | ☐ | ☒ |
| **e.** Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan? | ☐ | ☐ | ☐ | ☒ |
| **11. LAND USE AND PLANNING.** Would the project: | | | | |
| **a.** Physically divide an established community? | ☐ | ☐ | ☐ | ☒ |
| **b.** Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? | ☐ | ☐ | ☐ | ☒ |
| **12. MINERAL RESOURCES.** Would the project: | | | | |
| **a.** Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? | ☐ | ☐ | ☐ | ☒ |
| **b.** Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? | ☐ | ☐ | ☐ | ☒ |
| **13. NOISE.** Would the project result in: | | | | |
| **a.** Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? | ☐ | ☐ | ☐ | ☒ |
| **b.** Generation of excessive groundborne vibration or groundborne noise levels? | ☐ | ☐ | ☐ | ☒ |
| **c.** For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? | ☐ | ☐ | ☐ | ☒ |
| **14. POPULATION AND HOUSING.** Would the project: | | | | |
| **a.** Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **b.** Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere? | ☐ | ☐ | ☐ | ☒ |
| **15. PUBLIC SERVICES.** Would the project: | | | | |
| **a.** Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: | | | | |
| **i.** Fire protection? | ☐ | ☐ | ☐ | ☒ |
| **ii.** Police protection? | ☐ | ☐ | ☐ | ☒ |
| **iii.** Schools? | ☐ | ☐ | ☐ | ☒ |
| **iv.** Parks? | ☐ | ☐ | ☐ | ☒ |
| **v.** Other public facilities? | ☐ | ☐ | ☐ | ☒ |
| **16. RECREATION.** Would the project: | | | | |
| **a.** Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | ☐ | ☐ | ☐ | ☒ |
| **b.** Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment? | ☐ | ☐ | ☐ | ☒ |
| **17. TRANSPORTATION.** Would the project: | | | | |
| **a.** Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities? | ☐ | ☐ | ☐ | ☒ |
| **b.** Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)? | ☐ | ☐ | ☐ | ☒ |
| **c.** Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? | ☐ | ☐ | ☐ | ☒ |
| **d.** Result in inadequate emergency access? | ☐ | ☐ | ☐ | ☒ |
| **18. TRIBAL CULTURAL RESOURCES.** Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is | | | | |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **a.** Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)? | ☐ | ☐ | ☐ | ☒ |
| **b.** A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe. | ☐ | ☐ | ☐ | ☒ |
| **19. UTILITIES AND SERVICE SYSTEMS.** Would the project: | | | | |
| **a.** Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? | ☐ | ☐ | ☐ | ☒ |
| **b.** Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years? | ☐ | ☐ | ☐ | ☒ |
| **c.** Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | ☐ | ☐ | ☐ | ☒ |
| **d.** Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? | ☐ | ☐ | ☐ | ☒ |
| **e.** Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? | ☐ | ☐ | ☐ | ☒ |
| **20. WILDFIRES.** If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project: | | | | |
| **a.** Substantially impair an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |
| **b.** Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire? | ☐ | ☐ | ☐ | ☒ |
| **c.** Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **d.** Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? | ☐ | ☐ | ☐ | ☒ |
| **21. MANDATORY FINDINGS OF SIGNIFICANCE.** | | | | |
| **a.** Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | ☐ | ☐ | ☐ | ☒ |
| **b.** Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.) | ☐ | ☐ | ☐ | ☒ |
| **c.** Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? | ☐ | ☐ | ☐ | ☒ |

## *EXPLANATION OF ISSUES*

**1. AESTHETICS.** Would the project:

**a. Have a substantial adverse effect on a scenic vista?**

Discussion of Effects: The Policy Plan (General Plan) does not identify scenic vistas within the City. However, TOP Policy Plan (Policy CD1-5) requires all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains. The Project is not located adjacent to any major north-south arterial streets, as identified in the Functional Roadway Classification Plan (Figure M-2) of the Mobility Element within the Policy Plan. Consequently, the Project will not result in any new or substantially different aesthetic impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway?**

Discussion of Effects: The City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation. In addition, there are no historic buildings, or any scenic resources identified on or in the vicinity of the Project site. Therefore, it will not result in adverse environmental impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?**

Discussion of Effects: The Project would not degrade the existing visual character or quality of the site or its surroundings. The Project site is located in an area that is characterized by a mix of residential and commercial land uses and is surrounded by urban land uses.

The Project will substantially improve the visual quality of the area through development of the site with a high density residential development, which will be consistent with the policies of the Community Design Element of the Policy Plan (General Plan) and zoning designations on the property, as well as with the residential and commercial development in the surrounding area. Consequently, the Project will not result in any new or substantially different aesthetic impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?**

Discussion of Effects: New lighting will be introduced to the site with the development of the proposed Project. Pursuant to the requirements of the City's Development Code and the Emporia Family Housing PUD, the Project's on-site lighting will be shielded, diffused, or indirect, to avoid glare to pedestrians or motorists. In addition, lighting fixtures will be selected and located to confine the area of illumination to within the project site and minimize light spillage.

Site lighting plans will be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, the Project will not result in any new or substantially different aesthetic impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**2. AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

**c. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?**

Discussion of Effects: The site is presently improved with two commercial buildings and the unimproved land and does not contain any agricultural uses. Furthermore, the site is identified as "Urban and Built-Up Land" on the map prepared by the California Resources Agency, pursuant to the Farmland Mapping and Monitoring Program. Consequently, the Project will not result in any new or substantially different agriculture or forest resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Conflict with existing zoning for agricultural use, or a Williamson Act contract?**

Discussion of Effects: The Project site is not zoned for agricultural use. Furthermore, there are no Williamson Act contracts in effect on the subject site. Therefore, no impacts to agricultural uses are anticipated, nor will there be any conflict with Williamson Act contracts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?**

Discussion of Effects: The Project would not result in the rezoning of forest land, timberland, or timberland zoned Timberland Production because such land use designations do not exist within the City of Ontario. The Project site is zoned for Medium Density Residential development. The proposed project is consistent with the Land Use Element (Figure LU-6) of the Policy Plan (General Plan) and the development standards and allowed land uses of the MDR-18 (Medium Density Residential) zone. Therefore, no impacts to forest or timberland are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**f. Result in the loss of forest land or conversion of forest land to non-forest use?**

Discussion of Effects: There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither TOP nor the City's Zoning Code provide designations for forest land. Consequently, the proposed Project would not result in the loss or conversion of forest land.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**g. Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?**

Discussion of Effects: The Project site is currently zoned MU-1 (Downtown Mixed Use) and is not designated as Farmland. The Project site is currently vacant and there are no agricultural uses occurring onsite. As a result, to the extent that the Project would result in changes to the existing environment those changes would not result in loss of Farmland to non-agriculture use.

Additionally, there is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither TOP nor the City's Zoning Code provide designations for forest land. Consequently, to the extent that the proposed Project would result in changes to the existing environment, those changes would not impact forest land.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**3. AIR QUALITY**. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the Project:

**a. Conflict with or obstruct implementation of the applicable air quality plan?**

Discussion of Effects: The Project will not conflict with or obstruct implementation of any air quality plan. As noted in The Ontario Plan FEIR (Section 5.3), pollutant levels in the Ontario area already exceed Federal and State standards. To reduce pollutant levels, the City of Ontario is actively participating in efforts to enhance air quality by implementing Control Measures in the Air Quality Management Plan for local jurisdictions within the South Coast Air Basin.

The proposed Project is consistent with The Ontario Plan, for which the EIR was prepared and impacts evaluated. Furthermore, the Project is consistent with the City's participation in the Air Quality Management Plan and will not conflict with or obstruct implementation of the plan. Mitigation (Mitigation Measure 5.3-2) has been adopted by the City that requires fugitive dust control measures pursuant to SCAQMD's Rule 403, use of Tier 3 construction equipment, proper service and maintenance of construction equipment, limiting nonessential idling of construction equipment, and use of Super-Compliant VOC paints for coating and architectural surfaces. As a condition of approval, the project will comply with Mitigation Measure 5.3-2. No new impacts beyond those identified in the Certified TOP EIR that would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**

Discussion of Effects: The Project will not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality because of the limited size and scope of the Project. Although no impacts are anticipated, the Project will still comply with the air quality standards of the TOP FEIR and the SCAQMD resulting in impacts that are less than significant [please refer to Sections 3(a) and 3(b)].

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Expose sensitive receptors to substantial pollutant concentrations?**

Discussion of Effects: Sensitive receptors are defined as populations that are more susceptible to the effects of pollution than the population at large. The SCAQMD identifies the following as sensitive receptors: long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences, schools, playgrounds, child-care centers, and athletic facilities. According to the SCAQMD, projects have the potential to create significant impacts if they are located within one-quarter mile of sensitive receptors and would emit toxic air contaminants identified in SCAQMD Rule 1401.

The Project proposes the construction of residential units, a sensitive receptor. There are not, however, any known hot spots or heavy concentrations of pollutants in the area that would expose residents to potential adverse impacts. Therefore, the Project will not result in any new or substantially different air quality impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?**

Discussion of Effects: The subject site was previously analyzed by TOP EIR as Mixed-Use (Downtown Mixed Use District). The residential use proposed on the subject site do not create objectionable odors. Further, the Project shall comply with the policies of the Ontario Municipal Code and the Policy Plan (General Plan). Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**4. BIOLOGICAL RESOURCES.** Would the project:

**a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?**

Discussion of Effects: The Project site is located within an area that has not been identified as containing species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations or by the California Department of Fish and Game or the U.S. Fish and Wildlife Service. Therefore, the Project will not result in any new or substantially different biological resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?**

Discussion of Effects: The subject site was previously analyzed by the Certified TOP EIR as residential uses. The site does not contain any riparian habitat or other sensitive natural community identified by the Department of Fish & Game or Fish & Wildlife Service. Therefore, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?**

Discussion of Effects: No wetland habitat is present on site. Therefore, Project implementation would have no impact on these resources.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?**

Discussion of Effects: The site is part of a larger urbanized, mixed use area, and there are no wildlife corridors connecting this site to other areas. Therefore, the Project will not result in any new or substantially different biological resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?**

Discussion of Effects: The City of Ontario does not have any ordinances protecting biological resources; however, the Project site contains a number of mature trees necessitating the need for preservation consistent with the City's Tree Preservation Ordinance. Therefore, the Project will not result in any new or substantially different biological resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?**

Discussion of Effects: The site is not part of an adopted HCP, NCCP or other approved habitat conservation plan. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**5. CULTURAL RESOURCES.** Would the project:

**a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?**

Discussion of Effects: On January 27, 2010, The Ontario Plan (TOP), File No. PGPA06-001 for which an Environmental Impact Report (State Clearinghouse No. 2008101140) was adopted and certified by City Council, determining that demolition of Tier III historic resources results in significant and unavoidable impacts that cannot be fully mitigated to a level of less than significant, despite the imposition of all feasible mitigation measures identified in the EIR for which a Statement of Overriding Consideration was adopted. Two Tier III historic resources are located within the Project site:

(i) Office Building located at 201-215 South Fern Avenue: The building is a wide one-part commercial block building in the Art/Streamline Moderne architectural style and is approximately 4,000 square feet. The style is indicated by a flat roof, smooth wall surfaces, the use of glass-block windows, and a thin cantilevered roof running the entire length of the building which curves around the north-east corner. The building is situated in a rectangular building plan with a zero front setback and consists of eight commercial units. The original building addresses were 201 through 207 South Fern Avenue. It appears that there was a later addition constructed in the same style which added units in 1963 and 1978. The wall surfaces are made of concrete block covered by stucco and the entryways are recessed.

The 2003 Downtown intensive level survey suggests that the original portion of this commercial building appeared to be Eligible as a Contributor to a potential historic district stating that "the location, setting and design of the original building contributes to a historical record of the development of commerce in the City of Ontario." The design of the building preserves a sense of the historic character of the commercial core of the city of Ontario.

On August 10, 2010, the Historic Preservation Subcommittee approved a Tier III Determination (File No. PHP10-004) for this 4,000 square foot, one-story commercial building, a historic resource, located at 201-215 South Fern Avenue.

(ii) American Legion Building located at 310 West Emporia Street: Constructed in 1953, the American Legion Building is approximately 10,000 square feet and has a T-shape plan. The roof line is broken into two parts. The first portion is slightly angled and covered with composition. There is a window band under the eave that separates the two roof sections. The second portion of the roof is flat and intersects the wall just below the window band. The front façade has two vertical divisions. The wall, under

the angled roof, is a band of aluminum windows that increase in height towards the middle of the building. The wall below the window is covered with batten board and has vertical lines. The main entry door is centrally located and is under the flat roof section. There is a band of aluminum awning windows that sit below the eave and wrap the corner of the building. The building is constructed of hollow pumice concrete brick. This Modern Mid-Century building was designed by Jay Dewey Harnish of Harnish, Morgan and Causey (now referred to as HMC Architects, Inc.). HMC Architects is a nationally recognized firm with their main headquarters located in Ontario.

The American Legion is considered one of the Nation's most influential patriotic organizations. The American Legion was chartered by Congress in 1919 as a patriotic Veterans organization. Focusing on service to veterans, service members and communities, the Legion currently has about 2.4 million members in 14,000 posts worldwide. These posts are organized into 55 departments: one each for the 50 states, the District of Columbia, Puerto Rico, France, Mexico, and the Philippines.

The American Legion's national headquarters is in Indianapolis, with an office in Washington, D.C. The national organization has a full-time staff of about 300 employees. The Legion has several standing national commissions and committees that work with department, district, and post leadership to develop programs, increase membership, and recruit volunteers. Associated organizations are the American Legion Auxiliary and Sons of The American Legion. Over the years, The American Legion has founded many programs for children and youth, including American Legion Baseball and Boys Nation.

In 1919, a group of local veterans assembled in Archie Mitchell's office and formed the West End Service Men's club called "Cher- Ami". Archie Mitchell was an instrumental member in establishing the Ontario Municipal Airport. Later in 1920, the men's club was instituted as American Legion Post No. 112 with Dr. J.H. Titus serving as the first Commander. During the early 1920s, the Legion held regular meetings at the Hotpoint Clubhouse. During the late 1920s, John S. Armstrong donated the Armstrong residence to the Legion to be used as a new clubhouse. The residence was relocated from Euclid Avenue to 113 West E Street and was used as the clubhouse until 1953 when the new clubhouse was erected at the present location on Emporia Avenue. The Legion received top honors in 1929 for registering the highest percentage of voters in San Bernardino County. That same year the Legion Post took option on original thirty acres of the Ontario Airport. The Ontario Post has created and participated in several programs dedicated to promoting Americanism with the principals of justice, freedom, loyalty, and democracy. Aiding the veterans of all wars and their families is the foremost program as Ontario post works for a betterment of the community.

On January 11, 2011, the Historic Preservation Subcommittee approved a Tier III Determination (File No. PHP10-011) for the 10,000 square foot, one-story commercial building, a historic resource, located at 310 West Emporia Street. The following TOP mitigation measures are required Conditions of Approval for the Project:

(i) Prior to issuance of demolition building permit, every effort shall be made to relocate buildings. The buildings shall be offered at no cost for those who can relocate off site. Advertisements notifying the public of the opportunity to relocate the buildings shall be placed for a minimum of 45 days: on-site with temporary signage, in at least 3 local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards (realtor's offices, local business). Applicant shall notify a minimum of 5 non-profit heritage organizations in writing of the building. A social media campaign including a dedicated web page (or post) with the building's information (description, square footage, photographs) and contact information should be incorporated into the building's advertisement.

(ii) Full documentation, including but not limited to as-built drawing, historical narrative and HABS photographs, of the historic resource pursuant to Historic American Building Survey (HABS) Level 3 standards shall be submitted to the Planning Department for review and approval and subsequent release to the Ovitt Family Community Library, Model Colony History Room prior to issuance of demolition building permit.

(iii) A mitigation fee pursuant to Section 7.01.030 of the Ontario Development Code shall be paid to the Planning Department prior to issuance of building permit for demolition. For Tier III structures, this mitigation fee is equal to 10 percent of the price per square foot construction cost as established in the most current ICC Building Valuation Data. The fee amount will be provided by the Planning Department at the time of payment.

(iv) A determination whether items within or on the resource should be salvaged shall be made by the Planning Department. The applicant shall be responsible for the removal, relocation and donation of such items selected for salvaging. An inventory of salvaged items shall be provided by the applicant to the Planning Department prior to be to issuance of demolition permit.

Therefore, the Project will not result in any new or substantially different cultural resources impacts than were previously addressed in the EIR, and no changes or additions to the EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?**

Discussion of Effects: The Ontario Plan FEIR (Section 5.5) indicates no archeological sites or resources have been recorded in the City with the Archeological Information Center at San Bernardino County Museum. However, only about 10 percent of the City of Ontario has been adequately surveyed for prehistoric or historic archaeology. While no adverse impacts to archeological resources are anticipated at this site due to its urbanized nature, standard conditions have been imposed on the Project that in the event of unanticipated archeological discoveries, construction activities will not continue or will moved to other parts of the Project site and a qualified archaeologist shall be contacted to determine significance of these resources. If the find is discovered to be historical or unique archaeological resources, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented. Therefore, the Project will not result in any new or substantially different cultural resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Disturb any human remains, including those interred outside of formal cemeteries?**

Discussion of Effects: The proposed Project is in an area that has been previously disturbed by human activity. No known religious or sacred sites exist within the Project area. Thus, human remains are not expected to be encountered during any construction activities. However, in the unlikely event that human remains are discovered, existing regulations, including the California Public Resources Code Section 5097.98, would afford protection for human remains discovered during development activities. Furthermore, standard conditions have been imposed on the Project that in the event of unanticipated discoveries of human remains are identified during excavation, construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and/or Native American consultation has been completed, if deemed applicable.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**6. ENERGY** Would the project:

**a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?**

**b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?**

Discussion of Effects: Energy was not analyzed in the Certified TOP EIR but has been included as part of the 2019 revisions to the State CEQA Guidelines. Implementation of the Project would not substantially increase the demand for electricity and natural gas at the Project site and gasoline consumption in the region during construction and operation. Implementation of the Project will require compliance with CALGreen Building Code (CCR Title 24, Part11). Moreover, the Project includes a sample Greenhouse Gas Reduction Measure Screening Table for Residential and Commercial Development. The Screening Table includes measures energy efficient development, indoor space efficiency measures, building efficiency measures, renewable energy measures, and water conservation measures. Measures that would reduce electricity consumption include, but are not limited to: greatly enhanced window

insulation, an enhanced cool-roof, an improved efficiency heating, ventilation, and air conditioning ("HVAC") system, blower doors HERS verified Envelope leakage or equivalent, enhanced duct insulation, Energy Star commercial appliances, water efficient landscaping and irrigation systems, and water-efficient toilets and faucets.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts. No changes or additions to the Certified TOP EIR analyses are necessary.

**7. GEOLOGY & SOILS**. Would the project:

**a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:**

**i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.**

Discussion of Effects: There are no active faults known on the site and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Certified TOP EIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. Given that the closest fault zone is located more than ten miles from the Project site, fault rupture within the Project area is not likely. All development will comply with the Uniform Building Code seismic design standards to reduce geologic hazard susceptibility. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**ii. Strong seismic ground shaking?**

Discussion of Effects: There are no active faults known on the site and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Certified TOP EIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. The closest fault zone is located more than ten miles from the Project site. The proximity of the site to the active faults will result in ground shaking during moderate to severe seismic events. All construction will comply with the California Building Code, the Ontario Municipal Code, The Ontario Plan, and all other ordinances adopted by the City related to construction and safety. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iii. Seismic-related ground failure, including liquefaction?**

Discussion of Effects: As identified in the Certified TOP EIR (Section 5.7), groundwater saturation of sediments is required for earthquake induced liquefaction. In general, groundwater depths shallower than 10 feet to the surface can cause the highest liquefaction susceptibility. Depth to ground water at the Project site during the winter months is estimated to be between 250 to 450 feet below ground surface. Therefore, the liquefaction potential within the Project area is minimal. Implementation of The Ontario Plan strategies, Uniform Building Code and Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iv. Landslides?**

Discussion of Effects: The Project would not expose people or structures to potential adverse effects, including the risk of loss, injury, or death involving landslides because the relatively flat topography of the Project site (less than 2 percent slope across the City) makes the chance of landslides remote. The allowed residential use will not create greater landslide potential impacts than were identified in the Certified

TOP EIR. Implementation of TOP EIR strategies, Uniform Building Code and Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Result in substantial soil erosion or the loss of topsoil?**

Discussion of Effects: Implementation of the Project will not create greater erosion impacts than were identified in the Certified TOP EIR. Impacts will be less than significant with mitigation. The Project will not result in significant soil erosion or loss of topsoil because of the previously disturbed nature of the Project site and the limited size and scope of the Project. Grading increases the potential for erosion by removing protective vegetation, changing natural drainage patterns, and constructing slopes. However, compliance with the California Building Code and review of grading plans by the City Engineer will ensure no significant impacts will occur. In addition, the City requires an erosion/dust control plan for Projects located within this area. Implementation of a NPDES program, the Environmental Resource Element of the Policy Plan (General Plan) strategies, Uniform Building Code and Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?**

Discussion of Effects: Implementation of Project will not create greater landslide potential impacts than were identified in the Certified TOP EIR. Therefore, no adverse impacts are anticipated. In addition, the associated Project would not result in the location of development on a geologic unit or soil that is unstable, or that would become unstable because as previously discussed, the potential for liquefaction and landslides associated with the Project is less than significant. Certified TOP EIR (Section 5.7) indicates that subsidence is generally associated with large decreases or withdrawals of water from the aquifer. The Project would not withdraw water from the existing aquifer. Further, implementation of The Ontario Plan strategies, Uniform Building Code and Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?**

Discussion of Effects: The majority of Ontario, including the Project site, is located on alluvial and eolian soil deposits. These types of soils are not considered to be expansive. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?**

Discussion of Effects: The area is served by the local sewer system and the use of alternative systems is not necessary. There will be no impact to the sewage system.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?**

Discussion of Effects: The City of Ontario is underlain by deposits of Quaternary and Upper-Pleistocene sediments deposited during the Pliocene and early Pleistocene time, Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are, therefore, considered to have high sensitivity at depths of 10 feet or more below ground surface. In addition, the Certified TOP EIR (Section 5.5) indicates that one paleontological resource has been discovered in the City. While no adverse impacts are anticipated, standard conditions have been imposed on the Project that in the event of unanticipated paleontological resources are identified during excavation, construction activities will not continue or will be moved to other parts of the Project site and a qualified paleontologist shall be contacted to determine significance of these resources. If the find is determined to be significant, avoidance or other appropriate measures shall be implemented.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR and TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**8. GREENHOUSE GAS EMISSIONS.** Would the project:

**a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR as a residential/commercial Mixed-Use that may have an impact on the environment at buildout of The Ontario Plan due to the emission of greenhouse gases ("GHGs"). According to the TOP EIR, this impact would be significant and unavoidable (Re-circulated Portions of the Ontario Plan Draft Environmental Impact Report, p. 2-118.) The TOP EIR was certified by the City on January 27, 2010, at which time a statement of overriding considerations was also adopted for The Ontario Plan's significant and unavoidable impacts, including that concerning the emission of greenhouse gases.

Implementation of Project will not create significantly greater impacts than were identified in the Certified TOP EIR. The Project includes a sample GHG Reduction Measures Screening Threshold Table, which provides guidance in measuring the reduction of greenhouse gas ("GHG") emissions attributable to certain design and construction measures incorporated into development projects. The analysis, methodology, and significance determination (thresholds) are based upon the City's Climate Action Plan ("CAP"), which includes GHG emission inventories (2008 and 2020 forecasts), a year 2020 emission reduction target, the goals and policies to reach the target, together with the Addendum prepared for the CAP. The Screening Table assigns points for each option incorporated into a project as mitigation or a project design feature (collectively referred to as "feature"). The point values correspond to the minimum emissions reduction expected from each feature. The menu of features allows maximum flexibility and options for how development projects can implement the GHG reduction measures. The point levels are based upon improvements compared to 2008 emission levels of efficiency. Projects that garner at least 100 points will be consistent with the reduction quantities anticipated in the City's CAP. As such, those projects that garner a total of 100 points or greater would not require quantification of project specific GHG emissions. Consistent with CEQA Guidelines, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions. As shown in the Project GHG Reduction Measures Screening Table, the Project garners a total of 103 points, and is therefore consistent with the reduction quantities anticipated in the City's CAP. Therefore, quantification of Project-specific GHG emissions is not required.

Additionally, pursuant to Public Resources Code Section 21083.3, this impact need not be analyzed further, because (1) the proposed project would result in an impact that was previously analyzed in the Certified TOP EIR; (2) the proposed project would not result in any greenhouse gas impacts that were not addressed in the Certified EIR; (3) the proposed project is consistent with The Ontario Plan. The proposed impacts of the project were already analyzed in the Certified EIR and the project will be built to current energy efficient standards. Potential impacts of project implementation will be less than significant with mitigation already required under the Certified TOP EIR and, CAP Screening Tables, and current energy efficiency standards. No changes or additions to the Certified TOP EIR analyses are necessary.

Mitigation Required: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to Certified TOP EIR analyses are necessary. The mitigation measures adopted as part of Certified TOP EIR adequately address any potential significant impacts and there is no need for any additional mitigation measures. The City has reviewed the emission reduction measures and concepts in TOP EIR's MM 6-2 and 6-3, and has determined that the following actions apply and shall be undertaken by the applicant in connection with the project: energy efficient design, efficient irrigation systems, and compliance with Title 24 of the California Code of Regulations.

**b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR as a residential/commercial mixed-use land use. The proposed Project is consistent with The Ontario Plan Goal ER 4 of improving air quality by, among other things, implementation of Policy ER4-3, regarding the reduction of greenhouse gas emissions in accordance with regional, State, and federal regulations. In addition, the proposed Project is consistent with the policies outlined in Section 5.6.4 of the TOP EIR, which aims to reduce the City's contribution of greenhouse gas emissions at build-out by fifteen (15 percent), because the project is upholding the applicable City's adopted mitigation measures as represented in 6-1 through 6-6 and energy efficient design, efficient irrigation systems, electric vehicle charging stations, and compliance with Title 24 of the California Code of Regulations. The Project is consistent with the City's Climate Action Plan. Therefore, the proposed Project does not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing emissions of greenhouse gases.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**9. HAZARDS & HAZARDOUS MATERIALS.** Would the project:

**a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?**

Discussion of Effects: The Project site was previously analyzed by the TOP EIR for residential/commercial mixed-use land uses. The Project is not anticipated to involve the transport, use or disposal of hazardous materials during either construction or project implementation. Therefore, no adverse impacts are anticipated. However, in the unlikely event of an accident, implementation of the strategies included in The Ontario Plan will decrease the potential for health and safety risks from hazardous materials to a less than significant impact.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR for residential/commercial mixed-use land uses. The proposed Project does not include the use of hazardous materials or volatile fuels. In addition, there are no known stationary commercial or industrial land uses within close proximity to the subject site, which use/store hazardous materials to the extent that they would pose a significant hazard to visitors/occupants to the subject site, in the event of an upset condition resulting in the release of a hazardous material.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?**

Discussion of Effects: The Project does not include the use, emissions or handling of hazardous or acutely hazardous materials, substances, or waste. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?**

Discussion of Effects: The Project site is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5. Therefore, the Project would not create a hazard to the public or the environment and no impact is anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?**

Discussion of Effects: The Project was reviewed and found to be located within the Airport Influence Area of Ontario International Airport ("ONT") and was evaluated and found to be consistent with the policies and criteria of the Airport Land Use Compatibility Plan ("ALUCP") for ONT. The Project will not result in a safety hazard for people working or residing in the Project area because it will not obstruct aircraft maneuvering because of the Project's low elevation and the architectural style of the Project. Additionally, the Land Use Compatibility Guidelines for Noise Impacts (Table LU-08) shows the proposed use as normally accepted in the 65 CNEL. The proposed use will comply with standards for mitigating noise. Therefore, the Project will not result in any new or substantially different hazards and hazardous materials impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?**

Discussion of Effects: The City's Safety Element, as contained within The Ontario Plan, includes policies and procedures to be administered in the event of a disaster. The Ontario Plan seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to and recover from every day and disaster emergencies. In addition, the Project will comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access. Because the Project is required to comply with all applicable City codes, any impacts would be reduced to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?**

Discussion of Effects: The Project site is not located in or near wildlands. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**10. HYDROLOGY & WATER QUALITY.** Would the project:

**a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?**

Discussion of Effects: The Project site is served by City water and sewer service and will not affect water quality standards or waste discharge requirements. The site is required to comply with the statewide National Pollutant Discharge Elimination System ("NPDES") General Industrial Activities Stormwater Permit, the San Bernardino County Area-Wide Urban Runoff Permit (MS4 permit) and the City of Ontario's Municipal Code (Title 6, Chapter 6 (Stormwater Drainage System). This would reduce any impacts to below a level of significance. Furthermore, the applicant for the subject site has submitted a Preliminary Water Quality Management Plan (PWQMP), which establishes the subject sites' compliance with storm water discharge and water quality management requirements. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development (LID) best management practices (BMPs), such as retention and infiltration, biotreatment and evapotranspiration. The PWQMP proposes the use of an underground stormwater infiltration system for the subject sites. Any overflow drainage will be conveyed to the public street by way of parkway culverts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR for residential/commercial mixed-use land uses. The water use associated with the proposed use of the property will be negligible, and the proposed Project will not deplete groundwater supplies, nor will it interfere with recharge. The water use associated with the proposed use of the property was included in the Certified TOP EIR analysis. The development of the site will require the grading of the site and excavation is expected to be less than three feet and would not affect the existing aquifer, estimated to be about 230 to 250 feet below the ground surface. No adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:**

**i. Result in substantial erosion or siltation on- or off-site?**

Discussion of Effects: It is not anticipated that the Project would alter the drainage pattern of the site or area, in a manner that would result in erosion, siltation or flooding on-or-off site, nor will the proposed Project increase the erosion of the subject site or surrounding areas. The existing drainage pattern of the site will not be altered, and it will have no significant impact on downstream hydrology. Stormwater generated by the Project will be discharged in compliance with the statewide NPDES General Construction Activities Stormwater Permit and San Bernardino County MS4 permit requirements. With the full implementation of a Storm Water Pollution Prevention Plan developed in compliance with the General Construction Activities Permit requirements, the Best Management Practices included in the SWPPP, and a stormwater monitoring program would reduce any impacts to below a level of significance. No streams or streambeds are present on the site. No changes in erosion off-site are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**ii. Substantially increase the rate or amount of surface runoff water in a manner which would result in flooding on- or off-site?**

Discussion of Effects: The Project is not anticipated to increase the flow velocity or volume of storm water runoff to cause environmental harm from the site and will not create a burden on existing infrastructure. Furthermore, with the implementation of an approved Water Quality Management Plan developed for the site, in compliance with the San Bernardino County MS4 Permit requirements, stormwater runoff volume shall be reduced to below a level of significance.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?**

Discussion of Effects: It is not anticipated that the Project would create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or create or contribute stormwater runoff pollutants during construction and/or post-construction activity. Pursuant to the requirements of The Ontario Plan, the City's Development Code, and the San Bernardino County MS4 Permit's Water Quality Management Plan ("WQMP"), individual developments must provide site drainage and WQMP plans according to guidelines established by the City's Engineering Department. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iv. Impede or redirect flood flows?**

Discussion of Effects: Urbanization in the areas surrounding the Project site have resulted in increased responsiveness of the basin to rainfall. The increase in impervious surfaces such as roofs, roads, and parking lots has resulted in a decrease in groundwater infiltration and larger storm surges. The Project site is not impacted by offsite flows. The Project site is not located in a FEMA Firm Panel designated Flood Zone Risk, and according to the United States Fish and Wildlife Service National Wetlands Inventory ("NWI") no wetlands exist on the property. An adequate drainage facility to accept additional runoff from the site does not currently exist downstream of the project. However, the Project will be conditioned to design and construct a storm water detention facility on site so that the 100-year post-development peak flow does not exceed 80 percent of pre-development peak flows.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?**

Discussion of Effects: Impacts associated with flooding are primarily related to the construction or placement of structures in areas prone to flooding including within an unprotected 100-year flood zone, and in areas susceptible to high tides, tsunamis, seiches, mudflows or sea level rise. Specifically, structures placed in flood prone areas, if flooded, would be damaged, and could subject people to injury or death. The National Flood Insurance Act of 1968 requires the identification of floodplain areas and establishment of flood-risk zones within those areas. FEMA administers the programs and coordinates with communities to establish effective floodplain management standards. According to FEMA, the Project is not located in a known floodplain. Furthermore, this area is not known to flood and is not typically subjected to flooding. The Project site is not located in a floodplain as shown in Figure S-2 of TOP. The Project site is in an urbanized area that is developed residential dwelling units. No wetlands have been mapped on the Project site according to the NWI. According to the FEMA, the Project is not located in an area that is subject to flood hazard, tsunami, or seiche zones. The Project site is located over 60 miles east of the Pacific Ocean and is not located in a mapped tsunami zone. Therefore, the Project would not have a significant risk of flood hazard, tsunami, seiche zones, release of pollutants due to Project inundation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?**

Discussion of Effects: The Regional Water Quality Control Board's Basin Plan is designed to preserve and enhance water quality and protect the beneficial uses of all regional waters. Specifically, the Basin Plan (i) designates beneficial uses for surface and ground waters, (ii) sets narrative and numerical

objectives that must be attained or maintained to protect the designated beneficial uses and conform to the state's anti-degradation policy, and (iii) describes implementation programs to protect all waters in the region. The Project adheres to requirements of the water quality control plan, including all existing regulation and permitting requirements. This includes the incorporation of best management practices ("BMPs") to protect water quality during construction and operational periods. Development of the Project is subject to all existing water quality regulations and programs, as described in the regulatory section above, including all applicable construction permits. Existing General Plan policies related to water quality are also applicable to the Project. Implementation of these policies, in conjunction with compliance with existing regulatory programs, ensures that water quality impacts related to the Project are less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**11. LAND USE & PLANNING.** Would the project:

**a. Physically divide an established community?**

Discussion of Effects: The Project site is in an area that is developed with urban land uses. The Project will be of similar design and size to surrounding development. The Project will become a part of the larger mixed-use community. Therefore, the Project will not result in any new or substantially different land use and planning impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?**

Discussion of Effects: The subject site was previously analyzed by the Certified TOP EIR residential/commercial mixed-use land uses. Implementation of Project will not create greater impacts than were identified in the Certified TOP EIR. The proposed Project does not interfere with any policies for environmental protection. As such, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**12. MINERAL RESOURCES.** Would the project:

**a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?**

Discussion of Effects: The Project site is located within a mostly developed area surrounded by urban land uses. There are no known mineral resources in the area; therefore, the project will not result in any new or substantially different mineral resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?**

Discussion of Effects: There are no known mineral resources in the area. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**13. NOISE.** Would the project result in:

**a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR for residential/commercial mixed-use land uses. The Project will not expose people to or generate noise levels in excess of standards as established in The Ontario Plan FEIR (Section 5.12); therefore, the project will not result in any new or substantially different noise impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Generation of excessive groundborne vibration or groundborne noise levels?**

Discussion of Effects: Implementation of the Project will not create greater impacts than were identified in the Certified TOP EIR. The uses associated with this proposed Project are required to comply with the environmental standards contained in the City of Ontario Development Code and as such, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. For a project located within the vicinity of a private airstrip or the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?**

Discussion of Effects: The Project was reviewed and found to be located within the Airport Influence Area of Ontario International Airport ("ONT") and was evaluated and found to be consistent with the policies and criteria of the Airport Land Use Compatibility Plan ("ALUCP") for ONT. According to the Safety Element, the project is located outside of the 65 CNEL noise contour; therefore, the project will not result in any new or substantially different noise impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary. or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**14. POPULATION & HOUSING.** Would the project:

**a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR for residential/commercial mixed-use land uses and is consistent with General Plan land use designations and would not induce significant population growth. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?**

Discussion of Effects: The Project site does not contain existing housing. Implementation of the Project will result in the addition of 50 residential dwelling units.

Mitigation: No additional mitigation required. No changes or additions to the Certified TOP EIR analyses are necessary.

**15. PUBLIC SERVICES.** Would the project:

**a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:**

**i. Fire protection?**

Discussion of Effects: The Project site is in a developed area currently served by the Ontario Fire Department. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**ii. Police protection?**

Discussion of Effects: The Project site is in a developed area, currently served by the Ontario Police Department. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iii. Schools?**

Discussion of Effects: Upon development, the Project proponent will be required to pay school fees as prescribed by state law prior to the issuance of building permits. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iv. Parks?**

Discussion of Effects: The Project site is in a developed area, currently served by the City of Ontario. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**v. Other public facilities?**

Discussion of Effects: The Project site is in a developed area, currently served by the City of Ontario. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**16. RECREATION.** Would the project:

**a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?**

Discussion of Effects: This Project is not proposing a significant number of new housing units that would result in the substantial physical deterioration of nearby existing parks. Implementation of the Project would result in the construction of 12,356 square feet of private recreational amenities on-site to include a pool, pool house and children's play area as required by the PUD for the development of 50 residential units. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?**

Discussion of Effects: This Project is not proposing a significant number of new housing units or large employment generator that would require the construction of neighborhood parks or other recreational facilities. Furthermore, implementation of the Project includes construction of a recreational area and swimming pool for private use of residents. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**17. TRANSPORTATION.** Would the project:

**a. Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?**

Discussion of Effects: The Project is in an area that is mostly developed with all street improvements existing. The number of vehicle trips per day is not expected to be increased significantly. Therefore, the Project will not create a substantial increase in the number of vehicle trips, traffic volume or congestion at intersections. Consequently, the Project will not result in any new or substantially different transportation/traffic impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?**

Discussion of Effects: CEQA Guidelines Section 15064.3 subdivision (b) has been included in the 2018 CEQA Guidelines as part of the implementation of SB 743 which requires local jurisdictions to use Vehicle Miles Travelled (VMT) instead of Level of Service (LOS) methodologies for the purpose of determining the significance of traffic impacts under CEQA. Also, as part of the implementation of SB 743 local jurisdictions are required to develop and implement thresholds of significance criteria and methodologies for evaluating VMT. The City of Ontario has adopted and established a VMT analysis threshold or analysis methodology based on our Policy Plan (General Plan) baseline. However, the Project was submitted prior to the adoption of the threshold and therefore not subject to the adopted thresholds. Subsequently, TOP EIR analyzed VMT, as part of the GHG analysis. The Ontario Plan (TOP) is consistent with the RTP/SCS for the Southern California region. The SBTAM model has incorporated TOP buildout which was then incorporated into the SCAG model in developing the RTP/SCS for the region. The thresholds used in these models can be found in the tool created for SBCTA that analyzes the various threshold options. TOP established VMT thresholds as such this option has already been found to be consistent with the RTP/SCS and these land use assumptions have been incorporated into the SBTAM and SCAG's regional models. The screening tool created for use in San Bernardino County can be utilized for locations within Ontario where additional analysis is not required, and the City thresholds be used for Projects to determine if additional analysis is required. If mitigation measures are included for the Project and the VMT brought down below the established threshold (City average), then the Project can be

determined to have less than a significant impact on transportation (in terms of CEQA).Therefore, impacts with respect to CEQA Guidelines Section 15064.3(b) are less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?**

Discussion of Effects: The Project is in an area that is mostly developed, and street improvements are complete. The Project will not create a substantial increase in hazards due to a design feature. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Result in inadequate emergency access?**

Discussion of Effects: Development of the Project will be designed to provide access for all emergency vehicles and will therefore not create an inadequate emergency access. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Result in inadequate parking capacity?**

Discussion of Effects: The Project proposes to reduce the required parking standards that are established by the Emporia Family Housing PUD. The Project is proposing an average of 1.88 parking spaces per dwelling unit for a total of 94 parking spaces. On November 29, 2018, the California Department of Housing and Community Development ("HCD") released the guidelines for the Streamlined Ministerial Approval Process created by Senate Bill No. 35 (SB 35 Guidelines). SB 35 provides a streamline ministerial approval process for eligible affordable housing projects. SB 35 allows for local jurisdiction to reduce parking requirements for eligible projects to a maximum of one space per dwelling unit or waive all parking requirements for Project sites located within ½ mile of public transit. Located within the ½ mile of Project site is OmniTrans Bus Route 61 on Holt Boulevard. Therefore, the Project will not create an inadequate parking capacity. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**18. TRIBAL CULTURAL RESOURCES.** Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

**a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?**

**b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.**

Discussion of Effects: The Project site has been highly disturbed by residential and commercial development since the early 1890s. Surrounding properties and area are highly urbanized. It is highly unlikely that tribal resources would be discovered at the Project site; therefore, it is concluded that the proposed Project will not impact Tribal Cultural Resources or Native America artifacts relating to TCRs and as such, no mitigation measures are recommended.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**19. UTILITIES AND SERVICE SYSTEMS**. Would the project:

**a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?**

Discussion of Effects: The Project is served by the City of Ontario sewer system, which has waste treated by the Inland Empire Utilities Agency at the RP-1 or RP-5 treatment plant. The Project is required to meet the requirements of the Ontario Engineering Department regarding wastewater. Therefore, the Project will not result in any new or substantially different utilities and service systems impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary. As discussed in the energy section above, the Project will have no anticipated impacts with regards to electric power and natural gas. In addition, the Project will not have an impact on telecommunications facilities.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years? In making this determination, the City shall consider whether the project is subject to the water supply assessment requirements of Water Code Section 10910, et seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221).**

Discussion of Effects: The Project site is served by the City of Ontario water system. There is currently sufficient water supply available to the City of Ontario to serve this Project as per the findings of the Certified TOP EIR. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?**

Discussion of Effects: The Project site is served by the City of Ontario water system. There is currently sufficient water supply available to the City of Ontario to serve this Project as per the findings of Certified TOP EIR. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?**

Discussion of Effects: City of Ontario serves the Project site. Currently, the City of Ontario contracts with a waste disposal company that transports trash to a landfill with sufficient capacity to handle the City's solid waste disposal needs. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to analyses are necessary.

**e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?**

Discussion of Effects: This Project complies with federal, state, and local statues and regulations regarding solid waste. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**20. WILDFIRE.** If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

**a. Substantially impair an adopted emergency response plan or emergency evacuation plan?**

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?**

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?**

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?**

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**21. MANDATORY FINDINGS OF SIGNIFICANCE.**

**a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?**

Discussion of Effects: The proposed Project does not have the potential to reduce wildlife habitat and threaten a wildlife species; therefore, no environmental impacts resulting from the Project are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?**

Discussion of Effects: The Project does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)**

Discussion of Effects: The Project does not have impacts that are cumulatively considerable.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?**

Discussion of Effects: The Project does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

## *EARLIER ANALYSES*

*(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D))*:

1) Earlier Analyses Used. Identify earlier analyses used and state where they are available for review.

   a) The Ontario Plan Final EIR

   b) The Ontario Plan (TOP)

   c) City of Ontario Official Zoning Map

   d) City of Ontario Development Code

   e) Ontario International Airport Land Use Compatibility Plan

   f) Ontario International Airport Land Use Compatibility Plan Negative Declaration (SCH 2011011081)

All documents listed above are on file with the City of Ontario Planning Department, 303 East “B” Street, Ontario, California 91764, (909) 395-2036.

2) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of, and adequately analyzed in, an earlier document pursuant to applicable legal standards.

## *MITIGATION MEASURES*

*(For effects that are "Less than Significant with Mitigation Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.)*

The Mitigation Measures contained in the Certified TOP EIR adequately mitigate the impacts of the proposed Project. These mitigation measures are contained in the attached Mitigation Monitoring Program.

No additional mitigation beyond that previously imposed is required.

# *Mitigation Monitoring Program for The Ontario Plan Environmental Impact Report*

## *1. Introduction*

### *1.1 PURPOSE OF MITIGATION MONITORING PROGRAM*

This Mitigation Monitoring Program has been developed to provide a vehicle by which to monitor mitigation measures and conditions of approval outlined in The Ontario Plan Environmental Impact Report (EIR), State Clearinghouse No. 2008101140. The Mitigation Monitoring Program has been prepared in conformance with Section 21081.6 of the Public Resources Code and City of Ontario Monitoring Requirements. Section 21081.6 states:

(a) When making the findings required by paragraph (1) of subdivision subsection (a) of Section 21081 or when adopting a mitigated negative declaration pursuant to paragraph (2) of subdivision (c) of Section 21080, the following requirements shall apply:

(1) The public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation. For those changes which have been required or incorporated into the project at the request of a responsible agency or a public agency having jurisdiction by law over natural resources affected by the project, that agency shall, if so requested by the lead agency or a responsible agency, prepare and submit a proposed reporting or monitoring program.

(2) The lead agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which its decision is based.

(b) A public agency shall provide that measures to mitigate or avoid significant effects on the environment are fully enforceable through permit conditions, agreements, or other measures. Conditions of project approval may be set forth in referenced documents which address required mitigation measures or, in the case of the adoption of a plan, policy, regulation, or other public project, by incorporating the mitigation measures into the plan, policy, regulation, or project design.

(c) Prior to the close of the public review period for a draft environmental impact report or mitigated negative declaration, a responsible agency, or a public agency having jurisdiction over natural resources affected by the project, shall either submit to the lead agency complete and detailed performance objectives for mitigation measures which would address the significant effects on the environment identified by the responsible agency or agency having jurisdiction over natural resources affected by the project, or refer the lead agency to appropriate, readily available guidelines or reference documents. Any mitigation measures submitted to a lead agency by a responsible agency or an agency having jurisdiction over natural resources affected by the project shall be limited to measures which mitigate impacts to resources which are subject to the statutory authority of, and definitions applicable to, that agency. Compliance or noncompliance by a responsible agency or agency having jurisdiction over natural resources affected by a project with that requirement shall not limit the authority of the responsible agency or agency having jurisdiction over natural resources affected by a project, or the authority of the lead agency, to approve, condition, or deny projects as provided by this division or any other provision of law.

### *1.2 PROJECT SUMMARY*

The proposed project is the preparation of The Ontario Plan, which consists of a Vision, Governance Manual, Policy Plan, City Council Priorities, Implementation Plans, and Tracking and

Feedback. The Ontario Plan integrates components of city governance documents into a single guidance system that shapes the community 20 years or more into the future.

(a) The Ontario **Vision** describes the future community of Ontario. Its basic purpose is to improve the quality of life for the people of Ontario. It is the rationale and motivation for everything the City does.

(b) The **Governance Manual** describes the foundation for conducting the public's business on behalf of the present and future people of Ontario. It explains how The Ontario Plan is a tool for decision-making and communication.

(c) **City Council Priorities** define the short-term direction in City actions and initiatives. They are the primary means for exercising leadership in carrying out The Plan and realizing the Vision.

(d) The **Policy Plan** connects intent with action through the broad range of Goals and Policies that would guide the long-term growth and development required for the City to achieve its Vision. It also satisfies the California Government Code requirement for a general plan. Figure 3-6, *Proposed Land Use Plan,* shows the proposed General Plan land use designations that guide and regulate land use patterns, distributions, densities and intensities in the City of Ontario, including residential employment, retail, recreation, and public uses.

(e) **Implementation** consists of actions taken to carry out Plan policies. This includes initiatives by the City and decisions on public and private development projects.

(f) **Tracking and Feedback** allows the City to learn from experience and redirect efforts.

Pursuant to CEQA Guidelines Section 15064(d), the EIR considers the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by The Ontario Plan. Consequently, the EIR focuses on impacts from changes to land use associated with buildout of the Proposed Land Use Plan, within the Policy Plan, and impacts from the resultant population and employment growth in the City. The Ontario Plan Proposed Land Use Plan for the ultimate development of the City is not linked to a timeline. However, for the purpose of this environmental analysis, buildout of the Proposed Land Use Plan is forecast for the year 2035.

### *1.3 PROJECT LOCATION*

The City of Ontario is in the southwestern corner of San Bernardino County and is surrounded by the Cities of Chino and Montclair, and unincorporated areas of San Bernardino County to the west; the Cities of Upland and Rancho Cucamonga to the north; the City of Fontana and unincorporated land in San Bernardino County to the east; and unincorporated Riverside County land to the south. The City is in the central part of the Upper Santa Ana River Valley. This portion of the valley is bounded by the San Gabriel Mountains to the north; the Chino Hills, Puente Hills, and San Jose Hills to the west; the Santa Ana River to the south; and Lytle Creek Wash on the east.

The City comprises approximately 50 square miles (31,958 acres), which includes the 8,200-acre New Model Colony (NMC) in the southern portion of the City (formerly the City's Sphere of Influence). The northern urbanized portion of the City is known as the Original Model Colony (OMC). The City is generally bounded by Benson Avenue and Euclid Avenue on the west; Interstate 10 (I-10), 8th Street, and 4th Street on the north; Etiwanda Avenue and Hamner Avenue on the east; and Merrill Avenue and the San Bernardino County/Riverside County boundary on the south. Regional circulation to and through the City is provided by I-10 and State Route 60 (SR-60) east–west, and by I-15 and SR-83 (Euclid Avenue) north–south.

## *1.4 ENVIRONMENTAL IMPACTS*

The environmental document for this project is a "program EIR" as defined by State CEQA Guidelines (Section 15161, California Code of Regulations, Title 14, Division 6, Chapter 3). As provided in Section 15168 of the State CEQA Guidelines, a Program EIR may be prepared on a series of actions that may be characterized as one large project that are related either 1) geographically; 2) as logical parts of a chain of contemplated events; 3) in connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program; or 4) as individual activities carried out under the same authorizing statutory or regulatory authority and have generally similar environmental effects that can be mitigated in similar ways.

Although the legally required contents of a Program EIR are the same as those of a Project EIR, Program EIRs are typically more conceptual and may contain a more general discussion of impacts, alternatives, and mitigation measures than a Project EIR. Once a Program EIR has been prepared, subsequent activities within the program must be evaluated to determine whether an additional CEQA document needs to be prepared. However, if the Program EIR addresses the program's effects as specifically and comprehensively as possible, many subsequent activities could be found to be within the Program EIR scope and additional environmental documents may not be required (Guidelines Section 15168[c]). When a Program EIR is relied on for a subsequent activity, the lead agency must incorporate feasible mitigation measures and alternatives developed in the Program EIR into the subsequent activities (Guidelines Section 15168[c][1]). If a later activity would have effects that were not examined in the Program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration. Pursuant to Sections 15126.2 and 15126.4 of the State CEQA Guidelines, the EIR should identify any potentially significant adverse impacts and recommend mitigation that would reduce or eliminate these impacts to levels of insignificance.

### *1.4.1 Impacts Considered Less Than Significant*

Ten environmental categories are identified as having less than significant impacts that do not require mitigation. These categories are:

- Aesthetics
- Biological Resources
- Geology/Soils
- Hazards & Hazardous Materials
- Hydrology/Water Quality
- Land Use & Planning
- Mineral Resources
- Population and Housing
- Public Services
- Recreation

### *1.4.2 Potentially Significant Adverse Impacts That Can Be Mitigated, Avoided, or Substantially Lessened*

The following have been identified as potentially resulting in significant adverse impacts that can be mitigated, avoided, or substantially lessened:

- Cultural Resources: Mitigation Measures 5-2 through 5-4 would reduce archeological and prehistoric cultural resource impacts to less than significant.

- Noise: Mitigation Measure 12-3 would ensure that any new vibration-sensitive structures near the Union Pacific Railroad or Southern California Regional Rail Authority right-of-way would be constructed so that train-related vibration would not be perceptible and operational vibration impacts would be less than significant.

- Utilities and Service Systems: Mitigation Measures 17-1 through 17-4 would reduce impacts on water supply and demand from buildout of The Ontario Plan to less than significant.

### *1.4.3 Unavoidable Significant Adverse Impacts*

There are six environmental categories considered to have impacts that would be significant and unavoidable and would not be lessened through mitigation.

**Agricultural Resources**

Buildout of The Ontario Plan would convert 3,269.3 acres of California Resource Agency designated Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to residential, commercial, mixed-use, and industrial land uses. Consequently, impacts to Farmland would remain significant and unavoidable.

There are a number of Williamson Act contracts within the City that have yet to expire. Buildout of The Ontario Plan would most likely require the cancellation or nonrenewal of these contracts. The current use of these contracts would slow the rate of conversion from agricultural to nonagricultural land, but it would not impede the conversion. Since there are some Williamson Act contracts still active in the New Model Colony, implementation of the proposed land use plan for The Ontario Plan would conflict with these contracts and cause a significant impact. Consequently, impacts to Williamson Act contracts would remain significant and unavoidable.

Development of the City in accordance with The Ontario Plan would increase the amount of nonagricultural land uses. When nonagricultural land uses are placed near agricultural uses, the odors, noises, and other hazards related to agriculture conflict with the activities and the quality of life of the people living and working in the surrounding areas. Consequently, conversion of agricultural uses in the city may cause farms and agricultural land uses outside the City to be converted to nonagricultural uses because of the nuisances related to agriculture and impacts would remain significant and unavoidable.

**Air Quality**

The project would not be consistent with the Air Quality Management Plan (AQMP) because air pollutant emissions associated with buildout of the City of Ontario would cumulatively contribute to the nonattainment designations in the South Coast Air Basin (SoCAB). Furthermore, buildout of the Proposed Land Use Plan would exceed current estimates of population, employment, and vehicle miles traveled for Ontario and therefore these emissions are not included in the current regional emissions inventory for the SoCAB. As both criteria must be met in order for a project to be considered consistent with the AQMP, the project would be considered inconsistent with the AQMP. Consequently, this impact would remain significant and unavoidable.

Construction activities associated with buildout of The Ontario Plan would generate short-term emissions that exceed the South Coast Air Quality Management District's (SCAQMD) regional significance thresholds; cumulatively contribute to the SoCAB's nonattainment designations for ozone (O3), coarse inhalable particulate matter (PM10), and fine inhalable particulate matter (PM2.5); and potentially elevate concentrations of air pollutants at sensitive receptors. Mitigation Measure 3-1 would reduce The Ontario Plan's short-term construction-related volatile organic compounds (VOC), carbon monoxide (CO), oxides of nitrogen (NOx), PM10, and PM2.5 emissions but they would not be reduced to levels below the SCAQMD's regional thresholds and they would not reduce these impacts to less than significant. Consequently, construction air pollutant emissions generated by buildout of The Ontario Plan would remain significant and unavoidable.

Buildout of The Ontario Plan would generate long-term emissions that would exceed SCAQMD'S regional significance thresholds and cumulatively contribute to the SoCAB nonattainment designations for O3, PM10, and PM2.5. Mitigation Measure 3-2 would reduce long-term operational emissions of VOC, CO, NOx, PM10, and PM2.5 related to the buildout of The Ontario Plan but they would not reduce these emissions to levels below the SCAQMD's regional significance thresholds and impacts would not be less than significant. Consequently, operational impacts from buildout of The Ontario Plan would remain significant and unavoidable.

Approval of residential and other sensitive land uses within 500 feet of Interstate-10, Interstate-15, or State Route-60 would result in exposure of persons to substantial concentrations of diesel particulate matter. Mitigation Measure 3-3 would reduce impacts related to the exposure of sensitive receptors (residential and other sensitive land uses) to diesel particulate matter because of their placement near freeways within the City. However, it would not reduce this impact to be less than significant.

Conversion of agricultural land to nonagricultural uses would temporarily expose residents to objectionable odors and impacts would remain significant and unavoidable.

**Cultural Resources**

Although protective regulations are in place and preservation policies are included in The Ontario Plan, implementation of the Proposed Land Use Plan, especially within growth focus areas, has the potential to impact Tier III historic resources. Mitigation Measure 5-1 would require a historical evaluation for properties within historic resources in the Focus Areas under the City's ordinance. However, the ordinance does not provide a high level of protection for Tier III resources. As a result, demolition of historical resources categorized under the Ordinance as Tier III could potentially be impacted with implementation of the Proposed Land Use Plan. Consequently, Tier III historic resource impacts would remain significant and unavoidable.

**Global Climate Change**

Buildout of the City of Ontario would generate greenhouse gas emissions that would significantly contribute to global climate change impacts in California. Greenhouse gas (GHG) emissions generated in the City would significantly contribute to climate change impacts in California as a result of the growth in population and employment in the City and scale of development activity associated with buildout of the Proposed Land Use Plan. Mitigation Measures 6-1 through 6-6 would act to reduce the contributions of The Ontario Plan to global climate change but they would not reduce the impacts to less than significant.

**Noise**

Buildout of the Proposed Land Use Plan would result in an increase in traffic on local roadways in the City of Ontario, which would substantially increase noise levels. Consequently, impacts would remain significant and unavoidable.

Noise-sensitive uses could be exposed to elevated noise levels from transportation sources. Any siting of new sensitive land uses within a noise environment that exceeds the normally acceptable land use compatibility criterion would result in a potentially significant impact and would require a separate noise study through the development review process to determine the level of impacts and required mitigation. Mitigation Measure 12-1 would decrease the exposure of sensitive receptors to excessive noise levels within 65 dBA CNEL contours, whether near Los Angeles/Ontario International Airport (LAONT) or other noise-producing areas such as freeways and railroads, but it would not reduce these impacts to less than significant.

Construction activities associated with buildout of the individual land uses associated with the Proposed Land Use Plan would expose sensitive uses to strong levels of groundborne vibration. Mitigation Measure 12-2 would reduce the impacts caused by construction-related vibrations on sensitive receptors but it would not reduce the impact to less than significant.

Impact 5.12-5. Significant. Construction activities associated with buildout of the individual land uses associated with the Proposed Land Use Plan would substantially elevate noise levels in the vicinity of sensitive land uses. Mitigation Measure 12-4 calls for the use of noise-reducing techniques during construction projects that would impact nearby sensitive receptors, such as the use of temporary sound walls and reduced unnecessary truck idling. However, these impacts would not be reduced to levels considered less than significant.

Noise-sensitive land uses within the 65 dBA CNEL contour of the Los Angeles/Ontario International Airport would be exposed to substantial levels of airport-related noise. Consequently, impacts would remain significant and unavoidable.

**Transportation and Traffic**

The increased development and population growth associated with the buildout of the Proposed Land Use Plan would cause deficient levels of service at area intersections without implementation of the recommended lane geometry improvements. In addition, buildout of the Proposed Land Use Plan would also cumulatively contribute to the cumulatively significant freeway level of service impact that is already projected to occur in the future. Mitigation Measure 16-1 would require the buildout of The Ontario Plan to be consistent with the traffic study prepared by Kimley-Horn and Associates. This traffic study indicates the appropriate lane geometry for area intersections. This would allow for intersections to have LOS values of E or above, but it would not improve the cumulative freeway LOS standards to appropriate levels. The City has no jurisdiction over Caltrans projects, such as freeway improvements. Therefore, the impacts related to cumulative LOS deficiencies on freeways would not be reduced to levels considered less than significant.

# 2. Mitigation Monitoring Process

## *2.1 MITIGATION MONITORING PROGRAM ORGANIZATION*

CEQA requires that a reporting or monitoring program be adopted for the conditions of project approval that are necessary to mitigate or avoid significant effects on the environment (Public Resources Code 21081.6). The mitigation monitoring and reporting program is designed to ensure compliance with adopted mitigation measures during project implementation. For each mitigation measure recommended in the Environmental Impact Report, specifications are made herein that identify the action required and the monitoring that must occur. In addition, a responsible agency is identified for verifying compliance with individual conditions of approval contained in the Mitigation Monitoring Program (MMP). In order to effectively track and document the status of mitigation measures, a mitigation matrix has been prepared and includes:

- Responsibility for implementation
- Timing
- Responsibility for monitoring
- Monitor

Mitigation measure timing of verification has been apportioned into several specific timing increments. Of these, the most common are:

- Prior to project approval
- Prior to issuance of grading permit(s)
- During construction

Information pertaining to compliance with mitigation measures or any necessary modifications or refinements will be documented in the comments portion of the matrix.

## *2.2 MITIGATION MONITORING PROCEEDURES*

The City of Ontario Planning Department is the designated lead agency for the Mitigation Monitoring and Reporting Program. The City of Ontario includes the Mitigation Measures within the Special Conditions of Approval. The City is responsible for review of all monitoring reports, enforcement actions, and document disposition. The Planning Department shall designate a Project Mitigation Monitor for the proposed project.

### *2.2.1 In-Field Monitoring*

The Responsible Monitoring Party shall exercise caution and professional practices at all times when monitoring construction. Protective wear (hard hats, glasses, etc.) shall be worn at all times in construction areas. Injuries shall be reported immediately to the Project Mitigation Monitor.

### *2.2.2 Coordination with Contractors*

The construction manager/superintendent is responsible for coordination of contractors and for contractor completion of required measures in accordance with the provisions of this program.

### *2.2.3 Recognized Experts*

The use of recognized experts as a component of the monitoring team is required to ensure compliance with scientific and engineering mitigation measures. While the recognized experts assess compliance with required mitigation measures, consultation with the City of Ontario planning staff shall take place in the event of a dispute.

### *2.2.4 Enforcement*

Agencies may enforce conditions of approval through their existing police power, using stop-work orders, fines, infraction citations, loss of entitlements, refusal to issue building permits or certificates of use and occupancy or, in some cases, notice of violation for tax purposes. Criminal misdemeanor sanctions could be available where the agency has adopted an ordinance requiring compliance with the monitoring program, similar to the provision in many zoning ordinances that affirm the enforcement power to bring suit against violators of the ordinances.

# *3. Mitigation Monitoring Requirements*

## *3.1 CATEGORIZED MITIGATION MEASURES/MATRIX*

Project-specific mitigation measures have been categorized in matrix format, as shown in Table 3-1. The matrix identifies the environmental factor, specific mitigation measures, schedule, and responsible monitor. The mitigation matrix will serve as the basis for scheduling the implementation of, and compliance with, all mitigation measures.

## *3.2 IN-FIELD MONITORING*

Project monitors and technical subconsultants shall exercise caution and professional practices at all times when monitoring implementation of mitigation measures. Protective wear (e.g., hard hat, glasses) shall be worn at all times in construction areas. Injuries shall be immediately reported to the mitigation monitoring committee.

## *3.3 DATABASE MANAGEMENT*

All mitigation monitoring reports, letters, and memos shall be prepared using Microsoft Word software on IBM-compatible PCs and processed according to the City's Environmental Compliance Program.

## *3.4 COORDINATION WITH CONTRACTORS*

The construction manager is responsible for coordination of contractors and for contractor completion of required mitigation measures.

## *3.5 LONG-TERM MONITORING*

Long-term monitoring related to several mitigation measures will be required, including fire safety inspections. Post-construction fire inspections are conducted on a routine basis by the Ontario Fire Department.

| ***Table 3-1***<br>***Mitigation Monitoring Requirements*** | | | | |
|---|---|---|---|---|
| ***Mitigation Measure*** | ***Responsibility for Implementation*** | ***Timing*** | ***Responsibility for Monitoring*** | ***Monitor (Signature Required) (Date of Compliance)*** |
| **5.3 AIR QUALITY** | | | | |
| **3-1** The City of Ontario Building Department shall require that all new construction projects incorporate feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:<br>• Requiring fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:<br>o Requiring use of nontoxic soil stabilizers to reduce wind erosion.<br>o Applying water every four hours to active soil-disturbing activities.<br>o Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.<br>• Using construction equipment rated by the United States Environmental Protection Agency as having Tier 3 or higher exhaust emission limits.<br>• Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.<br>• Limiting nonessential idling of construction equipment to no more than five consecutive minutes.<br>• Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: | City of Ontario Building Department in coordination with the landowner/project applicant's construction contractor | During construction | City of Ontario Building and Department and Developer/Contractor | |

| ***Table 3-1***<br>***Mitigation Monitoring Requirements*** | | | | |

| ***Mitigation Measure*** | ***Responsibility for Implementation*** | ***Timing*** | ***Responsibility for Monitoring*** | ***Monitor (Signature Required) (Date of Compliance)*** |
| http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf . | | | | |
| **3-2** The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks). | City of Ontario Planning/Engineering Department in coordination with the landowner/project applicant | Prior to individual project approvals | City of Ontario Planning Department | |
| **3-3** The City of Ontario shall evaluate new development proposals within the City for potential incompatibilities with regard to the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Health Perspective* (April 2005). New development that is inconsistent with the recommended buffer distances shall only be approved if feasible mitigation measures, such as high efficiency Minimum Efficiency Reporting Value filters have been incorporated into the project design to protect future sensitive receptors from harmful concentrations of air pollutants as a result of proximity to existing air pollution sources. | City of Ontario Planning Department in coordination with the landowner/project applicant | Prior to individual project approvals | City of Ontario Planning Department | |
| **5.5 CULTURAL RESOURCES** | | | | |
| **5-1** Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals. | City of Ontario Planning Department | Prior to individual project approvals | City of Ontario Planning Department | |
| **5-2** In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring | City of Ontario Planning Department in coordination with the Landowner/Project Applicant | Prior to individual project approvals | City of Ontario Planning Department | |

***Table 3-1***
***Mitigation Monitoring Requirements***

| *Mitigation Measure* | *Responsibility for Implementation* | *Timing* | *Responsibility for Monitoring* | *Monitor (Signature Required) (Date of Compliance)* |
|---|---|---|---|---|
| program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:<br>• Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.<br>• Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.<br>• Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers. | | | | |
| **5-3** Upon receipt of an application for a Specific Plan or a project that requires a General Plan amendment subject to CEQA and is within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a [tribal] culturally sensitive area, then a cultural resources assessment prepared by an archaeologist shall be required. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA | City of Ontario Planning Department | Prior to individual project approvals | City of Ontario Planning Department | |

***Table 3-1***
***Mitigation Monitoring Requirements***

| | ***Mitigation Measure*** | ***Responsibility for Implementation*** | ***Timing*** | ***Responsibility for Monitoring*** | ***Monitor (Signature Required) (Date of Compliance)*** |
|---|---|---|---|---|---|
| | document, the procedure described in Mitigation Measure 5-4 shall be followed. | | | | |
| **5-4** | Prior to the issuance of grading permits for a Specific Plan or project that requires a General Plan amendment for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction. | City of Ontario Planning Department in coordination with the Landowner/Project Applicant | Prior to issuance of grading permit(s) | City of Ontario Planning Department | |
| **5.6 Global Climate Change** | | | | | |
| **6-1** | The City of Ontario shall prepare a Climate Action Plan within 18 months after adopting The Ontario Plan. The goal of the Climate Action Plan shall be to reduce GHG emissions from all activities within the City boundaries to support the State's efforts under AB 32 and to mitigate the impact of climate change on the City, State, and world. Once completed, the City shall update The Ontario Plan and associated policies, as necessary, to be consistent with the Climate Action Plan and prepare a subsequent or supplemental Environmental Impact Report, if new significant impacts are identified. The Climate Action Plan shall include the following:<br>• **Emission Inventories**: The City shall establish GHG emissions inventories including emissions from all sectors within the City, using methods approved by, or | City of Ontario | Within 18 months of adopting The Ontario Plan | City of Ontario Planning Department/ Municipal Utilities Agency (MUA) | |

| ***Table 3-1<br>Mitigation Monitoring Requirements*** | | | | |
|---|---|---|---|---|
| ***Mitigation Measure*** | ***Responsibility for Implementation*** | ***Timing*** | ***Responsibility for Monitoring*** | ***Monitor (Signature Required) (Date of Compliance)*** |
| consistent with guidance from, the CARB; the City shall update inventories every 3 years or as determined by state standards to incorporate improved methods, better data, and more accurate tools and methods, and to assess progress. If the City is not on-schedule to achieve the GHG reduction targets, additional measured shall be implemented, as identified in the CAP.<br>o The City shall establish a baseline inventory of GHG emissions including municipal emissions, and emissions from all business sectors and the community.<br>o The City shall define a "business as usual" scenario of municipal, economic, and community activities, and prepare a projected inventory for 2020 based on that scenario.<br>• **Emission Targets**: The City will develop Plans to reduce or encourage reductions in GHG emissions from all sectors within the City:<br>o A Municipal Climate Action Plan which shall include measures to reduce GHG emissions from municipal activities by at least 30 percent by 2020 compared to the "business as usual" municipal emissions (including any reductions required by the California Air Resource Board under AB 32.<br>o A Business Climate Action Plan in collaboration with the business community, which shall include measures to reduce GHG emissions from business activities, and which shall seek to reduce emissions by at least 30 percent by 2020 compared to "business as usual" business emissions.<br>o A Community Climate Action Plan in collaboration with the stakeholders from the community at large, which shall include measures reduce GHG | | | | |

|---|---|---|---|---|---|
| | emissions from community activities, and which shall seek to reduce emissions by at least 30 percent by 2020 compared to "business as usual" community emissions. | | | | |
| **6-2** | The Climate Action Plan shall include specific measures to achieve the GHG emissions reduction targets identified in Mitigation Measure 6-1. The Climate Action Plan shall quantify the approximate greenhouse gas emissions reductions of each measure and measures shall be enforceable. Measures listed below, along with others, shall be considered during the development of the Climate Action Plan (CAP):<br>• Require all new or renovated municipal buildings to seek Silver or higher Leadership in Energy and Environmental Design (LEED) standard, or compliance with similar green building rating criteria.<br>• Require all municipal fleet purchases to be fuel efficient vehicles for their intended use based on the fuel type, design, size, and cost efficiency.<br>• Require that new development projects in Ontario that require demolition prepare a demolition plan to reduce waste by recycling and/or salvaging a nonhazardous construction and demolition debris.<br>• Require that new developments design buildings to be energy efficient by siting buildings to take advantage of shade, prevailing winds, landscaping, and sun screening to reduce energy required for cooling.<br>• Require that cool roofs for non-residential development and cool pavement to be incorporated into the site/building design for new development where appropriate. | City of Ontario Planning Department | Within 18 months of adopting The Ontario Plan | City of Ontario Planning Department | |

| ***Table 3-1<br>Mitigation Monitoring Requirements*** | | | | |
|---|---|---|---|---|
| ***Mitigation Measure*** | ***Responsibility for Implementation*** | ***Timing*** | ***Responsibility for Monitoring*** | ***Monitor (Signature Required) (Date of Compliance)*** |
| • Evaluate the feasibility of implementing a Public Transit Fee to support Omnitrans in developing additional transit service in the City.<br>• Require diesel emission reduction strategies to eliminate and/or reduce idling at truck stops, warehouses, and distribution facilities throughout the City.<br>• Install energy efficient lighting and lighting control systems in all municipal buildings.<br>• Require all new traffic lights installed be energy efficient traffic signals.<br>• Require the use of reclaimed water for landscape irrigation in all new development and on public property where such connections are within the service boundaries of the City's reclaimed water system.<br>• Require all new landscaping irrigation systems installed within the City to be automated, high-efficient irrigation systems to reduce water use and require use of bubbler irrigation; low-angle, low-flow spray heads; or moisture sensors.<br>• Conduct energy efficiency audits of existing municipal buildings by checking, repairing, and readjusting heating, ventilation, and air conditioning systems, lighting, water heating equipment, insulation, and weatherization.<br>• Ensure that its local Climate Action, Land Use, Housing, and Transportation Plans are aligned with, support, and enhance any regional plans that have been developed consistent with state guidance to achieve reductions in GHG emissions. | | | | |

| ***Table 3-1<br>Mitigation Monitoring Requirements*** | | | | |

| • Work cooperatively with all developers to incorporate conservation measures into project designs (such as those recommended by the California Urban Water Conservation Council).<br>• Continue to develop and implement drought contingency plans to assist citizens and businesses reduce water use during water shortages and emergencies.<br>• Revise the City Code to include a Water-Efficient Landscape Ordinance to encourage or, as appropriate, require the use of water-efficient landscaping consistent with AB 1881. | | | | |
| **17-2** The City shall include a policy in the Policy Plan that maximizes the use of recycled water as an irrigation (nonpotable) source for landscaping, parks, and other irrigation opportunities in all areas of the City and requires use of recycled water in dual-system office and industrial uses in selected urban areas of the City, where available and feasible. | City of Ontario Planning Department in coordination with City of Ontario MUA/Engineering Department | Ongoing | City of Ontario Planning/MUA/Engineering Department | |
| **17-3** The City shall include a policy in the Policy Plan that the City participate through the Chino Basin Water Master and the Inland Empire Utilities Agency in regional efforts to develop finding additional sources of water for groundwater recharge, such as capture of stormwater runoff, recycled water, or other sources to ensure that the Chino Basin stays in long-term hydraulic balance and sustainability and that adequate additional local water sources would be available to increase the flexibility of the City's water supply. | City of Ontario Planning Department in coordination with City of Ontario MUA/Engineering Department | Ongoing | City of Ontario Planning/MUA/Engineering Department | |

RESOLUTION NO. PC21-034

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THAT THE CITY COUNCIL APPROVE FILE NO. PUD21-001, AN AMENDMENT TO THE EMPORIA FAMILY HOUSING PLANNED UNIT DEVELOPMENT (”PUD”), AMENDING CERTAIN PROVISIONS TO: [1] EXPAND THE PROJECT BOUNDARY AREA FROM APPROXIMATELY 2.80-ACRES OF LAND TO 4.95-ACRES OF LAND; [2] ESTABLISH MINIMUM BUILDING SETBACKS FROM PALM AVENUE AND TRANSIT STREET RIGHTS-OF-WAY; [3] MODIFY MINIMUM PARKING REQUIREMENTS; [4] ALLOW ON-STREET LOADING; [5] UPDATE THE PLANTING PALETTE; AND [6] MAKE VARIOUS REVISIONS NECESSARY TO THE INTERNAL CONSISTENCY OF THE PUD, AND MAKING FINDINGS IN SUPPORT THEREOF — APNS: 1049-051-04, 1049-054-02, 1049-054-03, 1049-054-04, 1049-054-06, 1049-059-06, AND1049-059-07

WHEREAS, The Related Companies of California, LLC, (hereinafter referred to as "Applicant") has initiated a request for the approval of an amendment to the Emporia Family Housing Planned Unit Development, File No. PUD21-001, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, in June 2017, the City Council adopted Ordinance No. 3075 approving the Emporia Family Housing Planned Unit Development (“PUD”), which governs land use and development within a two-block area within the downtown, bordered by Holt Boulevard on the north, Emporia Street on the south, Vine Avenue on the west, and Fern Avenue on the east; and

WHEREAS, the Project site land uses include a 75-unit multiple-family apartment complex, two historic commercial buildings, and vacant land; and

WHEREAS, the surrounding properties are located within the MU-1 (Mixed Use Downtown) zoning districts and land uses are characterized by a mixture of legal nonconforming residential uses, residential, light industrial, and commercial uses; and

WHEREAS, the PUD Amendment primarily applies to establishing development standards for a one-block area bordered Transit Street on the north, Emporia Street on the south, Fern Avenue on the west, and Palm Avenue on the east, and 2 lots located on the south side of Emporia Street; and

WHEREAS, the PUD Amendment will expand the project boundary area from approximately 2.80 acres of land to 4.95 acres of land, establish minimum building setbacks from Palm Avenue and Transit Street rights-of-way, modify minimum parking requirements, allow on-street loading, and update the planting palette. Other minor

revisions proposed are intended to clarify or update standards which reflect applicable Development Code standards and overall industry best practices; and

WHEREAS, the Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the Ontario City Council on January 27, 2010, in conjunction with File No. PGPA06-001 (hereinafter referred to as “Certified EIR”), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as “EIR Addendum”) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as “CEQA”); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside,

and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, as the first action on the Project, on May 25, 2021, the Planning Commission issued a Resolution recommending the City Council adopt the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on May 25, 2021, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the Ontario City Council on January 27, 2010, in conjunction with File No. PGPA06-001; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the EIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the Planning Commission finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the Project site is one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix, and the Project exceeds the 31-dwelling units and density of 25.1 dwelling units per acre as specified in the Available Land Inventory.

SECTION 4: ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the ALUCP, establishing the Airport Influence Area for Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the PLANNING COMMISSION, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 4, above, the Planning Commission hereby concludes as follows:

(1) ***The proposed PUD, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The Project is consistent with Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. Section 1.1, The Ontario Plan Objectives of the PUD, describes the manner in which the PUD complies with the Policy Plan goals and policies.

(2) ***The proposed PUD, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The Ontario Plan Environmental Impact Report includes safeguards and impose certain mitigation measures to ensure that development within the PUD boundary area would not be detrimental to public interest, health, safety, or general welfare of the City.

(3) ***In the case of an application affecting specific property(ies), the proposed PUD, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The PUD area is situated in Ontario's downtown and is adjacent to residential and commercial land uses and development. The surrounding development supports the objective of the PUD to further commercial and residential mixed-use development. The Project will not affect the harmonious relationship with adjacent properties and land use.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including but not limited to parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** In preparing the proposed PUD Amendment, a thorough review and analysis of the proposed Project and the subject site's physical suitability for the Project was completed, including analysis of the project size, shape, intensity of development, building height, building setbacks, site access, site landscaping and drainage, fences and walls, vehicle circulation, pedestrian connections, availability of mass transit, necessary street dedication and easements, public right-of-way improvements, availability of utilities and other infrastructure needs, off-street parking and circulation, building orientation and streetscapes, architectural character, building materials and color, and site signage. Based upon this review and analysis, the subject site has been deemed physically suitable, including but not limited to parcel size, shape, access, and availability of utilities, for the proposed PUD Amendment and the proposed development.

(5) ***The proposed PUD is superior to that which could be obtained through the application of the Development Code.*** The PUD Amendment will (a) expand the

Project area an additional 2.15 acres, from approximately 2.80-acres of land to 4.95-acres of land; (b) establish minimum building setbacks from Palm Avenue and Transit Street rights-of-way; (c) modify minimum parking requirements; (d) allow on-street loading, and (e) update the PUD's planting palette. These changes to the PUD will facilitate the development of Emporia Family Housing – Phase 2, consisting of 50 affordable multiple-family dwellings, related parking facilities and private and common open space areas. Additionally, the PUD Amendment will allow for the construction of additional recreation amenities that are available to all residents within the Emporia Family Housing Project (Phases 1 and 2). The proposed PUD Amendment will allow for subsequent development that is superior to that which could be obtained through the application of the Development Code by itself.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVE the herein described Amendment to the Emporia Family Housing Planned Unit Development, File No. PUD21-001, as depicted in Attachment A of this resolution and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of May 2021, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage
Planning Commission Chairman

ATTEST:

Rudy Zeledon
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA )
COUNTY OF SAN BERNARDINO )
CITY OF ONTARIO )

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC21-034, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on May 25, 2021, by the following roll call vote, to wit:

AYES: DeDiemar, Gage, Gregorek, Lampkin, Ricci, Willoughby

NOES: None

ABSENT: None

ABSTAIN: None

# 1 – Introduction

This document has been prepared to establish development regulations for the Emporia Ontario Family Project site located in the City of Ontario. The overall project site is approximately 4.62 net acres. Emporia I is comprised of ~~project site is~~ approximately 2.81 net acres and Emporia II is approximately 2.15 net acres in size. The project site is ~~containing~~ contained ~~a~~ within a ~~two~~ three block area that is generally bounded by Holt Boulevard and Transit Street to the north, Emporia Street to the south, ~~Fern~~ Palm Avenue to the east and Vine Avenue to the west and includes 2 lots bound by Emporia Street and the railroad right-of-way. ~~.~~ Additionally, this site is bisected east/west by Transit Street and bisected north/south by Fern Avenue (see Exhibit 1-1: Project Location Map).

The project site is located within the Ontario Plan Downtown Mixed-Use District which requires the establishment of a Planned Unit Development (PUD) prior to development. The PUD fulfills the requirements of a Downtown Mixed-Use District Planned Unit Development ("PUD"), as set forth in Ontario Development Code Section 4.01.030 (Planned Unit Developments ("PUD"). Upon approval, this PUD will establish the land use and development standards for the project site. Unless otherwise defined herein, definitions and interpretations contained in the Development Code shall apply to this PUD.

City staff and private developers will rely upon this PUD to determine whether precise plans for development ("Development Plans") will adequately meet the City's land use and design objectives for this key part of Downtown Ontario. These objectives have been defined over the last 20+ years in the Redevelopment Plan for the Center City Redevelopment Project (1983) and The Ontario Plan (2010) and are summarized in the proceeding chapters.

**Exhibit 1-1: Project Location Map**

Not to Scale

Not to Scale

# 2 – Objectives

## 2.1 – The Ontario Plan Objectives

The Ontario Plan, which includes the City's General Plan, designates the project area as part of the Downtown Mixed-Use District. The Downtown Mixed Use District designation requires approval of an Area Plan or Planned Unit Development to develop the property. Additionally, the designation specifies a residential density range of 25 to 75 units per acre and a maximum floor area ratio (FAR) of 2.0 for office and retail uses.

The intent of this designation is to:

- Create "an intensive vertical and horizontal mixture of retail, office, and residential uses in a pedestrian friendly atmosphere;
- Ensure the historic character is enhanced; and
- Concentrate the most intensive uses along Euclid and Holt Avenues.

The Ontario Plan goals and policies furthered by this Planned Unit Development are as follows:

### 2.1.1 – Land Use Element Goals & Policies

- LU1 A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.
  - ❖ LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

### 2.1.2 – Community Design Element Goals & Policies

- CD1 A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.
  - ❖ CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing the diverse character of our existing viable neighborhoods.
  - ❖ CD1-2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.
- CD2 A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.
  - ❖ CD2-1 Quality Architecture. We encourage all development projects to convey visual interest and character through:
    - ➢ building volume, massing, and height to provide appropriate scale and proportion;
    - ➢ a true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and

- exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.

- CD2-5 Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right of way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.
- CD2-8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of visibility and accessibility, and use of lighting.

- CD3 Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.
  - CD3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics. (Link to Bicycle and Pedestrians Section of the Mobility Element and Policies M2-3 and M2-4)
- CD4 Historic buildings, streets, landscapes and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, that have been preserved and serve as a focal point for civic pride and identity.

## 2.1.3 – Housing Element Goals & Policies

- H2 Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.
  - H2-1 Corridor Housing. We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally and aesthetically suited to corridors.
  - H2-2 Historic Downtown. We foster a vibrant historic downtown through facilitating a wide range of housing types and affordability levels for households of all ages, housing preferences, and income levels.
  - H2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices.
  - H2-6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.
- H4 Increased opportunities for low and moderate income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities
  - H4-3 Rental Assistance. We support the provision of rental assistance for individuals and families earning extremely low, very low, and low income with funding from the state and federal government.

- H5 A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age or other status.
  - ❖ H5-2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation and other amenities.

### 2.1.4 – Community Economics Element Goals & Policies

- CE1 A complete community that provides for all incomes and stages of life
  - ❖ CE1-6 Diversity of Housing. We collaborate with residents, housing providers and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to support our workforce, attract business and foster a balanced community.

## 2.2 – Center City Redevelopment Plan Objectives

The Center City Redevelopment Plan was established to provide a framework and process to guide the development of projects within the study area of the Redevelopment Plan. The following objectives have been identified from the Redevelopment Plan as pertaining to the Planned Unit Development:

- Create a healthy and exciting urban variety, the ability to work, live, shop and play within a small area, combine daytime and nighttime use, and conserve energy and resources through mixed-use land development;
- Create an attractive and pleasant environment in the Project Area through the use of proper design, open space, and other amenities to enhance the aesthetic quality;
- Encourage and facilitate medium and high-density development, including, but not limited to, condominiums, townhouses, apartments and similar compatible uses.
- Maximize the housing opportunities of the residential areas; and
- Provide improvements necessary for the elimination of blight and to provide for the orderly development of the commercial industrial and residential areas included in the redevelopment project area.

## 2.3 – Related Emporia Project Objectives

This Planned Unit Development provides guidelines of development for the project area. The objectives below have been established to provide a general framework for establishing development standards to ensure proper development of the project area.

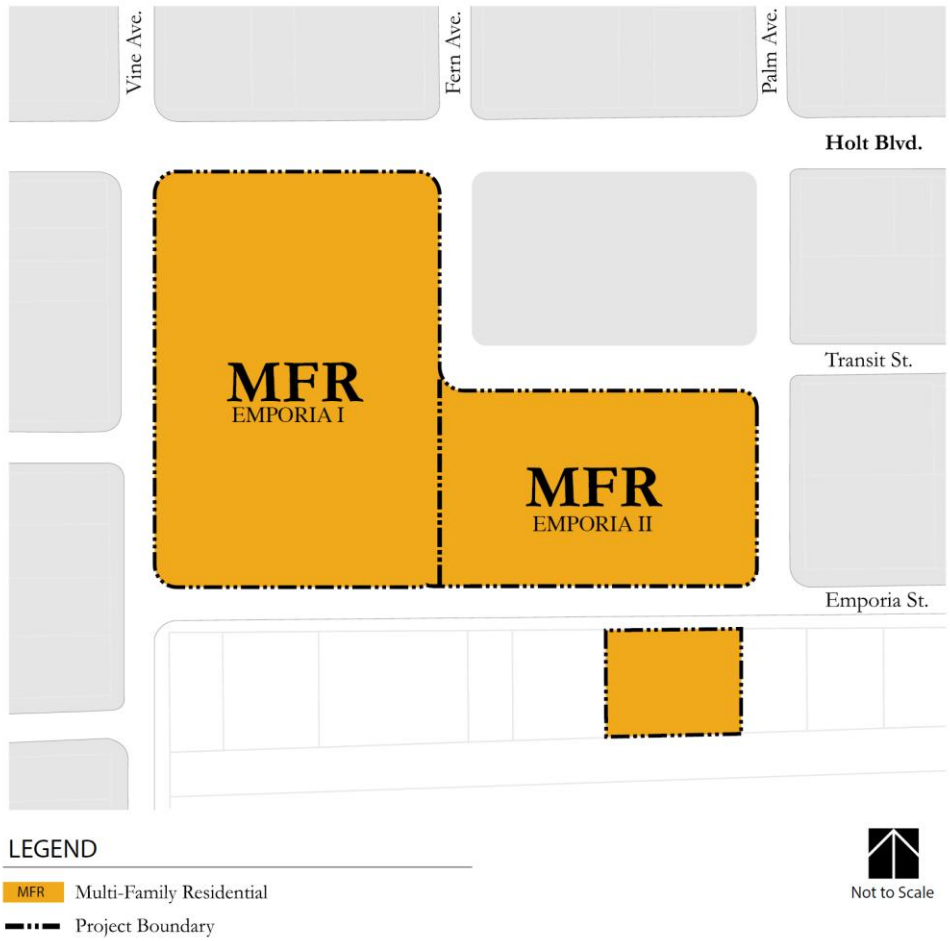
- Develop high quality, affordable rental housing;
- Establish appropriate relationships among new residential neighborhoods as well as with existing adjacent land use; and
- Provide new housing designed for families with children.

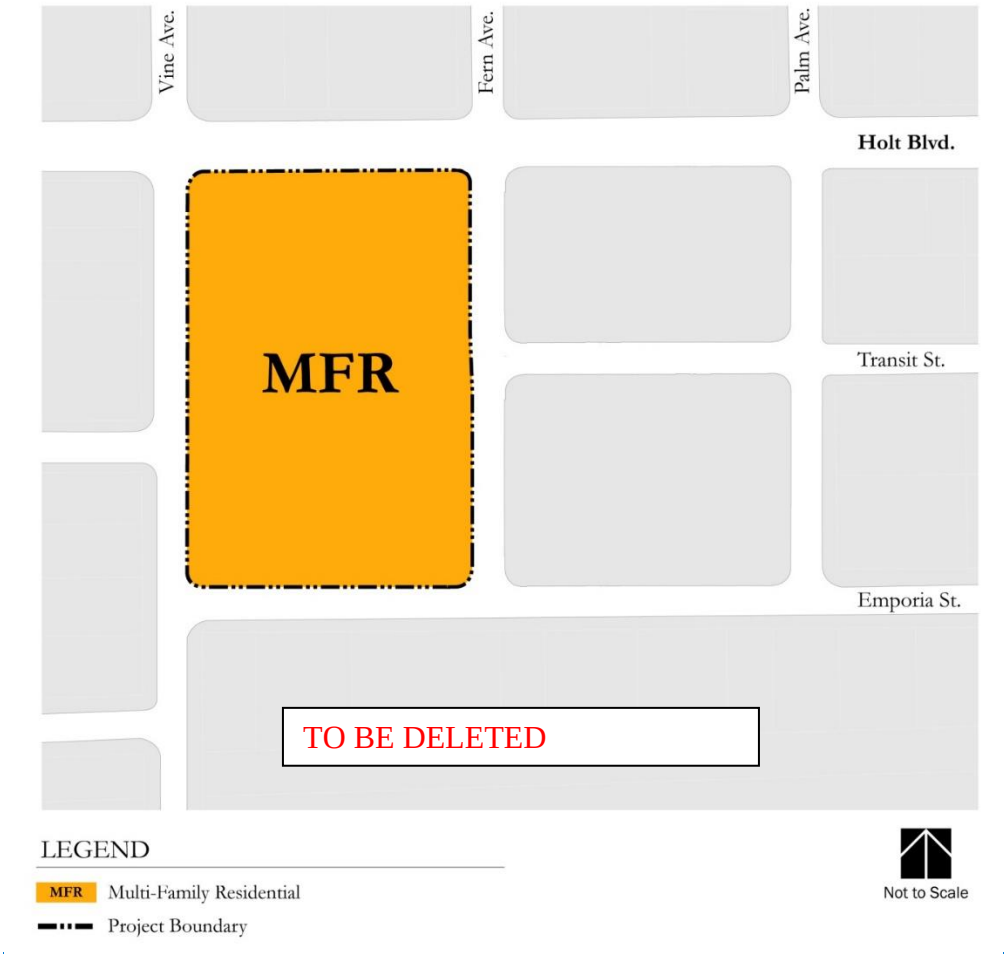
# 3 – Allowable Uses

The project site is located within the Downtown Mixed Use Area Policy Plan (General Plan) land use district, and the MU-1 (Downtown Mixed-Use) zoning district, which implements the Downtown Mixed-Use Area. The MU-1 zoning district is established to accommodate an intensive mixture of vertical and horizontal retail and office uses at a development intensity of up to 2.0 FAR, and residential uses at a density of 25 to 75 dwellings units per acre. Development projects within~~g~~ the MU-1 zoning district are intended to maintain a pedestrian friendly atmosphere, while at the same time enhancing the historic character of the area. The most intensive uses within this district are envisioned along Euclid Avenue and Holt Boulevard.

Consistent with the intent of the Downtown Mixed U~~u~~se Area and the MU-1 zoning district, the project site is designated for Multiple-Family Residential (MFR) land uses. Exhibit 3-1 (Land Use Plan), below, depicts the Planned Unit Development boundary and land use designation.

**Exhibit 3-1: Land Use Plan**





## 3.1 – Residential Use

The project site will be developed with high quality, attached housing units, with either two or three levels. The buildings will be a combination of podium-style stacked flat units, with parking beneath, ~~and~~ townhome style units, with first floor garage access, two and three story walk-ups with stacked flat units.

## 3.2 – Permitted Use Table/List

The permitted uses within the Related Emporia PUD include the following:

- Multiple-family (Affordable Low-Income) dwelling;
- Recreation facilities ancillary to multiple-family residential development projects, for use by residents and their guests, including but not limited to pool, spas, tennis courts, clubhouse or recreation building, playgrounds or tot lots, and other similar amenities appropriate to serve the project;
- Temporary Uses (As permitted within the residential districts of the City of Ontario Development Code subject to an Administrative Permit);

- Leasing/Administrative Office (for on-site property and facilities management only);
- Motor vehicle parking ancillary to a multiple-family residential development project; and
- Other land use compatible with multiple-family residential development projects, as determined appropriate by the Zoning Administrator.

Uses may be prohibited through rental contracts/agreements as provided by the project management, unless prohibited by Federal, State, or local laws.

# 4 – Development Regulations

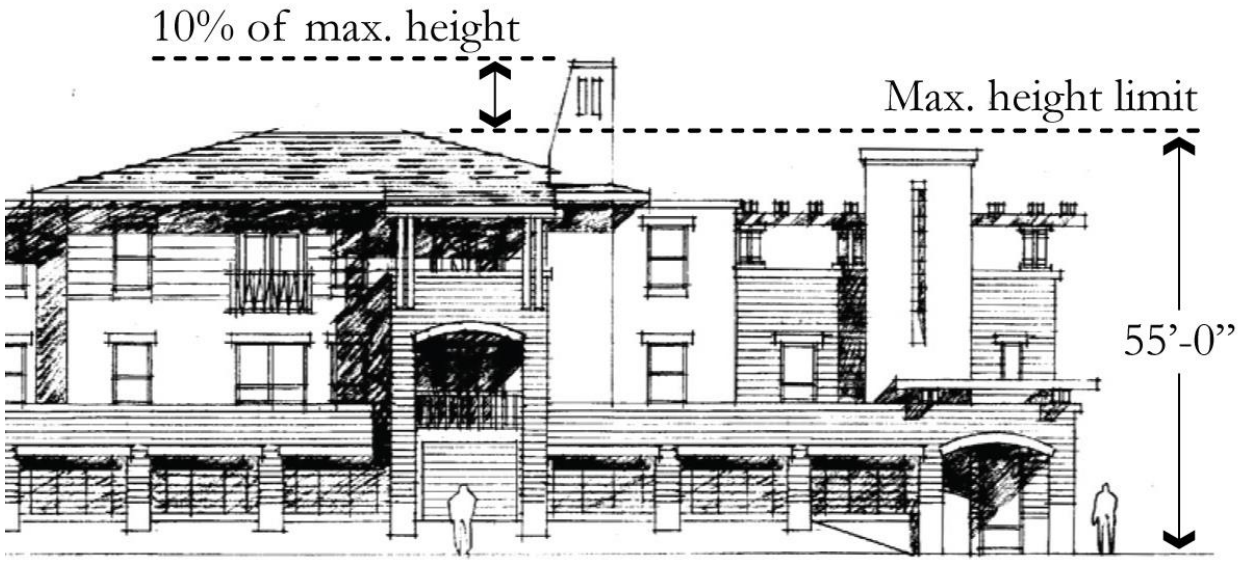
## 4.1 – Residential Density

The residential density shall range from 25.1 dwelling units per acre to a maximum of 75.0 dwelling units per acre.

## 4.2 – Building Height

No structure shall exceed 55 feet in height, except that the maximum height may be exceeded by roof mounted equipment, architectural projections, chimneys, elevator towers, parapet walls and any other roof top structures, by up to 10% of the allowed building height. No rooftop equipment shall be visible from anywhere on the project site, public streets, or adjacent properties, and shall be fully screened with appropriate architectural parapet walls or appropriate roof treatments. Roof-mounted equipment shall not exceed the height of the structures and appurtenances used to screen the equipment.

**Exhibit 4-1: Height Diagram**



# 4.3 – Setbacks

Building setbacks shall be as set forth in Table 4-1: (Minimum Building Setbacks), and shall comply with Exhibit 4-2 (Setback Diagram).

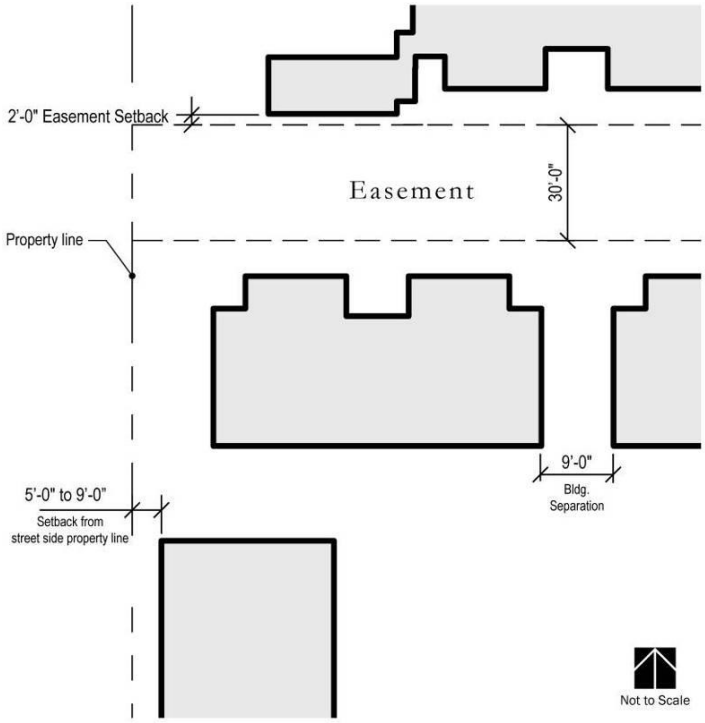
**Table 4-1: Minimum Building Setbacks**

| Setback | Distance |
|---|---|
| Street Setback | |
| Holt | 9 feet |
| Emporia | 5 feet |
| Vine | 5 feet |
| Fern | 5 feet |
| Palm | 5 feet |
| Transit | 5 feet |
| Easement Setback** | 2 feet |
| Building Separation | 9 feet |

** 30 foot wide storm drain easement located along vacated Transit Street

Certain types of features and equipment are allowed to encroach into the required setback areas in accordance with Table 4-2 (Encroachments into Setbacks) including but not limited to architectural projections, balconies, and underground utility structures such as electrical transformer vaults. Utility structures may encroach into the public right-of-way and/or public utility easement, subject to the approval of the City Engineer.

## Exhibit 4-2: Setback Diagram

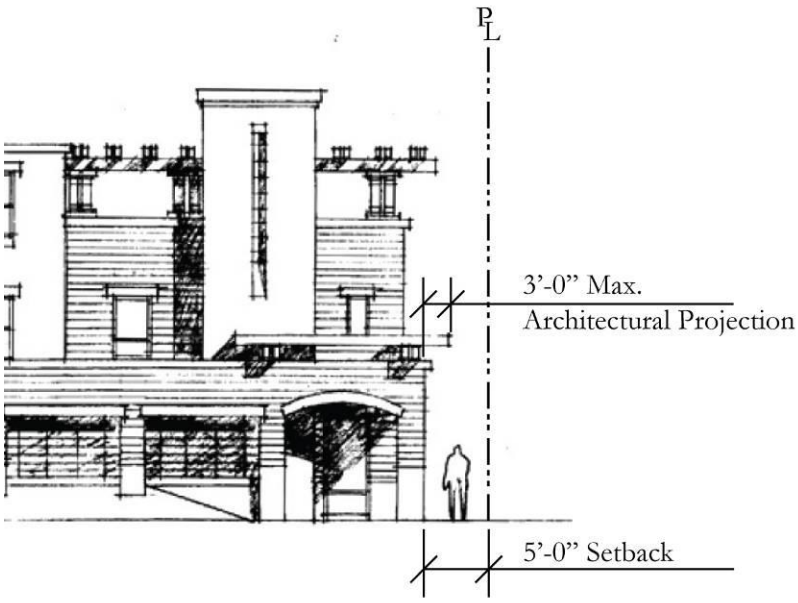


## Table 4-2: Maximum Encroachments into Building Setbacks

| Projection | Encroachment |
|---|---|
| Architectural Features** | 3 feet |
| Patios** | 3 feet |
| Balconies/Decks** | 3 feet |
| Porches** | 3 feet |

** No projection may encroach into the storm drain easement

**Exhibit 4-3: Projection Diagram**



# 4.4 – Open Space

Open space shall be provided for passive and active recreation opportunities within the project site. Two types of open space are required, private and common open space. These open space areas are for the use of the on-site residents and their guests. Required street setback areas are not counted towards common open space requirements.

## 4.4.1 – Private Open Space

Private open space shall be provided for all two and three-bedroom ~~each~~ residential units and one-bedroom ground units fronting Holt Avenue and Vine Street in order to provide private outdoor areas which can be enjoyed for the exclusive use by the occupant of the residential unit and their guests. Types of areas considered private open space include balconies, decks, and enclosed patios and yards.

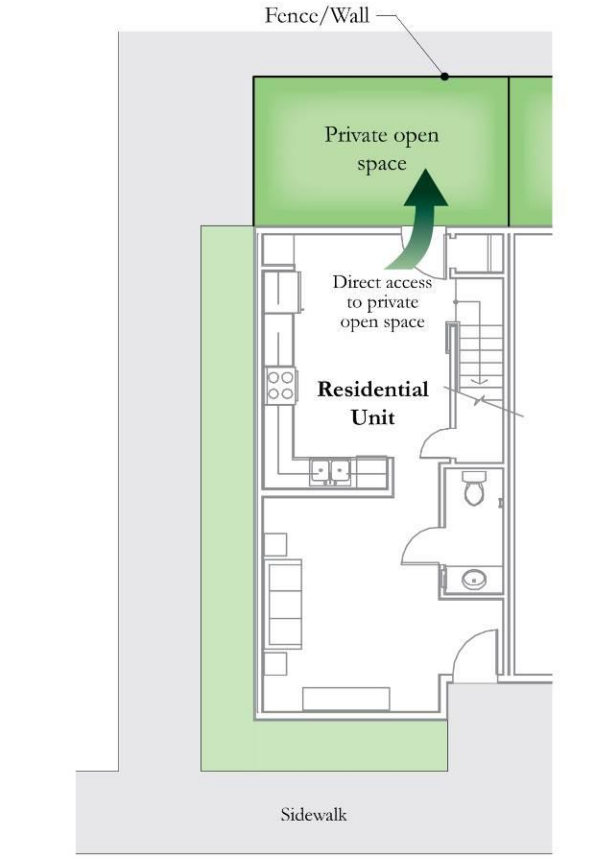
Private open space shall be provided for every residential unit and shall have direct access from the residential unit. Each residential unit shall have a minimum size of private open space as defined in Table 4-3 (Private Open Space). The space may be provided in multiple areas (e.g. two balconies, a yard and a balcony, etc.), as long as the total area of the spaces meets the minimum private open space requirement for the unit. The minimum dimension for private open space shall be no less than 6 feet in any direction.

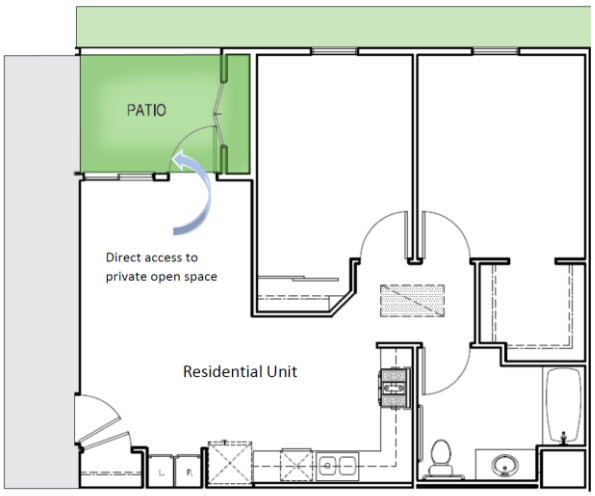
## Table 4-3: Private Open Space

| Number of Bedrooms | Open Space (SF) |
|---|---|
| 1 | 0** |
| 2 | 50 |
| 3 | 100 |
| 4 | 160 |

~~**20 square feet for one bedroom units with balconies fronting on to Holt Boulevard, and 50 square feet for one bedroom units fronting on to Vine Avenue.~~

## Exhibit 4-4: Private Open Space





## 4.4.2 – Common Open Space

Common open space shall be provided to allow for passive and active types of recreation, along with site landscaping amenities. These areas are for use by project residents and their guests and may include indoor recreational facilities. Recreational facilities provided pursuant to Section 4.4.3, shall be provided in common open space areas. The amount of required

common open space is based on the number of dwellings developed and shall be provided at the rate of 235 square feet of common open space for each dwelling unit.

Areas not considered common open space include the following: ~~(1) parking lots; (2)walkays along or between buildings; (3) parking lots landscaping; (4) street setback areas; and (5) areas not intended for active or passive recreation~~

- Parking lots;
- Walkways along or between buildings;
- Parking lot landscaping;
- Street side setback areas; and
- Other areas not intended for active or passive recreation.

## Exhibit 4-5: Common Open Space

## 4.4.3 – Recreational Facilities

Access to recreational facilities is important in a multi-family residential project as they provide needed facilities for the residents of the community. These facilities shall be centrally located on the site to minimize the distance of these facilities to all residential units within the project. A total of at least three recreational facilities (indoor or outdoor) shall be provided on-site. The facilities can be comprised of a combination of both similar and different recreational facilities to meet the recreational facilities requirement (e.g. two pools and one play ground or one clubhouse, one pool, and one tot lot, etc.). Recreational facilities can be indoor or outdoor and may include the following:

- Clubhouse;

- Teen Area; This area will be open between 6:00am and 10:00pm on a daily basis. The area will be designed with chairs and seating. Security lighting in this area will also add an additional safety factor.
- Pools;
- Community Building;
- Playground or tot lot; and
- Other indoor or outdoor recreation deemed appropriate by the City.

All recreational uses shall be for the exclusive use of the on-site residents and their guests.

# 4.5 – Parking Supply and Demand

## 4.5.1 – On-Site Parking Requirements

The number of parking spaces provide is based upon number of bedrooms contained within each dwelling unit, and is subject to the following requirements:

- All required resident parking shall be provided on-site;
- Each unit shall have at least one reserved parking space that is clearly marked;
- Reserved parking spaces shall be located within 150 200 feet of the dwelling it serves;
- At least one covered parking space shall be provided for each unit in Emporia I. This can be achieved through use of garages, carports, or tuck-under parking;
- Covered parking spaces provided through use of garages, carports, and tuck under parking are encouraged.
- Resident's assigned parking space(s) shall be used for the storage of the occupant's operable automobile(s), only;
- Tandem parking is prohibited;
- Tandem parking spaces shall be assigned to the same unit and may not be used as guest parking
- Required guest parking spaces shall be provide the necessary parking for the project leasing office. No separate parking is required for the leasing office; and
- Each dwelling unit is intended for occupancy by one family, regardless of bedroom size(s) provide. Paring for dwellings shall be provided on-site, pursuant to the requirements of Table 4-4 (Minimum Parking Requirements), below, except that guest parking may be provided on-street, pursuant to Section 4.5.2 (On-Street Guest Parking Requirements) of this PUD.

## Table 4-4: Minimum Parking Requirements

| Use | Parking Spaces |
|---|---|
| Multiple Family Dwellings<br>One Bedroom Unit | ~~1.75~~ 1 space~~s~~ per dwelling ~~(at least one space shall be in a garage or carport)~~ |
| Two ~~or more~~ Bedroom Unit | ~~2.0~~ 1.65 spaces per dwelling ~~(at least one space shall be in a garage or carport)~~ |
| Three Bedroom Unit | 2 spaces per dwelling |
| Guest Parking | 1 space per 5 dwellings |

### 4.5.2 – On-Street Guest Parking Requirements

On-street parking may be utilized to satisfy guest-parking requirements subject to the following:

- On-street parking may be used to satisfy guest parking requirements only, and shall not be used for required resident parking;
- On-street parking shall only be counted along the streets surrounding the project site on the side of the street adjoining the property, excluding Holt Boulevard and any other areas deemed necessary by the City Engineer, for corner sight distance as shown in Exhibit 4-6 (On-Street Parking Locations Map)
- All on-street parking locations shall be subject to approval by the City Engineer; and
- On-street parallel parking spaces shall be calculated by the length of unobstructed curb adjacent to the project site.

## Exhibit 4-6: Off-Site Parking Locations

TO BE DELETED

LEGEND

On-Street Parking Locations

Estimated Corner Site Distances

Not to Scale

**Note:** Proper clearance shall be maintained around fire hydrants. Fire hydrant clearance may impact availability to provide on-street parking.

**Note:** Proper clearance shall be maintained around fire hydrants. Fire hydrant clearance may impact availability to provide on-street parking.

## 4.5.3 – Parking Standards

All parking space size and location requirements shall conform to the standards set forth in Section 6.03.045 (Off-Street Parking Standards) of the Ontario Development Code.

# 4.6 – Vehicular Access

Vehicular access to the site from Holt Boulevard is prohibited. All points of access shall be approved by the City.

# 4.7 – Service Facilities

- Loading/unloading for residential uses and trash pickup service shall be limited to a designated street curb staging location consistent with an approved Solid Waste Handling Plan.~~on-site private drive aisles~~. Location, signage and any hourly restrictions to be imposed on such areas shall be subject to approval by the City.
- ~~On-street loading shall be prohibited.~~
- The number of enclosures, and their precise locations, dimensions, and design shall be provided consisted with City standards.
- Trash enclosures shall be designed to contain separate containers for the collection of refuse and recyclable materials, with an adequate number of containers provide to allow for the collection of both refuse and recyclable materials generated by the development, pursuant to standards established by the Ontario Municipal Utilities Company.
- Trash enclosures shall meet the minimum design standards depicted in the standard drawings adopted by the City, which shall include: [1] a minimum 6-FT high decorative masonry wall, with appropriate view-obstructing gates for container access, [2] separate pedestrian access that is designed to screen the interior of the enclosure from view from the exterior and prevent refuse dispersion, and [3] a decorative overhead roof structure to protect bins containing recyclable materials from adverse environmental conditions, which might render the collected materials unusable, and screen trash bins from view of the upper floors of adjacent dwellings. Furthermore, trash enclosures shall be architecturally enhanced, and shall be consistent with the architectural design of adjacent buildings.
- Trash enclosure dimensions shall be of adequate size to accommodate containers consistent with the City's current methods of collection within the area in which the project is located.
- Signs clearly identifying all recycling and refuse collection areas, and the materials accepted for recycling shall be posted adjacent to all points of access to each trash enclosure.
- Trash enclosures shall be located a minimum of 10 feet from the interior project boundary/property line.
- Particular care shall be given when placing trash enclosures immediately adjacent to dwelling units; however, no trash enclosure shall be located within 10 feet of the livable portion of a structure.
- Trash enclosures shall be bordered by a minimum 5-foot wide planter, and shall be screened with landscaping on all exposed sides, excluding the side with bin access gates.
- All service facilities shall be screened in accordance with the Section 4.9 (Screening) of this Planned Unit Development.

# 4.8 – Landscaping

## 4.8.1 – Site Landscaping

A conceptual landscape ~~and irrigation~~ plan shall be submitted along with the Development Plan for this Planned Unit Development. The plan shall specify all landscaping and hardscape for the entire project site. Detailed Landscape and Irrigation Plans shall be required prior to the issuance of building permits. The detailed plans shall show location of ground mounted utility boxes and equipment, along with the methods of screening for these items from the public right-of-way and adjacent residences where possible. The irrigation system shall be designed to utilize recycled water pursuant to State and local codes, ordinances, and laws, and applicable building and plumbing codes.

The landscape and irrigation plan shall be designed with water conservation in mind, utilizing "California friendly" species and drought tolerant planting materials. The landscaping and irrigation shall comply with AB 1881 and any other laws and regulations related to planting materials.

All trees which are to remain on-site shall be properly protected in place during construction to ensure tree health is preserved.

Tree plantings along the Transit Street storm drain easement shall be restricted to those species allowed by the San Bernardino Flood Control District.

## 4.8.2 – Planting Palette

The planting palette shall be comprised of "California friendly" drought tolerant planting materials compatible with the overall architectural style of the Planned Unit Development. The following palette has been established to meet the needs of this Planned Unit Development:

**Table 4-5: Planting Palette**

| Botanical Name | Common Name | Size | Comments |

### 4.8.3 – Tree Removal

As part of Emporia I ~~Eight mature Camphor trees and~~ one mature Cork Oak tree on site shall remain and be incorporated into the overall design of the development plan. ~~The Camphor trees are currently located in the right-of-way on Fern Street and Transit Street and~~ Tthe existing Cork Oak is located at the northwest corner of Emporia Street and Fern Street shall be preserved in place. Four existing Coast Live Oak trees located on the west side of Fern Avenue are to remain and shall be preserved in place. Approximate location of trees is shown in Exhibit 4-7 (Existing Trees Plan). These trees have been in place prior to the demolition of the Casa Blanca hotel and have been preserved in accordance with the Casa Blanca Hotel Demolition Environmental Impact Report. An arborist report shall be prepared on all other existing trees to determine the health and where feasible existing healthy trees in the project area shall be preserved in place.

## 4.8.4 – Parking Lot Landscaping

Parking lot landscaping shall be provided pursuant to Subsection D (Landscaping of Off-Street Parking Facilities) of Ontario Development Code Section 6.05.030 (Required Landscape Areas).

## 4.8.5 – Compliance with State and Federal Laws

Provide landscaping and an irrigation system, which promotes the conservation of water as required by the Water Conservation in Landscaping Act of 2006 (AB 1881), commencing with California Government Code Section 65591.

# 4.9 – Screening

- All roof and ground mounted equipment shall be screened pursuant to the requirements of the Ontario Development Code.
- Trash enclosures shall be screened with enclosures that are architecturally compatible with the surrounding buildings.
- Screening shall include plant and building materials compatible with the project design so it is well integrated and hidden within the project area.
- Building and plant materials used for screening shall be compatible with the architectural style and planting palette used on the project area.
- All ground level screening shall comply with the requirements of the Ontario Development Code Section 6.02.030 (Protection of Intersection Visibility).

## 4.9.1 – Fences, Walls, and Hedges

Fences, walls, and hedges shall comply with Section 6.02.030 (Protection of Intersection Visibility) of the Ontario Development Code, Engineering corner sight distance standards, and all other applicable city standards. Fences and walls shall be made of decorative materials which are compatible with or enhance the overall architectural character of the project. All fences, walls, and hedges shall be in scale with the development and shall be used for screening, site enhancement and creating a safer living environment for residents and their guests. All decorative walls, monuments and/or other similar features shall not encroach in to the public street right-of-way.

# 5 – Circulation

## 5.1 – Site Accessibility

The site shall be designed to promote safety for residents by only allowing limited vehicular and pedestrian access into and across the site. This can be done through the use of building orientation and placement to minimize the use of gates and fencing; however, amenities shall be properly gated with limited access for residents and their guests.

## 5.2 – Vehicular Circulation

The site should be designed to reduce the number of dead end aisles in the parking lot areas and provide all guest parking outside of gated areas (on or off-site) to ensure accessibility. Location of drive aisles and entries shall be approved by the City Engineer. Vehicular circulation shall be designed in a way that promotes pedestrian safety and proper access to all parking areas.

## 5.3 – Pedestrian Circulation

Site design must provide for safe pedestrian circulation across the project site by separating pedestrian areas from areas with vehicular access. This includes, but is not limited to accessibility from parking lot areas to unit entries, site amenities, and perimeter sidewalk areas. Fencing and gates may be used to limit public access to resident-only areas.

The vacation of Transit Street in Emporia I provides a unique opportunity to create a pedestrian promenade that will connect residential foot traffic between residential units, parking, and community spaces throughout the site. The space should be welcoming and designed with landscape features that help define the walking path across the project area. Since no vehicular traffic will be allowed on this promenade, it is expected that children will be able to play safely throughout the site. Lighting and visibility for enhanced security shall be taken into consideration designing this area and shall be compatible with the architectural theme. Buildings should have windows that look on to this open space area to enhance the views of the residences and help create defensible spaces. Emporia II will vacate Fern Avenue to create pedestrian connectivity and linkage between Emporia I and Emporia II as shown in Exhibit 5-1 (Circulation Plan).

## 5.4 – Access to Mass Transit

An existing bus stop is located on the south side Holt Boulevard just east of Vine Avenue. A new decorative bus shelter with seating and lighting shall be installed at this location upon development. The bus shelter design shall be consistent with the design of other shelters in the downtown area (see Figure 5-1 (Bus Shelter)), and shall meet ADA access requirements per City of Ontario and/or OmniTrans Standards and to the satisfaction of the City Engineer. Additionally, a concrete bus pad for this bus stop shall be incorporated into the public improvements required for the development of the project site.

**Figure 5-1: Bus Shelter**

# 6 – Design Guidelines

The project area is located within Ontario's historic downtown area and shall comply with the Downtown Ontario Design Guidelines. The Downtown Ontario Design Guidelines were adopted in 1998 to guide the physical revitalization of Ontario's historic downtown. The Guidelines provide architectural and design principals, as well as design concepts for downtown districts. The project area is located within the Educational District, a mixed use area with an educational theme. The Guidelines do not provide specific architectural or design guidance within the Educational District but do require that development be context sensitive.

The design guidelines provided in this section are designed to be compatible with the Downtown Ontario Design Guidelines and provide site specific guidance for the development of the project area.

## 6.1 – Building Orientation

Building orientation shall be designed to minimize potential noise impacts, aide in providing property site safety, create proper accessibility to site amenities and parking, and to maximize views from residential units. Design should also be done in a way to create defensible spaces improving site safety.

**Exterior:** Orientation towards the exterior of the project area shall be carefully evaluated to ensure a proper relationship.

**Interior:** Buildings should be clustered in a way that creates defensible spaces providing views of interior open spaces and amenities. For units without garage spaces buildings shall be oriented to create minimal distances from assigned parking spaces to primary or secondary residential unit entries.

## 6.2 – Architectural Character

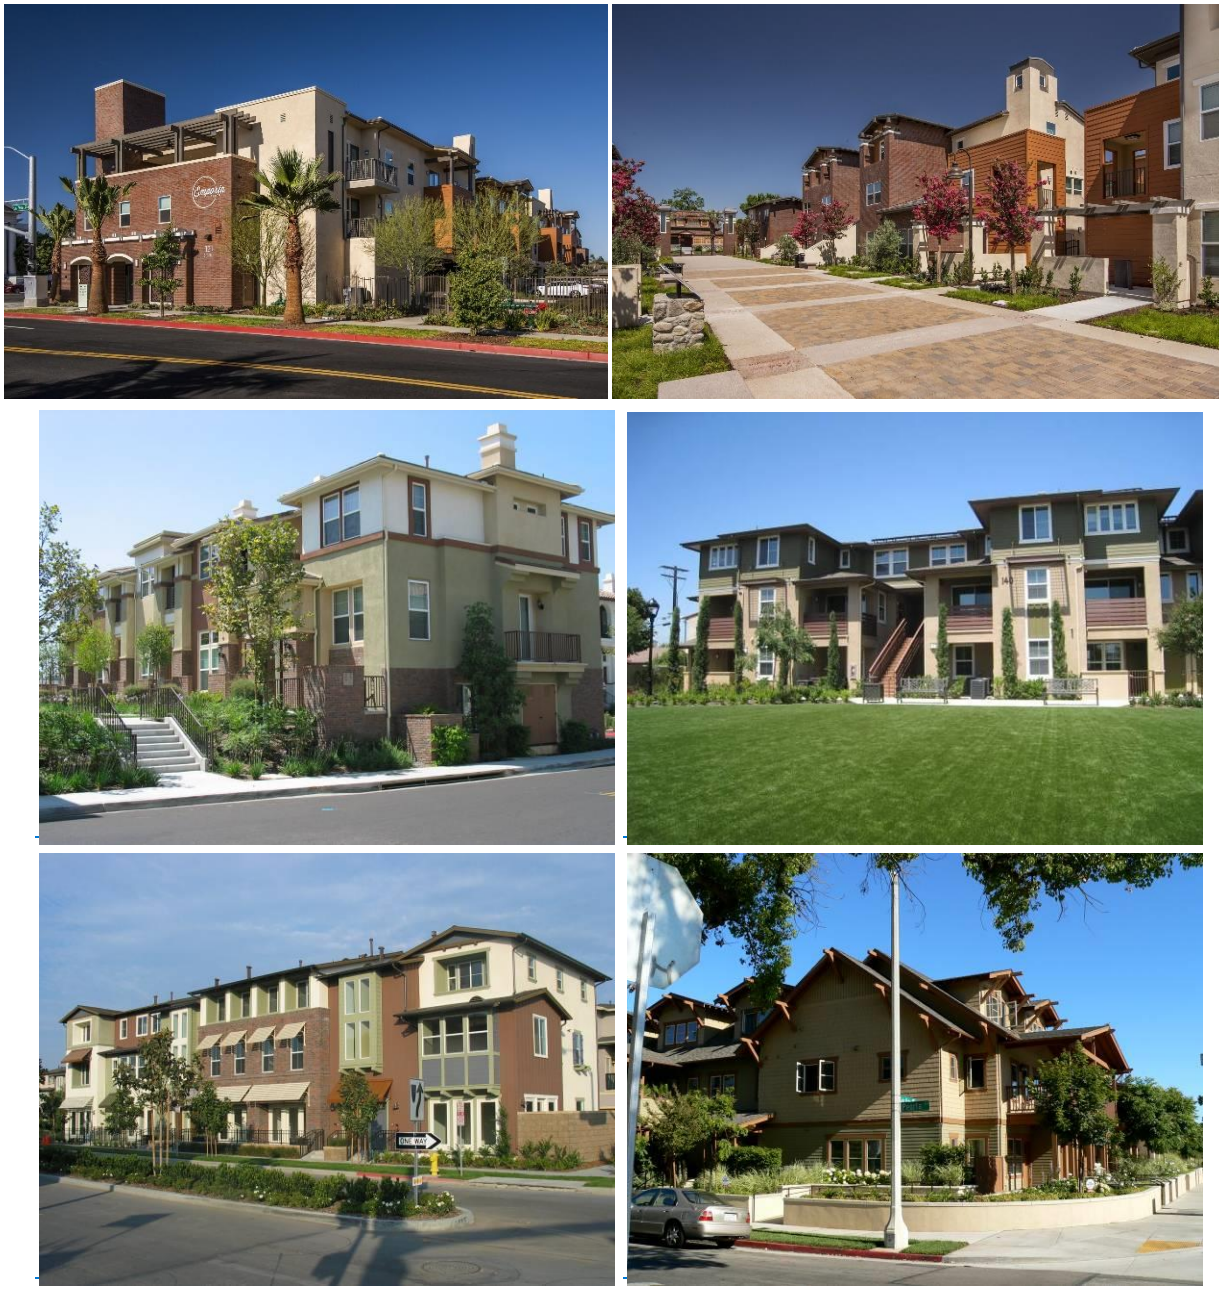
The architectural design leans toward a current interpretation of the Craftsman style. The design will make use of open ended beams, gabled and hipped roofs and trellis construction throughout the site. Large areas of masonry and wood siding with plaster accents will be provided to help enhance this overall architectural theme. Buildings along Holt Blvd will have a linear design with enhanced areas of design and color to differentiate units along this street. Street fronting podium parking will be shielded from view by intensified landscaping and podium walls with screened openings running alongside the north boundary of the site. Buildings along Emporia Avenue will be built with a ~~cottage style~~Craftsman feel. A sample rendering and photographic examples of the architectural style are provided in Figure 6-1 and Figure 6-2, on the proceeding page.

## Figure 6-1: Architectural Renderings

### Emporia I

### Emporia II

**Figure 6-2: Architectural Examples**



## 6.3 – Massing and Scale

All buildings shall be in scale with surrounding development with a majority of the building placement to occur towards the boundary of the project site. A prominent building edge shall

face Holt Boulevard. Buildings should be 2-3 stories in height containing a varied amount of units in each building with varying façade planes to decrease creating a "monotonous" look.

Amenities and site design shall be developed with the pedestrian scale in mind.

## 6.4 – Architectural Details

Architectural variations should occur between buildings to help distinguish each building and create variety within the contemporary craftsman style. Architectural details should be consistent with the architectural style of each individual building. Details should complement and enhance openings and accentuate the overall design of each building. Detailing can be achieved through the use of different colors and materials (brick, siding, etc.) to create interesting elevations.

Awnings should be placed where feasible over south facing windows and adequate shade should be provided for outdoor spaces. Coverings should use materials compatible with the building roofing and façade materials in creating a comprehensive building design. Exposed rafter beams should be integrated into building design along with trellises to help define outdoor spaces.

## 6.5 – Materials and Color

Materials and colors shall be compatible with and complementary to the overall architectural style of the development project. Larger building masses should use a combination of dark and light colors to break up building planes and use light colored trim to help accentuate roof features. All colors should be complementary and utilize primarily "earth tone" type colors. Materials should be a mixture of stucco, wood and brick siding in a variety of complementary colors and a concrete tile roof material should be used.

## 6.6 – On-Site Streetscapes and Pedestrian Walkways

Street furniture and decorative paving should be used throughout the project area to enhance architectural design. The use of complementary materials and textures should be used to create a continuity and consistency that is desired throughout the project area. A variety of decorative elements should be incorporated into the design of the project area including, but not limited to, benches, tree grates, bike racks, enhanced paving, trash receptacles and bollards.

A selection of appropriate elements shall consider sidewalk widths, size and spacing of street trees, importance of the pedestrian path, and the requirement to maintain a minimum 4 feet of clear space for pedestrian movement in all areas. All streetscape features shall comply with the Americans with Disabilities Act (ADA), along with accessibility requirements for public services, such as police and fire.

## Figure 6-3: Streetscape Examples

## 6.7 – On-Site Lighting

Decorative light fixtures compatible with the architectural style of the buildings shall be provided on-site.

A minimum of one-foot-candle of light shall be provided within parking areas and 0.5 foot-candles within pedestrian pathways, in compliance with the City of Ontario Police Department standards.

## 6.8 – Signs

Signs within the project area shall comply with the Division 8.0 (Sign Regulations) of the Ontario Development Code.

## 6.9 – Off-Site Improvements

All off-site improvements shall be installed in accordance with City standards and to the satisfaction of the City Engineer.

# 7 – Infrastructure and Utilities

## 7.1 – Infrastructure

All improvements and alterations to public infrastructure (sewer, water, recycled water, storm drain, etc.) shall obtain approval from all appropriate agencies. Public sewer and water lines within the project area on Transit Street that will only serve the project area once the street is vacated will not be the maintenance responsibility of the City. Public sewer and water lines within the project area on Fern Avenue that will only serve the proposed project area is to be vacated and a 30' wide public utilities easement (PUE) shall be granted to the City of Ontario.

If infiltration is deemed permissible by a licensed geotechnical engineer, on-site storm water drainage facilities shall be provided for capture and infiltration of a 2-yr, 24-hour storm event, consistent with the San Bernardino County Storm Water Program's Water Quality Management Plan (WQMP) requirements for new residential development. Storm water capture and infiltration facilities ~~may~~ will include the utilization of ~~pervious concrete pavers in enhanced paving areas and MaxWell Drywells or~~ underground storm water infiltration chambers and pretreatment devices, for the remainder of the site.

Upon development of the project area, ~~existing waterlines smaller than 8 inches in diameter fronting the project site along Emporia Street and Vine Avenue shall be upgraded~~all existing main sizes will be determine per the fire flow test results and will apply to the following: ~~to a minimum of 8 inches.~~

a. Transit Street: From Fern Avenue to Laurel Avenue.
b. Emporia Street: From Fern Avenue to Euclid Avenue.
c. Palm Avenue: From Holt Boulevard to Emporia Street.
d. Laurel Avenue: From Holt Boulevard to Emporia Street

Upon water line upgrade, the existing water line in Transit Street through the project area may be abandoned. An 8-inch water line shall be installed within Fern Avenue from Transit Street north to Holt Boulevard.

Any connection into the existing storm drain located within Transit Street shall require approval from the County of San Bernardino Flood Control District. See Exhibit 7-1 (Easement & Dedication Locations) for the approximate storm drain location.

The project area is a Priority Land Use (PLU and shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB).

## 7.2 – Street Improvements

Street improvements (street, sidewalk, parkway, curb, gutter, traffic signal, street lights, etc.) shall be constructed with the development of the project site. Improvements will be required on the streets adjacent to the project area including Holt Boulevard, Emporia Street, Fern Avenue, Transit Street, Palm Avenue, and Vine Avenue. Design and construction of street

improvements shall be in accordance with the City standards, and to the satisfaction of the City Engineer. Exhibit 7-2 (Street Sections) identifies the improvements for each street adjacent to the project site.

King standard lighting (City of Ontario Standard Drawing No. 5103) shall be required within the public right-of-way. Upon development of the project site, traffic signal alterations will need to occur to allow for safe and proper traffic movement. Traffic signal modifications shall be required at the intersection of Holt Boulevard and Vine Avenue.

# 7.3 – Public Utilities

All existing dry utilities (electricity, cable, telephone, gas, etc.) along the south side of Transit Street (Vine Avenue to Fern Avenue) and within Emporia I ~~shall be~~were relocated and re-routed to the streets bounding the project area, as required and approved by the affected utility agencies/companies. All public utilities along the proposed vacated portions of Fern Avenue (Transit Street to Emporia Street) and as part of Emporia II shall be relocated outside of the abovementioned street and undergrounded along the adjoining streets, as required and approved by the affected utility companies/agencies prior to recordation of PM-20339. Written approvals from the affected utility companies/agencies shall be submitted to the Engineering Department indicating that such utilities will be relocated and re-routed to adjacent streets and

easements are not required on Fern Avenue. A public utility easement shall be reserved for the City of Ontario for the existing sewer and water mains located in Fern Avenue. ~~In the event that relocation of a utility is not feasible, a Public Utility Easement (PUE) shall be reserved for the existing utility(s) prior to the vacation of Transit Street.~~

## 7.4 – Street Dedication, Vacation & Easements

In order to create a single developable project site for the proposed Planned Unit Development, a portion of the street that bisects the project site in an east-west direction in Emporia I (Transit Street from Vine Avenue to Fern Avenue) will be required to be vacated. The existing sewer lines located within thise section of Transit Street to be vacated, may be abandoned upon vacation of the street. Fern Avenue from Emporia Street to Transit Street will be required to be vacated and privatized as part of Emporia II to allow connectivity between the overall project.

The ultimate Holt Boulevard right-of-way is 60 feet, measured from centerline, and will require an additional 20 feet of street dedication. Corner cut-off areas within the project area shall be dedicated at the intersection of Holt Boulevard and -Fern Avenue, Fern Avenue and Emporia Street, Fern Avenue and Transit Street, Emporia Street and Vine Avenue, Emporia Street and Palm Avenue, Palm Avenue and Transit Street, and Vine Avenue and Holt Boulevard per Engineering Standard Drawing #~~1301~~1209. The ultimate half-width street section, measured from the centerline, shall be widened to 18 feet along the project frontage of Transit Street General location of the street dedication and corner cut-off areas are shown on Exhibit 7-1: Easement & Dedication Locations.

The proposed 30-foot wide storm drain easement in Emporia I runs along Transit Street (Vine Avenue to Fern Avenue) to facilitate an existing 7.5 foot by 8 foot reinforced Concrete Box (RCB). ~~Furthermore, a 30-foot wide storm drain easement, which runs along Fern Avenue north of Transit Street, is require to facilitate a reinforced concrete pipe (RCP).~~ The easements will be reserved and accommodated with the development of the project site. The easement locations are shown on Exhibit 7-1 (Easement & Dedication Locations).

# 8 – Historic Preservation

All historic structures are subject to the requirements of Ontario Development Code Sections 4.02.040 through 4.02.065, and Division 7.01 (Historic Preservation) of the Ontario Development Code, as applicable.

## 8.1 – Historic Background

The ~~two~~~~three~~-two block area that comprises Emporia I of this Planned Unit Development, was once home to the Casa Blanca Hotel and Developer's Row. During Ontario's early settlement period, several homes were constructed for prominent city pioneers along Emporia Avenue. This stretch of development was referred to as "Developer's Row." All of the homes from this development have been demolished, with the exception of the Ford-Collins House which was moved to its current location at 227 West Main Street sometime after 1915, to facilitate the construction of the Casa Blanca Hotel. An Environmental Impact Report was certified by City Council in 1998 for the demolition of the Casa Blanca Hotel.

In 2007, the property at 205 and 205 ½ was acquired by the City's Redevelopment Agency. A Mitigated Negative Declaration was prepared for the demolition of both buildings. A request to defer the Certificate of Appropriateness (File No. PHP07-012) for the replacement structure was approved by the Historic Preservation Commission on September 25, 2007. Development of ~~the project site will~~ Emporia I required both Development Plan approval pursuant to Ontario Development Code Section 4.02.025 (Development Plans) and the approval of a Certificate of Appropriateness pursuant to the requirements of Ontario Development Code Section 4.02.050 (Historic Preservation – Certificates of Appropriateness and Demolition of Historic Resources).

The one block area bound by Transit Street to the north, Emporia Street to the south, Fern Avenue to the west and Palm Avenue that comprises of Emporia II of this Planned Unit Development includes the American Legion Building located at 310 West Emporia Avenue and a single-story office building located at 201-215 South Fern Avenue and is shown on Exhibit 8-1 (Historic Resources Map).The buildings were reviewed for historic significance and determined to be eligible for listing on the local inventory of historic resources.

## ~~8.2 Existing Historic Structures~~

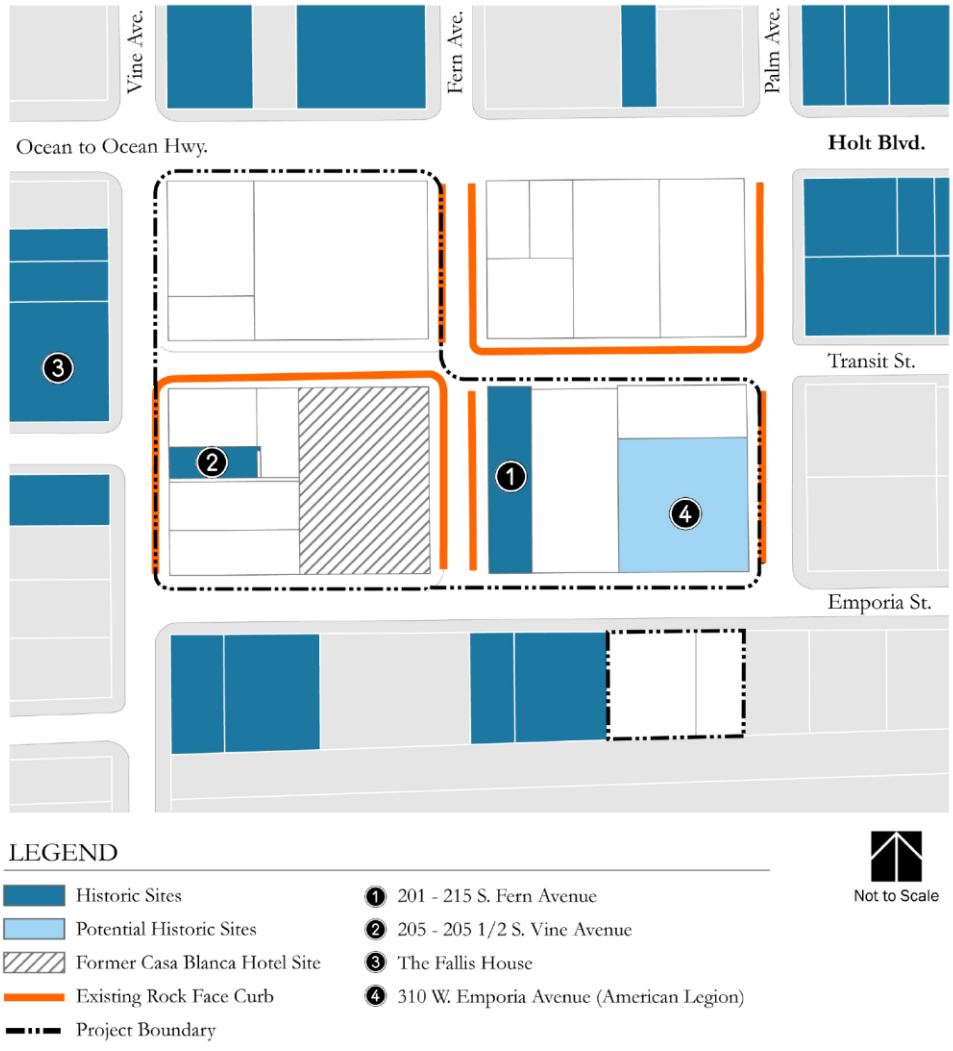
~~Remaining within the area of the project is site are historic properties located at 201 through 215 South Fern Avenue, The Fallis House, and 310 West Emporia Avenue (American Legion Hall). Location of these properties is shown on Exhibit 8-1 (Historic Resources Map).~~

## ~~8.3~~ 8.2 – Certificate of Appropriateness

~~As mentioned in Section 8.1 (Historic Background), above, a~~ Pursuant to the Ontario Development Code Section 4.02.050 (Historic Preservation – Certificates of Appropriateness and Demolition of Historic Resources, Certificate of Appropriateness approval ~~is was~~ is required for the demolition of the existing historic resources within the PUD area. Prior to

issuance of an approval, ~~to be submitted along with~~ a Development Plan to construct replacement buildings, structures or objects shall be approved. ~~, for~~ ~~Emporia I.~~~~to implement this Planned Unit Development.~~ ~~Approval of a Certificate of Appropriateness is to ensure a compatible project that does not detract from the historic site nor adversely affect adjacent historic properties, such as the Fallis House (Local Landmark No. 1), located at 122 South Vine Avenue, across the street to the west.~~ ~~A Certificate of Appropriateness is required for Emporia II for the American Legion building located at 310 West Emporia Avenue and office building at 201-215 South Fern Avenue.~~ Approval of a Certificate of Appropriateness is to determine if certain findings can be made to determine if the demolition is appropriate and to ~~ensure~~ impose previously approved mitigation measures. ~~a compatible project that does not detract from the historic site nor adversely affect adjacent historic properties, such as the Fallis House (Local Landmark No. 1), located at 122 South Vine Avenue, across the street to the west.~~ ~~Locations of adjacent historic properties are shown on Exhibit 8-1 (Historic Resources Map).~~

## Exhibit 8-1: Historic Resources Map



There are several policies in The Ontario Plan and regulations in the Ontario Development Code which support and encourage preservation of historic resources. More specifically, TOP contains policies for the management of the City's cultural resources through the updating and maintenance of the City's historic sites and buildings inventory compiled in the Ontario Register. In order to support the preservation goals, the Ontario City Council adopted a tier system with standard criteria and procedures for evaluating the significance of historic or potentially historic resources threatened by major modifications or demolition through a regulatory process. The Ontario Development Code establishes criteria for Tier I, Tier II, or Tier III historic resources, with Tier I and II being the most historically significant. The tier system identifies those historic resources that have the highest preservation value in terms of their architectural and/or historical contribution to the City and establishes a method to evaluate the impacts of their loss in the case of major modification or demolition. Major modification or demolition should not occur to Tier I or Tier II historic resources and preservation and/or avoidance of such historical resources to prevent demolition is strongly encouraged. Whereas, Tier III historic resources may be modified or demolished under certain circumstances with appropriate mitigation measures in place.

On January 27, 2010, environmental impacts were analyzed in an Environmental Impact Report (State Clearinghouse No. 2008101140) in conjunction with File No. PGPA06-001 adopted by City Council, whereas a statement of overriding considerations for demolition of Tier III historic resources was also adopted. Prior to demolition of the Tier III historic resource, those mitigation measures listed in the Environmental Impact Report and in Section 4.02.050, Certificate of Appropriateness of the Ontario Development Code, will be implemented. As such, the following mitigation measures shall be imposed and completed prior to issuance of demolition permits of Tier III historic resources located within the project site:

~~The following mitigation measures shall be imposed on the project prior to the issuance of demolition permits for all Tier III designated historic properties located on the project site:~~

- An effort to relocate structure must be made (such as an advertisement notifying the public of the opportunity to relocate the home to interested parties ~~running a new paper ad making the structure available to interested parties~~).
- HABS/HAER documentation of the historic resource (photos interior and exterior, written physical description of property, historical narrative, plans with dimensioned floor plan, site plan, elevations, and detailed drawings of any character defining-feature).
- Mitigation fees for non-residential structures ~~($6.50 per square foot with a cap of $32,500)~~ shall be paid to the Historic Preservation Mitigation Trust Fund.
- Planning Department to identify salvageable features from the building or site to be reused either in the new project or donated to a local preservation group.

~~Demolition of any historic building within the project site shall not occur until the Approving Authority has approved a Certificate of Appropriateness for the replacement structure. The Historic Preservation Commission, upon the recommendation of the Historic Preservation Subcommittee, may waive the requirement for replacement structures if the ultimate project proposed for the site of the demolition provides and exceptional benefit to the community. Minimum findings must be made to waive the replacement structure requirements pursuant to~~

~~the requirements of Ontario Development Code Section 4.02.050 (Historic Preservation – Certificates of Appropriateness and Demolition of Historic Resources).~~

## ~~8.4 –~~8.3 – Rock Curb

Split Cobble Stone Curb (Rock Curb) exists along areas of Vine Avenue, Fern Avenue, and Transit Street in the project area. All rock curb locations in the project area are considered the lowest priority of rock curb classification. Due to this classification, the rock curb can be removed. The rocks shall be clean to the extent possible (removal of concrete) and temporarily stored on the project site or at a City facility to be determined and arranged by the Housing Agency. The rocks acquired shall be reused into the project site within pedestrian corridors, at entry points into the site (e.g. drive aisles), or within the open space areas, subject to review and approval of the Planning Department. Rock curb locations can be replaced with standard curb and gutters pursuant to City standards. Locations of the rock curb are shown on Exhibit 8-1 (Historic Resources Map).

Incorporating an interpretative plan should be considered and submitted with the Development Plan submitted to implement this Planned Unit Development. Interpretative elements should be coordinated with the design of the landscape and hardscape plans, to achieve maximum compatibility and functionality. The purpose of the interpretative plan is to convey the historic background and historic significance (such as Developer's Row, Fallis House, Casa Blanca, American Legion, and Ocean to Ocean Highway- Holt Blvd.) of the project site and surrounding area through narrative plaques and photo displays. The salvaged rock curb should be part of the interpretative plan.

# 9 – CEQA Compliance

An Addendum to The Ontario Plan Environmental Impact Report (SCH No. 2008101140), prepared in conjunction with File No. PGPA06-001, and certified by the City of Ontario City Council on January 27, 2010, was prepared for the project.

The Approving Authority for the Project reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all submitted written and oral evidence. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence, the Approving Authority found as follows:

- The Addendum and administrative record have been completed in compliance with the California Environmental Quality Act (CEQA), the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and
- The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Approving Authority; and
- There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and
- The project will not introduce any new significant environmental impacts beyond those previously analyzed in the Environmental Impact Report, and all mitigation measures previously adopted by the Environmental Impact Report, are incorporated herein by this reference.

## 9.1 – Environmental Performance Standards

Due to the proximity of the project area to rail lines and Holt Avenue which are both generators of noise and emissions, standards have been established to mitigate these environmental impacts.

### 9.1.1 – Noise

To ensure a proper standard of living, noise levels shall not exceed 65 dBA for exterior noise levels and 45 dBA for interior noise levels. In order to achieve these noise levels the following mitigations shall be followed:

- MM 5.12-2: Prior to the issuance of building permits, the developer/owner shall retain an acoustical engineer to evaluate the potential for trains to create perceptible levels of vibration indoors. If vibration-related impacts are found, mitigation measures, such as use of concrete, iron, steel, or masonry materials to ensure that levels of vibration amplification are within acceptable limits to building occupants, shall be implemented. Pursuant to the Federal Transit Administration vibration-annoyance criteria, these acceptable limits are 78 VdB during the daytime and 72 VdB during the nighttime for residential uses.

  Listed below are standards for implementation of MM 5.12-2:

- Construction activities shall only occur between the hours of 7:00 AM and 6:00 PM on weekdays, and 9:00 AM and 6:00 PM on Saturdays and Sundays;
- Structural noise attenuation requirements contained in Ontario Municipal Code Title 8, Chapter 15, Article 3 (Building Requirements for New Residential Construction in the 65 CNEL to 70 CNEL Noise Zone) are required to be incorporated into exterior façade units located along the eastern, western, and northern project perimeter.
- Structural noise attenuation requirements contained in Ontario Municipal Code Title 8, Chapter 15, Article 2 (Building Requirements for New Residential Construction in the 70 CNEL to 75 CNEL Noise Zone) are required to be incorporated into exterior façade units located along the southern project perimeter;
- Balconies on exterior façade units located along the project's east, west and north perimeter street frontages shall have a solid balcony barrier of at least 5 feet above the deck height. On exterior façade units located along the project's south perimeter street frontage, ~~no~~ balconies or yard areas shall be designed to provide noise reducing measures ~~permitted~~; and
- A 6-foot high solid decorative masonry block wall or clear barrier with self closing, sound insulated gates shall be constructed between the buildings located along the southern edge of the project site where outdoor recreation is located. This will ensure exterior noise for outdoor facilities within the project will not exceed 65 dB CNEL.

## 9.1.2 – Air Quality

Due to the proximity of the active rail lines to the south of the project area, air quality is a concern for the project site resulting from the diesel emissions from trains. Listed below are standards for reducing the air quality impacts of the diesel emissions.

- All residential living areas shall be equipped with air filtration systems operating under a positive pressure rated at MERV 12 or higher;
- The HOA or property management will replace all unit filters on a routine basis, determined by industry standards for the filter and air conditioning HVAC systems selected;
- The active outdoor recreation areas should be shifted northward where feasible, to provide the greatest possible distance setback from the closest railroad tracks; and
- A dense tree canopy shall be established along the southern site boundary to act as a living bio-filter for particulate air pollution.

# 10 – Administration

## 10.1 – Items Not Addressed in PUD

Any terms or regulations pertaining to design, development, subdivision, administration and interpretation, and nonconforming use, structures and, which are not addressed in this PLANNED UNIT DEVELOPMENT, shall be governed by the City of Ontario Development Code

## 10.2 – Development Applications

Development Plan approval, pursuant to the requirements of Ontario Development Code Section 4.02.025 (Development Plans), shall be required for the physical alteration of a lot, the construction of a building, or the addition or significant alteration of an existing building. A Development Plan application shall be submitted to the Planning Department on a City application form pursuant to the requirements of Ontario Development Code Division 2.02 (Application Filing and Processing), commencing with Subsection B (Discretionary Permits and Actions) of Section 2.02.015 (Application Processing Procedures).

## 10.3 – Administrative Exceptions

Minor exceptions to the development standards set forth in this document may be granted by the Zoning Administrator in accordance with Section 4.02.020.C (Administrative Exceptions) of the Ontario Development Code, not to exceed 10 percent from minimum residential setback and separation requirements.

## 10.4 – Severability

If any portion of this Planned Unit Development is held to be invalid, unconstitutional, or unenforceable by a court of competent jurisdiction, the determination shall not affect the validity of the remaining portions of this Planned Unit Development. Moreover, the decision shall not affect, impair, or nullify this Planned Unit Development, either in whole or in part, and the remainder of this Planned Unit Development shall continue in full force and effect.

# *Addendum to The Ontario Plan Environmental Impact Report*

**Project Title/File Nos.**: PUD21-001, PHP21-003, PMTT21-004 and PDEV21-008

**Lead Agency:** City of Ontario, 303 East "B" Street, Ontario, California 91764, (909) 395-2036

**Contact Person:** Diane Ayala, Senior Planner, (909) 395-2428

**Project Sponsor:** The Related Companies of California, LLC., c/o Randy Mai, 18201 Von Karmen Ave, Suite 900, Irvine, CA 92612; Phone: 510-421-2999; Email: Randy.Mai@related.com

**Project Location:** The Project site is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. As illustrated on Figures 1 through 3, below, the Project site is generally located at the northwest corner of Emporia Street and Palm Avenue on Assessor Parcel Numbers ("APNs"): 1049-051-04, 1049-054-02, 1049-054-03, 1049-054-04, 1049-054-06, 1049-059-06, and 1049-059-07.

Figure 1: REGIONAL LOCATION MAP

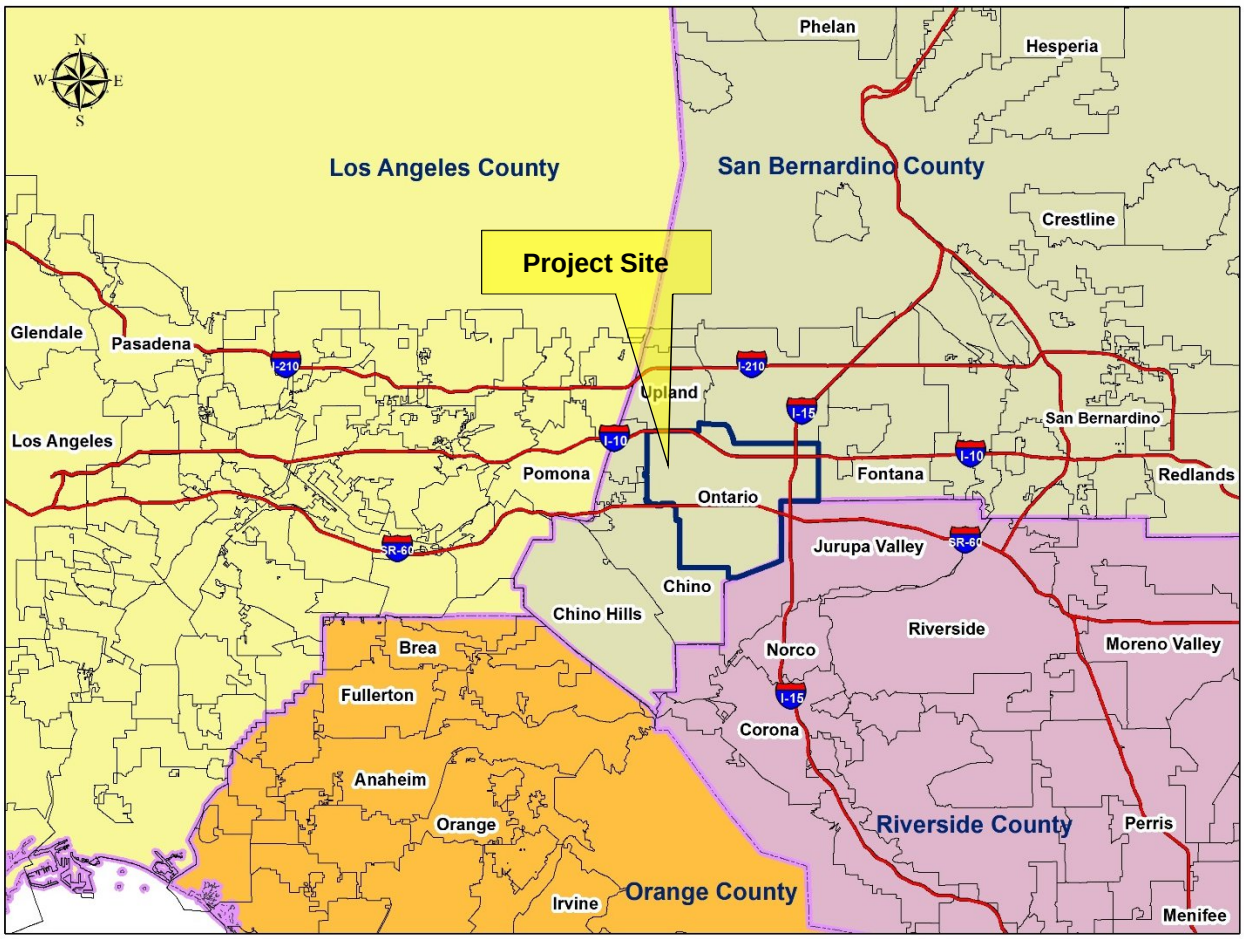

Figure 2: VICINITY MAP

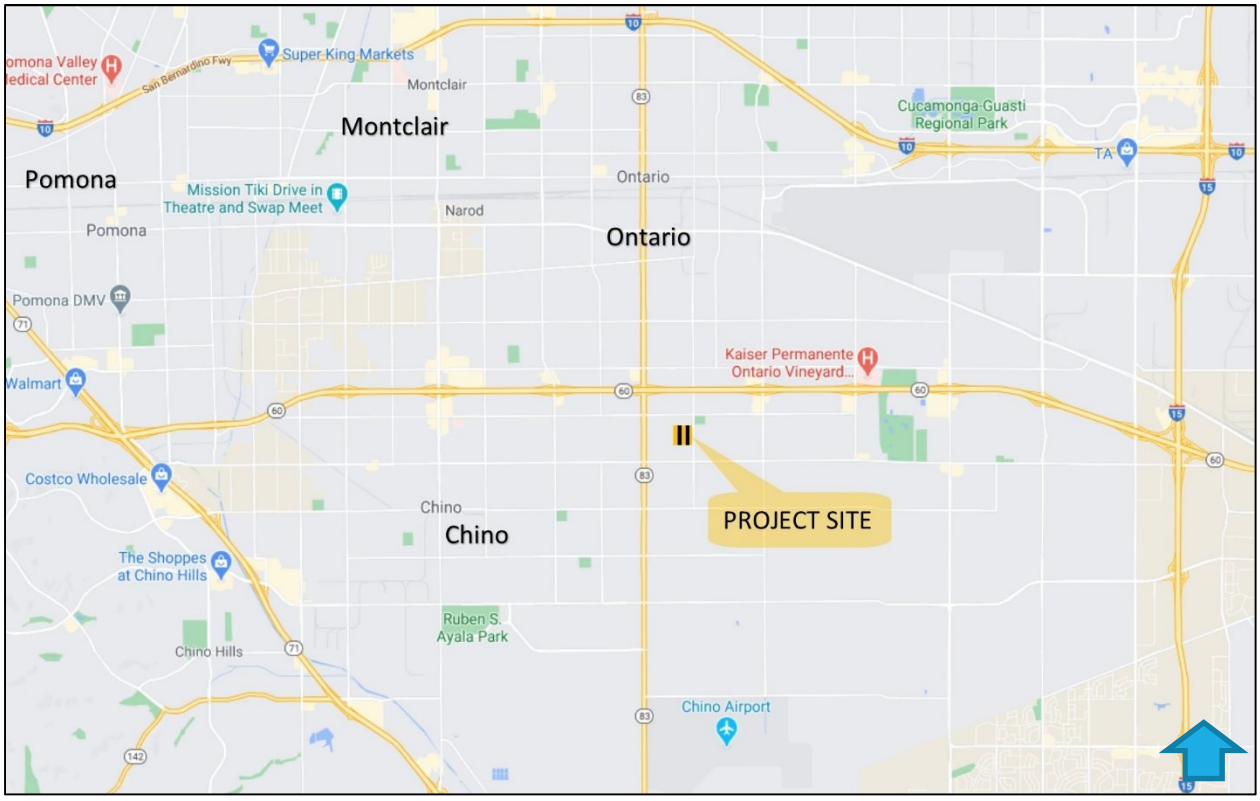

Figure 3: AERIAL PHOTOGRAPH

**General Plan Designation:** Mixed Use

**Zoning:** LUA2-N (Arts District- North) and LUA-3 (Holt Boulevard District) of the MU-1 (Downtown Mixed-Use) zoning district.

**Description of Project**: A request for approval of certain entitlements to facilitate the construction of an affordable multiple-family residential development project (Ontario Emporia Family Housing Project- Phase 2). The Project is proposed on approximately 2.15 acres of land within the Downtown Mixed Use District. Requested entitlements include the following:

1. An **Amendment to the Emporia Family Housing Planned Unit Development** (File No. PUD21-001) to expand the Project boundary area from approximately 2.80 acres of land to 4.95 acres of land, establish minimum building setbacks, modify minimum parking requirements, allow on-street loading, and update the planting palette.

2. A **Certificate of Appropriateness** (File No. PHP21-003) to demolish two historic Tier III buildings located within the Project site.

3. A **Tentative Parcel Map** (File No. PMTT21-004/ TPM 20339) to consolidate four lots and the vacation of an adjoining section of Fern Avenue, for a total of 1.71 acres of land.

4. A **Development Plan** (File No. PDEV21-008) to allow for the construction of 50 multiple-family affordable dwelling units on 2.15 acres of land, which includes the Tentative Parcel Map property in conjunction with an adjacent 0.44-acre property designated for off-street parking, located across Emporia Street, for a total project area of 2.15 acres of land.

5. A **Demolition Permit** to allow for the demolition of buildings located at 201 to 215 South Fern Avenue and 310 West Emporia Street, and determine appropriate hazardous materials (if any) and construction waste reduction measures; and

6. **A Street Vacation** to allow for the vacation of a segment of Fern Avenue, between Transit Street on the north and Emporia Street on the south , and a 30-foot wide storm drain easement will be established to allow an existing public storm drain in Fern Avenue to remain in place.

7. A **Disposition and Development Agreement (DDA)** with the Related Companies (Developer) for the development of this site as an affordable housing project. It is the intention of the parties that the Authority will sell the site to the Developer to develop a multifamily affordable rental housing project containing a total of the 50 dwelling units comprised of 6 one-bedroom units, 29 two-bedroom units, and 15 three-bedroom units. The units will be restricted to extremely low-income, very low-income, and low-income families, and will have a 55-year covenant recorded against the property to ensure the affordability and maintenance of the development.

**Discretionary and Nondiscretionary Approvals Associated with Project:** CEQA Guidelines Section 15124 states in pertinent part that if . . . "a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed . . ." Discretionary actions necessary to realize the project include, but are not limited to the following:

1. Planned Unit Development approval consistent with the requirements of The Ontario Plan and the Ontario Development Code;

2. Approval of a Development Plan subject to the requirements of the Development Code;

3. Approval of a Tentative and Final Parcel Map subject to the requirements of the Ontario Development Code;

4. Approval of a Certificate of Appropriateness Map subject to the requirements of the Ontario Development Code;

5. Approval of Demolition Permits;

6. Approval of rough and final grading plans;

7. Approval of infrastructure improvement plans, including but not limited to, roads, sewer, water, and storm water management systems;

8. Approval of architectural and structural building plans; and

9. Approval of landscape and irrigation plans.

**Project Setting:** The Project site encompasses a one-block area within the Mixed Use land use district of the Policy Plan (General Plan) and the MU-1 (Downtown Mixed Use) zoning district. The Project site is comprised of approximately 2.15 acres of land generally bordered by Transit Street to the north, Emporia Street, and the Southern Pacific Railroad Corridor to the south, Fern Avenue to the west and Palm Avenue to the east.

Existing land uses on the Project site includes unimproved land and two single-story commercial buildings that have been determined to be Tier III historic resources and are listed on the local register of historic properties. The existing properties south of Emporia Street, within the Project site, are unimproved.

Land uses surrounding the Project site are characterized by a mixture of legal nonconforming residential uses, light industrial, and commercial uses across Emporia Street to the south; retail, light industrial uses, and vacant property across Transit Street to the north; parking lot and unimproved land across Palm Avenue to the east; and a 75-unit affordable housing development (known as "Emporia Family Housing Phase 1") to the west. The surrounding existing land uses, Policy Plan (General Plan), and zoning information are summarized below.

| | *Existing Land Use* | *General Plan Designation* | *Zoning Designation* |
|---|---|---|---|
| Site: | Office, Commercial, Assembly, and Undeveloped | Mixed Use | LUA-3 (Holt Boulevard District) of MU-1 (Downtown Mixed Use) |
| North: | Retail and Undeveloped | Mixed Use | LUA-3 (Holt Boulevard District) of MU-1 (Downtown Mixed Use) |
| South: | Wholesale Machinery and Undeveloped | Mixed Use | LUA2-N (Arts District- North) of MU-1 (Downtown Mixed Use) |
| East: | Parking Lot and Undeveloped | Mixed Use | LUA2-N (Arts District- North) of MU-1 (Downtown Mixed Use) |
| West: | Multiple-Family Residential | Mixed Use | LUA-3 (Holt Boulevard District) of MU-1 (Downtown Mixed Use) |

**Cultural Resources Regulatory Setting:** The City of Ontario Historic Preservation Ordinance addresses the alteration of historic resources under the "Certificate of Appropriateness" guidelines that regulate the proposed "demolition, in whole or part" of any historic building. Development Code Section 4.02.040 (Historic Preservation – Local Historic Landmark and Local District Designations, Historic Resource Tiering, and Architectural Conservation Areas) ranks historic properties under a three-tiered system to determine their significance.

1. Tier I properties should not be demolished or significantly altered under any circumstances. Tier I properties are considered Ontario's most significant historical or cultural resources. In order for a property to be considered a Tier I it must meet the following criteria, [a] be listed as a local Eligible Historical Resource, [b] meet at least one of the criterion in the architecture category and three criteria in the historical category, or [c] be a contributor to a district and meet at least one architecture criterion and three historical criterion.

2. Demolition of Tier II properties should be avoided. In order for a property to be considered a Tier II

resource, the property must meet the following criteria, [a] be listed, or determined to be eligible for listing, in the National Register of Historic Places, or [b] be listed in the City's List of Eligible Historic Resources and determined to be eligible for listing in the California Register of Historic Places, or [c] be listed in the City's List of Eligible Historic Resources and meet at least two of the criterion in either architecture or history categories; and [4] be a contributing structure in a Eligible Historic District where the district meets at least two criterion on either the architecture or historic categories.

3. Tier III properties consist of [a] Designated Historic Landmarks; [b] contributing structures in Designated Historic Districts; or [c] historic resources listed in the Ontario Register, as defined in Development Code Section 4.02.045 (Historic Preservation – Rescind or Amend the Status of a Historic Resource). Demolition of these properties should be avoided where possible but may be appropriate under certain circumstances.

4. The City of Ontario Historic Preservation Commission makes recommendations to the Historic Preservation Subcommittee regarding the Tiers assigned to eligible historic properties. Pursuant to Development Code Section 4.02.040 (Historic Preservation – Local Historic Landmark and Local District Designations, Historic Resource Tiering, and Architectural Conservation Areas), the historic resource tiering criteria for individual properties is as follows:

**a.** Architecture/Form:

(i) The resource is prototypical, or one of the finest examples, of a period style, architectural movement, or construction in the City of a particular style of architecture, building type, or historical or archeological object. Only preeminent examples should be considered. Good representative examples of a style, period or method of construction are not appropriate; or

(ii) The resource is the first, last, only, or one of the finest examples, notable works, or the best surviving work by an architect or designer of major importance to the City, State or Nation.

**b.** History:

(i) The resource is the location of a historic event(s) that has significantly contributed to the history of the City, State, or Nation;

(ii) The resource is associated with a business, company, or individual that has made a significant cultural, social, or scientific contribution to the City, State, or Nation;

(iii) The resource is identified with a person(s) who has exerted a major influence on the heritage or history of the City, State, or Nation;

(iv) The resource embodies the ideals or principles of the "Model Colony" or furthers the ideals or principals established by the Chaffey Brothers;

(v) The resource has a direct relationship to one of the principal historic contexts in the City's history, including the "Model Colony," (includes the Chaffey Brothers, the Ontario Land and Improvement Company, or the citrus industry), the Guasti Winery or the wine industry, or the Dairy Preserve or the dairy industry;

(vi) The resource is related with a business, company, or individual significant in the agricultural history of the City; or

(vii) The resource is related to the archeological past of the region.

On August 10, 2010, the Historic Preservation Subcommittee approved a Tier III Determination (File No. PHP10-004) for the 4,000 square foot, one-story commercial building, a historic resource, located at 201-215 South Fern Avenue, within the Project site. On January 11, 2011, the Historic Preservation Subcommittee approved a Tier III Determination (File No. PHP10-011) for the 10,000 square foot, one-story commercial building, a historic resource, located at 310 West Emporia Street, also within the Project site.

**Background:** On January 27, 2010, the Ontario City Council adopted The Ontario Plan ("TOP"). TOP serves as the framework for the City's business plan and provides a foundation for the City to operate as a municipal corporation that consists of six (6) distinct components: 1) Vision; 2) Governance Manual; 3) Policy Plan; 4) Council Priorities; 5) Implementation; and 6) Tracking and Feedback. The Policy Plan

component of TOP meets the functional and legal mandate of a General Plan and contains nine elements: Land Use, Housing, Parks and Recreation, Environmental Resources, Community Economics, Safety, Mobility, Community Design and Social Resources.

An Environmental Impact Report ("EIR") was prepared for TOP (State Clearinghouse No. 2008101140) and certified by the City Council on January 27, 2010, that included Mitigation Findings and a Statement of Overriding Considerations pursuant to CEQA. The Certified TOP EIR analyzed the direct and physical changes in the environment that would be caused by TOP; focusing on changes to land use associated with the buildout of the proposed land use plan, in the Policy Plan and impacts resultant of population and employment growth in the City. The significant unavoidable adverse impacts that were identified in the EIR included agriculture resources, air quality, cultural resources, greenhouse gas emissions, noise, and transportation/traffic.

**Analysis:** According to the California Environmental Quality Act Guidelines Section 15164, an Addendum to a previously Certified EIR may be used if some changes or additions are necessary, but none of the conditions described in Section 15162 requiring the preparation of a subsequent Negative Declaration or EIR have occurred. The CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR or Negative Declaration are needed for further discretionary approval. These findings are described below:

1. *Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified effects*.

Substantial changes are not proposed by the Project and Project implementation will not require revisions to the Certified TOP EIR. The Certified TOP EIR analyzed the direct and physical changes in the environment that would be caused by TOP; focusing on changes to land use associated with the buildout of the proposed land use plan. In addition, all previously adopted mitigation measures are a condition of Project approval and are incorporated herein by reference. The attached Initial Study provides and analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

2. *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, that would require major revisions of the previous Environmental Impact Report due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.*

Substantial changes have not occurred with respect to the circumstances under which the Project was undertaken, that would not require major revisions to the Certified TOP EIR in that the proposed changes would be in keeping with the surrounding area. Therefore, no proposed changes or revisions to the EIR are required.

In addition, all previously adopted mitigation measures of the Certified TOP EIR are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

3. *Required Finding: No new information has been provided that would indicate that the proposed project would result in one or more significant effects not discussed in the previous EIR.*

No new information has been provided that would indicate the proposed Project would result in any new significant effects not previously discussed in the Certified TOP EIR. Therefore, no proposed changes or revisions to the EIR are required. In addition, all previously adopted mitigation measures of the Certified TOP EIR are incorporated herein by reference. The attached Initial Study provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

**CEQA Requirements for an Addendum:** If changes to a Project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency may: (1) prepare a subsequent EIR if the criteria of State CEQA Guidelines Section 15162(a) are met, (2) prepare a subsequent negative declaration, (3) prepare an addendum, or (4) prepare no further documentation. (State CEQA Guidelines Section 15162(b)). When only minor technical changes or additions to the negative declaration are necessary and none of the conditions described in section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred, CEQA allows the lead agency to prepare and adopt an addendum. (State CEQA Guidelines Section 15164(b).)

Under Section 15162, a subsequent EIR or negative declaration is required only when:

1) Substantial changes are proposed in the project which will require major revisions of the previous negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the negative declaration due to the involvement of any new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the negative declaration was adopted, shows any of the following:

a) The project will have one or more significant effects not discussed in the previous negative declaration;

b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Thus, if the Project does not result in any of the circumstances listed in Section 15162 (i.e., no new or substantially greater significant impacts), the City may properly adopt an addendum to the Certified TOP EIR.

**Conclusion**: The Ontario Plan Environmental Impact Report (TOP EIR), certified by City Council on January 27, 2010, was prepared as a Program EIR in accordance with CEQA, the State CEQA Guidelines, and the City's Rules for the Implementation of CEQA and in accordance with Section 15121(a) of the State CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3).The Certified TOP EIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by the Ontario Plan. Subsequent activities within the TOP Program EIR have been evaluated to determine whether an additional CEQA documents needs to be prepared.

Accordingly, and based on the findings and information contained in the Certified TOP EIR, the analysis above, the attached Initial Study, and CEQA statute and State CEQA Guidelines, including Sections 15164 and 15162, the Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified EIR. No changes or additions to the Certified TOP EIR analyses are necessary, nor is there a need for any additional mitigation measures; therefore, pursuant to State CEQA Guidelines Section 15164, the Ontario City Council hereby adopts this Addendum to the Certified EIR.

**Other public agencies whose approval is required (e.g., permits, financing approval or participation agreement):** Permitting may be required by/through the Regional Water Quality Control Board (RWQCB) pursuant to requirements of the City's National Pollutant Discharge Elimination System (NPDES) Permit; Permitting may be required by/through the South Coast Air Quality Management District (SCAQMD) for certain equipment or land uses that may be implemented within the Project area; and Various construction, grading, and encroachment permits allowing implementation of the Project.

**Tribal Consultation:** Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1?

☐ Yes ☐ No ☒ N/A

If "yes," has consultation begun? ☐ Yes ☐ No ☐ Completed

## *ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED*

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

| | | |
|---|---|---|
| ☐ Aesthetics | ☐ Agriculture/Forestry Resources | ☐ Air Quality |
| ☐ Biological Resources | ☐ Cultural Resources | ☐ Geology / Soils |
| ☐ Greenhouse Gas Emissions | ☐ Hazards & Hazardous Materials | ☐ Hydrology / Water Quality |
| ☐ Land Use / Planning | ☐ Mineral Resources | ☐ Noise |
| ☐ Population / Housing | ☐ Public Services | ☐ Recreation |
| ☐ Transportation | ☐ Utilities / Service Systems | ☐ Mandatory Findings of Significance |
| ☐ Tribal Cultural Resources | ☐ Wildfire | ☐ Energy |

## *DETERMINATION (To be completed by the Lead Agency)*

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards; (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project; and (c) a Statement of Overriding Consideration was adopted for demolition of Tier III historic resources finding that the demolition of Tier III historic resources results in significant and unavoidable impacts that cannot be

fully mitigated to a level of less than significant, despite the imposition of all feasible mitigation measures identified in the EIR, and nothing further is required.

## *EVALUATION OF ENVIRONMENTAL IMPACTS*

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4. "Negative Declaration: Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from the "Earlier Analyses" Section may be cross-referenced).

5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

a. Earlier Analyses Used. Identify and state where they are available for review.

b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

c. Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7. Supporting Information Sources. A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.

8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9. The explanation of each issue should identify:

a. The significance criteria or threshold, if any, used to evaluate each question; and

b. The mitigation measure identified, if any, to reduce the impact to less than significance.

| ***Issues*** | ***Potentially Significant Impact*** | ***Less Than Significant with Mitigation*** | ***Less Than Significant Impact*** | ***Impacts Previously Analyzed in TOP EIR*** |
|---|---|---|---|---|
| **1. AESTHETICS.** Would the project: | | | | |
| **a.** Have a substantial adverse effect on a scenic vista? | ☐ | ☐ | ☐ | ☒ |
| **b.** Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? | ☐ | ☐ | ☐ | ☒ |
| **c.** In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality? | ☐ | ☐ | ☐ | ☒ |
| **d.** Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area? | ☐ | ☐ | ☐ | ☒ |
| **2. AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project: | | | | |
| **a.** Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? | ☐ | ☐ | ☐ | ☒ |
| **b.** Conflict with existing zoning for agricultural use, or a Williamson Act contract? | ☐ | ☐ | ☐ | ☒ |
| **c.** Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? | ☐ | ☐ | ☐ | ☒ |
| **d.** Result in the loss of forest land or conversion of forest land to non-forest use? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **e.** Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? | ☐ | ☐ | ☐ | ☒ |
| **3. AIR QUALITY.** Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project: | | | | |
| **a.** Conflict with or obstruct implementation of the applicable air quality plan? | ☐ | ☐ | ☐ | ☒ |
| **b.** Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard? | ☐ | ☐ | ☐ | ☒ |
| **c.** Expose sensitive receptors to substantial pollutant concentrations? | ☐ | ☐ | ☐ | ☒ |
| **d.** Result in other emissions (such as those leading to odors adversely affecting a substantial number of people? | ☐ | ☐ | ☐ | ☒ |
| **4. BIOLOGICAL RESOURCES.** Would the project: | | | | |
| **a.** Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☒ |
| **b.** Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☒ |
| **c.** Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? | ☐ | ☐ | ☐ | ☒ |
| **d.** Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? | ☐ | ☐ | ☐ | ☒ |
| **e.** Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? | ☐ | ☐ | ☐ | ☒ |
| **f.** Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **5. CULTURAL RESOURCES.** Would the project: | | | | |
| **a.** Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5? | ☐ | ☐ | ☐ | ☒ |
| **b.** Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5? | ☐ | ☐ | ☐ | ☒ |
| **c.** Disturb any human remains, including those interred outside of dedicated cemeteries? | ☐ | ☐ | ☐ | ☒ |
| **6. ENERGY.** Would the project: | | | | |
| **a.** Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation? | ☐ | ☐ | ☐ | ☒ |
| **b.** Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? | ☐ | ☐ | ☐ | ☒ |
| **7. GEOLOGY AND SOILS.** Would the project: | | | | |
| **a.** Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving: | ☐ | ☐ | ☐ | ☒ |
| **i.** Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. | ☐ | ☐ | ☐ | ☒ |
| **ii.** Strong seismic ground shaking? | ☐ | ☐ | ☐ | ☒ |
| **iii.** Seismic-related ground failure, including liquefaction? | ☐ | ☐ | ☐ | ☒ |
| **iv.** Landslides? | ☐ | ☐ | ☐ | ☒ |
| **b.** Result in substantial soil erosion or the loss of topsoil? | ☐ | ☐ | ☐ | ☒ |
| **c.** Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? | ☐ | ☐ | ☐ | ☒ |
| **d.** Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code, creating substantial direct or indirect risks to life or property? | ☐ | ☐ | ☐ | ☒ |
| **e.** Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water? | ☐ | ☐ | ☐ | ☒ |
| **f.** Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **8. GREENHOUSE GAS EMISSIONS.** Would the project: | | | | |
| **a.** Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? | ☐ | ☐ | ☐ | ☒ |
| **b.** Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases? | ☐ | ☐ | ☐ | ☒ |
| **9. HAZARDS AND HAZARDOUS MATERIALS.** Would the project: | | | | |
| **a.** Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? | ☐ | ☐ | ☐ | ☒ |
| **b.** Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? | ☐ | ☐ | ☐ | ☒ |
| **c.** Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? | ☐ | ☐ | ☐ | ☒ |
| **d.** Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? | ☐ | ☐ | ☐ | ☒ |
| **e.** For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area? | ☐ | ☐ | ☐ | ☒ |
| **f.** Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |
| **g.** Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires? | ☐ | ☐ | ☐ | ☒ |
| **10. HYDROLOGY AND WATER QUALITY.** Would the project: | | | | |
| **a.** Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality? | ☐ | ☐ | ☐ | ☒ |
| **b.** Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? | ☐ | ☐ | ☐ | ☒ |
| **c.** Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **i.** result in substantial erosion or siltation on- or off-site; | ☐ | ☐ | ☐ | ☒ |
| **ii.** substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; | ☐ | ☐ | ☐ | ☒ |
| **iii.** create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or | ☐ | ☐ | ☐ | ☒ |
| **iv.** impede or redirect flood flows? | ☐ | ☐ | ☐ | ☒ |
| **d.** In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation? | ☐ | ☐ | ☐ | ☒ |
| **e.** Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan? | ☐ | ☐ | ☐ | ☒ |
| **11. LAND USE AND PLANNING.** Would the project: | | | | |
| **a.** Physically divide an established community? | ☐ | ☐ | ☐ | ☒ |
| **b.** Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? | ☐ | ☐ | ☐ | ☒ |
| **12. MINERAL RESOURCES.** Would the project: | | | | |
| **a.** Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? | ☐ | ☐ | ☐ | ☒ |
| **b.** Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? | ☐ | ☐ | ☐ | ☒ |
| **13. NOISE.** Would the project result in: | | | | |
| **a.** Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? | ☐ | ☐ | ☐ | ☒ |
| **b.** Generation of excessive groundborne vibration or groundborne noise levels? | ☐ | ☐ | ☐ | ☒ |
| **c.** For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? | ☐ | ☐ | ☐ | ☒ |
| **14. POPULATION AND HOUSING.** Would the project: | | | | |
| **a.** Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **b.** Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere? | ☐ | ☐ | ☐ | ☒ |
| **15. PUBLIC SERVICES.** Would the project: | | | | |
| **a.** Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: | | | | |
| **i.** Fire protection? | ☐ | ☐ | ☐ | ☒ |
| **ii.** Police protection? | ☐ | ☐ | ☐ | ☒ |
| **iii.** Schools? | ☐ | ☐ | ☐ | ☒ |
| **iv.** Parks? | ☐ | ☐ | ☐ | ☒ |
| **v.** Other public facilities? | ☐ | ☐ | ☐ | ☒ |
| **16. RECREATION.** Would the project: | | | | |
| **a.** Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | ☐ | ☐ | ☐ | ☒ |
| **b.** Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment? | ☐ | ☐ | ☐ | ☒ |
| **17. TRANSPORTATION.** Would the project: | | | | |
| **a.** Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities? | ☐ | ☐ | ☐ | ☒ |
| **b.** Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)? | ☐ | ☐ | ☐ | ☒ |
| **c.** Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? | ☐ | ☐ | ☐ | ☒ |
| **d.** Result in inadequate emergency access? | ☐ | ☐ | ☐ | ☒ |
| **18. TRIBAL CULTURAL RESOURCES.** Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is | | | | |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **a.** Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)? | ☐ | ☐ | ☐ | ☒ |
| **b.** A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe. | ☐ | ☐ | ☐ | ☒ |
| **19. UTILITIES AND SERVICE SYSTEMS.** Would the project: | | | | |
| **a.** Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? | ☐ | ☐ | ☐ | ☒ |
| **b.** Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years? | ☐ | ☐ | ☐ | ☒ |
| **c.** Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | ☐ | ☐ | ☐ | ☒ |
| **d.** Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? | ☐ | ☐ | ☐ | ☒ |
| **e.** Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? | ☐ | ☐ | ☐ | ☒ |
| **20. WILDFIRES.** If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project: | | | | |
| **a.** Substantially impair an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |
| **b.** Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire? | ☐ | ☐ | ☐ | ☒ |
| **c.** Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant with Mitigation* | *Less Than Significant Impact* | *Impacts Previously Analyzed in TOP EIR* |
|---|---|---|---|---|
| **d.** Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? | ☐ | ☐ | ☐ | ☒ |
| **21. MANDATORY FINDINGS OF SIGNIFICANCE.** | | | | |
| **a.** Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | ☐ | ☐ | ☐ | ☒ |
| **b.** Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.) | ☐ | ☐ | ☐ | ☒ |
| **c.** Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? | ☐ | ☐ | ☐ | ☒ |

## *EXPLANATION OF ISSUES*

**1. AESTHETICS.** Would the project:

**a. Have a substantial adverse effect on a scenic vista?**

Discussion of Effects: The Policy Plan (General Plan) does not identify scenic vistas within the City. However, TOP Policy Plan (Policy CD1-5) requires all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains. The Project is not located adjacent to any major north-south arterial streets, as identified in the Functional Roadway Classification Plan (Figure M-2) of the Mobility Element within the Policy Plan. Consequently, the Project will not result in any new or substantially different aesthetic impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway?**

Discussion of Effects: The City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation. In addition, there are no historic buildings, or any scenic resources identified on or in the vicinity of the Project site. Therefore, it will not result in adverse environmental impacts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?**

Discussion of Effects: The Project would not degrade the existing visual character or quality of the site or its surroundings. The Project site is located in an area that is characterized by a mix of residential and commercial land uses and is surrounded by urban land uses.

The Project will substantially improve the visual quality of the area through development of the site with a high density residential development, which will be consistent with the policies of the Community Design Element of the Policy Plan (General Plan) and zoning designations on the property, as well as with the residential and commercial development in the surrounding area. Consequently, the Project will not result in any new or substantially different aesthetic impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?**

Discussion of Effects: New lighting will be introduced to the site with the development of the proposed Project. Pursuant to the requirements of the City's Development Code and the Emporia Family Housing PUD, the Project's on-site lighting will be shielded, diffused, or indirect, to avoid glare to pedestrians or motorists. In addition, lighting fixtures will be selected and located to confine the area of illumination to within the project site and minimize light spillage.

Site lighting plans will be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, the Project will not result in any new or substantially different aesthetic impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**2. AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

**c. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?**

Discussion of Effects: The site is presently improved with two commercial buildings and the unimproved land and does not contain any agricultural uses. Furthermore, the site is identified as "Urban and Built-Up Land" on the map prepared by the California Resources Agency, pursuant to the Farmland Mapping and Monitoring Program. Consequently, the Project will not result in any new or substantially different agriculture or forest resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Conflict with existing zoning for agricultural use, or a Williamson Act contract?**

Discussion of Effects: The Project site is not zoned for agricultural use. Furthermore, there are no Williamson Act contracts in effect on the subject site. Therefore, no impacts to agricultural uses are anticipated, nor will there be any conflict with Williamson Act contracts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?**

Discussion of Effects: The Project would not result in the rezoning of forest land, timberland, or timberland zoned Timberland Production because such land use designations do not exist within the City of Ontario. The Project site is zoned for Medium Density Residential development. The proposed project is consistent with the Land Use Element (Figure LU-6) of the Policy Plan (General Plan) and the development standards and allowed land uses of the MDR-18 (Medium Density Residential) zone. Therefore, no impacts to forest or timberland are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**f. Result in the loss of forest land or conversion of forest land to non-forest use?**

Discussion of Effects: There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither TOP nor the City's Zoning Code provide designations for forest land. Consequently, the proposed Project would not result in the loss or conversion of forest land.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**g. Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?**

Discussion of Effects: The Project site is currently zoned MU-1 (Downtown Mixed Use) and is not designated as Farmland. The Project site is currently vacant and there are no agricultural uses occurring onsite. As a result, to the extent that the Project would result in changes to the existing environment those changes would not result in loss of Farmland to non-agriculture use.

Additionally, there is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither TOP nor the City's Zoning Code provide designations for forest land. Consequently, to the extent that the proposed Project would result in changes to the existing environment, those changes would not impact forest land.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**3. AIR QUALITY**. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the Project:

**a. Conflict with or obstruct implementation of the applicable air quality plan?**

Discussion of Effects: The Project will not conflict with or obstruct implementation of any air quality plan. As noted in The Ontario Plan FEIR (Section 5.3), pollutant levels in the Ontario area already exceed Federal and State standards. To reduce pollutant levels, the City of Ontario is actively participating in efforts to enhance air quality by implementing Control Measures in the Air Quality Management Plan for local jurisdictions within the South Coast Air Basin.

The proposed Project is consistent with The Ontario Plan, for which the EIR was prepared and impacts evaluated. Furthermore, the Project is consistent with the City's participation in the Air Quality Management Plan and will not conflict with or obstruct implementation of the plan. Mitigation (Mitigation Measure 5.3-2) has been adopted by the City that requires fugitive dust control measures pursuant to SCAQMD's Rule 403, use of Tier 3 construction equipment, proper service and maintenance of construction equipment, limiting nonessential idling of construction equipment, and use of Super-Compliant VOC paints for coating and architectural surfaces. As a condition of approval, the project will comply with Mitigation Measure 5.3-2. No new impacts beyond those identified in the Certified TOP EIR that would result from Project implementation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**

Discussion of Effects: The Project will not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality because of the limited size and scope of the Project. Although no impacts are anticipated, the Project will still comply with the air quality standards of the TOP FEIR and the SCAQMD resulting in impacts that are less than significant [please refer to Sections 3(a) and 3(b)].

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Expose sensitive receptors to substantial pollutant concentrations?**

Discussion of Effects: Sensitive receptors are defined as populations that are more susceptible to the effects of pollution than the population at large. The SCAQMD identifies the following as sensitive receptors: long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences, schools, playgrounds, child-care centers, and athletic facilities. According to the SCAQMD, projects have the potential to create significant impacts if they are located within one-quarter mile of sensitive receptors and would emit toxic air contaminants identified in SCAQMD Rule 1401.

The Project proposes the construction of residential units, a sensitive receptor. There are not, however, any known hot spots or heavy concentrations of pollutants in the area that would expose residents to potential adverse impacts. Therefore, the Project will not result in any new or substantially different air quality impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?**

Discussion of Effects: The subject site was previously analyzed by TOP EIR as Mixed-Use (Downtown Mixed Use District). The residential use proposed on the subject site do not create objectionable odors. Further, the Project shall comply with the policies of the Ontario Municipal Code and the Policy Plan (General Plan). Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**4. BIOLOGICAL RESOURCES.** Would the project:

**a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?**

Discussion of Effects: The Project site is located within an area that has not been identified as containing species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations or by the California Department of Fish and Game or the U.S. Fish and Wildlife Service. Therefore, the Project will not result in any new or substantially different biological resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?**

Discussion of Effects: The subject site was previously analyzed by the Certified TOP EIR as residential uses. The site does not contain any riparian habitat or other sensitive natural community identified by the Department of Fish & Game or Fish & Wildlife Service. Therefore, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?**

Discussion of Effects: No wetland habitat is present on site. Therefore, Project implementation would have no impact on these resources.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?**

Discussion of Effects: The site is part of a larger urbanized, mixed use area, and there are no wildlife corridors connecting this site to other areas. Therefore, the Project will not result in any new or substantially different biological resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?**

Discussion of Effects: The City of Ontario does not have any ordinances protecting biological resources; however, the Project site contains a number of mature trees necessitating the need for preservation consistent with the City's Tree Preservation Ordinance. Therefore, the Project will not result in any new or substantially different biological resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?**

Discussion of Effects: The site is not part of an adopted HCP, NCCP or other approved habitat conservation plan. As a result, no adverse environmental impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**5. CULTURAL RESOURCES.** Would the project:

**a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?**

Discussion of Effects: On January 27, 2010, The Ontario Plan (TOP), File No. PGPA06-001 for which an Environmental Impact Report (State Clearinghouse No. 2008101140) was adopted and certified by City Council, determining that demolition of Tier III historic resources results in significant and unavoidable impacts that cannot be fully mitigated to a level of less than significant, despite the imposition of all feasible mitigation measures identified in the EIR for which a Statement of Overriding Consideration was adopted. Two Tier III historic resources are located within the Project site:

(i) Office Building located at 201-215 South Fern Avenue: The building is a wide one-part commercial block building in the Art/Streamline Moderne architectural style and is approximately 4,000 square feet. The style is indicated by a flat roof, smooth wall surfaces, the use of glass-block windows, and a thin cantilevered roof running the entire length of the building which curves around the north-east corner. The building is situated in a rectangular building plan with a zero front setback and consists of eight commercial units. The original building addresses were 201 through 207 South Fern Avenue. It appears that there was a later addition constructed in the same style which added units in 1963 and 1978. The wall surfaces are made of concrete block covered by stucco and the entryways are recessed.

The 2003 Downtown intensive level survey suggests that the original portion of this commercial building appeared to be Eligible as a Contributor to a potential historic district stating that "the location, setting and design of the original building contributes to a historical record of the development of commerce in the City of Ontario." The design of the building preserves a sense of the historic character of the commercial core of the city of Ontario.

On August 10, 2010, the Historic Preservation Subcommittee approved a Tier III Determination (File No. PHP10-004) for this 4,000 square foot, one-story commercial building, a historic resource, located at 201-215 South Fern Avenue.

(ii) American Legion Building located at 310 West Emporia Street: Constructed in 1953, the American Legion Building is approximately 10,000 square feet and has a T-shape plan. The roof line is broken into two parts. The first portion is slightly angled and covered with composition. There is a window band under the eave that separates the two roof sections. The second portion of the roof is flat and intersects the wall just below the window band. The front façade has two vertical divisions. The wall, under

the angled roof, is a band of aluminum windows that increase in height towards the middle of the building. The wall below the window is covered with batten board and has vertical lines. The main entry door is centrally located and is under the flat roof section. There is a band of aluminum awning windows that sit below the eave and wrap the corner of the building. The building is constructed of hollow pumice concrete brick. This Modern Mid-Century building was designed by Jay Dewey Harnish of Harnish, Morgan and Causey (now referred to as HMC Architects, Inc.). HMC Architects is a nationally recognized firm with their main headquarters located in Ontario.

The American Legion is considered one of the Nation's most influential patriotic organizations. The American Legion was chartered by Congress in 1919 as a patriotic Veterans organization. Focusing on service to veterans, service members and communities, the Legion currently has about 2.4 million members in 14,000 posts worldwide. These posts are organized into 55 departments: one each for the 50 states, the District of Columbia, Puerto Rico, France, Mexico, and the Philippines.

The American Legion's national headquarters is in Indianapolis, with an office in Washington, D.C. The national organization has a full-time staff of about 300 employees. The Legion has several standing national commissions and committees that work with department, district, and post leadership to develop programs, increase membership, and recruit volunteers. Associated organizations are the American Legion Auxiliary and Sons of The American Legion. Over the years, The American Legion has founded many programs for children and youth, including American Legion Baseball and Boys Nation.

In 1919, a group of local veterans assembled in Archie Mitchell's office and formed the West End Service Men's club called "Cher- Ami". Archie Mitchell was an instrumental member in establishing the Ontario Municipal Airport. Later in 1920, the men's club was instituted as American Legion Post No. 112 with Dr. J.H. Titus serving as the first Commander. During the early 1920s, the Legion held regular meetings at the Hotpoint Clubhouse. During the late 1920s, John S. Armstrong donated the Armstrong residence to the Legion to be used as a new clubhouse. The residence was relocated from Euclid Avenue to 113 West E Street and was used as the clubhouse until 1953 when the new clubhouse was erected at the present location on Emporia Avenue. The Legion received top honors in 1929 for registering the highest percentage of voters in San Bernardino County. That same year the Legion Post took option on original thirty acres of the Ontario Airport. The Ontario Post has created and participated in several programs dedicated to promoting Americanism with the principals of justice, freedom, loyalty, and democracy. Aiding the veterans of all wars and their families is the foremost program as Ontario post works for a betterment of the community.

On January 11, 2011, the Historic Preservation Subcommittee approved a Tier III Determination (File No. PHP10-011) for the 10,000 square foot, one-story commercial building, a historic resource, located at 310 West Emporia Street. The following TOP mitigation measures are required Conditions of Approval for the Project:

(i) Prior to issuance of demolition building permit, every effort shall be made to relocate buildings. The buildings shall be offered at no cost for those who can relocate off site. Advertisements notifying the public of the opportunity to relocate the buildings shall be placed for a minimum of 45 days: on-site with temporary signage, in at least 3 local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards (realtor's offices, local business). Applicant shall notify a minimum of 5 non-profit heritage organizations in writing of the building. A social media campaign including a dedicated web page (or post) with the building's information (description, square footage, photographs) and contact information should be incorporated into the building's advertisement.

(ii) Full documentation, including but not limited to as-built drawing, historical narrative and HABS photographs, of the historic resource pursuant to Historic American Building Survey (HABS) Level 3 standards shall be submitted to the Planning Department for review and approval and subsequent release to the Ovitt Family Community Library, Model Colony History Room prior to issuance of demolition building permit.

(iii) A mitigation fee pursuant to Section 7.01.030 of the Ontario Development Code shall be paid to the Planning Department prior to issuance of building permit for demolition. For Tier III structures, this mitigation fee is equal to 10 percent of the price per square foot construction cost as established in the most current ICC Building Valuation Data. The fee amount will be provided by the Planning Department at the time of payment.

(iv) A determination whether items within or on the resource should be salvaged shall be made by the Planning Department. The applicant shall be responsible for the removal, relocation and donation of such items selected for salvaging. An inventory of salvaged items shall be provided by the applicant to the Planning Department prior to be to issuance of demolition permit.

Therefore, the Project will not result in any new or substantially different cultural resources impacts than were previously addressed in the EIR, and no changes or additions to the EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?**

Discussion of Effects: The Ontario Plan FEIR (Section 5.5) indicates no archeological sites or resources have been recorded in the City with the Archeological Information Center at San Bernardino County Museum. However, only about 10 percent of the City of Ontario has been adequately surveyed for prehistoric or historic archaeology. While no adverse impacts to archeological resources are anticipated at this site due to its urbanized nature, standard conditions have been imposed on the Project that in the event of unanticipated archeological discoveries, construction activities will not continue or will moved to other parts of the Project site and a qualified archaeologist shall be contacted to determine significance of these resources. If the find is discovered to be historical or unique archaeological resources, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented. Therefore, the Project will not result in any new or substantially different cultural resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Disturb any human remains, including those interred outside of formal cemeteries?**

Discussion of Effects: The proposed Project is in an area that has been previously disturbed by human activity. No known religious or sacred sites exist within the Project area. Thus, human remains are not expected to be encountered during any construction activities. However, in the unlikely event that human remains are discovered, existing regulations, including the California Public Resources Code Section 5097.98, would afford protection for human remains discovered during development activities. Furthermore, standard conditions have been imposed on the Project that in the event of unanticipated discoveries of human remains are identified during excavation, construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and/or Native American consultation has been completed, if deemed applicable.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**6. ENERGY** Would the project:

**a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?**

**b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?**

Discussion of Effects: Energy was not analyzed in the Certified TOP EIR but has been included as part of the 2019 revisions to the State CEQA Guidelines. Implementation of the Project would not substantially increase the demand for electricity and natural gas at the Project site and gasoline consumption in the region during construction and operation. Implementation of the Project will require compliance with CALGreen Building Code (CCR Title 24, Part11). Moreover, the Project includes a sample Greenhouse Gas Reduction Measure Screening Table for Residential and Commercial Development. The Screening Table includes measures energy efficient development, indoor space efficiency measures, building efficiency measures, renewable energy measures, and water conservation measures. Measures that would reduce electricity consumption include, but are not limited to: greatly enhanced window

insulation, an enhanced cool-roof, an improved efficiency heating, ventilation, and air conditioning ("HVAC") system, blower doors HERS verified Envelope leakage or equivalent, enhanced duct insulation, Energy Star commercial appliances, water efficient landscaping and irrigation systems, and water-efficient toilets and faucets.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts. No changes or additions to the Certified TOP EIR analyses are necessary.

**7. GEOLOGY & SOILS**. Would the project:

**a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:**

**i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.**

Discussion of Effects: There are no active faults known on the site and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Certified TOP EIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. Given that the closest fault zone is located more than ten miles from the Project site, fault rupture within the Project area is not likely. All development will comply with the Uniform Building Code seismic design standards to reduce geologic hazard susceptibility. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**ii. Strong seismic ground shaking?**

Discussion of Effects: There are no active faults known on the site and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Certified TOP EIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. The closest fault zone is located more than ten miles from the Project site. The proximity of the site to the active faults will result in ground shaking during moderate to severe seismic events. All construction will comply with the California Building Code, the Ontario Municipal Code, The Ontario Plan, and all other ordinances adopted by the City related to construction and safety. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iii. Seismic-related ground failure, including liquefaction?**

Discussion of Effects: As identified in the Certified TOP EIR (Section 5.7), groundwater saturation of sediments is required for earthquake induced liquefaction. In general, groundwater depths shallower than 10 feet to the surface can cause the highest liquefaction susceptibility. Depth to ground water at the Project site during the winter months is estimated to be between 250 to 450 feet below ground surface. Therefore, the liquefaction potential within the Project area is minimal. Implementation of The Ontario Plan strategies, Uniform Building Code and Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iv. Landslides?**

Discussion of Effects: The Project would not expose people or structures to potential adverse effects, including the risk of loss, injury, or death involving landslides because the relatively flat topography of the Project site (less than 2 percent slope across the City) makes the chance of landslides remote. The allowed residential use will not create greater landslide potential impacts than were identified in the Certified

TOP EIR. Implementation of TOP EIR strategies, Uniform Building Code and Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Result in substantial soil erosion or the loss of topsoil?**

Discussion of Effects: Implementation of the Project will not create greater erosion impacts than were identified in the Certified TOP EIR. Impacts will be less than significant with mitigation. The Project will not result in significant soil erosion or loss of topsoil because of the previously disturbed nature of the Project site and the limited size and scope of the Project. Grading increases the potential for erosion by removing protective vegetation, changing natural drainage patterns, and constructing slopes. However, compliance with the California Building Code and review of grading plans by the City Engineer will ensure no significant impacts will occur. In addition, the City requires an erosion/dust control plan for Projects located within this area. Implementation of a NPDES program, the Environmental Resource Element of the Policy Plan (General Plan) strategies, Uniform Building Code and Ontario Municipal code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?**

Discussion of Effects: Implementation of Project will not create greater landslide potential impacts than were identified in the Certified TOP EIR. Therefore, no adverse impacts are anticipated. In addition, the associated Project would not result in the location of development on a geologic unit or soil that is unstable, or that would become unstable because as previously discussed, the potential for liquefaction and landslides associated with the Project is less than significant. Certified TOP EIR (Section 5.7) indicates that subsidence is generally associated with large decreases or withdrawals of water from the aquifer. The Project would not withdraw water from the existing aquifer. Further, implementation of The Ontario Plan strategies, Uniform Building Code and Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?**

Discussion of Effects: The majority of Ontario, including the Project site, is located on alluvial and eolian soil deposits. These types of soils are not considered to be expansive. Therefore, no adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?**

Discussion of Effects: The area is served by the local sewer system and the use of alternative systems is not necessary. There will be no impact to the sewage system.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?**

Discussion of Effects: The City of Ontario is underlain by deposits of Quaternary and Upper-Pleistocene sediments deposited during the Pliocene and early Pleistocene time, Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are, therefore, considered to have high sensitivity at depths of 10 feet or more below ground surface. In addition, the Certified TOP EIR (Section 5.5) indicates that one paleontological resource has been discovered in the City. While no adverse impacts are anticipated, standard conditions have been imposed on the Project that in the event of unanticipated paleontological resources are identified during excavation, construction activities will not continue or will be moved to other parts of the Project site and a qualified paleontologist shall be contacted to determine significance of these resources. If the find is determined to be significant, avoidance or other appropriate measures shall be implemented.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR and TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**8. GREENHOUSE GAS EMISSIONS.** Would the project:

**a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR as a residential/commercial Mixed-Use that may have an impact on the environment at buildout of The Ontario Plan due to the emission of greenhouse gases ("GHGs"). According to the TOP EIR, this impact would be significant and unavoidable (Re-circulated Portions of the Ontario Plan Draft Environmental Impact Report, p. 2-118.) The TOP EIR was certified by the City on January 27, 2010, at which time a statement of overriding considerations was also adopted for The Ontario Plan's significant and unavoidable impacts, including that concerning the emission of greenhouse gases.

Implementation of Project will not create significantly greater impacts than were identified in the Certified TOP EIR. The Project includes a sample GHG Reduction Measures Screening Threshold Table, which provides guidance in measuring the reduction of greenhouse gas ("GHG") emissions attributable to certain design and construction measures incorporated into development projects. The analysis, methodology, and significance determination (thresholds) are based upon the City's Climate Action Plan ("CAP"), which includes GHG emission inventories (2008 and 2020 forecasts), a year 2020 emission reduction target, the goals and policies to reach the target, together with the Addendum prepared for the CAP. The Screening Table assigns points for each option incorporated into a project as mitigation or a project design feature (collectively referred to as "feature"). The point values correspond to the minimum emissions reduction expected from each feature. The menu of features allows maximum flexibility and options for how development projects can implement the GHG reduction measures. The point levels are based upon improvements compared to 2008 emission levels of efficiency. Projects that garner at least 100 points will be consistent with the reduction quantities anticipated in the City's CAP. As such, those projects that garner a total of 100 points or greater would not require quantification of project specific GHG emissions. Consistent with CEQA Guidelines, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions. As shown in the Project GHG Reduction Measures Screening Table, the Project garners a total of 103 points, and is therefore consistent with the reduction quantities anticipated in the City's CAP. Therefore, quantification of Project-specific GHG emissions is not required.

Additionally, pursuant to Public Resources Code Section 21083.3, this impact need not be analyzed further, because (1) the proposed project would result in an impact that was previously analyzed in the Certified TOP EIR; (2) the proposed project would not result in any greenhouse gas impacts that were not addressed in the Certified EIR; (3) the proposed project is consistent with The Ontario Plan. The proposed impacts of the project were already analyzed in the Certified EIR and the project will be built to current energy efficient standards. Potential impacts of project implementation will be less than significant with mitigation already required under the Certified TOP EIR and, CAP Screening Tables, and current energy efficiency standards. No changes or additions to the Certified TOP EIR analyses are necessary.

Mitigation Required: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to Certified TOP EIR analyses are necessary. The mitigation measures adopted as part of Certified TOP EIR adequately address any potential significant impacts and there is no need for any additional mitigation measures. The City has reviewed the emission reduction measures and concepts in TOP EIR's MM 6-2 and 6-3, and has determined that the following actions apply and shall be undertaken by the applicant in connection with the project: energy efficient design, efficient irrigation systems, and compliance with Title 24 of the California Code of Regulations.

**b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR as a residential/commercial mixed-use land use. The proposed Project is consistent with The Ontario Plan Goal ER 4 of improving air quality by, among other things, implementation of Policy ER4-3, regarding the reduction of greenhouse gas emissions in accordance with regional, State, and federal regulations. In addition, the proposed Project is consistent with the policies outlined in Section 5.6.4 of the TOP EIR, which aims to reduce the City's contribution of greenhouse gas emissions at build-out by fifteen (15 percent), because the project is upholding the applicable City's adopted mitigation measures as represented in 6-1 through 6-6 and energy efficient design, efficient irrigation systems, electric vehicle charging stations, and compliance with Title 24 of the California Code of Regulations. The Project is consistent with the City's Climate Action Plan. Therefore, the proposed Project does not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing emissions of greenhouse gases.

Mitigation Required: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**9. HAZARDS & HAZARDOUS MATERIALS.** Would the project:

**a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?**

Discussion of Effects: The Project site was previously analyzed by the TOP EIR for residential/commercial mixed-use land uses. The Project is not anticipated to involve the transport, use or disposal of hazardous materials during either construction or project implementation. Therefore, no adverse impacts are anticipated. However, in the unlikely event of an accident, implementation of the strategies included in The Ontario Plan will decrease the potential for health and safety risks from hazardous materials to a less than significant impact.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR for residential/commercial mixed-use land uses. The proposed Project does not include the use of hazardous materials or volatile fuels. In addition, there are no known stationary commercial or industrial land uses within close proximity to the subject site, which use/store hazardous materials to the extent that they would pose a significant hazard to visitors/occupants to the subject site, in the event of an upset condition resulting in the release of a hazardous material.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?**

Discussion of Effects: The Project does not include the use, emissions or handling of hazardous or acutely hazardous materials, substances, or waste. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?**

Discussion of Effects: The Project site is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5. Therefore, the Project would not create a hazard to the public or the environment and no impact is anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?**

Discussion of Effects: The Project was reviewed and found to be located within the Airport Influence Area of Ontario International Airport ("ONT") and was evaluated and found to be consistent with the policies and criteria of the Airport Land Use Compatibility Plan ("ALUCP") for ONT. The Project will not result in a safety hazard for people working or residing in the Project area because it will not obstruct aircraft maneuvering because of the Project's low elevation and the architectural style of the Project. Additionally, the Land Use Compatibility Guidelines for Noise Impacts (Table LU-08) shows the proposed use as normally accepted in the 65 CNEL. The proposed use will comply with standards for mitigating noise. Therefore, the Project will not result in any new or substantially different hazards and hazardous materials impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?**

Discussion of Effects: The City's Safety Element, as contained within The Ontario Plan, includes policies and procedures to be administered in the event of a disaster. The Ontario Plan seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to and recover from every day and disaster emergencies. In addition, the Project will comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access. Because the Project is required to comply with all applicable City codes, any impacts would be reduced to a less than significant level.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?**

Discussion of Effects: The Project site is not located in or near wildlands. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**10. HYDROLOGY & WATER QUALITY.** Would the project:

**a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?**

Discussion of Effects: The Project site is served by City water and sewer service and will not affect water quality standards or waste discharge requirements. The site is required to comply with the statewide National Pollutant Discharge Elimination System ("NPDES") General Industrial Activities Stormwater Permit, the San Bernardino County Area-Wide Urban Runoff Permit (MS4 permit) and the City of Ontario's Municipal Code (Title 6, Chapter 6 (Stormwater Drainage System). This would reduce any impacts to below a level of significance. Furthermore, the applicant for the subject site has submitted a Preliminary Water Quality Management Plan (PWQMP), which establishes the subject sites' compliance with storm water discharge and water quality management requirements. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development (LID) best management practices (BMPs), such as retention and infiltration, biotreatment and evapotranspiration. The PWQMP proposes the use of an underground stormwater infiltration system for the subject sites. Any overflow drainage will be conveyed to the public street by way of parkway culverts.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR for residential/commercial mixed-use land uses. The water use associated with the proposed use of the property will be negligible, and the proposed Project will not deplete groundwater supplies, nor will it interfere with recharge. The water use associated with the proposed use of the property was included in the Certified TOP EIR analysis. The development of the site will require the grading of the site and excavation is expected to be less than three feet and would not affect the existing aquifer, estimated to be about 230 to 250 feet below the ground surface. No adverse impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:**

**i. Result in substantial erosion or siltation on- or off-site?**

Discussion of Effects: It is not anticipated that the Project would alter the drainage pattern of the site or area, in a manner that would result in erosion, siltation or flooding on-or-off site, nor will the proposed Project increase the erosion of the subject site or surrounding areas. The existing drainage pattern of the site will not be altered, and it will have no significant impact on downstream hydrology. Stormwater generated by the Project will be discharged in compliance with the statewide NPDES General Construction Activities Stormwater Permit and San Bernardino County MS4 permit requirements. With the full implementation of a Storm Water Pollution Prevention Plan developed in compliance with the General Construction Activities Permit requirements, the Best Management Practices included in the SWPPP, and a stormwater monitoring program would reduce any impacts to below a level of significance. No streams or streambeds are present on the site. No changes in erosion off-site are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**ii. Substantially increase the rate or amount of surface runoff water in a manner which would result in flooding on- or off-site?**

Discussion of Effects: The Project is not anticipated to increase the flow velocity or volume of storm water runoff to cause environmental harm from the site and will not create a burden on existing infrastructure. Furthermore, with the implementation of an approved Water Quality Management Plan developed for the site, in compliance with the San Bernardino County MS4 Permit requirements, stormwater runoff volume shall be reduced to below a level of significance.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?**

Discussion of Effects: It is not anticipated that the Project would create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or create or contribute stormwater runoff pollutants during construction and/or post-construction activity. Pursuant to the requirements of The Ontario Plan, the City's Development Code, and the San Bernardino County MS4 Permit's Water Quality Management Plan ("WQMP"), individual developments must provide site drainage and WQMP plans according to guidelines established by the City's Engineering Department. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iv. Impede or redirect flood flows?**

Discussion of Effects: Urbanization in the areas surrounding the Project site have resulted in increased responsiveness of the basin to rainfall. The increase in impervious surfaces such as roofs, roads, and parking lots has resulted in a decrease in groundwater infiltration and larger storm surges. The Project site is not impacted by offsite flows. The Project site is not located in a FEMA Firm Panel designated Flood Zone Risk, and according to the United States Fish and Wildlife Service National Wetlands Inventory ("NWI") no wetlands exist on the property. An adequate drainage facility to accept additional runoff from the site does not currently exist downstream of the project. However, the Project will be conditioned to design and construct a storm water detention facility on site so that the 100-year post-development peak flow does not exceed 80 percent of pre-development peak flows.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?**

Discussion of Effects: Impacts associated with flooding are primarily related to the construction or placement of structures in areas prone to flooding including within an unprotected 100-year flood zone, and in areas susceptible to high tides, tsunamis, seiches, mudflows or sea level rise. Specifically, structures placed in flood prone areas, if flooded, would be damaged, and could subject people to injury or death. The National Flood Insurance Act of 1968 requires the identification of floodplain areas and establishment of flood-risk zones within those areas. FEMA administers the programs and coordinates with communities to establish effective floodplain management standards. According to FEMA, the Project is not located in a known floodplain. Furthermore, this area is not known to flood and is not typically subjected to flooding. The Project site is not located in a floodplain as shown in Figure S-2 of TOP. The Project site is in an urbanized area that is developed residential dwelling units. No wetlands have been mapped on the Project site according to the NWI. According to the FEMA, the Project is not located in an area that is subject to flood hazard, tsunami, or seiche zones. The Project site is located over 60 miles east of the Pacific Ocean and is not located in a mapped tsunami zone. Therefore, the Project would not have a significant risk of flood hazard, tsunami, seiche zones, release of pollutants due to Project inundation.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?**

Discussion of Effects: The Regional Water Quality Control Board's Basin Plan is designed to preserve and enhance water quality and protect the beneficial uses of all regional waters. Specifically, the Basin Plan (i) designates beneficial uses for surface and ground waters, (ii) sets narrative and numerical

objectives that must be attained or maintained to protect the designated beneficial uses and conform to the state's anti-degradation policy, and (iii) describes implementation programs to protect all waters in the region. The Project adheres to requirements of the water quality control plan, including all existing regulation and permitting requirements. This includes the incorporation of best management practices ("BMPs") to protect water quality during construction and operational periods. Development of the Project is subject to all existing water quality regulations and programs, as described in the regulatory section above, including all applicable construction permits. Existing General Plan policies related to water quality are also applicable to the Project. Implementation of these policies, in conjunction with compliance with existing regulatory programs, ensures that water quality impacts related to the Project are less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**11. LAND USE & PLANNING.** Would the project:

**a. Physically divide an established community?**

Discussion of Effects: The Project site is in an area that is developed with urban land uses. The Project will be of similar design and size to surrounding development. The Project will become a part of the larger mixed-use community. Therefore, the Project will not result in any new or substantially different land use and planning impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?**

Discussion of Effects: The subject site was previously analyzed by the Certified TOP EIR residential/commercial mixed-use land uses. Implementation of Project will not create greater impacts than were identified in the Certified TOP EIR. The proposed Project does not interfere with any policies for environmental protection. As such, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**12. MINERAL RESOURCES.** Would the project:

**a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?**

Discussion of Effects: The Project site is located within a mostly developed area surrounded by urban land uses. There are no known mineral resources in the area; therefore, the project will not result in any new or substantially different mineral resources impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?**

Discussion of Effects: There are no known mineral resources in the area. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**13. NOISE.** Would the project result in:

**a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR for residential/commercial mixed-use land uses. The Project will not expose people to or generate noise levels in excess of standards as established in The Ontario Plan FEIR (Section 5.12); therefore, the project will not result in any new or substantially different noise impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Generation of excessive groundborne vibration or groundborne noise levels?**

Discussion of Effects: Implementation of the Project will not create greater impacts than were identified in the Certified TOP EIR. The uses associated with this proposed Project are required to comply with the environmental standards contained in the City of Ontario Development Code and as such, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. For a project located within the vicinity of a private airstrip or the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?**

Discussion of Effects: The Project was reviewed and found to be located within the Airport Influence Area of Ontario International Airport ("ONT") and was evaluated and found to be consistent with the policies and criteria of the Airport Land Use Compatibility Plan ("ALUCP") for ONT. According to the Safety Element, the project is located outside of the 65 CNEL noise contour; therefore, the project will not result in any new or substantially different noise impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary. or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**14. POPULATION & HOUSING.** Would the project:

**a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?**

Discussion of Effects: The Project site was previously analyzed by the Certified TOP EIR for residential/commercial mixed-use land uses and is consistent with General Plan land use designations and would not induce significant population growth. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?**

Discussion of Effects: The Project site does not contain existing housing. Implementation of the Project will result in the addition of 50 residential dwelling units.

Mitigation: No additional mitigation required. No changes or additions to the Certified TOP EIR analyses are necessary.

**15. PUBLIC SERVICES.** Would the project:

**a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:**

**i. Fire protection?**

Discussion of Effects: The Project site is in a developed area currently served by the Ontario Fire Department. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**ii. Police protection?**

Discussion of Effects: The Project site is in a developed area, currently served by the Ontario Police Department. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iii. Schools?**

Discussion of Effects: Upon development, the Project proponent will be required to pay school fees as prescribed by state law prior to the issuance of building permits. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**iv. Parks?**

Discussion of Effects: The Project site is in a developed area, currently served by the City of Ontario. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**v. Other public facilities?**

Discussion of Effects: The Project site is in a developed area, currently served by the City of Ontario. The Project will not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**16. RECREATION.** Would the project:

**a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?**

Discussion of Effects: This Project is not proposing a significant number of new housing units that would result in the substantial physical deterioration of nearby existing parks. Implementation of the Project would result in the construction of 12,356 square feet of private recreational amenities on-site to include a pool, pool house and children's play area as required by the PUD for the development of 50 residential units. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?**

Discussion of Effects: This Project is not proposing a significant number of new housing units or large employment generator that would require the construction of neighborhood parks or other recreational facilities. Furthermore, implementation of the Project includes construction of a recreational area and swimming pool for private use of residents. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**17. TRANSPORTATION.** Would the project:

**a. Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?**

Discussion of Effects: The Project is in an area that is mostly developed with all street improvements existing. The number of vehicle trips per day is not expected to be increased significantly. Therefore, the Project will not create a substantial increase in the number of vehicle trips, traffic volume or congestion at intersections. Consequently, the Project will not result in any new or substantially different transportation/traffic impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?**

Discussion of Effects: CEQA Guidelines Section 15064.3 subdivision (b) has been included in the 2018 CEQA Guidelines as part of the implementation of SB 743 which requires local jurisdictions to use Vehicle Miles Travelled (VMT) instead of Level of Service (LOS) methodologies for the purpose of determining the significance of traffic impacts under CEQA. Also, as part of the implementation of SB 743 local jurisdictions are required to develop and implement thresholds of significance criteria and methodologies for evaluating VMT. The City of Ontario has adopted and established a VMT analysis threshold or analysis methodology based on our Policy Plan (General Plan) baseline. However, the Project was submitted prior to the adoption of the threshold and therefore not subject to the adopted thresholds. Subsequently, TOP EIR analyzed VMT, as part of the GHG analysis. The Ontario Plan (TOP) is consistent with the RTP/SCS for the Southern California region. The SBTAM model has incorporated TOP buildout which was then incorporated into the SCAG model in developing the RTP/SCS for the region. The thresholds used in these models can be found in the tool created for SBCTA that analyzes the various threshold options. TOP established VMT thresholds as such this option has already been found to be consistent with the RTP/SCS and these land use assumptions have been incorporated into the SBTAM and SCAG's regional models. The screening tool created for use in San Bernardino County can be utilized for locations within Ontario where additional analysis is not required, and the City thresholds be used for Projects to determine if additional analysis is required. If mitigation measures are included for the Project and the VMT brought down below the established threshold (City average), then the Project can be

determined to have less than a significant impact on transportation (in terms of CEQA).Therefore, impacts with respect to CEQA Guidelines Section 15064.3(b) are less than significant.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?**

Discussion of Effects: The Project is in an area that is mostly developed, and street improvements are complete. The Project will not create a substantial increase in hazards due to a design feature. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Result in inadequate emergency access?**

Discussion of Effects: Development of the Project will be designed to provide access for all emergency vehicles and will therefore not create an inadequate emergency access. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**e. Result in inadequate parking capacity?**

Discussion of Effects: The Project proposes to reduce the required parking standards that are established by the Emporia Family Housing PUD. The Project is proposing an average of 1.88 parking spaces per dwelling unit for a total of 94 parking spaces. On November 29, 2018, the California Department of Housing and Community Development ("HCD") released the guidelines for the Streamlined Ministerial Approval Process created by Senate Bill No. 35 (SB 35 Guidelines). SB 35 provides a streamline ministerial approval process for eligible affordable housing projects. SB 35 allows for local jurisdiction to reduce parking requirements for eligible projects to a maximum of one space per dwelling unit or waive all parking requirements for Project sites located within ½ mile of public transit. Located within the ½ mile of Project site is OmniTrans Bus Route 61 on Holt Boulevard. Therefore, the Project will not create an inadequate parking capacity. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**18. TRIBAL CULTURAL RESOURCES.** Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

**a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?**

**b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.**

Discussion of Effects: The Project site has been highly disturbed by residential and commercial development since the early 1890s. Surrounding properties and area are highly urbanized. It is highly unlikely that tribal resources would be discovered at the Project site; therefore, it is concluded that the proposed Project will not impact Tribal Cultural Resources or Native America artifacts relating to TCRs and as such, no mitigation measures are recommended.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**19. UTILITIES AND SERVICE SYSTEMS**. Would the project:

**a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?**

Discussion of Effects: The Project is served by the City of Ontario sewer system, which has waste treated by the Inland Empire Utilities Agency at the RP-1 or RP-5 treatment plant. The Project is required to meet the requirements of the Ontario Engineering Department regarding wastewater. Therefore, the Project will not result in any new or substantially different utilities and service systems impacts than were previously addressed in TOP EIR, and no changes or additions to TOP EIR analyses are necessary. As discussed in the energy section above, the Project will have no anticipated impacts with regards to electric power and natural gas. In addition, the Project will not have an impact on telecommunications facilities.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years? In making this determination, the City shall consider whether the project is subject to the water supply assessment requirements of Water Code Section 10910, et seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221).**

Discussion of Effects: The Project site is served by the City of Ontario water system. There is currently sufficient water supply available to the City of Ontario to serve this Project as per the findings of the Certified TOP EIR. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?**

Discussion of Effects: The Project site is served by the City of Ontario water system. There is currently sufficient water supply available to the City of Ontario to serve this Project as per the findings of Certified TOP EIR. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?**

Discussion of Effects: City of Ontario serves the Project site. Currently, the City of Ontario contracts with a waste disposal company that transports trash to a landfill with sufficient capacity to handle the City's solid waste disposal needs. No impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to analyses are necessary.

**e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?**

Discussion of Effects: This Project complies with federal, state, and local statues and regulations regarding solid waste. Therefore, no impacts are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**20. WILDFIRE.** If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

**a. Substantially impair an adopted emergency response plan or emergency evacuation plan?**

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?**

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?**

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?**

Discussion of Effects: The Project site is not located in or near a state responsibility area nor is it located in or near lands classified as very high fire hazard severity zones. Therefore, no impacts are anticipated.

Mitigation: No new mitigation measures required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**21. MANDATORY FINDINGS OF SIGNIFICANCE.**

**a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?**

Discussion of Effects: The proposed Project does not have the potential to reduce wildlife habitat and threaten a wildlife species; therefore, no environmental impacts resulting from the Project are anticipated.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**b. Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?**

Discussion of Effects: The Project does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**c. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)**

Discussion of Effects: The Project does not have impacts that are cumulatively considerable.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

**d. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?**

Discussion of Effects: The Project does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Mitigation: No additional mitigation required. The Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP EIR. No changes or additions to the Certified TOP EIR analyses are necessary.

## *EARLIER ANALYSES*

*(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D))***:**

1) Earlier Analyses Used. Identify earlier analyses used and state where they are available for review.

   a) The Ontario Plan Final EIR

   b) The Ontario Plan (TOP)

   c) City of Ontario Official Zoning Map

   d) City of Ontario Development Code

   e) Ontario International Airport Land Use Compatibility Plan

   f) Ontario International Airport Land Use Compatibility Plan Negative Declaration (SCH 2011011081)

All documents listed above are on file with the City of Ontario Planning Department, 303 East “B” Street, Ontario, California 91764, (909) 395-2036.

2) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of, and adequately analyzed in, an earlier document pursuant to applicable legal standards.

## *MITIGATION MEASURES*

*(For effects that are "Less than Significant with Mitigation Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.)*

The Mitigation Measures contained in the Certified TOP EIR adequately mitigate the impacts of the proposed Project. These mitigation measures are contained in the attached Mitigation Monitoring Program.

No additional mitigation beyond that previously imposed is required.

# *Mitigation Monitoring Program for The Ontario Plan Environmental Impact Report*

## *1. Introduction*

### *1.1 PURPOSE OF MITIGATION MONITORING PROGRAM*

This Mitigation Monitoring Program has been developed to provide a vehicle by which to monitor mitigation measures and conditions of approval outlined in The Ontario Plan Environmental Impact Report (EIR), State Clearinghouse No. 2008101140. The Mitigation Monitoring Program has been prepared in conformance with Section 21081.6 of the Public Resources Code and City of Ontario Monitoring Requirements. Section 21081.6 states:

(a) When making the findings required by paragraph (1) of subdivision subsection (a) of Section 21081 or when adopting a mitigated negative declaration pursuant to paragraph (2) of subdivision (c) of Section 21080, the following requirements shall apply:

(1) The public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation. For those changes which have been required or incorporated into the project at the request of a responsible agency or a public agency having jurisdiction by law over natural resources affected by the project, that agency shall, if so requested by the lead agency or a responsible agency, prepare and submit a proposed reporting or monitoring program.

(2) The lead agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which its decision is based.

(b) A public agency shall provide that measures to mitigate or avoid significant effects on the environment are fully enforceable through permit conditions, agreements, or other measures. Conditions of project approval may be set forth in referenced documents which address required mitigation measures or, in the case of the adoption of a plan, policy, regulation, or other public project, by incorporating the mitigation measures into the plan, policy, regulation, or project design.

(c) Prior to the close of the public review period for a draft environmental impact report or mitigated negative declaration, a responsible agency, or a public agency having jurisdiction over natural resources affected by the project, shall either submit to the lead agency complete and detailed performance objectives for mitigation measures which would address the significant effects on the environment identified by the responsible agency or agency having jurisdiction over natural resources affected by the project, or refer the lead agency to appropriate, readily available guidelines or reference documents. Any mitigation measures submitted to a lead agency by a responsible agency or an agency having jurisdiction over natural resources affected by the project shall be limited to measures which mitigate impacts to resources which are subject to the statutory authority of, and definitions applicable to, that agency. Compliance or noncompliance by a responsible agency or agency having jurisdiction over natural resources affected by a project with that requirement shall not limit the authority of the responsible agency or agency having jurisdiction over natural resources affected by a project, or the authority of the lead agency, to approve, condition, or deny projects as provided by this division or any other provision of law.

### *1.2 PROJECT SUMMARY*

The proposed project is the preparation of The Ontario Plan, which consists of a Vision, Governance Manual, Policy Plan, City Council Priorities, Implementation Plans, and Tracking and

Feedback. The Ontario Plan integrates components of city governance documents into a single guidance system that shapes the community 20 years or more into the future.

(a) The Ontario **Vision** describes the future community of Ontario. Its basic purpose is to improve the quality of life for the people of Ontario. It is the rationale and motivation for everything the City does.

(b) The **Governance Manual** describes the foundation for conducting the public's business on behalf of the present and future people of Ontario. It explains how The Ontario Plan is a tool for decision-making and communication.

(c) **City Council Priorities** define the short-term direction in City actions and initiatives. They are the primary means for exercising leadership in carrying out The Plan and realizing the Vision.

(d) The **Policy Plan** connects intent with action through the broad range of Goals and Policies that would guide the long-term growth and development required for the City to achieve its Vision. It also satisfies the California Government Code requirement for a general plan. Figure 3-6, *Proposed Land Use Plan,* shows the proposed General Plan land use designations that guide and regulate land use patterns, distributions, densities and intensities in the City of Ontario, including residential employment, retail, recreation, and public uses.

(e) **Implementation** consists of actions taken to carry out Plan policies. This includes initiatives by the City and decisions on public and private development projects.

(f) **Tracking and Feedback** allows the City to learn from experience and redirect efforts.

Pursuant to CEQA Guidelines Section 15064(d), the EIR considers the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by The Ontario Plan. Consequently, the EIR focuses on impacts from changes to land use associated with buildout of the Proposed Land Use Plan, within the Policy Plan, and impacts from the resultant population and employment growth in the City. The Ontario Plan Proposed Land Use Plan for the ultimate development of the City is not linked to a timeline. However, for the purpose of this environmental analysis, buildout of the Proposed Land Use Plan is forecast for the year 2035.

### *1.3 PROJECT LOCATION*

The City of Ontario is in the southwestern corner of San Bernardino County and is surrounded by the Cities of Chino and Montclair, and unincorporated areas of San Bernardino County to the west; the Cities of Upland and Rancho Cucamonga to the north; the City of Fontana and unincorporated land in San Bernardino County to the east; and unincorporated Riverside County land to the south. The City is in the central part of the Upper Santa Ana River Valley. This portion of the valley is bounded by the San Gabriel Mountains to the north; the Chino Hills, Puente Hills, and San Jose Hills to the west; the Santa Ana River to the south; and Lytle Creek Wash on the east.

The City comprises approximately 50 square miles (31,958 acres), which includes the 8,200-acre New Model Colony (NMC) in the southern portion of the City (formerly the City's Sphere of Influence). The northern urbanized portion of the City is known as the Original Model Colony (OMC). The City is generally bounded by Benson Avenue and Euclid Avenue on the west; Interstate 10 (I-10), 8th Street, and 4th Street on the north; Etiwanda Avenue and Hamner Avenue on the east; and Merrill Avenue and the San Bernardino County/Riverside County boundary on the south. Regional circulation to and through the City is provided by I-10 and State Route 60 (SR-60) east–west, and by I-15 and SR-83 (Euclid Avenue) north–south.

## *1.4 ENVIRONMENTAL IMPACTS*

The environmental document for this project is a "program EIR" as defined by State CEQA Guidelines (Section 15161, California Code of Regulations, Title 14, Division 6, Chapter 3). As provided in Section 15168 of the State CEQA Guidelines, a Program EIR may be prepared on a series of actions that may be characterized as one large project that are related either 1) geographically; 2) as logical parts of a chain of contemplated events; 3) in connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program; or 4) as individual activities carried out under the same authorizing statutory or regulatory authority and have generally similar environmental effects that can be mitigated in similar ways.

Although the legally required contents of a Program EIR are the same as those of a Project EIR, Program EIRs are typically more conceptual and may contain a more general discussion of impacts, alternatives, and mitigation measures than a Project EIR. Once a Program EIR has been prepared, subsequent activities within the program must be evaluated to determine whether an additional CEQA document needs to be prepared. However, if the Program EIR addresses the program's effects as specifically and comprehensively as possible, many subsequent activities could be found to be within the Program EIR scope and additional environmental documents may not be required (Guidelines Section 15168[c]). When a Program EIR is relied on for a subsequent activity, the lead agency must incorporate feasible mitigation measures and alternatives developed in the Program EIR into the subsequent activities (Guidelines Section 15168[c][1]). If a later activity would have effects that were not examined in the Program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration. Pursuant to Sections 15126.2 and 15126.4 of the State CEQA Guidelines, the EIR should identify any potentially significant adverse impacts and recommend mitigation that would reduce or eliminate these impacts to levels of insignificance.

### *1.4.1 Impacts Considered Less Than Significant*

Ten environmental categories are identified as having less than significant impacts that do not require mitigation. These categories are:

- Aesthetics
- Biological Resources
- Geology/Soils
- Hazards & Hazardous Materials
- Hydrology/Water Quality
- Land Use & Planning
- Mineral Resources
- Population and Housing
- Public Services
- Recreation

### *1.4.2 Potentially Significant Adverse Impacts That Can Be Mitigated, Avoided, or Substantially Lessened*

The following have been identified as potentially resulting in significant adverse impacts that can be mitigated, avoided, or substantially lessened:

- Cultural Resources: Mitigation Measures 5-2 through 5-4 would reduce archeological and prehistoric cultural resource impacts to less than significant.

- Noise: Mitigation Measure 12-3 would ensure that any new vibration-sensitive structures near the Union Pacific Railroad or Southern California Regional Rail Authority right-of-way would be constructed so that train-related vibration would not be perceptible and operational vibration impacts would be less than significant.

- Utilities and Service Systems: Mitigation Measures 17-1 through 17-4 would reduce impacts on water supply and demand from buildout of The Ontario Plan to less than significant.

### *1.4.3 Unavoidable Significant Adverse Impacts*

There are six environmental categories considered to have impacts that would be significant and unavoidable and would not be lessened through mitigation.

**Agricultural Resources**

Buildout of The Ontario Plan would convert 3,269.3 acres of California Resource Agency designated Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to residential, commercial, mixed-use, and industrial land uses. Consequently, impacts to Farmland would remain significant and unavoidable.

There are a number of Williamson Act contracts within the City that have yet to expire. Buildout of The Ontario Plan would most likely require the cancellation or nonrenewal of these contracts. The current use of these contracts would slow the rate of conversion from agricultural to nonagricultural land, but it would not impede the conversion. Since there are some Williamson Act contracts still active in the New Model Colony, implementation of the proposed land use plan for The Ontario Plan would conflict with these contracts and cause a significant impact. Consequently, impacts to Williamson Act contracts would remain significant and unavoidable.

Development of the City in accordance with The Ontario Plan would increase the amount of nonagricultural land uses. When nonagricultural land uses are placed near agricultural uses, the odors, noises, and other hazards related to agriculture conflict with the activities and the quality of life of the people living and working in the surrounding areas. Consequently, conversion of agricultural uses in the city may cause farms and agricultural land uses outside the City to be converted to nonagricultural uses because of the nuisances related to agriculture and impacts would remain significant and unavoidable.

**Air Quality**

The project would not be consistent with the Air Quality Management Plan (AQMP) because air pollutant emissions associated with buildout of the City of Ontario would cumulatively contribute to the nonattainment designations in the South Coast Air Basin (SoCAB). Furthermore, buildout of the Proposed Land Use Plan would exceed current estimates of population, employment, and vehicle miles traveled for Ontario and therefore these emissions are not included in the current regional emissions inventory for the SoCAB. As both criteria must be met in order for a project to be considered consistent with the AQMP, the project would be considered inconsistent with the AQMP. Consequently, this impact would remain significant and unavoidable.

Construction activities associated with buildout of The Ontario Plan would generate short-term emissions that exceed the South Coast Air Quality Management District's (SCAQMD) regional significance thresholds; cumulatively contribute to the SoCAB's nonattainment designations for ozone (O3), coarse inhalable particulate matter (PM10), and fine inhalable particulate matter (PM2.5); and potentially elevate concentrations of air pollutants at sensitive receptors. Mitigation Measure 3-1 would reduce The Ontario Plan's short-term construction-related volatile organic compounds (VOC), carbon monoxide (CO), oxides of nitrogen (NOx), PM10, and PM2.5 emissions but they would not be reduced to levels below the SCAQMD's regional thresholds and they would not reduce these impacts to less than significant. Consequently, construction air pollutant emissions generated by buildout of The Ontario Plan would remain significant and unavoidable.

Buildout of The Ontario Plan would generate long-term emissions that would exceed SCAQMD'S regional significance thresholds and cumulatively contribute to the SoCAB nonattainment designations for O3, PM10, and PM2.5. Mitigation Measure 3-2 would reduce long-term operational emissions of VOC, CO, NOx, PM10, and PM2.5 related to the buildout of The Ontario Plan but they would not reduce these emissions to levels below the SCAQMD's regional significance thresholds and impacts would not be less than significant. Consequently, operational impacts from buildout of The Ontario Plan would remain significant and unavoidable.

Approval of residential and other sensitive land uses within 500 feet of Interstate-10, Interstate-15, or State Route-60 would result in exposure of persons to substantial concentrations of diesel particulate matter. Mitigation Measure 3-3 would reduce impacts related to the exposure of sensitive receptors (residential and other sensitive land uses) to diesel particulate matter because of their placement near freeways within the City. However, it would not reduce this impact to be less than significant.

Conversion of agricultural land to nonagricultural uses would temporarily expose residents to objectionable odors and impacts would remain significant and unavoidable.

**Cultural Resources**

Although protective regulations are in place and preservation policies are included in The Ontario Plan, implementation of the Proposed Land Use Plan, especially within growth focus areas, has the potential to impact Tier III historic resources. Mitigation Measure 5-1 would require a historical evaluation for properties within historic resources in the Focus Areas under the City's ordinance. However, the ordinance does not provide a high level of protection for Tier III resources. As a result, demolition of historical resources categorized under the Ordinance as Tier III could potentially be impacted with implementation of the Proposed Land Use Plan. Consequently, Tier III historic resource impacts would remain significant and unavoidable.

**Global Climate Change**

Buildout of the City of Ontario would generate greenhouse gas emissions that would significantly contribute to global climate change impacts in California. Greenhouse gas (GHG) emissions generated in the City would significantly contribute to climate change impacts in California as a result of the growth in population and employment in the City and scale of development activity associated with buildout of the Proposed Land Use Plan. Mitigation Measures 6-1 through 6-6 would act to reduce the contributions of The Ontario Plan to global climate change but they would not reduce the impacts to less than significant.

**Noise**

Buildout of the Proposed Land Use Plan would result in an increase in traffic on local roadways in the City of Ontario, which would substantially increase noise levels. Consequently, impacts would remain significant and unavoidable.

Noise-sensitive uses could be exposed to elevated noise levels from transportation sources. Any siting of new sensitive land uses within a noise environment that exceeds the normally acceptable land use compatibility criterion would result in a potentially significant impact and would require a separate noise study through the development review process to determine the level of impacts and required mitigation. Mitigation Measure 12-1 would decrease the exposure of sensitive receptors to excessive noise levels within 65 dBA CNEL contours, whether near Los Angeles/Ontario International Airport (LAONT) or other noise-producing areas such as freeways and railroads, but it would not reduce these impacts to less than significant.

Construction activities associated with buildout of the individual land uses associated with the Proposed Land Use Plan would expose sensitive uses to strong levels of groundborne vibration. Mitigation Measure 12-2 would reduce the impacts caused by construction-related vibrations on sensitive receptors but it would not reduce the impact to less than significant.

Impact 5.12-5. Significant. Construction activities associated with buildout of the individual land uses associated with the Proposed Land Use Plan would substantially elevate noise levels in the vicinity of sensitive land uses. Mitigation Measure 12-4 calls for the use of noise-reducing techniques during construction projects that would impact nearby sensitive receptors, such as the use of temporary sound walls and reduced unnecessary truck idling. However, these impacts would not be reduced to levels considered less than significant.

Noise-sensitive land uses within the 65 dBA CNEL contour of the Los Angeles/Ontario International Airport would be exposed to substantial levels of airport-related noise. Consequently, impacts would remain significant and unavoidable.

**Transportation and Traffic**

The increased development and population growth associated with the buildout of the Proposed Land Use Plan would cause deficient levels of service at area intersections without implementation of the recommended lane geometry improvements. In addition, buildout of the Proposed Land Use Plan would also cumulatively contribute to the cumulatively significant freeway level of service impact that is already projected to occur in the future. Mitigation Measure 16-1 would require the buildout of The Ontario Plan to be consistent with the traffic study prepared by Kimley-Horn and Associates. This traffic study indicates the appropriate lane geometry for area intersections. This would allow for intersections to have LOS values of E or above, but it would not improve the cumulative freeway LOS standards to appropriate levels. The City has no jurisdiction over Caltrans projects, such as freeway improvements. Therefore, the impacts related to cumulative LOS deficiencies on freeways would not be reduced to levels considered less than significant.

# *2. Mitigation Monitoring Process*

## *2.1 MITIGATION MONITORING PROGRAM ORGANIZATION*

CEQA requires that a reporting or monitoring program be adopted for the conditions of project approval that are necessary to mitigate or avoid significant effects on the environment (Public Resources Code 21081.6). The mitigation monitoring and reporting program is designed to ensure compliance with adopted mitigation measures during project implementation. For each mitigation measure recommended in the Environmental Impact Report, specifications are made herein that identify the action required and the monitoring that must occur. In addition, a responsible agency is identified for verifying compliance with individual conditions of approval contained in the Mitigation Monitoring Program (MMP). In order to effectively track and document the status of mitigation measures, a mitigation matrix has been prepared and includes:

- Responsibility for implementation
- Timing
- Responsibility for monitoring
- Monitor

Mitigation measure timing of verification has been apportioned into several specific timing increments. Of these, the most common are:

- Prior to project approval
- Prior to issuance of grading permit(s)
- During construction

Information pertaining to compliance with mitigation measures or any necessary modifications or refinements will be documented in the comments portion of the matrix.

## *2.2 MITIGATION MONITORING PROCEEDURES*

The City of Ontario Planning Department is the designated lead agency for the Mitigation Monitoring and Reporting Program. The City of Ontario includes the Mitigation Measures within the Special Conditions of Approval. The City is responsible for review of all monitoring reports, enforcement actions, and document disposition. The Planning Department shall designate a Project Mitigation Monitor for the proposed project.

### *2.2.1 In-Field Monitoring*

The Responsible Monitoring Party shall exercise caution and professional practices at all times when monitoring construction. Protective wear (hard hats, glasses, etc.) shall be worn at all times in construction areas. Injuries shall be reported immediately to the Project Mitigation Monitor.

### *2.2.2 Coordination with Contractors*

The construction manager/superintendent is responsible for coordination of contractors and for contractor completion of required measures in accordance with the provisions of this program.

### *2.2.3 Recognized Experts*

The use of recognized experts as a component of the monitoring team is required to ensure compliance with scientific and engineering mitigation measures. While the recognized experts assess compliance with required mitigation measures, consultation with the City of Ontario planning staff shall take place in the event of a dispute.

### *2.2.4 Enforcement*

Agencies may enforce conditions of approval through their existing police power, using stop-work orders, fines, infraction citations, loss of entitlements, refusal to issue building permits or certificates of use and occupancy or, in some cases, notice of violation for tax purposes. Criminal misdemeanor sanctions could be available where the agency has adopted an ordinance requiring compliance with the monitoring program, similar to the provision in many zoning ordinances that affirm the enforcement power to bring suit against violators of the ordinances.

# *3. Mitigation Monitoring Requirements*

### *3.1 CATEGORIZED MITIGATION MEASURES/MATRIX*

Project-specific mitigation measures have been categorized in matrix format, as shown in Table 3-1. The matrix identifies the environmental factor, specific mitigation measures, schedule, and responsible monitor. The mitigation matrix will serve as the basis for scheduling the implementation of, and compliance with, all mitigation measures.

### *3.2 IN-FIELD MONITORING*

Project monitors and technical subconsultants shall exercise caution and professional practices at all times when monitoring implementation of mitigation measures. Protective wear (e.g., hard hat, glasses) shall be worn at all times in construction areas. Injuries shall be immediately reported to the mitigation monitoring committee.

### *3.3 DATABASE MANAGEMENT*

All mitigation monitoring reports, letters, and memos shall be prepared using Microsoft Word software on IBM-compatible PCs and processed according to the City's Environmental Compliance Program.

### *3.4 COORDINATION WITH CONTRACTORS*

The construction manager is responsible for coordination of contractors and for contractor completion of required mitigation measures.

### *3.5 LONG-TERM MONITORING*

Long-term monitoring related to several mitigation measures will be required, including fire safety inspections. Post-construction fire inspections are conducted on a routine basis by the Ontario Fire Department.

| ***Mitigation Measure*** | ***Responsibility for Implementation*** | ***Timing*** | ***Responsibility for Monitoring*** | ***Monitor (Signature Required) (Date of Compliance)*** |
| **5.3 AIR QUALITY** | | | | |
| **3-1** The City of Ontario Building Department shall require that all new construction projects incorporate feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:<br>• Requiring fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:<br>o Requiring use of nontoxic soil stabilizers to reduce wind erosion.<br>o Applying water every four hours to active soil-disturbing activities.<br>o Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.<br>• Using construction equipment rated by the United States Environmental Protection Agency as having Tier 3 or higher exhaust emission limits.<br>• Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.<br>• Limiting nonessential idling of construction equipment to no more than five consecutive minutes.<br>• Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: | City of Ontario Building Department in coordination with the landowner/project applicant's construction contractor | During construction | City of Ontario Building and Department and Developer/Contractor | |

| **3-2** | The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks). | City of Ontario Planning/Engineering Department in coordination with the landowner/project applicant | Prior to individual project approvals | City of Ontario Planning Department | |
| **3-3** | The City of Ontario shall evaluate new development proposals within the City for potential incompatibilities with regard to the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Health Perspective* (April 2005). New development that is inconsistent with the recommended buffer distances shall only be approved if feasible mitigation measures, such as high efficiency Minimum Efficiency Reporting Value filters have been incorporated into the project design to protect future sensitive receptors from harmful concentrations of air pollutants as a result of proximity to existing air pollution sources. | City of Ontario Planning Department in coordination with the landowner/project applicant | Prior to individual project approvals | City of Ontario Planning Department | |
| **5.5 CULTURAL RESOURCES** | | | | | |
| **5-1** | Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals. | City of Ontario Planning Department | Prior to individual project approvals | City of Ontario Planning Department | |
| **5-2** | In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring | City of Ontario Planning Department in coordination with the Landowner/Project Applicant | Prior to individual project approvals | City of Ontario Planning Department | |

| ***Mitigation Measure*** | ***Responsibility for Implementation*** | ***Timing*** | ***Responsibility for Monitoring*** | ***Monitor (Signature Required) (Date of Compliance)*** |
|---|---|---|---|---|
| program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:<br>• Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.<br>• Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.<br>• Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers. | | | | |
| **5-3** Upon receipt of an application for a Specific Plan or a project that requires a General Plan amendment subject to CEQA and is within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a [tribal] culturally sensitive area, then a cultural resources assessment prepared by an archaeologist shall be required. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA | City of Ontario Planning Department | Prior to individual project approvals | City of Ontario Planning Department | |

|---|---|---|---|---|---|
| | document, the procedure described in Mitigation Measure 5-4 shall be followed. | | | | |
| **5-4** | Prior to the issuance of grading permits for a Specific Plan or project that requires a General Plan amendment for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction. | City of Ontario Planning Department in coordination with the Landowner/Project Applicant | Prior to issuance of grading permit(s) | City of Ontario Planning Department | |
| **5.6 Global Climate Change** | | | | | |
| **6-1** | The City of Ontario shall prepare a Climate Action Plan within 18 months after adopting The Ontario Plan. The goal of the Climate Action Plan shall be to reduce GHG emissions from all activities within the City boundaries to support the State's efforts under AB 32 and to mitigate the impact of climate change on the City, State, and world. Once completed, the City shall update The Ontario Plan and associated policies, as necessary, to be consistent with the Climate Action Plan and prepare a subsequent or supplemental Environmental Impact Report, if new significant impacts are identified. The Climate Action Plan shall include the following:<br>• **Emission Inventories**: The City shall establish GHG emissions inventories including emissions from all sectors within the City, using methods approved by, or | City of Ontario | Within 18 months of adopting The Ontario Plan | City of Ontario Planning Department/ Municipal Utilities Agency (MUA) | |

***Table 3-1***
***Mitigation Monitoring Requirements***

| *Mitigation Measure* | *Responsibility for Implementation* | *Timing* | *Responsibility for Monitoring* | *Monitor (Signature Required) (Date of Compliance)* |
|---|---|---|---|---|
| consistent with guidance from, the CARB; the City shall update inventories every 3 years or as determined by state standards to incorporate improved methods, better data, and more accurate tools and methods, and to assess progress. If the City is not on-schedule to achieve the GHG reduction targets, additional measured shall be implemented, as identified in the CAP.<br>o The City shall establish a baseline inventory of GHG emissions including municipal emissions, and emissions from all business sectors and the community.<br>o The City shall define a "business as usual" scenario of municipal, economic, and community activities, and prepare a projected inventory for 2020 based on that scenario.<br>• **Emission Targets**: The City will develop Plans to reduce or encourage reductions in GHG emissions from all sectors within the City:<br>o A Municipal Climate Action Plan which shall include measures to reduce GHG emissions from municipal activities by at least 30 percent by 2020 compared to the "business as usual" municipal emissions (including any reductions required by the California Air Resource Board under AB 32.<br>o A Business Climate Action Plan in collaboration with the business community, which shall include measures to reduce GHG emissions from business activities, and which shall seek to reduce emissions by at least 30 percent by 2020 compared to "business as usual" business emissions.<br>o A Community Climate Action Plan in collaboration with the stakeholders from the community at large, which shall include measures reduce GHG | | | | |

|---|---|---|---|---|---|
| | emissions from community activities, and which shall seek to reduce emissions by at least 30 percent by 2020 compared to "business as usual" community emissions. | | | | |
| **6-2** | The Climate Action Plan shall include specific measures to achieve the GHG emissions reduction targets identified in Mitigation Measure 6-1. The Climate Action Plan shall quantify the approximate greenhouse gas emissions reductions of each measure and measures shall be enforceable. Measures listed below, along with others, shall be considered during the development of the Climate Action Plan (CAP):<br>• Require all new or renovated municipal buildings to seek Silver or higher Leadership in Energy and Environmental Design (LEED) standard, or compliance with similar green building rating criteria.<br>• Require all municipal fleet purchases to be fuel efficient vehicles for their intended use based on the fuel type, design, size, and cost efficiency.<br>• Require that new development projects in Ontario that require demolition prepare a demolition plan to reduce waste by recycling and/or salvaging a nonhazardous construction and demolition debris.<br>• Require that new developments design buildings to be energy efficient by siting buildings to take advantage of shade, prevailing winds, landscaping, and sun screening to reduce energy required for cooling.<br>• Require that cool roofs for non-residential development and cool pavement to be incorporated into the site/building design for new development where appropriate. | City of Ontario Planning Department | Within 18 months of adopting The Ontario Plan | City of Ontario Planning Department | |

***Table 3-1***

| ***Mitigation Measure*** | ***Responsibility for Implementation*** | ***Timing*** | ***Responsibility for Monitoring*** | ***Monitor (Signature Required) (Date of Compliance)*** |
| • Work cooperatively with all developers to incorporate conservation measures into project designs (such as those recommended by the California Urban Water Conservation Council).<br>• Continue to develop and implement drought contingency plans to assist citizens and businesses reduce water use during water shortages and emergencies.<br>• Revise the City Code to include a Water-Efficient Landscape Ordinance to encourage or, as appropriate, require the use of water-efficient landscaping consistent with AB 1881. | | | | |
| **17-2** The City shall include a policy in the Policy Plan that maximizes the use of recycled water as an irrigation (nonpotable) source for landscaping, parks, and other irrigation opportunities in all areas of the City and requires use of recycled water in dual-system office and industrial uses in selected urban areas of the City, where available and feasible. | City of Ontario Planning Department in coordination with City of Ontario MUA/Engineering Department | Ongoing | City of Ontario Planning/MUA/Engineering Department | |
| **17-3** The City shall include a policy in the Policy Plan that the City participate through the Chino Basin Water Master and the Inland Empire Utilities Agency in regional efforts to develop finding additional sources of water for groundwater recharge, such as capture of stormwater runoff, recycled water, or other sources to ensure that the Chino Basin stays in long-term hydraulic balance and sustainability and that adequate additional local water sources would be available to increase the flexibility of the City's water supply. | City of Ontario Planning Department in coordination with City of Ontario MUA/Engineering Department | Ongoing | City of Ontario Planning/MUA/Engineering Department | |

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PUD21-001, AN AMENDMENT TO THE EMPORIA FAMILY HOUSING PLANNED UNIT DEVELOPMENT (”PUD”), AMENDING CERTAIN PROVISIONS TO: [1] EXPAND THE PROJECT AREA FROM APPROXIMATELY 2.80-ACRES OF LAND TO 4.95 ACRES OF LAND; [2] ESTABLISH MINIMUM BUILDING SETBACKS FROM PALM AVENUE AND TRANSIT STREET RIGHTS-OF-WAY; [3] MODIFY MINIMUM PARKING REQUIREMENTS; [4] ALLOW ON-STREET LOADING; AND [5] UPDATE THE PLANTING PALETTE FOR A 3-BLOCK AREA LOCATED WITHIN LUA2-N (ARTS DISTRICT-NORTH) AND LUA-3 (HOLT BOULEVARD DISTRICT) OF THE MU-1 (DOWNTOWN MIXED USE) ZONING DISTRICT, AND MAKING FINDINGS IN SUPPORT THEREOF — APNS: 1049-051-04, 1049-054-02, 1049-054-03, 1049-054-04, 1049-054-06, 1049-059-06, AND 1049-059-07.

WHEREAS, The Related Companies of California, LLC. ("Applicant") has initiated a request for the approval of an amendment to the Emporia Family Housing Planned Unit Development, File No. PUD21-001, as described in the title of this Ordinance (hereinafter referred to as "Application" or "Project"); and

WHEREAS, in June 2017, the City Council adopted Ordinance No. 3075 approving the Emporia Family Housing Planned Unit Development (“PUD”), which governs land use and development within a two-block area within the downtown, bordered by Holt Boulevard on the north, Emporia Street on the south, Vine Avenue on the west, and Fern Avenue on the east; and

WHEREAS, the Project site land uses include a 75-unit multiple-family apartment complex, two historic commercial buildings, and vacant land; and

WHEREAS, the surrounding properties are located within LUA2-N (Arts District-North) and LUA-3 (Holt Boulevard District) of the MU-1 (Mixed Use Downtown) zoning district and land uses are characterized by a mixture of legal nonconforming residential uses, residential, light industrial, and commercial uses; and

WHEREAS, the PUD Amendment primarily applies to establishing development standards for a one-block area bordered Transit Street on the north, Emporia Street on the south, Fern Avenue on the west, and Palm Avenue on the east, and 2 lots located on the south side of Emporia Street located at 303 and 309 West Emporia Street; and

WHEREAS, the PUD Amendment will expand the project boundary area from approximately 2.80 acres of land to 4.95 acres of land, allow the adjoining section of Fern Avenue bound by Transit Street on the north and Emporia Street on the south, to be vacated, establish 5-foot minimum building setbacks from Palm Avenue and Transit Street rights-of-way, reduce minimum parking requirements for one-bedroom units from 1.75 spaces per dwelling unit to one space per dwelling unit, 2-bedroom units from 2

spaces per dwelling unit to 1.65 spaces per dwelling unit, and create a 3-bedroom parking requirement at a ratio of 2 spaces per dwelling unit, eliminate the covered parking requirement, allow on-street loading along Palm Avenue, and update the planting palette. Other minor revisions proposed are intended to clarify or update standards which reflect applicable Development Code standards and overall industry best practices; and

WHEREAS, on May 25, 2021, the Planning Commission conducted a public hearing and approved Resolution No. PC21-033, recommending the City Council approve a Resolution adopting an Addendum to the Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the City Council on January 27, 2010, in conjunction with File No. PGPA06-001. The Addendum finds that the proposed project introduces no new significant environmental impacts. Furthermore, all mitigation measures previously adopted with the Certified Environmental Impact Report are incorporated into the Project by reference; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on May 25, 2021, the Planning Commission of the City of Ontario conducted a hearing to consider the Initial Study/Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC21-034, recommending the City Council approve the Application; and

WHEREAS, on June 15, 2021, the City Council of the City of Ontario conducted a hearing to consider the Initial Study/Addendum and the Project, and concluded said hearing on that date; and

WHEREAS, as the first action on the Project, on June 15, 2021, the City Council approved a Resolution adopting an Initial Study/Addendum to a previous Certified EIR prepared pursuant to CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines, which indicated that all potential environmental impacts from the Project were less than significant or could be mitigated to a level of significance; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to Ontario Plan Environmental Impact Report, certified by the City of Ontario City Council on June 15, 2021, in conjunction with File No. PUD21-001.

(2) The Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts.

(4) The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the DAB; and

(5) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

(6) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the Certified EIR, and all mitigation measures previously adopted by the Certified EIR, are incorporated herein by this reference.

SECTION 2. ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP.

SECTION 4. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

(1) ***The proposed PUD, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The Project is consistent with Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. Section 1.1, The Ontario Plan Objectives of the PUD, describes the manner in which the PUD complies with the Policy Plan goals and policies.

(2) ***The proposed PUD, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The Ontario Plan Environmental Impact Report includes safeguards and impose certain mitigation measures to ensure that development within the PUD boundary area would not be detrimental to public interest, health, safety, or general welfare of the City.

(3) ***In the case of an application affecting specific property(ies), the proposed PUD, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The PUD area is situated in Ontario's downtown and is adjacent to residential and commercial land uses and development. The surrounding development supports the objective of the PUD to further commercial and residential mixed-use development. The Project will not affect the harmonious relationship with adjacent properties and land use.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including but not limited to parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** In preparing the proposed PUD Amendment, a thorough review and analysis of the proposed Project and the subject site's physical suitability for the Project was completed, including analysis of the project size, shape, intensity of development, building height, building setbacks, site access, site landscaping and drainage, fences and walls, vehicle circulation, pedestrian connections, availability of mass transit, necessary street dedication and easements, public right-of-way improvements, availability of utilities and other infrastructure needs, off-street parking and circulation, building orientation and streetscapes, architectural character, building materials and color, and site signage. Based upon this review and analysis, the subject site has been deemed physically suitable, including but not limited to parcel size, shape, access, and availability of utilities, for the proposed PUD Amendment and the proposed development.

(5) ***The proposed PUD is superior to that which could be obtained through the application of the Development Code.*** The PUD Amendment will (a) expand the Project area an additional 2.15 acres, from approximately 2.80-acres of land to 4.95-acres of land; (b) establish minimum building setbacks from Palm Avenue and Transit Street rights-of-way; (c) modify minimum parking requirements; (d) allow on-street loading, and (e) update the PUD's planting palette. These changes to the PUD will facilitate the

development of Emporia Family Housing – Phase 2, consisting of 50 affordable multiple-family dwellings, related parking facilities and private and common open space areas. Additionally, the PUD Amendment will allow for the construction of additional recreation amenities that are available to all residents within the Emporia Family Housing Project (Phases 1 and 2). The proposed PUD Amendment will allow for subsequent development that is superior to that which could be obtained through the application of the Development Code by itself.

SECTION 5. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described amendment to the Emporia Family Housing Planned Unit Development, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 6. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 8. ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 9. ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 10. ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this ____ day of _____ 2021.

# 1 – Introduction

This document has been prepared to establish development regulations for the Emporia Ontario Family Project site located in the City of Ontario. The overall project site is approximately 4.62 net acres. Emporia I is comprised of ~~project site is~~ approximately 2.81 net acres and Emporia II is approximately 2.15 net acres in size. The project site is ~~containing~~ contained ~~a~~ within a ~~two~~ three block area that is generally bounded by Holt Boulevard and Transit Street to the north, Emporia Street to the south, ~~Fern~~ Palm Avenue to the east and Vine Avenue to the west and includes 2 lots bound by Emporia Street and the railroad right-of-way. ~~.~~ Additionally, this site is bisected east/west by Transit Street and bisected north/south by Fern Avenue (see Exhibit 1-1: Project Location Map).

The project site is located within the Ontario Plan Downtown Mixed-Use District which requires the establishment of a Planned Unit Development (PUD) prior to development. The PUD fulfills the requirements of a Downtown Mixed-Use District Planned Unit Development ("PUD"), as set forth in Ontario Development Code Section 4.01.030 (Planned Unit Developments ("PUD"). Upon approval, this PUD will establish the land use and development standards for the project site. Unless otherwise defined herein, definitions and interpretations contained in the Development Code shall apply to this PUD.

City staff and private developers will rely upon this PUD to determine whether precise plans for development ("Development Plans") will adequately meet the City's land use and design objectives for this key part of Downtown Ontario. These objectives have been defined over the last 20+ years in the Redevelopment Plan for the Center City Redevelopment Project (1983) and The Ontario Plan (2010) and are summarized in the proceeding chapters.

**Exhibit 1-1: Project Location Map**

Not to Scale

Not to Scale

# 2 – Objectives

## 2.1 – The Ontario Plan Objectives

The Ontario Plan, which includes the City's General Plan, designates the project area as part of the Downtown Mixed-Use District. The Downtown Mixed Use District designation requires approval of an Area Plan or Planned Unit Development to develop the property. Additionally, the designation specifies a residential density range of 25 to 75 units per acre and a maximum floor area ratio (FAR) of 2.0 for office and retail uses.

The intent of this designation is to:

- Create "an intensive vertical and horizontal mixture of retail, office, and residential uses in a pedestrian friendly atmosphere;
- Ensure the historic character is enhanced; and
- Concentrate the most intensive uses along Euclid and Holt Avenues.

The Ontario Plan goals and policies furthered by this Planned Unit Development are as follows:

### 2.1.1 – Land Use Element Goals & Policies

- LU1 A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.
  - ❖ LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

### 2.1.2 – Community Design Element Goals & Policies

- CD1 A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.
  - ❖ CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing the diverse character of our existing viable neighborhoods.
  - ❖ CD1-2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.
- CD2 A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.
  - ❖ CD2-1 Quality Architecture. We encourage all development projects to convey visual interest and character through:
    - ➢ building volume, massing, and height to provide appropriate scale and proportion;
    - ➢ a true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and

- exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.

- CD2-5 Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right of way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.
- CD2-8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of visibility and accessibility, and use of lighting.

- CD3 Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.
  - CD3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics. (Link to Bicycle and Pedestrians Section of the Mobility Element and Policies M2-3 and M2-4)
- CD4 Historic buildings, streets, landscapes and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, that have been preserved and serve as a focal point for civic pride and identity.

## 2.1.3 – Housing Element Goals & Policies

- H2 Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.
  - H2-1 Corridor Housing. We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally and aesthetically suited to corridors.
  - H2-2 Historic Downtown. We foster a vibrant historic downtown through facilitating a wide range of housing types and affordability levels for households of all ages, housing preferences, and income levels.
  - H2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices.
  - H2-6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.
- H4 Increased opportunities for low and moderate income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities
  - H4-3 Rental Assistance. We support the provision of rental assistance for individuals and families earning extremely low, very low, and low income with funding from the state and federal government.

- H5 A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age or other status.
  - ❖ H5-2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation and other amenities.

### 2.1.4 – Community Economics Element Goals & Policies

- CE1 A complete community that provides for all incomes and stages of life
  - ❖ CE1-6 Diversity of Housing. We collaborate with residents, housing providers and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to support our workforce, attract business and foster a balanced community.

## 2.2 – Center City Redevelopment Plan Objectives

The Center City Redevelopment Plan was established to provide a framework and process to guide the development of projects within the study area of the Redevelopment Plan. The following objectives have been identified from the Redevelopment Plan as pertaining to the Planned Unit Development:

- Create a healthy and exciting urban variety, the ability to work, live, shop and play within a small area, combine daytime and nighttime use, and conserve energy and resources through mixed-use land development;
- Create an attractive and pleasant environment in the Project Area through the use of proper design, open space, and other amenities to enhance the aesthetic quality;
- Encourage and facilitate medium and high-density development, including, but not limited to, condominiums, townhouses, apartments and similar compatible uses.
- Maximize the housing opportunities of the residential areas; and
- Provide improvements necessary for the elimination of blight and to provide for the orderly development of the commercial industrial and residential areas included in the redevelopment project area.

## 2.3 – Related Emporia Project Objectives

This Planned Unit Development provides guidelines of development for the project area. The objectives below have been established to provide a general framework for establishing development standards to ensure proper development of the project area.

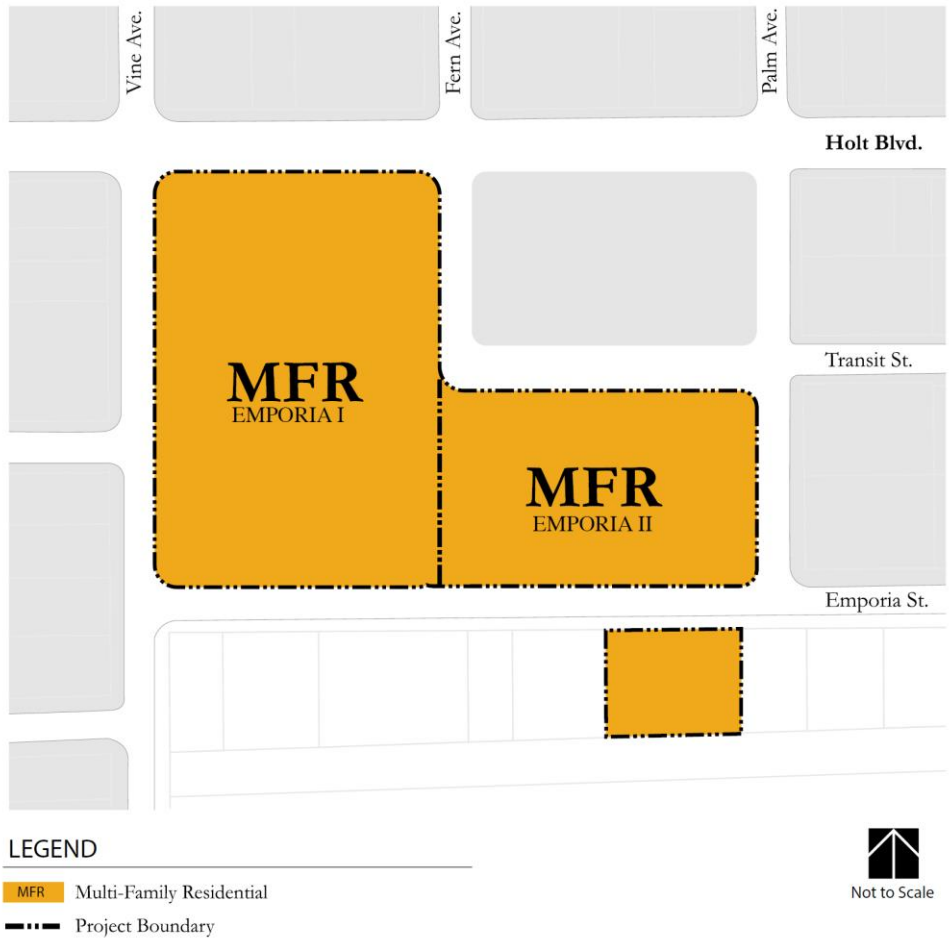
- Develop high quality, affordable rental housing;
- Establish appropriate relationships among new residential neighborhoods as well as with existing adjacent land use; and
- Provide new housing designed for families with children.

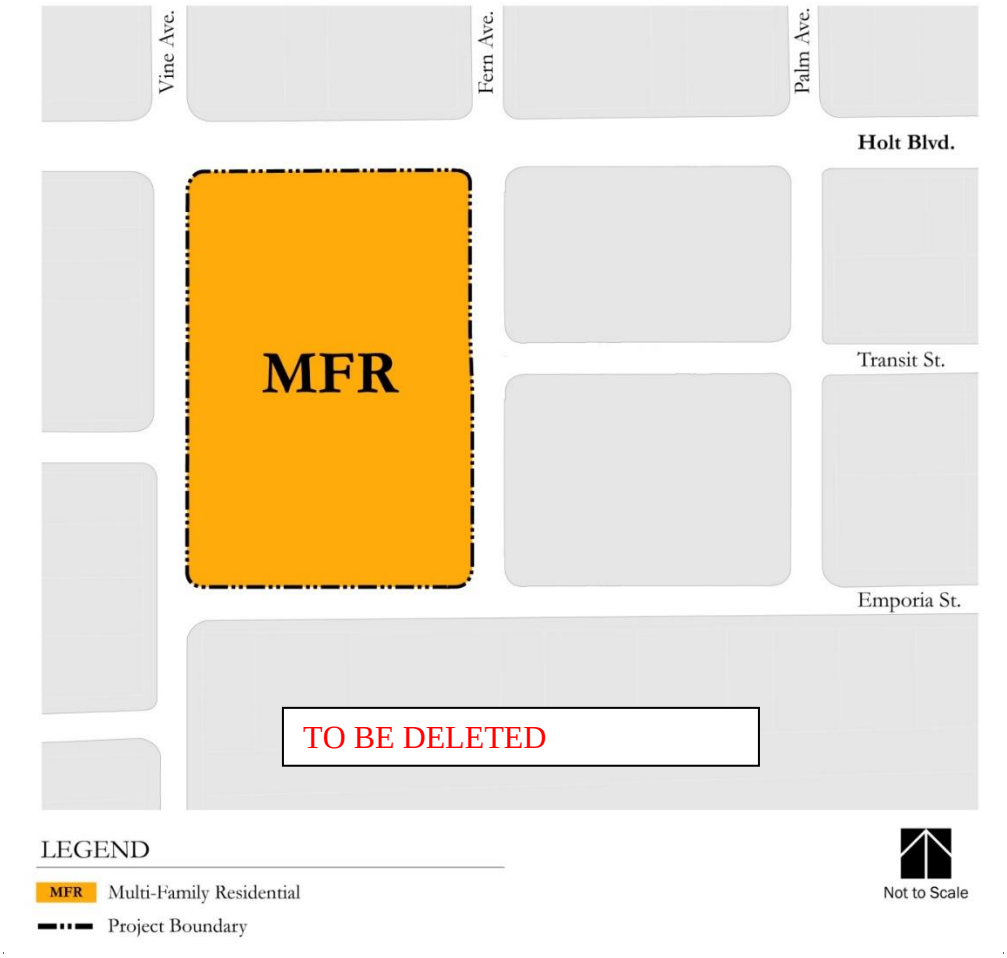
# 3 – Allowable Uses

The project site is located within the Downtown Mixed Use Area Policy Plan (General Plan) land use district, and the MU-1 (Downtown Mixed-Use) zoning district, which implements the Downtown Mixed-Use Area. The MU-1 zoning district is established to accommodate an intensive mixture of vertical and horizontal retail and office uses at a development intensity of up to 2.0 FAR, and residential uses at a density of 25 to 75 dwellings units per acre. Development projects within~~g~~ the MU-1 zoning district are intended to maintain a pedestrian friendly atmosphere, while at the same time enhancing the historic character of the area. The most intensive uses within this district are envisioned along Euclid Avenue and Holt Boulevard.

Consistent with the intent of the Downtown Mixed U~~u~~se Area and the MU-1 zoning district, the project site is designated for Multiple-Family Residential (MFR) land uses. Exhibit 3-1 (Land Use Plan), below, depicts the Planned Unit Development boundary and land use designation.

**Exhibit 3-1: Land Use Plan**





## 3.1 – Residential Use

The project site will be developed with high quality, attached housing units, with either two or three levels. The buildings will be a combination of podium-style stacked flat units, with parking beneath, ~~and~~ townhome style units, with first floor garage access, two and three story walk-ups with stacked flat units.

## 3.2 – Permitted Use Table/List

The permitted uses within the Related Emporia PUD include the following:

- Multiple-family (Affordable Low-Income) dwelling;
- Recreation facilities ancillary to multiple-family residential development projects, for use by residents and their guests, including but not limited to pool, spas, tennis courts, clubhouse or recreation building, playgrounds or tot lots, and other similar amenities appropriate to serve the project;
- Temporary Uses (As permitted within the residential districts of the City of Ontario Development Code subject to an Administrative Permit);

- Leasing/Administrative Office (for on-site property and facilities management only);
- Motor vehicle parking ancillary to a multiple-family residential development project; and
- Other land use compatible with multiple-family residential development projects, as determined appropriate by the Zoning Administrator.

Uses may be prohibited through rental contracts/agreements as provided by the project management, unless prohibited by Federal, State, or local laws.

# 4 – Development Regulations

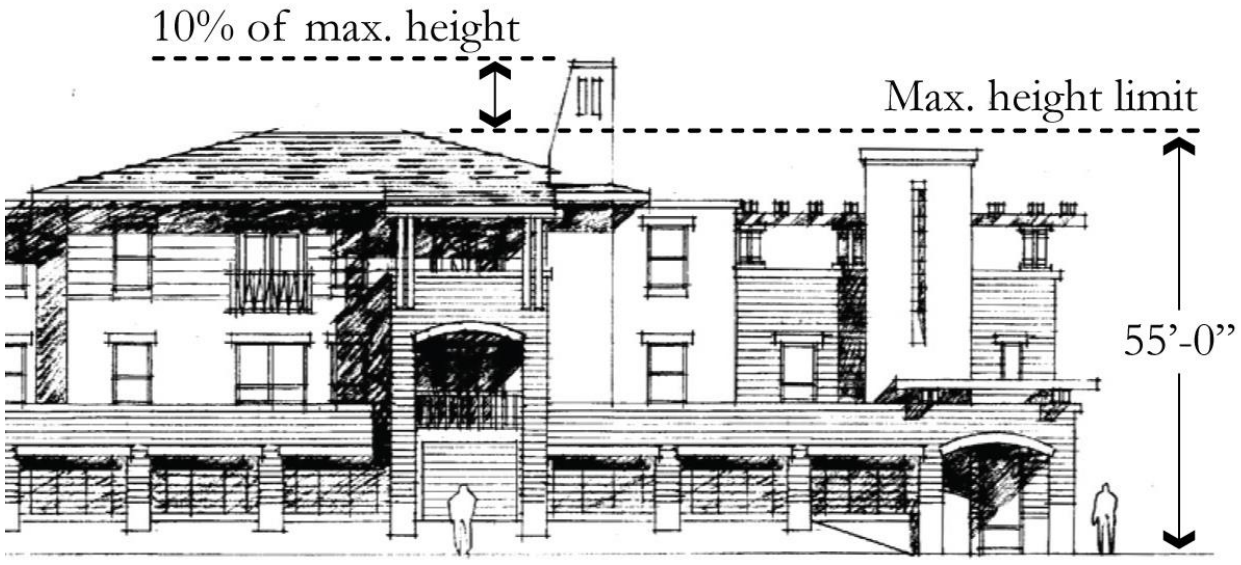
## 4.1 – Residential Density

The residential density shall range from 25.1 dwelling units per acre to a maximum of 75.0 dwelling units per acre.

## 4.2 – Building Height

No structure shall exceed 55 feet in height, except that the maximum height may be exceeded by roof mounted equipment, architectural projections, chimneys, elevator towers, parapet walls and any other roof top structures, by up to 10% of the allowed building height. No rooftop equipment shall be visible from anywhere on the project site, public streets, or adjacent properties, and shall be fully screened with appropriate architectural parapet walls or appropriate roof treatments. Roof-mounted equipment shall not exceed the height of the structures and appurtenances used to screen the equipment.

**Exhibit 4-1: Height Diagram**



# 4.3 – Setbacks

Building setbacks shall be as set forth in Table 4-1: (Minimum Building Setbacks), and shall comply with Exhibit 4-2 (Setback Diagram).

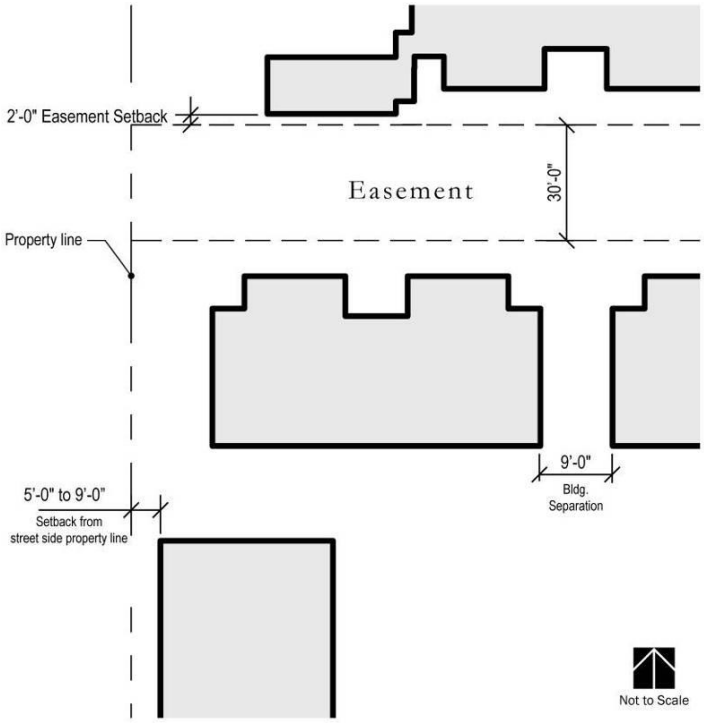
**Table 4-1: Minimum Building Setbacks**

| Setback | Distance |
|---|---|
| Street Setback | |
| Holt | 9 feet |
| Emporia | 5 feet |
| Vine | 5 feet |
| Fern | 5 feet |
| Palm | 5 feet |
| Transit | 5 feet |
| Easement Setback** | 2 feet |
| Building Separation | 9 feet |

** 30 foot wide storm drain easement located along vacated Transit Street

Certain types of features and equipment are allowed to encroach into the required setback areas in accordance with Table 4-2 (Encroachments into Setbacks) including but not limited to architectural projections, balconies, and underground utility structures such as electrical transformer vaults. Utility structures may encroach into the public right-of-way and/or public utility easement, subject to the approval of the City Engineer.

## Exhibit 4-2: Setback Diagram

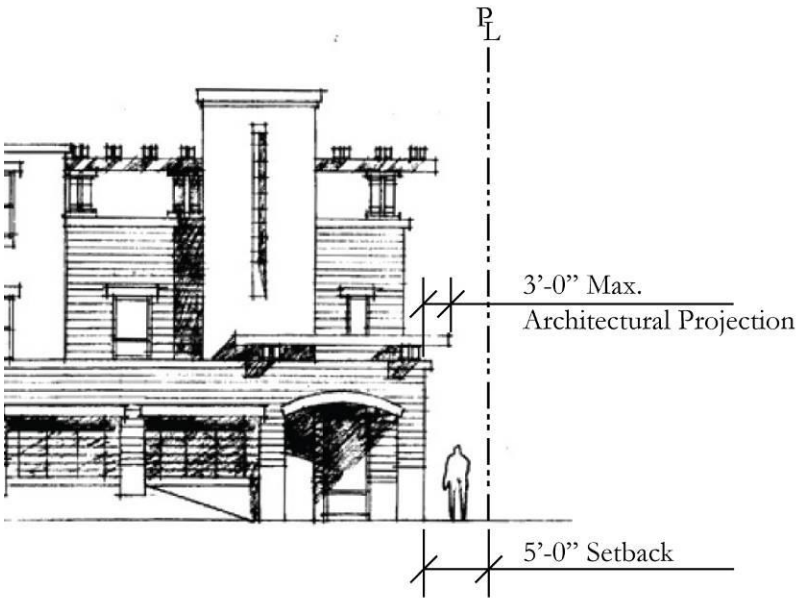


## Table 4-2: Maximum Encroachments into Building Setbacks

| Projection | Encroachment |
|---|---|
| Architectural Features** | 3 feet |
| Patios** | 3 feet |
| Balconies/Decks** | 3 feet |
| Porches** | 3 feet |

** No projection may encroach into the storm drain easement

**Exhibit 4-3: Projection Diagram**



# 4.4 – Open Space

Open space shall be provided for passive and active recreation opportunities within the project site. Two types of open space are required, private and common open space. These open space areas are for the use of the on-site residents and their guests. Required street setback areas are not counted towards common open space requirements.

## 4.4.1 – Private Open Space

Private open space shall be provided for all two and three-bedroom ~~each~~ residential units and one-bedroom ground units fronting Holt Avenue and Vine Street in order to provide private outdoor areas which can be enjoyed for the exclusive use by the occupant of the residential unit and their guests. Types of areas considered private open space include balconies, decks, and enclosed patios and yards.

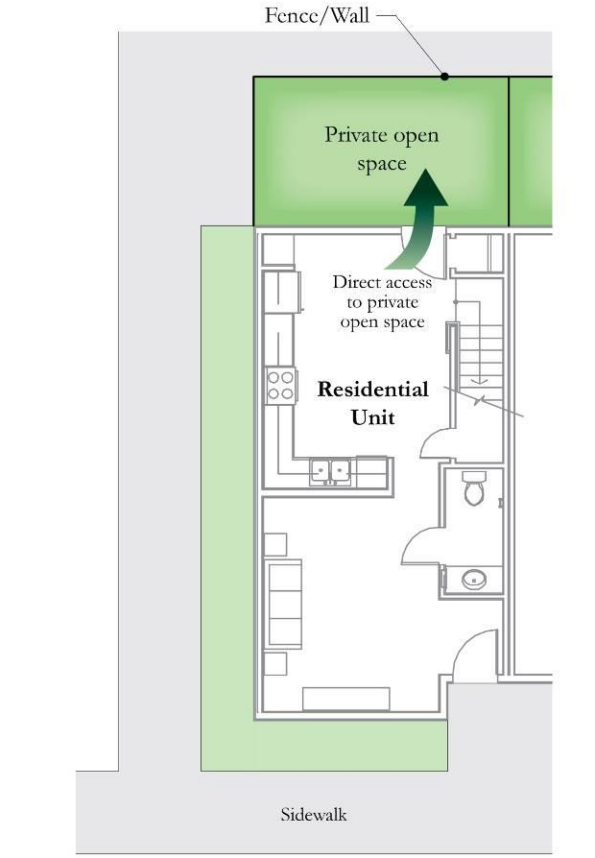
Private open space shall be provided for every residential unit and shall have direct access from the residential unit. Each residential unit shall have a minimum size of private open space as defined in Table 4-3 (Private Open Space). The space may be provided in multiple areas (e.g. two balconies, a yard and a balcony, etc.), as long as the total area of the spaces meets the minimum private open space requirement for the unit. The minimum dimension for private open space shall be no less than 6 feet in any direction.

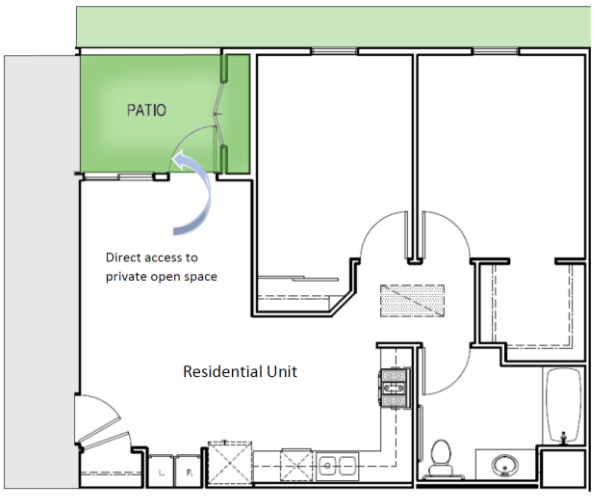
## Table 4-3: Private Open Space

| Number of Bedrooms | Open Space (SF) |
|---|---|
| 1 | 0** |
| 2 | 50 |
| 3 | 100 |
| 4 | 160 |

~~**20 square feet for one bedroom units with balconies fronting on to Holt Boulevard, and 50 square feet for one bedroom units fronting on to Vine Avenue.~~

## Exhibit 4-4: Private Open Space





## 4.4.2 – Common Open Space

Common open space shall be provided to allow for passive and active types of recreation, along with site landscaping amenities. These areas are for use by project residents and their guests and may include indoor recreational facilities. Recreational facilities provided pursuant to Section 4.4.3, shall be provided in common open space areas. The amount of required

common open space is based on the number of dwellings developed and shall be provided at the rate of 235 square feet of common open space for each dwelling unit.

Areas not considered common open space include the following: ~~(1) parking lots; (2)walkays along or between buildings; (3) parking lots landscaping; (4) street setback areas; and (5) areas not intended for active or passive recreation~~

- Parking lots;
- Walkways along or between buildings;
- Parking lot landscaping;
- Street side setback areas; and
- Other areas not intended for active or passive recreation.

## Exhibit 4-5: Common Open Space

## 4.4.3 – Recreational Facilities

Access to recreational facilities is important in a multi-family residential project as they provide needed facilities for the residents of the community. These facilities shall be centrally located on the site to minimize the distance of these facilities to all residential units within the project. A total of at least three recreational facilities (indoor or outdoor) shall be provided on-site. The facilities can be comprised of a combination of both similar and different recreational facilities to meet the recreational facilities requirement (e.g. two pools and one play ground or one clubhouse, one pool, and one tot lot, etc.). Recreational facilities can be indoor or outdoor and may include the following:

- Clubhouse;

- Teen Area; This area will be open between 6:00am and 10:00pm on a daily basis. The area will be designed with chairs and seating. Security lighting in this area will also add an additional safety factor.
- Pools;
- Community Building;
- Playground or tot lot; and
- Other indoor or outdoor recreation deemed appropriate by the City.

All recreational uses shall be for the exclusive use of the on-site residents and their guests.

# 4.5 – Parking Supply and Demand

## 4.5.1 – On-Site Parking Requirements

The number of parking spaces provide is based upon number of bedrooms contained within each dwelling unit, and is subject to the following requirements:

- All required resident parking shall be provided on-site;
- Each unit shall have at least one reserved parking space that is clearly marked;
- Reserved parking spaces shall be located within 150 200 feet of the dwelling it serves;
- At least one covered parking space shall be provided for each unit in Emporia I. This can be achieved through use of garages, carports, or tuck-under parking;
- Covered parking spaces provided through use of garages, carports, and tuck under parking are encouraged.
- Resident's assigned parking space(s) shall be used for the storage of the occupant's operable automobile(s), only;
- Tandem parking is prohibited;
- Tandem parking spaces shall be assigned to the same unit and may not be used as guest parking
- Required guest parking spaces shall be provide the necessary parking for the project leasing office. No separate parking is required for the leasing office; and
- Each dwelling unit is intended for occupancy by one family, regardless of bedroom size(s) provide. Paring for dwellings shall be provided on-site, pursuant to the requirements of Table 4-4 (Minimum Parking Requirements), below, except that guest parking may be provided on-street, pursuant to Section 4.5.2 (On-Street Guest Parking Requirements) of this PUD.

## Table 4-4: Minimum Parking Requirements

| Use | Parking Spaces |
|---|---|
| Multiple Family Dwellings<br>One Bedroom Unit | ~~1.75~~ 1 space~~s~~ per dwelling ~~(at least one space shall be in a garage or carport)~~ |
| Two ~~or more~~ Bedroom Unit | ~~2.0~~ 1.65 spaces per dwelling ~~(at least one space shall be in a garage or carport)~~ |
| Three Bedroom Unit | 2 spaces per dwelling |
| Guest Parking | 1 space per 5 dwellings |

### 4.5.2 – On-Street Guest Parking Requirements

On-street parking may be utilized to satisfy guest-parking requirements subject to the following:

- On-street parking may be used to satisfy guest parking requirements only, and shall not be used for required resident parking;
- On-street parking shall only be counted along the streets surrounding the project site on the side of the street adjoining the property, excluding Holt Boulevard and any other areas deemed necessary by the City Engineer, for corner sight distance as shown in Exhibit 4-6 (On-Street Parking Locations Map)
- All on-street parking locations shall be subject to approval by the City Engineer; and
- On-street parallel parking spaces shall be calculated by the length of unobstructed curb adjacent to the project site.

# Exhibit 4-6: Off-Site Parking Locations

TO BE DELETED

LEGEND

Estimated Corner Site Distances

Not to Scale

**Note:** Proper clearance shall be maintained around fire hydrants. Fire hydrant clearance may impact availability to provide on-street parking.

**Note:** Proper clearance shall be maintained around fire hydrants. Fire hydrant clearance may impact availability to provide on-street parking.

## 4.5.3 – Parking Standards

All parking space size and location requirements shall conform to the standards set forth in Section 6.03.045 (Off-Street Parking Standards) of the Ontario Development Code.

# 4.6 – Vehicular Access

Vehicular access to the site from Holt Boulevard is prohibited. All points of access shall be approved by the City.

# 4.7 – Service Facilities

- Loading/unloading for residential uses and trash pickup service shall be limited to a designated street curb staging location consistent with an approved Solid Waste Handling Plan.~~on-site private drive aisles~~. Location, signage and any hourly restrictions to be imposed on such areas shall be subject to approval by the City.
- ~~On-street loading shall be prohibited.~~
- The number of enclosures, and their precise locations, dimensions, and design shall be provided consisted with City standards.
- Trash enclosures shall be designed to contain separate containers for the collection of refuse and recyclable materials, with an adequate number of containers provide to allow for the collection of both refuse and recyclable materials generated by the development, pursuant to standards established by the Ontario Municipal Utilities Company.
- Trash enclosures shall meet the minimum design standards depicted in the standard drawings adopted by the City, which shall include: [1] a minimum 6-FT high decorative masonry wall, with appropriate view-obstructing gates for container access, [2] separate pedestrian access that is designed to screen the interior of the enclosure from view from the exterior and prevent refuse dispersion, and [3] a decorative overhead roof structure to protect bins containing recyclable materials from adverse environmental conditions, which might render the collected materials unusable, and screen trash bins from view of the upper floors of adjacent dwellings. Furthermore, trash enclosures shall be architecturally enhanced, and shall be consistent with the architectural design of adjacent buildings.
- Trash enclosure dimensions shall be of adequate size to accommodate containers consistent with the City's current methods of collection within the area in which the project is located.
- Signs clearly identifying all recycling and refuse collection areas, and the materials accepted for recycling shall be posted adjacent to all points of access to each trash enclosure.
- Trash enclosures shall be located a minimum of 10 feet from the interior project boundary/property line.
- Particular care shall be given when placing trash enclosures immediately adjacent to dwelling units; however, no trash enclosure shall be located within 10 feet of the livable portion of a structure.
- Trash enclosures shall be bordered by a minimum 5-foot wide planter, and shall be screened with landscaping on all exposed sides, excluding the side with bin access gates.
- All service facilities shall be screened in accordance with the Section 4.9 (Screening) of this Planned Unit Development.

# 4.8 – Landscaping

## 4.8.1 – Site Landscaping

A conceptual landscape ~~and irrigation~~ plan shall be submitted along with the Development Plan for this Planned Unit Development. The plan shall specify all landscaping and hardscape for the entire project site. Detailed Landscape and Irrigation Plans shall be required prior to the issuance of building permits. The detailed plans shall show location of ground mounted utility boxes and equipment, along with the methods of screening for these items from the public right-of-way and adjacent residences where possible. The irrigation system shall be designed to utilize recycled water pursuant to State and local codes, ordinances, and laws, and applicable building and plumbing codes.

The landscape and irrigation plan shall be designed with water conservation in mind, utilizing "California friendly" species and drought tolerant planting materials. The landscaping and irrigation shall comply with AB 1881 and any other laws and regulations related to planting materials.

All trees which are to remain on-site shall be properly protected in place during construction to ensure tree health is preserved.

Tree plantings along the Transit Street storm drain easement shall be restricted to those species allowed by the San Bernardino Flood Control District.

## 4.8.2 – Planting Palette

The planting palette shall be comprised of "California friendly" drought tolerant planting materials compatible with the overall architectural style of the Planned Unit Development. The following palette has been established to meet the needs of this Planned Unit Development:

**Table 4-5: Planting Palette**

| Botanical Name | Common Name | Size | Comments |
|---|---|---|---|
| **Trees** | | | |
| **Vine Street** | | | |

| Euonymus fortunei "moomshadow" | Moonshadow Euonymus | 5 Gal. | None |
| Baccharis 'Centennial' | Centennial Coyote Brush | 1 Gal. | None |

### 4.8.3 – Tree Removal

As part of Emporia I ~~Eight mature Camphor trees and~~ one mature Cork Oak tree on site shall remain and be incorporated into the overall design of the development plan. ~~The Camphor trees are currently located in the right-of-way on Fern Street and Transit Street and~~ Tthe existing Cork Oak is located at the northwest corner of Emporia Street and Fern Street shall be preserved in place. Four existing Coast Live Oak trees located on the west side of Fern Avenue are to remain and shall be preserved in place. Approximate location of trees is shown in Exhibit 4-7 (Existing Trees Plan). These trees have been in place prior to the demolition of the Casa Blanca hotel and have been preserved in accordance with the Casa Blanca Hotel Demolition Environmental Impact Report. An arborist report shall be prepared on all other existing trees to determine the health and where feasible existing healthy trees in the project area shall be preserved in place.

## 4.8.4 – Parking Lot Landscaping

Parking lot landscaping shall be provided pursuant to Subsection D (Landscaping of Off-Street Parking Facilities) of Ontario Development Code Section 6.05.030 (Required Landscape Areas).

## 4.8.5 – Compliance with State and Federal Laws

Provide landscaping and an irrigation system, which promotes the conservation of water as required by the Water Conservation in Landscaping Act of 2006 (AB 1881), commencing with California Government Code Section 65591.

# 4.9 – Screening

- All roof and ground mounted equipment shall be screened pursuant to the requirements of the Ontario Development Code.
- Trash enclosures shall be screened with enclosures that are architecturally compatible with the surrounding buildings.
- Screening shall include plant and building materials compatible with the project design so it is well integrated and hidden within the project area.
- Building and plant materials used for screening shall be compatible with the architectural style and planting palette used on the project area.
- All ground level screening shall comply with the requirements of the Ontario Development Code Section 6.02.030 (Protection of Intersection Visibility).

## 4.9.1 – Fences, Walls, and Hedges

Fences, walls, and hedges shall comply with Section 6.02.030 (Protection of Intersection Visibility) of the Ontario Development Code, Engineering corner sight distance standards, and all other applicable city standards. Fences and walls shall be made of decorative materials which are compatible with or enhance the overall architectural character of the project. All fences, walls, and hedges shall be in scale with the development and shall be used for screening, site enhancement and creating a safer living environment for residents and their guests. All decorative walls, monuments and/or other similar features shall not encroach in to the public street right-of-way.

# 5 – Circulation

## 5.1 – Site Accessibility

The site shall be designed to promote safety for residents by only allowing limited vehicular and pedestrian access into and across the site. This can be done through the use of building orientation and placement to minimize the use of gates and fencing; however, amenities shall be properly gated with limited access for residents and their guests.

## 5.2 – Vehicular Circulation

The site should be designed to reduce the number of dead end aisles in the parking lot areas and provide all guest parking outside of gated areas (on or off-site) to ensure accessibility. Location of drive aisles and entries shall be approved by the City Engineer. Vehicular circulation shall be designed in a way that promotes pedestrian safety and proper access to all parking areas.

## 5.3 – Pedestrian Circulation

Site design must provide for safe pedestrian circulation across the project site by separating pedestrian areas from areas with vehicular access. This includes, but is not limited to accessibility from parking lot areas to unit entries, site amenities, and perimeter sidewalk areas. Fencing and gates may be used to limit public access to resident-only areas.

The vacation of Transit Street in Emporia I provides a unique opportunity to create a pedestrian promenade that will connect residential foot traffic between residential units, parking, and community spaces throughout the site. The space should be welcoming and designed with landscape features that help define the walking path across the project area. Since no vehicular traffic will be allowed on this promenade, it is expected that children will be able to play safely throughout the site. Lighting and visibility for enhanced security shall be taken into consideration designing this area and shall be compatible with the architectural theme. Buildings should have windows that look on to this open space area to enhance the views of the residences and help create defensible spaces. Emporia II will vacate Fern Avenue to create pedestrian connectivity and linkage between Emporia I and Emporia II as shown in Exhibit 5-1 (Circulation Plan).

## 5.4 – Access to Mass Transit

An existing bus stop is located on the south side Holt Boulevard just east of Vine Avenue. A new decorative bus shelter with seating and lighting shall be installed at this location upon development. The bus shelter design shall be consistent with the design of other shelters in the downtown area (see Figure 5-1 (Bus Shelter)), and shall meet ADA access requirements per City of Ontario and/or OmniTrans Standards and to the satisfaction of the City Engineer. Additionally, a concrete bus pad for this bus stop shall be incorporated into the public improvements required for the development of the project site.

# 6 – Design Guidelines

The project area is located within Ontario's historic downtown area and shall comply with the Downtown Ontario Design Guidelines. The Downtown Ontario Design Guidelines were adopted in 1998 to guide the physical revitalization of Ontario's historic downtown. The Guidelines provide architectural and design principals, as well as design concepts for downtown districts. The project area is located within the Educational District, a mixed use area with an educational theme. The Guidelines do not provide specific architectural or design guidance within the Educational District but do require that development be context sensitive.

The design guidelines provided in this section are designed to be compatible with the Downtown Ontario Design Guidelines and provide site specific guidance for the development of the project area.

## 6.1 – Building Orientation

Building orientation shall be designed to minimize potential noise impacts, aide in providing property site safety, create proper accessibility to site amenities and parking, and to maximize views from residential units. Design should also be done in a way to create defensible spaces improving site safety.

**Exterior:** Orientation towards the exterior of the project area shall be carefully evaluated to ensure a proper relationship.

**Interior:** Buildings should be clustered in a way that creates defensible spaces providing views of interior open spaces and amenities. For units without garage spaces buildings shall be oriented to create minimal distances from assigned parking spaces to primary or secondary residential unit entries.

## 6.2 – Architectural Character

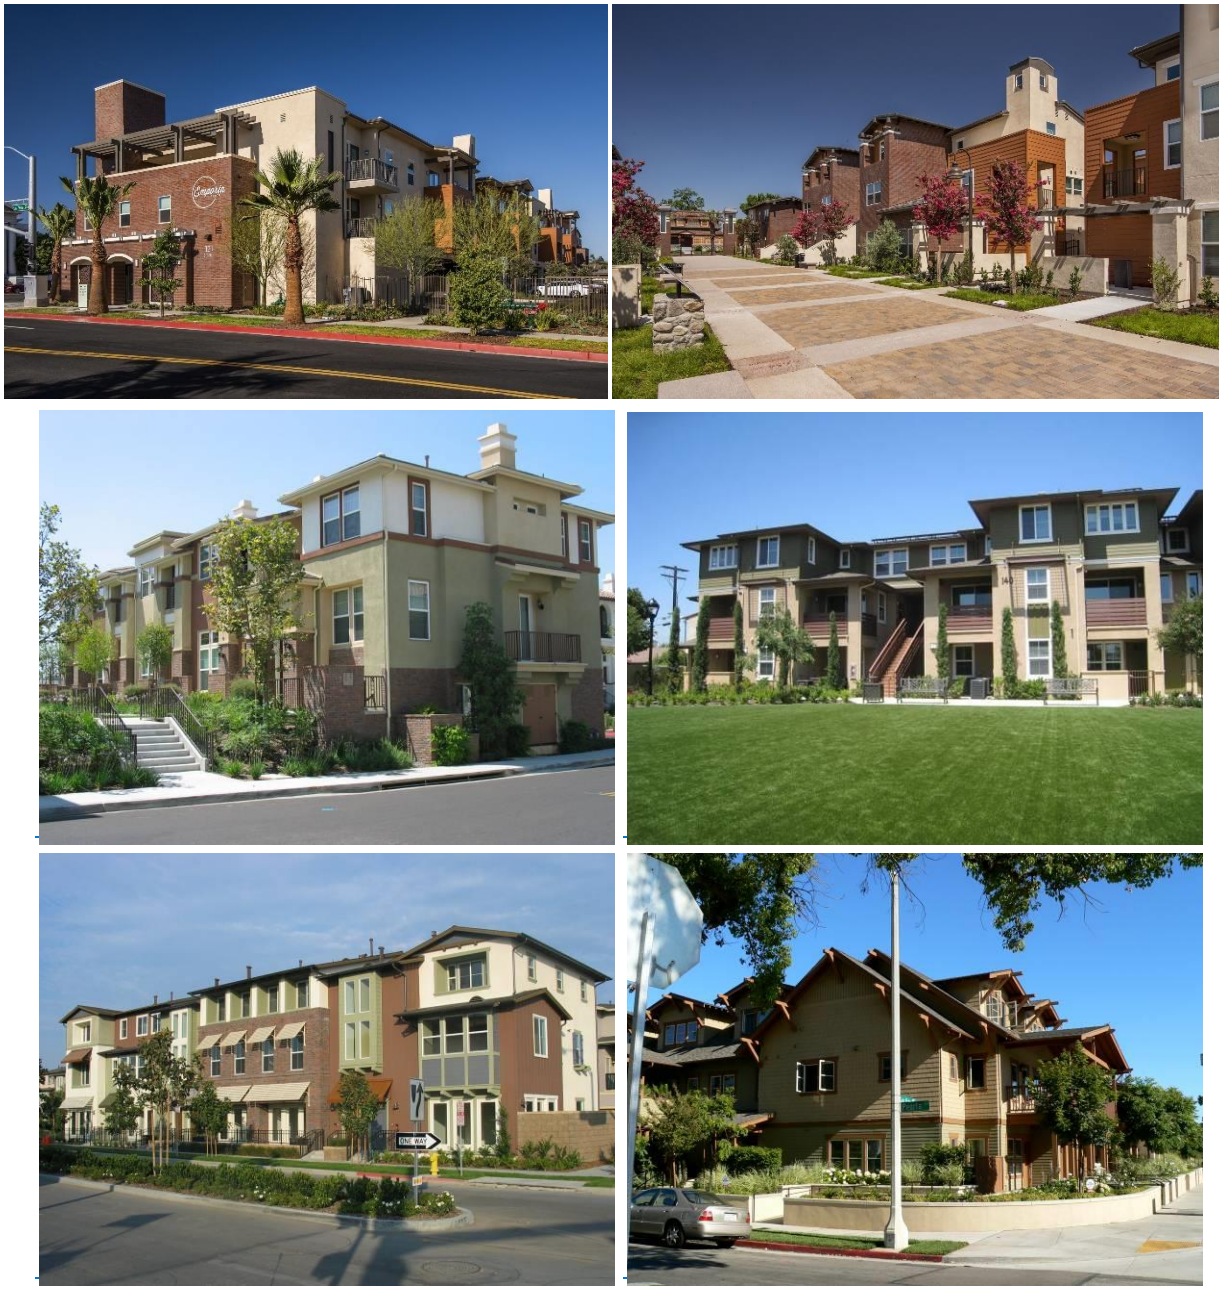
The architectural design leans toward a current interpretation of the Craftsman style. The design will make use of open ended beams, gabled and hipped roofs and trellis construction throughout the site. Large areas of masonry and wood siding with plaster accents will be provided to help enhance this overall architectural theme. Buildings along Holt Blvd will have a linear design with enhanced areas of design and color to differentiate units along this street. Street fronting podium parking will be shielded from view by intensified landscaping and podium walls with screened openings running alongside the north boundary of the site. Buildings along Emporia Avenue will be built with a ~~cottage style~~Craftsman feel. A sample rendering and photographic examples of the architectural style are provided in Figure 6-1 and Figure 6-2, on the proceeding page.

## Figure 6-1: Architectural Renderings

### Emporia I

### Emporia II

**Figure 6-2: Architectural Examples**



## 6.3 – Massing and Scale

All buildings shall be in scale with surrounding development with a majority of the building placement to occur towards the boundary of the project site. A prominent building edge shall

face Holt Boulevard. Buildings should be 2-3 stories in height containing a varied amount of units in each building with varying façade planes to decrease creating a "monotonous" look.

Amenities and site design shall be developed with the pedestrian scale in mind.

## 6.4 – Architectural Details

Architectural variations should occur between buildings to help distinguish each building and create variety within the contemporary craftsman style. Architectural details should be consistent with the architectural style of each individual building. Details should complement and enhance openings and accentuate the overall design of each building. Detailing can be achieved through the use of different colors and materials (brick, siding, etc.) to create interesting elevations.

Awnings should be placed where feasible over south facing windows and adequate shade should be provided for outdoor spaces. Coverings should use materials compatible with the building roofing and façade materials in creating a comprehensive building design. Exposed rafter beams should be integrated into building design along with trellises to help define outdoor spaces.

## 6.5 – Materials and Color

Materials and colors shall be compatible with and complementary to the overall architectural style of the development project. Larger building masses should use a combination of dark and light colors to break up building planes and use light colored trim to help accentuate roof features. All colors should be complementary and utilize primarily "earth tone" type colors. Materials should be a mixture of stucco, wood and brick siding in a variety of complementary colors and a concrete tile roof material should be used.

## 6.6 – On-Site Streetscapes and Pedestrian Walkways

Street furniture and decorative paving should be used throughout the project area to enhance architectural design. The use of complementary materials and textures should be used to create a continuity and consistency that is desired throughout the project area. A variety of decorative elements should be incorporated into the design of the project area including, but not limited to, benches, tree grates, bike racks, enhanced paving, trash receptacles and bollards.

A selection of appropriate elements shall consider sidewalk widths, size and spacing of street trees, importance of the pedestrian path, and the requirement to maintain a minimum 4 feet of clear space for pedestrian movement in all areas. All streetscape features shall comply with the Americans with Disabilities Act (ADA), along with accessibility requirements for public services, such as police and fire.

## Figure 6-3: Streetscape Examples

## 6.7 – On-Site Lighting

Decorative light fixtures compatible with the architectural style of the buildings shall be provided on-site.

A minimum of one-foot-candle of light shall be provided within parking areas and 0.5 foot-candles within pedestrian pathways, in compliance with the City of Ontario Police Department standards.

## 6.8 – Signs

Signs within the project area shall comply with the Division 8.0 (Sign Regulations) of the Ontario Development Code.

## 6.9 – Off-Site Improvements

All off-site improvements shall be installed in accordance with City standards and to the satisfaction of the City Engineer.

# 7 – Infrastructure and Utilities

## 7.1 – Infrastructure

All improvements and alterations to public infrastructure (sewer, water, recycled water, storm drain, etc.) shall obtain approval from all appropriate agencies. Public sewer and water lines within the project area on Transit Street that will only serve the project area once the street is vacated will not be the maintenance responsibility of the City. Public sewer and water lines within the project area on Fern Avenue that will only serve the proposed project area is to be vacated and a 30' wide public utilities easement (PUE) shall be granted to the City of Ontario.

If infiltration is deemed permissible by a licensed geotechnical engineer, on-site storm water drainage facilities shall be provided for capture and infiltration of a 2-yr, 24-hour storm event, consistent with the San Bernardino County Storm Water Program's Water Quality Management Plan (WQMP) requirements for new residential development. Storm water capture and infiltration facilities ~~may~~ will include the utilization of ~~pervious concrete pavers in enhanced paving areas and MaxWell Drywells or~~ underground storm water infiltration chambers and pretreatment devices, for the remainder of the site.

Upon development of the project area, ~~existing waterlines smaller than 8 inches in diameter fronting the project site along Emporia Street and Vine Avenue shall be upgraded~~all existing main sizes will be determine per the fire flow test results and will apply to the following: ~~to a minimum of 8 inches.~~

a. Transit Street: From Fern Avenue to Laurel Avenue.
b. Emporia Street: From Fern Avenue to Euclid Avenue.
c. Palm Avenue: From Holt Boulevard to Emporia Street.
d. Laurel Avenue: From Holt Boulevard to Emporia Street

Upon water line upgrade, the existing water line in Transit Street through the project area may be abandoned. An 8-inch water line shall be installed within Fern Avenue from Transit Street north to Holt Boulevard.

Any connection into the existing storm drain located within Transit Street shall require approval from the County of San Bernardino Flood Control District. See Exhibit 7-1 (Easement & Dedication Locations) for the approximate storm drain location.

The project area is a Priority Land Use (PLU and shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB).

## 7.2 – Street Improvements

Street improvements (street, sidewalk, parkway, curb, gutter, traffic signal, street lights, etc.) shall be constructed with the development of the project site. Improvements will be required on the streets adjacent to the project area including Holt Boulevard, Emporia Street, Fern Avenue, Transit Street, Palm Avenue, and Vine Avenue. Design and construction of street

improvements shall be in accordance with the City standards, and to the satisfaction of the City Engineer. Exhibit 7-2 (Street Sections) identifies the improvements for each street adjacent to the project site.

King standard lighting (City of Ontario Standard Drawing No. 5103) shall be required within the public right-of-way. Upon development of the project site, traffic signal alterations will need to occur to allow for safe and proper traffic movement. Traffic signal modifications shall be required at the intersection of Holt Boulevard and Vine Avenue.

# 7.3 – Public Utilities

All existing dry utilities (electricity, cable, telephone, gas, etc.) along the south side of Transit Street (Vine Avenue to Fern Avenue) and within Emporia I ~~shall be~~were relocated and re-routed to the streets bounding the project area, as required and approved by the affected utility agencies/companies. All public utilities along the proposed vacated portions of Fern Avenue (Transit Street to Emporia Street) and as part of Emporia II shall be relocated outside of the abovementioned street and undergrounded along the adjoining streets, as required and approved by the affected utility companies/agencies prior to recordation of PM-20339. Written approvals from the affected utility companies/agencies shall be submitted to the Engineering Department indicating that such utilities will be relocated and re-routed to adjacent streets and

easements are not required on Fern Avenue. A public utility easement shall be reserved for the City of Ontario for the existing sewer and water mains located in Fern Avenue. ~~In the event that relocation of a utility is not feasible, a Public Utility Easement (PUE) shall be reserved for the existing utility(s) prior to the vacation of Transit Street.~~

## 7.4 – Street Dedication, Vacation & Easements

In order to create a single developable project site for the proposed Planned Unit Development, a portion of the street that bisects the project site in an east-west direction in Emporia I (Transit Street from Vine Avenue to Fern Avenue) will be required to be vacated. The existing sewer lines located within thise section of Transit Street to be vacated, may be abandoned upon vacation of the street. Fern Avenue from Emporia Street to Transit Street will be required to be vacated and privatized as part of Emporia II to allow connectivity between the overall project.

The ultimate Holt Boulevard right-of-way is 60 feet, measured from centerline, and will require an additional 20 feet of street dedication. Corner cut-off areas within the project area shall be dedicated at the intersection of Holt Boulevard and -Fern Avenue, Fern Avenue and Emporia Street, Fern Avenue and Transit Street, Emporia Street and Vine Avenue, Emporia Street and Palm Avenue, Palm Avenue and Transit Street, and Vine Avenue and Holt Boulevard per Engineering Standard Drawing #~~1301~~1209. The ultimate half-width street section, measured from the centerline, shall be widened to 18 feet along the project frontage of Transit Street General location of the street dedication and corner cut-off areas are shown on Exhibit 7-1: Easement & Dedication Locations.

The proposed 30-foot wide storm drain easement in Emporia I runs along Transit Street (Vine Avenue to Fern Avenue) to facilitate an existing 7.5 foot by 8 foot reinforced Concrete Box (RCB). ~~Furthermore, a 30-foot wide storm drain easement, which runs along Fern Avenue north of Transit Street, is require to facilitate a reinforced concrete pipe (RCP).~~ The easements will be reserved and accommodated with the development of the project site. The easement locations are shown on Exhibit 7-1 (Easement & Dedication Locations).

# 8 – Historic Preservation

All historic structures are subject to the requirements of Ontario Development Code Sections 4.02.040 through 4.02.065, and Division 7.01 (Historic Preservation) of the Ontario Development Code, as applicable.

## 8.1 – Historic Background

The ~~two~~~~three~~-two block area that comprises Emporia I of this Planned Unit Development, was once home to the Casa Blanca Hotel and Developer's Row. During Ontario's early settlement period, several homes were constructed for prominent city pioneers along Emporia Avenue. This stretch of development was referred to as "Developer's Row." All of the homes from this development have been demolished, with the exception of the Ford-Collins House which was moved to its current location at 227 West Main Street sometime after 1915, to facilitate the construction of the Casa Blanca Hotel. An Environmental Impact Report was certified by City Council in 1998 for the demolition of the Casa Blanca Hotel.

In 2007, the property at 205 and 205 ½ was acquired by the City's Redevelopment Agency. A Mitigated Negative Declaration was prepared for the demolition of both buildings. A request to defer the Certificate of Appropriateness (File No. PHP07-012) for the replacement structure was approved by the Historic Preservation Commission on September 25, 2007. Development of ~~the project site will~~ Emporia I required both Development Plan approval pursuant to Ontario Development Code Section 4.02.025 (Development Plans) and the approval of a Certificate of Appropriateness pursuant to the requirements of Ontario Development Code Section 4.02.050 (Historic Preservation – Certificates of Appropriateness and Demolition of Historic Resources).

The one block area bound by Transit Street to the north, Emporia Street to the south, Fern Avenue to the west and Palm Avenue that comprises of Emporia II of this Planned Unit Development includes the American Legion Building located at 310 West Emporia Avenue and a single-story office building located at 201-215 South Fern Avenue and is shown on Exhibit 8-1 (Historic Resources Map).The buildings were reviewed for historic significance and determined to be eligible for listing on the local inventory of historic resources.

## ~~8.2 Existing Historic Structures~~

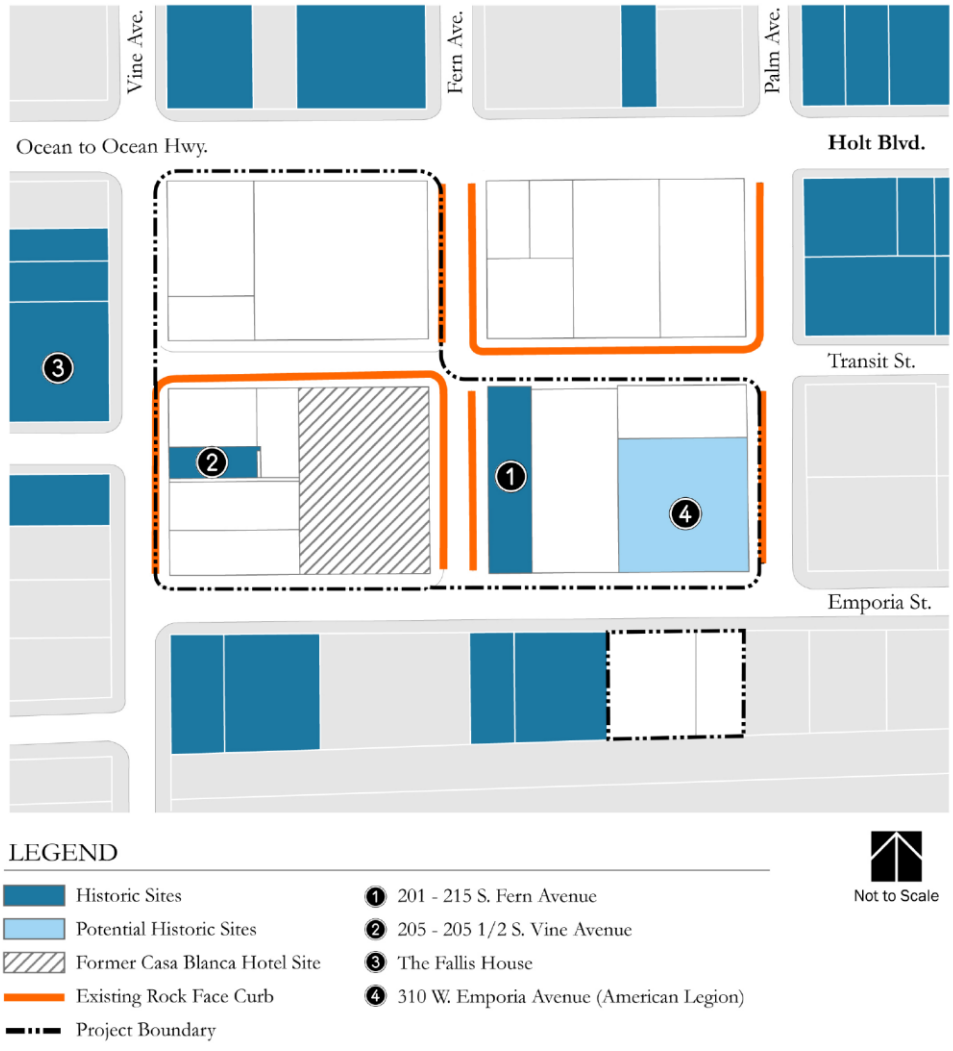
~~Remaining within the area of the project is site are historic properties located at 201 through 215 South Fern Avenue, The Fallis House, and 310 West Emporia Avenue (American Legion Hall). Location of these properties is shown on Exhibit 8-1 (Historic Resources Map).~~

## ~~8.3~~ 8.2 – Certificate of Appropriateness

~~As mentioned in Section 8.1 (Historic Background), above, a~~ Pursuant to the Ontario Development Code Section 4.02.050 (Historic Preservation – Certificates of Appropriateness and Demolition of Historic Resources, Certificate of Appropriateness approval ~~is was~~ is required for the demolition of the existing historic resources within the PUD area. Prior to

issuance of an approval, ~~to be submitted along with~~ a Development Plan to construct replacement buildings, structures or objects shall be approved. ~~, for~~ Emporia I.~~to implement this Planned Unit Development. Approval of a Certificate of Appropriateness is to ensure a compatible project that does not detract from the historic site nor adversely affect adjacent historic properties, such as the Fallis House (Local Landmark No. 1), located at 122 South Vine Avenue, across the street to the west. A Certificate of Appropriateness is required for Emporia II for the American Legion building located at 310 West Emporia Avenue and office building at 201-215 South Fern Avenue.~~ Approval of a Certificate of Appropriateness is to determine if certain findings can be made to determine if the demolition is appropriate and to ~~ensure~~ impose previously approved mitigation measures. ~~a compatible project that does not detract from the historic site nor adversely affect adjacent historic properties, such as the Fallis House (Local Landmark No. 1), located at 122 South Vine Avenue, across the street to the west. Locations of adjacent historic properties are shown on Exhibit 8-1 (Historic Resources Map).~~

## Exhibit 8-1: Historic Resources Map



There are several policies in The Ontario Plan and regulations in the Ontario Development Code which support and encourage preservation of historic resources. More specifically, TOP contains policies for the management of the City's cultural resources through the updating and maintenance of the City's historic sites and buildings inventory compiled in the Ontario Register. In order to support the preservation goals, the Ontario City Council adopted a tier system with standard criteria and procedures for evaluating the significance of historic or potentially historic resources threatened by major modifications or demolition through a regulatory process. The Ontario Development Code establishes criteria for Tier I, Tier II, or Tier III historic resources, with Tier I and II being the most historically significant. The tier system identifies those historic resources that have the highest preservation value in terms of their architectural and/or historical contribution to the City and establishes a method to evaluate the impacts of their loss in the case of major modification or demolition. Major modification or demolition should not occur to Tier I or Tier II historic resources and preservation and/or avoidance of such historical resources to prevent demolition is strongly encouraged. Whereas, Tier III historic resources may be modified or demolished under certain circumstances with appropriate mitigation measures in place.

On January 27, 2010, environmental impacts were analyzed in an Environmental Impact Report (State Clearinghouse No. 2008101140) in conjunction with File No. PGPA06-001 adopted by City Council, whereas a statement of overriding considerations for demolition of Tier III historic resources was also adopted. Prior to demolition of the Tier III historic resource, those mitigation measures listed in the Environmental Impact Report and in Section 4.02.050, Certificate of Appropriateness of the Ontario Development Code, will be implemented. As such, the following mitigation measures shall be imposed and completed prior to issuance of demolition permits of Tier III historic resources located within the project site:

~~The following mitigation measures shall be imposed on the project prior to the issuance of demolition permits for all Tier III designated historic properties located on the project site:~~

- An effort to relocate structure must be made (such as an advertisement notifying the public of the opportunity to relocate the home to interested parties ~~running a new paper ad making the structure available to interested parties~~).
- HABS/HAER documentation of the historic resource (photos interior and exterior, written physical description of property, historical narrative, plans with dimensioned floor plan, site plan, elevations, and detailed drawings of any character defining-feature).
- Mitigation fees for non-residential structures ~~($6.50 per square foot with a cap of $32,500)~~ shall be paid to the Historic Preservation Mitigation Trust Fund.
- Planning Department to identify salvageable features from the building or site to be reused either in the new project or donated to a local preservation group.

~~Demolition of any historic building within the project site shall not occur until the Approving Authority has approved a Certificate of Appropriateness for the replacement structure. The Historic Preservation Commission, upon the recommendation of the Historic Preservation Subcommittee, may waive the requirement for replacement structures if the ultimate project proposed for the site of the demolition provides and exceptional benefit to the community. Minimum findings must be made to waive the replacement structure requirements pursuant to~~

~~the requirements of Ontario Development Code Section 4.02.050 (Historic Preservation – Certificates of Appropriateness and Demolition of Historic Resources).~~

## ~~8.4 –~~8.3 – Rock Curb

Split Cobble Stone Curb (Rock Curb) exists along areas of Vine Avenue, Fern Avenue, and Transit Street in the project area. All rock curb locations in the project area are considered the lowest priority of rock curb classification. Due to this classification, the rock curb can be removed. The rocks shall be clean to the extent possible (removal of concrete) and temporarily stored on the project site or at a City facility to be determined and arranged by the Housing Agency. The rocks acquired shall be reused into the project site within pedestrian corridors, at entry points into the site (e.g. drive aisles), or within the open space areas, subject to review and approval of the Planning Department. Rock curb locations can be replaced with standard curb and gutters pursuant to City standards. Locations of the rock curb are shown on Exhibit 8-1 (Historic Resources Map).

Incorporating an interpretative plan should be considered and submitted with the Development Plan submitted to implement this Planned Unit Development. Interpretative elements should be coordinated with the design of the landscape and hardscape plans, to achieve maximum compatibility and functionality. The purpose of the interpretative plan is to convey the historic background and historic significance (such as Developer's Row, Fallis House, Casa Blanca, American Legion, and Ocean to Ocean Highway- Holt Blvd.) of the project site and surrounding area through narrative plaques and photo displays. The salvaged rock curb should be part of the interpretative plan.

# 9 – CEQA Compliance

An Addendum to The Ontario Plan Environmental Impact Report (SCH No. 2008101140), prepared in conjunction with File No. PGPA06-001, and certified by the City of Ontario City Council on January 27, 2010, was prepared for the project.

The Approving Authority for the Project reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all submitted written and oral evidence. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence, the Approving Authority found as follows:

- The Addendum and administrative record have been completed in compliance with the California Environmental Quality Act (CEQA), the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and
- The Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Approving Authority; and
- There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and
- The project will not introduce any new significant environmental impacts beyond those previously analyzed in the Environmental Impact Report, and all mitigation measures previously adopted by the Environmental Impact Report, are incorporated herein by this reference.

## 9.1 – Environmental Performance Standards

Due to the proximity of the project area to rail lines and Holt Avenue which are both generators of noise and emissions, standards have been established to mitigate these environmental impacts.

### 9.1.1 – Noise

To ensure a proper standard of living, noise levels shall not exceed 65 dBA for exterior noise levels and 45 dBA for interior noise levels. In order to achieve these noise levels the following mitigations shall be followed:

- MM 5.12-2: Prior to the issuance of building permits, the developer/owner shall retain an acoustical engineer to evaluate the potential for trains to create perceptible levels of vibration indoors. If vibration-related impacts are found, mitigation measures, such as use of concrete, iron, steel, or masonry materials to ensure that levels of vibration amplification are within acceptable limits to building occupants, shall be implemented. Pursuant to the Federal Transit Administration vibration-annoyance criteria, these acceptable limits are 78 VdB during the daytime and 72 VdB during the nighttime for residential uses.

  Listed below are standards for implementation of MM 5.12-2:

- Construction activities shall only occur between the hours of 7:00 AM and 6:00 PM on weekdays, and 9:00 AM and 6:00 PM on Saturdays and Sundays;
- Structural noise attenuation requirements contained in Ontario Municipal Code Title 8, Chapter 15, Article 3 (Building Requirements for New Residential Construction in the 65 CNEL to 70 CNEL Noise Zone) are required to be incorporated into exterior façade units located along the eastern, western, and northern project perimeter.
- Structural noise attenuation requirements contained in Ontario Municipal Code Title 8, Chapter 15, Article 2 (Building Requirements for New Residential Construction in the 70 CNEL to 75 CNEL Noise Zone) are required to be incorporated into exterior façade units located along the southern project perimeter;
- Balconies on exterior façade units located along the project's east, west and north perimeter street frontages shall have a solid balcony barrier of at least 5 feet above the deck height. On exterior façade units located along the project's south perimeter street frontage, ~~no~~ balconies or yard areas shall be designed to provide noise reducing measures ~~permitted~~; and
- A 6-foot high solid decorative masonry block wall or clear barrier with self closing, sound insulated gates shall be constructed between the buildings located along the southern edge of the project site where outdoor recreation is located. This will ensure exterior noise for outdoor facilities within the project will not exceed 65 dB CNEL.

## 9.1.2 – Air Quality

Due to the proximity of the active rail lines to the south of the project area, air quality is a concern for the project site resulting from the diesel emissions from trains. Listed below are standards for reducing the air quality impacts of the diesel emissions.

- All residential living areas shall be equipped with air filtration systems operating under a positive pressure rated at MERV 12 or higher;
- The HOA or property management will replace all unit filters on a routine basis, determined by industry standards for the filter and air conditioning HVAC systems selected;
- The active outdoor recreation areas should be shifted northward where feasible, to provide the greatest possible distance setback from the closest railroad tracks; and
- A dense tree canopy shall be established along the southern site boundary to act as a living bio-filter for particulate air pollution.

# 10 – Administration

## 10.1 – Items Not Addressed in PUD

Any terms or regulations pertaining to design, development, subdivision, administration and interpretation, and nonconforming use, structures and, which are not addressed in this PLANNED UNIT DEVELOPMENT, shall be governed by the City of Ontario Development Code

## 10.2 – Development Applications

Development Plan approval, pursuant to the requirements of Ontario Development Code Section 4.02.025 (Development Plans), shall be required for the physical alteration of a lot, the construction of a building, or the addition or significant alteration of an existing building. A Development Plan application shall be submitted to the Planning Department on a City application form pursuant to the requirements of Ontario Development Code Division 2.02 (Application Filing and Processing), commencing with Subsection B (Discretionary Permits and Actions) of Section 2.02.015 (Application Processing Procedures).

## 10.3 – Administrative Exceptions

Minor exceptions to the development standards set forth in this document may be granted by the Zoning Administrator in accordance with Section 4.02.020.C (Administrative Exceptions) of the Ontario Development Code, not to exceed 10 percent from minimum residential setback and separation requirements.

## 10.4 – Severability

If any portion of this Planned Unit Development is held to be invalid, unconstitutional, or unenforceable by a court of competent jurisdiction, the determination shall not affect the validity of the remaining portions of this Planned Unit Development. Moreover, the decision shall not affect, impair, or nullify this Planned Unit Development, either in whole or in part, and the remainder of this Planned Unit Development shall continue in full force and effect.

| *CITY OF ONTARIO*<br>*Agenda Report*<br>**June 15, 2021** | **SECTION:**<br>**PUBLIC HEARINGS** |
|---|---|
| Department: Planning<br>Prepared By: Jeanie Irene T Aguilo<br>Staff Member Presenting:<br>Scott Murphy, Executive Director Community Development<br>Approved By: | Submitted To: Council/OHA<br>Approved: _____<br>Continued To: _____<br>Denied: _____<br>Item No: 17 |

**SUBJECT: A PUBLIC HEARING TO CONSIDER AN AMENDMENT TO THE SUBAREA 29 SPECIFIC PLAN (FILE NO. PSPA20-006) TO INCREASE THE OVERALL DENSITY WITHIN PLANNING AREA 27 (CLUSTER HOMES - 7-14 DU/AC) FROM 4.8 TO 4.9 DWELLING UNITS PER GROSS ACRE AND ESTABLISH A NEW RESIDENTIAL PRODUCT TYPE (MOTORCOURT CLUSTER D - 8-PLEX). THE PROJECT SITE IS BOUNDED BY MERRILL AVENUE TO THE NORTH, SOUTHERN CALIFORNIA EDISON EASEMENT TO THE WEST, AND THE SAN BERNARDINO COUNTY FLOOD CONTROL DISTRICT AND THE CITY OF EASTVALE TO THE SOUTH. (APN: 0218-331-42)**

**RECOMMENDATION:** That the City Council consider and adopt a resolution approving the use of an Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009; and a Resolution approving File No. PSPA20-006 pursuant to the facts and reasons contained in this staff report and the attached resolution.

**THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:**
**Invest in the Growth and Evolution of the City's Economy**
**Operate in a Businesslike Manner**
**Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)**
**Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch**

**FISCAL IMPACT:** No fiscal impacts are anticipated with the adoption of the Subarea 29 Specific Plan Amendment. Any potential long-term fiscal impacts and anticipated expenditures to the City would be offset by development impact fees and property tax revenues from the future development. Additionally, future development projects approved on the subject properties will be conditioned to form/join a services Community Facilities District to offset increased costs associated with police and fire services.

**BACKGROUND & ANALYSIS:** The Subarea 29 Specific Plan and related Environmental Impact Report (EIR; State Clearinghouse No. 2004011009) were approved by the City Council on October 17, 2006. The Specific Plan established the land use designations, development standards, and design guidelines, which included the potential development of 2,470 dwelling units and up to 87,000 square feet of commercial uses for the Specific Plan Area.

On December 15, 2020, the Applicant submitted the proposed Amendment to the Subarea 29 Specific Plan (File No. PSPA20-006). In addition, the Applicant submitted a Tentative Tract Map application (File No. PMTT20-012/TTM 20389) for Planning Area 27 to subdivide 5.99 acres of land into one numbered lot and three lettered lots for condominium purposes. The Tentative Tract Map was approved by the Planning Commission on May 25, 2021; however, the approval will not be final and conclusive unless and until the subject Specific Plan Amendment is approved by the City Council.

**SPECIFIC PLAN AMENDMENT:** To accommodate the proposed Tentative Tract Map application, the Specific Plan Amendment proposes to increase the overall residential density of the Subarea 29 Specific Plan from 4.8 dwelling units per gross acre to 4.9 dwelling units per gross acre. Adjusting the total unit count implements the Low-Density land use designation of the General Plan, while maintaining the neighborhood planning and architectural design standards of the original Specific Plan. This Specific Plan Amendment increases the total number of allocated dwelling units from 2,392 dwelling units to 2,418 dwelling units. Specifically, the planned gross density within Planning Area 27 (Cluster Homes -- 7-14 du/ac) will increase from 6.2 dwelling units per acre to 9.7 dwelling units per gross acre, resulting in an increase in unit count, from 47 dwelling units to 73 dwelling units (See Exhibit D: Subarea 29 Specific Plan Land Use Summary, attached). In addition, the Applicant has proposed to establish a new residential product type (Motorcourt Cluster D - 8-Plex) for Planning Area 27.

The Specific Plan currently allows for Motorcourt Cluster A (6-Plex or 8-Plex), Paseo Cluster Lots, Motorcourt Cluster B (6-Plex), Motorcourt Cluster C (5-Plex), and Green Courts product types. The new Motorcourt Cluster D (8-Plex) product will allow for a cluster of up to 8 single-family homes with a smaller building footprint. The single-family homes will be clustered around a motorcourt, with vehicle access taken from the shared motorcourt and pedestrian access taken from a paseo. Parking for residents will be provided in garages or uncovered parking spaces and each unit will be provided private open space within a side yard.

All changes and additions to the Specific Plan (exhibits, tables, development standards and design guidelines) are contained within the revised Specific Plan document accompanying this report. All additions to the Specific Plan have been highlighted in red and all deletions have been highlighted in red with a strikethrough.

On May 25, 2021, the Planning Commission conducted a public hearing to consider File No. PSPA20-006 and concluded the hearing on that date. After considering all public testimony on the application, the Planning Commission voted unanimously (6-0) to approve a resolution recommending that the City Council approve the Specific Plan Amendment. In addition, the Planning Commission approved the Tentative Tract Map (File No. PMTT20-012) contingent upon City Council approval of the Specific Plan Amendment.

**HOUSING ELEMENT COMPLIANCE:** The project site is one of the properties listed in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix. With the approval of the related Specific Plan Amendment (File No. PSPA20-006), the proposed project will be consistent with the number of dwelling units and density (7-14 DU/AC) within Planning Area 27, as specified in the Available Land Inventory.

**AIRPORT LAND USE COMPATIBILITY PLAN COMPLIANCE:** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted

Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the ALUCP. The project site is also located within the Airport Influence area of Chino Airport and is consistent with policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics. Any special conditions of approval associated with uses in close proximity to the airport are included in the conditions of approval provided with the attached Resolution.

**ENVIRONMENTAL REVIEW:** An Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) has been prepared and concluded that the amendment to the Subarea 29 Specific Plan introduces no new significant environmental impacts, and all previously adopted mitigation measures are a condition of project approval.

# *EXHIBIT A – SUBAREA 29 SPECIFIC PLAN LAND USE SUMMARY*

TABLE 1—SPECIFIC PLAN LAND USE SUMMARY

| Planning Area | Land Use | Minimum Lot Size (S.F) | Planned Dwelling Units[3,4,5] | Net Acre[1] | Planned Net Density (Du/Ac.)[3,5] | Gross Acres[2] | Planned Gross Density (Du/Ac.)[3,5] |
|---|---|---|---|---|---|---|---|
| 1* | Conventional Small Lot | 3,500 | 432 | 83.1 | 5.2 | 89.8 | 4.8 |
| 2* | Commercial | N / A | 0 | 12.1 | 0.0 | 14.5 | 0.0 |

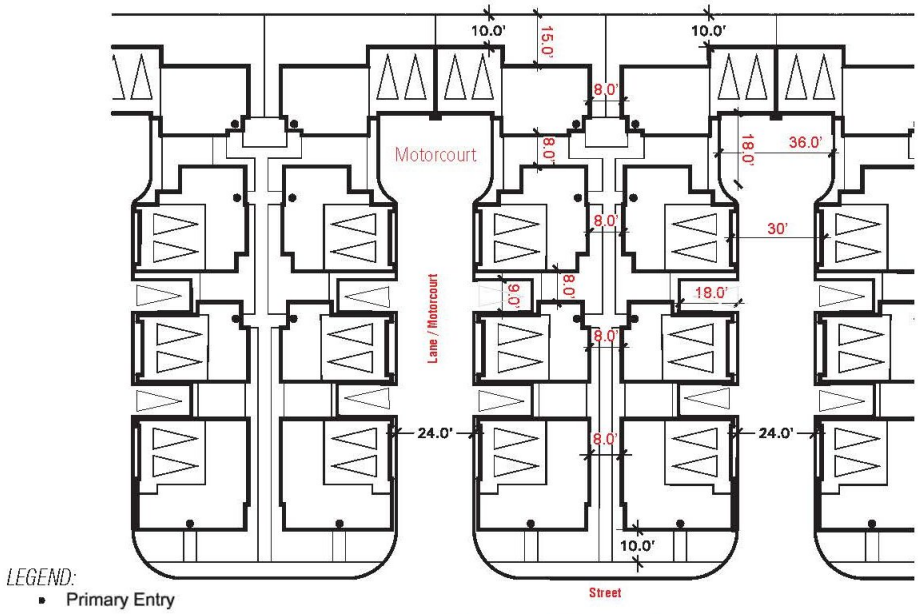
**) Indicates "Park Place" Planning Areas as controlled/owned by SL Ontario Development Company
***) Indicates Planning Areas as controlled/owned by Brookfield Homes

## *EXHIBIT B – MOTORCOURT CLUSTER D (8-PLEX)*

*Cluster Homes: Motorcourt Cluster D (8-Plex)* *(PA 27)*



*Typical Product Plotting Concept*

Note: Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review and approval of the Planning Director.

## Minimum Standards

**MinimumLot Size**
Exclusive usearea per home 1,750 s.f.

**Building Separation**
Front tofront 8'
Front entryto side livingspace 8' (4'+4')
Side toside living space 8'

**Side Setbacks- To Backof Sidewalk - Street Facing**
Living space 10'**
Porch, balcony 5'
Garden wall 5'

**Side Setbacks- To Parcel Edge**
Living spaceto property line 4'

**Rear Setbacks- To Parcel Edge**
Living space(2-story) 4'

**Garage Setbacks**
Garage face to garage face 30'
Garage face to driveway (apron) 2'*
Street facing garage 18'
Note: Lane width may be increased to 24' when the lane length exceeds 150'.

**Maximum Encroachments into Building Setbacks**
Fireplace, media niche (8' max length), bay windows (cantilevered),furr-out, potshelves, brackets, etc.
2' max encroachment,3' min. from PL
Second floor cantilever overgarage
4' max encroachment,3' min. from PL

**Private Open Space Per Unit**
Minimum dimension 8'
Total per unit 50 s.f.

**Parking** Per City of Ontario Development Code

**Building Height**
Architectural projections mayexceed the maximum building height of 35' by an additional 10'.

*Measurement is to be taken from the inside of the curb.

**Where site conditions do not permit a 10' setback from sidewalk to living space, an average setback of 10' may be utilized across the site subject to approval by the Planning Director.

CITY OF ONTARIO PLANNING DEPARTMENT

# PLANNING COMMISSION STAFF REPORT

May 25, 2021

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

**FILE NOS:** PSPA20-006 and PMTT20-012

**SUBJECT:** An Amendment to the Subarea 29 Specific Plan (File No. PSPA20-006) to increase the overall density within Planning Area 27 (Cluster Homes – 7-14 du/ac) from 4.8 to 4.9 dwelling units per gross acre and establish a new residential product type (Motorcourt Cluster D – 8-Plex), in conjunction with a Tentative Tract Map (File No. PMTT20-012 / TTM 20389) to subdivide 5.99 acres of land into one numbered lot and three lettered lots for condominium purposes. The project is bounded by Merrill Avenue to the north, Southern California Edison easement to the west, and the San Bernardino County Flood Control District and the City of Eastvale to the south; (APN: 0218-331-42) **submitted by SL Ontario Development Company, LLC. City Council action is required.**

**PROPERTY OWNER:** SL Ontario Development Company, LLC

**RECOMMENDED ACTION:** That the Planning Commission consider and adopt the following:

[1] A resolution recommending that the City Council approve the use of an Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009); and

[2] A resolution recommending that the City Council approve File No. PSPA20-006 pursuant to the facts and reasons contained in this staff report and the attached resolution; and

[3] A resolution approving File No. PMTT20-012 (TTM 20389) pursuant to the facts and reasons contained in this staff report and the resolution, and subject to the conditions of approval.

***Figure 1: Project Location***

**PROJECT SETTING:** The project site is comprised of 5.99 acres of land bounded by Merrill Avenue to the north, Southern California Edison easement to the west,

| CC | | | |

and the San Bernardino County Flood Control District and the City of Eastvale to the south, and is depicted in Figure 1: Project Location, above. The project site was historically utilized for agricultural dairy purposes. The site has been cleared of any structures and is presently vacant. The natural vegetation and soil conditions that once occurred throughout the project area have been significantly altered through agricultural activities, leaving little to no native vegetation. There is an existing 255-foot-wide SCE Easement located along the western property line that contain 180-foot-tall transmission towers (115kV). The existing surrounding land uses, zoning, and general plan and specific plan land use designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report.

## PROJECT ANALYSIS:

(1) Background — The Subarea 29 Specific Plan and related Environmental Impact Report (EIR; State Clearinghouse No. 2004011009) were approved by the City Council on October 17, 2006. The Specific Plan established the land use designations, development standards, and design guidelines, which included the potential development of 2,470 dwelling units and up to 87,000 square feet of commercial uses for the Specific Plan Area.

On December 15, 2020, the Applicant submitted an Amendment to the Subarea 29 Specific Plan (File No. PSPA20-006) to increase the overall density from 4.8 to 4.9 dwelling units per gross acre and establish a new residential product type (Motorcourt Cluster D – 8-Plex). The proposed change will increase the number of units within Planning Area 27 (Cluster Homes – 7-14 du/ac) from 47 to 73 dwelling units, for a total increase of 2,392 dwelling units to 2,418 dwelling units (See Figure 2—Subarea 29 Specific Plan Land Use Plan).

In addition, to the Subarea 29 Specific Plan Amendment, the Applicant has submitted a Tentative Tract Map application (File No. PMTT20-012/TTM 20389) to subdivide 5.99 acres of land into one numbered lot and three lettered lots for condominium purposes.

On May 17, 2021, the Development Advisory Board ("DAB") conducted a hearing to consider the Tentative Tract Map, and concluded the hearing, voting to recommend that the Planning Commission approve the Application subject to conditions of approval, which are included as attachments to the Planning Commission resolutions.

(2) Amendment to the Subarea 29 Specific Plan ("SPA") (File No. PSPA20-006) — To accommodate the proposed Tentative Tract Map application, the SPA proposes to increase the overall residential density of the Subarea 29 Specific Plan from 4.8 to 4.9 dwelling units per gross acre. Adjusting the total unit count implements the Low-Density land use designation of the General Plan while maintaining the neighborhood planning and architectural design standards of the original Specific Plan. This Specific Plan Amendment increases the total number of allocated dwelling units from 2,392 dwelling units to 2,418 dwelling units. Specifically, the planned gross density within Planning Area 27 (Cluster Homes – 7-14 du/ac) will increase from 6.2 to 9.7 dwelling units per gross acre

resulting in an increase from 47 to 73 dwelling units (See Exhibit D: Subarea 29 Specific Plan Land Use Summary). In addition, the Applicant has proposed to establish a new residential product type (Motorcourt Cluster D – 8-Plex) to Planning Area 27.

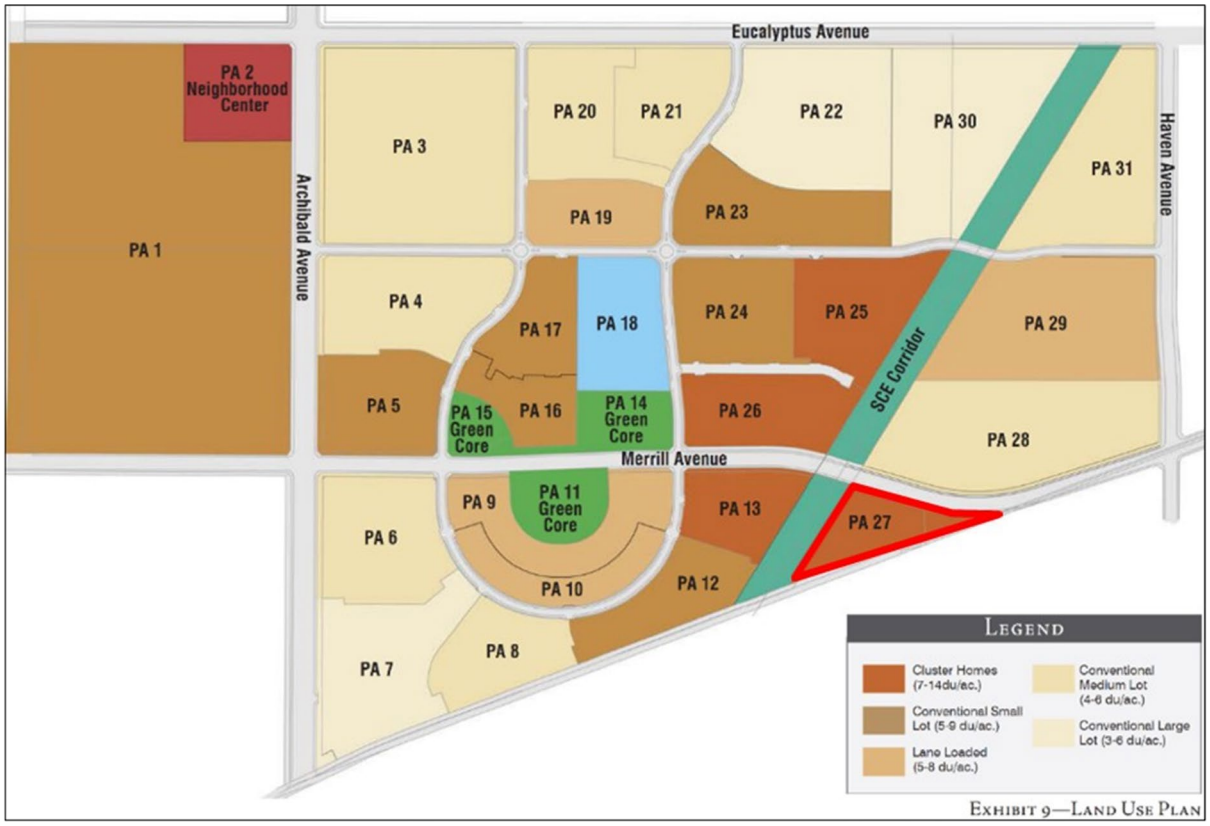

***Figure 2—Subarea 29 Specific Plan Land Use Plan***

The Specific Plan currently allows for a Motorcourt Cluster A (6- or 8- Plex), Paseo Cluster Lots, Motorcourt Cluster B (6-Plex), Motorcourt Cluster C (5-Plex), and Green Courts. The new Motorcourt Cluster D (8-Plex) product will allow for a cluster of up to 8 single-family homes, with a smaller building footprint. The single-family homes will be clustered around a motorcourt (See Exhibit D: Motorcourt Cluster D (8-Plex) with vehicle access taken from the shared motorcourt and pedestrian access will be taken from a paseo. Parking for residents will be provided in garages or uncovered parking spaces and each unit will be provided private open space within the side yard.

All changes and additions to the Specific Plan (exhibits, tables, development standards and design guidelines) are contained within the revised Specific Plan document accompanying this report. All additions to the Specific Plan have been highlighted in red and all deletions have been highlighted in red with a strikethrough.

Approval of the related Tentative Tract Map, discussed below, is contingent upon the approval of the proposed Specific Plan Amendment and related Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) certified by the City Council on April 21, 2015.

(3) Tentative Tract Map (File No. PMTT20-012 / TTM 20389) — Tentative Tract Map 20389 proposes to subdivide 5.99 acres of land into one numbered lot for condominium purposes and three lettered lots for common areas, private streets, public utility easements and neighborhood landscape edges (see Exhibit B—Tentative Tract Map, attached). The map will implement the required infrastructure improvements to serve the site. These improvements include the backbone infrastructure and the internal street circulation for residential neighborhoods (Private Streets A and B and Private Drives A through I). The Tentative Tract Map will accommodate the proposed Motorcourt Cluster D – 8-Plex product type and allow up to 73 units (see, Exhibit C—Conceptual Site Plan, attached). The future development of the site will require review and approval of a Development Plan.

(4) Site Access/Circulation — The project will have two access points from Merrill Avenue, which runs east-west along the northern frontage. The developer is responsible for the construction of the remaining backbone street improvements and all interior neighborhood streets necessary to serve the project.

(5) Architecture — Future development of the site will be required to meet all Development Code and Subarea 29 Specific Plan standards regarding architecture, including style, decorative elements and enhancements.

(6) Landscaping — Future development of the site will be required to meet all Development Code and Subarea 29 Specific Plan standards regarding landscaping. The Policy Plan (Policy PR1-6) requires new developments to provide a minimum of 2 acres of private park per 1,000 residents. The proposed project is required to provide a 0.56-acre park to meet the minimum Policy Plan private park requirement. The site will include landscaped parkways along the public and private streets, and homes fronting the private streets will have a small front landscape area maintained by the Homeowners Association. The final landscape plan, including the park amenities and planting plan, will be reviewed and approved as part of the Development Plan process.

(7) Utilities (drainage, sewer) — The project will be required to undergo a more extensive Preliminary Water Quality Management Plan ("PWQMP") review as part of the Development Plan process. The PWQMP establishes project compliance with storm water discharge/water quality requirements and includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development ("LID") best management practices ("BMPs"), such as retention and infiltration, biotreatment, and evapotranspiration. Additionally, the Project is consistent with the previously approved Development Agreement (File No. PDA16-001)

that required all major backbone infrastructure improvements within the Subarea 29 Specific Plan.

(8) Covenants, Conditions and Restrictions ("CCR&Rs") — As a Condition of Approval, CC&R's will be required to be prepared and recorded with the final map. The CC&R's will outline the maintenance responsibilities for the open space areas, recreation amenities, drive aisles, utilities, and upkeep of the entire site to ensure the on-going maintenance of the common areas and facilities.

**COMPLIANCE WITH THE ONTARIO PLAN:** The proposed project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP). More specifically, the goals and policies of TOP that are furthered by the proposed project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Maintain the Current High Level of Public Safety
- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods
- Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
- Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in the New Model Colony

(2) Vision.

**Distinctive Development:**

- Commercial and Residential Development

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

**Decision Making:**

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

➢ G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision

(4) Policy Plan (General Plan).

**Land Use Element:**

- Goal LU1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

  - LU1-6 Complete Community: We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario. (Refer to Complete Community Section of Community Economics Element).

- Goal LU2: Compatibility between a wide range of uses.

  - LU2-6: Infrastructure Compatibility: We require infrastructure to be aesthetically pleasing and in context with the community character.

**Housing Element:**

- Goal H2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

  - H2-4 New Model Colony. We support a premier lifestyle community in the New Model Colony distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.

  - H2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices.

Goal H5: A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age or other status.

  - H5-2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation and other amenities.

**Community Economics Element:**

- Goal CE1: A complete community that provides for all incomes and stages of life.

  - CE1-6 Diversity of Housing. We collaborate with residents, housing providers and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to support our workforce, attract business and foster a balanced community.

- Goal CE2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.

  - CE2-1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

  - CE2-2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional and sustainable places that will compete well with their competition within the region.

  - CE2-4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

  - CE2-5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

**Safety Element:**

- Goal S1: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced and other geologic hazards.

  - S1-1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

**Community Design Element:**

- Goal CD1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.

  - CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing the diverse character of our existing viable neighborhoods.

➢ CD1-2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.

➢ CD1-3 Neighborhood Improvement. We require viable existing residential and non-residential neighborhoods to be preserved, protected, and enhanced in accordance with our land use policies.

▪ Goal CD2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.

➢ CD2-1 Quality Architecture. We encourage all development projects to convey visual interest and character through:

- Building volume, massing, and height to provide appropriate scale and proportion;
- A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and
- Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.

➢ CD2-2 Neighborhood Design. We create distinct residential neighborhoods that are functional, have a sense of community, emphasize livability and social interaction, and are uniquely identifiable places through such elements as:

- A pattern of smaller, walkable blocks that promote access, activity and safety;
- Variable setbacks and parcel sizes to accommodate a diversity of housing types;
- Traffic calming measures to slow traffic and promote walkability while maintaining acceptable fire protection and traffic flows;
- Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and
- Landscaped parkways, with sidewalks separated from the curb.

➢ CD2-7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.

➢ CD2-8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding

physically and visually isolated spaces, maintenance of visibility and accessibility, and use of lighting.

- CD2-9 Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD2-10 Surface Parking Areas. We require parking areas visible to or used by the public to be landscaped in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.

- CD2-11 Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

- CD2-12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

- CD2-13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

- Goal CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics.

- CD3-2 Connectivity Between Streets, Sidewalks, Walkways and Plazas. We require landscaping and paving be used to optimize visual connectivity between streets, sidewalks, walkways and plazas for pedestrians.

- CD3-3 Building Entrances. We require all building entrances to be accessible and visible from adjacent streets, sidewalks or public open spaces.

- CD3-5 Paving. We require sidewalks and road surfaces to be of a type and quality that contributes to the appearance and utility of streets and public spaces.

➢ CD3-6 Landscaping. We utilize landscaping to enhance the aesthetics, functionality and sustainability of streetscapes, outdoor spaces and buildings.

- Goal CD5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investments.

➢ CD5-1 Maintenance of Buildings and Property. We require all public and privately owned buildings and property (including trails and easements) to be properly and consistently maintained.

➢ CD5-2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

**HOUSING ELEMENT COMPLIANCE:** The project site is one of the properties listed in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix, and with approval of the related Specific Plan Amendment (File No. PSPA20-006) the proposed project will be consistent with the number of dwelling units and density (7-14 DU/AC) within Planning Area 27, as specified in the Available Land Inventory.

**AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE:** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the ALUCP. The project site is also located within the Airport Influence area of Chino Airport and is consistent with policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics. Any special conditions of approval associated with uses in close proximity to the airport are included in the conditions of approval provided with the attached Resolution.

**ENVIRONMENTAL REVIEW:** An Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) has been prepared. The Addendum concluded that the amendment to the Subarea 29 Specific Plan and Tentative Tract Map introduces no new significant environmental impacts.

**CONDITIONS OF APPROVAL:** See attached department reports.

## TECHNICAL APPENDIX:

**Surrounding Zoning and Land Use:**

| | *Existing Land Use* | *General Plan Designation* | *Zoning Designation* | *Specific Plan Land Use* |
|---|---|---|---|---|

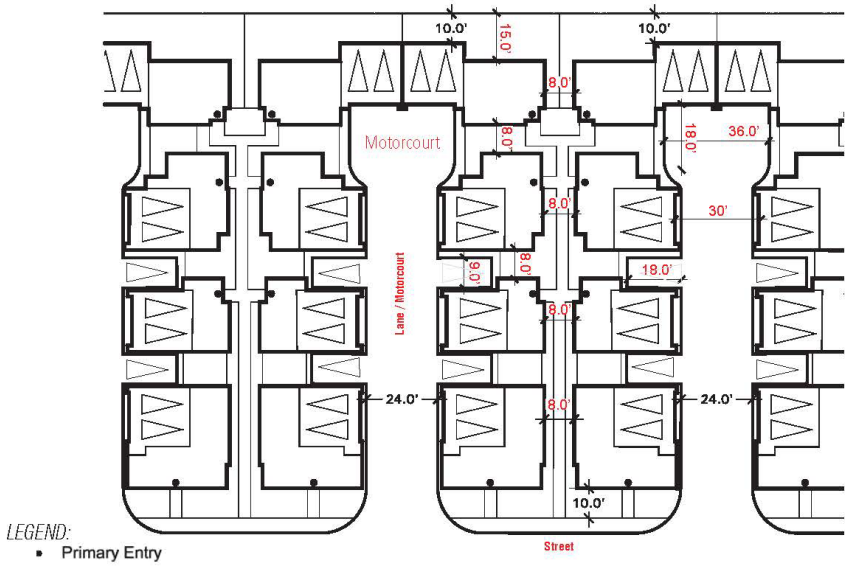
A) Minimum square footage identified is for exclusive use area on a per home basis, recorded lot size may differ.
1) Gross Acres calculated to centerlines of Master Planned streets minus SCE easements.
2) Net Acres excludes street rights-of-way and SCE easements.
3) Actual total units and gross/net density and acreage will be dependent on final lotting.
4) Target unit count based on submitted Tentative "B" Maps
5) A density transfer of 15.0% may occur between Planning Areas.

*) Indicates Planning Areas as controlled/owned by Richland Communities, Inc.
**) Indicates "Park Place" Planning Areas as controlled/owned by SL Ontario Development Company
***) Indicates Planning Areas as controlled/owned by Brookfield Homes

*Cluster Homes: Motorcourt Cluster D (8-Plex)* *(PA 27)*



Note: Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review and approval of the Planning Director.

*Typical Product Plotting Concept*

## Minimum Standards

**MinimumLot Size**
Exclusive usearea per home 1,750 s.f.

**Building Separation**
Front tofront 8'
Front entryto side livingspace 8' (4'+4')
Side toside living space 8'

**Side Setbacks- To Backof Sidewalk - Street Facing**
Living space 10'**
Porch, balcony 5'
Garden wall 5'

**Side Setbacks- To Parcel Edge**
Living spaceto property line 4'

**Rear Setbacks- To Parcel Edge**
Living space(2-story) 4'

**Garage Setbacks**
Garage face to garage face 30'
Garage face to driveway (apron) 2'*
Street facing garage 18'
Note: Lane width may be increased to 24' when the lane length exceeds 150'.

**Maximum Encroachments into Building Setbacks**
Fireplace, media niche (8' max length), bay windows (cantilevered),furr-out, potshelves, brackets, etc.
2' max encroachment,3' min. from PL
Second floor cantilever overgarage
4' max encroachment,3' min. from PL

**Private Open Space Per Unit**
Minimum dimension 8'
Total per unit 50 s.f.

**Parking** Per City of Ontario Development Code

**Building Height**
Architectural projections mayexceed the maximum building height of 35' by an additional 10'.

*Measurement is to be taken from the inside of the curb.

**Where site conditions do not permit a 10' setback from sidewalk to living space, an average setback of 10' may be utilized across the site subject to approval by the Planning Director.

RESOLUTION NO. PC21-038

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE THE USE OF AN ADDENDUM TO THE SUBAREA 29 SPECIFIC PLAN ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO. PSP03-003

WHEREAS, SL ONTARIO DEVELOPMENT COMPANY, LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of an Amendment to the Subarea 29 Specific Plan (File No. PSPA20-006) to increase the overall density within Planning Area 27 (Cluster Homes – 7-14 du/ac) from 4.8 to 4.9 dwelling units per gross acre and establish a new residential product type (Motorcourt Cluster D – 8-Plex) in conjunction with a Tentative Tract Map (File No. PMTT20-012 / TTM 20389) to subdivide 5.99 acres of land into one numbered lot and three lettered lots for condominium purposes, bounded by Merrill Avenue to the north, Southern California Edison easement to the west, and the San Bernardino County Flood Control District and the City of Eastvale to the south, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the property to the north of the Project site is within the Planning Area 28 (Conventional Medium Lot) land use designation of the Subarea 29 Specific Plan and a residential subdivision in currently under construction. The properties to the east are located in the City of Eastvale within R-1 land use district and developed with residential land uses. The properties to the south are located in the City of Eastvale within the PRD (Planned Residential Development) land use district and developed with residential land uses. The property to the west is located within the Subarea 29 Specific Plan and has an SCE Corridor land use designation that is developed with SCE 180-foot-tall transmission towers (115kV) and power lines; and

WHEREAS, the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) was certified on October 17, 2006 (hereinafter referred to as “Certified EIR”), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as “EIR Addendum”) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as “CEQA”); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously

analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the recommending authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the Planning Commission has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project are on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, The Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) was certified on October 17, 2006 in conjunction with File No. PSP03-003.

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines.

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts.

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference.

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and.

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the Planning Commission hereby recommends the City Council finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby approve the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 6: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of May 2021, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage
Planning Commission Chairman

ATTEST:

Rudy Zeledon
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA )
COUNTY OF SAN BERNARDINO )
CITY OF ONTARIO )

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC21-038, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on May 25, 2021, by the following roll call vote, to wit:

AYES: DeDiemar, Gage, Gregorek, Lampkin, Ricci, Willoughby

NOES: None

ABSENT: None

ABSTAIN: None

Fax: (909) 395-2420

## California Environmental Quality Act
# Environmental Checklist Form

**Project Title/File No(s).:** Park Place/Planning Area 27 – PSPA20-006 and PMTT20-012 (TTM 20389)

**Lead Agency:** City of Ontario, 303 East "B" Street, Ontario, California 91764, (909) 395-2036

**Contact Person:** Jeanie Irene Aguilo, Associate Planner

**Project Sponsor**: SL Ontario Development Company, LLC, 1156 N. Mountain Avenue, Upland, CA 91786

**Project Location and Setting**: The 5.99-net-acre[1] Project site includes Planning Area 27 of the Subarea 29 Specific Plan and is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County (refer to Figure 1, Regional Location Map, and Figure 2, Vicinity Map). As illustrated on Figure 3, the Project site is located south of Merrill Avenue, approximately 1,000 feet of Celebration Avenue).

The Project site is vacant but was previously graded; the Southern California Edison (SCE) corridor extends along the western portion of the Project site (refer to Figure 3, Aerial Photograph). The areas surrounding the site to the west, east and south are developed with residential uses. The area to the north of the Project site is currently under construction.

**General Plan Designation**: Low Density Residential (2.1 – 5 du/ac) and within the Chino Airport Overlay area.

**Zoning**: SP – Subarea 29 Specific Plan

**Description of Project**: The proposed Project involves an amendment to the Subarea 29 Specific Plan (File No. PSPA20-006) to: (1) increase the number of allowed units within Planning Area 27 (Cluster Homes – 7-14 du/ac) from 47 dwelling units to 73 dwelling units (an increase of 26 dwelling units), which would increase the total number of allowed units in the Subarea 29 Specific Plan area from 2,392 dwelling units to 2,418 dwelling units; and (2) provide an additional housing typology (Motorhome Cluster D – 8-Plex). The modified Specific Plan Land Use Summary table and additional housing typology are provided in Attachment A of this document). With the increase in units, the overall density in the Specific Plan area would increase from 4.8 dwelling units per gross acre to 4.9 dwelling units per gross acre, consistent with the Low Density Residential (2.1 – 5 du/ac) land use designation in The Ontario Plan (TOP). Additionally, the proposed Project involves a Tentative Tract Map (TTM 20389) (File No. PMTT20-012) to subdivide 5.99 acres of land into one numbered lot and three lettered lots for condominium purposes (refer to proposed TTM 20389 included in Attachment B of this document).

The proposed Specific Plan Amendment and TTM 20389 would allow for the development of 73 cluster homes, which are single-family detached residential units with vehicular access from lanes (private alleys or motorcourts) via interior streets, with direct access garages. A conceptual site plan for the proposed development within Planning Area 27 is provided on Figure 4. As shown, access would be provided from two locations along Merrill Avenue. The proposed development would be implemented in compliance with Development and Subdivision Regulations contained in the Subarea 29 Specific Plan, and Ontario Development Code Chapters 5.0 and 6.0 (e.g., setbacks and separations, landscaping, parking and circulation).

**Background:** In October 2006, the City of Ontario approved the Subarea 29 Specific Plan (File No. PSPA20-006). The Subarea 29 Specific Plan has been subsequently amended through April 2015. The 2015 amendment included the addition of 99 dwelling units, allowing up to 2,392 units to be developed in the Specific Plan area. The Subarea 29 Specific Plan establishes the land use designations, infrastructure and services, development standards, and design guidelines for the approximately 540-gross-acre Subarea 29 Specific Plan area located east of the Cucamonga Creek Channel, south of Eucalyptus Avenue, north of Bellegrave Avenue and west of Haven Avenue. The southern boundary of the Specific Plan area is also

[1] The Project site is 7.6 gross acres, inclusive of the Southern California Edison (SCE) easement and public right-of-way; Assessor Parcel Number (APN) 0218-331-42.

## Conceptual Site Plan

the jurisdictional boundary between the cities of Ontario and Eastvale, and the counties of San Bernardino and Riverside.

The *Subarea 29 (Hettinga) Specific Plan Final Environmental Impact Report* (Subarea 29 Specific Plan Final EIR) (State Clearinghouse [SCH] No. 2004011009) was prepared for the Subarea 29 Specific Plan and was certified by the City Council in October 2006. The Subarea 29 Specific Plan Final EIR analysis concluded that implementation of the Subarea 29 Specific Plan would result in significant and unavoidable impacts related to loss of Farmland (project and cumulative), air quality impacts (project and cumulative), cumulative surface water quality impacts (due to impaired receiving waters), cumulative traffic-related noise, operational cumulative traffic impacts, and cumulative solid waste generation. A Statement of Overriding Considerations was adopted by the City for these impacts. Mitigation measures were adopted to reduce impacts to less than significant impacts to the extent feasible, and those mitigation measures will continue to apply to development in the Subarea 29 Specific Plan area, including the proposed Project. An Addendum to the Subarea 29 Specific Plan Final EIR was prepared for the 2015 Specific Plan Amendment.

Prior to adoption of TOP, the New Model Colony (NMC) General Plan Amendment established the land uses within the entire NMC area and designated the Subarea 29 Specific Plan area as Low Density Residential (2.1 – 5 du/ac), Neighborhood Commercial, Open Space – Parkland, Open Space – Non Recreation, and Public School. In 2010, TOP was adopted and designated the Project site Low Density Residential (2.1 – 5 du/ac). The associated *The Ontario Plan Final Environmental Impact Report* (SCH No. 2008101140) (TOP Final EIR) was certified in January 2010, and is incorporated by reference in this Addendum. The TOP Final EIR analyzes the environmental impacts that would result from implementation of the TOP, focusing on changes to land use associated with the buildout of the Land Use Plan in the Policy Plan and impacts resultant of population and employment growth in the City. The TOP and TOP Final EIR anticipated 2,700 residential unit for the Subarea 29 Specific Plan area. The significant unavoidable adverse impacts that were identified in the TOP Final EIR include: agriculture resources, air quality, cultural resources, greenhouse gas emissions, noise and transportation/traffic.

**CEQA REQUIREMENTS FOR AN ADDENDUM:**

Section 15164(a) of the CEQA Guidelines outlines when an Addendum to an EIR is required, and states: "The lead agency or responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred."

Section 15162 of the CEQA Guidelines states: "When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:

A. When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

    (1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

    (2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

    (3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

        (a) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

        (b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative."

Thus, if the proposed Project does not result in any of the circumstances listed in section 15162 (i.e., no new or substantially greater significant impacts), the City may adopt an addendum to the Subarea 29 Specific Plan Final EIR.

Section 16164(e) of the CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR is needed for further discretionary approval. These findings are described below, and are based on the analysis presented in this document:

1. *Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects*. Substantial changes are not proposed with the Project and the proposed Project will not require revisions to the Subarea 29 Specific Plan Final EIR or TOP Final EIR. The Specific Plan is divided into 31 Planning Areas and the Subarea 29 Specific Plan Final EIR evaluated the impacts associated with the development capacity of 2,293 dwelling units; a subsequent Specific Plan Amendment increased the allowed number of units to 2,392 dwelling units, which was evaluated in the 2015 Addendum. The proposed Project involves a Specific Plan Amendment to increase the residential unit count in Planning Area 27 of the Subarea 29 Specific Plan by 26 dwelling units (from 47 dwelling units to 73 dwelling units). This would increase the total number of allowed residential units in the Specific Plan area by 1%, from 2,392 dwelling units to 2,418 dwelling units, an insubstantial increase. The proposed Specific Plan Amendment also involves the introduction of an additional housing typology (Motorhome Cluster D – 8-Plex). A TTM is also proposed (TTM 20389) to accommodate the proposed development in Planning Area 27. On January 26, 2010, the City of Ontario adopted TOP Policy Plan (General Plan). The SPA proposes a maximum of 2,418 residential units within the Subarea 29 Specific Plan which is less than the 2,700 residential unit development capacity established by the Policy Plan (General Plan) for the Specific Plan area. Additionally, the overall density of the Specific Plan area with the proposed Project would be 4.9 dwelling units per acre, which is consistent with the Policy Plan (General Plan) that allows up to 5 dwelling units per acre within the Low Density Residential (2.1 – 5 du/ac) land use designation. Additionally, the City's water, recycled water, and sewer infrastructure would have sufficient capacity to serve the additional units with the proposed Specific Plan Amendment. There are no new significant impacts or a substantial increase in the severity of previously identified significant impacts due to the proposed Specific Plan Amendment. Therefore, no proposed changes or revisions to the EIR are required.

2. *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, which would require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects*. As shown on the aerial photograph provided in Figure 3, the Project site (Planning Area 27) was previously graded and the areas surrounding the Project site are developed or under construction. Grading activities and other site disturbance were conducted in accordance with the mitigation requirements outlined in the Subarea 29 Specific Plan Final EIR, including measures required for the protection of biological, cultural, and paleontological resources. No sensitive biological resources, cultural resources, or paleontological resources existing at the Project site. No proposed changes or revisions to the EIR are required.

3. *Required Finding*. *No new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, has been provided that would indicate: the proposed project would result in one or more significant effects not discussed in the previous EIR; significant effects previously examined would be substantially more severe than shown in the previous EIR; mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or, mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternatives*. The Subarea 29 Specific Plan Final EIR did not address Global Climate Change impacts as required by Assembly Bill 32, passed in August of 2006. However, the impact of buildout of TOP on the environment due to the emission of greenhouse gases (GHGs) were analyzed in TOP Final EIR. According to TOP Final EIR, this impact would be significant and unavoidable. This EIR was certified by the City on January 27, 2010, at which time a statement of overriding considerations was also adopted for TOP's significant and unavoidable impacts, including that concerning the emission of greenhouse gases. Pursuant to Public Resources Code section 21083.3, this impact need not be analyzed further, because (1) the proposed buildout of the Subarea 29 Specific Plan would result in an impact that was previously analyzed in TOP Final EIR, which was certified by the City; (2) the proposed Project would not result in any GHG impacts that were not addressed in TOP Final EIR; (3) the proposed Project would only increase the number of residential units by 26 Low Density residential dwelling units and the total number of units in the Specific Plan area (2,481 units) is less than evaluated in TOP Final EIR. As part of the City's certification of TOP Final EIR and its adoption of TOP, the City adopted mitigation measures with regard to the significant and unavoidable impacts relating to GHG emissions. These mitigation measures are outlined in Section 6 of this Initial Study.

   The Subarea 29 Specific Plan Final EIR evaluated the Riverside County Airport Land Use Compatibility Plan – Chino Airport, but the final report was not adopted prior to approval of the Subarea 29 Specific Plan Final EIR. Additionally, the Ontario International Airport (ONT) Land Use Compatibility Plan (ALUCP) was adopted by the City of Ontario in 2011. As determined by the analysis presented in this Addendum, the proposed Project would not result in any new impacts related to the Chino Airport that were not addressed in TOP Final EIR. As part of the City's certification of TOP Final EIR and its adoption of TOP, the City adopted mitigation measures with regard to the significant and unavoidable impacts relating to the Chino Airport. These mitigation measures are outlined in Section 6 of this Initial Study. There are no significant impacts associated with the ONT.

   Lastly, Appendix G of the CEQA Guidelines was modified as part of the CEQA Guidelines updates that were approved in December 2018. New checklist topics related to Energy, Tribal Cultural Resources and Wildfire were added and some checklist questions for other environmental topics were revised. The Initial Study presented in this Addendum uses the updated checklist in Appendix G of the CEQA Guidelines. As identified through the analysis presented in this Addendum, there would be no new significant impacts resulting from the proposed Project related to the changes Appendix G of the CEQA Guidelines.

**Conclusion**:

Accordingly, and based on the findings and information contained in the previously certified the Subarea 29 Specific Plan Final EIR, the analysis above, the attached Initial Study, and the CEQA statute and CEQA Guidelines, including sections 15164 and 15162, the proposed Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and the TOP Final EIR, as appropriate. No changes or additions to the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum or TOP Final EIR analyses are necessary, nor is there a need for any additional mitigation measures.

The attached Initial Study provides an analysis of the proposed Project and verification that the proposed Project will not cause environmental impacts such that any of the circumstances identified in CEQA Guidelines section 15162 are present.

**Surrounding Land Uses:**

| | Existing Land Use | General Plan Designation | Zoning Designation | Specific Plan Land Use |
|---|---|---|---|---|
| City of Ontario | | | | |
| Site | Vacant and SCE Corridor | Low Density Residential (2.1 – 5 du/ac) and Open Space – Non-Recreation | SP – Subarea 29 Specific Plan | Cluster Homes (7-14 du/acre) |
| North | Vacant | Low Density Residential (2.1 – 5 du/ac) | SP – Subarea 29 Specific Plan | Conventional Medium Lot (4-6 du/acre) |
| West: | Residential | Low Density Residential (2.1 – 5 du/ac) | SP – Subarea 29 Specific Plan Specific Plan | Cluster Homes (7-14 du/acre) and Conventional Small Lot (5-9 du/acre) |
| City of Eastvale | | | | |
| South | Residential | Medium Density Residential | R-1 One-Family Dwellings | NA |

du/acre – dwelling units per acre; NA – Not Applicable

**Other public agencies whose approval is required** (e.g., permits, financing approval or participation agreement): None.

**ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:**

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- ☐ Aesthetics
- ☐ Air Quality
- ☐ Cultural Resources
- ☐ Geology / Soils
- ☐ Hazards & Hazardous Materials
- ☐ Land Use / Planning
- ☐ Noise
- ☐ Public Services
- ☐ Transportation
- ☐ Utilities / Service Systems
- ☐ Mandatory Findings of Significance
- ☐ Agriculture and Forestry Resources
- ☐ Biological Resources
- ☐ Energy
- ☐ Greenhouse Gas Emissions
- ☐ Hydrology / Water Quality
- ☐ Mineral Resources
- ☐ Population / Housing
- ☐ Recreation
- ☐ Tribal Cultural Resources
- ☐ Wildfire

**DETERMINATION** (To be completed by the Lead Agency):

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier certified Subarea 29 Specific Plan Final EIR and associated 2015 Addendum pursuant to applicable standards, and (b) The certified TOP Final EIR and (c) have been avoided or mitigated pursuant to the earlier certified environmental documents, including revisions or mitigation measures that are imposed upon the proposed project, the analysis from the certified Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and the certified TOP EIR was used as a basis for this Addendum, and nothing further is required.

**EVALUATION OF ENVIRONMENTAL IMPACTS:**

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from the "Earlier Analyses" Section may be cross-referenced).

5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

   a) Earlier Analyses Used. Identify and state where they are available for review.

   b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The explanation of each issue should identify:

   a) The significance criteria or threshold, if any, used to evaluate each question; and

   b) The mitigation measure identified, if any, to reduce the impact to less than significance.

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **1. AESTHETICS.** Would the project: | | | | |
| a. Have a substantial adverse effect on a scenic vista? | ☐ | ☐ | ☐ | ☒ |
| b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? | ☐ | ☐ | ☐ | ☒ |
| c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality? | ☐ | ☐ | ☐ | ☒ |
| d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area? | ☐ | ☐ | ☐ | ☒ |
| **2. AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project: | | | | |
| a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? | ☐ | ☐ | ☐ | ☒ |
| b. Conflict with existing zoning for agricultural use, or a Williamson Act contract? | ☐ | ☐ | ☐ | ☒ |
| c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? | ☐ | ☐ | ☐ | ☒ |
| d. Result in the loss of forest land or conversion of forest land to non-forest use? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? | ☐ | ☐ | ☐ | ☒ |
| **3. AIR QUALITY.** Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project: | | | | |
| a. Conflict with or obstruct implementation of the applicable air quality plan? | ☐ | ☐ | ☐ | ☒ |
| b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard? | ☐ | ☐ | ☐ | ☒ |
| c. Expose sensitive receptors to substantial pollutant concentrations? | ☐ | ☐ | ☐ | ☒ |
| d. Result in other emissions (such as those leading to odors adversely affecting a substantial number of people? | ☐ | ☐ | ☐ | ☒ |
| **4. BIOLOGICAL RESOURCES.** Would the project: | | | | |
| a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☒ |
| b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☒ |
| c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? | ☐ | ☐ | ☐ | ☒ |
| d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? | ☐ | ☐ | ☐ | ☒ |
| e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? | ☐ | ☐ | ☐ | ☒ |
| f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **5. CULTURAL RESOURCES.** Would the project: | | | | |
| a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5? | ☐ | ☐ | ☐ | ☒ |
| b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5? | ☐ | ☐ | ☐ | ☒ |
| c. Disturb any human remains, including those interred outside of dedicated cemeteries? | ☐ | ☐ | ☐ | ☒ |
| **6. ENERGY.** Would the project: | | | | |
| a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation? | ☐ | ☐ | ☐ | ☒ |
| b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? | ☐ | ☐ | ☐ | ☒ |
| **7. GEOLOGY AND SOILS.** Would the project: | | | | |
| a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: | ☐ | ☐ | ☐ | ☒ |
| i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. | ☐ | ☐ | ☐ | ☒ |
| ii) Strong seismic ground shaking? | ☐ | ☐ | ☐ | ☒ |
| iii) Seismic-related ground failure, including liquefaction? | ☐ | ☐ | ☐ | ☒ |
| iv) Landslides? | ☐ | ☐ | ☐ | ☒ |
| b. Result in substantial soil erosion or the loss of topsoil? | ☐ | ☐ | ☐ | ☒ |
| c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? | ☐ | ☐ | ☐ | ☒ |
| d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property? | ☐ | ☐ | ☐ | ☒ |
| e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water? | ☐ | ☐ | ☐ | ☒ |
| f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **8. GREENHOUSE GAS EMISSIONS.** Would the project: | | | | |
| a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? | ☐ | ☐ | ☐ | ☒ |
| b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases? | ☐ | ☐ | ☐ | ☒ |
| **9. HAZARDS AND HAZARDOUS MATERIALS.** Would the project: | | | | |
| a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? | ☐ | ☐ | ☐ | ☒ |
| b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? | ☐ | ☐ | ☐ | ☒ |
| c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? | ☐ | ☐ | ☐ | ☒ |
| d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? | ☐ | ☐ | ☐ | ☒ |
| e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area? | ☐ | ☐ | ☐ | ☒ |
| f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |
| g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires? | ☐ | ☐ | ☐ | ☒ |
| **10. HYDROLOGY AND WATER QUALITY.** Would the project: | | | | |
| a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality? | ☐ | ☐ | ☐ | ☒ |
| b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: | ☐ | ☐ | ☐ | ☒ |
| i) result in substantial erosion or siltation on- or off-site; | ☐ | ☐ | ☐ | ☒ |
| ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; | ☐ | ☐ | ☐ | ☒ |
| iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or | ☐ | ☐ | ☐ | ☒ |
| iv) impede or redirect flood flows? | ☐ | ☐ | ☐ | ☒ |
| d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation? | ☐ | ☐ | ☐ | ☒ |
| e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan? | ☐ | ☐ | ☐ | ☒ |
| **11. LAND USE AND PLANNING.** Would the project: | | | | |
| a. Physically divide an established community? | ☐ | ☐ | ☐ | ☒ |
| b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? | ☐ | ☐ | ☐ | ☒ |
| **12. MINERAL RESOURCES.** Would the project: | | | | |
| a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? | ☐ | ☐ | ☐ | ☒ |
| b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? | ☐ | ☐ | ☐ | ☒ |
| **13. NOISE.** Would the project result in: | | | | |
| a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? | ☐ | ☐ | ☐ | ☒ |
| b. Generation of excessive groundborne vibration or groundborne noise levels? | ☐ | ☐ | ☐ | ☒ |
| c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **14. POPULATION AND HOUSING.** Would the project: | | | | |
| a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)? | ☐ | ☐ | ☐ | ☒ |
| b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere? | ☐ | ☐ | ☐ | ☒ |
| **15. PUBLIC SERVICES.** Would the project: | | | | |
| a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: | | | | |
| i) Fire protection? | ☐ | ☐ | ☐ | ☒ |
| ii) Police protection? | ☐ | ☐ | ☐ | ☒ |
| iii) Schools? | ☐ | ☐ | ☐ | ☒ |
| iv) Parks? | ☐ | ☐ | ☐ | ☒ |
| v) Other public facilities? | ☐ | ☐ | ☐ | ☒ |
| **16. RECREATION.** Would the project: | | | | |
| a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | ☐ | ☐ | ☐ | ☒ |
| b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? | ☐ | ☐ | ☐ | ☒ |
| **17. TRANSPORTATION/TRAFFIC.** Would the project: | | | | |
| a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities? | ☐ | ☐ | ☐ | ☒ |
| b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)? | ☐ | ☐ | ☐ | ☒ |
| c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? | ☐ | ☐ | ☐ | ☒ |
| d. Result in inadequate emergency access? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **18. TRIBAL CULTURAL RESOURCES.** Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: | | | | |
| a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)? | ☐ | ☐ | ☐ | ☒ |
| b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe. | ☐ | ☐ | ☐ | ☒ |
| **19. UTILITIES AND SERVICE SYSTEMS.** Would the project: | | | | |
| a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? | ☐ | ☐ | ☐ | ☒ |
| b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years? | ☐ | ☐ | ☐ | ☒ |
| c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | ☐ | ☐ | ☐ | ☒ |
| d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? | ☐ | ☐ | ☐ | ☒ |
| e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? | ☐ | ☐ | ☐ | ☒ |
| **20. WILDFIRE.** If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project: | | | | |
| a. Substantially impair an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire? | ☐ | ☐ | ☐ | ☒ |
| c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? | ☐ | ☐ | ☐ | ☒ |
| d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? | ☐ | ☐ | ☐ | ☒ |
| **21. MANDATORY FINDINGS OF SIGNIFICANCE.** | | | | |
| a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | ☐ | ☐ | ☐ | ☒ |
| b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.) | *1.*☐ | *2.*☐ | *3.*☐ | *4.*☒ |
| c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? | *5.*☐ | *6.*☐ | *7.*☐ | *8.*☒ |

## EXPLANATION OF ISSUES

The Subarea 29 Specific Plan Final EIR, certified in October 2006, was prepared as a Program EIR in accordance with CEQA, the CEQA Guidelines, and the City's Rules for the Implementation of CEQA. As required, the EIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by implementation of the Subarea 29 Specific Plan. The Final EIR focused on impacts from the proposed land uses associated with buildout of the Specific Plan Land Use Plan, and impacts from the resultant population and employment growth from the Specific Plan.

Once a Program EIR has been prepared, subsequent activities within the program must be evaluated to determine whether an additional CEQA document needs to be prepared. However, if the Program EIR addresses the program's effects as specifically and comprehensively as possible, many subsequent activities could be found to be within the Program EIR scope and additional environmental documents may not be required (CEQA Guidelines Section 15168[c]). When a Program EIR is relied on for a subsequent activity, the lead agency must incorporate feasible mitigation measures and alternatives developed in the Program EIR into the subsequent activities (Guidelines Section 15168[c][3]). If a later activity would have effects that were not examined in the Program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration.

Here, an Initial Study has been prepared to determine if the proposed Project is within the scope of the Subarea 29 Specific Plan Final EIR such that additional environmental review is not required. As discussed below, the City has concluded that no additional environmental review is required, such that this Initial Study can serve as an Addendum to the Subarea 29 Specific Plan Final EIR pursuant to Section 15164 of the CEQA Guidelines. Substantial changes are not proposed to the Subarea 29 Specific Plan Project and will not require revisions to the Subarea 29 Specific Plan Final EIR. The Specific Plan is divided into 31 Planning Areas and the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum evaluated the impacts associated with the development capacity of 2,392 units. As previously addressed, the currently proposed Project would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 to 73 (an increase of 26 units), would introduce a new housing typology, and includes proposed TTM 20389. Applicable mitigation measures from the Subarea 29 Specific Plan Final EIR are incorporated by reference in each impact area discussion and are listed at the conclusion of this Addendum under the "Earlier Analysis" section.

On January 26, 2010, the City of Ontario adopted TOP Policy Plan (General Plan). With the proposed Specific Plan Amendment, the total number of dwelling units allowed to be developed in the Subarea 29 Specific Plan area would increase from 2,392 dwelling units to 2,418 dwelling units, which is less than the 2,700 residential unit development capacity established by the Policy Plan (General Plan) for the Subarea 29 Specific Plan area. Additionally, the overall density of the Specific Plan area of 4.9 dwelling units per acre is consistent with the Policy Plan (General Plan) that allows up to 5 dwelling units per acre within the Low Density Residential (2.1 – 5 du/ac) land use designation. Finally, the City's water, recycled water, and sewer infrastructure would have sufficient capacity to serve the additional development allowed by the proposed Project. Therefore, no proposed changes or revisions to the Subarea 29 Final EIR are required. The proposed Project would not result in any additional impacts beyond those previously analyzed in the Subarea 29 Specific Plan Final EIR or the TOP Final EIR.

**1. AESTHETICS.** Would the project:

**a. Have a substantial adverse effect on a scenic vista?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that no substantial effect on a scenic vista would result from implementation of the proposed development. The Policy Plan (General Plan) does not identify scenic vistas within the City. However, the Policy Plan (Policy CD1-5) of TOP requires all major north-south streets be designed and constructed to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. North-south streets should be clear of visual clutter, including billboards and be enhanced appropriately by framing corridors with trees.

The Project site is located south of Merrill Avenue and is not located along any major north-south streets. Therefore, no adverse impacts related to scenic vistas would result from the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Substantially damage scenic resources, including, but not limited to, tress, rock outcroppings and historic buildings within a state scenic highway?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that no impacts to state scenic highways would result from implementation of the proposed development. The City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation. There are no historic buildings or any scenic resources identified on or in the vicinity of the Project site. Therefore, no scenic resources within a state scenic highway would be impacted by the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that the visual character of the Specific Plan area would be changed dramatically changed but would not be degraded with the introduction of a well-planned and landscaped new residential community, resulting in a less than significant impact. The Project site has been graded and remains vacant. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology (Motorcourt Cluster D – 8-plex) at the Project site. The proposed residential units would be consistent with the design standards of the Subarea 29 Specific Plan and the policies of the Community Design Element of the Policy Plan (General Plan) and zoning designations on the property, as well as with the existing and future development in the surrounding area. Therefore, the proposed Project would not degrade the visual quality of the area through development of the site with single-family homes. Therefore, no adverse impacts related to the degradation of the existing visual character or quality would result from the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that potential impacts associated with light and glare would be less than significant levels with adhere to the City's standard practices and procedures, including requirements to ensure that light does not spill onto

adjacent properties. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology (Motorcourt Cluster D – 8-plex) at the Project site. New lighting beyond that anticipated in the previous environmental analysis would not be introduced to the site with the development of the proposed Project. Pursuant to the requirements of the City's Development Code, on-site lighting would be shielded, diffused or indirect, to avoid glare to pedestrians or motorists. In addition, lighting fixtures would be selected and located to confine the area of illumination to within the Project site and minimize light spillage.

Site lighting plans would be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, no adverse impacts are anticipated.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**2. AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:

**a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that implementation of development allowed by the Specific Plan would result in the conversion of Prime Farmland to nonagricultural uses and considered the impact significant and unavoidable. According to the 2016 California Department of Conservation's (CDC) California Important Farmland Finder (the latest information available), the western portion of the Project site (including the SCE corridor) is classified as Prime Farmland and the eastern portion of the Project site is classified Other Land (CDC, 2016). The Project site has been graded and is currently vacant; therefore, the conversion of Prime Farmland to non-agricultural uses anticipated in the Subarea 29 Specific Plan Final EIR has already occurred. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The Subarea 29 Specific Plan Final EIR identified approximately 50% of the 540-acre Specific Plan Area designated Prime Farmland. The impact would remain as a significant and unavoidable impact.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that impacts related to

conflict with existing Williamson Act contracts would be significant and unavoidable. However, based on review of Figure III-1-1, Williamson Active Contracts Locations Map, there are no areas within the Specific Plan area that remain under a Williamson Act contract. Further, the Project site is zoned "Subarea 29 Specific Plan". The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and no changes to the impact conclusions presented in the Final EIR.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR did not address impacts associated with lands zone for forestland or timberland. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The Project site is zoned "Subarea 29 Specific Plan". There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither TOP nor the City's Zoning Code provide designations for forest land, timberland, or timberland production. There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The proposed Project would not result in any conflict with zoning for forest land, timberland, or timberland production.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Result in the loss of forest land or conversion of forest land to non-forest use?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR did not address impacts to forestland or timberland. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The Project site has been graded and is currently vacant; there is no forest land at or near the Project site. There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The proposed Project would not result in the loss of forest land or the conversion of forest land to non-forest uses. No impacts would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. Involve other changes in the existing environment, which, due to their location or nature, could result in the conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?**

Discussion of Effects: As previously discussed, the Subarea 29 Specific Plan Final EIR concluded that implementation of development in the Specific Plan area would convert Farmland, and specifically Prime Farmland, to non-agricultural use. The conversion of farmland to urban uses was determined to be a potentially significant impact that is unavoidable. The Project site has been previously graded and although the western portion of the site continues to be classified as Prime Farmland, the conversion of Farmland to non-agricultural use has already occurred. Similarly, the areas surrounding the Project site have been developed or are under construction. There is no forest land at or near the Project site so no conversion of forest land to non-forest use would occur.

There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the conversion of Farmland to non-agricultural use would remain as a significant and unavoidable impact. There is no additional mitigation available that could potentially reduce this impact. The impact will remain as a significant unavoidable impact.

It should also be noted that in order to minimize conflicts between urban and agricultural land uses, MM Ag 2 from the Subarea 29 Specific Plan Final EIR requires that all residential units in the Subarea 29 Specific Plan be provided with a deed disclosure, or similar notice, approved by the City Attorney, regarding the proximity and nature, including odors, of neighboring agricultural uses. Mitigation Measure (MM) Ag 2 remains applicable to proposed development in Planning Area 27 and is presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation Required: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. Applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**3. AIR QUALITY**. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

**a. Conflict with or obstruct implementation of the applicable air quality plan?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Subarea 29 Specific Plan would not impair implementation of the Air Quality Management Plan (AQMP) and would result in less-than-significant impacts. Since certification of the Subarea 29 Specific Plan Final EIR, the South Coast Air Quality Management District (SCAQMD) has updated the AQMP. The current AQMP for CEQA analysis purposes is the 2016 AQMP, which is a regional and multi-agency effort (SCAQMD, California Air Resources Board [CARB], Southern California Association of Governments [SCAG], and United States Environmental Protection Agency [USEPA]). The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. City and county general plans were used to develop the growth and pollutant emissions forecasts in the 2016 AQMP. With the proposed Specific Plan Amendment, the total number of units allowed in the Subarea 29 Specific Plan area would increase from 2,392 dwelling units to 2,418 units, which is less than the 2,700 residential unit development capacity established by TOP Policy Plan (General Plan) for the Subarea 29 Specific Plan area. Therefore, consistent with the conclusions of the Subarea 29 Specific Plan Final EIR, the proposed Project would not conflict with the AQMP's growth assumptions or the AQMP, resulting in a less than significant impact.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that during construction and operation, implementation of development allowed by the Subarea 29 Specific Plan would result in significant and unavoidable project-level and cumulative impacts associated with emissions of air pollutants for which the region (South Coast Air Basin [SCAB]) is in non-attainment. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site.

With respect to construction emissions, the types of construction activities and construction equipment that would be used for construction in Planning Area 27 would be the same as that evaluated in the Subarea 29 Specific Plan Final EIR. However, as shown on the aerial photograph provided on Figure 3, the majority of approved land uses in the Subarea 29 Specific Plan area have been constructed or are currently under construction. Additionally, the mass grading for the 5.99-acre Project site, which uses larger equipment (and generates higher air quality emissions) has been completed; finish grading activities would be conducted as part of the proposed Project. Therefore, the construction activities associated with the proposed Project would be less than what was anticipated for a peak construction day as analyzed in the Subarea 29 Specific Plan Final EIR. It should also be noted that federal and State requirements for cleaner diesel engines would further reduce construction emissions compared to estimates in the Subarea 29 Specific Plan Final EIR. Additionally, MM Air 1 though MM Air 3, which identify requirements to reduce construction emissions, would be implemented during construction of the proposed Project. These mitigation measures are presented under the discussion of "Earlier Analysis" at the end of this document. Therefore, daily construction emissions resulting from the proposed Project would not exceed those presented in the Subarea 29 Specific Plan Final EIR and likely would be less.

Mobile emissions are the primary factor associated with operational emissions. Based on the *Park Place Specific Plan (Planning Area 27) Trip Generation Assessment* (Trip Generation Assessment) prepared by Urban Crossroads (November 2020), the increase in 26 units within Planning Area 27 associated with proposed Project would generate 168 additional daily trips compared to that anticipated for Planning Area 27 in the Subarea 29 Specific Plan Final EIR (Urban Crossroads, 2020). However, the total number of units and associated vehicular trip generation would be less than anticipated in TOP and evaluated in TOP Final EIR for the Subarea 29 Specific Plan area (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment). Additionally, based on the SCAQMD 1993 CEQA Handbook, it is estimated that a potentially significant air quality impact would occur with the development of approximately 166 units; therefore, the development of an additional 26 dwelling units alone would not represent a significant air quality impact and would not represent a substantial increase in emissions beyond those already approved in the Subarea 29 Specific Plan Final EIR and 2015 Addendum.

Therefore, although the proposed Project would increase the number of units and associated operational air pollutant emissions associated with development in the Subarea 29 Specific Plan area, and specifically Planning Area 27, including emissions of criteria pollutants for which the Project region is non-attainment under an applicable federal or state ambient air quality standard, the proposed Project would not result in any new or substantially more severe impacts beyond that previously analyzed in the Subarea 29 Specific Plan Final EIR and TOP Final EIR. Additionally, consistent with MM Air 4 from the Subarea 29 Specific Plan Final EIR, a bus stop is planned at Haven Avenue, just north of Merrill Avenue. This bus stop will be approximately 0.25 mile from the Project site (within walking distance), and would facilitate use of transit to reduce vehicular trips and associated air pollutant emissions. MM Air 4 is presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No

changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Expose sensitive receptors to substantial pollutant concentrations?**

Discussion of Effects: Sensitive receptors are defined as populations that are more susceptible to the effects of pollution than the population at large. The SCAQMD identifies the following as sensitive receptors: long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences, schools, playgrounds, child care centers, and athletic facilities. The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would result in increased local traffic volumes, but would not expose sensitive receptors to substantial localized carbon monoxide (CO) concentrations. Additionally, the Final EIR concluded that emissions during project construction would exceed the SCAQMD localized significance thresholds (LSTs) for nitrogen oxides (NOx) and particulates (PM10), resulting in a potentially significant and unavoidable impact to sensitive receptors.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would not be a change or increase in the type and amount of construction activities, type of uses proposed (residential), or proximity to sensitive receptors. Therefore, the proposed minimal increase of 26 residential dwelling units within Planning Area 27 would not result in a substantial increase in the number of sensitive receptors being exposed to pollutant concentrations, or the amount of pollutant concentrations resulting from implementation of development in the Subarea 29 Specific Plan area.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that potential odor impacts resulting from implementation of the Specific Plan would be less than significant. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed additional residential units, as well as those permitted within the Low-Density Residential zoning district, do not create objectionable odors. Therefore, no adverse impacts are anticipated.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**4. BIOLOGICAL RESOURCES.** Would the project:

**a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded there may be a probability of burrowing owl (*Athene cunicularia hypogea*) colonization within the Subarea 29 Specific Plan area considering the presence of foraging habitat and previous records of presence. To ensure that no direct loss of individuals occurs, mitigation is required prior to initiation of on-site

grading activities for each development phase. With mitigation impacts to burrowing owl were determined to be less than significant. Specifically, MM Bio 1 requires a pre-construction survey for resident burrowing owls be conducted by a qualified biologist 30 days prior to construction activities. If ground-disturbing activities are delayed or suspended for more than 30 days after the preconstruction survey, the site should be resurveyed for owls. The Project site was previously graded and the required pre-construction surveys were conducted. However, the site remains vacant and pre-construction surveys would be conducted again prior to construction for the proposed Project. MM Bio 1 is presented under the discussion of "Earlier Analysis" at the end of this document. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and impacts to burrowing owl would remain less than significant.

The Subarea 29 Specific Plan EIR analysis also identified that potential habitat for the federally listed Delhi sands Flower Loving Fly (DSFLF) (*Rhaphiomidas terminatus abdominalis*). Planning Areas 28 A & B (including Bellegrave Avenue in Planning Area 28), 30 A & B, 31, and 32 were included in the general biological assessment for the area and were determined to contain the soil series Delhi fines and may contain suitable habitat for the DSFLF. Based on the results of focused surveys, the Final EIR concluded that Planning Area 27 (the current Project site) does not support the DSFLF. Further, the Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Therefore, the proposed Project would not impact the DSFLF.

In August 2014, ECORP Consulting updated the Biological Reconnaissance for the Subarea 29 Specific Plan Area and concluded that due to the high level of disturbance, the land use activity, and lack of suitable habitat that all other sensitive species identified during the database search are either presumed to be absent or have a very low potential to occur. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Additionally, the Project Applicant has paid the required City of Ontario open space mitigation fee (MM Bio 2) to address potential cumulative impacts associated with loss of habitat. The proposed Project would have a less than significant impact on candidate, sensitive, or special status species.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the man-made ponds within the Specific Plan area did not support riparian habitat, that the habitat value was low due to the lack of species and structural diversity, and that habitat for sensitive biological resources is not present. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The Project site does not support riparian habitat or other sensitive natural communities and no impact to such resources would occur with implementation of the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan (through construction and operation) would not have direct and indirect effects upon the hydrology and aquatic habitat quality of state or federally protected wetlands and "Others Waters" of the United States as defined Section 404 of the *Clean Water Act*. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. There are no protected wetlands on-site, as defined by Section 404 of the Clean Water Act and no impact to protected wetlands would occur with implementation of the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would not interfere with migratory movement and considered the impact less than significant because habitat fragmentation already occurred due to agricultural practices, development, and road construction. No wildlife corridors were identified within the Specific Plan area, including the Project site. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The Project site is surrounding be existing development and is not within or near any native wildlife nursery sites. Additionally, construction activities would be conducted in compliance with the Migratory Bird Treaty Act (MBTA) and CDFW requirements (refer to MM Bio 4, which is presented under the discussion of "Earlier Analysis" at the end of this document). Therefore, the proposed Project would not interfere with the movement of any species, with migratory wildlife corridors, or impede the use of a native wildlife nursery site, and impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that there are no specific local policies or ordinances established to protect biological resources that would relate to the Project site and impacts relative to this issue would be less than significant. The City of Ontario does not have any municipal ordinances for the protection of trees on private property; however, Municipal Code Sections 10-1.25 and 10-2.05 prohibit the damaging or destruction of trees on City property, except under conditions specified in the Municipal Code. There are existing trees planted in the public right-of-way along Merrill Avenue north of the Project site; however, these trees would be retained, and the proposed Project would not conflict with any policies or ordinances protecting biological resources.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions

to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area is not part of an adopted HCP, NCCP or other approved habitat conservation plan and that no significant impacts would result. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Therefore, the Project site is not within an adopted HCP, NCCP or another approved habitat conservation plan. However, it is within the Ontario Recover Unit for the DSFLF; refer to the discussion above related to potential impacts to this species. As identified, impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**5. CULTURAL RESOURCES.** Would the project:

**a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would not result in the destruction of historical resources and considered the impact less than significant. The Project site has been graded, is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and is currently vacant. City records do not reflect the presence of a historic resource as defined in CEQA Guideline section 15064.5 at, or in the vicinity of the Project site and no impacts to historical resources would result from implementation of the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded there is a low potential for adverse environmental impacts to unique archaeological resources and potential impacts were determined to be less than significant. However, the Final EIR included mitigation outlining actions to take in the unlikely event unknown resources were discovered during grading (refer to MM Cultural 1). The Project site has been graded, and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. No archaeological resources were encountered during previous grading activities and no impacts to archaeological resources would occur during remaining construction activities, which would occur in previously disturbed soils. However, in the unlikely event archaeological resources are encountered the requirements outlined in MM Cultural 1, which is presented under the discussion of “Earlier Analysis” at the end of this document, would be followed and impacts would remain less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Disturb any human remains, including those interred outside of formal cemeteries?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded there is low potential for adverse environmental impacts to human remains, including those interred outside of a formal cemetery, and impacts were determined to be less than significant. However, the Final EIR included mitigation outlining actions to take in the unlikely event human remains were discovered during grading (refer to MM Cultural 2). The Project site has been graded, and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. No human remains were discovered during previous grading activities and it is not anticipated that human remains would be encountered during remaining construction activities. However, in the unlikely event human remains are encountered the requirements outlined in MM Cultural 2, which is presented under the discussion of "Earlier Analysis" at the end of this document, would be followed and impacts would remain less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**6. ENERGY**. Would the project:

Although Energy was added in December 2018 as a topic in the Environmental Checklist included in Appendix G of the CEQA Guidelines, analysis of a project's potential to result in a significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources is not a new requirement. This issue is also addressed in Appendix F of the CEQA Guidelines. Energy consumption was addressed in the Subarea 29 Specific Plan Final EIR (Section III.12, Utilities/Service Systems).

**a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that development in the Specific Plan area would have less than significant impacts related to energy consumption (natural gas and electric). It was identified that energy consumption can be reduced through design considerations that are more sustainable than conventional construction; MM Util 6 requires that the City and developer include sustainable systems for use of energy within the project design.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project would not change the type of land uses anticipated for Planning Area 27 (residential) and would not change the anticipated construction and operational characteristics of the proposed development. Therefore, the associated energy demand for these activities would be the same as discussed below.

Construction-related energy demand includes energy and fuel used by construction equipment, construction worker vehicles, and construction vendor / hauling vehicles, coupled with construction energy efficiency / conservation measures. The construction equipment, use of electricity, and fuel for the proposed Project would be typical for the type of construction proposed because there are no aspects of the proposed construction process that are unusual or energy-intensive, and construction equipment would conform to applicable CARB emissions standards, which promote equipment fuel efficiencies. It should also be noted that fuel efficiencies are improving for on- and off-road vehicle engines due to more stringent government requirements. Construction energy consumption would represent a "single-event" demand and would not require ongoing or permanent commitment of energy resources. Thus, construction energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

With respect to operations, Title 24 energy standards have become more stringent since 2006. These regulations are regularly updated. The 2019 version of Title 24 was adopted by the CEC and became effective on January 1, 2020. The 2019 Title are applicable to building permit applications submitted on or after January 1, 2020. Further, the California Green Building Standards (CALGreen) Code, which contains mandatory and voluntary requirements for new residential and nonresidential buildings, became effective in August 2009 following certification of the Subarea 29 Specific Plan Final EIR. The proposed residential buildings would be constructed to achieve the building energy standards set forth in the Title 24 requirements in effect at the time of building permit issuance. Therefore, there would be additional reductions in energy consumption pursuant to the new and updated codes compared to those anticipated in the Subarea 29 Specific Plan Final EIR. Further, the types of trips and vehicle mix generated by the proposed Project would be consistent with other residential development of similar scale and configuration, including other development in the Subarea 29 Specific Plan area. The proposed Project does not propose uses or operations that would inherently result in excessive and wasteful vehicle trips and vehicle miles traveled, nor associated excess and wasteful vehicle energy consumption.

Therefore, the proposed Project would not result in wasteful, inefficient, or unnecessary consumption of energy resources during construction or operation and the impact would remain less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?**

Discussion of Effects: The potential for development within the Subarea 29 Specific Plan area to conflict with or obstruct a state or local plan for renewable energy or energy efficiency was not specifically addressed in the Final EIR or 2015 Addendum. However, federal and state agencies regulated energy use and consumption through various means and programs when the 2006 EIR was prepared and continue to do so. On the state level, the California Public Utilities Commission (CPUC) and the California Energy Commission (CEC) are two agencies with authority over different aspects of energy. In additional to Title 24 energy standards and the CALGreen Code addressed above, relevant state energy-related laws and plans are summarized below.

- **Integrated Energy Policy Report**. Senate Bill (SB) 1389 (Bowen, Chapter 568, Statutes of 2002) requires the CEC to prepare a biennial integrated energy policy report that assesses major energy trends and issues facing California's electricity, natural gas, and transportation fuel sectors and provides policy recommendations to conserve resources; protect the environment; ensure reliable, secure, and diverse energy supplies; enhance the state's economy; and protect public health and safety. The 2019 IEPR was adopted January 31, 2020, and continues to work towards improving electricity, natural gas, and transportation fuel energy use in California. The 2019 IEPR focuses on a variety of topics such as including the environmental performance of the electricity generation system, landscape-scale planning, the response to the gas leak at the Aliso Canyon natural gas storage facility, transportation fuel supply reliability issues, updates on Southern California electricity reliability, methane leakage, climate adaptation activities for the energy sector, climate and sea level rise scenarios, and the California Energy Demand Forecast. The 2019 IEPR is a State Policy report and is not applied to individual development projects such as the proposed Project or other development in the Subarea 29 Specific Plan area. However, the proposed Project would not involve any uses or activities that would conflict with or otherwise hinder or obstruct implementation of the goals presented in the 2019 IEPR.
- **State of California Energy Plan**. The CEC is responsible for preparing the State of California Energy Plan (State Energy Plan), which identifies emerging trends related to energy supply, demand, conservation, public health and safety, and the maintenance of a healthy economy. The State Energy Plan calls for the state to assist in the transformation

of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the State Energy Plan identifies a number of strategies, including assistance to public agencies and fleet operators and encouragement of urban designs that reduce vehicle miles traveled and accommodate pedestrian and bicycle access. The proposed Project takes advantage of existing infrastructure systems, and promotes land use compatibilities through the development of residential uses on a site designated for such uses in the TOP and the Subarea 29 Specific Plan. Further, Merrill Avenue extends along the northern boundary of the Project site and will provide Class II bike lanes, a pedestrian walkway, and a multi-purpose trail to promote non-vehicular travel. The Subarea 29 Specific Plan and the proposed Project would support urban design and planning processes identified under the State Energy Plan, and would not otherwise interfere with or obstruct implementation of the State Energy Plan.

- **State of California Renewables Portfolio Standard (SB 1078, SB 107, and SBX1-2)**. Established in 2002 under SB 1078, and accelerated in 2006 under SB 107 and again in 2011 under SBX1-2, California's Renewables Portfolio Standard (RPS) Program requires retail sellers of electric services to increase procurement from eligible renewable energy resources. The RPS applies to all electricity retailers in the State including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators. All of these entities must adopt the RPS goals of 20% of retail sales from renewables by the end of 2013, 25% by the end of 2016, and 33% by the end of 2020. As with the rest of the Subarea 29 Specific Plan area, the proposed Project would receive electricity from SCE. SCE is required by law to comply with RPS Goals. Therefore, the proposed Project would not interfere with nor obstruct implementation of the RPS.

The proposed Project would also comply with the requirements of the City's Climate Action Plan (CAP), which is addressed under the Greenhouse Gas Emissions section of this document. Compliance with the CAP would be achieved through the implementation of an array of project design features that would conserve or reduce energy use, (i.e., improved insulation, water use reduction, use of recycled water, solar energy, etc.).

Therefore, the proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency, and this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**7. GEOLOGY & SOILS**. Would the project:

**a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:**

**i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area, including the Project site, is located outside the Fault Rupture Hazard Zone (formerly Alquist-Priolo Zone) and there would no impacts related to rupture of a known earthquake fault. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Therefore, no impacts associated with rupture of a known earthquake fault would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No

changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**ii) Strong seismic ground shaking?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan could expose people or structures to seismic hazards; however, with implementation of mitigation this impact would be less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the underlying geologic conditions at the Project site remain the same. As identified in the Final EIR, all construction would be conducted in compliance with the Uniform Building Code (UBC), the Ontario Municipal Code, TOP and all other ordinances adopted by the City related to construction and safety. Further, as required, the previous grading activities at the Project site (Planning Area 27) were subject to observation and testing. It was concluded that rough grading was performed in general accordance with the recommendations presented in the geotechnical reports and field, and Planning Area 27 is acceptable from a geotechnical standpoint (Leighton and Associates, 2019). Further, MM Geo 4 from the Subarea 29 Specific Plan Final EIR requires that a project-specific geotechnical investigation be prepared prior to issuance of building permits and the recommendations be incorporated during project design and grading. MM Geo 4, which is presented under the discussion of "Earlier Analysis" at the end of this document, is applicable to the proposed Project. This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**iii) Seismic-related ground failure, including liquefaction?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that due to the consistency of the underlying soils and the deep groundwater levels, the potential for seismic-induced liquefaction was less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the potential for seismic-induced liquefaction remains the same (less significant). Further, as identified above, based on observations and testing during grading, Planning Area 27 is acceptable from a geotechnical standpoint (Leighton and Associates, 2019). Therefore, this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**iv) Landslides?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the topography of the Specific Plan area is virtually flat, and the potential for landslides is considered not significant. The Project site has been graded and the terrain remains level. No impacts related to seismically induced landslides would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Result in substantial soil erosion or the loss of topsoil?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan could alter site topography, which could affect the rate or extent of erosion; however, with implementation of mitigation measures this impact would be less than significant. The Project site has been graded and remains vacant with exposed soil. Compliance with applicable regulations, including implementation of erosion control and dust reduction measures required by the Stormwater Pollution Prevention Plan (SWPPP), review of grading plans by the City Engineer, and obtaining required permits (refer to MM Geo 1, which is presented under the discussion of "Earlier Analysis" at the end of this document), ensure that erosion impacts are less than significant, and. Under the developed condition, and with adherence to the requirements of the National Pollutant Discharge Elimination System (NPDES) requirements and the Environmental Resource Element of the Policy Plan (General Plan) strategies, and compliance with the UBC and Ontario Municipal code requirements the potential for erosion would be reduced to a less than significant level.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would locate structures on soils that are considered potentially unstable and prone to settlement and corrosion; however, with implementation of mitigation measures this impact would be less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the underlying geologic conditions at the Project site remain the same. As required, the previous grading activities at the Project site (Planning Area 27) were subject to observation and testing. It was concluded that rough grading was performed in general accordance with the recommendations presented in the geotechnical reports and field, and Planning Area 27 is acceptable from a geotechnical standpoint (Leighton and Associates, 2019). Further, implementation of TOP strategies, adherence to requirements outlined in the Uniform Building Code and Ontario Municipal code, and implementation of MM Geo 2 and MM Geo 4, which require further geotechnical evaluation of on-site soils prior to development, would ensure that impacts remain less than significant. MM Geo 2 and MM Geo 4 are presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would locate structures on soils characterized by their sandy texture and inability to hold moisture. Therefore, the potential for expansive soils was determined to be less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the underlying geologic conditions at the Project site remain the same. Further, as required, the previous grading activities at the Project site (Planning Area 27) were subject to observation and testing. It was concluded that rough grading was performed in general accordance with the recommendations presented in the geotechnical reports

and field, and Planning Area 27 is acceptable from a geotechnical standpoint (Leighton and Associates, 2019). This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would involve the removal of existing septic tanks, and a complete sewer system would be installed that does not require the use of septic tanks. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and the proposed residential uses would be connected to sewer lines that have been installed to serve the Specific Plan area. There would no use of septic systems or alternative wastewater treatment systems and no impact would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that earth-disturbing activities associated with the implementation of the Specific Plan could potentially disturb or damage undocumented paleontological resources; however, with implementation of MM Cultural 3, this impact would be less than significant. The Project site has been graded, and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. No paleontological resources were encountered during previous grading activities, which were conducted in compliance with the requirements outlined in the *Paleontological Resources Monitoring and Treatment Plan* established for the Subarea 28 Specific Plan. No impacts to paleontological resources are expected to occur during remaining construction activities, which would occur in previously disturbed soils. However, in the unlikely event paleontological resources are encountered, applicable requirements outlined in MM Cultural 3 would be followed and impacts would remain less than significant. MM Cultural 3 is presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

## 8. GREENHOUSE GAS EMISSIONS.

The State of California enacted Assembly Bill (AB) 32, the California Global Warming Solutions Act of 2006, after certification of the Subarea 29 Specific Plan Final EIR, and, as a result, increased attention has been paid to the impact of GHG emissions. The California Natural Resources Agency (CNRA) in 2010, adopted amendments to the CEQA Guidelines in a new Section 15064.4 entitled "Determining the Significance of Impacts from Greenhouse Gas Emissions", which require evaluation of GHG emissions. Therefore, GHG emissions were not specifically identified as such in the Subarea 29 Specific Plan Final EIR analyses. However, as described in the following paragraphs, courts have ruled

that there is no requirement to address GHG emissions in an Addendum to an EIR that was completed prior to the adopted CEQA amendments. "Information on the effect of greenhouse gas emissions on climate change" does not constitute "new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the IS / MND was adopted." (See *Citizens for Responsible Equitable Environmental Development v. City of San Diego* [2011] 196 Cal. App. 4th 515, 531–532 [rejecting claim that such information triggered the need for a supplemental EIR, and explaining that such information was known "long before the City approved the 1994 EIR" at issue]). Further, the impact of buildout of TOP on the environment due to the emission of GHG emissions was analyzed in the TOP Final EIR. As previously discussed, the proposed buildout of the Subarea 29 Specific Plan was previously analyzed in TOP Final EIR, which was certified by the City.

Would the project:

**a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

Discussion of Effects: Limiting GHG emissions to combat climate change has been a governmental goal since the late 1970s. As explained by the United States Supreme Court in *Massachusetts v. EPA (2007) 549 U.S. 497*: "In the late 1970s, the Federal Government began devoting serious attention to the possibility that carbon dioxide emissions associated with human activity could provoke climate change. In 1978, Congress enacted the National Climate Program Act, 92 Stat. 601, which required the President to establish a program to "assist the Nation and the world to understand and respond to natural and man-induced climate processes and their implications". In 1987, Congress enacted the Global Climate Protection Act for the purpose of "establish[ing] a national climate program that will assist the Nation and the world to understand and respond to natural and man-induced climate processes and their implications" (15 *United States Code* [USC] 2902). The act required the establishment of various programs to further climate change research (15 USC 2904[d]).

In 1988, the United Nations created the Intergovernmental Panel on Climate Change (IPCC) to provide scientific information regarding climate change to policymakers. In 1992, 154 nations, including the United States, entered into the United Nations Framework Convention on Climate Change (UNFCCC), a nonbinding agreement under which industrialized countries pledged to work to reduce GHG emissions. Five years later, in 1997, the parties to the UNFCCC adopted the Kyoto Protocol, which set binding GHG reduction targets for 37 industrialized countries and the European Community, with the objective of reducing their collective emissions by 5% below 1990 levels during the "commitment period" of 2008–2012.

As noted by the court in *Citizens for Responsible Equitable Environmental Development v. City of San Diego* (supra, 196 Cal. App. 4th 515), by 1990, the potential impacts of GHG emissions were already the subject of litigation, with the "Natural Resources Defense Council (NRDC) argu[ing that an] "increase in fossil fuel combustion … will … lead to a global increase in temperatures, causing a rise in sea level and a decrease in snow cover that would damage the shoreline, forests, and agriculture of California." (Id. at 531, quoting *City of Los Angeles v. National Highway Traffic Safety Administration* [D.C. Cir. 1990] 286 U.S. App.D.C. 78.)

Thus, by the 1990s, California's local governmental agencies were well aware of the importance of monitoring and limiting GHG emissions when approving projects. Since GHG impacts were known at the time that the Subarea 29 Specific Plan Final EIR was conducted, information regarding the proposed Project's potential to impact climate change does not constitute "new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time . . . the IS / MND was adopted". Accordingly, the inclusion of GHG impacts as a requirement of CEQA analysis does not trigger the need for any further environmental review. (See *Citizens for Responsible Equitable Environmental Development v. City of San Diego* [supra, 196 Cal. App. 4th at 531–532]). Notwithstanding this conclusion, the discussion below addresses the analysis of the proposed Project included in TOP Final EIR.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. With the

proposed Specific Plan Amendment, the total number of units allowed in the Subarea 29 Specific Plan area would increase from 2,392 dwelling units to 2,418 units, which is less than the 2,700 residential unit development capacity established by TOP Policy Plan (General Plan) for the Subarea 29 Specific Plan area. Therefore, the Project site was previously analyzed by the Certified TOP EIR as a residential use that may have an impact on the environment at buildout of The Ontario Plan due to the emission of GHGs. According to TOP Final EIR, this impact would be significant and unavoidable (Re-circulated Portions of the Ontario Plan Draft Environmental Impact Report, p. 2-118.) TOP Final EIR was certified by the City on January 27, 2010, at which time a statement of overriding considerations was also adopted for The Ontario Plan's significant and unavoidable impacts, including that concerning the emission of GHGs.

Implementation of the proposed Project would not create significantly greater impacts than were identified in the Certified TOP EIR. The proposed Project includes a sample GHG Reduction Measures Screening Threshold Table, which provides guidance in measuring the reduction of GHG emissions attributable to certain design and construction measures incorporated into development projects. The analysis, methodology, and significance determination (thresholds) are based upon the City's Climate Action Plan (CAP), which includes GHG emission inventories (2008 and 2020 forecasts), a year 2020 emission reduction target, the goals and policies to reach the target, together with the Addendum prepared for the CAP. The Screening Table assigns points for each option incorporated into a project as mitigation or a project design feature (collectively referred to as "feature"). The point values correspond to the minimum emissions reduction expected from each feature. The menu of features allows maximum flexibility and options for how development projects can implement the GHG reduction measures. The point levels are based upon improvements compared to 2008 emission levels of efficiency. Projects that garner at least 100 points will be consistent with the reduction quantities anticipated in the City's CAP. As such, those projects that garner a total of 100 points or greater would not require quantification of project specific GHG emissions. Consistent with CEQA Guidelines, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions. Future development on the Project site will be required to meet or exceed the minimum 100 points; therefore, quantification of Project-specific GHG emissions is not required.

Additionally, pursuant to Public Resources Code Section 21083.3, this impact need not be analyzed further, because (1) the proposed Project would result in an impact that was previously analyzed in the Certified TOP Final EIR; (2) the proposed Project would not result in any greenhouse gas impacts that were not addressed in the Certified EIR; (3) the proposed Project is consistent with The Ontario Plan. The proposed impacts of the Project were already analyzed in the Certified TOP Final EIR and the Project would be built to current energy efficient standards. Potential impacts of project implementation would be less than significant with mitigation already required under the Certified TOP Final EIR and, CAP Screening Tables, and current energy efficiency standards. No changes or additions to the Certified TOP Final EIR analyses are necessary.

Mitigation: No new mitigation measures required. The proposed Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP Final EIR. No changes or additions to Certified TOP Final EIR analyses are necessary. The mitigation measures adopted as part of Certified TOP Final EIR adequately address any potential significant impacts and there is no need for any additional mitigation measures. The City has reviewed the emission reduction measures and concepts in TOP Final EIR, and has determined that the following actions apply and shall be undertaken by the applicant in connection with the proposed Project: energy efficient design, efficient irrigation systems, and compliance with Title 24 of the California Code of Regulations.

**b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?**

Discussion of Effects: The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. With the proposed Specific Plan Amendment, the total number of units allowed in the Subarea 29 Specific Plan area would increase from 2,392 dwelling units to 2,418 units, which

is less than the 2,700 residential unit development capacity established by TOP Policy Plan (General Plan) for the Subarea 29 Specific Plan area.

The proposed Project is consistent with TOP Goal ER 4 of improving air quality by, among other things, implementation of Policy ER4-3, regarding the reduction of GHG emissions in accordance with regional, state and federal regulations. As discussed above, the proposed Project is also consistent with the City's CAP. Further, the proposed Project is consistent with the policies outlined in Section 5.6.4 of TOP Final EIR, which aims to reduce the City's contribution of greenhouse gas emissions at build-out by 15%, because the proposed Project is upholding the applicable City's adopted mitigation measures from the TOP Final EIR. Therefore, the proposed Project does not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing GHG emissions. This impact is less than significant.

Mitigation Required: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**9. HAZARDS & HAZARDOUS MATERIALS.** Would the project:

**a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that implementation of the proposed residential and retail uses would not generate hazardous materials other than those typically associated with household products, and there would be no transport of non-construction related hazardous materials to or from the Specific Plan area. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no new uses proposed and the Proposed Project would not involve the transport, use or disposal of hazardous materials during either construction or operation. Therefore, no adverse impacts are anticipated and this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that if known and unknown hazardous materials/situations within the Specific Plan area are not mitigated, current and future residents could be exposed to hazards or hazardous materials (e.g., asbestos and lead from building materials and paints in older structures, pesticides from past agricultural uses, or petroleum products used or leaked on the site), resulting in a potentially significant impact. However, this impact would be less than significant with implementation of mitigation measures. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, the Project site has already been graded, and mitigation measures outlined in the Subarea 29 Specific Plan Final EIR for pre-demolition and grading activities have been completed. There are no new uses proposed and development the proposed residential uses would not expose the public or the environment to a significant hazard through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. In the unlikely event of an accident, implementation of the strategies included in TOP would decrease the

potential for health and safety risks from hazardous materials, Further, MM Haz 4 from the Subarea 29 Specific Plan Final EIR, which is presented under the discussion of "Earlier Analysis" at the end of this document, identifies actions to take if material that is believed to be hazardous waste is discovered during construction, ensuring the impact remains less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area was more than one-mile from the Phoenix High School (Corona-Norco Unified School District [CNUSD]) and Colony High School (Chaffey Joint Union High School District [CJUHSD]), but within one-quarter mile of the proposed elementary school within the Specific Plan area. Therefore, while the proposed uses would not involve hazardous emissions or handling of acutely hazardous materials, future students could be exposed to possible safety hazards associated with hazardous emissions or hazardous material handling in proximity to a school resulting in a potentially significant impact. However, this impact was considered less than significant with implementation of mitigation measures.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, the Project site has already been graded, and mitigation measures outlined in the Subarea 29 Specific Plan Final EIR for pre-demolition and grading activities have been completed. The Project site is 0.2-mile from the proposed elementary school; however, there are no new uses proposed and development the proposed residential uses would not involve hazardous emissions or handling of acutely hazardous materials. This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?**

Discussion of Effects: he Subarea 29 Specific Plan Final EIR analysis concluded that Specific Plan area was not included on a list of hazardous materials compiled pursuant to Government Code Section 65962.5 (Cortese List), and none of the sites identified in the Phase I Environmental Site Assessment conducted during preparation of the Final EIR represent an environmental concern for proposed uses. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and the Project site has already been graded. Further, based on review of the current California Department of Toxic Substances Control (DTSC) current Cortese List, the Project site is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5 (DTSC, 2021). Therefore, no impact would occur.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that the Specific Plan area is within the Airport Influence Area (AIA) for the Chino Airport resulting in a potentially significant impact. However, because planned land uses would be consistent with those allowed in the applicable airport safety zones, building heights would not exceed applicable height requirements related to airport safety (refer to MM Haz 8), and buyers would be notified of proximity to the airport (refer to MM Haz 9), proposed development in the Specific Plan area would not result in a safety hazard or excessive noise related to proximity to the Chino Airport. MM Haz 8 and MM Haz 9 are presented under the discussion of "Earlier Analysis" at the end of this document.

The Subarea 29 Specific Plan area is located within the Chino ALUCP Compatibility Zone D (refer to Exhibit C – Airport Influence Areas) that requires: (1) 10% of the area be set aside as Open Land for the purpose of serving as emergency landing areas; (2) residential density be either higher than 5.0 dwelling units per acre or have an average parcel size of less than 0.2 acres (8,712 SF); (3) limits the maximum building height to 70 feet; and (4) recording of an Overflight Notification on the Property Deed and Title and provision of a Real Estate Transaction Disclosure. The impacts of the Chino Airport were analyzed in the TOP Final EIR, which was certified by the City on January 27, 2010, at which time mitigation measures were adopted for TOP, including those concerning the impacts related to the Chino Airport. Consistent with all development in the City, development at the Project site would be required to be consistent with the Chino ALUCP. Impacts related to the Chino Airport would be less than significant.

The Subarea 29 Specific Plan area is also located within the Airport Influence Area of the Ontario International Airport (ONT) (refer to Exhibit C) and is subject to the ONT Airport Land Use Compatibility Plan (ALUCP), which was adopted by the Ontario City Council on in April 2011 (Ontario, 2011), after certification of the TOP Final EIR. Policy Map 2-2: Safety Zones of the ONT ALUCP identifies the geographic locations of Safety Zones; the proposed Project is located outside the established Safety Zones and would not result in safety hazards for people residing at the Project. The proposed Project was also evaluated for hazards to aircraft in flight utilizing by Policy Map 2-4: Airspace Obstruction Zones of the ONT ALUCP, which identifies height restrictions of proposed structures or buildings. While portions of the Subarea 29 Specific Plan area are subject to height restrictions (greater than 200 feet); the Project site (Planning Area 27) is not. However, as further discussed in the Noise section of this Addendum, in compliance with ONT ALUCP's Overflight Policy O2, a Real Estate Transaction Disclosure is required for all development at the Project site.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded proposed that the Specific Plan, and all tracts within it, would be designed to meet Fire Department emergency access requirements and would not interfere in any way with emergency evacuation or response plans. The City's Safety Element, as contained within TOP, includes policies and procedures to be administered in the event of a disaster. TOP seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to, and recover from every day and disaster emergencies. As required, the proposed Project would comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access, resulting in a less than significant impact.

Mitigation: None required. The proposed Project would not result in any new, substantially more

severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**g. Expose people or structures to a significant risk of loss, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that wildland fires do not pose a threat to the Specific Plan area. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan EIR, and not located in or near wildlands. Therefore, no impact would occur.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**10. HYDROLOGY & WATER QUALITY.** Would the project:

**a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan could violate quality standards and/or waste discharge requirements; however, with implementation of mitigation measures and adherence to statewide NPDES General Industrial Activities Stormwater Permit, the San Bernardino County Area-Wide Urban Runoff Permit (MS4 permit) and the City of Ontario's Municipal Code (Section 6, Title 6), potential impacts to surface water quality would be less than significant. Cumulative impact to surface water quality were determined to be significant and unavoidable due to impaired receiving waters. The Final EIR analysis also concluded that groundwater quality would be improved within the Chino II Groundwater Sub-basin because the agricultural uses that cause high levels of nitrates in the drinking water supply would be eliminated with implementation of the Subarea 29 Specific Plan.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The proposed Project would not involve any construction activities or new uses, and would be required to comply with applicable water quality regulations (refer to Final EIR MM, Hydro 1, MM Hydro 2, and MM Hydro 6, which are presented under the discussion of "Earlier Analysis" at the end of this document). Further, all Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit. Drainage from the PLU shall be designed with conveyance tributary to a certified full trash capture device approved by the SWRCB. Therefore, impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that implementation of the Specific Plan would further the ground water management objectives for the Chino Basin by limiting recharge into the southern portion of the basin, since the development of the Chino Basin management program anticipated the cumulative impacts of urbanization of the Chino Basin and consequent conversion of agricultural land use (e.g., diminished agricultural ground water extraction and projected need to increase ground water pumping by desalters), no significant individual or cumulative negative impacts to aquifer volume or the ground water table were expected to occur. Nevertheless, MM Hydro 5 is included in the Subarea 29 Specific Plan Final EIR and requires application of measures to conserve water and enhance ground water recharge. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, would not involve any construction activities or new uses beyond that anticipated in the Subarea 29 Specific Plan Final EIR, and would be required to implement Final EIR MM Hydro 5, which is presented under the discussion of "Earlier Analysis" at the end of this document. Therefore, impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:**

**i) result in substantial erosion or siltation on- or off-site;**

**ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;**

**iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or**

**iv) impede or redirect flood flows?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis identified that no streams or streambeds are present within the Specific Plan area. The Final EIR concluded that implementation of the Specific Plan could alter the drainage patterns of the site and in a manner that could create substantial flooding, erosion, or siltation on or off-site. However, with implementation of the on-site storm drain system, and required Subarea 29 Specific Plan Final EIR mitigation measures, which include requirement requirements to adhere to applicant regulations, as discussed above, impacts would be less than significant.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, would not involve any construction activities or new uses beyond that anticipated in the Subarea 29 Specific Plan Final EIR. Therefore, with implementation of an on-site storm drain system, which would connect to existing storm drain facilities constructed in accordance with the master drainage plan, as required by the Specific Plan, the amount and rate of runoff from the Project site would be the same as that anticipated in the Subarea 29 Specific Plan under post-

development conditions and impacts related to potential flooding and storm drain capacity would be less than significant.

As required by MM Hydro 1 and MM Hydro 2 from the Subarea 29 Specific Plan Final EIR, the proposed Project would be constructed in compliance with applicable regulations to minimize water quality impacts during construction and potential development, including from erosion, and impacts related to erosion and polluted runoff would be less than significant. MM Hydro 1 and MM Hydro 2 are presented under the discussion of "Earlier Analysis" at the end of this document

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that no structures within the Specific Plan area would be placed within a 100-year flood, and the Specific Plan area is not in proximity to a large body of water or the ocean, so the threat of an earthquake-induced seiche or tsunami would not occur. Figure 5.9-2, Flood Hazard Areas, of TOP Final EIR indicates that the Specific Plan are is within the San Antonio Creek dam failure inundation area; however, TOP Final EIR concludes that because the likelihood of catastrophic failure of the San Antonio Dam is very low and the City is prepared in the event of such failure, impacts are considered less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and TOP Final EIR and would also have no impacts or less than related to the risk of pollutant release from inundation of the Project site from seiche, tsunami or dam failure. Based on review of the Federal Emergency Management Agency (FEMA) National Flood Hazard Layer (NFHL) Viewer, the Project site is not located within a 100-year flood hazard area; the Project site is located within FEMA Zone X, a minimal flood hazard area (FEMA, 2021). Therefore, the Project would also have a less than significant impact related to the risk of pollutant release from flood inundation.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?**

Discussion of Effects: As identified in the Subarea 29 Specific Plan Final EIR, the Specific Plan area is subject the requirements of the Water Quality Management Plan of the Santa Ana River Basin (Basin Plan), and overlies the Chino Groundwater Basin. As previously discussed, the Subarea 29 Specific Plan Final EIR analysis concluded that with adherence to applicable water quality regulations, as required by mitigation measures in the Subarea 29 Specific Plan Final EIR, water quality and groundwater impacts would be less than significant, and the Project would not conflict with the Basin Plan.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The proposed Project would not involve any construction activities or new uses, and would be required to comply with applicable water quality regulations (refer to Final EIR MM Hydro 1, MM Hydro 2, and MM Hydro 6 presented under the discussion of "Earlier Analysis" at the end of this document). Therefore, the Project would comply with the Basin Plan.

On September 16, 2014, subsequent to certification of the Subarea 29 Specific Plan Final EIR and TOP Final EIR, Governor Jerry Brown signed into law the Sustainable Groundwater Management Act (SGMA). The 2014 SGMA requires local public agencies and Groundwater Sustainability Agencies (GSAs) in "high-" and "medium"-priority basins to develop and implement Groundwater Sustainability Plans (GSPs) or Alternatives to GSPs. GSPs are detailed road maps for how groundwater basins will reach long-term sustainability. The California Department of Water Resources (DWR) currently categorizes the Chino Groundwater Basins as "very low" priority. Therefore, the Chino Groundwater Basins is not subject to the requirements of the SGMA (DWR, 2021). Accordingly, the proposed Project would no conflict with or obstruct implementation of a sustainable groundwater management plan.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**11. LAND USE & PLANNING.** Would the project:

**a. Physically divide an established community?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area was not located within a "community" and all major circulation routes would be maintained through the Specific Plan area; therefore, the proposed development would not physically divide and established community, and no impact would result. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and is surrounded by existing residential development implemented in compliance with the Subarea 29 Specific Plan, TOP, and Eastvale General Plan. The proposed Project would involve development of residential uses consistent with the Subarea 29 Specific Plan and TOP, and would not divide an established community. No impact would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that proposed development would comply within the Specific Plan area with the land use designations and the land use policies in the General Plan Amendment for the NMC, and would comply with the requirements established in the Subarea 29 Specific Plan, resulting in a less than significant impact related to land use policies.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. However, the proposed Project would not require a change in the Specific Plan land use designation (Cluster Homes – 7-14 du/ac) or TOP land use designation (Low Density Residential [2.1 – 5 du/ac]). Further, the proposed Project would be designed to be consistent with the development regulations of the Subarea 29 Specific Plan. The proposed increase in residential units at the Project site, which was previously graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and TOP Final EIR, would not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and

this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**12. MINERAL RESOURCES.** Would the project:

**a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that the Specific Plan area does not contain any known mineral resource and is not located within an area that has been classified or designated as a mineral resource area by the State Board of Mining and Geology, there are no known mines on or near the Specific Plan area, and no impacts to known mineral resources would result. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and does not contain any mineral resources. Therefore, no impacts would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that the Specific Plan area is not located within an area of locally important mineral resource recovery delineated in any plans. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and is not located within an area that has been classified or designated as a mineral resource recovery site in the TOP, Subarea 29 Specific Plan or other land use plan. Therefore, no impacts would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**13. NOISE.** Would the project result in:

**a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that implementation of the Specific Plan would result in project-level noise impacts during construction and operation; however, these impacts would be reduced to less than significant levels with implementation of mitigation measures. The Subarea 29 Specific Plan Final EIR analysis concluded that cumulative traffic-related noise impacts were determined to be significant and unavoidable. The TOP Final EIR concluded that build-out of the uses anticipated by TOP, which includes development in the Subarea 29 Specific Plan area, would result in significant and unavoidable traffic-related noise impacts and noise and vibration impacts to sensitive receptors during construction.

With respect to construction emissions, the types of construction activities and construction equipment that would be used for construction in Planning Area 27 would be the same as that evaluated in the Subarea 29 Specific Plan Final EIR. Additionally, the Project site is entirely within

the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The mass grading for the Project site, which uses larger equipment and generates higher noise levels than other construction activities) has been completed; finish grading activities and building construction would be conducted as part of the proposed Project. Construction activities would be subject to the mitigation measures outlined in the Subarea 29 Specific Plan Final EIR, which require that construction activities comply with the City of Ontario noise ordinance that restricts the days and hours of construction activities (MM Noi 1), and that construction staging area not be located within 150 feet of existing sensitive receptors and construction equipment be fitted with properly operating and maintained mufflers (MM Noi 2). Construction-related noise impacts would be less than significant. MM Noi 1 and MM Noi 2 are presented under the discussion of "Earlier Analysis" at the end of this document.

With respect to operations, the Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. However, the overall number of dwelling units in the Specific Plan area with the proposed Specific Plan Amendment (2,418 dwelling units), would not exceed the number of units anticipated in TOP for the Specific Plan area (2,700 units). The noise sources associated with the proposed residential uses would be the same as that anticipated in the Subarea 29 Specific Plan Final EIR and TOP Final EIR at the Project site and with adherence to the City's Noise Ordinance would be less than significant. As required by MM Noi 7, architectural plans would be submitted to the City for an acoustical plan check prior to the issuance of building permits to assure that interior noise level requirements are met. MM Noi 7 is presented under the discussion of "Earlier Analysis" at the end of this document.

The increase in 26 dwelling units at the Project site would result in a net increase of approximately 168 trips (increase from 450 daily trips to 618 daily trips) compared to the number of trips anticipated in the traffic analysis and associated noise analysis in the Subarea 29 Specific Plan Final EIR, and would be within the trip generation anticipated in the traffic-related noise analysis in the TOP Final EIR. The circulation system for the Specific Plan area would not change with the proposed Project and the trip distribution would be the same; the additional daily vehicular trips generated by the proposed Project would be distributed along various roadways. A doubling of traffic volumes is required to increase average traffic noise levels by 3 dBA, a change which is barely discernable to human hearing. The increase of 168 daily trips would not double the traffic generated by residential uses at the Project site and would not double the daily trips on any roadway segment. Therefore, the proposed increase in units associated with proposed Project would not represent a significant noise impact or substantial increase in traffic-related noise impacts compared to that evaluated in the Subarea 29 Specific Plan Final EIR and TOP Final EIR. Further, soundwalls required by MM Noi 3 through MM Noi 6 from the Subarea 29 Specific Plan Final EIR to address traffic-related noise impacts have been or will be implemented by the Project Applicant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, or TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**b. Generation of excessive groundborne vibration or groundborne noise levels?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that proposed uses in the Specific Plan area would not generate excessive groundborne vibrations or groundborne noise levels during normal operations. The Final EIR also concluded that during construction, groundborne vibrations may be generated infrequently by use of heavy construction equipment. However, this type of vibration would be temporary and infrequent. Therefore, this impact is considered less than significant and no mitigation measures are required. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The operations

associated with residential uses at the Project site would be the same as evaluated in the Subarea 29 Specific Plan Final EIR and would not generate excessive groundborne vibration or noise. Further, the Project site was previously graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The construction activities associated with the proposed Project would be the same as those evaluated in the Subarea 29 Specific Plan Final EIR and would also be considered less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, or TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area is located outside the 65 dBA CNEL contour line of ONT and the Chino Airport airports and people residing and working in the Specific Plan area would not be exposed to excessive noise levels from airport operations.

The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Based on review of Policy Map 2-3: Noise Impact Zones, of the ONT ALUCP, the Project site (Planning Area 27) is not located within a noise impact zone for the ONT; therefore, the proposed Project would not expose people residing at the Project site to excessive noise levels from airport operations and this impact would be less than significant. However, based on review of Policy Map 2-5: Overflight Notification Zones, and as presented in the Land Use Element (Exhibit LU-01 Official Land Use Plan) of TOP Policy Plan (General Plan), the entire City of Ontario, including the Project site, is within the area subject to Real Estate Transaction Disclosure policies.

The Project site is also located within the Chino ALUCP Compatibility Zone D that requires residential developments to record an Overflight Notification on the Property Deed and Title and provide a Real Estate Transaction Disclosure. The Project site underlies the Chino Airport traffic pattern, but is outside of the area that would be subject to average exterior noise levels of 55 CNEL under the ultimate airport development conditions. Therefore, no special noise attenuation measures are required for future residential development. Since the Project site is located outside of the noise impact zone, the proposed Project would not expose people residing at the Project site to excessive noise levels from airport operations and impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, or TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

However, in compliance with ONT ALUCP's Overflight Policy O2, a Real Estate Transaction Disclosure is required for all development at the Project site. State Law (Business and Professions Code Section 11010) provides the following disclosure language:

> NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example, noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

The Project site is located within the Chino ALUCP Compatibility Zone D that requires residential developments to record an Overflight Notification on the Property Deed and Title and provide a

Real Estate Transaction Disclosure.

**14. POPULATION & HOUSING.** Would the project:

**a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that growth associated with implementation of the Subarea 29 Specific Plan would be consistent with regional growth forecasts and regional jobs/housing balance projections, and impacts would be less than significant.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. However, the overall number of dwelling units in the Specific Plan area with the proposed Specific Plan Amendment (2,418 dwelling units), would not exceed the number of units anticipated in TOP for the Specific Plan area (2,700 units). The California Department of Finance (DOF) estimates that in January 2020, the City of Ontario had an estimated population of 182,871 residents, with approximately 3.69 persons per household (DOF, 2020a). Therefore, the increase in 26 units resulting from the proposed Project would represent an increase in population of approximately 100 residents, a negligible increase (0.05%) in the existing City population. Additionally, this represents growth that was planned and anticipated in the TOP, and would not represent substantial unplanned growth in the area. Further, the Project would not include any new roadways or infrastructure that would indirectly increase population growth in the area. This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, or TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would result in replacement of existing dairies, agriculture fields, fields and nursery with residential uses. As a result, less than significant impacts related to the displacement of housing and population would occur. The Project site was previously graded and is currently vacant. The proposed Project would not result in the displacement of people or housing and no impact would occur.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**15. PUBLIC SERVICES.** Would the project:

**a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:**

**i) Fire protection?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would add residential uses to the area and would increase

demands upon fire protection; however, with implementation of mitigation measures and adherence to applicable regulations, impacts would be reduced to a less than significant level. The Ontario Fire Department currently provides fire and Emergency Medical Services to the Specific Plan area, including the Project site from Fire Station No. 6 located northeast of the Project site, at 2931 E. Philadelphia Street. A fire station in under construction approximately one-mile northwest of the Project site on the west side of Archibald Avenue within the Parkside Specific Plan area; it is anticipated that construction of this first station will be complete at the end of this year (2021), prior to occupation of residential uses at the Project site. The proposed Project would increase the number of residential units to be constructed at the Project site and would have an associated increase in the population within the Specific Plan area. Therefore, the proposed Project would increase the demand for fire protection services. However, the payment of Development Impact Fees from Subarea 29 will help fund construction of this station (refer to MM Serv 8 presented under the discussion of "Earlier Analysis" at the end of this document). When completed, response time from Station No. 9 will be within the current Fire Department Emergency Response Guideline and the proposed Project would not result in the need for new or physically altered fire protection facilities that would cause a physical environmental impact. Further, the proposed Project would implement mitigation measures to reduce fire hazards (MM Serv 1 through MM Serve 6), which include adherence to regulations for access, building materials, fire flow, etc. Impacts related to fire protection services would be less than significant. MM Serv 1 through MM Serve 6 are presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**ii) Police protection?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would add residential uses to the area and would increase demands upon police protection; however, the impacts would be less than significant. Police services will be provided by the Ontario Police Department. Since police services are based upon per capita service levels, the proposed Project, which would increase the residential population at the Project site, would require an incremental increase in police services to maintain required service levels. The City's development review process and building permit plan check processes include review by the City's Police Department to ensure incorporation of defensible space concepts in site design and construction. Property taxes and City fees support the general fund to help offset the cost of additional personnel. MM Serv 8 presented under the discussion of "Earlier Analysis" at the end of this document requires the payment of applicable fees for police services. Since response time for police service is not based on proximity to the station and since the new main station is close to the project site, no adverse physical impacts associated with the need for, or provision of, new or physically altered police facilities would result from the project. Therefore, impacts to police protection are considered less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**iii) Schools?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that with adherence to regulations requiring payment of school fees, impacts to school services would be less than significant. The proposed Project would increase the number of dwelling units at the Project site; however, as with all development in the City, the payment of required school fees would reduce this impact to a less than significant level (refer to MM Serv 9 presented under the discussion of "Earlier Analysis" at the end of this document).

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**iv) Parks?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that with the provision of parkland or payment of in-lieu park fees, impacts to related to park services would be less than significant. The Quimby Act requires local jurisdictions with parks responsibilities to provide parks and recreation opportunities through the receipt of fees or the acceptance of facilities/land. Each tract within the Specific Plan area could either provide adequate local park facilities or pay fees to the City in lieu thereof or some combination of both approaches for a total of 24 acres within the Specific Plan (refer to MM Serv 10 presented under the discussion of "Earlier Analysis" at the end of this document). With adherence to park requirements for the additional residential units associated with the proposed Project, impacts related to park services would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**v) Other public facilities?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that impacts to other existing public facilities (i.e., libraries) would be less than significant with payment of the City's library development impact fee. The increased demand for library services associated with the increase in population resulting from the proposed Project would be addressed through payment of the required development impact fee (refer to MM Serv 8 presented under the discussion of "Earlier Analysis" at the end of this document). Because libraries need enough people within a geographic area to warrant their construction, the fees are considered adequate mitigation and the construction of new library facilities is not required. Impacts to library services would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**16. RECREATION.** Would the project:

**a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that if parks within the Specific Plan are built out based on the population-based service criteria, as required, potential impacts related to increase use of existing parks would be less than significant. The Subarea 29 Specific Plan includes a network of paseos, parks and bicycle trails. Notably, at buildout the Specific Plan includes two neighborhood parks, a recreational area, mini-parks, and a 10-acre elementary school site. The nearest regional park to the Project site is the Santa Ana River Wildlife Area and the Prado Regional Park to the south. Due to the proximity of the Project site to these large recreational areas, they may get some use by the Project residents, but these regional facilities are designed to serve this region. Regional parks would be built out over time to serve the region. Existing local park facilities in the area could experience accelerated deterioration due to the additional residents resulting from the proposed Project. However, as concluded in the Subarea 29 Specific Plan Final EIR, with the timely implementation of parks based on the population-based service criteria, such potential impacts would be reduced to a less than significant level.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR included evaluation of the physical environmental impacts resulting from implementation of recreational facilities and mitigation measured were identified to reduce these impacts as feasible. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There are no new park or recreational facilities proposed as part of the Project. Therefore, no physical environmental impacts associated with construction of park and recreational facilities would occur beyond that already addressed in the Subarea 29 Specific Plan Final EIR.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**17. TRANSPORTATION/TRAFFIC.** Would the project:

**a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?**

Discussion of Effects: As discussed under Threshold b, below, pursuant to Senate Bill (SB) 743, the requirement for analyzing congestion impacts for CEQA purposes was eliminated in December 2018. Therefore, this analysis focuses on the consistency of the Project with programs, plans, ordinances, or policies addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. Notwithstanding, it should be noted that an assessment of the trip generation from the proposed Project was conducted by Urban Crossroads. Based on the Trip Generation Assessment, the increase in 26 units within Planning Area 27 associated with proposed Project would generate 168 additional daily trips, with 12 additional AM peak hour trips and 15 additional PM peak hour trips. Although the proposed Project results in a net increase in trips, the net increase is anticipated to be less than 50 peak hour trips. Therefore, the increase in proposed Project trips is nominal and is not anticipated to change the analysis findings and recommendations previously identified in the *Traffic Impact Study Report (Revised) Sub-Area 29 Specific Plan* (August 5, 2005)

included in the Subarea 29 Specific Plan Final EIR (Urban Crossroads, 2020). Further, the total number of units and associated vehicular trip generation would be less than anticipated in TOP and evaluated in TOP Final EIR for the Subarea 29 Specific Plan area (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment). Further, mitigation measures included in the Subarea 29 Specific Plan Final EIR involving the completion of intersection improvements to address operational deficiencies at intersections have already been implemented. The remaining mitigation is related to the required payment of developer impact fees, which would also would be paid for the proposed Project (refer to MM Trans 7 presented under the discussion of "Earlier Analysis" at the end of this document).

The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would not conflict with a plan, ordinance, or policy addressing circulation system, taking into account all modes of transportation including transit, roadway, and non-vehicular modes of transportation. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project does not involve any changes to the Specific Plan related to the circulation system. Merrill Avenue, which forms the northern boundary of the Project site has been constructed to its full width as required by the City and the Subarea 29 Specific Plan, and required bicycle and pedestrian facilities have been provided. Further, a bus stop is planned along Haven Avenue just north of Merrill Avenue and is within walking distance to the Project site, which would facilitate use of transit. Therefore, the proposed Project would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Conflict with or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?**

Discussion of Effects: SB 743, approved in 2013 and codified in Public Resources Code Section 21099, changes the way transportation impacts are determined according to CEQA. The Office of Planning and Research (OPR) recommended the use of VMT as the replacement for automobile delay-based LOS for the purposes of determining a significant transportation impact under CEQA. On December 28, 2018, the State approved updates to the CEQA Guidelines, which entailed changes to the thresholds of significance for the evaluation of impacts to transportation. Updates to the CEQA Guidelines included the addition of CEQA Guidelines Section 15064.3, of which Subdivision b establishes criteria for evaluating a project's transportation impacts based on project type and using automobile VMT as the metric. Beginning July 1, 2020, the provisions of CEQA Guidelines Section 15064.3 apply statewide. As identified in Section 15064.3(b)(4) of the CEQA Guidelines, a lead agency has the discretion to choose the most appropriate methodology to evaluate a project's VMT. The City of Ontario adopted its VMT thresholds of significance on June 16, 2020.

The TOP Final EIR traffic analysis did not employ a VMT-based threshold of significance for evaluating traffic impacts, but nonetheless acknowledged that TOP Land Use Plan would exceed SCAG's VMT projections for the City. The GHG section of the Recirculated TOP Draft EIR discusses CARB and SCAG strategies to reduce community VMT. In response to the sole VMT comment on the TOP Final EIR from SCAG, the City noted that while buildout of the City under TOP would increase VMT, implementation of TOP would nonetheless "improve the SANDBAG region's job/housing balance," thus "reduce VMT by shortening commute distances'" and that development pursuant to TOP would be required to implement measures to further "reduce vehicle trips and VMT." (See, e.g., TOP Final EIR, pp. 2-97, 33-12; Recirculated TOP Draft EIR, pp. 2-18, 2-43, 2-84, 2-110.) The TOP Final EIR Air Quality and GHG Analysis likewise necessarily calculated the VMT generated by buildout of the City under TOP in order to determine development-related air pollutant emissions. (See, e.g., Recirculated TOP Draft EIR, pp. 2-1, 2-5,

2-20, 2-21 [explaining traffic data was used to calculate emissions and VMT calculations]; see also Appendix D, [using VMT to calculate project emissions].) Buildout of the City under TOP anticipated development of the Subarea 29 Specific Plan Area with 2,700 units, which exceeds the 2,418 dwelling units currently proposed. Therefore, the VMT generated by Subarea 29 was anticipated in TOP Final EIR.

Information regarding VMT impacts was available at the time the Certified EIR was prepared. The new VMT requirements implemented under the CEQA Guidelines do not relate to a different type of impact, but merely a different way of analyzing transportation impacts. Moreover, as discussed above, the TOP Final EIR both discussed VMT, including the regional goal of reducing per capita VMT and project features intended to reduce VMT. Accordingly, information regarding potential impacts related to VMT not only could have been included in the TOP Final EIR, but to a large extent it already was included.

The adoption of VMT as a new metric for the measurement of transportation impacts under CEQA does not require the preparation of a subsequent or supplemental EIR, because VMT associated with the Subarea 29 Specific Plan does not constitute new significant information requiring additional environmental analysis. An addendum is not required to consider new impact areas added to CEQA after the underlying EIR was certified. See *Concerned Dublin Citizens v. City of Dublin* (2013) 214 Cal.App.4th 1301, 1320 (adoption of new guidelines for GHG evaluation was not significant new information requiring further CEQA review because GHG emissions were known information and could have been addressed in the original EIR); *Fort Mojave Indian Tribe v. Dept. of Health Servs.* (1995) 38 Cal.App.4th 1574, 1605 (new critical habitat regulation was not significant new information because impacts to the species had already been addressed in original EIR.). As with the adoption of new GHG guidelines discussed above, the adoption of VMT as a metric for analyzing transportation impacts (and corresponding GHG impacts) pursuant to SB 743 is not new information, as VMT-related impacts were knowable and known when the Subarea 29 Specific Plan Final EIR was adopted. Since VMT impacts were known at the time that the Subarea 29 Specific Plan Final EIR was conducted, information regarding the proposed Project's potential VMT-related impacts does not constitute "new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time . . . the IS / MND was adopted". Accordingly, the inclusion of VMT impacts as a requirement of CEQA analysis does not trigger the need for any further environmental review. (See *Citizens for Responsible Equitable Environmental Development v. City of San Diego* [supra, 196 Cal. App. 4th at 531–532]).

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that with the development of residential units, the means of automobile conveyance with relation to design features could be a potential problem. However, with the implementation of traffic mitigation measures, impacts related to design-feature hazards would be less than significant. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project does not involve any changes to the Subarea 29 Specific Plan related to the circulation system. Access to the Project site would be provided from Merrill Avenue as anticipated in the Specific Plan, and internal roadways, access driveways, and sight distance would comply with the City design requirements, and roadway standards outlined in the Specific Plan (refer to MM Trans 1 through MM Trans 3 presented under the discussion of "Earlier Analysis" at the end of this document). This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**d. Result in inadequate emergency access?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that implementation of the Specific Plan would improve emergency access by completing improved road segments in the Specific Plan area, and development would adhere to City of Ontario standard conditions of approval, and permits related to emergency access. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project does not involve any changes to the Subarea 29 Specific Plan related to the circulation system or emergency access. Access to the Project site would be provided from Merrill Avenue as anticipated in the Specific Plan, and would comply with applicable requirements for emergency access. This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**18. Tribal Cultural Resources**. The provisions of Assembly Bill (AB) 52 are not applicable to the proposed Project. AB 52 applies "…only to a project that has a notice of preparation or a notice of negative declaration or mitigated negative declaration filed on or after July 1, 2015." AB 52, which became effective on July 1, 2015, established a consultation process with California Native American tribes, and established Tribal Cultural Resources as a new class of resources to be considered in the determination of project impacts and mitigation under CEQA. AB 52 requires lead agencies to provide notice to tribes that are traditionally and culturally affiliated with the geographic area of a proposed project, if they have requested such notice in writing. The project notification is required prior to the lead agency's release of a Notice of Preparation (NOP) of an EIR or notice of intent to adopt an MND or ND, and is not required for Addendums. However, the analysis of impacts to cultural resources, including prehistoric archaeological sites, resulting from implementation of the Subarea 29 Specific Plan is provided in the Subarea 29 Specific Plan Final EIR (Section III.4, Cultural Resources), as summarized above in Section 5 of this Addendum. The Subarea 29 Specific Plan Final EIR found that implementation of the Specific Plan would result in less than significant impact to archaeological resources.

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

**a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?**

Discussion of Effects: As discussed in the Cultural Resources section of this Addendum, the Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would not result in the destruction of historical resources and considered the impact less than significant. The Project site has been graded, is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and is currently vacant. City records do not reflect the presence of a historic resource as defined in CEQA Guideline section 15064.5 at, or in the vicinity of the Project site and no impacts to tribal cultural resources listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k) would result from implementation of the proposed

Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded there is a low potential for adverse environmental impacts to archaeological resources and potential impacts were determined to be less than significant. However, the Final EIR included mitigation outlining actions to take in the unlikely event unknown resources were discovered during grading. The Project site has been graded, and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. No tribal cultural resources were encountered during previous grading activities and no impacts to tribal cultural resources would occur during remaining construction activities, which would occur in previously disturbed soils.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**19. UTILITIES AND SERVICE SYSTEMS**. Would the project:

**a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?**

Discussion of Effects: The Subarea 29 Specific Plan identifies the required infrastructure systems necessary to serve the proposed development within the Specific Plan area, and the Subarea 29 Specific Plan Final EIR addressed the utility demands associated with proposed development and potential environmental impacts associated with installation of the required infrastructure. Utility and service system impacts were determined to the less than significant with mitigation. The Final EIR also identified that the Subarea 29 Specific Plan would be one of many projects developed within the NMC, which is only a portion of the Inland Empire Utility Agency's (IEUA) Southern Service Area. The cumulative effects of the IEUA Wastewater Master Plan were evaluated under CEQA in the IEUA Wastewater, Recycled Water and Organics Management Master Plan Program EIR, dated July 3, 2002 (SCH No. 2002011116); this EIR also concluded that impacts would be less than significant with mitigation.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project does not involve any changes that would require new or expanded utility infrastructure beyond that already anticipated in the Subarea 29 Specific Plan and evaluated in the associated Final EIR, and on-site utility infrastructure that would serve the Project. Notably, a hydraulic analysis was prepared to address the proposed changes to development at the Project site and to analyze the resulting impact to downstream sewers (including Eastern Trunk Sewer capacity). The *OSS2021-0004 - Subarea 29 Specific Plan Amendment for Park Place Planning Area 27 Sewer Study* (Sewer Study) concluded that there were no capacity deficiencies in the sewer system (AKM Consulting Engineers, 2021). With respect to storm drain facilities, as discussed in the Hydrology and Water Quality section of this Addendum, the increase in residential units would not substantially alter the post-development drainage characteristics of the Project site; therefore, the existing storm

drain system has sufficient capacity to accommodate runoff from the Project site and on-site storm drains would connect to the existing drainage system. Further, MM Util 1 requires that utility infrastructure be constructed to funded to the satisfaction of the City, and MM Util 4 requires that coordination with utilities agencies be conducted to ensure existing utility lines are protected during construction. MM Util 1 and MM Util 4 are presented under the discussion of "Earlier Analysis" at the end of this document. Impacts related to the installation of utility infrastructure necessary to serve the proposed Project would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would generate an additional demand for water; however, there will be sufficient water supply exists to meet the City's existing and planned future uses. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the total number of units would be less than anticipated in TOP (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment). Buildout of TOP is also anticipated in the *2015 Urban Water Management Plan* (2015 UWMP) prepared by the Ontario Municipal Utilities Company in July 2016 and amended through 2018 (Ontario Municipal Utilities Company, 2018). Pursuant to SB 610 (codified in the California Water Code beginning at Section 10910), the proposed Project does not require preparation of a Project-specific Water Supply Assessment (WSA); a WSA is required for residential projects that meet certain criteria relative to size (i.e., 500 dwelling units or more). Further, MM Util 5 and MM Util 6 presented under the discussion of "Earlier Analysis" at the end of this document require design considerations to reduce water consumption. Impacts to water supplies are considered less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would be one of many projects developed within the NMC which is only a portion of IEUA's Southern Service Area. As previously discussed, the cumulative effects of the IEUA Wastewater Master Plan were evaluated in the IEUA Wastewater, Recycled Water and Organics Management Master Plan Program EIR and found to be less than significant. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The total number of units would be less than anticipated in TOP and evaluated in TOP Final EIR (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment).

The Specific Plan area, including the Project site, is served by the City of Ontario sewer system, which has waste treated by the IEUA at the Regional Water Recycling Plant No. 1 (RP)-1 or RP-5.

RP-1 and RP-5 are not at capacity and the proposed Project would not cause these facilities to exceed capacity. Notably, RP-1 is located in the City of Ontario and has undergone several expansions to increase the design hydraulic domestic sewage (wastewater) treatment capacity to 44 million gallons per day (mgd). The plant serves areas of Chino, Fontana, Montclair, Ontario, Rancho Cucamonga, Upland, and solids removed from RP-4, located in Rancho Cucamonga. RP-1 treats an average influent wastewater flow of approximately 28 mgd (IEUA, 2021). The additional wastewater generated by an increase of 26 dwelling units, which are anticipated in TOP, would not exceed the capacity of RP-1 or RP-5 and this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that implementation of the Specific Plan site would not substantially contribute to the exceedance of the permitted landfill capacity at project-level; however, cumulative impacts were determined to be significant and unavoidable. TOP Final EIR determined that impact related to solid waste generation would be less than significant.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The total number of units would be less than anticipated in TOP and evaluated in TOP Final EIR (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment). Further, considering the proposed Project's future residents' participation in the source reduction and household hazardous waste programs offered by the City, and which are more stringent then when the Subarea 29 Specific Plan EIR was prepared, the solid waste stream generated by the additional residential uses may be reduced over time. Currently, the City of Ontario contracts with a waste disposal company that transports trash to a landfill with sufficient capacity to handle the City's solid waste disposal needs. Less than significant impacts to the existing landfills are expected.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. Comply with federal, state, and local statutes and regulations related to solid waste?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that construction and operation of proposed uses in the Specific Plan area would comply with regulations associated with solid waste and impacts would be less than significant. As with all development in the City and the Specific Plan area, the proposed additional uses within Planning Area 27 would also be required to comply with applicable regulations related to solid waste management, disposal, recycling, etc., and this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**20. WILDFIRE**. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

**a. Substantially impair an adopted emergency response plan or emergency evacuation plan?**

**b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?**

**c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?**

**d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?**

Discussion of Effects: Wildfire was added as a new topic in the environmental checklist form in Appendix G of the State Guidelines as part of the CEQA Guidelines updates that were approved in December 2018. However, as discussed in the Hazards and Hazardous Materials section of this Addendum, wildland fires were discussed in the Hazards/Hazardous Materials section of the Subarea 29 Specific Plan Final EIR (Section III.6) and it was determined the Specific Plan area is not subject to wildfires.

The State Responsibility Area (SRA) is the land where the State of California is financially responsible for the prevention and suppression of wildfires. The SRA does not include lands within city boundaries or in federal ownership; therefore, the Project site is not within an SRA. According to the California Department of Forestry and Fire Protection (CalFire), the City of Ontario, including the Project site is not located within a very high fire hazard severity zone (VHFHSZ) (CalFire, 2008). As such, no impacts related to wildfires would occur.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**21. MANDATORY FINDINGS OF SIGNIFICANCE**

**Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?**

Discussion of Effects: The Project site was previously graded, and the proposed Project is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and no natural or sensitive habitats exist at the Project site. The proposed Project does not have the potential to degrade the quality of the environment, reduce the fish and wildlife habitat, threaten plant, fish or wildlife species, or eliminate historical, archeological, or cultural resources. As previously discussed in the Biological Resources section of this document, based on focused surveys conducted for the Specific Plan area it was concluded that Planning Area 27 (the current Project site) does not support the DSFLF. Further, although the site was previously graded and the required pre-construction surveys were conducted, these surveys would be conducted again prior to construction for the proposed Project. Impacts to burrowing owl would remain less than significant. Due to the high level of disturbance, the land use activity, and lack of suitable habitat, other sensitive species are either presumed to be absent or have a very low potential to occur within the Specific Plan area, including the Project site. Further, there are no historic or prehistoric resources located at the Project site and no such resources were discovered during the previous grading activities.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions

to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**a. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)**

Discussion of Effects: The potential cumulative impacts identified in the Subarea 29 Specific Plan Final EIR include: loss of Farmland, air quality impacts, surface water quality (due to impaired receiving waters), traffic-related noise, operational traffic impacts, and solid waste generation. Substantial changes are not proposed with the Project and the proposed Project would not require revisions to the Subarea 29 Specific Plan Final EIR. The Specific Plan is divided into 31 Planning Areas that were assigned a maximum development capacity. The Subarea 29 Specific Plan Final EIR and associated 2015 Addendum evaluated the impacts associated with the development capacity of 2,392 single family units. Further, the TOP and TOP Final EIR evaluated up to 2,700 units within the Subarea 29 Specific Plan area. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change in the type of land allowed (residential), and the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Additionally, the City's water, recycled water, and sewer infrastructure would have sufficient capacity to serve the proposed Project. Therefore, the Project's contribution to significant cumulative impacts would not be cumulatively considerable.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?**

Discussion of Effects: Substantial changes are not proposed with the proposed Project and the proposed Project would not require revisions to the Subarea 29 Specific Plan Final EIR. The Subarea 29 Specific Plan Final EIR and associated 2015 Addendum evaluated the impacts associated with the development capacity of 2,392 single family units. Further, the TOP and TOP Final EIR evaluated up to 2,700 units within the Subarea 29 Specific Plan area. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change in the type of land allowed (residential), and the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Therefore, the proposed Project would not result in any adverse effects to human beings directly or indirectly that were not considered in the previous environmental documents.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

## EARLIER ANALYSIS

*(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D))***:**

1) **Earlier analyzes used.** Identify earlier analyzes used and state where they are available for review.

   a) The Ontario Plan Final EIR

   b) The Ontario Plan

   c) The Subarea 29 Specific Plan Final EIR

   d) The Subarea 29 Specific Plan EIR Mitigation Monitoring and Reporting Program

   e) The Subarea 29 Specific Plan

   All documents listed above are on file with the City of Ontario Planning Department, 303 East "B" Street, Ontario, California 91764, (909) 395-2036. Other references used to prepare this Addendum are listed below.

2) **Impacts adequately addressed.** Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards.

   Most of the checklist items were analyzed in the Subarea 29 Specific Plan Final EIR. The Subarea 29 Specific Plan Final EIR and associated 2015 Addendum evaluated the impacts associated with the development capacity of 2,392 single family units. Further, the TOP and TOP Final EIR evaluated up to 2,700 units within the Subarea 29 Specific Plan area. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change in the type of land allowed (residential), and the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Additionally, the City's water, recycled water, and sewer infrastructure would have sufficient capacity to serve the proposed Specific Plan Amendment. Therefore, the proposed Project would not introduce any impacts beyond those previously analyzed in the Subarea 29 Specific Plan Final EIR or TOP Final EIR.

**MITIGATION MEASURES** *(For effects that are "Less than Significant with Mitigation Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project)***:**

As the project does not have any adverse environmental impacts beyond those identified in the previous environmental document, no mitigation beyond that previously imposed is required. The Subarea 29 Specific Plan Final EIR mitigation measures applicable to the proposed Project area listed below.

**Agricultural Resources**

**MM Ag 2:** In order to minimize conflicts between urban and agricultural land uses, all residential units in the Subarea 29 Specific Plan shall be provided with a deed disclosure, or similar notice, approved by the City Attorney, regarding the proximity and nature, including odors, of neighboring agricultural uses.

**Air Quality**

**MM Air 1**: During construction, mobile construction equipment will be properly maintained at an offsite location, which includes proper tuning and timing of engines. Equipment maintenance records and equipment design specification data sheets shall be kept on-site during construction.

**MM Air 2:** During construction of the proposed improvements, all contractors will be advised not to idle construction equipment on site for more than ten minutes.

**MM Air 3**: Configure construction parking to minimize traffic interference.

**MM Air 4**: Local transit agencies shall be contacted to determine bus routing in the project area that can
accommodate bus stops at the project access points and the project shall provide bus passenger benches and shelters at these project access points.

**Biological Resources**

**MM Bio 1:** There may be a probability of owl colonization within the project site considering the presence of foraging habitat and previous records of presence. To ensure that no direct loss of individuals occurs, mitigation shall be completed prior to initiation of on-site grading activities for each development phase. A preconstruction survey for resident burrowing owls will be conducted by a qualified biologist. The survey will be conducted 30 days prior to construction activities. If ground-disturbing activities are delayed or suspended for more than 30 days after the preconstruction survey, the site should be resurveyed for owls.

If owls are determined to be present within the construction footprint, they will be captured and relocated. If non-breeding owls must be moved away from the disturbance area, passive relocation techniques will be used. The pre-construction survey and any relocation activity will be conducted in accordance with the CDFG Report on Burrowing Owl Mitigation, 1995. According to CDFG guidelines, mitigation actions will be conducted from September 1 to January 31, which is prior to the nesting season. However, burrowing owl nesting activity is variable, and as such the time frame will be adjusted accordingly. Should eggs or fledglings be discovered in any owl burrow, the burrow cannot be disturbed (pursuant to CDFG guidelines) until the young have hatched and fledged (matured to a stage that they can leave the nest on their own). Occupied burrows will not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by the Department of Fish and Game verifies through non-invasive methods that either: a) the adult birds have not begun egg-laying and incubation; or b) the juveniles from the occupied burrows are foraging independently and are capable of independent survival. If a biologist is unable to verify one of the above conditions, then no disturbance shall occur within 300 feet of the burrowing owls nest during the breeding season to avoid abandonment of the young.

Passive relocation can be used to exclude owls from their burrows (outside the breeding season or once the young are able to leave the nest and fly) by installing one-way doors in burrow entrances. These one-way doors allow the owl to exit the burrow, but not enter it. These doors should be left in place 48 hours to ensure owls have left the burrow. Artificial burrows should be provided nearby. The project area should be monitored daily for one week to confirm owl use of burrows before excavating burrows in the impact area. Burrows should be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible pipe should be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow.

**MM Bio 4:** If project construction activities involving heavy equipment and/or windrow tree removal are to occur during the nesting/breeding season (between February 1st and August 31st) of potentially occurring sensitive bird species, a pre-construction field survey shall be conducted by a qualified biologist to determine if active nests of species protected by MBTA or CDFG are present in the construction zone or within a buffer of 500 feet. Preconstruction nesting/breeding surveys shall be conducted in all CDFG jurisdictional areas and within windrow trees. If no active nests are found during the survey, construction activities may proceed. If active nests are located during the pre-construction surveys, no grading, heavy equipment or tree removal activities shall take place within at least 500 feet of an active listed species or raptor nest, 300 feet of other sensitive bird nests (non-listed), and 100 feet of most common songbird nests.

**Cultural Resources**

**MM Cultural 1:** Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified

archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be an historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented.

**MM Cultural 2:** If human remains are uncovered at any time, all activities in the area of the find shall be halted by the developer or its contractor and the County Coroner shall be notified immediately pursuant to CA Health & Safety Code Section 7050.5 and CA PRC Section 5097.98. If the Coroner determines that the remains are of Native American origin, the Coroner shall proceed as directed in Section 15064.5(e) of the CEQA Guidelines.

**Geology and Soils**

**MM Geo 1:** To reduce impacts associated with erosion due to high winds, prior to construction, all tentative tracts and other construction activities will apply for and adhere to the permit given by the City of Ontario and enforced by the Building Official found in Title 6, Chapter 12, sections 6-12.01– 6-12.07. The permit lasts for one (1) year, therefore all construction lasting for a period of more than one calendar year from the date of issue will reapply for the permit and pay applicable fees.

**MM Geo 2:** To properly assess and address the suitability of onsite soils to be used as fill, a geotechnical evaluation shall be performed by a qualified professional prior to the approval of the Tentative Tract map or site plan for a given phase of development. This evaluation will include an analysis of the organic matter content of soils on the site. If the organic matter content of the soils is greater than 2 percent when mixed with subsurface soils and/or imported fill, then manure will be removed from the site prior to grading operations.

**MM Geo 4:** Prior to the issuance of building permits, a project-specific geotechnical investigation for the site must be prepared and submitted to the City for approval. All recommendations contained within the geotechnical investigation must be incorporated during project design and construction. Examples of recommendations include, but are not limited to, specific seismic design parameters and subgrade preparation parameters specifying the amount of overexcavation and recompaction of specific soils in buildings pad and pavement areas.

**MM Cultural 3:** Since grading plans have not yet been prepared to establish how deep excavation is needed, prior to the issuance of grading permits, and as recommended in the Phase I Cultural and Paleontological Resources Assessment for this site, a qualified paleontologist shall be retained to develop a Paleontological Resources Monitoring and Treatment Plan (PRMTP) for approval by the City. Following City approval of the PRMTP, grading and construction activities may proceed in compliance with the provisions of the approved PRMTP. The PRMTP shall include the following measures:

a. Identification of those locations within the project site where paleontological resources are likely to be uncovered during grading.

b. A monitoring program specifying the procedures for the monitoring of grading activities by a qualified paleontologist or qualified designee.

c. If fossil remains large enough to be seen are uncovered by earth-moving activities, a qualified paleontologist or qualified designee shall temporarily divert earthmoving activities around the fossil site until the remains have been evaluated for significance and, if appropriate, have been recovered; and the paleontologist or qualified designee allows earth-moving activities to proceed through the site. If potentially significant resources are encountered, a letter of notification shall be provided in a timely manner to the City, in addition to the report (described below) that is filed at completion of grading.

d. If a qualified paleontologist or qualified designee is not present when fossil remains are uncovered by earthmoving activities, these activities shall be stopped and a qualified paleontologist or qualified designee shall be called to the site immediately to evaluate the significance of the fossil remains.

e. At a qualified paleontologist or qualified designee's discretion and to reduce any construction

delay, a construction worker shall assist in removing fossiliferous rock samples to an adjacent location for temporary stockpiling pending eventual transport to a laboratory facility for processing.

f. A qualified paleontologist or qualified designee shall collect all significant identifiable fossil remains. All fossil sites shall be plotted on a topographic map of the project site.

g. If the qualified paleontologist or qualified designee determines that insufficient fossil remains have been found after fifty percent of earthmoving activities have been completed, monitoring can be reduced or discontinued.

h. Any significant fossil remains recovered in the field as a result of monitoring or by processing rock samples shall be prepared, identified, catalogued, curated, and accessioned into the fossil collections of the San Bernardino County Museum, or another museum repository complying with the Society of Vertebrate Paleontology standard guidelines. Accompanying specimen and site data, notes, maps, and photographs also shall be archived at the repository.

i. Within 6 months following completion of the above tasks, a qualified paleontologist or qualified designee shall prepare a final report summarizing the results of the mitigation program and presenting an inventory and describing the scientific significance of any fossil remains accessioned into the museum repository. The report shall be submitted to the City Planning Department and the museum repository. The report shall comply with the Society of Vertebrate Paleontology standard guidelines for assessing and mitigating impacts on paleontological resources.

**Hazardous Materials**

**MM Haz 4:** If, while performing any excavation as part of project construction, material that is believed to be hazardous waste is discovered, as defined in Section 25117 of the California Health & Safety Code, the developer shall contact the City of Ontario Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped until the material has been tested and the presence of hazardous waste has been confirmed. If no hazardous waste is present, excavation may continue. If hazardous waste is determined to be present, the California Department of Toxic Substances Control shall be contacted and the material shall be removed and disposed of pursuant to applicable provisions of California law.

**MM Haz 8:** To mitigate for any potential impacts related to proximity to the Chino Airport, all development with the Specific Plan will comply with the building height constraints identified in the GPA for the NMC (1998).

**MM Haz 9:** To disclose to the buyer or lessee of subdivided lands within the Subarea 29 project of the proximity of this site to the Chino Airport as required by AB 2776, the City shall disclose, and ensure that the developer makes disclosures, as required by law, to all future buyers.

**Hydrology and Water Quality**

**MM Hydro 1:** In order to ensure that construction activities associated with the Subarea 29 Specific Plan will not cause a violation of any water quality standard or waste discharge requirements and to assure no substantial degradation of water quality occurs, and to implement the intent of mitigation measures included in the Final Environmental Impact Report for the NMC, developments within the project area shall comply with all applicable provisions of the State's General Permit for Construction Activities (Order No. 99-08-DWQ, or most recent version) during all phases of construction. A copy of evidence of the receipt of a Waste Discharge Identification Number from the State Regional Water Quality Control Board shall be filed with the City Engineer along with a copy of the Storm Water Pollution Prevention Plan (SWPPP) maps and BMPs. The City Engineer shall review and approve the provisions of the SWPPP prior to implementation of any SWPPP provision or starting any construction activity.

**MM Hydro 2:** In order to ensure that development within the Specific Plan will not cause or contribute to violations of any water quality standard or waste discharge requirements, and to assure no substantial degradation of water quality occurs, the project will complete a Water Quality Management

Plan (WQMP) pursuant to the MS4 permit (Order No. 2002-0012) adopted by the City of Ontario. The project shall incorporate Site Design BMPs and Source Control BMPs, and potentially Treatment Control BMPs. The following tables (Table III-7-F and G) provide guidelines and BMPs that shall be incorporated as appropriate into project design (on construction drawings) and/or project specifications and implemented in the field to reduce the expected pollutants from various types of development. Prior to acceptance of the WQMP, the City shall assure that maintenance responsibilities of BMPs approved for the project are identified and enforceable. Table III-7-G correlates each BMP to the pollutants of concern which it removes/reduces and/or meets the design objectives for the BMP.

**MM Hydro 5**: In order to conserve water and to mitigate for any potential unforeseen adverse impacts to a reduction in ground water recharge, the following measure has been recommended by the Chino Basin Water Conservation District. Landscaping within individual development projects will retain and percolate both applied irrigation water and storm water in vegetated areas of parking lots and other areas, where appropriate; "depressed" planted areas bordered by shrubbery screens will be implemented rather than "mounded" grass and shrubbery planted screens.

**MM Hydro 6**: In order to reduce pollutants in post construction run-off and to implement mitigation measures included in the GPA for the NMC FEIR, the individual project owners and operators (e.g., homeowner associations, retail center owners, school district, parks department, etc.) shall ensure that all pest control, herbicide, insecticide and other similar substances used as part of maintenance of project features are handled, stored, applied and disposed of by those conducting facility maintenance in a manner consistent with all applicable federal, state and local regulations. According to Title 6, Chapter 6, Section 6 of the City's code, the City Engineer shall monitor and enforce this provision.

**Noise**

**MM Noi 1:** The construction activities of the proposed project shall comply with the City of Ontario noise ordinance that prohibits construction activities on Sundays, federal holidays, and other days between the hours of 7:00 p.m. and 7:00 a.m.

**MM Noi 2**: Construction staging areas shall not be located within 150 feet of existing sensitive receptors and construction equipment shall be fitted with properly operating and maintained mufflers.

**MM Noi 7:** Architectural plans shall be submitted to the City of Ontario for an acoustical plan check prior to the issuance of building permits to assure that second story windows are upgraded for sound reduction and proper ventilation systems are incorporated in order to meet the interior noise level requirement.

**Public Services**

**MM Serv 1:** Wood-shingled and shake-shingled roofs are prohibited.

**MM Serv 2:** Fire hydrant locations and water main sizes shall meet standards established by the City Fire Department and reviewed and implemented by the Engineering Department.

**MM Serv 3**: To reduce fire hazards, adequate fire flow pressure shall be provided for residential and non-residential projects in accordance with currently adopted City standards.

**MM Serv 4:** To reduce fire hazards, adequate water supply shall be provided as approved by the Fire Department prior to the framing stages of construction.

**MM Serv 5:** Houses located on cul-de-sacs longer than 300 feet shall be constructed with residential fire sprinklers.

**MM Serv 6:** Access roadways designed in accordance with Fire Department standards to within 150' of all structures, shall be provided prior to the framing stages of construction. This access is to be maintained in an unobstructed manner throughout construction.

**MM Serv 8:** The developer shall pay library, police, and fire service development impact fees.

**MM Serv 9:** The developer shall pay school fees or otherwise, in lieu of fees, meet project obligations to schools, as required by Mountain View and Chaffey Joint Union High School Districts.

**MM Serv 10:** Park development impact fees, Quimby fees, and/or developed parkland shall be provided to the City commensurate with the requirements of the General Plan equivalent to 24 acres.

**Transportation**

**MM Trans 1:** Construction of full width of internal roadways not specified in the Design Considerations of the project such that they shall comply with City of Ontario standards.

**MM Trans 2**: Sight distance at the project entrance roadways should be reviewed with respect to standard City of Ontario sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

**MM Trans 3**: Signing/striping should be implemented in conjunction with detailed construction plans for the project site.

**MM Trans 7:** The project shall participate in the cost of offsite improvements through the payment of "fair-share" development impact fees. These fees should be collected and utilized as needed by the City of Ontario to maintain acceptable levels of service.

**Utilities and Service Systems**

**MM Util 1:** All water and sewer pipelines within and adjacent to the project boundaries shall be constructed and/or funded for construction on a fair share basis based on the NMC Infrastructure Master Plans and to the satisfaction of the City.

**MM Util 4:** Prior to obtaining grading permit(s), the project proponent shall coordinate with the applicable natural gas, electrical, and telephone utility providers for the project site to ensure that all existing underground and overhead lines are not damaged during project construction.

**MM Util 5:** To reduce the quantity of energy used and to conserve water resources, the project developer and City of Ontario should work to include sustainable systems for use of water and energy within the project design.

**MM Util 6:** The project applicant shall plan and construct a dual pipe system to supply reclaimed water when available in the future (GP Policy 5.1.4).

RESOLUTION NO. PC21-039

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE FILE NO. PSPA20-006, AN AMENDMENT TO THE SUBAREA 29 SPECIFIC PLAN TO INCREASE THE OVERALL DENSITY FROM 4.8 TO 4.9 DWELLING UNITS PER GROSS ACRE AND ESTABLISH A NEW RESIDENTIAL PRODUCT TYPE (MOTORCOURT CLUSTER D – 8-PLEX) WITHIN PLANNING AREA 27. THE PROJECT IS BOUNDED BY MERRILL AVENUE TO THE NORTH, SOUTHERN CALIFORNIA EDISON EASEMENT TO THE WEST, AND THE SAN BERNARDINO COUNTY FLOOD CONTROL DISTRICT AND THE CITY OF EASTVALE TO THE SOUTH AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 0218-331-42.

WHEREAS, SL ONTARIO DEVELOPMENT COMPANY, LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA20-006, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 5.99 acres of land generally bounded by Merrill Avenue to the north, Southern California Edison easement to the west, and the San Bernardino County Flood Control District and the City of Eastvale to the south, and is presently vacant; and

WHEREAS, the property to the north of the Project site is within the Planning Area 28 (Conventional Medium Lot) land use designation of the Subarea 29 Specific Plan and a residential subdivision in currently under construction. The properties to the east are located in the City of Eastvale within R-1 land use district and developed with residential land uses. The properties to the south are located in the City of Eastvale within the PRD (Planned Residential Development) land use district and developed with residential land uses. The property to the west is located within the Subarea 29 Specific Plan and has an SCE Corridor land use designation that is developed with SCE 180-foot-tall transmission towers (115kV) and power lines; and

WHEREAS, the Specific Plan Amendment will increase the density of the Subarea 29 Specific Plan from 4.8 to 4.9 dwelling units per gross acre; and

WHEREAS, the Specific Plan Amendment will increase the planned gross density from 6.2 to 9.7 dwelling units per gross acre to allow an increase from 47 dwelling units to a maximum of 73 dwelling units within Planning Area 27 (Cluster Homes – 7-14 du/ac); and

WHEREAS, the Specific Plan Amendment will establish a new residential product type (Motorcourt Cluster D – 8-Plex) within Planning Area 27 (Cluster Homes – 7-14 du/ac); and

WHEREAS, all changes and additions to the Specific Plan (exhibits, tables, development standards and design guidelines) are contained within the revised Specific Plan document; and

WHEREAS, the Applicant submitted a Tentative Tract Map (File No. PMTT20-012/TTM 20389) to subdivide 5.99 acres of land into one numbered lot and three lettered lots for condominium purposes in conjunction with the Subarea 29 Specific Plan amendment; and

WHEREAS, the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) was certified on October 17, 2006 (hereinafter referred to as “Certified EIR”), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as “EIR Addendum”) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as “CEQA”); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity. The project site is also located within the Airport Influence area of Chino Airport and is consistent with policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on May 17, 2021, the Development Advisory Board of the City of Ontario conducted a hearing to consider the Addendum and the Project, and concluded said hearing on that date, voting to issue Decision No. DAB21-020, recommending that the Planning Commission recommend the City Council approve the Addendum; and

WHEREAS, as the first action on the Project, on May 25, 2021, the Planning Commission issued a Resolution recommending the City Council adopt the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on May 25, 2021, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) was certified on October 17, 2006 in conjunction with File No. PSP03-003; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the EIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant

environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and.

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The project site is one of the properties listed in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix, and with approval of the related Specific Plan Amendment (File No. PSPA20-006) the proposed project will be consistent with the number of dwelling units and density (7-14 DU/AC) within Planning Area 27, as specified in the Available Land Inventory.

SECTION 4: ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted

Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the ALUCP, establishing the Airport Influence Area for Ontario International Airport (hereinafter referred to as "ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). The project site is also located within the Airport Influence area of Chino Airport and is consistent with policies and criteria set forth within the 2011 California Airport Land Use Planning Handbook published by the California Department of Transportation, Division of Aeronautics. As a result, the PLANNING COMMISSION, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP and the 2011 California Airport Land Use Planning Handbook.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 4, above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Subarea 29 Specific Plan amendment will provide consistency between the Policy Plan Land Use Plan and the Subarea 29 Specific Plan Planning Area 27 land use designation. The proposed amendment will accommodate the construction of future residential land uses within the Specific Plan which is consistent with goals, policies, plans and City Council priorities of The Ontario Plan.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed amendment to the Subarea 29 Specific Plan will provide consistency between the Policy Plan Land Use Plan and the Planning Area 27 land use designation. The proposed Specific Plan Amendment will not be detrimental to the public interest, health, safety, convenience, or general welfare of the City. The land use change will provide residential land uses within the Subarea 29 Specific Plan, which is consistent with the type and intensity of development specified in The Ontario Plan and evaluated by the Subarea 29 Specific Plan Environmental Impact Report.

(3) ***In the case of an application affecting specific property, the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The proposed amendment will accommodate the construction of future residential land uses. The Specific Plan currently allows for a Motorcourt Cluster A (6- or 8- Plex), Paseo Cluster Lots, Motorcourt Cluster B (6-Plex), Motorcourt Cluster C (5-Plex), and Green Courts. The new Motorcourt Cluster D (8-Plex) product will allow for a cluster of up to 8 single-family homes, with smaller and more efficient building footprints.

(4) ***In the case of an application affecting specific property, the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The subject site is physically suitable to accommodate the future residential land uses. The Subarea 29 Specific Plan amendment includes development standards to facilitate the proposed land use, which will be developed with adequate lot sizes, access, and utilities to serve the project site.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," the Subarea 29 Specific Plan Document "Attachment B," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of May 2021, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage
Planning Commission Chairman

**Meeting Date:** May 25, 2021

**File No:** PSPA20-006

**Related Files:** PMTT20-012

**Project Description:** An Amendment to the Subarea 29 Specific Plan to increase the overall density within Planning Area 27 (Cluster Homes – 7-14 du/ac) from 4.8 to 4.9 dwelling units per gross acre and establish a new residential product type (Motorcourt Cluster D – 8-Plex). Planning Area 27 is bounded by Merrill Avenue to the north, Southern California Edison easement to the west, and the San Bernardino County Flood Control District and the City of Eastvale to the south (APN: 0218-331-42); **submitted by SL Ontario Development Company, LLC.**

**Prepared By:** Jeanie Irene Aguilo, Associate Planner
Phone: 909.395.2418 (direct)
Email: jaguilo@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

**1.0 Standard Conditions of Approval.** The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

**2.0 Special Conditions of Approval.** In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

**2.1** Specific Plan/Specific Plan Amendment. The following shall be submitted to the Planning Department within 30 days following City Council approval of the Specific Plan/Specific Plan Amendment:

**(a)** Fifteen copies of the final Specific Plan document;

**(b)** One complete, unbound copy of the final Specific Plan document;

**(c)** One CD containing a complete Microsoft Word copy of the final Specific Plan document, including all required revisions;

**(d)** Five CDs, each containing a complete PDF copy of the final Specific Plan document, including all required revisions; and

**(e)** One CD containing a complete electronic website version of the final Specific Plan document, including all required revisions.

**2.2** Environmental Review.

**(a)** The environmental impacts of this project were reviewed in conjunction with an **Addendum to The Ontario Plan Environmental Impact Report**, certified by the Ontario City Council on January 27, 2010, in conjunction with File No. PGPA06-001 (City Council Resolution No. 2010-006). This application introduces no new significant environmental impacts. The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of project approval, and are incorporated herein by this reference. All previously adopted mitigation measures shall be a condition of project approval, as they are applicable, and are incorporated herein by this reference.

**2.3** Indemnification. The applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul any approval of the City of Ontario, whether by its City Council, Planning Commission or other authorized board or officer. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

**2.4** Tribal Consultation Conditions.

**(a)** Prior to the commencement of any ground disturbing activity at the project site, the project applicant shall retain a Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation – the tribe that consulted on this project pursuant to Assembly Bill A52 – SB18 (the "Tribe" or the "Consulting Tribe"). A copy of the executed contract shall be submitted to the City of Ontario Planning and Building Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. The Tribal monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when all ground-disturbing activities on the Project Site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources. Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by project activities shall be evaluated by the qualified archaeologist and Tribal monitor approved by the Consulting Tribe. If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project Site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]). If a non-Native American resource is determined by the qualified archaeologist to constitute a "historical resource" or "unique archaeological resource," time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Sections 21083.2(b) for unique archaeological resources.

**(b)** Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery

excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

**2.5** Additional Fees.

**(a)** Within 5 days following final application approval, the Notice of Determination (NOD) filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act (CEQA). Failure to provide said fee within the time specified may result in a 180-day extension to the statute of limitations for the filing of a CEQA lawsuit.

# CITY OF ONTARIO
## MEMORANDUM

**TO:** **Jeanie Irene Aguilo, Associate Planner**
**Planning Department**

**FROM:** **Mike Gerken, Deputy Fire Chief/Fire Marshal**
**Fire Department**

**DATE:** **January 14, 2021**

**SUBJECT:** **PSPA20-006 - An Amendment to the Subarea 29 Specific Plan, to increase the number of units within Planning Area 27 (Cluster Homes) from 47 to 73 dwelling units, located south of and adjacent to Merrill Avenue, approximately 1,000 feet east of Celebration Avenue, within the PA 27 of the Subarea 29 Specific Plan (APN: 0218-331-42). Related File: PMTT20-012.**

---

☒ The plan **does** adequately address Fire Department requirements at this time.

☒ Standard Conditions of Approval apply, as stated below.

---

**SITE AND BUILDING FEATURES:**

A. 2019 CBC Type of Construction: Type V-B Wood Frame

B. Type of Roof Materials: Non-Rated

C. Ground Floor Area(s): Various

D. Number of Stories: Two Story

E. Total Square Footage: Various

F. 2019 CBC Occupancy Classification(s): R-3, U

**CONDITIONS OF APPROVAL:**

## 1.0 GENERAL

☒ 1.1 The following are the Ontario Fire Department ("Fire Department") requirements for this development project, based on the current edition of the California Fire Code (CFC), and the current versions of the Fire Prevention Standards ("Standards.") It is recommended that the applicant or developer transmit a copy of these requirements to the on-site contractor(s) and that all questions or concerns be directed to the Bureau of Fire Prevention, at (909) 395-2029. For copies of Ontario Fire Department Standards please access the City of Ontario web site at www.ontarioca.gov/Fire/Prevention.

☒ 1.2 These Fire Department conditions of approval are to be included on any and all construction drawings.

## 2.0 FIRE DEPARTMENT ACCESS

☒ 2.1 Fire Department vehicle access roadways shall be provided to within 150 ft. of all portions of the exterior walls of the first story of any building, unless specifically approved. Roadways shall be paved with an all-weather surface and shall be a minimum of twenty-four (24) ft. wide. See Standard #B-004.

☒ 2.2 In order to allow for adequate turning radius for emergency fire apparatus, all turns shall be designed to meet the minimum twenty five feet (25') inside and forty-five feet (45') outside turning radius per Standard #B-005.

☒ 2.3 Fire Department access roadways that exceed one hundred and fifty feet (150') in length shall have an approved turn-around per Standard #B-002.

☒ 2.7 Any time PRIOR to on-site combustible construction and/or storage, a minimum twenty-four (24) ft. wide circulating all weather access roads shall be provided to within 150 ft. of all portions of the exterior walls of the first story of any building, unless specifically approved by fire department and other emergency services.

## 3.0 WATER SUPPLY

☒ 3.1 The required fire flow per Fire Department standards, based on the 2019 California Fire Code, Appendix B, is Choose an item. gallons per minute (g.p.m.) for Choose an item. hours at a minimum of 20 pounds per square inch (p.s.i.) residual operating pressure.

☒ 3.2 Off-site (public) fire hydrants are required to be installed on all frontage streets, at a minimum spacing of three hundred foot (300') apart, per Engineering Department specifications.

☒ 3.4 The water supply, including water mains and fire hydrants, shall be tested and approved by the Engineering Department and Fire Department prior to combustible construction to assure availability and reliability for firefighting purposes.

## 4.0 FIRE PROTECTION SYSTEMS

☒ 4.3 An automatic fire sprinkler system is required. The system design shall be in accordance with National Fire Protection Association (NFPA) Standard Choose an item.. All new fire sprinkler systems, except those in single family dwellings, which contain twenty (20) sprinkler heads or more shall be monitored by an approved listed supervising station. An application along with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

## 5.0 BUILDING CONSTRUCTION FEATURES

☒ 5.1 The developer/general contractor is to be responsible for reasonable periodic cleanup of the development during construction to avoid hazardous accumulations of combustible trash and debris both on and off the site.

☒ 5.2 Approved numbers or addresses shall be placed on all new and existing buildings in such a position as to be plainly visible and legible from the street or road fronting the property. Multi-tenant or building projects shall have addresses and/or suite numbers provided on the rear of the building. Address numbers shall contrast with their background. See Section 9-1 6.06 of the Ontario Municipal Code and Standards #H-003 and #H-002.

☒ 5.3 Single station smoke alarms and carbon monoxide alarms are required to be installed per the California Building Code and the California Fire Code.

☒ 5.5 All residential chimneys shall be equipped with an approved spark arrester meeting the requirements of the California Building Code.

## The project is impacted by the following Chino ALUCP Safety Zones:

☐ Zone 1 ○ Zone 2 ☐ Zone 3 ○ Zone 4 ○ Zone 5 ○ Zone 6

Allowable Height: 200 FT +

## CONSISTENCY DETERMINATION

This proposed Project is: ○ Exempt from the ALUCP ○ Consistent ◉ Consistent with Conditions ○ Inconsistent

The proposed project is located within the Airport Influence Area of Ontario International Airport (ONT) and Chino Airport was evaluated and found to be consistent with the policies and criteria of the Airport Land Use Compatibility Plan (ALUCP) for ONT and Chino Airport.

See Attached Conditions

Airport Planner Signature: Lorena Mejia

CD No.: 2021-002
PALU No.:

## PROJECT CONDITIONS

The proposed project is located within the Airport Influence Area of Ontario International Airport (ONT) and was evaluated and found to be consistent with the Airport Land Use Compatibility Plan (ALUCP) for ONT. The applicant is required to meet the Real Estate Transaction Disclosure in accordance with California Codes (Business and Professions Code Section 11010-11024). New residential subdivisions within an Airport Influence Area are required to file an application for a Public Report consisting of a Notice of Intention (NOI) and a completed questionnaire with the Department of Real Estate and include the following language within the NOI:

NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

SUBJECT: FILE #: PSPA20-006 Finance Acct#:

The following project has been submitted for review. Please send one (1) copy and email one (1) copy of your DAB report to the Planning Department by .

**Note:**
- ☐ Only DAB action is required
- ☒ Both DAB and Planning Commission actions are required
- ☐ Only Planning Commission action is required
- ☐ DAB, Planning Commission and City Council actions are required
- ☐ Only Zoning Administrator action is required

**PROJECT DESCRIPTION:** An Amendment to the Subarea 29 Specific Plan, to increase the number of units within PA# by # within the (APN: 0218-331-42). Related File: PMTT20-012

☑ The plan does adequately address the departmental concerns at this time.
- ☐ No comments
- ☐ Report attached (1 copy and email 1 copy)
- ☑ Standard Conditions of Approval apply

☐ The plan does not adequately address the departmental concerns.
- ☐ The conditions contained in the attached report must be met prior to scheduling for Development Advisory Board.

# 1. Specific Plan Overview

# 1.0 Specific Plan Overview

The Subarea 29 Specific Plan is comprised of approximately 539.7 gross acres. The project site is bounded by Eucalyptus Avenue to the north, Riverside County Flood Control Channel to the south, Haven Avenue to the east, Cucamonga Creek Channel to the west as illustrated in ***Exhibit 1, Regional Location and Exhibit 2, Vicinity Map.***

The net acreage of the Specific Plan area is 449.9 net acres. This excludes street right-of-ways, Southern California Edison (SCE), and County Line easements.

The regional context and local setting of the Specific Plan area are illustrated in the ***Regional Location Map, Exhibit 1, and Vicinity Map, Exhibit 2.***

The project site is consistent with and implements the gross Low Density Residential allocation (5.0 dwelling units permitted per gross acre) and broad "community design" policy requirements for the New Model Colony, including a general neo-traditional community design. These include:

- Creation of a "sense of place;"
- Diversity in housing product and architecture;
- Pedestrian connectivity;
- Smaller "neighborhoods;" and
- Elimination of the "subdivision" feel.

The New Model Colony General Plan Amendment adopted by the City of Ontario designated Planning Subarea 29 for development of residential, Neighborhood Center commercial, three (3) elementary, and one (1) middle school land uses. Residential land uses are designated within the Low Density Residential category, with a maximum permitted density of 5.0 dwelling units (du) per gross acre. A General Plan Amendment was adopted concurrently with the Specific Plan in 2006, modifying the General Plan Land Use Policy Map and Circulation Map to 1) reassign the location of one elementary school, 2) eliminate one elementary school, 3) relocate the middle school designation southeast of the intersection of Eucalyptus Ave. and Haven Ave., 4) "straighten" the Haven Ave. alignment between Merrill Ave. and Eucalyptus Ave., and 5) eliminate Neighborhood Center in the northeast portion of Subarea 29.

On January 26th, 2010, the City of Ontario adopted The Ontario Plan (TOP) which serves as the City's new business plan and includes a long term Vision and a principle based Policy Plan (General Plan). The City's Policy Plan, which acts as the City's General Plan, designates (Policy Plan Exhibit LU-1 - Land Use Plan) the project site for development of Low Density Residential (2.1 -5.0 dwelling units per acre), Neighborhood Commercial, Public Schools, and Open Space - Parkland.

Consistent with the adopted General Plan allowing for 5.0 du/gross acre, Subarea 29 is permitted to include a total of 2,470 residential units based on a gross residential acreage of 494.2 acre; see Table 3-A for calculations. The Subarea 29 Specific Plan (2006) originally allocated a total of 1,937 dwelling units. The Specific Plan Amendment (2015) reallocated a variety of residential home types in Subarea 29 resulting in a total of 2,392 dwelling units, or 4.8 du/gross residential acre, 4.4 du/gross acre overall. Adjusting the total unit count implements the land use designation of the General Plan while maintaining the neighborhood crafting and architectural design standards of the original Specific Plan. This Specific Plan Amendment increases the total number of allocated dwelling units to 2,418 or 4.9 du/gross residential acre, 4.5 du/gross acre overall.

Overall, Subarea, 29 is planned for a total of thirty-one (31) planning areas. A total of twenty-six (26) residential neighborhoods are planned within Park Place, with varying lot sizes, product design, and architectural character. ***Refer to Exhibit 3, Land Use Plan.*** Single-family detached home types range from Cluster Homes to 6,300 square foot lots. A maximum total of 1,374 dwelling units are proposed for Park Place. Richland Communities, Inc. controls a total of five (5) residential neighborhoods with varying product, and lot sizes ranging from 3,500 square feet to 5,040 square feet. A maximum total of 936 dwelling units are planned for the five (5) planning areas controlled by Richland Communities, Inc. Brookfield Homes owns Planning Area 29. This planning area is planned for 108 lots featuring either lane or conventionally loaded designs. Combined these three land holders may develop 2,418 potential dwelling units within Subarea 29 Specific Plan area. ***Refer to Table 3a on page 4-4.***

Non-residential uses proposed in the Specific Plan include a commercial parcel (Planning Area 2) consisting of 14.5 gross acres on the southwest corner of Eucalyptus Ave. and Archibald Ave. An elementary school (Planning Area 18) made up of 11.2 gross acres is included at the center of Subarea 29, directly adjacent to a neighborhood park (Planning Area 14) consisting of 7.7 gross acres.

Parks and the private Recreation Center form the "heart" of the Specific Plan and entire planned community. These include a private 3.1-acre private Recreation Center (Planning Area 15) and two (2) neighborhood parks (Planning Area 11 and 14) north and south of Merrill Ave. The two (2) neighborhood parks amount to 7.7 gross acres (north) and 6.2 gross acres (south) of Merrill Ave. Subarea 29 is planned as a walkable community.

A system of pedestrian trails link all residential neighborhoods with the planned school, parks, and recreation amenities. Additionally, connections to the SCE Corridor trail and County Line Channel trail are also planned.

The internal street system includes a modified grid and landscaped parkways in all local residential streets. ***Refer to Exhibit 3, Land Use Plan.***

A) Minimum square footage identified is for exclusive use area on a per home basis, recorded lot size may differ.
1) Gross Acres calculated to centerlines of Master Planned Streets minus SCE easements.
2) Net Acres excludes street rights-of-way and SCE easements.
3) Actual total units and gross/net density and acreage will be dependent on final lotting.
4) Target unit count based on submitted Tentative "B" Maps
5) A density transfer of 15.0% may occur between Planning Areas.

*) Indicates Planning Areas as controlled/owned by Richland Communities, Inc.
**) Indicates "Park Place" Planning Areas as controlled/owned by SL Ontario Development Company
***) Indicates Planning Areas as controlled/owned by Brookfield Homes

## 1.1 Purpose for Amendment

This Specific Plan Amendment (2021) modifies PA-27 to permit a greater number of units. This unit increase would change the overall Subarea 29 density from 4.8 dwelling units per gross acre to 4.9 dwelling units per gross acre. This Amendment also permits an additional cluster housing typology.

## 1.2 Governing Documents

Development of the Subarea 29 Specific Plan will be regulated by the following documents:

- The Ontario Plan (TOP) Policy Plan (General Plan) which establishes policies governing land use, circulation, housing, conservation and open space, noise, safety, and public facilities within the Specific Plan area;
- The Specific Plan, to include a Land Use Plan, Infrastructure Plan, Design Guidelines, and Development Regulations;
- The City of Ontario Development Code, as applicable to the project site, where the Specific Plan is silent on development standards and regulations;
- The City of Ontario Subdivision Ordinance, regulating the subdivision of land within the project site area;
- The Airport Land Use Compatibility Plans of Chino Airport and Ontario International Airport;
- The approved Subarea 29 Environmental Impact Report; and
- Covenants, Conditions, and Restrictions (CC&R's) to be established by the developer of Park Place, and other developers in Subarea 29 as a means of ensuring and enforcing quality design and development of the master planned community.

### Specific Plan Components

The Subarea 29 Specific Plan is organized into the following sections in addition to Section 1, Specific Plan Overview.

### 2.0 Introduction

The Introduction provides:

- The project site setting;
- A general description of the project site proposal;
- The goals and policies of the Specific Plan;
- The entitlements to accompany the Specific Plan; and
- The relationship of the Specific Plan to The Ontario Plan (TOP) Policy Plan (General Plan) and the City on Ontario Development Code.

### 3.0 Existing Conditions

This section describes the setting for the project site, outlining the existing physical conditions on and around the site at the time of the original approval.

### 4.0 Land Use

The Land Use section describes the various residential planning areas and residential types, commercial planning area, school planning area, and the parks and trails within the planned community.

### 5.0 Infrastructure and Public Improvements

This section provides information on proposed circulation improvements, the planned backbone water, sewer, and storm drain systems, the grading concept for the project site, and a discussion of public utilities and services to serve the Specific Plan area.

## 6.0 Development Regulations

The Development Regulations identify permitted uses and standards regulating the development of various residential product types and commercial uses. The relationship of the Specific Plan development regulations to the City of Ontario Development Ordinance is also provided. The policies and procedures for the City's review and approval of future development proposals within the Specific Plan are included in this section. This section provides the methods and procedures for interpreting and amending the Specific Plan, as necessary in the future.

## 7.0 Design Guidelines

The Specific Plan Design Guidelines are intended to direct the site planning, landscaping, and architectural quality of the development. Streetscapes, entries, edge treatments, walls and fencing, lighting, signage, and architectural design are addressed in the Design Guidelines.

## 8.0 Commercial Design Guidelines

This section will direct site planning, architectural design, and landscaping for the commercial parcel.

## 9.0 General Plan Consistency

This section includes the City of Ontario General Plan consistency matrix describing the relationship of the Specific Plan to each policy of The Ontario Plan (TOP) Policy Plan (General Plan).

# 2. Introduction

# 2.0Introduction

The Specific Plan is comprised of 539.7 gross acres designated as Planning Subarea 29 of the New Model Colony, within the City of Ontario. The Specific Plan area illustrated in Exhibit 2, Vicinity Map, is bounded by Eucalyptus Ave. on the north, Haven Ave. on the east, County Line Channel on the south, and Cucamonga Channel and Archibald Ave. on the west. The Specific Plan is a comprehensive plan proposed by SL Ontario Development Company, Richland Communities, Inc, and Brookfield Homes, for the development of residential neighborhoods designed to reflect the small town character of older established communities.

The Specific Plan also includes a commercial site, parks, and school uses. The Specific Plan establishes Development Standards and Design Guidelines for a commercial land use area within Planning Subarea 29.

It should be noted that use of the term "Park Place" throughout this document applies only to the SL Ontario Development Company ownership.

## 2.1 Purpose and Objectives

### 2.1.1 Purpose

The Subarea 29 Specific Plan serves to implement the City's Policy Plan (General Plan) for the project site and provides zoning regulations for development of the project site by establishing permitted land use, development standards, infrastructure requirements, and implementation requirements for development. A comprehensive set of design guidelines and development regulations are included to guide and regulate site planning, landscape, and architectural character within the community ensuring that excellence in community design is achieved during project development. The Subarea 29 Specific Plan establishes the procedures and requirements to approve new development within the project site.

The Specific Plan is designed to address the following guiding planning principles:

- Diversity and choice of single-family housing types and opportunities to address a variety of lifestyles, home sizes, and economic segments of the marketplace;
- Connectivity among land uses within the Specific Plan area and to surrounding public facilities and the existing Ontario community;
- Use of traditional development patterns as found in older established neighborhoods in Southern California;
- Recreational amenities within walking distance of all residential neighborhoods;
- Bicycle and pedestrian accessibility and mobility to encourage alternative modes of travel;
- Diversity in architectural design; and
- Sustainable development practices addressing energy efficiency.

### 2.1.2 Objectives

The following objectives are established for the Subarea 29 Specific Plan.

#### Residential Areas

- Residential neighborhoods designed at a "human scale" and oriented to pedestrian activity;
- Connectivity provided among residential neighborhoods and recreational areas through a network of pedestrian sidewalks and on-street bicycle trails;
- Connectivity provided between residential neighborhoods and the adjacent commercial land use, as well as to the central elementary school, by means of pedestrian and bicycle trail linkages;
- A variety of housing types incorporated into the land use plan addressing lifestyle considerations of singles, families, and empty nesters;
- Residential neighborhoods designed around a central park "green core," "framing" green spaces, promoting active and passive recreational activity and casual social interaction among neighbors; and
- Residential neighborhoods with diverse architectural styles and traditional design elements reflecting the characteristics of older established Ontario neighborhoods.

#### Commercial Area

- Neighborhood commercial uses to meet the needs of the residential community within the project site as well as the larger surrounding market area;
- Provision for trails connecting the residential community with the commercial center and adjacent uses;
- The development of plaza areas and other amenities within the commercial center providing space for social interaction; and
- Orientation of commercial buildings to the street wherever possible to create an urban edge and sense of arrival.

### Streets and Pedestrian/Bicycle Mobility

- Streets and lanes (private alleys) designed in a modified grid pattern, reminiscent of traditional neighborhood streets;
- Streets with landscaped parkways and pedestrian walkways separated from the street, to create a pleasant and safe pedestrian environment, promoting friendly interaction among neighbors;
- Several traffic calming techniques within the project site street design including enhanced parkway landscaping, median landscaping, and tapered street intersections and lane entrances to influence a driver's peripheral vision and encourage motorists to drive more slowly; and
- Inside turning radii at corners reduced to slow traffic at corners.

### Recreation / Trails

- New recreational opportunities for residents through the development of two (2) neighborhood parks centered within the community "green core" to include play fields, tot lots, and picnic areas. Additionally, a private Recreation Center including a recreation building with swimming pool for Park Place residents (3.13 acres), community tennis courts, and other areas for passive recreation. The two (2) neighborhood parks amount to 7.7 acres (north) and 6.2 acres (south) of Merrill Ave.;
- A portion of the City's Multipurpose Trails and Bikeway Corridor Master Plan provided through development of a multipurpose trail within the SCE property connecting County Line Channel and Merrill Ave. with Eucalyptus Ave.; and
- A system of on-street multipurpose trails and bicycle lanes integrated into the project site providing bicycle access from the residential community to surrounding areas.

### Sustainable Development

- The opportunity for development of residential units designed with living areas on the second floor and home office areas on the first floor;
- Native plant materials and non-invasive ornamental landscape materials will be incorporated into the landscaping plan for portions of the SCE property developed for trail purposes;
- Residential development will be connected to the commercial land use area located within the site through pedestrian and bicycle trails promoting walking and bicycling as an alternative means of travel to the automobile to and from these areas;
- Residential development will be equipped with the latest technology for internet access allowing residents to shop and work on-line, thereby reducing vehicle trips to employment centers and shopping;
- Canopy trees will be utilized in public areas such as parkways, medians, and the public parks to provide shade to counteract the heat island effect;
- Roadway widths will be reduced as much as possible to minimize heat generating asphalt surfaces; and
- Recycled water will be utilized for the central public parks, neighborhood edges, and other common landscape areas.

## 2.2 Specific Plan Proposal

### 2.2.1 Project Summary

The Specific Plan Land Use Plan is described below and in the Specific Plan Statistical Summary, Tables 1-1b, pages 4-3 through 4-4.

### Residential Uses

The Subarea 29 Specific Plan will provide for development of a variety of residential housing types, oriented toward park and open space amenities and designed to promote walkability and interaction among residents. Residential development within 494.2 acres of the Specific Plan area (per Table 1a, Specific Plan Land Use Summary) will contain up to 2,392 dwelling units, providing a varied mix of single-family detached housing types, as described below.

### Residential Detached

Five (5) types of single-family detached residential development products are planned for the site; Planning Areas may be identified with more than one type of planned development product to allow for flexibility within the maximum number of permitted dwelling units. These include:

### Cluster Homes (PA 13, 25, 26 & 27)

Cluster Homes are single-family detached residential development with vehicular access from lanes (private alleys or motorcourts) via interior streets, with direct access garages. These residential areas will be developed at an approximate net density of 7-14 dwelling units per acre with a exclusive use area size of at least ~~2,100~~ 1,750 square feet.

### Conventional Small Lot (PA 1, 5, 12, 16, 17, 23 & 24)

Conventional single-family detached residential development will consist of cottage style residential homes designed with vehicular access provided from local interior streets. Residential areas will be developed at an approximate net density of 5-9 dwelling units per acre with a minimum lot size of at least 3,015 square feet.

### Lane Loaded (PA 9, 10, 19 & 29)

Detached single-family residential development consists of lane-served residential units designed with an orientation to the street or green spaces, by locating garages to the rear of residential units. Residential areas will be developed at an approximate net density of 5-8 dwelling units per acre with an minimum lot size of at least 3,100 square feet.

### Conventional Medium Lot (PA 3, 4, 6, 8, 20, 21, 28, 29 & 31)

Conventional single-family detached units with orientation to local streets and direct access garages, in varying orientations. Residential neighborhoods will be developed at an approximate net density of 4-6 dwelling units per acre, with a minimum lot size of 4,000 square feet.

### Conventional Large Lot (PA 7, 22 & 30)

These are the largest single-family detached lots in the Specific Plan, conventionally accessed from local streets. Net densities average approximately 3-6 dwelling units per acre, with a minimum lot size of 5,000 square feet.

## 2.3 Authority and Requirements

### 2.3.1 Authority

State of California Government Code, Title 7, Division 1, Chapter 3, Article 8, Section 65450-57 grants authority to cities to adopt Specific Plans for purposes of implementing the goals and policies of their General Plans. The Government Code specifies that specific plans may be adopted either by resolution or by ordinance and that the Specific Plan is required to be consistent with the General Plan. The City of Ontario adopts specific plans by ordinance, thereby establishing the zoning regulations for development of the project site. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.

### 2.3.2 Requirements of the Specific Plan

California Government Code Section 65451 sets forth the minimum requirements and review procedures for Specific Plans as follows:

A Specific Plan shall include a text and a diagram or diagrams, which specify all of the following in detail:

- The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan;
- The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;
- Standards and criteria by which improvements will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable; and
- A program of implementation measures including regulations, programs, public works projects and the financing measures necessary to carry out paragraphs 1, 2, and 3 above. The Specific Plan shall include a statement of the relationship of the Specific Plan to the General Plan.

The Subarea 29 Specific Plan meets the requirements of the State of California Government Code.

### 2.3.3 Development Agreement Required

Unless done in a coordinated manner and with adequate fiscal planning, development projects within the New Model Colony are likely to present a challenge in their implementation because of the lack of existing public facilities, including, streets, sewerage, transportation, drinking water, school, and utility facilities. California law has established a mechanism for ensuring the adequate provision of such facilities, while at the same time providing assurances to applicants that, upon approval of the project, the applicants can proceed with their projects. Approval of this Specific Plan without a development agreement may result in a waste of resources, escalate the cost of housing to the consumer, and discourage investment in and commitment to comprehensive planning, as envisioned by the City, which seeks to make maximum efficient utilization of resources at the least economic cost to the public.

Therefore, a statutory development agreement, authorized pursuant to California Government Code sections 65864 et seq., shall be required as part of the approval of this Specific Plan. For the above-mentioned reasons, the development agreement for this Specific Plan shall include, among other things, methods for financing acquisition and construction of infrastructure, acquisition and development of adequate levels of park land, and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the regional housing needs assessment. SL Ontario Development Company, Richland Communities, Inc., and Brookfield Homes may each enter into separate development agreements with the City.

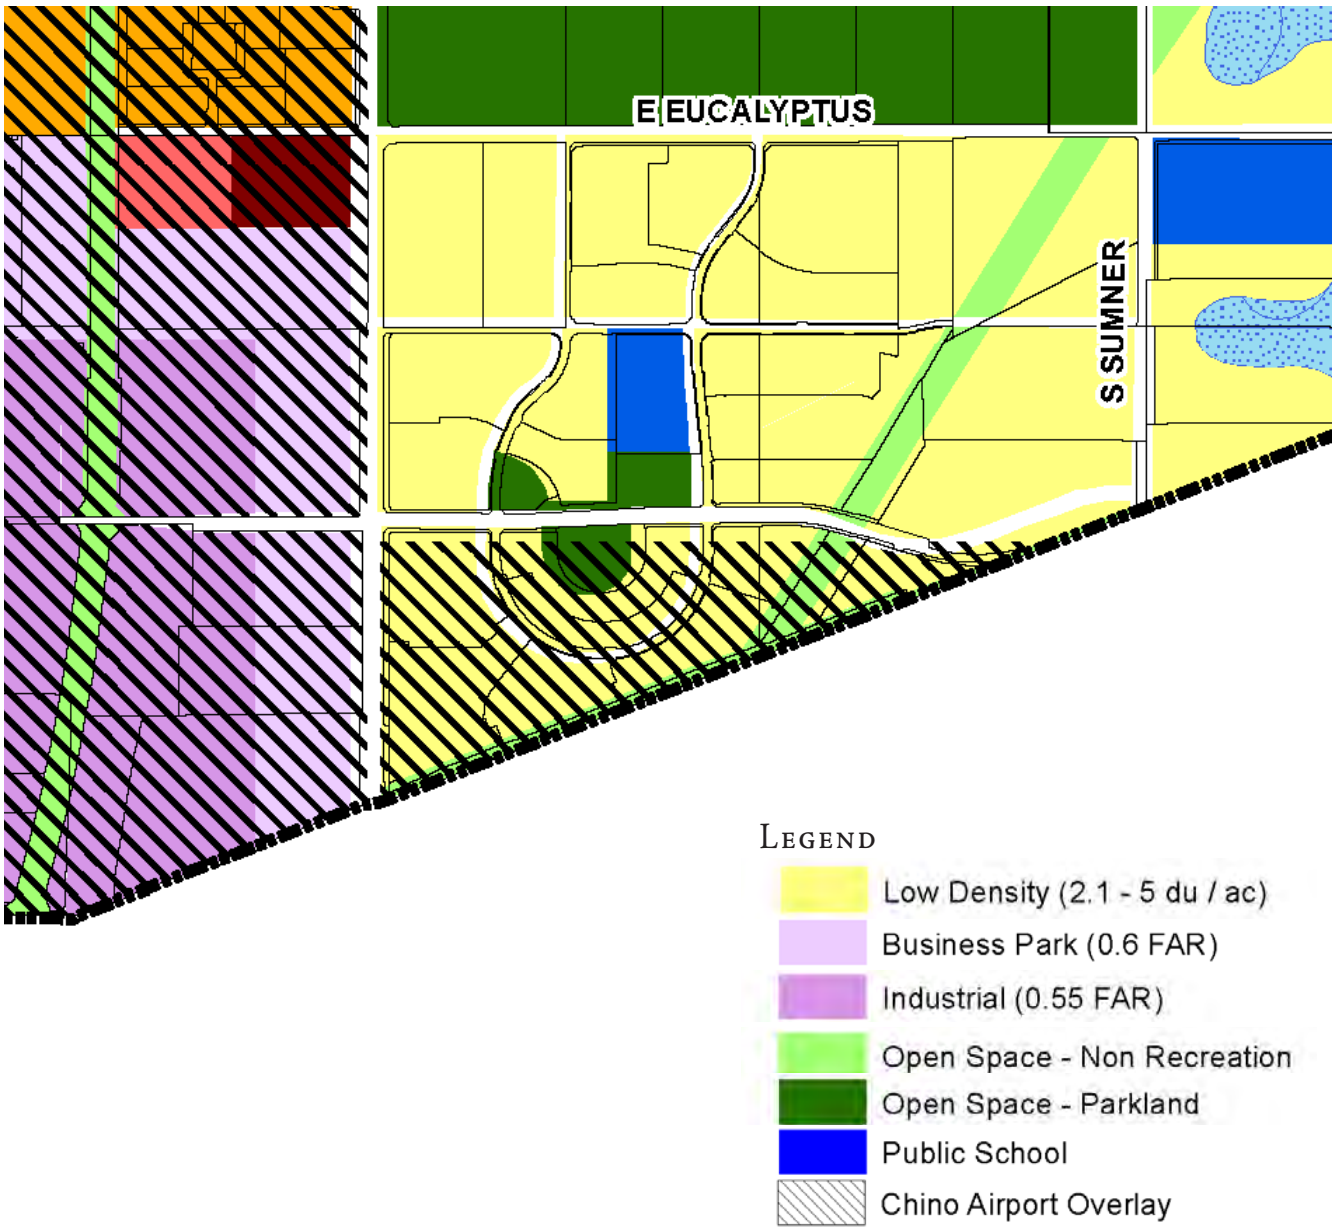

Exhibit 4—Policy Plan Land Use Plan (Exhibit LU_01)

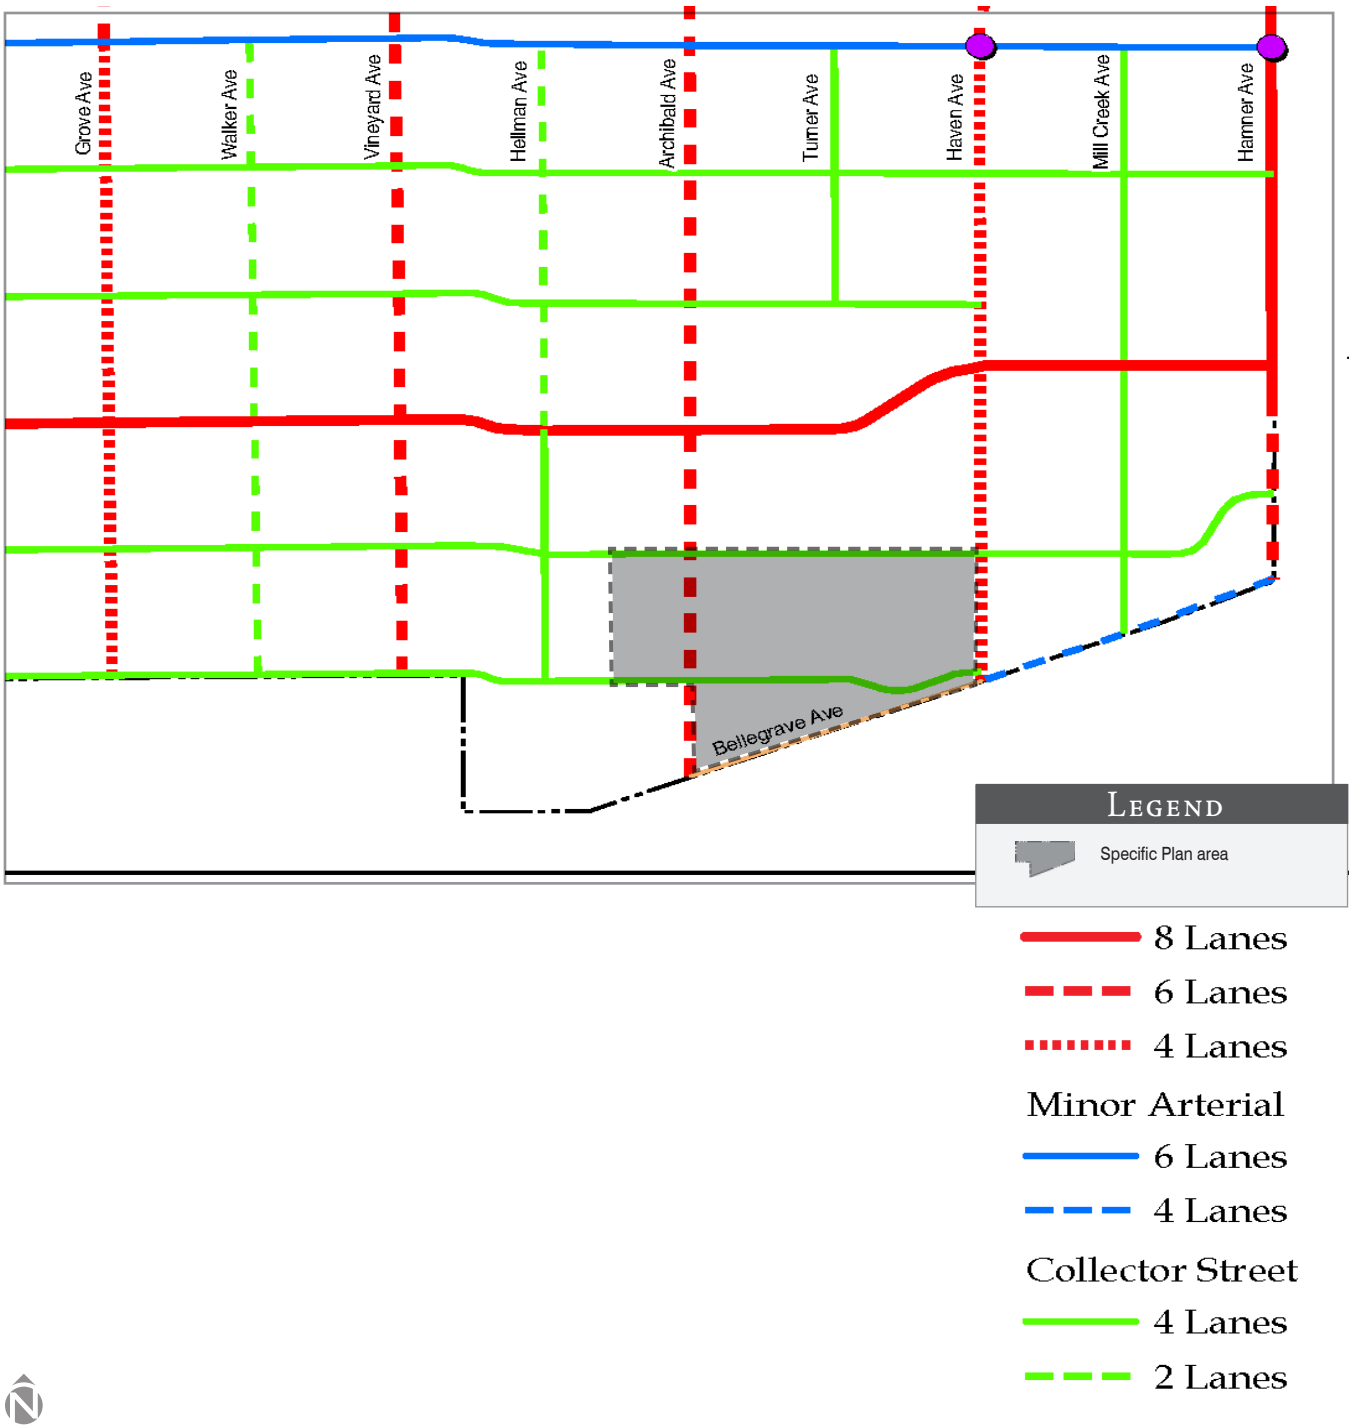

Exhibit 5—Policy Plan Functional Roadway Classification Plan

## 2.4 Development Approval Components

The components of the development approval process for the Specific Plan are as follows:

### General Plan (Policy Plan)

The Ontario Plan (TOP) establishes the direction and vision for the City of Ontario providing a single guidance system that will shape the Ontario community for the future. TOP provides for policies to accommodate change over a 30 year period commencing in 2010, the beginning of the planning period. TOP consists of a six part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.

### Specific Plan

The Policy Plan (General Plan) requires the approval of a Specific Plan for development of the project site to ensure that sufficient land area is included to achieve unified districts and neighborhoods. The City of Ontario has zoned the project site as AG-Specific Plan. The zoning designation of AG-Specific Plan requires that a Specific Plan be approved to guide development of the project site and to implement the goals and policies of the Policy Plan. The Specific Plan provides the zoning regulations to govern development of the project site. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.

### Subdivision Maps

A tentative tract map(s) will be reviewed by the City of Ontario for the residential portion of the Specific Plan indicating the approximate location of lot lines, streets, and proposed grading. Following approval by the City of the tentative tract map(s), a final map(s) will be prepared. Parcel maps will be approved by the City of Ontario for development proposed within the commercial portion of the Specific Plan.

## 2.5 CEQA Compliance

A project site Environmental Impact Report (EIR) prepared by the City of Ontario for the Specific Plan, in accordance with the California Environmental Quality Act (CEQA), addressed impacts associated with the Specific Plan and subdivision map. The EIR recommended mitigation measures to reduce impacts of the project site to a less than significant level. The EIR was prepared as the basis for the environmental review for all subsequent discretionary and ministerial actions.

## 2.6 Relationship to General Plan and Zoning

The City's Policy Plan, which acts as the City's General Plan, designates the project site for development as follows:

- Low Density Residential (2.1 -5.0 dwelling units per acre)
- Neighborhood Commercial
- Public Schools
- Open Space - Parkland
- Open Space - Non-Recreation

The Policy Plan (General Plan) establishes a development capacity of 2,228 dwelling units and approximately

189,486 square feet of commercial use and 369,171 of commercial office use for the project site. The Policy Plan Residential Capacity is further broken down as follows:

Table 2—Policy Plan Residential Capacity

| *Gross Acres* | *TOP Land Use Designation* | *Maximum Permitted Dwelling Units* |
|---|---|---|
| 495.2 | Low Density Residential | 2,228 |
| Total: 495.2 | | 2,228* |

*Densities do not reflect maximum allowable densities by the Policy Plan and are based on TOP EIR densities (average) of 4.5 du/ac for Low Density.

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan. The Subarea 29 Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). The policy analysis is located in the Appendix of this document, describes the manner in which the Subarea 29 Specific Plan complies with the Policy Plan policies applicable to the project.

## 2.7 Development Plan Review

Following the approval of the Specific Plan, all development proposals for individual residential neighborhoods or product areas within the Specific Plan will be subject to the Development Plan Review process pursuant to Article 8: Development Plan Review of the City of Ontario Development Code.

## 2.8 Airport Land Use Compatibility Planning Consistency

All development proposals or Specific Plan Amendments are required to be consistent with the Airport Land Use Compatibility Plans of Chino Airport and Ontario International Airport.

3. Existing Conditions

# 3.0 Existing Conditions

## 3.1 Property Ownership

The 539.7 gross acre Subarea 29 Specific Plan consists of twenty-two (22) parcels with eight (8) separate ownerships. Three (3) separate developers, SL Ontario Development Company, Richland Communities, Inc., and Brookfield Homes are involved in the entitlement process to develop portions of the study area at this time. ***Exhibit*** 6, ***Existing Property Ownership & Williamson Act Contract Status*** illustrates this information.

## 3.2 Williamson Act Status

The Williamson Act program is designed as a mechanism for the preservation of agricultural and open space lands in the State of California. Within the Subarea 29 Specific Plan, only one Williamson Act contract is active. ***Exhibit*** 6, ***Existing Property Ownerships & Williamson Act Contract Status*** illustrates the location and status of the Williamson Act contract within the Subarea 29 Specific Plan.

## 3.3 Airport Land Use Compatibility Plan Consistency

The Project Site is located within the Airport Influence Areas of Chino Airport and Ontario International Airport (ONT) as depicted in Exhibit 10, Airport Influence Areas.

## 3.4 Existing Site Conditions and Improvements

Existing on-site land uses include dairy farming, agriculture, and the SCE transmission corridor. The 539.7 gross acre Specific Plan area has historically been used for general agricultural purposes. Agricultural activities remain within the Specific Plan area and include operations such as dairy farming and row crop production. The site contains farm buildings supporting the existing agricultural activities.

## 3.5 Surrounding Land Uses

Uses surrounding the Specific Plan area include residential, dairy farming, agriculture, vacant open space, and roadways. Refer to ***Exhibit 8, Aerial Photo***, which documents existing and surrounding land uses.

## 3.6 Topography

The project site is relatively flat with gently sloping topography of approximately 2%, sloping in a northeasterly to southwesterly direction. ***Exhibit 18, Conceptual Grading Plan***, illustrates existing and proposed topographic contours on the site. There are no significant landforms or rock outcroppings within the project site.

## 3.7 Hydrology

Most of the project site is presently in agricultural use, and only a limited portion is now covered with impervious surfaces. Normal rainfall in the area is, therefore, able to percolate through on-site soils and does not result in high volumes of surface runoff, typically associated with urban areas. During periods of heavy rainfall, when ground surfaces are saturated, surface runoff is collected in the existing storm drains, culverts, and retention basins located within the surrounding area.

Groundwater within and surrounding the project site as a whole, contains high concentrations of salt, attributable to historic agricultural activities such as dairy farming. The high organic content of on-site soils has contributed incrementally to the degradation of surface and groundwater quality. Removal of the organic materials which constitute by-products of those dairy operations and compliance with National Pollution Discharge Elimination System (NPDES) and other storm water permit requirements will be required as part of project site development.

## 3.8 Existing Circulation/Access

### 3.8.1 Regional Circulation

The Pomona Freeway, State Route (SR-60), is located approximately one (1) mile to the north of the New Model Colony General Plan area. In this area, SR-60 has full diamond-type interchanges with Euclid Ave., Grove Ave., Vineyard Ave., Archibald Ave., Haven Ave., and Milliken Ave. SR-60 carries approximately 160,000 vehicles per day near the City of Ontario sphere of influence area, also referred to as the New Model Colony (NMC) General Plan area.

The Ontario Freeway, Interstate 15 (I-15), is located approximately one-half mile to the east of the New Model Colony General Plan area, and carries approximately 90,000 vehicles per day in the vicinity of the NMC General Plan area. The closest arterial interchange to the NMC General Plan area is located at Limonite Road in Riverside County, approximately 3-¼ miles south of the SR-60 interchange with I-15.

State Highway SR-83 (Euclid Ave.) extends along the western boundary of the NMC General Plan area. Another major freeway in the area is SR-71 (Chino Valley Freeway), located between SR-91 and SR-60, and is approximately 2-3 miles southwest of the NMC General Plan area. This freeway is a major commuter route in southwestern San Bernardino County, connecting the SR-91 freeway with SR-60 and I-10 freeways.

Regional access to the project site is provided from Interstate 15 (I-15) located approximately 1.5 miles east of the project site and from SR-60, located approximately 2.2 miles north of the project site. Refer to ***Exhibit 1, Regional Location,*** page 1-2.

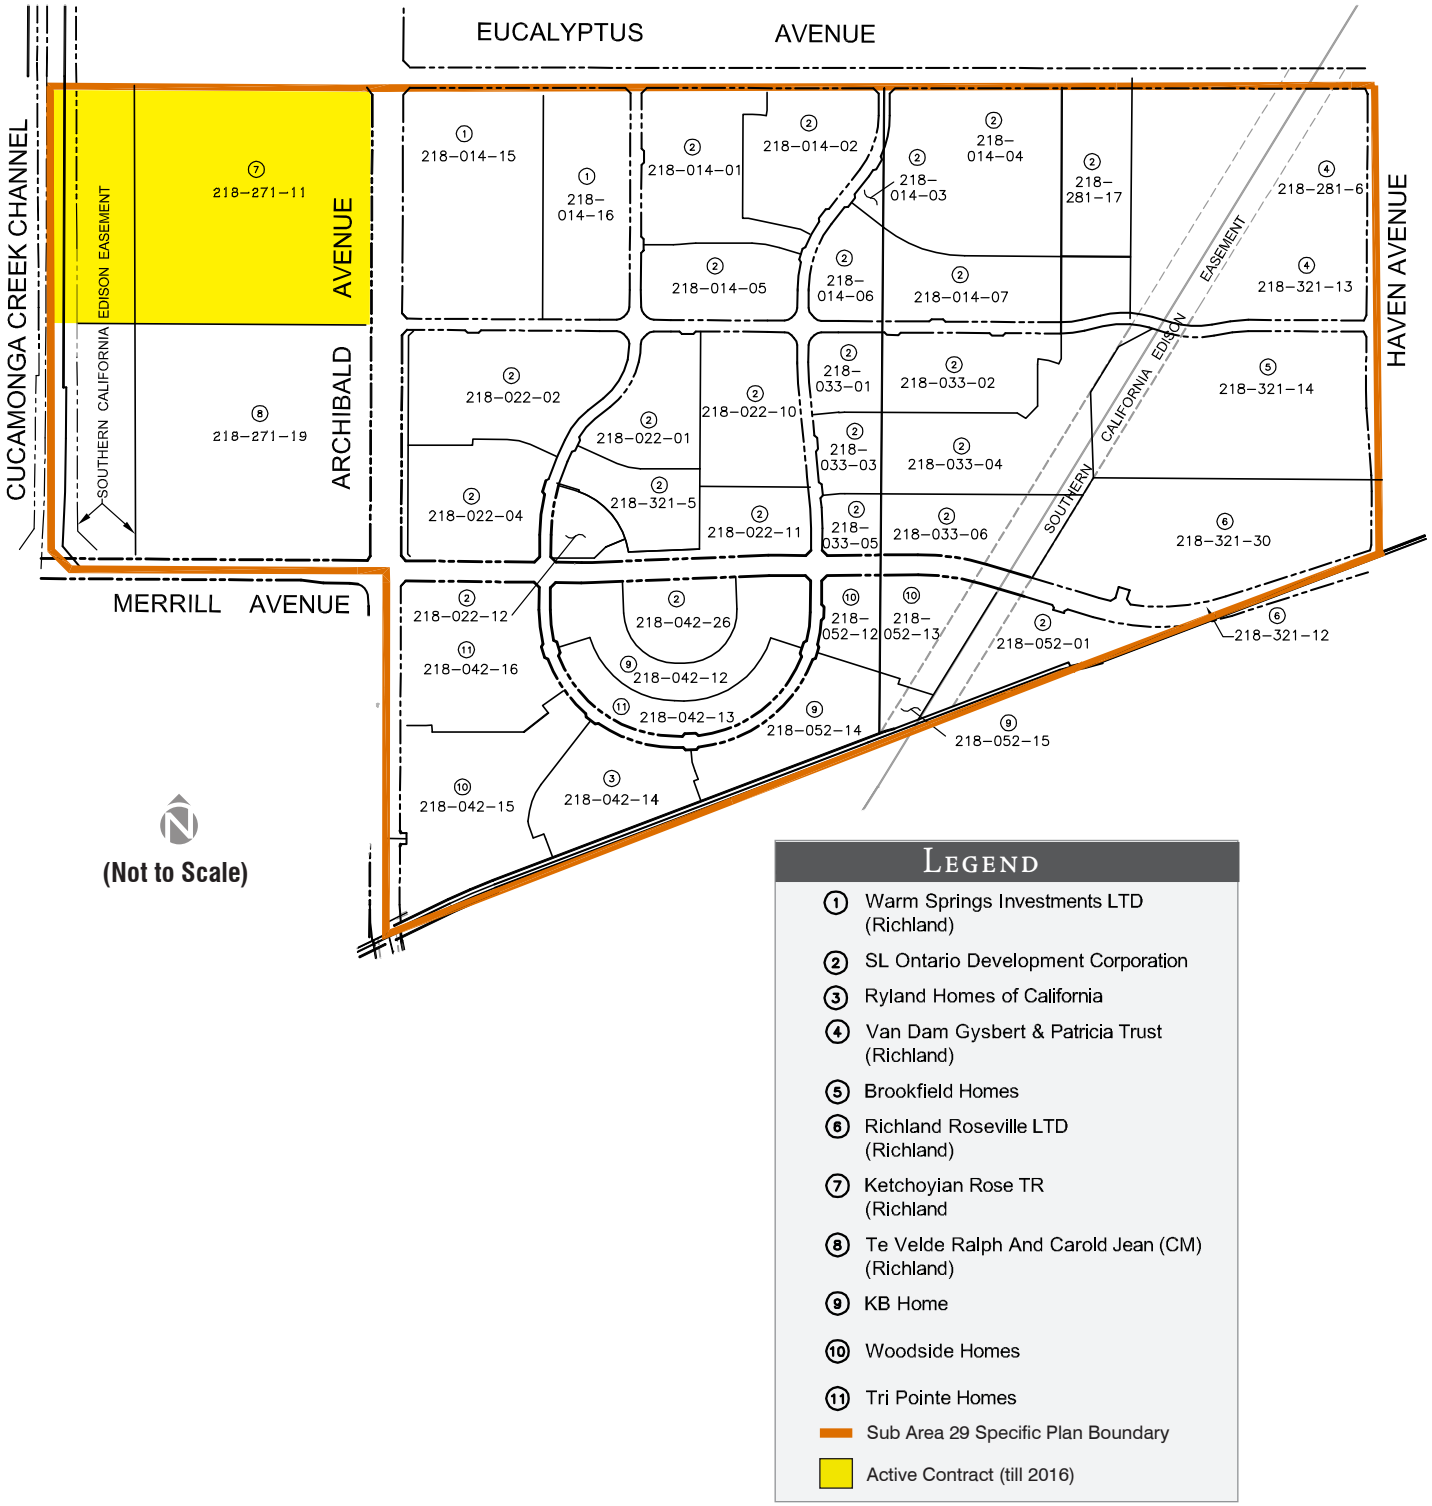

Exhibit 6—Existing Property Ownerships and Williamson Act Contract Status

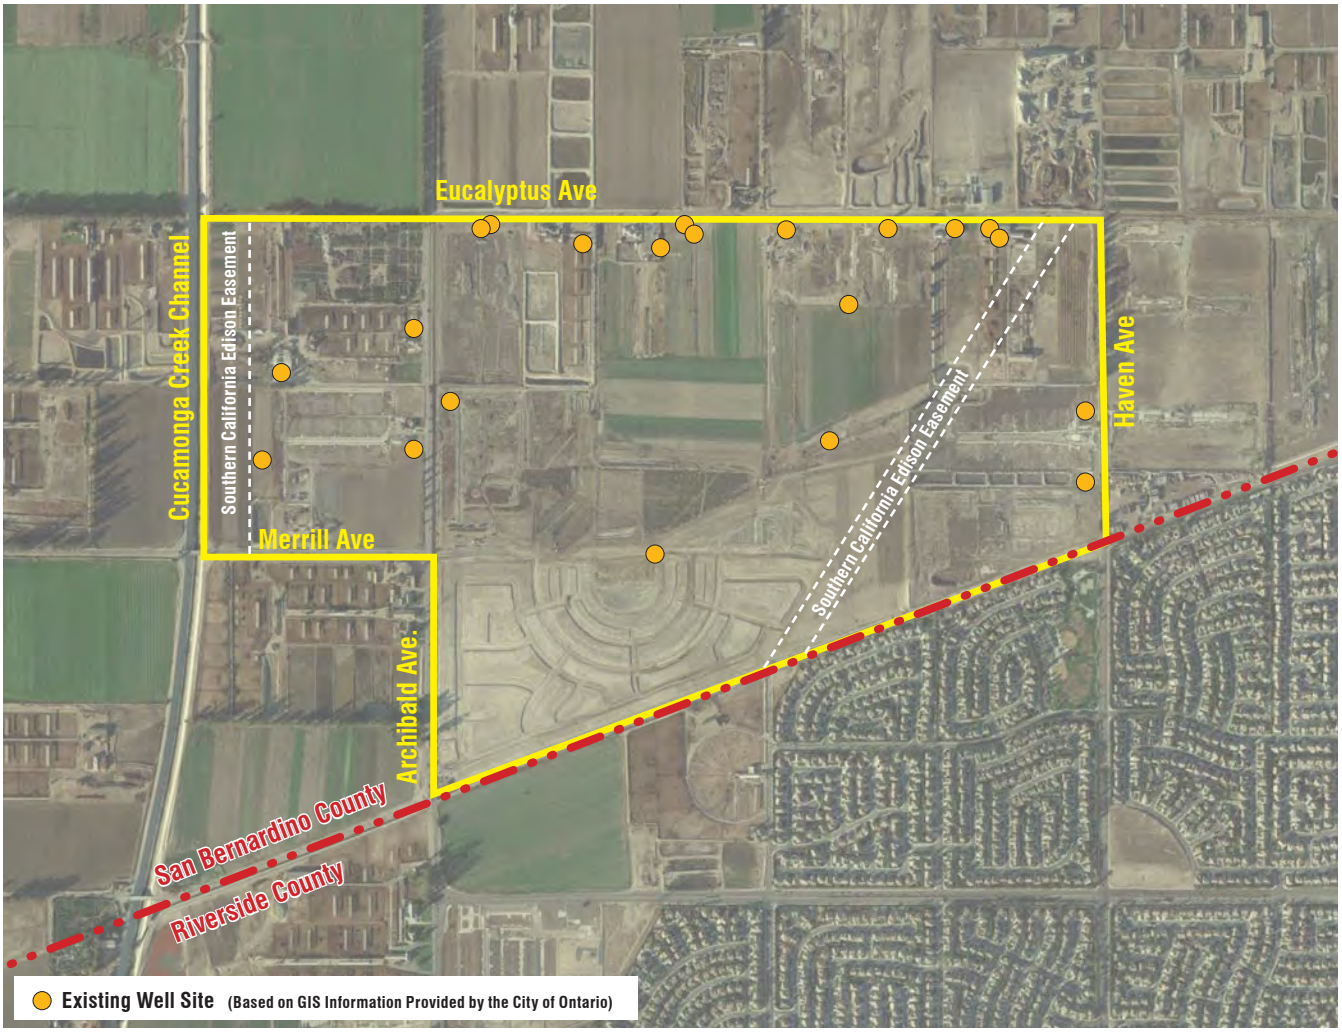

Exhibit 7—Aerial Photo

### 3.8.2 Local Circulation

No local streets exist at present to serve the project site. Archibald Ave. provides arterial access. It has an existing intersection with Eucalyptus Ave. west of the project site.

Archibald Ave. is improved with approximately 36 (thirty-six) feet of paved area from the southerly boundary of the site to Eucalyptus Ave. A five-foot wide shoulder is located adjacent to Archibald Ave. on both sides of the street. Eucalyptus Ave. is improved with approximately 26.5 feet of paved area between Archibald Ave. and the Cucamonga Channel. Haven Ave. is improved with a paved area varying in width from fourteen (14) feet to seventeen (17) feet. Refer to ***Exhibit 8, Policy Plan Functional Roadway Classification Plan,*** which illustrates the General Plan Circulation network for the New Model Colony.

## 3.9 Existing Infrastructure/Utilities

### 3.9.1 Water Supply Facilities

The closest water mains to the project site are located over 1.5 miles north of the Specific Plan area in Riverside Drive. This water main has not been sized to serve significant development within the New Model Colony. A 16-inch water main, owned and operated by the Jurupa Community Services District, is located within Riverside County along the east side of Milliken Avenue, east of the site. As part of the development of the project site, the construction of new water systems shall be consistent with the City's approved Water Master Plan.

On-site residential and agricultural uses are served by private wells, as illustrated on ***Exhibit 7, Aerial Photo***. Please note that the well sites depicted on this exhibit may not be all inclusive, and existing wells will be identified at the Tentative Map stage. Upon development of the well site areas, these wells, or any other wells found on the property, will be abandoned per California Department of Water Resources Health Guidelines and the City of Ontario Guidelines. In compliance with the Chino Basin Water Master's *Well Procedure for Developers*, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City of Ontario for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system (residential to the domestic water system and agricultural to the recycled water system) when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from County Health Department. A copy of such permit shall be provided to the Engineering and Public Works Agency prior to issuance of grading and/or building permits. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

The City of Ontario does not have recycled water facilities on or within the area of the Specific Plan. Construction of new recycled water facilities will be required of the developer as part of development of the project. Construction of these recycled water facilities will be consistent with the City's approved Recycled Water Master Plan.

### 3.9.2 Sewer

The City of Ontario does not have sewer facilities within the vicinity of the project site. Wastewater disposal within the Specific Plan area is currently provided through septic tanks and subsurface disposal fields. Prior to grading operations, existing septic tanks and subsurface disposal fields will need to be abandoned in accordance with Department of Health Services requirements. The City of Ontario's Sewer Master Plan provides for significant new facilities to serve the project site.

### 3.9.3 Stormwater/Drainage Facilities

There are no existing storm drain facilities located within the vicinity of the site. The existing storm drainage system surrounding the site generally consists of open earthen swales adjacent to area roadways. Storm water run-off from the site is generally by sheet flow. As part of the development of the project site, construction of new storm drain facilities will be required consistent with the City's approved Storm Drain Master Plan.

### 3.9.4 Solid Waste Disposal

There is no solid waste disposal in the vicinity of the project site.

### 3.9.5 Natural Gas Lines

Natural gas service in the vicinity of the site is provided by the Southern California Gas Company.

### 3.9.6 Electrical Facilities

Electrical service in the vicinity of the site is provided by Southern California Edison.

### 3.9.7 Communications Systems

Time Warner provides telephone service within the project area. Currently, telephone service is provided to the residences, dairies and farms in the area.

## 3.10 Geology and Soils

The City of Ontario General Plan identified the project site as containing Delhi series soils, as mapped by the United States Department of Agriculture, Soil Conservation Service in 1971 and 1980. Delhi series soils have been used for agriculture, primarily for grapes and citrus, since the 1800's.

## 3.11 Seismicity

The General Plan identified numerous earthquake faults within a 50-mile radius of the project site. Major mapped faults include, but are not limited to, the Chino, Whittier and North Elsinore, and Cucamonga Faults. For the "maximum probable earthquake" (MPE), defined as the 100-year event normally considered in the design of non-critical structures, the values range from about 0.13 to 0.20 g (i.e., the unit force of gravity). In the design of certain critical or important facilities such as hospitals and dams, the "maximum credible earthquake" (MCE) should yield an estimated peak horizontal acceleration in the range of 0.33 to 0.52 g.

A zone of concentrated, relatively low-magnitude seismicity extends to the southwest from the San Jacinto fault zone (Rialto-Colton branch) along an inferred fault near Fontana. Where the inferred fault (Fontana trend) stops, this zone of micro-seismicity continues in a southwesterly to westerly direction terminating in the New Model Colony area. It is expected that the MPE for this fault structure could produce horizontal accelerations in the range of 0.3 to 0.5 g. More distant faults are capable of larger earthquakes with a higher probability of occurrence. The San Andreas fault is expected to generate a MCE event every 150 to 200 years, yielding a peak horizontal ground acceleration of approximately 0.21 to 0.26 g. The Uniform Building Code (UBC), establishes procedures designed to ensure that all development occurs in a safe manner relative to those known hazards.

## 3.12 Vegetation

The project site has been extensively used for agricultural operations, including both dairy use and the cultivation of row crops. Those areas not in active agricultural production are occupied by rural residential housing, farm buildings, and other ancillary facilities. The natural vegetation and soils conditions that once occurred throughout the site have been significantly altered through human uses.

## 3.13 Biological Resources

The Program EIR prepared for the City's NMC General Plan Amendment states that the Ontario NMC General Plan area has been greatly altered from natural conditions, under the influence of intensive agriculture and dairy industry.

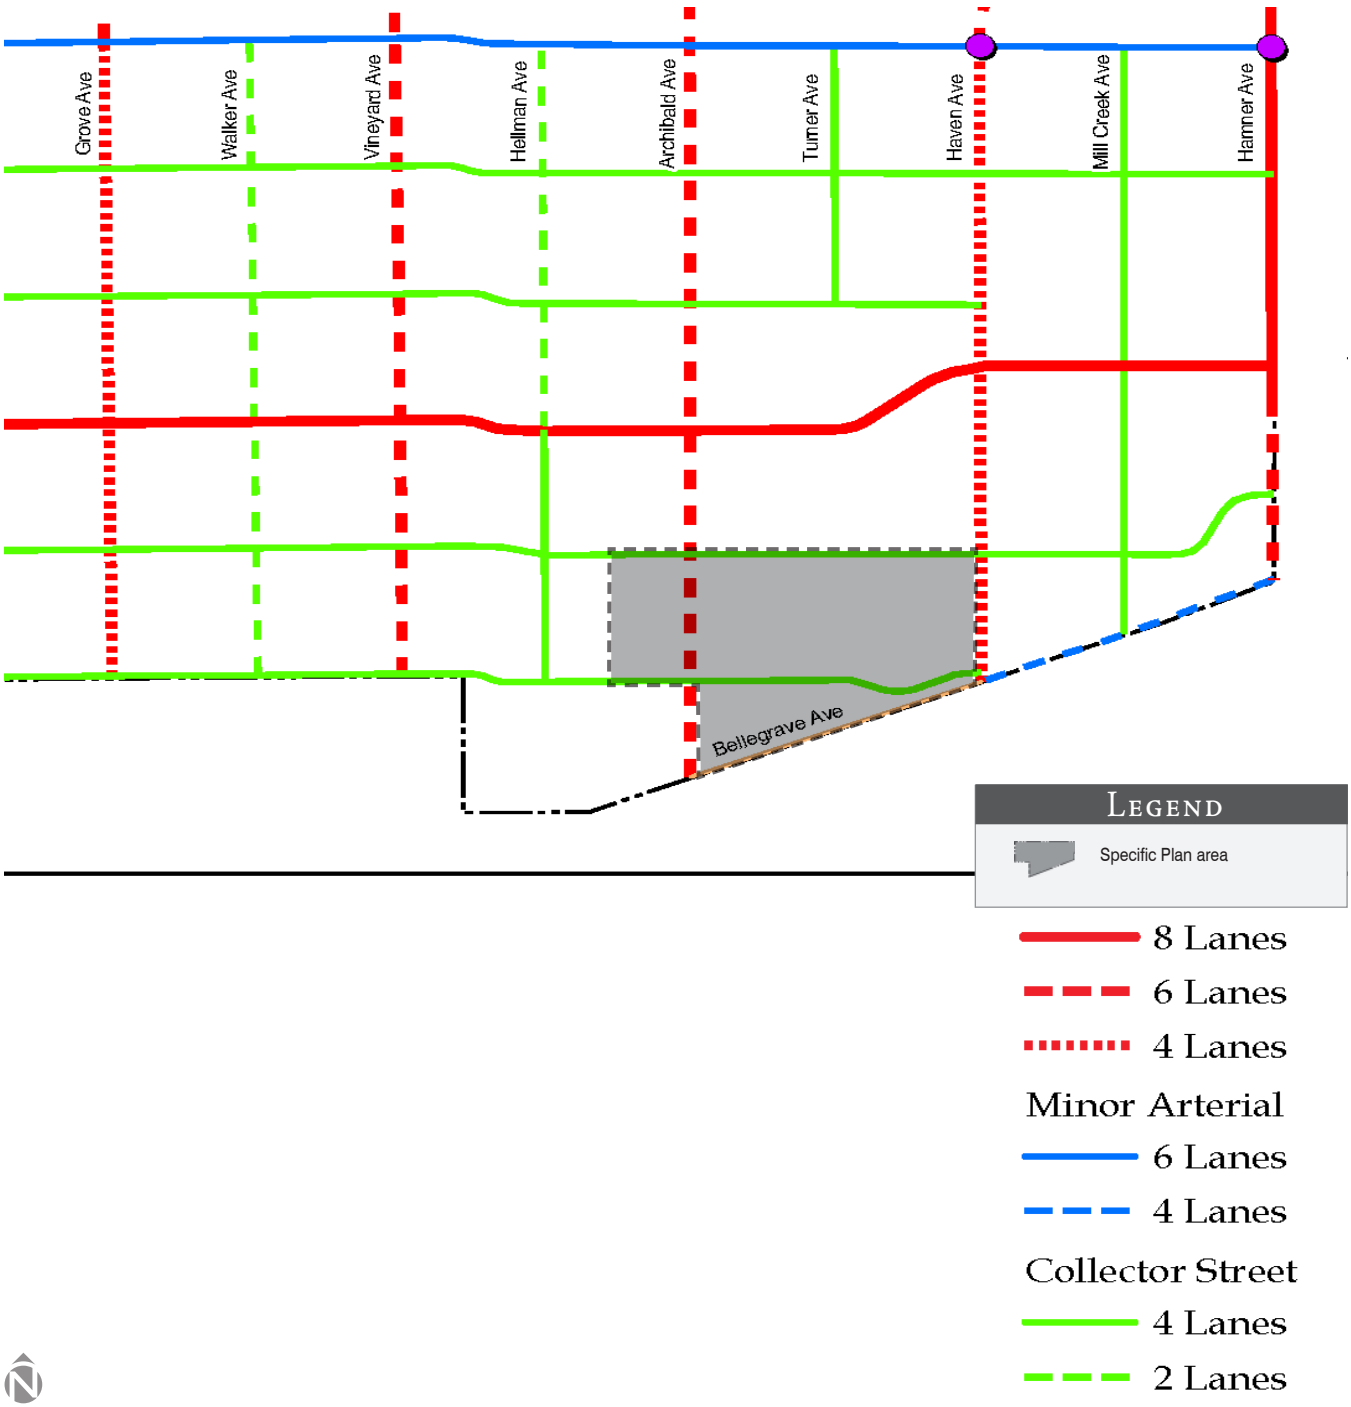

Exhibit 8—Policy Plan Functional Roadway Classification Plan

# 4. Land Use

# 4.0Land Use

## 4.1 Introduction

The 539.7 gross acre Specific Plan is envisioned to provide a neighborhood lifestyle featuring a variety of residential housing types designed within easy walking distance to the school, recreational amenities, and commercial retail uses. Connectivity within the Specific Plan is provided through a system of pedestrian and bicycle trails linking residential neighborhoods to one another, to parks, to school, and to the commercial land use area. A component of the trail system will be provided through the improvement of a portion of the SCE owned property (SCE Corridor) within the Specific Plan. These improvements represent a part of the City's Master Planned multi-purpose trail system planned for the New Model Colony.

Residential development is designed to address a variety of income levels and lifestyles, such as singles, families, executives, and "empty nesters." Housing types will include single-family detached homes ranging from cluster homes and lane loaded homes with significant architectural street and "green" frontage and garages facing courts or lanes, to conventional single-family detached cottage homes with lot sizes from approximately 3,015 square feet, and scaling up to larger single-family detached homes on lot sizes varying between 5,000 and 6,300 square feet.

A commercial land use is provided for in the Specific Plan, in Planning Area 2. The Specific Plan allows for the development of approximately 87,000 square feet of neighborhood commercial, retail, and service uses in Planning Area 2 conveniently located adjacent to Archibald Ave. and Eucalyptus Ave. on approximately 12.1 net acres.

The Land Use diagram shown in ***Exhibit 10, Land Use Plan*** illustrates the overall land use pattern within Subarea 29. Table 1 documents statistical totals for the entire Subarea, Table 1a provides residential allocations for Subarea 29 by ownership, and Table 1b provides the Specific Plan Land Use Summary. ***Refer to pages 4-3 through 4-5, Tables 1-1b.***

## 4.2 Residential Use

Residential land uses within the Subarea 29 Specific Plan comprise approximately 494.2 gross acres. The Specific Plan will permit the development of up to 2,418 single-family detached residential dwelling units. Residential land use areas are contained within 26 distinctive neighborhoods, linked by a network of sidewalks and on-street bicycle paths connecting all the neighborhoods to the central neighborhood parks, the elementary school, and a private Community Recreation Center (Planning Area 15).

### 4.2.1 Variety of Housing Types

A total of five (5) housing types or product lines are included in the Specific Plan; these single-family detached housing types proposed for Park Place include:

- Cluster Homes: minimum 1,750-square foot exclusive use area per home;
- Conventional Small Lot Homes: minimum 3,015-square foot lots;
- Lane Loaded Homes: minimum 3,100-square foot lots;
- Conventional Medium Lot Homes: minimum 4,000-square foot lots; and
- Conventional Large Lot Homes: minimum 5,000-square foot lots.

### 4.2.2 Traditional Neighborhood Design

The community plan for Park Place offers a strong neighborhood character and identity for residents and visitors through a traditional approach to street design, architecture, and landscape design elements to reflect a similar character to that of older traditional Southern California neighborhoods, including Ontario. The design features described below "activate" the streetscene and promote friendly interaction between neighbors.

- A traditional grid and geometric street design in residential neighborhoods, with sidewalks separated by landscaped parkways, which provide visual interest, slower traffic, lower traffic volumes, and enhance a pedestrian orientation for neighborhoods. Sidewalks separated by a landscaped parkway promote pedestrian mobility, beautify the streetscene, and lend a pedestrian scale.
- The primary entry street into the residential area (Merrill Ave.) shall include on-street parking for park and recreation uses to the north and south, and a "linear" landscape treatment on both sides of the street. Parkways adjacent to both sides of the street are planned to be heavily landscaped. This street leads directly to the central neighborhood parks (Planning Areas 11 and 14) and the private Recreation Center (Planning Area 15), the focal point designed to reinforce the sense of arrival and establish a sense of community.
- The architecture of residences within Park Place will be designed to focus on human scale details which will enhance the pedestrian friendly character of the community. These features may include the use of front porches, railings, enhanced entries, a mix of materials and textures, and authentic detailing on elements such as windows and doors, columns, balconies, and lighting.

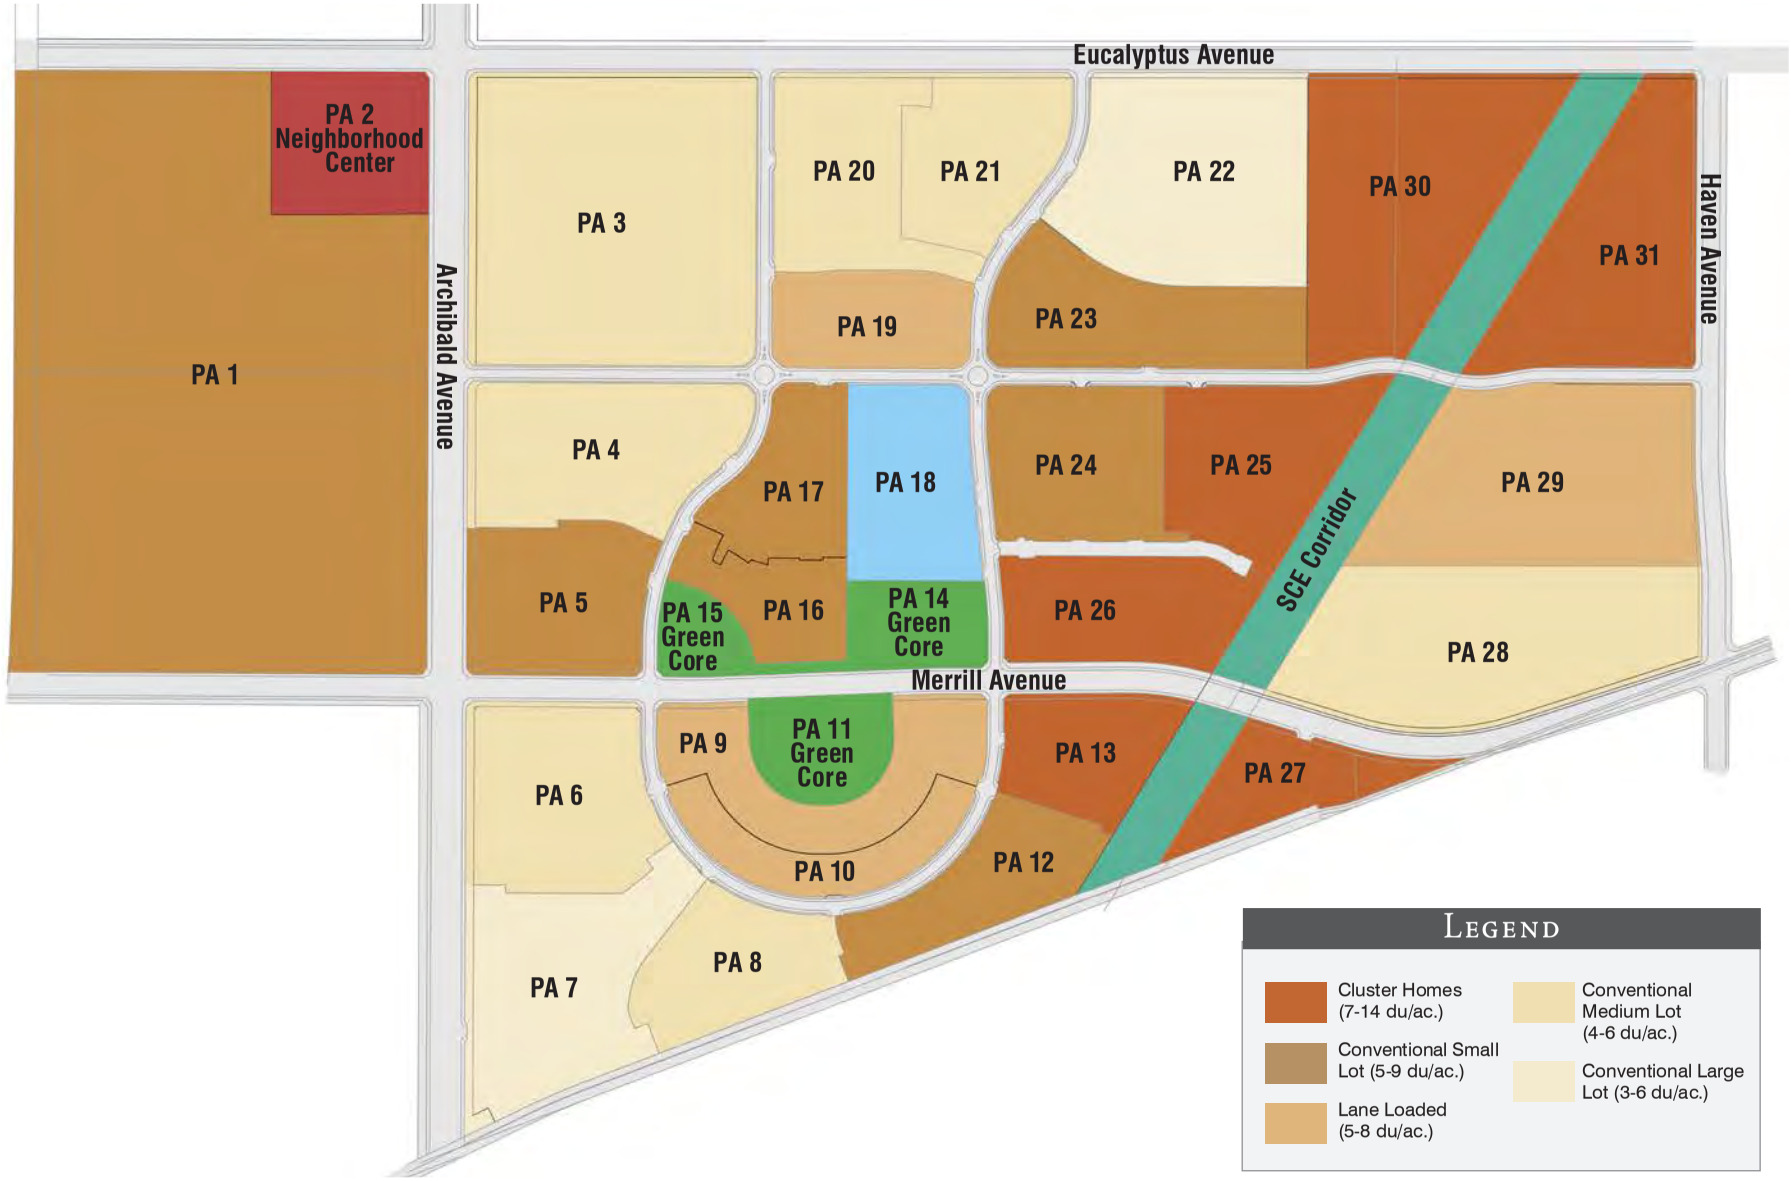

Exhibit 9—Land Use Plan

## Table 3—Specific Plan Land Use Summary

| Planning Area | Land Use | Minimum Lot Size (S.F) | Planned Dwelling Units[3,4,5] | Net Acre[1] | Planned Net Density (Du/Ac.)[3,5] | Gross Acres[2] | Planned Gross Density (Du/Ac.)[3,5] |
|---|---|---|---|---|---|---|---|
| 1* | Conventional Small Lot | 3,500 | 432 | 83.1 | 5.2 | 89.8 | 4.8 |
| 2* | Commercial | N / A | 0 | 12.1 | 0.0 | 14.5 | 0.0 |
| 3* | Conventional Medium Lot | 4,500 | 186 | 34.5 | 5.4 | 40.2 | 4.6 |

A) Minimum square footage identified is for exclusive use area on a per home basis, recorded lot size may differ.
1) Gross Acres calculated to centerlines of Master Planned Streets minus SCE easements.
2) Net Acres excludes street rights-of-way and SCE easements.
3) Actual total units and gross/net density and acreage will be dependent on final lotting.
4) Target unit count based on submitted Tentative "B" Maps
5) A density transfer of 15.0% may occur between Planning Areas.

*) Indicates Planning Areas as controlled/owned by Richland Communities, Inc.
**) Indicates "Park Place" Planning Areas as controlled/owned by SL Ontario Development Company
***) Indicates Planning Areas as controlled/owned by Brookfield Homes

Table 3a—Subarea 29 Specific Plan Residential Allocations Summary (by Ownership)

| *Description* | *Park Place* | *Richland* | *Brookfield Homes* | *Totals* |
|---|---|---|---|---|
| Total Gross Acres | 290.7 ac | 221.7 ac | 27.2ac | 539.7 ac |
| SCE Easement | - (11.2 ac) | - (9.2 ac) | - (3.8 ac) | - (24.3 ac) |
| Elementary School (*)(**) | - (10.0 ac) | -0- | -0- | - (10.0 ac) |
| Neighborhood Center(**) | -0- | - (11.2 ac) | -0- | - (11.2 ac) |
| Residential Gross Acreage | 269.5 ac | 201.3 ac | 23.4 ac | 494.2 ac |
| Percent of Total Residential Acreage | 54.5% | 40.7% | 4.7% | 100% |
| Total Residential Lots | 1,374 du | 936 du | 108 du | 2,418 du |
| Planned Residential Gross Density (du/gross ac.) | 5.1 du/gross ac. | 4.6 du/gross ac. | 4.6 du/gross ac. | 4.9 du/gross ac. |
| Residential Gross Density permitted by TOP (5.0 du/gross ac.) | 1,347.4 du | 1,006.5 du | 117.0 du | 2,470.9 du |

Table 3b—Subarea 29 Specific Plan Total Units Record

| *Description* | *Dwelling Units* |
|---|---|
| Original Subarea 29 (2006) | 1,937 du, 3.6 du/gross ac. |
| March 2008 Amendment | 2,293 du, 4.2 du/gross ac. |
| Subarea 29 Amendment (2015) | 2,392 du, 4.8 du/gross ac. |
| Subarea 29 Amendment (2021) | 2,418 du, 4.9 du/gross ac. |

(*) Only one (1) Elementary School, No Residential Allocation for Deleting,
(**) Elementary School and Neighborhood Center are "Useable" (excluding Street, Right-of-Way, and Additional Neighborhood Edge)

- Innovative garage designs will be utilized in order to de-emphasize the visual impact of garage doors on the streetscene. Design techniques may include varied garage setback requirements, split-garages, turn-in garages, garages located on rear lanes (private alleys), garages located on motorcourts, or other similar techniques that de-emphasize the view of garage doors from the street.
- Lane Loaded Homes permitted in Planning Areas 9, 10, 19, and 29 will front directly on green spaces and local streets, framing these spaces with architecture.

## 4.3 Parks, Open Space and Recreational Facilities

The Park Place portion of the Specific Plan will have a central, "Green Core" that consists primarily of open space for recreation and passive use, linked to the elementary school. Exterior walkways and paseos lead to this centralized area. Several opportunities exist for community interaction and recreation within these parklands. The "Green Core" is comprised of several facilities and amenities to meet the needs of the community. The following areas make up the "Green Core": two (2) neighborhood parks, the linear park system, a private Community Recreation Center, and the paseo trail system, which are all linked to the elementary school (Planning Area 18).

### 4.3.1 Parks

An integral part of the development of the residential program within the development boundary of the Specific Plan is park and recreational areas, providing active and passive recreational opportunities for residents of the project site. A total of 12.0 net acres of usable neighborhood park is included in Park Place. The Quimby Act for the City of Ontario, provides for the dedication of three (3) acres of parkland per 1,000 residents. However, pursuant to the GPA Goal 12.0, Objective 12.2, Policy 12.1.3, each specific plan is required to define a park acquisition and improvement financing plan to ensure the achievement of a park standard of five (5) acres of parkland per 1,000 residents through a combination of Neighborhood and pocket parks. Pursuant to the foregoing policy, the total parkland requirement for the project is 45.5 gross acres. However, at the City of Ontario election, it was determined that the developers of Subarea 29 may pay park area fees in lieu of park dedication. Neighborhood parks shall be dedicated to the City and pocket parks shall be transferred to a homeowners association. Refer to Chapter 7.6, Landscape Design, included in the overall Residential Design Guidelines for the project, for park plans for Park Place, including the overall core plan and detailed site plans of the two (2) neighborhood parks and the private Community Recreation Center.

### 4.3.2 Trails

Bicycle trails are an integral element in creating accessibility and mobility within the Specific Plan. An off-street Class I bicycle trail system will be provided within the right-of-way of Haven Ave. (west side of street) adjacent to the project site as part of the ultimate development of the Specific Plan area. An off-street Class I bicycle trail system will also be provided within the right-of-way of Archibald Ave. (west side of street) adjacent to the development area between Merrill Ave. and Eucalyptus Ave. Adequate right-of-way will be provided for on-street bicycle routes with the improvement of Archibald Ave. adjacent to the development area south of Eucalyptus Ave., Eucalyptus Ave. adjacent to the development area, and Merrill Ave. serving the central portion of the community. The bicycle trail system will link residential neighborhoods to the planned parks and the elementary school site located within the project site, as well as providing connectivity to future development areas within the Specific Plan area and to the proposed school site located adjacent to the project site at the southeast corner of Haven Ave. and Eucalyptus Ave.

Refer to ***Exhibit 11, Master Circulation Plan***, for the location of Class 1 bike paths.

## 4.4 SCE Corridor Trail

A link within the City's Master Plan of Trails proposed for SCE easements and corridors includes a portion of the trail which will be developed in the Specific Plan, extending a multi-purpose bicycle trail from Eucalyptus Ave. south to County Line Channel Trail. Access to the SCE Corridor Trail will be provided at key points within residential areas to provide pedestrian and bicycle accessibility. A conceptual plan for the SCE Corridor Trail is illustrated in ***Exhibits 13, Pedestrian and Bicycle Circulation Plan, and Exhibit 29, SCE Easement Paseo System,*** in Chapter 7, Design Guidelines.

## 4.5 Commercial / Neighborhood Center

The Specific Plan includes approximately 12.1-net acres (11.2 usable acres) designated for development of commercial uses as a neighborhood center in Planning Area 2. Approximately 87,000 square feet of neighborhood center commercial land uses are planned adjacent to Archibald and Eucalyptus Avenues. Commercial development at this location is conveniently located to serve Subarea 29. Pedestrian and bicycle connectivity between residential land use areas within the Specific Plan area and the future commercial center will be provided through an extensive network of trails. Commercial uses which could be developed within this land use district include local servicing commercial uses, such as small restaurants, small retail shops, and personal services.

## 4.6 Schools

The Specific Plan is located within the Mountain View School District, which serves the school needs for grades K-8 and the Chaffey Joint Union School District, which serves the school needs for grades 9-12.

One elementary school (Planning Area 18) is included within Park Place and Subarea 29 Specific Plan. A 10.0 net acre (10-acre usable) K-5 elementary school is located in the heart of Park Place, adjacent to the northern neighborhood park, north of Merrill Ave. Joint use school/park facilities are envisioned, serving the K-5 school needs generated by the project. A middle school of approximately 20 acres is conceptually planned east of the Specific Plan area, east of Haven Ave. and south of Eucalyptus Ave. The developers of Park Place and other developers in Subarea 29 will be required to pay school fees or construct school facilities, as required by the State of California.

Final approval of the elementary school site rests with the State of California Department of Education. It shall be the responsibility of the school district to seek such approval and to comply with all applicable regulations and procedures. Should the Mountain View School District find it necessary to build the elementary school or another public school in a location other than Planning Area 18, the placement of a school at another location within Subarea 29 Specific Plan shall be considered consistent with the provisions of Specific Plan.

In the event that the Mountain View School District elects to construct the elementary school at an alternate location outside the Subarea 29 Specific Plan, the designated school site (Planning Area 18) will be developed with residential uses. Should this site be developed with residential uses, in lieu of the school, it will be developed as Low Density Residential within a density of 4.6 dwelling units per acre and with a development target of 46 dwelling units; and the total number of dwelling units within the specific plan will be increased to 2,438 dwelling units with the approval of a Specific Plan Amendment (SPA).

In order to develop Planning Area 18 with residential uses in lieu of the elementary school, the developer shall be required to obtain written confirmation from the Mountain View School District that it will not utilize the planning area for development of an elementary or other school. The written confirmation will be submitted to the City of Ontario Planning Department concurrently with any development application for Planning Area 18, which would require an amendment to the Specific Plan.

## 4.7 Dairy Farming

The Specific Plan Area contains existing dairies and feed lots. A minimum 100-foot separation shall be required between a new residential, commercial, or industrial development, or structures used for public assembly and an existing animal feed trough, corral/pen, or an existing dairy/feed lot including manure stockpiles and related wastewater detention basins. The 100-foot separation requirement may be satisfied by an off-site easement acceptable to the Planning Director with adjacent properties, submitted with the initial final map and recorded prior to or concurrent with the final map.

## 4.8 Airport Land Use Compatibility Planning (ALUCP)

### 4.8.1 Ontario Airport (ONT) Requirements

The ALUCP for ONT was adopted in April of 2011 and the project site is located outside noise and safety impact zones but is located within the Real Estate Transaction Disclosure zone due to overflight and does not place development restrictions on the property but does require disclosure to new property owners. The Business and Professions Code Section 11010 and Civil Code Sections 1102.6, 1103.4, and 1353 require that, as part of many residential real estate transactions, information be disclosed regarding whether the property is situated within an Airport Influence Area (AlA). The Business and Professions Code applies the disclosure requirement to the sale or lease of newly subdivided lands and condominium conversions and to the sale of certain existing residential property.

The Civil Code applies the disclosure requirement to existing residential property transfers only when certain natural conditions (earthquake, fire, or flood hazards) warrant disclosure. State Law provides the following disclosure language:

> NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

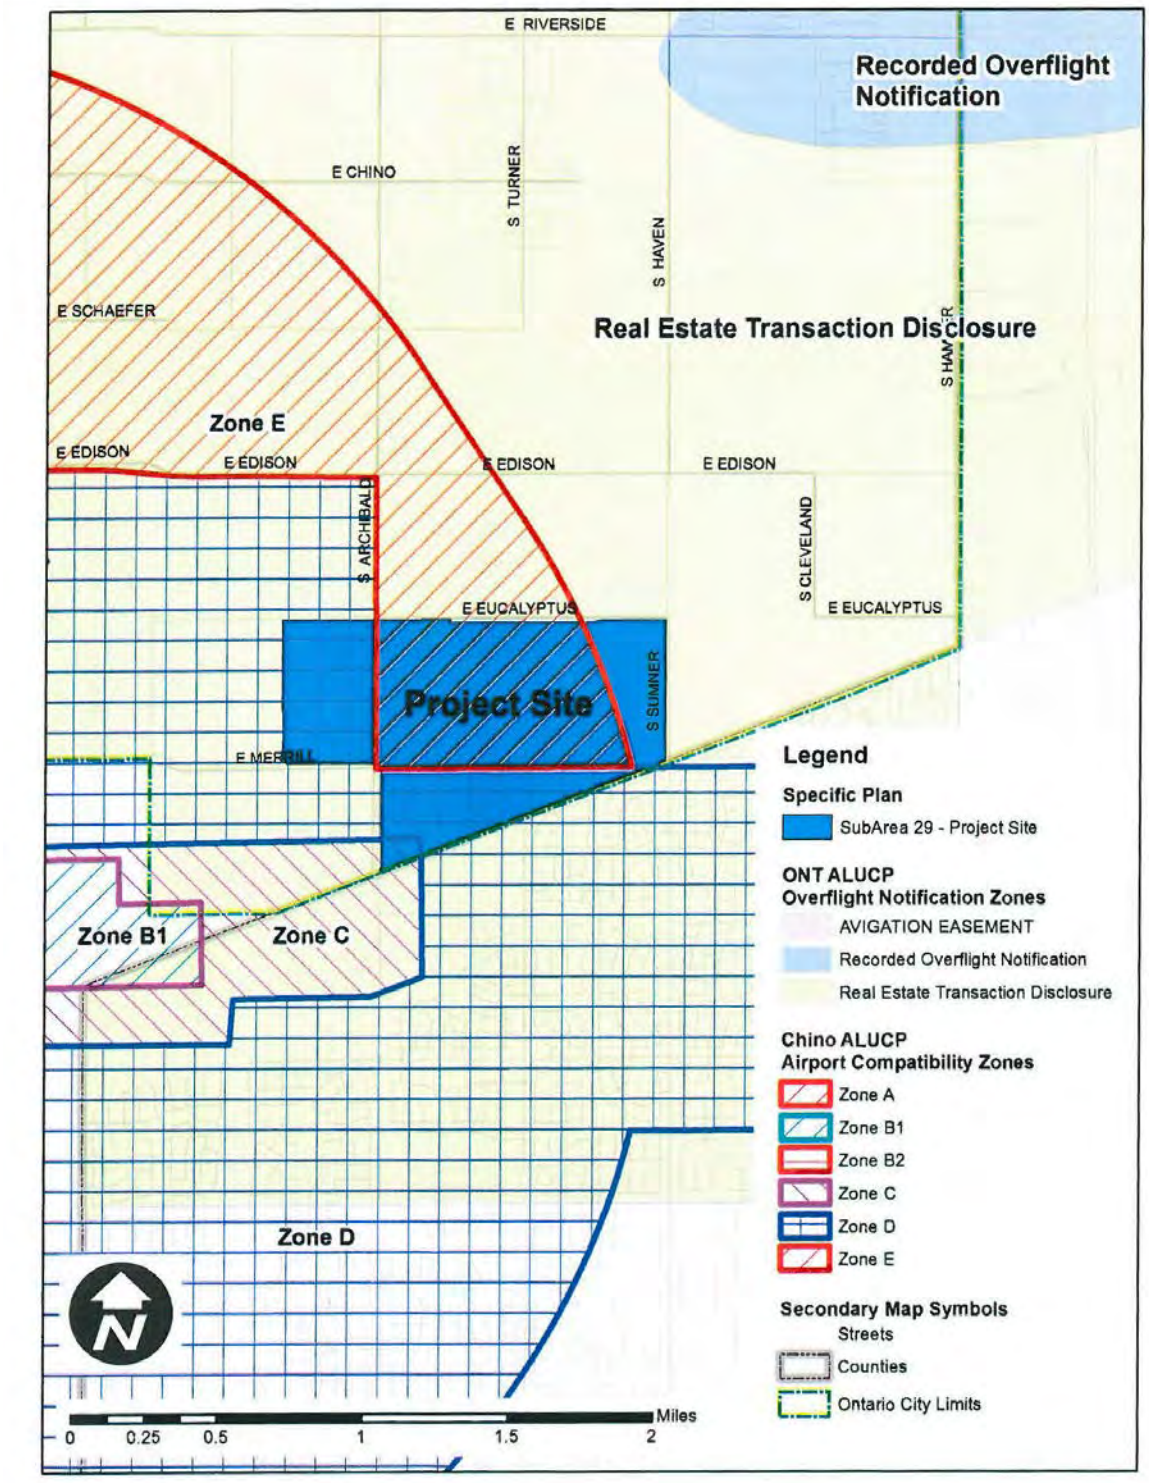

Exhibit 10—Airport Influence Areas

## 4.8.2 Chino Airport Requirements

The most recent ALUCP for Chino Airport was completed by the County of Riverside Airport Land Use Commission in 2008 and is being used by the City as a guide for development around Chino Airport. The project site is partially located within Zones C, D and E.

- The portions located within Zone C are considered existing land uses.
- Residential land uses within Chino Airport Compatibility Zone D are required to have a Recorded Overflight Notification appearing on the Property Deed and Title incorporating the following language:

  (NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.)
- Zone D requires that 10% of the area be set aside as Open Land. Open Land must have a minimum dimensions of (75 feet by 300 feet). Open Land area must be free most structures and other major obstacles such as walls, large trees or poles (greater than 4 inches in diameter, measured 4 feet above the ground), and overhead wires. Small trees and shrubs that exceed 4 feet in height and/or thickness of 4 inches may be allowed along the edge of Open Land areas where the area abuts a wall or similar feature, provided that they are planted within 4 feet of the wall. Roads and automobile parking lots are acceptable as Open Land areas if they meet the above criteria.
- Zone D requires residential densities to be at or above 5.0 dwelling units per acre or have an average parcel size of less than 0.2 gross acres (8,712 SF).
- Zone D limits building/structure heights to 70 feet. Any permanent or temporary object greater than 70 feet in height are required to file a FAA Form 7460-1 and receive a determination of No Hazard from the FAA prior to project approval. During construction or grading of the site construction equipment such as cranes that exceed 70 feet will also be required to file a FAA Form 7460-1 and receive a No Hazard determination.
- Zone E and does not place any land use restrictions on the property but due to flight patterns the height of any structure cannot exceed 100 feet without FAA approval. If a structure exceeds 100 feet in height or has the potential to be a hazard to flight due to visual glare or electronic interference the project applicant is required to notify the FAA by electronically filing a 7460-1 Form.

# 5. Infrastructure and Services

# 5.0 Infrastructure and Services

The infrastructure, utilities, and public services to be provided to support development of the Subarea 29 Specific Plan are discussed in this section.

## 5.1 Circulation

The circulation plan for the Specific Plan area will provide efficient movement of vehicular traffic throughout the project as well as an environment for pedestrian circulation and bicycle traffic, reducing the reliance on the automobile as a means of travel. The plan reinforces the concept of traditional neighborhood design with a grid street pattern and traffic calming measures. The ***Master Circulation Plan, Exhibit 11*** illustrates the roadway system planned for the Specific Plan area, as well as new backbone street traffic signals.

The project site will be served by a system of new arterial roadways to be improved per the requirements of the City Council Approved 2010 The Ontario Plan (TOP), General Plan, the 2012 Master Plan of Streets and Highways, and through proposed new local streets to be constructed as part of project development. Improvements will be constructed to Archibald Ave., Haven Ave., and Eucalyptus Ave. adjacent to the site and elsewhere to accommodate traffic increases as specified in the traffic impact analysis and as required by the City. Proposed Merrill Ave. will be fully developed through the site to provide access to and from the project.

Within the development area, local collector roadways and local interior streets will provide for efficient movement of vehicles and pedestrians through the project. The developer will be required to submit a parking analysis to the City of Ontario to ensure the proposal is in conformance with the City's Parking Code for residential developments.

### 5.1.1 Streets

The developer(s) of the Subarea 29 Specific Plan area will be responsible for all offsite improvements for the entire project frontage or as otherwise indicated. Phasing of the improvements will be implemented as required by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. Additionally, bus turnouts within the Specific Plan area may be required to be constructed to the satisfaction of the City of Ontario and Omnitrans.

The minimum design speeds to be used for centerline curve radii, superelevation, corner sight distance, vertical and horizontal alignment, and sight distance, etc. are listed:

| | |
|---|---|
| Eucalyptus Ave. | 45 m.p.h. |
| Merrill Ave. | 45 m.p.h. |
| Haven Avenue | 45 m.p.h. |
| Archibald Ave. | 50 m.p.h. |

The traffic study prepared for the Subarea 29 Specific Plan will verify the need for additional rights-of-way at critical intersections in order to accommodate additional left and right turn lanes.

On-street parking is prohibited on all master planned roadways, except that section of Merrill Ave. along the neighborhood parks.

Any walls and/or fencing exceeding 3 feet in height proposed within the 10-foot street (interior street) side yard setback area shall be setback a minimum of 5-feet from side yard property line. The 5-foot setback area shall be landscaped and maintained by the home owner and/or HOA.

#### Archibald Ave.

Per the City's 2012 Master Plan of Streets and Highways, Archibald Ave. is designated as a Principal Arterial. The Street Sections for Archibald Ave. are per the approved Archibald Ave. Street Improvement Plans. Per this plan set, Archibald Ave. has a 165-foot right-of-way (north of Merrill Ave. to Edison Ave) and a 160-foot right-of-way (south of Merrill Ave. to the County Line). Archibald Ave. will provide north/south access along the western portion of the Specific Plan. Per The Ontario Plan (TOP) Figure M-3: Multipurpose Trails and Bikeway Corridor Plan, Archibald Ave. is to include an off-street multipurpose trail. Access to this street via driveways from residential units and on-street parking will be prohibited. Improvements to Archibald Ave. are illustrated on ***Exhibit 12, Arterial Street Sections, Archibald Ave. and Archibald Ave. (East Side).***

#### Merrill Ave. (Minor Arterial Street)

Merrill Ave. is designated as a Minor Arterial street with a 108-foot right-of-way and will provide east/west access through the Specific Plan. Access to this street via driveways from residential units and on-street parking will be prohibited (on-street parking along the Neighborhood Parks will be allowed). Improvements to Merrill Ave. are illustrated on ***Exhibit 12, Arterial Street Sections Merrill Ave. and Merrill Ave. (North Side).***

Per TOP Figure M-3: Multipurpose Trails and Bikeway Corridor Plan, Merrill Ave. is to include a class II (on-street striped and signed bike lanes) bicycle system and an off-street multipurpose trail.

Exhibit 12d— Lane (Private Alley)

### Eucalyptus Ave. (Minor Arterial Street)

The Minor Arterial roadway, Eucalyptus Ave., abuts the project site on the north. Eucalyptus Ave. will be improved as a half-street along the project's northern boundary (from the Cucamonga Creek Channel to Haven Ave.). Improvements to be constructed to Eucalyptus Ave. will include the south half-street and parkway improvements of the 108-foot right-of-way, as well as the additional neighborhood edge landscaped buffer. These improvements include 42 feet of pavement, including two (2) lanes for eastbound traffic, a 12-foot landscaped parkway, which includes a 5-foot sidewalk separated from the street by a 7-foot landscaped buffer; as well as 23 feet of additional landscaped buffer (35-foot total neighborhood edge), provided from the street right-of-way extending to the property line. Additionally, north side improvements to Eucalyptus Ave. include a 7-foot painted median, a 14-foot paved lane and 5 feet of graded shoulder. ***Exhibit 12, Eucalyptus Ave. (South Side)***, illustrates the half-street improvements for Eucalyptus Ave. The Project Level EIR will determine the need for constructing additional lanes for westbound traffic.

Per TOP Figure M-3: Multipurpose Trails and Bikeway Corridor Plan, Eucalyptus Ave. is to include a class II (on-street striped and signed bike lanes) bicycle system and an off-street multipurpose trail.

### Haven Ave.

Haven Ave. is designated as a Principle Arterial with 124-foot right-of-way. Haven Ave and will provide north/south access along the eastern boundary of the Specific Plan. Access to this street via driveways from residential units and on-street parking will be prohibited. Improvements to Haven Ave. are illustrated on ***Exhibit 12, Arterial Street Sections, Haven Ave. (West Side)***.

Refer to ***Exhibit 13, Pedestrian and Bicycle Circulation Plan***, which illustrates all pedestrian and multipurose trails in Park Place.

### Primary Local Streets

Primary Local Streets include a 60-foot right-of-way and provide for circulation between the varying Planning Areas within the Specific Plan. Refer to ***Exhibit 12a, Local Street Sections, Primary Local/Interior Street and Cul-De-Sac Street***, which illustrates these improvements. Varying additional landscaped buffers are provided along the Primary Street where specific conditions apply, as detailed below. Development conditions, where walls are proposed on either side of the roadway will include seven (7) feet of additional landscaped buffers between the rights-of-way and the proposed walls. Refer to ***Exhibit 12a, Local Street Sections, Primary Local Street (60′ R/W with 14′ Total Additional Landscaped Buffer)***, which illustrates this condition. Development conditions where a wall is proposed on one (1) side of the roadway will include seven (7) feet of additional landscaped buffers between the right-of-way and the proposed wall. ***Exhibit 12a, Local Street Sections: Primary Local Street (60' R/W with 7' Total Additional Landscaped Buffer)*** illustrates this condition.

### Local Streets

Local Streets include a 60-foot right-of-way and provide for circulation within the residential planning areas of the project site. Exhibit 12a, Local Street Sections: Primary Local/Interior Street & Cul-De-Sac Street, illustrates these improvements. Where any local street is adjacent to a park, paseo area, or paseo link, the street parkway will be included as park/paseo area/acreage. ***Exhibit 12a, Local Street Sections, Primary Local/Interior Street & Cul-De-Sac Street*** along Park/SCE Easement, illustrates these improvements.

### Lanes

Private lanes are to be utilized within the residential development. These lanes will be private, but will offer a public utility easement along the paved section. Where private lanes are utilized for non-emergency access a 20-foot minimum paved section with 5-foot minimum (measurement taken from inside of curb) landscaping on each side will be used as illustrated on ***Exhibit 12b, Lane (Private Alley) Sections***. Where emergency access lanes or public utility easements are proposed within the residential development, a 24-foot minimum paved section with 3-foot minimum landscaping (measurement taken from inside of curb) on each side will be utilized.

### Motorcourts

Motorcourts shall be scaled and developed consistent with the development standards of the typical product plotting diagram of the applicable residential product (Motorcourt Cluster A, B, C); see Section 7.5.2 for home type criteria.

## 5.1.2 Traffic Calming

The Specific Plan area provides for traffic calming within residential neighborhoods to slow traffic and reduce traffic noise on streets contributing to livable neighborhoods in which to walk, bike, and drive.

Traffic calming within the Specific Plan is designed to address the following:

- Reduction in traffic speeds;
- Reduction in traffic related noise;
- Reduction in "cut-through" traffic within residential neighborhoods;
- A secure pedestrian friendly circulation system to encourage walking;

- Allowance for non-restricted access for emergency services vehicles such as police, fire, and ambulances; and
- Reduction in radii of streets.

Factors affecting traffic speeds are those that influence the driver's perception of the roadway such as:

- Type of adjacent development and the distance of development from the roadway;
- Frequency of access points onto the roadway;
- Roadway alignment and curvature;
- Type and massing of landscaping adjacent to the roadway;
- Frequency of traffic control devices along the roadway;
- Width of travel lanes; and
- Roundabout locations.

The following traffic calming techniques may be implemented in the design of the roadways within the Specific Plan.

### Local Neighborhood Street Design

Neighborhood streets within the Specific Plan are designed in a grid with landscaping on either side within parkways to add interest in the street, encouraging drivers to slow their travel speed and observe their surroundings. Traffic speeds on local residential streets may be reduced by incorporating tapered intersections for local streets as illustrated in ***Exhibit 12c, Neighborhood Street Chokers.*** Tapers may not be appropriate at all intersections.

### Lanes (Private Alleys)

The lanes (private alleys) within the Specific Plan will incorporate tapers at the entrance to lanes to slow traffic in these areas and to provide a visual element to discourage drivers from using lanes as a through street. Speeds for traffic entering the lanes and cut-through traffic can be reduced by incorporating tapers at the entrance to these lanes as illustrated on ***Exhibit 12d, Lane (Private Alley) Tapers.***

### Landscaping

Landscaping adjacent to streets within the Specific Plan area will combine the use of shade trees, shrubs, and ground cover adjacent to sidewalks to create a more intimate streetscape, encouraging drivers to reduce driving speeds. The landscape concept for the Specific Plan is designed to contribute a sense that the street system is a pedestrian "protected area" to promote slower traffic speeds.

## 5.1.3 Pedestrian Circulation

Off-street pedestrian circulation will be available throughout the Specific Plan by means of the interconnected paved sidewalk system within the roadway right-of-way separated from vehicular travel lanes by a landscaped parkway. All pedestrian circulation improvements within the SCE corridor and County Line Channel require approval from the appropriate public entity prior to the construction of any improvements.

## 5.1.4 Bicycle Trails

Bicycle trails are an integral element creating accessibility and mobility within the Specific Plan. A multi-purpose pedestrian and bicycle trail will be provided within the SCE Corridor between Eucalyptus Ave. and County Line Channel. This multi-purpose trail will provide a link within the City's Master Planned trail system proposed for SCE easements and corridors throughout the City. All bicycle trail improvements within the SCE corridor and County Line Channel require approval from the appropriate public entity prior to the construction of any improvements. Refer to ***Exhibit 13, Pedestrian and Bicycle Circulation Plan.***

## 5.2 Water Master Plans

All pipe improvements, sizing and alignment shall follow the most currently approved version of the Master Plan (currently 2012), in case there are discrepancies between pipe improvements, sizing and/or alignment as shown on the utility exhibits versus the Master Plans.

## 5.2.1 Domestic and Recycled Water Master Plan

Domestic water will be provided by the City of Ontario. The New Model Colony Water Master Plan Phase 1 (Phases 1a–1e) identifies new water facilities to include three reservoirs, four groundwater wells, and potable and recycled transmission water lines. Construction of the on-site and off-site Master Plan water service improvements shall be the responsibility of the developer(s) and is required prior to issuance of occupancy permits for the Specific Plan. One of the waterlines included in the Phase 1 improvements is a 24-inch water main in Eucalyptus Ave., which borders the Specific Plan on the north. Master planned domestic and recycled water main lines serving surrounding and within the Specific Plan, as identified in the Water Master Plan, shall be constructed prior to issuance of first occupancy.

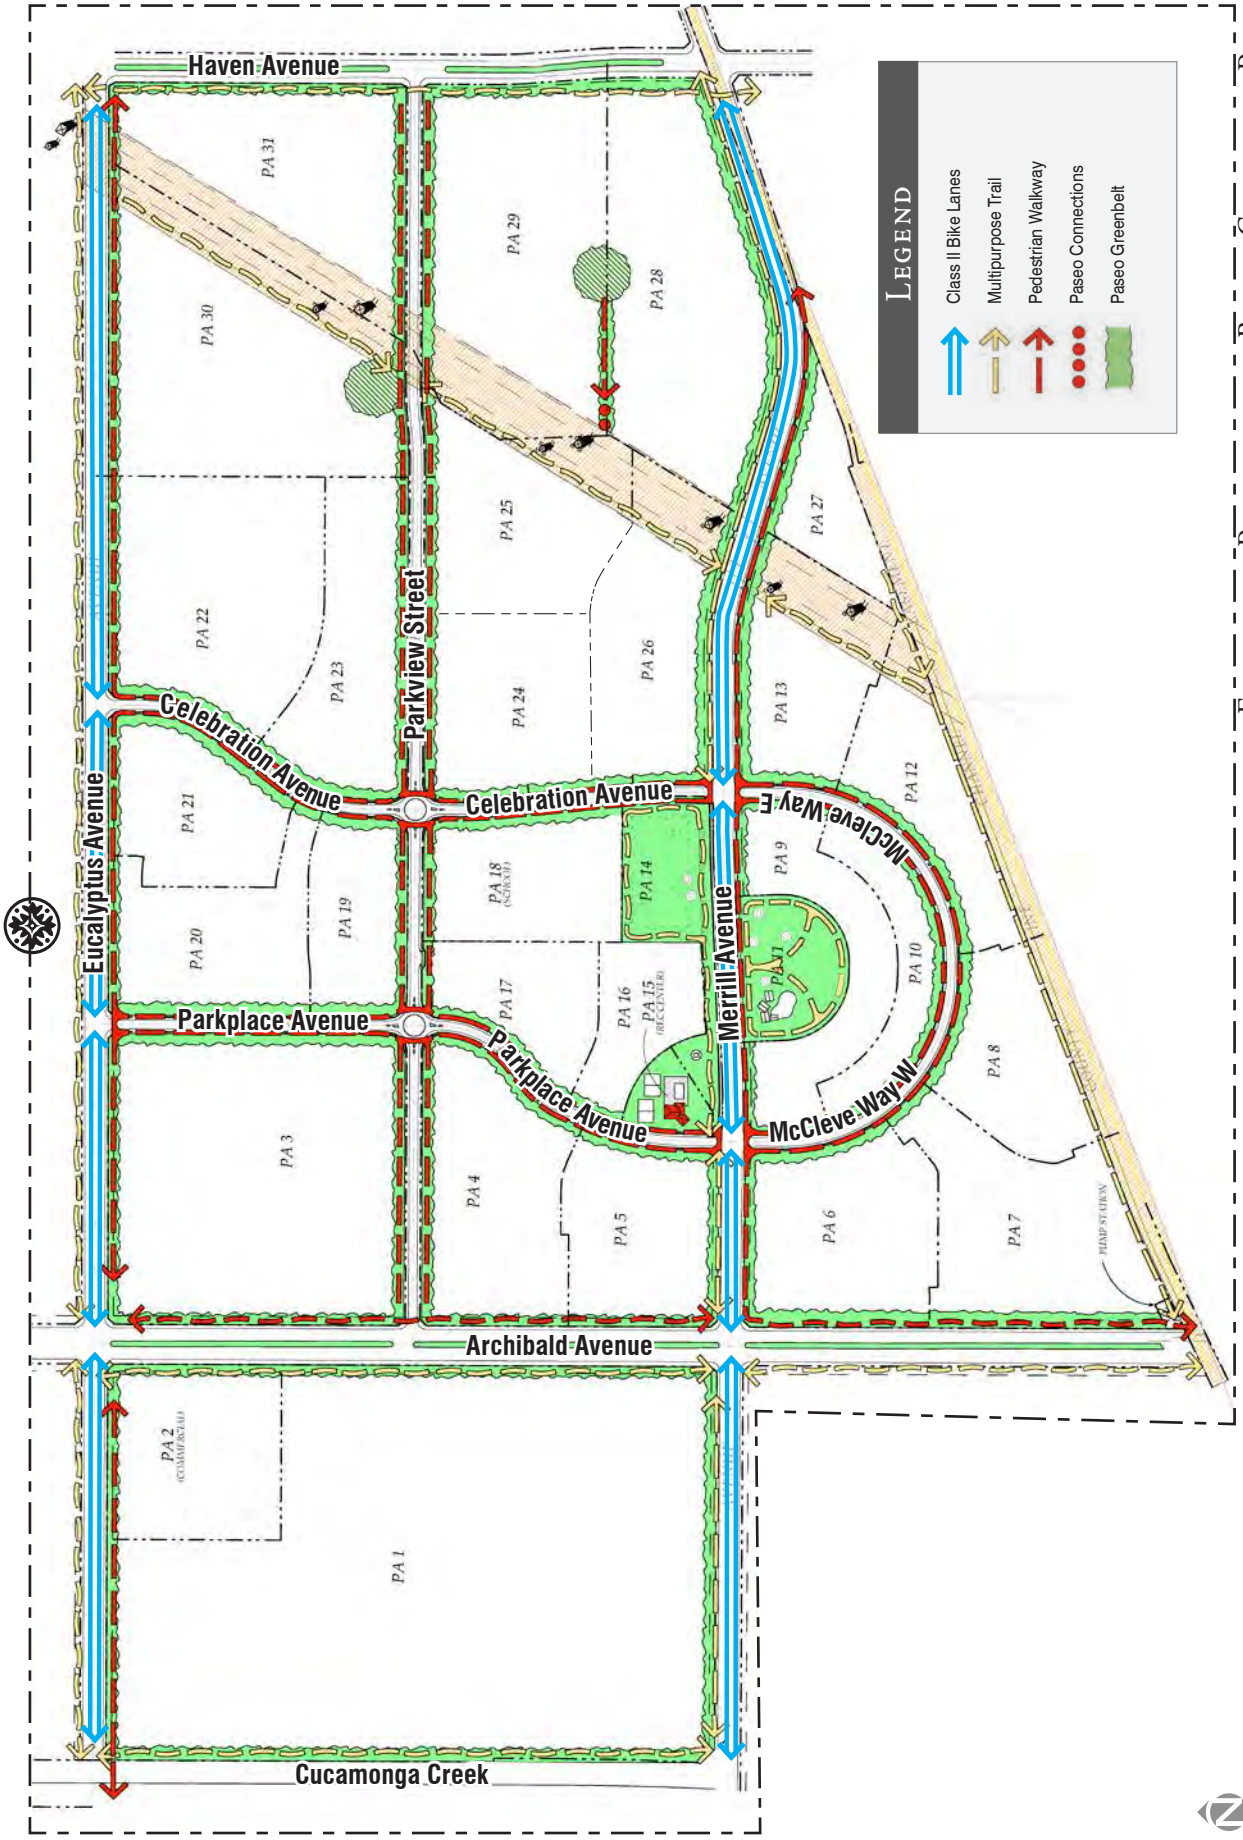

Exhibit 13 — Pedestrian and Bicycle Circulation Plan

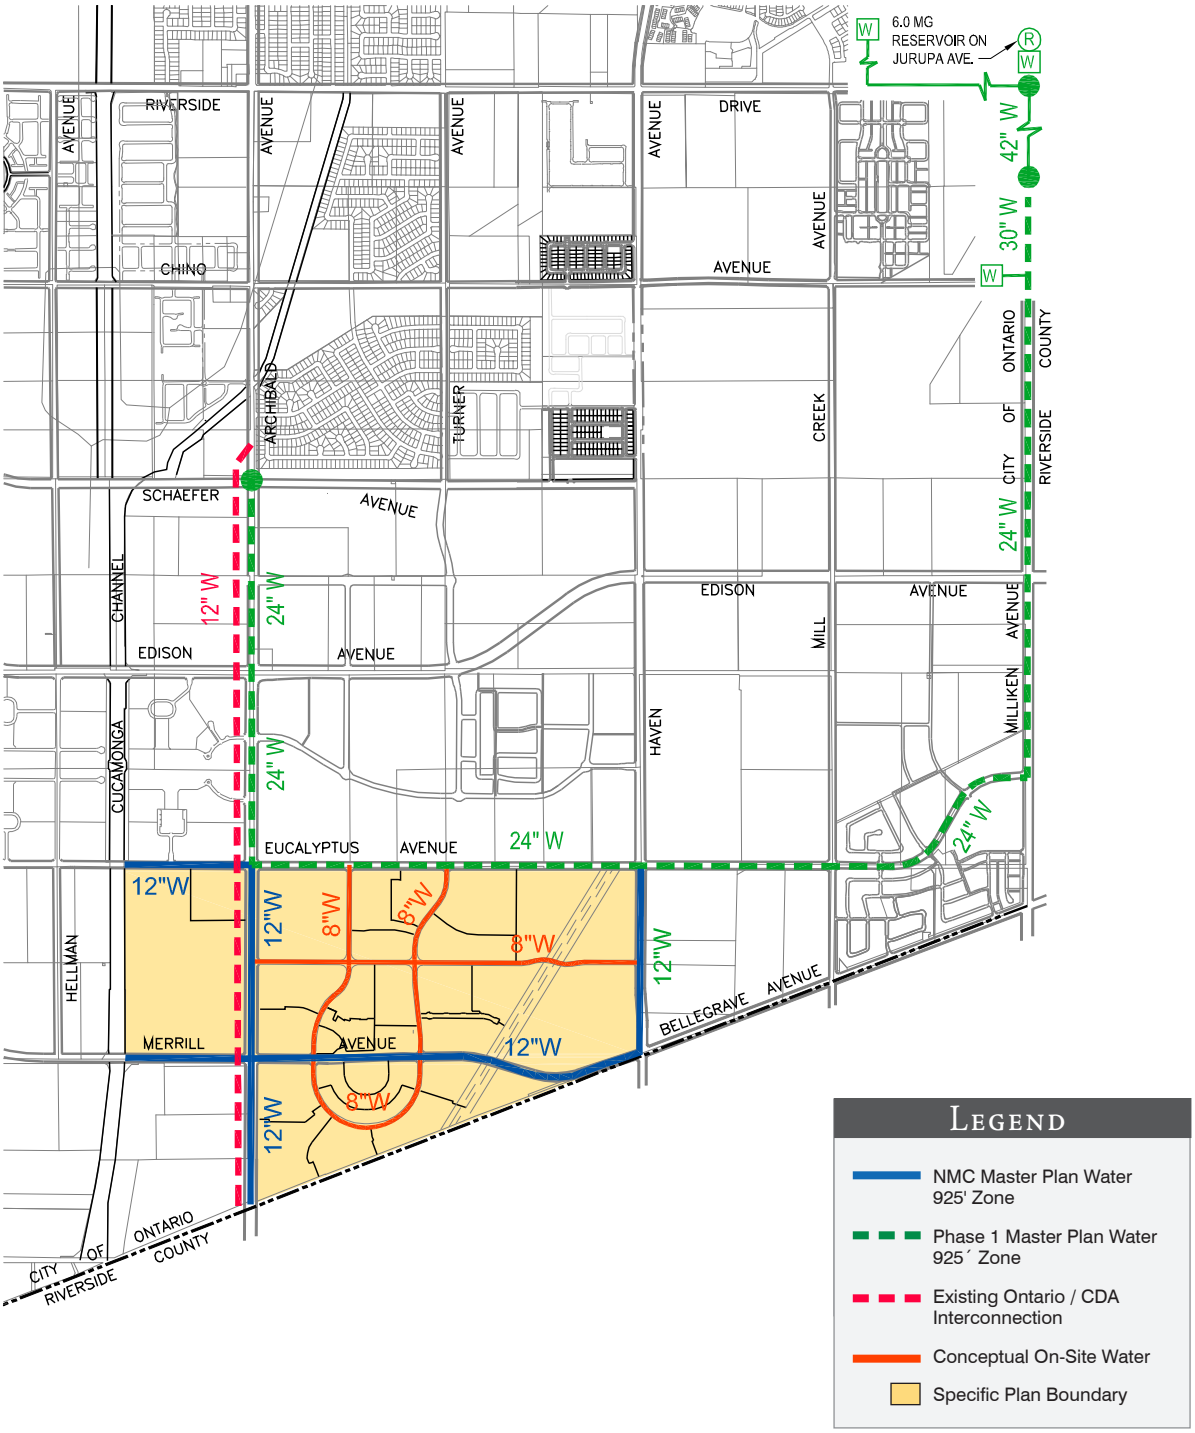

Exhibit 14— Conceptual Domestic Water Master Plan

### 5.2.2 Domestic Water

The project site lies within the 925 Pressure Zone. Master Plan water mains to be constructed as part of the development of the Specific Plan will include a 12-inch water main in Merrill Ave., Haven Ave., and Archibald Ave. Within the project site, a network of minimum 8-inch water lines will be installed. The proposed on-site public water system sizing is subject to the recommendations and approval of the required hydraulic analysis.

The Master Plan for domestic water for the Specific Plan is illustrated on Exhibit 14, Conceptual Domestic Water Improvement Plan.

### 5.2.3 Recycled Water System

New recycled water lines in conformance with the City of Ontario's Recycled Water Master Plan will be constructed as part of the development of the Specific Plan. The source of recycled water is an Inland Empire Utilities Agency (IEUA) Facility located east of the Cucamonga Creek Channel and north of Riverside Drive. The project site lies within the 930 Pressure Zone. The master plan improvements, adjacent to the project site, will include a 16-inch recycled water line in Eucalyptus Ave., a 12-inch recycled water line in Archibald Ave., and in Merrill Ave. (west of Archibald Ave.), and 8-inch recycled water lines in Merrill Ave. (east of Archibald Ave.) and in Haven Ave. The planned recycled water line along Riverside Drive will be constructed generally as follows: Easterly along Riverside Drive from RP-1, southerly along Haven to Chino Avenue, including the pressure reducing station at Haven & Chino. This pipeline shall be fully operational prior to occupancy. Within the project site, a network of minimum 8-inch recycled water lines will be installed. The proposed on-site public water system sizing is subject to the recommendations and approval of the required hydraulic analysis. The Subarea 29 Specific Plan shall comply with City Ordinance 2689 and make use of recycled water for all approved uses, including but not limited to irrigation of parks, schools, street landscaping, recreational trails, HOA maintained on-site common areas, and commercial/industrial landscaping. An Engineering Report approved by the City and the Department of Health Services is required prior to the use of recycled water.

There may be an interim period where recycled water supply does not have adequate pressure depending on the timing of development and construction of a regional booster station. In this case, the recycled water system will connect to the potable system initially, until such point that recycled water service is available.

The Recycled Water Master Plan for recycled water for the Specific Plan is illustrated on ***Exhibit 15, Conceptual Recycled Water Master Plan.***

## 5.3 Sewer Master Plan

All pipe, improvements, sizing, and alignment shall follow the most current approved version of the Sewer Master Plan (currently 2012), in case there are discrepancies between pipe improvements, sizing, and/or alignments as show on the utility exhibits versus the Master Plan. Sewer service for the Specific Plan area will be provided by the City of Ontario. The City's Sewer Master Plan identifies ultimate sewer facilities from the project site to the Eastern Trunk Sewer. Master Planned facilities within the project area include a 24-inch sewer main extending along Merrill Ave. from the easterly project boundary to the Eastern Trunk Sewer. Completion of these Master Plan improvements is required to provide ultimate sewer service to the project area. Within the project site, a network of minimum 8-inch sewer lines will be installed. The proposed on-site public sewer system sizing is subject to the recommendations and approval of the required sewer analysis.

The Sewer Master Plan for the Specific Plan is illustrated on ***Exhibit 16, Conceptual Sewer Master Plan.***

## 5.4 Drainage

All pipe, improvements, sizing, and alignment shall follow the most current approved version of the Storm Drain Master Plan (currently 2012), in case there are discrepancies between pipe improvements, sizing, and/or alignments as show on the utility exhibits versus the Master Plan. The City's Storm Drain Master Plan identifies two new storm drain systems to serve the site and properties north of the site. The storm drain systems, namely the Turner Storm Drain and the Archibald Storm Drain, will connect to the County Line Channel. Completion of these Master Plan improvements will provide permanent storm drain service to the Specific Plan area.

That portion of the Master Planned line, which lies within the Specific Plan, will be constructed as a part of the development of the Specific Plan. The Archibald Ave. storm drain includes a 90-inch storm drain in Archibald Ave., which transitions to a 96-inch storm drain and connects to the County Line Channel. The Celebration Ave. storm drain includes a 84-inch storm drain in Turner Ave., which transitions to an 90-inch storm drain, then transitions to a 96-inch storm drain and connects to the County Line Channel.

On-site storm drains will be constructed to convey the on-site flows to the proposed Master Planned lines. Size and location of proposed SD may change based on final design. On-site storm flows from the Specific Plan west of Archibald Ave. will be collected at an outlet into the Cucamonga Creek Channel.

The Storm Drain Master Plan for the Specific Plan is illustrated in ***Exhibit 17, Conceptual Storm Drain Master Plan.*** Size and location of proposed storm drain may change based on final design.

### 5.4.1 NPDES Compliance

The grading and drainage of the Specific Plan area shall be designed to detain, filter, and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Storm Water Program's Quality Management (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMP's) and/or either on-site Structural Treatment Control BMP's, or participation in regional or watershed-based Treatment Control BMP's.

Prior to the issuance of a grading or construction permit, a Storm Water Pollution Prevention Plan (SWPPP) will also be prepared. The SWPPP will be prepared to comply with the California State Water Resources Control Board's (State Water Board) current, "General Permit to Discharge Storm Water Associated With Construction Activity" and the current Area Wide Urban Storm Water Runoff (Regional NPDES Permit). The SWPPP will identify and detail all appropriate Best Management Practices (BMP's) to be implemented or installed during construction of the project.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, the applicant will be required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMP's, Source Control BMP's and Treatment Control BMP's to be implemented or installed at this site in order to reduce storm water pollutants and site runoff.

The Mill Creek Wetlands, a regional runoff treatment facility for the sub-watershed area that this project lies within has been constructed. This regional treatment facility is part of an overall solution for storm water treatment.

## 5.5 Schools

The Specific Plan area is located within the Mountain View School District which serves the school needs for grades K-8 and the Chaffey Joint Union School District, which serves the school needs for grades 9-12.

Development of the Subarea 29 Specific Plan area will generate an estimated student population as follows (based on student generation numbers supplied by the City of Ontario, "School Generation for NMC Subareas," July 2, 2004):

Grades K-5 - Generation Factor 0.38/du - 0.38 x 2,392 = 909

Grades 6-8 - Generation Factor 0.22du - 0.22 x 2,315 = 527

Grades 9-12 - Generation Factor 0.20/du - 0.20 x 2,315 = 479

One 10-acre elementary school is included within the Subarea 29 Specific Plan (Planning Area 18). The school is located north of Merrill Ave. in the heart of Park Place, adjacent to the two (2) neighborhood parks. Joint use school/park facilities are envisioned, serving the K-5 school needs generated by the project.

A 20-acre middle school site is conceptually located east of Subarea 29, east of Haven Ave. and south of Eucalyptus Ave. (not within the Specific Plan area).

The developers of the Specific Plan will be required to pay school fees or construct school facilities as required by the State of California.

## 5.6 Public Utilities

Public utilities including telephone, gas, and electrical service will be available to the site and will be extended into the planned community as part of the development of the Specific Plan. All existing overhead utilities shall be under-grounded, including all on-site utilities and those within the public right-of-way along streets fronting the project. All new facilities will be under-grounded by developer and according to the City of Ontario adopted ordinance.

### 5.6.1 Telecommunications

Proposed Fiber Optics (conduits and fiber) will be placed underground within a duct and structure system to be installed by the Developer. The fiber optic conduits along the backbone streets shall be installed in a joint trench by each Developer as the last lane improvements are completed. In-tract fiber optic conduits shall be installed by the Developer in joint trenches with City Street Light conduits where possible. Maintenance of the installed system will be the responsibility of the City/Special District. Development of the Project requires the installation by the Developer of all fiber optic conduits and pullboxes as well as payment of Development Impact Fees to cover the installation of the fiber optic cable.

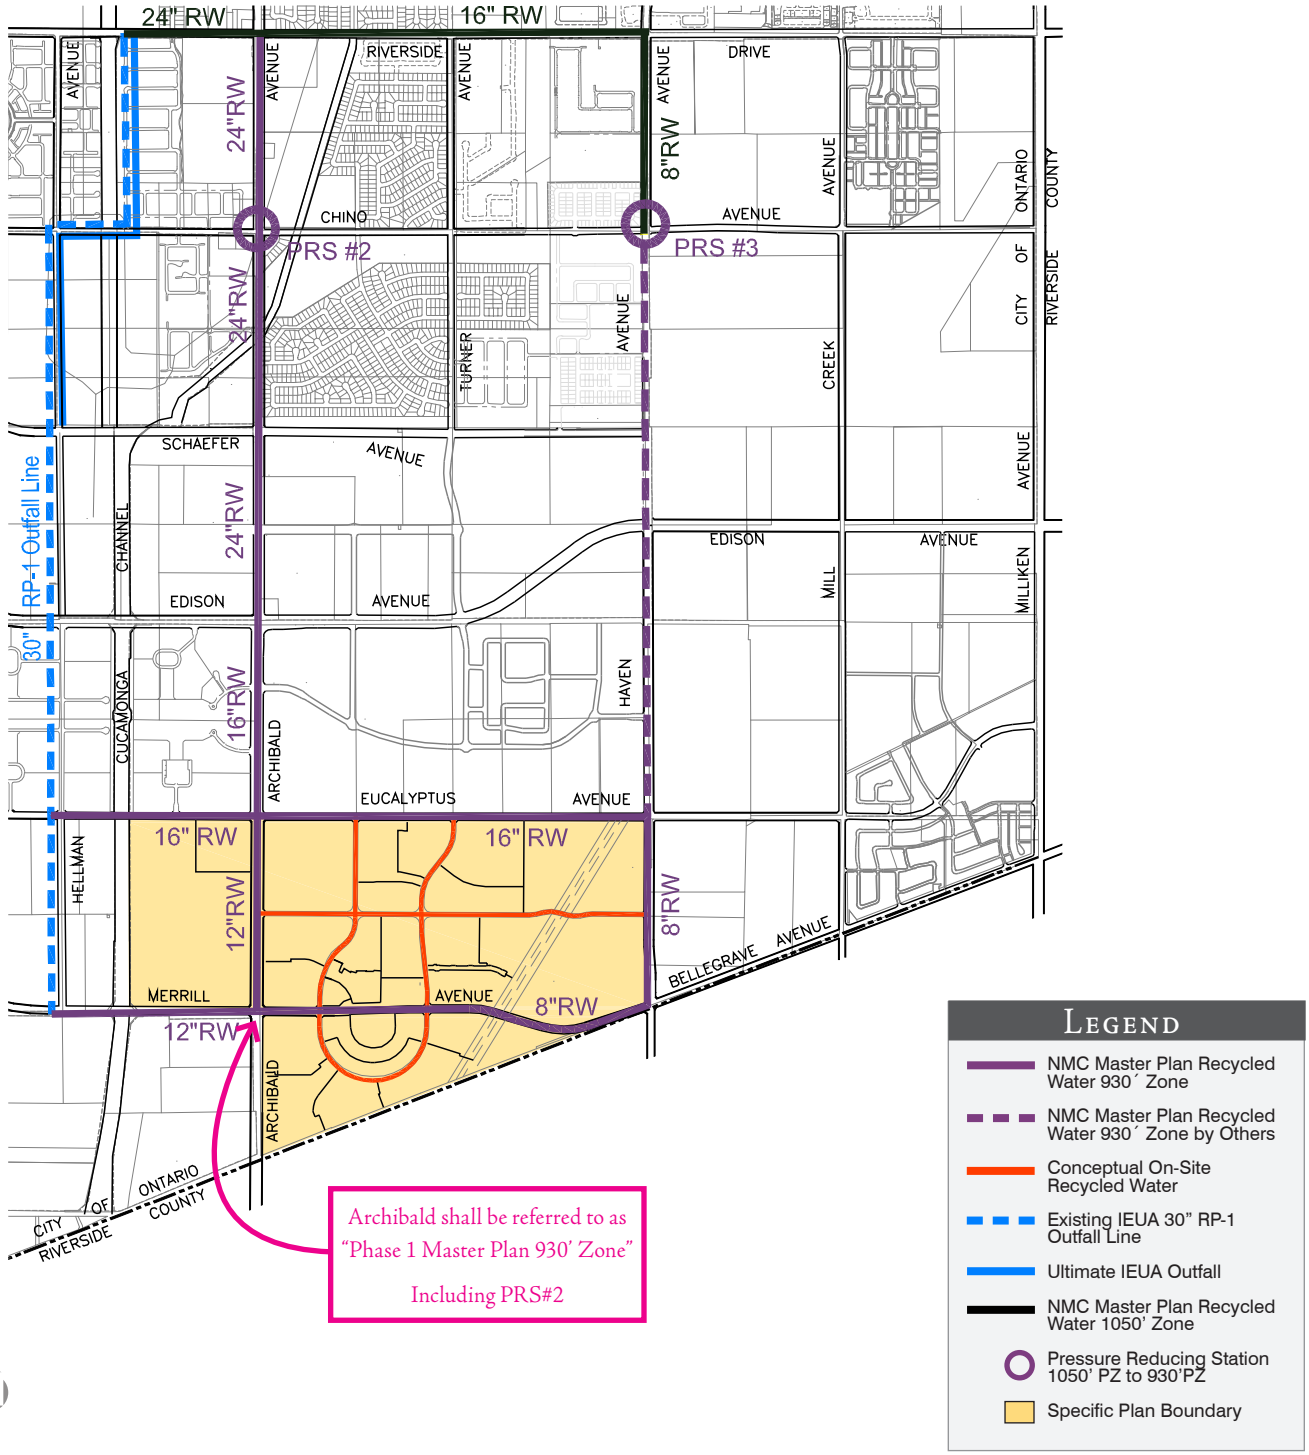

Exhibit 15— Conceptual Recycled Water Master Plan

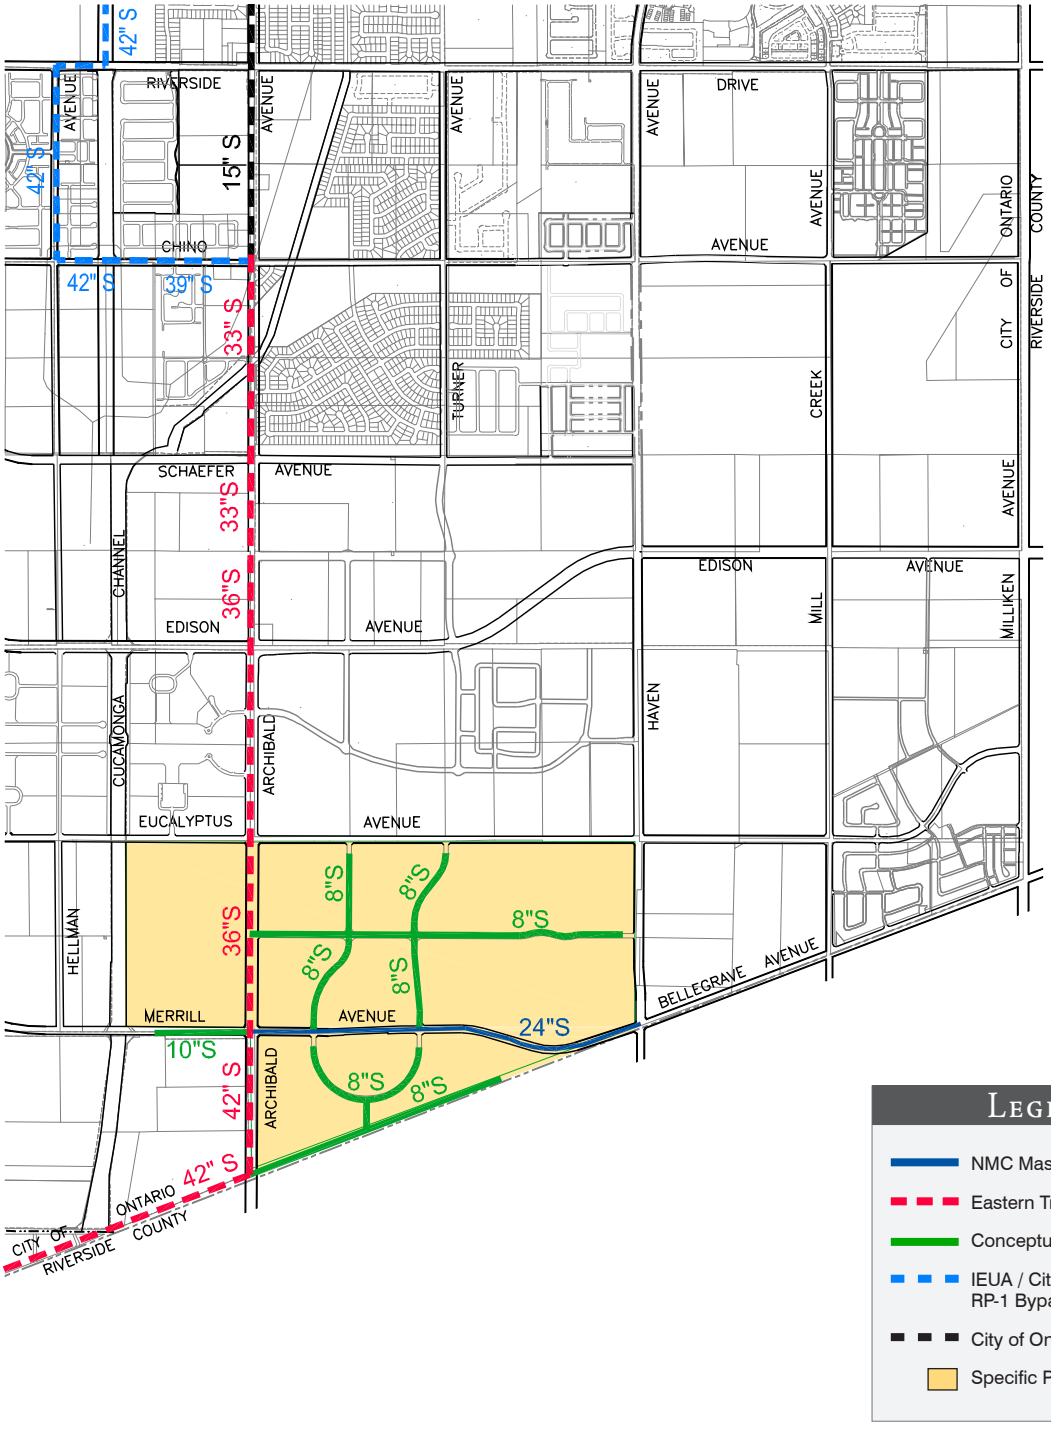

Exhibit 16— Conceptual Sewer Master Plan

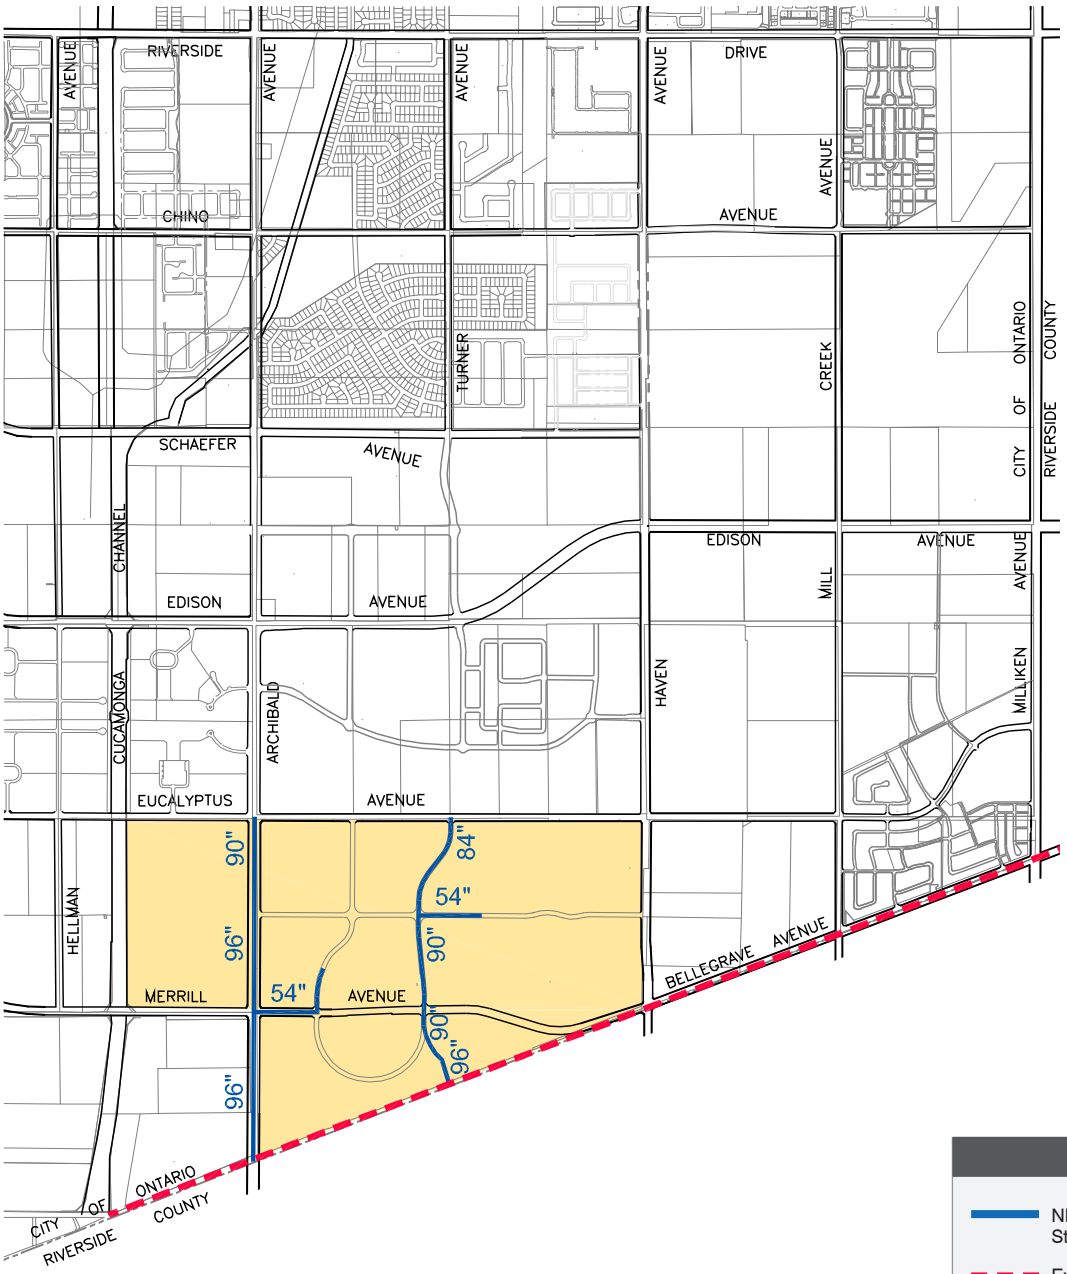

Exhibit 17—Conceptual Storm Drain Master Plan

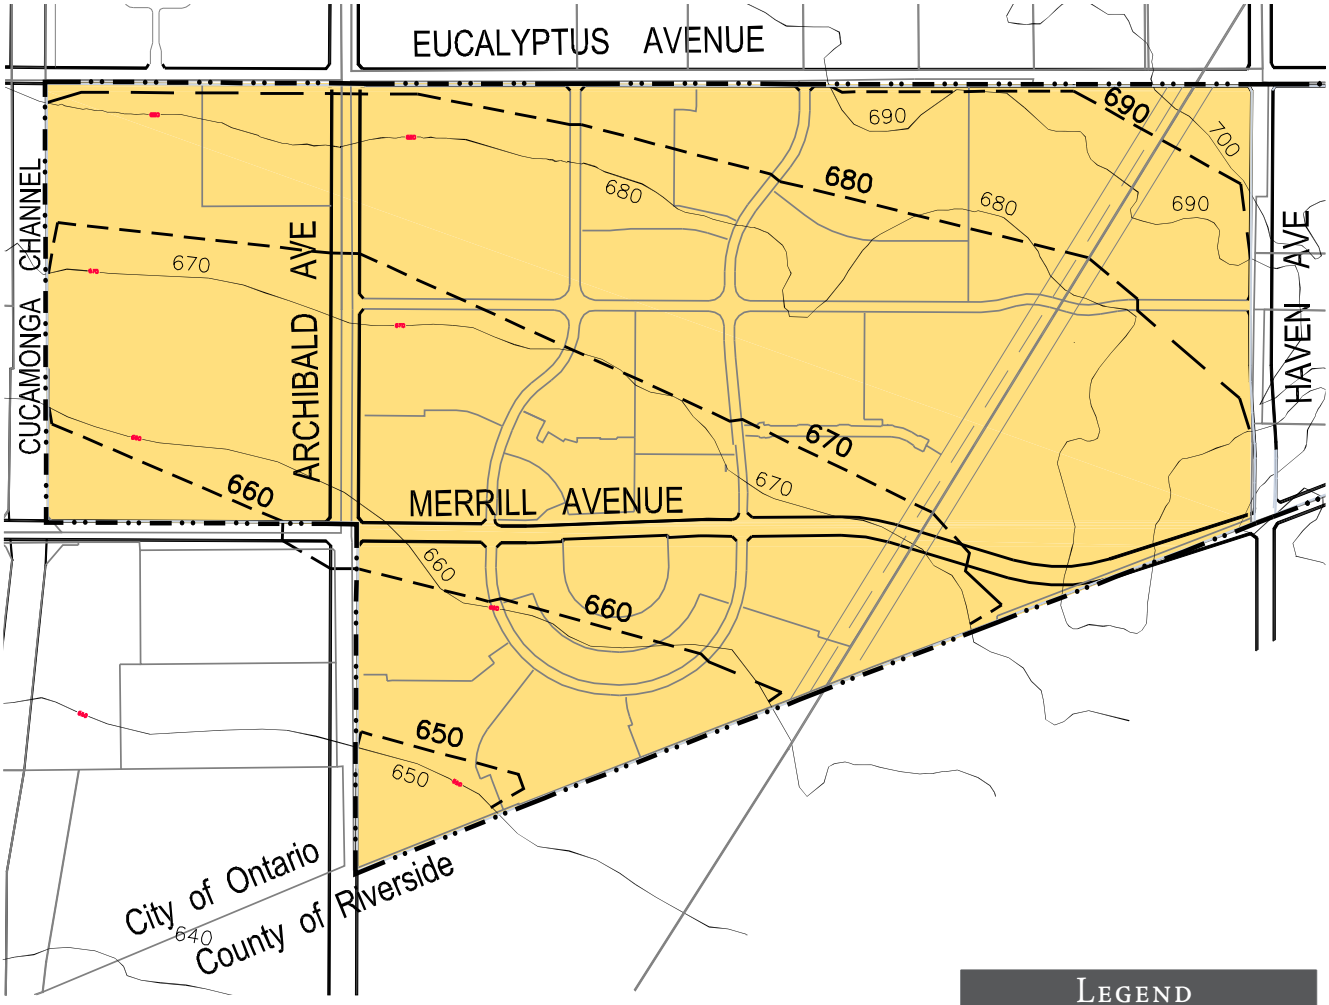

Exhibit 18—Conceptual Grading Plan

### 5.6.2 Natural Gas

The Southern California Gas Company will provide natural gas to the site.

### 5.6.3 Electricity

Southern California Edison will provide electricity to the site from existing facilities in the vicinity of the site. Proposed on-site facilities will be located underground.

### 5.6.4 Solid Waste

- Commercial - Developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards, and Sec. 6-3.601 Business Recycling Plan.
- Apartment - For apartments using commercial bin service developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards and Sec. 6-3.601 Business Recycling Plan.
- Residential - For curbside automated container service developer shall comply with Municipal Code Sec. 6-3.308.9(a) and (d), Residential Receptacles, Placement.
- Recycling Requirements - Developer shall comply with Municipal Code Article 6. Recycling Requirements for Specified Business Activity, Sec. 6-3.601 Business Recycling Plan, and Sec. 6-3.602 Construction and Demolition Recycling Plan.
- Site Improvement Plans shall follow the City of Ontario refuse collections standards.
- Standard two bin enclosures (for solid waste) may be used to service the residents. Modification to the standard two bin enclosure may be allowed to accommodate architectural/design layout for the cluster products.
- CC&Rs/HOA shall define areas where tenants place their waste cans for pickup by service vehicles. Said policy shall be reviewed/ approved by the Solid Waste Department.

## 5.7 Grading Concept

The existing ground has a gentle, uniform slope to the south, at approximately 1.0 to 2.0% and will not require a large grading operation, nor will it result in noticeable cut or fill slope banks. The grading operation will generally consist of the removal of any manure left over from dairy operations, clearing and grubbing, demolition of existing structures, and movement of surface soils to construct residential building pads and streets.

The grading and drainage of the Subarea 29 Specific Plan shall be designed to retain, infiltrate, and treat surface runoff, in a manner and combination which is practical, to reach NPDES compliance. Landscaped strips and landscaped setback areas can be swaled and depressed to retain and infiltrate irrigation water and runoff from smaller storm events. Pedestrian paseos, open space, and paseo connectors are examples of the landscaped strips that work well for this purpose in residential areas. If slopes are required on the property, the top of the slopes shall be set at the property lines. In areas adjacent to a ridgeline or in moderate slope areas, dwelling units and structures should be sited to use the natural ridgeline as a backdrop for structures; use landscape plant materials as a backdrop; and use structure to maximize concealment of cut slope. If retaining walls are constructed, they shall be kept to a minimum height and step with the contours of the property. Where retaining walls or fences face roadways, they shall be built, when feasible, of decorative materials consistent with the wall theme of the neighborhood. Exposed walls and fences facing roadways shall be no greater than six feet (6) in height, except as necessary for acoustical purposes to satisfy the intent of the noise ordinance.

### 5.7.1 Preliminary Earthwork Calculations

Based on the Conceptual Grading Plan, the estimated total amount of cut/fill for the project would be approximately 1,200,000 cubic yards.

### 5.7.2 Preliminary Grading/Drainage Concept

Grading plans for each tract in the Specific Plan area will be reviewed and approved by the City of Ontario Building, Planning, and Engineering Departments prior to the issuance of grading permits. All grading plans and activities will conform to the City grading ordinance and dust control and erosion control requirements.

A Conceptual Grading Plan for the project site is illustrated in Exhibit 18.

## 5.8 Phasing

Development of the Specific Plan area will be phased to meet the following objectives:

- Orderly build-out of the community based upon market and economic conditions;
- Provisions for adequate infrastructure and public facilities as determined and deemed necessary by the City Engineer; and
- Protection of public health, safety and welfare.

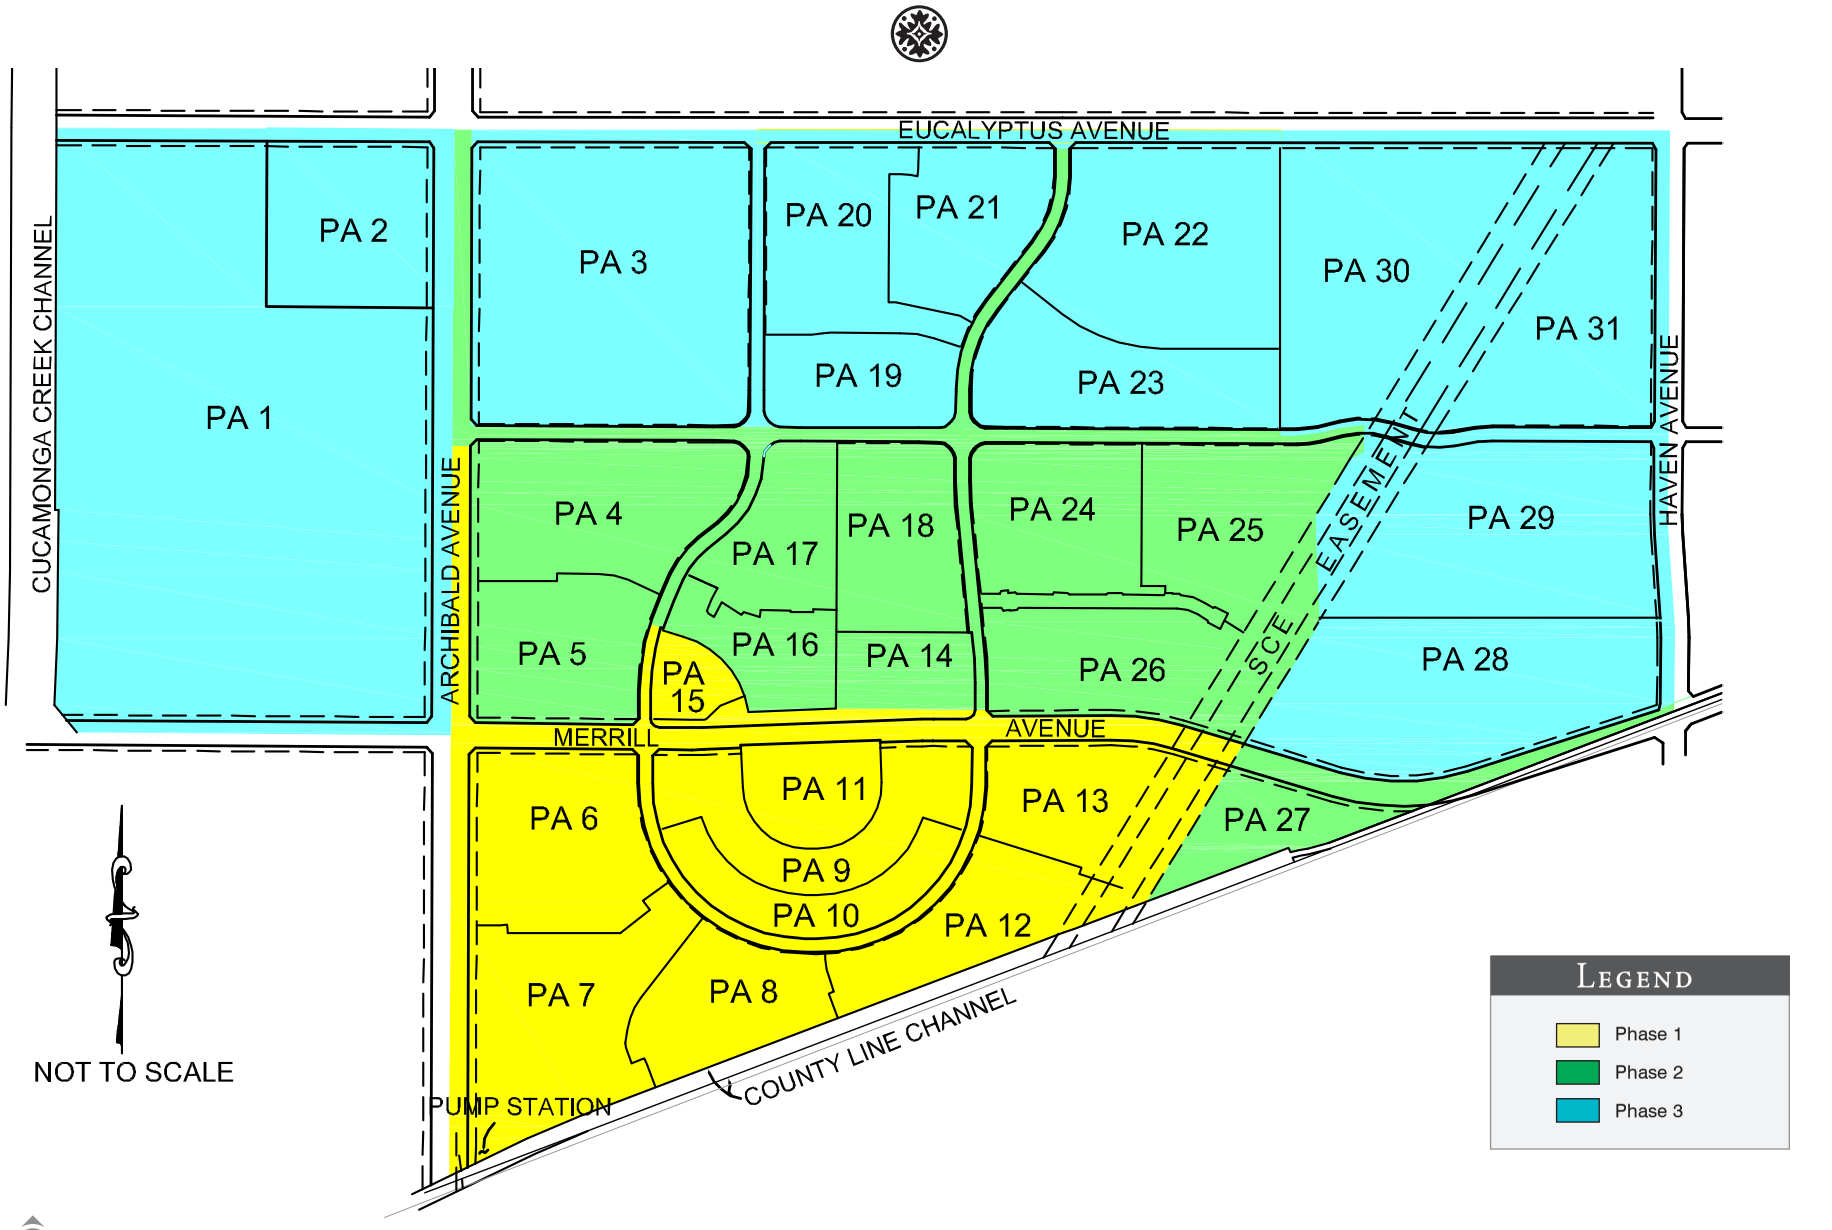

Exhibit 19—Conceptual Phasing Plan

Development phasing of the project site will be determined by the landowner and/or developer based upon real estate market conditions. Phasing will occur as appropriate levels of infrastructure, community facilities, and open space dedications are provided. Phasing sequencing is subject to change over time to respond to these various factors and individual phases may overlap or develop concurrently. Phased infrastructure improvements, as required and approved by the City Engineer to support each phase, will be installed by the developer. Refer to ***Exhibit 19, Conceptual Phasing Plan***. This plan describes three general phases of development, starting in the southern portion of Park Place and extending north over time.

Infrastructure required to serve the commercial development area will be installed by the developer(s) of these areas. The timing for installation of infrastructure and utilities and the provision of public services for the commercial development within the Specific Plan will be determined as part of the City's approval of parcel maps. Facilities will be constructed and services made available in a timely manner as development progresses.

Backbone infrastructure to serve all areas of the Specific Plan shall be installed by the developer(s) in accordance with the City's adopted Master Plan for the areas or any approved amendments to it. Infill service mains will be installed/constructed in phases as development proceeds and conditioned by the City Engineer's office to support individual phases of development. This may require installation of off-site infrastructure improvements beyond a given phase boundary.

Flexibility to adjust final product selection in Phases 2 and 3 shall be provided to the master developer, based on evolving market conditions. In particular, parcels designated for lane loaded product may be re-designated to conventionally loaded product in the future, at the time Phases 2 and 3 are underway. Other single-family detached product lines may also be adjusted over time, while not sacrificing the overall integrity of the proposed land plan and with the approval of the City of Ontario. Should a new product be introduced, a Specific Plan Amendment will be required.

A "Model Home Permit" is required and will be approved through the "Temporary Use Permit" process. Flexibility to adjust final product

## Land Use, Infrastructure and Services

Water, recycled water and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed and constructed per City standards and contained within acceptable easements. The CC&RS shall contain language that requires all proposed work by the HOA within said easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within lanes, parking areas or driveways. Utilities within commercial and industrial parking lots and loading areas shall be designated as private. The extent to which said utilities will be accepted as public utilities shall be determined, at the full discretion of the City, during final design plan review.

# 6. Development Regulations

# 6.0 Development Regulations

## 6.1 Introduction

The provisions contained herein will regulate design and development within the Subarea 29 Specific Plan. The regulations contained herein provide for the development of all land use categories with development regulations established for residential uses, commercial uses, parks and recreation, and landscaping.

## 6.2 Definition of Terms

The meaning and construction of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code Article 2, "Definitions," unless otherwise specifically provided herein.

## 6.3 Applicability

The development regulations contained herein provide specific standards for land use development within the Subarea 29 Specific Plan. Regulations address residential, commercial, and parks and recreation land uses. General landscaping regulations are also provided. Application of the following regulations is intended to encourage the most appropriate use of the land, ensure the highest quality of development, and protect the public health, safety, and general welfare. The adoption of the Subarea 29 Specific Plan by ordinance, supersedes otherwise applicable City of Ontario zoning regulations unless stated herein to the contrary. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of the Subarea 29 Specific Plan shall take precedence. Where the Specific Plan is silent, City codes shall apply. These regulations shall reinforce specific site planning, architectural design, and landscape design guidelines contained in ***Chapter 7, Residential Design Guidelines,*** and ***Chapter 8, Commercial Design Guidelines***, of the Specific Plan.

## 6.4 Administration

The Specific Plan is adopted by ordinance and will serve as the implementation tool for the General Plan as well as the zoning for the site. The Specific Plan Development Regulations address general provisions, permitted uses, and development standards for the project.

## 6.5 Methods and Interpretation

Development within the Specific Plan shall be implemented through the approval by the City of Ontario of parcel maps, tract maps, and development permits. The administration process described herein provides the mechanisms for review and approval of development projects within the project, consistent with the Specific Plan objectives.

## 6.6 General Site Development Criteria

The following general site development criteria shall apply to all land development proposed in the Specific Plan.

- Gross Acres-Except as otherwise indicated, gross acres for all development areas are measured to the centerline of streets;
- Grading-Development within the site shall utilize grading techniques as approved by the City of Ontario. Grading concepts shall respond to the grading design included in this Specific Plan which guide the development of land use toward the goal of providing for a livable community with streets and entries designed for walking and resident interaction;
- Building Modification-Additions shall match the architectural style of the primary unit and shall be constructed of the same materials and colors as the primary unit;
- Utilities-All new and existing public utility distribution lines of 66 kV or less shall be subsurface throughout the planned community;
- Technology-All homes and businesses shall accommodate the most modern technology for computer internet access, phone, fax, and television. Broadband fiber optics cable will be installed on all peripheral streets per the approved Broadband Master Plan;
- Density-The Specific Plan Land Use Plan allocates a total number of units to each residential neighborhood as indicated in the "Land Use Summaries" Tables 1 and 1b, included in Section 4, Land Use, of the Specific Plan. Variations in the number and type of dwelling units within each residential neighborhood may occur at the time of final design of the neighborhood, depending upon the residential product identified for development. Increases in allocation of residential units up to a maximum of fifteen percent (15%) are permitted among the residential neighborhoods within the Specific Plan, provided the total number of units established for the Specific Plan area is not exceeded; and

- Maximum Number of Dwelling Units-The maximum number of dwelling units permitted within the Subarea 29 Specific Plan shall be 2,392 dwelling units, as set forth in the ***Specific Plan Land Use Summaries.*** Consistent with Table 1a, the maximum number of residential dwelling units permitted within Park Place shall be 1,348 dwelling units. The maximum number of residential dwelling units permitted within Richland Communities, Inc. controlled properties shall be 936 dwelling units. The maximum number of residential dwelling units permitted within Brookfield Homes controlled property shall be 108 dwelling units.
- The measurement of the width of the lots on curvilinear streets shall be taken from the front and rear setback lines. The front setback lines shall be displayed by dotted lines or by plotting the footprint of the dwelling unit.
- Buildings or parts of buildings, in particular roof overhangs, shall not encroach into the 3-foot building setback from the property line.

## 6.7 Implementation

- Development proposals within the project site shall be subject to the implementation procedures established herein. The provisions and development standards contained herein supercede those contained in the City of Ontario Development Code. However, where the development standards are silent, the City's Development Code shall apply;
- Severability - If any portion of these regulations is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining portions thereof. The legislative body hereby declares that they would have enacted these regulations and each portion thereof irrespective of the fact that any one or more portions be declared invalid or ineffective;
- Unless otherwise provided, any ambiguity concerning the content or application of the Specific Plan shall be resolved by the Planning Director or his/her designee, hereinafter referred to as Director, in a manner consistent with the goals, policies, purpose, and intent established in this Specific Plan; and
- Any major deviation from the design guidelines within the Specific Plan shall require a Specific Plan Amendment. The Director shall determine whether a proposed change constitutes a major deviation.

## 6.8 Development Permit

All development projects within the Specific Plan shall be subject to the Development Plan Review Process as established in Article 8: Development Plan Review, City of Ontario Development Code. Adoption of the Specific Plan by the City includes adoption of the design guidelines contained within the Specific Plan. Where the Specific Plan design guidelines are silent, the applicant's design guidelines contained within the City's Development Code shall apply. The design guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during design review.

Pursuant to these provisions, the Development Permit process constitutes a design review of project architecture, site plans, and landscape plans. All development project applications shall include a landscape and irrigation plan describing plant materials and their growth habits, plant size and spacing, methods of irrigation and landscaping maintenance, site plans, architectural elevations, floor plans, grading plans, and other requirements as specified by the City. Development permits will be approved with conditions of approval.

## 6.9 Subdivision Maps

Approval of the Tentative Tract Map(s) and Parcel Maps will create legal lots for development. All Tentative Tract Maps and Parcel Maps will be reviewed and approved pursuant to applicable provisions of the City of Ontario Subdivision Ordinance and consistent with the applicable provisions contained within this Specific Plan.

## 6.10 Specific Plan Modifications and Amendments

### 6.10.1 Minor Modifications

The following constitute minor modifications to the Specific Plan, not requiring a Specific Plan Amendment, and are subject to review and approval by the Zoning Administrator. The Zoning Administrator shall have the discretion to refer any such request for modification to the Planning Commission or the City Council.

- Change in utility and/or public service provider;
- An increase of more than fifteen percent (15%) to the number of units within an individual neighborhood, provided the total number of units for the entire Specific Plan areas does not exceed that established in the approved Specific Plan;

- Adjustment of a neighborhood boundary, provided the total acreage of the affected area does not increase or decrease by more than fifteen percent (15%) of the total acreage stated in the approved Specific Plan;
- Minor changes to the design guidelines, which are intended to be conceptual in nature only, and are intended to be flexible in implementation; and
- Other modifications of a similar nature to those listed above, which are deemed minor by the Director, which are in keeping with the purpose and intent of the approved Specific Plan and which are in conformance with the General Plan.

## 6.10.2 Specific Plan Amendments

Amendments to the Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65433(a) of the Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for Specific Plan Amendments. In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) will be responsible for preparing the necessary CEQA documentation.

## 6.11 Appeals

Appeals from any determination of the Zoning Administrator shall be made to the Planning Commission. The applicant(s) or any other entity shall have the right to appeal the decision of the Planning Commission on any determination. Appeals shall be submitted by filing an application on forms provided by the City of Ontario within ten (10) days following the final date of action for which an appeal is made. Appeals shall be processed consistent with the provisions of Article 5, "Appeals" of the City of Ontario Development Code.

## 6.12 Project Financing

Construction and maintenance of public improvements and facilities to serve the Specific Plan will be financed through a combination of financing mechanisms including the use of public and private funds. In order for the project to be fiscally self-sufficient the following options can be considered for implementation:

### *Maintenance*

A lighting and landscape district can be implemented in order to defray the costs associated with street maintenance and street light costs.

### *Facilities and Services*

A variety of other financing options can be considered by the City of Ontario for financing facilities and services to be provided within the Specific Plan to include:

- Establishment of a Mello-Roos Community Facilities District, which enables governmental entities to finance public infrastructure on a tax-exempt basis;
- Special assessment districts;
- Benefit assessment financing for improvements such as storm drains and street lighting; and
- Integrated financing districts such as landowner assessments that are contingent upon development.

City Council approval is required for the establishment of all special district financing mechanisms. Establishment of a district would enable the City to levy a special tax and to issue bonds for the financing of improvements and/or services. Among the facilities that potentially could be financed are flood control, drainage, utilities, street improvements, and other infrastructure and related facilities. The district provisions for those services would cover all phases, including planning, design, acquisition, construction, operations, and maintenance. These assessments would only affect the Subarea 29 Specific Plan area, and the debt service incurred by these assessments would be paid by landowners or homeowners within the Specific Plan area.

## 6.13 Maintenance Responsibilities

The public and private improvements constructed within the Specific Plan area will be maintained through a combination of public and private entities as described below and in ***Table 4, Maintenance Responsibilities.*** During the course of maintenance of public utilities (including storm drain) within private and public streets, the City will pave the streets and restore landscaping per City standards. Restoration of any enhancements above and beyond City standards, including but not limited to architectural, hardscaping, and landscaping enhancements shall be the responsibility of the HOA or other entity maintaining those enhancements. This applies to all areas where public utilities are located including but not limited to public and private streets, gated communities, alleys, etc.

## 6.13.1 Public Maintenance

Water, recycled water, and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed and constructed per City

## Table 4—Maintenance Responsibilities

1. Including restoration work following public street repairs.
2. Only those facilities in the public right-of-way and/or easements.

standards and contained within acceptable easements. The CC&RS shall contain language that requires all proposed work by the HOA within said easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within alleys, parking areas or driveways. Utilities within commercial and industrial parking lots and loading areas shall be designated as private. The extent to which said utilities would be accepted as public utilities shall be determined, at the full discretion of the City, during final design plan review. Refer to ***Table 4, Maintenance Responsibilities.***

### 6.13.2 Homeowner Association

Refer to ***Table 4, Maintenance Responsibilities.***

## 6.14 Residential Development Standards

### 6.14.1 Residential Detached

#### *General*

This category includes the development of all single-family detached dwelling units. The purpose of the residential standards for single-family detached housing is to establish the minimum criteria for the development of these product types on individual lots within the neighborhoods specified within the Subarea 29 Specific Plan. Further residential design guidelines are in Chapter 7.0.

#### *Permitted Uses*

- Public or private parks, recreational buildings, newsstands, coffee concessions, and sales of grocery items, greenbelts, or open space.
- Accessory uses to include the following:
- Garages (minimum 2-car);
- Granny Flats (i.e. Second Dwelling Units, in accordance with the City's Zoning Code;
- Home occupations;
- Swimming pools, spas, sports courts, and other similar outdoor recreational amenities;
- Patios and patio covers;
- Storage, garden structures, cabanas, and greenhouses;
- Monument signage;
- Temporary uses such as model home and subdivision sales trailers; temporary construction parking, offices, and facilities; real estate signs, signage indicating future development and directional signage with the approval of a Temporary Use Permit; and
- Second story additions to existing single story dwelling units.

#### *Conditionally Permitted Uses*

- Places of worship including but not limited to churches and synagogues; and
- Child care facilities/day care facilities.

## 6.15 Neighborhood Serving Commercial Land Use Development Standards

#### *General*

This section sets forth the development regulations for development of commercial land uses within the Specific Plan Planning Area 2.

#### *Permitted Uses*

- Bakery (Retail);
- Barber Shop and Beauty/Nail Salon;
- Book Stores;
- Camera and Photographic Supply Stores;
- Clothing and Accessory Stores;
- Convenience Market;
- Dry Cleaner;
- Florist;
- Jewelry and watches/clocks;
- Laundry – Self-Service;
- Locksmith/Key Shop;
- Police Storefront/Sub-Station;
- Satellite Dishes/Ham Radio Antennas (private use);
- Shoe Repair;
- Specialty Food Stores;
- Tailor; and
- Travel Agency

Table 5—Neighborhood Service Commercial Site Development Standards

| *Planning Area 2* | |
|---|---|
| Minimum Parcel Area | N/A |
| Minimum Lot Size | Shall be large enough to accommodate the proposed use and meet all Development Standards as specified within the Specific Plan. Minimum site area shall be 7 acres; however, the site area may be less when developed as part of an integrated commercial center. |
| Maximum Development Floor Area Ratio | 0.35 |
| ***Minimum Building Setbacks*** (1)(2) | |
| • From Public Street Property Lines | 20' |
| • From Private Street Property Lines | 15 ' |
| • From Interior Property Lines | 0' |
| • From Haven Avenue Right-of-Way | 14' |
| • From Archibald Avenue Right-of-Way | 19' |
| • From Eucalyptus Avenue Right-of-Way | |
| • From Private or Local Street | 15' |
| • From Interior Property Line | 0' |
| • From Interior Property Line Adjacent to Residential District | 25' |
| ***Parking & Drive Aisle Setbacks*** | |
| • From Public Arterial Streets | 25' |
| • From Private Streets & Drive Aisles to Bldgs. | 10' |
| • From Interior Property Line | 5' |
| • From Rear Property Line | 5' |
| • From Haven Avenue Right-of-Way | 14' |
| • From Archibald Avenue Right-of-Way | 19 |
| • From Merrill Avenue Right-of-Way | N/A |
| • From Private or Local Street | 10' |
| • From Interior Property Line | 5' |
| • From Interior Property Line Adjacent to Residential District | 5' |
| Minimum Landscape Coverage | 15% |
| ***Maximum Building Height*** | |
| • Main Structure | 35' |

Table 5—Neighborhood Service Commercial Site Development Standards *Continued*

| | |
|---|---|
| Architectural Projections and Focal Elements such as Towers, Cupolas, and other[3] | 55' |
| Porte-Cocheres [4] | 1 story |
| Other Development Regulations | Per Article 16, City of Ontario Dev. Code. |
| • Walls, Fences & Hedges | Per Article 16, City of Ontario Dev. Code. When a non-residential use adjoins a residential district, a 6-foot high masonry wall shall be required at the interior side or rear property lines. |
| • Parking | Per Article 30, City of Ontario Dev. Code. |
| • Screening | All loading areas shall be screened from adjacent public streets, residential, and open space uses through the use of landscaping, earthen berms, decorative walls, or fencing. All storage, including cartons, containers, materials, or trash shall be shielded from view within a building or area enclosed by a solid fence or wall not less than 6' in height |
| | All roof-mounted equipment, including but not limited to, mechanical equipment, satellite dishes, tanks, ducts, towers, and all equipment appurtenant thereto, shall be screened on all sides from public view from the street adjoining properties, and neighboring residential units, by a parapet wall, decorative enclosure, or other architectural element. Equipment screening shall appear as an integral part of the building architecture. |
| • Lighting | All interior and exterior lighting shall be directed away from residential and open space uses. |

1. All setbacks areas shall be landscaped.
2. All setbacks are measured to habitable area not architectural appurtenance or projection. An architectural projection is defined as an element that articulates the building elevation such as eaves, window and door pop-out surrounds, bay windows, pot shelves, chimneys, enhanced window sills, shutter detail, window trim, and balconies, and other similar elements. Such elements may project a max. of 3' into setback areas. Building setbacks shall be determined by the hierarchy of streets (major arterial and local streets) and measured from PL for local streets and RW for major arterials.
3. Architectural element only, not to be used for signage, subject to Planning Director approval. Within commercial areas, towers and vertical projections are limited in size to 10% of the total building square footage.
4. Porte-Cocheres shall be open on three sides.

### *Conditionally Permitted Uses*

- Alcoholic Beverage Sales;
- Commercial Day Care Facility (including Adult Day Care);
- Banks, Credit Unions and Other Depository Institutions;
- Church;
- Money Transmitting;
- Other Financial Services;
- Police/Fire Station;
- Recreation Center; and
- Senior Citizen Center

### *Determination of Use*

Uses not specifically listed may be deemed permitted subject to a "determination of Use" as provided for in Section 9-1.1310 of the City of Ontario Development Code.

### *Design Guidelines*

Prior to the approval of the first site development permit and/or parcel map within the Community Commercial land use area, a detailed set of design guidelines for the area shall be submitted by the developer and approved by the City. These guidelines shall be compatible with the residential architectural styles in this Specific Plan and discretion of the City.

## 6.16 Landscape Standards

## 6.16.1 General Provisions

- All landscape plans, streetscape plans and graphic designs which create neighborhood identity or enhance entry monuments shall conform to the design guidelines and regulations as set forth herein and shall be subject to review and approval by the City of Ontario;
- The landscape/streetscape improvements for the Specific Plan shall establish a landscape theme reminiscent of the regional landscape character of the surrounding area;
- Installation of landscaping within the front yards of single-family detached housing products will be provided by the home builder. Front yard landscaping shall be installed prior to Certificate of Occupancy;
- Installation of landscaping in residential areas of Park Place may be provided by the home builder, based on future landscape plans submitted to the City during site plan review; and
- Installation of landscaping within the commercial area of the Specific Plan will be provided by the developer/builder.
- All loading areas shall be screened from adjacent public streets, residential, and open space use through the use of landscaping, earthen berms, and/or decorative walls or fencing. All storage including cartons, containers, materials, or trash shall be shielded from view within a building or area enclosed by a solid fence or wall not less than six feet in height.

## 6.16.2 Landscape Standards

- Landscaping within the Specific Plan shall be provided in accordance with the Design Guidelines for Streetscapes and Entries utilizing plant materials specified on the Plant Palette included in ***Chapter 7, Residential Design Guidelines, and Chapter 8, Commercial Design Guidelines,*** established for the Specific Plan;
- Boundary landscaping will be required adjacent to residential, commercial, park, and school areas. Landscaping shall generally be placed along the entire property line;
- Landscaping and irrigation systems within the public rights-of-way of the Specific Plan area shall be installed by the developer;
- Freestanding perimeter walls and view fencing shall be provided within and at the perimeter of the project as specified in the ***Wall and Fence Master Plan, Chapter 7, Residential Design Guidelines***. Such walls and fences will be constructed concurrently with the construction of improvements required for development of the neighborhoods of the Specific Plan;
- Walls and Fencing—Perimeter walls shall be constructed in locations and of a design consistent with the Residential Design Guidelines and the Wall and Fence Master Plan, and Wall Details, provided in Chapter 7, Residential Design Guidelines, and shall not exceed six feet (6) in height from finished grade. Perimeter walls may exceed six feet (6) in height if required for sound attenuation. Perimeter walls shall be constructed of either decorative masonry (both sides) or other permanent, durable, low maintenance material subject to approval by the City;

- Residential—Side and rear yard walls and fencing shall not exceed six (6) feet in height from the highest adjacent finished grade. Walls and fencing within the residential front yard setback area shall not exceed three feet (3) in height. Walls shall be decorative masonry construction (both sides) or other permanent low maintenance materials. Front yard fences may be constructed of attractive, durable materials, including, but not limited to, wrought iron with pilasters, textured concrete block, formed concrete with reveals, or other materials approved by the Planning Director. View fencing may be of a decorative wrought iron, glass panels, or other durable material subject to approval by the City;
- All perimeter wall and fence materials throughout the Specific Plan will be of uniform manufacture with colors specified for the overall design theme;
- All interior walls (both sides) that are visible from the public street shall be constructed of attractive, durable materials, including, but not limited to, wrought iron with pilasters, textured concrete block, formed concrete with reveals, or other materials approved by the Planning Director. Colors shall be consistent with the colors specified for the overall design theme and shall be decoratively capped. Decorative all-weather vinyl fencing is not permitted in the Specific Plan area;
- The developer will provide site inspection of all construction and installation of open space areas in accordance with City of Ontario requirements;
- Parking lot landscaping within commercial areas shall be required in accordance with Section 9-1.3040 of the City's Development Code; and
- Non-toxic and non-invasive vegetation shall be utilized adjacent to all public open space areas.
- All landscaping features shall comply with City of Ontario requirements for sight distance.

## 6.17 Signage

A Master Sign Program shall be submitted by the developer(s) of each land use component for the Specific Plan and approved by the City of Ontario pursuant to Article 31 of the City's Development Code to address residential project entries, residential neighborhood identification signs, commercial center identification, tenant signage, and "way-finding" signs within the Specific Plan area. All other signs shall be subject to the approval of a sign permit pursuant to the City's Development Code. All traffic-related signs shall conform to City of Ontario Traffic and Transportation Design Guidelines and California Manual of Uniform Traffic Control Devices (MUTCD), latest editions.

### 6.17.1 Master Sign Program Contents

All sign programs shall address, at a minimum, the following:

- Permitted signs;
- Prohibited signs;
- The hierarchy of signage; and
- Definition of types of signs.
- Locations and dimensions for monument signs, neighborhood identification signs, and public facilities signs;
- Locations and dimensions of directional signage;
- Provision for size, location, and duration of display of temporary signs;
- Permitted sign types, styles, construction materials, colors, and lettering styles;
- Requirements for a sign permit application;
- Procedures for obtaining approval of a sign permit; and
- Procedures for amendments to the sign program.

## 6.18 Private Recreational Facilities

This category includes the development of all private recreation facilities and is subject to the Development Permit process contained herein.

# 7. Residential Design Guidelines

# 7.0Residential Design Guidelines

## 7.1 Introduction

Subarea 29 is a new residential master-planned community located within the New Model Colony in Ontario, California. The historical character of this area is typically rural and agricultural in nature. However, being located in the path of the advancing railroad, the later automobile Route 66, and eventually Ontario International Airport, Ontario has also typically been associated with transit and forward-moving progress.

The proposed community design integrates the historic character of the past with a plan which provides a variety of housing choices that serve the needs and lifestyles of today.

Upon entering the community, residents and visitors arrive at a central community core consisting of a school and community park. Connections to both community and regional trails are accessed from this core area. With a focus on promoting a pedestrian friendly, healthy lifestyle this core area is within approximately ¼ mile walk from all neighborhoods in the community.

### *Community Overview*

Community design elements include:

- A central village core consisting of a school, parks, and private recreation center;
- A wide variety of home sizes and plans to fulfill the needs of different life stages;
- Tree-lined neighborhood streets with curb separated sidewalks and generous plantings in parks and open spaces;
- Neighborhood parks and a private recreation center to support physical and social activities within the community;
- A network of sidewalks and trails that link all neighborhoods to schools, parks, open spaces, a regional trail system and nearby retail; and
- Nearby connections to local, regional and global transit.

The community character is inspired by:

- The charm and tradition of Ontario's historic downtown and the existing neighborhood's eclectic mix of architectural styles;
- The simple, yet stately landscape along Euclid Ave. and the region's agricultural heritage; and
- Environments that encourage wellness by providing opportunities for pedestrian and outdoor physical activity.

Community retail goods and services are conveniently located in a planning area at the Northwest corner of the Specific Plan at the intersection of Eucalyptus Ave. and Archibald Ave.

The Specific Plan community entries along Archibald Ave., Haven Ave., and Merrill Ave. will be identified with community character monuments and entry statements. Signage, lighting, and monuments within Park Place will reflect an identifiable community character.

Upon arrival at the primary Merrill Ave. entry, from Archibald Ave., residents and visitors are greeted by the central "village core;" a private community recreation center and two (2) neighborhood parks frame the lane loaded lot homes on the south side and an elementary school and lane loaded homes on the north side. These elements are all easily accessed from all neighborhoods by way of pedestrian, bicycle, and vehicular routes.

Farther into the community, Merrill Ave. crosses through a green space over the SCE Easement before connecting with Haven Ave. to the east. Circulation throughout the community is organized by a network of interior streets with curb separated sidewalks framed by street trees and varied architectural styles that reflect the chosen community character.

### 7.1.1 Guiding Principles

The following guiding principles have been created to help develop architecture that reflects quality in design, simplicity in form and plan and contributes charm and appeal to the neighborhoods of Subarea 29 as a whole.

- The home, not the garage, is the primary focus of the front elevation. A variety of garage placements emphasizes the pedestrian environment as opposed to the automobile;
- A variety of compatible architectural styles are provided to ensure a degree of individuality throughout neighborhoods;
- Appropriate massing and roof forms play a major role in defining architecture styles, roof framing related to each plan versus individual elevations;
- Architectural elements, details, and appropriate color palettes are used to reinforce individual architectural styles;
- Rear elevations visible to the public viewshed should provide articulated walls, windows, and varied roof profiles, all defining level of quality in detail and interest in neighborhood architecture; and
- Selected architectural styles are related to those historically represented in Ontario. These are: Craftsman, Cottage, American Colonial, Farmhouse, American Traditional, Spanish Colonial, and Andalusian.

## 7.2 Architectural Styles

### 7.2.1 Introduction

The style information on the following pages provides the builder and design consultants with the tools to create functional and attractive architectural designs without using gimmicks or sacrificing the integrity of the style.

#### *Authenticity*

The design criteria in these guidelines is offered to encourage a high quality of architecture and reasonable level of authenticity of styles through the use of appropriate elements. Although detail elements may be used to further convey the character of a style, the overall massing and appropriate roof forms should be used to establish a recognizable style. Proper scale and proportion of architectural elements and appropriate choice of details are all factors in achieving authenticity.

### 7.2.2 Architectural Philosophy

Looking back to Ontario's older, established neighborhoods for inspiration, the design intent for Subarea 29 is to re-capture the charm and essence of these original home styles and express them in the simple, honest manner that they originated. These homes reflected function and tradition, simplicity in massing, plan and roof forms, and authentic, regional styles.

Homes will provide the kind of function, quality, value, and appeal that were built into those original homes. Neighborhood parks, sidewalks, parkways, and street trees will add to the traditional feeling in these neighborhoods, linking them with the overall community.

#### *Design Character*

The design character of the neighborhoods will be one of hometown appeal characterized by simple, yet charming homes, curb separated sidewalks, and parkways lined with street trees. Homes and street scenes will reflect an overall feeling of quality and tradition. The architectural palette of styles has a regional historic background and context in keeping with the character of Ontario.

### 7.2.3 Architectural Styles

#### *Architectural Style/Plan Mix*

An important goal in this community is to develop varied and interesting streetscenes. In order to achieve this, the following architectural style and plan requirements shall be met for all Lane Loaded and Conventional Small, Medium, and Large Lot residential development products:

In each neighborhood that consists of 0-80 homes, provide:

- A minimum of three (3) plans;
- A minimum of three (3) elevations per plan using a minimum of two (2) significantly different styles per plan; and
- A minimum of four (4) different color schemes per number of plans.

In each neighborhood that consists of 81-100 homes, provide:

- A minimum of four (4) plans;
- A minimum of three (3) elevations per plan using a minimum of three (3) significantly different styles per plan; and
- A minimum of four (4) different color schemes per number of plans.

#### Cluster Home Style/Plan Mix

The development of Cluster Homes generally results in the same 1 or 2 plans being repeated along the street front. To support varied neighborhood streetscenes, each Cluster Home residential product neighborhood shall provide:

- A minimum of three (3) significantly different styles per plan. Although the styles shall be significantly different, they shall be coordinated to provide a harmonious and cohesive neighborhood preferably from a family of related architectural styles; and
- A minimum of four (4) different color schemes per number of plans.

Number of plans and elevations shall not be regulated for interior units; the above standards shall apply to any unit plotted along (facing or siding on to) a street more than one (1) time.

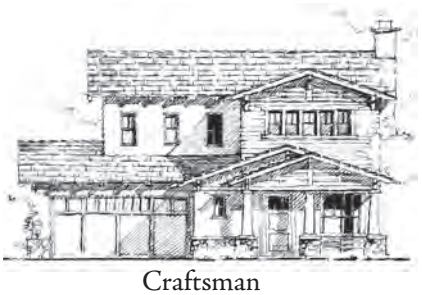
# Architectural Styles

Farmhouse

Cottage

American Traditional

American Colonial



Craftsman

Spanish Colonial

Andalusian

### *Specific Plan Style Selection*

Builders will select from the following palette of architectural styles:

- Farmhouse;
- Cottage;
- American Colonial;
- American Traditional;
- Craftsman;
- Andalusian; and
- Spanish Colonial.

The "common features" for each architectural style are displayed on the following pages. These elements will assist in defining the character of each one.

As future phases of the Subarea 29 Specific Plan are developed, architectural styles may be added or deleted provided that they are compatible with the overall style palette and approved by the City of Ontario.

# *Farmhouse*

©2006 William Hezmalhalch Architects, Inc.

The American Farmhouse represents a practical and picturesque country house. Its beginnings are traced to both Colonial styles from New England and later the Mid-West. As the American Frontier moved westward, the American Farmhouse style evolved according to availability of materials and technological advancements, such as balloon framing.

Predominant features of the style are large front and/or wrapping porches with a variety of wood columns and railings. Two story massing, dormers, and symmetrical elevations occur most often on the New England Farmhouse variations. The asymmetrical, casual cottage look, with a more decorated appearance, is typical of the Midwest American Farmhouse. Roof ornamentation is a characteristic detail consisting of cupolas, weather vanes, and dovecotes.

Full to Partial Width Front Porch

Multi-Pane Bay Window
Horizontal Lapped Siding

Simple Wood Columns & Wood Railings

## *Farmhouse*

| *Element* | *Common Features* |
|---|---|
| ***Form*** | • Simple plan form massing and simple roof design |
| ***Roof*** | • 6:12 to 12:12 roof pitch, possibly lower pitch at main roof<br>• Front to back main gable roof<br>• 12" overhangs with open eaves<br>• Concrete tiles with smooth flat or shingled appearance |
| ***Walls*** | • Horizontal siding may be combined with stucco<br>• All material changes must occur at an inside corner or another logical location |
| ***Windows*** | • Vertical multi-paned windows or use of an accent window appropriate to style, such as: bay windows or single hung windows at front elevation<br>• Multi-paned windows or inserts on side and rear elevations in high visibility public view areas<br>• Vinyl wrapped windows |
| ***Details*** | • Porches with simple wood or shaped wood columns and wood railings<br>• Minimum 2′ x 4′ window and door trim - wood on siding, foam on stucco<br>• All surface mounted fixtures on front elevations must complement architectural style (i.e. use of some style appropriate details such as: wood pot shelves, louvered attic vents, cupolas or dormers).<br>• Stucco or siding chimney wrap<br>• Garage door patterns and colors to complement style |
| ***Colors*** | • Field: Whites or light tinted colors<br>• Trim: Whites or light shades complementary to field color<br>• Accents: Light or dark shades in contrast with field color |

Note: Enhancements are required at corners and second-story elevations seen from public views.

# *Cottage*

Cottage is a picturesque style derived from medieval Norman and Tudor domestic architecture. The resulting English and French inspired "cottage" became extremely popular nationwide after the adoption of stone and brick veneer techniques in the 1920s.

Although the cottage is looked upon as small and not costly, it was recognized as one of the most popular styles in suburban America. The design of the home was reflected in the rural setting that they evolved in. Established neighborhoods in Riverside, Orange, and Santa Ana contained many homes of charm and character that depicted the alluring, yet unpretentious lifestyle of the Cottage home.

Varying Roof Slopes & Forms

Feature Windows & Gable Accents

Stucco With Stone Accents

## *Cottage*

| *Element* | *Common Features* |
|---|---|
| ***Form*** | • Rectangular plan form massing with some recessed second floor area |
| ***Roof*** | • Main roof hip or gable with intersecting gable roofs<br>• Secondary roof with either a curved slope or steeper pitch than main roof<br>• 6:12 to 12:12 roof pitch, possibly lower pitch at main roof<br>• 0" to 12" overhangs - (limit tight overhangs to distinguishing character elements)<br>• Architectural quality asphalt shingles or smooth flat concrete tiles |
| ***Walls*** | • Stucco, wood siding, or stone accents |
| ***Windows*** | • Vertical multi-paned windows at front elevation<br>• Multi-paned windows or inserts on side and rear elevations in high visibility public view areas<br>• Vinyl wrapped windows<br>• Use of an accent window where appropriate to style, such as: curved or round top accent windows, bay windows or single hung windows at front |
| ***Details*** | • Entry accents with natural or manufactured stone<br>• Shutters<br>• Simple wood 2x window and door trim - wood on stone or siding, foam on stucco<br>• All surface mounted fixtures on front elevations must complement architectural style.<br>• Garage door patterns and colors to complement style |
| ***Colors*** | • Field: Whites or light tinted colors<br>• Trim: Whites or light shades complementary to field color<br>• Accents: Light or dark shades in contrast with field color |

Note: Enhancements are required at corners and second-story elevations seen from public views.

# American Traditional

The American Traditional style evolved in the early twentieth century being influenced by American Colonial styles as formal as Georgian Revival and those as simple and functional as Cape Cod, New England Colonial, and Farmhouse.

With respect to East Coast traditions and regional culture, the Colonial Revival vocabulary of white-painted columns, clapboards, and shuttered windows were combined with the less symmetrical, unpretentious massing, and functional forms of the Cape Cod and Farmhouse. Combined one and two-story massing with single story wings, gabled roofs with dormered windows, or occasional saltbox roof forms were favored solutions, later becoming classic variations of the traditional style. These inspirations yielded a truly American inspired architecture for a more relaxed, yet still dignified style that would become the new American dream.

Closed Pediment and Shuttered Windows

Brick Siding and Vertical Multi-paned Windows

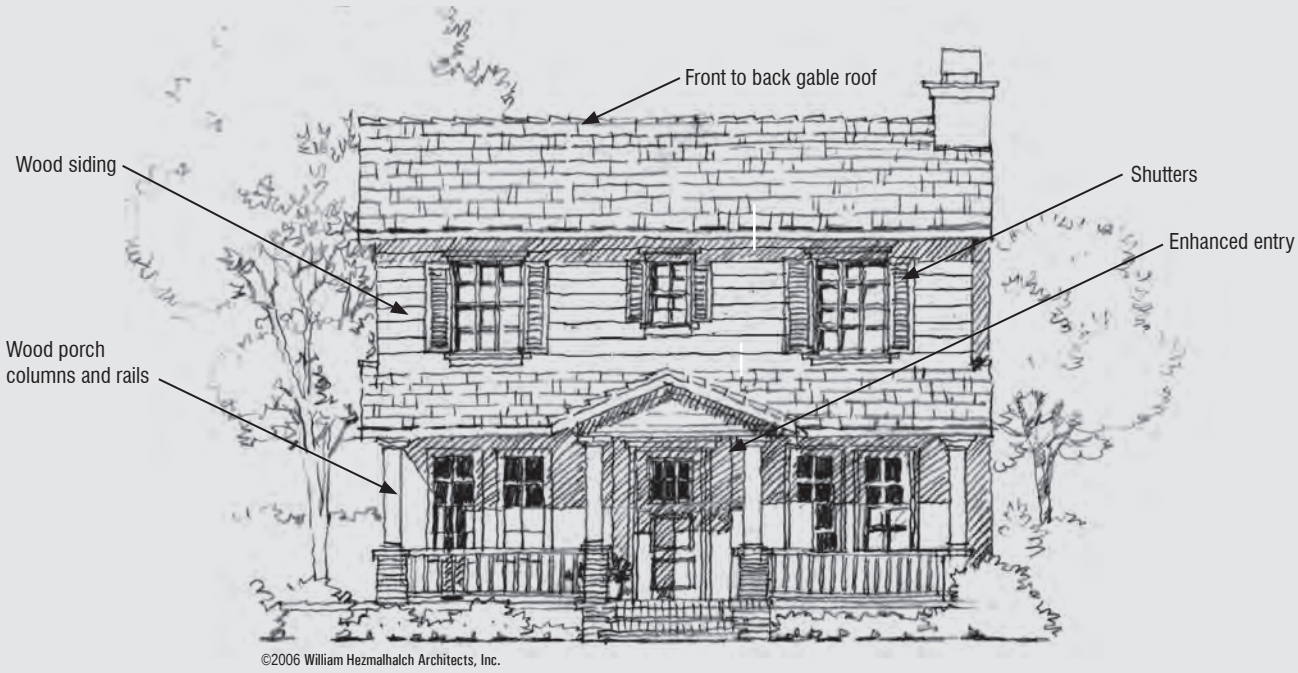
Vented Gable and Horizontal Siding

## *American Traditional*

| *Element* | *Common Features* |
|---|---|
| ***Form*** | • Asymmetrical massing with a vertical and a horizontal break |
| ***Roof*** | • 5:12 to 12:12 roof pitch, possibly lower pitch at main roof<br>• 16" to 24" overhangs<br>• Concrete roof tile - flat or shake appearance<br>• Front to back gable or hip roof with intersecting hip or gable roofs |
| ***Walls*** | • Horizontal siding - may be combined with stucco<br>• All material changes must occur at an inside corner or another logical location |
| ***Windows*** | • Vertical multi-paned windows or use of an accent window where appropriate to architectural style, such as: round top accent or bay windows at front elevations<br>• Multi-paned windows or inserts on side and rear elevations in high visibility public view areas<br>• Vinyl wrapped windows |
| ***Details*** | • Simplified cornice trim at gable ends<br>• 2x6 window and door trim - wood on siding, foam on stucco<br>• All surface mounted fixtures on front elevations must complement architectural style (i.e. use some style appropriate details such as: header window wood accent trim, full porches or balconies, square columns with trim, window pot shelves, brick veneer chimney wrap)<br>• Garage door patterns and colors to complement style |
| ***Colors*** | • Field: Whites, off-white, dark, or light colors<br>• Trim: White or contrasting with field color<br>• Accents: White, light, or dark colors in contrast or harmony with field color |

Note: Enhancements are required at corners and second-story elevations seen from public views.

# *American Colonial*



This classic American style descended directly from the first homes built in the New England colonies in the 17th century. Their beginnings were as small and unpretentious as the one story saltbox, favoring the cultures and traditions of the settlements.

As living functions became more defined and prosperity increased, so did the need for additional space. Second stories with overhangs, dormers, and gabled roof forms became favored solutions, later evolving into classic elements of this traditional American style. Wood shutters and an enhanced entry element and/or trim are the finishing details for an otherwise simple and functional form.

Vertical Multi-Paned Windows with Shutters

Accent Window and Enhanced Molding details

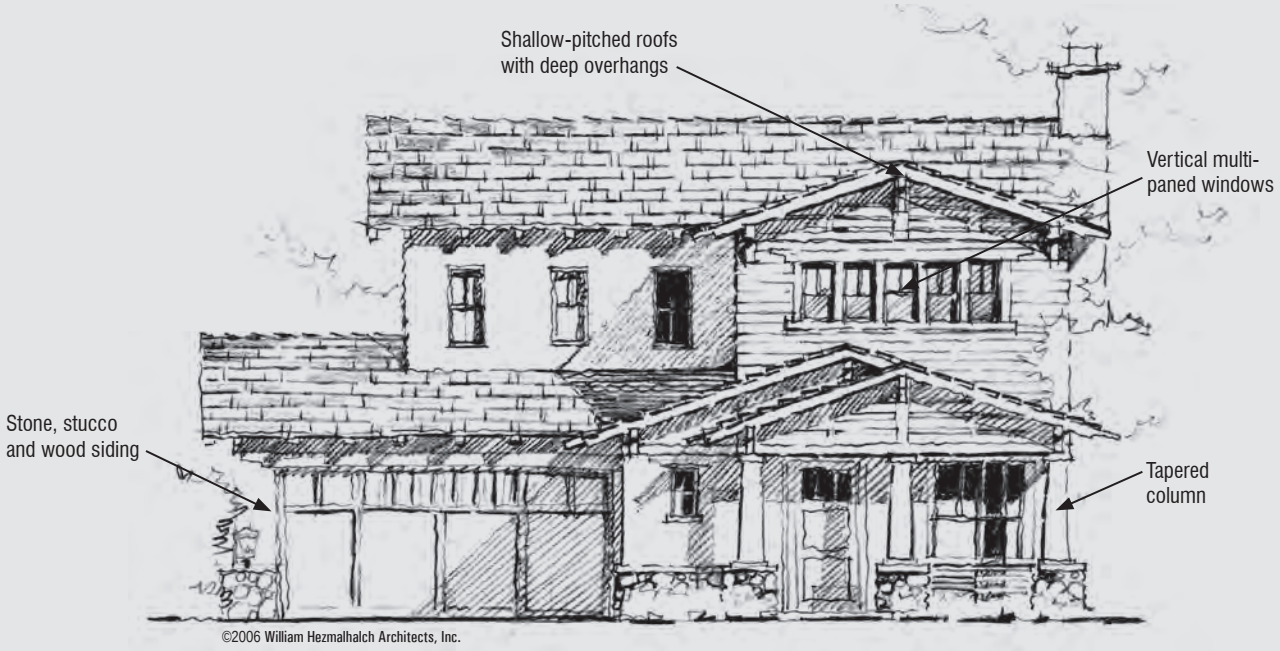
Articulated Portico Entry

## *American Colonial*

| *Element* | *Common Features* |
|---|---|
| ***Form*** | • Simple plan form and massing; or shed or pitched roof dormers |
| ***Roof*** | • 5:12 to 12:12 roof pitch, possibly lower pitch at main roof<br>• 12" to 18" overhang<br>• Simple front to back gable roof<br>• Architectural quality asphalt shingles or shingle texture flat concrete tiles |
| ***Walls*** | • Horizontal siding or brick may be combined with stucco. All material changes must occur at an inside corner or other logical location |
| ***Windows*** | • Vertical multi-paned windows or use of an accent window where appropriate to architectural style such as: bay windows, dormer window in roof at front elevations<br>• Multi-paned windows or inserts on side and rear elevations in high visibility public view areas<br>• Vinyl wrapped windows |
| ***Details*** | • Neoclassic columns or posts at entry<br>• Simplified cornice trim at gable ends<br>• 2 x 6 window and door trim - wood on siding, foam on stucco<br>• Enhanced entry element such as portico or covered porch<br>• All surface mounted fixtures on front elevations must complement architectural style (i.e. use of some style appropriate details such as: knee braces at dormer, wood porch columns and rails, shutters, enhanced window trims, and louvered attic vents)<br>• Garage door patterns and colors to complement style |
| ***Colors*** | • Field: Pastels, whites, light earth tones, off-whites, or dark earth tones<br>• Trim: Light or dark in contrast to field color<br>• Accents: Whites, light tones, or medium to dark tones in contrast to field, grayed or dark greens, blues, reds, or black |

Note: Enhancements are required at corners and second-story elevations seen from public views.

# *Craftsman*



The Craftsman style was inspired by the English Arts and Crafts Movement of the late 19th century. Of the utmost importance was that all exterior and interior elements received both tasteful and "artful" attention. The movement influenced numerous California architects such as Green and Green, and Bernard Maybeck.

The resulting Craftsman style responded with extensive built-in elements and by treating details such as windows or ceilings as if they were furniture. The style was further characterized by the rustic texture of building materials, broad overhangs with exposed rafter tails at the eaves, and trellises over the porches. The overall affect was the creation of a natural, warm and livable home. In Southern California, the Craftsman style spun out of bungalows that were the production home of the time.

Front Porch with Battered Columns

Gabled Roof with Deep Overhang

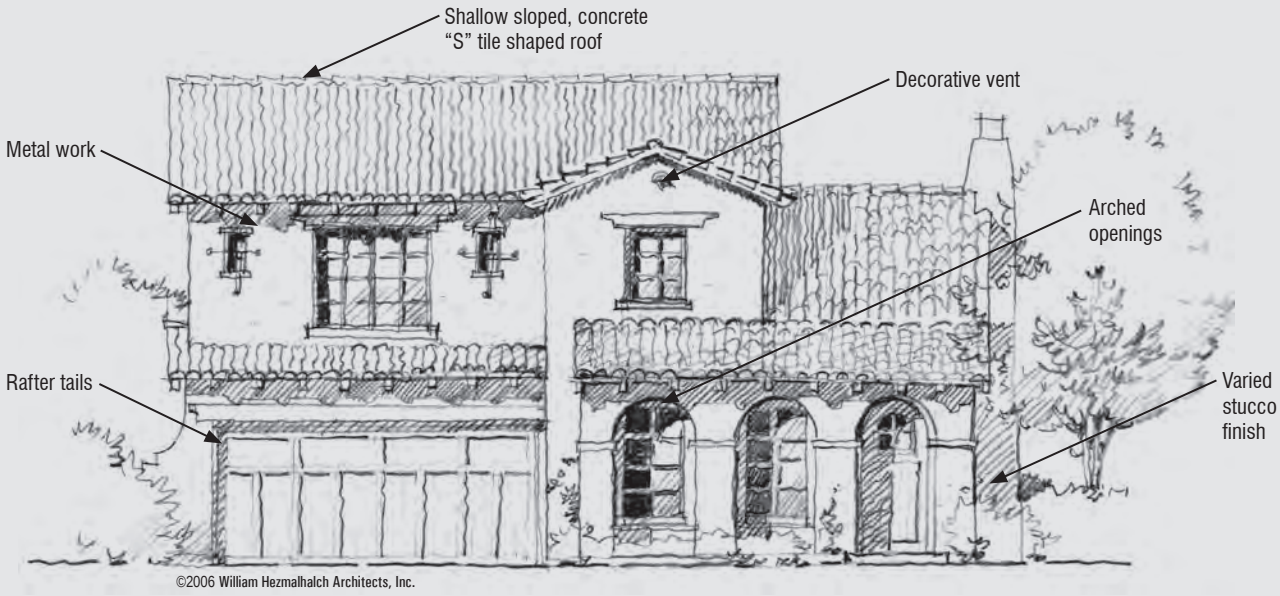
Vertical Multi-Paned Windows

# *Craftsman*

| *Element* | *Common Features* |
|---|---|
| ***Form*** | • Simple 2 story boxed massing with vertical and horizontal breaks |
| ***Roof*** | • 4:12 to 5:12 roof pitch, possibly lower pitch at main roof<br>• 16" to 24" overhangs<br>• Flat concrete tile - shingle appearance<br>• Basic gabled roof - side to side with cross gables |
| ***Walls*** | • Horizontal siding or stone base accents may be combined with stucco. All material changes must occur on inside corner or other logical location |
| ***Windows*** | • Vertical multi-paned windows or use of accent window where appropriate to architectural style such as: single hung windows at front elevation, feature ribbon windows (3 or more) at front elevation<br>• Multi-paned windows or inserts on side and rear elevations in high visibility public view areas<br>• Vinyl wrapped windows<br>• Use windows individually or in groups |
| ***Details*** | • Entry or full porches with heavy square columns or posts on stone or brick piers<br>• Shaped wood header trim at windows and doors - wood on siding, foam on stucco<br>• Simple or triangulated knee brace<br>• All surface mounted fixtures on front elevations must complement architectural style<br>• Garage door patterns and colors to complement style |
| ***Colors*** | • Field: Light to dark earth tones<br>• Trim: Light to dark earth tones in harmony or contrasting with field color<br>• Accents: Light to dark earth tones in contrast with field color |

Note: Enhancements are required at corners and second-story elevations seen from public views.

# Spanish Colonial

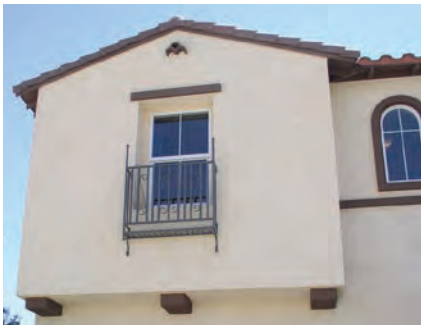


Spanish Colonial, also known as Spanish Eclectic is an adaptation of Mission Revival enriched with additional Latin American details and elements. The style attained widespread popularity after its use in the Panama-California Exposition of 1915.

The simple courtyards of the Spanish Colonial heritage with hanging pots, a flowering garden, and sprawling shade trees are hardly surpassed as foreground design elements. Further architectural distinction was established through the use of tile roofs, stucco walls, heavily textured wooden doors and highlighted ornamental ironwork.

Key features of this style were adapted to the Southern California locale. The plans were informally organized around a courtyard with the front elevation very simply articulated and detailed. The charm of this style lies in the directness, adaptability, and contrast of materials and textures.

Feature Window



Tile Roof, Gable Vent and Wrought Iron Accents

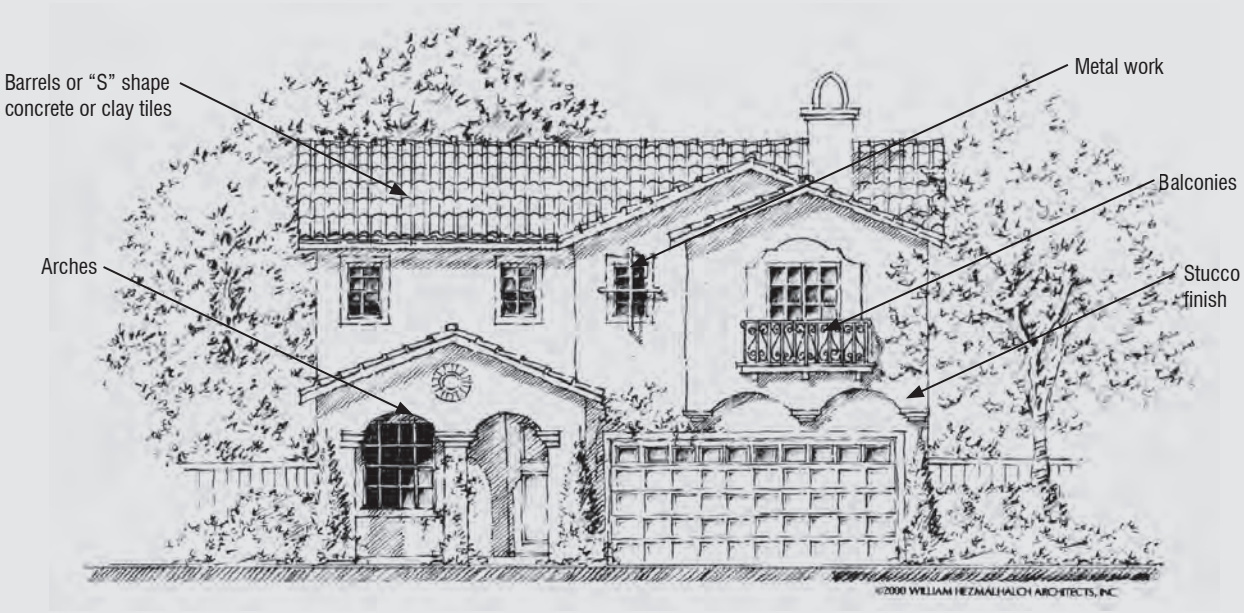
Stucco Walls with Arched Openings

## *Spanish Colonial*

| *Element* | *Common Features* |
|---|---|
| *Form* | • 2 story massing with strong one-story element |
| *Roof* | • 4:12 to 5:12 roof pitch, possibly lower pitch at main roof<br>• 12" to 18" overhang<br>• Simple hip or gable roof with one intersecting gable roof<br>• Barrel or 'S' shape concrete tiles |
| *Walls* | • Stucco |
| *Windows* | • Vertical multi-paned windows or use of an accent window where appropriate to architectural style such as: feature recessed arched window, accent beveled glass recessed window, single or grouped round top windows at front elevations<br>• Multi-paned windows or inserts on side and rear elevations in high visibility public view areas<br>• Vinyl wrapped windows<br>• Simple 2x window and door trim - wood or stucco over foam |
| *Details* | • Stucco over foam window and door trim<br>• Arched stucco column porches<br>• All surface mounted fixtures on front elevations must complement architectural style (i.e. some style appropriate details such as: wrought iron balconies and accent details and shaped rafter tails at feature areas<br>• Garage door patterns and colors to complement style |
| *Colors* | • Field: Whites or off-whites<br>• Trim: Dark browns<br>• Accents: Deep jewel tones of green, blue, red (on shutters, door, balcony trim) |

Note: Enhancements are required at corners and second-story elevations seen from public views.

# *Andalusian*



The Andalusian style is an adaptation of the farmhouses and cottages found in the rural areas throughout Andalusia, in the South of Spain. Enriched with details and elements derived from Moroccan, Moorish, and classical Roman architecture this style represents a simple, yet elegant blend of cultures.

The informality of rural life originally inspired a simple, rectangular form that evolved organically over time to meet the spatial needs of the owner. Subsequent massing was typically similar in form, but changed in dimension with new functions and arrangement of spaces. The resultant irregularity in massing and appearance adds to the charm and romance of this southern European style. Its informal rustic character is highlighted with sophisticated details, natural, indigenous materials, warm, sun-bleached colors, and rich textures.

Architectural distinction is established through the use of details such as softly sculpted or curved wall and chimney articulation, colorful mosaics and tile work, rustic stone accents, balconies, perforated wall patterns and vents, cantilevered windows, classical elements, arches, and/or wrought iron grillwork accents.

Feature Windows and Simple Massing

Vertical Windows with Wrought Iron Detail

Well Articulated Entry

## *Andalusian*

| *Element* | *Common Features* |
|---|---|
| ***Form*** | • 2 story massing with one story elements at courtyards and/or entries |
| ***Roof*** | • 4:12 to 5:12 roof pitch, possibly lower pitch at main roof<br>• 12" to 18" overhang<br>• Simple hip or gable roof<br>• Barrel or 'S' shape concrete or clay tiles |
| ***Walls*** | • Stucco finish |
| ***Windows*** | • Vertical multi-paned windows or use of an accent window where appropriate to architectural style such as: feature recessed arched window, accent beveled glass recessed window, single or grouped round top windows at front elevations<br>• Multi-paned windows or inserts on side and rear elevations in high visibility public view areas<br>• Vinyl wrapped windows<br>• Simple 2x window and door trim - wood or stucco over foam |
| ***Details*** | • Arcades supported by classic columns at courtyards, balconies, and porches<br>• Enhanced articulation at entrances and feature windows<br>• Classical and/or Moorish details<br>• Wood or wrought iron railings at balconies or porches<br>• Garage door patterns and colors to complement style |
| ***Colors*** | • White or beige tones on field color<br>• Dark brown or jewel toned trim |

Note: Enhancements are required at corners and second-story elevations seen from public views.

## 7.3 Massing

### 7.3.1 Introduction

Creating street scenes that function well and have visual interest is a primary community objective. The following basic elements and criteria are intended to develop variations in appearance and a sense of individuality for each home. Neighborhoods that have nearly identical homes and streets without variation in product placement and form will not be approved in design review. This section lists architectural massing and plotting techniques that will help to create a quality environment.

Objectives:

- Minimize visual impact of garages;
- Give attention to composition of building mass;
- Incorporate single-story elements in two-story buildings;
- Vary setbacks at porches, living and garage areas;
- Minimize two-story dominance on streetscene, sidewalks and open spaces;
- Design with sensitivity to corner lot conditions;
- Use appropriate transition of scale; and
- Use four-sided elevation design.

### 7.3.2 General Elements

The general elements of building massing include:

- Front articulation;
- Roof form;
- Garage placement;
- Balconies and projections;
- Rear articulation;
- Variable setbacks; and
- Corner lots/critical edge conditions.

#### *Neighborhood Massing and Plotting Concepts*

To provide more interesting neighborhood streetscenes, varied massing on all elevations is encouraged.

Where possible when plotting, refrain from strict compliance to minimum garage setbacks to avoid contributing to repetitious street scenes. Typically, plans are to be reversed and plotted so that garages and entries are adjacent to each other to create an undulating setback. Occasionally, this pattern should be broken to avoid monotony. Additionally, no more than two (2) of the same plan/elevations shall be plotted next to each other or directly across the street from one another.

#### *Simple Home Design*

In an attempt to design aesthetically pleasing architecture that is economically feasible and functions well the concept of "The Simple House" is to be implemented. This suggests that starting with simple structural forms and building masses and appropriate roof forms can lead to the development of an "authentic" style while maintaining acceptable building costs. In order to achieve this the following basic criteria have been established:

- Design "simple," attractive homes using simple plan forms and style-appropriate massing and roof pitches;
- Use style-appropriate elements and details to enhance good architecture;
- Provide a variety of single-story heights and profiles while stepping back second story massing where appropriate;

SINGLE STORY ELEMENTS

- Acknowledge both street front facades on corner homes or buildings by 'wrapping' usable spaces, architectural elements & materials around to face the side street frontage;
- Give added attention to side and rear articulation on all building facades;
- Use covered and shaded spaces such as porches, landscaped courtyards or structural landscape elements to provide a sense of entry and respond to local climate conditions; and
- Respond to overall community character with appropriate choices of style, color and materials.

Refer to sections 7.2, 7.3, and 7.4 of this document for specific guidelines concerning styles, massing, elements and details of simple residential architectural design.

### *Single Story Elements*

Single-story elements are encouraged on all homes to help establish neighborhood pedestrian scale and add variety to the street scene. A minimum of 33% of homes in each neighborhood shall have at least one (1) significant single-story element on an exposed front or side elevation.

Significant single-story elements include:

- Front or wraparound porch (minimum 7' deep and 10' wide);
- Roofed porte cochere;
- Single-story living space in conjunction with a second story recess of at least 5'; and
- Pop-out gable element - enclosed or open.

In neighborhoods with required lot sizes of less than 5,000 square feet, this requirement may be satisfied with the addition of a one-story porch or other elements listed above.

In neighborhoods with required lot sizes of 5,000 square feet or greater, this requirement shall be satisfied with an enclosed single-story living space in conjunction with a second story recess of at least five (5) feet.

Where forward garages are used, single story massing is encouraged.

## 7.3.3 Front Articulation

The appearance of the street scene and collection of homes within it is typically the first impression of any neighborhood. Most homes are seen primarily from the front and represent the transition from public to private space as well as the character of those who dwell within .

Varied Massing on Elevation

Varied Roof Forms

With this in mind it is important that the front of the home, and any sides exposed to the street receive thoughtful design and articulation to bring character and quality to the individual home and to the neighborhood as a whole. The following guidelines will help to achieve that level of articulation:

- Design neighborhood plan packages with forms and front elevations in mind to work together in controlling the impact of buildings on the street scene;
- Provide variety in form and massing to reflect interior uses and achieve attractive and interesting elevations;
- Design placement of windows to work with interior uses and provide "eyes on the street;"
- Consider the entry as a focal point when designing the front elevation; and
- Provide an appropriate level of detail and trim at entry, doors and windows to enhance good design.

## 7.3.4 Roof Forms

Rows of homes seen from a distance or along arterial roads are perceived by their contrast against the skyline or background. The dominant impact is the shape of the building and roof line. Articulate the building mass and roof lines to express a variety of conditions and minimize the visual impact of repetitious flat planes, similar building silhouettes and similar ridge heights. This can be achieved by designing a discernibly different roof for each home plan. Individual roof plans may be simple but between different plans should exhibit variety by using front to rear, side-to-side, gables, hipped roofs, and/or by the introduction of one-story elements.

## 7.3.5 Garage Placement & Treatment

Create attractive and comfortable street scenes and pedestrian spaces by de-emphasizing garages, implementing "architecture forward," and encouraging "corner homesites."

## A. Street Facing Garages

The impact of repetitive, street-front garages can be reduced by using the following techniques:

- Vary garage placement mix within neighborhood plotting plan;
- Vary garage door appearance;
- Vary garage placement; and
- Provide optional treatments that occur forward of the garage to buffer the view impact of garages and garage doors.

### Vary garage placement within neighborhood plotting plan

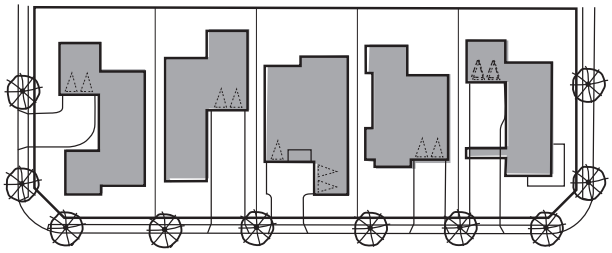
Vary garage placement whenever possible by alternating front setbacks. Alternate plans with different garage locations when plotting adjacent homes.

### Vary garage door appearance

Vary garage door pattern, windows and/or color as appropriate to individual architectural styles. Where possible, use two (2) single doors instead of a large one. Additional treatments are encouraged to buffer direct view of the garage door.

### Vary garage placement from plan to plan

The following are examples of garage placements in each Conventional Small, Medium, and Large Lot neighborhood (Cluster Home and Lane Loaded neighborhoods are exempt). The intent is to limit the impact of street facing garages and vary garage placement (i.e. forward, shallow, deep recessed) within each neighborhood.



Varied Garage Placement—Street Facing

Varied Garage Door Appearance

### *1. Shallow-Recessed Garage*

All front facing, shallow-recessed garages shall be located a minimum of five (5) feet behind the front elevation/living space and a minimum of twenty (20) feet from the property line. Homes with shallow recessed garages shall be limited to 25 percent of the total number of units in each builder's plan package; 50 percent of units may be permitted with shallow-recessed garages if front porches are provided on those plans. Porches shall have a minimum depth between 5 to 7 feet (Subject to Planning Department review and approval).

### *2. Mid-Recessed Garage*

Mid-recessed garages are located ten (10) feet or more behind the front elevation, living space, or front porch feature.

### *3. Deep-Recessed Garage*

Deep-recessed garages are located twenty (20) feet or more behind the front elevation, living space, or front porch feature. These may be attached or detached.

### *4. Corner Lot with Side-street Entry Garage*

This garage placement allows the option of entering from the side street, thereby eliminating the garage and driveway from the front face of the house.

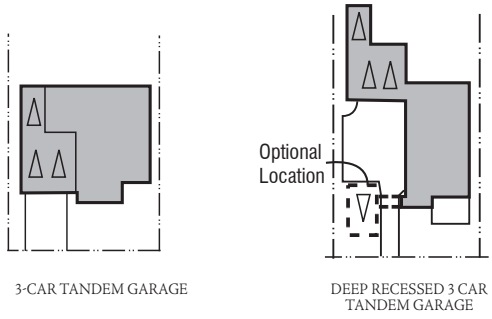
### *5. Garage Forward*

This garage placement includes front-facing or swing-in access. It applies to any garage located forward of the home's front facade. Extra attention and treatments should be applied when using this garage location.

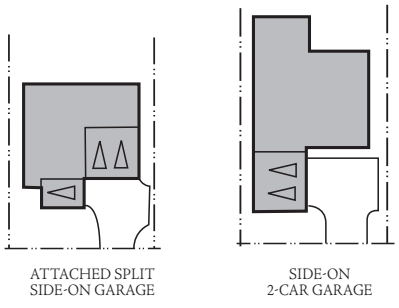
Shallow Recessed

Mid Recessed

Deep Recessed



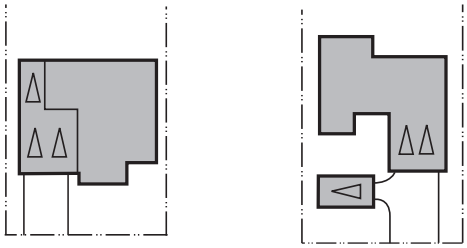
Varied Tandem Garage Examples



Varied Swing-in Garage Examples

Split 3-car Swing-in Example
(55' Wide Minimum)

Detached, Deep Recessed Examples



Varied Tandem Garage Examples

## Forward Side-On Garage

Side-on garages greatly reduce the impact of garage door faces on the streetscape. The resultant street-facing garage wall shall be articulated with the same level of detail as the front facade of the home including windows, trim, etc.

- Side-on garages are prohibited on lots less than 55' wide; and
- All garage doors on side-on plans shall be recessed a minimum of twelve (12) inches behind the garage wall plane.

## Forward-Front facing Garage

This garage placement is limited and must be used in combination with others to lessen the impact on the street scene. The minimum garage setbacks (as stated in Section 7.5, Home Types, of this document) shall be maintained.

- All garage doors located forward of the front living space shall be recessed a minimum of twelve (12) inches behind the garage wall plane.

## Garage Treatments

### *Garage Placement*

#### Tandem Garage or Split Garages

When a three (3)-car garage is planned, the impact on the streetscape can be reduced by constructing the additional car bay in tandem behind the standard two (2)-car garage door. Designing split or separated garages is another option to reduce the impact of adjacent garage doors.

## 3-Car Front-Facing Garage Requirements

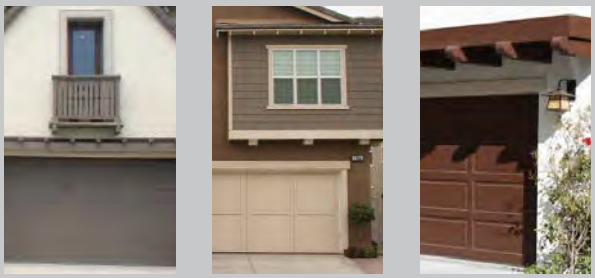
Three (3)-car garages with all doors facing front are limited to:

- One plan per neighborhood plan package ;
- Lots that are 55' wide or greater; and
- All other standard garage requirements of the Specific Plan

When a 3-car front-facing garage is used, in addition to standard garage requirements and a minimum seven (7) feet deep by ten (10) feet wide porch, it shall provide at least one (1) of the following additional front-facing plan requirements:

- Offset a single garage door at least two (2) feet from a double door; and

- Provide three (3) single garage doors each separated by at least one (1) foot. Three (3)-car garages may be located forward of the house or recessed. If they are located forward of the living space they are subject to all requirements of garage forward plans.
- Provide an 18- to 24-inch box-out or architectural projection forward of the garage to create a plane break.



Box-out and Architectural Projection Examples

## Detached Garages

Detached garages may be deep-recessed or corner-facing with a side street entry. Detached garages are located toward the rear of the lot behind the primary structure. They are enhanced by applying the same details found on the home. When detached garages are front-facing, long driveways should be improved by adding texture, pattern or a 'ribbon' driveway.

## Optional Garage Treatments

The following optional treatments are encouraged to reduce or buffer the direct view of garages and garage doors from the sidewalk or street.

## Porte Cochere

A recessed garage plan with a porte cochere creates an additional, partially covered, parking space and serves an occasional outdoor private space while buffering the view of the garage.

## Garage Door Screening Elements

The following screening elements may be utilized to reduce direct impact of the garage:

- An attached overhead trellis installed beneath garage roof fascia and/or above garage door header trim.
- Driveway may be spanned with a gated element or overhead trellis.

Three Car Tandem Garages

Offset Garage Doors

Three Single Garage Doors

Porte Cochere Example

## B. Garage Placement and Treatments

### *Lane Facing / Motorcourt Garages*

Although lanes and motorcourts are thought of as merely a transitional vehicular space, they also provide garage and sometimes direct residence access, trash collection and other daily utility uses. They may be experienced by homeowners as often as the front entries to these homes.

Therefore, when designing lanes and motorcourts, both functional and aesthetic issues are to be considered. It is the intent to provide a pleasant experience for daily users by incorporating both in the elements of lane design.

Lanes and motorcourts with home and garage elevations that have similar or identical facades, setbacks, roof lines, or color schemes are not permitted.

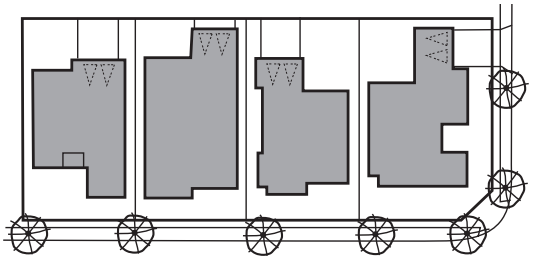
In order to avoid this, the following requirements must be met:

- Avoid a multi-storied, "canyon-like" effect within the lane by providing varied massing, vertical and horizontal offsets of primary architectural elements and roof lines. Where possible, vary ground floor building setbacks to provide undulation in the line of garage doors. All drive apron and building separation setback requirements shall still be maintained, (refer to Section 7.5, Home Types for specific setback requirements);
- Articulate lane-facing and motorcourt building elevations with style-appropriate window trim, elements and details;
- Vary garage door appearance by using door patterns, colors, and windows appropriate to individual architectural styles;
- Design and locate rear privacy walls and pedestrian-gate entries to provide ease of access to the rear yard, allow sufficient dimension for landscape requirements and screen trash can storage from lane and motorcourt view; and
- Provide landscape planters (as feasible) within lanes to soften the appearance of the building elevations.

Cottage

Farmhouse

LANE (PRIVATE ALLEY) LOADED ACCESS



**Varied Garage Placement—Lane (Private Alley) Facing**

## C. Off-Street Parking

If providing off-street parking, ensure the dimensions of the space are 9 feet by 18 feet for uncovered spaces. A 2-foot landscape area may be used to reduce the stall length minimum to 16 feet. Carports must have 10 feet by 20 feet clear at minimum.

## 7.3.6 Balconies and Projections

The inclusion of balconies and projections are encouraged for both aesthetic and practical purposes. They are useful in breaking up large wall planes, offsetting floors, providing shade, creating visual interest, and adding human scale to a building. Balconies also provide the practical advantage of extending living areas to the outdoors and providing elevated spaces and views.

- Balconies may be covered or open. They may be partially recessed into the mass of the building or serve as a projecting element; and
- Design balconies as integral elements of the building with details, eaves, supports, and railings to be consistent with the architectural style and other elements of the building's design.

Other architectural projections may include elements such as cantilevered massing, secondary roof changes, niches in plan and bay windows.

## 7.3.7 Elevation Enhancements

The second story portion of elevations facing a public street should include a variety of window treatments, roof projections, etc. to provide an appearance similar in quality to front elevations. A variety of hipped and gabled roof forms should be used in each neighborhood. One-story elements also help to provide this variety.

## 7.3.8 Varied Massing

Provide varied massing and articulated elevations consistent with the selected style. Provide alternative garage locations, from shallow to deep, and alternate plan configurations within each neighborhood, for conventionally loaded product.

### *Floor Plan Form*

Keep architectural styles in mind when designing the floor plan. For example, styles such as Cottage or Farmhouse that reflect asymmetrical massing and steeper roof pitches may be applied to a similar floor plan and elevation while both maintain an authentic appearance.

## 7.3.9 Corner Lots/Critical Edge Conditions

Neighborhood quality will be enhanced by adding a home plan designed specifically for the corner, or by enhancing an interior lot plan for use on the corner with additional architectural elements and/or details as found on the front elevation.

All corner homes (Conventional, Lane Loaded, and Cluster Home product) shall wrap materials (where applicable to the style/front elevation) and continue articulation around to the corner side facade. All material changes shall occur on an inside corner such as a porch, fireplace, niche or bay window, OR coincide with an architectural element that conceals the material change, OR terminate a logical stopping point such as a fence, column, or window.

## Corner Plans

At least two (2) plans per Conventional and Lane Loaded residential product neighborhood should be designed for optional use on corner lots. Cluster Home product should be designed appropriately to address the front and corner side exposure.

- One (1) of these plans shall include a significant architectural element that encompasses an interior room or living space that wraps around or occupies the corner side yard.

A second plan (primarily for conventional product) should include an element that helps to articulate the side facade such as:

- A wraparound porch;
- pop-out side gable;
- significant wall plane offset;
- appropriately detailed second story pop-out.

These elements will also provide logical stopping points/less conspicuous inside corners for wrapping materials. Corner plans should also consider use of the following elements:

- A corner-related front entry door placement; and
- A garage placement that allows entry from the side street or lane.

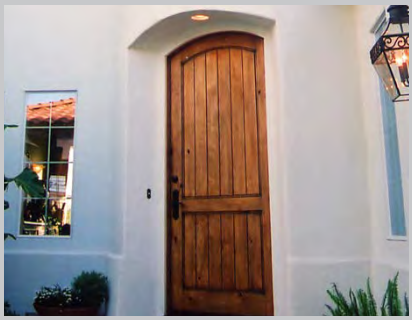
## Community Recreation and Common Facilities

Private, common recreation facilities may include a pool, spa, clubhouse, barbeque areas or other facilities as appropriate to the community. Common facilities act as key character elements. Therefore, the following should be considered when designing for such facilities.

- Clubhouse and other common buildings should exhibit a high level of quality and attention to detail on all sides of the building;
- All architectural and community elements, such as street furnishings, benches, and lighting standards should be consistent with the selected overall architectural character for the community; and
- Colors, massing, roof pitch, and materials of surrounding residential buildings should also be considered in conjunction with the design of the common facility.

Wrapping Materials

Wraparound Porch On Corner Plan



Doors

Windows

## 7.4 Materials and Details

### 7.4.1 Introduction

Although the character and style of homes should be established primarily through the use of massing, roof forms and key architectural elements, the addition of appropriate secondary character elements, detailing and accent materials provides an effective means of further reinforcing and enhancing character and style interpretations.

Key elements are those primary architectural features of the home that clearly discern one style from another. Secondary elements and details are identified as those that help to reinforce or enhance an already identifiable style. A list of appropriate elements, colors and materials for each individual style is found in the requirements matrices in the "Architectural Styles" section of this document.

The Key or Primary elements are:

- Doors and Entries;
- Windows;
- Rakes and Eaves;
- Exterior Lighting Fixtures;
- Roof Materials;
- Colors;
- Accent Materials; and
- Wall Finishes

### 7.4.2 Doors and Entries

Building entries represent an important point of interface between public and private spaces typically creating the initial impression for the user and a focal point for the viewer. Front doors and associated entry spaces should thereby be treated with a sense of importance and detailed so as to emphasize their location and purpose. In designing the door and entry space of homes the following guidelines shall be observed:

- Design of door and entry spaces shall be consistent with the architectural style of the home;
- Doors shall be protected by a deep recess, porch or other covered element;
- Door and entry spaces shall reflect a level of detail appropriate to their function and architectural style;
- Surface mounted lights shall not be permitted in garage door soffits; and
- Wall mounted lighting fixtures shall be selected according to the individual style of the home or building.

## 7.4.3 Windows

The following guidelines shall be observed for windows:

- Proportions and alignment shall be appropriate to individual style;
- No highly reflective glazing shall be used;
- Windows may be vinyl-wrapped or wood;
- Inset windows shall be a minimum of two (2) inches in depth;
- Recessed windows are encouraged to be a minimum of six (6) inches in depth;
- Window placement shall be designed to enhance privacy between neighbors;
- Full window trim is encouraged on street facing elevations;
- Shutters shall be sized to match window width and exhibit style-appropriate hardware; and
- Style-appropriate grates, shutters and tile surrounds are encouraged.

## 7.4.4 Rakes and Eaves

As with other architectural elements, roof edge treatments vary with the character of each style. Rakes and eaves shall reflect that of each individual style and contribute to the overall look and feel of the community.

- Elements and proportions of rakes and eaves shall be appropriate to the individual style;
- Where appropriate to individual style, larger eave overhangs are encouraged to provide opportunities for shading and relief; and
- Rafter tails, when exposed, shall be a minimum of four (4) inches and painted or stained.

## 7.4.5 Exterior Lighting and Fixtures

In the neighborhoods, streets and lanes of the Specific Plan emphasis shall be placed on lighting for safety, security and aesthetics. Street poles and wall fixtures shall be used to provide sufficient light for traversal and visibility, thereby providing the community with a comfortable level of safety and security at night. Every attempt should be made to reduce overflowing light on adjacent homes and to increase the amount of light in less visible areas.

Opportunities to use lighting for directional and aesthetic reasons should also be considered. Where fixtures are not an important focal point, conceal light sources and concentrate on achieving the maximum effects of good lighting design. Where fixtures are part of architectural detailing they should reflect the selected style.

- Lighting used on walls and walkways shall focus light down and provide appropriate down-casting hardware to minimize glare; and
- Ambient light shall be down-cast to reduce the impact on the neighborhood.

Exterior Treatments

## 7.4.6 Roof Materials

Roof materials, colors and treatments should correspond to the individual character or style of the home or building and be compatible with the overall look of the neighborhood. Style appropriate materials and colors are found in each appropriate matrix in the "Architectural Styles" section of this document.

- A variety of roof plans, forms and ridge heights shall be provided using hips, gables and intersecting elements to avoid a repetitious skyline;
- High quality composition, concrete or clay tiles may be used in conjunction with the style of home; and
- Skylights are prohibited on sloped roofs facing public streets.

## 7.4.7 Colors

A varied palette of regional and style-appropriate colors and materials have been selected for the homes in the Specific Plan. This inherently rich and diverse palette will provide the variety required for visual interest while providing a sense of unity within the neighborhoods. Style-appropriate color selections will enhance the architectural character and impart individuality to each home.

- Color shall contribute to distinguishing the overall architectural character of the dwelling. Refer to "Architectural Styles" matrices for individual color palettes;
- Hue variation in adjacent homes shall be provided to create diversity within the neighborhood;
- Diversity of color is encouraged; and
- Roof tile colors will be selected according to architectural styles.

To further this goal of diversity, the following criteria shall be met:

- Elevation/color scheme shall consider the composition of colors, appropriately combining colors for an aesthetic and varied streetscape. Consider field color, trim color, accent colors, and accent materials colors.
- Individual color schemes must be appropriate to the architectural styles with a harmonious selection of accent materials, roof profiles and colors;
- No adjacent or facing home shall have the same color scheme; and
- No more than two (2) of the same plan/elevation shall be plotted adjacent to one another.

Roof Materials

Accent Materials

## 7.4.8 Accent Materials

Accent materials should be used to enhance and reinforce the architectural style and composition of individual homes and provide variety in the street scene. Selective use of appropriate materials, color and placement can provide maximum impact while imparting a sense of unique character to each home.

- Culmination of accent materials shall terminate at inside corners or coincide with an edge or architectural element to conceal changes in material. Where views are limited or edges concealed by an architectural element, accent materials may terminate at privacy wall conditions;
- Natural stone, approved manufactured or cultured stone, painted or natural brick, precast concrete, ceramic tile, slump block, and horizontal or vertical wood siding (or approved manufactured siding, i.e. cementitious board) are encouraged;
- Accent materials shall be selected to complement the overall color and style of the home or building; and
- Architectural trim applied to all elevations is encouraged to be consistent with front elevation and the architectural style.

## 7.4.9 Wall Finishes

Style-appropriate wall finishes should visually enhance individual homes. The use and placement of extreme contrasts in color and/or materials should be carefully considered in order to maintain a compatible overall look throughout the neighborhood. Footings shall be exposed no higher than 6" above finished grade.

Finishes

***Permitted Finishes:***

- Stucco: light to medium sand finish ("Spanish Lace" finish is prohibited);
- Exposed masonry walls (brick, slump block, etc.);
- Stone, brick, adobe, brick veneers (accent materials);
- Horizontal plank siding; and
- Board and batten siding.

## 7.4.10 Trash Container Pads in Lanes

Builders are required to build one (1) 42-inch by 42-inch brick pane pad for each lot immediately adjacent to the lane for the purpose of temporarily placing trash containers for pick-up by the Sanitation Department on scheduled days. The design of the enclosures shall comply with NPDES requirements.

# 7.5 Home Types

## 7.5.1 Introduction

A primary design objective for the Specific Plan is to provide a variety of home sizes and plans to suit the needs of different life stages and market segments.

The following section provides conceptual plotting examples for a variety of single-family detached homes, arrangements, and lot size ranges. The plotting concepts are provided only to illustrate a typical layout of each building type. These concepts are not intended to be mandated layouts.

## 7.5.2 Home Type Criteria

The following are design standards and minimum setbacks by typical residential product and building type.

## *Cluster Homes Residential Product: Motorcourt Cluster A (6- or 8-Plex)* *(PA 13, 25, 26 & 27)**

### Characteristics

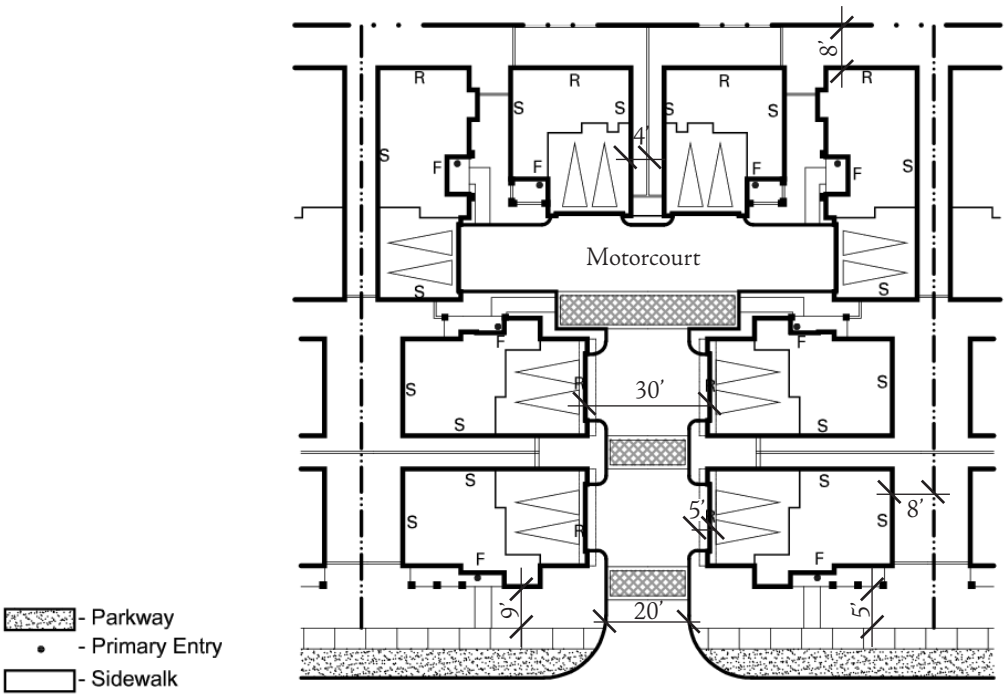
- Potential net density of 7.5 to 9 du/ac.
- Single-family detached dwellings clustered around motor court
- Automobile access via common motor court driveway
- Primary entries and walks face motor court or street
- Private side and rear yards
- Parking for residents provided in garages
- Guest parking provided on local streets, designated parking areas, or as approved by the City of Ontario
- Reciprocal use easements extend private space

**Notes:**

1. Actual acreages, lot sizes, unit counts and densities may vary based on final plans.
2. Refer to other areas of ***Chapter 7 – Residential Design Guidelines,*** for more specific criteria regarding building design, plotting, styles, materials, details and implementation.
3. Refer to other areas of 7.6 Landscape Design, for specific criteria regarding all landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only - not intended to be mandated layout.

* Proposed representative product types in each planning area are subject to final development submittal and are subject to change.

*Cluster Homes: Motorcourt Cluster A (6- or 8- Plex)* *(PA 13, 25, 26 & 27)*



*Typical Product Plotting Concept*

Note: Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review and approval of the Planning Director.

© 2006 WILLIAM HEZMALHALCH ARCHITECTS, INC.

## Minimum Standards

**Minimum Lot Size**
- Exclusive use area per home: 2,100 s.f.

**Building Separation**
- Front to side living space: N/A
- Front entry to side living space: 8' (4' +4')
- Side to side living space: 8' (4' +4')

**Side Setbacks - To Back of Sidewalk - Street Facing**
- Living space: 9'
- Porch, balcony: 5'
- Garden wall: N/A'

**Side Setbacks - To Parcel Edge**
- Living space to property line: 4'

**Rear Setbacks - To Parcel Edge**
- Living space (2-story): 8'

**Garage Setbacks**
- Garage face to garage face: 30'
- Garage face to driveway (apron): 5'*
- Note: Lane width may be increased to 24' when the lane length exceeds 150'.

**Maximum Encroachments into Building Setbacks**
- Fireplace, media niche (8' max length), bay windows (cantilevered), potshelves, brackets, etc.: 2'
- Second floor cantilever over garage: 2'

**Private Open Space Per Unit**
- Minimum dimension: 6'
- Total per unit: 100 s.f.

**Parking**: Per City of Ontario Development Code

**Building Height**
- Architectural projections may exceed the maximum building height of 35' by an additional 10'.

*Measurement is to be taken from the inside of the curb.

# *Cluster Homes Residential Product:*
***Paseo Cluster Lots (PA 25 & 27)****

©2015 William Hezmalhalch Architects, Inc.

Not to Scale

## Characteristics

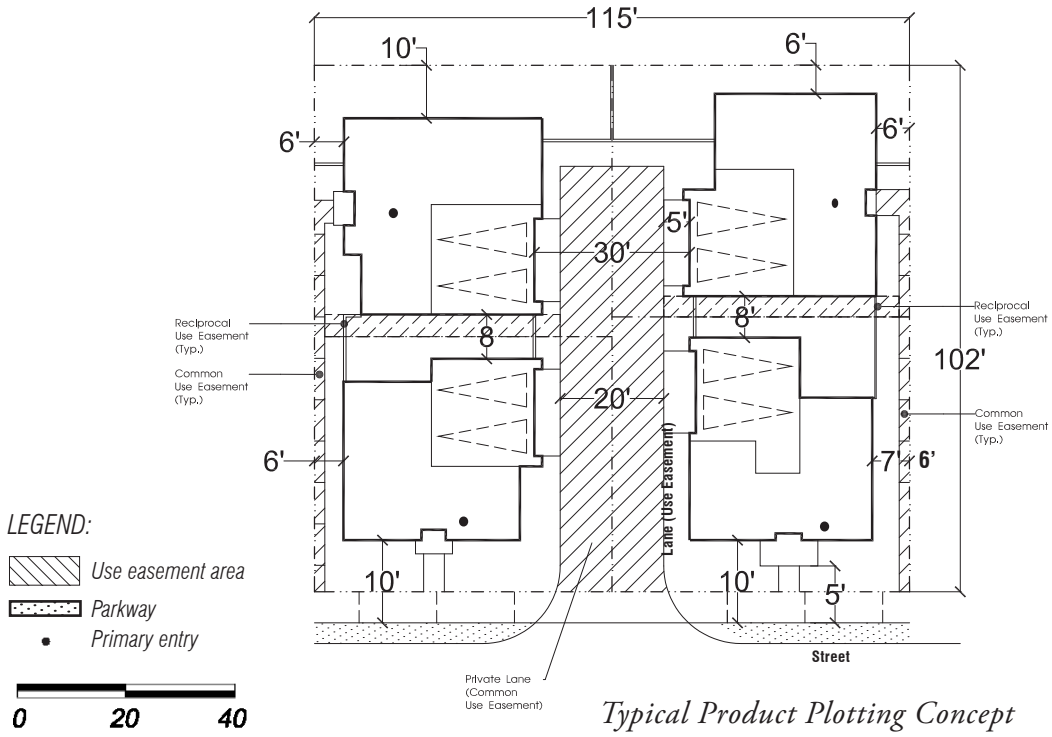
- Potential net density of 7.5 to 9 du/ac.
- Single-family dwellings with front orientation (primary entries and walks) along green court, paseo, or street
- Automobile access via lane
- Private side and rear yards/patios
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas
- Reciprocal use easements may be used to increase private yards and meet building standards

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

* Proposed representative product types in each planning area are subject to final development submittal and are subject to change.

*Cluster Homes: Paseo Cluster Lots* *(PA 25 & 27)*



Note: Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review and approval of the Planning Director.

## Minimum Standards

**Minimum Lot Size**

| | |
|---|---|
| Exclusive use area per home | 2,100 s.f. |

**Cluster Dimensions***

| | |
|---|---|
| Lot width standard | 115' |
| Lot width on corner Lot | 120' |
| Lot depth on standard lot | 102' |
| Maximum building coverage | 45% |

*Minimum lot dimensions on curvilinear streets shall be measured at front and rear building setbacks.

**Building Separation**

| | |
|---|---|
| Side to side living space | 8' (4'+4') |
| Paseo separation | 12' (6'+6') |

**Front Setbacks - To Back of Sidewalk - Street Facing**

| | |
|---|---|
| Living space | 10' |
| Porch, balcony | 10' |
| Garage facing street | - - |
| Garage facing lane | 10' |

**Building Height**

Architectural projections may exceed the maximum building height of 35 feet by an additional 10 feet.

**Side Setbacks - To Back of Sidewalk - Street Facing**

| | |
|---|---|
| Living space | 10' |
| Porch, balcony | 5' |
| Corner facing garage | 18' |

**Interior Setbacks to Property Line or Lane**

| | |
|---|---|
| Living space to PL (ground floor) | 6' |
| Living space to lane (ground floor) | 5' |
| Garage to PL or lane | 5' |

**Encroachments into Setbacks**

| | |
|---|---|
| Fireplace, media niche (8' max length), bay windows, potshelves, brackets, roof overhangs etc. | 2' max encroachment, 3' min. from PL |
| Second story living space over garage, offset or cantilever from face of garage (or as approved by the City of Ontario) | 4' max encroachment, 3' min. from PL |

**Private Open Space Per Unit**

| | |
|---|---|
| Minimum dimension | 10' |
| Total per unit | 100 s.f. |

**Parking** Per City of Ontario Development Code

# *Cluster Homes Residential Product:*
***Motorcourt Cluster B (PA 26 & 27)****

©2015 William Hezmalhalch Architects, Inc.

Not to Scale

## Characteristics

- Potential net density of 8.5 to 10 du/ac.
- Single-family dwellings with front orientation along paseos, motorcourt, or street
- Automobile access via lane or motorcourt
- Primary entries and walks face paseos or motorcourt
- Private yards/patios
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas
- Reciprocal use easements may be used to increase private yards and meet building standards

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

Note: Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review and approval of the Planning Director.

*Typical Product Plotting Concept*

## Minimum Standards

**Minimum Lot Size**

| | |
|---|---|
| Exclusive use area per home | 1,750 s.f. |

**Building Separation**

| | |
|---|---|
| Front to front | 8' |
| Front entry to side living space | 8' (4'+4') |
| Side to side living space | 8' |

**Side Setbacks - To Back of Sidewalk - Street Facing**

| | |
|---|---|
| Living space | 10'** |
| Porch, balcony | 5' |
| Garden wall | 5' |

**Side Setbacks - To Parcel Edge**

| | |
|---|---|
| Living space to property line | 4' |

**Rear Setbacks - To Parcel Edge**

| | |
|---|---|
| Living space (2-story) | 4' |

**Garage Setbacks**

| | |
|---|---|
| Garage face to garage face | 30' |
| Garage face to driveway (apron) | 2'* |
| Street facing garage | 18' |

Note: Lane width may be increased to 24' when the lane length exceeds 150'.

**Maximum Encroachments into Building Setbacks**

Fireplace, media niche (8' max length), bay windows (cantilevered), furr-out, potshelves, brackets, etc.
2' max encroachment, 3' min. from PL

Second floor cantilever over garage
4' max encroachment, 3' min. from PL

**Private Open Space Per Unit**

| | |
|---|---|
| Minimum dimension | 8' |
| Total per unit | 50 s.f. |

**Parking** Per City of Ontario Development Code

**Building Height**

Architectural projections may exceed the maximum building height of 35' by an additional 10'.

*Measurement is to be taken from the inside of the curb.

**Where site conditions do not permit a 10' setback from sidewalk to living space, an average setback of 10' may be utilized across the site subject to approval by the Planning Director.

## *Cluster Homes Residential Product:*

***Green Court*** ***(PA 13, 25, 26 & 27)****

### Characteristics

- Potential net density of 7 to 10 du/ac.
- Single-family detached dwellings surround green court or face street or paseo
- Automobile access via lanes
- Primary entries and walks face green court, street or paseo
- Private side yards/patios
- Reciprocal use easements extend private spaces on sides of buildings
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

subject to final development submittal and are subject to change.

## Minimum Standards

**Minimum Lot Size**

| | |
|---|---|
| Exclusive use area per home | 2,100 s.f. |

**Building Separation**

| | |
|---|---|
| Front to front living space - central | 38' |
| Front to front living space - entry | 20' |
| Front to side living space | 12' |
| Side to side living space | 10' |
| Garage face to garage face | 30' |
| Rear to rear living space | 26' |

**Front/Side Setbacks - To Back of Sidewalk - Street Facing**

| | |
|---|---|
| Living space | 10' |
| Porch, balcony | 5' |
| Garden wall | 3' |

**Side Setbacks - To parcel edge**

| | |
|---|---|
| Living space, porch, garden wall, balcony | 10' |

**Building Height**

Architectural projections may exceed the maximum building height of 35' feet by an additional 10 feet.

**Rear Setbacks - Lane**

| | |
|---|---|
| Living space (ground and second floor) | 10' |
| Garage face to lane (drive apron) | 3'-5'* |
| Living space over garage - minimum offset or max. cantilever from face of garage | 2' |

**Encroachments into Setbacks**

| | |
|---|---|
| Fireplace, media niche (8' max length), bay windows, potshelves, brackets, roof overhangs, etc. | 2' max encroachment, 3' min. from PL |
| Second floor cantilever over garage | 4' max encroachment, 3' min. from PL |

**Private Open Space Per Unit**

| | |
|---|---|
| Minimum dimension | 7' |
| Total per unit | 70 s.f. |

**Parking** Per City of Ontario Development Code

**Maximum Building Coverage** 60%

*Measurement is to be taken from the inside of the curb.

## *Conventional Small Lot Residential Product:*
***Cottage Homes (PA 1 ,5, 12, 16, 17, 23 & 24)****

### Characteristics

- Potential net density of 5 to 9 du/ac.
- Single-family dwellings with street front orientation
- Automobile access via street
- Primary entries and walks face street
- Private rear and side yards
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

## Minimum Standards

**Lot Dimensions**

| | |
|---|---|
| Minimum lot size | 3,150 sq. ft. |
| Lot width on front | 45' |
| Lot width on corner | 50' |
| Lot depth on standard lot | 70' |
| Maximum building coverage | 50% |

**Building Separation**

| | |
|---|---|
| Side to side living space | 10' (5'+5') |
| Rear to rear living space | 26' |
| Garage face to garage face | 30' |

**Front Setbacks - to Back of Sidewalk**

| | |
|---|---|
| Living space | 10' |
| Garden wall | 3' |
| Porch, balcony | 8' |

**Side Setbacks**

| | |
|---|---|
| Living space to property line or paseo easement | 5' |

**Building Height**

Architectural projections may exceed the maximum building height of 35 feet by an additional 10 feet.

**Side Setbacks - at Corners - to Back of Sidewalk**

| | |
|---|---|
| Living space | 10' |
| Porch or balcony | 8' |
| Garden wall | 3' |

**Rear Setbacks - to Lane**

| | |
|---|---|
| Living space (ground floor) | 8' |
| Garage face (drive apron) | 3'-5'* |
| Living space over garage - min. offset or max. cantilever from face of garage | 2' |

**Encroachments into Setbacks**

| | |
|---|---|
| Fireplace, media niche (8' max length), bay windows, potshelves, brackets, roof overhangs etc. | 2' max encroachment, 3' min. from PL |
| Second floor cantilever over garage (or as approved by the City of Ontario) | 4' max encroachment, 3' min. from PL |

**Private Open Space Per Unit**

| | |
|---|---|
| Minimum dimension | 7' |
| Total per unit | 70 s.f. |

**Parking** Per City of Ontario Development Code

*Measurement is to be taken from the inside of the curb.

## *Conventional Medium Lot Residential Product:*
***Village Homes (PA 3, 4, 6, 8, 20, 21, 28, 29 & 31)****

### Characteristics

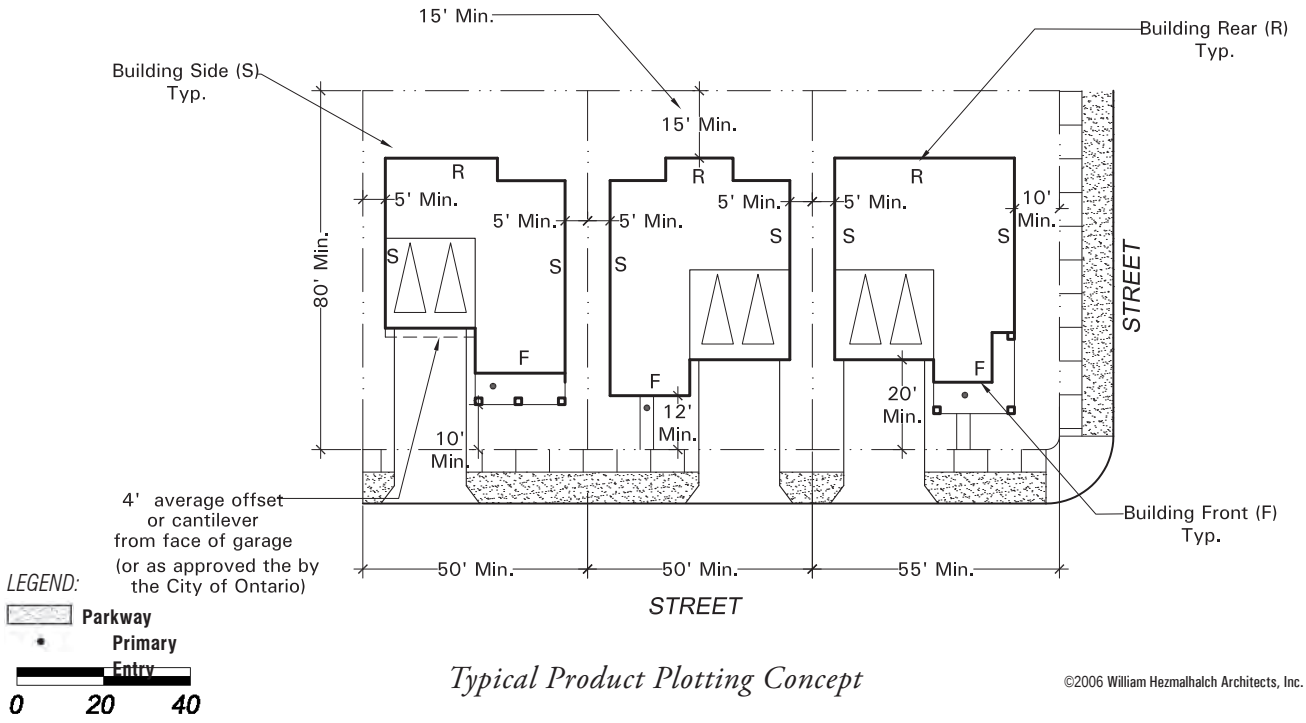
- Potential net density of 4 to 6 du/ac.
- Single-family dwellings with street front orientation
- Automobile access via street
- Primary entries and walks face street
- Private rear and side yards
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

* Proposed representative product types in each planning area are subject to final development submittal and are subject to change.

*Conventional Medium Lot: Village Homes* *(PA 3, 4, 6, 8, 20, 21, 28, 29 & 31)*



*Typical Product Plotting Concept*

©2006 William Hezmalhalch Architects, Inc.

# Minimum Standards

**Lot Dimensions**

| | |
|---|---|
| Minimum lot size | 4,000 sq. ft. |
| Lot width on front property line | 50'* |
| Lot width on corner | 55' |
| Lot depth on standard lot | 80' |
| Maximum building coverage | 50% |
| Minimum front lot width on cul-de-sac, standard knuckle or modified knuckle street | 35' |

Minimum lot dimensions on curvilinear streets shall be measured at front and rear building setbacks.

**Building Separation**

| | |
|---|---|
| Side to side living space | 10' (5'+5') |

**Front Setbacks - To Back of Sidewalk - Street Facing**

| | |
|---|---|
| Living space | 12' |
| Porch, balcony | 10' |
| Garage | 20' |
| Side-on garage** | 15' |

**Building Height**

Architectural projections may exceed the maximum building height of 35 feet by an additional 10 feet.

**Side Setbacks - To Back of Sidewalk - Street Facing**

| | |
|---|---|
| Living space | 10' |
| Porch, balcony | 10' |
| Side-on garage** | 15' |
| Corner facing garage | 20' |

**Rear Setbacks to Property Line**

| | |
|---|---|
| Living space (ground floor) minimum | 15' |

**Encroachments into Setbacks**

| | |
|---|---|
| Fireplace, media niche (8' max length), bay windows, potshelves, brackets, roof overhangs etc. | 2' max encroachment, 3' min. from PL |
| Second floor cantilever over garage (or as approved by the City of Ontario) | 4' max encroachment, 3' min. from PL |

**Private Open Space Per Unit**

| | |
|---|---|
| Minimum dimension | 7' |
| Total per unit | 70 s.f. |

**Parking** Per City of Ontario Development Code

*Planning Area 3 may have a lot width of 45' for a variable lot program per minor SP Amendment August 2013.
**Side-on garages are prohibited on lots less then 60' wide.

## *Conventional Large Lot Residential Product:*

***Enclave Homes (PA 7, 22 & 30)****

©2006 William Hezmalhalch Architects, Inc.

Not to Scale

### Characteristics

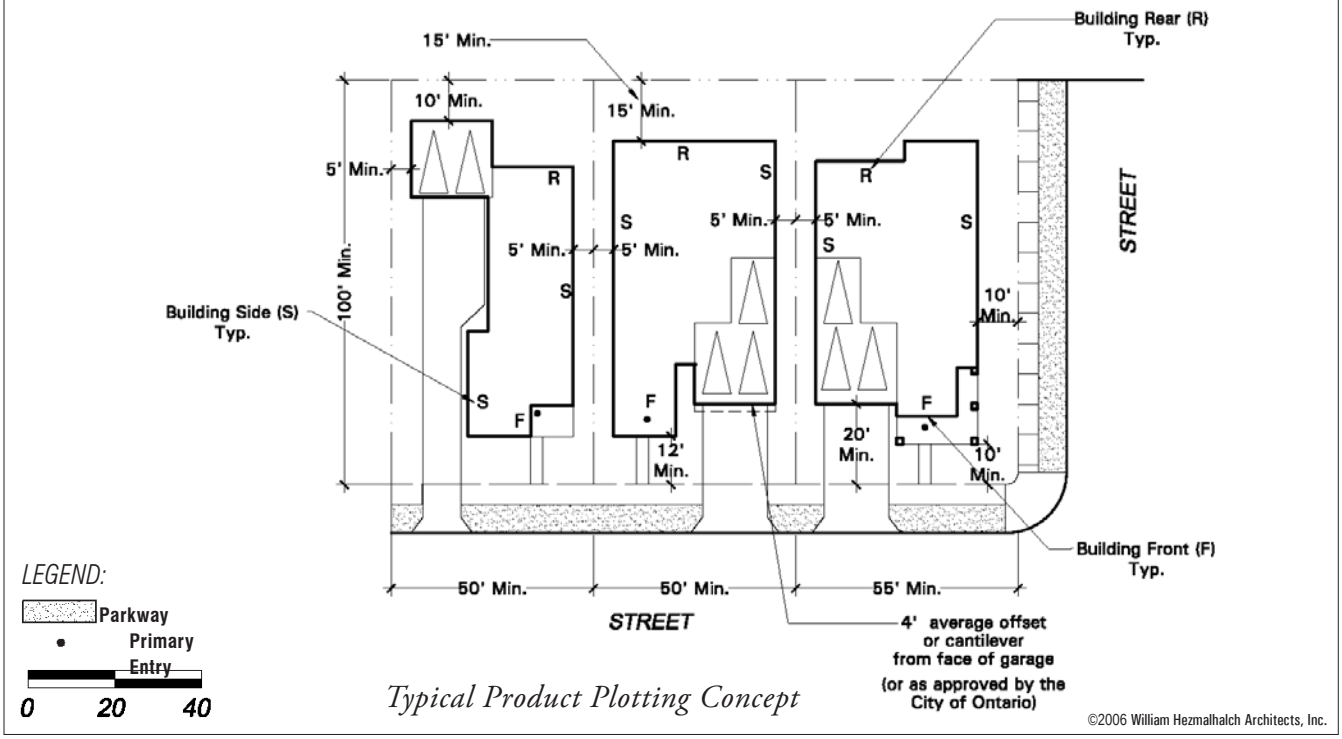
- Potential net density of 3 to 6 du/ac.
- Single-family dwellings with street front orientation
- Automobile access via street
- Primary entries and walks face street
- Private rear and side yards/patios
- Parking for residents provided in garages
- Guest parking provided on local streets or in designated parking areas

Notes:

1. Actual lot sizes and densities may vary based on final plan.
2. Refer to other areas of Section 7 - Residential Design Guidelines for more specific criteria regarding building design, plotting, styles, materials, details, and implementation.
3. Refer to Section 7.6 Landscape Design, for specific criteria regarding landscape design and implementation.
4. Typical Product Plotting Concepts are provided for representative purposes only and are not intended to be mandated layouts.

* Proposed representative product types in each planning area are subject to final development submittal and are subject to change.

*Conventional Large Lot: Enclave Homes* *(PA 7, 22 & 30)*



*Typical Product Plotting Concept*

| Minimum dimension | 7' |
| Total per unit | 70 s.f. |

**Parking** Per City of Ontario Development Code

*Side-on garages are prohibited on lots less then 60' wide

## 7.6 Landscape

### 7.6.1 Introduction

Careful consideration has been given to the design of the community landscape architectural character for the Specific Plan. The following design guidelines are organized to help define the basic landscape design principles for the Specific Plan. Observing these guidelines will help to assure the "design vision" and integrity of this planned community.

All landscape plans, streetscape plans, and graphic designs with regard to community identity, neighborhood identity, or entry monumentation shall conform to the guideline as set forth herein, and shall be subject to review and approval by the City of Ontario.

### 7.6.2 Overall Streetscapes and Entries

**Perimeter Streetscape Design**

Streetscape design guidelines establish a hierarchy for the landscape development along the surrounding roadways, as well as establishing a framework for consistency of design. Three (3) major master planned arterial roadways surround the Specific Plan area: Archibald Ave. to the west, Eucalyptus Ave. to the north, and Haven Ave. to the east. Landscape easements associated with these roadways have been defined, as noted in The Ontario Plan (TOP) Policy Plan (General Plan).

Landscape development surrounding the Specific Plan area will help to set the character, while maintaining consistency with the City of Ontario's pedestrian pathway system illustrated within the Mobility Element Exhibit M-3: Multipurpose Trails and Bikeway Corridor Plan of The Ontario Plan (TOP) Policy Plan (General Plan).

#### *Archibald Ave.*

Archibald Ave. streetscape (North of Merrill Ave.) shall include the following:

- A landscaped parkway 7-foot wide parkway on the west side and 10-foot wide parkway on the east side with a double row of street trees per the New Model Colony Streetscape Master Plan along both sides of the street;
- A split sidewalk (5-foot wide)/bikeway (8-foot wide) along the west side of the street. Multipurpose trail shall be separated from the concrete sidewalk and shall be constructed of stabilized decomposed granite;
- A landscaped median (26-foot wide) with a single row of street trees per the New Model Colony Streetscape Master Plan;
- A landscape easement of fifty (50) feet measured from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum of 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant grouping while combining interesting foliage textures and color; and
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20.***
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21 and Archibald Ave., Exhibit 22A*** for illustration.

Archibald Ave. streetscape (South of Merrill Ave.) shall include the following:

- A landscaped parkway 7-foot wide parkway on the west side and 10-foot wide parkway on the east side with a double row of street trees per the New Model Colony Streetscape Master Plan along both sides of the street;
- A sidewalk (5-foot wide) along both sides of the street. Multipurpose trail shall be separated from the concrete sidewalk and shall be constructed of stabilized decomposed granite;
- A landscaped median (26-foot wide) with a single row of street trees per the New Model Colony Streetscape Master Plan;
- A landscape easement of 50-foot measured from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum of 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color; and
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20.***
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21 and Archibald Ave., Exhibit 22*** for illustration.

#### *Eucalyptus Ave.*

Eucalyptus Ave. streetscape shall include the following:

- A landscaped parkway (7-foot wide min.) with a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street;
- A lineal sidewalk (5-foot wide) on the south side of the street, with a (13-foot wide) sidewalk/bike path on the north side;
- A landscape easement of 35 feet measured from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum of 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color; and
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20.***
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21 and Eucalyptus Ave., Exhibit 25*** for illustration.

**Note: Roundabouts shall be designed in accordance with the City of Ontario Traffic and Transportation Design Guidelines and are subject to City Engineer approval within the public street right-of-way.**

### *Haven Ave.*

Haven Ave. streetscape shall include the following:

- A landscaped parkway (16-foot wide min.-west side, 21-foot wide min.-east side) with a double row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street;
- A split sidewalk (5-foot wide)/bikeway (8-foot wide) on the west side of Haven Ave. and a lineal sidewalk (5-foot wide) on the east side of Haven Ave.;
- A landscape easement of forty (40) feet measured from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20***; and
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21 and Haven Ave., Exhibit 24*** for illustration.

## 7.6.3 Interior Streetscape Design

Streetscape design within the interior of the Specific Plan area shall be consistent in character with the perimeter streetscapes and should help to promote pedestrian circulation into the "Community Green Core."

Where interior streetscapes interface with community parks and open space, special consideration should be taken to integrate pedestrian circulation into these areas via a streetside pedestrian paseo system that links city sidewalk to active walking trails and open space uses. Refer to the Interior Local Street Paseo Edge for illustration.

Where interior streetscapes include a turn-about median, special considerations should be taken to integrate pedestrian circulation through enhanced landscaping and traffic calming. Refer to ***Exhibit 31, Round-about Intersection with Neighborhood Paseo Connector*** for illustration.

Two major interior roadways bring residents into the "Community Green Core", Merrill Ave., extending east/west, and Turner Ave. that enters off Eucalyptus Ave., extending north/south.

### *Merrill Ave.*

Merrill Ave. streetscape shall include the following:

- A landscaped parkway (7-foot wide min.) with a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street;
- A lineal sidewalk (5-foot wide) along both sides of the street;
- A landscape easement of 35 feet taken from face of curb to perimeter wall on both sides of the street;
- Background trees (minimum of 24-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 19***; and
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21*** and ***Merrill Ave. (From Archibald to Rec. Center & From SCE Easement to Haven Ave.), Exhibit 23*** for illustration.

### *Merrill Ave. (between Community Recreation Center and the SCE Easement) streetscape shall include the following:*

- A landscaped parkway (7-foot wide min.) and an additional landscaped parkway projection (7-foot wide by approximately 25-foot long) to accommodate a single row of street trees per the City of Ontario Street Tree Master Plan along both sides of the street;
- A lineal sidewalk (5-foot wide) along both sides of the street that makes additional connections to park and paseo walkways;
- A landscape easement of thirty-five (35) feet measured from face of curb to perimeter wall on both sides of the street;
- Background landscaping that harmonizes with the landscape character set in the "Community Green Core";
- Monumentation as shown in the ***Conceptual Landscape Master Plan, Exhibit 20***; and
- Refer to the ***Streetscape/Paseo Sections, Exhibit 21*** and ***Merrill Ave., Exhibits 23 and 23A*** for illustration.

## 7.6.4 Lanes

Lanes will occur in single-family detached lane-loaded planning areas 9, 16, 17, and 19. In these product areas, garage access will be provided along lanes. Lanes consist of a twenty (20) feet wide asphalt travel way with five (5) feet of landscaping provided in planter pockets on both sides of the lane. Refer to ***Exhibit 32, Conceptual Lane (Private Alley) Section,*** which illustrates the conceptual location of planter pockets in a lane condition. Where emergency access is required, residential lanes will have a twenty-four (24)-foot paved section with three (3) feet minimum landscaping on each side. Measurement will be taken from inside of curb.

A key design goal of these guidelines is to design lanes which are "scaled" to the driver and do not appear as "tunnels" of garages. Planter pockets may occur at common property lines and at corners of lanes, to include trees and shrubs, to break up the massing of buildings and create a more inviting street scene.

## 7.6.5 Entries and Monumentation

Monumentation occurs throughout the Specific Plan area and is designed to establish a hierarchy for entering each area of the community. Along the perimeter edges there are several entry points into the community. At key entries a landscape and monumentation program will be utilized to help identify the community as well as convey a "welcoming" feeling for both vehicular and pedestrian traffic. Three monument treatments are used to set this hierarchy: the Primary Community Entry and Monumentation, the Secondary Community Entry and Monumentation, and the Neighborhood Entry and Monumentation.

## 7.6.6 Primary and Secondary Community Entry, and Neighborhood Entry Monumentation

### *A. Community Entry and Monumentation*

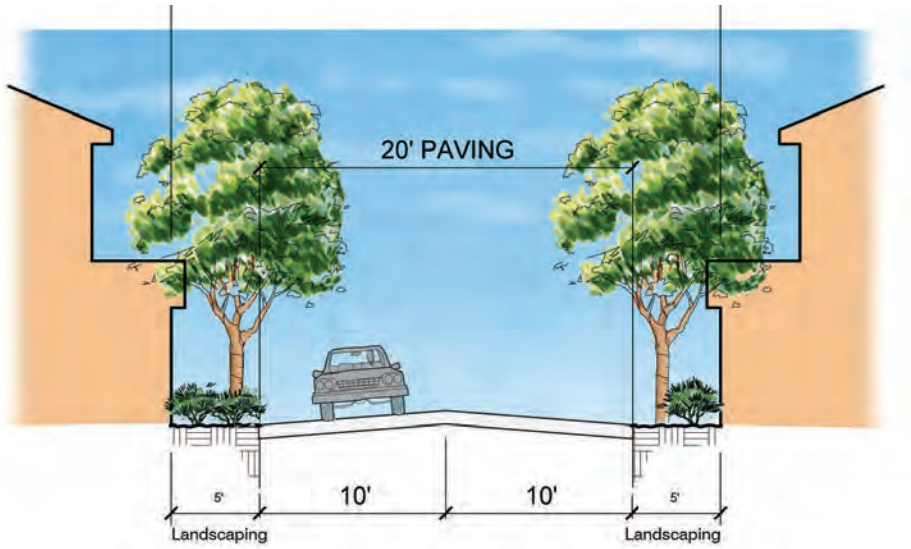
The Primary Community Entry and Monumentation shall include the following:

- Decorative, freestanding curved monument walls at each corner with anchoring large entry pilaster;
- Identification field for potential sign lettering placement;
- Decorative, architectural concrete caps, trim, and bases to help delineate each veneered material used;
- Short curved wall in front of main freestanding wall to create layering effect of monumentation;
- Use of veneer materials;
- Use of large specimen trees (minimum of 48-inch box) to flank each side of entry drive at site entry;
- Use of seasonal perennial shrubs to allow for flowering interest throughout the year;
- Enhanced pedestrian paving at street crossing and at monument location;
- Accent trees (minimum of 48-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Accent lighting of landscape/monumentation; and
- Refer to the ***Conceptual Landscape Plan, Exhibit 20*** and the ***Primary Community Entry and Monument, Exhibit 33*** for detailed conceptual illustration.

### *B. Secondary Community Entry and Monumentation*

The Secondary Community Entry and Monumentation shall include the following:

- Decorative, freestanding curved walls at each corner with anchoring entry pilaster. The large entry plaster should embody the same character as that of the Primary Community Entry Monument;
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall;
- Decorative, architectural concrete caps, trim, and bases to help delineate each veneered material used;
- Enhancement of corner cut wall and use of accent pilasters to anchor each side;
- Use of veneer materials instead;
- Use of large specimen native trees (minimum 48-inch box) to flank each side of entry drive at site entry;
- Use of seasonal perennial shrubs to allow for flowering interest throughout the year;
- Enhanced pedestrian paving at street crossing and at monument location;
- Accent trees (minimum 48-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Accent lighting of landscape/monumentation;
- All monumentation shall be designed in accordance with the City of Ontario Traffic and Transportation Design Guidelines and are subject to City Engineer approval within the public street right-of-way; and
- Refer to the ***Conceptual Landscape Plan, Exhibit 20***, and the ***Secondary Community Entry and Monument, Exhibit 34*** for detailed conceptual illustration.



## Lanes (Private Alleys)

20' Paved Section / 30' Width, Garage to Garage
N.T.S.
Note: where emergency access lanes are to be used within the residential development, a 24-foot paved section with 3-foot minimum landscaped area will be utilized (30-feet total)

* Measurement taken from inside of curb

Exhibit 32—Conceptual Lane (Private Alley) Section

## C. *Neighborhood Entry and Monumentation*

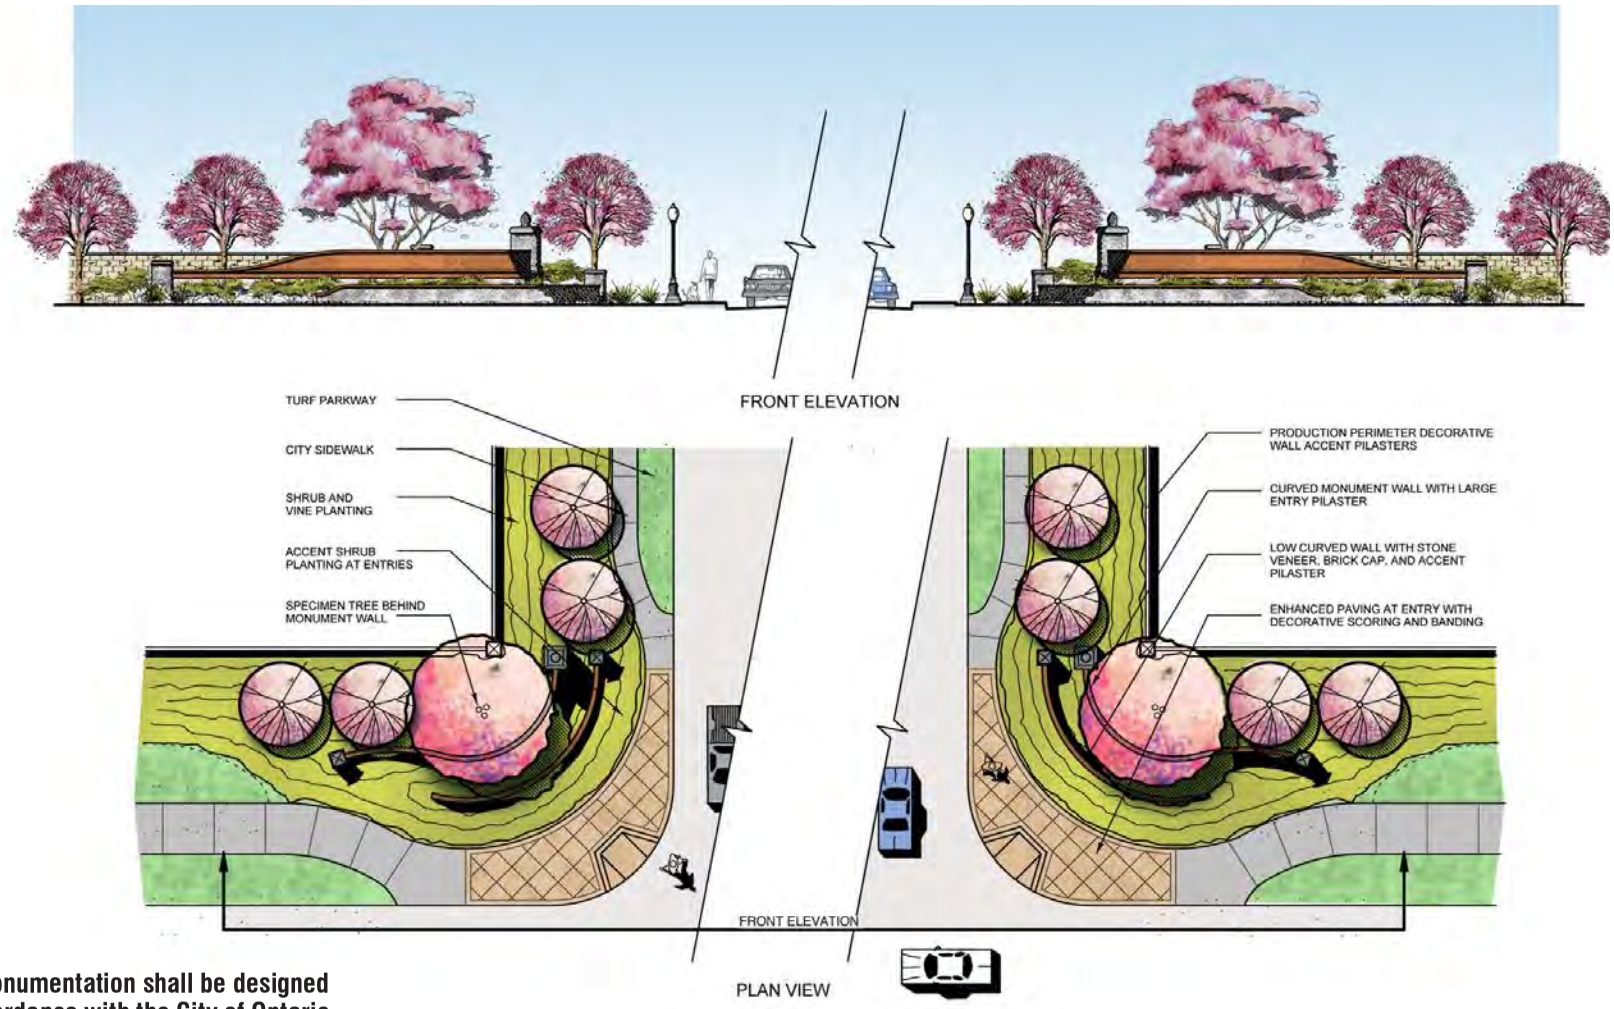
Neighborhood entries and monumentation should occur on interior corner entries within the Specific Plan area. These entries should be used to help continue the landscape character theme to the "core" of the community. Each neighborhood built within the project will have the opportunity to identify their individual project character while providing the basic design features of the other monuments.

### The Neighborhood Entry and Monumentation shall include the following:

- Freestanding, large, decorative entry pilaster set within the landscaped parkway. This pilaster should embody the same character as that of the Primary Community Entry Monument but is slightly reduced in scale to create a pedestrian gateway" into each neighborhood;
- Identification field for potential sign lettering placement on enhanced perimeter corner cut wall;
- Architectural decorative concrete caps, trim, and bases to help delineate each veneered material used;
- Enhancement of corner cut wall and use of accent pilasters to anchor each side;
- Use of veneer materials;
- Use of seasonal perennial shrubs to allow for flowering interest throughout the year;
- Enhanced pedestrian paving at street crossing and at monument location;
- Accent trees (minimum 48-inch box) and shrub masses planted in series of layers (foreground, midground, background) to help define borders and plant groupings while combining interesting foliage textures and color;
- Accent lighting of landscape/monumentation; and
- Refer to the ***Conceptual Landscape Master Plan, Exhibit 20***, and ***Neighborhood Entry and Monument, Exhibit 35*** for detailed conceptual illustrations.

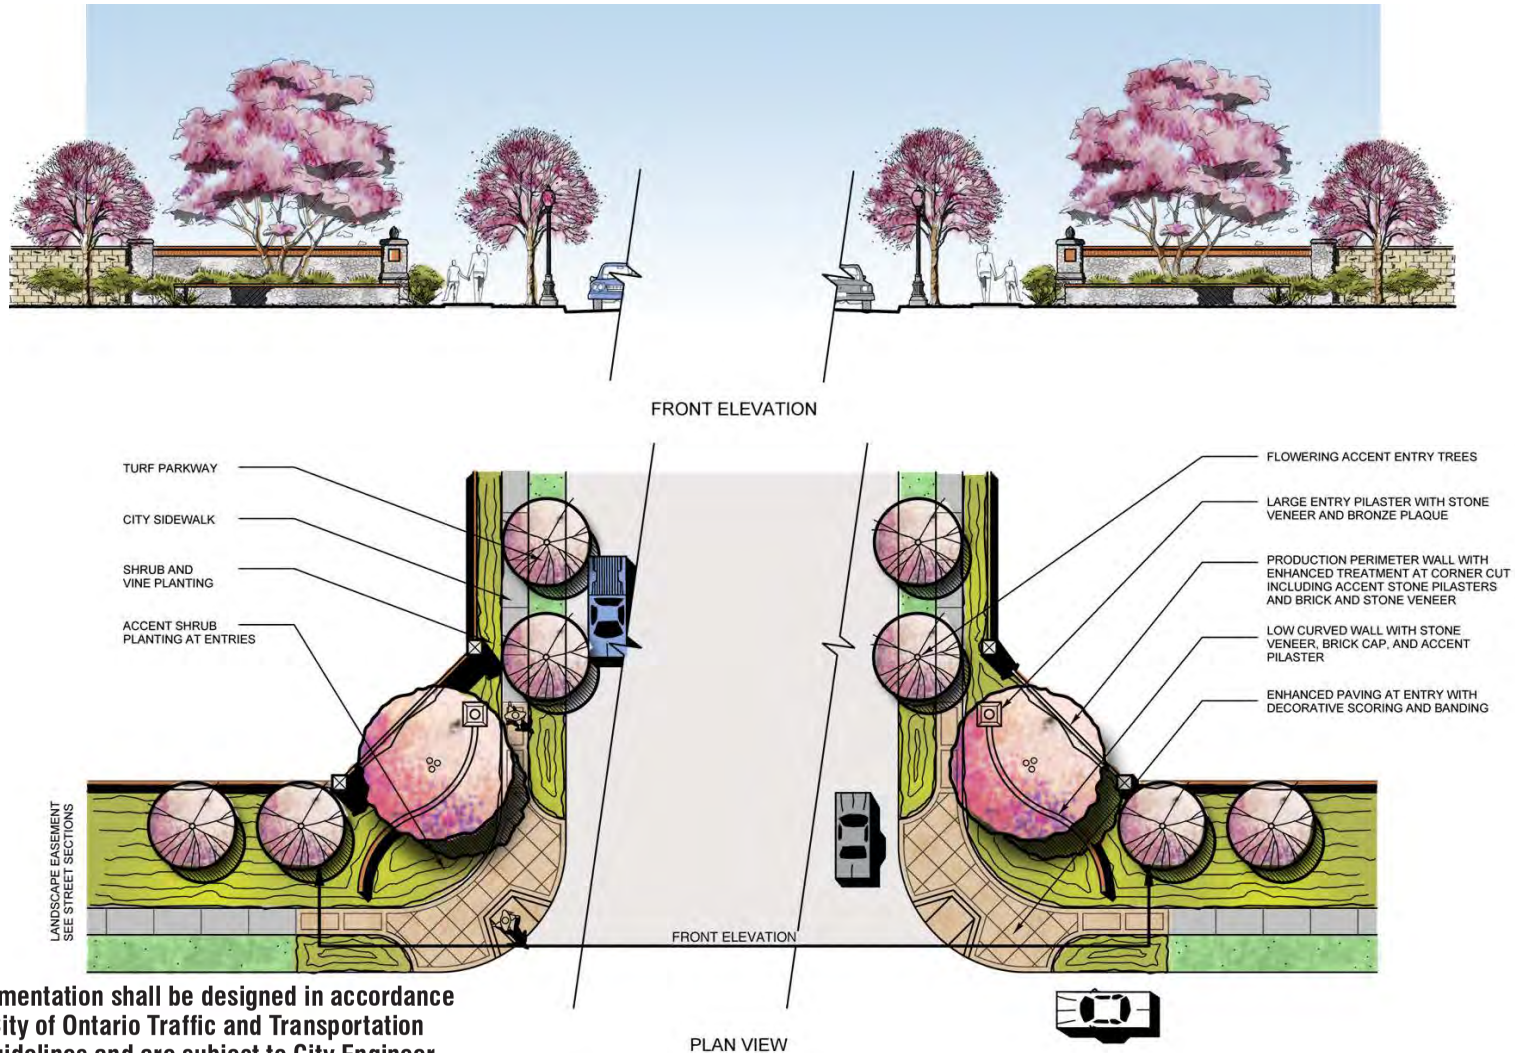
### *City of Ontario "Gateway" Monument*

At the corner of Archibald Ave. and the southern corner of the Specific Plan planning area, a city "Gateway" monument will be located. Special consideration should be made to integrate the landscaping within the easement on Archibald Ave. into the monument. The City of Ontario is currently developing the "Gateway" monument program for the New Model Colony. Additional coordination with the City of Ontario will be needed prior to developing this area.



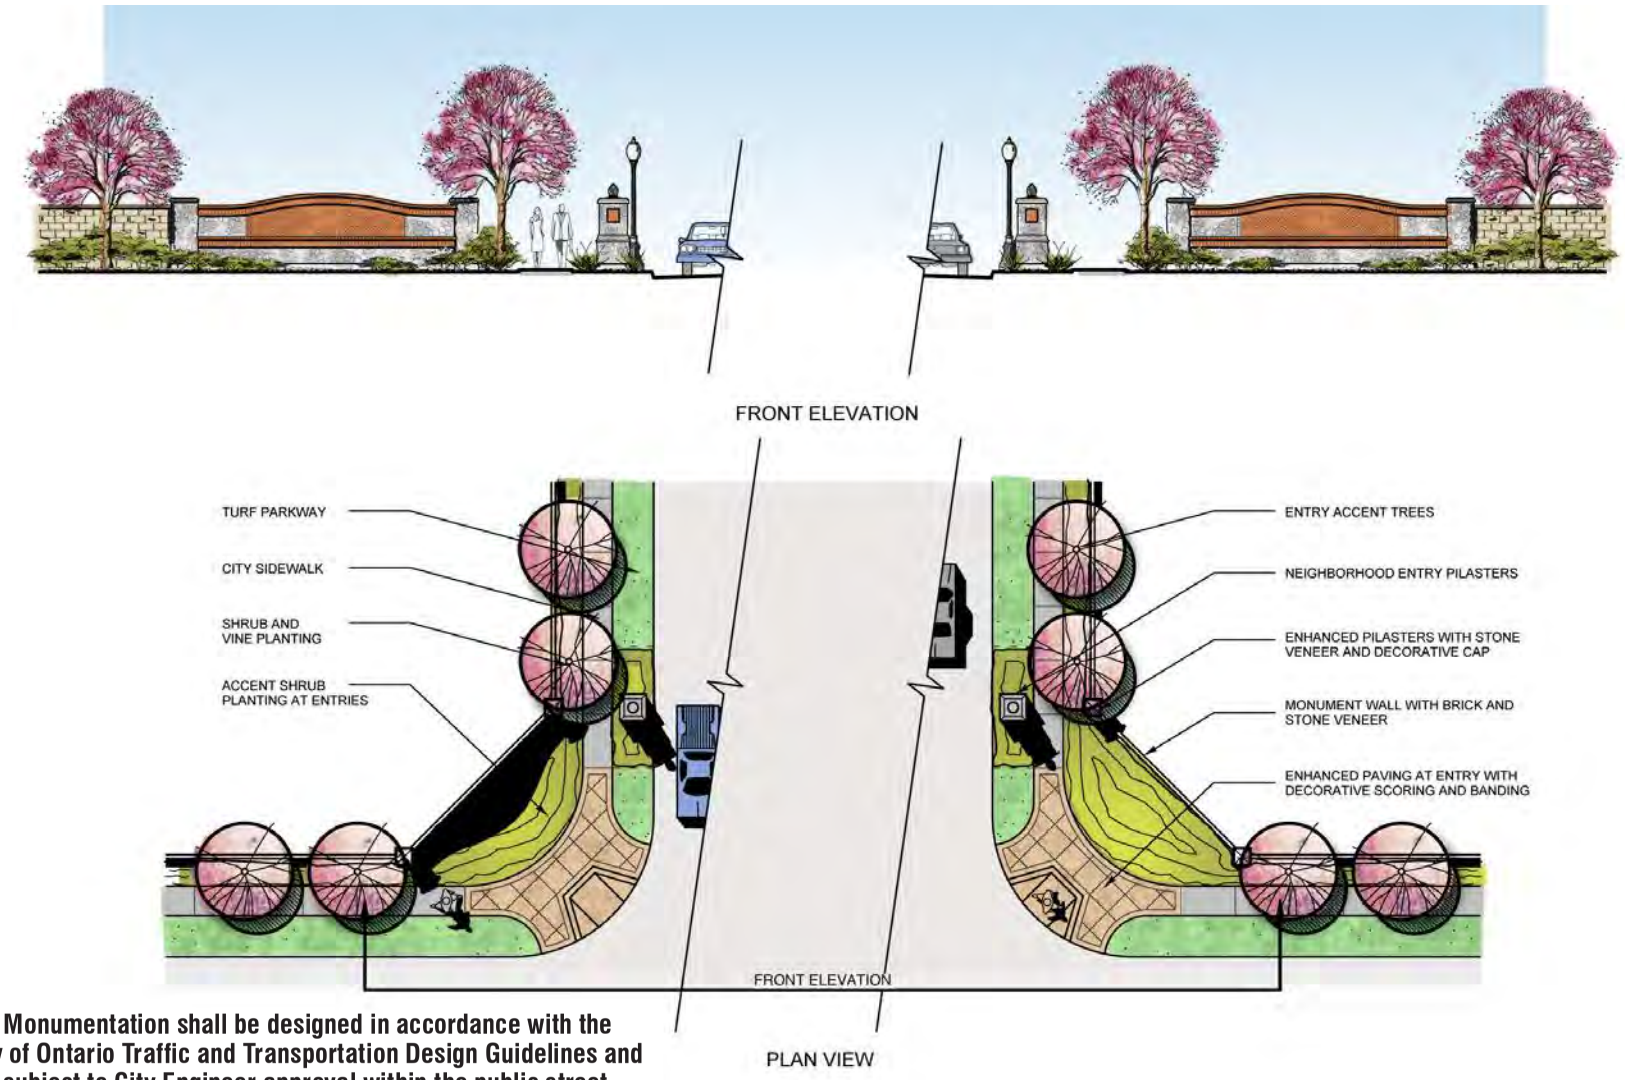
**Note: Monumentation shall be designed in accordance with the City of Ontario Traffic and Transportation Design Guidelines and are subject to City Engineer approval within the public street right-of-way;**

Exhibit 33—Primary Community Entry & Monument



**Note: Monumentation shall be designed in accordance with the City of Ontario Traffic and Transportation Design Guidelines and are subject to City Engineer approval within the public street right-of-way;**

Exhibit 34—Secondary Community Entry & Monument



**Note: Monumentation shall be designed in accordance with the City of Ontario Traffic and Transportation Design Guidelines and are subject to City Engineer approval within the public street right-of-way;**

Exhibit 35—Neighborhood Entry & Monument

## 7.6.7 Neighborhood Parks and Open Space

The Specific Plan area will have a central "Community Green Core" that consists primarily of open space for recreation and passive use. Exterior walkways and paseos lead to this centralized area. Several opportunities exist for community interaction and recreation within these parklands. The "Community Green Core" is comprised of several facilities and amenities to meet the needs of the community.

The following areas make up the "Community Green Core:" the two (2) Park Place Neighborhood Parks, the Linear Park System, the Community Recreation Center, and the Paseo Trail System.

### *A. The Public Neighborhood Parks*

Public Neighborhood Parks will be designed and constructed per City guidelines and approvals. The Neighborhood Parks consists of the following:

- Parking - Parking shall be adequate to accommodate daily use of the park, and should be screened from public view using a combination of berming and landscaping. In addition, the parking configuration should take into consideration possible shared use with the proposed neighboring elementary school to the North;
- On-street parallel parking is provided along the corridor from the Private Community Recreation Center to the SCE Easement, along Merrill Ave.;
- Children's Tot Lot Play Area - A tot lot will be located within close proximity to the parking lot and private Park Place Community Recreation Center. Play structures and equipment should be staged to allow for separated use based on age. The tot lot should also follow ADA (Americans With Disabilities Act) guidelines and provide access based off of equipment selected. Seating areas shall be located near the tot lot to provide areas for parental supervision;
- Open Turf Area/Barbeque Picnic Facilities - The two (2) Park Place Neighborhood Parks should provide an open turf area and barbeque picnic facilities scattered throughout a looped concrete walkway system. Barbeque facilities (minimum of 50%) should be located adjacent to the walkway system for ADA accessibility; the remaining percentage set in open turf areas. Each barbeque picnic facility shall provide a picnic table, freestanding barbeque, hot coal container, and trash receptacle. These barbeque facilities can be placed on concrete or any other ADA acceptable surfacing. The design of the two (2) Park Place Neighborhood Parks open space should take into account pedestrian circulation and the linkage to the two adjacent roads as well as the surrounding community;
- Sports Fields for unorganized play - The open space turf area should be arranged to accommodate two baseball/softball fields and a soccer field overlay;
- Tennis Courts - An area for tennis courts should be implemented into the site with special consideration to solar orientation. The tennis court facility will be fenced with standard tennis court fencing and will allow public access. Hours of operation will be enforced in an effort to avoid evening disturbance to adjacent neighborhoods;
- Pedestrian Plaza - A centralized pedestrian plaza should be located near the children's tot lot as a entry walkway system from the city sidewalk. This space should include bench seating and decorative pots, as well as shade for protection from the sun. Enhanced paving should be utilized within this area for decorative treatment, and should match the material used in the enhanced pedestrian crossings;
- Refer to the ***Park Blow-ups, Exhibits 37-39,*** for detailed conceptual illustrations;
- Landscaping - Landscaping within the park system shall harmonize with the surrounding streetscapes. Large specimen trees should be used within the open turf areas to help provide shade and screening of unwanted views. Accent trees should also be used at pedestrian entries and around the tot lot for color and seasonal interest. All trees shall be a minimum of 24-inch box. Specimen trees surrounding play areas shall be a minimum of 36-inch box;
- Landform Berming - Landform berming should occur throughout the park system to provide interest and opportunities for screening;
- Paseo Walkway System - A paseo walkway system should be designed to provide connections to adjacent neighborhoods as well as linking the private Park Place Community Recreation Center and Park together; and
- Lighting - No sports lighting should be implemented in the park. However, safety lighting will be provided in the parks and paseos within the Subarea 29 Specific Plan. A photometric plan will be required to be submitted with the landscape plans for these areas.

## 7.6.8 The Park Place Private Recreation Center

The Private Recreation Center consists of the following:

- Private Parking - Parking shall be adequate to accommodate daily use of the Private Recreation Center, and should be screened from public view using a combination of berming and landscaping;
- Recreation Building - The Park Place Recreation Building should adhere to the architectural design guidelines and should be designed to accommodate the community needs;
- Private Pool and Spa Facility - The Park Place residents will have access to a pool sized adequately to accommodate competitive swimming as well as serve as a summer leisure recreational amenity for adults and children of the community;
- The pool decking area should be sized to allow for lounge chairs and tables. A spa area separate of the pool will also be located within the Park Place Community Pool and Spa Facility. A group barbeque facility and wood shade structure should be located within the pool deck area. The pool and spa facility should be fenced and gated for resident entry only. Hours of operation will be enforced in an effort to avoid evening disturbance to adjacent neighborhoods;
- Landform Berming - Landform berming should occur throughout the linear park system to provide interest and opportunities for screening; and
- Paseo Walkway System - A paseo walkway system should be designed to provide connections to adjacent neighborhoods as well as linking the Private Park Place Community Recreation Center and Park together with the linear park system.
- Tennis Courts will be available through the Private Recreation Center, and therefore will be private.

## 7.6.9 Paseo Trail System

Pedestrian circulation is highly encouraged within the Specific Plan Community. Landscape easements are provided along major roadways and are encouraged within the neighborhood communities.

- Paseo Trail System - A paseo walkway system should be designed to provide connections to adjacent neighborhoods as well as linking the Private Park Place Community Recreation Center and Park together with the linear park system;
- Landscaping - Landscaping along the paseo trail system shall harmonize with the surrounding streetscapes. All trees shall be a minimum of 24-inch box. Specimen trees shall be a minimum of 36-inch box;
- Meandering sidewalks are encouraged;
- Enhanced paving should be provided at paseo connections where pedestrian circulation crosses roadways;
- Paseos should provide strong connections to the "Community Village Core;"
- Utilization of SCE Easement Corridor for multipurpose trails should be provided. Refer to the detailed conceptual illustrations. Final approval of paseo configuration and design to by SCE. Refer to ***Exhibit 29, SCE Easement Paseo System***; and
- Utilization of the County Line Channel Flood Control Easement. Refer to the detailed conceptual illustrations, ***Exhibit 30, County Line Channel Paseo System.***
- Connection of neighborhood pocket parks to paseo trail system. Refer to the detailed conceptual illustrations. At strategic places within neighborhoods, pocket parks will be implemented to serve each neighborhood, These pocket parks are intended to provide minimal amenities, and should be linked throughout each neighborhood link via the paseo trail system. Pocket parks should be sized between 1/4–2 acre in size. The paseo pocket parks will contain the following amenities:
- Paseo walkway (meandering encouraged);
- Landscaping - Landscaping shall harmonize with the surrounding streetscapes; and
- Lighting - Pole mounted fixtures spaced at appropriate intervals for safety and security.

***The Paseo Pocket Parks might contain the following additional amenities:***

- Open turf area/barbeque picnic facilities;
- Basketball courts; and
- Tot lots

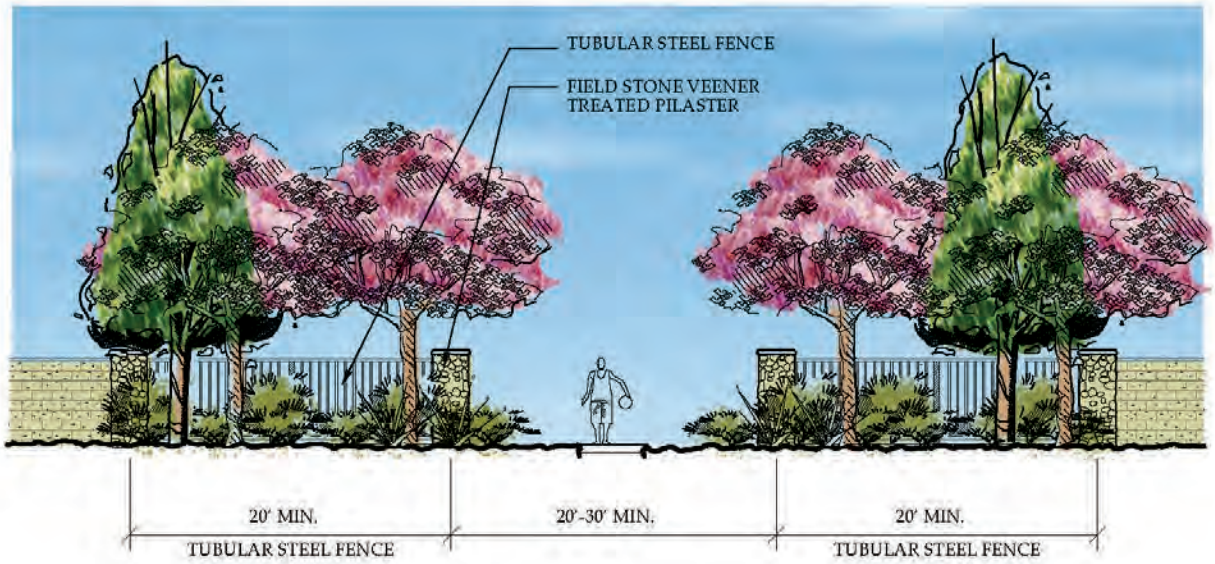
## 7.6.10 Community Walls and Fencing

Walls are a major component in achieving an overall community theme within the Specific Plan. A strong cohesive appearance is achieved through the use of "community walls" and general overall wall guidelines.

All walls that adjoin community street scenes and are along the boundary edges of the paseo and to the opposite side of the corridor shall be deemed "community walls." All wall and fencing designs and layout shall be approved by the City of Ontario prior to construction.

Refer to the ***Conceptual Wall and Fence Plan, Exhibit 40.***

Brick walls or screening walls shall have climbing plants or anti-graffiti elements to prevent vandalism.



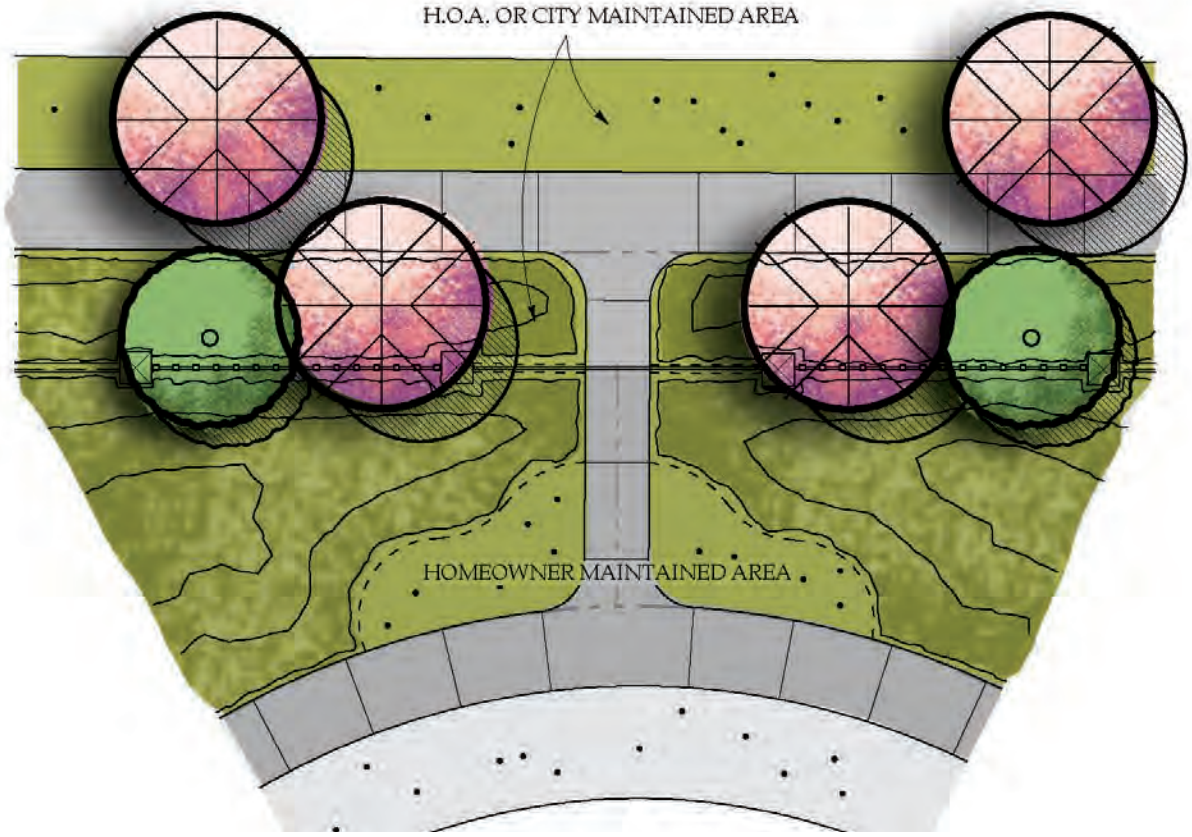


Exhibit 36—Community Portal Entry

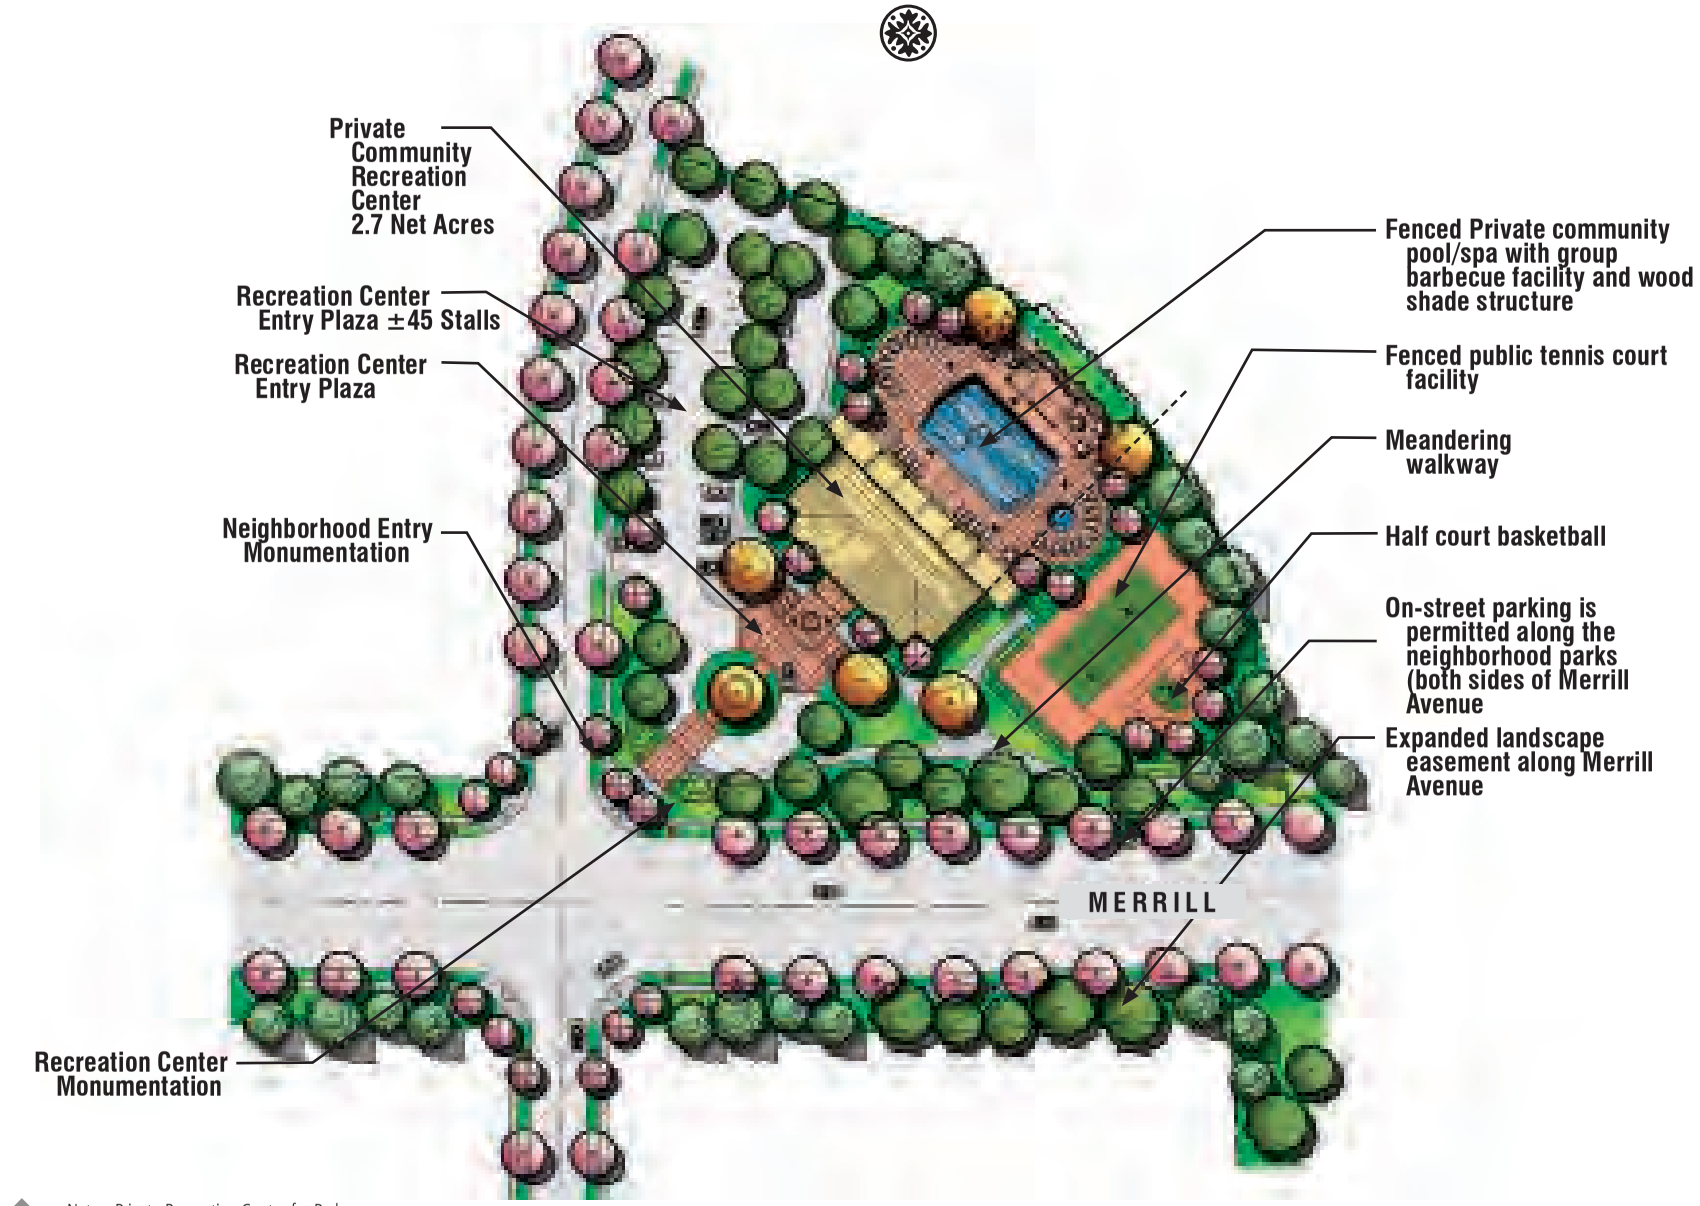
Exhibit 37—Overall Park



Note: Private Recreation Center for Park Place residents use. Tennis Court and Basketball area for public use.

Exhibit 38—Community Recreation Center
Public Tennis Courts & Basketball Court

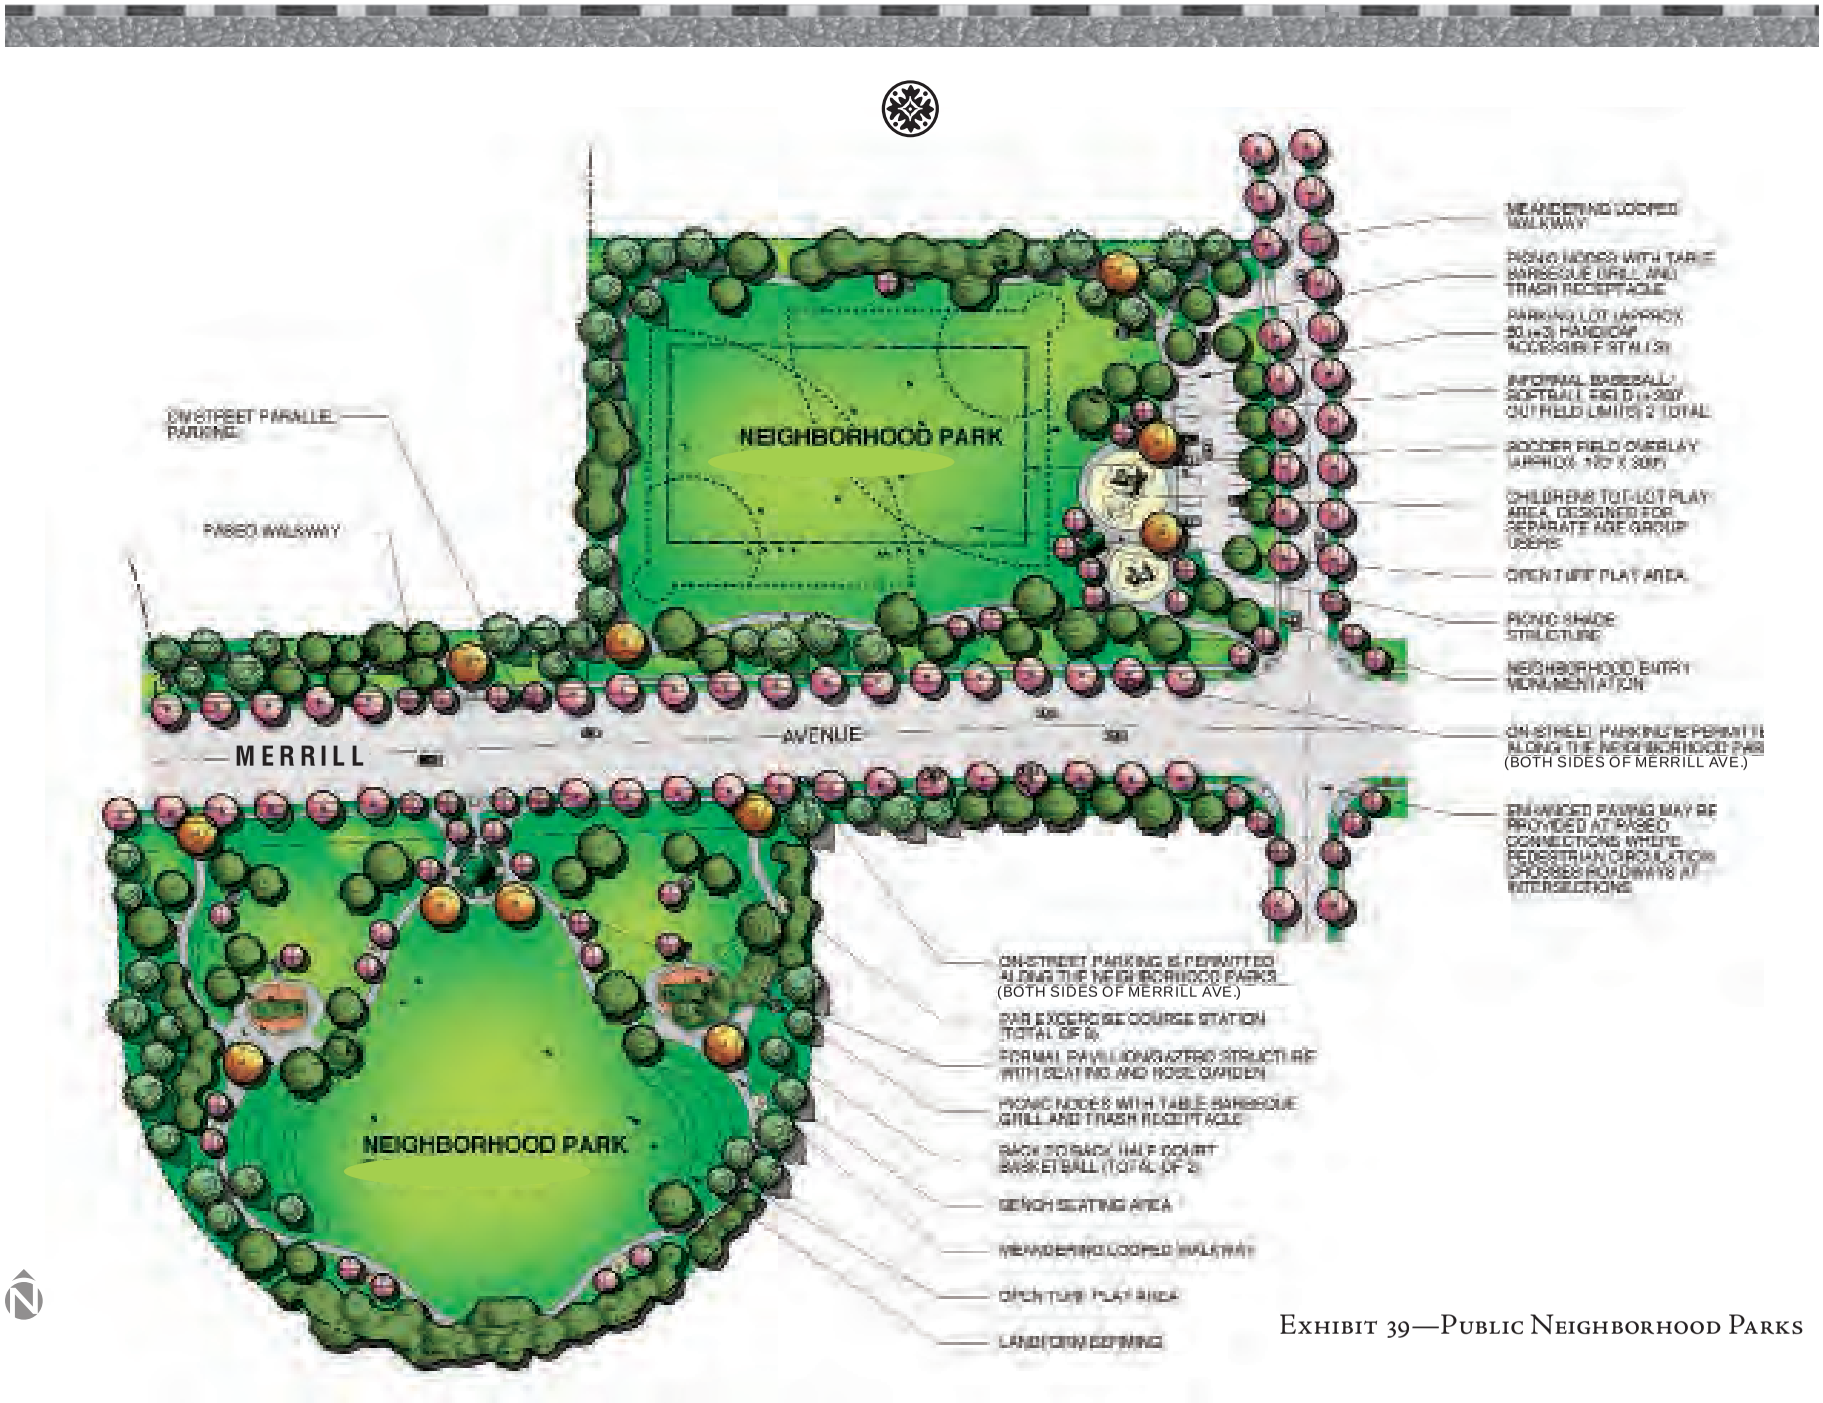


Exhibit 39—Public Neighborhood Parks

### Community Walls

Community walls shall be decorative in nature. Decorative accent pilasters spaced at equal intervals are highly encouraged.

#### *Solid Walls and Fencing*

Where privacy or protection of common area views dictates, walls shall be of decorative block. Reverse frontage walls and any wall return that is visible from the street shall be constructed of split-face block or precision block that is plastered or stuccoed, and of a color that blends with the Specific Plan color palette. Decorative caps and the use of pilasters to help enhance the perimeter appeal of the walls are encouraged. Walls visible from the community streets may not be made of exposed or painted precision block or slumped block. Variation shall be provided in the perimeter wall to include pilasters, material changes, and/or other decorative features which offers relief along the proposed perimeter walls or as approved by the City of Ontario Planning Department. All interior walls (both sides) shall be constructed of decorative block whether they are in public view or not. Colors shall be consistent with the colors specific for the overall design theme and shall be decoratively shaped. Combo walls shall be utilized where residential properties abut trails, paseos and/or parks or as approved by the City of Ontario. The overall height established by the City of Ontario for walls and fences shall not be exceeded; however, the height of the decorative block and/or wrought iron utilized to construct the combo walls may vary depending on the proposed location of the combo walls. Wood and vinyl fencing are prohibited within the Specific Plan. The final wall design and location shall be approved by the Planning Department during the tentative map or development review process. Refer to ***Exhibit 40A, Wall and Fence Details.***

#### *Tubular Steel Fencing*

If applicable, tubular steel fences should be located in the rear yards of those properties abutting large slope areas. In addition, view fencing shall be used at the Private Recreation Center pool area, and any other open space areas where visibility is needed and physical access is controlled. Areas where tubular steel fencing occurs will be subject to review by the City of Ontario.

## 7.6.11 Outdoor Lighting

Lighting standards within the Specific Plan community shall be consistent in style, color, and materials in order to maintain uniformity throughout. Lighting should be subtle, providing a soft wash of light over illuminated objects such as monumentation. Hierarchy shall be established by using a variety of lighting fixtures and illumination levels based off of lighting design intent. Lighting styles shall tie into architectural styles and provide sufficient illumination for the safety and well being of the community.

Accent lighting of landscape and monumentation shall be incorporated into the following areas: Metal halide lighting to project true colors and clear visibility, and reflective street signs shall be used on all proposed streets. Lighting shall have anti-vandalism fixtures.

Each residential unit shall have illuminated addresses at the front door and the garage door, if the garage faces a lane.

#### *Entry Monuments*

Avoid intensely bright or "hot" lighting of monuments; rather, each should be lit to provide a soft wash of light across the monument signage. Specimen trees should be uplighted with several fixtures into the canopy to avoid creating dark sides of the trees.

#### *Recreation Center*

Uplighting of specimen trees is very important and providing adequate lighting within the vehicular turn-around areas. Recreation center monumentation/kiosk should also be illuminated.

#### *Community Park/Linear Park/Paseo Lighting*

Lighting of the walkways, tot lot, and parking area within the Parks and Paseo Trail System should be considered for safety and security. Utilization of a traditional Globe/Acorn Post mounted light fixture should be considered for both the park open space areas as well as interior street lighting fixtures. Keeping with the character of traditional materials, this will help to create a better sense of scale to the pedestrian.

## 7.6.12 Mailboxes

The developers shall work with the United States Post Office to determine the best possible location for mailboxes within the residential subdivisions. The developer will determine the specifications for the mailbox units.

# 7.7 Landscape Implementation

## 7.7.1 Improvement Responsibility Landscape Maintenance

#### *Landscape Maintenance*

- All public landscapes, including slopes, street trees, lighting, and irrigation systems, shall be maintained by the City of Ontario Landscape Maintenance District;
- Front yard landscapes shall be installed by the developer and maintained by the homeowner in a healthy condition at all times; and

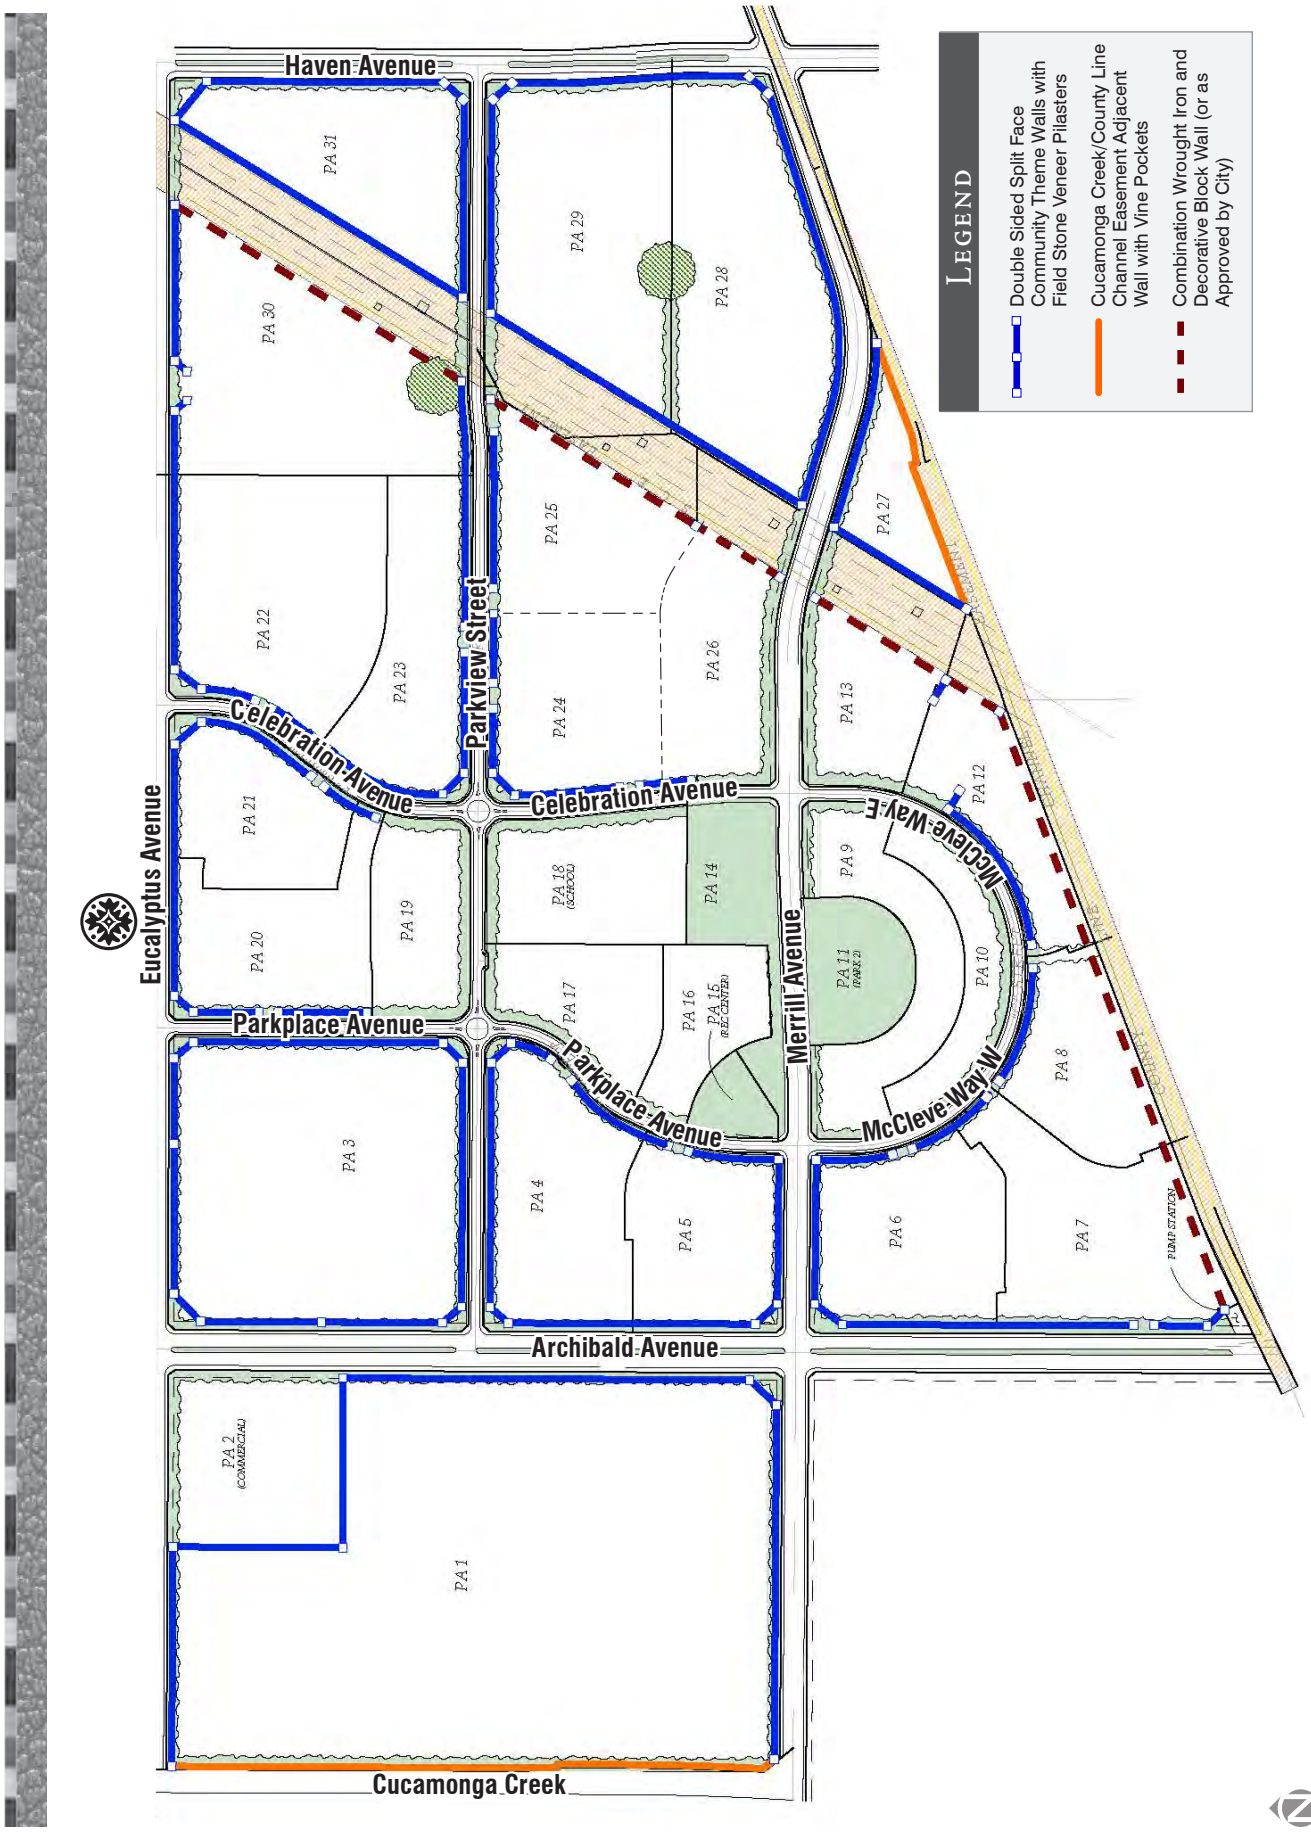

Exhibit 40—Conceptual Wall and Fence Plan

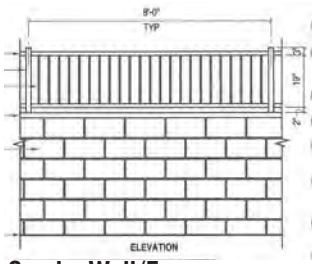
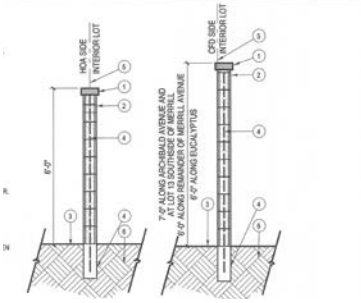
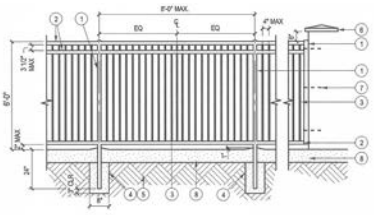


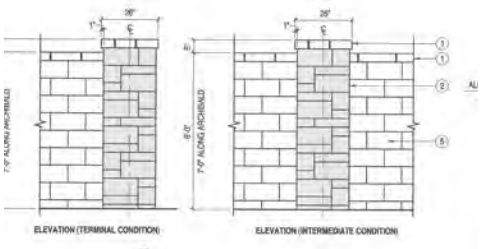
**Combo Wall/Fence**



**Perimeter Split Face Block Wall**



**Tubular Steel Fence**



**Pattern Pilaster**

**Neighborhood Monument**

Note: Use of double sided material when visible from the street

Exhibit 40a—Wall and Fence Details

- All manufactured and cut/fill slopes which exceed three (3) feet in height shall be planted with an effective mixture of groundcover, shrubs, and trees by the Developer. Such slopes shall also be irrigated as necessary to ensure germination and establishment in conformance with the fuel modification guidelines described later in this document.

| Tree Size | Percentage on-site |
|---|---|
| 15 Gallon | 60% |
| 24" Box | 25% |
| 36" Box | 10% |
| 48" Box | 5% |

## 7.7.2 Homebuilder Landscape Requirements

### *Public Landscapes (HOA and City maintained areas)*

- Landscape plantings in public areas should reflect a commitment to both developing a "sense of place" and maintaining harmony with the New Model Colony;
- A landscape architect licensed in California shall be retained to prepare planting and irrigation plans for all public areas. Arrangement of plants should incorporate the concepts of mass planting; plants should be placed to allow them to grow to their natural sizes and forms, and sheared hedges should be kept to a minimum; and
- All pathway areas shall be designed to be barrier free and meet ADA guidelines.

The plant matrix at the end of this section offers a suggested plant palette for the Specific Plan; while it is by no means all-inclusive, plantings in public areas should draw primarily from this palette for visual community continuity.

### *Front Yard Landscapes*

Plantings in front yards may vary substantially from the Specific Plan Plant Matrix, but should retain some of the character and style of the public plantings. No more than 50 percent of the total square footage of any front yard shall be lawn; the balance shall be composed of shrubs and groundcovers, with an emphasis on drought tolerant plant species. Each front yard shall be planted with one 24-gallon tree (minimum). Installation of landscaping within the front yards of single family detached housing products will be provided by the home builder. Front yard landscaping shall be installed prior to Certificate of Occupancy.

## 7.7.3 Soil Testing

Soil samples shall be taken from several locations after the completion of rough grading operations, and a reputable soil-testing laboratory shall perform an agronomic soils test. The test shall assess soil fertility needs for water-wise California native and Mediterranean plant types. No planting shall take place until the soil has been properly prepared based on the recommendations of the soils testing laboratory.

## 7.7.4 Slope Landscaping - HOA

All manufactured and cut/fill slopes which exceed three (3) feet in height shall be planted with an effective mixture of groundcover, shrubs, and trees. These slopes shall be installed before the Certificates of Occupancy. Such slopes shall also be irrigated as necessary to ensure germination and establishment in conformance with the fuel modification guidelines.

## 7.7.5 Private Interior Slopes: Residential Interior

- Private interior slopes may be more ornamental in character than exterior slopes. They may have a somewhat broader range of plant materials than exterior slopes, but should still be chosen primarily from the plant palette and are subject to the same fuel modification restrictions.
- All manufactured and cut/fill slopes which exceed three (3) feet in height shall be planted by the Developer with an effective mixture of groundcover, shrubs, and trees. Such slopes shall also be irrigated as necessary to ensure germination and establishment in conformance with the fuel modification guidelines described later in this document. All slopes shall be landscaped in accordance with the City of Ontario's standards.

## 7.7.6 Streetscape Landscaping

### Streetscape Development Standards

- Turf grass shall not exceed 30 percent of streetscape planting and shall be located adjacent to the sidewalk or curb line;
- All new plantings within the planned community shall draw substantially from the Park Place Plant Matrix included in this document;
- All streetscape landscaping within the Specific Plan planned community will be implemented by the Developer in accordance with this Specific Plan;

- A balance of evergreen and deciduous trees shall be considered during the planning process for the selection of street trees and understory trees between them (if any). Street trees shall be sized per City of Ontario's standards;
- The Developer shall install all primary and secondary improvements concurrently with the construction of the roadway on which they front. Neighborhood intersections shall be constructed as each neighborhood street is built;
- The Developer shall provide site inspection of all construction and installation of entries and intersections in accordance with the City of Ontario requirements;
- Self-attached vines are to be added against block walls;
- Along community walls, the use of 5-gallon plant material as hedgegrow is preferred; and
- Closely spaced plant materials (to horticultural practices) is expected on this project.

### 7.7.7 Irrigation Design

Irrigation for both public and private landscapes should be designed to be as water-efficient as possible. All irrigation systems shall have automatic controllers designed to properly water plant materials given the site's soil conditions, and irrigation systems for all public landscapes shall have automatic rain shut-off devices. Low volume irrigation is encouraged. Spray systems shall have low-gallons-per-minute, matched-precipitation heads. All City maintained landscapes (LMD areas) are to be controlled with a central controlled system as approved by the City of Ontario, Parks and Maintenance Department, and trees plantings are to consist of root barriers and a pop up stream bubbler system on a separate valve. Irrigation design shall meet the requirements of the Landscape Development Standards.

#### Addresses

Each single family home will be required to have the address numbers painted on the curb with black numerals on a white reflective paint background. Each homeowner will be responsible for the maintenance of these numbers.

## 7.8 Design Guideline Implementation

### 7.8.1 Design Review Submittal Requirements

The respective developers. SL Ontario Development Corporation, Richland Communities, Inc, and Brookfield Homes shall review all plans prior to submittal to the City for Plan Check for their projects. This design review process will include these steps: Conceptual review, Refined review and Construction document review prior to plans being submitted for city processing. The Design Review process will ensure the vision of Subarea 29 will be implemented.

## 7.9 Plant Matrix

Per City of Ontario Street Tree Master Plan.

### Vines

| Botanical Name | Common Name | Eucalyptus Avenue | Merrill Avenue | Archibald Avenue | Turner Avenue | Haven Avenue | Primary Community Entries | Secondary Community Entries | Neighborhood Entries | Community Park Open Space | Linear Park | Community Recreation Center | Paseo Trail System | Commercial Area | Alleys |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| *Bigononia c. 'Tangerine Beauty'* | Cross Vine | | | | | | | | | | | | • | • | • |
| *Bouganvillea hybrids* | Bouganvillea | ■ | | ■ | | ■ | | ■ | | ■ | | • | | ■ | |
| *Clytostoma callestegioides* | Purple Trumpet Vine | | | | | | | | | | | | • | | |
| *Distictis buccinatoria* | Blood-red Trumpet Vine | ■ | | ■ | | ■ | | • | • | ■ | | ■ | • | ■ | |

| *Quercus ilex* | Holly Oak | | | | | | | | | | | | | | | | |
| *Rhus lancea* | African Sumac | | | | | | | | | | | • | | • | | | |
| *Schinus molle* | California Pepper | | | | | | • | • | | • | | • | | • | | | |
| *Tristania laurina* | Water Gum | | | | | | | | | | | | | • | • | | |

# 8. Commercial Design Guidelines

# 8.0 Commercial Design Guidelines

## 8.1 Introduction

The Subarea 29 Specific Plan area will include a commercial area in the northwest corner of the project, at the intersection of Archibald Ave. and Merrill Ave. This non-residential use will allow the residents of the Specific Plan area with shopping and employment conveniently located nearby. Residents will have the ability to access services by foot or ride their bicycles to work via pedestrian trails connecting the residential uses to the commercial center and the local community.

Throughout the commercial development, landscaping, site planning, and architectural design should be considered to create friendly and welcoming places to shop and work. These non-residential uses will continue to vision established in the residential community, including integrating pedestrian-friendly design.

The Commercial Design Guidelines will help guide the development of the area to enhance the pedestrian experience and innovative design that contributes to the character of the Specific Plan area. These guidelines are not intended to be strictly enforced rules, but rather as a tool in aiding the design process. Additionally, these guidelines have been generalized for the Specific Plan. Potential developers will be required to submit their own supplemental design guidelines for the Commercial development area to the City of Ontario for approval.

The Commercial Section is organized into the following components:

- Site Planning;
- Building Design;
- Architectural Details; and
- Open Space and Landscaping.

### 8.1.1 Guiding Principles

Guiding Principles for commercial design for the Specific Plan include:

***Buildings should contribute to the qualitative nature of the overall neighborhood.***

- Proper scale and proportions in massing and details should be used;
- Pedestrian open spaces should be implemented;
- Massing and articulation should be varied;
- Buildings should be designed at a human-scale; and
- Parking lots should be de-emphasized as much as possible.

***Buildings should have an enduring quality***

- Design should draw inspiration from the rich and diverse Southern California architectural heritage;
- Materials and colors typical to southern California should be used;
- Details and ornamentation should be authentic, as much as possible; and
- Design should create an inviting place to shop and work. Pedestrian trails from the residential neighborhoods should not lead to the rear of the Commercial Center.

### 8.1.2 Review Process

The Commercial Design Guidelines are to be used as a general tool to guide the development of the northwest portion of the Specific Plan area. Final designs will be subject to the City of Ontario's approval. Additionally, more detailed Design Guidelines for each developer may be required by the City prior to final approval. Refer to the City of Ontario Code for further information regarding the review process.

## 8.2 Commercial Design Guidelines

### 8.2.1 Introduction

Commercial development within the Specific Plan will continue the pedestrian-friendly character established in the residential community. By reducing the impact of the automobile on the appearance of the commercial development, appropriate site planning can de-emphasize the vehicle, creating a safe outdoor environment without ignoring the necessary needs of vehicular traffic. Through well executed planning, architecture, and landscape design, the commercial uses within the Specific Plan will complement and, to some extent, integrate the residential community rather than turn its back completely to the community residents.

### 8.2.2 Site Planning

***Orientation***

Buildings should be oriented for best visibility from the street. Windows and entries should face the street, avoiding blank walls which could dominate public views. Stores with entries not visible from the street may be oriented towards pedestrian open space.

All primary entries should face onto a street or a connecting walkway.

### *Driveways and Sidewalks*

The site should be provided with a limited number of driveways to reduce the traffic impact along Merrill Ave. and Archibald Ave. Pedestrian crossing distances should be minimized at driveways. To increase safety for pedestrians, a raised median as a pedestrian island should be provided between travel lanes, especially those entries with more than one lane in any direction. Driveways should be paved with asphalt, concrete or an enhanced paving material such as brick.

Sidewalks should be located along natural travel paths for pedestrians. Sidewalks should be a minimum of six (6) feet wide along pedestrian pathways and a minimum of eight (8) feet width along more heavily traveled commercial areas.

### *Street Frontage and Buildings*

Streetside buildings, or those with no parking separating them from the street, should use windows and entry features to soften the building's appearance to the street. These buildings should not be more than 100-feet long without a pedestrian plaza or walkway breaking the building mass and connecting the parking lot with the street. On corners, buildings should utilize massing elements to anchor the corner.

### *Streetside Setbacks and Buildings*

The sides of buildings along street edges should be landscaped within the setback to soften the building's appearance to the street as well as have additional windows or design elements. Refer to the City of Ontario Development Code for specific setback requirements.

### *Street Frontage and Parking Lots*

Parking lots should generally be placed away from streets. No street frontages should consist of a continuous parking lot, but should be broken up with buildings, landscaping, plazas, and other pedestrian features. Any parking along street edges should be set back with a landscaped buffer to minimize the dominant feeling of the automobile along the street. Continuous parking stalls should be interrupted by landscaped islands, no more than ten (10) stalls apart.

### *Service and Storage Areas*

Loading docks, garages and storage areas are to be located behind or to the side of buildings siding onto secondary access and not primary streets. These features must be screened with walls and landscaping as much as possible from public view of streets, residences, pedestrians walkways and connecting trails. Loading docks and storage areas should not conflict with pedestrian walkways.

### *Refuse Containers, Utility and Mechanical Equipment*

Refuse containers and equipment should be easily accessed by service vehicles but screened from view of the streets, parking lots, and connecting walkways through roof forms, walls and/or landscaping. Screening details should incorporate elements that are compatible with the architectural style of the building. Proper landscaping including trellises also may help to screen these elements. Equipment and enclosures shall not be located near pedestrian walkways.

## 8.2.3 Building Design

### *Massing*

With larger buildings, appropriate massing becomes more important to maintain the human-scale of the development and create a visually pleasing environment. Bay windows, stepped buildings, height changes and setback variations between stores helps to break up large buildings as well as indicate entries and store locations to customers. Tower elements or monumental features are encouraged at focal points, such as corners, plazas, major entrances, or where walkways meet streets. All elevations of a tower element or monumental feature shall be completely constructed. In no instance shall a feature of this nature be left unfinished and exposed to public view.

### *Roof Forms*

Hipped and gable roofs are encouraged. Roof pitches should be compatible with the architectural style of the building. Flat roofs should vary in height and be accompanied by cornice, trim or other accent features.

### *Entry Design*

Building entries should be prominent and easily identified. Various elements can be used to enhance the entry features including massing variation, materials and color change, change in roof form, and awnings. For smaller retail, as part of a cluster or strip, arcades, awnings, and simple signage may be acceptable as entries.

### *Arcades, Trellises, and Awnings*

Outdoor arcades along store fronts are encouraged over pedestrian walkways. Arcades may be used to connect separate buildings, or providing a more pleasing experience for pedestrians. Trellises or awnings may also be used to create a covered walkway to protect pedestrians from the sun and rain.

## 8.2.4 Architectural Details

### *Architectural Styles*

A consistent architectural style should be used throughout the commercial development to create a sense of continuity between the buildings. Related elements, such as trellises, planters, light-standards, windows, doors, etc. should also adopt detailing that is compatible with

the selected architectural style. The selected style of the commercial development does not necessarily need to be of any one of those available for the residential community but should be compatible to them.

Architectural styles should derive from Southern California and Ontario's history. Modern and "high-tech" styles are not acceptable style choices. Acceptable styles generally respond to the region's climate including such features as shade windows, outdoor circulation, and outdoor courtyards or plazas, recessed window frames, awnings, arcades, loggias, and trellises.

### *Building Wall Treatment*

No wall should have a blank, uninterrupted length exceeding 20 feet without including one of the following:

- Change in texture;
- Change in material;
- Change in plane;
- Lattice; and
- A tree or equivalent element.

Facades that are visible from adjacent streets or walkways should display even greater visual interest by using architectural elements that break up the massing of large buildings, such as windows, arcades, awnings, porticos, and other architectural features.

### *Base and Top Treatments*

Base and top treatments help to balance the "weight" of the building visually. Bases should appear to "ground" the building, while tops create a defined edge to the roofline. Possible treatment techniques are as follows:

- Base;
- Thicker walls;
- Natural materials;
- Different colored materials;
- Enriched landscaping with a mature height of at least 18";
- Special materials, such as ceramic tile, granite and marble, are encouraged on the base of buildings that face streets or connecting walkways, especially adjacent to major entries;
- Tops;
- Cornice treatments;
- Roof overhangs with brackets;
- Stepped parapets;
- Textured materials; and
- Different colored materials.

### *Exterior Materials*

Recommended materials include stucco, exterior plaster, brick, wood siding, tile, or stone. Exterior materials that appear pre-fabricated are not recommended. Selected materials and detailing should have an enduring appearance.

### *Roof Materials*

Roofing materials that are generally acceptable include metal standing seam, concrete tile, ceramic tile and slate or slate-like materials.

### *Colors*

Color selection should be consistent with the selected architecture style.

## 8.2.5 Open Space and Landscaping

### *Site Accessories*

Site accessories, such as recycling bins, bike racks, litter cans, planters, benches and transit shelters, should use materials and have an architectural character consistent with the overall project. These accessories should be graffiti-resistant with materials that are easy to clean and paint.

### *Connecting Walkways*

Walkways throughout the Specific Plan's commercial development should connect the various buildings to each other and to the sidewalks. Use of trellises, landscaping, sitting areas and the site planning of buildings adjacent to one another will encourage pedestrian activity within the commercial area. A typical walkway should be a minimum of six (6) feet wide. In large parking lots, pedestrian walkways should be provided within the median of at least two parking aisles for every five (5) aisles of 20 stalls or more.

Pedestrian walkways that may also be used for emergency access must allow minimum clearance of 30' wide and 14' vertical clearance.

### *Off-site Connections*

Off-site connections should be provided from the commercial area to the Specific Plan residential development. Access to the residential community will be available by adjacent sidewalks. Pedestrian trails should not lead to the rear of a Commercial Center.

### *Plazas*

Plazas are encouraged as much as possible to emphasize a pedestrian-friendly environment by creating locations within the commercial development that allow for people to gather. Plazas create a more inviting feeling to pedestrians, allowing them to feel safe from the vehicular dominated parking lot. These outdoor places may include water features, landscaping, and other elements to create a comfortable place to sit. Plazas are encouraged where high levels of pedestrian activity are expected, such as adjacent to major entrances and nearby uses that allow for more interactivity with the plaza such as delis, cafes, restaurants, bakeries and other food services.

### *Landscaping*

Landscaping helps to soften the feel of the buildings and parking lot while enhancing the visual quality of the site. The following landscaping techniques may be used:

Shrubs and tree canopies shall not be higher than three and lower then seven feet respectively to allow police officers the ability to patrol the project site without visual obstructions. Plants near low-lying windows shall have thorns as a deterrent for suspects hiding and removing glass panes as a point of entry.

- Provide special landscaping treatment at all project entries and building entries;
- Provide shade/canopy trees within parking areas;
- Use plants to define outdoor spaces such as edges, outdoor plazas, or movement paths between parking and building entrances;
- Chosen plantings should provide a continuity of form across the entire project.
- Where a parking lot contains 10 or more parking spaces and is visible from a street, not less than 5 percent of the total area, excluding any perimeter landscaping, shall be landscaped. Such landscaping shall be concentrated in any one location. A minimum of 50 percent of the plant material shall be canopy or shade trees. Contact the Community Services Department for specific requirements;
- All rows of parking spaces shall be provided with landscape islands at each row terminus, minimum five (5) feet in width, exclusive of curbs, to protect parked vehicles, ensure visibility, confine moving traffic to drive aisles and driveways, and provide within each row of parking spaces, landscaped islands, minimum five (5) feet in width exclusive of curbs, located so as to prevent more than ten vehicles from being parked side-by-side in an abutting configuration.
- Landscaped areas shall be delineated with a concrete curb, minimum 6-inches high by 6-inches wide; except where a landscape area is parallel and adjacent to a parking stall, the curb shall be a minimum 6-inches high by 12-inches wide, to provide an area for persons to step when entering or exiting a motor vehicle.

### *Outdoor Storage Areas*

Outdoor storage areas should be incorporated into the design of a project to avoid visual impacts on the site.

Outdoor storage areas should be located away from the street, behind or to the side of buildings. Walls and landscaping should be used to screen stored materials.

### *Transit Shelters*

Transit shelters should be incorporated into the design of the commercial project and will be designed according to guidelines provided by the transit agency of Ontario. The commercial developer should explore with the transit agency and the City, possibilities for a structure that is integrated architecturally with the project through its color, materials and architectural style.

Pedestrian walkways should be provided for easy accessibility by pedestrians moving to and from the transit stop to the commercial development.

### *Lighting*

Lighting standards under 15 feet should provide adequate illumination throughout the site during the nighttime hours. Lighting fixtures should be designed to be compatible with the architectural styles selected for the project. At a minimum, all light standards should have an attractive base and top; overhead "cobrahead" standards are not permitted. Buildings and landscaping can be illuminated indirectly to create a strong positive image. Along pedestrian walks, lighting should provide appropriate illumination at a human scale without too much glare. Lighting within larger parking lots should provide safe visibility. Service area lighting should be positioned as to not be seen from public view.

# 9. General Plan Consistency

# 9.0General Plan Consistency

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local General Plan. Specific plans must demonstrate consistency In regulations, guidelines, and programs with the goals and policies set forth in the General Plan.

The Subarea 29 Specific Plan (SP) has been prepared in conformance with the goals and policies of The Ontario Plan (TOP) Policy Plan (General Plan). The policy analysis in this Chapter describes the manner in which the SP complies with TOP Goals and Polices applicable to the project.

| *Land Use Element* | |
|---|---|
| **Policy Plan Goals and Policies** | **SP Consistency** |
| **GOAL LU1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.** | |
| LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identify, maximizes available and planned infrastructure, and foster the development of transit. | The SP area is within the New Model Colony as identified in The Ontario Plan. The SP will adhere to current approved City of Ontario Infrastructure Master Plans. |
| LU1-2 Sustainable Community Strategy. We integrate state, regional and local Sustainable Community/ Smart Growth principles into the development and entitlement process. | Sustainable Community/Smart Growth principles are incorporated into Land Use Plan. Pedestrian sidewalks and multipurpose trails provide connectivity. |
| LU1-3 Adequate Capacity. We require adequate infrastructure and services for all development. | The SP establishes an infrastructure and public facilities plan to ensure that adequate roadways and public utilities including sewer, water and drainage facilities along with parks and other public facilities are provided to serve the SP area. |
| LU1-4 Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on multi-modal transportation opportunities. (Link to Mobility Element Policy M3-3) | Multipurpose trails are provided within the SP area. These trails connect with the trails located on the City's Multipurpose Trails and Bikeway Corridor Plan and provides points of connection to parks, residential neighborhoods, schools and the neighborhood commercial area. |
| LU1-6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario. (Link to Complete Community Section of Community Economics Element) | The SP plans for a complete community with a mix of residential, commercial, and parks where residents can live, work, shop and recreate. |
| **GOAL LU2: Compatibility between a wide range of uses.** | |
| LU2-6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character. | The SP provides for an aesthetically pleasing streetscape concept. |
| LU2-9 Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks. | The project will comply with appropriate mitigation measures identified in the project EIR for soil remediation and proper venting to address the potential existence of methane gases within the project. Per development requirements, several feet of soil that is potentially methane producing will be removed from the site to minimize risks. |
| **GOAL LU5: Integrated airport facilities that minimize negative impacts to the community and maximize economic benefits.** | |
| LU5-7 ALUCP Consistency and Land Use Regulations. We comply with state law that requires general plans, specific plans and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport. | The SP is located within the Airport Influence Areas of Chino Airport and Ontario International Airport. Section 4.8 requires all development to be consistent with the Airport Land Use Compatibility Plans for both airports. |

| | |
|---|---|
| *Housing Element* | |
| **GOAL H2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.** | |
| H2-4 New Model Colony. We support a premier lifestyle community in the New Model Colony distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods. | The SP features single family detached housing types in a variety of plotting configurations distinguished by the highest design quality and cohesive and highly amenitized neighborhoods. |
| H2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices. | The SP has is own design guidelines to achieve architectural excellence. |
| **GOAL H4: Increased opportunities for low and moderate income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities.** | |
| H4-4: Mixed-income Housing. We encourage the integration of affordable housing in the New Model Colony, Ontario Airport Metro Center Area, and existing neighborhoods. | The SP provides for a wide range of home ownership opportunities for many different lifestyles. |
| *Parks and Recreation Element* | |
| **Goal PR1: A system of safe and accessible parks that meets the needs of the community.** | |
| PR1-1 Access to Parks. We strive to provide a park and/or recreational facility within walking distances (1/4 mile) of every residence. | The SP provides for parks and multipurpose trails that allow all homes to be within walking distance. |
| PR1-5 Acreage Standard. We strive to provide 5 acres of parkland (public and private) per 1,000 residents. | The SP provides for park land, park improvements and/or park fees or a combination thereof in order to meet and comply with City park standards. |
| PR1-6 Private Parks. We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents. | The SP will provide a minimum of 2 acres of developed private park space per 1,000 residents. |
| PR1-9 Phased Development. We require parks be built in new communities before a significant proportion of residents move in. | Development within the SP is required to be reviewed and approved pursuant to the City's Subdivision Ordinance which requires the approval of tentative and final subdivision maps for the project. Conditions of approval associated with the City's approval of tentative subdivision maps will provide for the timing of construction of parks as part of the development. |
| PR1-11 Environmental Function of Parks. We require new parks to meet environmental management objectives. | The SP requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Planning Department which may require the development to incorporate environmental management objectives into the design of parks. |
| PR1-12 Trails. We promote connections between parks and local trails including those managed by other public agencies. | Multipurpose trails are provided within the SP area. These trails connect with the trails located on the City's Multipurpose Trails and Bikeway Corridor Plan and provides points of connection to parks, residential neighborhoods, schools and the neighborhood commercial area. |
| PR1-14 Multi-family Residential Developments. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees. | The SP requires that all condominium and multi-family developments within the project provide private recreational areas and/or pocket parks for residents of the development in addition to the payment by the developer of adopted impact fees. |

| *Environmental Resources Element* | |
|---|---|
| **GOAL ER1: A reliable and cost effective system that permits the City to manage its diverse water resources and needs.** | |
| ER1-3 Conservation. We require conservation strategies that reduce water usage. | All SP development will meet CALgreen low flow fixture requirements. All irrigation systems will be designed per AB 325 guidelines and/or the City of Ontario's Water Conservation Ordinance. |
| ER1-5 Groundwater Management. We protect groundwater quality by incorporating strategies that prevent pollution, require remediation where necessary, capture and treat urban run-off, and recharge the aquifer. | The SP development will comply with all applicable regulations in regards to protecting groundwater quality. |
| ER1-6 Urban Run-off Quantity. We encourage the use of low impact development strategies to intercept run-off, slow the discharge rate, increase infiltration and ultimately reduce discharge volumes to traditional storm drain systems. | SP development shall be designed to detain, filter and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management (WQMP) for significant new development projects. Low impact development strategies will be implemented as part of source control best management practices. |
| ER1-7 Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations. | The project is obligated to control urban run-off, consistent with Regional Water Quality Control Board regulations as part of the regional NPDES Permit. |
| ER1-8 Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board. | The project is obligated to comply with wastewater discharge and collection requirements adopted by the Regional Water Quality Control Board. |
| **GOAL ER3: Cost-effective and reliable energy system sustained through a combination of low impact building, site and neighborhood energy conservation and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.** | |
| ER3-1 Conservation Strategy. We require conservation as the first strategy to be employed to meet applicable energy-saving standards. | All development within the SP will meet California's stringent CALgreen and Energy Codes. |
| ER3-2 Green Development- Communities. We require the use of best practices identified in green community rating systems to guide the planning and development of all new communities. | The SP contains a broad mix of land uses, density, trails and proximity to planned transit as identified in the best practices of several rating systems. |
| R3-3 Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation. | All development within the SP will meet California's stringent CALgreen and Energy Codes. |
| **GOAL ER4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.** | |
| ER4-4 Indoor Air Quality. We will comply with State Green Building Codes relative to indoor air quality. | SP development will be required to comply with all State laws in regards to indoor air quality. |
| **GOAL ER5: Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.** | |
| ER5-2 Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species. | The project will comply with all mitigation measures identified in the project EIR with regard to biological resources. |

| | |
|---|---|
| ER5-3 Right to Farm. We support the right of existing farms to continue their operations within the New Model Colony. | N/A, this refers to a City function. |
| ER5-4 Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses. | N/A, this refers to a City function. |
| *Community Economics Element* | |
| **GOAL CE1: A complete community that provides for all incomes and stages of life.** | |
| CE1-7 Retail Goods and Services. We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community. | The SP contains an approximately 12.1-acre neighborhood commercial site to provide goods and services to the community as well as surrounding areas. |
| CE1-12 Circulation. We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles. (Link to Mobility Public Transit) | The SP multipurpose trails throughout the community. A bus turnout is provided on Merrill Avenue. |
| **GOAL CE2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.** | |
| CE2-1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community. (Link to Community Design Element) | The SP sets forth criteria for creating high-quality places. |
| CE2-4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality. | The SP provides a framework for high quality architecture and urban design. |
| *Safety Element* | |
| **Goal S1: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced and other geologic hazards.** | |
| S1-1: Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading. | All habitable buildings within the SP will be required to meet the California Building Code. |
| **Goal S3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.** | |
| S3-8: Fire Prevention through Environmental Design. We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open space and buildings. (Link to Community Design Element) | All development within the SP incorporates fire prevention considerations in the design of streetscapes, sites, open spaces and buildings and will be verified for compliance during the review process. |
| **Goal S5: Reduced risk of injury, property damage and economic loss resulting from windstorms and wind- related hazards.** | |
| S5-2 Dust Control Measures. We require the implementation of Best Management Practices for dust control at all excavation and grading project. | Construction within the Specific Plan will comply with all mitigation measures identified in the project EIR with regard to dust control. |

| | |
|---|---|
| **Goal S6: Reduced potential for hazardous materials exposure and contamination.** | |
| S6-9 Remediation of Methane. We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines. | The project will comply with all mitigation measures identified as part of the venting to address the potential existence of methane gases within the project. |
| **Goal S7: Neighborhoods and commercial and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, community involvement and a system of continuous monitoring.** | |
| S7-4 Crime Prevention through Environmental Design (CPTED). We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings. | The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Police Department which may require the development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings. |
| *Mobility Element* | |
| **GOAL M1: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.** | |
| Ml-1: Roadway Design and Maintenance. We require our roadways to:<br>* Comply with federal, state and local design and safety standards.<br>* Meet the needs of multiple transportation modes and users.<br>* Handle the capacity envisioned in the Functional Roadway Classification Plan.<br>* Maintain a peak hour Level of Service (LOS) E or better at all intersections.<br>* Be compatible with the streetscape and surrounding land uses.<br>* Be maintained in accordance with best practices and our Right-of-Way Management Plan. | The SP is consistent with the requirements of the City's Functional Roadway Classification Plan. The City will maintain arterial streets and curb-to-curb internal streets through the creation of an Community Facilities District. Parkway improvements within the ROW along interior streets and alleys shall be maintained by an HOA. |
| Ml-2: Mitigation of Impacts. We require development to mitigate its traffic impacts. | Development within the SP will implement all traffic mitigation measures, standard conditions and project design features identified in the project EIR. |
| **GOAL M2: A system of trails and corridors that facilitate and encourage bicycling and walking.** | |
| M2-3: Pedestrian Walkways. We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points. (Link to Community Design CD3-1) | Pedestrian walkways, as shown in the roadway plans and sections, exist throughout the SP area promoting safe and convenient travel between destination points. |
| **GOAL M3: A public transit system that is a viable alternative to automobile travel and meets the basic transportation needs of the transit dependent.** | |
| M3-2 Transit Facilities at New Development. We require new development to provide transit facilities, such as bus shelters, transit bays and turnouts, as necessary. | A bus turnout in Merril Avenue is being developed. |

| *Community Design Element* | |
|---|---|
| **GOAL CD1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.** | |
| CD1-2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes. | The Design Guidelines set forth a clear and cohesive design theme by providing design criteria for site planning, architectural styles, landscaping, and walls and fences. |
| CD1-5 View Corridors. We require all major north- south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees. | The major north-south streets are designed to feature views of the San Gabriel Mountains and comply with City standards for these streets. |
| **GOAL CD2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and district.** | |
| CD2-1: Quality Architecture. We encourage all development projects to convey visual interest and character through:<br>* building volume, massing, and height to provide appropriate scale and proportion;<br>* a true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and<br>* exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style. | The Design Guidelines set forth a clear and cohesive design theme by providing design criteria for architecture, landscaping, and walls and fences. |
| CD2-2 Neighborhood Design. We create distinct residential neighborhoods that are functional, have a sense of community, emphasize livability and social interaction, and are uniquely identifiable places through such elements as:<br>* a pattern of smaller, walkable blocks that promote access, activity and safety;<br>* variable setbacks and parcel sizes to accommodate a diversity of housing types;<br>* traffic calming measures to slow traffic and promote walkability while maintaining acceptable fire protection and traffic flows;<br>* floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"}, as appropriate; and<br>* landscaped parkways, with sidewalks separated from the curb. | The Design Guidelines provide for distinct residential neighborhoods that are functional, have a sense of community, emphasize livability and social interaction, and are uniquely identifiable places. |
| CD2-5: Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right of way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture. | The Circulation Plan is designed to accommodate pedestrians, bicycles and autos equally. |

| | |
|---|---|
| CD2-6: Connectivity. We promote development of local street patterns and pedestrian networks that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means:<br>local street patterns that provide access between subdivisions and within neighborhoods and discourage through traffic;<br>a local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials; and neighborhoods, centers, public schools, and parks that are linked by pedestrian greenways open space networks. These may also be used to establish clear boundaries between distinct neighborhoods and/or centers. | The Circulation Plan is designed for connectivity that unifies neighborhoods. |
| CD 2-7: Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques. | All buildings will meet or exceed California's stringent CALgreen and California Energy Codes reducing energy demand. |
| CD2-8: Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of visibility and accessibility, and use of lighting. | The SP encourages "eyes on the street" for neighborhood safety and security. |
| CD2-9: Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits. | The SP landscape enhances the aesthetics of structures, created and defines public and private spaces and provides shade. |
| CD2-11: Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places. | The SP contains guidelines for neighborhood entries and monumentation. |
| CD2-12: Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures. | The SP contains guidelines for neighborhood entries and monumentation. |
| **GOAL CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing, and safe during all hours.** | |
| CD3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics. (Link to Bicycle and Pedestrians Section of the Mobility Element and Policies M2-3 and M2-4) | The SP is designed for bicycle and pedestrian accessibility throughout the community through a network of off-street bike and pedestrian trails. |

| | |
|---|---|
| CD3-2 Connectivity Between Streets, Sidewalks, Walkways and Plazas. We require landscaping and paving be used to optimize visual connectivity between streets, sidewalks, walkways and plazas for pedestrians. | Landscaping and paving are used to maintain a visual connectivity between streets, sidewalks, and walkways for pedestrians. |
| CD3-3 Building Entrances. We require all building entrances to be accessible and visible from adjacent streets, sidewalks or public open spaces. (Link to Safety Element Policy S7-4) | The SP guidelines for doors and entries promote the interface between public and private spaces. |
| CD3-5 Paving. We require sidewalks and road surfaces to be of a type and quality that contributes to the appearance and utility of streets and public spaces. | Sidewalks and road surfaces contribute to the appearance of streets and public spaces. |
| **GOAL CD5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages public and private investments.** | |
| CD5-1 Maintenance of Buildings and Property. We require all public and privately owned buildings and property (including trails and easements) to be properly and consistently maintained. | A master Home Owner Association (HOA) will be established to maintain common areas and other areas as shown in the Maintenance Responsibility Matrix. |
| CD5-2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure. | The HOA will maintain infrastructure elements as shown in the Maintenance Responsibility Matrix and in accordance with City rules and regulations. |
| *Community Economics Element* | |
| **GOAL CE1: A complete community that provides for all incomes and stages of life.** | |
| CE1-6 Diversity of Housing. We collaborate with residents, housing providers and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to support our workforce, attract business and foster a balanced community. | The SP provides a wide array of residential product types, including single family detached, single family attached to provide housing opportunities for a variety of stages of life and price points to foster a socially balanced community. |
| **GOAL CE2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.** | |
| CE2-1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community. | The SP provides for unique, high-quality places that add value to the community. |
| CE2-2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional and sustainable places that will compete well with their competition within the region. | The SP requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process. |
| CE2-5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values. | Maintenance will be ensured by the HOA. |
| CE2-6 Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property. | A Community Facilities District (CFD) may be established in conjunction with the Master Homeowners Association to maintain the public realm at the Avenue. |

# Appendix

# Appendix

## Appendix A—Legal Description

### *Subarea 29*

Section 23, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of CALIFORNIA, according to official plat thereof.

Together with the northeast quarter of Section 22, Township 2 South, Range 7 West, San Bernardino meridian, in the County of San Bernardino, state of CALIFORNIA, according to official plat thereof.

Excepting therefrom that portion lying westerly of the easterly line of that portion conveyed to the San Bernardino County Flood Control District by deed recorded September 9, 1977 in book 9259, page 335 of official records.

Also Excepting therefrom that portion lying westerly of the easterly line of that portion conveyed to the San Bernardino County Flood Control District by deed recorded November 18, 1977 in book 9308, page 683 of official records.

## Appendix B—Glossary of Specific Plan Terms

### *A. Glossary of Specific Plan terms*

***Accessory Structures*** —"Accessory structures" shall mean a detached subordinate structure located on the same lot, which is devoted exclusively to a use customarily incidental and subordinate to the principal structure.

***Building Height*** – "Building" Height shall mean the vertical distance measured from the average level of the highest and lowest point of the building site covered by the building, to the highest point of the structure.

***Casita***—An additional bedroom, home office, or use area located on the same lot as a single-family detached residence, which does not require subdivision. A Casita may contain its own bathroom facilities but not a kitchen. It also may not, by deed restriction, be rented or sold separately from the appurtenant residence.

A Casita shall meet main building setbacks, standard height limits, overall lot coverage, floor area ratios, and other applicable requirements.

***Conditional Use*** – "Conditional Use" shall mean a use permitted on a particular site and within a zoning district only upon finding that such use in a specified location will comply with all the conditions and standards for the location or operation of such use.

***Front Yard*** – "Front Yard" shall mean a yard extending across the full width of the lot, having at no point a depth of less than the minimum required, horizontal distance between the front lot line, or its tangent, and the closest permissible locations of the main building. A line at right angle to the front lot line or its tangent shall measure said distance. Front yard setbacks shall be measured from back of walk or R/W, if no walk.

***Home Occupations*** – "Home Occupations" shall mean an occupation customarily conducted as a secondary use entirely within a dwelling by the occupant of the dwelling in connection with which there is not display, no stock in trade, or commodity sold on the premises, and no persons employed: and which is conducted in such a manner that the outward appearance of the premise gives no indication of other than residential use, and which is not detrimental to the residential character of the neighborhood by virtue of traffic flow, noise, odor, or other adverse conditions.

***Lot Coverage*** – "Lot Coverage" shall mean that portion of the area of a lot, expressed as a percentage, occupied by all buildings or structures which are roofed or otherwise covered (exclusive of eaves or overhangs) and which extend more than three (3) feet above grade level).

***Lot Size*** – "Lot Size" shall mean the total area exclusive of public streets within the boundary lines of the lot.

***Lot Width*** – "Lot Width" shall mean the horizontal distance between the side lot line measured at right angles to the line comprising the depth of the lot at a point midway between the front and rear lot lines.

***Minimum Floor Area*** – "Minimum Floor Area" shall mean the minimum total horizontal area expressed in square feet, of all the floors of a building included within the surrounding walls, including shafts and enclosed exterior stairwells.

***Rear Yard*** – "Rear Yard" shall mean a yard extending across the full width of the lot, having at no point a depth of less than the minimum required horizontal distance as measured from the part of the main building nearest the rear lot line towards the rear lot line, and such measurement shall be along a line representing the shortest distance between said part of the main building and the rear lot line.

***Side Yard*** – "Side Yard" shall mean a yard between the main building and the side lot lines extending from the required front yard, or the front lot line where not front yard is required, to the rear yard, the width of which side yard shall be measured horizontally from, and at right angles to, the nearest point of a side lot line toward the nearest part of a main building.

***Temporary Uses*** – "Temporary Uses" shall mean residential or commercial construction activities, including necessary construction offices and materials and equipment storage, subdivision sales and leasing offices, sales information centers, sales pavilions, model home complexes, and signage located within the subdivision.

## Appendix C—Summary of Key Specific Plan Background Information

### *Technical appendices*

- Traffic Study and/or TIA (Traffic Impact Analysis);
- Hydrology/Drainage Study and drainage master plan for the Specific Plan area;
- Sewer Master Plan for the Specific Plan area;
- Water Master Plan for the Specific Plan area; and
- Geotechnical/Soils study (if applicable) for the Specific Plan area.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING THE USE OF AN ADDENDUM TO THE SUBAREA 29 SPECIFIC PLAN ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2004011009), PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO. PSP03-003.

WHEREAS, SL ONTARIO DEVELOPMENT COMPANY, LLC, (hereinafter referred to as "Applicant") has filed an Application for the approval of an Amendment to the Subarea 29 Specific Plan (File No. PSPA20-006) to increase the overall density within Planning Area 27 (Cluster Homes – 7-14 du/ac), from 4.8 dwelling units per gross acre to 4.9 dwelling units per gross acre, and establish a new residential product type (Motorcourt Cluster D – 8-Plex), in conjunction with a Tentative Tract Map (File No. PMTT20-012 / TTM 20389) to subdivide 5.99 acres of land into one numbered lot and three lettered lots for condominium purposes, bounded by Merrill Avenue to the north, Southern California Edison easement to the west, and the San Bernardino County Flood Control District and the City of Eastvale to the south, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the property to the north of the Project site is within the Planning Area 28 (Conventional Medium Lot) land use designation of the Subarea 29 Specific Plan and a residential subdivision in currently under construction. The properties to the east are located in the City of Eastvale within R-1 land use district and developed with residential land uses. The properties to the south are located in the City of Eastvale within the PRD (Planned Residential Development) land use district and developed with residential land uses. The property to the west is located within the Subarea 29 Specific Plan and has an SCE Corridor land use designation that is developed with 180 foot tall SCE transmission towers (115kV) and power lines; and

WHEREAS, the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) was certified by the City Council on October 17, 2006, (hereinafter referred to as “Certified EIR”) in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as “EIR Addendum”) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as “CEQA”); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, on May 25, 2021, the Planning Commission of the City of Ontario conducted a hearing to consider the Addendum and concluded said hearing on that date, voting to issue Resolution No. PC21-038, recommending that the City Council concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and further recommending that the City Council take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the City Council is the decision-making authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the City Council has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project are on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making authority for the project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) was certified on October 17, 2006 in conjunction with File No. PSP03-003.

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts.

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference.

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

SECTION 2. ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and.

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the City Council hereby finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby approve the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

PASSED, APPROVED, AND ADOPTED this 15th day of June 2021.

## Addendum to the Subarea 29 Specific Plan Environmental Impact Report

*(Addendum to follow this page)*

City of Ontario
Planning Department
303 East "B" Street
Ontario, California
Phone: (909) 395-2036
Fax: (909) 395-2420

## California Environmental Quality Act
# Environmental Checklist Form

**Project Title/File No(s).:** Park Place/Planning Area 27 – PSPA20-006 and PMTT20-012 (TTM 20389)

**Lead Agency:** City of Ontario, 303 East "B" Street, Ontario, California 91764, (909) 395-2036

**Contact Person:** Jeanie Irene Aguilo, Associate Planner

**Project Sponsor**: SL Ontario Development Company, LLC, 1156 N. Mountain Avenue, Upland, CA 91786

**Project Location and Setting**: The 5.99-net-acre[1] Project site includes Planning Area 27 of the Subarea 29 Specific Plan and is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County (refer to Figure 1, Regional Location Map, and Figure 2, Vicinity Map). As illustrated on Figure 3, the Project site is located south of Merrill Avenue, approximately 1,000 feet of Celebration Avenue).

The Project site is vacant but was previously graded; the Southern California Edison (SCE) corridor extends along the western portion of the Project site (refer to Figure 3, Aerial Photograph). The areas surrounding the site to the west, east and south are developed with residential uses. The area to the north of the Project site is currently under construction.

**General Plan Designation**: Low Density Residential (2.1 – 5 du/ac) and within the Chino Airport Overlay area.

**Zoning**: SP – Subarea 29 Specific Plan

**Description of Project**: The proposed Project involves an amendment to the Subarea 29 Specific Plan (File No. PSPA20-006) to: (1) increase the number of allowed units within Planning Area 27 (Cluster Homes – 7-14 du/ac) from 47 dwelling units to 73 dwelling units (an increase of 26 dwelling units), which would increase the total number of allowed units in the Subarea 29 Specific Plan area from 2,392 dwelling units to 2,418 dwelling units; and (2) provide an additional housing typology (Motorhome Cluster D – 8-Plex). The modified Specific Plan Land Use Summary table and additional housing typology are provided in Attachment A of this document). With the increase in units, the overall density in the Specific Plan area would increase from 4.8 dwelling units per gross acre to 4.9 dwelling units per gross acre, consistent with the Low Density Residential (2.1 – 5 du/ac) land use designation in The Ontario Plan (TOP). Additionally, the proposed Project involves a Tentative Tract Map (TTM 20389) (File No. PMTT20-012) to subdivide 5.99 acres of land into one numbered lot and three lettered lots for condominium purposes (refer to proposed TTM 20389 included in Attachment B of this document).

The proposed Specific Plan Amendment and TTM 20389 would allow for the development of 73 cluster homes, which are single-family detached residential units with vehicular access from lanes (private alleys or motorcourts) via interior streets, with direct access garages. A conceptual site plan for the proposed development within Planning Area 27 is provided on Figure 4. As shown, access would be provided from two locations along Merrill Avenue. The proposed development would be implemented in compliance with Development and Subdivision Regulations contained in the Subarea 29 Specific Plan, and Ontario Development Code Chapters 5.0 and 6.0 (e.g., setbacks and separations, landscaping, parking and circulation).

**Background:** In October 2006, the City of Ontario approved the Subarea 29 Specific Plan (File No. PSPA20-006). The Subarea 29 Specific Plan has been subsequently amended through April 2015. The 2015 amendment included the addition of 99 dwelling units, allowing up to 2,392 units to be developed in the Specific Plan area. The Subarea 29 Specific Plan establishes the land use designations, infrastructure and services, development standards, and design guidelines for the approximately 540-gross-acre Subarea 29 Specific Plan area located east of the Cucamonga Creek Channel, south of Eucalyptus Avenue, north of Bellegrave Avenue and west of Haven Avenue. The southern boundary of the Specific Plan area is also

[1] The Project site is 7.6 gross acres, inclusive of the Southern California Edison (SCE) easement and public right-of-way; Assessor Parcel Number (APN) 0218-331-42.

## Conceptual Site Plan

the jurisdictional boundary between the cities of Ontario and Eastvale, and the counties of San Bernardino and Riverside.

The *Subarea 29 (Hettinga) Specific Plan Final Environmental Impact Report* (Subarea 29 Specific Plan Final EIR) (State Clearinghouse [SCH] No. 2004011009) was prepared for the Subarea 29 Specific Plan and was certified by the City Council in October 2006. The Subarea 29 Specific Plan Final EIR analysis concluded that implementation of the Subarea 29 Specific Plan would result in significant and unavoidable impacts related to loss of Farmland (project and cumulative), air quality impacts (project and cumulative), cumulative surface water quality impacts (due to impaired receiving waters), cumulative traffic-related noise, operational cumulative traffic impacts, and cumulative solid waste generation. A Statement of Overriding Considerations was adopted by the City for these impacts. Mitigation measures were adopted to reduce impacts to less than significant impacts to the extent feasible, and those mitigation measures will continue to apply to development in the Subarea 29 Specific Plan area, including the proposed Project. An Addendum to the Subarea 29 Specific Plan Final EIR was prepared for the 2015 Specific Plan Amendment.

Prior to adoption of TOP, the New Model Colony (NMC) General Plan Amendment established the land uses within the entire NMC area and designated the Subarea 29 Specific Plan area as Low Density Residential (2.1 – 5 du/ac), Neighborhood Commercial, Open Space – Parkland, Open Space – Non Recreation, and Public School. In 2010, TOP was adopted and designated the Project site Low Density Residential (2.1 – 5 du/ac). The associated *The Ontario Plan Final Environmental Impact Report* (SCH No. 2008101140) (TOP Final EIR) was certified in January 2010, and is incorporated by reference in this Addendum. The TOP Final EIR analyzes the environmental impacts that would result from implementation of the TOP, focusing on changes to land use associated with the buildout of the Land Use Plan in the Policy Plan and impacts resultant of population and employment growth in the City. The TOP and TOP Final EIR anticipated 2,700 residential unit for the Subarea 29 Specific Plan area. The significant unavoidable adverse impacts that were identified in the TOP Final EIR include: agriculture resources, air quality, cultural resources, greenhouse gas emissions, noise and transportation/traffic.

**CEQA REQUIREMENTS FOR AN ADDENDUM:**

Section 15164(a) of the CEQA Guidelines outlines when an Addendum to an EIR is required, and states: "The lead agency or responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred."

Section 15162 of the CEQA Guidelines states: "When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:

A. When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:

    (1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

    (2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

    (3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

        (a) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

        (b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative."

Thus, if the proposed Project does not result in any of the circumstances listed in section 15162 (i.e., no new or substantially greater significant impacts), the City may adopt an addendum to the Subarea 29 Specific Plan Final EIR.

Section 16164(e) of the CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR is needed for further discretionary approval. These findings are described below, and are based on the analysis presented in this document:

1. *Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects*. Substantial changes are not proposed with the Project and the proposed Project will not require revisions to the Subarea 29 Specific Plan Final EIR or TOP Final EIR. The Specific Plan is divided into 31 Planning Areas and the Subarea 29 Specific Plan Final EIR evaluated the impacts associated with the development capacity of 2,293 dwelling units; a subsequent Specific Plan Amendment increased the allowed number of units to 2,392 dwelling units, which was evaluated in the 2015 Addendum. The proposed Project involves a Specific Plan Amendment to increase the residential unit count in Planning Area 27 of the Subarea 29 Specific Plan by 26 dwelling units (from 47 dwelling units to 73 dwelling units). This would increase the total number of allowed residential units in the Specific Plan area by 1%, from 2,392 dwelling units to 2,418 dwelling units, an insubstantial increase. The proposed Specific Plan Amendment also involves the introduction of an additional housing typology (Motorhome Cluster D – 8-Plex). A TTM is also proposed (TTM 20389) to accommodate the proposed development in Planning Area 27. On January 26, 2010, the City of Ontario adopted TOP Policy Plan (General Plan). The SPA proposes a maximum of 2,418 residential units within the Subarea 29 Specific Plan which is less than the 2,700 residential unit development capacity established by the Policy Plan (General Plan) for the Specific Plan area. Additionally, the overall density of the Specific Plan area with the proposed Project would be 4.9 dwelling units per acre, which is consistent with the Policy Plan (General Plan) that allows up to 5 dwelling units per acre within the Low Density Residential (2.1 – 5 du/ac) land use designation. Additionally, the City's water, recycled water, and sewer infrastructure would have sufficient capacity to serve the additional units with the proposed Specific Plan Amendment. There are no new significant impacts or a substantial increase in the severity of previously identified significant impacts due to the proposed Specific Plan Amendment. Therefore, no proposed changes or revisions to the EIR are required.

2. *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, which would require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects*. As shown on the aerial photograph provided in Figure 3, the Project site (Planning Area 27) was previously graded and the areas surrounding the Project site are developed or under construction. Grading activities and other site disturbance were conducted in accordance with the mitigation requirements outlined in the Subarea 29 Specific Plan Final EIR, including measures required for the protection of biological, cultural, and paleontological resources. No sensitive biological resources, cultural resources, or paleontological resources existing at the Project site. No proposed changes or revisions to the EIR are required.

3. *Required Finding*. *No new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, has been provided that would indicate: the proposed project would result in one or more significant effects not discussed in the previous EIR; significant effects previously examined would be substantially more severe than shown in the previous EIR; mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or, mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternatives*. The Subarea 29 Specific Plan Final EIR did not address Global Climate Change impacts as required by Assembly Bill 32, passed in August of 2006. However, the impact of buildout of TOP on the environment due to the emission of greenhouse gases (GHGs) were analyzed in TOP Final EIR. According to TOP Final EIR, this impact would be significant and unavoidable. This EIR was certified by the City on January 27, 2010, at which time a statement of overriding considerations was also adopted for TOP's significant and unavoidable impacts, including that concerning the emission of greenhouse gases. Pursuant to Public Resources Code section 21083.3, this impact need not be analyzed further, because (1) the proposed buildout of the Subarea 29 Specific Plan would result in an impact that was previously analyzed in TOP Final EIR, which was certified by the City; (2) the proposed Project would not result in any GHG impacts that were not addressed in TOP Final EIR; (3) the proposed Project would only increase the number of residential units by 26 Low Density residential dwelling units and the total number of units in the Specific Plan area (2,481 units) is less than evaluated in TOP Final EIR. As part of the City's certification of TOP Final EIR and its adoption of TOP, the City adopted mitigation measures with regard to the significant and unavoidable impacts relating to GHG emissions. These mitigation measures are outlined in Section 6 of this Initial Study.

   The Subarea 29 Specific Plan Final EIR evaluated the Riverside County Airport Land Use Compatibility Plan – Chino Airport, but the final report was not adopted prior to approval of the Subarea 29 Specific Plan Final EIR. Additionally, the Ontario International Airport (ONT) Land Use Compatibility Plan (ALUCP) was adopted by the City of Ontario in 2011. As determined by the analysis presented in this Addendum, the proposed Project would not result in any new impacts related to the Chino Airport that were not addressed in TOP Final EIR. As part of the City's certification of TOP Final EIR and its adoption of TOP, the City adopted mitigation measures with regard to the significant and unavoidable impacts relating to the Chino Airport. These mitigation measures are outlined in Section 6 of this Initial Study. There are no significant impacts associated with the ONT.

   Lastly, Appendix G of the CEQA Guidelines was modified as part of the CEQA Guidelines updates that were approved in December 2018. New checklist topics related to Energy, Tribal Cultural Resources and Wildfire were added and some checklist questions for other environmental topics were revised. The Initial Study presented in this Addendum uses the updated checklist in Appendix G of the CEQA Guidelines. As identified through the analysis presented in this Addendum, there would be no new significant impacts resulting from the proposed Project related to the changes Appendix G of the CEQA Guidelines.

**Conclusion**:

Accordingly, and based on the findings and information contained in the previously certified the Subarea 29 Specific Plan Final EIR, the analysis above, the attached Initial Study, and the CEQA statute and CEQA Guidelines, including sections 15164 and 15162, the proposed Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and the TOP Final EIR, as appropriate. No changes or additions to the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum or TOP Final EIR analyses are necessary, nor is there a need for any additional mitigation measures.

The attached Initial Study provides an analysis of the proposed Project and verification that the proposed Project will not cause environmental impacts such that any of the circumstances identified in CEQA Guidelines section 15162 are present.

**Surrounding Land Uses:**

| | Existing Land Use | General Plan Designation | Zoning Designation | Specific Plan Land Use |
|---|---|---|---|---|
| City of Ontario | | | | |
| Site | Vacant and SCE Corridor | Low Density Residential (2.1 – 5 du/ac) and Open Space – Non-Recreation | SP – Subarea 29 Specific Plan | Cluster Homes (7-14 du/acre) |
| North | Vacant | Low Density Residential (2.1 – 5 du/ac) | SP – Subarea 29 Specific Plan | Conventional Medium Lot (4-6 du/acre) |
| West: | Residential | Low Density Residential (2.1 – 5 du/ac) | SP – Subarea 29 Specific Plan Specific Plan | Cluster Homes (7-14 du/acre) and Conventional Small Lot (5-9 du/acre) |
| City of Eastvale | | | | |
| South | Residential | Medium Density Residential | R-1 One-Family Dwellings | NA |

du/acre – dwelling units per acre; NA – Not Applicable

**Other public agencies whose approval is required** (e.g., permits, financing approval or participation agreement): None.

**ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:**

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- ☐ Aesthetics
- ☐ Air Quality
- ☐ Cultural Resources
- ☐ Geology / Soils
- ☐ Hazards & Hazardous Materials
- ☐ Land Use / Planning
- ☐ Noise
- ☐ Public Services
- ☐ Transportation
- ☐ Utilities / Service Systems
- ☐ Mandatory Findings of Significance
- ☐ Agriculture and Forestry Resources
- ☐ Biological Resources
- ☐ Energy
- ☐ Greenhouse Gas Emissions
- ☐ Hydrology / Water Quality
- ☐ Mineral Resources
- ☐ Population / Housing
- ☐ Recreation
- ☐ Tribal Cultural Resources
- ☐ Wildfire

**DETERMINATION** (To be completed by the Lead Agency):

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier certified Subarea 29 Specific Plan Final EIR and associated 2015 Addendum pursuant to applicable standards, and (b) The certified TOP Final EIR and (c) have been avoided or mitigated pursuant to the earlier certified environmental documents, including revisions or mitigation measures that are imposed upon the proposed project, the analysis from the certified Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and the certified TOP EIR was used as a basis for this Addendum, and nothing further is required.

**EVALUATION OF ENVIRONMENTAL IMPACTS:**

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from the "Earlier Analyses" Section may be cross-referenced).

5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:

   a) Earlier Analyses Used. Identify and state where they are available for review.

   b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The explanation of each issue should identify:

   a) The significance criteria or threshold, if any, used to evaluate each question; and

   b) The mitigation measure identified, if any, to reduce the impact to less than significance.

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **1. AESTHETICS.** Would the project: | | | | |
| a. Have a substantial adverse effect on a scenic vista? | ☐ | ☐ | ☐ | ☒ |
| b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? | ☐ | ☐ | ☐ | ☒ |
| c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality? | ☐ | ☐ | ☐ | ☒ |
| d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area? | ☐ | ☐ | ☐ | ☒ |
| **2. AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project: | | | | |
| a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use? | ☐ | ☐ | ☐ | ☒ |
| b. Conflict with existing zoning for agricultural use, or a Williamson Act contract? | ☐ | ☐ | ☐ | ☒ |
| c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? | ☐ | ☐ | ☐ | ☒ |
| d. Result in the loss of forest land or conversion of forest land to non-forest use? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? | ☐ | ☐ | ☐ | ☒ |
| **3. AIR QUALITY.** Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project: | | | | |
| a. Conflict with or obstruct implementation of the applicable air quality plan? | ☐ | ☐ | ☐ | ☒ |
| b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard? | ☐ | ☐ | ☐ | ☒ |
| c. Expose sensitive receptors to substantial pollutant concentrations? | ☐ | ☐ | ☐ | ☒ |
| d. Result in other emissions (such as those leading to odors adversely affecting a substantial number of people? | ☐ | ☐ | ☐ | ☒ |
| **4. BIOLOGICAL RESOURCES.** Would the project: | | | | |
| a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☒ |
| b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? | ☐ | ☐ | ☐ | ☒ |
| c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? | ☐ | ☐ | ☐ | ☒ |
| d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? | ☐ | ☐ | ☐ | ☒ |
| e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? | ☐ | ☐ | ☐ | ☒ |
| f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **5. CULTURAL RESOURCES.** Would the project: | | | | |
| a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5? | ☐ | ☐ | ☐ | ☒ |
| b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5? | ☐ | ☐ | ☐ | ☒ |
| c. Disturb any human remains, including those interred outside of dedicated cemeteries? | ☐ | ☐ | ☐ | ☒ |
| **6. ENERGY.** Would the project: | | | | |
| a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation? | ☐ | ☐ | ☐ | ☒ |
| b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? | ☐ | ☐ | ☐ | ☒ |
| **7. GEOLOGY AND SOILS.** Would the project: | | | | |
| a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: | ☐ | ☐ | ☐ | ☒ |
| i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. | ☐ | ☐ | ☐ | ☒ |
| ii) Strong seismic ground shaking? | ☐ | ☐ | ☐ | ☒ |
| iii) Seismic-related ground failure, including liquefaction? | ☐ | ☐ | ☐ | ☒ |
| iv) Landslides? | ☐ | ☐ | ☐ | ☒ |
| b. Result in substantial soil erosion or the loss of topsoil? | ☐ | ☐ | ☐ | ☒ |
| c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? | ☐ | ☐ | ☐ | ☒ |
| d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property? | ☐ | ☐ | ☐ | ☒ |
| e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water? | ☐ | ☐ | ☐ | ☒ |
| f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **8. GREENHOUSE GAS EMISSIONS.** Would the project: | | | | |
| a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? | ☐ | ☐ | ☐ | ☒ |
| b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases? | ☐ | ☐ | ☐ | ☒ |
| **9. HAZARDS AND HAZARDOUS MATERIALS.** Would the project: | | | | |
| a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? | ☐ | ☐ | ☐ | ☒ |
| b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? | ☐ | ☐ | ☐ | ☒ |
| c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? | ☐ | ☐ | ☐ | ☒ |
| d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? | ☐ | ☐ | ☐ | ☒ |
| e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area? | ☐ | ☐ | ☐ | ☒ |
| f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |
| g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires? | ☐ | ☐ | ☐ | ☒ |
| **10. HYDROLOGY AND WATER QUALITY.** Would the project: | | | | |
| a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality? | ☐ | ☐ | ☐ | ☒ |
| b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: | ☐ | ☐ | ☐ | ☒ |
| i) result in substantial erosion or siltation on- or off-site; | ☐ | ☐ | ☐ | ☒ |
| ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite; | ☐ | ☐ | ☐ | ☒ |
| iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or | ☐ | ☐ | ☐ | ☒ |
| iv) impede or redirect flood flows? | ☐ | ☐ | ☐ | ☒ |
| d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation? | ☐ | ☐ | ☐ | ☒ |
| e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan? | ☐ | ☐ | ☐ | ☒ |
| **11. LAND USE AND PLANNING.** Would the project: | | | | |
| a. Physically divide an established community? | ☐ | ☐ | ☐ | ☒ |
| b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? | ☐ | ☐ | ☐ | ☒ |
| **12. MINERAL RESOURCES.** Would the project: | | | | |
| a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? | ☐ | ☐ | ☐ | ☒ |
| b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? | ☐ | ☐ | ☐ | ☒ |
| **13. NOISE.** Would the project result in: | | | | |
| a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? | ☐ | ☐ | ☐ | ☒ |
| b. Generation of excessive groundborne vibration or groundborne noise levels? | ☐ | ☐ | ☐ | ☒ |
| c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **14. POPULATION AND HOUSING.** Would the project: | | | | |
| a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)? | ☐ | ☐ | ☐ | ☒ |
| b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere? | ☐ | ☐ | ☐ | ☒ |
| **15. PUBLIC SERVICES.** Would the project: | | | | |
| a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: | | | | |
| i) Fire protection? | ☐ | ☐ | ☐ | ☒ |
| ii) Police protection? | ☐ | ☐ | ☐ | ☒ |
| iii) Schools? | ☐ | ☐ | ☐ | ☒ |
| iv) Parks? | ☐ | ☐ | ☐ | ☒ |
| v) Other public facilities? | ☐ | ☐ | ☐ | ☒ |
| **16. RECREATION.** Would the project: | | | | |
| a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? | ☐ | ☐ | ☐ | ☒ |
| b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? | ☐ | ☐ | ☐ | ☒ |
| **17. TRANSPORTATION/TRAFFIC.** Would the project: | | | | |
| a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities? | ☐ | ☐ | ☐ | ☒ |
| b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)? | ☐ | ☐ | ☐ | ☒ |
| c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? | ☐ | ☐ | ☐ | ☒ |
| d. Result in inadequate emergency access? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| **18. TRIBAL CULTURAL RESOURCES.** Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: | | | | |
| a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)? | ☐ | ☐ | ☐ | ☒ |
| b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe. | ☐ | ☐ | ☐ | ☒ |
| **19. UTILITIES AND SERVICE SYSTEMS.** Would the project: | | | | |
| a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? | ☐ | ☐ | ☐ | ☒ |
| b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years? | ☐ | ☐ | ☐ | ☒ |
| c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? | ☐ | ☐ | ☐ | ☒ |
| d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? | ☐ | ☐ | ☐ | ☒ |
| e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? | ☐ | ☐ | ☐ | ☒ |
| **20. WILDFIRE.** If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project: | | | | |
| a. Substantially impair an adopted emergency response plan or emergency evacuation plan? | ☐ | ☐ | ☐ | ☒ |

| *Issues* | *Potentially Significant Impact* | *Less Than Significant With Mitigation* | *Less Than Significant Impact* | *Impacts Analyzed in Previous EIR* |
|---|---|---|---|---|
| b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire? | ☐ | ☐ | ☐ | ☒ |
| c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? | ☐ | ☐ | ☐ | ☒ |
| d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? | ☐ | ☐ | ☐ | ☒ |
| **21. MANDATORY FINDINGS OF SIGNIFICANCE.** | | | | |
| a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? | ☐ | ☐ | ☐ | ☒ |
| b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.) | *1.*☐ | *2.*☐ | *3.*☐ | *4.*☒ |
| c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? | *5.*☐ | *6.*☐ | *7.*☐ | *8.*☒ |

## EXPLANATION OF ISSUES

The Subarea 29 Specific Plan Final EIR, certified in October 2006, was prepared as a Program EIR in accordance with CEQA, the CEQA Guidelines, and the City's Rules for the Implementation of CEQA. As required, the EIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by implementation of the Subarea 29 Specific Plan. The Final EIR focused on impacts from the proposed land uses associated with buildout of the Specific Plan Land Use Plan, and impacts from the resultant population and employment growth from the Specific Plan.

Once a Program EIR has been prepared, subsequent activities within the program must be evaluated to determine whether an additional CEQA document needs to be prepared. However, if the Program EIR addresses the program's effects as specifically and comprehensively as possible, many subsequent activities could be found to be within the Program EIR scope and additional environmental documents may not be required (CEQA Guidelines Section 15168[c]). When a Program EIR is relied on for a subsequent activity, the lead agency must incorporate feasible mitigation measures and alternatives developed in the Program EIR into the subsequent activities (Guidelines Section 15168[c][3]). If a later activity would have effects that were not examined in the Program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration.

Here, an Initial Study has been prepared to determine if the proposed Project is within the scope of the Subarea 29 Specific Plan Final EIR such that additional environmental review is not required. As discussed below, the City has concluded that no additional environmental review is required, such that this Initial Study can serve as an Addendum to the Subarea 29 Specific Plan Final EIR pursuant to Section 15164 of the CEQA Guidelines. Substantial changes are not proposed to the Subarea 29 Specific Plan Project and will not require revisions to the Subarea 29 Specific Plan Final EIR. The Specific Plan is divided into 31 Planning Areas and the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum evaluated the impacts associated with the development capacity of 2,392 units. As previously addressed, the currently proposed Project would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 to 73 (an increase of 26 units), would introduce a new housing typology, and includes proposed TTM 20389. Applicable mitigation measures from the Subarea 29 Specific Plan Final EIR are incorporated by reference in each impact area discussion and are listed at the conclusion of this Addendum under the "Earlier Analysis" section.

On January 26, 2010, the City of Ontario adopted TOP Policy Plan (General Plan). With the proposed Specific Plan Amendment, the total number of dwelling units allowed to be developed in the Subarea 29 Specific Plan area would increase from 2,392 dwelling units to 2,418 dwelling units, which is less than the 2,700 residential unit development capacity established by the Policy Plan (General Plan) for the Subarea 29 Specific Plan area. Additionally, the overall density of the Specific Plan area of 4.9 dwelling units per acre is consistent with the Policy Plan (General Plan) that allows up to 5 dwelling units per acre within the Low Density Residential (2.1 – 5 du/ac) land use designation. Finally, the City's water, recycled water, and sewer infrastructure would have sufficient capacity to serve the additional development allowed by the proposed Project. Therefore, no proposed changes or revisions to the Subarea 29 Final EIR are required. The proposed Project would not result in any additional impacts beyond those previously analyzed in the Subarea 29 Specific Plan Final EIR or the TOP Final EIR.

**1. AESTHETICS.** Would the project:

**a. Have a substantial adverse effect on a scenic vista?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that no substantial effect on a scenic vista would result from implementation of the proposed development. The Policy Plan (General Plan) does not identify scenic vistas within the City. However, the Policy Plan (Policy CD1-5) of TOP requires all major north-south streets be designed and constructed to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. North-south streets should be clear of visual clutter, including billboards and be enhanced appropriately by framing corridors with trees.

The Project site is located south of Merrill Avenue and is not located along any major north-south streets. Therefore, no adverse impacts related to scenic vistas would result from the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Substantially damage scenic resources, including, but not limited to, tress, rock outcroppings and historic buildings within a state scenic highway?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that no impacts to state scenic highways would result from implementation of the proposed development. The City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation. There are no historic buildings or any scenic resources identified on or in the vicinity of the Project site. Therefore, no scenic resources within a state scenic highway would be impacted by the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that the visual character of the Specific Plan area would be changed dramatically changed but would not be degraded with the introduction of a well-planned and landscaped new residential community, resulting in a less than significant impact. The Project site has been graded and remains vacant. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology (Motorcourt Cluster D – 8-plex) at the Project site. The proposed residential units would be consistent with the design standards of the Subarea 29 Specific Plan and the policies of the Community Design Element of the Policy Plan (General Plan) and zoning designations on the property, as well as with the existing and future development in the surrounding area. Therefore, the proposed Project would not degrade the visual quality of the area through development of the site with single-family homes. Therefore, no adverse impacts related to the degradation of the existing visual character or quality would result from the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that potential impacts associated with light and glare would be less than significant levels with adhere to the City's standard practices and procedures, including requirements to ensure that light does not spill onto

adjacent properties. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology (Motorcourt Cluster D – 8-plex) at the Project site. New lighting beyond that anticipated in the previous environmental analysis would not be introduced to the site with the development of the proposed Project. Pursuant to the requirements of the City's Development Code, on-site lighting would be shielded, diffused or indirect, to avoid glare to pedestrians or motorists. In addition, lighting fixtures would be selected and located to confine the area of illumination to within the Project site and minimize light spillage.

Site lighting plans would be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, no adverse impacts are anticipated.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**2. AGRICULTURE AND FOREST RESOURCES.** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:

**a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that implementation of development allowed by the Specific Plan would result in the conversion of Prime Farmland to nonagricultural uses and considered the impact significant and unavoidable. According to the 2016 California Department of Conservation's (CDC) California Important Farmland Finder (the latest information available), the western portion of the Project site (including the SCE corridor) is classified as Prime Farmland and the eastern portion of the Project site is classified Other Land (CDC, 2016). The Project site has been graded and is currently vacant; therefore, the conversion of Prime Farmland to non-agricultural uses anticipated in the Subarea 29 Specific Plan Final EIR has already occurred. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The Subarea 29 Specific Plan Final EIR identified approximately 50% of the 540-acre Specific Plan Area designated Prime Farmland. The impact would remain as a significant and unavoidable impact.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that impacts related to

conflict with existing Williamson Act contracts would be significant and unavoidable. However, based on review of Figure III-1-1, Williamson Active Contracts Locations Map, there are no areas within the Specific Plan area that remain under a Williamson Act contract. Further, the Project site is zoned "Subarea 29 Specific Plan". The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and no changes to the impact conclusions presented in the Final EIR.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR did not address impacts associated with lands zone for forestland or timberland. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The Project site is zoned "Subarea 29 Specific Plan". There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither TOP nor the City's Zoning Code provide designations for forest land, timberland, or timberland production. There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The proposed Project would not result in any conflict with zoning for forest land, timberland, or timberland production.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Result in the loss of forest land or conversion of forest land to non-forest use?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR did not address impacts to forestland or timberland. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The Project site has been graded and is currently vacant; there is no forest land at or near the Project site. There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The proposed Project would not result in the loss of forest land or the conversion of forest land to non-forest uses. No impacts would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. Involve other changes in the existing environment, which, due to their location or nature, could result in the conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?**

Discussion of Effects: As previously discussed, the Subarea 29 Specific Plan Final EIR concluded that implementation of development in the Specific Plan area would convert Farmland, and specifically Prime Farmland, to non-agricultural use. The conversion of farmland to urban uses was determined to be a potentially significant impact that is unavoidable. The Project site has been previously graded and although the western portion of the site continues to be classified as Prime Farmland, the conversion of Farmland to non-agricultural use has already occurred. Similarly, the areas surrounding the Project site have been developed or are under construction. There is no forest land at or near the Project site so no conversion of forest land to non-forest use would occur.

There would be no change to the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the conversion of Farmland to non-agricultural use would remain as a significant and unavoidable impact. There is no additional mitigation available that could potentially reduce this impact. The impact will remain as a significant unavoidable impact.

It should also be noted that in order to minimize conflicts between urban and agricultural land uses, MM Ag 2 from the Subarea 29 Specific Plan Final EIR requires that all residential units in the Subarea 29 Specific Plan be provided with a deed disclosure, or similar notice, approved by the City Attorney, regarding the proximity and nature, including odors, of neighboring agricultural uses. Mitigation Measure (MM) Ag 2 remains applicable to proposed development in Planning Area 27 and is presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation Required: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. Applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**3. AIR QUALITY**. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

**a. Conflict with or obstruct implementation of the applicable air quality plan?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Subarea 29 Specific Plan would not impair implementation of the Air Quality Management Plan (AQMP) and would result in less-than-significant impacts. Since certification of the Subarea 29 Specific Plan Final EIR, the South Coast Air Quality Management District (SCAQMD) has updated the AQMP. The current AQMP for CEQA analysis purposes is the 2016 AQMP, which is a regional and multi-agency effort (SCAQMD, California Air Resources Board [CARB], Southern California Association of Governments [SCAG], and United States Environmental Protection Agency [USEPA]). The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. City and county general plans were used to develop the growth and pollutant emissions forecasts in the 2016 AQMP. With the proposed Specific Plan Amendment, the total number of units allowed in the Subarea 29 Specific Plan area would increase from 2,392 dwelling units to 2,418 units, which is less than the 2,700 residential unit development capacity established by TOP Policy Plan (General Plan) for the Subarea 29 Specific Plan area. Therefore, consistent with the conclusions of the Subarea 29 Specific Plan Final EIR, the proposed Project would not conflict with the AQMP's growth assumptions or the AQMP, resulting in a less than significant impact.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that during construction and operation, implementation of development allowed by the Subarea 29 Specific Plan would result in significant and unavoidable project-level and cumulative impacts associated with emissions of air pollutants for which the region (South Coast Air Basin [SCAB]) is in non-attainment. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site.

With respect to construction emissions, the types of construction activities and construction equipment that would be used for construction in Planning Area 27 would be the same as that evaluated in the Subarea 29 Specific Plan Final EIR. However, as shown on the aerial photograph provided on Figure 3, the majority of approved land uses in the Subarea 29 Specific Plan area have been constructed or are currently under construction. Additionally, the mass grading for the 5.99-acre Project site, which uses larger equipment (and generates higher air quality emissions) has been completed; finish grading activities would be conducted as part of the proposed Project. Therefore, the construction activities associated with the proposed Project would be less than what was anticipated for a peak construction day as analyzed in the Subarea 29 Specific Plan Final EIR. It should also be noted that federal and State requirements for cleaner diesel engines would further reduce construction emissions compared to estimates in the Subarea 29 Specific Plan Final EIR. Additionally, MM Air 1 though MM Air 3, which identify requirements to reduce construction emissions, would be implemented during construction of the proposed Project. These mitigation measures are presented under the discussion of "Earlier Analysis" at the end of this document. Therefore, daily construction emissions resulting from the proposed Project would not exceed those presented in the Subarea 29 Specific Plan Final EIR and likely would be less.

Mobile emissions are the primary factor associated with operational emissions. Based on the *Park Place Specific Plan (Planning Area 27) Trip Generation Assessment* (Trip Generation Assessment) prepared by Urban Crossroads (November 2020), the increase in 26 units within Planning Area 27 associated with proposed Project would generate 168 additional daily trips compared to that anticipated for Planning Area 27 in the Subarea 29 Specific Plan Final EIR (Urban Crossroads, 2020). However, the total number of units and associated vehicular trip generation would be less than anticipated in TOP and evaluated in TOP Final EIR for the Subarea 29 Specific Plan area (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment). Additionally, based on the SCAQMD 1993 CEQA Handbook, it is estimated that a potentially significant air quality impact would occur with the development of approximately 166 units; therefore, the development of an additional 26 dwelling units alone would not represent a significant air quality impact and would not represent a substantial increase in emissions beyond those already approved in the Subarea 29 Specific Plan Final EIR and 2015 Addendum.

Therefore, although the proposed Project would increase the number of units and associated operational air pollutant emissions associated with development in the Subarea 29 Specific Plan area, and specifically Planning Area 27, including emissions of criteria pollutants for which the Project region is non-attainment under an applicable federal or state ambient air quality standard, the proposed Project would not result in any new or substantially more severe impacts beyond that previously analyzed in the Subarea 29 Specific Plan Final EIR and TOP Final EIR. Additionally, consistent with MM Air 4 from the Subarea 29 Specific Plan Final EIR, a bus stop is planned at Haven Avenue, just north of Merrill Avenue. This bus stop will be approximately 0.25 mile from the Project site (within walking distance), and would facilitate use of transit to reduce vehicular trips and associated air pollutant emissions. MM Air 4 is presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No

changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Expose sensitive receptors to substantial pollutant concentrations?**

Discussion of Effects: Sensitive receptors are defined as populations that are more susceptible to the effects of pollution than the population at large. The SCAQMD identifies the following as sensitive receptors: long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences, schools, playgrounds, child care centers, and athletic facilities. The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would result in increased local traffic volumes, but would not expose sensitive receptors to substantial localized carbon monoxide (CO) concentrations. Additionally, the Final EIR concluded that emissions during project construction would exceed the SCAQMD localized significance thresholds (LSTs) for nitrogen oxides (NOx) and particulates (PM10), resulting in a potentially significant and unavoidable impact to sensitive receptors.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would not be a change or increase in the type and amount of construction activities, type of uses proposed (residential), or proximity to sensitive receptors. Therefore, the proposed minimal increase of 26 residential dwelling units within Planning Area 27 would not result in a substantial increase in the number of sensitive receptors being exposed to pollutant concentrations, or the amount of pollutant concentrations resulting from implementation of development in the Subarea 29 Specific Plan area.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that potential odor impacts resulting from implementation of the Specific Plan would be less than significant. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed additional residential units, as well as those permitted within the Low-Density Residential zoning district, do not create objectionable odors. Therefore, no adverse impacts are anticipated.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**4. BIOLOGICAL RESOURCES.** Would the project:

**a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded there may be a probability of burrowing owl (*Athene cunicularia hypogea*) colonization within the Subarea 29 Specific Plan area considering the presence of foraging habitat and previous records of presence. To ensure that no direct loss of individuals occurs, mitigation is required prior to initiation of on-site

grading activities for each development phase. With mitigation impacts to burrowing owl were determined to be less than significant. Specifically, MM Bio 1 requires a pre-construction survey for resident burrowing owls be conducted by a qualified biologist 30 days prior to construction activities. If ground-disturbing activities are delayed or suspended for more than 30 days after the preconstruction survey, the site should be resurveyed for owls. The Project site was previously graded and the required pre-construction surveys were conducted. However, the site remains vacant and pre-construction surveys would be conducted again prior to construction for the proposed Project. MM Bio 1 is presented under the discussion of "Earlier Analysis" at the end of this document. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and impacts to burrowing owl would remain less than significant.

The Subarea 29 Specific Plan EIR analysis also identified that potential habitat for the federally listed Delhi sands Flower Loving Fly (DSFLF) (*Rhaphiomidas terminatus abdominalis*). Planning Areas 28 A & B (including Bellegrave Avenue in Planning Area 28), 30 A & B, 31, and 32 were included in the general biological assessment for the area and were determined to contain the soil series Delhi fines and may contain suitable habitat for the DSFLF. Based on the results of focused surveys, the Final EIR concluded that Planning Area 27 (the current Project site) does not support the DSFLF. Further, the Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Therefore, the proposed Project would not impact the DSFLF.

In August 2014, ECORP Consulting updated the Biological Reconnaissance for the Subarea 29 Specific Plan Area and concluded that due to the high level of disturbance, the land use activity, and lack of suitable habitat that all other sensitive species identified during the database search are either presumed to be absent or have a very low potential to occur. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Additionally, the Project Applicant has paid the required City of Ontario open space mitigation fee (MM Bio 2) to address potential cumulative impacts associated with loss of habitat. The proposed Project would have a less than significant impact on candidate, sensitive, or special status species.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the man-made ponds within the Specific Plan area did not support riparian habitat, that the habitat value was low due to the lack of species and structural diversity, and that habitat for sensitive biological resources is not present. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The Project site does not support riparian habitat or other sensitive natural communities and no impact to such resources would occur with implementation of the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan (through construction and operation) would not have direct and indirect effects upon the hydrology and aquatic habitat quality of state or federally protected wetlands and "Others Waters" of the United States as defined Section 404 of the *Clean Water Act*. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. There are no protected wetlands on-site, as defined by Section 404 of the Clean Water Act and no impact to protected wetlands would occur with implementation of the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would not interfere with migratory movement and considered the impact less than significant because habitat fragmentation already occurred due to agricultural practices, development, and road construction. No wildlife corridors were identified within the Specific Plan area, including the Project site. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The Project site is surrounding be existing development and is not within or near any native wildlife nursery sites. Additionally, construction activities would be conducted in compliance with the Migratory Bird Treaty Act (MBTA) and CDFW requirements (refer to MM Bio 4, which is presented under the discussion of "Earlier Analysis" at the end of this document). Therefore, the proposed Project would not interfere with the movement of any species, with migratory wildlife corridors, or impede the use of a native wildlife nursery site, and impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that there are no specific local policies or ordinances established to protect biological resources that would relate to the Project site and impacts relative to this issue would be less than significant. The City of Ontario does not have any municipal ordinances for the protection of trees on private property; however, Municipal Code Sections 10-1.25 and 10-2.05 prohibit the damaging or destruction of trees on City property, except under conditions specified in the Municipal Code. There are existing trees planted in the public right-of-way along Merrill Avenue north of the Project site; however, these trees would be retained, and the proposed Project would not conflict with any policies or ordinances protecting biological resources.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions

to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area is not part of an adopted HCP, NCCP or other approved habitat conservation plan and that no significant impacts would result. The Project site has been graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Therefore, the Project site is not within an adopted HCP, NCCP or another approved habitat conservation plan. However, it is within the Ontario Recover Unit for the DSFLF; refer to the discussion above related to potential impacts to this species. As identified, impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**5. CULTURAL RESOURCES.** Would the project:

**a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would not result in the destruction of historical resources and considered the impact less than significant. The Project site has been graded, is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and is currently vacant. City records do not reflect the presence of a historic resource as defined in CEQA Guideline section 15064.5 at, or in the vicinity of the Project site and no impacts to historical resources would result from implementation of the proposed Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded there is a low potential for adverse environmental impacts to unique archaeological resources and potential impacts were determined to be less than significant. However, the Final EIR included mitigation outlining actions to take in the unlikely event unknown resources were discovered during grading (refer to MM Cultural 1). The Project site has been graded, and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. No archaeological resources were encountered during previous grading activities and no impacts to archaeological resources would occur during remaining construction activities, which would occur in previously disturbed soils. However, in the unlikely event archaeological resources are encountered the requirements outlined in MM Cultural 1, which is presented under the discussion of “Earlier Analysis” at the end of this document, would be followed and impacts would remain less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Disturb any human remains, including those interred outside of formal cemeteries?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded there is low potential for adverse environmental impacts to human remains, including those interred outside of a formal cemetery, and impacts were determined to be less than significant. However, the Final EIR included mitigation outlining actions to take in the unlikely event human remains were discovered during grading (refer to MM Cultural 2). The Project site has been graded, and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. No human remains were discovered during previous grading activities and it is not anticipated that human remains would be encountered during remaining construction activities. However, in the unlikely event human remains are encountered the requirements outlined in MM Cultural 2, which is presented under the discussion of "Earlier Analysis" at the end of this document, would be followed and impacts would remain less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**6. ENERGY**. Would the project:

Although Energy was added in December 2018 as a topic in the Environmental Checklist included in Appendix G of the CEQA Guidelines, analysis of a project's potential to result in a significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources is not a new requirement. This issue is also addressed in Appendix F of the CEQA Guidelines. Energy consumption was addressed in the Subarea 29 Specific Plan Final EIR (Section III.12, Utilities/Service Systems).

**a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that development in the Specific Plan area would have less than significant impacts related to energy consumption (natural gas and electric). It was identified that energy consumption can be reduced through design considerations that are more sustainable than conventional construction; MM Util 6 requires that the City and developer include sustainable systems for use of energy within the project design.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project would not change the type of land uses anticipated for Planning Area 27 (residential) and would not change the anticipated construction and operational characteristics of the proposed development. Therefore, the associated energy demand for these activities would be the same as discussed below.

Construction-related energy demand includes energy and fuel used by construction equipment, construction worker vehicles, and construction vendor / hauling vehicles, coupled with construction energy efficiency / conservation measures. The construction equipment, use of electricity, and fuel for the proposed Project would be typical for the type of construction proposed because there are no aspects of the proposed construction process that are unusual or energy-intensive, and construction equipment would conform to applicable CARB emissions standards, which promote equipment fuel efficiencies. It should also be noted that fuel efficiencies are improving for on- and off-road vehicle engines due to more stringent government requirements. Construction energy consumption would represent a "single-event" demand and would not require ongoing or permanent commitment of energy resources. Thus, construction energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

With respect to operations, Title 24 energy standards have become more stringent since 2006. These regulations are regularly updated. The 2019 version of Title 24 was adopted by the CEC and became effective on January 1, 2020. The 2019 Title are applicable to building permit applications submitted on or after January 1, 2020. Further, the California Green Building Standards (CALGreen) Code, which contains mandatory and voluntary requirements for new residential and nonresidential buildings, became effective in August 2009 following certification of the Subarea 29 Specific Plan Final EIR. The proposed residential buildings would be constructed to achieve the building energy standards set forth in the Title 24 requirements in effect at the time of building permit issuance. Therefore, there would be additional reductions in energy consumption pursuant to the new and updated codes compared to those anticipated in the Subarea 29 Specific Plan Final EIR. Further, the types of trips and vehicle mix generated by the proposed Project would be consistent with other residential development of similar scale and configuration, including other development in the Subarea 29 Specific Plan area. The proposed Project does not propose uses or operations that would inherently result in excessive and wasteful vehicle trips and vehicle miles traveled, nor associated excess and wasteful vehicle energy consumption.

Therefore, the proposed Project would not result in wasteful, inefficient, or unnecessary consumption of energy resources during construction or operation and the impact would remain less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?**

Discussion of Effects: The potential for development within the Subarea 29 Specific Plan area to conflict with or obstruct a state or local plan for renewable energy or energy efficiency was not specifically addressed in the Final EIR or 2015 Addendum. However, federal and state agencies regulated energy use and consumption through various means and programs when the 2006 EIR was prepared and continue to do so. On the state level, the California Public Utilities Commission (CPUC) and the California Energy Commission (CEC) are two agencies with authority over different aspects of energy. In additional to Title 24 energy standards and the CALGreen Code addressed above, relevant state energy-related laws and plans are summarized below.

- **Integrated Energy Policy Report**. Senate Bill (SB) 1389 (Bowen, Chapter 568, Statutes of 2002) requires the CEC to prepare a biennial integrated energy policy report that assesses major energy trends and issues facing California's electricity, natural gas, and transportation fuel sectors and provides policy recommendations to conserve resources; protect the environment; ensure reliable, secure, and diverse energy supplies; enhance the state's economy; and protect public health and safety. The 2019 IEPR was adopted January 31, 2020, and continues to work towards improving electricity, natural gas, and transportation fuel energy use in California. The 2019 IEPR focuses on a variety of topics such as including the environmental performance of the electricity generation system, landscape-scale planning, the response to the gas leak at the Aliso Canyon natural gas storage facility, transportation fuel supply reliability issues, updates on Southern California electricity reliability, methane leakage, climate adaptation activities for the energy sector, climate and sea level rise scenarios, and the California Energy Demand Forecast. The 2019 IEPR is a State Policy report and is not applied to individual development projects such as the proposed Project or other development in the Subarea 29 Specific Plan area. However, the proposed Project would not involve any uses or activities that would conflict with or otherwise hinder or obstruct implementation of the goals presented in the 2019 IEPR.
- **State of California Energy Plan**. The CEC is responsible for preparing the State of California Energy Plan (State Energy Plan), which identifies emerging trends related to energy supply, demand, conservation, public health and safety, and the maintenance of a healthy economy. The State Energy Plan calls for the state to assist in the transformation

of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the State Energy Plan identifies a number of strategies, including assistance to public agencies and fleet operators and encouragement of urban designs that reduce vehicle miles traveled and accommodate pedestrian and bicycle access. The proposed Project takes advantage of existing infrastructure systems, and promotes land use compatibilities through the development of residential uses on a site designated for such uses in the TOP and the Subarea 29 Specific Plan. Further, Merrill Avenue extends along the northern boundary of the Project site and will provide Class II bike lanes, a pedestrian walkway, and a multi-purpose trail to promote non-vehicular travel. The Subarea 29 Specific Plan and the proposed Project would support urban design and planning processes identified under the State Energy Plan, and would not otherwise interfere with or obstruct implementation of the State Energy Plan.

- **State of California Renewables Portfolio Standard (SB 1078, SB 107, and SBX1-2)**. Established in 2002 under SB 1078, and accelerated in 2006 under SB 107 and again in 2011 under SBX1-2, California's Renewables Portfolio Standard (RPS) Program requires retail sellers of electric services to increase procurement from eligible renewable energy resources. The RPS applies to all electricity retailers in the State including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators. All of these entities must adopt the RPS goals of 20% of retail sales from renewables by the end of 2013, 25% by the end of 2016, and 33% by the end of 2020. As with the rest of the Subarea 29 Specific Plan area, the proposed Project would receive electricity from SCE. SCE is required by law to comply with RPS Goals. Therefore, the proposed Project would not interfere with nor obstruct implementation of the RPS.

The proposed Project would also comply with the requirements of the City's Climate Action Plan (CAP), which is addressed under the Greenhouse Gas Emissions section of this document. Compliance with the CAP would be achieved through the implementation of an array of project design features that would conserve or reduce energy use, (i.e., improved insulation, water use reduction, use of recycled water, solar energy, etc.).

Therefore, the proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency, and this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**7. GEOLOGY & SOILS**. Would the project:

**a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:**

**i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area, including the Project site, is located outside the Fault Rupture Hazard Zone (formerly Alquist-Priolo Zone) and there would no impacts related to rupture of a known earthquake fault. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Therefore, no impacts associated with rupture of a known earthquake fault would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No

changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**ii) Strong seismic ground shaking?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan could expose people or structures to seismic hazards; however, with implementation of mitigation this impact would be less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the underlying geologic conditions at the Project site remain the same. As identified in the Final EIR, all construction would be conducted in compliance with the Uniform Building Code (UBC), the Ontario Municipal Code, TOP and all other ordinances adopted by the City related to construction and safety. Further, as required, the previous grading activities at the Project site (Planning Area 27) were subject to observation and testing. It was concluded that rough grading was performed in general accordance with the recommendations presented in the geotechnical reports and field, and Planning Area 27 is acceptable from a geotechnical standpoint (Leighton and Associates, 2019). Further, MM Geo 4 from the Subarea 29 Specific Plan Final EIR requires that a project-specific geotechnical investigation be prepared prior to issuance of building permits and the recommendations be incorporated during project design and grading. MM Geo 4, which is presented under the discussion of "Earlier Analysis" at the end of this document, is applicable to the proposed Project. This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**iii) Seismic-related ground failure, including liquefaction?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that due to the consistency of the underlying soils and the deep groundwater levels, the potential for seismic-induced liquefaction was less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the potential for seismic-induced liquefaction remains the same (less significant). Further, as identified above, based on observations and testing during grading, Planning Area 27 is acceptable from a geotechnical standpoint (Leighton and Associates, 2019). Therefore, this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**iv) Landslides?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the topography of the Specific Plan area is virtually flat, and the potential for landslides is considered not significant. The Project site has been graded and the terrain remains level. No impacts related to seismically induced landslides would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Result in substantial soil erosion or the loss of topsoil?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan could alter site topography, which could affect the rate or extent of erosion; however, with implementation of mitigation measures this impact would be less than significant. The Project site has been graded and remains vacant with exposed soil. Compliance with applicable regulations, including implementation of erosion control and dust reduction measures required by the Stormwater Pollution Prevention Plan (SWPPP), review of grading plans by the City Engineer, and obtaining required permits (refer to MM Geo 1, which is presented under the discussion of "Earlier Analysis" at the end of this document), ensure that erosion impacts are less than significant, and. Under the developed condition, and with adherence to the requirements of the National Pollutant Discharge Elimination System (NPDES) requirements and the Environmental Resource Element of the Policy Plan (General Plan) strategies, and compliance with the UBC and Ontario Municipal code requirements the potential for erosion would be reduced to a less than significant level.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would locate structures on soils that are considered potentially unstable and prone to settlement and corrosion; however, with implementation of mitigation measures this impact would be less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the underlying geologic conditions at the Project site remain the same. As required, the previous grading activities at the Project site (Planning Area 27) were subject to observation and testing. It was concluded that rough grading was performed in general accordance with the recommendations presented in the geotechnical reports and field, and Planning Area 27 is acceptable from a geotechnical standpoint (Leighton and Associates, 2019). Further, implementation of TOP strategies, adherence to requirements outlined in the Uniform Building Code and Ontario Municipal code, and implementation of MM Geo 2 and MM Geo 4, which require further geotechnical evaluation of on-site soils prior to development, would ensure that impacts remain less than significant. MM Geo 2 and MM Geo 4 are presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would locate structures on soils characterized by their sandy texture and inability to hold moisture. Therefore, the potential for expansive soils was determined to be less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and the underlying geologic conditions at the Project site remain the same. Further, as required, the previous grading activities at the Project site (Planning Area 27) were subject to observation and testing. It was concluded that rough grading was performed in general accordance with the recommendations presented in the geotechnical reports

and field, and Planning Area 27 is acceptable from a geotechnical standpoint (Leighton and Associates, 2019). This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would involve the removal of existing septic tanks, and a complete sewer system would be installed that does not require the use of septic tanks. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and the proposed residential uses would be connected to sewer lines that have been installed to serve the Specific Plan area. There would no use of septic systems or alternative wastewater treatment systems and no impact would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that earth-disturbing activities associated with the implementation of the Specific Plan could potentially disturb or damage undocumented paleontological resources; however, with implementation of MM Cultural 3, this impact would be less than significant. The Project site has been graded, and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. No paleontological resources were encountered during previous grading activities, which were conducted in compliance with the requirements outlined in the *Paleontological Resources Monitoring and Treatment Plan* established for the Subarea 28 Specific Plan. No impacts to paleontological resources are expected to occur during remaining construction activities, which would occur in previously disturbed soils. However, in the unlikely event paleontological resources are encountered, applicable requirements outlined in MM Cultural 3 would be followed and impacts would remain less than significant. MM Cultural 3 is presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

## 8. GREENHOUSE GAS EMISSIONS.

The State of California enacted Assembly Bill (AB) 32, the California Global Warming Solutions Act of 2006, after certification of the Subarea 29 Specific Plan Final EIR, and, as a result, increased attention has been paid to the impact of GHG emissions. The California Natural Resources Agency (CNRA) in 2010, adopted amendments to the CEQA Guidelines in a new Section 15064.4 entitled "Determining the Significance of Impacts from Greenhouse Gas Emissions", which require evaluation of GHG emissions. Therefore, GHG emissions were not specifically identified as such in the Subarea 29 Specific Plan Final EIR analyses. However, as described in the following paragraphs, courts have ruled

that there is no requirement to address GHG emissions in an Addendum to an EIR that was completed prior to the adopted CEQA amendments. "Information on the effect of greenhouse gas emissions on climate change" does not constitute "new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the IS / MND was adopted." (See *Citizens for Responsible Equitable Environmental Development v. City of San Diego* [2011] 196 Cal. App. 4th 515, 531–532 [rejecting claim that such information triggered the need for a supplemental EIR, and explaining that such information was known "long before the City approved the 1994 EIR" at issue]). Further, the impact of buildout of TOP on the environment due to the emission of GHG emissions was analyzed in the TOP Final EIR. As previously discussed, the proposed buildout of the Subarea 29 Specific Plan was previously analyzed in TOP Final EIR, which was certified by the City.

Would the project:

**a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

Discussion of Effects: Limiting GHG emissions to combat climate change has been a governmental goal since the late 1970s. As explained by the United States Supreme Court in *Massachusetts v. EPA (2007) 549 U.S. 497*: "In the late 1970s, the Federal Government began devoting serious attention to the possibility that carbon dioxide emissions associated with human activity could provoke climate change. In 1978, Congress enacted the National Climate Program Act, 92 Stat. 601, which required the President to establish a program to "assist the Nation and the world to understand and respond to natural and man-induced climate processes and their implications". In 1987, Congress enacted the Global Climate Protection Act for the purpose of "establish[ing] a national climate program that will assist the Nation and the world to understand and respond to natural and man-induced climate processes and their implications" (15 *United States Code* [USC] 2902). The act required the establishment of various programs to further climate change research (15 USC 2904[d]).

In 1988, the United Nations created the Intergovernmental Panel on Climate Change (IPCC) to provide scientific information regarding climate change to policymakers. In 1992, 154 nations, including the United States, entered into the United Nations Framework Convention on Climate Change (UNFCCC), a nonbinding agreement under which industrialized countries pledged to work to reduce GHG emissions. Five years later, in 1997, the parties to the UNFCCC adopted the Kyoto Protocol, which set binding GHG reduction targets for 37 industrialized countries and the European Community, with the objective of reducing their collective emissions by 5% below 1990 levels during the "commitment period" of 2008–2012.

As noted by the court in *Citizens for Responsible Equitable Environmental Development v. City of San Diego* (supra, 196 Cal. App. 4th 515), by 1990, the potential impacts of GHG emissions were already the subject of litigation, with the "Natural Resources Defense Council (NRDC) argu[ing that an] "increase in fossil fuel combustion … will … lead to a global increase in temperatures, causing a rise in sea level and a decrease in snow cover that would damage the shoreline, forests, and agriculture of California." (Id. at 531, quoting *City of Los Angeles v. National Highway Traffic Safety Administration* [D.C. Cir. 1990] 286 U.S. App.D.C. 78.)

Thus, by the 1990s, California's local governmental agencies were well aware of the importance of monitoring and limiting GHG emissions when approving projects. Since GHG impacts were known at the time that the Subarea 29 Specific Plan Final EIR was conducted, information regarding the proposed Project's potential to impact climate change does not constitute "new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time . . . the IS / MND was adopted". Accordingly, the inclusion of GHG impacts as a requirement of CEQA analysis does not trigger the need for any further environmental review. (See *Citizens for Responsible Equitable Environmental Development v. City of San Diego* [supra, 196 Cal. App. 4th at 531–532]). Notwithstanding this conclusion, the discussion below addresses the analysis of the proposed Project included in TOP Final EIR.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. With the

proposed Specific Plan Amendment, the total number of units allowed in the Subarea 29 Specific Plan area would increase from 2,392 dwelling units to 2,418 units, which is less than the 2,700 residential unit development capacity established by TOP Policy Plan (General Plan) for the Subarea 29 Specific Plan area. Therefore, the Project site was previously analyzed by the Certified TOP EIR as a residential use that may have an impact on the environment at buildout of The Ontario Plan due to the emission of GHGs. According to TOP Final EIR, this impact would be significant and unavoidable (Re-circulated Portions of the Ontario Plan Draft Environmental Impact Report, p. 2-118.) TOP Final EIR was certified by the City on January 27, 2010, at which time a statement of overriding considerations was also adopted for The Ontario Plan's significant and unavoidable impacts, including that concerning the emission of GHGs.

Implementation of the proposed Project would not create significantly greater impacts than were identified in the Certified TOP EIR. The proposed Project includes a sample GHG Reduction Measures Screening Threshold Table, which provides guidance in measuring the reduction of GHG emissions attributable to certain design and construction measures incorporated into development projects. The analysis, methodology, and significance determination (thresholds) are based upon the City's Climate Action Plan (CAP), which includes GHG emission inventories (2008 and 2020 forecasts), a year 2020 emission reduction target, the goals and policies to reach the target, together with the Addendum prepared for the CAP. The Screening Table assigns points for each option incorporated into a project as mitigation or a project design feature (collectively referred to as "feature"). The point values correspond to the minimum emissions reduction expected from each feature. The menu of features allows maximum flexibility and options for how development projects can implement the GHG reduction measures. The point levels are based upon improvements compared to 2008 emission levels of efficiency. Projects that garner at least 100 points will be consistent with the reduction quantities anticipated in the City's CAP. As such, those projects that garner a total of 100 points or greater would not require quantification of project specific GHG emissions. Consistent with CEQA Guidelines, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions. Future development on the Project site will be required to meet or exceed the minimum 100 points; therefore, quantification of Project-specific GHG emissions is not required.

Additionally, pursuant to Public Resources Code Section 21083.3, this impact need not be analyzed further, because (1) the proposed Project would result in an impact that was previously analyzed in the Certified TOP Final EIR; (2) the proposed Project would not result in any greenhouse gas impacts that were not addressed in the Certified EIR; (3) the proposed Project is consistent with The Ontario Plan. The proposed impacts of the Project were already analyzed in the Certified TOP Final EIR and the Project would be built to current energy efficient standards. Potential impacts of project implementation would be less than significant with mitigation already required under the Certified TOP Final EIR and, CAP Screening Tables, and current energy efficiency standards. No changes or additions to the Certified TOP Final EIR analyses are necessary.

Mitigation: No new mitigation measures required. The proposed Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified TOP Final EIR. No changes or additions to Certified TOP Final EIR analyses are necessary. The mitigation measures adopted as part of Certified TOP Final EIR adequately address any potential significant impacts and there is no need for any additional mitigation measures. The City has reviewed the emission reduction measures and concepts in TOP Final EIR, and has determined that the following actions apply and shall be undertaken by the applicant in connection with the proposed Project: energy efficient design, efficient irrigation systems, and compliance with Title 24 of the California Code of Regulations.

**b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?**

Discussion of Effects: The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. With the proposed Specific Plan Amendment, the total number of units allowed in the Subarea 29 Specific Plan area would increase from 2,392 dwelling units to 2,418 units, which

is less than the 2,700 residential unit development capacity established by TOP Policy Plan (General Plan) for the Subarea 29 Specific Plan area.

The proposed Project is consistent with TOP Goal ER 4 of improving air quality by, among other things, implementation of Policy ER4-3, regarding the reduction of GHG emissions in accordance with regional, state and federal regulations. As discussed above, the proposed Project is also consistent with the City's CAP. Further, the proposed Project is consistent with the policies outlined in Section 5.6.4 of TOP Final EIR, which aims to reduce the City's contribution of greenhouse gas emissions at build-out by 15%, because the proposed Project is upholding the applicable City's adopted mitigation measures from the TOP Final EIR. Therefore, the proposed Project does not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing GHG emissions. This impact is less than significant.

Mitigation Required: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**9. HAZARDS & HAZARDOUS MATERIALS.** Would the project:

**a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that implementation of the proposed residential and retail uses would not generate hazardous materials other than those typically associated with household products, and there would be no transport of non-construction related hazardous materials to or from the Specific Plan area. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no new uses proposed and the Proposed Project would not involve the transport, use or disposal of hazardous materials during either construction or operation. Therefore, no adverse impacts are anticipated and this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that if known and unknown hazardous materials/situations within the Specific Plan area are not mitigated, current and future residents could be exposed to hazards or hazardous materials (e.g., asbestos and lead from building materials and paints in older structures, pesticides from past agricultural uses, or petroleum products used or leaked on the site), resulting in a potentially significant impact. However, this impact would be less than significant with implementation of mitigation measures. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, the Project site has already been graded, and mitigation measures outlined in the Subarea 29 Specific Plan Final EIR for pre-demolition and grading activities have been completed. There are no new uses proposed and development the proposed residential uses would not expose the public or the environment to a significant hazard through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. In the unlikely event of an accident, implementation of the strategies included in TOP would decrease the

potential for health and safety risks from hazardous materials, Further, MM Haz 4 from the Subarea 29 Specific Plan Final EIR, which is presented under the discussion of "Earlier Analysis" at the end of this document, identifies actions to take if material that is believed to be hazardous waste is discovered during construction, ensuring the impact remains less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area was more than one-mile from the Phoenix High School (Corona-Norco Unified School District [CNUSD]) and Colony High School (Chaffey Joint Union High School District [CJUHSD]), but within one-quarter mile of the proposed elementary school within the Specific Plan area. Therefore, while the proposed uses would not involve hazardous emissions or handling of acutely hazardous materials, future students could be exposed to possible safety hazards associated with hazardous emissions or hazardous material handling in proximity to a school resulting in a potentially significant impact. However, this impact was considered less than significant with implementation of mitigation measures.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, the Project site has already been graded, and mitigation measures outlined in the Subarea 29 Specific Plan Final EIR for pre-demolition and grading activities have been completed. The Project site is 0.2-mile from the proposed elementary school; however, there are no new uses proposed and development the proposed residential uses would not involve hazardous emissions or handling of acutely hazardous materials. This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?**

Discussion of Effects: he Subarea 29 Specific Plan Final EIR analysis concluded that Specific Plan area was not included on a list of hazardous materials compiled pursuant to Government Code Section 65962.5 (Cortese List), and none of the sites identified in the Phase I Environmental Site Assessment conducted during preparation of the Final EIR represent an environmental concern for proposed uses. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and the Project site has already been graded. Further, based on review of the current California Department of Toxic Substances Control (DTSC) current Cortese List, the Project site is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5 (DTSC, 2021). Therefore, no impact would occur.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that the Specific Plan area is within the Airport Influence Area (AIA) for the Chino Airport resulting in a potentially significant impact. However, because planned land uses would be consistent with those allowed in the applicable airport safety zones, building heights would not exceed applicable height requirements related to airport safety (refer to MM Haz 8), and buyers would be notified of proximity to the airport (refer to MM Haz 9), proposed development in the Specific Plan area would not result in a safety hazard or excessive noise related to proximity to the Chino Airport. MM Haz 8 and MM Haz 9 are presented under the discussion of "Earlier Analysis" at the end of this document.

The Subarea 29 Specific Plan area is located within the Chino ALUCP Compatibility Zone D (refer to Exhibit C – Airport Influence Areas) that requires: (1) 10% of the area be set aside as Open Land for the purpose of serving as emergency landing areas; (2) residential density be either higher than 5.0 dwelling units per acre or have an average parcel size of less than 0.2 acres (8,712 SF); (3) limits the maximum building height to 70 feet; and (4) recording of an Overflight Notification on the Property Deed and Title and provision of a Real Estate Transaction Disclosure. The impacts of the Chino Airport were analyzed in the TOP Final EIR, which was certified by the City on January 27, 2010, at which time mitigation measures were adopted for TOP, including those concerning the impacts related to the Chino Airport. Consistent with all development in the City, development at the Project site would be required to be consistent with the Chino ALUCP. Impacts related to the Chino Airport would be less than significant.

The Subarea 29 Specific Plan area is also located within the Airport Influence Area of the Ontario International Airport (ONT) (refer to Exhibit C) and is subject to the ONT Airport Land Use Compatibility Plan (ALUCP), which was adopted by the Ontario City Council on in April 2011 (Ontario, 2011), after certification of the TOP Final EIR. Policy Map 2-2: Safety Zones of the ONT ALUCP identifies the geographic locations of Safety Zones; the proposed Project is located outside the established Safety Zones and would not result in safety hazards for people residing at the Project. The proposed Project was also evaluated for hazards to aircraft in flight utilizing by Policy Map 2-4: Airspace Obstruction Zones of the ONT ALUCP, which identifies height restrictions of proposed structures or buildings. While portions of the Subarea 29 Specific Plan area are subject to height restrictions (greater than 200 feet); the Project site (Planning Area 27) is not. However, as further discussed in the Noise section of this Addendum, in compliance with ONT ALUCP's Overflight Policy O2, a Real Estate Transaction Disclosure is required for all development at the Project site.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded proposed that the Specific Plan, and all tracts within it, would be designed to meet Fire Department emergency access requirements and would not interfere in any way with emergency evacuation or response plans. The City's Safety Element, as contained within TOP, includes policies and procedures to be administered in the event of a disaster. TOP seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to, and recover from every day and disaster emergencies. As required, the proposed Project would comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access, resulting in a less than significant impact.

Mitigation: None required. The proposed Project would not result in any new, substantially more

severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**g. Expose people or structures to a significant risk of loss, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that wildland fires do not pose a threat to the Specific Plan area. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan EIR, and not located in or near wildlands. Therefore, no impact would occur.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**10. HYDROLOGY & WATER QUALITY.** Would the project:

**a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan could violate quality standards and/or waste discharge requirements; however, with implementation of mitigation measures and adherence to statewide NPDES General Industrial Activities Stormwater Permit, the San Bernardino County Area-Wide Urban Runoff Permit (MS4 permit) and the City of Ontario's Municipal Code (Section 6, Title 6), potential impacts to surface water quality would be less than significant. Cumulative impact to surface water quality were determined to be significant and unavoidable due to impaired receiving waters. The Final EIR analysis also concluded that groundwater quality would be improved within the Chino II Groundwater Sub-basin because the agricultural uses that cause high levels of nitrates in the drinking water supply would be eliminated with implementation of the Subarea 29 Specific Plan.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The proposed Project would not involve any construction activities or new uses, and would be required to comply with applicable water quality regulations (refer to Final EIR MM, Hydro 1, MM Hydro 2, and MM Hydro 6, which are presented under the discussion of "Earlier Analysis" at the end of this document). Further, all Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit. Drainage from the PLU shall be designed with conveyance tributary to a certified full trash capture device approved by the SWRCB. Therefore, impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that implementation of the Specific Plan would further the ground water management objectives for the Chino Basin by limiting recharge into the southern portion of the basin, since the development of the Chino Basin management program anticipated the cumulative impacts of urbanization of the Chino Basin and consequent conversion of agricultural land use (e.g., diminished agricultural ground water extraction and projected need to increase ground water pumping by desalters), no significant individual or cumulative negative impacts to aquifer volume or the ground water table were expected to occur. Nevertheless, MM Hydro 5 is included in the Subarea 29 Specific Plan Final EIR and requires application of measures to conserve water and enhance ground water recharge. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, would not involve any construction activities or new uses beyond that anticipated in the Subarea 29 Specific Plan Final EIR, and would be required to implement Final EIR MM Hydro 5, which is presented under the discussion of "Earlier Analysis" at the end of this document. Therefore, impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:**

**i) result in substantial erosion or siltation on- or off-site;**

**ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;**

**iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or**

**iv) impede or redirect flood flows?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis identified that no streams or streambeds are present within the Specific Plan area. The Final EIR concluded that implementation of the Specific Plan could alter the drainage patterns of the site and in a manner that could create substantial flooding, erosion, or siltation on or off-site. However, with implementation of the on-site storm drain system, and required Subarea 29 Specific Plan Final EIR mitigation measures, which include requirement requirements to adhere to applicant regulations, as discussed above, impacts would be less than significant.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, would not involve any construction activities or new uses beyond that anticipated in the Subarea 29 Specific Plan Final EIR. Therefore, with implementation of an on-site storm drain system, which would connect to existing storm drain facilities constructed in accordance with the master drainage plan, as required by the Specific Plan, the amount and rate of runoff from the Project site would be the same as that anticipated in the Subarea 29 Specific Plan under post-

development conditions and impacts related to potential flooding and storm drain capacity would be less than significant.

As required by MM Hydro 1 and MM Hydro 2 from the Subarea 29 Specific Plan Final EIR, the proposed Project would be constructed in compliance with applicable regulations to minimize water quality impacts during construction and potential development, including from erosion, and impacts related to erosion and polluted runoff would be less than significant. MM Hydro 1 and MM Hydro 2 are presented under the discussion of "Earlier Analysis" at the end of this document

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that no structures within the Specific Plan area would be placed within a 100-year flood, and the Specific Plan area is not in proximity to a large body of water or the ocean, so the threat of an earthquake-induced seiche or tsunami would not occur. Figure 5.9-2, Flood Hazard Areas, of TOP Final EIR indicates that the Specific Plan are is within the San Antonio Creek dam failure inundation area; however, TOP Final EIR concludes that because the likelihood of catastrophic failure of the San Antonio Dam is very low and the City is prepared in the event of such failure, impacts are considered less than significant. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and TOP Final EIR and would also have no impacts or less than related to the risk of pollutant release from inundation of the Project site from seiche, tsunami or dam failure. Based on review of the Federal Emergency Management Agency (FEMA) National Flood Hazard Layer (NFHL) Viewer, the Project site is not located within a 100-year flood hazard area; the Project site is located within FEMA Zone X, a minimal flood hazard area (FEMA, 2021). Therefore, the Project would also have a less than significant impact related to the risk of pollutant release from flood inundation.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?**

Discussion of Effects: As identified in the Subarea 29 Specific Plan Final EIR, the Specific Plan area is subject the requirements of the Water Quality Management Plan of the Santa Ana River Basin (Basin Plan), and overlies the Chino Groundwater Basin. As previously discussed, the Subarea 29 Specific Plan Final EIR analysis concluded that with adherence to applicable water quality regulations, as required by mitigation measures in the Subarea 29 Specific Plan Final EIR, water quality and groundwater impacts would be less than significant, and the Project would not conflict with the Basin Plan.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The proposed Project would not involve any construction activities or new uses, and would be required to comply with applicable water quality regulations (refer to Final EIR MM Hydro 1, MM Hydro 2, and MM Hydro 6 presented under the discussion of "Earlier Analysis" at the end of this document). Therefore, the Project would comply with the Basin Plan.

On September 16, 2014, subsequent to certification of the Subarea 29 Specific Plan Final EIR and TOP Final EIR, Governor Jerry Brown signed into law the Sustainable Groundwater Management Act (SGMA). The 2014 SGMA requires local public agencies and Groundwater Sustainability Agencies (GSAs) in "high-" and "medium"-priority basins to develop and implement Groundwater Sustainability Plans (GSPs) or Alternatives to GSPs. GSPs are detailed road maps for how groundwater basins will reach long-term sustainability. The California Department of Water Resources (DWR) currently categorizes the Chino Groundwater Basins as "very low" priority. Therefore, the Chino Groundwater Basins is not subject to the requirements of the SGMA (DWR, 2021). Accordingly, the proposed Project would no conflict with or obstruct implementation of a sustainable groundwater management plan.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**11. LAND USE & PLANNING.** Would the project:

**a. Physically divide an established community?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area was not located within a "community" and all major circulation routes would be maintained through the Specific Plan area; therefore, the proposed development would not physically divide and established community, and no impact would result. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and is surrounded by existing residential development implemented in compliance with the Subarea 29 Specific Plan, TOP, and Eastvale General Plan. The proposed Project would involve development of residential uses consistent with the Subarea 29 Specific Plan and TOP, and would not divide an established community. No impact would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that proposed development would comply within the Specific Plan area with the land use designations and the land use policies in the General Plan Amendment for the NMC, and would comply with the requirements established in the Subarea 29 Specific Plan, resulting in a less than significant impact related to land use policies.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. However, the proposed Project would not require a change in the Specific Plan land use designation (Cluster Homes – 7-14 du/ac) or TOP land use designation (Low Density Residential [2.1 – 5 du/ac]). Further, the proposed Project would be designed to be consistent with the development regulations of the Subarea 29 Specific Plan. The proposed increase in residential units at the Project site, which was previously graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and TOP Final EIR, would not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and

this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**12. MINERAL RESOURCES.** Would the project:

**a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that the Specific Plan area does not contain any known mineral resource and is not located within an area that has been classified or designated as a mineral resource area by the State Board of Mining and Geology, there are no known mines on or near the Specific Plan area, and no impacts to known mineral resources would result. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and does not contain any mineral resources. Therefore, no impacts would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that the Specific Plan area is not located within an area of locally important mineral resource recovery delineated in any plans. The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and is not located within an area that has been classified or designated as a mineral resource recovery site in the TOP, Subarea 29 Specific Plan or other land use plan. Therefore, no impacts would result.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**13. NOISE.** Would the project result in:

**a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that implementation of the Specific Plan would result in project-level noise impacts during construction and operation; however, these impacts would be reduced to less than significant levels with implementation of mitigation measures. The Subarea 29 Specific Plan Final EIR analysis concluded that cumulative traffic-related noise impacts were determined to be significant and unavoidable. The TOP Final EIR concluded that build-out of the uses anticipated by TOP, which includes development in the Subarea 29 Specific Plan area, would result in significant and unavoidable traffic-related noise impacts and noise and vibration impacts to sensitive receptors during construction.

With respect to construction emissions, the types of construction activities and construction equipment that would be used for construction in Planning Area 27 would be the same as that evaluated in the Subarea 29 Specific Plan Final EIR. Additionally, the Project site is entirely within

the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The mass grading for the Project site, which uses larger equipment and generates higher noise levels than other construction activities) has been completed; finish grading activities and building construction would be conducted as part of the proposed Project. Construction activities would be subject to the mitigation measures outlined in the Subarea 29 Specific Plan Final EIR, which require that construction activities comply with the City of Ontario noise ordinance that restricts the days and hours of construction activities (MM Noi 1), and that construction staging area not be located within 150 feet of existing sensitive receptors and construction equipment be fitted with properly operating and maintained mufflers (MM Noi 2). Construction-related noise impacts would be less than significant. MM Noi 1 and MM Noi 2 are presented under the discussion of "Earlier Analysis" at the end of this document.

With respect to operations, the Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. However, the overall number of dwelling units in the Specific Plan area with the proposed Specific Plan Amendment (2,418 dwelling units), would not exceed the number of units anticipated in TOP for the Specific Plan area (2,700 units). The noise sources associated with the proposed residential uses would be the same as that anticipated in the Subarea 29 Specific Plan Final EIR and TOP Final EIR at the Project site and with adherence to the City's Noise Ordinance would be less than significant. As required by MM Noi 7, architectural plans would be submitted to the City for an acoustical plan check prior to the issuance of building permits to assure that interior noise level requirements are met. MM Noi 7 is presented under the discussion of "Earlier Analysis" at the end of this document.

The increase in 26 dwelling units at the Project site would result in a net increase of approximately 168 trips (increase from 450 daily trips to 618 daily trips) compared to the number of trips anticipated in the traffic analysis and associated noise analysis in the Subarea 29 Specific Plan Final EIR, and would be within the trip generation anticipated in the traffic-related noise analysis in the TOP Final EIR. The circulation system for the Specific Plan area would not change with the proposed Project and the trip distribution would be the same; the additional daily vehicular trips generated by the proposed Project would be distributed along various roadways. A doubling of traffic volumes is required to increase average traffic noise levels by 3 dBA, a change which is barely discernable to human hearing. The increase of 168 daily trips would not double the traffic generated by residential uses at the Project site and would not double the daily trips on any roadway segment. Therefore, the proposed increase in units associated with proposed Project would not represent a significant noise impact or substantial increase in traffic-related noise impacts compared to that evaluated in the Subarea 29 Specific Plan Final EIR and TOP Final EIR. Further, soundwalls required by MM Noi 3 through MM Noi 6 from the Subarea 29 Specific Plan Final EIR to address traffic-related noise impacts have been or will be implemented by the Project Applicant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, or TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**b. Generation of excessive groundborne vibration or groundborne noise levels?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that proposed uses in the Specific Plan area would not generate excessive groundborne vibrations or groundborne noise levels during normal operations. The Final EIR also concluded that during construction, groundborne vibrations may be generated infrequently by use of heavy construction equipment. However, this type of vibration would be temporary and infrequent. Therefore, this impact is considered less than significant and no mitigation measures are required. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The operations

associated with residential uses at the Project site would be the same as evaluated in the Subarea 29 Specific Plan Final EIR and would not generate excessive groundborne vibration or noise. Further, the Project site was previously graded and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. The construction activities associated with the proposed Project would be the same as those evaluated in the Subarea 29 Specific Plan Final EIR and would also be considered less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, or TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the Specific Plan area is located outside the 65 dBA CNEL contour line of ONT and the Chino Airport airports and people residing and working in the Specific Plan area would not be exposed to excessive noise levels from airport operations.

The Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Based on review of Policy Map 2-3: Noise Impact Zones, of the ONT ALUCP, the Project site (Planning Area 27) is not located within a noise impact zone for the ONT; therefore, the proposed Project would not expose people residing at the Project site to excessive noise levels from airport operations and this impact would be less than significant. However, based on review of Policy Map 2-5: Overflight Notification Zones, and as presented in the Land Use Element (Exhibit LU-01 Official Land Use Plan) of TOP Policy Plan (General Plan), the entire City of Ontario, including the Project site, is within the area subject to Real Estate Transaction Disclosure policies.

The Project site is also located within the Chino ALUCP Compatibility Zone D that requires residential developments to record an Overflight Notification on the Property Deed and Title and provide a Real Estate Transaction Disclosure. The Project site underlies the Chino Airport traffic pattern, but is outside of the area that would be subject to average exterior noise levels of 55 CNEL under the ultimate airport development conditions. Therefore, no special noise attenuation measures are required for future residential development. Since the Project site is located outside of the noise impact zone, the proposed Project would not expose people residing at the Project site to excessive noise levels from airport operations and impacts would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, or TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

However, in compliance with ONT ALUCP's Overflight Policy O2, a Real Estate Transaction Disclosure is required for all development at the Project site. State Law (Business and Professions Code Section 11010) provides the following disclosure language:

> NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example, noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

The Project site is located within the Chino ALUCP Compatibility Zone D that requires residential developments to record an Overflight Notification on the Property Deed and Title and provide a

Real Estate Transaction Disclosure.

**14. POPULATION & HOUSING.** Would the project:

**a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that growth associated with implementation of the Subarea 29 Specific Plan would be consistent with regional growth forecasts and regional jobs/housing balance projections, and impacts would be less than significant.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. However, the overall number of dwelling units in the Specific Plan area with the proposed Specific Plan Amendment (2,418 dwelling units), would not exceed the number of units anticipated in TOP for the Specific Plan area (2,700 units). The California Department of Finance (DOF) estimates that in January 2020, the City of Ontario had an estimated population of 182,871 residents, with approximately 3.69 persons per household (DOF, 2020a). Therefore, the increase in 26 units resulting from the proposed Project would represent an increase in population of approximately 100 residents, a negligible increase (0.05%) in the existing City population. Additionally, this represents growth that was planned and anticipated in the TOP, and would not represent substantial unplanned growth in the area. Further, the Project would not include any new roadways or infrastructure that would indirectly increase population growth in the area. This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, or TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would result in replacement of existing dairies, agriculture fields, fields and nursery with residential uses. As a result, less than significant impacts related to the displacement of housing and population would occur. The Project site was previously graded and is currently vacant. The proposed Project would not result in the displacement of people or housing and no impact would occur.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**15. PUBLIC SERVICES.** Would the project:

**a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:**

**i) Fire protection?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would add residential uses to the area and would increase

demands upon fire protection; however, with implementation of mitigation measures and adherence to applicable regulations, impacts would be reduced to a less than significant level. The Ontario Fire Department currently provides fire and Emergency Medical Services to the Specific Plan area, including the Project site from Fire Station No. 6 located northeast of the Project site, at 2931 E. Philadelphia Street. A fire station in under construction approximately one-mile northwest of the Project site on the west side of Archibald Avenue within the Parkside Specific Plan area; it is anticipated that construction of this first station will be complete at the end of this year (2021), prior to occupation of residential uses at the Project site. The proposed Project would increase the number of residential units to be constructed at the Project site and would have an associated increase in the population within the Specific Plan area. Therefore, the proposed Project would increase the demand for fire protection services. However, the payment of Development Impact Fees from Subarea 29 will help fund construction of this station (refer to MM Serv 8 presented under the discussion of "Earlier Analysis" at the end of this document). When completed, response time from Station No. 9 will be within the current Fire Department Emergency Response Guideline and the proposed Project would not result in the need for new or physically altered fire protection facilities that would cause a physical environmental impact. Further, the proposed Project would implement mitigation measures to reduce fire hazards (MM Serv 1 through MM Serve 6), which include adherence to regulations for access, building materials, fire flow, etc. Impacts related to fire protection services would be less than significant. MM Serv 1 through MM Serve 6 are presented under the discussion of "Earlier Analysis" at the end of this document.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**ii) Police protection?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would add residential uses to the area and would increase demands upon police protection; however, the impacts would be less than significant. Police services will be provided by the Ontario Police Department. Since police services are based upon per capita service levels, the proposed Project, which would increase the residential population at the Project site, would require an incremental increase in police services to maintain required service levels. The City's development review process and building permit plan check processes include review by the City's Police Department to ensure incorporation of defensible space concepts in site design and construction. Property taxes and City fees support the general fund to help offset the cost of additional personnel. MM Serv 8 presented under the discussion of "Earlier Analysis" at the end of this document requires the payment of applicable fees for police services. Since response time for police service is not based on proximity to the station and since the new main station is close to the project site, no adverse physical impacts associated with the need for, or provision of, new or physically altered police facilities would result from the project. Therefore, impacts to police protection are considered less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**iii) Schools?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that with adherence to regulations requiring payment of school fees, impacts to school services would be less than significant. The proposed Project would increase the number of dwelling units at the Project site; however, as with all development in the City, the payment of required school fees would reduce this impact to a less than significant level (refer to MM Serv 9 presented under the discussion of "Earlier Analysis" at the end of this document).

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**iv) Parks?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that with the provision of parkland or payment of in-lieu park fees, impacts to related to park services would be less than significant. The Quimby Act requires local jurisdictions with parks responsibilities to provide parks and recreation opportunities through the receipt of fees or the acceptance of facilities/land. Each tract within the Specific Plan area could either provide adequate local park facilities or pay fees to the City in lieu thereof or some combination of both approaches for a total of 24 acres within the Specific Plan (refer to MM Serv 10 presented under the discussion of "Earlier Analysis" at the end of this document). With adherence to park requirements for the additional residential units associated with the proposed Project, impacts related to park services would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**v) Other public facilities?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that impacts to other existing public facilities (i.e., libraries) would be less than significant with payment of the City's library development impact fee. The increased demand for library services associated with the increase in population resulting from the proposed Project would be addressed through payment of the required development impact fee (refer to MM Serv 8 presented under the discussion of "Earlier Analysis" at the end of this document). Because libraries need enough people within a geographic area to warrant their construction, the fees are considered adequate mitigation and the construction of new library facilities is not required. Impacts to library services would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measure included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**16. RECREATION.** Would the project:

**a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that if parks within the Specific Plan are built out based on the population-based service criteria, as required, potential impacts related to increase use of existing parks would be less than significant. The Subarea 29 Specific Plan includes a network of paseos, parks and bicycle trails. Notably, at buildout the Specific Plan includes two neighborhood parks, a recreational area, mini-parks, and a 10-acre elementary school site. The nearest regional park to the Project site is the Santa Ana River Wildlife Area and the Prado Regional Park to the south. Due to the proximity of the Project site to these large recreational areas, they may get some use by the Project residents, but these regional facilities are designed to serve this region. Regional parks would be built out over time to serve the region. Existing local park facilities in the area could experience accelerated deterioration due to the additional residents resulting from the proposed Project. However, as concluded in the Subarea 29 Specific Plan Final EIR, with the timely implementation of parks based on the population-based service criteria, such potential impacts would be reduced to a less than significant level.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR included evaluation of the physical environmental impacts resulting from implementation of recreational facilities and mitigation measured were identified to reduce these impacts as feasible. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There are no new park or recreational facilities proposed as part of the Project. Therefore, no physical environmental impacts associated with construction of park and recreational facilities would occur beyond that already addressed in the Subarea 29 Specific Plan Final EIR.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**17. TRANSPORTATION/TRAFFIC.** Would the project:

**a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?**

Discussion of Effects: As discussed under Threshold b, below, pursuant to Senate Bill (SB) 743, the requirement for analyzing congestion impacts for CEQA purposes was eliminated in December 2018. Therefore, this analysis focuses on the consistency of the Project with programs, plans, ordinances, or policies addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. Notwithstanding, it should be noted that an assessment of the trip generation from the proposed Project was conducted by Urban Crossroads. Based on the Trip Generation Assessment, the increase in 26 units within Planning Area 27 associated with proposed Project would generate 168 additional daily trips, with 12 additional AM peak hour trips and 15 additional PM peak hour trips. Although the proposed Project results in a net increase in trips, the net increase is anticipated to be less than 50 peak hour trips. Therefore, the increase in proposed Project trips is nominal and is not anticipated to change the analysis findings and recommendations previously identified in the *Traffic Impact Study Report (Revised) Sub-Area 29 Specific Plan* (August 5, 2005)

included in the Subarea 29 Specific Plan Final EIR (Urban Crossroads, 2020). Further, the total number of units and associated vehicular trip generation would be less than anticipated in TOP and evaluated in TOP Final EIR for the Subarea 29 Specific Plan area (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment). Further, mitigation measures included in the Subarea 29 Specific Plan Final EIR involving the completion of intersection improvements to address operational deficiencies at intersections have already been implemented. The remaining mitigation is related to the required payment of developer impact fees, which would also would be paid for the proposed Project (refer to MM Trans 7 presented under the discussion of "Earlier Analysis" at the end of this document).

The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would not conflict with a plan, ordinance, or policy addressing circulation system, taking into account all modes of transportation including transit, roadway, and non-vehicular modes of transportation. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project does not involve any changes to the Specific Plan related to the circulation system. Merrill Avenue, which forms the northern boundary of the Project site has been constructed to its full width as required by the City and the Subarea 29 Specific Plan, and required bicycle and pedestrian facilities have been provided. Further, a bus stop is planned along Haven Avenue just north of Merrill Avenue and is within walking distance to the Project site, which would facilitate use of transit. Therefore, the proposed Project would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Conflict with or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?**

Discussion of Effects: SB 743, approved in 2013 and codified in Public Resources Code Section 21099, changes the way transportation impacts are determined according to CEQA. The Office of Planning and Research (OPR) recommended the use of VMT as the replacement for automobile delay-based LOS for the purposes of determining a significant transportation impact under CEQA. On December 28, 2018, the State approved updates to the CEQA Guidelines, which entailed changes to the thresholds of significance for the evaluation of impacts to transportation. Updates to the CEQA Guidelines included the addition of CEQA Guidelines Section 15064.3, of which Subdivision b establishes criteria for evaluating a project's transportation impacts based on project type and using automobile VMT as the metric. Beginning July 1, 2020, the provisions of CEQA Guidelines Section 15064.3 apply statewide. As identified in Section 15064.3(b)(4) of the CEQA Guidelines, a lead agency has the discretion to choose the most appropriate methodology to evaluate a project's VMT. The City of Ontario adopted its VMT thresholds of significance on June 16, 2020.

The TOP Final EIR traffic analysis did not employ a VMT-based threshold of significance for evaluating traffic impacts, but nonetheless acknowledged that TOP Land Use Plan would exceed SCAG's VMT projections for the City. The GHG section of the Recirculated TOP Draft EIR discusses CARB and SCAG strategies to reduce community VMT. In response to the sole VMT comment on the TOP Final EIR from SCAG, the City noted that while buildout of the City under TOP would increase VMT, implementation of TOP would nonetheless "improve the SANDBAG region's job/housing balance," thus "reduce VMT by shortening commute distances'" and that development pursuant to TOP would be required to implement measures to further "reduce vehicle trips and VMT." (See, e.g., TOP Final EIR, pp. 2-97, 33-12; Recirculated TOP Draft EIR, pp. 2-18, 2-43, 2-84, 2-110.) The TOP Final EIR Air Quality and GHG Analysis likewise necessarily calculated the VMT generated by buildout of the City under TOP in order to determine development-related air pollutant emissions. (See, e.g., Recirculated TOP Draft EIR, pp. 2-1, 2-5,

2-20, 2-21 [explaining traffic data was used to calculate emissions and VMT calculations]; see also Appendix D, [using VMT to calculate project emissions].) Buildout of the City under TOP anticipated development of the Subarea 29 Specific Plan Area with 2,700 units, which exceeds the 2,418 dwelling units currently proposed. Therefore, the VMT generated by Subarea 29 was anticipated in TOP Final EIR.

Information regarding VMT impacts was available at the time the Certified EIR was prepared. The new VMT requirements implemented under the CEQA Guidelines do not relate to a different type of impact, but merely a different way of analyzing transportation impacts. Moreover, as discussed above, the TOP Final EIR both discussed VMT, including the regional goal of reducing per capita VMT and project features intended to reduce VMT. Accordingly, information regarding potential impacts related to VMT not only could have been included in the TOP Final EIR, but to a large extent it already was included.

The adoption of VMT as a new metric for the measurement of transportation impacts under CEQA does not require the preparation of a subsequent or supplemental EIR, because VMT associated with the Subarea 29 Specific Plan does not constitute new significant information requiring additional environmental analysis. An addendum is not required to consider new impact areas added to CEQA after the underlying EIR was certified. See *Concerned Dublin Citizens v. City of Dublin* (2013) 214 Cal.App.4th 1301, 1320 (adoption of new guidelines for GHG evaluation was not significant new information requiring further CEQA review because GHG emissions were known information and could have been addressed in the original EIR); *Fort Mojave Indian Tribe v. Dept. of Health Servs.* (1995) 38 Cal.App.4th 1574, 1605 (new critical habitat regulation was not significant new information because impacts to the species had already been addressed in original EIR.). As with the adoption of new GHG guidelines discussed above, the adoption of VMT as a metric for analyzing transportation impacts (and corresponding GHG impacts) pursuant to SB 743 is not new information, as VMT-related impacts were knowable and known when the Subarea 29 Specific Plan Final EIR was adopted. Since VMT impacts were known at the time that the Subarea 29 Specific Plan Final EIR was conducted, information regarding the proposed Project's potential VMT-related impacts does not constitute "new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time . . . the IS / MND was adopted". Accordingly, the inclusion of VMT impacts as a requirement of CEQA analysis does not trigger the need for any further environmental review. (See *Citizens for Responsible Equitable Environmental Development v. City of San Diego* [supra, 196 Cal. App. 4th at 531–532]).

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that with the development of residential units, the means of automobile conveyance with relation to design features could be a potential problem. However, with the implementation of traffic mitigation measures, impacts related to design-feature hazards would be less than significant. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project does not involve any changes to the Subarea 29 Specific Plan related to the circulation system. Access to the Project site would be provided from Merrill Avenue as anticipated in the Specific Plan, and internal roadways, access driveways, and sight distance would comply with the City design requirements, and roadway standards outlined in the Specific Plan (refer to MM Trans 1 through MM Trans 3 presented under the discussion of "Earlier Analysis" at the end of this document). This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**d. Result in inadequate emergency access?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR concluded that implementation of the Specific Plan would improve emergency access by completing improved road segments in the Specific Plan area, and development would adhere to City of Ontario standard conditions of approval, and permits related to emergency access. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project does not involve any changes to the Subarea 29 Specific Plan related to the circulation system or emergency access. Access to the Project site would be provided from Merrill Avenue as anticipated in the Specific Plan, and would comply with applicable requirements for emergency access. This impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**18. Tribal Cultural Resources**. The provisions of Assembly Bill (AB) 52 are not applicable to the proposed Project. AB 52 applies "…only to a project that has a notice of preparation or a notice of negative declaration or mitigated negative declaration filed on or after July 1, 2015." AB 52, which became effective on July 1, 2015, established a consultation process with California Native American tribes, and established Tribal Cultural Resources as a new class of resources to be considered in the determination of project impacts and mitigation under CEQA. AB 52 requires lead agencies to provide notice to tribes that are traditionally and culturally affiliated with the geographic area of a proposed project, if they have requested such notice in writing. The project notification is required prior to the lead agency's release of a Notice of Preparation (NOP) of an EIR or notice of intent to adopt an MND or ND, and is not required for Addendums. However, the analysis of impacts to cultural resources, including prehistoric archaeological sites, resulting from implementation of the Subarea 29 Specific Plan is provided in the Subarea 29 Specific Plan Final EIR (Section III.4, Cultural Resources), as summarized above in Section 5 of this Addendum. The Subarea 29 Specific Plan Final EIR found that implementation of the Specific Plan would result in less than significant impact to archaeological resources.

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

**a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?**

Discussion of Effects: As discussed in the Cultural Resources section of this Addendum, the Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would not result in the destruction of historical resources and considered the impact less than significant. The Project site has been graded, is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR, and is currently vacant. City records do not reflect the presence of a historic resource as defined in CEQA Guideline section 15064.5 at, or in the vicinity of the Project site and no impacts to tribal cultural resources listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k) would result from implementation of the proposed

Project.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded there is a low potential for adverse environmental impacts to archaeological resources and potential impacts were determined to be less than significant. However, the Final EIR included mitigation outlining actions to take in the unlikely event unknown resources were discovered during grading. The Project site has been graded, and is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. No tribal cultural resources were encountered during previous grading activities and no impacts to tribal cultural resources would occur during remaining construction activities, which would occur in previously disturbed soils.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**19. UTILITIES AND SERVICE SYSTEMS**. Would the project:

**a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?**

Discussion of Effects: The Subarea 29 Specific Plan identifies the required infrastructure systems necessary to serve the proposed development within the Specific Plan area, and the Subarea 29 Specific Plan Final EIR addressed the utility demands associated with proposed development and potential environmental impacts associated with installation of the required infrastructure. Utility and service system impacts were determined to the less than significant with mitigation. The Final EIR also identified that the Subarea 29 Specific Plan would be one of many projects developed within the NMC, which is only a portion of the Inland Empire Utility Agency's (IEUA) Southern Service Area. The cumulative effects of the IEUA Wastewater Master Plan were evaluated under CEQA in the IEUA Wastewater, Recycled Water and Organics Management Master Plan Program EIR, dated July 3, 2002 (SCH No. 2002011116); this EIR also concluded that impacts would be less than significant with mitigation.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The proposed Project does not involve any changes that would require new or expanded utility infrastructure beyond that already anticipated in the Subarea 29 Specific Plan and evaluated in the associated Final EIR, and on-site utility infrastructure that would serve the Project. Notably, a hydraulic analysis was prepared to address the proposed changes to development at the Project site and to analyze the resulting impact to downstream sewers (including Eastern Trunk Sewer capacity). The *OSS2021-0004 - Subarea 29 Specific Plan Amendment for Park Place Planning Area 27 Sewer Study* (Sewer Study) concluded that there were no capacity deficiencies in the sewer system (AKM Consulting Engineers, 2021). With respect to storm drain facilities, as discussed in the Hydrology and Water Quality section of this Addendum, the increase in residential units would not substantially alter the post-development drainage characteristics of the Project site; therefore, the existing storm

drain system has sufficient capacity to accommodate runoff from the Project site and on-site storm drains would connect to the existing drainage system. Further, MM Util 1 requires that utility infrastructure be constructed to funded to the satisfaction of the City, and MM Util 4 requires that coordination with utilities agencies be conducted to ensure existing utility lines are protected during construction. MM Util 1 and MM Util 4 are presented under the discussion of "Earlier Analysis" at the end of this document. Impacts related to the installation of utility infrastructure necessary to serve the proposed Project would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would generate an additional demand for water; however, there will be sufficient water supply exists to meet the City's existing and planned future uses. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. Further, the total number of units would be less than anticipated in TOP (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment). Buildout of TOP is also anticipated in the *2015 Urban Water Management Plan* (2015 UWMP) prepared by the Ontario Municipal Utilities Company in July 2016 and amended through 2018 (Ontario Municipal Utilities Company, 2018). Pursuant to SB 610 (codified in the California Water Code beginning at Section 10910), the proposed Project does not require preparation of a Project-specific Water Supply Assessment (WSA); a WSA is required for residential projects that meet certain criteria relative to size (i.e., 500 dwelling units or more). Further, MM Util 5 and MM Util 6 presented under the discussion of "Earlier Analysis" at the end of this document require design considerations to reduce water consumption. Impacts to water supplies are considered less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures. The applicable mitigation measures included in the Subarea 29 Specific Plan Final EIR will continue to apply to Project activities.

**c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that the implementation of the Specific Plan would be one of many projects developed within the NMC which is only a portion of IEUA's Southern Service Area. As previously discussed, the cumulative effects of the IEUA Wastewater Master Plan were evaluated in the IEUA Wastewater, Recycled Water and Organics Management Master Plan Program EIR and found to be less than significant. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The total number of units would be less than anticipated in TOP and evaluated in TOP Final EIR (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment).

The Specific Plan area, including the Project site, is served by the City of Ontario sewer system, which has waste treated by the IEUA at the Regional Water Recycling Plant No. 1 (RP)-1 or RP-5.

RP-1 and RP-5 are not at capacity and the proposed Project would not cause these facilities to exceed capacity. Notably, RP-1 is located in the City of Ontario and has undergone several expansions to increase the design hydraulic domestic sewage (wastewater) treatment capacity to 44 million gallons per day (mgd). The plant serves areas of Chino, Fontana, Montclair, Ontario, Rancho Cucamonga, Upland, and solids removed from RP-4, located in Rancho Cucamonga. RP-1 treats an average influent wastewater flow of approximately 28 mgd (IEUA, 2021). The additional wastewater generated by an increase of 26 dwelling units, which are anticipated in TOP, would not exceed the capacity of RP-1 or RP-5 and this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that implementation of the Specific Plan site would not substantially contribute to the exceedance of the permitted landfill capacity at project-level; however, cumulative impacts were determined to be significant and unavoidable. TOP Final EIR determined that impact related to solid waste generation would be less than significant.

The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. The total number of units would be less than anticipated in TOP and evaluated in TOP Final EIR (2,700 dwelling units are anticipated in the TOP, compared to 2,418 dwelling units with the proposed Specific Plan Amendment). Further, considering the proposed Project's future residents' participation in the source reduction and household hazardous waste programs offered by the City, and which are more stringent then when the Subarea 29 Specific Plan EIR was prepared, the solid waste stream generated by the additional residential uses may be reduced over time. Currently, the City of Ontario contracts with a waste disposal company that transports trash to a landfill with sufficient capacity to handle the City's solid waste disposal needs. Less than significant impacts to the existing landfills are expected.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum, and TOP Final EIR. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**e. Comply with federal, state, and local statutes and regulations related to solid waste?**

Discussion of Effects: The Subarea 29 Specific Plan Final EIR analysis concluded that construction and operation of proposed uses in the Specific Plan area would comply with regulations associated with solid waste and impacts would be less than significant. As with all development in the City and the Specific Plan area, the proposed additional uses within Planning Area 27 would also be required to comply with applicable regulations related to solid waste management, disposal, recycling, etc., and this impact would be less than significant.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**20. WILDFIRE**. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

**a. Substantially impair an adopted emergency response plan or emergency evacuation plan?**

**b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?**

**c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?**

**d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?**

Discussion of Effects: Wildfire was added as a new topic in the environmental checklist form in Appendix G of the State Guidelines as part of the CEQA Guidelines updates that were approved in December 2018. However, as discussed in the Hazards and Hazardous Materials section of this Addendum, wildland fires were discussed in the Hazards/Hazardous Materials section of the Subarea 29 Specific Plan Final EIR (Section III.6) and it was determined the Specific Plan area is not subject to wildfires.

The State Responsibility Area (SRA) is the land where the State of California is financially responsible for the prevention and suppression of wildfires. The SRA does not include lands within city boundaries or in federal ownership; therefore, the Project site is not within an SRA. According to the California Department of Forestry and Fire Protection (CalFire), the City of Ontario, including the Project site is not located within a very high fire hazard severity zone (VHFHSZ) (CalFire, 2008). As such, no impacts related to wildfires would occur.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**21. MANDATORY FINDINGS OF SIGNIFICANCE**

**Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?**

Discussion of Effects: The Project site was previously graded, and the proposed Project is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR and no natural or sensitive habitats exist at the Project site. The proposed Project does not have the potential to degrade the quality of the environment, reduce the fish and wildlife habitat, threaten plant, fish or wildlife species, or eliminate historical, archeological, or cultural resources. As previously discussed in the Biological Resources section of this document, based on focused surveys conducted for the Specific Plan area it was concluded that Planning Area 27 (the current Project site) does not support the DSFLF. Further, although the site was previously graded and the required pre-construction surveys were conducted, these surveys would be conducted again prior to construction for the proposed Project. Impacts to burrowing owl would remain less than significant. Due to the high level of disturbance, the land use activity, and lack of suitable habitat, other sensitive species are either presumed to be absent or have a very low potential to occur within the Specific Plan area, including the Project site. Further, there are no historic or prehistoric resources located at the Project site and no such resources were discovered during the previous grading activities.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions

to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**a. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)**

Discussion of Effects: The potential cumulative impacts identified in the Subarea 29 Specific Plan Final EIR include: loss of Farmland, air quality impacts, surface water quality (due to impaired receiving waters), traffic-related noise, operational traffic impacts, and solid waste generation. Substantial changes are not proposed with the Project and the proposed Project would not require revisions to the Subarea 29 Specific Plan Final EIR. The Specific Plan is divided into 31 Planning Areas that were assigned a maximum development capacity. The Subarea 29 Specific Plan Final EIR and associated 2015 Addendum evaluated the impacts associated with the development capacity of 2,392 single family units. Further, the TOP and TOP Final EIR evaluated up to 2,700 units within the Subarea 29 Specific Plan area. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change in the type of land allowed (residential), and the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Additionally, the City's water, recycled water, and sewer infrastructure would have sufficient capacity to serve the proposed Project. Therefore, the Project's contribution to significant cumulative impacts would not be cumulatively considerable.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

**b. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?**

Discussion of Effects: Substantial changes are not proposed with the proposed Project and the proposed Project would not require revisions to the Subarea 29 Specific Plan Final EIR. The Subarea 29 Specific Plan Final EIR and associated 2015 Addendum evaluated the impacts associated with the development capacity of 2,392 single family units. Further, the TOP and TOP Final EIR evaluated up to 2,700 units within the Subarea 29 Specific Plan area. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change in the type of land allowed (residential), and the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Therefore, the proposed Project would not result in any adverse effects to human beings directly or indirectly that were not considered in the previous environmental documents.

Mitigation: None required. The proposed Project would not result in any new, substantially more severe, or substantially different impacts, other than those previously considered and addressed in the Subarea 29 Specific Plan Final EIR and associated 2015 Addendum. No changes or additions to the previous environmental documents are necessary, nor is there a need for any additional mitigation measures.

## EARLIER ANALYSIS

*(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D))***:**

1) **Earlier analyzes used.** Identify earlier analyzes used and state where they are available for review.

   a) The Ontario Plan Final EIR

   b) The Ontario Plan

   c) The Subarea 29 Specific Plan Final EIR

   d) The Subarea 29 Specific Plan EIR Mitigation Monitoring and Reporting Program

   e) The Subarea 29 Specific Plan

   All documents listed above are on file with the City of Ontario Planning Department, 303 East "B" Street, Ontario, California 91764, (909) 395-2036. Other references used to prepare this Addendum are listed below.

2) **Impacts adequately addressed.** Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards.

   Most of the checklist items were analyzed in the Subarea 29 Specific Plan Final EIR. The Subarea 29 Specific Plan Final EIR and associated 2015 Addendum evaluated the impacts associated with the development capacity of 2,392 single family units. Further, the TOP and TOP Final EIR evaluated up to 2,700 units within the Subarea 29 Specific Plan area. The proposed Project includes a Specific Plan Amendment that would increase the allowed number of dwelling units in Planning Area 27 of the Subarea 29 Specific Plan from 47 units to 73 units (an increase of 26 units), and would introduce a new housing typology at the Project site. There would be no change in the type of land allowed (residential), and the Project site is entirely within the physical impact area evaluated in the Subarea 29 Specific Plan Final EIR. Additionally, the City's water, recycled water, and sewer infrastructure would have sufficient capacity to serve the proposed Specific Plan Amendment. Therefore, the proposed Project would not introduce any impacts beyond those previously analyzed in the Subarea 29 Specific Plan Final EIR or TOP Final EIR.

**MITIGATION MEASURES** *(For effects that are "Less than Significant with Mitigation Incorporated," describe the mitigation measures, which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project)***:**

As the project does not have any adverse environmental impacts beyond those identified in the previous environmental document, no mitigation beyond that previously imposed is required. The Subarea 29 Specific Plan Final EIR mitigation measures applicable to the proposed Project area listed below.

**Agricultural Resources**

**MM Ag 2:** In order to minimize conflicts between urban and agricultural land uses, all residential units in the Subarea 29 Specific Plan shall be provided with a deed disclosure, or similar notice, approved by the City Attorney, regarding the proximity and nature, including odors, of neighboring agricultural uses.

**Air Quality**

**MM Air 1**: During construction, mobile construction equipment will be properly maintained at an offsite location, which includes proper tuning and timing of engines. Equipment maintenance records and equipment design specification data sheets shall be kept on-site during construction.

**MM Air 2:** During construction of the proposed improvements, all contractors will be advised not to idle construction equipment on site for more than ten minutes.

**MM Air 3**: Configure construction parking to minimize traffic interference.

**MM Air 4**: Local transit agencies shall be contacted to determine bus routing in the project area that can
accommodate bus stops at the project access points and the project shall provide bus passenger benches and shelters at these project access points.

**Biological Resources**

**MM Bio 1:** There may be a probability of owl colonization within the project site considering the presence of foraging habitat and previous records of presence. To ensure that no direct loss of individuals occurs, mitigation shall be completed prior to initiation of on-site grading activities for each development phase. A preconstruction survey for resident burrowing owls will be conducted by a qualified biologist. The survey will be conducted 30 days prior to construction activities. If ground-disturbing activities are delayed or suspended for more than 30 days after the preconstruction survey, the site should be resurveyed for owls.

If owls are determined to be present within the construction footprint, they will be captured and relocated. If non-breeding owls must be moved away from the disturbance area, passive relocation techniques will be used. The pre-construction survey and any relocation activity will be conducted in accordance with the CDFG Report on Burrowing Owl Mitigation, 1995. According to CDFG guidelines, mitigation actions will be conducted from September 1 to January 31, which is prior to the nesting season. However, burrowing owl nesting activity is variable, and as such the time frame will be adjusted accordingly. Should eggs or fledglings be discovered in any owl burrow, the burrow cannot be disturbed (pursuant to CDFG guidelines) until the young have hatched and fledged (matured to a stage that they can leave the nest on their own). Occupied burrows will not be disturbed during the nesting season (February 1 through August 31) unless a qualified biologist approved by the Department of Fish and Game verifies through non-invasive methods that either: a) the adult birds have not begun egg-laying and incubation; or b) the juveniles from the occupied burrows are foraging independently and are capable of independent survival. If a biologist is unable to verify one of the above conditions, then no disturbance shall occur within 300 feet of the burrowing owls nest during the breeding season to avoid abandonment of the young.

Passive relocation can be used to exclude owls from their burrows (outside the breeding season or once the young are able to leave the nest and fly) by installing one-way doors in burrow entrances. These one-way doors allow the owl to exit the burrow, but not enter it. These doors should be left in place 48 hours to ensure owls have left the burrow. Artificial burrows should be provided nearby. The project area should be monitored daily for one week to confirm owl use of burrows before excavating burrows in the impact area. Burrows should be excavated using hand tools and refilled to prevent reoccupation. Sections of flexible pipe should be inserted into the tunnels during excavation to maintain an escape route for any animals inside the burrow.

**MM Bio 4:** If project construction activities involving heavy equipment and/or windrow tree removal are to occur during the nesting/breeding season (between February 1st and August 31st) of potentially occurring sensitive bird species, a pre-construction field survey shall be conducted by a qualified biologist to determine if active nests of species protected by MBTA or CDFG are present in the construction zone or within a buffer of 500 feet. Preconstruction nesting/breeding surveys shall be conducted in all CDFG jurisdictional areas and within windrow trees. If no active nests are found during the survey, construction activities may proceed. If active nests are located during the pre-construction surveys, no grading, heavy equipment or tree removal activities shall take place within at least 500 feet of an active listed species or raptor nest, 300 feet of other sensitive bird nests (non-listed), and 100 feet of most common songbird nests.

**Cultural Resources**

**MM Cultural 1:** Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified

archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be an historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented.

**MM Cultural 2:** If human remains are uncovered at any time, all activities in the area of the find shall be halted by the developer or its contractor and the County Coroner shall be notified immediately pursuant to CA Health & Safety Code Section 7050.5 and CA PRC Section 5097.98. If the Coroner determines that the remains are of Native American origin, the Coroner shall proceed as directed in Section 15064.5(e) of the CEQA Guidelines.

**Geology and Soils**

**MM Geo 1:** To reduce impacts associated with erosion due to high winds, prior to construction, all tentative tracts and other construction activities will apply for and adhere to the permit given by the City of Ontario and enforced by the Building Official found in Title 6, Chapter 12, sections 6-12.01– 6-12.07. The permit lasts for one (1) year, therefore all construction lasting for a period of more than one calendar year from the date of issue will reapply for the permit and pay applicable fees.

**MM Geo 2:** To properly assess and address the suitability of onsite soils to be used as fill, a geotechnical evaluation shall be performed by a qualified professional prior to the approval of the Tentative Tract map or site plan for a given phase of development. This evaluation will include an analysis of the organic matter content of soils on the site. If the organic matter content of the soils is greater than 2 percent when mixed with subsurface soils and/or imported fill, then manure will be removed from the site prior to grading operations.

**MM Geo 4:** Prior to the issuance of building permits, a project-specific geotechnical investigation for the site must be prepared and submitted to the City for approval. All recommendations contained within the geotechnical investigation must be incorporated during project design and construction. Examples of recommendations include, but are not limited to, specific seismic design parameters and subgrade preparation parameters specifying the amount of overexcavation and recompaction of specific soils in buildings pad and pavement areas.

**MM Cultural 3:** Since grading plans have not yet been prepared to establish how deep excavation is needed, prior to the issuance of grading permits, and as recommended in the Phase I Cultural and Paleontological Resources Assessment for this site, a qualified paleontologist shall be retained to develop a Paleontological Resources Monitoring and Treatment Plan (PRMTP) for approval by the City. Following City approval of the PRMTP, grading and construction activities may proceed in compliance with the provisions of the approved PRMTP. The PRMTP shall include the following measures:

a. Identification of those locations within the project site where paleontological resources are likely to be uncovered during grading.

b. A monitoring program specifying the procedures for the monitoring of grading activities by a qualified paleontologist or qualified designee.

c. If fossil remains large enough to be seen are uncovered by earth-moving activities, a qualified paleontologist or qualified designee shall temporarily divert earthmoving activities around the fossil site until the remains have been evaluated for significance and, if appropriate, have been recovered; and the paleontologist or qualified designee allows earth-moving activities to proceed through the site. If potentially significant resources are encountered, a letter of notification shall be provided in a timely manner to the City, in addition to the report (described below) that is filed at completion of grading.

d. If a qualified paleontologist or qualified designee is not present when fossil remains are uncovered by earthmoving activities, these activities shall be stopped and a qualified paleontologist or qualified designee shall be called to the site immediately to evaluate the significance of the fossil remains.

e. At a qualified paleontologist or qualified designee's discretion and to reduce any construction

delay, a construction worker shall assist in removing fossiliferous rock samples to an adjacent location for temporary stockpiling pending eventual transport to a laboratory facility for processing.

f. A qualified paleontologist or qualified designee shall collect all significant identifiable fossil remains. All fossil sites shall be plotted on a topographic map of the project site.

g. If the qualified paleontologist or qualified designee determines that insufficient fossil remains have been found after fifty percent of earthmoving activities have been completed, monitoring can be reduced or discontinued.

h. Any significant fossil remains recovered in the field as a result of monitoring or by processing rock samples shall be prepared, identified, catalogued, curated, and accessioned into the fossil collections of the San Bernardino County Museum, or another museum repository complying with the Society of Vertebrate Paleontology standard guidelines. Accompanying specimen and site data, notes, maps, and photographs also shall be archived at the repository.

i. Within 6 months following completion of the above tasks, a qualified paleontologist or qualified designee shall prepare a final report summarizing the results of the mitigation program and presenting an inventory and describing the scientific significance of any fossil remains accessioned into the museum repository. The report shall be submitted to the City Planning Department and the museum repository. The report shall comply with the Society of Vertebrate Paleontology standard guidelines for assessing and mitigating impacts on paleontological resources.

**Hazardous Materials**

**MM Haz 4:** If, while performing any excavation as part of project construction, material that is believed to be hazardous waste is discovered, as defined in Section 25117 of the California Health & Safety Code, the developer shall contact the City of Ontario Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped until the material has been tested and the presence of hazardous waste has been confirmed. If no hazardous waste is present, excavation may continue. If hazardous waste is determined to be present, the California Department of Toxic Substances Control shall be contacted and the material shall be removed and disposed of pursuant to applicable provisions of California law.

**MM Haz 8:** To mitigate for any potential impacts related to proximity to the Chino Airport, all development with the Specific Plan will comply with the building height constraints identified in the GPA for the NMC (1998).

**MM Haz 9:** To disclose to the buyer or lessee of subdivided lands within the Subarea 29 project of the proximity of this site to the Chino Airport as required by AB 2776, the City shall disclose, and ensure that the developer makes disclosures, as required by law, to all future buyers.

**Hydrology and Water Quality**

**MM Hydro 1:** In order to ensure that construction activities associated with the Subarea 29 Specific Plan will not cause a violation of any water quality standard or waste discharge requirements and to assure no substantial degradation of water quality occurs, and to implement the intent of mitigation measures included in the Final Environmental Impact Report for the NMC, developments within the project area shall comply with all applicable provisions of the State's General Permit for Construction Activities (Order No. 99-08-DWQ, or most recent version) during all phases of construction. A copy of evidence of the receipt of a Waste Discharge Identification Number from the State Regional Water Quality Control Board shall be filed with the City Engineer along with a copy of the Storm Water Pollution Prevention Plan (SWPPP) maps and BMPs. The City Engineer shall review and approve the provisions of the SWPPP prior to implementation of any SWPPP provision or starting any construction activity.

**MM Hydro 2:** In order to ensure that development within the Specific Plan will not cause or contribute to violations of any water quality standard or waste discharge requirements, and to assure no substantial degradation of water quality occurs, the project will complete a Water Quality Management

Plan (WQMP) pursuant to the MS4 permit (Order No. 2002-0012) adopted by the City of Ontario. The project shall incorporate Site Design BMPs and Source Control BMPs, and potentially Treatment Control BMPs. The following tables (Table III-7-F and G) provide guidelines and BMPs that shall be incorporated as appropriate into project design (on construction drawings) and/or project specifications and implemented in the field to reduce the expected pollutants from various types of development. Prior to acceptance of the WQMP, the City shall assure that maintenance responsibilities of BMPs approved for the project are identified and enforceable. Table III-7-G correlates each BMP to the pollutants of concern which it removes/reduces and/or meets the design objectives for the BMP.

**MM Hydro 5**: In order to conserve water and to mitigate for any potential unforeseen adverse impacts to a reduction in ground water recharge, the following measure has been recommended by the Chino Basin Water Conservation District. Landscaping within individual development projects will retain and percolate both applied irrigation water and storm water in vegetated areas of parking lots and other areas, where appropriate; "depressed" planted areas bordered by shrubbery screens will be implemented rather than "mounded" grass and shrubbery planted screens.

**MM Hydro 6**: In order to reduce pollutants in post construction run-off and to implement mitigation measures included in the GPA for the NMC FEIR, the individual project owners and operators (e.g., homeowner associations, retail center owners, school district, parks department, etc.) shall ensure that all pest control, herbicide, insecticide and other similar substances used as part of maintenance of project features are handled, stored, applied and disposed of by those conducting facility maintenance in a manner consistent with all applicable federal, state and local regulations. According to Title 6, Chapter 6, Section 6 of the City's code, the City Engineer shall monitor and enforce this provision.

**Noise**

**MM Noi 1:** The construction activities of the proposed project shall comply with the City of Ontario noise ordinance that prohibits construction activities on Sundays, federal holidays, and other days between the hours of 7:00 p.m. and 7:00 a.m.

**MM Noi 2**: Construction staging areas shall not be located within 150 feet of existing sensitive receptors and construction equipment shall be fitted with properly operating and maintained mufflers.

**MM Noi 7:** Architectural plans shall be submitted to the City of Ontario for an acoustical plan check prior to the issuance of building permits to assure that second story windows are upgraded for sound reduction and proper ventilation systems are incorporated in order to meet the interior noise level requirement.

**Public Services**

**MM Serv 1:** Wood-shingled and shake-shingled roofs are prohibited.

**MM Serv 2:** Fire hydrant locations and water main sizes shall meet standards established by the City Fire Department and reviewed and implemented by the Engineering Department.

**MM Serv 3**: To reduce fire hazards, adequate fire flow pressure shall be provided for residential and non-residential projects in accordance with currently adopted City standards.

**MM Serv 4:** To reduce fire hazards, adequate water supply shall be provided as approved by the Fire Department prior to the framing stages of construction.

**MM Serv 5:** Houses located on cul-de-sacs longer than 300 feet shall be constructed with residential fire sprinklers.

**MM Serv 6:** Access roadways designed in accordance with Fire Department standards to within 150' of all structures, shall be provided prior to the framing stages of construction. This access is to be maintained in an unobstructed manner throughout construction.

**MM Serv 8:** The developer shall pay library, police, and fire service development impact fees.

**MM Serv 9:** The developer shall pay school fees or otherwise, in lieu of fees, meet project obligations to schools, as required by Mountain View and Chaffey Joint Union High School Districts.

**MM Serv 10:** Park development impact fees, Quimby fees, and/or developed parkland shall be provided to the City commensurate with the requirements of the General Plan equivalent to 24 acres.

**Transportation**

**MM Trans 1:** Construction of full width of internal roadways not specified in the Design Considerations of the project such that they shall comply with City of Ontario standards.

**MM Trans 2**: Sight distance at the project entrance roadways should be reviewed with respect to standard City of Ontario sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

**MM Trans 3**: Signing/striping should be implemented in conjunction with detailed construction plans for the project site.

**MM Trans 7:** The project shall participate in the cost of offsite improvements through the payment of "fair-share" development impact fees. These fees should be collected and utilized as needed by the City of Ontario to maintain acceptable levels of service.

**Utilities and Service Systems**

**MM Util 1:** All water and sewer pipelines within and adjacent to the project boundaries shall be constructed and/or funded for construction on a fair share basis based on the NMC Infrastructure Master Plans and to the satisfaction of the City.

**MM Util 4:** Prior to obtaining grading permit(s), the project proponent shall coordinate with the applicable natural gas, electrical, and telephone utility providers for the project site to ensure that all existing underground and overhead lines are not damaged during project construction.

**MM Util 5:** To reduce the quantity of energy used and to conserve water resources, the project developer and City of Ontario should work to include sustainable systems for use of water and energy within the project design.

**MM Util 6:** The project applicant shall plan and construct a dual pipe system to supply reclaimed water when available in the future (GP Policy 5.1.4).

A) Minimum square footage identified is for exclusive use area on a per home basis, recorded lot size may differ.
1) Gross Acres calculated to centerlines of Master Planned streets minus SCE easements.
2) Net Acres excludes street rights-of-way and SCE easements.
3) Actual total units and gross/net density and acreage will be dependent on final lotting.
4) Target unit count based on submitted Tentative "B" Maps
5) A density transfer of 15.0% may occur between Planning Areas.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA20-006, AN AMENDMENT TO THE SUBAREA 29 SPECIFIC PLAN TO INCREASE THE OVERALL DENSITY FROM 4.8 TO 4.9 DWELLING UNITS PER GROSS ACRE AND ESTABLISH A NEW RESIDENTIAL PRODUCT TYPE (MOTORCOURT CLUSTER D-8-PLEX) WITHIN PLANNING AREA 27. THE PROJECT SITE IS BOUNDED BY MERRILL AVENUE TO THE NORTH, SOUTHERN CALIFORNIA EDISON EASEMENT TO THE WEST, AND THE SAN BERNARDINO COUNTY FLOOD CONTROL DISTRICT AND THE CITY OF EASTVALE TO THE SOUTH AND MAKING FINDINGS IN SUPPORT THEREOF - APN: 0218-331-42.

WHEREAS, SL ONTARIO DEVELOPMENT COMPANY, LLC, (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA20-006, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 5.99 acres of land generally bounded by Merrill Avenue to the north, Southern California Edison easement to the west, and the San Bernardino County Flood Control District and the City of Eastvale to the south, and is presently vacant; and

WHEREAS, the property to the north of the Project site is within the Planning Area 28 (Conventional Medium Lot) land use designation of the Subarea 29 Specific Plan and a residential subdivision in currently under construction. The properties to the east are located in the City of Eastvale within R-1 land use district and developed with residential land uses. The properties to the south are located in the City of Eastvale within the PRD (Planned Residential Development) land use district and developed with residential land uses. The property to the west is located within the Subarea 29 Specific Plan and has an SCE Corridor land use designation that is developed with SCE 180-foot-tall transmission towers (115kV) and power lines; and

WHEREAS, the Specific Plan Amendment will increase the density of the Subarea 29 Specific Plan from 4.8 dwelling units per gross acre to 4.9 dwelling units per gross acre; and

WHEREAS, the Specific Plan Amendment will increase the planned gross density from 6.2 dwelling units per gross acre to 9.7 dwelling units per gross acre, to allow an increase from 47 dwelling units to a maximum of 73 dwelling units within Planning Area 27 (Cluster Homes — 7-14 du/ac); and

WHEREAS, the Specific Plan Amendment will establish a new residential product type (Motorcourt Cluster D – 8-Plex) within Planning Area 27 (Cluster Homes – 7-14 du/ac); and

WHEREAS, all changes and additions to the Specific Plan (exhibits, tables, development standards and design guidelines) are contained within the revised Specific Plan document; and

WHEREAS, the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) was certified on October 17, 2006 (hereinafter referred to as “Certified EIR”), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as “EIR Addendum”) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as “CEQA”); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as “ALUCP”), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on May 17, 2021, the Development Advisory Board of the City of Ontario conducted a hearing to consider the Addendum and the Project, and concluded said hearing on that date, voting to issue Decision No. DAB21-020, respectively, recommending that the Planning Commission recommend the City Council approve the Application; and

WHEREAS, on May 25, 2021, the Planning Commission of the City of Ontario conducted a hearing to consider the EIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC21-038, recommending the City Council adopt the EIR Addendum, and voting to issue Resolution No. PC21-039, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on May 25, 2021, the City Council issued a Resolution adopting the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on June 15, 2021, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to the Subarea 29 Specific Plan Environmental Impact Report (State Clearinghouse No. 2004011009) was certified on October 17, 2006 in conjunction with File No. PSP03-003; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2. ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the EIR Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and.

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

1. The Project will have one or more significant effects not discussed in the Certified EIR; or

2. Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

3. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3. ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix, and with approval of the related Specific Plan Amendment (File No. PSPA20-006) the proposed project will be consistent with the number of dwelling units and density (7-14 DU/AC) within Planning Area 27, as specified in the Available Land Inventory.

SECTION 4. ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP.

SECTION 5. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 4, above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Subarea 29 Specific Plan amendment will provide consistency between the Policy Plan Land Use Plan and the Subarea 29 Specific Plan Planning Area 27 land use designation. The proposed amendment will accommodate the construction of future residential land uses within the Specific Plan which is consistent with goals, policies, plans and City Council priorities of The Ontario Plan.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed amendment to the Subarea 29 Specific Plan will provide consistency between the Policy Plan Land Use Plan and the Planning Area 27 land use designation. The proposed Specific Plan Amendment will not be detrimental to the public interest, health, safety, convenience, or general welfare of the City. The land use change will provide residential land uses within the Subarea 29 Specific Plan, which is consistent with the type and intensity of development specified in The Ontario Plan and evaluated by the Subarea 29 Specific Plan Environmental Impact Report.

(3) ***In the case of an application affecting specific properties, the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The proposed amendment will accommodate the construction of future residential land uses. The Specific Plan currently allows for a Motorcourt Cluster A (6- or 8- Plex), Paseo Cluster Lots, Motorcourt Cluster B (6-Plex), Motorcourt Cluster C (5-Plex), and Green Courts. The new Motorcourt Cluster D (8-Plex) product will allow for a cluster of up to 8 single-family homes, with smaller and more efficient building footprints.

(4) ***In the case of an application affecting specific properties, the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The subject site is physically suitable to accommodate the future residential land uses. The Subarea 29 Specific Plan amendment includes development standards to facilitate the proposed land use, which will be developed with adequate lot sizes, access, and utilities to serve the project site.

(5) During the amendment of the specific plan, opportunities for the notification and involvement of citizens, California Native American Indian tribes pursuant to Senate Bill 18 (Government Code Section 65352.3.), public agencies, public utility companies, and civic, education, and other community groups, through public hearings or other means were implemented consistent with Government Code Section 65351. The Senate Bill 18 Tribal Notification Process resulted in consultation with the Gabrieleno Band of Mission Indians - Kizh Nation and the following conditions shall be implemented when developing the project site:

(a) Prior to the commencement of any ground disturbing activity at the project site, the project applicant shall retain a Native American Monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation – the tribe that consulted on this project pursuant to Assembly Bill A52 – SB18 (the “Tribe” or the “Consulting Tribe”). A copy of the executed contract shall be submitted to the City of Ontario Planning and Building Department prior to the issuance of any permit necessary to commence a ground-disturbing activity. The Tribal monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day’s activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when

all ground-disturbing activities on the Project Site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources. Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 100 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by project activities shall be evaluated by the qualified archaeologist and Tribal monitor approved by the Consulting Tribe. If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance shall immediately cease, and the county coroner shall be notified per Public Resources Code Section 5097.98, and Health & Safety Code Section 7050.5. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Work may continue on other parts of the Project Site while evaluation and, if necessary, mitigation takes place (CEQA Guidelines Section 15064.5[f]). If a non-Native American resource is determined by the qualified archaeologist to constitute a "historical resource" or "unique archaeological resource," time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and PRC Sections 21083.2(b) for unique archaeological resources.

(b) Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

SECTION 6. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the City Council hereby APPROVES the herein described Application, included as "Attachment A" of this resolution incorporated herein by this reference.

SECTION 7. ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

PASSED, APPROVED, AND ADOPTED this 15th day of June 2021.

# 1. Specific Plan Overview

# 1.0 Specific Plan Overview

The Subarea 29 Specific Plan is comprised of approximately 539.7 gross acres. The project site is bounded by Eucalyptus Avenue to the north, Riverside County Flood Control Channel to the south, Haven Avenue to the east, Cucamonga Creek Channel to the west as illustrated in ***Exhibit 1, Regional Location and Exhibit 2, Vicinity Map.***

The net acreage of the Specific Plan area is 449.9 net acres. This excludes street right-of-ways, Southern California Edison (SCE), and County Line easements.

The regional context and local setting of the Specific Plan area are illustrated in the ***Regional Location Map, Exhibit 1, and Vicinity Map, Exhibit 2.***

The project site is consistent with and implements the gross Low Density Residential allocation (5.0 dwelling units permitted per gross acre) and broad "community design" policy requirements for the New Model Colony, including a general neo-traditional community design. These include:

- Creation of a "sense of place;"
- Diversity in housing product and architecture;
- Pedestrian connectivity;
- Smaller "neighborhoods;" and
- Elimination of the "subdivision" feel.

The New Model Colony General Plan Amendment adopted by the City of Ontario designated Planning Subarea 29 for development of residential, Neighborhood Center commercial, three (3) elementary, and one (1) middle school land uses. Residential land uses are designated within the Low Density Residential category, with a maximum permitted density of 5.0 dwelling units (du) per gross acre. A General Plan Amendment was adopted concurrently with the Specific Plan in 2006, modifying the General Plan Land Use Policy Map and Circulation Map to 1) reassign the location of one elementary school, 2) eliminate one elementary school, 3) relocate the middle school designation southeast of the intersection of Eucalyptus Ave. and Haven Ave., 4) "straighten" the Haven Ave. alignment between Merrill Ave. and Eucalyptus Ave., and 5) eliminate Neighborhood Center in the northeast portion of Subarea 29.

On January 26th, 2010, the City of Ontario adopted The Ontario Plan (TOP) which serves as the City's new business plan and includes a long term Vision and a principle based Policy Plan (General Plan). The City's Policy Plan, which acts as the City's General Plan, designates (Policy Plan Exhibit LU-1 - Land Use Plan) the project site for development of Low Density Residential (2.1 -5.0 dwelling units per acre), Neighborhood Commercial, Public Schools, and Open Space - Parkland.

Consistent with the adopted General Plan allowing for 5.0 du/gross acre, Subarea 29 is permitted to include a total of 2,470 residential units based on a gross residential acreage of 494.2 acre; see Table 3-A for calculations. The Subarea 29 Specific Plan (2006) originally allocated a total of 1,937 dwelling units. The Specific Plan Amendment (2015) reallocated a variety of residential home types in Subarea 29 resulting in a total of 2,392 dwelling units, or 4.8 du/gross residential acre, 4.4 du/gross acre overall. Adjusting the total unit count implements the land use designation of the General Plan while maintaining the neighborhood crafting and architectural design standards of the original Specific Plan. This Specific Plan Amendment increases the total number of allocated dwelling units to 2,418 or 4.9 du/gross residential acre, 4.5 du/gross acre overall.

Overall, Subarea, 29 is planned for a total of thirty-one (31) planning areas. A total of twenty-six (26) residential neighborhoods are planned within Park Place, with varying lot sizes, product design, and architectural character. ***Refer to Exhibit 3, Land Use Plan.*** Single-family detached home types range from Cluster Homes to 6,300 square foot lots. A maximum total of 1,374 dwelling units are proposed for Park Place. Richland Communities, Inc. controls a total of five (5) residential neighborhoods with varying product, and lot sizes ranging from 3,500 square feet to 5,040 square feet. A maximum total of 936 dwelling units are planned for the five (5) planning areas controlled by Richland Communities, Inc. Brookfield Homes owns Planning Area 29. This planning area is planned for 108 lots featuring either lane or conventionally loaded designs. Combined these three land holders may develop 2,418 potential dwelling units within Subarea 29 Specific Plan area. ***Refer to Table 3a on page 4-4.***

Non-residential uses proposed in the Specific Plan include a commercial parcel (Planning Area 2) consisting of 14.5 gross acres on the southwest corner of Eucalyptus Ave. and Archibald Ave. An elementary school (Planning Area 18) made up of 11.2 gross acres is included at the center of Subarea 29, directly adjacent to a neighborhood park (Planning Area 14) consisting of 7.7 gross acres.

Parks and the private Recreation Center form the "heart" of the Specific Plan and entire planned community. These include a private 3.1-acre private Recreation Center (Planning Area 15) and two (2) neighborhood parks (Planning Area 11 and 14) north and south of Merrill Ave. The two (2) neighborhood parks amount to 7.7 gross acres (north) and 6.2 gross acres (south) of Merrill Ave. Subarea 29 is planned as a walkable community.

A system of pedestrian trails link all residential neighborhoods with the planned school, parks, and recreation amenities. Additionally, connections to the SCE Corridor trail and County Line Channel trail are also planned.

The internal street system includes a modified grid and landscaped parkways in all local residential streets. ***Refer to Exhibit 3, Land Use Plan.***

A) Minimum square footage identified is for exclusive use area on a per home basis, recorded lot size may differ.
1) Gross Acres calculated to centerlines of Master Planned Streets minus SCE easements.
2) Net Acres excludes street rights-of-way and SCE easements.
3) Actual total units and gross/net density and acreage will be dependent on final lotting.
4) Target unit count based on submitted Tentative "B" Maps
5) A density transfer of 15.0% may occur between Planning Areas.

*) Indicates Planning Areas as controlled/owned by Richland Communities, Inc.
**) Indicates "Park Place" Planning Areas as controlled/owned by SL Ontario Development Company
***) Indicates Planning Areas as controlled/owned by Brookfield Homes

## 1.1 Purpose for Amendment

This Specific Plan Amendment (2021) modifies PA-27 to permit a greater number of units. This unit increase would change the overall Subarea 29 density from 4.8 dwelling units per gross acre to 4.9 dwelling units per gross acre. This Amendment also permits an additional cluster housing typology.

## 1.2 Governing Documents

Development of the Subarea 29 Specific Plan will be regulated by the following documents:

- The Ontario Plan (TOP) Policy Plan (General Plan) which establishes policies governing land use, circulation, housing, conservation and open space, noise, safety, and public facilities within the Specific Plan area;
- The Specific Plan, to include a Land Use Plan, Infrastructure Plan, Design Guidelines, and Development Regulations;
- The City of Ontario Development Code, as applicable to the project site, where the Specific Plan is silent on development standards and regulations;
- The City of Ontario Subdivision Ordinance, regulating the subdivision of land within the project site area;
- The Airport Land Use Compatibility Plans of Chino Airport and Ontario International Airport;
- The approved Subarea 29 Environmental Impact Report; and
- Covenants, Conditions, and Restrictions (CC&R's) to be established by the developer of Park Place, and other developers in Subarea 29 as a means of ensuring and enforcing quality design and development of the master planned community.

### Specific Plan Components

The Subarea 29 Specific Plan is organized into the following sections in addition to Section 1, Specific Plan Overview.

### 2.0 Introduction

The Introduction provides:

- The project site setting;
- A general description of the project site proposal;
- The goals and policies of the Specific Plan;
- The entitlements to accompany the Specific Plan; and
- The relationship of the Specific Plan to The Ontario Plan (TOP) Policy Plan (General Plan) and the City on Ontario Development Code.

### 3.0 Existing Conditions

This section describes the setting for the project site, outlining the existing physical conditions on and around the site at the time of the original approval.

### 4.0 Land Use

The Land Use section describes the various residential planning areas and residential types, commercial planning area, school planning area, and the parks and trails within the planned community.

### 5.0 Infrastructure and Public Improvements

This section provides information on proposed circulation improvements, the planned backbone water, sewer, and storm drain systems, the grading concept for the project site, and a discussion of public utilities and services to serve the Specific Plan area.

## 6.0 Development Regulations

The Development Regulations identify permitted uses and standards regulating the development of various residential product types and commercial uses. The relationship of the Specific Plan development regulations to the City of Ontario Development Ordinance is also provided. The policies and procedures for the City's review and approval of future development proposals within the Specific Plan are included in this section. This section provides the methods and procedures for interpreting and amending the Specific Plan, as necessary in the future.

## 7.0 Design Guidelines

The Specific Plan Design Guidelines are intended to direct the site planning, landscaping, and architectural quality of the development. Streetscapes, entries, edge treatments, walls and fencing, lighting, signage, and architectural design are addressed in the Design Guidelines.

## 8.0 Commercial Design Guidelines

This section will direct site planning, architectural design, and landscaping for the commercial parcel.

## 9.0 General Plan Consistency

This section includes the City of Ontario General Plan consistency matrix describing the relationship of the Specific Plan to each policy of The Ontario Plan (TOP) Policy Plan (General Plan).

# 2. Introduction

# 2.0Introduction

The Specific Plan is comprised of 539.7 gross acres designated as Planning Subarea 29 of the New Model Colony, within the City of Ontario. The Specific Plan area illustrated in Exhibit 2, Vicinity Map, is bounded by Eucalyptus Ave. on the north, Haven Ave. on the east, County Line Channel on the south, and Cucamonga Channel and Archibald Ave. on the west. The Specific Plan is a comprehensive plan proposed by SL Ontario Development Company, Richland Communities, Inc, and Brookfield Homes, for the development of residential neighborhoods designed to reflect the small town character of older established communities.

The Specific Plan also includes a commercial site, parks, and school uses. The Specific Plan establishes Development Standards and Design Guidelines for a commercial land use area within Planning Subarea 29.

It should be noted that use of the term "Park Place" throughout this document applies only to the SL Ontario Development Company ownership.

## 2.1 Purpose and Objectives

### 2.1.1 Purpose

The Subarea 29 Specific Plan serves to implement the City's Policy Plan (General Plan) for the project site and provides zoning regulations for development of the project site by establishing permitted land use, development standards, infrastructure requirements, and implementation requirements for development. A comprehensive set of design guidelines and development regulations are included to guide and regulate site planning, landscape, and architectural character within the community ensuring that excellence in community design is achieved during project development. The Subarea 29 Specific Plan establishes the procedures and requirements to approve new development within the project site.

The Specific Plan is designed to address the following guiding planning principles:

- Diversity and choice of single-family housing types and opportunities to address a variety of lifestyles, home sizes, and economic segments of the marketplace;
- Connectivity among land uses within the Specific Plan area and to surrounding public facilities and the existing Ontario community;
- Use of traditional development patterns as found in older established neighborhoods in Southern California;
- Recreational amenities within walking distance of all residential neighborhoods;
- Bicycle and pedestrian accessibility and mobility to encourage alternative modes of travel;
- Diversity in architectural design; and
- Sustainable development practices addressing energy efficiency.

### 2.1.2 Objectives

The following objectives are established for the Subarea 29 Specific Plan.

#### Residential Areas

- Residential neighborhoods designed at a "human scale" and oriented to pedestrian activity;
- Connectivity provided among residential neighborhoods and recreational areas through a network of pedestrian sidewalks and on-street bicycle trails;
- Connectivity provided between residential neighborhoods and the adjacent commercial land use, as well as to the central elementary school, by means of pedestrian and bicycle trail linkages;
- A variety of housing types incorporated into the land use plan addressing lifestyle considerations of singles, families, and empty nesters;
- Residential neighborhoods designed around a central park "green core," "framing" green spaces, promoting active and passive recreational activity and casual social interaction among neighbors; and
- Residential neighborhoods with diverse architectural styles and traditional design elements reflecting the characteristics of older established Ontario neighborhoods.

#### Commercial Area

- Neighborhood commercial uses to meet the needs of the residential community within the project site as well as the larger surrounding market area;
- Provision for trails connecting the residential community with the commercial center and adjacent uses;
- The development of plaza areas and other amenities within the commercial center providing space for social interaction; and
- Orientation of commercial buildings to the street wherever possible to create an urban edge and sense of arrival.

### Streets and Pedestrian/Bicycle Mobility

- Streets and lanes (private alleys) designed in a modified grid pattern, reminiscent of traditional neighborhood streets;
- Streets with landscaped parkways and pedestrian walkways separated from the street, to create a pleasant and safe pedestrian environment, promoting friendly interaction among neighbors;
- Several traffic calming techniques within the project site street design including enhanced parkway landscaping, median landscaping, and tapered street intersections and lane entrances to influence a driver's peripheral vision and encourage motorists to drive more slowly; and
- Inside turning radii at corners reduced to slow traffic at corners.

### Recreation / Trails

- New recreational opportunities for residents through the development of two (2) neighborhood parks centered within the community "green core" to include play fields, tot lots, and picnic areas. Additionally, a private Recreation Center including a recreation building with swimming pool for Park Place residents (3.13 acres), community tennis courts, and other areas for passive recreation. The two (2) neighborhood parks amount to 7.7 acres (north) and 6.2 acres (south) of Merrill Ave.;
- A portion of the City's Multipurpose Trails and Bikeway Corridor Master Plan provided through development of a multipurpose trail within the SCE property connecting County Line Channel and Merrill Ave. with Eucalyptus Ave.; and
- A system of on-street multipurpose trails and bicycle lanes integrated into the project site providing bicycle access from the residential community to surrounding areas.

### Sustainable Development

- The opportunity for development of residential units designed with living areas on the second floor and home office areas on the first floor;
- Native plant materials and non-invasive ornamental landscape materials will be incorporated into the landscaping plan for portions of the SCE property developed for trail purposes;
- Residential development will be connected to the commercial land use area located within the site through pedestrian and bicycle trails promoting walking and bicycling as an alternative means of travel to the automobile to and from these areas;
- Residential development will be equipped with the latest technology for internet access allowing residents to shop and work on-line, thereby reducing vehicle trips to employment centers and shopping;
- Canopy trees will be utilized in public areas such as parkways, medians, and the public parks to provide shade to counteract the heat island effect;
- Roadway widths will be reduced as much as possible to minimize heat generating asphalt surfaces; and
- Recycled water will be utilized for the central public parks, neighborhood edges, and other common landscape areas.

## 2.2 Specific Plan Proposal

### 2.2.1 Project Summary

The Specific Plan Land Use Plan is described below and in the Specific Plan Statistical Summary, Tables 1-1b, pages 4-3 through 4-4.

### Residential Uses

The Subarea 29 Specific Plan will provide for development of a variety of residential housing types, oriented toward park and open space amenities and designed to promote walkability and interaction among residents. Residential development within 494.2 acres of the Specific Plan area (per Table 1a, Specific Plan Land Use Summary) will contain up to 2,392 dwelling units, providing a varied mix of single-family detached housing types, as described below.

### Residential Detached

Five (5) types of single-family detached residential development products are planned for the site; Planning Areas may be identified with more than one type of planned development product to allow for flexibility within the maximum number of permitted dwelling units. These include:

### Cluster Homes (PA 13, 25, 26 & 27)

Cluster Homes are single-family detached residential development with vehicular access from lanes (private alleys or motorcourts) via interior streets, with direct access garages. These residential areas will be developed at an approximate net density of 7-14 dwelling units per acre with a exclusive use area size of at least ~~2,100~~ 1,750 square feet.

### Conventional Small Lot (PA 1, 5, 12, 16, 17, 23 & 24)

Conventional single-family detached residential development will consist of cottage style residential homes designed with vehicular access provided from local interior streets. Residential areas will be developed at an approximate net density of 5-9 dwelling units per acre with a minimum lot size of at least 3,015 square feet.

### Lane Loaded (PA 9, 10, 19 & 29)

Detached single-family residential development consists of lane-served residential units designed with an orientation to the street or green spaces, by locating garages to the rear of residential units. Residential areas will be developed at an approximate net density of 5-8 dwelling units per acre with an minimum lot size of at least 3,100 square feet.

### Conventional Medium Lot (PA 3, 4, 6, 8, 20, 21, 28, 29 & 31)

Conventional single-family detached units with orientation to local streets and direct access garages, in varying orientations. Residential neighborhoods will be developed at an approximate net density of 4-6 dwelling units per acre, with a minimum lot size of 4,000 square feet.

### Conventional Large Lot (PA 7, 22 & 30)

These are the largest single-family detached lots in the Specific Plan, conventionally accessed from local streets. Net densities average approximately 3-6 dwelling units per acre, with a minimum lot size of 5,000 square feet.

## 2.3 Authority and Requirements

### 2.3.1 Authority

State of California Government Code, Title 7, Division 1, Chapter 3, Article 8, Section 65450-57 grants authority to cities to adopt Specific Plans for purposes of implementing the goals and policies of their General Plans. The Government Code specifies that specific plans may be adopted either by resolution or by ordinance and that the Specific Plan is required to be consistent with the General Plan. The City of Ontario adopts specific plans by ordinance, thereby establishing the zoning regulations for development of the project site. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.

### 2.3.2 Requirements of the Specific Plan

California Government Code Section 65451 sets forth the minimum requirements and review procedures for Specific Plans as follows:

A Specific Plan shall include a text and a diagram or diagrams, which specify all of the following in detail:

- The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan;
- The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;
- Standards and criteria by which improvements will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable; and
- A program of implementation measures including regulations, programs, public works projects and the financing measures necessary to carry out paragraphs 1, 2, and 3 above. The Specific Plan shall include a statement of the relationship of the Specific Plan to the General Plan.

The Subarea 29 Specific Plan meets the requirements of the State of California Government Code.

### 2.3.3 Development Agreement Required

Unless done in a coordinated manner and with adequate fiscal planning, development projects within the New Model Colony are likely to present a challenge in their implementation because of the lack of existing public facilities, including, streets, sewerage, transportation, drinking water, school, and utility facilities. California law has established a mechanism for ensuring the adequate provision of such facilities, while at the same time providing assurances to applicants that, upon approval of the project, the applicants can proceed with their projects. Approval of this Specific Plan without a development agreement may result in a waste of resources, escalate the cost of housing to the consumer, and discourage investment in and commitment to comprehensive planning, as envisioned by the City, which seeks to make maximum efficient utilization of resources at the least economic cost to the public.

Therefore, a statutory development agreement, authorized pursuant to California Government Code sections 65864 et seq., shall be required as part of the approval of this Specific Plan. For the above-mentioned reasons, the development agreement for this Specific Plan shall include, among other things, methods for financing acquisition and construction of infrastructure, acquisition and development of adequate levels of park land, and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the regional housing needs assessment. SL Ontario Development Company, Richland Communities, Inc., and Brookfield Homes may each enter into separate development agreements with the City.

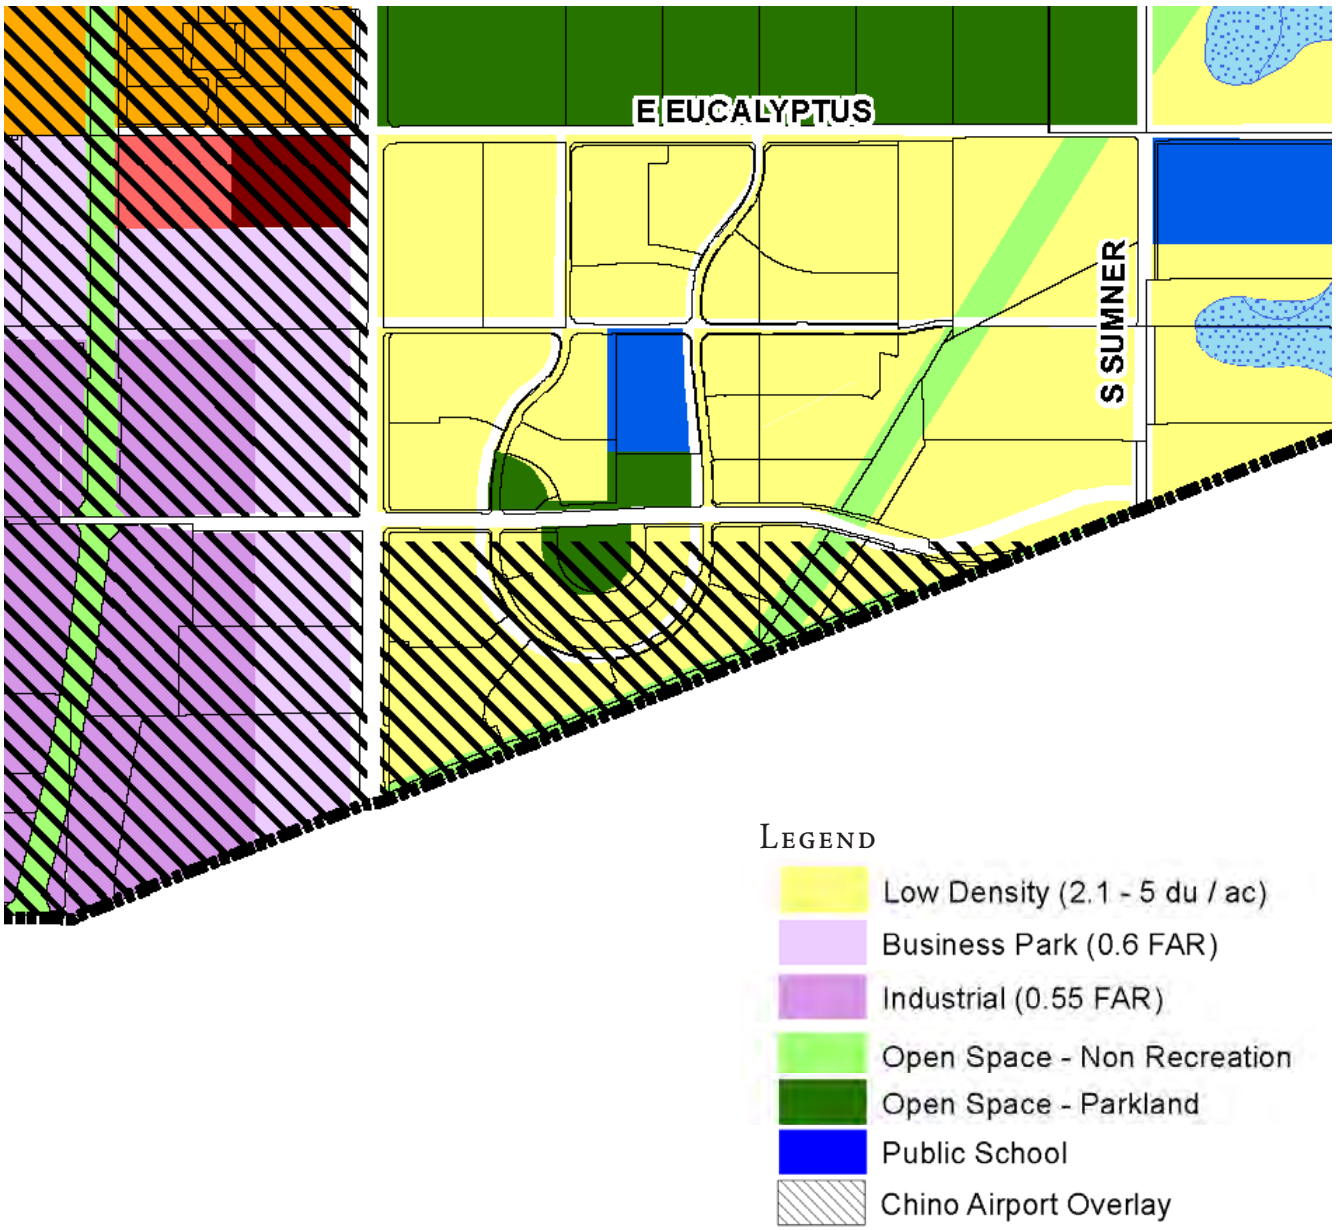

Exhibit 4—Policy Plan Land Use Plan (Exhibit LU_01)

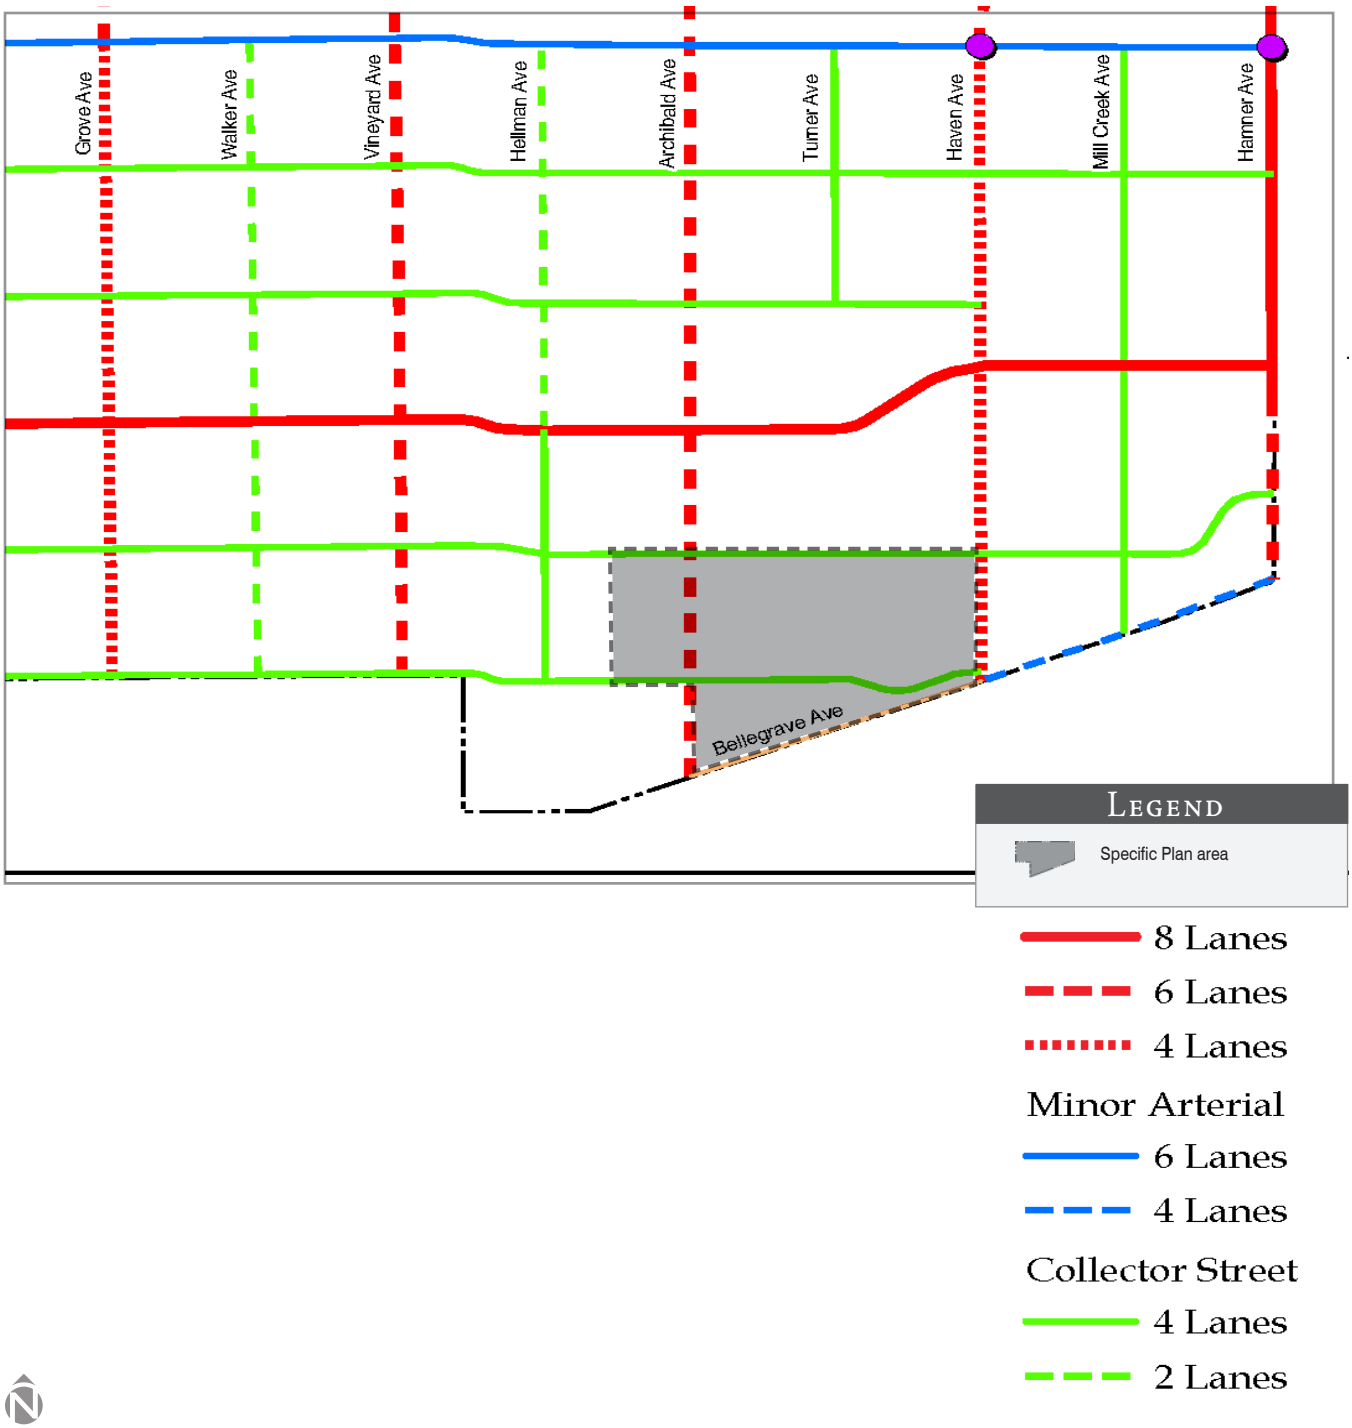

Exhibit 5—Policy Plan Functional Roadway Classification Plan

## 2.4 Development Approval Components

The components of the development approval process for the Specific Plan are as follows:

### General Plan (Policy Plan)

The Ontario Plan (TOP) establishes the direction and vision for the City of Ontario providing a single guidance system that will shape the Ontario community for the future. TOP provides for policies to accommodate change over a 30 year period commencing in 2010, the beginning of the planning period. TOP consists of a six part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.

### Specific Plan

The Policy Plan (General Plan) requires the approval of a Specific Plan for development of the project site to ensure that sufficient land area is included to achieve unified districts and neighborhoods. The City of Ontario has zoned the project site as AG-Specific Plan. The zoning designation of AG-Specific Plan requires that a Specific Plan be approved to guide development of the project site and to implement the goals and policies of the Policy Plan. The Specific Plan provides the zoning regulations to govern development of the project site. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.

### Subdivision Maps

A tentative tract map(s) will be reviewed by the City of Ontario for the residential portion of the Specific Plan indicating the approximate location of lot lines, streets, and proposed grading. Following approval by the City of the tentative tract map(s), a final map(s) will be prepared. Parcel maps will be approved by the City of Ontario for development proposed within the commercial portion of the Specific Plan.

## 2.5 CEQA Compliance

A project site Environmental Impact Report (EIR) prepared by the City of Ontario for the Specific Plan, in accordance with the California Environmental Quality Act (CEQA), addressed impacts associated with the Specific Plan and subdivision map. The EIR recommended mitigation measures to reduce impacts of the project site to a less than significant level. The EIR was prepared as the basis for the environmental review for all subsequent discretionary and ministerial actions.

## 2.6 Relationship to General Plan and Zoning

The City's Policy Plan, which acts as the City's General Plan, designates the project site for development as follows:

- Low Density Residential (2.1 -5.0 dwelling units per acre)
- Neighborhood Commercial
- Public Schools
- Open Space - Parkland
- Open Space - Non-Recreation

The Policy Plan (General Plan) establishes a development capacity of 2,228 dwelling units and approximately

189,486 square feet of commercial use and 369,171 of commercial office use for the project site. The Policy Plan Residential Capacity is further broken down as follows:

Table 2—Policy Plan Residential Capacity

| *Gross Acres* | *TOP Land Use Designation* | *Maximum Permitted Dwelling Units* |
|---|---|---|
| 495.2 | Low Density Residential | 2,228 |
| Total: 495.2 | | 2,228* |

*Densities do not reflect maximum allowable densities by the Policy Plan and are based on TOP EIR densities (average) of 4.5 du/ac for Low Density.

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan. The Subarea 29 Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). The policy analysis is located in the Appendix of this document, describes the manner in which the Subarea 29 Specific Plan complies with the Policy Plan policies applicable to the project.

## 2.7 Development Plan Review

Following the approval of the Specific Plan, all development proposals for individual residential neighborhoods or product areas within the Specific Plan will be subject to the Development Plan Review process pursuant to Article 8: Development Plan Review of the City of Ontario Development Code.

## 2.8 Airport Land Use Compatibility Planning Consistency

All development proposals or Specific Plan Amendments are required to be consistent with the Airport Land Use Compatibility Plans of Chino Airport and Ontario International Airport.

# 3. Existing Conditions

# 3.0 Existing Conditions

## 3.1 Property Ownership

The 539.7 gross acre Subarea 29 Specific Plan consists of twenty-two (22) parcels with eight (8) separate ownerships. Three (3) separate developers, SL Ontario Development Company, Richland Communities, Inc., and Brookfield Homes are involved in the entitlement process to develop portions of the study area at this time. ***Exhibit*** 6, ***Existing Property Ownership & Williamson Act Contract Status*** illustrates this information.

## 3.2 Williamson Act Status

The Williamson Act program is designed as a mechanism for the preservation of agricultural and open space lands in the State of California. Within the Subarea 29 Specific Plan, only one Williamson Act contract is active. ***Exhibit*** 6, ***Existing Property Ownerships & Williamson Act Contract Status*** illustrates the location and status of the Williamson Act contract within the Subarea 29 Specific Plan.

## 3.3 Airport Land Use Compatibility Plan Consistency

The Project Site is located within the Airport Influence Areas of Chino Airport and Ontario International Airport (ONT) as depicted in Exhibit 10, Airport Influence Areas.

## 3.4 Existing Site Conditions and Improvements

Existing on-site land uses include dairy farming, agriculture, and the SCE transmission corridor. The 539.7 gross acre Specific Plan area has historically been used for general agricultural purposes. Agricultural activities remain within the Specific Plan area and include operations such as dairy farming and row crop production. The site contains farm buildings supporting the existing agricultural activities.

## 3.5 Surrounding Land Uses

Uses surrounding the Specific Plan area include residential, dairy farming, agriculture, vacant open space, and roadways. Refer to ***Exhibit 8, Aerial Photo***, which documents existing and surrounding land uses.

## 3.6 Topography

The project site is relatively flat with gently sloping topography of approximately 2%, sloping in a northeasterly to southwesterly direction. ***Exhibit 18, Conceptual Grading Plan***, illustrates existing and proposed topographic contours on the site. There are no significant landforms or rock outcroppings within the project site.

## 3.7 Hydrology

Most of the project site is presently in agricultural use, and only a limited portion is now covered with impervious surfaces. Normal rainfall in the area is, therefore, able to percolate through on-site soils and does not result in high volumes of surface runoff, typically associated with urban areas. During periods of heavy rainfall, when ground surfaces are saturated, surface runoff is collected in the existing storm drains, culverts, and retention basins located within the surrounding area.
