TOWN OF
SAN ANSELMO
EST. 1907

In the Council Chambers and Via Zoom at 525 San Anselmo Avenue, San Anselmo, CA 94960

Town Council

Agenda

Tuesday, November 17, 2026 7:00 PM

Meeting held In-Person and via Zoom:

https://us02web.zoom.us/j/82266993704

Or Telephone: +1 669 900 6833 | Webinar ID: 822 6699 3704

How to Submit Comments Before the Meeting: Members of the public are encouraged to submit email correspondence to towncouncil@sananselmo.gov or eComments on the Agendas and Meeting webpage before the meeting begins.

How to Participate During the Meeting: Members of the public will have the option to speak during the meeting through the Zoom application by using their phone or an electronic device.

For PC, Mac, or smart phone, use the Raise Hand function when public comment for an item is requested. It is a button that is located at the top or bottom of your screen, based on your electronic device.

For landline phones, Raise Hand to be recognized with *9

Please be advised that those participating in the meeting remotely via Zoom do so at their own risk. The Town Council's regular meeting will not be cancelled if any technical problems occur during the meeting.

Call to Order. Optional Pledge of Allegiance: The Mayor or a designated Council member will recite the Pledge of Allegiance for members of the Council and the public who wish to join in the recitation.

Open time for public expression.

The public is welcome to address the Council at this time on matters not on the agenda that are within the jurisdiction of the Council. Please be advised that pursuant to Government Code Section 54954.2, Council is not permitted to discuss or take action on any matter not on the agenda unless it determines that an emergency exists, or that there is a need to take immediate action which arose

following posting of the agenda. Comments may be no longer than three minutes and should be respectful to the community.

Council requests for future agenda items.

Council committee liaison reports, questions and comments to staff; staff miscellaneous items.

Special Presentation. There are No Special Presentations.

1. Consent Agenda:

The opportunity for public comment on consent agenda items will occur prior to Council discussion of the consent agenda. The Council may approve the entire consent agenda with one action. In the alternative, items on the consent agenda may be removed by any Council or staff member, for separate discussion and vote.

1.1 Approve the Draft Minutes of the Regular Meeting of October 27, 2026
Staff Report (DOC)
Attachment 1- Draft Minutes of the October 27, 2026 Regular Town Council Meeting (DOC)

2. Public Hearing:

In general, the following procedural order applies to Public Hearing items:
•Presentation
•Town Council questions
•PUBLIC COMMENT – limited to 3 minutes/person
•Town Council discussion/action

2.1 Adopt Resolution Approving Marin Sanitary Service Rate Increase. Adoption of the resolution increasing MSS rates and is not a project under California Environmental Quality Act (CEQA) Guidelines Section 15378(b)(4), because the Town's rate approval relates to the

funding mechanism of on-going solid waste collection services, which does not involve any commitment to any specific project which may result in a potentially significant physical impact on the environment.
Staff Report (DOCX)

Attachment 7- Planning Commission Staff Report, November 2, 2026 (PDF)
Attachment 8- EIR Errata Memorandum (PDF)
Public Comment- Galvez (PDF)

Adjourn

In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact Town Staff at email savila@sananselmo.gov. Notification at least 48 hours prior to the meeting will enable the Town to make reasonable accommodations to help ensure accessibility to this meeting.

Any writings or documents provided to a majority of the Town Council regarding any item on this agenda after the distribution of the original packet will be made available for public inspection at the public counter at Town Hall located at 525 San Anselmo Avenue.

Notice is hereby given that Council may discuss and/or take action on any or all of the items listed on this agenda. If any of these matters above are challenged in court, you may be limited to raising only those issues you or someone else raised at any public hearing described on this agenda, or in written correspondence delivered at, or prior to, this Council meeting. Judicial review of an administrative decision of the Town Council must be filed with the Court not later than the 90th day following the date of the Council's decision (Code of Civil Procedure Section 1094.6) Any item not under discussion before 10:00 p.m. may be continued to the next regular meeting. Next regular meeting is December 8, 2026.

AYES: Burke, Kullaway, Schlesinger, Vice Mayor Walker, Mayor Burdo

1.3 Receive and File the Town of San Anselmo 2024 Greenhouse Gas Inventory Summary

Councilmember Kullaway stated the Town has done a good job. In order to reach the 2030 goal they need to reduce climate emissions by 14%.

M/s, Schlesinger / Burke, Motion to approve Consent Calendar item #1.3.
AYES: Burke, Kullaway, Schlesinger, Vice Mayor Walker, Mayor Burdo

1.7 Approve the Dia de los Muertos Special Event Application

Councilmember Schlesinger stated this is a great event but he would like to see earlier approval of these applications (not last minute).

M/s, Schlesinger/Kullaway, Motion to approve Consent Calendar item #1.7.
AYES: Burke, Kullaway, Schlesinger, Vice Mayor Walker, Mayor Burdo

<u>Council Business Items</u>

2.1 Receive and File the Live on the Avenue 2026 Recap and Review

Community Services Director O'Grady and Kelley Werner, Community Engagement Coordinator presented a staff report and a PowerPoint presentation that included: 1) 2026 Live on the Avenue; 2) 2026 Recap; 3) 2026 Programming; 4) Continued Partnership with IDC; 5) Continued Partnership with Cal Film; 6) New in 2026; 7) 2026 Responsiveness; 8) Placer.ai Data; 9) 2026 Metrics; 10) 2026 Visit Trends; 11) 2026 Daily Visits; 12) 2026 Hourly Visits; 13) 2026 vs. 2025 vs. 2024 Metrics; 14) 2026 Community Survey Results; 15) Demographics of Respondents; 16) Overall Satisfaction; 17) Timing of Music; 18) Length of Season (June 20-September 19) Satisfaction with Street Closure; 20) Sustainability/Aluminum Pilot; 21) Question: When you came down what did you do?; 22) Will Attendees Return? 23) 2026 Budget; 24) Fundraising Budget- Friends of San Anselmo Parks; 25) Town Budget- Special Events Fund; 26) 2026 Total Cost; 27) None of this is possible without our amazing sponsors; 28) Looking Forward to keep dates consistent, consider approving a 2-3 year permit cycle, keep it local, kid's entrepreneur permits, focus on sustainability and proper planning on Creek Park availability for 2027. Staff answered questions from the Council regarding the business survey; expenses and fundraising; if staff could present the financial information differently; if there is anything staff would change; if the additional planning and coordination required for the special programming is worth the ROI.

Mayor Burdo opened the meeting to public comments.

There were no comments.

Mayor Burdo closed the meeting to public comments.

2.2 Approval of Climate Action Fund Policy and Approve the Recommended 2026/27 Climate Action Fund planned Expenditures

Community Development Director Scoble and Climate Action Coordinator Wipfler presented a staff report and a PowerPoint presentation that included: 1) Climate Action Fund Policy and Projects; 2) Emissions by Sector- 2024; 3) Climate Action Fund Policy Budget Timeline; 4) Recommended Projects; 5) Optional Projects; 6) Option 1; 7) Option 2; 8) Requested Council Action. Staff answered questions from the Council regarding whether staff could highlight how this work connects to the Community Development work; the recommended projects in the staff report; heat pump water heater rebates and coordination with MCE; who would do the administration work; if the rebates are income based; if the Climate Action Committee members are satisfied with the amount of input received; if the Town is getting their "bang for the buck"; if the Climate Action Commission supports Option 1.

Mayor Burdo opened the meeting to public comments.

Mr. Michael Kamrick, Chair of the Climate Action Commission, discussed the rationale for the recommendations.

Ms. Sue Saunders, Vice Chair of the Climate Action Commission, thanked staff for the great process. She was excited about the partnership with Ride and Drive Clean on transportation and home electrification.

Mayor Burdo closed the meeting to public comments.

Councilmember Kullaway stated she was very pleased with the plan.

Councilmember Burke stated she was glad to see that the consultant payments were a one-time thing. She likes the focus on education and would like an analysis on the effectiveness of the money is being spent.

Vice Mayor Walker thanked the committee for its dedication. She supported Option 1.

Councilmember Schlesinger supported Option 1 and Councilmember Burke's request for impact measurement.

Mayor Burdo discussed the commission's level of engagement, depth of skills, and expertise. He supports Option 1.

M/s, Kullaway/Walker, Motion to Approve the Climate Action Fund Administration, Prioritization and Reporting Policy.
AYES: Burke, Kullaway, Schlesinger, Vice Mayor Walker, Mayor Burdo

M/s, Kullaway/Walker, Motion to Approve the Allocation and Appropriation of Climate Action Fund monies for Fiscal Year 2026/27 as outlined in Option 1.
AYES: Burke, Kullaway, Schlesinger, Vice Mayor Walker, Mayor Burdo

The Council took a break at 9:15 p.m.

The Council reconvened in the Council Chambers at 9:23 p.m.

Public Hearing

2.3 Introduction and First Reading of an Ordinance Repealing and Replacing Title 6 "Business, Professionals and Trades, Chapter 7 "Tobacco Retailer License" to Prohibit the Sale of Tobacco and Nicotine Products within San Anselmo with Certain Exceptions

Assistant Town Manager Kenton and Town Attorney Longfellow presented a staff report. There were no questions from the Council.

Mayor Burdo opened the meeting to public comments.

Mr. Brian Gill stated his family runs the Quick and Easy Market and he urged the Council to reconsider the proposed ban on nicotine and tobacco products. It would have an impact on local family run businesses in Town. He supported keeping the products out of the hands of children.

Dr. John Marr, San Francisco/Marin Medical Society, supported the ordinance. He discussed the hidden costs to society.

Mr. Brian Limb, California Fuels and Convenience Store Alliance, did not support the ordinance. He supported eradicating underage tobacco use.

Ms. Pamela Granger, Co-Chair of Smoke Free Marin Coalition, supported the ordinance.

Jeremiah stated he has spent thirty years studying the tobacco and nicotine industry. He supported the ordinance.

Barbara stated the tobacco ban was not essential but she appreciated the cigar carve-out. The local constituents should have the loudest voice in the room.

Ms. Megan Manning, Action on Smoking and Health, supported the ordinance. She discussed the health hazards and addictive nature of smoking.

Ms. Hailey Hodges, National Association of Tobacco Outlets, stated they shared the goal of preventing youth access to tobacco and nicotine products. She urged the Council to reconsider a broad sales ban.

Mr. Bob Curry, Co-Chair of the Smoke Free Marin Coalition, stated he support the draft ordinance.

Tom Saberi stated his family operates the Gas and Stop Service Station on Sir Francis Drake Boulevard. He is opposed to the ordinance. It is unfair to current license holders and the cigar carve out is discriminatory for socio-economic reasons.

Mr. Taylor Hassal, Executive Director of the American Petroleum and Convenience Store Association, agreed that tobacco is for adults only and any retailer selling to kids should lose their license. The ordinance will not stop youth access. He asked the Council to explore other opportunities to prevent youth access.

Mayor Burdo closed the meeting to public comments.

Councilmember Burke stated this ordinance is not the way to address teen smoking. She has not heard any evidence that stores are selling to under-age individuals. Teens are accessing

tobacco and alcohol at other locations. She supports education and treatment for individuals who want to quit.

Councilmember Schlesinger stated smoking is concentrated among lower-income people and a policy that targets tobacco fall hardest on those individuals. This would be a regressive socio-economic policy. He shares the goal of reducing youth access to tobacco and nicotine products. He has significant reservations about the policy itself and its scope.

Vice Mayor Walker stated she remains focused on limiting youth access to tobacco products. This ordinance strikes the right balance.
Councilmember Kullaway stated she supported the measure.

Mayor Burdo stated the youth are getting tobacco products that came from San Anselmo. The policy is the right thing to do from a public policy standpoint and the ordinance strikes the right balance

M/s, Kullaway/Walker, Motion to read the Ordinance by title only, an Ordinance of the Town Council of the Town of San Anselmo Repealing and Replacing Title 6, Chapter 7, "Tobacco Retailer License" to Prohibit the Sale of Tobacco and Nicotine Products within San Anselmo with Certain Exceptions and Making Certain Associated CEQA Exemption Findings.
AYES: Kullaway, Vice Mayor Walker, Mayor Burdo
NOES: Burke
ABSTAIN: Schlesinger

M/s, Kullaway/Walker, Motion to introduce the Ordinance, approve its first reading and waive the second reading.
AYES: Kullaway, Vice Mayor Walker, Mayor Burdo
NOES: Burke
ABSTAIN: Schlesinger

Town Manager Donery noted the Council should vote on whether or not to continue the meeting after 10:00 p.m.

M/s, Walker/Kullaway/, Motion to continue the meeting past 10:00 p.m.
AYES: Burke, Kullaway, Schlesinger, Vice Mayor Walker, Mayor Burdo

Council Business Items

2.4 Adopt a Resolution Proclaiming a Local Emergency Related to Winter Storms

Town Manager Donery presented a staff report. Staff answered questions from the Council regarding whether staff would be requesting funds from the Federal Government in addition to state and local funds; if this preemptive resolution would become an annual one; if a declared State of Emergency could be denied by the State or Federal Government; the administrative process.

Mayor Burdo opened the meeting to public comments.

There were no comments.

Mayor Burdo closed the meeting to public comments.

Town Manager Donery stated staff wants to be "on its game" given the forecasts for a rough

winter!

M/s, Walker/Burke, Motion to Adopt Resolution No. 2026-4645 Proclaiming a Local Emergency Related to Winter Storms.
AYES: Burke, Kullaway, Schlesinger, Vice Mayor Walker, Mayor Burdo

With no further business to discuss the meeting adjourned at 10:18 p.m.

Respectfully submitted,

Toni DeFrancis,
Recording Secretary

STAFF REPORT

TOWN OF SAN ANSELMO Item #: 1.2

MEETING DATE: November 17, 2026

AGENDA TITLE: Adopt a Proclamation to Welcome, Recognize and Ratify Youth Commissioners for the Year 2026/27

FROM: Administration

RECOMMENDATION: For Town Council to Consider Adopting a Proclamation Recognizing and Ratifying All Town Youth Commissioners for the Year 2026/27

BACKGROUND

The Town of San Anselmo annually promotes the opportunity to become a Town of San Anselmo Youth Commissioner. Youth Commissioners serve as full voting members on a wide variety of Town Committees for one full year from July to June of the following year. During this time Youth Commissioners have the opportunity to serve their community, represent the school they're currently attending, learn about municipal government, and boost their college applications.

DISCUSSION/ANALYSIS

The following Youth Commissioners have been interviewed and appointed by and to the various boards, committees, and commissions:

Youth Commissioners for 2026/27	
Board, Committee, Commission	**Youth Commissioner Name:**
Arts Commission	Sean Brambl
	Hailey Chapman
	Alexis Hinsdale
Bicycle and Pedestrian Advisory Committee	Jack Woolen

Climate Action Commission	Brendan BuistSohn
	Will Greenwald
	Calvin Gundee
	Chiara Machotka Farley
Historical Commission	Nico Less
Library Advisory Board	Tatum Sanchez
Open Space	Liam Barandan
	Nico Less
Parks & Recreation Commission	Megan Ehrlinspiel
	Molly Ehrlinspiel
	Ainsley Sullivan
Racial Equity	Eben Eyler
	Will Greenwald

The Town of San Anselmo would like to welcome and ratify all Youth Commissioners, acknowledging their volunteer community service as an integral part of the Town's operations.

FISCAL IMPACT
None

CEQA AND CLIMATE ACTION PLAN CONSISTENCY
Adopting a proclamation to recognize the 2026/27 Town Youth Commissioners is not a “project” under the California Environmental Quality Act, because it does not involve an activity that has the potential to cause a direct or reasonably foreseeable indirect physical change in the environment. (Cal. Pub. Res. Code § 21065).

ATTACHMENTS
Attachment 1- Proclamation

PROCLAMATION

The Town of San Anselmo is pleased to welcome and recognize

YOUTH COMMISSIONER

FOR 2026-2027

WHEREAS; the Town of San Anselmo annually promotes the opportunity to become a Youth Commissioner; and

WHEREAS; Youth Commissioners serve as full voting members on a wide variety of Town Boards, Commissions, and Committees; and

WHEREAS; Youth Commissioners commit to a one-year term, starting on the month of July and ending in June of the following year; and

WHEREAS; Youth Commissioners have the opportunity to serve their community, represent the school they're currently attending, learn about municipal government, and to boost their college applications; and

WHEREAS; the Town of San Anselmo's Boards, Committees, and Commissions have interviewed and appointed more than ten Youth Commissioners for the current year;

NOW, THEREFORE, be it proclaimed, that the Town of San Anselmo, in appreciation of all Youth Commissioners' devotion and service to our Town, desires that there should be a public record of recognition for their community service.

IN WITNESS WHEREOF, I have hereunto set my hand this 17th day of November, two thousand twenty-six.

_____

Steve Burdo, Mayor

STAFF REPORT
TOWN OF SAN ANSELMO

MEETING DATE:	November 17, 2026
AGENDA TITLE:	Receive and Accept the Library Tax Oversight Committee review of FY2025-26 Library Tax Expenditures
FROM:	Serianna Leyland, Adult Services Librarian Linda Kenton, Town Librarian
RECOMMENDATION:	That the Town Council receive and accept the Library Tax Oversight Committee review of FY 2025-26 Library Tax expenditures

BACKGROUND

In June of 2014, voters of the Town of San Anselmo approved a renewal of the 2010 library parcel tax. The 2014 renewal, known as Measure E, passed with 73% of the vote. The role of the Library Tax oversight committee was codified in this measure since it had not been part of the original 2010 parcel tax. The group had been an instrumental part of the process and met twice a year to observe the upcoming fiscal year budget and review the previous fiscal year expenditures.

Measure E was renewed as Measure H in November 2022 by 85% of voters. The existing tax had been set to expire in 2024 at which point Measure H would take effect, continuing at the current rate, with the 3% escalator. The ballot question read as follows:

To continue expiring funding for San Anselmo Library to maintain library operating hours; increase book/ebook collections; maintain programs for children, families, seniors/people with disabilities; and maintain free internet access, computers/technology, shall the measure be adopted extending the existing San Anselmo library services tax at the existing rate of $70 per parcel, providing $320,000 annually, for nine years, with annual adjustments, mandatory audits, independent citizens' oversight and all funds locally controlled for San Anselmo Library?

The Library Parcel Tax was meant to supplement the Library's budget and was not meant to replace the Town's general fund contribution to the department. Parcel tax history and expected revenue can be reviewed in Attachment 1.

DISCUSSION/ANALYSIS

Parcel tax revenue for FY2025–26 totaled **$326,451**. With an ending balance of **-$2,208** carried over from FY24-25, the Library Parcel Tax Fund began the year with a projected balance of **$324,243**.

Expenses for the year totaled **$300,861**, which was under budget by **$23,381**.

The current report focused solely on Library Parcel Tax expenditures (Attachments 2 and 3). The Town contributed $952,892 from the General Fund to support library operations. Together, the two funding sources provided the essential resources required to operate the library.

The projected beginning fund balance for FY2026-27 was **$23,381**.

Fiscal year 2025-26 was a year of change and progress. The Library embarked on a large-scale construction project for much-needed infrastructure improvements including a new roof, a high-efficiency HVAC system, and a remodeled Children's Room. The Friends of the Library contributed $250,000 to the Children's Room refresh, which included new carpet, child-sized furniture, new shelving, and more. This construction project necessitated a six-month closure of the Library. Staff designed and operated "Mini Library" that provided holds pick-up and continued select services, including browsing new and recently returned library materials, reference services, Wi-Fi printing, and programs.

Attachment 4 provided a statistical snapshot that illustrated how services and use of the library were impacted during the closure.

The Youth Services Librarian continued to be a vital part of the team by scheduling, promoting, and conducting programs for youth of all ages. 14,215 attended 234 children's programs. A critical part of the library's daily service was providing students with a place to go after school to study. When the library was closed for construction, the Youth Services Librarian created a welcoming space in the Council Chambers every Wednesday for students to study, play games, and read books on their early dismissal day. Year-round in-person storytimes continued to be popular, bringing in 80-100 per session and the annual Summer Reading Program made the Library a top summer destination for kids and families. In addition, the Youth Services Librarian purchased materials, staffed public service desks, supervised Teen volunteers, and planned for the future of Youth Services.

Adult programs attracted 1,166 attendees across 79 events. Highlights included an ongoing series of classes on artificial intelligence for older adults and participation in the inaugural One Book One Coast. In addition, the Library partnered with the Reuse Alliance and hosted two San Anselmo Repair Fairs. Volunteers fixed over 100 items, which diverted 861 pounds of waste from landfills and 3,857kg CO2e of avoided emissions.

The Writers in Conversation virtual author talk series, funded by the parcel tax, continued to resonate strongly with patrons, garnering 1,205 views from 39 virtual programs.

The retirement of the part-time Library Assistant during the operation of the Mini Library resulted in salary savings, which is funded entirely out of the parcel tax. This position was filled in late April 2026.

Temporary/extra-hire employees were essential for covering public service desks and provided general staff support. This staffing category offered the most flexibility in maintaining operations and filling gaps created by vacancies, meetings, vacations, and absences due to illness. The temporary help budget also supported an extra-hire Technical Services Librarian. While most of this position's hours were funded by the General Fund, additional desk coverage was paid for by the library tax. This librarian handled the cataloging, processing, and management of all new materials and represented the San Anselmo Library at the MARINet consortium's quarterly Bibliographic Standards Committee.

Automated catalog expenses included new, and the maintenance of, shared services with MARINet. Consortium shared services included Link+, the county-wide delivery system, the online catalog, and a selection of databases and digital subscriptions to Ancestry.com, Mango Languages, the New York Times, and the Washington Post. The CENIC Internet network, the backbone of the library's robust Internet and Wi-Fi connection, was paid from the parcel tax budget.

Librarians continued to purchase physical books, but the library's primary vendor, Baker & Taylor, ceased operation. Librarians looked to other suppliers to purchase physical books. This transition in vendors changed purchasing workflow and staff continued to adapt. Of the $11,000 allocated for adult books, **$8,222** was expended. $8,500 was budgeted for youth books, and **$3,551** was spent.

Circulation of digital materials remained robust, increasing by 13% since FY2024-25. $18,951 was allocated for eBooks/eAudiobooks, **$23,678** was spent. This included digital materials purchased in OverDrive, as well as pay per use checkouts in Hoopla.

In contrast, circulation of physical materials decreased by 33%.

For streaming video, $5,000 was budgeted and **$5,605** was spent under Kanopy's pay per use model.

The parcel tax funded **$1,137** for LibCal, an online event management system. LibCal enabled registration, which supported steady attendance by sending email reminders and enabling patrons to add library events to their digital calendars.

The community continued to support the Library during this year of change. During the closure, patrons used the Mini Library for library resources and, upon reopening, returned to a larger space to work quietly, use computers, and access the full physical collection. Since reopening, patrons and library staff have enjoyed the natural light streaming through the daylighted windows, which were hidden behind shelves for decades. The new Children's Room was a welcoming space for families and children of all ages to explore, study, and find their next great read.

The Oversight Committee met on October 29th to review and accept the Library Tax expenditures and unanimously found that monies had been spent according to the letter and spirit of the parcel tax.

FISCAL IMPACT

None

GENERAL PLAN CONSISTENCY

None

CEQA AND CLIMATE ACTION PLAN CONSISTENCY

This item is not subject to the California Environmental Quality Act ("CEQA") because it does not constitute a "project" within the meaning of Public Resources Code section 21065. The Climate Action Plan is not implicated.

STAFF REPORT

TOWN OF SAN ANSELMO Item #: 1.4

MEETING DATE: November 17, 2026

AGENDA TITLE: Accept the 2026 Street Resurfacing Project and Authorize Staff to File a Notice of Completion

FROM: Scott Schneider, Public Works Director

RECOMMENDATION: That the Town Council accept the 2026 Street Resurfacing Project and authorize staff to file a Notice of Completion.

BACKGROUND AND DISCUSSION

The Town Council approved the 2026 Street Resurfacing Project at the April 28, 2026 meeting, and authorized staff to bid the project. The Town Council awarded the project at the June 23, 2026 meeting to Ronan Construction Inc. The project includes paving the following street segments:

Base Bid:
Valley Road – Suffield Avenue to West Court
Suffield Avenue – Valley Road to Butterfield Road
Rutherford Avenue – Camino de Herrera to Butterfield Road
Camino De Herrera – Valley Road to Oakwood Court
Skyline Road – Traxler Road to End
Bennit Avenue – Suffield Avenue to Camino de Herrera
Oakwood Court – Camino de Herrera to End
Sunnyside Avenue – Austin Avenue to Ross Avenue
Spring Grove Avenue – Greenfield Avenue to Town Limit
Longwood Drive – Town Limits to end

Hillcrest Avenue – Olive Avenue to Laurel Avenue (45 PCI) was originally included, but has been postponed due to an upcoming MMWD water pipeline replacement project on the street. It will be included in a future paving project once the water project has been completed.

Construction started July 13th and was completed on September 1st.

Following completion of the street resurfacing and slurry seal projects, staff entered the improvements into the StreetSaver program, which computed the Pavement Condition Index (PCI) of the Town's road to be 75, which is the highest PCI in over 20 years. (See Attachment 1 – Current PCI Map).

FISCAL IMPACT

The construction contract was awarded to Ronan Construction Inc. of South San Francisco, CA for $1,025,608 for the Base Bid. Work was completed substantially in accordance with the project plans and specifications, and was fully available for use on September 1, 2026. The final construction cost was $1,188,225.46.

The Town will be reimbursed by several utilities for adjustments made to manhole and valve covers (approximately $3,000).

Funding for the project was included in the Town's 2026/2027 Budget and Work Plan from the Road Maintenance Fund, TAM Measure AA funds, and SB1 funds.

CEQA ANDCLIMATE ACTION PLAN/BICYCLE AND PEDESTRIAN MASTER PLAN CONSISTENCY

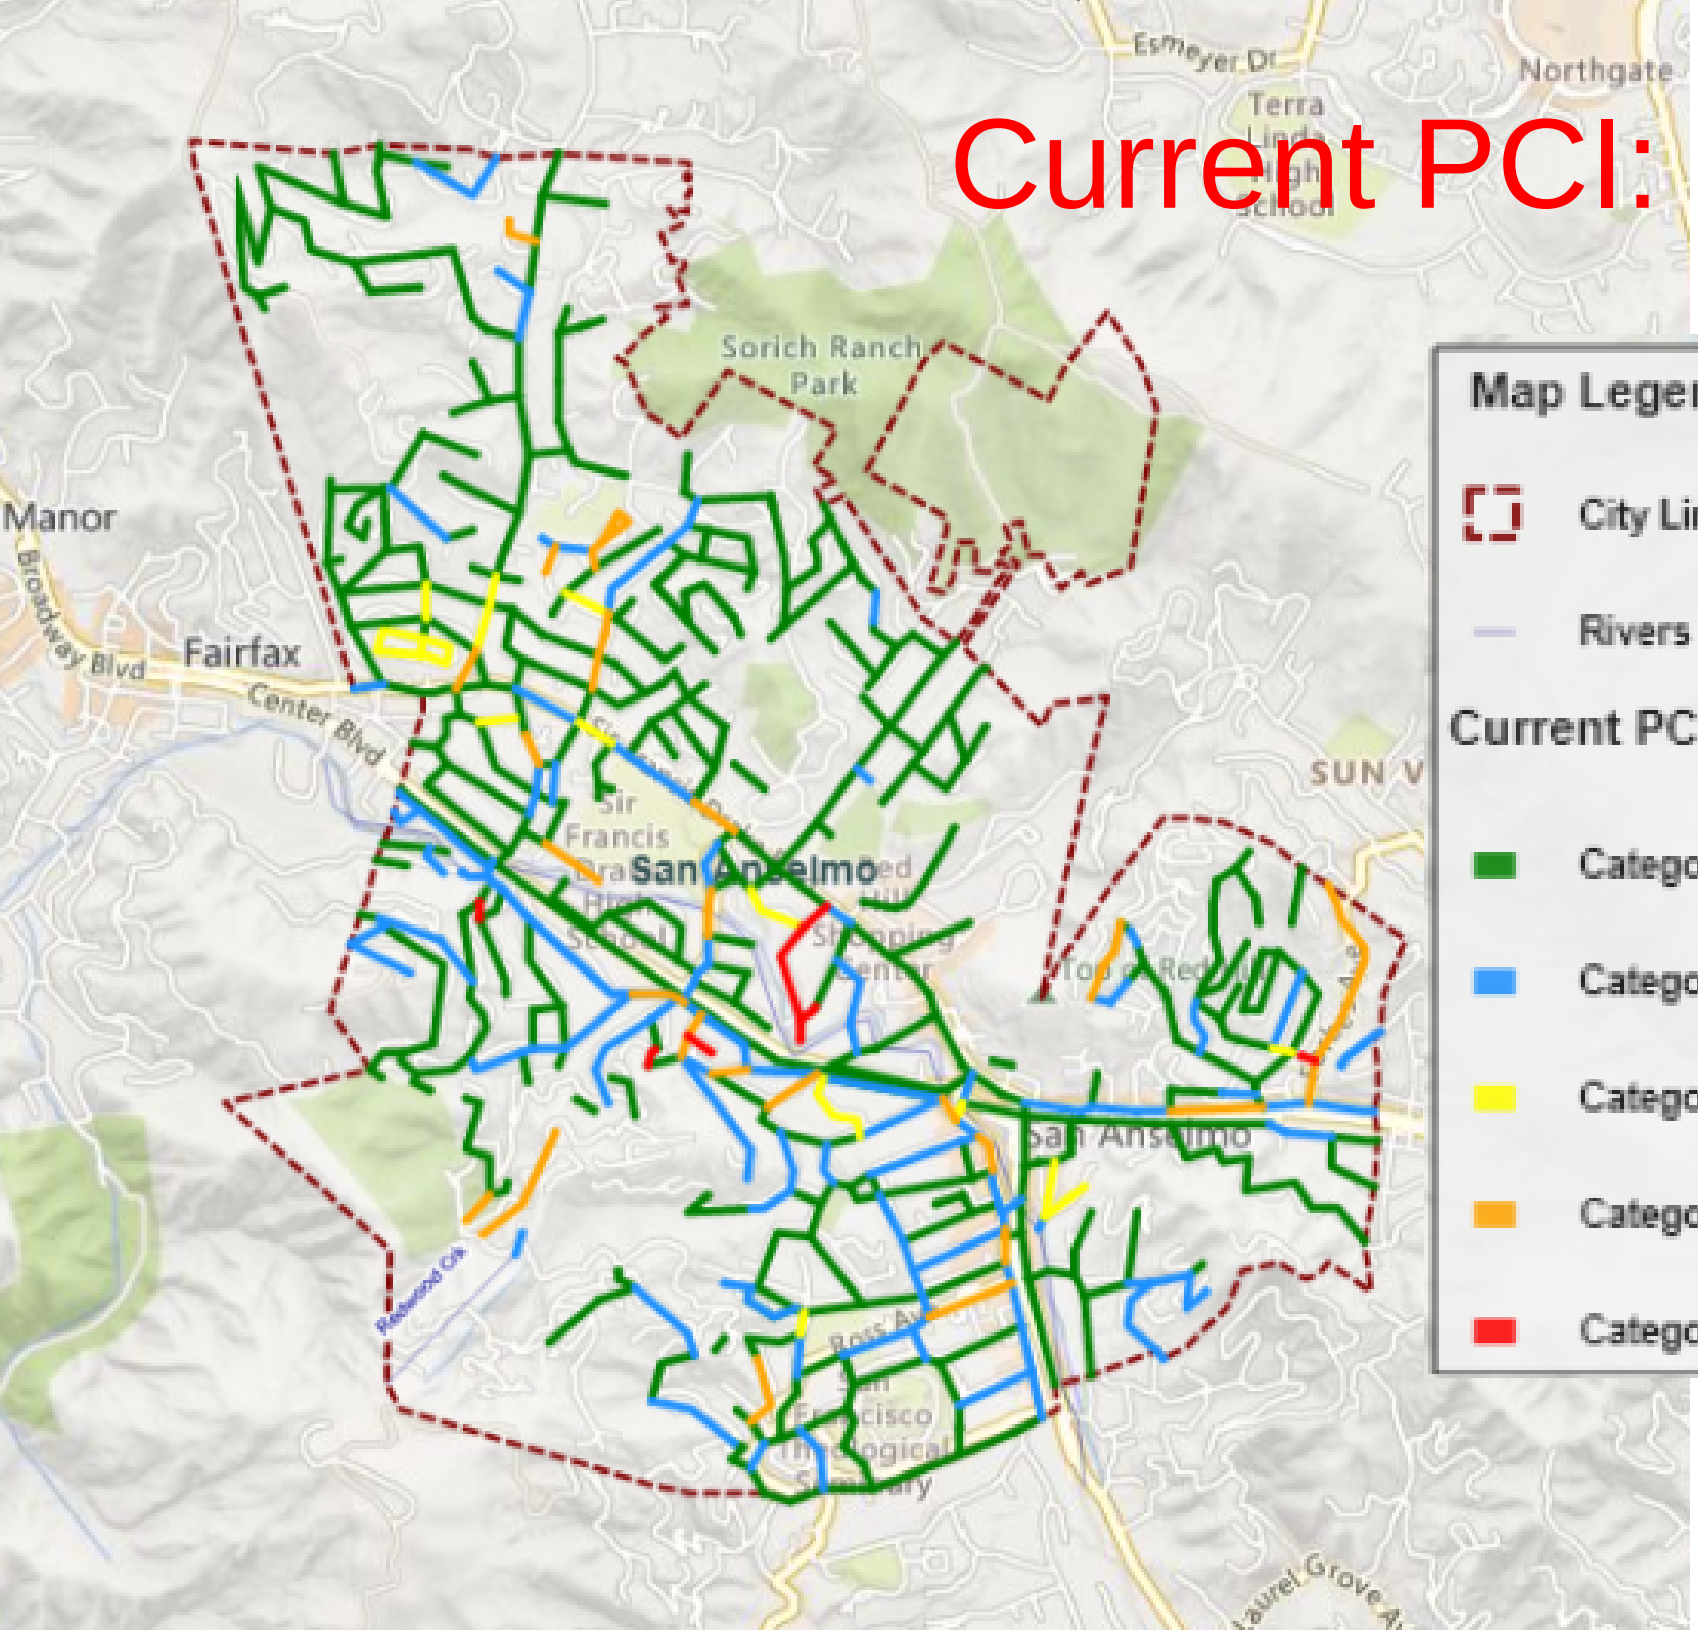

The Town found this project to be categorically exempt from the requirement for the preparation of environmental documents under the California Environmental Quality Act (CEQA) under CEQA Guidelines Section 15301 Class 1, because they involve rehabilitation of existing streets, sidewalks, and gutters that will not create additional automobile lanes and involve negligible or no expansion of use. (14 Cal. Code Regs. § 15301). None of the exceptions to this Class 1 categorical exemption apply in this instance (14 Cal. Code Regs. § 15300.2). Specifically, successive projects of the same type in the same location will not cause significant cumulative impacts, as there are no successive projects planned at this time. There are no unusual circumstances presented by this project and the project will not result in damage to scenic resources within a designated state scenic highway. Finally, the project will not cause a substantial adverse change in the significance of a historical resource, as no historical resources will be impacted.

As with any paving project, the Town follows our Complete Streets Policy which aims to improve the street not just for vehicular traffic, but for pedestrians and bicyclists as well as transit. New and modified curb ramps and enhanced crosswalks improve pedestrian safety, and improved pavement condition makes conditions safer for bicyclists. (Climate Action Plan 2030 Transportation Measures T-2 Bicycling and T-3 Walking).

STAFF REPORT

TOWN OF SAN ANSELMO Item #:1.5

MEETING DATE: October 13, 2026

AGENDA TITLE: Report of Checks Issued, October 2026

FROM: Jeff Zuba, Finance & Admin Services Director

RECOMMENDATION: That the Town Council acknowledges, and files warrant numbers 102666 to 102878 issued during the month of October and bank draft numbers DFT07320, DFT07347-DFT07348, DFT07377-DFT07381, DFT07406-DFT07410, DFT07413-DFT07414, and DFT07416-DFT074174, in a total amount of $2,941,654.23.

BACKGROUND

This report is an itemization of payments made to vendors during the months of October 2026. It also includes wires to Bank of America for October 2026 payrolls, including payments for retirement and health benefits. The Bank of America account is used for payroll-related items.

The following warrants were voided or canceled in October 2026: 102670, 102671, 102742, 102743, 102744, 102815, 102816, 102817, 102818.

STAFF REPORT

TOWN OF SAN ANSELMO Item #1.6

MEETING DATE: November 17, 2026

AGENDA TITLE: Revenue and Expenditure Reports, October 2026

FROM: Jeff Zuba, Finance & Admin Services Director

RECOMMENDATION: That Town Council consider approving the monthly year-to-date Revenue and Expenditure Reports and corresponding activity for the period ending October 31, 2026.

SUMMARY

At the end of each reporting period, the Town of San Anselmo presents to the Town Council its operations as shown on the Revenue and Expenditure reports for discussion and approval.

BACKGROUND

The Revenue and Expenditure reports are year-to-date summaries of revenues and expenditures from the Town's financial system (Tyler Incode) for both the current as well as the prior corresponding fiscal year. These reports include the General Fund's operations given that most of the Town-level operational activities are processed through the General Fund either directly or indirectly. The Town Council approves these reports monthly throughout the fiscal year.

DISCUSSION/ANALYSIS

The revenue and expenditure data through October 31, 2026, is a compilation of all operating activity that is year-to-date for the current and prior fiscal year. These reports are sourced directly from the Town's financial system, of which a corresponding analysis has been carried out by identifying the key trends the Town Council should take note of.

Revenues
Overall, through the October 2026 reporting period, the Town's General Fund revenue increased by $0.079M compared to the prior fiscal year. A majority of the Town's revenue is collected at specific times of the year.

Category	OCT YTD FY27	OCT YTD FY26	$ Change	% Change
Property Tax	230,956.24	211,078.90	19,877.34	9.42%
Sales Tax	226,057.98	202,750.69	23,307.29	11.50%
Property Transfer Tax	22,236.77	14,291.74	7,945.03	55.59%
Franchise Taxes	177,617.37	149,947.82	27,669.55	18.45%
Licenses & Permits	534,011.46	421,206.90	112,804.56	26.78%
Fines	4,500.43	14,414.89	(9,914.46)	-68.78%
Cash & Investment Interest	15.14	-	15.14	-
Intergovernmental	47,184.89	70,310.28	(23,125.39)	-32.89%
Other Fees	188,810.06	168,785.71	20,024.35	11.86%
Transfers In	-	-	-	-
Total	**1,431,390.34**	**1,252,786.93**	**178,603.41**	**14.26%**

As shown above, the $0.079M increase in General Fund revenue is due to the following:

- The Town receives property tax disbursements from the County of Marin in December (55%), April (40%), and June (5%). Collections to date reflect supplemental taxes and unsecured property taxes only.
- The Town receives monthly sales tax disbursements from the State. Fiscal year 2026-27 collections began in September. The Town remains on track to meet its budgeted fiscal year sales tax revenue, with an increase of $0.023M compared to the prior fiscal year driven by higher fuel and consumer goods prices.
- Licenses & Permits revenue increased by $0.113M compared to the prior fiscal year, due to increased construction permit activity in the Town and the timing of collection of business license tax.
- Intergovernmental revenue decreased by $0.023M compared to the prior fiscal year due to the timing of collections from the County of Marin for Prop 172 sales tax.
- Other Fees revenue increased by $0.020M compared to the prior fiscal year, primarily due to the financial services agreement with the Marin Wildfire Prevention Authority. This increase was partially offset by a decline in planning fees resulting from fewer planning applications.

All other revenue categories remained flat or changed by immaterial amounts compared to the prior fiscal year.

Expenditures
Overall, through the October 2026 reporting period, the Town's General Fund expenditures increased by $0.218M compared to the prior fiscal year, primarily due to increases in retirement, outside services – public safety, debt service, and internal service fund charges. All other activity was flat year-over-year or nets to an immaterial change, all within management's expectations.

Category	OCT YTD FY27	OCT YTD FY26	$ Change	% Change
Compensation	1,652,483.50	1,745,650.21	(93,166.71)	-5.34%
Retirement	393,148.52	320,134.95	73,013.57	22.81%
Training	5,931.39	16,483.09	(10,551.70)	-64.02%
Outside Services	612,554.02	785,803.81	(173,249.79)	-22.05%
Outside Services - Public Safety	4,080,225.34	3,904,366.20	175,859.14	4.50%
Maintenance	63,251.32	47,283.83	15,967.49	33.77%
Utilities	22,200.84	9,982.96	12,217.88	122.39%
Supplies	60,093.12	43,026.38	17,066.74	39.67%
Debt Service - Pension Bond	633,976.09	596,120.07	37,856.02	6.35%
Other Expenditure	75,466.89	73,288.59	2,178.30	2.97%
Internal Service Charge	1,063,736.08	902,364.64	161,371.44	17.88%
Transfers Out	-	-	-	0.00%
Total	**8,663,067.11**	**8,444,504.73**	**218,562.38**	**2.59%**

As shown above, the $0.218M increase in General Fund expenditures is driven by the following:

- Compensation (Salaries & Wages and Benefits) decreased by $0.093M compared to the prior fiscal year, primarily due to open positions and the $3,000 one-time payout in August 2025 to all employees upon signing of the July 1, 2025 to June 30, 2028 Memorandum of Understanding with SEIU. These savings were partially offset by a 5.5% cost-of-living adjustment effective July 1, 2026 and step adjustments.
- Retirement increased by $0.073M compared to the prior fiscal year due to the Town's increased CalPERS unfunded liability payment, cost-of-living adjustments, and step adjustments.
- Outside Services decreased by $0.173M compared to the prior fiscal year, primarily due to the Memorial Park feasibility study completed in FY25-26 that did not recur, lower consultant costs for the General Plan update, reduced street sweeping costs, and the timing of contributions to the County of Marin for the Marin County Stormwater Pollution Prevention Program (MCSTOPPP).
- Outside Services – Public Safety increased by $0.175M compared to the prior fiscal year due to higher contributions to the Town's public safety JPAs, the Central Marin Police Authority and Ross Valley Fire Department. These increases are in line with the budgeted amounts set by the Police Council and Fire Board.
- Debt Service increased by $0.037M compared to the prior fiscal year due to a higher scheduled payment on the 2021 Pension Obligation Bonds. The bond payments are due in August and February.
- Internal Service Fund Charges increased by $0.161M compared to the prior fiscal year, primarily due to higher insurance charges resulting from an increase in the Town's contribution to the Bay Cities Joint Powers Insurance Authority (BCJPIA) for coverage. Charges for building maintenance and information technology also increased slightly.

All other expenditure categories remained flat or changed by immaterial amounts compared to the prior fiscal year, consistent with the Town's operations.

MEASURE J

Revenues

Overall, through the October 2026 reporting period, the Town's Measure J Fund revenue increased by $0.236M compared to the prior fiscal year.

Category	OCT YTD FY27	OCT YTD FY26	$ Change	% Change
Sales Tax	412,548.00	367,586.98	44,961.02	12.23%
Cash & Investment Interest	-	-	-	-
Reimbursement	191,104.00	-	191,104.00	-
Total	**603,652.00**	**367,586.98**	**236,065.02**	**64.22%**

- The Town receives monthly sales tax disbursements from the State. Fiscal year 2026-27 collections began in September. The Town remains on track to meet its budgeted fiscal year sales tax revenue, with an increase of $0.045M compared to the prior fiscal year driven by higher fuel and consumer goods prices.
- Reimbursement revenue increased by $0.191M compared to the prior fiscal year due to RVFD reimbursing the Town for items unique to fire service operations (the emergency radio and exhaust extraction systems) installed during the Fire Station 20 remodel, which fall under RVFD's responsibility per JPA Section 9.2(b).

Expenditures

Overall, through the October 2026 reporting period, the Town's Measure J expenditures decreased by $0.869M compared to the prior fiscal year, primarily due to decreased construction activity. All other activity was flat year-over-year or nets to an immaterial change.

Category	OCT YTD FY27	OCT YTD FY26	$ Change	% Change
Compensation	53,080.75	82,662.84	(29,582.09)	-35.79%
Retirement	3,309.07	6,201.75	(2,892.68)	-46.64%
Training	-	-	-	-
Outside Services	104,106.82	101,830.18	2,276.64	2.24%
Construction	858,522.58	1,697,777.37	(839,254.79)	-49.43%
Transfers Out	-	-	-	-
Total	**1,019,019.22**	**1,888,472.14**	**(869,452.92)**	**-46.04%**

- Compensation (Salaries & Wages and Benefits) decreased by $0.030M compared to the prior fiscal year, primarily due to current open positions partially offset by a 5.5% cost-of-living adjustment effective July 1, 2026 and step adjustments.
- Construction decreased by $0.839M compared to the prior fiscal year because the Fire Station 20 and Adaptive Traffic Signal projects were substantially completed in FY25-26.

FISCAL IMPACT
None

STAFF REPORT

TOWN OF SAN ANSELMO Item #: 1.7

MEETING DATE: November 17, 2026

AGENDA TITLE: First Amendment to Sleepy Hollow Fire Protection District Contribution Agreement for Fire Station 20 Project

FROM: David P. Donery, Town Manager

RECOMMENDATION: That the Town Council approve the attached amendment to the Contribution Agreement between the Sleepy Hollow Fire Protection District and the Town for the Fire Station 20 project.

BACKGROUND

On August 26, 2025, the Town entered into a Contribution Agreement in connection with the Fire Station 20 project. With this agreement, the Sleepy Hollow Fire Protection District (SHFPD) agreed to contribute up to $1.5 million dollars towards the completion of the project to be paid incrementally based on a agreed set of project milestones.

DISCUSSION

In recognition of increased costs and in an effort to facilitate the completion of the fire station project, the District has agreed to make an additional contribution in the amount of Two Hundred Fifty Thousand Dollars ($250,000.00) to enable the Town to discharge certain overages accumulated in connection with the project. The Town and District desire to amend the Contribution Agreement to reflect this supplemental contribution.

Separate and independent from the Supplemental Contribution, the District agrees to provide funding to the Town in an amount not to exceed One Hundred Fifty Thousand Dollars ($150,000.00) (the “Garden Contribution”) to partially fund the design and construction of a public "FireSmart" garden on the portion of Station 20 which abuts Butterfield Road.

This Agreement documents the combined (i) amendment of the Contribution Agreement in connection with the Supplemental Contribution, and (ii) the Parties' agreement with respect to the Garden and the Garden Contribution. It is entered into entered into with the mutual objective of enabling the timely completion of both the Project and the

Garden. The garden project is expected to cost approximately $200K, and the Town has set aside $50K in Measure J funds to fund the completion.

To summarize the SHFPD's financial participation in the renovations at Fire Station 20, the following outlines each contribution:

- *Initial August 2025* ***Contribution Agreement*** *-* ***$1,500,000***

- *Additional* ***Supplemental Contribution*** *(pending approval of the Amendment) -* ***$250,000***

- *Non-budgeted equipment purchases requested of SHFPD by RVFD for the Project (Hose Dryer, Tool Washer, PPE Washer) -* ***$66,541***

- ***Garden Contribution*** *(pending approval of the Amendment)– Not-to-Exceed* ***$150,000***

TOTAL SHFPD financial support as of November 10, 2026: $1,966,541

CEQA AND CLIMATE ACTION PLAN CONSISTENCY

The Council's approval of the attached amended contribution agreement is not a "project" under the California Environmental Quality Act, because it does not involve an activity which has the potential to cause a direct or reasonably foreseeable indirect physical change in the environment. (Cal. Pub. Res. Code § 21065).

FISCAL IMPACT

The approval of this amendment to the Contribution Agreement facilitates contributions by the SHFPD of $250K towards renovation costs for the Fire Station 20 renovation project, and an additional contribution of $150K toward the design and construction of the fire safe garden project.

ATTACHMENTS

Attachment 1: First Amendment to Sleepy Hollow Fire Protection District Contribution Agreement for Fire Station 20 Project

FIRST AMENDMENT TO
CONTRIBUTION AGREEMENT
AND
AGREEMENT RE:
FIRESMART GARDEN

This FIRST AMENDMENT TO CONTRIBUTION AGREEMENT and AGREEMENT RE: FIRESMART (this "**Agreement**") is made and entered into as of this ___ day of November __, 2026 (the "**Effective Date**") by and between the TOWN OF SAN ANSELMO, a California Municipal Corporation (the "**Town**") and the SLEEPY HOLLOW FIRE PROTECTION DISTRICT, a California Special Service District (the "**District**") (collectively, the "**Parties**"). Capitalized terms used but not defined herein shall have the meaning set forth in the Contribution Agreement

RECITALS

This Agreement is made with reference to the following facts and objectives:

A. Effective August 26, 2025, the Parties entered into a Contribution Agreement in connection with the Project (the "**Contribution Agreement**"). The Parties acknowledge that the District has fulfilled its obligation under the Contribution Agreement to contribute the amount of One Million Five Hundred Thousand Dollars ($1,500,000.00) (the "**Aggregate Contribution**") to the Town in connection with the Project.

B. As of the Effective Date, the Project remains uncompleted. The Completion Date is on or about September 1, 2026. To facilitate the timely completion and delivery of the Project, the District is willing to make an additional Contribution in the amount of Two Hundred Fifty Thousand Dollars ($250,000.00) to enable the Town to discharge certain Overages accumulated as of the Effective Date (the "**Supplemental Contribution**") in connection with the Project. The Parties desire to amend the Contribution Agreement to reflect this Supplemental Contribution.

C. Separate and independent from the Supplemental Contribution, the District agrees to provide funding to the Town in an amount not to exceed One Hundred Fifty Thousand Dollars ($150,000.00) (the "**Garden Contribution**") to partially fund the design and construction of a public "FireSmart" garden on the portion of Station 20 which abuts Butterfield Road (the "**Garden**").

D. This Agreement documents the combined (i) amendment of the Contribution Agreement in connection with the Supplemental Contribution, and (ii) the Parties' agreement with respect to the Garden and the Garden Contribution. It is entered into entered into with the mutual objective of enabling the timely completion of both the Project and the Garden.

E. The District has found and declared that the Supplemental Contribution and the Garden Contribution each serves a direct and substantial public interest and furthers the District's mission to provide fire protection and emergency services for the direct benefit of District residents.

NOW, THEREFORE, in consideration of the foregoing Recitals, which collectively shall be considered an integral part of this Agreement, and in consideration of the terms and conditions contained in this Agreement, and for other good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, the District and the Town hereby agree as follows:

AGREEMENT

1. Provisions Incorporated by Reference. The Parties agree that the Recitals contained in this Agreement are true and correct and are incorporated in this Agreement by reference. Capitalized terms not otherwise defined in this Agreement shall have the meaning attributed to them in the

Contribution Agreement. Additionally, the terms and provisions of the Contribution Agreement are hereby incorporated by reference as though fully set forth in this Agreement.

2. Supplemental Contribution. Pursuant to Section 3.1(e) of the Contribution Agreement, subject to all applicable terms and conditions to which Contributions are subject under the Contribution Agreement, the District shall make the Supplemental Contribution to the Town in the amount of Two Hundred Fifty Thousand Dollars ($250,000.00). The Supplemental Contribution shall be utilized by the Town for the exclusive purpose of discharging the accumulated Overages on a Last Dollar basis.

3. Garden Contribution. As soon as practicable following the execution of the Garden Contracts (as defined below), subject to all applicable terms and conditions to which Contributions are subject under the Contribution Agreement, the District shall make the Garden Contribution to the Town in an amount not to exceed One Hundred Fifty Thousand Dollars ($150,000.00). The Garden Contribution shall be utilized by the Town for the exclusive purpose of discharging, prior to delinquency, costs due and payable to the Town's contractors or other Persons in accordance with the Garden Contracts on a Last Dollar basis.

4. Consideration. As partial consideration for the District agreeing to amend the Contribution Agreement and make the Supplemental Contribution and the Garden Contribution as set forth herein, the Parties agree as follows:

(a) Agreement re: Garden.

(i) The Town shall, without any cost whatsoever to the District, cause and complete the design, construction, and delivery of the Garden in a good and workmanlike manner substantially in accordance with all construction drawings, required approvals, and execution plans in compliance with the time periods set forth therein as the same may be extended;

(ii) As soon as practicable following the Town's execution of all services contracts for the design and construction of the Garden (collectively, the "**Garden Contracts**"), the District shall, upon the Town's written request, make available for disbursement to the Town the Garden Contribution;

(i) The Town shall utilize the Garden Contribution exclusively to pay to the Town's contractors or other Persons, prior to delinquency, on a Last Dollar basis, and in accordance with the Garden Contracts, costs due and payable by the Town in connection with the Garden's design and construction;

(ii) The Town shall hold and account for the Garden Contribution separately from any other Contributions or Town Funds and maintain, separate and distinct from the Project Costs, the accounting and expense records of the Garden design and construction costs;

(iv) The Town shall provide the District with the same level of access to the accounting and expense records of the Garden's design and construction as the Town is obligated to provides to the District pursuant to Section 5.1 of the Contribution Agreement with respect to Project Costs;

(v) The District's rights of access to the Town's accounting and expense records with respect to Project Costs and the Garden design and construction costs shall survive the Completion Date indefinitely; and

(iv) This agreement with respect to the Garden Contribution shall be construed as an agreement ancillary to the Contribution Agreement, as amended by this Agreement, and

the existence of any claim or cause of action of one Party against the other, whether predicated on the Contribution Agreement or otherwise, shall not constitute a defense to the enforcement of this Agreement.

(b) Negative Covenants. As a distinct, bargained-for benefit and further consideration for the District agreeing to amend the Contribution Agreement and make the Supplemental Contribution and Garden Contribution as set forth herein, the Town hereby covenants and agrees that the Town shall not, directly or indirectly, without the prior written consent of the District, which consent may be withheld in the District's sole and absolute discretion:

(i) Service Level. Fail or cause the Town not to maintain Station 20 open and fully staffed and equipped. For purposes of this Agreement, "open and fully staffed and equipped" shall mean (A) the twenty-four (24) hour continuous operation of Station 20 by not less than three (3) full-time uniformed personnel sufficient to permit the immediate dispatch of an effective "First Alarm Response" to all calls for services within the District on an equal-priority basis as calls for services outside of the District; (B) the stationing and maintenance at Station 20 of equipment, materials, and supplies substantially the same in quality and quantity as currently exist and increasing the number of apparatus to include the Type 6 Truck as soon as practicable; and (C) the maintenance of Station 20 in satisfactory physical condition.

(ii) Change of Use. Alone or in concert with any one or more Third Parties, (A) make or be the proponent of any proposal to the Town, the Town Council or any of its committees, or (B) conduct, call for, or publicly support a referendum of residents of the Town, in favor of taking, causing, or upholding any act by the Town to: (1) suspend, close, decommission, cease, downsize, or curtail fire and emergency services operations at Station 20; (2) convert, repurpose, redevelop, re-zone, or adapt Station 20 for re-use other than as an open and fully staffed and equipped fire station; (3) relocate or declare Station 20 as surplus property, fully or partially; or (4) direct any Third Party in the acquisition of record or beneficial ownership of, or offer for sale, sell, lease, transfer, tender, pledge, encumber, assign, or otherwise dispose of the Town's ownership or control, fully or partially, voluntarily or involuntarily, or directly or indirectly, of Station 20 or enter into any contract, option, or other agreement or arrangement or understanding with respect to, or consent to, the same; *provided, however*, that the Town Councilmembers shall be permitted to vote in their sole discretion on any proposal with respect to any of the foregoing acts in the event that the District shall issue a voting recommendation that the Town Council approve a proposal submitted to the Town Council at a Town Council meeting authorizing any of the foregoing acts, the Town Councilmembers may, but are not required to, vote in accordance with any such recommendation.

(iii) District Continuity. Alone or in concert with any one or more Third Parties, seek, call for, publicly support, knowingly encourage, solicit, be a proponent of, or advise (A) any jurisdictional reorganization of or involving the District under the Cortese-Knox-Hertzberg Local Government Reorganization Act, as amended, via petition or otherwise, which could result in a reorganization, liquidation, merger, consolidation, dissolution, or similar extraordinary transaction involving the District; (B) any change to the District's Board of Directors or the District's management or governance structure, (C) institute, solicit, or join as a party any litigation, arbitration, or other proceeding against or involving the District or any of its current or former directors or officers; *provided, however*, that for the avoidance of doubt, the foregoing shall not prevent the Town from (1) bringing litigation against the District to enforce any express provision of this Agreement, (B) making any counterclaim with respect to any proceeding initiated by, or on behalf of, the District against the Town, (C) responding to or complying with validly issued legal process; (d) making any request or submit any proposal to amend or waive any of the terms of this Agreement (including this Section 9.2(d)), in each case publicly or that would reasonably be expected to result in a public announcement or disclosure of such request or proposal or give rise to a requirement to so publicly announce or disclose such request or proposal; or (4)

knowingly assist any Third Party in encouraging or advising any other Person with respect to the foregoing acts. The covenant and prohibitions in this Section 9.2(d) shall cease to apply immediately if the District announces that it has entered into an agreement to contract with, join, merge, or consolidate with a public agency other than the JPA to whom the responsibility for fire protection and emergency services in the District shall be transferred and assumed, either as a successor to the powers, duties, and functions of the District or pursuant to a joint powers agreement or other form of services contract.

5. Term. The respective rights and obligations of the Parties shall have effect beginning on the Effective Date and shall continue until terminated. The term of this Agreement is indefinite (the "**Term**") and continues in effect until either or both Parties take(s) action to terminate it. Certain provisions of this Agreement, as more fully set forth in Section 6, below, shall continue in effect beyond the dates of termination of this Agreement (the "**Termination Date**").

6. Survival of Covenants. Except as expressly set forth herein, all covenants and agreements of the Parties set forth in Section 4, above, and liability for the breach thereof, shall survive the completion of construction of the Project, the Garden, and the expiration or termination of this Agreement for any reason.

7. Effect of Agreement, etc. This Agreement shall be deemed a part of, and shall be deemed included in, the Contribution Agreement, and the Contribution Agreement and this Agreement shall be interpreted and enforced as one combined agreement. The Parties affirm that, except as expressly amended herein, the terms, provisions and Conditions of the Contribution Agreement shall remain in full force and effect and are hereby ratified and confirmed.

8. Severability. A determination that any provision of this Agreement is unenforceable or invalid shall not affect the enforceability or validity of any other provision hereof and any determination that the application of any provision of this Agreement to any Person or circumstance is illegal or unenforceable shall not affect the enforceability or validity of such provision as it may apply to any other Persons or circumstances.

9. Authority. Each Party represents to the other Party that: (i) such Party has the full right and authority to enter into this Agreement, (ii) the Person signing on behalf of such Party was and continues to be authorized to do so, and (iii) no consent of any other party is required for the execution of this Agreement, or such consent has been obtained.

10. Execution. This Agreement may be executed in multiple counterparts and all such counterparts when taken together shall constitute one and the same instrument. This Agreement and counterparts thereof may be executed and delivered by electronic transmission, with the same effect as an original executed Agreement or counterpart.

11. Successors and Assigns. The provisions of this Agreement shall bind and inure to the benefit of the Parties and their respective heirs, successors, and assigns.

12. Entire Agreement. This Agreement, together with the Contribution Agreement, contains all of the agreements of the Parties with respect to any matter covered in this Agreement.

IN WITNESS WHEREOF, the Parties have executed and delivered this Agreement as of the Effective Date.

STAFF REPORT

TOWN OF SAN ANSELMO Item 1.8

MEETING DATE: 11/17/26

AGENDA TITLE: Financial Report on Recreation Fund

FROM: Mattie O'Grady – Director of Community Services

RECOMMENDATION: That the Town Council review the Recreation Fund revenue and expenditure report for the period ending October 31, 2026.

BACKGROUND

The Recreation Department offers a wide variety of fee-based programs throughout the fiscal year including sports programs and leagues, youth and adult classes, and childcare and camps. Additional revenue is generated through facility rentals and administrative fees.

DISCUSSION/ANALYSIS

As of October 31, 2026, 33% of the fiscal year has elapsed and the Recreation Fund is listed at 42% of projected revenues and 33% of projected expenditures.

Attached are the department's capital outlay budget and the Recreation Fund revenue and expenditure report. For this fiscal year, the Recreation Department has allocated funds to support special events and older adult programming that are not expected to be cost-recoverable.

For future historical comparison purposes, staff has developed the following table:

FY		Revenue				Expenditures				Rev Over/(Under) Exp	
		Budget	Actual	%		Budget	Actual	%		$$	%
2026-27		**2,608,050**	**1,088,238**	**42%**		**2,608,050**	**870,478**	**33%**		**217,804**	**8%**
2025-26		2,362,320	999,714	42%		2,362,320	825,583	35%		174,130	7%
2024-25		2,210,355	974,247	44%		2,210,355	699,450	32%		274,797	12%

STAFF REPORT

TOWN OF SAN ANSELMO Item #: Consent Calendar

MEETING DATE: November 17, 2026

AGENDA TITLE: Adoption of an Ordinance Repealing and Replacing Title 6 “Business, Professions, and Trades”, Chapter 7 “Tobacco Retailer License” to Prohibit the Sale of Tobacco and Nicotine Products within San Anselmo with Certain Exceptions

FROM: Linda Kenton, Assistant Town Manager
Emily Longfellow, Assistant Town Attorney

RECOMMENDATION

Adopt the attached Ordinance entitled, "ORDINANCE OF THE TOWN COUNCIL OF THE TOWN OF SAN ANSELMO REPEALING AND REPLACING TITLE 6, CHAPTER 7 “TOBACCO RETAILER LICENSE” TO PROHIBIT THE SALE OF TOBACCO AND NICOTINE PRODUCTS WITHIN SAN ANSELMO WITH CERTAIN EXCEPTIONS AND MAKING ASSOCIATED CEQA EXEMPTION FINDINGS." (Attachment 1)

BACKGROUND AND DISCUSSION

On October 27, 2026, the Town Council conducted a duly noticed public hearing to consider repealing the Town’s Tobacco Retailer License chapter and replacing it with an Ordinance banning the sale of tobacco and nicotine products, with an exception for retailers that were actively selling premium cigars (as defined in State law) as of October 13, 2026. Following the public hearing, the Council introduced the ordinance, waived further reading, and directed staff to return with the ordinance for adoption.

Previous staff reports from the Council’s consideration of tobacco regulation with additional background information may be found here: June 23, 2026, October 13, 2026 and October 27, 2026.

Pursuant to Council direction, the proposed Ordinance would repeal the Town’s Tobacco Retailer License chapter and replace with an Ordinance banning the sale of tobacco and nicotine products, with an exception for retailers that were actively selling premium cigars (as defined in State law) as of October 13, 2026 as directed by the Council.

FISCAL IMPACT

Staff does not anticipate significant new fiscal impacts.

RECOMMENDATION

Adopt the attached Ordinance entitled, "ORDINANCE OF THE TOWN COUNCIL OF THE TOWN OF SAN ANSELMO REPEALING AND REPLACING TITLE 6, CHAPTER 7 “TOBACCO RETAILER LICENSE” TO PROHIBIT THE SALE OF TOBACCO AND NICOTINE PRODUCTS WITHIN SAN ANSELMO WITH CERTAIN EXCEPTIONS AND MAKING ASSOCIATED CEQA EXEMPTION FINDINGS." (Attachment 1)

CEQA AND CLIMATE ACTION PLAN

The adoption of the ordinance repealing and replacing Title 6, Chapter 7 “Tobacco Retailer License” to prohibit the sale of tobacco and nicotine products withing San Anselmo with certain exceptions and making associated CEQA exemption findings is exempt from the California Environmental Quality Act, Public Resources Code section 21000 et seq. (“CEQA”). In addition, The Town Council finds that adoption of this ordinance is not a “project” within the meaning of CEQA because it is an organizational and administrative activity that will not result in direct or indirect physical changes in the environment (4 Cal. Code Regs. § 15378(b)(5)). The Climate Action Plan is not implicated.

ATTACHMENTS

Attachment 1: Ordinance

ORDINANCE OF THE TOWN COUNCIL OF THE TOWN OF SAN ANSELMO REPEALING AND REPLACING TITLE 6, CHAPTER 7 "TOBACCO RETAILER LICENSE" TO PROHIBIT THE SALE OF TOBACCO AND NICOTINE PRODUCTS WITHIN SAN ANSELMO WITH CERTAIN EXCEPTIONS AND MAKING ASSOCIATED CEQA EXEMPTION FINDINGS

WHEREAS, the Town may make and enforce all regulations necessary to protect the public health, safety, and welfare pursuant to its police power under Article XI, Section 7 of the California Constitution; and

WHEREAS, the World Health Organization estimates that tobacco kills over 7 million people annually worldwide[1]; and

WHEREAS, the U.S. Surgeon General reports at least 480,000 people die in the United States from smoking-related diseases and exposure to second hand smoke every year making tobacco use the nation's leading cause of preventable death[2]; and

WHEREAS, smoking causes approximately 230 deaths in Marin County annually[3]; and

WHEREAS, commercial tobacco use is the number one cause of preventable death in California with 40,000 California adults die from their own smoking annually[4]; and

WHEREAS, the majority of tobacco use begins in the teen years and people who start smoking at an early age are more likely to develop a severe nicotine addiction[5]; and

WHEREAS, nicotine is highly addictive, particularly for adolescents and young people, and can affect brain development including learning, memory, and attention[6]; and

WHEREAS, youth nicotine poses serious health risks, including through vaping, which can harm brain development, and lung function, and increase respiratory disease such as asthma[7]; and

WHEREAS, heated tobacco products also pose significant health risks and research shows they contain many of the same harmful chemicals as traditional cigarettes, as well as additional toxic substances not found in traditional tobacco cigarettes[8]; and

WHEREAS, in California, vapes are the most commonly used nicotine product among teens ages 12-17[9]; and

WHEREAS, Marin County 11th grade vaping rates have consistently surpassed California state averages[10]; and

WHEREAS, California retailers continue to sell tobacco and nicotine products to underage consumers evidenced by a 2022 survey where 27.7% of tobacco retailers in California unlawfully sold tobacco products to underage persons[11]; and

WHEREAS, the tobacco industry encourages youth initiation of smoking through predatory targeting and target young adults ages 18-24 to increase their frequency of tobacco use and encourage their transition to habitual users[12]; and

WHEREAS, research shows that a greater density and proximity of tobacco retailers are associated with increased smoking, including the number of cigarettes smoked per day[13]; and

WHEREAS, the density of retailers selling tobacco near adolescents' homes has been associated with increased youth smoking rates and the initiation of non-cigarette tobacco product use[14]; and

WHEREAS, adults who smoke are likely to have a harder time quitting when residential proximity to retailers is closer[15] and density is higher[16]; and

WHEREAS, policies to reduce tobacco retailer density are effective and can reduce or eliminate inequities in the location and distribution of tobacco retailers[17]; and

WHEREAS, tobacco product waste harms the environment as it contaminates water supplies and human food sources[18]; and

WHEREAS, in response to significant health threats to youth and adults, the Town of San Anselmo has a history of regulating tobacco and smoking activities including:

- 2007 smoking prohibited in certain public areas and Town parks
- 2015 smoking prohibited in multi-family residential buildings
- 2015 vaping and e-cigarettes included in the definition of smoking
- 2019 sale of flavored tobacco and vaping products banned and tobacco retailer licenses required for sales; and

WHEREAS, the Town has a substantial interest in protecting the health and safety of the public, including young people, from the harms of tobacco use; and

WHEREAS, State law explicitly allows municipalities and counties to enact local tobacco retail ordinances that are more stringent than State law; and

WHEREAS, regulating the retail sale of tobacco and nicotine products is necessary and appropriate to protect the public health, safety, and welfare; and

WHEREAS, regulating the retail sale of tobacco and nicotine products will reduce the harm to persons and the environment in the Town of San Anselmo, as set forth above; and

WHEREAS, exempting retailers in San Anselmo that are actively engaged in the sale of premium cigars as of October 13, 2026 recognizes these retailers established business interests and their reasonable reliance on existing regulations, while preventing the establishment of new premium cigar retailers; and

WHEREAS, premium cigar smoking is less prevalent than tobacco and non-premium cigar smoking, particularly among youth populations, and use patterns are meaningfully different in that most smoke cigars only occasionally, resulting in a comparatively limited overall impact on public health[19]; and

WHEREAS, at a duly noticed Town Council meeting on October 13, 2026, the Council held a discussion item regarding tobacco and nicotine regulations, and instructed staff to return with an Ordinance prohibiting the sale of tobacco and nicotine products within San Anselmo with certain exceptions (the "Ordinance"); and

WHEREAS, the Town Clerk caused notice of a Town Council public hearing regarding the Town Council's consideration of adoption of the Ordinance to be published in the Marin Independent Journal newspaper on as required by Government Code section 36933 and published the text of the Ordinance as required by State law; and

WHEREAS, on October 27, 2026 the Town Council held a duly noticed public hearing to consider introduction of the Ordinance; and

WHEREAS the Ordinance is statutorily exempt from the requirements of the California Environmental Quality Act ("CEQA") pursuant to CEQA Guidelines section 15378 because it does not constitute a project under CEQA; and CEQA Guidelines section 15061(b)(3) because it can be seen with certainty that there is no possibility it would have a significant effect on the environment; the Ordinance bans the sale of tobacco and nicotine products with certain exceptions and will have no adverse impact on the environment.

NOW, THEREFORE, THE TOWN COUNCIL OF THE TOWN OF SAN ANSELMO DOES HEREBY ORDAIN AS FOLLOWS:

SECTION 1: Recitals. The above recitals are true and correct and incorporated as findings herein.

SECTION 2: Environmental Review. The Ordinance is statutorily exempt from the requirements of the California Environmental Quality Act ("CEQA") pursuant to CEQA Guidelines section 15378 because it does not constitute a project under CEQA; and CEQA Guidelines section 15061(b)(3) because it can be seen with certainty that there is no possibility it would have a significant effect on the environment; the Ordinance bans the sale of tobacco and nicotine products with certain exceptions and will have no adverse impact on the environment.

SECTION 3: Ordinance. Title 6 of the San Anselmo Municipal Code "Business, Professions, and Trades" Chapter 7 "Tobacco Retailer License" is hereby repealed in its entirety and replaced as follows:

TOBACCO AND NICOTINE PRODUCT REGULATIONS

6-7.01 – Title and Purpose.

(a) Title. This Chapter shall be known as the "San Anselmo Tobacco and Nicotine Product Regulation Ordinance."

(b) Purpose. The purpose of this Chapter is to protect the public health, safety, and welfare by prohibiting the sale of tobacco and nicotine products, except as expressly authorized in this Chapter. The use of tobacco products is the leading cause of preventable illness and death in the United States. Prohibiting the retail sale of tobacco and nicotine products as set forth in this Ordinance will help reduce these harms to the public.

(c) In the event of a conflict between this Ordinance and State law, State law shall apply.

6-7.02 – Definitions. Except as otherwise provided below, the definitions in Section 4-15.01 shall apply.

(a) "Delivery sale" means the sale of any tobacco product to any person for personal consumption and not for resale when the sale is conducted by any means other than an in-person, over-the-counter sales transaction in any retail establishment that sells tobacco products. Delivery sale includes the sale of any tobacco product when the sale is conducted by telephone, other voice transmission, mail, or any internet or app-based service.

(b) "Nicotine" means any form of the chemical nicotine, including any salt or complex, regardless of whether the chemical is naturally or synthetically derived. Nicotine includes nicotine analogs.

(c) "Nicotine analog" means a substance with a chemical structure that is substantially similar to the chemical structure of nicotine, and: has an addictive effect that is substantially similar to the addictive effect of nicotine; or has, or is representing to have, an effect on the human body that is substantially similar to that of nicotine. Any communication by, or behalf of, the manufacturer, distributor, or retailer of a tobacco product that indicates that the product contains a nicotine analog, constitutes presumptive evidence that the product contains a nicotine analog.

(d) "Premium cigar" has the same definition as in California Health and Safety Code section 104559.5(a)(13) and means any cigar that is handmade, is not mass produced by use of mechanization, has a wrapper that is made entirely from whole tobacco leaf, and has a wholesale price of no less than twelve dollars ($12). A premium cigar does not have a filter, tip, or nontobacco mouthpiece and is capped by hand.

(e) "Sale" or "sell" means any transfer, exchange, barter, offer for sale, gift, or distribution for a commercial purpose in any manner or by any means whatsoever.

(f) "Tobacco product" means any of the following means:

(1) any product containing, made of, or derived from tobacco or nicotine that is intended for human consumption or is likely to be consumed, whether inhaled, absorbed, or ingested by any other means, including but not limited to, a cigarette, a cigar, pipe tobacco, chewing tobacco, snuff, snus, or heated tobacco product;

(2) any electronic smoking device and any substances that may be aerosolized or vaporized by such device, whether or not the substance contains nicotine and whether or not sold separately; or

(3) any component, part, or accessory of a product described in paragraph (1) or (2) whether or not any of these contain tobacco or nicotine, including but not limited to, filters, rolling papers, blunt or hemp wraps, hookahs, and pipes.

Tobacco product does not include any nicotine cessation product that has been approved by the U.S. Food and Drug Administration to be marketed and for

sale as “drugs,” devices,” or “combination products,” as defined in the Federal Food, Drug, and Cosmetic Act.

6-7.03 – Sales Prohibitions.

(a) It shall be unlawful for any person or entity to sell, offer for sale, conduct or facilitate a delivery sale, distribute for a commercial purpose, or permit to be sold any tobacco product or electronic smoking device in the Town of San Anselmo.

(b) Notwithstanding the foregoing sales prohibition, a retailer that was lawfully and actively engaged in the sale of premium cigars as of October 13, 2026 may continue to sell premium cigars to the extent such sales are conducted at the same retail location. This exception is personal to the qualifying retailer and may not be transferred, assigned, or otherwise conveyed to any other person or entity. This exception does not authorize the sale of any other tobacco product.

(c) Nothing in this Ordinance shall prohibit the lawful possession or personal use of a tobacco product by an individual.

6-7.04 – Transition Period for Existing Retailers.

(a) A tobacco retailer holding a valid Town Tobacco Retailer License on the adoption date of this Ordinance may continue to sell tobacco products for a period of twelve (12) months after the effective date of this Ordinance (“transition period”).

(b) At the end of the transition period, all tobacco product sales shall cease, except for premium cigar sales as authorized under Section 6-7.03(b).

(c) Notwithstanding the repeal and replacement of Chapter 6-7, its existing compliance and enforcement provisions shall remain in effect only during the transition period. No new Tobacco Retailer License applications shall be accepted or approved.

6-7.05 – Enforcement and Penalties.

(a) Violations of this Chapter may be subject to civil action brought by the Town, punishable by a civil fine of up to one thousand dollars ($1,000) per violation.

(b) Violations may be subject to enforcement pursuant to any applicable provision of the San Anselmo Municipal Code, which remedies include administrative citation, civil action, injunctive relief, nuisance abatement, and suspension or revocation of any applicable Town license, permit, or other approval.

(c) All remedies in this Chapter are cumulative and in addition to any other remedies available at law or in equity. Each sale, offer for sale, or day of unlawful operation in violation of this Chapter constitutes a separate violation.

(d) The Town Manager or designee may designate the County of Marin, the County of Marin Department of Health and Human Services, the Marin County Sheriff’s Office, or any public agency, officer, employee, contractor, or designee to administer, monitor compliance with, or enforce this Chapter to the extent authorized by law. Notwithstanding the foregoing, the Town reserves the right to enforce this Chapter independently through any remedy available under law.

SECTION 4: Severability. The Town Council hereby declares every section, paragraph, sentence, clause, and phrase is severable. If any section, paragraph, sentence, clause or phrase of this Ordinance for any reason is found to be invalid or unconstitutional, such invalidity, or unconstitutionality shall not affect the validity or constitutionality of the remaining sections, paragraphs, sentences, clauses or phrases.

SECTION 5: Effective Date. This Ordinance shall go into effect thirty (30) days from its adoption. Prior to the expiration of fifteen (15) days of adoption, this Ordinance or a summary thereof pursuant to Government Code section 36933, shall be published at least once in a newspaper of general circulation, along with the names of the members of the Town Council voting for and against its adoption.

INTRODUCED AND ADOPTED AT A PUBLIC HEARING at a regular meeting of the San Anselmo Town Council on October 27, 2026 by the following vote:

CAUTION: External Sender

Dear Mayor Burdo, Vice Mayor Walker, and Council members Burke, Kullaway, and Schlesinger,

I am writing to support your near-complete end of tobacco and nicotine sales policy.

As a Professor of Respiratory Medicine, I see people harmed by the effects of tobacco smoke every day. The damage caused by smoking is well-documented – tobacco kills two out of three people who continue to smoke.

While proponents of tobacco control tend to frame measures that reduce smoking as a means to increase human wellbeing, the tobacco industry and its proxies typically counter this with arguments that purport to defend smoking as an issue of individual freedom. But for most people, smoking is based on an addiction that starts in childhood. Most people who smoke, well aware of the harms smoking causes, want to quit.

For most people who do quit, quitting smoking takes multiple attempts. To frame nicotine dependence as a matter of freedom or personal choice makes little sense.

What is more, the apparent conflict between wellbeing and freedom is a false one, dependent on a narrow view of freedom concerned only with what individuals *are forbidden to do*, rather than what they are *actually able to do,* their capabilities. Considered more fully, the tobacco industry can thus be recognised as also an enemy of human freedom.

The tobacco industry creates lives that are unfree in the sense that the human capability to pursue activities that individuals would otherwise choose to do – work, caring for children or grandchildren, sport and recreation, walking 50 yards without getting out of breath – is diminished by cardiorespiratory disease and other medical conditions. Smoking ends relationships and harms families through the premature death of partners and the absence of grandparents. It ends pregnancies and kills children.

Tobacco addiction, with its cycle of craving and reward that usually begins in childhood, robs autonomy and impacts mental health.

The key ethical justification for this proposed public health intervention, against the charge that it will encroach on freedom or is paternalistic, is that it will not only improve wellbeing, it will actually *increase*

rather than reduce freedom, considered in terms of capabilities. Rather than preventing people taking responsibility for their own lives, it will increase individuals' capacity to act.

These issues are covered in more detail in the article attached.

I hope that this measure will be allowed to pass, to protect both the wellbeing and freedom of your citizens.

ABSTRACT

A richer understanding of the ethical basis for ending the tobacco epidemic has the potential to strengthen the case for change. This paper first addresses the way that the two key moral goods of well-being and freedom, elements of a 'good life', are limited by tobacco dependence. The limited negative view of freedom as a lack of prohibition is rejected in favour of a view of freedom as capability—what individuals can actually do. Second, arguments around tobacco control are considered through the long-established medical ethics framework of principlism—an approach that weighs decisions according to their respect for beneficence, non-maleficence, autonomy and distributive justice. The ethical responsibilities of healthcare and other organisations, as well as government, are considered, as are the ethics of the tobacco industry itself, whose products drastically limit human well-being and freedom, yet uses moral arguments to promote itself through corporate social responsibility.

The enormous impact of smoking on both well-being and freedom, combined with the existence of effective means to end these harms, provides a moral imperative to pursue the tobacco endgame.

WHAT THIS PAPER ADDS

⇒ The feeling that tobacco control is the right thing to do is often taken for granted. However, a proper appreciation of the ethical principles underpinning this can be helpful both to reject tobacco industry arguments, especially those that appear to cite the primacy of individual freedom, and to strengthen and extend arguments into areas beyond a concern for individual health.

⇒ A full appreciation of the scale and range of harm caused by smoking also drives the ethical obligation to adopt a swift and comprehensive set of measures to deliver the tobacco endgame.

INTRODUCTION

Tobacco dependence is a key driver of premature death and disability and forms one of the crucial commercial determinants of global health.[1–3] The ambition of the tobacco control endgame is that nobody starts smoking, everyone who smokes is supported to quit, and the tobacco industry ceases to be viable.[4 5] Delivery of this requires a concrete plan to end all activities of the tobacco industry with a specific timeline and strategy tailored to each region's needs.[6 7] It requires both the introduction, strengthening and enforcement of conventional policies such as smoke-free legislation, tobacco taxation and advertising bans, as well as what the WHO Framework Convention on Tobacco Control (FCTC) refers to as 'forward-looking measures'.[8] These may include generational sales bans, reducing retail outlets and denicotinisation, as well as 'polluter pays' measures where the tobacco industry ceases to be profitable because it is forced to pay for health and environmental externalities.[5]

While proponents of tobacco control tend to frame measures that reduce smoking as a means to increase human well-being,[1 9] the tobacco industry and its proxies typically counter this with arguments that purport to defend smoking as an issue of individual freedom.[10–12] However, this apparent conflict between well-being and freedom is a false dichotomy dependent on a narrow view of freedom concerned only with what individuals are *forbidden* to do, rather than what they are actually *able to* do. Considered more fully, the tobacco industry can thus be recognised as an enemy of human freedom.

Some general principles of well-being and freedom

From our own individual experience, we know that we are conscious and can suffer and that we have desires or preferences from which we derive goals and objectives that we have reason to value.[13] These facts form distinct but also profoundly intertwined aspects of the human condition—we can suffer a loss of well-being because our ambitions are thwarted or accept a loss of well-being in order to achieve some purpose that we consider more valuable.

A person's freedom or agency can best be thought of not simply in terms of what is allowed in a legal sense, but rather as what they are actually able to do or be in a society. This approach, advocated by Amartya Sen,[13] considers not simply what is or is not permitted to an individual, but that individual's *capabilities*. The issue is not whether or not something is merely forbidden (negative freedom), but whether a person can actually do the thing that they wish to do and are in theory permitted to do (positive freedom).

The tobacco industry creates lives that are unfree in the sense that the human capability to pursue activities that individuals would otherwise choose to do—work, caring for children or grandchildren, sport and recreation, walking 50 yards without getting out of breath—is diminished by cardiorespiratory disease and other medical conditions.[14 15] Smoking ends relationships and harms families through the premature death of partners and the absence of grandparents.[16] It ends pregnancies and kills children.[9 14] Tobacco addiction, with

its cycle of craving and reward that usually begins in childhood, robs autonomy and impacts mental health.[17]

Thus, a key ethical justification for public health interventions that are intended to prevent or discourage a particular behaviour, against the charge that they encroach on freedom or are paternalistic,[18] is that they not only improve well-being, but also increase rather than reduce freedom, considered in terms of capabilities. Rather than preventing people from taking responsibility for their own lives, they increase individuals' capacity to act.

The principle of humanity and tobacco as a cause of bad lives

The moral goods of well-being and freedom underpin two kinds of human experience, those in which desires are satisfied and those in which desires are frustrated. A list of six great human desires, proposed by Ted Honderich, identifies (1) a decent length of conscious life, (2) bodily quality of life, (3) freedom and power, including political freedom and power, (4) respect and self-respect, (5) the goods of relationship and (6) the goods of culture, as fundamental.[19]

We have reasons to desire these for ourselves, which basic rationality tells us must apply generally. If they are right for us, they are right for other people as well. From this derives the Principle of Humanity to guide action, the principle that '*the right or justified thing to do is the one that, according to the best judgement and information, is the rational means, in the sense of being effective and not self-defeating, of getting and keeping people in general out of bad lives*'—lives where these desires cannot be met.

The Principle of Humanity, a form of list consequentialism, prioritises getting and keeping people from such 'bad lives' over a general principle of maximising utility for all. The Jesuit 'preferential option for the poor' is another articulation of the same approach, while the 'proportionate universalism' approach, coined more recently by Michael Marmot[20–22] emphasises that '*focusing solely on the most disadvantaged will not reduce health inequalities sufficiently. To reduce the steepness of the social gradient in health, actions must be universal but with a scale and intensity that is proportionate to the level of disadvantage.*'

The facts that the tobacco industry is an engine that generates bad lives and that tobacco control measures, including the tobacco endgame, form rational means to prevent this, produce a clear ethical imperative to act.

Tobacco control through the lens of principlism

The impact of tobacco control can be considered through the familiar framework of principlism which proposes that healthcare decision-making is bound to consider four broad moral principles: beneficence, non-maleficence, respect for autonomy and distributive justice and so represents a practical synthesis of consequentialist and deontological moral principles.[23]

Beneficence

The harms of tobacco dependency include killing two in three people who continue to smoke,[24–26] more than 8 million people/year.[27] People who smoke become disabled at a younger age, experience worse mental health and die on average 10 years younger than those who do not.[14 17 28] Each cigarette smoked takes away around 20 min of life expectancy.[16] Tobacco control can be considered beneficial because ending smoking is an effective means to reduce human suffering and increase human freedom.

The toxicity of smoking is multiplied by other harmful exposures, including early life deprivation, trauma, lack of access to healthcare, poor diet and housing,[29] while quitting smoking will benefit most those who have multiple health problems. Tobacco endgame approaches require a continuing focus on vulnerable, underserved and marginalised groups, especially as overall smoking rates fall. Targets to lower smoking rates must cover all groups within the population, not just the headline figure. In practical terms, this includes ensuring that factors which promote or sustain smoking uptake in specific groups or locations are identified and removed and that they have access to the most effective support and treatment to quit.[30 31]

Benefits of tobacco control measures do not only accrue to individuals who are supported to quit smoking or to the people who never start. There are harms to others from passive smoke exposure, in utero exposure and transgenerational effects, which further entrench health inequality.

The tobacco product life cycle, from cultivation, curing and manufacture through to use and disposal, is also a cause of substantial environmental harms.[32] It drives deforestation and displaces agricultural land, predominantly in low- and middle-income countries, a number of which are food insecure.[32 33] Trillions of plastic cigarette butts are discarded into the environment each year, polluting water with microplastics and other toxic chemicals that leach from them.[34 35] Child labour is common, and as well as missing schooling, children's thinner skin makes them particularly vulnerable to green tobacco sickness caused by nicotine absorption from leaves they harvest.[36] Smoking drives an estimated 5.7% of global healthcare spend,[37] and healthcare accounts for around 5% of greenhouse gases,[38] thus contributing a further 0.3% of the emissions behind global heating, over and above the direct impact of its product life cycle.

Non-maleficence

Where novel or strengthened measures are proposed, the tobacco industry and its front organisations have often raised bogus warnings of adverse paradoxical consequences, such as increases in illicit trade with higher prices, violence against shopkeepers, increased child exposure to smoke at home when bars and restaurants became smoke-free, damage to arts and culture if sponsorship is forbidden or harm from advertising bans, as they will stop people switching to supposedly safer lower tar products.[11] Precedent (the predicted adverse outcomes do not occur, but bogus arguments are often recycled) and modelling (impact and effectiveness of previous or similar measures) should inform practical wisdom to reject them. Comprehensive rebuttals are available elsewhere,[2] but as arguments with little factual basis, they carry little ethical weight, although it is important to acknowledge that they may be politically effective, as evidenced by the (hopefully temporary) repeal of endgame policies in New Zealand.[39]

Policies that reduce the affordability or availability of smoking can be said to produce a disadvantage for people who nevertheless continue to smoke. Although tobacco products are addictive, there is still an element of choice to smoke or not to smoke involved which tobacco control policies may restrict. However, the human ends of increasing well-being and increasing freedom broadly considered can be taken to outweigh this. Measures should be addressed against smoking rather than people who smoke. Thus, a generational sales ban that makes selling tobacco products to people under a certain (progressively increasing) age illegal is justified, but not criminalising possession of tobacco products. Where a tobacco product is particularly used in

Tob Control: first published as 10.1136/tc-2026-060293 on 3 November 2026. Downloaded from http://tobaccocontrol.bmj.com/ on November 4, 2026 at Imperial College London Library. Protected by copyright, including for uses related to text and data mining, AI training, and similar technologies.

over-policed populations (such as menthol cigarettes or shisha in Black and Muslim populations, respectively), reassurance on this point is key so that fears that legislation will lead to increased stop and search do not develop. People working in tobacco control and legislators also need to ensure that they seek out the views of groups with high smoking rates whose voice is frequently absent from consultation processes or ignored.[40–42]

The tobacco endgame requires that the tobacco industry ceases to be viable. For people employed in the tobacco product chain and their dependents, reducing smoking may pose a threat to their livelihoods. This issue is tightly linked to industry practices that produce debt traps for farmers.[43] Mitigating this where possible is desirable, and Article 17 of the WHO FCTC encourages member countries to promote economically viable alternatives for tobacco workers, growers and sellers.

Autonomy

Considering human freedom in a full sense, smoking limits freedom, and ending smoking will expand it. Even the narrower sense of freedom as choice is of limited applicability when talking about an addiction that starts in childhood and which has been manufactured by a rapacious industry, relentlessly targeting young people with its advertising.[44–46] Smoking is highly addictive—69% of people who have a single cigarette will go on to smoke daily. The vast majority of people who smoke become addicted in childhood,[47] and children are much more likely to take up smoking if their parents, siblings or peer group do.[48] Tobacco smoking is therefore a transmissible condition which maintains and perpetuates health inequalities. Most people who smoke wish they had not started smoking, would not want their children to start, and support tobacco control measures.[49]

For autonomy to be meaningful, it needs to be informed. The tobacco industry has been consistently dishonest, misrepresenting the harms of smoking, including by minimising them or inflating positive features. This practice of disinformation, which is especially targeted at the most disadvantaged groups, is itself a threat to individuals' freedom of thought.

Distributive justice

Distributive justice concerns the allocation of finite resources in a way that is fair. Instead of tobacco control, should we be turning our attention and efforts to some other more pressing problem? Smoking is incredibly addictive and uniquely lethal, responsible for a huge burden on health, the economy and the environment.[2] Tobacco control interventions are relatively cheap or cost negative, so compared with other activities that the healthcare system can address, treating tobacco dependency, preventing smoking uptake and ultimately eliminating smoking is astonishingly good value, associated with in-year savings.[14] At the level of the broader economy, smoking reduces productivity to an extent that far outweighs income from excise taxes, costing the UK £43.7 billion/year.[4] Again, in distributive terms, tobacco control will actually increase the resources available to government and society. Beyond that, the global economic impact of smoking exceeds US$2 trillion/year,[37 50] a colossal waste of resources that could be redeployed more usefully to address unmet human needs for clean air, water, food, clothing and shelter.[51]

The ethical imperative to eliminate the tobacco industry is also driven by intergenerational equity. We need to consider whether what we're doing is beneficial both for ourselves and others now, but also for generations that come after us. This includes securing the sustainability of future healthcare systems by preventing future ill health where possible, as well as environmental and ecosystem protection on a finite planet.[32]

The ethical responsibilities of institutions

Knowledge of the enormous harm that smoking causes to health, the economy and the environment also places an obligation on a range of actors who might engage with the tobacco industry not to do so. This includes arts, sporting and other cultural organisations and is underpinned by Article 13 of the WHO FCTC calling for a comprehensive ban on tobacco advertising, promotion and sponsorship.

Universities, academic journals, funders and other research institutions that constitute the systems of evidence production and use also have a key role in protecting scientists and researchers from tobacco industry influence and in ensuring that science works in the public interest.[52] They must be challenged if they are allowing the tobacco industry to use scientific collaborations strategically to manipulate research.[53–55]

Government ethics

For the government, the argument for action on smoking should be clear—to strengthen the nation's health, economy and environment both now and for the future. There is popular support for tobacco control measures. The main obstacle to progress on tobacco control has been the financial power of the tobacco industry,[2] so it is crucial that governments meet their obligations under WHO FCTC Article 5.3 to exclude the industry from any policymaking, both directly and through tobacco-funded front organisations and think tanks, and to resist industry offers of direct or indirect monetary incentives.[10] Where politicians engage with the tobacco industry, they are also likely to risk breaching the Nolan Principles,[56] a set of seven standards for anyone in public life: selflessness, integrity, objectivity, accountability, openness, honesty and leadership.

In terms of social justice, the very existence of 'disadvantaged' groups is a manifestation of structural violence.[57 58] The government holds many of the levers that control the structures that keep groups of people disadvantaged. Redistributive policies around wealth, decent housing, health, education, human rights and law enforcement have the potential to reduce the conditions that increase smoking uptake in particular groups.[22]

Tobacco industry ethics: creating cancer for profit

As England's Chief Medical Officer Chris Whitty has put it, almost all the people who get lung cancer do so *'because an extremely wealthy, incredibly sophisticated marketing industry—the cigarette industry—has got them addicted to cigarettes at a young age and kept them addicted the rest of their lives, and then they die. This should never be a cancer blamed on individuals. This is a cancer created by industry for profit.'*[59]

However, defenders of the industry can argue that its products are legal and, in that context, tobacco transnationals' only duty is to their shareholders, to maximise profits and the return on their investments. On this basis, any action that might reduce profits would be improper unless it was required to fulfil a legal obligation. Tobacco executives thus might *regret* the harm tobacco causes, but *reducing* that harm is somehow off-limits to them. A belief by the tobacco industry that it is operating in a sphere not bound by conventional morality might go some way towards explaining its behaviour, but this line of argument does not stand up to scrutiny.

First, as a human endeavour like any other, what the industry does can be subjected to judgement as to the good and bad it

Tob Control: first published as 10.1136/tc-2026-060293 on 3 November 2026. Downloaded from http://tobaccocontrol.bmj.com/ on November 4, 2026 at Imperial College London Library. Protected by copyright, including for uses related to text and data mining, AI training, and similar technologies.

causes and it can be held to be responsible for these outcomes. The absence of a legal obligation does not mean the absence of a moral one. It is possible to think of many examples of actions or inactions in daily life which have adverse consequences for other people and that ordinary judgement would condemn but which are not illegal. Many selfish or dishonest acts are not crimes.

Second, although arguing that its only legitimate concern is shareholder value and that it cannot act for any other reason, it is worth noting that the industry has been quite capable of using language that relates to morality or justice when it has suited it to do so. For example, in one annual report, Philip Morris deployed the phrase '*Good people doing good things*'[11 60] as a way of highlighting the socially responsible activities of its employees, helping out in their communities.

As with arts sponsorship, this allows its employees to see themselves in a better light and encourages outsiders to do so as well. Situating itself in a moral framework, although the distorted one of corporate social responsibility, the industry in its annual reports typically presents a range of actions which, though of trivial impact, address or divert attention from some aspect of the harm it causes.

Based on its market share and the global death toll, British American Tobacco (BAT) products kill at least a million people every year, making it one of the world's most prolific killers of women. Despite that, they are sufficiently accepting of the concept of justice to post on social media about their 'Fair Pay Certification' on International Women's Day, *'because fair pay isn't just a principle; it's a commitment.*'

Bogus tobacco industry transformation narratives are a further example of the industry's unethical behaviour. Ostensibly intended to help people who smoke to quit, the industry has aggressively marketed e-cigarettes and other novel nicotine products to children and young people, while using the existence of these products as an argument that other tobacco control measures are unnecessary.[61] An example of this hypocrisy is Philip Morris International's declaration that it is 'transforming itself and is committed to a 'smoke-free' future', while actual shipping data reveal little or no reduction in its combustible sales between 2020 and 2025.[62]

The tobacco industry attempts to insinuate itself as part of the solution to a problem that it has created, sustained and continues to profit from must be rejected. It is abundantly documented that, rather than transforming itself, tobacco transnationals have proceeded with efforts to target youth and used their economic and political power, derived from sales worth more than US$120 billion/year,[63] to obstruct or delay measures that would make people less likely to take up smoking, reduce tobacco consumption and thus save lives.[10 11 64 65]

Conclusions: the tobacco endgame and the principle of Humanity

As far back as 1954, Philip Morris Vice President George Weissman announced that if the company had any thought or knowledge that in any way it was selling a product harmful to consumers, they would stop business *immediately*.[66] Instead, the tobacco industry has been a consistent enemy of human well-being and freedom, standing in opposition to beneficence, non-maleficence, respect for autonomy and distributive justice.

The Principle of Humanity demands that we take rational action that will have the effect of getting and keeping people from 'bad lives', most pressingly, lives that are bad by reason of being limited and cut short. It is not a principle for half measures. The terrible consequences of delay include an estimated 104 063 infant deaths (including 95 850 neonatal deaths) that could have been avoided over 3 years if 72 middle-income countries had introduced smoke-free legislation in 2015[67] or an estimated 231 220 infant deaths that could have been averted in 2018 if all countries had a total cigarette tax of at least 75%.[9]

There is a moral imperative to end the multitude of harms caused by smoking, and both conventional tobacco control measures and forward-looking tobacco endgame measures provide effective means to achieve this.

CAUTION: External Sender

Good evening, Councilmembers Chantel Walker, Eileen Burke, Tarrell Kullaway, and Yoav Schlesinger, and Mayor Steve Burdo.

My name is Mari Silva, and I am a member of the Youth Advocacy Committee and the Tobacco Use Prevention Education (TUPE) program at Redwood High School. Thank you for your time and for considering an ordinance that prioritizes the health and safety of young people not only in San Anselmo but also Marin County.

I strongly support this ordinance to end the sale of tobacco and nicotine products, with the proposed exception for Ludwig's Fine Wines. Through my work in youth tobacco prevention, I have seen how these harmful products affect young people and contribute to a cycle of addiction and harm that can span generations. Protecting youth means not only educating them about these risks, but also taking meaningful action to reduce their exposure to tobacco and nicotine.

After giving tobacco prevention presentations at middle schools, I have received questions from students such as, "If what you are saying is true, with all these chemicals, why isn't anyone protecting us?" That question is difficult to answer when young people are asking adults and their communities to help protect them, yet still face the very risks they are being taught to avoid.

By considering this ordinance, you have an opportunity to turn that question into action. Your decision can help protect young people today while creating a safer environment for future generations. Students should not have to spend seven or more hours avoiding their school bathrooms to escape clouds of smoke. They deserve to learn, grow, and attend school in environments where their health and safety are taken seriously.

Thank you for your leadership, your time, and your willingness to consider a policy that puts the well-being of young people first. I urge you to support this ordinance and help build a healthier future for San Anselmo's youth.

Sincerely,

Mari Silva
Youth Advocacy Committee Member
Tobacco Use Prevention Education (TUPE), Redwood High School

CAUTION: External Sender

Dear Mayor Burdo, Vice Mayor Walker, and Councilmembers Burke, Kullaway, and Schlesinger,

I had the honor of serving as Mayor of Beverly Hills when we passed our first-in-nation sales ban on tobacco and nicotine products. Our community has greatly benefitted from this life-saving policy.

Today, I am writing to express my strong support for San Anselmo's proposed policy to end the sale of commercial tobacco and nicotine products.

Tobacco is the leading cause of preventable disease and death worldwide. For generations, the tobacco industry has profited by addicting people, often starting in childhood, to products that kill when used exactly as intended. The consequences are devastating, not only for those who use tobacco but also for their families and communities.

Research shows that about 90% of people who smoke started by the age of 18. This means that minors are getting addicted, and addiction is not a choice. Addiction is a chronic, relapsing brain disease. That's why our community members struggle to quit, regardless of their age, and deserve to live in a tobacco-and-nicotine-free community that is not filled with triggers for their addiction.

Local governments have a clear responsibility to act to protect our citizens. The Federal Government is infiltrated by tobacco lobbyists. For example, as of October 1st, tobacco companies have already spent $20.37 million in 2026 at the federal level alone, seeking to prioritize their deadly products over the lives of our citizens.

We also have a profound moral responsibility to protect human life and prevent avoidable suffering. Today, one person dies every 4.5 seconds from a tobacco-related disease. In Beverly Hills, we passed our ban not only in line with our goal of being a "Healthy City," but also in line with our values that the preservation of life is among our most important obligations. As the Jewish Talmudic teaching reminds us, saving a single life is like saving the entire world. Preventing unnecessary deaths from tobacco consumption is a world-saving measure.

San Anselmo has an opportunity to put that principle into action.By ending the sale of commercial tobacco and nicotine products, the Town can help prevent another generation from becoming addicted, reduce future tobacco-related illnesses and suffering, and save countless lives. This is a meaningful public health measure that will protect young people and help ensure that fewer families experience the devastating loss of a loved one to a tobacco-related disease.

Other California communities, including Mill Valley, Corte Madera, Ross, Tiburon, Beverly Hills, and Manhattan Beach, have already taken this important step. San Anselmo can join usand help lead the way toward a future free from the tobacco epidemic.

I strongly encourage you to support this policy. Every life saved matters, and San Anselmo has an opportunity to make a lasting difference for generations to come.

Sincerely,

John Mirisch

CAUTION: External Sender

Hi Council-member Burke, and the rest of the council,

I live on Tamalpais Ave. I just wanted to thank you specifically for your principled no-vote regarding the nicotine ban. As council member Schlesinger noted, this ban falls hardest on low-income communities, who might not even know this ordinance was being weighed.

I've already said all of my piece, but i just wanted to highlight and thank you for your progressive commitment to evidence-based and user-informed public health policy. As many in our community know, utilizing abstinence in place of robust education and access to equitable treatment to deter teens away from things like sex, tobacco, or other harms in life is failed public health policy.

Solidarity,
Mick Bruckner

San Anselmo, CA 94960

RE: Preventing Addiction, Illness and Death by Ending the Sale of All Commercial Tobacco and Nicotine Products

Dear Honorable Mayor, Vice Mayor, and Members of San Anselmo Town Council:

On behalf of Action on Smoking and Health (ASH), I am pleased to offer full support for Item 1.9 on the Consent Agenda for your November 17th meeting – ending the sale of all commercial tobacco and nicotine products in San Anselmo.

ASH is the nation's oldest anti-tobacco organization, formed in response to the 1964 Surgeon General's report that definitively connected tobacco use with disease and death. ASH has worked at the local, state, national and global levels to end the tobacco epidemic. In 2018, ASH launched Project Sunset, a campaign to phase out the sale of commercial tobacco products. We chair a national steering committee of prominent public health professionals dedicated to this cause. We also co-chair a global committee working to replicate the U.S. effort in other regions and countries. Since we started, the concept of tobacco "endgame" has transformed from a fringe idea to a widely embraced mandate to finally end the tobacco epidemic. Tobacco endgame measures have been implemented in 42 jurisdictions worldwide.

Commercial tobacco is widely recognized as the leading cause of preventable disease and death in the world and is the only consumer product that kills when used as directed. As a result of aggressive tobacco industry targeting, smoking disproportionately affects communities of color, low-income individuals, unhoused people, LGBTQ+ people, and those suffering from mental illness and substance use disorders. In fact, the 2024 United States Surgeon General's Report identifies addressing persistent disparities as integral to the elimination of tobacco-related disease and death.

The California Department of Public Health has a vision of ending the tobacco epidemic, and the city of San Anselmo can be a leader in this area. Access to tobacco products by youth is a problem in San Anselmo. In fact, the 2023 California Youth Tobacco Survey (CYTS) revealed that the county group of Marin/Napa had the highest current use of any tobacco products in California, with 17.4% of middle and high school students responding that they currently use tobacco products, vapes, and/or cigarettes. by California county or county grouping.

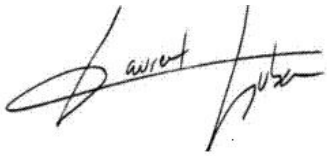

The best way to reduce tobacco-related illness and death and promote health equity is to prevent youth and vulnerable community members from starting to smoke in the first place, beginning

with eliminating access to the tobacco industry's harmful products. Six cities in California, Mill Valley, Corte Madera, Ross, Tiburon, Beverly Hills and Manhattan Beach, have already passed commercial tobacco sales bans without legal retaliation, showing that such a policy is indeed feasible. San Anselmo can join the charge to shift the paradigm from regulating tobacco products to stopping the sale of all commercial tobacco, setting a precedent for other jurisdictions to follow, and paving the way for tobacco-free generations to come.

The tobacco industry has been addicting people – mostly as children – for generations and is by far the biggest cause of preventable death in California and the world. The industry sells products that addict and kill when used precisely as intended. No other industry gets to do that. If a similar product were introduced to the market tomorrow, they would immediately be taken off shelves and the people behind it would likely be arrested. We need to take away Big Tobacco's free pass.

ASH is connected to endgame experts across the nation and globe. If there is any way we or any of our colleagues can assist you as you consider this important ordinance, please do not hesitate.

Sincerely,

Laurent Huber
Executive Director

The tobacco industry has been addicting people – mostly as children – for generations and is by far the biggest cause of preventable death in California and the world. The industry sells products that addict and kill when used precisely as intended. No other industry gets to do that. If a similar product were introduced to the market tomorrow, they would immediately be taken off shelves and the people behind it would likely be arrested. We need to take away Big Tobacco's free pass.

ASH is connected to endgame experts across the nation and globe. If there is any way we or any of our colleagues can assist you as you consider this important ordinance, please do not hesitate.

Sincerely,

Laurent Huber
Executive Director

CAUTION: External Sender

Dear Members of the San Anselmo Town Council,

My name is Andrew Delsol, and I am a senior at Redwood High School in Larkspur. I am writing to thank you for considering an ordinance that would prohibit the sale of tobacco and nicotine products in San Anselmo. I strongly support this effort and appreciate the council's willingness to take action to protect the health and well-being of young people in our community.

This issue matters to me because I have seen how easily nicotine products can become part of teenagers' lives. Through my work with the TUHSD Tobacco Use Prevention Education program and the Youth Advisory Council, I have spoken with other students about vaping and nicotine use and learned how difficult it can be for young people to avoid these products when they are so accessible. I have also had the opportunity to speak at local town council meetings about youth tobacco use. Those experiences have shown me that protecting young people requires more than simply telling them not to vape. We also need to make harmful products less accessible in the first place.

As a student, I see how much influence the people and environment around us can have on the choices young people make. Removing the sale of tobacco and nicotine products would help reduce that access and send a clear message that our communities value the health of their youth. I believe San Anselmo has an opportunity to be a leader in protecting the next generation.

Thank you for your time, your consideration, and your commitment to making San Anselmo a healthier community for young people.

Sincerely,
Andrew Delsol
Redwood High School

Nicotine and Tobacco Ban

From Craig S. Nelson <csnelson@nelsonconnects.com>
Date Sat 11/7/2026 10:11 AM
To Town Council <towncouncil@sananselmo.gov>

Some people who received this message don't often get email from csnelson@nelsonconnects.com. Learn why this is important

CAUTION: External Sender

Dear Council Members,

I was born and raised in San Anselmo, attended Sir Francis Drake High School (now Archie Williams), and returned to raise my kids here in 2007. As such, I am deeply rooted in, and extremely proud to be a member of, our San Anselmo community. In addition, I have been very involved in the Marin business community since 2001 and as a former prosecutor with the California Department of Justice understand when too much government regulation further strengthens a black-market economy.

I am writing you all to encourage you to rethink your decision to ban Nicotine and Tobacco sales in San Anselmo for the following reasons:

1. The impact on our local businesses will be devastating – likely our local convenience stores will close because of the ban.
2. The local convenience stores are vigilant in enforcing local laws by checking IDs. They should not be punished for the acts of others.
3. The ban infringes on free choice by making it harder to legally buy Nicotine and Tobacco products. In addition, the black market will only increase throughout our town and schools. We should let parents, teachers, and administrators guide children away from these products as the solution. These products will always be available through the black market and the harder these items are to get legally the more the bad actors benefit through more sales.
4. I agree with lifting the restriction on Ludwigs, but it is unfair to other business owners.

Thank you for taking the time to consider my opinion.

Best,

Craig S. Nelson | Chairman and CEO

Youth concern about Tobacco sales

From Mari Birnberg <maribirnberg@gmail.com>

Date Wed 11/4/2026 8:58 PM

To Steve Burdo <SBurdo@sananselmo.gov>; Chantel Walker <cwalker@sananselmo.gov>; Tarrell Kullaway <tkullaway@sananselmo.gov>; eileenburke100@sananselmo.gov <eileenburke100@sananselmo.gov>; Yoav Schlesinger <yschlesinger@sananselmo.gov>; Frances Fontanilla <frances.fontanilla@bacr.org>; Linda Kenton <lkenton@sananselmo.gov>; Town Council <towncouncil@sananselmo.gov>

CAUTION: External Sender

Good evening, Councilmembers Chantel Walker, Eileen Burke, Tarrell Kullaway, and Yoav Schlesinger, and Mayor Steve Burdo.

My name is Mari Silva, and I am a member of the Youth Advocacy Committee and the Tobacco Use Prevention Education (TUPE) program at Redwood High School. Thank you for your time and for considering an ordinance that prioritizes the health and safety of young people not only in San Anselmo but also Marin County.

I strongly support this ordinance to end the sale of tobacco and nicotine products, with the proposed exception for Ludwig's Fine Wines. Through my work in youth tobacco prevention, I have seen how these harmful products affect young people and contribute to a cycle of addiction and harm that can span generations. Protecting youth means not only educating them about these risks, but also taking meaningful action to reduce their exposure to tobacco and nicotine.

After giving tobacco prevention presentations at middle schools, I have received questions from students such as, "If what you are saying is true, with all these chemicals, why isn't anyone protecting us?" That question is difficult to answer when young people are asking adults and their communities to help protect them, yet still face the very risks they are being taught to avoid.

By considering this ordinance, you have an opportunity to turn that question into action. Your decision can help protect young people today while creating a safer environment for future generations. Students should not have to spend seven or more hours avoiding their school bathrooms to escape clouds of smoke. They deserve to learn, grow, and attend school in environments where their health and safety are taken seriously.

Thank you for your leadership, your time, and your willingness to consider a policy that puts the well-being of young people first. I urge you to support this ordinance and help build a healthier future for San Anselmo's youth.

Sincerely,

Mari Silva
Youth Advocacy Committee Member
Tobacco Use Prevention Education (TUPE), Redwood High School

For the end of sale of tobacco ordinance

From Saya Eguchi <saya.lugueteguchi@gmail.com>
Date Fri 11/13/2026 12:27 PM
To Town Council <towncouncil@sananselmo.gov>

Some people who received this message don't often get email from saya.lugueteguchi@gmail.com. Learn why this is important

CAUTION: External Sender

Dear city council members of San Anselmo,

I am writing to respectfully urge you to consider to adopt an end to sales policy for all commercial tobacco products in San Anselmo. This policy would guarantee a step forward in improving the community of San Anselmo for the better and it would show how much the city cares for its residents health. This would not only protect current residents but future ones who seek a safe environment for their families and friends.

Now more than ever, tobacco companies continue to market new nicotine products including flavored vapes and nicotine pouches that appeal to young people. These products are meant to keep people addicted to the point of no return where it could control your entire life. Not only does nicotine affect adults but many teenagers are being more and more exposed to nicotine and tobacco products everyday. In schools, on the streets, at parks, at gas stations, these products are found everywhere and are often times on display for young people. Nicotine and tobacco can affect adolescent brain development, making it much harder to teens to concentrate in school, socialize, regulate emotions, and especially break free from addiction.

An end to sales policy addresses the availability of tobacco and nicotine products that are known to cause disease and harm to people's health. Many communities have successfully reduced access to other harmful products when concerns for public health outweigh commercial interests. Tobacco still remains the leading cause of preventable deaths in the United States, claiming hundreds of thousands of lives every year.

By considering an end to sales policy, you'd be prioritizing public health, supporting current and incoming families, and lead by example for other communities.

Thank you so much for considering this policy and your time.

Sincerely, Saya Eguchi

New eComment for Town Council

John Maa submitted a new eComment.

Meeting: Town Council

Item: 1.9) Adoption of an Ordinance Repealing and Replacing Title 6 “Business, Professions, and Trades”, Chapter 7 “Tobacco Retailer License” to Prohibit the Sale of Tobacco and Nicotine Products within San Anselmo with Certain Exceptions.

eComment: Thank you to the Town Council for your leadership and vision to pass this ordinance - you join a growing movement across Marin and California that will save lives, and help America reach the Tobacco Endgame. More American lives have been lost from nicotine addiction in the 21st century than in all of our nation's wars added together, multiplied by ten. This does not need to continue - you help make the world a better place. John Maa 2018 President of the San Francisco Marin Medical Society

STAFF REPORT

TOWN OF SAN ANSELMO Item #: 1.10

MEETING DATE: November 17, 2026

AGENDA TITLE: Accept the Sequoia Park Safe Route to Schools Project Area #3 and Authorize Staff to File a Notice of Completion

FROM: Scott Schneider, Public Works Director

RECOMMENDATION: That the Town Council accept the Sequoia Park Safe Route to Schools Project Area #3 Project and authorize staff to file a Notice of Completion.

BACKGROUND AND DISCUSSION

The Town Council accepted the donation to design and construct the Sequoia Park Safe Route to Schools Project Area #3 at the June 24, 2025 meeting. The Town Council authorized staff to bid and award the project at the March 24, 2026 meeting to the lowest responsible bidder.

Project Area #3 involved relocating the road alignment at Sequoia Drive and Ancho Vista Avenue to enhance visibility and safety (the "Project"). Relocating the roadway required the removal of the uninhabitable structure at 100 Sequoia Drive following Planning Commission review and approval. The structure was located in both the front- and side-yard setbacks, as well as in the 30-foot view corridor of the intersection and would not be allowed to be constructed in that location today.

To take advantage of economies of scale, the project included road repaving of Sequoia Drive from the east side of 100 Sequioa to Hilldale Drive. This portion of the project is estimated to cost about $58,640 and will be funded from the Road Maintenance Fund based on the bid prices.

At a September 22nd Town Council meeting, Town Council approved vacating a portion of right-of-way adjacent to the project area.

Town staff is working with various utility companies to establish a utility easement in the portion of right-of-way that was abandoned.

FISCAL IMPACT

The construction contract was awarded to Villalobos & Associates Inc. of Gilroy, CA for $422,714 for the Base Bid. Work was completed substantially in accordance with the project plans and specifications and was fully available for use on September 1, 2026. The final construction cost was $446,330.80.

The Town will be reimbursed by several utilities for adjustments made to manhole and valve covers (approximately $1,100).

Funding is available in the project budget provided by the donor and from the Road Maintenance Fund for the additional paving (approximately $58,6400). The acceptance of an easement for the relocated roadway and the abandonment of existing right-of-way have a negligible fiscal impact.

CEQA AND CLIMATE ACTION PLAN/BICYCLE AND PEDESTRIAN MASTER PLAN CONSISTENCY

The Town finds this Project to be categorically exempt from the requirement for the preparation of environmental documents under the California Environmental Quality Act (CEQA) under CEQA Guidelines Section 15301 Class 1, because it involves maintenance of existing streets, will not create additional automobile lanes and involves negligible or no expansion of use. (14 Cal. Code Regs. § 15301). None of the exceptions to this Class 1 categorical exemption apply in this instance (14 Cal. Code Regs. § 15300.2). Specifically, successive projects of the same type in the same location will not cause significant cumulative impacts, as there are no successive projects planned at this time. There are no unusual circumstances presented by this project and the project will not result in damage to scenic resources within a designated state scenic highway. Finally, the project will not cause a substantial adverse change in the significance of a historical resource, as no historical resources will be impacted.

This Project is consistent with the Town's Climate Action Plan, in that it makes this neighborhood safer for pedestrians and cyclists, and it supports Safe Routes to School (See CAP T-2, T-3, and T-4).

STAFF REPORT

TOWN OF SAN ANSELMO Item #:1.11

MEETING DATE: November 17, 2026

AGENDA TITLE: Quarterly Treasurer's Investment Report, September 2026

FROM: Jeff Zuba, Finance & Admin Services Director

RECOMMENDATION: That the Town Council consider approving the Treasurer's Investment Report for the quarter ending September 30, 2026.

SUMMARY

The Treasurer's Investment Report is a quarterly itemization of the market value of Town investments. The purpose of this report is to present financial information for review and discussion.

DISCUSSION/ANALYSIS

The attached report itemizes the Town's investments and states the market value of each investment as of September 30, 2026. The Wells Fargo bank account is the Town's primary checking account used for the deposit and expenditure of the operating funds. The Bank of America checking account is a controlled account used for payroll processing only.

The Town holds two investment accounts: one with Moreton Capital with funds held at U.S. Bank and one with RBC Capital Markets held at RBC. The investments held are allowable by the Town's investment policy.

The Town maintains two Local Agency Investment Fund accounts (LAIF) for the purpose of maximizing interest income on funds not needed for immediate expenditure. One LAIF account is for the investment of general operating funds. The other is for the remaining series 2003 Measure G bond proceeds, required by law to be maintained in a segregated account.

The Town's cash balance as of September is $7,567,672, which is $2,280,042 less than the balances at this time last year. The significant decrease is due to the Town's

ongoing projects, General Plan update, Fire Station 20, Resilience Hub, Library Roof & HVAC, Isabel Community Center roof.

FISCAL IMPACT
Not applicable

GENERAL PLAN CONSISTENCY
Not applicable

CEQA AND CLIMATE ACTION PLAN CONSISTENCY

The Council's discussion and approval of this report is not a "project" under the California Environmental Quality Act, because it does not involve an activity which has the potential to cause a direct or reasonably foreseeable indirect physical change in the environment. (Cal. Pub. Res. Code § 21065).

STAFF REPORT

TOWN OF SAN ANSELMO Item #: 1.12

MEETING DATE: November 17, 2026

AGENDA TITLE: Accept the Resignation of Judith L. O'Rourke from the Climate Action Commission

FROM: Serge Avila, Town Clerk

RECOMMENDATION: For the Council to accept the resignation of Judith L. O'Rourke and direct staff to recruit to fill the vacant positions.

BACKGROUND:

On November 10, 2026, Town staff received a written notice from Judith L. O'Rourke, resigning from her position on the CAC. The Climate Action Commission deeply appreciate Judith's contributions and unwavering dedication and extend their sincere thanks for her service.

With this resignation, the Council may direct staff to begin recruiting and fill the vacancy.

FISCAL IMPACT

None.

CEQA AND CLIMATE ACTION PLAN CONSISTENCY

Accepting the boards, committees, and commissions' resignations is not defined as a project under CEQA (Section 15378 CEQA Guidelines).

None

STAFF REPORT

TOWN OF SAN ANSELMO Item #: 2.1

MEETING DATE: November 17, 2026

AGENDA TITLE: Marin Sanitary Service Rate Increase

FROM: Jeff Zuba, Finance & Admin Services Director

RECOMMENDATION:

1) Conduct a public hearing to consider the proposed 2027 Marin Sanitary Service ("MSS") collection rates.
2) Adopt the attached Resolution establishing maximum rates collected by MSS for solid waste, recycling, and organic waste services, to be effective January 1, 2027, including reinstatement of the Vehicle Impact Fee (Attachment 1).

BACKGROUND

Each year, the Town Council conducts a public hearing to set the maximum solid waste, recycling, and organics collection rates that may be charged by Marin Sanitary Service ("MSS"). These rates are determined in accordance with a rate-setting methodology defined in the Town's Franchise Agreement with MSS.

In 2019, the Town Council approved an Amended and Restated Franchise Agreement that revised the rate methodology to enhance consistency, transparency, and predictability of annual rate adjustments. The Town amended the Franchise Agreement on November 10, 2025, as discussed in more detail below ("Franchise Agreement"). The methodology in the Franchise Agreement is applied uniformly across all customer classes and is used by other Marin jurisdictions that share similar franchise agreements with MSS, including San Rafael, Larkspur, Ross, Fairfax, the County of Marin, and Las Gallinas Valley Sanitary District.

Each year, the seven participating jurisdictions jointly retain R3 Consulting Group, Inc. to perform an independent review of MSS's rate application. This regional collaboration reduces administrative costs while ensuring a consistent, third-party assessment of the proposed rates.

DISCUSSION

The Franchise Agreement ties MSS's annual compensation to a combination of actual cost-of-service factors and indexed adjustments using the Consumer Price Index (CPI) for Water, Sewer, and Trash Collection (WST). The rate methodology also provides for adjustments related to changes in recyclables market revenue, labor, fuel, insurance, landfill disposal fees, and other operating expenses.

In accordance with the Franchise Agreement, MSS submitted its annual rate application on August 31, 2026, requesting an adjustment effective January 1, 2027. R3 Consulting reviewed MSS's rate application, supporting documentation, and underlying financial schedules, and concluded that the proposed rate adjustment is consistent with the approved methodology.

Based on R3's analysis, MSS's calculated 2027 rate revenue requirement for the Town of San Anselmo is $6,162,003, representing an increase of $447,449 over the prior year's revenue requirement of $5,714,554. The resulting overall proposed rate adjustment for calendar year 2027 is 7.83%, compared to the 4.04% increase implemented on January 1, 2026.

The proposed 7.83% increase is driven primarily by three factors. First, Collector Operations, which compensates MSS for labor, benefits, fuel, maintenance, and other operating costs, increased by $161,278 based on the 4.62% change in the WST index, which falls within the Franchise Agreement's 2.5% minimum and 5.0% maximum. Second, garbage and organics tipping fees increased by $152,886, or 20.42%, largely because Redwood Landfill, which processes the Town's residential organics, is increasing its processing rate from $53.00 to $90.00 per ton in 2027. MSS is exploring an alternative facility for residential organics but will not have one in place before the 2027 rates take effect; if MSS secures a lower-cost option, the savings will be passed through to the Town as a credit in the 2028 rates. Third, the reinstatement of the $84,000 Vehicle Impact Fee, discussed below, accounts for approximately 1.47 percentage points of the increase.

Smaller changes include a $33,357 increase in MSS's calculated profit, which is set by the contractual 90.5% operating ratio and rises with allowable operating expenses; a $22,137 increase in net recyclable materials processing costs, from $49.64 to $64.41 per ton, after R3 and MSS agreed on an adjustment to limit the effect of a correction to MSS's recycling tonnage accounting; and minor increases in SB 1383 compliance costs ($3,604), interest ($2,253), and Zero Waste Marin fees ($107).

Proposed Rates for 2027

Attachment 2 to this report is a rate application letter from MSS. Attachment 3 is a report from R3 that provides its third party, independent assessment of MSS and its application of the rate methodology. This application and assessment provide a broad perspective of the proposed rate increase. However, the actual increase in each jurisdiction is based on the application of the Franchise Agreement methodology to the specific customer base. R3 reviewed the application and all relevant documents and financial schedules with MSS and recommends an increase of 7.83% to the Town of San Anselmo's rates in 2027. As in previous years, staff is recommending that the rate adjustment be applied across the board to all residential, multi-family and commercial service accounts. The new proposed

rates reflective of this increase can be found in the exhibit to the attached proposed Resolution (Attachment 1, Exhibits A-B).

Franchise Fee

Under the Franchise Agreement, MSS pays the Town fees in connection with its exclusive right to provide solid waste services within the Town. Prior to 2026, the franchise fee was calculated as 11% of MSS's gross receipts. On November 10, 2025, the Town Council approved the First Amendment to the Amended and Restated Franchise Agreement, which replaced the percentage-based fee with two fees calculated consistent with the Town's Franchise Fee Study: a Town cost of solid waste services fee, which recovers the Town's costs of negotiating, administering, and overseeing the Franchise Agreement and implementing State solid waste mandates, and a franchise fee for the use of Town property, which reflects the reasonable value of the public property used for solid waste operations. Both fees are adjusted each January 1 in proportion to the annual change in the Consumer Price Index for All Urban Consumers (CPI-U) for the San Francisco Bay Area. For 2027, the Town cost of solid waste services fee is $383,601 and the franchise fee for the use of Town property is $349,197, a 3.77% increase from the 2026 amounts of $369,650 and $336,498, respectively.

Other Agency Fees

Other agency fees are calculated and applied to each of the Agencies based on the specific fees set by those Agencies. In 2026, the Town temporarily paused collection of the $84,000 Vehicle Impact Fee (VIF) paid by MSS to cover the cost of road impacts from MSS's solid waste collection vehicles, following the 2025 appellate court decision in *Rogers v. City of Redlands*, which found that recovering road repair costs through solid waste rates conflicted with the California Vehicle Code. On August 27, 2026, the Governor signed Senate Bill 922 (SB 922), effective January 1, 2027, which confirms the authority of local agencies to recover street maintenance and repair costs associated with services such as solid waste collection. With the legal authority to collect VIF in place, the Town can resume collecting these funds, which would be held in the Town's Road Maintenance Fund and be available for road work.

Accordingly, staff recommends that the VIF be reinstated for 2027, which is reflected in the Adjusted Application. This results in $84,000 in other agency fees, which is $84,000 more than 2026. Without the reinstatement of the VIF, the 2027 rate increase would be 6.36%; the VIF accounts for approximately 1.47 percentage points of the proposed 7.83% increase.

CONCLUSION

The Town's Franchise Agreement with MSS, as amended, provides a clear and transparent methodology for determining annual solid waste collection rates and associated franchise fees. The independent review conducted by R3 Consulting confirms that the proposed 7.83% rate adjustment accurately reflects changes in cost-of-service factors for 2027, including reinstatement of the VIF following the enactment of SB 922.

Staff recommends that the Town Council adopt the attached resolution authorizing the maximum allowable collection rates for 2027, including reinstatement of the Vehicle Impact Fee.

FISCAL IMPACT

Reinstatement of the VIF will generate $84,000 in revenue to the Town in 2027. This revenue will be recorded in the Town's Road Maintenance Fund and will be available for road work, including paving and slurry seal. There is no other direct fiscal impact to the Town from approving this item.

CEQA AND CLIMATE ACTION PLAN CONSISTENCY

Adoption of the resolution increasing MSS rates is not a project under California Environmental Quality Act (CEQA) Guidelines Section 15378(b)(4), because the Town's rate approval relates to the funding mechanism of on-going solid waste collection services, which does not involve any commitment to any specific project which may result in a potentially significant physical impact on the environment.

RESOLUTION NO. xxxx-xxxx

A RESOLUTION OF THE TOWN COUNCIL OF THE TOWN OF SAN ANSELMO AUTHORIZING MAXIMUM RATES COLLECTED BY MARIN SANITARY SERVICE FOR REFUSE AND RECYCLABLE MATERIAL COLLECTION AND DISPOSAL SERVICES TO BE EFFECTIVE JANUARY 1, 2027, AND REINSTATING THE VEHICLE IMPACT FEE

WHEREAS, in 2019 the Town of San Anselmo ("Town") and Marin Sanitary Service ("MSS") entered into an Amended and Restated Franchise Agreement and agreed to amend the Agreement in 2025 ("Franchise Agreement"); and

WHEREAS, pursuant to the Franchise Agreement, MSS renders Solid Waste, Recyclable Material and Green Waste collection, processing and disposal services to businesses, residents and government institutions in the Town; and

WHEREAS, Section 5-3.05 of the San Anselmo Municipal Code provides that the Town Council shall establish rates for the collection of garbage and recycling after a public hearing; and

WHEREAS, Section 6 of the Franchise Agreement provides for maximum rates allowed to be collected by MSS, to be authorized from time to time by the Town Council; and

WHEREAS, the proposed 2027 rate schedule is attached to this resolution as Exhibit A; and

WHEREAS, on November 10, 2025, the Town Council adopted Resolution No. 2025-4603 approving the First Amendment to the Franchise Agreement, accepting the Solid Waste Franchise Fee Study prepared by R3 Consulting Group, and adopting a Town Cost-of-Service Fee and a Franchise Fee for the use of Town property, which are adjusted each January 1 in proportion to the annual percentage change in the Consumer Price Index for All Urban Consumers (CPI-U) for the San Francisco Bay Area; and

WHEREAS, MSS has submitted a rate application request for 2027, dated August 31, 2026, using the methodology outlined under Exhibit B of the Franchise Agreement; and

WHEREAS, the Town and R3 Consulting Group, Inc., have conducted a review of the 2027 rate application based on a formula determined by MSS's actual cost of service and produced a report concurring with MSS's rate and fee adjustments; and

WHEREAS, Section II(B)(6)(d) of Exhibit B of the Franchise Agreement provides that other agency fees, including the Vehicle Impact Fee, shall be calculated using the appropriate methodology and the forecasted values; and

WHEREAS, the Town previously collected a Vehicle Impact Fee of $84,000 per year, paid by MSS, to recover the cost of road impacts from MSS's solid waste collection vehicles, and temporarily paused collection of the Vehicle Impact Fee in 2026 following the 2025 appellate court decision in *Rogers v. City of Redlands*; and

WHEREAS, on August 27, 2026, the Governor signed Senate Bill 922, effective January 1, 2027, which confirms the authority of local agencies to recover street maintenance and repair costs associated with the provision of services such as solid waste collection; and

WHEREAS, the Town desires to reinstate the Vehicle Impact Fee effective January 1, 2027, the revenue from which will be deposited in the Town's Road Maintenance Fund and used for road maintenance, including paving and slurry seal; and

WHEREAS, the rates for solid waste service are set and imposed by MSS and the Town's Cost-of-Service Fee, Franchise Fee, including the Vehicle Impact Fee are set by the Franchise Agreement and are the exclusive obligation of MSS. By adopting this resolution, the Town does not intend to impose any rates, fees, or charges on solid waste customers. However, to the extent that the adoption of this resolution results in the Town's imposition of any fees, rates, or charges, on solid waste customers, for services or facilities in connection with a solid waste system, including the Franchise Fees, those charges are adopted pursuant to California Health and Safety Code section 5471; and

WHEREAS, the Town properly published and posted notice of the proposed rate increase as required by law; and

WHEREAS, on November 17, 2026, the Town Council held a duly noticed public hearing to consider the rate application request, reviewed the staff report, and received all oral and written testimony presented at the hearing; and

WHEREAS, the Town of San Anselmo has determined that such rate and fee adjustments are proper, in the best interest of all citizens, and will promote public health, safety and welfare.

NOW, THEREFORE, BE IT RESOLVED by the Town Council of the Town of San Anselmo that:

Section 1. **Recitals Incorporated.** The above recitals are true and correct and are incorporated as findings herein.

Section 2. **Environmental Review.** Pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15378(b)(4), this action is not a project under CEQA because the Town's rate approval relates to the funding mechanism of on-going solid waste collection

services, which does not involve any commitment to any specific project which may result in a potentially significant physical impact on the environment.

Section 3. Approval of Maximum Rates for 2027. The schedule of maximum rates and fees attached hereto as Exhibit A and incorporated herein by reference, is hereby approved to be collected by Marin Sanitary Service for refuse and recyclable material collection and disposal services, at an increased rate of 7.83% over 2026 rates, to be effective January 1, 2027. Exhibit A shall be incorporated as the revised Exhibit C to the Franchise Agreement.

Section 4. Town Fees for 2027. The Cost-of-Service Fee and Franchise Fee for calendar year 2027, are set forth in Exhibit B, attached hereto and incorporated herein. The Town Council hereby reinstates the Vehicle Impact Fee in the amount of $84,000 per year, effective January 1, 2027, as set forth in Exhibit B.

Section 5. Interpretation of Resolution. To the extent the provisions of this resolution conflict with any prior resolutions, the provisions of this resolution shall control.

Section 6. Severability. The Town Council hereby declares every section, paragraph, sentence, clause, and phrase is severable. If any section, paragraph, sentence, clause or phrase of this resolution for any reason is found to be invalid or unconstitutional, such invalidity, or unconstitutionality shall not affect the validity or constitutionality of the remaining sections, paragraphs, sentences, clauses or phrases.

RESOLUTION PASSED AND ADOPTED, at the regular meeting of the Town of San Anselmo on the 17th day of November 2026, by the following vote:

AYES: Councilmember:
NOES: Councilmember:
ABSENT: Councilmember:
ABSTAIN: Councilmember:

Exhibit B - Town Fees for 2027

Exhibit B – Town Fees for 2027

The Town's Cost of Service Fee, Franchise Fee, and Vehicle Impact Fee for 2027 are set forth below.

Amounts shown are annual calendar year figures effective January 1, 2027 through December 31, 2027.

- Cost of Service Fee - $383,601
- Franchise Fee - $349,197
- Vehicle Impact Fee - $84,000

The Cost of Service Fee and the Franchise Fee shown above reflect the January 1, 2027 adjustment of 3.77% from the 2026 amounts of $369,650 and $336,498, respectively, in proportion to the annual percentage change in the Consumer Price Index for All Urban Consumers (CPI-U) for the San Francisco Bay Area (U.S. Bureau of Labor Statistics series ID: CUURS49BSA0), and shall continue to be adjusted annually every January 1st thereafter. The Vehicle Impact Fee is not subject to annual adjustment.

Subject: 2027 Combined Service Area Rate Application

Dear Ms. Robinson Piñon, Bryant, Abrams, Johnson, and Messrs. Paxton, Schwarz, Donery, and Schultz.

Attached is Marin Sanitary Service's (MSS) rate calculation for rates to be effective January 1, 2027, in our combined service area. The 2027 Rate Application has been prepared in accordance with Exhibit B, Collector's Rate Revenue Requirement and Rate Adjustment methodology. This methodology was ratified by the Marin Franchisors' Group (MFG) during the 2019 Rate Application process. The same methodology was adopted by the Town of Fairfax and the Town of San Anselmo in 2019, during the 2020 Rate Application process.

Overview

Exhibit B specifies that the 2027 Rate Application is to be prepared utilizing the Indexed Rate Revenue Requirement methodology. This means that a majority of MSS's operating costs are adjusted by the change in the June Consumer Price Index for Water and Sewer and Trash Collection, US city average, (referred to as the WST index).

For this application, the June WST index was calculated at 4.62% per the contract. Other operating costs such as Garbage Landfilling, Organics Processing, Recyclable Materials Processing, Zero Waste Marin Fees, and Other Agency Fees are adjusted based upon projections or other methods to arrive at 2027 costs. Extraordinary costs for the Recycling Center property insurance and SB1383 implementation costs have been reflected consistent with prior years. These adjusted expenses, plus Franchise Fees and Collector Profit, are totaled for the 2027 Rate Revenue Requirement.

The 2027 Rate Revenue Requirement is calculated individually for each jurisdiction to account for varying Franchises Fees and Other Agency Fees. The 2027 Rate Revenue Requirement is then divided by the 2026 Rate Revenue Requirement to arrive at the 2027 Rate Adjustment Factor for each jurisdiction.

Notable rate adjustments include an increase in organic processing costs, driven by a proposed Waste Management's Redwood landfill green waste tipping fee increase from $53 to $90 per ton, effective January 1, 2027. We continue to engage in good-faith negotiations with Waste Management to secure the most favorable tipping fee for our ratepayers. Should we successfully secure a lower tipping fee prior to the final review of our rate request, we will submit an amended application to reflect these savings and reduce our proposed increase. Ultimately, pass-through adjustments for disposal and organic tipping fees remain outside our operational control. Furthermore, the rate accounts for higher recycling processing expenses driven by flat commodity market revenues and an overall decline in processed recyclable material.

We look forward to working closely with the R3 Consulting Group personnel during the review process and will supply them with all necessary financial documentation. Once the review is completed, we look forward to meeting with you to discuss the rate review report.

As always, we remain at your disposal.

Patty Garbarino

SUBJECT: Report – Review of Marin Sanitary Service's 2027 Rate Application

Dear Mr. Donery,

R3 Consulting Group, Inc. (R3) is pleased to submit this report detailing the results of our review of Marin Sanitary Service's (MSS's) 2027 rate application (Application) for the Town of San Anselmo (Town).

This review was conducted pursuant to R3's engagement with the seven agencies (Agencies) served by MSS, including the City of San Rafael, City of Larkspur, County of Marin, Las Gallinas Valley Sanitary District, Town of Ross, Town of Fairfax, and the Town of San Anselmo.

This report summarizes results from our review of MSS's 2027 indexed rate application per the streamlined rate setting methodology established in 2019. The methodology is described in the amended Exhibit B to the Franchise Agreement (Exhibit B) that the Town holds with MSS.

* * * * *

We appreciate the opportunity to be of service to the Town. Should you have any questions regarding this report or need any additional information, please do not hesitate to reach out directly.

Sincerely,

Nikki Burke | *Sr. Managing Consultant*

1. FINDINGS

Executive Summary

On August 31, 2026, MSS submitted an application for an adjustment to solid waste rates in the Town, to be effective January 1, 2027. This is an indexed year rate adjustment, which primarily projects compensation due to MSS based on the applicable Water-Sewer-Trash CPI Index (WST). MSS originally submitted an application with a 2027 revenue requirement of $6,090,310. Based on our review, R3 recommended adjustments to the rate application and incorporated changes as directed by Town management (Adjusted Application). MSS agreed with the adjustments to the application, which are detailed in the report below and in Exhibit I. The final calculated 2027 rate revenue requirement is $6,162,002 which is $447,448 higher than the 2026 rate revenue requirement of $5,714,554. The corresponding adjustment to the Town's solid waste rates for 2027 is 7.83% based on a January 1, 2027 effective date.

Table 1: 2027 Rate Adjustment Summary

Compensation Category	2026	Adjusted Application 2027[1]	Dollar Change	Percentage Change	Adjustment to Rates
Collector Operations	$3,494,561	$3,655,839	$161,278	4.62%	2.82%
Garbage and Organics Tipping Fees	$748,641	$901,527	$152,886	20.42%	2.68%
Compliance with SB1383	$38,167	$41,771	$3,604	9.44%	0.06%
Profit Calculation	$449,425	$482,782	$33,357	7.42%	0.58%
Recyclable Materials Processing	$82,849	$104,986	$22,137	26.72%	0.39%
Interest	$48,821	$51,074	$2,253	4.62%	0.04%
Zero Waste Marin Fees	$69,056	$69,163	$107	0.15%	0.00%
Cost of Service Fee	$369,650	$383,601	$13,951	3.77%	0.24%
Franchise Fees	$336,498	$349,197	$12,699	3.77%	0.22%
Other Agency Fees	$0	$84,000	$84,000	N/A	1.47%
Annual Rate Revenue Reconciliation (2025)	$58,661	$26,897	($31,764)	-54.15%	-0.56%
Recycling Property Insurance	$18,225	$11,166	($7,059)	-38.73%	-0.12%
Total Annual Rate Revenue Requirement	**$5,714,554**	**$6,162,003**	**$447,449**	**N/A**	**7.83%**

[1] The figures in this column reflect the recommendations put forth by R3 during the review process. MSS and R3 concur with the figures presented in Table 1 for the 2027 rate calculation. A table detailing the original 2027 application, R3's recommended adjustments, and the respective variations from the original application can be found in Exhibit I.

2027 Rate Adjustment Details

Collector Operations

Collector operations compensates MSS for labor, benefits, general and administrative, depreciation and lease, maintenance, fuel and oil. Per Exhibit B, compensation for Collector Operations is adjusted using the CPI index for Water and Sewer and Trash Collection. R3 used publicly available Bureau of Labor Statistics data to verify the calculated increase of 4.62% to Collector Operations. Per Exhibit B, the rate adjustment is subject to a 2.5% minimum and a 5.0% maximum rate cap for MSS's collector operations. The result is $3,655,839 in collector operations for the Town of San Anselmo in 2027, which is an increase of $161,278 compared to 2026.

Garbage and Organics Tipping Fees

Garbage and organics tipping fee projections are calculated using actual tonnages collected from January 1 through June 30, 2026, which are then annualized to project total 2027 tonnages. Those tonnages are then multiplied by the projected 2027 tipping fees calculated in accordance with Exhibit B. This is based on the actual per ton tipping fees for each waste stream category, or if unavailable, projected tipping fees are calculated using the current year per ton tipping fees escalated by the change in WST subject to a minimum increase of 2.5% and a maximum increase of 5.0%.

R3 reviewed MSS's projected 2026 tons and the 2027 per ton tipping fees for residential garbage, residential organics, commercial garbage, commercial mixed waste for processing, commercial food scraps, and MSS-served Agencies' waste delivered to MSS. Per Exhibit B, R3 confirmed that MSS correctly projected tons by category using annualized actual tons for the first six months of the current rate year. For all materials except residential organics, MSS correctly projected 2027 per ton tip fees by increasing the 2026 per ton tip fees by 4.62% increase in WST as indicated in Exhibit B.

MSS currently processes residential organics at Redwood Landfill, which communicated to MSS that the processing rate for residential organics will increase from $53.00 per ton to $90.00 per ton in 2027. MSS included this extraordinary increase in the Application. R3 reviewed the projected 2027 per ton rate and agree on its reasonableness, given outside market conditions. The result is $901,527 in total garbage and organics tipping fees for the Town in 2027, which is an increase $152,886 or 20.42% over 2026.

MSS is currently exploring sending residential organics to another facility, but will not have an alternative in place before the 2027 rates go into effect. If MSS is able to secure another processing facility which provides an overall reduced cost for transport and processing of residential organics, the reduction will be passed through to the Town through a credit in the 2028 rates.

Compliance with SB 1383

MSS is requesting continued revenue in association with SB 1383 with the goal of increasing compliance with the State of California's organics state mandate(s). MSS will continue to provide compliance monitoring and inspection services, contamination monitoring, outreach and education, and reporting functions on behalf of the Town. The total 2027 revenue recovery for these SB 1383 compliance measures for MSS is $41,771, or an increase of $3,604 from 2026.

Profit Calculation

R3 reviewed the calculation of MSS's profit, which is a function of total allowable operating expenses ($4,599,136) for the Town divided by the contractually set operating ratio of 90.5% and subtracting the same sum, rounded to the nearest dollar. MSS's actual profit achievement will vary depending on the company's real revenues and expenses; as such, profit is not guaranteed. For 2027, the result is $482,782 in calculated profit for the Town, which is an increase of $33,357 compared to 2026. The increase is due to increases in allowable operating expenses, which were described in the previous sections of this report.

Recyclable Materials Processing

A net recyclable materials processing cost is calculated each year to share the risks and rewards of changing recycling markets between rate payers and MSS. Per Exhibit B, the recyclable materials processing cost is escalated by the annual change in the WST and that amount is then divided by the number of incoming recycling tons processed at Marin Recycling Center (MRC) from July 1 of the prior rate year through June 30 of the current rate year.

The recyclable materials revenue amount is calculated based on 90% of the total recyclable material revenue received by the MRC, which is then divided by the number of recyclable material tons processed at MRC. The calculation does not include income or tons from recyclable materials processed for third parties or agencies that were not customers of MSS or the MRC as of December 31, 2018. During the compilation of the 2027 rate application, MSS identified a long-standing practice of including in inbound tons metal tons that were not actually sent for processing at the MRC for the purposes of calculating net recyclables materials processing costs.

In the 2027 submitted rate application, MSS amended the accounting to include only the tons sent to the MRC for processing, which increased the percentage of net recycling costs allocated to MFG jurisdictions from 72% to 79%. Following a series of discussions, MSS and R3 agreed to use the average of the previously included tons from 2020 to 2026 to mitigate this increase. Adjustments to this practice will be accounted for in the next base year rate application. If another index-based rate year occurs prior to the next base year, R3 and MSS will work together to determine an approach that is reasonable fair to rate payers and MSS.

For rate year 2027, the Application included a recycling materials processing cost of $71.23 per ton. After the adjustment to incoming tons, the resulting net recyclable materials processing cost per ton is $64.41, which is an increase of $14.77 from the 2026 value of $49.64. The result is $104,986 in recyclable materials processing costs for the Town in 2027,which is an increase of $22,137 compared to 2026.

Interest

Interest is based on MSS's actual interest from its loan amortization schedules for actual and projected capital expenditures for services under the Agreement as of the last base year review in 2019. This is increased in the same manner as collector operations, as described above, via WST annually.
The result is $51,074 in interest for the Town in 2027, which is an increase of $2,253 compared to 2026.

Zero Waste Marin Fees

Zero Waste Marin fees are set as a pass-through of government fees and, per Exhibit B to the agreements, changes in such fees result in appropriate adjustments to rates to compensate MSS for increases or decreases in such fees. Zero Waste Marin fees included in the Application are set to be equal to the current Zero Waste Marin fee assessments for the current fiscal year, with 100% of the MSS hauler fees passed through to the MSS Agencies, and with none of the MSS Transfer Station fees passed through to the MSS Agencies. The result is $69,163 in Zero Waste Marin fees for the Town in 2027, which is an increase of $107 compared to 2026.

Cost of Service Fee and Franchise Fee

Per Resolution No. 2025 – 4603, effective January 1, 2026 through December 31, 2026, the Town's cost of service fee is $369,650 and the Town's franchise fee is $336,498. For succeeding years, the cost of service fee and franchise fee are to be escalated in proportion to the annual percentage change in the Consumer Price Index for All Urban Consumers (CPI-U) for the San Francisco Bay Area. R3 concurs with MSS's calculated percentage change in the CPI-U index of 3.77% The result is $383,601 in cost of service fee and $349,197 in franchise fees for the Town in 2027. These fees fund the costs of compliance with State laws, management and administration of the Town's Agreement with MSS, and compensate the Town for the value of the property rights conveyed to MSS via the Agreement.

Other Agency Fees

Other agency fees are calculated and applied to each of the Agencies based on the specific fees set by those Agencies. R3 received direction from Town management to reinstate the $84,000 VIF paid by MSS to cover the cost of road impacts from MSS's solid waste collection vehicles, which is reflected in the Adjusted Application. This results in $84,000 in other agency fees, which is $84,000 more than 2026 due to the temporary pause on collecting the VIF in 2026.

Annual Rate Revenue Reconciliation

The rate revenue reconciliation item is to reconcile the projected rate revenue from the 2025 rate adjustment to the actual revenue collected through rates charged during the 2025 rate year. MSS experienced a shortfall of $26,897 in 2025 compared to the rate revenue requirement for that year.

For 2027, the total annual rate revenue reconciliation is $26,897, which is $31,764 less than the revenue reconciliation credit included in 2026.

Recycling Property Insurance

Property insurance for recycling processing facilities has gone up across the country due to fire risks from lithium batteries as well as increases in wildfire related risks. MSS has had no such claims but has received rate increases based on its risk profile. MSS has previously and separately briefed the Agencies on this item, and R3 is aware of the market circumstances surrounding it. The adjustment to incoming tons discussed in the recyclable materials processing section also impacted the recycling property insurance section as the insurance is allocated by inbound tons to MRC. With this change, the result is $11,166 in recycling property insurance for the Town in 2027, which is a decrease of $7,059 from 2026.

Survey of Comparable Rates

Figure 1, below, illustrates R3's survey of solid waste rates as of October 2026 for agencies located throughout the Marin County. These survey results are presented as an indication of the reasonableness of the resulting rates for 2027. For comparison purposes, the Agencies are designated in yellow and represent the proposed pricing for 32-gallon cart, including the change indicated by the Adjusted Application. Other, non-MSS service agencies are designated in grey and are current pricing, though price increases are expected for 2027 as well. The average cost for the 30–35-gallon cart for non-MSS service agencies is represented by the black line is $60.37. The 32-gallon cart is projected to cost $67.40 per month for customers in the Town. The Town's commercial rates for a 3-cubic yard bin serviced once per week will be $1,106.26 compared to $1,025.93 the previous year.

Figure 1: Comparison of MSS's 2027 Rates to Other Marin County Agencies

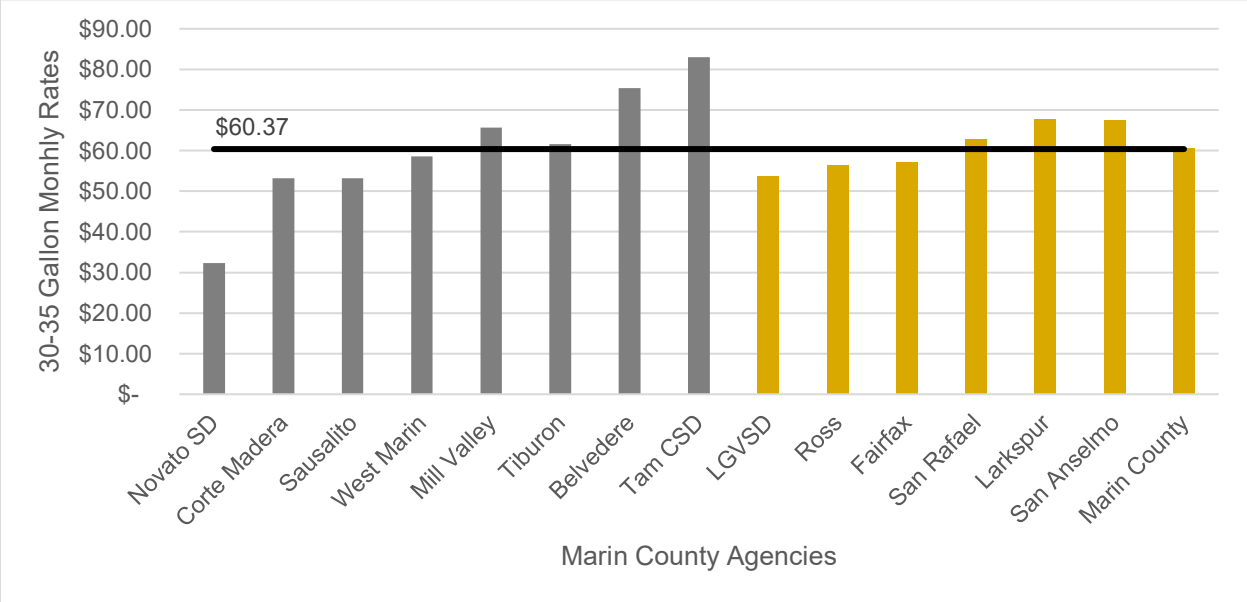

Exhibit I – Rate Adjustments

	2026	2027 Submitted	Adjustments	2027 Adjusted	2027Adjusted vs. 2026		Portion of Rate Adjustment

Review of MSS 2027 Rate Adjustment

November 17, 2026
R3 Consulting

R3 CONSULTING GROUP, INC.
RESOURCES · RESPECT · RESPONSIBILITY

OUTLINE

1. **Rate Adjustment Methodology**
2. **Rate Compensation Overview**
3. **2027 Rate Adjustment**
4. **Rate Comparison**

San Anselmo Agreement with MSS

- The Town of San Anselmo has a long-term Agreement with MSS for provision of solid waste services for residents and businesses in central Marin and the Ross valley
- The Agreement provides for annual adjustment to rate compensation to MSS

Rates are Sole Compensation to MSS

- Rates are the only source of funding for MSS's solid waste and recycling collection, processing, recovery and disposal services

CPI-like Rate Adjustments

- Annual changes are based on streamlined formulas since 2020
- Results have been stable and predictable rate changes (even through the uncertainty of the COVID-19 pandemic)

Costs of Solid Waste Services

- Costs for these services tends to increase annually
  - Labor wages and benefits
  - Vehicles, fuel, parts and equipment
  - Processing, recycling, composting and disposal
  - Governmental fees and unfunded state mandates
- Important (and required) environmental programs like recycling and composting are more costly than landfill disposal

Annual Rate Revenue Adjustments

- Contract with MSS sets the terms of annual adjustments
- Adjustments are CPI-like, setting amount paid to MSS
- MSS is incentivized to control costs

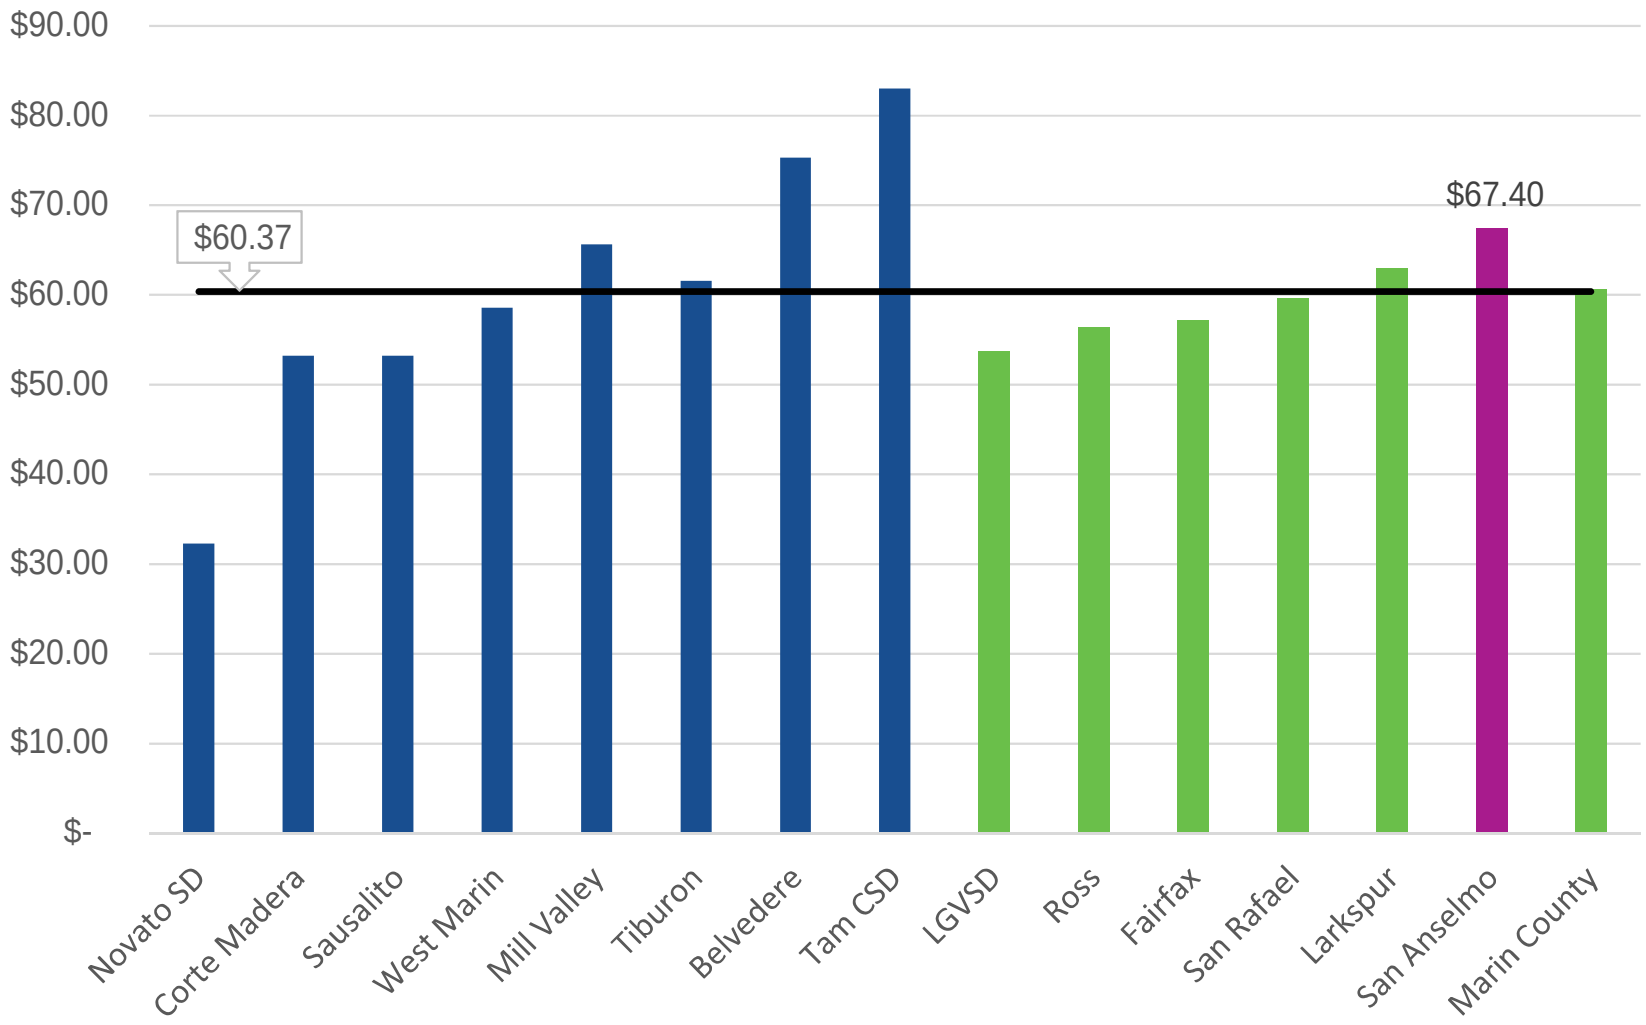

Rate Compensation Overview

- **Collection Operations (60%)**
  - Programs and services provided by MSS @ 4.62% CPI increase
- **Processing, Recycling and Disposal (16%)**
  - Garbage, recycling and and organics services provided by MSS and others based on changing tonnages and CPI
    - This year organics per ton rates include the impact of third-party contract expiration on organics processing costs
  - Normal increases are offset by improvements in recycling markets
- **State and Local Compliance (16%)**
  - Mandatory SB 1383 organics recovery and climate pollutant reduction programs, services, education and reporting
  - Contract management, administration, compliance with State laws and use of government property
- **Profit Allowance (8%)**
  - Normal industry standard profit margin; investments; risks
  - Profit is not guaranteed – MSS must control costs to achieve profitability

Rate Adjustment Effective January 1, 2027

- 7.83% increase to MSS rates in the Town of San Anselmo
  - 2.82% - MSS Collector Operations
  - 2.68% - Garbage and Organics Tipping Fees
  - 0.39% - Recyclable Material Processing Fees
  - 1.47% - Vehicle Impact Fee
  - 0.47% - Profit, Fees, and All Other(1)
- Equates to an adjustment of $4.89 per month for most residential customers (32-gallon garbage subscription)
- Residential customers who qualify for low-income rate will receive 20% discount (based on PG&E CARE Program)
- Changes to commercial rates will vary and can often be avoided through better recycling and waste reduction

Monthly 32-gallon Residential Rates

STAFF REPORT

TOWN OF SAN ANSELMO Item 2.2

MEETING DATE: November 17, 2026

AGENDA TITLE: Memorial Park – Athletic Courts Improvement Project

FROM: Mattie O'Grady, Director of Community Services
Scott Schneider, Director of Public Works

RECOMMENDATION: That the Town Council review the Memorial Park Athletic Courts Improvement Project's 95% conceptual design and updated funding proposal and provide direction to staff.

BACKGROUND

On August 25, 2026, the Town Council reviewed the 60% design for the Memorial Park Athletic Courts Improvement Project and provided feedback to guide further design development. The Council expressed broad support for the project and requested additional information on project funding and options to close the funding gap.

On October 20, 2026, the Parks and Recreation Commission reviewed the project at 95% design. The Commission expressed strong support for the futsal court and provided the following feedback:

- Prioritize Alternate 2, pathway paving, over Alternate 1, plaza beautification.
- Select futsal court materials that emphasize quality, durability, and reduced maintenance.
- Consider long-term maintenance needs and costs, including court resurfacing and future replacement of the futsal turf and shock pad.
- Address pedestrian safety at the crosswalk between Red Hill Shopping Center and the tennis courts. Staff noted that the design includes a light post at the crossing.
- Explore opportunities for shade. Staff explained that a shade structure is not included due to cost, but new trees and landscaping are planned to help provide shade.

DISCUSSION/ANALYSIS

Since the 60% design review, staff have identified additional funding sources to substantially reduce the project's funding gap. These include Measure J funds, FY 2027–28 Measure A funds, Recreation Fund reserves, and other funding sources subject to Town Council approval.

The revised funding approach would support a broader base bid that includes athletic court improvements, parking, accessibility improvements, and grading. This approach more fully addresses accessible parking and the path of travel in the southern portion of Memorial Park.

Two additive alternates remain:

- Add Alternate 1: Plaza, seat walls, and beautification improvements in the entrance/frontage area adjacent to the courts.
- Add Alternate 2: Repaving the asphalt pathway connecting the Sunny Hills courts to the Skate Park.

The evolution of the bid structure is summarized below:

Design Stage	Base Bid	Add Alternates
60% Design	Athletic courts only	Parking, accessibility, pathway connection, and beautification.
95% Design	Athletic courts, parking, accessibility, and pathway connection	Add Alternate 1: Plaza beautification Add Alternate 2: Pathway paving from Sunny Hills courts to the Skate Park

Consistent with the Commission's feedback, staff recommends prioritizing Add Alternate 2 if funding is insufficient to complete both alternates.

FISCAL IMPACT

The project was initially budgeted for athletic court improvements alone. As design progressed, staff identified the importance of addressing parking, accessibility, and related site improvements as part of the project. At 95% design, the total estimated project cost is $1,934,909, including design and both additive alternates.

The FY 2025-26 budget includes $865,000 for the project, supplemented by a generous $15,000 donation, and an additional $86,000 in Measure A funds will become available on July 1, 2027, for a total of $966,000.

To help close the remaining gap, staff recommends reallocating Measure J funds from projects that can be delayed. After consulting with a contractor, staff determined that the ICC Parking Lot needs full replacement rather than repairs, and its $40,000 budget would not be sufficient. The $35,000 budgeted for the Sorich Parking Lot can also be deferred, and because the ICC lower building does not currently need HVAC work, the $80,000 ICC HVAC budget can be released. Staff also asks the Town Council to consider using $200,000 of the $500,000 General Fund surplus transferred to the Park Improvement Fund at the FY 2025-26 mid-year review for Robson-Harrington projects. That project will require significant public outreach to determine the community's vision, while the Memorial Park courts are nearing the end of design and have an engineer's estimate. In addition, $200,000 in FY 2027-28 Measure J funds that were not allocated

in the Capital Improvement Plan could be applied to the project, and staff requests the use of $100,000 each from General Fund and Recreation Fund reserves. These sources would bring total funding to $1,721,000, leaving a remaining gap of $213,909, which staff proposes to address through additional fundraising. If more funding is needed, staff can review the FY 2027-28 Measure J allocation to determine whether additional resources can be freed up or evaluate whether further use of one-time reserves is warranted to complete this community project.

Funding Breakdown:

Total Identified Funding	**$1,721,000**
• Secured Funding	$1,335,000
• Funding Pending Town Council Approval	$300,000
• Measure A funding available July 1, 2027	$86,000
Total Project Cost (Includes Design and Both Alternates)	**$1,934,909**
Remaining Fundraising Need	($213,909)

Staff plans to kick off a capital fundraising campaign in early 2027.

GENERAL PLAN CONSISTENCY

The proposed athletic court redevelopment is consistent with General Plan because it upgrades deficient recreational infrastructure, improves safety and user experience, and enhances accessibility. It also advances phased implementation of the adopted Memorial Park Master Plan.

CEQA AND CLIMATE ACTION PLAN CONSISTENCY

The Town finds this Project to be categorically exempt from the requirement to prepare environmental documents under the CEQA pursuant to CEQA Guidelines Section 15301, Class 1, as it involves the maintenance and minor alteration of an existing facility with negligible or no expansion of use.

The project is consistent with Climate Action Plan S-1.a (Urban Forests, planting additional trees) and A-4.a and b (Natural Infrastructure, trees and bioretention).

Feedback from the Review of the 60% Design

Commission & Council Discussion

- Ensure the selection of high-quality synthetic turf materials
- Clarify what electrical infrastructure upgrades are included
- Provide financial clarity and identify strategies to close the funding gap

Public Support

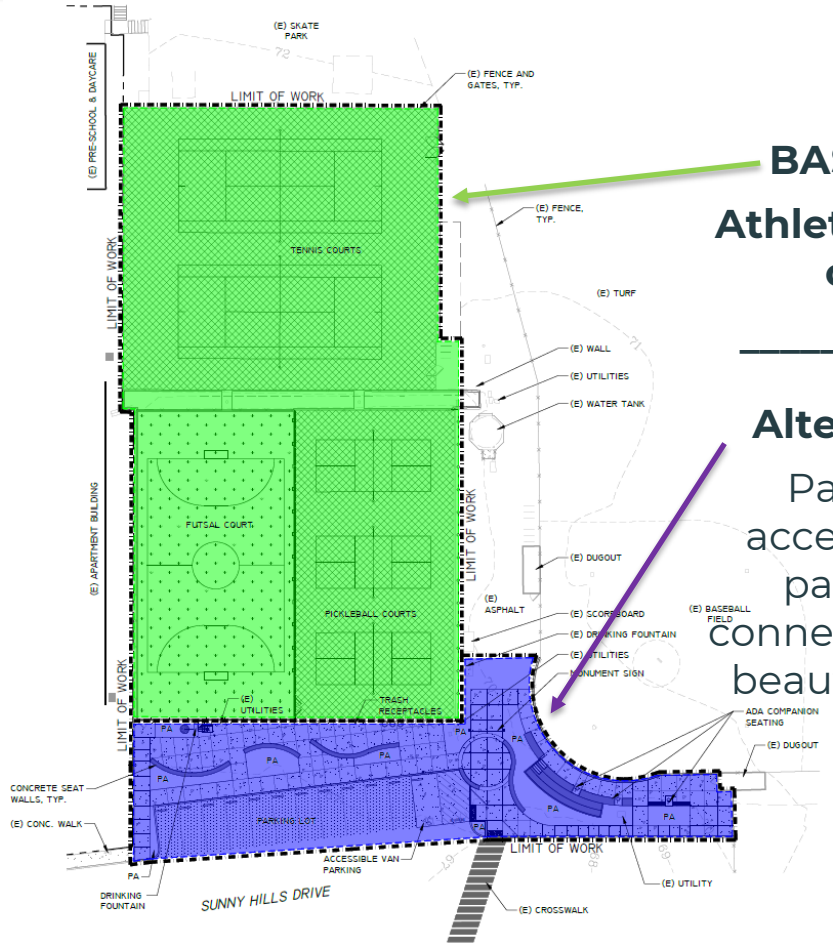

- Demonstrated strong support for permanent futsal and pickleball courts and enhanced tennis facilities
- Proof of concept: strengthened community connections through the World Cup Futsal program

Safety

- Request to review the crosswalk connecting Red Hill Shopping Center to the park and identify potential safety improvements

Funding Progress

The Memorial Park Multi-Use Court Project was initially scoped for courts only. As design progressed, staff identified the need to broaden the scope and include accessibility improvements. At 95% design, the estimated total is **$1,934,909.**

Estimated total includes design and both alternates.

Total Identified Funding	**$1,721,000**
• Secured Funding	$1,335,000
• Funding Pending Town Council Approval	$300,000
• Measure A funding available July 1, 2027	$86,000
Total Project Cost (Includes Design and Both Alternates)	**$1,934,909**
Remaining Fundraising Need	($213,909)

STAFF REPORT

TOWN OF SAN ANSELMO Item #: 2.3

MEETING DATE: November 17, 2026

AGENDA TITLE: Public Hearing: Certification of the Program Environmental Impact Report (EIR) Pursuant to the California Environmental Quality Act (CEQA) and Adoption of General Plan 2045

FROM: Heidi Scoble, Community Development Director

RECOMMENDATION:

Staff recommends that the Town Council conduct a duly noticed public hearing; receive and consider the staff report, public testimony, Planning Commission recommendation, and environmental record; and adopt a resolution to:

1. Certify the Final Program EIR for General Plan 2045 and adopt the associated findings under the CEQA, following the Council's independent review and consideration of the Final EIR.

2. Adopt General Plan 2045, including the proposed Land Use Map, Implementation Matrix, and the two amendments recommended by the Planning Commission on November 2, 2026, or such modifications as the Council determines appropriate, subject to any necessary CEQA review.

EXECUTIVE SUMMARY

The Town Council is being asked to consider certification of the Final Program EIR under CEQA and adoption of General Plan 2045. The General Plan establishes the Town's long-term framework for land use, development, and community priorities, while the Program EIR evaluates the potential environmental impacts of implementing the Plan without approving individual development projects.

The proposed Plan is the culmination of a planning process initiated in November 2023 and involving more than 70 public engagement opportunities, including meetings of the Town Council, Planning Commission, General Plan Advisory Committee (GPAC), other Town boards and commissions, community workshops, surveys, and public events.

The Final Program EIR evaluates potential environmental effects of implementing General Plan 2045, considers alternatives, and responds to comments received during public review. The Final EIR concludes that the Plan would not result in significant

unavoidable environmental impacts, no mitigation measures are required, and recirculation of the Draft EIR is not necessary.

On November 2, 2026, the Planning Commission adopted Resolution No. 2026-27 by a 6-0 vote, with one Commissioner absent, recommending certification of the Final EIR and adoption of General Plan 2045, with two proposed minor amendments, as described in the *Discussion/Analysis* section of the Staff Report. This report also clarifies the distinction between the General Plan's land use framework and the theoretical buildout assumptions evaluated in the EIR, in response to questions raised at the Commission hearing.

The Council is requested to independently consider the Final EIR and decide whether to certify the environmental document and adopt General Plan 2045, including the Planning Commission's recommended amendments.

BACKGROUND

Purpose of the General Plan and the Council's Role

The General Plan establishes the Town's long-term vision and policy framework for future growth and development. It includes guiding principles, goals, policies, and implementation actions that translate the community's vision into priorities and guide decisions related to development, regulations, infrastructure investments, departmental work programs, and budgeting.

The Council's action would establish the Town's updated policy framework for the next 20 years. Adoption of the General Plan does not authorize development on individual properties or commit funding for specific implementation actions. Future development projects, ordinances, and expenditures would remain subject to applicable review and approval processes.

General Plan Update Process (2023–2026)

San Anselmo's General Plan was last comprehensively updated in the mid-1970s and amended in 1988. Although individual elements have been updated periodically, including the Housing and Safety Elements in 2023, the Town had not undertaken a comprehensive update in several decades.

The Town Council initiated the General Plan Update process in November 2023 and selected O'Rourke & Associates in April 2024 to prepare the update and associated environmental review. In June 2024, the Town established a 15-member GPAC to advise on the vision, guiding principles, land use framework, goals, policies, and implementation actions.

Date	General Plan Update Milestone
2024	Community visioning, workshops, surveys, and development of the Vision Statement and Guiding Principles.
2025	Review and refinement of the proposed Land Use Map

	and General Plan goals, policies, and actions.
January/February 2026	Review of the consolidated Draft General Plan and additional refinements informed by an independent diversity, equity, inclusion, and belonging assessment.
July 24, 2026	Release of the Public Draft General Plan and Draft Program EIR.
September 8, 2026	Close of the 45-day Draft EIR public comment period.
October 2026	Completion of the Final EIR, responses to comments, and related refinements.
November 2, 2026	Planning Commission recommendation to certify the Final EIR and adopt the General Plan, with two amendments.

The November 2 Planning Commission staff report, included as an attachment, provides additional project chronology and public engagement detail.

DISCUSSION/ANALYSIS

Decisions Before the Town Council

The Town Council is being asked to consider two related actions: certification of the Final Program Environmental Impact Report (EIR) and adoption of General Plan 2045.

The first step is to consider the Final Program EIR. Before adopting the General Plan, the Council must review and consider the EIR and determine whether it has been prepared in compliance with CEQA and reflects the Town's independent judgment and analysis. If the Council makes these determinations, it may certify the EIR and adopt the required CEQA findings.

Following consideration of the EIR, the Council would turn to the proposed General Plan. This includes reviewing the Plan's long-term vision, land use framework, goals, policies, and Implementation Matrix, along with the Planning Commission's recommendations and public testimony. The Council would then determine whether to adopt General Plan 2045, with or without modifications.

1. Planning Commission Review and Recommendation

On November 2, 2026, the Planning Commission conducted a public hearing, reviewed the Final Draft General Plan and Final Program EIR, and received public testimony. The Commission adopted Resolution No. 2026-27 (**Attachment 2**) by a vote of 6-0, recommending that the Town Council certify the Final EIR, adopt CEQA Findings of Fact, and adopt General Plan 2045, including the Land Use Map and Implementation Matrix, with two proposed minor amendments as follows:

1. Policy S-B.1: Seismic Codes. Require that new development and redevelopment meet the most up-to-date seismic codes and /regulations as set forth in applicable building codes.

2. Action C-C.6.a: Transit Agency Partnerships. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends. In coordination with TAM and transit operators, identify and consider supporting feasible transit-priority improvements that increase transit travel speeds and reliability along local roadways identified in TAM's Countywide Transportation Plan Transit Priority Network.

These proposed amendments refine existing policy direction and do not change the General Plan Land Use Map or anticipated development capacity. The proposed amendment language is documented in Planning Commission Resolution No. 2026-27 and included in **Attachment 3**, Consolidated General Plan Policy and Action Amendments, Including Planning Commission Recommendations. The amendments were also evaluated in the EIR Errata Memorandum (**Attachment 8**), which concludes that they would not result in new or more severe environmental impacts. Accordingly, no additional environmental analysis or recirculation of the EIR is required under CEQA Guidelines Section 15088.5.

2. Overview of General Plan 2045

General Plan 2045 establishes the Town's long-range framework for land use, housing, transportation, conservation, public facilities, safety, and community priorities. Goals describe desired outcomes, policies guide future decisions, and implementation actions identify steps toward those outcomes.

- Land Use and Community Design
- Open Space and Conservation
- Sustainability, Climate Change and Resiliency
- Economic Vitality
- Housing
- Circulation
- Parks, Recreation and Public Facilities
- Safety
- Noise

The previously adopted 2023–2031 Housing Element and 2023 Safety Element are incorporated into the comprehensive framework. The proposed Land Use Map generally retains established designations while incorporating targeted refinements related to hillside residential mapping, Town-owned open space, school properties, and reserve areas for potential future housing needs.

Distinctive Features of General Plan 2045

The proposed Plan emphasizes diversity, equity, inclusion, and belonging; community design in new development; monitoring of demographic, economic, environmental, and mobility indicators; and an Implementation Matrix to track progress. It also identifies Reserve Areas for potential future housing growth if needed during a subsequent

Housing Element cycle. The Sustainability, Climate Change, and Resiliency and Economic Vitality elements are new components of the comprehensive Plan.

General Plan Growth and Theoretical Buildout Analysis

During the November 2, 2026, Planning Commission public hearing, questions were raised about whether the growth analyzed in the Program EIR represents the amount of development expected to occur under General Plan 2045.

It is important to distinguish between the theoretical buildout evaluated for environmental review and the development reasonably expected to occur during the General Plan planning period. The theoretical buildout represents the potential development capacity allowed under the proposed General Plan land use designations, rather than a forecast or development target for 2045.

For purposes of CEQA, the Program EIR evaluates a theoretical buildout scenario that generally assumes vacant and underutilized properties could develop or redevelop at their maximum allowable densities and intensities, while accounting for identified development constraints and other assumptions, including the capacity of sites identified in the adopted Housing Element.

As identified in Table ES-3 of the Draft EIR, theoretical full buildout could accommodate approximately:

- 2,279 additional dwelling units
- 5,356 additional residents
- 752,133 square feet of additional nonresidential development

These figures are used to evaluate the potential environmental impacts of development that could occur under the General Plan**.** They are not projections of actual growth, and the Town does not anticipate that every eligible property will develop or redevelop to its maximum allowable capacity by 2045.

In practice, development occurs gradually and depends on numerous factors, including market conditions, property owner decisions, financing, infrastructure availability, site-specific constraints, and applicable regulations. Many properties may remain unchanged throughout the planning period, while others may develop at densities or intensities below the maximum allowed.

Adoption of General Plan 2045 establishes the Town's long-term policy framework but does not authorize development on individual properties or require property owners to redevelop. Future development proposals would remain subject to applicable review and approval processes.

Additional information is provided in the Draft EIR, Executive Summary, pages ES-7 through ES-9, and Section 2.0.5, General Plan Buildout Analysis.

3. Revisions Following Public Review

Following public review of the Draft General Plan and Draft Program EIR, the Town received six comments from state and local agencies, organizations, and community members. In response, the Town prepared responses to the comments and proposed targeted revisions to the General Plan. Comments from the Transportation Authority of Marin, Marin Conservation League, and California Department of Fish and Wildlife helped inform these revisions, which are summarized below. The complete proposed amendments are provided in **Attachment 3**.

- Transportation and Circulation: A Safe System approach, multimodal performance monitoring, and enhanced coordination on bicycle, pedestrian, and transit improvements.
- Biological Resources: Strengthened survey and screening requirements and additional direction for identifying and evaluating sensitive resources during project-level review.
- Sustainability and Safety: Clarifications addressing community education, post-disaster recovery, wildfire risk reduction, and environmental protection.
- Land Use and Other Elements: Targeted revisions improving policy clarity, consistency, and implementation.

These revisions improve policy clarity and environmental protection without changing the overall vision, land use framework, or anticipated development capacity.

4. Final Program EIR and CEQA Considerations

The Town prepared a Program Environmental Impact Report (EIR) to evaluate the potential environmental impacts of implementing General Plan 2045, as required by the California Environmental Quality Act (CEQA). The EIR evaluates the General Plan as a whole rather than individual development projects.

The Draft EIR was circulated for public review from July 24 through September 8, 2026. The Town received six comment letters and prepared a Final EIR that includes responses to those comments and revisions to the environmental analysis.

The EIR evaluates 21 environmental topics and 84 potential impacts. It concludes that:

- All identified environmental impacts, including cumulative impacts, would be less than significant.
- No mitigation measures are required.

The revisions made in response to public comments did not change the EIR's environmental conclusions or introduce significant new information requiring recirculation under CEQA, as explained in Chapter 2 of the Final EIR.

5. General Plan Implementation and Accountability

Adoption of General Plan 2045 marks the beginning of an ongoing effort to turn the Town’s long-term vision into action. The Plan’s Implementation Matrix identifies

priorities for the first five years and longer-term actions for the following 15 years, allowing the Town to adjust priorities as community needs and resources change.

Implementation will involve Town staff, the Council, and the Town's boards, committees, and commissions, with responsibilities that include:

- **Town Staff and Operations:** Incorporate General Plan policies and actions into development review, Town regulations, departmental work plans, infrastructure improvements, and budget priorities.
- **Boards, Committees, and Commissions:** Identify priorities and recommend implementation actions to the Council.
- **Annual Progress Reviews:** Track accomplishments and challenges and incorporate priorities into annual and biennial work plans and budgets.
- **Five-Year Council Review:** Evaluate progress and establish priorities for the next five years.

Individual implementation actions may require additional analysis, public review, regulatory changes, or future funding approval.

The General Plan is intended to be a living document that evolves with the community. Throughout its planning horizon, the Town may consider amendments to respond to changing needs, new state requirements, or lessons learned through implementation. Any amendments would be subject to applicable public review and approval procedures, ensuring the Plan remains relevant and responsive while maintaining San Anselmo's long-term vision.

6. Town Council Considerations

The Town Council has been actively involved throughout the development of General Plan 2045. At this hearing, the Council is being asked to consider whether the proposed Plan reflects the Town's long-term vision and priorities, whether to incorporate the Planning Commission's recommended amendments, and whether to certify the Final EIR in accordance with CEQA.

Following the public hearing, the Council will have an opportunity to consider the public testimony, discuss the proposed Plan, and deliberate on the environmental review. Staff recommends that the Council first consider certification of the Final EIR, followed by adoption of General Plan 2045. Alternatively, the Council may provide direction to staff and continue the matter to a future meeting if additional information or revisions are needed.

FISCAL IMPACT

On April 23, 2024, the Town Council authorized a professional services agreement with O'Rourke & Associates in an amount not to exceed $1,022,805 for the General Plan Update and associated environmental review. The Council subsequently authorized approximately $30,000 for document accessibility improvements and up to $17,000 for an independent DEIB assessment. Funding has been provided through approved

appropriations over multiple fiscal years, including General Fund allocations and General Plan Maintenance Fees; these expenditures exclude Town staff time.

Adoption of General Plan 2045 does not itself authorize expenditures for individual implementation actions. Future activities will be considered through Town budget and work planning processes.

GENERAL PLAN CONSISTENCY

General Plan 2045 establishes the governing framework for future land use, development, conservation, infrastructure, and public investment decisions. It incorporates the previously adopted Housing and Safety Elements and coordinates goals, policies, and actions across elements to promote internal consistency. Upon adoption, it will supersede applicable provisions of the existing General Plan.

CEQA AND CLIMATE ACTION PLAN CONSISTENCY

CEQA Analysis

General Plan 2045 is a project subject to CEQA. The Program EIR evaluates the reasonably foreseeable environmental effects of implementing the Plan and alternatives. The Final EIR incorporates the Draft EIR, public and agency comments, responses, and revisions. The Council is requested to independently consider the Final EIR and associated findings and determine whether to certify the Final EIR before adopting the Plan.

Climate Action Plan Consistency

General Plan 2045 supports and complements the Town's Climate Action Plan 2030 (CAP), which calls for a 54 percent reduction in greenhouse gas emissions below 2005 levels by 2030 and carbon neutrality no later than 2045. The Sustainability, Climate Change and Resiliency Element provides long-range policies related to climate change, energy efficiency, sustainable land use, multimodal transportation, natural resources, and adaptation. Following adoption, staff will coordinate implementation with the CAP update, the Climate Action Commission, and relevant departments and advisory bodies.

RESOLUTION NO. 2026-___

A RESOLUTION OF THE TOWN COUNCIL OF THE TOWN OF SAN ANSELMO CERTIFYING THE FINAL PROGRAM ENVIRONMENTAL IMPACT REPORT FOR THE SAN ANSELMO GENERAL PLAN 2045 UPDATE (STATE CLEARINGHOUSE NO. 2025100912), ADOPTING FINDINGS OF FACT PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AND ADOPTING THE SAN ANSELMO GENERAL PLAN 2045

WHEREAS, the Town of San Anselmo ("Town") has undertaken a comprehensive update of its General Plan, known as the San Anselmo General Plan 2045 Update ("General Plan 2045" or "Project"), which will replace the Town's existing General Plan, last comprehensively adopted in 1975; and

WHEREAS, The General Plan 2045 includes eleven General Plan Elements addressing land use and community design, open space and conservation, sustainability, climate, and resiliency, economic vitality, circulation, parks, recreation and public facilities, safety, and noise, and integrates environmental justice and climate adaptation considerations throughout; and

WHEREAS, the Town Council initiated the comprehensive General Plan Update in November 2023 and, in June 2024, the Town established a 15-member General Plan Advisory Committee (GPAC) to advise on the community vision, guiding principles, land use framework, goals, policies, and implementation actions; and

WHEREAS, the General Plan Update was informed by an extensive, community-led public engagement process involving more than 70 opportunities for participation, including 10 Town Council meetings, seven Planning Commission meetings, 12 GPAC meetings, five town-wide surveys, eight pop-up community events, four public workshops, six stakeholder meetings, and engagement with Town advisory boards, committees, and commissions; and

WHEREAS, through community visioning, workshops, surveys, public meetings, stakeholder discussions, and outreach at community events, residents, businesses, community organizations, and other interested parties provided input that informed the Vision Statement and Guiding Principles, proposed Land Use Map, General Plan goals, policies, and implementation actions; and

WHEREAS, pursuant to Public Resources Code section 21067 and State CEQA Guidelines section 15367 (Cal. Code Regs., tit. 14, § 15000 et seq.), the Town of San Anselmo is the lead agency for the General Plan 2045 under the California Environmental Quality Act (Pub. Resources Code, § 21000 et seq.) ("CEQA"); and

WHEREAS, pursuant to CEQA and the State CEQA Guidelines, the Town determined that an Environmental Impact Report ("EIR") should be prepared to analyze the potential environmental effects of the General Plan 2045, and that the EIR would be prepared as a Program EIR pursuant to State CEQA Guidelines section 15168, given the programmatic nature of a General Plan update; and

WHEREAS, the Town issued a Notice of Preparation ("NOP") of a Draft EIR on October 20, 2025, which was sent to each responsible agency, trustee agency, the Office of Planning and Research, and interested parties, including members of the public who had requested such notice; and

WHEREAS, the Town held a public scoping meeting on November 13, 2025 to further solicit comments on the scope of the Draft EIR; and

WHEREAS, for purposes of evaluating potential environmental effects of the General Plan Update, the Program EIR analyzes a theoretical buildout scenario that includes approximately 2,279 additional dwelling units (including accessory dwelling units) and approximately 752,133 additional square feet of nonresidential development within the Planning Area; these figures describe an analytical scenario for CEQA review, not a prediction of the amount of development that will occur by 2045, or a Town housing production target, or an approval of any particular development; and

WHEREAS, the actual amount, location, and timing of future development will depend on applicable land use regulations, site-specific review and approvals where required, infrastructure and environmental constraints, property-owner decisions, market conditions, and other factors; adoption of the General Plan 2045 does not approve individual development projects; and

WHEREAS, on July 24, 2026 the Town initiated a public review and comment period of the Draft EIR for the General Plan 2045 and released the Draft EIR for public review and comment; and

WHEREAS, pursuant to State CEQA Guidelines section 15086, the Town consulted with and requested comments from all responsible and trustee agencies, other regulatory agencies, and other interested parties during the public review and comment period; and

WHEREAS, the Town received six (6) comments (or letters) during the public review and comment period; and

WHEREAS, the Town prepared a Final EIR that includes the comments received on the Draft EIR, written responses to comments, and revisions and clarifications to the Draft EIR; for purposes of this Resolution, the "Final EIR" consists of the Draft EIR together with the Final EIR materials, including revisions, comments, and responses; and

WHEREAS, the Final EIR provides clarifications and refinements to the Draft EIR, and the Town Council has considered whether those changes or other information require recirculation under State CEQA Guidelines section 15088.5; and

WHEREAS, proposed findings of fact concerning the environmental analysis, cumulative impacts, growth inducement, and alternatives are attached as Exhibit A and incorporated herein by reference, and the Town Council has considered those findings in light of the entire administrative record; and

WHEREAS, environmental impacts that are identified in the EIR as no impact or less than significant and do not require mitigation are described in Section 2 of Exhibit A; and

WHEREAS, the EIR identifies no significant environmental impacts requiring mitigation measures for the General Plan 2045; the General Plan implementation checklist discussed in Responses to Comments A2-3 and A2-4 is an administrative tool to document consistency with applicable General Plan policies and actions, rather than a CEQA mitigation measure; therefore, no mitigation monitoring and reporting program is required for the General Plan 2045; and

WHEREAS, the cumulative impacts of the General Plan 2045, identified in the EIR and set forth herein, are described in Section 3 of Exhibit A; and

WHEREAS, the EIR evaluates the potential growth-inducing effects of the General Plan 2045, as discussed in Section 4 of Exhibit A, using the theoretical buildout assumptions described above; and

WHEREAS, an analysis of alternatives to the General Plan 2045, as set forth in the EIR, is further discussed in Section 5 of Exhibit A, including identification of Alternative 3 (Reserve Overlay Housing Element) as the environmentally superior alternative; and

WHEREAS, the EIR did not identify any project-specific or cumulative significant and unavoidable environmental impacts associated with the General Plan 2045, and accordingly no Statement of Overriding Considerations pursuant to State CEQA Guidelines section 15093 is required; and

WHEREAS, before deciding whether to certify the Final EIR, the Town Council has reviewed and considered the information contained in the Final EIR and the record of proceedings, including written and oral comments presented in connection with the General Plan 2045; and

WHEREAS, the Town Council recognizes that certification of the Final EIR is a separate CEQA determination to be made before consideration of the discretionary action to adopt the General Plan 2045; and

WHEREAS, based on the Final EIR and the record of proceedings, the Town Council finds that the changes and information presented after circulation of the Draft EIR do not constitute significant new information requiring recirculation under Public Resources Code section 21092.1 and State CEQA Guidelines section 15088.5; and

WHEREAS, the Town Council has considered the adequacy of the Final EIR as a program-level environmental document under CEQA and State CEQA Guidelines section 15168, including its use of theoretical buildout assumptions to evaluate reasonably foreseeable environmental effects; and

WHEREAS, on November 2, 2026, the Planning Commission adopted Resolution No. 2026-27 recommending that the Town Council certify the Final Program EIR, adopt CEQA Findings of Fact, and adopt the General Plan 2045, including the Land Use Map and Implementation Matrix, with two recommended amendments to Policy S-B.1 and Action C-C.6.a; and

WHEREAS, on November 17, 2026, the Town Council held a duly noticed public hearing concerning the General Plan 2045 and its Final EIR, received public testimony, and considered the materials presented; and

WHEREAS, the Town Council intends, through this single Resolution, first to certify the Final Program EIR and adopt the CEQA findings, and thereafter to adopt the General Plan 2045 as the Town's updated long-range policy framework; and

WHEREAS, the Town Council has considered the proposed General Plan 2045, including its Land Use Map and Implementation Matrix, the revisions following public review, the Planning Commission's two recommended amendments, the EIR Errata Memorandum addressing those amendments, the staff report, and public testimony, and finds that adoption of the General Plan 2045, as described below, is appropriate;

NOW THEREFORE, THE TOWN COUNCIL OF THE TOWN OF SAN ANSELMO DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. RECITALS. The foregoing recitals are true and correct and are incorporated into this Resolution.

SECTION 2. CERTIFICATION OF EIR. The Town Council finds, pursuant to State CEQA Guidelines section 15090, that (a) the Final EIR has been completed in compliance with CEQA; (b) the Final EIR was presented to the Town Council, which reviewed and considered the information contained therein before making a decision on the General Plan 2045; and (c) the Final EIR reflects the Town's independent judgment and analysis. The Town Council further finds, based on the whole record, that recirculation is not required under State CEQA Guidelines section 15088.5 because the Final EIR does not contain significant new information of the type described in that section. Accordingly, the Town Council hereby CERTIFIES the Final EIR for the San Anselmo General Plan 2045 Update (State Clearinghouse No. 2025100912). The theoretical buildout assumptions used in the Final EIR establish the scope of the program-level environmental analysis; certification does not approve, mandate, or forecast construction of the assumed number of dwelling units or amount of nonresidential development.

SECTION 3. ADOPTION OF FINDINGS. The Town Council hereby adopts the CEQA Findings of Fact attached as Exhibit A and is incorporated herein by reference. The Town Council finds that the Final EIR identifies no significant impacts requiring mitigation measures, and therefore no mitigation monitoring and reporting program or statement of overriding considerations is required. The findings are adopted on the basis of the Final EIR and the entire record of proceedings.

SECTION 4. ADOPTION OF THE GENERAL PLAN 2045. Following certification of the Final Program EIR and adoption of the CEQA Findings of Fact in Sections 2 and 3 of this Resolution, the Town Council hereby ADOPTS the San Anselmo General Plan 2045 as the Town's comprehensive General Plan pursuant to California Government Code section 65356. The adopted General Plan 2045 includes the proposed Land Use Map, goals, policies, implementation actions, and Implementation Matrix, together with the revisions and amendments identified in Attachment 3 to the November 17, 2026 Town Council staff report, including the two amendments to Policy

S-B.1 (Seismic Codes) and Action C-C.6.a (Transit Agency Partnerships) recommended by the Planning Commission in Resolution No. 2026-27. The adopted General Plan 2045 supersedes the applicable provisions of the Town's prior General Plan; the previously adopted 2023–2031 Housing Element and 2023 Safety Element are incorporated into the comprehensive General Plan framework. Adoption establishes policy direction but does not approve any individual development project or authorize expenditures for specific implementation actions. Future projects and implementation measures remain subject to applicable discretionary approvals, environmental review, and funding decisions.

SECTION 5. RECORD OF PROCEEDINGS. The documents and other materials constituting the record of proceedings are maintained by the Town of San Anselmo at 525 San Anselmo Avenue, San Anselmo, California 94960. The Town Clerk is designated as the custodian of the record of proceedings.

SECTION 6. NOTICE OF DETERMINATION. Upon approval of the General Plan 2045, Town staff is directed to file a Notice of Determination with the Marin County Clerk and the State Clearinghouse, as applicable, within the time required by CEQA and to arrange for payment of applicable filing fees under Fish and Game Code section 711.4.

SECTION 7. IMPLEMENTATION CHECKLIST. Town staff is directed to develop and use a General Plan implementation checklist, as appropriate, in reviewing future development proposals for consistency with applicable General Plan policies and actions. The checklist is an administrative implementation tool and does not constitute a CEQA mitigation measure or substitute for environmental review of future projects when required.

RESOLUTION PASSED AND ADOPTED, at the regular meeting of the San Anselmo Town Council on the 17th day of November, 2026, by the following vote:

AYES: Councilmember:
NOES: Councilmember:
ABSENT: Councilmember:
ABSTAIN: Councilmember:

TOWN CLERK

EXHIBIT "A"

FINDINGS OF FACT

The California Environmental Quality Act (Pub. Resources Code, § 21000 et seq.) ("CEQA") provides that public agencies shall not approve or carry out a project for which an environmental impact report ("EIR") has been certified that identifies one or more significant adverse environmental effects of a project unless the public agency makes one or more written Findings for each of those significant effects, accompanied by a brief explanation of the rationale for each Finding (State CEQA Guidelines [Cal. Code Regs., tit. 14, § 15000 et seq.], § 15091). This document presents the CEQA Findings of Fact made by the Town of San Anselmo, in its capacity as the CEQA lead agency, regarding the San Anselmo General Plan 2045 Update ("General Plan 2045" or "Project"), evaluated in the Draft Environmental Impact Report ("Draft EIR") and Final Environmental Impact Report ("Final EIR") for the General Plan 2045.

As discussed in Section 2 below, the Draft EIR determined that implementation of the General Plan 2045 would result in no impact or a less-than-significant impact with respect to every environmental issue area evaluated, and would not result in any significant and unavoidable impacts on a project-specific or cumulative basis. Because State CEQA Guidelines section 15091 findings are required only for significant effects, these Findings are not, strictly speaking, mandated by CEQA for the General Plan 2045. Nevertheless, the Town Council has elected to adopt these comprehensive CEQA Findings of Fact — including findings regarding less-than-significant impacts (Section 2), cumulative impacts (Section 3), growth-inducing impacts (Section 4), and alternatives (Section 5) — consistent with sound CEQA practice, in order to document the basis for the Town's environmental review and to provide the public, responsible and trustee agencies, and any reviewing court a complete and transparent record of the Town's analysis and decision-making process. Because the Draft EIR did not identify any significant impacts requiring mitigation, no Mitigation Monitoring and Reporting Program is required, and no Statement of Overriding Considerations is required.

SECTION 1: INTRODUCTION

Pursuant to Section 15091 of the State CEQA Guidelines, where an EIR for a project determines that the project will have one or more significant environmental impacts, a public agency may only approve or carry out the project if the agency makes one or more of the following written finding(s) for each of those significant effects, accompanied by a brief explanation of the rationale for each finding:

1. Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR.

2. Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.

3. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or alternatives identified in the final EIR.

While CEQA requires that lead agencies adopt feasible mitigation measures or alternatives to substantially lessen or avoid significant environmental impacts, an agency need not adopt infeasible mitigation measures or alternatives. (Pub. Resources Code, § 21002.1(c) [if "economic, social, or other conditions make it infeasible to mitigate one or more significant effects on the environment of a project, the project may nonetheless be carried out or approved at the discretion of a public agency"]; see also State CEQA Guidelines, § 15126.6(a) [an "EIR is not required to consider alternatives which are infeasible"].) CEQA defines "feasible" to mean "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." (Pub. Resources Code, § 21061.1.) The State CEQA Guidelines add "legal" considerations as another indicia of feasibility. (State CEQA Guidelines, § 15364.) Project objectives also inform the determination of "feasibility." (*Jones v. U.C. Regents* (2010) 183 Cal.App.4th 818, 828-829.) "'[F]easibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133 Cal.App.3d 401, 417; see also *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 715.) "Broader considerations of policy thus come into play when the decision making body is considering actual feasibility." (*Cal. Native Plant Soc'y v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1000; see also Pub. Resources Code, § 21081(a)(3) ["economic, legal, social, technological, or other considerations" may justify rejecting mitigation and alternatives as infeasible].)

Environmental impacts that are less than significant do not require the imposition of mitigation measures. (*Leonoff v. Monterey County Board of Supervisors* (1990) 222 Cal.App.3d 1337, 1347.) As set forth in Section 2 below, the Draft EIR determined that every environmental impact of the General Plan 2045 would be less than significant or no impact; therefore, no mitigation measures are required, and Section 15091 findings are not required for the General Plan 2045. Nonetheless, the Town Council presents these Findings, consistent with sound CEQA practice, to document the basis for its determinations.

The California Supreme Court has stated, "[t]he wisdom of approving . . . any development project, a delicate task which requires a balancing of interests, is necessarily left to the sound discretion of the local officials and their constituents who are responsible for such decisions. The law as we interpret and apply it simply requires that those decisions be informed, and therefore balanced." (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 576.)

The Draft EIR was prepared as a Program EIR pursuant to State CEQA Guidelines section 15168, which provides for the use of a single EIR to analyze a series of actions that can be characterized as one large project, such as the adoption of a general plan, where the individual actions are related either geographically, as logical parts of a chain of contemplated actions, in connection with the issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or as individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways. As a Program EIR, the Draft EIR provides the basis for later environmental review of

individual projects implementing the General Plan 2045 to be tiered from the Program EIR pursuant to State CEQA Guidelines sections 15152 and 15168(c), with subsequent environmental documents focusing on issues specific to the later project rather than repeating the broader programmatic analysis already contained in this EIR.

SECTION 2. FINDINGS REGARDING LESS-THAN-SIGNIFICANT IMPACTS NOT REQUIRING MITIGATION

Consistent with Public Resources Code section 21002.1 and State CEQA Guidelines section 15128, the Draft EIR focused its analysis on potentially significant impacts of the General Plan 2045. State CEQA Guidelines section 15091 does not require specific findings to address environmental effects that an EIR identifies as "no impact" or a "less than significant" impact. Nevertheless, the Town Council hereby finds that the General Plan 2045 would have either no impact or a less-than-significant impact with respect to each of the following resource areas, as more specifically set forth below:

AESTHETICS AND VISUAL RESOURCES

Impact 3.1-1: Scenic Vistas

Threshold: Would General Plan 2045 implementation have a substantial adverse effect on a scenic vista?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.1-15 through 3.1-18.)

Explanation: The Land Use Map does not designate any new areas for urban development that are not already designated for urban uses under the existing General Plan, and does not convert any open space lands to urban uses, although it would allow increased residential densities in some areas of the town, which could increase building heights and sizes. San Anselmo's prominent ridgelines (including the Bald Hill, Red Hill, Sunny Hills, Indian Rock, Camino de Herrera, and Perimeter ridgelines) lie within designated Ridge and Upland Greenbelt areas that are protected from incompatible development under the Town's planning and zoning regulations. The General Plan 2045 carries forward and strengthens these protections through Goal OSC-A and Policy LU-C.1, which protect and enhance open spaces, scenic vistas, and natural features; Action LU-C.1.a, which prohibits development within areas designated Open Space; Policy LU-C.2 and Policy LU-C.3, which limit building size, height, and grading within hillside and protected ridge zone areas (150 horizontal feet, or 50 feet vertically, from visually prominent ridgelines); and Action LU-C.3.b, which requires objective hillside and ridge zone development standards. Future development would also be required to comply with Town Code Title 10, Chapter 3 zoning and design review standards addressing height, siting, and functional and aesthetic compatibility. Implementation of these policies and regulations would ensure that new development is visually compatible with the surrounding area and that adverse effects on scenic vistas are minimized.

Impact 3.1-2: Scenic Resources (Trees, Rock Outcroppings, Historic Buildings)

Threshold: Would General Plan 2045 implementation substantially damage scenic resources, including trees, rock outcroppings, and historic buildings within a State scenic highway?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.1-18.)

Explanation: There are no designated State Scenic Highways or National Scenic Byways within the Planning Area. The Town's Scenic Highways Element identifies Red Hill Avenue, Sir Francis Drake Boulevard (from the Ross line to the Fairfax town limits), and Center Boulevard (from the Hub to the Fairfax town limits) as locally designated scenic highways, and the Town aims to beautify these corridors through landscaping, signage, and design improvements, but no State-eligible scenic highways are located within or provide views of the Planning Area. Because no adopted State scenic highway traverses or views the Planning Area, this impact would be less than significant.

Impact 3.1-3: Visual Character and Quality of Public Views

Threshold: Would General Plan 2045 implementation, in a non-urbanized area, substantially degrade the existing visual character or quality of public views of the site and its surroundings, or conflict with applicable zoning and other regulations governing scenic quality?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.1-18 through 3.1-20.)

Explanation: San Anselmo, with a 2020 population of 12,623, is not an "urbanized area" under CEQA Guidelines section 15387. The proposed Land Use Map does not convert open space lands to urban uses, although increased residential densities could increase building heights and sizes in some areas. The General Plan 2045 does not itself directly result in development; future development would be required to comply with Policy LU-C.1 (protection of open spaces, scenic vistas, and natural features), Action LU-C.1.a (prohibiting development in Open Space designations), Policy LU-C.2 and Policy LU-C.3 (hillside and ridge zone design and grading standards), Policy LU-D.9 (siting sensitive receptors away from excessive lighting), and the Town's zoning and design review standards. Implementation of these policies would ensure future development remains visually compatible with the community's scenic and open space resources, and this impact would be less than significant.

Impact 3.1-4: Light and Glare

Threshold: Would General Plan 2045 implementation create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.1-20 through 3.1-21.)

Explanation: Implementation of the General Plan would introduce new sources of daytime glare (primarily from reflective building materials and vehicles) and nighttime lighting (from exterior building lights, streetlights, and vehicle headlights) into previously undeveloped or less-developed portions of the Planning Area, with the most pronounced effects occurring on the town's limited number of vacant parcels and in areas that currently experience low ambient lighting. Future development would be required to comply with the General Plan's Policy LU-D.9 (locating residences and sensitive receptors away from excessive lighting) and Action LU-D.9.a (requiring project design to avoid excessive glare and light spillage onto adjacent properties), as well as glare and lighting standards in Town Code Title 10, Chapter 9 (Signs). Implementation of these policies

and standards through the Town's development review process would keep light and glare impacts less than significant.

AGRICULTURAL AND FOREST RESOURCES

Impact 3.2-1: Conversion of Farmland

Threshold: Would General Plan 2045 implementation result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.2-12.)

Explanation: No Prime Farmland, Unique Farmland, or Farmland of Statewide Importance is mapped within the Town's Planning Area. The northern portion of the Planning Area contains approximately 668.72 acres of grazing land, but areas outside the existing town limits, including this grazing land within the Sphere of Influence, are not proposed for development under the General Plan 2045. Because no farmland meeting these classifications exists within the Planning Area, this impact would be less than significant.

Impact 3.2-2: Conflict with Agricultural Zoning or Williamson Act Contracts

Threshold: Would General Plan 2045 implementation conflict with existing zoning for agricultural use or a Williamson Act contract?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.2-12 through 3.2-13.)

Explanation: Only a small area of Agriculture, Limited (A-2) zoning exists within the Town's Sphere of Influence, north and east of the town limits, and no land within the Planning Area is subject to a Williamson Act contract. The General Plan 2045 includes Action LU-C.1.a (prohibiting development in Open Space designations) and Action OSC-A.3.c (pursuing permanent protection of open space through easements and similar tools) to reduce conflicts between undeveloped and agricultural lands and new development, and Marin County's right-to-farm ordinance further protects agricultural uses in the unincorporated Sphere of Influence. Because no land is zoned for agricultural use within the town or subject to a Williamson Act contract, this impact would be less than significant.

Impact 3.2-3: Indirect Conversion of Farmland or Forest Land

Threshold: Would General Plan 2045 implementation involve other changes in the existing environment that, due to their location or nature, could result in conversion of farmland to non-agricultural use?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.2-13.)

Explanation: Farmland is not located within or adjacent to the Planning Area, and areas within the Planning Area but outside the town limits, including existing grazing land, are not proposed for development under the General Plan 2045. Because no indirect development pressure would be created toward farmland-designated land, this impact would be less than significant.

AIR QUALITY

Impact 3.3-1: Consistency with Air Quality Plan

Threshold: Would General Plan 2045 implementation conflict with or obstruct implementation of the applicable air quality plan?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-32 through 3.3-37.)

Explanation: The Bay Area Air Quality Management District's (BAAQMD) 2017 Clean Air Plan (CAP) contains 85 control measures addressing stationary sources, transportation, buildings and energy, agriculture, natural and working lands, waste management, water, and super-GHG pollutants. The General Plan 2045 does not include development of oil refineries, power plants, cement plants, landfills, or oil production infrastructure, and supports the CAP's control strategies through policies including Policy OSC-B.9 (pollution prevention), Policy SU-E.1 and Goal C-C (low-carbon, multimodal transportation and complete streets), Policy SU-C.2 (renewable energy and electrification, including a prohibition on new gas stations), and Policy SU-C.3 (building energy efficiency). Under BAAQMD's 2022 CEQA Air Quality Guidelines, a plan results in a less-than-significant impact where it is consistent with current air quality plan control measures and where projected vehicle miles traveled (VMT) growth is less than or equal to projected population growth; the General Plan 2045 is projected to result in approximately 42 percent population growth but only approximately 4 percent VMT growth, and is consistent with the CAP's control measures. This impact would be less than significant.

Impact 3.3-2: Criteria Pollutant Emissions

Threshold: Would General Plan 2045 implementation result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or state ambient air quality standard?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-38.)

Explanation: Because emissions associated with a long-range plan are inherently cumulative, BAAQMD guidance evaluates plan-level criteria pollutant impacts based on the same two thresholds applied in Impact 3.3-1: consistency with the 2017 CAP control measures and a VMT growth rate at or below the population growth rate. Because the General Plan 2045 satisfies both criteria, its contribution to a cumulatively considerable net increase in nonattainment criteria pollutants would be less than significant.

Impact 3.3-3: Sensitive Receptor Exposure to Pollutants

Threshold: Would General Plan 2045 implementation expose sensitive receptors to substantial pollutant concentrations?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-38 through 3.3-43.)

Explanation: The eastern portion of San Anselmo is mapped by BAAQMD as an "Impacted Community" under the Community Air Risk Evaluation (CARE) Program based on proximity to

toxic air contaminant (TAC) sources, sensitive populations, and poverty indicators. Roadway traffic volumes projected for 2045 (up to approximately 39,575 average daily trips on Sir Francis Drake Boulevard) remain well below the CARB thresholds (100,000 ADT for urban roads) that would trigger recommended 500-foot buffers from sensitive land uses, and screening of permitted stationary sources in the Planning Area using BAAQMD's Stationary Source Screening Map found cancer risk and chronic hazard levels below BAAQMD's significance thresholds. The General Plan 2045 includes Action OSC-B.9.a and Action OSC-B.9.c, which require project-level review of construction and operational air quality impacts, evaluation of toxic air contaminants and objectionable odors affecting sensitive receptors, and site-specific exposure analysis consistent with BAAQMD procedures where new sensitive receptors would be sited near TAC sources. Because the Town does not include industrial land uses and future projects would be evaluated on a project-specific basis for TAC exposure, this impact would be less than significant.

Impact 3.3-4: Odors

Threshold: Would General Plan 2045 implementation result in other emissions, such as those leading to odors, adversely affecting a substantial number of people?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.3-44 through 3.3-45.)

Explanation: Potential odor sources associated with future development are generally limited to temporary, diffuse construction-related diesel exhaust and small-scale commercial uses (such as restaurants, body shops, and coffee roasters), rather than the large-scale sources (wastewater treatment plants, landfills, chemical plants) typically associated with significant odor complaints under BAAQMD's CEQA Guidelines. The General Plan 2045 includes Action OSC-B.9.c (reducing potential for discomfort or illness from local concentrations of toxic contaminants, odors, and dust) and Action OSC-B.9.a (implementing the Clean Air Plan relative to odor sources in project review). Because major existing odor sources are already buffered and future development would be evaluated for odor compatibility, this impact would be less than significant.

BIOLOGICAL RESOURCES

Impact 3.4-1: Special-Status Species

Threshold: Would General Plan 2045 implementation have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or USFWS?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.4-29 through 3.4-31; Final EIR, Responses to Comments A2-2 through A2-7 and A2-10, and Chapter 2, Revisions to the Draft EIR.)

Explanation: Database searches identified documented occurrences of 20 special-status plant species and 16 special-status animal species within two miles of the Planning Area (93 plant species and 76 animal species within the broader 11-quadrangle search area). In response to comments from CDFW, the Final EIR revised Tables 3.4-4 and 3.4-5 and the accompanying text to identify northern spotted owl, including the CNDDB occurrence and MASTEROWL records identified by CDFW and the proximity of U.S. Fish and Wildlife Service (USFWS)-designated

critical habitat, and to identify burrowing owl as a candidate species under CESA, which receives the full protection of CESA during the candidacy period. CDFW also identified Santa Cruz tarplant and North Coast semaphore grass as special-status plants with potential to occur in grassland and wetland habitat. (Final EIR, Responses to Comments A2-2 and A2-4 through A2-7.) While subsequent development facilitated by the General Plan 2045 could result in direct or indirect impacts to special-status species and their habitat, such species are protected under the federal and California Endangered Species Acts. Further, the General Plan 2045 includes Policy OSC-B.3 (conserving special-status plants and animals, including species listed or considered candidates for listing by the State or federal agencies and plants assigned special status by the California Native Plant Society, and establishing avoidance, accompanied by habitat restoration, as the preferred approach, with mitigation strategies considered where avoidance is not possible), Action OSC-B.3.a, as revised in the Final EIR (requiring surveys by a qualified biologist, prior to development and other management approvals, of sites and potentially affected buffer areas with potentially suitable habitat for special-status species, including creek corridors; requiring projects to implement measures to avoid or minimize harm to special-status species, critical habitat, riparian habitat, and other sensitive biological resources to a less-than-significant level; requiring consultation with resource agencies as required by federal and State regulations; requiring documentation of compliance through the Town's General Plan implementation checklist; and requiring submittal of qualifying observations to the CNDDB and/or SPOWDB), Action OSC-B.3.b (requiring pre-construction nesting bird surveys and avoidance of active nests during the February 1 through August 31 nesting season) Policy OSC-B.1 (preserving and enhancing wildlife and plant communities in open space and riparian corridors), Policy OSC-B.6 and Actions OSC-B.6.a and OSC-B.6.b (water quality, stormwater, and low-impact design), and Policy OSC-B.8 (tree protection), and the Town's Watercourse regulations establish codified creek setback standards enforced through the Town's permit process. Subsequent development would also be required to comply with applicable federal and State requirements that apply independently of the General Plan 2045, including the prohibition on take of species listed, or that are candidates for listing, under CESA or the federal Endangered Species Act except as authorized by an incidental take permit (ITP) or federal authorization, and the protections for raptors, nesting birds, and migratory birds under Fish and Game Code sections 3503, 3503.5, and 3513 and the Migratory Bird Treaty Act. Where such authorization is required, the applicant must comply with the avoidance, minimization, monitoring, reporting, compensatory mitigation, and other requirements imposed by the agency with jurisdiction. Following adoption of the General Plan 2045, the Town will develop and use a General Plan implementation checklist to document, for applicable subsequent development proposals, whether suitable habitat for special-status species may be present, whether surveys by a qualified biologist are required, applicable avoidance and minimization requirements, required agency consultation or authorization, and whether additional project-specific CEQA review is warranted. The checklist will supplement, and would not replace, project-specific CEQA review or State or federal regulatory authorization required by law. With implementation of these General Plan 2045 policies and actions, together with compliance with federal and State law, would avoid or reduce adverse effects to a less-than-significant level.

Impact 3.4-2: Riparian Habitat and Sensitive Natural Communities

Threshold: Would General Plan 2045 implementation have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by CDFW or USFWS?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.4-32 through 3.4-33; Final EIR, Responses to Comments A2-2, A2-4, A2-8, and A2-9, and Chapter 2, Revisions to the Draft EIR.)

Explanation: A California Natural Diversity Database search identified four sensitive natural community types (Coastal Brackish Marsh, Northern Coastal Salt Marsh, Northern Vernal Pool, and Serpentine Bunchgrass) within the broader 11-quadrangle search area, though none has been documented within the Planning Area itself; Sleepy Hollow Creek and San Anselmo Creek within the Planning Area do qualify as sensitive aquatic habitat. As clarified in the Final EIR, Ross Creek and Corte Madera Creek, in addition to Sleepy Hollow Creek and San Anselmo Creek, may be subject to LSA Notification under Fish and Game Code section 1600 et seq., which extends to ephemeral and intermittent watercourses, watercourses with subsurface flow, and floodplains. The absence of a sensitive natural community from the CNDDB records identified for the Planning Area does not eliminate the project-level review required by Action OSC-B.3.a where potentially suitable or sensitive habitat is present. (Final EIR, Responses to Comments A2-2 and A2-9.) The General Plan 2045 includes Action OSC-B.3.a (pre-development biological surveys of creek corridors and other potentially suitable habitat), Action OSC-B.4.a (requiring that proposals for grading, filling, or construction that would alter a watercourse shown on General Plan Figure OSC-3 be referred to CDFW, the U.S. Army Corps of Engineers, the San Francisco Bay Regional Water Quality Control Board, the Marin County Flood Control District, and other regulatory agencies for consultation), and Action OSC-B.4.b (requiring compliance with the Town's creek setback standards).

The General Plan 2045 also includes Policy OSC-B.1 (preservation and enhancement of wildlife and plant communities in open spaces, riparian corridors, and other biologically sensitive areas), Policy OSC-B.3 (avoidance, accompanied by habitat restoration, as the preferred approach to conservation), Policy OSC-B.5 (creek enhancement and riparian habitat restoration for construction projects adjacent to creeks and drainageways), Policy OSC-B.6 and Actions OSC-B.6.a and OSC-B.6.b (water quality, stormwater, and low-impact design), and Policy OSC-B.8 (tree protection), and the Town's Watercourse regulations establish codified creek setback standards enforced through the Town's permit process. Independent of the General Plan 2045, activities that may substantially divert or obstruct the natural flow of, or change the bed, channel, or bank of, any river, stream, or lake require LSA Notification under Fish and Game Code section 1602, and the terms of any executed LSA Agreement govern the ratio, location, and timing of required restoration. The Town's General Plan implementation checklist will document, for applicable subsequent projects, whether a project may affect a stream, riparian habitat, wetland, or sensitive natural community; whether evaluation by a qualified biologist is required; whether LSA Notification or other agency authorization is required; and applicable avoidance, minimization, and restoration requirements. Where a subsequent project would affect riparian habitat or a sensitive natural community, the required outcome is avoidance or minimization of harm to a less-than-significant level, accompanied by habitat restoration as applicable, with project-specific measures determined based on the nature, extent, quality, and function of the affected resource; where an LSA Agreement or other regulatory authorization is required, the applicant must also comply with any restoration, compensation, monitoring, or other requirements imposed through that authorization. (Final EIR, Responses to Comments A2-8 and A2-9.) Adoption and implementation of these General Plan 2045 policies and actions, together with compliance with applicable federal and State law, would avoid or reduce adverse effects on riparian habitat and

sensitive natural communities to a less-than-significant level, and this impact would be less than significant.

Impact 3.4-3: Wetlands

Threshold: Would General Plan 2045 implementation have a substantial adverse effect on State or federally protected wetlands through direct removal, filling, hydrological interruption, or other means?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.4-33 through 3.4-34; Final EIR, Responses to Comments A2-2, A2-6, and A2-8, and Chapter 2, Revisions to the Draft EIR.)

Explanation: Sleepy Hollow Creek and San Anselmo Creek qualify as aquatic and riparian habitat that may be subject to Clean Water Act Section 404 and Porter-Cologne Act jurisdiction. As a planning document, the General Plan 2045 does not itself authorize physical changes to wetlands; subsequent individual development would be subject to site-specific review, including evaluation by a qualified biologist under Action OSC-B.3.a of potentially affected creek corridors, riparian habitat, wetlands, and buffer areas, and, where jurisdictional waters or wetlands are present, to permitting under Clean Water Act sections 401 and 404, the Porter-Cologne Water Quality Control Act, and LSA Notification under Fish and Game Code section 1602, which require avoidance, minimization, and compensatory mitigation as imposed by the agencies with jurisdiction. Where a project could modify surface or subsurface flows supporting seasonal wetland or seep habitat, Action OSC-B.3.a and Policy OSC-B.6 and Actions OSC-B.6.a and OSC-B.6.b require evaluation of those indirect hydrologic effects. The General Plan 2045 further includes Policy OSC-B.5 (requiring creek enhancement and riparian restoration for construction adjacent to creeks), Action OSC-B.4.a (requiring that proposals for grading, filling, or construction that would alter a watercourse shown on General Plan Figure OSC-3 be referred to CDFW, the U.S. Army Corps of Engineers, the San Francisco Bay Regional Water Quality Control Board, the Marin County Flood Control District, and other regulatory agencies for consultation), and Action OSC-B.4.b (creek setback compliance). With these regulatory protections and General Plan policies in place, together with compliance with applicable federal and State law, this impact would be less than significant.

Impact 3.4-4: Wildlife Movement and Migratory Corridors

Threshold: Would General Plan 2045 implementation interfere substantially with the movement of any native resident or migratory fish or wildlife species, established wildlife corridors, or wildlife nursery sites?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.4-34 through 3.4-3; Final EIR, Response to Comment A2-4.)

Explanation: Sleepy Hollow Creek and San Anselmo Creek function as wildlife movement corridors within the Planning Area; although portions have been channelized with culverts at road crossings, both creeks retain the vegetative cover and topography needed to support animal movement, and areas designated Single-Family Residential near both creeks are already largely developed with urban uses. The General Plan 2045 includes Policy OSC-B.2 and Actions OSC-B.2.b (rewilding) and OSC-B.2.c (wildlife fencing), as well as Action OSC-B.2.a, which requires development on vacant or connected sites to assess potential impacts to wildlife movement and

incorporate feasible measures to maintain habitat connectivity, and future site-specific projects would be subject to federal and State permitting where movement corridors are present. This impact would be less than significant.

Impact 3.4-5: Local Biological Resource Policies and Ordinances

Threshold: Would General Plan 2045 implementation conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.4-35 through 3.4-36; Final EIR, Responses to Comments A2-9 and A2-10, and Chapter 2, Revisions to the Draft EIR.)

Explanation: As a policy document, the General Plan 2045 does not conflict with the local biological resource policies it establishes, and it carries forward and strengthens existing protections through Policy OSC-B.3 and its supporting Actions OSC-B.3.a (as revised in the Final EIR to require documentation of compliance through the Town's General Plan implementation checklist and submittal of qualifying observations to the CNDDB and/or SPOWDB) and OSC-B.3.b, and Policy OSC-B.8 (tree protection).. The Town's Municipal Code Chapter 9 (Street Trees) separately regulates the removal, pruning, and protection of street trees, and future development would be required to comply with these Municipal Code provisions. This impact would be less than significant, and no mitigation is required.

Impact 3.4-6: Habitat Conservation Plan

Threshold: Would General Plan 2045 implementation conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?

Findings: No Impact. (Draft EIR, pp. 3.4-36.)

Explanation: The Town of San Anselmo is not subject to an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. No impact would occur.

CULTURAL AND TRIBAL CULTURAL RESOURCES

Impact 3.5-1: Historical Resources

Threshold: Would General Plan 2045 implementation cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines section 15064.5?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.5-35 through 3.5-36.)

Explanation: Known historic and prehistoric resource sites are documented throughout the Planning Area, and one prehistoric district (the Mount Tamalpais district) extends into the southwest portion of San Anselmo, although no historic sites or districts within the Planning Area are currently listed or eligible for listing on the National Register of Historic Places or California Register of Historical Resources. The Town consulted the San Anselmo Historical Museum and Marin History Museum by letter on June 26, 2024, and had received no response as of Draft EIR

publication. The General Plan 2045 includes Policy LU-E.1 (protecting locally, State-, or federally significant historic buildings, features, or sites from demolition or major alteration), Action LU-E.1.e (requiring a qualified historian to survey adjacent parcels prior to construction near identified historic resources and develop a Historic Resource Protection Plan where warranted), Action LU-E.1.b (preparing and maintaining a townwide historic resources inventory), Policy LU-E.2 (supporting the Historical Commission and Historical Society), and Action OSC-C.1.c (an inadvertent-discovery protocol requiring work to stop within 50 feet of a find pending evaluation by a qualified archaeologist). With implementation of these policies and applicable federal, State, and local regulations, this impact would be less than significant.

Impact 3.5-2: Archaeological Resources

Threshold: Would General Plan 2045 implementation cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines section 15064.5?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.5-36 through 3.5-37.)

Explanation: Undeveloped hillsides and areas along existing or historically daylighted watercourses in and around San Anselmo have potential for subsurface prehistoric archaeological deposits; specific site information is withheld from the Draft EIR and maintained confidentially by the Town to protect resource integrity. The General Plan 2045 includes Policy OSC-C.1 (protecting significant archaeological, tribal cultural, and paleontological resources from destruction), Action OSC-C.1.a (requiring qualified-archaeologist evaluation of project sites with potential for cultural or tribal cultural resources prior to approval, and implementation of avoidance or reduction measures), and Action OSC-C.1.c (the 50-foot stop-work and evaluation protocol for inadvertent discoveries). Future development would also be subject to project-level CEQA review. With these policies in place, this impact would be less than significant.

Impact 3.5-3: Human Remains

Threshold: Could General Plan 2045 implementation lead to the disturbance of human remains?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.5-37 through 3.5-38.)

Explanation: Human occupation of southern Marin County dates back approximately 13,000 years, and isolated Native American burials and cremations have been found outside formal cemeteries elsewhere in the region, so excavation associated with future development could inadvertently encounter human remains. Health and Safety Code section 7050.5 and Public Resources Code section 5097.98 establish mandatory stop-work, Marin County Coroner notification, and (where remains are determined to be Native American) Native American Heritage Commission and Most Likely Descendant consultation procedures, and General Plan 2045 Action OSC-C.1.d requires the Town to immediately halt excavation in the vicinity of a discovery and notify the Coroner and a qualified archaeologist. There is no indication that the Planning Area contains known human remains. Given compliance with these existing legal protections, this impact would be less than significant.

Impact 3.5-4: Tribal Cultural Resources

Threshold: Would General Plan 2045 implementation cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code section 21074?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.5-38 through 3.5-39.)

Explanation: A July 2024 Sacred Lands File search through the Native American Heritage Commission found no recorded cultural resources in the vicinity of the Planning Area. The Town conducted Native American consultation under both SB 18 and AB 52, sending letters to the Federated Indians of Graton Rancheria and the Guidiville Indian Rancheria; the Town and consultant team met with the Federated Indians of Graton Rancheria on October 14, 2024, and the Town later shared the draft Vision Statement and Guiding Principles with the tribe for review, receiving no further comments, and reissued consultation invitations to both tribes on November 19, 2025, without response. Because unknown tribal cultural resources could nonetheless be present, the General Plan 2045's Action OSC-C.1.c inadvertent-discovery protocol would apply, and subsequent individual development projects would be subject to project-specific CEQA review, which may include additional AB 52 consultation. This impact would be less than significant.

ENERGY

Impact 3.6-1: Wasteful and Inefficient Use of Energy

Threshold: Would General Plan 2045 implementation result in the wasteful, inefficient, or unnecessary consumption of energy resources?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.6-14 through 3.6-15.)

Explanation: Future development facilitated by the General Plan 2045 would be required to comply with the California Building Energy Efficiency Standards (Title 24, Part 6), resulting in new and remodeled buildings that consume less energy per square foot than existing development. The General Plan 2045 also promotes energy-efficient land use patterns, including compact, infill, and mixed-use development (Policy C-A.3), energy-efficient building technologies (Action SU-C.2.b), and municipal renewable energy and microgrid strategies (Action SU-C.2.c, Policy SU-C.5), while Action SU-A.1.a and Action SU-A.1.b support regional energy-efficiency partnerships and public education. Reduced vehicle miles traveled resulting from the Plan's land use and circulation policies (Action C-A.3.a) would lower transportation energy consumption, complemented by state and federal vehicle efficiency and zero-emission vehicle mandates. Collectively, these building and transportation efficiencies would reduce energy consumption per capita and per unit of development relative to existing conditions, and this impact would be less than significant.

Impact 3.6-2: Conflict with Renewable Energy or Energy Efficiency Plans

Threshold: Would General Plan 2045 implementation conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.6-15 through 3.6-18.)

Explanation: The General Plan 2045 would be required to remain consistent with the California Energy Commission's Title 24, Part 6 Building Energy Efficiency Standards, CALGreen, California Air Resources Board vehicle efficiency and GHG programs, and the Town's own Climate Action Plan 2030; Municipal Code Chapter 19 (Green Building Requirements) independently requires the Town to meet or exceed CALGreen. As detailed in Draft EIR Table 3.6-2, each Climate Action Plan 2030 measure area (transportation, residential and commercial energy use, waste, water and wastewater, and off-road equipment) corresponds to one or more General Plan 2045 policies or actions, and the General Plan 2045 does not include policies or land use designations that would prohibit or unduly restrict rooftop solar, battery storage, or electric vehicle charging infrastructure. Because the General Plan 2045 would support, rather than obstruct, applicable state and local renewable energy and efficiency plans, this impact would be less than significant.

GEOLOGY, SOILS, AND SEISMICITY

Impact 3.7-1: Seismic Hazards (Fault Rupture, Ground Shaking, Liquefaction, Landslides)

Threshold: Would General Plan 2045 implementation expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure (including liquefaction), or landslides?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-24 through 3.7-25.)

Explanation: No Alquist-Priolo Earthquake Fault Zones lie within the Planning Area; the nearest mapped active faults are the San Andreas Fault Zone (approximately 8 miles west), the Hayward Fault Zone (approximately 10 miles east), and the Rodgers Creek Fault (approximately 18 miles north). Seismic hazard zones with liquefaction potential and landslide susceptibility are nonetheless mapped within portions of the Planning Area, primarily at higher elevations, and USGS modeling indicates a 72 percent probability of a magnitude 6.7 or greater earthquake in the San Francisco region within the next 30 years. Future development would be required to comply with the California Building Standards Code's geotechnical investigation and earthquake-resistant design requirements, as well as General Plan 2045 Policy S-B.1 and Action S-B.1.a (current seismic code compliance review), Policy S-B.3 (maintenance of seismically vulnerable structures), Policy S-C.1 (minimizing landslide and slope-instability hazards), and Policy S-C.2 and its related actions (addressing erosion, expansive soils, and liquefaction). With implementation of these codes and policies, this impact would be less than significant.

Impact 3.7-2: Soil Erosion and Loss of Topsoil

Threshold: Would General Plan 2045 implementation result in substantial soil erosion or the loss of topsoil?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-25 through 3.7-26.)

Explanation: Grading and other ground-disturbing construction activities associated with future development could temporarily increase erosion; NRCS soil survey data indicate the Planning Area's erosion factor (Kf) ranges from 0.28 to 0.32, a low-to-moderate erosion potential. Projects

disturbing one acre or more would be required to prepare a project-specific Stormwater Pollution Prevention Plan under Regional Water Quality Control Board permitting, incorporating best management practices for drainage and erosion control, and General Plan 2045 Policies S-C.1, S-C.2, and S-C.3 and Actions S-C.2.a and S-C.2.b require that development on unstable slopes be designed to avoid soil creep and debris-flow hazards. With these regulatory and policy requirements, this impact would be less than significant.

Impact 3.7-3: Unstable Geologic Units or Soils

Threshold: Would General Plan 2045 implementation result in development located on a geologic unit or soil that is unstable, or that would become unstable, resulting in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-26 through 3.7-27.)

Explanation: Landslide potential increases in the Town's northern, eastern, and southwestern higher-elevation areas; lateral spreading and liquefaction potential are greatest in flat, creek-adjacent areas including the downtown, the Center Boulevard vicinity, Brookside, and Sleepy Hollow; subsidence is not a significant concern in the Planning Area; and collapsible soils have not been identified as an issue, although liquefaction-induced settlement potential exists in susceptible areas. Future development would be required to prepare project-specific geotechnical reports consistent with California Building Standards Code section 1803, and General Plan 2045 Policies S-B.3, S-C.1, S-C.2, and S-C.3 and Actions S-B.3.a, S-B.3.b, S-C.2.a, and S-C.2.b require geotechnical review, hazard evaluation of at-risk structures, and site-specific study in areas subject to liquefaction. With implementation of these code and policy requirements, this impact would be less than significant.

Impact 3.7-4: Expansive Soils

Threshold: Would General Plan 2045 implementation result in development on expansive soil, as defined in the Uniform Building Code, creating substantial direct or indirect risks to life or property?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-28 through 3.7-29.)

Explanation: NRCS Web Soil Survey data indicate the Planning Area's soils range from low to moderate shrink-swell potential, with the moderate-potential area located in the neighborhood north of Red Hill Avenue. The General Plan 2045 Safety Element establishes policies addressing geologic hazards, including expansive soils, and Policies S-C.2 and S-C.3 and Action S-C.2.a require enforcement of building codes on new development and redevelopment, together with a periodic slope-improvement inspection and maintenance program under Action S-C.2.b. Design-level geotechnical investigations required by the California Building Standards Code would ensure proper foundation design in areas of expansive soil, and this impact would be less than significant.

Impact 3.7-5: Septic System Soil Suitability

Threshold: Would General Plan 2045 implementation result in soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-29.)

Explanation: Sewer service in the Planning Area is provided by the Ross Valley Sanitary District, which conveys wastewater to the Central Marin Sanitation Agency treatment plant in San Rafael. All new wastewater generated by future development under the General Plan 2045 would be collected by the existing municipal sewer system; no septic tanks or alternative wastewater disposal systems would be used. This impact would be less than significant.

Impact 3.7-6: Paleontological Resources and Unique Geologic Features

Threshold: Would General Plan 2045 implementation directly or indirectly destroy a unique paleontological resource or site, or a unique geologic feature?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.7-29 through 3.7-30.)

Explanation: While Marin County contains approximately 369 documented paleontological sites (concentrated near the coastline), no paleontological resources have been identified within San Anselmo. General Plan 2045 Action OSC-C.1.c requires ground-disturbing work to stop within 50 feet of any inadvertently discovered historic, cultural, tribal cultural, or archaeological resource, including paleontological finds, pending evaluation by a qualified professional, with subsequent recovery, monitoring, or curation as warranted consistent with Society of Vertebrate Paleontology standards. Combined with project-level CEQA review of future development, this inadvertent-discovery procedure would reduce the potential for loss of significant paleontological resources, and this impact would be less than significant.

GREENHOUSE GAS EMISSIONS

Impact 3.8-1: Greenhouse Gas Emissions and Consistency with GHG Reduction Plans

Threshold: Would General Plan 2045 implementation generate greenhouse gas emissions that could have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.8-32 through 3.8-38.)

Explanation: Because the General Plan 2045 does not directly approve or entitle specific development or infrastructure projects, construction-related GHG emissions of future individual projects cannot be quantified at a program level and would typically contribute less than one percent to a project's annual GHG inventory; long-term operational emissions would derive primarily from mobile sources, area sources, and electricity and natural gas use. The Town's Climate Action Plan (CAP) establishes a business-as-usual emissions forecast and sets reduction targets consistent with State goals: a 54 percent reduction below the 2005 baseline by 2030 (45 percent below 1990 levels) and carbon neutrality by 2045. As summarized in Draft EIR Table 3.8-2, the General Plan 2045 includes goals, policies, and actions addressing each of the CAP's

reduction categories (low-carbon transportation, energy efficiency, renewable energy, waste reduction, water conservation, and adaptation), including Policy LU-A.1 and Policy LU-A.2 (sustainable growth and infill development), Policy SU-E.1 (low-carbon transportation), and Policy SU-C.2 and SU-C.3 (renewable energy, electrification, and building energy efficiency). Transportation accounts for approximately 55 percent of the Town's GHG inventory, and per-capita and per-employee vehicle miles traveled are projected to decline under the General Plan 2045 relative to existing conditions even as population grows, consistent with Transportation Authority of Marin travel demand modeling. Because the General Plan 2045's goals, policies, and actions are consistent with and implement the CAP's emission reduction framework and the State's long-term climate goals, this impact would be less than significant.

HAZARDS AND HAZARDOUS MATERIALS

Impact 3.9-1: Routine Transport, Use, or Disposal of Hazardous Materials

Threshold: Would General Plan 2045 implementation create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, or through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-21 through 3.9-23.)

Explanation: Future development facilitated by the General Plan 2045 could involve the transport, use, or disposal of hazardous materials associated with construction (coatings, solvents, fuels), site remediation, and ongoing commercial and residential activity, and use of such materials is regulated by local fire departments, Certified Unified Program Agencies (CUPAs), Cal/OSHA, and the Department of Toxic Substances Control under the Resource Conservation and Recovery Act, CERCLA, and Titles 8, 22, and 26 of the California Code of Regulations. The General Plan 2045 implements Goal S-A (community resilience and hazard preparedness), Policy S-A.1 and Action S-A.1.a (updating building codes and regulations as conditions change), Policy S-A.4 (resilient utilities and public safety coordination), Policy S-A.6 (coordination with agencies on hazardous materials oversight), and Policy S-A.7 (staff training to prevent accidental releases). With compliance with this federal, State, and local regulatory framework and General Plan 2045 policies, this impact would be less than significant.

Impact 3.9-2: Hazardous Emissions Near Schools

Threshold: Would General Plan 2045 implementation emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-23 through 3.9-25.)

Explanation: Three Ross Valley School District elementary schools (Brookside, Hidden Valley, and Wade Thomas) and Archie Williams High School (Tamalpais Union High School District) are located within the Planning Area. The General Plan 2045 does not itself authorize specific development and does not designate new schools or hazardous-materials-generating businesses, though future commercial or industrial uses could handle hazardous materials near a school.

Federal and State standards under the Clean Air Act, CARB regulations, the Clean Water Act, and Health and Safety Code underground storage tank requirements govern such emissions and materials, and General Plan 2045 Policy S-A.3 directs new development away from hazard areas, Action S-A.3.b requires protective construction for essential facilities in hazard zones, and Action S-A.17.c requires Fire and Police consultation in development review. Any new school site would independently be subject to the California Department of Education's School Site Selection and Approval Guide, which evaluates proximity to hazardous air emissions and toxic substances within a quarter mile, among other safety factors. This impact would be less than significant.

Impact 3.9-3: Hazardous Materials Sites (Cortese List)

Threshold: Would General Plan 2045 implementation result in projects located on a site included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-25 through 3.9-26.)

Explanation: One Cortese List site exists within the Planning Area: the Bolinas Avenue Center (4 and 8 Bolinas Avenue and 21 San Anselmo Avenue), a former dry-cleaning site where PCE has been identified in soil, soil vapor, and shallow groundwater (which is not a drinking water source); current conditions do not pose an immediate health risk, and the site remains subject to ongoing DTSC-overseen investigation and remediation. General Plan 2045 Policy S-A.3 encourages new development to avoid or minimize exposure to hazard sites, and Policy S-A.6 supports coordination among agencies on hazardous site oversight. Because federal and State law mandates investigation, remediation, and regulatory oversight of listed sites prior to redevelopment, this impact would be less than significant.

Impact 3.9-4: Airport Land Use Hazards

Threshold: Is General Plan 2045 implementation located within an airport land use plan or within two miles of a public or public-use airport such that it would result in a safety hazard for people residing or working in the Planning Area?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-26.)

Explanation: No public or private airport facilities are located within the Planning Area, San Anselmo is not within an airport influence zone or airport land use plan area, and the nearest airport (San Rafael Airport) is approximately 2.7 miles from the town boundary, beyond the two-mile threshold. This impact would be less than significant.

Impact 3.9-5: Emergency Response/Evacuation Plan Interference

Threshold: Would General Plan 2045 implementation impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-27.)

Explanation: Emergency management in San Anselmo is coordinated through the Marin County Sheriff's Office of Emergency Services under the Marin Operational Area Emergency Operations

Plan (EOP); the Town has no officially designated evacuation routes, and incident-specific routes are determined by the Ross Valley Fire Department in coordination with the Town and Central Marin Police Authority. Future development is not anticipated to remove or impede evacuation routes, and the General Plan 2045 includes Policy S-A.8 (pedestrian rights-of-way as supplemental evacuation routes), Policy S-A.9 and Action S-A.9.a (maintaining and updating the Town's EOP and Marin County Multi-Jurisdictional Hazard Mitigation Plan participation), and Policy S-A.17 and Actions S-A.17.a through S-A.17.c (emergency response capability and Fire/Police consultation in project review). With this regulatory framework and General Plan 2045 policy support, this impact would be less than significant.

Impact 3.9-6: Wildland Fire Risk to People or Structures

Threshold: Would General Plan 2045 implementation expose people or structures to a significant risk of loss, injury, or death involving wildland fires?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.9-27 through 3.9-28.)

Explanation: No areas within the Planning Area are mapped as Very High Fire Hazard Severity Zones, though the Town includes areas of moderate to high wildfire risk within the wildland-urban interface, particularly in the vegetated, sloped eastern portions of town. Future development would be required to comply with defensible space standards under Public Resources Code section 4291, Fire Department review, and the California Fire Code, together with General Plan 2045 wildfire policies including Policy S-E.1 and its actions (vegetation management and fuel reduction), Policy S-E.5 (fire code and Ross Valley Fire standards consistency), Policy S-E.6 (siting restrictions for critical facilities in high fire severity zones), Policy S-E.7 (defensible space and public education), Policy S-E.8 (vegetation clearance), Policy S-E.11 (prioritizing development supported by adequate water and evacuation capacity), and Policy S-E.12 (coordination with Marin Water on firefighting water supply). A full evaluation is provided in Section 3.16, Wildfire. With this regulatory and policy framework, this impact would be less than significant.

HYDROLOGY AND WATER QUALITY

Impact 3.10-1: Water Quality Standards and Waste Discharge Requirements

Threshold: Would General Plan 2045 implementation violate water quality standards or waste discharge requirements, or otherwise substantially degrade water quality or obstruct implementation of a water quality control plan?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.10-20 through 3.10-24; Final EIR, Response to Comment B2-1.)

Explanation: Construction activities associated with future development could temporarily increase erosion and sedimentation, and new impervious surfaces could increase urban runoff and associated pollutants (sediments, petroleum hydrocarbons, pesticides, fertilizers, and heavy metals), particularly during the "first flush" of the wet season. Each future project disturbing one acre or more would be required under the Clean Water Act to obtain RWQCB General Permit coverage supported by a project-specific Stormwater Pollution Prevention Plan (SWPPP) with best management practices, and the Town's Municipal Code Chapter 8 (Urban Runoff Pollution

Prevention) independently requires BMP implementation and limits on post-development runoff rates. The General Plan 2045 further includes Goal OSC-B and Policy OSC-B.4 (creek protection for water quality and stormwater conveyance), Policy OSC-B.6 and Action OSC-B.6.a (minimizing stormwater pollutants and Clean Water Act/NPDES compliance), and Action OSC-B.6.b (requiring low-impact development site design). With this regulatory framework and General Plan 2045 policies, this impact would be less than significant.

Impact 3.10-2: Groundwater Supplies and Recharge

Threshold: Would General Plan 2045 implementation deplete groundwater supplies, substantially interfere with groundwater recharge, or conflict with a groundwater management plan?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.10-24 through 3.10-26.)

Explanation: Marin Water's supply comes from imported Sonoma County Water Agency water, local surface water, and recycled water; groundwater is not currently or planned to be used as a municipal supply source, and the three groundwater basins within Marin Water's service area (Ross Valley, San Rafael Valley, and portions of Novato) are all classified as very low priority under the State's monitoring program. Projected General Plan 2045 growth (approximately 2,279 additional units and 5,356 new residents) would require roughly 408 acre-feet per year, a small fraction of Marin Water's projected 2045 available supply of approximately 11,541 acre-feet per year, consistent with the district's 2020 Urban Water Management Plan; larger individual projects would independently be subject to Water Supply Assessment requirements under SB 610/SB 221. Because future development would concentrate on already-disturbed, urbanized sites and mandatory low-impact-development standards under MCSTOPPP require projects to mimic pre-project infiltration through bioretention, rain gardens, and permeable pavement, buildout would not substantially reduce regional groundwater recharge. This impact would be less than significant.

Impact 3.10-3: Drainage Pattern Alteration, Erosion, and Flooding

Threshold: Would General Plan 2045 implementation alter the existing drainage pattern in a manner that would result in substantial erosion, siltation, flooding, impeded flows, or polluted runoff?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.10-26 through 3.10-27; Final EIR, Response to Comment B2-1.)

Explanation: New impervious surfaces associated with future development would incrementally reduce infiltration and could increase stormwater runoff and non-point-source pollutant discharge, particularly during the "first flush" of storm events. The Town is subject to NPDES Permit No. CAS000004, which regulates stormwater discharge, and future development would be required to prepare project-specific floodplain and drainage studies, implement post-construction stormwater control plans and low-impact-development site design consistent with MCSTOPPP guidance, and obtain USACE/CDFW permits for any work affecting waterway drainage pathways. The General Plan 2045 further includes Policy OSC-B.4 (creek protection for stormwater conveyance), Policy OSC-B.6 and Action OSC-B.6.a (stormwater pollutant minimization and Clean Water Act/NPDES compliance), and Action OSC-B.6.b (LID site design). With this regulatory framework and General Plan 2045 policies, this impact would be less than significant.

Impact 3.10-4: Flood, Tsunami, or Seiche Inundation

Threshold: Would General Plan 2045 implementation release pollutants due to project inundation by flood hazard, tsunami, or seiche?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.10-27 through 3.10-29; Final EIR, Response to Comment B2-1.)

Explanation: Limited portions of the southern Planning Area lie within FEMA 100-year or 500-year flood zones; future development would be subject to SWPPP requirements and Town Code Section 7-11 (Protection of Flood Hazard), together with General Plan 2045 policies to maintain storm drainage systems and flood management facilities. San Anselmo, located approximately 20 miles inland at approximately 46 feet above mean sea level, is not within a mapped tsunami inundation or run-up zone. The Planning Area lies within the inundation area of the Phoenix Dam, which has no history of failure and is subject to annual Division of Safety of Dams inspection and a Cal OES-approved Emergency Action Plan under Water Code sections 6160 and 6161, integrated with the Town's and Marin County's hazard mitigation and emergency response plans. This impact would be less than significant.

LAND USE, PLANNING, AND POPULATION/HOUSING

Impact 3.11-1: Physical Division of an Established Community

Threshold: Would the General Plan 2045 physically divide an established community?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.11-26 through 3.11-27.)

Explanation: The General Plan 2045 establishes the Town's vision for future growth and development and does not itself propose any development. General Plan goals and policies help ensure that implementation would not physically divide an established community, including Goal LU-A (managing future growth to prioritize a compact, walkable community and efficient extension of urban services), Goal LU-D (strengthening the Town's community fabric and pedestrian-friendly built environment, including Policy LU-D.4 encouraging maintenance and enhancement of the downtown as a pedestrian-friendly center), and Goal LU-F (maintaining and enhancing residential neighborhoods through pedestrian-scale, context-sensitive design). The land uses, development, and infrastructure accommodated by the General Plan 2045 provide opportunities for cohesive new growth at infill locations within existing urbanized areas, as well as new growth adjacent to existing urbanized areas, without creating physical division within the community. The Land Use Map does not include any new areas designated for urbanization or new roadways, infrastructure, or other features that would divide existing communities.

Impact 3.11-2: Conflict with Land Use Plans, Policies, or Regulations

Threshold: Would the General Plan 2045 cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.11-27 through 3.11-28.)

Explanation: The General Plan 2045 was prepared in conformance with state laws and regulations governing general plans, including environmental protection requirements; consistency with state regulations on specific environmental topics is addressed in the relevant EIR chapters. The proposed Land Use Plan accommodates and builds on land uses anticipated under Plan Bay Area 2050+ (the region's Regional Transportation Plan/Sustainable Communities Strategy) and includes adequate sites to accommodate the Town's Regional Housing Needs Allocation (RHNA), and does not conflict with that regional plan. As the Town's primary planning document, the General Plan 2045 carries forward and enhances existing General Plan policies intended for environmental protection and would not remove or conflict with Town plans, policies, or regulations adopted for environmental protection; Action LU-A.1.a requires consistency among the General Plan, Zoning Code, and other land use regulations. Subsequent development and infrastructure projects accommodated by the General Plan 2045 would be required to remain consistent with all applicable land use plans, policies, and regulations adopted to avoid or mitigate environmental effects.

Impact 3.11-3: Unplanned Population Growth

Threshold: Would the General Plan 2045 induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.11-28 through 3.11-30.)

Explanation: The General Plan 2045 accommodates future growth in San Anselmo but does not itself propose any development projects; it has been designed to accommodate incremental growth consistent with historical population and household trends for the Town and Marin County (Table 3.11-3). Growth in the Town, as in the state generally, is inevitable and would occur regardless of General Plan 2045 implementation, driven by factors such as natural increase, net migration, housing costs, job location, the economy, climate, and transportation. The General Plan 2045 establishes adequate sites to accommodate the Town's fair share of regional housing needs allocated by ABAG and anticipated under Plan Bay Area 2050+, including the Town's 6th Cycle RHNA target of 833 units (253 very low, 145 low, 121 moderate, and 314 above-moderate income units) for the 2023-2031 planning period. Because this growth is an explicitly planned response to state mandates and regional planning frameworks rather than unforeseen expansion, and because the General Plan 2045's goal and policy framework, together with the mitigating policies and actions addressed throughout Sections 3.1 through 3.16 and Chapter 4.0 of the Draft EIR, would guide growth to appropriate areas and provide necessary services, the General Plan 2045 would not induce substantial unplanned population growth beyond that already disclosed and analyzed in the Draft EIR.

Impact 3.11-4: Displacement of People or Housing

Threshold: Would the General Plan 2045 displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.11-30.)

Explanation: The majority of developed land in the Planning Area consists of residential uses that are not anticipated to undergo significant land use changes under the General Plan 2045. The General Plan 2045 focuses infill development opportunities on vacant and underutilized areas and on commercially developed areas that may transition to mixed use, and its Land Use Map designations reflect existing neighborhoods throughout the Town. While the General Plan 2045 accommodates growth and an overall increase in dwelling units, it does not entitle any development projects and does not require the removal or replacement of existing housing. No mitigation is required.

NOISE

Impact 3.12-1: Traffic Noise

Threshold: Would General Plan 2045 implementation result in exposure to significant traffic noise sources?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-20 through 3.12-21.)

Explanation: Traffic noise levels were modeled using the FHWA Highway Traffic Noise Prediction Model for Existing (2024) and Proposed 2045 General Plan Buildout conditions along area roadway segments. As shown in Table 3.12-11, projected future traffic noise levels at the nearest sensitive receptors would increase between 0.8 and 2.8 dBA compared to existing conditions across the roadway segments analyzed, all of which are below the applicable significance criteria (a 5.0 dBA increase where existing levels are below 60 dBA, a 3.0 dBA increase where existing levels are 60-65 dBA, or a 1.5 dBA increase where existing levels exceed 65 dBA). General Plan Policies N-A.1, N-A.2, and N-A.4 further support noise-compatible land uses near traffic noise sources, review of new development for consistency with adopted noise standards, and townwide traffic noise reduction. Because the predicted traffic noise increases comply with the applicable significance thresholds, the impact would be less than significant.

Impact 3.12-2: Stationary Noise Sources

Threshold: Could General Plan 2045 implementation result in the generation of excessive stationary noise sources?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-21 through 3.12-22.)

Explanation: The General Plan 2045 does not propose specific noise-generating uses, but its Land Use Map includes industrial designations that could accommodate uses such as loading docks, industrial operations, HVAC equipment, car washes, daycare facilities, auto repair, and recreational uses, and specific future land uses are not known at this time. Where more intensive noise-generating uses are proposed closer to sensitive uses, detailed noise studies would be required to ensure noise control measures (e.g., orienting loading docks away from sensitive uses, sound walls or berms, buffer distance, or screening) are incorporated into project design. An illustrative example in the Draft EIR demonstrates that site design measures such as a 12-foot sound wall or building screening can reduce a typical loading dock's noise levels to meet the Town's Zoning Code standards of 55 dBA Leq (daytime) and 45 dBA Leq (nighttime), even where more intensive uses are located closer to sensitive receptors. General Plan Policies N-A.1 and N-

A.2 would further reduce noise associated with stationary sources. Implementation of these policies and actions would reduce stationary noise impacts to a less-than-significant level.

Impact 3.12-3: Construction Noise

Threshold: May General Plan 2045 implementation result in an increase in construction noise sources?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-22 through 3.12-23.)

Explanation: New development, roadway maintenance, and installation of public utilities and infrastructure facilitated by the General Plan 2045 would require construction activities involving heavy equipment and impact tools, which could generate maximum noise levels ranging from approximately 85 to 90 dBA at 50 feet (Table 3.12-12), potentially resulting in periods of significant ambient noise increases. General Plan Policy N-A.3 and its implementing actions would reduce construction noise impacts: Action N-A.3.a requires the Town to enforce construction hour limitations and feasible noise-reduction measures (sound barriers, muffled and properly maintained equipment, and other technologies) through development review, and establishes a 12 dBA increase over ambient conditions as the significance threshold for temporary construction noise; Action N-A.3.b requires advance notice to nearby residents and businesses and Construction Noise Management Plans for major projects. Implementation of these policies and actions would ensure construction noise impacts remain less than significant.

Impact 3.12-4: Construction Vibration

Threshold: May General Plan 2045 implementation result in construction vibration?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.12-23 through 3.12-24.)

Explanation: Construction activities facilitated by the General Plan 2045 could include demolition, site preparation, excavation, foundation work, pile driving, and building erection, which can generate ground-borne vibration. While typical construction vibration is not predicted to cause structural damage or annoyance to sensitive receptors located more than 25 feet away, pile driving within 50 feet of an existing structure could result in a potentially significant vibration impact. Implementation of General Plan Policy N-A.5 would ensure that construction-related vibration does not cause damage to adjacent structures, reducing this impact to a less-than-significant level.

PUBLIC SERVICES AND RECREATION

Impact 3.13-1: Fire Protection Facilities

Threshold: Would the General Plan 2045 result in adverse physical impacts associated with the provision of new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-36 through 3.13-37.)

Explanation: Development and growth accommodated by the General Plan 2045 would increase demand for fire protection services, likely requiring new or expanded fire protection facilities,

which would primarily be accommodated on sites with the Public Facilities land use designation. The General Plan 2045 does not itself propose or approve development projects or the physical expansion of public facilities; any future fire protection facility would be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations, and would be subject to project-level CEQA review. The environmental effects of constructing and operating such facilities (e.g., increased operational and construction noise, increased water demand, potential habitat or cultural resource effects) would be similar to those of other development under the General Plan and are addressed in the relevant EIR chapters. The General Plan 2045 includes policies and actions ensuring public services are provided in a timely, adequately funded, and coordinated manner, with new development funding its fair share of services. Impacts related to fire protection facilities would be less than significant.

Impact 3.13-2: Police Protection Facilities

Threshold: Would the General Plan 2045 result in adverse physical impacts associated with the provision of new or physically altered police protection facilities, the construction of which could cause significant environmental impacts?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-37 through 3.13-39.)

Explanation: Development and growth accommodated by the General Plan 2045 would increase demand for law enforcement services, likely requiring new or expanded police protection facilities, which would primarily be accommodated on sites with the Public Facilities land use designation. As with fire protection facilities, the General Plan 2045 does not itself propose or approve such development; future facilities would undergo Town review for conformance with the General Plan and Municipal Code and would be subject to project-level CEQA review, and their environmental effects (increased noise, potential habitat or cultural resource effects) are addressed in the relevant EIR chapters. The General Plan 2045's policies and actions for timely, adequately funded, and coordinated public services, supported by fair-share funding from new development, would ensure impacts related to police protection facilities remain less than significant.

Impact 3.13-3: School Facilities

Threshold: Would the General Plan 2045 result in adverse physical impacts associated with the provision of new or physically altered school facilities, the construction of which could cause significant environmental impacts?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-39 through 3.13-40.)

Explanation: Development and growth accommodated by the General Plan 2045 would increase demand for school facilities, potentially requiring new or expanded facilities primarily accommodated on Public Facilities-designated sites. State law (Government Code Section 65995/65996, as amended by SB 50) establishes that payment of statutorily authorized school impact fees provides full and complete mitigation of a project's impact on school facilities, and a project cannot be denied on the basis that existing school facilities are inadequate. Each subsequent developer would be required to pay applicable developer impact fees, fully mitigating potential impacts to school facilities as a matter of state law. The General Plan 2045 does not itself propose

or approve school facility development; any future facility would be subject to Town review and project-level CEQA review. Impacts related to school facilities would be less than significant.

Impact 3.13-4: Park Facilities

Threshold: Would the General Plan 2045 result in adverse physical impacts associated with the provision of new or physically altered park facilities, the construction of which could cause significant environmental impacts?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-40 through 3.13-41.)

Explanation: Development and growth accommodated by the General Plan 2045 would increase demand for park and recreational facilities, which would primarily be accommodated in the Parks and Open Space land use designations. The General Plan 2045 does not itself propose or approve such development; future park and recreational facilities would be evaluated for conformance with the General Plan and Municipal Code and subject to project-level CEQA review, with environmental effects similar to other development under the General Plan addressed in the relevant EIR chapters. The General Plan 2045 includes policies and actions to ensure public services are provided in a timely, adequately funded, and coordinated manner, with new development funding its fair share. Impacts related to park and recreational facilities would be less than significant.

Impact 3.13-5: Other Public Facilities

Threshold: Would the General Plan 2045 result in adverse physical impacts associated with the provision of new or physically altered other public facilities (e.g., Town Hall, Library, Historical Museum), the construction of which could cause significant environmental impacts?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-41 through 3.13-43.)

Explanation: Development and growth accommodated by the General Plan 2045 would increase demand for other public facilities such as the San Anselmo Town Hall, Library, and Historical Museum, potentially requiring new or expanded facilities primarily accommodated in the Public Facilities and Parks land use designations. The General Plan 2045 does not itself propose or approve such development; future facilities would be evaluated for conformance with the General Plan and Municipal Code and subject to project-level CEQA review, with environmental effects similar to other development under the General Plan addressed in the relevant EIR chapters. The General Plan 2045's policies and actions ensuring timely, adequately funded, and coordinated public services, supported by fair-share funding from new development, would ensure impacts related to other public facilities remain less than significant.

Impact 3.13-6: Deterioration of Existing Parks and Recreation Facilities

Threshold: Would the General Plan 2045 result in adverse physical impacts associated with the deterioration of existing parks and recreation facilities or the construction of new parks and recreation facilities?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.13-43 through 3.13-44.)

Explanation: Growth accommodated under the General Plan 2045 would increase demand for parks, trails, and recreation facilities and increase the need for maintenance and improvements, though the Town does not currently have a minimum park-acreage-per-resident ordinance. General Plan 2045 Action PR-A.1.c would direct the Town to evaluate opportunities to expand the park system and amend the Municipal Code to establish a parkland dedication and in-lieu fee ordinance consistent with the Quimby Act; Action PR-A.1.a requires a community-informed assessment of park and facility needs every five years with associated funding strategies; and Action PR-A.1.b requires preparation or updating of master plans, cost estimates, and funding sources for neighborhood and community parks and recreation facilities. Future development would be required to dedicate land for park uses or fund its fair share under the Quimby Act, providing new parkland and recreation facilities to accommodate demand at a pace and in locations appropriate to serve new development. Any new facilities would be subject to project-level CEQA review. Impacts related to the provision and need for park and recreational facilities would be less than significant.

TRANSPORTATION AND CIRCULATION

Impact 3.14-1: Vehicle Miles Traveled (VMT)

Threshold: Would the General Plan 2045 conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b) (vehicle miles traveled)?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.14-25 through 3.14-26; Final EIR, Response to Comment B2-2.)

Explanation: A quantitative VMT evaluation was prepared using a sketch-model assessment with the Town's Travel Demand Model (TAMDM) at horizon-year 2040/General Plan 2045 buildout conditions, evaluating VMT per resident and VMT per employee as the primary efficiency metrics (Table 3.14-4). General Plan 2045 buildout would generate approximately 10.9 VMT per resident and 13.0 VMT per employee — approximately 27 percent and 24 percent lower, respectively, than the baseline countywide average, and below the Town's adopted significance thresholds of 15 percent below the Marin County average (12.7 VMT per resident and 14.6 VMT per employee). The General Plan 2045 also includes multimodal and demand-management policies and actions (e.g., Policies C-A.1, C-A.3, C-A.4, and C-A.5 and associated actions) supporting Complete Streets improvements, active transportation infrastructure, residential development near transit and daily services, VMT mitigation for discretionary projects, and emerging mobility strategies, consistent with SB 743's intent to reduce vehicle-travel-related environmental effects. The impact would be less than significant.

Impact 3.14-2: Conflict with Circulation Plans, Policies, or Programs

Threshold: Would the General Plan 2045 conflict with a program, plan, policy, or ordinance addressing the circulation system, including transit, bicycle, and pedestrian facilities?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.14-26 through 3.14-27; Final EIR, Responses to Comments A3-2, A3-3, A3-5, and B2-2, and Chapter 2, Revisions to the Draft EIR.)

Explanation: The General Plan 2045 serves as the Town's primary transportation policy framework and was prepared consistent with regional and State transportation planning frameworks, including the MTC/ABAG Plan Bay Area 2050+. The General Plan 2045's implementing policies and actions (Policy C-A.1/Action C-A.1.a; Policies C-C.1 through C-C.7 and associated actions) advance Complete Streets improvements, expansion and maintenance of pedestrian, bicycle, and transit infrastructure, implementation of the Town's Bicycle and Pedestrian Master Plan, improved access to transit stops and mobility hubs, and continued implementation of the Town's Local Road Safety Plan and coordination with regional transit providers and VMT/GHG reduction strategies. Because these policies and actions promote consistency with, rather than conflict with, adopted circulation plans and applicable regional and State transportation policies and standards, the impact would be less than significant.

Impact 3.14-3: Roadway Design Hazards

Threshold: Would the General Plan 2045 increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.14-27 through 3.14-28.)

Explanation: The General Plan 2045 would retain the Town's existing roadway patterns and would not include new major roadways or other circulation features expected to substantially increase hazards or introduce incompatible uses; most anticipated development would occur on developed or underutilized sites served by existing infrastructure, with any incremental improvements limited in extent and subject to review for compliance with State and local design, sight-distance, and access requirements. General Plan 2045 policies and actions support safe roadway and access design, including Complete Streets and multimodal design principles (Policy C-A.1/Action C-A.1.a), circulation improvements along major corridors balancing user needs (Policies C-B.2, C-B.3 and associated actions), neighborhood traffic calming (Policy C-B.1/Action C-B.1.a), constrained hillside roadway improvements (Policy C-B.4), and safe and accessible pedestrian, bicycle, and transit infrastructure (Policies C-C.2, C-C.3, C-C.7). Because future development and related roadway improvements would be reviewed for compliance with applicable design and safety standards, the impact would be less than significant.

Impact 3.14-4: Emergency Access

Threshold: Would the General Plan 2045 result in inadequate emergency access?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.14-28 through 3.14-29.)

Explanation: The General Plan 2045 would retain the Town's existing roadway patterns and does not propose new major roadways, realignments, or other physical changes expected to create inadequate emergency access; anticipated development would generally occur on developed or underutilized sites served by existing streets and infrastructure. Any localized infrastructure modifications would be designed and reviewed through the Town's discretionary and permitting processes to maintain adequate emergency access. General Plan 2045 policies and actions support reliable emergency access, including circulation improvements along key corridors (Policy C-B.2), constrained hillside roadway measures such as temporary parking restrictions during elevated fire-risk conditions and construction management planning (Policy C-B.4/Actions C-B.4.a, C-

B.4.b), and context-sensitive traffic calming that directs higher volumes to arterials designed to accommodate them (Policy C-B.1/Action C-B.1.a). The impact would be less than significant.

UTILITIES AND SERVICE SYSTEMS

Impact 3.15-1: Water Supply Sufficiency

Threshold: Would the General Plan 2045 result in insufficient water supplies available to serve the Town and reasonably foreseeable future development during normal, dry, and multiple-dry years?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.15-16 through 3.15-17.)

Explanation: Water service to San Anselmo is provided by Marin Municipal Water District (Marin Water), which sources 75 percent of its supply from local watersheds and supplements with imported Russian River water. Marin Water's 2020 Urban Water Management Plan (updated 2024) projects adequate supplies through 2045 under normal, single-dry, and multiple-dry-year conditions, with service-area population projected to grow from 191,269 (2020) to 230,996 (2045), incorporating ABAG's 2023-2031 RHNA housing allocations. The General Plan 2045's projected growth of approximately 2,279 additional units and 5,356 new residents represents a minor proportional increase in total district demand already encompassed within the UWMP's regional demand projections, which show a substantial surplus under all scenarios. General Plan Policy PR-C.8 requires coordination with Marin Water to meet projected demand and ensure system reliability, and larger development projects would be subject to SB 610/SB 221 Water Supply Assessment requirements. Because development would occur gradually over decades, utility demand would evolve incrementally, allowing the Town and Marin Water to periodically update master plans and the UWMP to reflect actual development trends. This impact would be less than significant.

Impact 3.15-2: Water Treatment Facilities

Threshold: Would the General Plan 2045 require or result in the construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.15-17 through 3.15-18.)

Explanation: As described under Impact 3.15-1, projected 2045 water supplies are adequate to meet demand with a surplus under all scenarios, and no new water treatment plants or major transmission facilities are anticipated beyond those already identified in Marin Water's UWMP and Capital Improvement Program. Water supply infrastructure would need to be extended to serve future development, with new development required to connect to existing distribution infrastructure, pay applicable connection fees and usage rates, and, in some cases, construct limited site-specific and off-site improvements; the specific impacts of such improvements cannot be determined at this time since the General Plan 2045 does not authorize specific development or designate specific facility sites. Future improvements would primarily occur on sites with urbanized land use designations, and their environmental effects would be similar to other development under the General Plan (addressed throughout the Draft EIR). General Plan Policy PR-C.8 ensures coordination with Marin Water, and future projects would undergo project-specific

CEQA review addressing construction-related impacts such as ground disturbance, noise, and traffic. This impact would be less than significant.

Impact 3.15-3: Wastewater Treatment Capacity

Threshold: Would the General Plan 2045 result in a determination by the wastewater treatment provider that it lacks adequate capacity to serve the project's projected demand in addition to existing commitments?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.15-27 through 3.15-29.)

Explanation: Wastewater service is provided by the Ross Valley Sanitary District (RVSD), serving over 15,900 accounts and a service population of nearly 45,000 across Ross Valley, which conveys flows (averaging approximately 4.0 MGD) to the Central Marin Sanitation Agency (CMSA) treatment plant. CMSA treated approximately 4.869 billion gallons in Fiscal Year 2023, with an average dry-weather effluent flow limited to 10 MGD under its NPDES Permit and permitted bypass/blending provisions for peak wet-weather events up to a 30 MGD biological treatment capacity. New development would connect to the existing RVSD network, with localized extensions of collection lines or pump stations occurring within developed rights-of-way; growth would occur gradually over decades, allowing RVSD and CMSA to periodically update master plans and Capital Improvement Programs (including RVSD's 2021 Infrastructure Asset Management Plan and CMSA's Ten-Year Capital Improvement Program) to maintain capacity and treatment efficiency. General Plan Policies PR-C.11 and PR-C.1 direct continued coordination with RVSD and proactive facility maintenance. Projected wastewater generation from General Plan 2045 buildout is not anticipated to exceed the wastewater treatment provider's capacity. This impact would be less than significant.

Impact 3.15-4: Wastewater Facilities

Threshold: Would the General Plan 2045 require or result in the relocation or construction of new or expanded wastewater facilities, the construction or relocation of which could cause significant environmental effects?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.15-29.)

Explanation: Development contemplated under the General Plan 2045 would increase wastewater flows, potentially requiring additional or expanded wastewater treatment and conveyance infrastructure both on new development sites and off-site (e.g., at existing treatment facilities or within existing rights-of-way); the specific impacts of such facilities cannot be determined at this time since the General Plan does not authorize specific development or designate specific facility sites. Growth would occur gradually over decades, and RVSD and CMSA would continue to periodically update master plans and Capital Improvement Programs. Future wastewater facilities would primarily be provided on appropriately designated sites, and their environmental effects (e.g., trenching, line extensions) would be similar to those of other development and infrastructure projects under the General Plan, with each future project subject to Town conformance review and project-specific CEQA review. This impact would be less than significant.

Impact 3.15-5: Stormwater Drainage Facilities

Threshold: Would the General Plan 2045 require or result in the relocation or construction of new or expanded stormwater drainage facilities, the construction or relocation of which could cause significant environmental effects?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.15-44 through 3.15-45; Final EIR, Response to Comment B2-1.)

Explanation: San Anselmo is located within the Ross Valley watershed, where the Town's storm drain network (culverts, inlets, and conveyance pipes) is maintained by the Public Works Department and periodic flooding occurs along the valley floor. The Town participates in the Marin County Stormwater Pollution Prevention Program (MCSTOPPP), implementing the Municipal Regional Stormwater Permit and Low Impact Development (LID) requirements, and maintains a Storm Drain Capital Improvement Program for culvert, main, and debris basin replacement/enlargement. General Plan 2045 buildout would modestly increase impervious surfaces and associated runoff; the General Plan 2045's Safety Element Goal S-D and Policies S-D.1 through S-D.4 (and associated actions) address floodplain development limits, NFIP participation, drainage infrastructure funding and mapping, integration of hydrologic/hydraulic analysis and impervious-surface limits into development review, and interagency flood-management coordination, together with Policy PR-C.7 (storm drainage monitoring) and Action PR-C.1.a (CIP maintenance). The General Plan 2045 does not itself propose or approve specific drainage improvements; future improvements would occur largely within existing rights-of-way, with temporary construction-related effects addressed through project-level CEQA review, Town grading/erosion-control ordinances, and NPDES/LID requirements requiring post-development runoff rates at or below pre-project levels. This impact would be less than significant.

Impact 3.15-6: Solid Waste Reduction and Regulatory Compliance

Threshold: Would the General Plan 2045 comply with federal, state, and local management and reduction statutes and regulations related to solid waste, and avoid generating solid waste in excess of State or local standards or infrastructure capacity, or otherwise impair attainment of solid waste reduction goals?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.15-59 through 3.15-61.)

Explanation: Solid waste collection, recycling, and composting services are provided by Marin Sanitary Service under an exclusive Town franchise, with waste transported primarily to the Redwood Landfill (a Class III facility with an estimated remaining capacity of approximately 20-26 million cubic yards and a permitted closure date beyond 2036) and, secondarily, other regional landfills including Potrero Hills Landfill (projected open until 2047). The Town participates in Zero Waste Marin, which implements AB 939, AB 341, AB 1826, and SB 1383 diversion and organics-recycling mandates. At General Plan 2045 buildout, the Town's growth (approximately 5,356 additional residents and 752,133 square feet of non-residential space) would generate roughly 16 tons per day of new waste, well within the Redwood Landfill's permitted daily throughput of 3,500 tons per day. The General Plan 2045 includes a comprehensive suite of sustainability policies and actions strengthening waste reduction and diversion, including Policy SU-B.1 (waste diversion targets and partnership with Marin Sanitary Service/Zero Waste Marin on SB 1383 compliance), Policy SU-B.2 (plastic waste reduction), Policy SU-B.3 (municipal

waste reduction, recycling, and environmentally preferable purchasing), and Policy SU-B.4 (local food system/waste-climate linkages), together with Policies PR-C.2 and PR-A.3.b integrating waste-reduction principles into public facility design. No new landfill or major disposal facility expansion is proposed or anticipated. This impact would be less than significant.

WILDFIRE

Impact 3.16-1: Emergency Response/Evacuation Plan Impairment

Threshold: Would the General Plan 2045 substantially impair an adopted emergency response plan or emergency evacuation plan?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.16-17 through 3.16-18.)

Explanation: All lands within the Town of San Anselmo are within a Local Responsibility Area, primarily mapped as Moderate Fire Hazard Severity Zones (FHSZs) by CAL FIRE, with surrounding unincorporated areas within the Sphere of Influence including areas of High and Moderate FHSZs. The General Plan 2045 accommodates future development that would increase population, employment, and vehicle trips, potentially influencing emergency response and evacuation operations, but future development would occur in accordance with Circulation Element roadway capacity improvements and would be required to comply with state and local emergency access, fire protection, and evacuation standards, and would undergo discretionary/CEQA review demonstrating consistency with the Marin County Multi-Jurisdictional Hazard Mitigation Plan, the Town's Emergency Operations Plan, and the California Fire Code. General Plan 2045 policies under Goal S-A (including Policy S-A.9 supporting emergency/evacuation plan updates, Policy S-A.14 and Action S-A.14.a requiring at least two points of emergency access for new development including in hillside areas) and Policies S-E.4, S-E.5, and S-E.8 (fire hazard management, vegetation clearance, adequate firefighting water supply) maintain and enhance emergency response and evacuation capabilities. Because the General Plan is a policy-level document that does not authorize site-specific development and does not directly alter or obstruct evacuation routes, and future projects would undergo Ross Valley Fire Department review for compliance, this impact would be less than significant.

Impact 3.16-2: Wildfire Risk Exacerbation and Pollutant Exposure

Threshold: Would the General Plan 2045, due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.16-19 through 3.16-21.)

Explanation: The Town includes areas of Wildland-Urban Interface (WUI) where development intermingles with flammable vegetation; CAL FIRE data identify "moderate" and "high" fire threat areas within the Planning Area, with high fire threats concentrated in the northern and eastern portions and moderate threats in hillside areas, while low, very high, and extreme threat levels are not mapped within or adjacent to the Planning Area. New development within WUI zones would comply with California Building Code Chapter 7A ignition-resistant construction requirements and the 5-foot ember-resistant Zone 0 required by Public Resources Code Section 4291.1 (AB

3074), as well as Public Resources Code Sections 4290 and 4291 defensible space and vegetation management requirements. General Plan 2045 Policy S-E.5 requires consistency with the California Building and Fire Codes and Ross Valley Fire Department standards, and Action S-E.5.a requires a fire risk study prior to approving subdivisions in high fire hazard areas; future projects would also undergo Ross Valley Fire Department review of emergency access, water supply, and defensible space. Because the General Plan is a policy-level document that does not authorize site-specific development or actions that would alter slope, prevailing winds, or vegetation patterns, and anticipated development would generally be infill within existing Town limits, implementation would not exacerbate wildfire spread or increase exposure to wildfire smoke beyond current conditions. This impact would be less than significant.

Impact 3.16-3: Wildfire-Related Infrastructure

Threshold: Would the General Plan 2045 require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or result in temporary or ongoing impacts to the environment?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.16-21 through 3.16-22.)

Explanation: Development in or near Fire Hazard Severity Zones may require infrastructure such as roads, emergency water sources, fuel breaks, and utility lines. The General Plan 2045 directs new development to provide adequate emergency access consistent with Policy S-A.14 (minimum two points of access, road width upgrades where feasible) and Policy S-A.15 (private road emergency-vehicle accommodation), and integrates vegetation management into infrastructure planning (Actions S-E.1.a through S-E.1.c addressing fire-resistant plantings, non-native species removal, and structural mitigations), fuel break funding and maintenance (Policy S-E.9/Action S-E.9.a), private-property defensible space compliance (Policy S-E.8), and emergency water supply coordination with Marin Municipal Water District (Policies S-E.10, S-E.12). Infrastructure construction and maintenance would comply with the California Fire Code, Public Resources Code Sections 4290/4291, Ross Valley Fire Department standards, and CPUC General Orders 95, 165, and 166 governing utility line design, inspection, and emergency response (the Town falls within CPUC High Fire-Threat District Tier 2/Tier 3 areas). Because the General Plan does not include site-specific designs or proposed utility improvements, and future development would primarily occur within or near existing developed areas connecting to existing infrastructure, with any site-specific impacts addressed through project-level environmental review, this impact would be less than significant.

Impact 3.16-4: Post-Fire Flooding and Landslides

Threshold: Would the General Plan 2045 expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Findings: Less-than-significant impact. (Draft EIR, pp. 3.16-22 through 3.16-24.)

Explanation: Post-fire debris flows and slope instability can create hazardous conditions in San Anselmo's peripheral hillside and creek-side areas, and the Town is periodically affected by flooding from San Anselmo and Sleepy Hollow creeks. Development under the General Plan 2045

would involve some land clearing and grading that could temporarily increase erosion, but the majority of intensified development would occur in already-developed, urbanized areas generally not subject to severe flooding or erosion, and projects disturbing one acre or more would require a Clean Water Act-compliant Storm Water Pollution Prevention Plan (SWPPP) with best management practices for grading and topsoil preservation. The General Plan 2045 addresses these hazards through Goal S-A and associated policies/actions promoting resilience (Policy S-A.1/Action S-A.1.a building code updates; Policy S-A.3/Actions S-A.3.a-b siting essential facilities outside hazard zones), emergency planning (Policy S-A.9/Action S-A.9.a; Policy S-A.10/Action S-A.10.a post-disaster recovery framework; Policy S-A.11/Action S-A.11.a public education), and adequate circulation/emergency response (Policies S-A.12 through S-A.17). Areas within the Town at risk of post-fire flooding and landslide exposure are largely already urbanized, developed, or entitled, and adoption of the General Plan 2045 would not increase or exacerbate these existing risks. This impact would be less than significant.

SECTION 3. FINDINGS REGARDING CUMULATIVE ENVIRONMENTAL IMPACTS

Consistent with CEQA's requirements, the Draft EIR includes an analysis of cumulative impacts for each environmental issue area, consistent with State CEQA Guidelines sections 15130 and 15355. The cumulative impact analysis for each issue area is presented as the final impact discussion in the corresponding chapter of the Draft EIR. The Town Council hereby finds as follows:

AESTHETICS AND VISUAL RESOURCES

Impact 3.1-5: Cumulative Aesthetic Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in adverse cumulative impacts to aesthetics and scenic resources?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.1-21 through 3.1-22.)

Explanation: The cumulative context for this analysis is Marin County. Regional growth anticipated throughout Marin County, including in San Rafael and Corte Madera, will continue to convert undeveloped land to urban uses and increase nighttime lighting levels, which is considered a potentially significant cumulative effect on the region's visual character. However, subsequent development under the General Plan 2045 would be required to comply with the Plan's aesthetic and lighting policies, including Goal OSC-A and Policy LU-C.1 (preservation of view corridors, ridgelines, and open space) and Policy LU-C.2 (protection of hillside visual integrity). Because the General Plan 2045's contribution to regional visual change would not be considerable in light of these protections, the cumulative impact to aesthetics and scenic resources would be less than significant.

AGRICULTURAL AND FOREST RESOURCES

Impact 3.2-4: Cumulative Agricultural and Forestry Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in adverse cumulative impacts to agricultural or forestry resources?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.2-13 through 3.2-14.)

Explanation: The cumulative context for this analysis is Marin County. A significant cumulative impact could occur if development in the region placed pressure on agricultural lands to convert to non-agricultural uses through parcelization, incompatible adjacent uses, rising land values, loss of agricultural support infrastructure, or competition for water resources. However, Marin County has established a comprehensive framework to prevent such conversion, including the Coastal Agricultural Production Zone, which restricts coastal-zone land use to agricultural production (its enforceability against parcel fragmentation was affirmed in a 2025 legal precedent), and a Marin Agricultural Land Trust conservation easement program that has permanently protected more than 59,000 acres of farmland. The Marin Regional Forest Health Strategy similarly guides regional protection of forest lands. Given this regulatory and conservation framework, and because the General Plan 2045 would not convert farmland or place development pressure on agricultural land within or near the Planning Area, the cumulative impact to agricultural and forestry resources would be less than significant.

AIR QUALITY

Impact 3.3-5: Cumulative Air Quality Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in adverse cumulative air quality impacts?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.3-45.)

Explanation: The cumulative context for this analysis is the San Francisco Bay Area air basin. Emissions associated with a long-range plan such as the General Plan 2045 are inherently cumulative in nature and are evaluated against BAAQMD's assessment guidance for long-range plans, which is based on the same consistency and VMT-to-population growth criteria applied in Impact 3.3-1. Because the General Plan 2045 is consistent with the goals of the 2017 CAP, would not disrupt or hinder implementation of CAP control measures, and would result in VMT growth substantially below population growth, the cumulative impact to regional air quality would be less than significant.

BIOLOGICAL RESOURCES

Impact 3.4-7: Cumulative Biological Resources Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in adverse cumulative impacts to biological resources?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.4-36 through 3.4-37; Final EIR, Responses to Comments A2-4 and A2-10, and Chapter 2, Revisions to the Draft EIR.)

Explanation: The cumulative context for this analysis is Marin County. Cumulative development anticipated throughout Marin County will result in impacts to biological resources, including permanent habitat loss, corridor fragmentation, and degradation of sensitive habitat, which the Draft EIR identifies as a potentially significant cumulative effect; the Marin Countywide Plan establishes countywide goals and policies to protect watersheds, habitats, and open space, and has

generally directed development away from the County's Coastal, Inland Rural, and Baylands corridors. Because the General Plan 2045 concentrates growth within the already largely built-out town limits, would not extend development or infrastructure into the Sphere of Influence, and requires site-specific biological review by a qualified biologist under Action OSC-B.3.a, documented through the Town's General Plan implementation checklist; avoidance or minimization of harm to special-status species and other sensitive biological resources to a less-than-significant level; submittal of qualifying observations to the CNDDB and/or SPOWDB; and compliance with CESA, the federal Endangered Species Act, Fish and Game Code section 1600 et seq., and other federal and State permitting for individual projects, the General Plan 2045's incremental contribution to this cumulative impact would not be considerable, and the cumulative impact to biological resources would be less than significant.

CULTURAL AND TRIBAL CULTURAL RESOURCES

Impact 3.5-5: Cumulative Cultural and Tribal Cultural Resources Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in adverse cumulative impacts to cultural or tribal cultural resources?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.5-39 through 3.5-40.)

Explanation: The cumulative context for this analysis is Marin County (and Marin and Sonoma Counties for tribal cultural resources, reflecting traditional Coast Miwok territory). Marin County has experienced a loss of historic resources through demolition and substantial alteration, and continued regional development, including in Marin and Sonoma Counties (the traditional territory of the Coast Miwok), has the potential to adversely affect undiscovered historic, archaeological, and tribal cultural resources and human remains, which the Draft EIR identifies as a potentially significant cumulative effect at the county level notwithstanding the protective framework of the Marin Countywide Plan. The General Plan 2045's historic and tribal cultural resource policies, together with State and federal regulations, require project-specific surveys and evaluation of discovered resources for individual development projects. Because these safeguards would avoid or minimize the cumulative loss of cultural and tribal cultural resources attributable to General Plan 2045 buildout, the General Plan 2045's contribution to this cumulative impact would be less than considerable, and the cumulative impact would be less than significant.

ENERGY

Impact 3.6-3: Cumulative Energy Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in the wasteful, inefficient, or unnecessary consumption of energy resources, or conflict with or obstruct a state or local renewable energy or energy efficiency plan?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.6-18 through 3.6-19.)

Explanation: The cumulative context for this analysis is Marin County. Plan Bay Area 2050+ (the joint Metropolitan Transportation Commission/Association of Bay Area Governments long-range regional plan) establishes transportation and environmental strategies to reduce regional energy consumption, and the Marin County Climate Action Plan sets goals for renewable energy

delivery, municipal solar installation, natural-gas appliance replacement, and an all-electric model green building ordinance. These regional and countywide frameworks, together with the General Plan 2045's consistency with the Town's Climate Action Plan 2030 as described in Impacts 3.6-1 and 3.6-2, would ensure continued energy efficiency gains across the region. The cumulative impact on energy resources would be less than significant.

GEOLOGY, SOILS, AND SEISMICITY

Impact 3.7-7: Cumulative Geology and Soils Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in adverse cumulative impacts related to geology, soils, or seismicity?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.7-30 through 3.7-31.)

Explanation: The cumulative context for this analysis is Marin County (geology, soils, and paleontological resources) and the State of California (seismicity). Cumulative grading, excavation, and vegetation removal associated with regional development could contribute to increased erosion, sedimentation, and exposure to geologic hazards including liquefaction, landsliding, and lateral spreading, and a regional seismic event could result in cumulative ground-shaking and ground-failure effects. Federal and State regulatory frameworks, including the Earthquake Hazards Reduction Act of 1977, the California Building Standards Code, the Alquist-Priolo Earthquake Fault Zoning Act, and Public Resources Code sections 5097.5 and 30244 (paleontological resource protection), together with the Marin Multi-Jurisdictional Hazard Mitigation Plan, provide a comprehensive framework to reduce risk to people and property from geologic and seismic hazards region-wide. Given this regulatory framework and the General Plan 2045's own geologic and seismic safety policies, the cumulative impact would be less than significant.

GREENHOUSE GAS EMISSIONS

Impact 3.8-1: Greenhouse Gas Emissions and Consistency with GHG Reduction Plans

Threshold: Would General Plan 2045 implementation generate greenhouse gas emissions that could have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.8-32 through 3.8-38.)

Explanation: The cumulative context for this analysis is global (GHG emissions and climate change impacts are inherently evaluated on a cumulative basis). Because the General Plan 2045 does not directly approve or entitle specific development or infrastructure projects, construction-related GHG emissions of future individual projects cannot be quantified at a program level and would typically contribute less than one percent to a project's annual GHG inventory; long-term operational emissions would derive primarily from mobile sources, area sources, and electricity and natural gas use. The Town's Climate Action Plan (CAP) establishes a business-as-usual emissions forecast and sets reduction targets consistent with State goals: a 54 percent reduction below the 2005 baseline by 2030 (45 percent below 1990 levels) and carbon neutrality by 2045. As summarized in Draft EIR Table 3.8-2, the General Plan 2045 includes goals, policies, and

actions addressing each of the CAP's reduction categories (low-carbon transportation, energy efficiency, renewable energy, waste reduction, water conservation, and adaptation), including Policy LU-A.1 and Policy LU-A.2 (sustainable growth and infill development), Policy SU-E.1 (low-carbon transportation), and Policy SU-C.2 and SU-C.3 (renewable energy, electrification, and building energy efficiency). Transportation accounts for approximately 55 percent of the Town's GHG inventory, and per-capita and per-employee vehicle miles traveled are projected to decline under the General Plan 2045 relative to existing conditions even as population grows, consistent with Transportation Authority of Marin travel demand modeling. Because the General Plan 2045's goals, policies, and actions are consistent with and implement the CAP's emission reduction framework and the State's long-term climate goals, this impact would be less than significant.

HAZARDS AND HAZARDOUS MATERIALS

Impact 3.9-7: Cumulative Hazards and Hazardous Materials Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in adverse cumulative impacts related to hazards and hazardous materials?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.9-28 through 3.9-29.)

Explanation: The cumulative context for this analysis is Marin County. Cumulative regional development could increase the transport, use, and disposal of hazardous materials countywide, including near schools and other sensitive receptors, and cumulative risk is compounded by continued development into the wildland-urban interface and shared regional wildfire trends. The Marin Multi-Jurisdictional Hazard Mitigation Plan addresses evacuation infrastructure, fuels-reduction mapping, and the Zonehaven evacuation zoning system, while the Marin Operational Area Emergency Operations Plan governs coordinated response to hazardous materials releases. Because these regional and State regulatory frameworks apply across jurisdictions and embed ongoing coordination and monitoring requirements, the cumulative impact related to hazards and hazardous materials would be less than significant.

HYDROLOGY AND WATER QUALITY

Impact 3.10-5: Cumulative Hydrology and Water Quality Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in adverse cumulative impacts to hydrology and water quality?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.10-29 through 3.10-31; Final EIR, Response to Comment B2-1.)

Explanation: The cumulative context for this analysis is the shared watershed, RWQCB jurisdiction, and Marin Water service area. Cumulative development within the watershed could increase impervious surfaces, stormwater runoff, and erosion and siltation risk, and could affect regional drainage capacity. All cumulative development would independently be required to comply with the Regional MS4 NPDES Permit, project-specific SWPPPs and BMPs, and the stormwater and drainage regulations of the jurisdiction in which each project is located, and Marin Water's non-reliance on groundwater means cumulative growth would not deplete regional

groundwater supplies. Because this regulatory framework applies uniformly across the watershed and requires project-by-project mitigation of water quality, erosion, and drainage effects, the cumulative impact to hydrology and water quality would be less than significant.

LAND USE, PLANNING, AND POPULATION/HOUSING

Impact 3.11-5: Cumulative Land Use and Population/Housing Impacts

Threshold: Would the General Plan 2045, in combination with other cumulative development, result in adverse cumulative impacts to land use, population, or housing?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.11-30 through 3.11-31.)

Explanation: The cumulative context for land use and planning is the nine-county San Francisco Bay Area (ABAG region). Plan Bay Area 2050+, jointly adopted by MTC and ABAG as the region's Regional Transportation Plan/Sustainable Communities Strategy, manages a projected regional influx of 1 million new households and 1.4 million jobs by 2050, which is potentially significant on a cumulative regional basis. To manage this growth, Plan Bay Area 2050+ directs the large majority of household and job growth into designated "Growth Geographies" (Priority Development Areas, Transit-Rich Areas, and High-Resource Areas), steering growth toward existing urban footprints and away from environmentally sensitive lands, high fire-risk areas, and sea-level rise zones. San Anselmo is designated a Growth Geography under this framework. The General Plan 2045 accommodates San Anselmo's proportional share of regional infill housing and economic expansion by directing development to infill sites and the existing urban footprint, preventing sprawl. Evaluated against the three CEQA thresholds for this topic: (1) Division of an Established Community — the General Plan 2045 provides for cohesive infill growth without new roadways or infrastructure that would divide existing communities; (2) Unplanned Population Growth — General Plan 2045 policies and actions would guide growth to appropriate areas served by adequate infrastructure, such that growth would not be unplanned; and (3) Displacement — General Plan 2045 implementation would not displace substantial numbers of existing people or housing because no existing uses would be removed or relocated. Because the General Plan 2045 confines growth to established urban footprints, does not divide existing communities, and avoids displacement of housing or populations, its contribution to this cumulative impact would not be cumulatively considerable, and the cumulative impact would be less than significant.

NOISE

Impact 3.12-5: Cumulative Noise Impacts

Threshold: Would General Plan 2045 implementation, in combination with other cumulative development, result in adverse cumulative noise impacts?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.12-24 through 3.12-25.)

Explanation: The cumulative context for the noise analysis is the Town of San Anselmo itself, as noise impacts tend to be localized. Cumulative noise impacts would occur primarily from increased traffic on local roadways and from on-site activities associated with development of urban land uses throughout the Town. Although construction-related noise is temporary and would typically occur during normal daytime working hours, it could result in sleep interference at nearby

sensitive uses if activities occurred outside permitted hours; however, the cumulative construction noise contribution would be small and not substantial in the future noise environment. The General Plan 2045, considered alongside past, present, and probable future projects, would not be expected to cause significant cumulative construction or traffic noise impacts, and its contribution would not be cumulatively considerable. The cumulative noise impact would be less than significant.

PUBLIC SERVICES AND RECREATION

Impact 3.13-7: Cumulative Public Services and Recreation Impacts

Threshold: Would the General Plan 2045, in combination with other cumulative development, result in adverse cumulative impacts to public services and recreation?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.13-44 through 3.13-46.)

Explanation: The cumulative setting for public services and facilities includes the service areas of the Ross Valley Fire Department (RVFD, serving Ross, San Anselmo, Fairfax, and Sleepy Hollow), the Central Marin Police Authority (serving Larkspur, Corte Madera, San Anselmo, and portions of Greenbrae), the San Anselmo Recreation Department and Marin County Open Space District, the Ross Valley School District (RVSD), and the Tamalpais Union High School District (TUHSD). Cumulative growth within these service areas would increase demand for fire and police protection, potentially requiring new or expanded facilities that could have a physical effect on the environment, which could be a potentially significant cumulative impact absent mitigation; however, General Plan 2045 policies ensuring timely, adequately funded, and coordinated public services with fair-share funding from new development would keep the Town's contribution to this cumulative impact less than considerable, and the cumulative impact on fire and police protection services would be less than significant. Because the San Anselmo Recreation Department's service area does not extend beyond Town boundaries, the cumulative impact on Town parks and recreation facilities would be the same as the project-specific impact (addressed in Impacts 3.13-4 and 3.13-6) and would be less than significant; the Marin County Open Space District's approximately 18,500 acres of parks and open space are supported by ongoing funding including the re-implemented Measure A parks sales tax, ensuring ongoing maintenance and acquisition keep pace with regional growth. For schools, the Ross Valley Elementary School District's Measure H (approved June 2026) and the Tamalpais Union High School District's Measure B bond (approved November 2024) provide dedicated local funding for facilities and services, and combined with SB 50 developer impact fees collected at the time of development, student growth within both districts would be fully mitigated. The cumulative impact to public services and recreation would be less than significant.

TRANSPORTATION AND CIRCULATION

Impact 3.14-5: Cumulative Transportation and Circulation Impacts

Threshold: Would the General Plan 2045, in combination with other cumulative development, result in adverse cumulative impacts to transportation and circulation?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.14-30 through 3.14-31; Final EIR, Response to Comment B2-2.)

Explanation: The cumulative context for transportation impacts is Marin County. Existing County VMT is 14.9 per resident and 17.2 per employee; 15 percent below that countywide average (the applicable significance threshold) is 12.7 VMT per resident and 14.6 VMT per employee. Plan Bay Area 2050+ and Marin County's local Countywide Transportation Plan 2050 direct land use and transportation investment toward reduced auto-dependency, including concentrating growth in compact Priority Development Areas, expanding transit service frequency and capacity under the Transit 2050+ framework, investing in active transportation infrastructure, and considering demand-management measures such as per-mile tolling on congested corridors. These regional VMT-reduction strategies are consistent with applicable local transit, bicycle, and pedestrian plans and are not anticipated to conflict with existing traffic regulations or complete-streets policies. To the extent these strategies reduce single-occupancy vehicle trips, they could also reduce congestion at high-volume intersections without requiring roadway widening, and are not anticipated to impede emergency vehicle access, since local complete-streets and transit-first design standards require that roadway modifications accommodate safe and timely emergency responder movement. Cumulative impacts to the transportation system, including VMT, alternative forms of transportation, and emergency vehicle access, would be less than significant.

UTILITIES AND SERVICE SYSTEMS

Impact 3.15-7: Cumulative Utilities and Service Systems Impacts

Threshold: Would the General Plan 2045, in combination with other cumulative development, result in adverse cumulative impacts to utilities and service systems?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.15-62 through 3.15-64.)

Explanation: Cumulative development across Marin County — including Fairfax, Larkspur, Corte Madera, San Rafael, Ross, and unincorporated areas — will incrementally increase demand for water supply, wastewater treatment, stormwater management, and solid waste disposal services through 2045. Regional infrastructure planning documents, including Plan Bay Area 2050+ and the Marin Countywide Plan (2020), already encompass the modest level of additional population and employment growth expected within San Anselmo under the General Plan 2045. For water supply, Marin Water's UWMP demonstrates sufficient regional supplies through 2045 even under dry-year conditions, and General Plan 2045 Policies PR-C.8 and PR-C.2 support continued coordination and conservation, such that San Anselmo's contribution would not be cumulatively considerable. For wastewater, RVSD and CMSA's integrated system and capital improvement planning are designed to accommodate projected regional growth, and General Plan Policies PR-C.11 and PR-C.1 support continued coordination and facility maintenance, such that cumulative wastewater impacts would be less than significant. For stormwater, San Anselmo's contribution to regional runoff is limited by its small, largely built-out geographic area, and the General Plan 2045's Safety Element policies (Goal S-D and Policies S-D.1 through S-D.5) combined with mandatory LID practices under MCSTOPPP and regional flood management coordination through the Marin County Flood Control and Water Conservation District would keep the Town's incremental contribution to cumulative hydrologic impacts less than considerable. For solid waste, San Anselmo's modest growth would generate only a small fraction of countywide waste volumes against sufficient regional landfill capacity (Redwood Landfill through at least 2036, Potrero Hills Landfill through 2047), and the General Plan 2045's Policies SU-B.1 through SU-B.4 support the Town's continued consistency with Zero Waste Marin's diversion targets. Because regional service

providers' long-range planning documents already incorporate anticipated growth, and development under the General Plan 2045 would occur incrementally over decades allowing service providers to periodically update their master plans, cumulative impacts to utilities and service systems would be less than significant.

WILDFIRE

Impact 3.16-5: Cumulative Wildfire Impacts

Threshold: Would the General Plan 2045, in combination with other cumulative development, result in adverse cumulative impacts related to wildfire?

Finding: Less-than-significant cumulative impact. (Draft EIR, pp. 3.16-24 through 3.16-25.)

Explanation: Due to the regional nature of natural disasters, emergency preparedness, and emergency response, the cumulative context for wildfire is Marin County. Wildfire preparation in the County is coordinated through a highly integrated, data-backed approach involving the Community Wildfire Protection Plan (CWPP), the annually updated Strategic Fire Plan, the Marin Wildfire Prevention Authority (MWPA, a joint-powers authority coordinating tax-funded wildfire preparation across 17 member jurisdictions established under Measure C), the Marin County Fire Department, the Marin County Office of Emergency Management, and Fire Safe Marin (a non-profit coordinating Firewise communities and home-hardening programs). These coordinated regional plans and agencies reduce cumulative wildfire risk through targeted vegetation clearing and fuel breaks based on CWPP hazard mapping, synchronized home-hardening and ember-vulnerability inspection standards administered through Fire Safe Marin and regional fire districts, and evacuation-corridor management and unified alert communication (AlertMarin) administered by the MWPA and Office of Emergency Management. Through these coordinated regional emergency preparation and response programs, and the General Plan 2045's own consistency with and support for these programs, cumulative impacts related to wildfire would be less than significant.

SECTION 4. FINDINGS REGARDING SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

State CEQA Guidelines section 15126.2(d), together with Public Resources Code sections 21100(b)(2) and 21100.1(a), require that an EIR discuss the extent to which a project's primary and secondary effects would generally commit future generations to the use of nonrenewable resources and to irreversible environmental damage. Irreversible environmental effects may result where: (1) the project would involve a large commitment of nonrenewable resources; (2) the primary and secondary impacts of the project would generally commit future generations to similar uses; (3) the project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project; or (4) the phasing of the proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy). (Draft EIR, pp. 4.0-1 through 4.0-2.)

Long-Term Commitment of Resources

The General Plan 2045 is a policy document guiding development and land use decisions in the Town through the year 2045, contemplating accommodation of up to 2,279 new residential units (including 319 accessory dwelling units) and approximately 752,133 square feet of new non-residential uses at theoretical full buildout over a 20-year planning horizon. Construction of this development would involve the use of building materials such as petroleum-based products and metals that cannot reasonably be recreated, and would involve consumption of energy, primarily petroleum-based fuels that deplete nonrenewable resource supplies. Construction debris recycling practices would be expected to allow for recovery and reuse of materials such as concrete, lumber, and steel, limiting disposal of non-renewable materials, and construction equipment would be required to meet Bay Area Air Quality Management District standards (Draft EIR Section 3.3, Air Quality). As development is constructed over the 20-year planning horizon, associated land uses would consume nonrenewable fuels and water; however, new development would be required to comply with the latest adopted California Green Building Standards Code, reducing energy demand, water consumption, and wastewater and solid waste generation. As discussed in Section 2 of these Findings (Draft EIR Section 3.4, Biological Resources), implementation of the General Plan 2045 would not result in significant impacts to biological resources, and the Planning Area does not contain Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, such that the General Plan 2045 would not result in the conversion of agricultural land to non-agricultural uses. (Draft EIR, pp. 4.0-2 through 4.0-3.)

Commitment of the Project Site for Future Generations

The General Plan 2045 would guide the allocation of land within the Town to a range of urban land uses through 2045, establishing the overall pattern of development for the foreseeable future. Because the Town is already largely developed and urbanized, the General Plan 2045 would primarily accommodate infill and incremental growth consistent with existing land use patterns. The most notable impacts would be increased generation of pollutants from vehicle travel and stationary operations, and the short-term commitment of nonrenewable and/or slowly renewable resources, such as water, during construction activities. (Draft EIR, p. 4.0-3.)

Irreversible Environmental Damage

Implementation of the General Plan 2045 would result in irretrievable commitments of land, energy, water, construction materials, and human resources through the introduction of new development and intensification of existing land uses. Buildout would require commitment of non-renewable or slowly renewable natural resources such as lumber and other forest products, sand and gravel, asphalt, petrochemicals, and metals, as well as ongoing operational consumption of fossil fuels for building operations, vehicle travel, and equipment. Development under the General Plan 2045 would also physically change the environment in terms of aesthetics, air emissions, noise, traffic, open space, and natural resources — changes that are largely irreversible once development occurs, though as set forth in Section 2 of these Findings, each of these physical changes was found to result in a less-than-significant environmental impact. Development may result in disturbance or loss of biological resources, trees, open space lands, and riparian habitats supporting sensitive species, committing those areas to urban uses; however, as discussed in Section 2 of these Findings (Draft EIR Section 3.4, Biological Resources), such impacts would be reduced to a less-than-significant level through compliance with federal, State, and local regulations and implementation of General Plan 2045 policies. The General Plan 2045 may have the potential to result in environmental accidents through hazardous material releases during construction or operation of future commercial, industrial, or mixed-use land uses; however, as discussed in Section 2 of these Findings (Draft EIR Section 3.9, Hazards and Hazardous Materials), compliance with State law and implementation of Stormwater Pollution Prevention Plans during construction would ensure that this impact remains less than significant. Greenhouse gas emissions associated with the General Plan 2045 are known to have long-term effects on atmospheric conditions and the global climate that could last for generations; these changes are not considered irreversible, and as discussed in Section 2 of these Findings (Draft EIR Section 3.8, Greenhouse Gas Emissions), compliance with the Town's General Plan policies and programs, the San Anselmo Municipal Code, the California Building Standards Code, and the CALGreen Code would ensure that this impact remains less than significant. (Draft EIR, pp. 4.0-3 through 4.0-5.)

Unjustified Consumption of Resources

Resources permanently and continually consumed by implementation of the General Plan 2045 would include water, electricity, natural gas, and fossil fuels. However, as discussed in Section 2 of these Findings (Draft EIR Section 3.6, Energy, and Section 3.15, Utilities and Service Systems), the amount and rate of consumption of these resources would not result in unnecessary, inefficient, or wasteful use of resources, because new development would be required to comply with all applicable building codes, including the Title 24 Energy Efficiency Standards, as well as General Plan 2045 policies and standard conservation features. Construction activities for future development permitted under the General Plan 2045 would nonetheless result in the irretrievable commitment of nonrenewable energy resources, primarily in the form of fossil fuels, natural gas, and gasoline for automobiles and construction equipment. (Draft EIR, pp. 4.0-5.)

Findings

The Town Council finds that, although implementation of the General Plan 2045 would result in an irretrievable commitment of certain nonrenewable and slowly renewable resources — including land, energy, water, and construction materials — typical of the growth accommodated by a General Plan update, such commitments are justified because: (1) the growth accommodated by

the General Plan 2045 is planned growth consistent with the Town's Regional Housing Needs Allocation and regional planning frameworks, rather than growth that would not otherwise occur; (2) future development would be required to comply with all applicable federal, State, and local regulations, including the California Green Building Standards Code and Title 24 Energy Efficiency Standards, which would minimize resource consumption; and (3) as set forth in Section 2 of these Findings, the physical environmental effects associated with this commitment of resources — including effects on biological resources, air quality, greenhouse gas emissions, and hazards — were each found to be less than significant. Accordingly, while these irreversible commitments of resources are disclosed as required by State CEQA Guidelines section 15126.2(d), they do not constitute a significant and unavoidable environmental impact, and no Statement of Overriding Considerations is required.

SECTION 5. MANDATORY FINDINGS OF SIGNIFICANCE

State CEQA Guidelines section 15065 requires a lead agency to find that a project may have a significant effect on the environment where there is substantial evidence that any of the following conditions may occur: (1) the project has the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of an endangered, rare, or threatened species, or eliminate important examples of the major periods of California history or prehistory; (2) the project has the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals; (3) the project has possible environmental effects that are individually limited but cumulatively considerable; or (4) the environmental effects of the project will cause substantial adverse effects on human beings, either directly or indirectly. (State CEQA Guidelines, § 15065(a); Draft EIR, pp. 4.0-5 through 4.0-6.)

Substantial Adverse Effects on Fish, Wildlife, and Plant Species, and Elimination of Important Examples of California History or Prehistory

As discussed in Section 2 of these Findings (Draft EIR Section 3.4, Biological Resources), implementation of the General Plan 2045 would not result in any significant impacts that would substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal species. Any potentially significant impacts related to plant and animal species would be reduced to a less-than-significant level through implementation of the goals, policies, and actions of the General Plan 2045 and adherence to applicable State and federal regulations. (Draft EIR, pp. 4.0-6.) CDFW commented that impacts to CESA-listed and other special-status species would be potentially significant and would warrant a mandatory finding of significance under State CEQA Guidelines sections 15065 and 15380. As explained in the Final EIR, the General Plan 2045 is a self-mitigating plan whose mandatory policies and actions, including Policy OSC-B.3 and Action OSC-B.3.a, establish a performance standard (avoidance or minimization of harm to special-status species, critical habitat, and riparian habitat to a less-than-significant level), identify the types of measures that can feasibly achieve that standard, and operate together with independent State and federal requirements, including the prohibition on take of listed and candidate species except as authorized by an ITP or federal authorization. (Final EIR, Responses to Comments A2-4 through A2-9.) Accordingly, the

Town Council finds that the General Plan 2045 would not substantially reduce the number or restrict the range of an endangered, rare, or threatened species.

Similarly, as discussed in Section 2 of these Findings (Draft EIR Section 3.5, Cultural and Tribal Cultural Resources), implementation of the General Plan 2045 would not result in a substantial adverse change in the significance of a historical resource, archaeological resource, or tribal cultural resource, or the elimination of important examples of the major periods of California history or prehistory, each of which would remain less than significant with compliance with applicable regulations, and, in the event of an inadvertent discovery, the General Plan 2045's cultural resource policies and applicable State law.

Short-Term Environmental Goals to the Disadvantage of Long-Term Environmental Goals

The General Plan 2045 is a comprehensive, long-range planning document intended to guide the Town's growth and development through 2045 in a manner that balances near-term housing and economic needs against long-term environmental, climate resilience, and resource protection goals. The General Plan 2045 includes goals, policies, and actions addressing sustainability, climate, and resiliency (as discussed in Section 2 of these Findings, Draft EIR Section 3.8, Greenhouse Gas Emissions), hazard and wildfire resilience (Draft EIR Sections 3.9 and 3.16), and open space and biological resource conservation (Draft EIR Section 3.4), each of which is intended to ensure that near-term development does not occur to the disadvantage of the Town's long-term environmental goals. No substantial evidence in the record indicates that the General Plan 2045 would achieve short-term goals to the disadvantage of long-term environmental goals.

Cumulatively Considerable Effects

State CEQA Guidelines section 15065(a)(3) defines “cumulatively considerable” to mean that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects. Cumulative impacts are addressed in each technical section of the Draft EIR (Draft EIR, p. 4.0-5) and are summarized in Section 3 of these Findings. As set forth in Section 3, the General Plan 2045's contribution to cumulative impacts in each environmental issue area evaluated in the Draft EIR — including aesthetics, agricultural and forest resources, air quality, biological resources, cultural and tribal cultural resources, energy, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and population/housing, noise, public services and recreation, transportation and circulation, utilities and service systems, and wildfire — would not be cumulatively considerable, and each cumulative impact would be less than significant.

Substantial Adverse Effects on Human Beings

State CEQA Guidelines section 15065(a)(4) requires a finding of potential significance where a project's environmental effects will cause substantial adverse effects on human beings, either directly or indirectly. The Draft EIR's topic-specific analyses each evaluate potential effects on human health and safety, and each was found to be less than significant, as set forth in Section 2 of these Findings. These include: exposure of sensitive receptors to substantial pollutant concentrations (Draft EIR Section 3.3, Air Quality, Impact 3.3-3); exposure to hazardous materials, hazardous emissions near schools, and hazardous materials sites (Draft EIR Section 3.9, Hazards and Hazardous Materials, Impacts 3.9-1 through 3.9-4); interference with adopted

emergency response or evacuation plans (Draft EIR Section 3.9, Impact 3.9-5, and Section 3.16, Wildfire, Impact 3.16-1); exposure to wildland fire risk and post-fire flooding or landslide hazards (Draft EIR Section 3.9, Impact 3.9-6, and Section 3.16, Impacts 3.16-2 through 3.16-4); exposure to significant traffic, stationary, and construction noise and vibration (Draft EIR Section 3.12, Noise, Impacts 3.12-1 through 3.12-4); exposure to seismic and geologic hazards (Draft EIR Section 3.7, Geology, Soils, and Seismicity, Impact 3.7-1); and degradation of water quality or exposure to flood, tsunami, or seiche hazards (Draft EIR Section 3.10, Hydrology and Water Quality, Impacts 3.10-1 and 3.10-4). Because each of these topic-specific impacts was found to be less than significant through compliance with applicable regulations and implementation of General Plan 2045 policies, the Town Council finds that implementation of the General Plan 2045 would not cause substantial adverse effects on human beings, directly or indirectly.

Findings

Based on the foregoing, and the more detailed analysis and findings set forth in Sections 2 and 3 of these Findings, the Town Council finds that implementation of the General Plan 2045 would not result in any of the mandatory findings of significance described in State CEQA Guidelines section 15065(a). No further mitigation is required, and no Statement of Overriding Considerations is required.

SECTION 6. FINDINGS REGARDING GROWTH-INDUCING IMPACTS

State CEQA Guidelines Section 15126.2(e) requires an EIR to discuss the ways in which a project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Growth-inducing impacts are not per se considered significant impacts requiring mitigation, but rather are impacts to be identified and disclosed to decision-makers. The Draft EIR evaluates growth-inducing impacts that could result from implementation of the General Plan 2045, including whether it would (1) directly or indirectly induce substantial unplanned population growth, (2) result in the removal of an obstacle to growth, or (3) result in an increase in the population that may tax existing community facilities.

As of January 2025, San Anselmo had an estimated population of approximately 12,700 residents. The General Plan 2045 accommodates growth of approximately 2,279 new dwelling units (including 319 accessory dwelling units townwide) and 5,356 new residents, and approximately 752,133 square feet of new non-residential development, as described in Draft EIR Chapter 2.0, Project Description (Table 2.0-4). This growth has been explicitly planned for and accommodated through the General Plan 2045 update process, including alignment with the Town's 6th Cycle Regional Housing Needs Allocation (RHNA) of 833 units and with Plan Bay Area 2050+, rather than representing unplanned or unforeseen growth.

The General Plan 2045 would not remove a substantial obstacle to population growth. The Plan does not propose extensions of major infrastructure (such as roadways, water, or sewer trunk lines) beyond what is needed to serve growth already planned for and analyzed within the Planning Area, and does not extend infrastructure into the Sphere of Influence in a manner that would newly facilitate development there.

The General Plan 2045 would not adversely affect the jobs/housing balance in a way that would induce substantial unplanned growth; the Plan's land use program is designed to accommodate a mix of housing and employment uses consistent with regional and local planning objectives.

Implementation of the General Plan 2045 would not directly or indirectly induce growth in adjacent jurisdictions. The Plan does not require infrastructure extensions into neighboring communities (San Rafael, Ross, Fairfax, or unincorporated Marin County), and would not pressure those jurisdictions to alter their land use patterns or approve growth beyond what they have independently planned for.

For the reasons set forth above and in Draft EIR Section 4.0.5, the Town Council finds that implementation of the General Plan 2045 would result in growth-inducing impacts that are less than significant. The growth accommodated by the General Plan 2045 is planned growth consistent with state-mandated regional housing allocations and regional planning frameworks (including Plan Bay Area 2050+), rather than growth that is unplanned, unforeseen, or that would remove a substantial obstacle to growth. No mitigation measures are required.

SECTION 7. FINDINGS REGARDING ALTERNATIVES

The Draft EIR analyzed three alternatives to the General Plan 2045 as proposed and evaluated these alternatives for their ability to avoid or reduce the General Plan 2045's environmental effects while also meeting the majority of the project objectives. Because the Draft EIR determined that the General Plan 2045 would not result in any significant and unavoidable impacts, the alternatives analysis was undertaken to inform the range of reasonable choices available to decision-makers and to comply with CEQA's requirement to identify an environmentally superior alternative pursuant to State CEQA Guidelines section 15126.6(e)(2).

PROJECT OBJECTIVES

The following objectives have been established for the General Plan 2045:

- Maintain and enhance San Anselmo's character by preserving its scenic beauty, open space, and natural resources while ensuring new development complements the historic qualities of the built environment.
- Foster a sense of community and belonging for town residents by providing equitable access to public services, recreation opportunities, and social engagement.
- Enhance the town's economic vitality by fostering a variety of businesses, encouraging sustainable economic practices, and ensuring that economic growth is inclusive, responsive to the changing needs of the community, and in alignment with the Town's environmental and social goals.
- Manage the location, type, and amount of growth to ensure the safety and well-being of all residents through high-quality public services, resilient infrastructure, improved safety and noise regulation, and robust emergency preparedness and response plans.
- Prioritize multi-modal transportation options and improvements that eliminate greenhouse gas emissions, such as zero-emission vehicles, public transit, cycling, and pedestrian-friendly

infrastructure, while improving vehicular circulation, promoting safety, ensuring accessibility, and improving traffic flow.

- Promote a wide range of housing options that are affordable at all income levels, accessible, sustainable, meet the needs of existing residents, and welcomes a diverse spectrum of future residents.
- Ensure consistency with State, regional, and local regulatory requirements, including housing, climate, and environmental mandates.
- Improve community resilience to climate change and natural hazards, including wildfire, flooding, and extreme weather.
- Protect and enhance environmental resources, including air and water quality, biological resources, and urban forest.
- Promote efficient land use and infill development patterns that support sustainability and reduce greenhouse gas emissions.

ALTERNATIVE CONSIDERED BUT DISMISSED FROM FURTHER EVALUATION

CEQA requires that an EIR briefly describe alternatives that were considered by the lead agency but rejected as infeasible, and briefly explain the reasons for their rejection. (State CEQA Guidelines, § 15126.6(c).) A Notice of Preparation was circulated to the public and a public scoping meeting was held to solicit recommendations for a reasonable range of alternatives to the General Plan 2045. No specific alternatives were recommended by commenting agencies or members of the general public during the NOP public review and comment period.

Hillside Downzoning/Corridor Upzoning. This alternative would have downzoned the Town's hillside areas and upzoned corridor areas. It was rejected from further evaluation because the majority of hillside areas are already developed, and changing their land use designation would not substantially affect overall growth potential.

ALTERNATIVES SELECTED FOR ANALYSIS IN THE EIR

Alternative 1: No Project

Description

Under Alternative 1, the Town would not adopt the General Plan 2045. The existing Town of San Anselmo General Plan would continue to be implemented, and no changes to the Land Use Map, Circulation Diagram, goals, policies, or actions would occur; updates addressing land use, housing, mobility, sustainability and climate resilience, open space and conservation, safety, economic vitality, recreation, public facilities, and diversity, equity, inclusion, and belonging would not be implemented, and subsequent Municipal Code/zoning map amendments would not occur. Alternative 1 would retain the same 3,211-acre Planning Area as the General Plan 2045, but would result in approximately 2,156 dwelling units, 5,067 residents, and 750,171 square feet of non-residential development at buildout — approximately 123 fewer dwelling units, 289 fewer residents, and 1,962 fewer square feet of non-residential development than the General Plan 2045.

Comparative Analysis of Environmental Effects

Impacts Identified as Being the Same as or Similar to Those of the General Plan 2045

Impacts under Alternative 1 would be substantially the same as or similar to those of the General Plan 2045, and would remain less than significant, for aesthetics (Impacts 3.1-1 through 3.1-4); agricultural and forestry resources (Impacts 3.2-1 through 3.2-4); biological resources (Impacts 3.4-1 through 3.4-7); cultural and tribal cultural resources (Impacts 3.5-1 through 3.5-5); energy (Section 3.6); geology, soils, and paleontological resources (Impacts 3.7-1 through 3.7-7); hazards and hazardous materials (Impacts 3.9-1 through 3.9-7); hydrology and water quality (Impacts 3.10-1 through 3.10-5); noise (Section 3.12); public services and recreation (Impacts 3.13-1 through 3.13-6); utilities and service systems (Impacts 3.15-1 through 3.15-7); and wildfire (Impacts 3.16-1 through 3.16-5).

Impacts Identified as Being Less Severe Than Those of the General Plan 2045

Because Alternative 1 would accommodate slightly less growth, VMT per resident (10.8 versus 10.9) and VMT per employee (12.8 versus 13.0) would be marginally lower, resulting in slightly less severe (but still less-than-significant) impacts related to transportation (Impact 3.14-1), air quality (Impacts 3.3-1 through 3.3-6), and greenhouse gas emissions (Impacts 3.8-1 and 3.8-2). Because Alternative 1 would not accommodate the Town's Regional Housing Needs Allocation or the housing capacity provided by the General Plan 2045, however, this reduction would reflect a deferral or redistribution of regional housing demand rather than an overall avoidance of growth.

Impacts Identified as Being More Severe Than Those of the General Plan 2045

Because the Town would not adopt the updated Land Use Map and policy framework, Alternative 1 would be less consistent with regional and State land use, housing (RHNA), and climate requirements than the General Plan 2045, resulting in slightly more severe impacts related to land use and planning and population/housing (Impacts 3.11-1 through 3.11-5).

Relationship to Significant and Unavoidable Impacts

The General Plan 2045 would not result in any significant and unavoidable impacts. Alternative 1 likewise would not result in any significant and unavoidable impacts. Accordingly, there are no significant and unavoidable impacts to avoid, reduce, or intensify under Alternative 1.

Relationship to Project Objectives

Because the General Plan 2045 would not be adopted, Alternative 1 would fail to meet most of the basic project objectives, including accommodating the Town's Regional Housing Needs Allocation and establishing an updated housing framework, managing growth through multimodal circulation and greenhouse gas reduction, advancing climate resilience and environmental protection, and promoting infill development. While existing scenic, open space, and safety policies would remain in effect, Alternative 1 would not satisfy the underlying purpose of the project — adoption of a comprehensive, updated General Plan that meets current State requirements.

Alternative 2: Reserve Overlay Intensification

Description

Alternative 2 would increase density in Reserve Areas along major transportation corridors, furthering General Plan 2045 Policy LU-A.5 (Reserve Areas). The General Plan 2045's goals, policies, and self-mitigating programs would continue to apply. Alternative 2 would occupy the same 3,211-acre Planning Area as the General Plan 2045 but would result in approximately 2,857 dwelling units and 6,714 residents at buildout — an increase of approximately 578 dwelling units and 1,358 residents compared to the General Plan 2045, accommodated primarily through General Commercial, Limited Commercial, and Neighborhood Commercial designations along major corridors.

Comparative Analysis of Environmental Effects

Impacts Identified as Being the Same as or Similar to Those of the General Plan 2045

Impacts under Alternative 2 would be substantially the same as or similar to those of the General Plan 2045, and would remain less than significant, for agricultural and forestry resources (Impacts 3.2-1 through 3.2-4); biological resources (Impacts 3.4-1 through 3.4-7); cultural and tribal cultural resources (Impacts 3.5-1 through 3.5-5); energy (Section 3.6); geology, soils, and paleontological resources (Impacts 3.7-1 through 3.7-7); hazards and hazardous materials (Impacts 3.9-1 through 3.9-7); hydrology and water quality (Impacts 3.10-1 through 3.10-5); land use and planning and population/housing (Impacts 3.11-1 through 3.11-5); public services and recreation (Impacts 3.13-1 through 3.13-6); utilities and service systems (Impacts 3.15-1 through 3.15-7); and wildfire (Impacts 3.16-1 through 3.16-5).

Impacts Identified as Being Less Severe Than Those of the General Plan 2045

By concentrating additional housing and commercial development in transit-proximate Reserve Areas, Alternative 2 would achieve the lowest VMT per resident of the alternatives analyzed (approximately 10.7, versus 10.9 under the General Plan 2045), with VMT per employee remaining the same (13.0). This would result in slightly less severe (but still less-than-significant) impacts related to transportation (Impact 3.14-1), air quality (Impacts 3.3-1 through 3.3-6), greenhouse gas emissions (Impacts 3.8-1 and 3.8-2), and transportation noise (Section 3.12).

Impacts Identified as Being More Severe Than Those of the General Plan 2045

Because Alternative 2 would allow increased height, massing, and lot coverage along commercial corridors, impacts related to aesthetics (Impacts 3.1-1 through 3.1-4) would be slightly more severe than those of the General Plan 2045, although such impacts would remain less than significant through application of the General Plan 2045's design, community character, and scenic resource policies.

Relationship to Significant and Unavoidable Impacts

The General Plan 2045 would not result in any significant and unavoidable impacts. Alternative 2 likewise would not result in any significant and unavoidable impacts. Accordingly, there are no significant and unavoidable impacts to avoid, reduce, or intensify under Alternative 2.

Relationship to Project Objectives

Alternative 2 would meet most of the basic project objectives, including accommodating the Town's Regional Housing Needs Allocation and housing needs, supporting economic vitality, promoting multimodal circulation and reduced per-capita greenhouse gas emissions, and providing services, climate resilience, and resource protection. However, by allowing greater height, massing, and intensity along corridors, Alternative 2 would create greater tension with the Town's community character, scenic resource, and small-town scale objectives than the General Plan 2045. On balance, Alternative 2 would meet most of the basic objectives of the General Plan 2045.

Alternative 3: Reserve Overlay Housing Element

Description

Alternative 3 would apply a Reserve Overlay calibrated to the Town's adopted Housing Element, directing modest additional housing capacity to areas already served by infrastructure and services while preserving open space, hillsides, and environmentally sensitive areas, furthering General Plan 2045 Policy LU-A.5. Alternative 3 would occupy the same 3,211-acre Planning Area as the General Plan 2045 and would result in approximately 2,308 dwelling units at buildout — an increase of approximately 29 dwelling units compared to the General Plan 2045 and substantially fewer than under Alternative 2 — with a corresponding buildout population of approximately 4,947 residents, directed primarily to High Density Residential, General Commercial, and Neighborhood Commercial designations.

Comparative Analysis of Environmental Effects

Impacts Identified as Being the Same as or Similar to Those of the General Plan 2045

Impacts under Alternative 3 would be substantially the same as or similar to those of the General Plan 2045, and would remain less than significant, for agricultural and forestry resources (Impacts 3.2-1 through 3.2-4); cultural and tribal cultural resources (Impacts 3.5-1 through 3.5-5); energy (Section 3.6); geology, soils, and paleontological resources (Impacts 3.7-1 through 3.7-7); hazards and hazardous materials (Impacts 3.9-1 through 3.9-7); land use and planning and population/housing (Impacts 3.11-1 through 3.11-5); public services and recreation (Impacts 3.13-1 through 3.13-6); utilities and service systems (Impacts 3.15-1 through 3.15-7); wildfire (Impacts 3.16-1 through 3.16-5); transportation (Impact 3.14-1); air quality (Impacts 3.3-1 through 3.3-6); greenhouse gas emissions (Impacts 3.8-1 and 3.8-2); and transportation noise (Section 3.12), for which VMT per resident (approximately 10.9) and VMT per employee (approximately 13.0) would be comparable to the General Plan 2045.

Impacts Identified as Being Less Severe Than Those of the General Plan 2045

By directing additional housing capacity to areas already served by infrastructure and services and preserving hillsides, ridgelines, and open space, Alternative 3 would result in slightly less severe

impacts related to aesthetics (Impacts 3.1-1 through 3.1-4). By directing development away from creeks, riparian corridors, and sensitive habitat, Alternative 3 would also result in slightly less severe impacts related to biological resources (Impacts 3.4-1 through 3.4-7) and hydrology and water quality (Impacts 3.10-1 through 3.10-5) than the General Plan 2045. On balance, the impacts of Alternative 3 would be slightly less severe than those of the General Plan 2045 in these respects.

Impacts Identified as Being More Severe Than Those of the General Plan 2045

There are no impacts associated with implementation of Alternative 3 that would be more severe than those of the General Plan 2045.

Relationship to Significant and Unavoidable Impacts

The General Plan 2045 would not result in any significant and unavoidable impacts. Alternative 3 likewise would not result in any significant and unavoidable impacts, and would further reduce the severity of several impacts that are already less than significant under the General Plan 2045.

Relationship to Project Objectives

Alternative 3 would meet all of the basic project objectives, including protecting community character and scenic and open space resources; accommodating the Town's Regional Housing Needs Allocation and housing needs; supporting economic vitality; managing growth and providing services and resilient infrastructure; promoting multimodal circulation and reduced per-capita greenhouse gas emissions; advancing climate resilience; protecting resources including the urban forest, biological resources, and water quality; and promoting infill development.

ENVIRONMENTALLY SUPERIOR ALTERNATIVE

State CEQA Guidelines Section 15126.6(e)(2) requires that if the No Project Alternative is identified as environmentally superior, the EIR must also identify an environmentally superior alternative among the other alternatives analyzed.

The Draft EIR compared each alternative to the General Plan 2045 across each environmental issue area using a uniform five-point scale (1 = Significantly Better, 2 = Slightly Better, 3 = Same, 4 = Slightly Worse, 5 = Significantly Worse), with each issue area weighted equally and scores summed to produce a total comparative score, where a lower score indicates fewer overall environmental effects relative to the General Plan 2045 (Draft EIR Table 5.0-7). No alternative's impact in any issue area was determined to be significantly better or significantly worse than the General Plan 2045.

The total comparative scores were 51 for the General Plan 2045, 49 for Alternative 1 (No Project), 48 for Alternative 2 (Reserve Overlay Intensification), and 48 for Alternative 3 (Reserve Overlay Housing Element).

Although Alternative 1 (No Project) would result in a slightly lower total comparative score than the General Plan 2045, it would result in slightly worse land use and population/housing effects, would not include the General Plan 2045's self-mitigating policy framework, and would fail to meet most of the project objectives; for these reasons, Alternative 1 is not the environmentally

superior alternative. Alternative 2 and Alternative 3 received the same total comparative score (48), but Alternative 2 would result in slightly greater aesthetic impacts than the General Plan 2045 (reflecting increased height, massing, and intensity of development along commercial corridors), whereas Alternative 3 would not result in greater impacts than the General Plan 2045 in any environmental issue area. Alternative 3 would result in slightly fewer impacts than the General Plan 2045 with respect to aesthetics, biological resources, and hydrology and water quality by directing modest additional housing capacity to areas already served by infrastructure while preserving open space, hillsides, ridgelines, and environmentally sensitive areas.

Because Alternative 3 would reduce impacts in these resource areas without increasing impacts in any other issue area, and because it would accommodate the Town's Regional Housing Needs Allocation and meet all of the basic project objectives, the Town Council finds that Alternative 3 (Reserve Overlay Housing Element) is the environmentally superior alternative. The Town Council has nonetheless selected the General Plan 2045 as the preferred project for the reasons set forth in these Findings and in the record of proceedings, including the General Plan 2045's balance of housing capacity, community character preservation, economic vitality, and consistency with the Town's comprehensively updated policy framework.

TOWN OF SAN ANSELMO

PLANNING COMMISSION RESOLUTION NO. 2026-27

A RESOLUTION OF THE PLANNING COMMISSION OF THE TOWN OF SAN ANSELMO RECOMMENDING THAT THE TOWN COUNCIL CERTIFY THE FINAL PROGRAM ENVIRONMENTAL IMPACT REPORT FOR THE GENERAL PLAN 2045 UPDATE, ADOPT THE ASSOCIATED CEQA FINDINGS OF FACT, AND ADOPT GENERAL PLAN 2045, INCLUDING THE LAND USE MAP AND IMPLEMENTATION MATRIX

WHEREAS, the Town of San Anselmo has undertaken a comprehensive update of its General Plan to establish a long-range vision and coordinated policy framework for the Town through the year 2045; and

WHEREAS, on November 14, 2023, the Town Council directed the initiation of the General Plan Update process, and on April 23, 2024, authorized a professional services agreement with O'Rourke & Associates for preparation of the General Plan Update and associated environmental review; and

WHEREAS, the Town established a General Plan Advisory Committee (GPAC) in June 2024 to provide community input and recommendations throughout the General Plan Update process; and

WHEREAS, the General Plan Update was developed through an extensive community engagement and public review process, including surveys, workshops, community events, stakeholder meetings, and public meetings involving the GPAC, Planning Commission, Town Council, and other Town boards and commissions; and

WHEREAS, the community engagement process informed the preparation of a Vision Statement and Guiding Principles, which established the foundation for the General Plan's goals, policies, and implementation actions; and

WHEREAS, throughout 2024, 2025, and 2026, the GPAC, Planning Commission, and Town Council reviewed and provided direction on the General Plan's land use framework, Land Use Map, goals, policies, and implementation actions, resulting in refinements to the Draft General Plan; and

WHEREAS, the Final Draft General Plan 2045 establishes a comprehensive, long-range policy framework addressing land use and community design; open space and conservation; sustainability, climate change, and resiliency; economic vitality; housing; circulation; parks, recreation, and public facilities; safety; and noise; and

WHEREAS, the Final Draft General Plan 2045 incorporates the Town's previously adopted Housing and Safety Elements and coordinates the goals, policies, and actions across the General Plan elements to promote internal consistency; and

WHEREAS, the Final Draft General Plan 2045 includes a Land Use Map establishing the Town's long-range land use framework and an Implementation Matrix identifying near-term and longer-term actions to guide implementation, establish priorities, and support ongoing monitoring and reporting; and

WHEREAS, pursuant to the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq., and the State CEQA Guidelines, California Code of Regulations, Title 14, Section 15000 et seq., the Town prepared a Program Environmental Impact Report (EIR) to

evaluate the reasonably foreseeable environmental effects of implementing General Plan 2045; and

WHEREAS, the Draft Program EIR for General Plan 2045, State Clearinghouse No. 2025100912, was circulated for public review beginning July 24, 2026, with the public comment period concluding September 8, 2026; and

WHEREAS, the Town prepared a Final Program EIR, dated October 2026, consisting of the Draft EIR, comments received during the public review period, written responses to comments, and revisions to the environmental analysis; and

WHEREAS, the Final Program EIR concludes that implementation of General Plan 2045 would not result in significant unavoidable environmental impacts, that no mitigation measures are required, and that the revisions made following public review do not constitute significant new information requiring recirculation of the Draft EIR pursuant to State CEQA Guidelines Section 15088.5; and

WHEREAS, the Town has prepared proposed CEQA Findings of Fact documenting the environmental analysis and conclusions supporting certification of the Final Program EIR for consideration by the Town Council; and

WHEREAS, on November 2, 2026, the Planning Commission held a duly noticed public hearing to consider the Final Draft General Plan 2045 and Final Program EIR, at which all interested persons were afforded an opportunity to provide oral and written testimony; and

WHEREAS, the Planning Commission has reviewed and considered the Final Draft General Plan 2045, including the Land Use Map and Implementation Matrix, the Final Program EIR, the proposed CEQA Findings of Fact, the staff report and accompanying attachments, and all oral and written testimony submitted in connection with the public hearing; and

WHEREAS, the Planning Commission finds that the Final Draft General Plan 2045 reflects the culmination of an extensive community engagement, policy development, and environmental review process and establishes an appropriate long-range policy framework for the Town; and

WHEREAS, pursuant to California Government Code Section 65354, the Planning Commission is responsible for providing a recommendation to the Town Council concerning adoption of the proposed General Plan.

NOW, THEREFORE, BE IT RESOLVED THAT THE PLANNING COMMISSION OF THE TOWN OF SAN ANSELMO DOES HEREBY RESOLVE AS FOLLOWS:

SECTION 1. INCORPORATION OF RECITALS

The foregoing recitals are true and correct and are incorporated herein by reference.

SECTION 2. GENERAL PLAN FINDINGS

The Planning Commission hereby finds and determines that:

A. Comprehensive Planning Process. The Final Draft General Plan 2045 has been prepared through an extensive and inclusive public planning process involving community members, advisory bodies, the Planning Commission, and the Town Council. The process provided multiple opportunities for public participation and review of the General Plan’s vision, land use framework, goals, policies, and implementation actions.

B. Community Vision and Guiding Principles. The Final Draft General Plan 2045 reflects the community's Vision Statement and Guiding Principles and establishes goals, policies, and actions intended to guide the Town's future growth, development, conservation, sustainability, and public investment through 2045.

C. Comprehensive and Internally Consistent Policy Framework. The Final Draft General Plan 2045 establishes a coordinated policy framework addressing the matters required by California Government Code Section 65302 and other applicable law. The Plan incorporates the Town's previously adopted Housing and Safety Elements and coordinates the goals, policies, and actions across the General Plan elements to promote internal consistency.

D. Land Use Map. The proposed Land Use Map reflects the Town's established land use framework while incorporating targeted refinements considered through the General Plan Update process. The Planning Commission finds that the proposed Land Use Map is appropriate for inclusion in General Plan 2045.

E. Implementation Matrix. The Implementation Matrix provides an appropriate framework for carrying out the General Plan's goals, policies, and actions through near-term and longer-term priorities, interdepartmental coordination, and periodic progress reporting, subject to future Town Council direction, staffing, funding, and applicable approval processes.

F. Public Interest. Adoption of General Plan 2045 would serve the public interest by establishing an updated, coordinated, and forward-looking policy framework to guide land use, development, environmental protection, infrastructure, public services, and community priorities.

SECTION 3. ENVIRONMENTAL REVIEW FINDINGS

The Planning Commission hereby finds and determines that:

A. Program Environmental Review. The Town has prepared a Program EIR for the General Plan 2045 Update pursuant to CEQA and the State CEQA Guidelines to evaluate the reasonably foreseeable environmental effects associated with implementation of the General Plan.

B. Consideration of the Final EIR. The Planning Commission has reviewed and considered the Final Program EIR, including the Draft EIR, comments received during the public review period, responses to comments, revisions to the environmental analysis, and the alternatives evaluated.

C. Environmental Conclusions. The Final Program EIR concludes that implementation of General Plan 2045 would not result in significant unavoidable environmental impacts and that no mitigation measures are required. Accordingly, the Final EIR does not identify mitigation measures requiring a Mitigation Monitoring and Reporting Program or significant unavoidable impacts requiring a Statement of Overriding Considerations.

D. Recirculation. The Planning Commission has considered the Final EIR's evaluation of revisions made following circulation of the Draft EIR and concurs with the recommendation that the Town Council determine that recirculation is not required pursuant to State CEQA Guidelines Section 15088.5.

E. CEQA Findings of Fact. The Planning Commission has considered the proposed CEQA Findings of Fact prepared for the Town Council and recommends that the Town Council independently review and consider the Final EIR, make the appropriate CEQA determinations, and adopt the associated Findings of Fact.

F. Town Council Responsibility. The Planning Commission acknowledges that certification of the Final Program EIR is the responsibility of the Town Council as the decision-making body for adoption of General Plan 2045. The Planning Commission's consideration and recommendation do not constitute certification of the Final EIR.

SECTION 4. RECOMMENDATION TO CERTIFY THE FINAL PROGRAM EIR

Based on its review and consideration of the Final Program EIR, the administrative record, and all testimony and evidence presented, the Planning Commission recommends that the Town Council certify the Final Program EIR for the General Plan 2045 Update, State Clearinghouse No. 2025100912, upon independently determining that:

1. The Final Program EIR has been completed in compliance with CEQA and the State CEQA Guidelines;

2. The Final Program EIR was presented to the Town Council and independently reviewed and considered prior to taking action on General Plan 2045;

3. The Final Program EIR reflects the independent judgment and analysis of the Town; and

4. Recirculation of the Draft EIR is not required pursuant to State CEQA Guidelines Section 15088.5.

The Planning Commission further recommends that the Town Council adopt the associated CEQA Findings of Fact.

SECTION 5. RECOMMENDATION TO ADOPT GENERAL PLAN 2045

Based on the findings set forth herein, the Planning Commission recommends that the Town Council adopt General Plan 2045, including the Land Use Map and Implementation Matrix, as presented in the Final Draft General Plan.

The Planning Commission finds that General Plan 2045 establishes a comprehensive and internally consistent long-range policy framework that reflects the community's Vision Statement and Guiding Principles and provides appropriate direction for the Town through 2045.

SECTION 6. PLANNING COMMISSION RECOMMENDATIONS

The Planning Commission recommends approval of the Final Draft General Plan 2045 as presented, without additional substantive modifications.

1. Policy S-B.1: Seismic Codes. Require that new development and redevelopment meet the most up-to-date seismic codes and /regulations as set forth in applicable building codes. ~~and use methods of construction to withstand stress caused by an earthquake~~.

2. Action C-C.6.a: Transit Agency Partnerships. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends. In coordination with TAM and transit operators, identify and consider supporting feasible transit-priority improvements that increase transit travel speeds and reliability along local roadways identified in TAM's Countywide Transportation Plan Transit Priority Network.

SECTION 7. TRANSMITTAL TO THE TOWN COUNCIL

The Planning Commission directs the Community Development Director to transmit this Resolution and the Planning Commission's recommendation to the Town Council, together with the Final Draft General Plan 2045, the Final Program EIR, the proposed CEQA Findings of Fact, and the relevant public hearing record, for consideration at a duly noticed Town Council public hearing.

THE FOREGOING RESOLUTION WAS PASSED AND ADOPTED by the Planning Commission of the Town of San Anselmo at its regular meeting held on November 2, 2026, by the following vote:

AYES:	Shemano, Ticknor, Asselstine, Pipkin, Thomas, and Heiman
NOES:	None
ABSENT:	Strauss
ABSTAIN:	None

Heidi Scoble, AICP
Secretary to the Planning Commission

General Plan 2045 | Consolidated Comments and Policy/Action Amendments

October 2026 Final EIR Chapter 2 amendments and agency comments.

Circulation

Provision / status	Summary of change	FEIR page	Policy / action language with redlines	Agency comment / source
C-A.1.a Editorial Policy Revision	Clarifies Complete Streets improvements for users of all ages and abilities, including pedestrian, bicycle, transit, and human-scale amenities.	2-2, 2-22	**Action C-A.1.a: Complete Streets and Human-Scale Enhancements**. Approach every transportation project and program as ~~opportunities~~ an opportunity to improve safety, accessibility, and mobility for users of all ages, abilities, and transportation needs. Work with relevant departments, agencies, and jurisdictions to incorporate Complete Streets design features, such as accessible curb ramps, crosswalks, transit facilities, sidewalks, and bicycle infrastructure, into existing streets. Where feasible, integrate human-scale amenities including street trees, landscaping, benches, and pedestrian-scale lighting to enhance comfort, visual quality, and encourage walking, bicycling, and transit use.	No corresponding agency comment in the supplied comment matrix.
C-A.1.b New	Adds a Safe System approach emphasizing safe speeds, crash prevention, and coordination with TAM safety planning.	2-2, 2-22	**Action C-A.1.b: Safe System Approach.** Incorporate a Safe System approach into the planning, design, operation, and maintenance of the transportation network. Design and manage transportation infrastructure to anticipate human error, encourage safe speeds, reduce conflicts, and provide multiple layers of protection so that crashes do not result in fatalities or serious injuries. Coordinate implementation with TAM's countywide Local Road Safety Plan and subsequent local and regional safety planning efforts.	**TRANSPORTATION AUTHORITY OF MARIN** TAM recommends further strengthening these policies by incorporating a Safe System approach, which recognizes that transportation systems should be designed to reduce the likelihood that inevitable human mistakes result in fatal or serious-injury crashes. The general plan should also consider explicitly connecting General Plan implementation with TAM's countywide Local Road Safety Plan.

Attachment 5

Provision / status	Summary of change	FEIR page	Policy / action language with redlines	Agency comment / source
C-A.1.c Renumbered	Former C-A.1.b; retains direction to develop objective off-site infrastructure improvement standards.	2-2, 2-22–2-23	**Action C-A.1.cb: Standards for Infrastructure Improvements**. Develop Public Improvement Engineering Standards or other objective standards for property subdivision or development projects to specify required off-site infrastructure improvements, such as sidewalks, that would accommodate or mitigate estimated project traffic impacts.	No corresponding agency comment in the supplied comment matrix.
C-A.1.d New	Adds multimodal performance monitoring using crash, network, transit, VMT, pavement, and corridor indicators.	2-2, 2-23	**Action C-A.1.d: Multimodal Transportation Performance Monitoring.** Monitor and evaluate multimodal transportation performance using available indicators such as fatal and serious-injury crashes, completion of pedestrian and bicycle network improvements, transit accessibility and reliability, mode share, VMT per capita, pavement condition, and travel conditions along key corridors. Apply the results to assess progress toward General Plan goals, identify emerging needs, support grant applications, and prioritize transportation investments.	**TRANSPORTATION AUTHORITY OF MARIN** TAM recommends expanding the Draft General Plan's transportation monitoring provisions beyond automobile traffic conditions to establish a broader multimodal transportation performance framework. Periodic monitoring would help the Town assess progress toward General Plan goals, identify emerging transportation needs, support grant applications, and prioritize transportation investments.
C-A.3.b Revised	Clarifies consideration of VMT reduction and alternatives to automobile travel in capital improvement planning.	2-2, 2-23	**Action C-A.3.b: VMT and Transportation Improvements**. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT and evaluate opportunities to reduce automobile travel through land use planning, transportation demand management, active transportation, transit, shared mobility, and parking strategies.	**TRANSPORTATION AUTHORITY OF MARIN** TAM recommends supplementing these policies with an implementation action that periodically evaluates and identifies opportunities to reduce automobile travel through land-use planning, transportation demand management (TDM), active transportation, transit, shared mobility, and parking strategies.
C-B.2 Revised policy	Reframes major roadways and	2-2–2-3, 2-23	**Policy C-B.2: ~~Roadway Traffic Circulation~~ Multimodal Corridor Planning.** ~~Maintain adequate~~	**TRANSPORTATION AUTHORITY OF MARIN**

Provision / status	Summary of change	FEIR page	Policy / action language with redlines	Agency comment / source
	downtown as integrated multimodal corridors balancing regional and local mobility.		~~traffic circulation while balancing the needs of all system users along~~ Plan for and manage Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, Butterfield Road, the Hub, and ~~in~~ downtown as integrated multimodal corridors that balance local and regional mobility with the needs of all transportation system users.	TAM recommends considering corridor performance from a multimodal and regional perspective, rather than focusing primarily on individual intersection congestion.
C-B.2.b Revised	Addresses safety, traffic operations, active transportation, transit reliability, emergency response, and regional travel together.	2-3, 2-23	**Action C-B.2.b: Major Thoroughfare Roadway Improvements**. Improve Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, and intersections along these roadways by investing in transportation infrastructure that addresses safety, traffic operations, pedestrian and bicycle access, transit reliability, emergency response, and regional travel as interconnected objectives.~~to improve safety and accessibility for pedestrians and other non-vehicle roadway users while maintaining adequate circulation for regional through traffic.~~	**TRANSPORTATION AUTHORITY OF MARIN** TAM recommends expanding this language [on regional coordination] to specifically recognize coordination with TAM and other appropriate regional transportation partners on the following areas including Traffic safety, travel on Sir Francis Drake Boulevard, transit priority and coordination, VMT reduction, active transportation, emergency mobility, and emerging transportation technologies.
C-C.1 Revised policy	Broadens Bicycle and Pedestrian Master Plan updates to micromobility, accessibility, Safe Routes to School, intersection safety, and transit connections.	2-3, 2-23	**Policy C-C.1: Bicycle and Pedestrian Master Plan**. Regularly review, update, and implement the Town's Bicycle and Pedestrian Master Plan to maintain eligibility for grant funding and to advance a safe, accessible, and connected active transportation network for users of all ages and abilities. Future updates should comprehensively address walking, conventional bicycles, e-bikes and other emerging micromobility, accessibility, Safe Routes to School, intersection safety, and first- and last-mile connections to transit.	**TRANSPORTATION AUTHORITY OF MARIN** TAM recommends considering a broader Active Transportation Plan framework for future updates that could comprehensively address walking, conventional bicycles, e-bikes, emerging micromobility, accessibility, Safe Routes to School, low-stress bicycle networks, intersection safety, and first/last-mile connections to transit.
C-C.3 Revised policy	Emphasizes bicycle connections to daily destinations,	2-3, 2-23–2-24	**Policy C-C.3: Bicycle Network**. Continue to expand San Anselmo's bicycle network to safely and comfortably connect residents to schools, shopping, work, recreation, the Cross-Marin Bikeway, and other	**TRANSPORTATION AUTHORITY OF MARIN** TAM recommends considering corridor performance from a multimodal and

	safer crossings, traffic calming, and signage.		local and regional ~~daily~~ destinations, with a focus on improved paths and crossings at larger and high vehicle volume roadways and traffic calming installations and signage on local streets.	regional perspective, rather than focusing primarily on individual intersection congestion.
C-C.6.a Revised	Adds coordination with TAM and transit operators on feasible transit-priority improvements and reliability.	2-3, 2-24	**Action C-C.6.a: Transit Agency Partnerships**. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends. In coordination with TAM and transit operators, identify and consider supporting feasible transit-priority improvements that increase transit travel speeds and reliability along local roadways identified in TAM's Countywide Transportation Plan Transit Priority Network.	**TRANSPORTATION AUTHORITY OF MARIN** TAM recommends explicitly identifying transit priority as an objective to increase transit speeds and reliability along TAM's Countywide Transportation Plan Transit Priority Network.

Open Space and Conservation

Provision / status	Summary of change	FEIR page	Policy / action language with redlines	Agency comment / source
OSC-B.2.b Revised	Clarifies potential Rewild San Anselmo campaign, public resources, volunteer restoration, and community partnerships.	2-11	**Action OSC-B.2.b: Rewilding Campaign.** Explore the feasibility of a "Rewild San Anselmo" campaign to encourage ecological restoration and biological diversity on private and public lands. This effort may include developing accessible public resources, such as planting guides and design templates, organizing volunteer habitat restoration days open to a broad range of participants, and partnering with schools and community organizations to expand engagement and awareness.	**MARIN CONSERVATION LEAGUE** It is recommended that this section [under Goal OSC-B] include a policy that ensures that biodiversity is considered and addressed in open space land management and new development.
OSC-B.3.a Revised	Requires qualified biological surveys of potentially	2-12	**Action OSC-B.3.a: Biological Surveys.** Require surveys of sites, including buffer areas potentially affected by proposed projects, with potentially suitable	**CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE** CDFW recommends creating a

	affected sites and buffers, avoidance/minimization measures, compliance documentation, and qualifying species observations reporting.		habitat for special status species, including creek corridors, to determine the presence or absence of special status species, critical habitat, and riparian habitat~~,~~. Surveys are to be prepared by a qualified biologist prior to development and other management approvals. Require projects to implement measures to avoid or minimize harm to special status species, critical habitat, ~~and~~ riparian habitat, and other sensitive biological resources to a less than significant level. Consult with resource agencies as required by federal and State regulations. Document compliance with these requirements through the Town's General Plan implementation checklist or other applicable review procedure. Qualified biologists conducting surveys pursuant to this Action shall submit qualifying observations of special-status species and sensitive natural communities to the California Natural Diversity Database (CNDDB) and/or Spotted Owl Observations Database (SPOWDB), as applicable, consistent with applicable reporting protocols.	procedure or checklist for evaluating subsequent project impacts on biological resources to determine if they are within the scope of the Program EIR or if an additional environmental document is warranted. This checklist should be included as an attachment to the EIR. Future analysis should include all special-status species and sensitive habitat including, but not limited to, species considered rare, threatened, or endangered species pursuant to CEQA Guidelines, section 15380. CDFW recommends including the following mitigation measures: MM-BIO-1 Northern Spotted Owl MM-BIO-2 Northern Spotted Owl Nesting or Roosting Compensatory Mitigation MM-BIO-3 Burrowing Owl MM-BIO-4 Lake and Stream Alteration MM-BIO-5 Sensitive Natural Communities
OSC-B.6.a Revised	Clarifies compliance with applicable Clean Water Acts, NPDES, and Town urban runoff requirements.	2-12, 2-20	**Action OSC-B.6.a: Watershed Management.** Ensure that new development complies with the requirements of the federal and ~~state~~ State Clean Water Acts, National Pollutant Discharge Elimination System (NPDES), and the Town's Urban Runoff Pollution Prevention regulations.	No corresponding agency comment in the supplied comment matrix.

Cultural Resources

Provision / status	Summary of change	FEIR page	Policy / action language with redlines	Agency comment / source
OSC-C.1.d Revised	Clarifies procedures for discovery of human remains, coroner notification, archaeological review, and Native American consultation.	2-13	**Action OSC-C.1.d: Discovery of Human Remains.** If an inadvertent discovery of human remains is made at any time during project-related construction activities or project planning, the following performance standards shall be met before implementing or continuing actions such as construction that may result in damage to or destruction of human remains. In accordance with the California Health and Safety Code (HSC), if human remains are encountered during ground-disturbing activities, the Town shall immediately halt potentially damaging excavation in the area of the remains and notify the Marin County Coroner and a qualified archeologist (meeting the Secretary of the Interior's Professional Qualifications Standards for Archeology) to determine the nature of the remains. The coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or ~~state~~ State lands (HSC Section 7050.5[b]). Implementation Plan . . . 293

1. INTRODUCTION

The San Anselmo General Plan 2045 provides a long-range framework to guide the Town's growth, investment, and decision-making through 2045. It establishes goals, policies, and actions that establish a safe, vibrant, and resilient community for all residents, including renters, lower-income households, non-English speakers, older adults, people with disabilities, communities of color, immigrants, and LGBTQ+ residents, while preserving San Anselmo's small-town character and natural environment.

The Plan addresses key topics, such as land use, housing, mobility, sustainability and climate resilience, open space and conservation, safety, economic vitality, recreation, and public facilities, and reflects extensive community input. Together, these elements outline how the Town will manage development, protect resources, strengthen infrastructure, and enhance quality of life.

Recognizing that community needs, environmental conditions, and State requirements will continue to evolve, the General Plan is designed to be a flexible and adaptable document. Many of its initiatives rely on ongoing efforts such as updates to the Climate Action Plan, Housing Element, and Hazard Mitigation Plan. A detailed Implementation Matrix identifies responsible departments, funding sources, and timelines, and Town staff will regularly report to the Town Council on progress.

Overall, General Plan 2045 provides a clear and practical roadmap for San Anselmo's future, supporting thoughtful planning, strengthening resilience, and ensuring that the Town remains a welcoming and sustainable place for current and future generations.

1.1 SETTING AND PLANNING AREA

San Anselmo is an incorporated town in central Marin County nestled in a picturesque valley straddling San Anselmo Creek, surrounded by wooded open spaces and the rolling hills of the Mount Tamalpais watershed. As shown in Figure IN-1, San Anselmo is bordered by the Town of Fairfax to the west; the City of San Rafael to the east; the Town of Ross to the south; and unincorporated areas to the west, north, and east.

San Anselmo is accessible by road from Sir Francis Drake Boulevard and Red Hill Avenue, which connect to adjacent communities and Highway 101. The Golden Gate Bridge is approximately 12 miles to the south. Public transit connects the town to local cities as well as regional locations. Commuter train stations are in nearby San Rafael and Larkspur, and a ferry terminal in Larkspur provides service to San Francisco.

The area now known as San Anselmo was originally home to the Coast Miwok, whose presence in Marin County dates back 3,600 years. The Miwok were hunters and gatherers who roamed the surrounding oak-studded hills and fished the freshwaters of San Anselmo Creek. In the first half of the 19th century, Mexico awarded land grants to Domingo Sais (1839), John Rogers Cooper (1840), and Timothy Murphy (1844) for large tracts that included portions of modern-day San Anselmo. The land remained rural for thirty-five years, occupied by scattered homes and grazing cattle.

The town changed dramatically in 1874 with the completion of the Sausalito-San Rafael section of the North Pacific Coast Railroad, bringing new trade and people to the area. At San Anselmo, the rail line branched east to San Rafael and west to Fairfax, Tomales, and the Sonoma County timberlands. Initially called Junction, the town was renamed San Anselmo in the 1880s, taking its name from Cooper's original land grant.

The arrival of the San Francisco Theological Seminary in 1892 spurred further development. After the 1906 earthquake and fire, many summer homes built by San Francisco residents became permanent residences. Local roads evolved from simple, dusty tracks to tree-lined streets. After a lively debate, residents voted to incorporate, and the Town of San Anselmo was created in 1907. A volunteer fire department, town hall (1911), library (1915), and chamber of commerce soon followed.

A shift to motor vehicle travel began to increase in the 1930s, particularly following the construction of the Golden Gate Bridge in 1937. Railroad service through town ended in 1941, and tracks were

replaced with asphalt to accommodate vehicular traffic. The town's population increased in the post-World War II era and continued to grow through the 1960s until it leveled off at around 12,000. Development occurred first on the valley floor and lower elevations, and then progressively moved up the hillsides.

Today, San Anselmo is an established residential community with local businesses centered on the major transportation thoroughfares. Winding streets emanate out from the major roadways into quiet, residential neighborhoods and steep hillsides. Historic Downtown San Anselmo, one of the major commercial centers in San Anselmo, sits at the heart of the town and follows San Anselmo Creek. The town is largely developed with most remaining land constrained by environmental hazards or conserved as open space. The community values the town's close access to open space with its natural beauty and recreation opportunities. Therefore, new construction is predominantly limited to infill development.

Elevations in the San Anselmo planning area range from about 40 feet in the downtown to about 1,400 feet near the Loma Alta peak. The community is located within a watershed that collects water from the surrounding hills and flows southeasterly into San Francisco Bay. Vegetation occurring within the area primarily consists of grassland, woodland, and urban landscaping.

1.2 TOWN LIMITS AND PLANNING AREA

The Town of San Anselmo comprises approximately 2.7 square miles of land area. The Town limits are shown in Figure IN-2.

The planning area for the General Plan is greater than the Town limits and includes the Town's sphere of influence (SOI), which defines the probable future physical boundaries and service area of the Town as determined by the Marin Local Agency Formation Commission. The SOI extends well past the Town's northern boundary to include the unincorporated community of Sleepy Hollow, as shown in Figure IN-2. The unincorporated area in the SOI is approximately 2.9 square miles and has a population of about 2,400. The SOI does not give the Town any direct land use authority over the territory within the sphere. The Town's land use authority only applies to the area within its actual town limits.

Our Town by the Numbers

Land area: 2.7 square miles

Population: 12,830

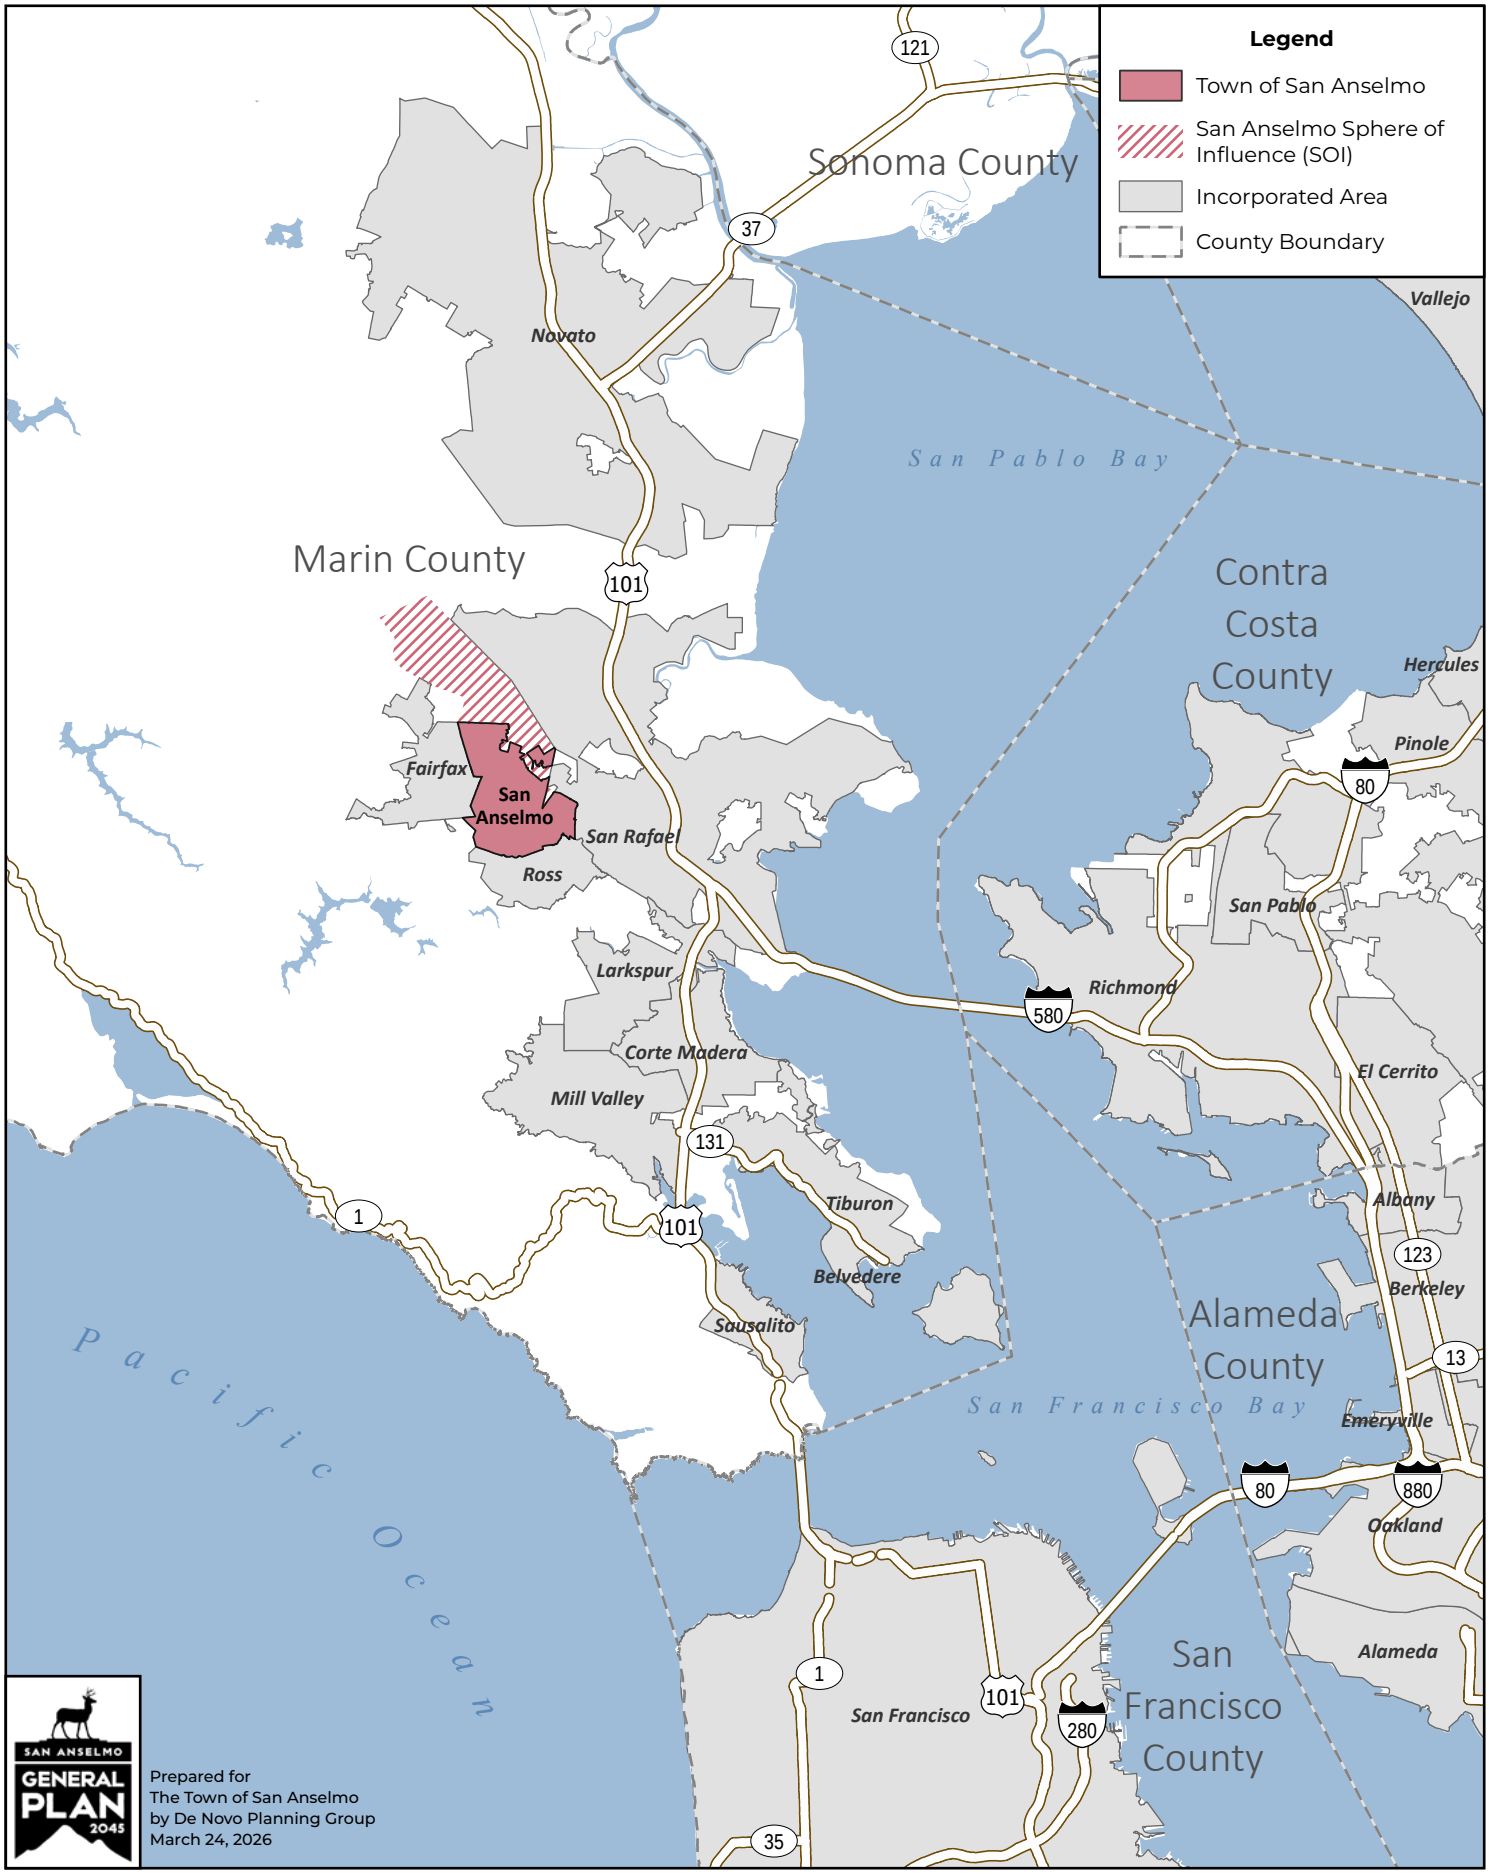

Number of housing units: 5,621

Seniors 65 and older: 21% of the population

Children under 18: 22% of the population

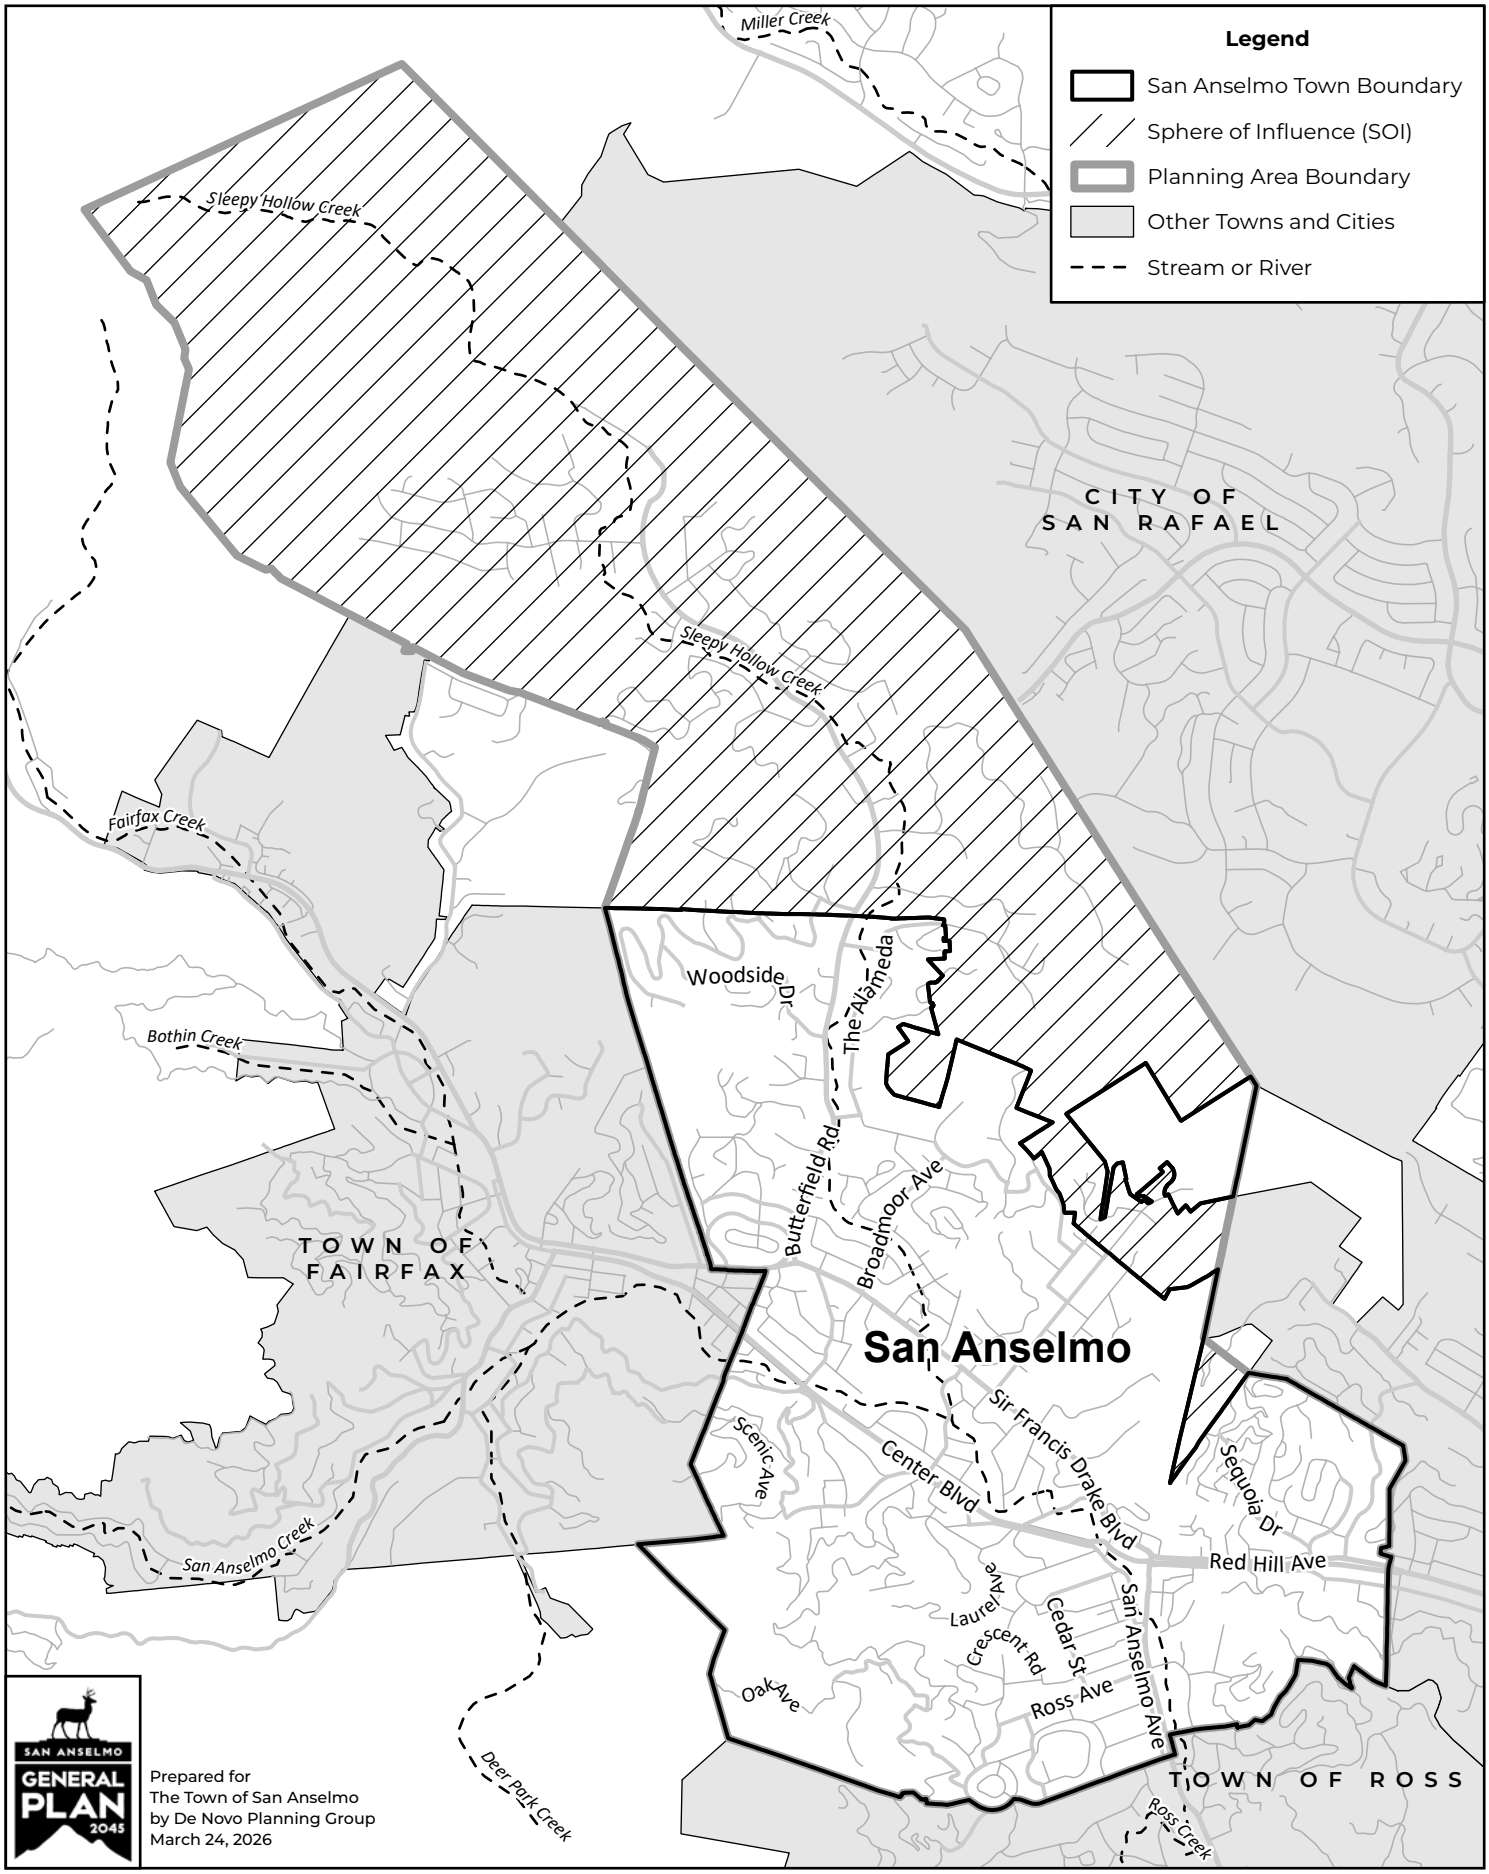

Median age: 47.2 years

1.3 WHAT IS A GENERAL PLAN?

A general plan is a town's road map for the future. It describes a community's long-term vision and sets forth goals, policies, and actions to guide growth, land use decision-making, and preservation of the community's environment and distinctive qualities. The State of California requires every town, city, and county to have a general plan to guide future development, preserve open space, conserve resources, and safeguard public health, safety, and welfare. Local ordinances and other plans must be consistent with the general plan and applicable policies.

This comprehensive update of San Anselmo's General Plan provides goals and policies that reflect present-day community values and priorities and compliance with current State laws and local ordinances. The Implementation Plan at the end of this document contains information to support staff and community implementation of the General Plan actions to effectively integrate them into budgets, the capital improvement program, and other work plans. The actions are intended to help achieve, and be consistent with, the Town's General Plan vision and goals.

1.4 THE GENERAL PLAN LEGACY

San Anselmo's General Plan was last comprehensively updated in 1988. Since that time, several amendments to the plan have been adopted, including recent revisions of the Housing and Safety Elements in 2023. The 1988 General Plan concluded that the town was near build-out at the time and that additional residential development was most likely to occur as infill. Primary land use goals for the 1988 General Plan included 1) preserving the small-town character of the town and its close connections to the natural beauty of its setting; 2) maintaining economic viability of the town's commercial core; 3) integrating new development harmoniously into existing neighborhoods and commercial areas; 4) regulating new development in the town's open hillsides and ridge areas to protect the natural beauty of these areas; and 5) accommodating the housing needs of a socially and economically diverse population.

The Town has adopted several planning documents that fall under the umbrella of the General Plan and provide important policy and program implementation for topics addressed in the General Plan. These include the Sorich Ranch Park Master Plan (1992), the Bald Hill Area Plan (1996), the Bicycle and Pedestrian Master Plan (2016), the Economic Development Plan (2018), the Climate Action Plan 2030 (2019), and the Multi-Jurisdiction Hazard Mitigation Plan (2023). These plans are referred to and incorporated in this General Plan and may be updated according to General Plan policy.

1.5 GENERAL PLAN UPDATE PROCESS

The General Plan update process was a community-wide effort to ensure that San Anselmo retains its distinctive sense of community while accommodating growth and encouraging positive change. It was a two-year planning process used to help define the community's shared values and explore a vision for the future. It was a public process, one that sought to engage the community as the General Plan was drafted and refined.

Each stage of the General Plan update process was supported by extensive community outreach and participation. Community members shared their input through a series of public workshops, meet-

ings, and surveys. The Town created a website dedicated to the San Anselmo General Plan update effort and offered in-person and virtual workshops, an open house, pop-up events, and surveys to expand community participation. Notifications and updates were shared through the website, the Town's newsletter, postcard mailers, email lists, local newspaper, and printed materials to publicize upcoming events and ensure the community stayed informed and involved.

Surveys and Workshops. The General Plan process began with a series of stakeholder interviews and a "Setting Priorities" survey to identify special characteristics about the town, key issues to address, and potential areas for change or improvement. Residents said they prized San Anselmo's natural environment and access to open space, downtown, lifestyle and community life, and location. The town's safety and security, parks and public gathering spaces, local businesses, and walkability and bikeability were also noted. Key issues facing the town included: business viability, bike and pedestrian infrastructure, housing affordability, flooding, diversity, traffic, wildfire risk, and climate change.

A series of community workshops and an open house were held between October 2024 and April 2025. Workshops focused on specific topics of the General Plan as follows:

- Sustainability, Climate Change, and Resiliency
- Commercial Districts
- Circulation and Noise
- Community Programming, Recreation, Parks, Open Space and Conservation

Online and paper surveys were provided before and after each workshop to engage community members who could not participate during the scheduled event or who did attend but wanted to provide additional input.

General Plan Advisory Committee. The General Plan update process was guided by a 15-member General Plan Advisory Committee (GPAC) that was appointed by the Town Council to provide input, feedback, and recommendations to the Town Council, Planning Commission, Town staff, and the consultant team. The GPAC included two Town Council members, two Planning Commissioners, and one representative each from the Climate Action Commission, Bicycle and Pedestrian Advisory Committee, Economic Development Committee, Open Space Committee, Parks and Recreation Commission, and Racial Equity Committee. Five at-large community members, including one high school student, were also appointed to the GPAC. The GPAC met 13 times over a period of two years.

Committees and Commissions. The Town's committees and commissions, including the Climate Action Commission, Bicycle and Pedestrian Advisory Committee, Economic Development Committee, Historical Commission, Infrastructure and Fiscal Monitoring Committee, Open Space Committee, Parks and Recreation Commission, and Racial Equity Committee, provided initial input on issues to address in the General Plan, reviewed draft General Plan policies and actions related to their area of expertise, and provided recommendations.

1.6 VISION STATEMENT

The Town of San Anselmo envisions a future where natural beauty, community well-being, and sustainable progress harmoniously co-exist. We respectfully acknowledge that San Anselmo resides on the ancestral lands of the Coast Miwok people, and we honor their enduring connection to this land. Our town seeks to honor its heritage, scenic beauty, and sense of community, while embracing innovation, inclusivity, climate action, sustainability, economic vitality, and fiscal responsibility. Together, we will work to create a safe, welcoming, and vibrant community where all people belong, recognizing that communities of color, renters, immigrants, non-English-speaking residents, and other historically underrepresented groups have not always experienced San Anselmo that way, and committing to equitable access to housing, services, and opportunities so that belonging is real for everyone who lives here. The values of social equity, environmental stewardship, and community connection are fundamental to that commitment.

1.7 GENERAL PLAN GUIDING PRINCIPLES

The General Plan planning process was shaped by the following guiding principles that defined the major themes for the General Plan update and served as touchstones during the process of developing and refining goals, policies, and actions.

1. **Environmental Stewardship:** Protect and enhance our open spaces, wildlife, and biological diversity through thoughtful land use and environmental policies, and support public access to open space and scenic vistas in ways that minimize environmental impact and preserve natural resources.

2. **Climate Action, Resilience, and Sustainability:** Lead in eliminating greenhouse gas emissions, mitigating and adapting to climate change, and building a resilient community that can withstand environmental challenges, with particular attention to lower-income households, renters, older adults, people with disabilities, non-English-speaking residents, and immigrants, who face disproportionate climate impacts and have the least access to recovery resources. Embed sustainable practices across all Town operations

and decisions.

3. **Architectural and Scenic Beauty:** Maintain and complement the diverse and historic qualities of the built environment, and preserve and enhance the scenic beauty of San Anselmo.

4. **Economic Vitality:** Support a thriving local economy that strengthens Town revenues by fostering a variety of businesses, encouraging sustainable economic practices, and ensuring that economic growth is inclusive, responsive to the changing needs of the community, and in alignment with our environmental and social goals. Encourage businesses in the town's commercial hubs and downtown to foster vibrancy and contribute to attractive gateways to San Anselmo.

5. **Housing:** Promote a wide range of housing options that are affordable at all income levels, accessible, and sustainable while protecting the town's natural resources and respecting its charming architecture. Encourage housing that meets the needs of existing residents and welcomes a diverse spectrum of future residents.

6. **A Community of Belonging:** Foster an inclusive, welcoming, and socially connected community where people of all ages, backgrounds, and abilities, including renters, lower-income households, non-English speakers, older adults, people with disabilities, com-

munities of color, immigrants, and LGBTQ+ residents, and others who may face barriers to access or participation, have a sense of belonging, equitable access, and opportunities to thrive. Emphasize community engagement, connections, and volunteerism to enhance the social fabric of the town.

7. **Social Equity and Diversity:** Commit to social equity, respect, and understanding in all community interactions. Actively remove barriers to participation, access, and opportunity faced by communities of color, renters, immigrants, non-English-speaking residents, lower-income households, people with disabilities, and LGBTQ+ residents. Commit to diversity, equity, inclusion, and belonging as fundamental values that strengthen the town, to the extent consistent with federal and State law. Honor the history and enduring presence of the Coast Miwok.

> Families move to San Anselmo because of its small town feel, good schools and neighborhoods, low crime, abundant recreation, and proximity to nature and San Francisco.

8. **Healthy Community:** Offer and improve access to our parks, recreation programs, facilities, and events which provide affordable opportunities for active living, personal enrichment, education, and social connection to all members of the community.

9. **Sustainable Transportation:** Prioritize multi-modal transportation options and improvements that eliminate greenhouse gas emissions, such as zero-emission vehicles, public transit, cycling, and pedestrian-friendly infrastructure. Improve and promote safety, accessibility, and traffic flow.

10. **Safety and Preparedness:** Ensure the safety and well-being of all residents through high-quality public services, resilient infrastructure, improved safety and noise regulation, and robust emergency preparedness and response plans.

11. **Excellence in Governance:** Provide high-quality public facilities and infrastructure and fiscally responsible, innovative, transparent, and responsive local government services to ensure the health, safety, and welfare of the community. Communicate with and engage all members of the community to align leadership with the diverse needs and values of San Anselmo's residents.

1.8 GENERAL PLAN ORGANIZATION

The General Plan is organized into ten chapters:

1. The **Introduction** provides background information on the General Plan.

2. The **Land Use and Community Design Element** describes land use in San Anselmo and how and where new development will occur and fit into the existing built and natural environment. This element also covers the topics of governance and inclusion.

3. The **Open Space and Conservation Element** covers open space, natural communities and ecological resources, watersheds and waterways, water resources, water and air quality, and cultural resources.

4. The **Sustainability, Climate Change, and Resiliency Element** describes concepts of sustainability, provides an overview of climate change impacts, and addresses how the town will reduce greenhouse gas emissions and become a more sustainable and resilient community.

5. The **Economic Vitality Element** describes the town's economic sectors and identifies strategies to strengthen the town's economy and support its local businesses.

6. The **Housing Element** details the constraints to and need for housing, especially housing affordable to lower and moderate-income households, identifies sites available for housing, and sets the course to address identified needs.

7. The **Circulation Element** describes and plans for the circulation network and traffic operations, parking, public transportation, and bicycle and pedestrian facilities.

8. The **Parks, Recreation, and Public Facilities Element** addresses the maintenance and enhancement of San Anselmo's public facilities, parks, and recreational programs.

9. The **Safety Element** describes environmental and human-caused hazards, including earthquakes, flooding, sea level

rise, and fire, and addresses potential risks to the community.

10. The **Noise Element** identifies existing and future noise sources and prescribes appropriate noise levels in San Anselmo.

State law requires the San Anselmo General Plan to cover seven topics, also known as "elements." Elements may be combined, as is the case for San Anselmo's Open Space and Conservation Element, and requirements for an element may be addressed in more than one element. Table IN-1 shows the relationship of the General Plan elements to the State-mandated elements.

Table IN-1 Location of State-Mandated Elements

State-Mandated Element	San Anselmo General Plan Element
Land Use	Land Use and Community Design; Safety[1]
Circulation	Circulation
Open Space	Open Space and Conservation
Conservation	Open Space and Conservation
Safety	Safety; Sustainability, Climate Change, and Resiliency[2]
Noise	Noise
Housing	Housing

[1]California Government Code 65302(a) specifies that the land use element identify areas subject to flooding. This information is presented in the Safety Element.

[2]California Government Code 65302(g)(4) specifies that the safety element address climate adaptation and resiliency strategies. This information is presented in the Sustainability, Climate Change, and Resiliency Element.

An eighth element covering Environmental Justice is required for local governments that contain disadvantaged communities as defined by State law. San Anselmo does not have any such communities. Nonetheless, the Town is committed to environmental justice, and the General Plan integrates policies and actions reflecting these foundational values throughout all elements to create a just and equitable community and provide a healthy environment for all.

State law also allows local governments to include additional, or "optional," elements in a general plan to cover other topics of local importance. The General Plan includes three optional elements: the Parks, Recreation, and Public Facilities Element, the Economic Vitality Element, and the Sustainability, Climate Change, and Resiliency Element.

Each element in the General Plan describes existing conditions and context for the topic area, followed by goals, policies, and actions to guide the town's future management and development.

The General Plan is supported by separately published documents that provide background information and environmental analysis. The Existing Conditions Reports, prepared in an early phase of the General Plan update, contain detailed baseline information for each of the topic areas covered in the General Plan and were used as reference documents during the development of the General Plan. The Environmental Impact Report determines the type and extent of environmental impacts that would result from implementation of the General Plan. It identifies requirements for more detailed environmental analysis that may be necessary for specific projects considered in the future.

1.9 DIVERSITY, EQUITY, INCLUSION, AND BELONGING

San Anselmo is committed to fostering a town that is welcoming and supportive of all residents. The Town recognizes that diverse perspectives strengthen decision-making and strives to ensure that its policies, decisions, and public spaces work for everyone.

The Town acknowledges that many of the structural inequities that have affected marginalized groups such as communities of color and indigenous people have had long-lasting effects. To move forward, we must acknowledge our past, beginning with the displacement of the Coast Miwok people in the 19th century and continuing with the discriminatory practices of redlining, racial covenants in deeds, and exclusionary zoning rules. These policies have had long-term adverse effects both locally and regionally on opportunities for marginalized groups and must be addressed.

The Town recognizes that equity principles must function as a living framework, an ongoing standard that informs future decisions rather than a one-time commitment. To support this, the Town will incorporate a DEIB alignment review into the staff report process for Planning Commission and Town Council actions and will conduct periodic reviews of progress on equity-related General Plan actions as part of the implementation reporting described in Action LU-H.9.c. The Town also acknowledges the foundational work of the Racial Equity Committee's Action Plan (May 2023), which helped inform these efforts, and intends to build upon this work through continued collaboration with the Racial Equity Committee, evaluation of the Action Plan, community engagement, and future initiatives over the life of the General Plan.

The Town reaffirms its commitment to foster an equitable future and incorporates the principles of diversity, equity, inclusion, and belonging throughout the General Plan. Key terms and concepts related to these principles are defined below.

Diversity. The full spectrum of differences that everyone brings to the table. It includes characteristics such as race, ethnicity, gender identity, sexual orientation, age, ability, language, and socioeconomic status, as well as neurodiversity, worldviews, and life experiences.

Embracing diversity acknowledges the value of multiple perspectives, ideas, and solutions provided when individuals with different backgrounds, identities, and views collaborate and are heard.

Equity. Fair treatment and access to all individuals or groups irrespective of their identity. Equity is not sameness; it is justice in design, practice, and outcome. This requires the identification, recognition, and remediation of historic, systemic, and structural barriers that create unequal access to resources, opportunities, and power.

Inclusion. The active, continuous practice of reshaping environments, relationships, and systems so that all individuals and groups can fully participate, contribute, and lead in the greater community. It includes valuing difference as a resource and building cultures rooted in trust, respect, and shared purpose.

San Anselmo remains predominantly white, but the community is becoming more diverse. Residents from diverse backgrounds grew from 19% to 25% since 2020.

Belonging. The felt and lived experience of being valued, safe, respected, and essential within a community, such that individuals feel secure being their authentic selves without fear of marginalization or exclusion. Belonging emerges when diversity is welcomed, equity is practiced, and inclusion is sustained — resulting in environments where people not only have access and voice, but also feel they matter and are integral to the shared purpose and culture of the community. The Town will actively apply this definition as a guiding standard in planning decisions, staff report review, boards and commissions governance, and ongoing equity progress reporting.

General Plan policies and actions designed to increase diversity, equity, inclusion, and belonging appear across all elements and will be implemented with explicit attention to who benefits, who may be underserved, and whether outcomes are improving to enhance belonging for all residents. Progress will be reviewed annually as part of the Town's existing implementation reporting. Overarching strategies to create an equitable, diverse, and welcoming community in San Anselmo include:

- Allowing a variety of land uses to accommodate a socially and economically diverse community. (Land Use and Community

Design Element)

- Encouraging age- and disability-friendly communities. (Land Use and Community Design Element)
- Facilitating the authentic, equitable, and inclusive participation of all residents in local government and decision-making. (Land Use and Community Design Element)
- Providing equitable public access to open space. (Open Space and Conservation Element)
- Honoring and protecting tribal cultural resources. (Open Space and Conservation Element)

> We could use more diversity!

- Ensuring equitable access to programs, resources, and financial incentives for electrification, energy efficiency, and climate resilience. (Sustainability, Climate Change, and Resiliency Element)
- Providing affordable housing for lower-income households and affirmatively furthering fair housing. (Housing Element)
- Providing Complete Streets that meet the needs of all users. (Circulation Element)
- Providing equitable access to parks and recreation facilities and programs. (Parks, Recreation, and Public Facilities Element)
- Conducting outreach and education to vulnerable communities through multilingual materials, accessible formats, and engagement strategies designed to reach renters, working families, non-English-speaking residents, immigrants, and others who face barriers to participation. (Land Use, Open Space and Conservation, Sustainability, Economic Vitality, Housing, Parks, Recreation, and Public Facilities, and Safety Element)

1.10 ADMINISTERING THE PLAN

The General Plan is for all members of the community and used in a variety of ways. The Town Council and the Town's committees and commissions use the document to guide decision-making and budgeting. Town staff use the General Plan to ensure that projects, capital improvements, programs, and budgeting are consistent with the General Plan land use designations and applicable goals, policies, and actions. Importantly, the General Plan empowers the Town, public agencies that work with the Town, and property owners to invest in and plan for a future in accordance with the Plan's goals and policies.

Each chapter of the General Plan contains a series of goals, policies, and actions that provide guidance to the Town on how to direct change, manage growth, and maintain resources over the life of the General Plan. The following provides a description and explains the relationship of each:

- A **goal** is a description of the general desired result related to a particular topic or issue that the Town seeks to create through the implementation of the General Plan.
- A **policy** is a specific statement that guides decision-making as the Town works to achieve its goals. The General Plan's policies set out the standards that will be used by Town staff, the Planning Commission, and the Town Council in their review of land development projects, resource protection activities, infrastructure improvements, and other Town actions. Policies are ongoing and require no specific action on behalf of the Town.
- An **action** is a program, procedure, or technique to be undertaken by the Town to help achieve a specified goal or implement an adopted policy.

The following words are used to indicate whether a particular policy or program is mandatory, advisory, or permissive:

- "Must" or "shall" means an action the Town is required to follow.
- "Should" means an action the Town is advised to follow.

- "May" means an action which is left to the discretion of the Town.

The General Plan contains a series of figures and maps depicting existing and proposed or future conditions of areas within and near San Anselmo. These maps and diagrams are intended to provide the reader with a general understanding of the extent of land uses and conditions. Most maps are focused on land within the town boundaries and do not detail characteristics in the SOI. Figures as shown at the General Plan scale are not intended to be used for development, permitting, or investment purposes for specific parcels. More detailed maps may be available at the Town of San Anselmo.

The General Plan's actions set forth a work program for the Town, guide capital improvement projects, and prioritize Town expenditures. Some actions call for additional analysis, studies, and implementing ordinances. The General Plan Implementation Matrix will track implementation of the General Plan's actions through 2045, detailing how each action will be carried out, including the Town departments responsible, the funding source(s), and the timeframes. Town staff will regularly report to the Town Council on the progress of the Plan's implementation.

The Town will evaluate General Plan implementation using the belonging standard established in Section 1.9, including regular review of who is benefiting from policies and actions and where outcomes fall short for renters, communities of color, immigrants, non-English-speaking residents, lower-income households, people with disabilities, and LGBTQ+ residents. This evaluation will be coordinated with existing reporting processes and the work of the Racial Equity Committee.

Importantly, the General Plan is not a static document; it is expected to evolve as San Anselmo's needs, priorities, and conditions change over time. Many of the Plan's goals, policies, and actions rely on ongoing efforts, such as regularly updating the Climate Action Plan, Housing Element, and Hazard Mitigation Plan, which require the Town to adapt to new data, regulations, technologies, and communi-

ty expectations. As demographic shifts influence housing and service needs, climate change alters environmental risks, and innovations reshape mobility, communication, and community, the General Plan will be reviewed and refined to remain relevant, effective, and aligned with community values. The Town will periodically assess the entire document, making updates as necessary to guide responsible growth, enhance resilience, and support a high quality of life for all residents.

Successful implementation of the General Plan will rely on the active participation and shared commitment of the entire community. Residents, businesses, local organizations, and town leaders each play a vital role in bringing the Plan's vision to life. By working together, contributing ideas, and taking collective responsibility for our town's future, San Anselmo can ensure that the goals and ideals outlined in this Plan are realized for generations to come.

2. LAND USE AND COMMUNITY DESIGN

San Anselmo's land use pattern reflects a long-established blend of diverse neighborhoods, vibrant commercial districts, and treasured natural areas that shape the Town's identity. Looking ahead, the Town will adapt these patterns to meet changing demographic, environmental, and technological conditions while preserving the community character residents value.

Jump to Goals, Policies, and Actions

2.1 PURPOSE OF THE ELEMENT

The purpose of this element is to advance equitable access to housing, services, and opportunity for all who live in San Anselmo, with particular attention to residents who have historically been excluded from the decisions that shape their neighborhoods. Its policies are designed to produce outcomes consistent with the Town's belonging standard, ensuring that land use decisions reflect not just who participates in the process, but who benefits from the result.

The Land Use and Community Design Element describes existing land use in San Anselmo and establishes a comprehensive framework to guide growth, as well as the use, development, and preservation of land over time. It informs decisions about the location, type, intensity, and design of future development in a manner that reflects community values and balances the needs of residents, businesses, the environment, and State housing requirements.

This element includes goals, policies, actions, and land use designations that shape development patterns to support a vibrant downtown and commercial areas, provide a diverse range of housing choices, protect the town's unique neighborhoods and natural resources, and promote sustainable, resilient growth. It also addresses community design, reflecting the importance residents place on maintaining the character and quality of development throughout San Anselmo.

The Land Use and Community Design Element includes the following sections.

2.2 Development Trends. Discusses how land use in San Anselmo has developed and changed over time.

2.3 Land Use Categories and Map. Describes land use designations within the town and graphically represents allowed land uses and intensities on the Land Use Map.

2.4 Community Design. Focuses on creating and maintaining a strong sense of place in San Anselmo by enhancing the appearance of streets, buildings, and public space. It also addresses the preservation of historic resources.

2.5 Development Projections. Identifies the maximum growth potential in San Anselmo based on the policy framework of the General Plan.

2.6 Navigating Towards 2045. Discusses how the Town's land use policies will respond to changing demographic, environmental, and technological conditions.

2.7 Goals, Policies, and Actions. Identifies goals, policies, and actions to guide growth, enhance community design, balance residential and commercial uses, and ensure effective governance and inclusive participation in decision-making.

California's housing laws including, but not limited to, those related to housing development approvals, accessory dwelling units, density bonus units, by-right and ministerial housing approvals, and objective development standards, limit the Town's ability to apply design review, hold public hearings, and apply certain General Plan policies and actions and development standards. As such, the goals, policies, and actions in the General Plan, including this Land Use and Community Design Element, are intended to be interpreted in a manner consistent with all applicable housing laws. To the extent a conflict exists, the applicable State laws shall control.

2.2 DEVELOPMENT TRENDS

San Anselmo's historical development patterns reflect its evolution from a small rural settlement into a vibrant Marin County community shaped by transportation, commerce, and suburban growth. In the late 19th century, the town developed around the extension of the North Pacific Coast Railroad, which connected San Anselmo to San Francisco and other parts of the region. The rail line made the area more accessible and laid the foundation for early residential and commercial growth.

> A great sense of community pride seems to have taken place. We try to keep it a secret but are also happy to share and grow our community.

Small businesses, schools, and civic institutions clustered near the train depot, located at "The Hub," the present-day intersection of Sir Francis Drake Boulevard, Center Boulevard, Greenfield Avenue, and Red Hill Avenue. The original depot location helped establish San Anselmo's downtown and adjacent neighborhoods, characterized by a mix of uses anchored by local shops, restaurants, and civic buildings that reinforce San Anselmo's identity as a walkable, pedestrian-oriented community.

As the 20th century progressed, San Anselmo's character was further influenced by the rise of the automobile and post–World War II suburban expansion. Expanding road networks opened new areas to housing, leading to the creation of distinctive residential neighborhoods with tree-lined streets and a variety of architectural styles. Commercial activity gradually spread along major roadways to serve increasing automobile traffic, shifting some focus away from the historic town center.

Like many Bay Area communities, San Anselmo experienced an influx of families seeking single-family homes in a traditional neighborhood setting with access to regional employment centers. This period brought new housing construction, the growth of local schools, and the expansion of municipal services. Commercial development began to accommodate cars through larger roadways and parking areas.

Despite these changes, the town also retained much of its historic charm, preserving open spaces, protecting creeks and natural landscapes, and maintaining a strong sense of place. Today, San Ansel-

mo's development patterns reflect a balance of historic small-town character, suburban residential growth, and ongoing efforts to adapt to modern challenges while honoring its unique past.

2.3 LAND USE CATEGORIES AND LAND USE MAP

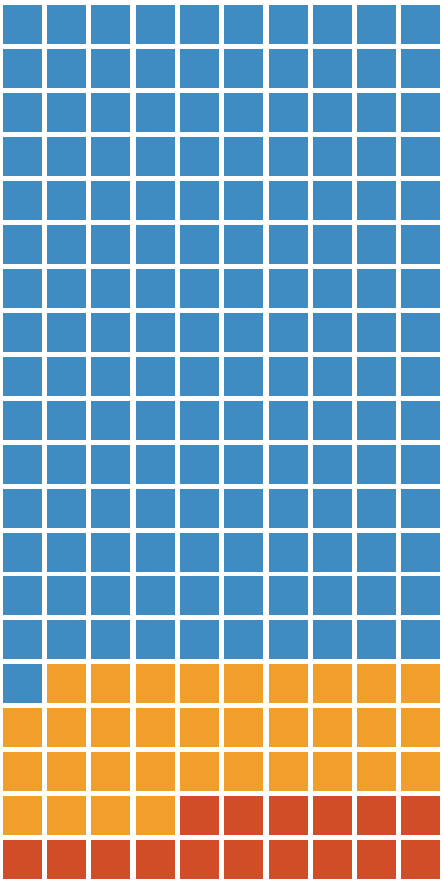

Land in San Anselmo is classified according to three broad land use categories: Residential, Commercial and Mixed Use, and Community and Natural Resource.

Residential land use designations are applied to areas appropriate for single-family, two-family, multifamily, manufactured home, and accessory dwelling housing options. The Town's residential neighborhoods support a diverse range of lifestyles and household income levels.

Commercial and Mixed Use land use designations are applied to areas appropriate for retail and commercial services to serve residents and visitors. Multifamily residential uses are also allowed to be mixed in with commercial uses.

Community and Natural Resource land use designations apply to open space, parks, and community facilities. Natural areas, such as the woodlands and grasslands, offer opportunities for preservation and conservation. Public facilities provide opportunities for social and community interaction and the provision of public utilities and services.

Table LU-1 identifies acreages for each land use designation in the Land Use Map. The greatest amount of land within the town limits is designated for residential use, encompassing 75.4 percent of San Anselmo's land area. The second largest amount of land is designated for community and natural resource use, totaling 16.5 percent of the land area. Commercial and mixed-use areas comprise 8.1 percent of San Anselmo's land area. Figure LU-1 shows the Town's Land Use Map.

Residential – 75.4%

Community and Natural Resource – 16.5%

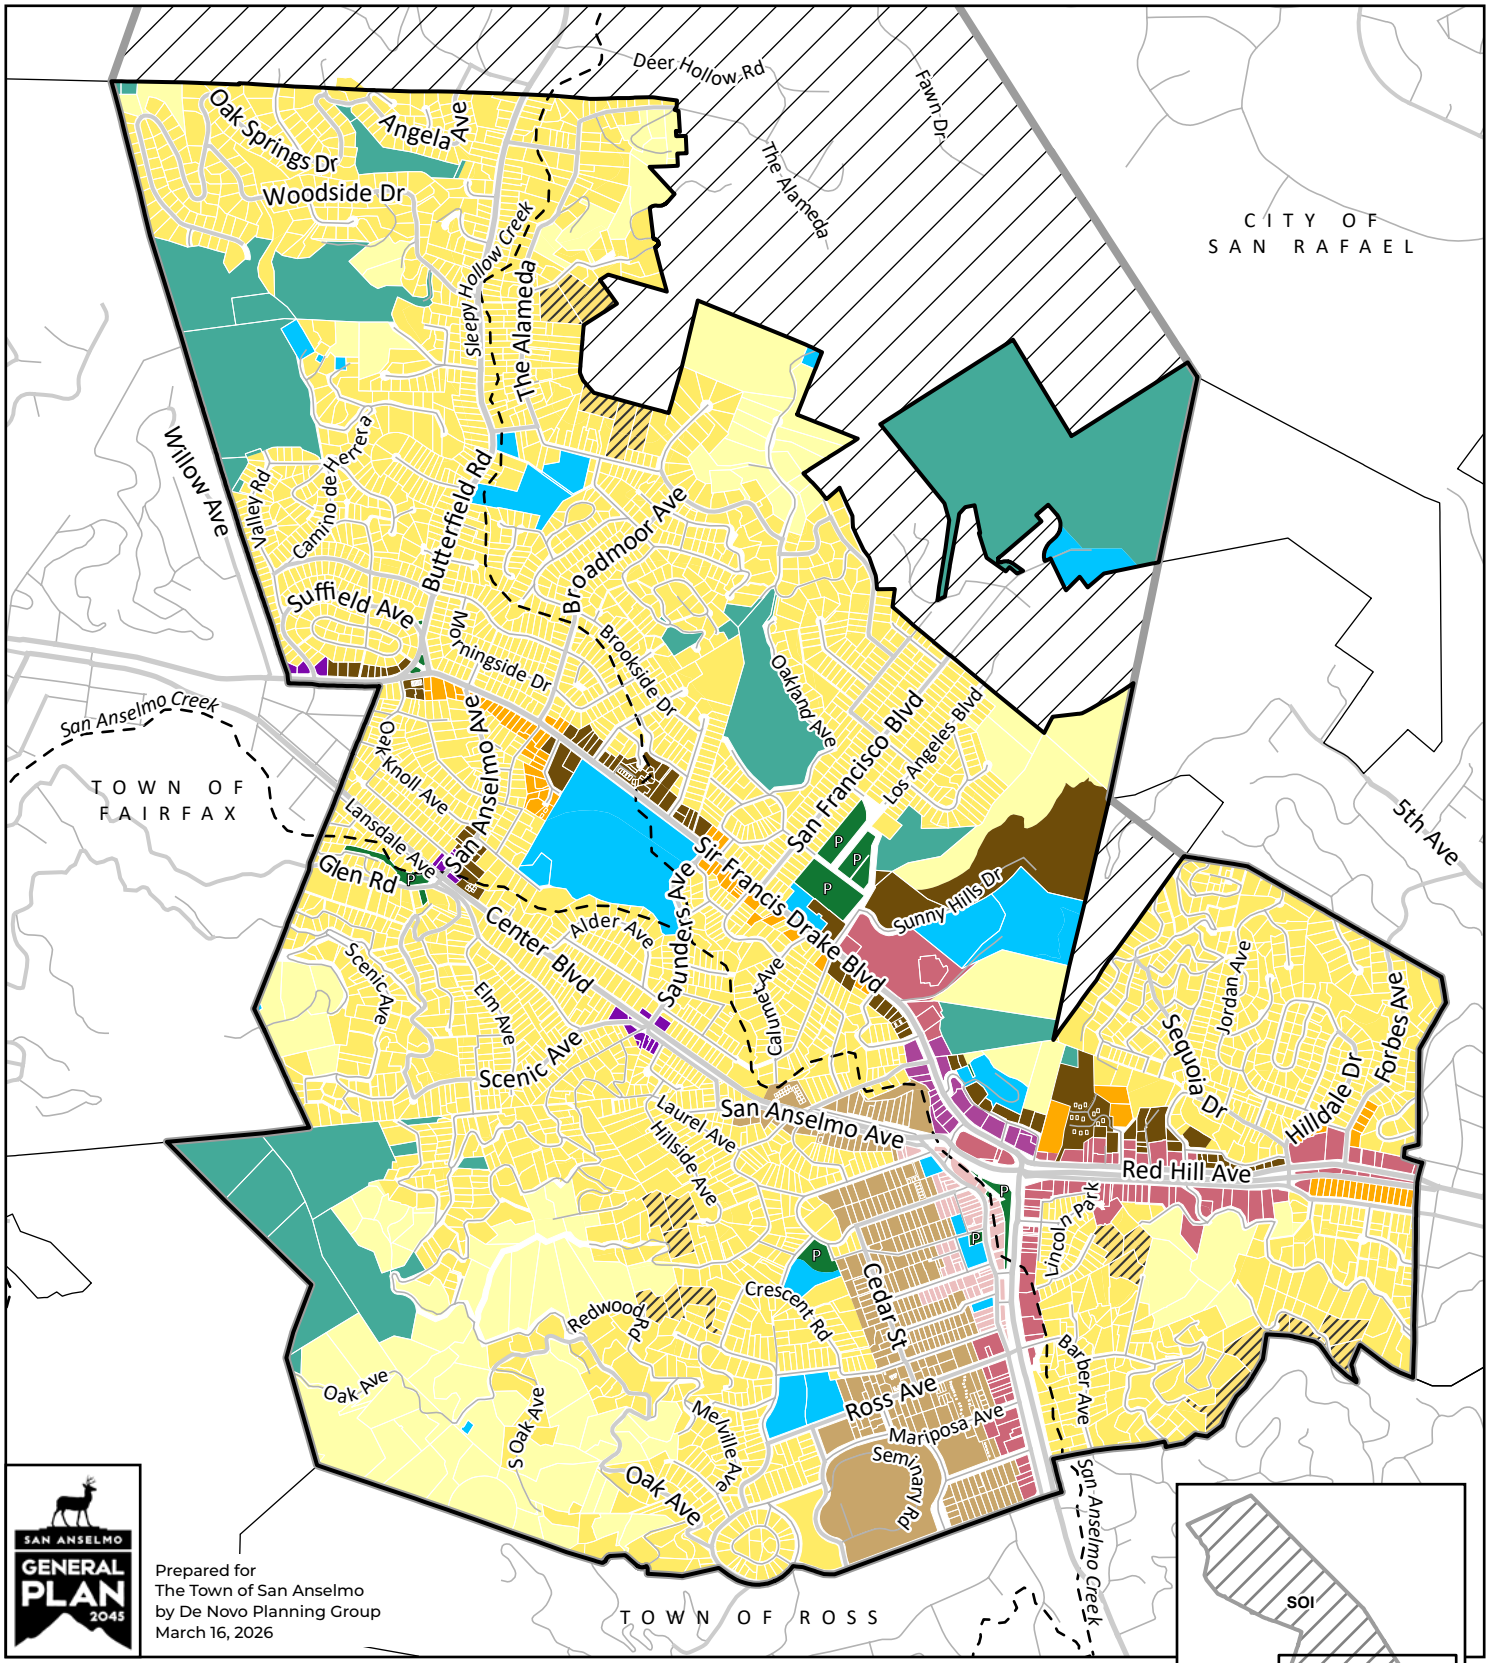

Commercial and Mixed Use – 8.1%

Table LU-1 General Plan Land Use Acreage

Land Use Designation	Acreages
Residential	
Very Low Density Residential	206
Single-Family Residential-Conservation	24
Single-Family Residential	813
Medium Density Residential	15
High Density Residential	43
Residential Subtotal	**1,102**
Commercial and Mixed Use	
Downtown Mixed Residential	67
Central Commercial	8
General Commercial	35
Limited Commercial	5
Neighborhood Commercial	2
Professional	0
Commercial and Mixed Use Subtotal	**118**
Community and Natural Resource	
Parks	10
Open Space	170
Public Facilities	60
Right-of-Ways	2
Community and Natural Resource Subtotal	**241**
Total	**1,461**

Notes:

1. General Plan Land Use acreage reflects the land area that has assigned land use designations. The remainder of the land that does not have a land use designation is primarily roads and associated rights-of-way.
2. Land in the Sphere of Influence (1,749 acres) is not designated.
3. Acreages are rounded to the nearest whole acre. Subtotals and totals are calculated using unrounded acreage values and may differ from the sum of the displayed figures due to rounding.

Figure LU-1

General Plan Land Use Ma

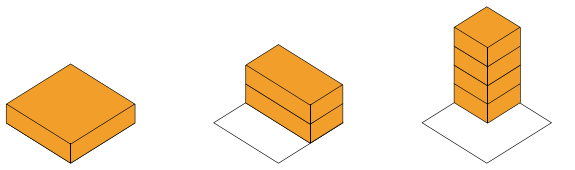

Within each of the land use categories, specific land use designations identify allowable land uses and the density and intensity of development allowed in each designation. Table LU-2 details the Town's land use designations and describes the general land uses intended for the category and applicable building density and/or intensity.

Residential density is measured in units per acre, while non-residential building intensity is measured in Floor Area Ratio.

Density is defined by the number of dwelling units per gross acre, and intensity of a parcel is defined as the ratio of floor area to the land area. Residential densities for land use designations are expressed in dwelling units per gross acre. For non-residential designations, building intensities are defined by Floor Area Ratio (FAR), which is the ratio of gross building floor area to the gross site area. For example, a FAR of 0.5 would allow a one-story building over half of a site, or a two-story building over one quarter of a site.

In addition to building density, State law requires the General Plan to estimate population density for the various land use categories. Population density is determined by multiplying the average household size by the maximum number of dwelling units permitted in a land use category, rounded up to the nearest whole number. The average household size in San Anselmo was 2.35 persons in 2025, as reported by the California Department of Finance. For example, since the Medium Density Residential category allows 12 units per gross acre, the population density may be up to 29 persons per acre.

Floor Area Ratio (FAR) 1.0

1 Story
100% Lot Coverage

2 Stories
50% Lot Coverage

4 Stories
25% Lot Coverage

The General Plan provides the high-level parameters of density and intensity for land use designations, but all development must also comply with the applicable regulations of the Zoning Ordinance. The Town's Zoning Ordinance contains detailed descriptions of land uses permitted in each designation, as well as development standards that implement the General Plan.

Table LU-2 Land Use Categories

Land Use Designation		Associated Zoning District(s)		Residential Density and Building Intensity	Description
Residential Designations					
VLD	Very Low Density Residential	R-1-H	Very Low Density Residential	Up to 1 unit/acre	The Very Low-Density Residential land use designation is applied to those hillside lands, located at or above the 150-foot mean sea level elevation, suitable for low density, detached single-family homes, accessory residential uses, residential care, day care, and essential public and quasi-public utility facilities on larger lots which will maintain the natural features of the land and associated landscape and have minimal visual impacts on the community. Other residential uses are also allowed, as consistent with State law.
SF-C	Single-Family Residential-Conservation	R-1-C	Single-Family Residential-Conservation	Up to 1 unit/acre	The Single-Family Residential-Conservation land use designation is applied to hillside areas, located at or above the 150-foot mean sea level elevation, appropriate for development of single-family homes, accessory residential uses, residential care, day care, and essential public and quasi-public utility facilities on larger lots which will have minimal visual impacts on the community. Other residential uses are also allowed, as consistent with State law.
SF	Single-Family Residential	R-1	Single-Family Residential	1-6 units/acre	The Single-Family Residential land use designation is applied to areas suitable for detached single-family homes and accessory residential uses on smaller lots. Duplex, triplex, and multifamily homes may also be compatible. Additionally, education, day care, residential care, religious, institutional, and essential public and quasi-public utility facilities may be allowed.
MDR	Medium Density Residential	R-2	Medium Density Residential	6-12 units/acre	The Medium Density Residential land use designation is applied to areas appropriate for a mix of housing types including single-family, duplex, triplex, and multifamily homes and accessory residential uses at moderate densities. Additionally, education, day care, residential care, religious, institutional, and utility facilities may be allowed.
HDR	High Density Residential	R-3	High Density Residential	13-30 units/acre*	The High Density Residential land use designation is applied to areas appropriate for single-family, duplex, triplex, and multifamily homes and accessory residential uses at higher densities. Additionally, education, day care, residential care, religious, lodging, institutional, and utility facilities may be allowed.

Commercial and Mixed Use Designations					
DMR	Downtown Mixed Residential	R-1	Single-Family Residential	6-30 units/acre* 2.0 FAR	The Downtown Mixed Residential land use designation is applied to areas suitable for a mixture of single-family, duplex, triplex, and multifamily housing and accessory residential uses. Additionally, education, day care, residential care, religious, lodging, institutional, and utility facilities may be allowed.
		R-2	Medium Density Residential		
		R-3	High Density Residential		
		C-2	Downtown Commercial		
		C-3	Commercial		
CC	Central Commercial	C-2	Downtown Commercial	13-30 units/acre 2.0 FAR	The Central Commercial land use designation is applied to the downtown area providing for a wide range of resident- and visitor-serving commercial and institutional uses that create a vibrant downtown environment. Mixed commercial and residential uses are allowed.
GC	General Commercial	C-3	Commercial	13-30 units/acre* 2.0 FAR	The General Commercial land use designation is applied to areas appropriate for a broad range of retail, restaurant, entertainment, lodging, office, medical, service, automotive, institutional, and utility facilities. Mixed commercial and residential uses are allowed.
LC	Limited Commercial	C-L	Limited Commercial	13-30 units/acre 2.0 FAR	The Limited Commercial land use designation is applied to areas appropriate for a broad range of commercial uses that have lower traffic generation including limited retail, restaurant, office, medical, service, automotive, religious, institutional, and utility facilities. Mixed commercial and residential uses are allowed.
NC	Neighborhood Commercial	C-1	Neighborhood Commercial	13-20 units/acre 1.0 FAR 1.25 FAR for mixed-use projects with 8-10 units	The Neighborhood Commercial land use designation is applied to neighborhood-serving commercial uses within residential areas appropriate for a mix of retail, restaurant, office, medical, personal service, recreation, religious, lodging, institutional, and utility facilities. Mixed commercial and residential uses are allowed.
P	Professional	P	Professional	20-30 units/acre 2.0 FAR	The Professional land use designation is applied to professional uses in areas in the vicinity of the Town's commercial hubs which serve as buffers or transitions between the more intense commercial development and adjoining residential development.

Community and Natural Resource Designations					
Parks	Parks	Parks	Parks	-	The Parks land use designation is applied to areas suitable for parks, playgrounds, and other recreational uses.
OS	Open Space	OS	Open Space	-	The Open Space land use designation is applied to publicly-owned and privately-owned land devoted to the preservation of natural and scenic resources and for limited passive recreation on designated trails.
PF	Public Facilities	PF	Public Facilities	40 units/acre	The Public Facilities land use designation is applied to public land uses including public educational facilities and governmental buildings and facilities. Residential uses may also be permitted.

* Residential densities up to 40 units per acre may be allowed for properties subject to the Affordable Housing Overlay (AHO) District, as specified in the Zoning Code.

2.3.1 RESERVE AREAS

Reserve Areas identify potential housing opportunity sites for the future.

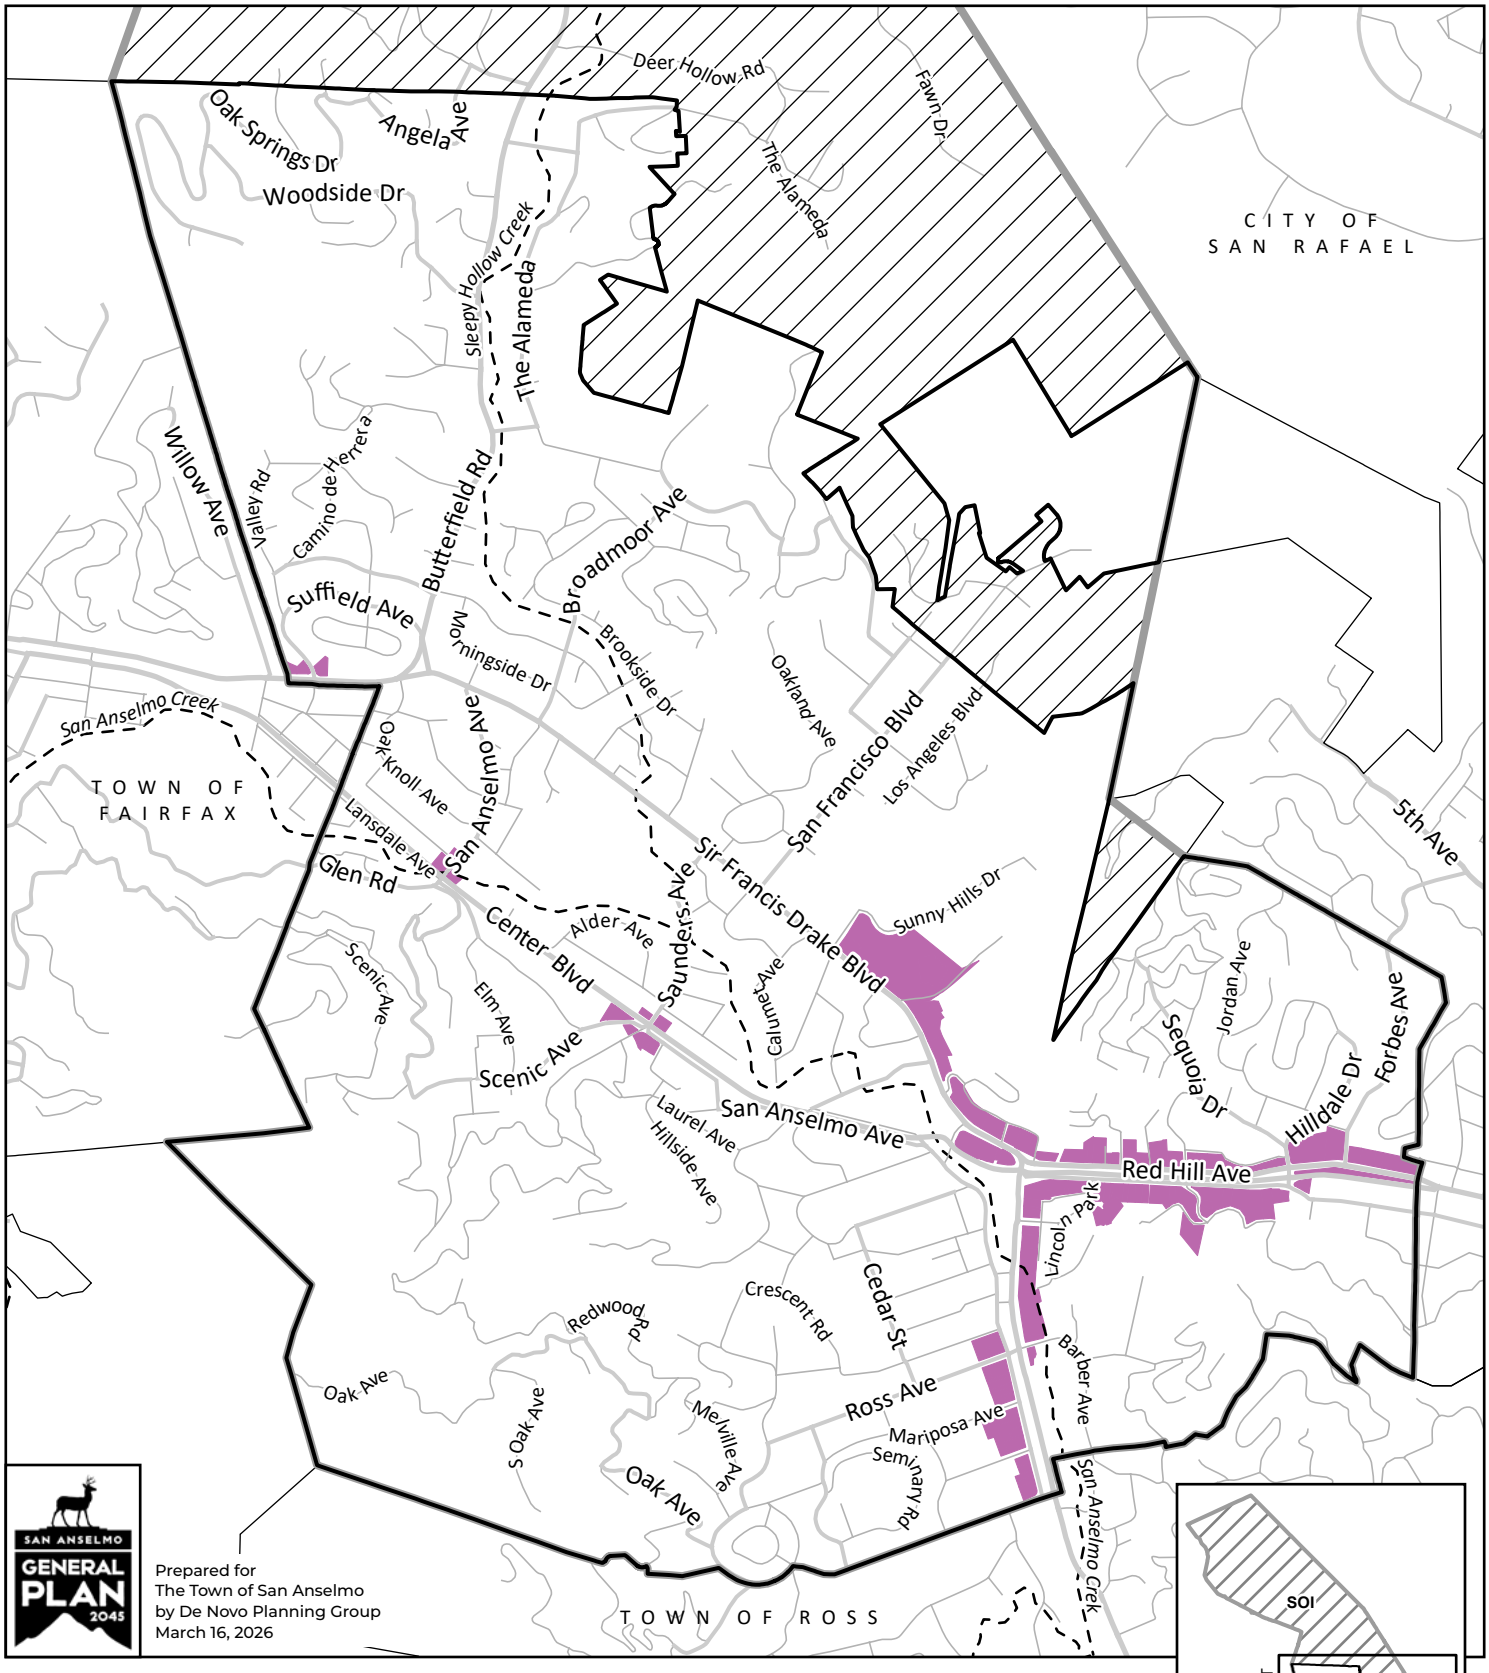

Every eight years, the Town must update the General Plan's Housing Element according to State law and identify land that is appropriately zoned to accommodate its share of the Regional Housing Needs for the upcoming planning cycle. The current Housing Element plans for needed housing development through the year 2030 on a variety of housing opportunity sites. The Housing Element will need to be updated in 2031 to accommodate the next Regional Housing Needs Allocation (RHNA).

To proactively accommodate anticipated housing needs over time, the General Plan identifies Reserve Areas along major transportation corridors in San Anselmo where future increases in residential density and additional development incentives could be considered to encourage new housing. These Reserve Areas are shown in Figure LU-2 and were selected based on community input gathered through outreach conducted during the General Plan Update process.

Reserve Areas provide a framework for accommodating growth in a planned and orderly manner while ensuring that infrastructure, public services, and community design standards are maintained.

The identification of these Reserve Areas is advisory and serves as a conceptual framework for identifying potential housing opportunity areas in future Housing Element updates. Future density increases or housing-related land use changes to meet upcoming RHNA cycles may also occur elsewhere in the Town. Redevelopment in any area, whether within or outside the Reserve Areas, will continue to be guided by the General Plan, Zoning Ordinance, and other Town policies.

Figure LU-2
Reserve Area

2.4 COMMUNITY DESIGN

Community design refers to the form and appearance of the Town. It addresses how buildings, streets, landscape, and activities within neighborhoods come together to create a distinct sense of place. Community design also defines the physical and aesthetic relationships between neighborhoods, examining how shared characteristics or natural and built features connect, or in some cases separate them. The physical form of each street corridor, public space, and neighborhood contributes to the town's livability, economic vitality, and overall quality of life.

The goals, policies, and actions in this element articulate how to maintain San Anselmo's natural setting and small-town character, while incorporating compatible new development.

2.4.1 NATURAL SETTING

The natural setting is an essential part of San Anselmo's sense of place. The town is nestled in a picturesque valley along San Anselmo Creek, surrounded by wooded open spaces and the rolling hills of the Mount Tamalpais watershed. Many of the town's hillsides are visually prominent, and Figure LU-3 identifies key ridgelines visible from vantage points throughout the community. The General Plan establishes a policy framework to minimize potential visual and environmental impacts from hillside development.

2.4.2 RESIDENTIAL NEIGHBORHOODS

San Anselmo is home to several distinct neighborhoods, each featuring a mix of architectural styles, street patterns, and building scales that reflect its original period of development. Through the goals, policies, and actions outlined in the General Plan, the Town seeks to preserve the scale, walkability, and aesthetic qualities of these neighborhoods while allowing for context-sensitive infill and new development.

2.4.3 DOWNTOWN

Downtown San Anselmo functions as the heart of the community, serving as the town's primary center for commerce, civic life, and community gatherings. Its pedestrian-oriented layout with storefronts along active sidewalks defines its identity as a walkable and vibrant commercial district. The area's character is further distinguished by its historic architecture and inviting public realm, which together contribute to a strong sense of place. The public realm, including Downtown's streets, plazas, parks, and civic buildings is central to the community's identity and quality of life. Town Hall Plaza, Imagination Park, and Creek Park provide opportunities for social interaction, recreation, and community events. San Anselmo Creek offers a distinctive natural amenity within steps of the town's urban core, enhancing the connection between the built and natural environments. Throughout San Anselmo, parks and gathering places continue to promote health, well-being and civic engagement.

To ensure Downtown's continued vitality, the General Plan's community design policy framework supports active ground-floor uses, enhanced pedestrian connectivity, and a welcoming environment for residents and visitors alike.

2.4.4 COMMERCIAL CORRIDORS

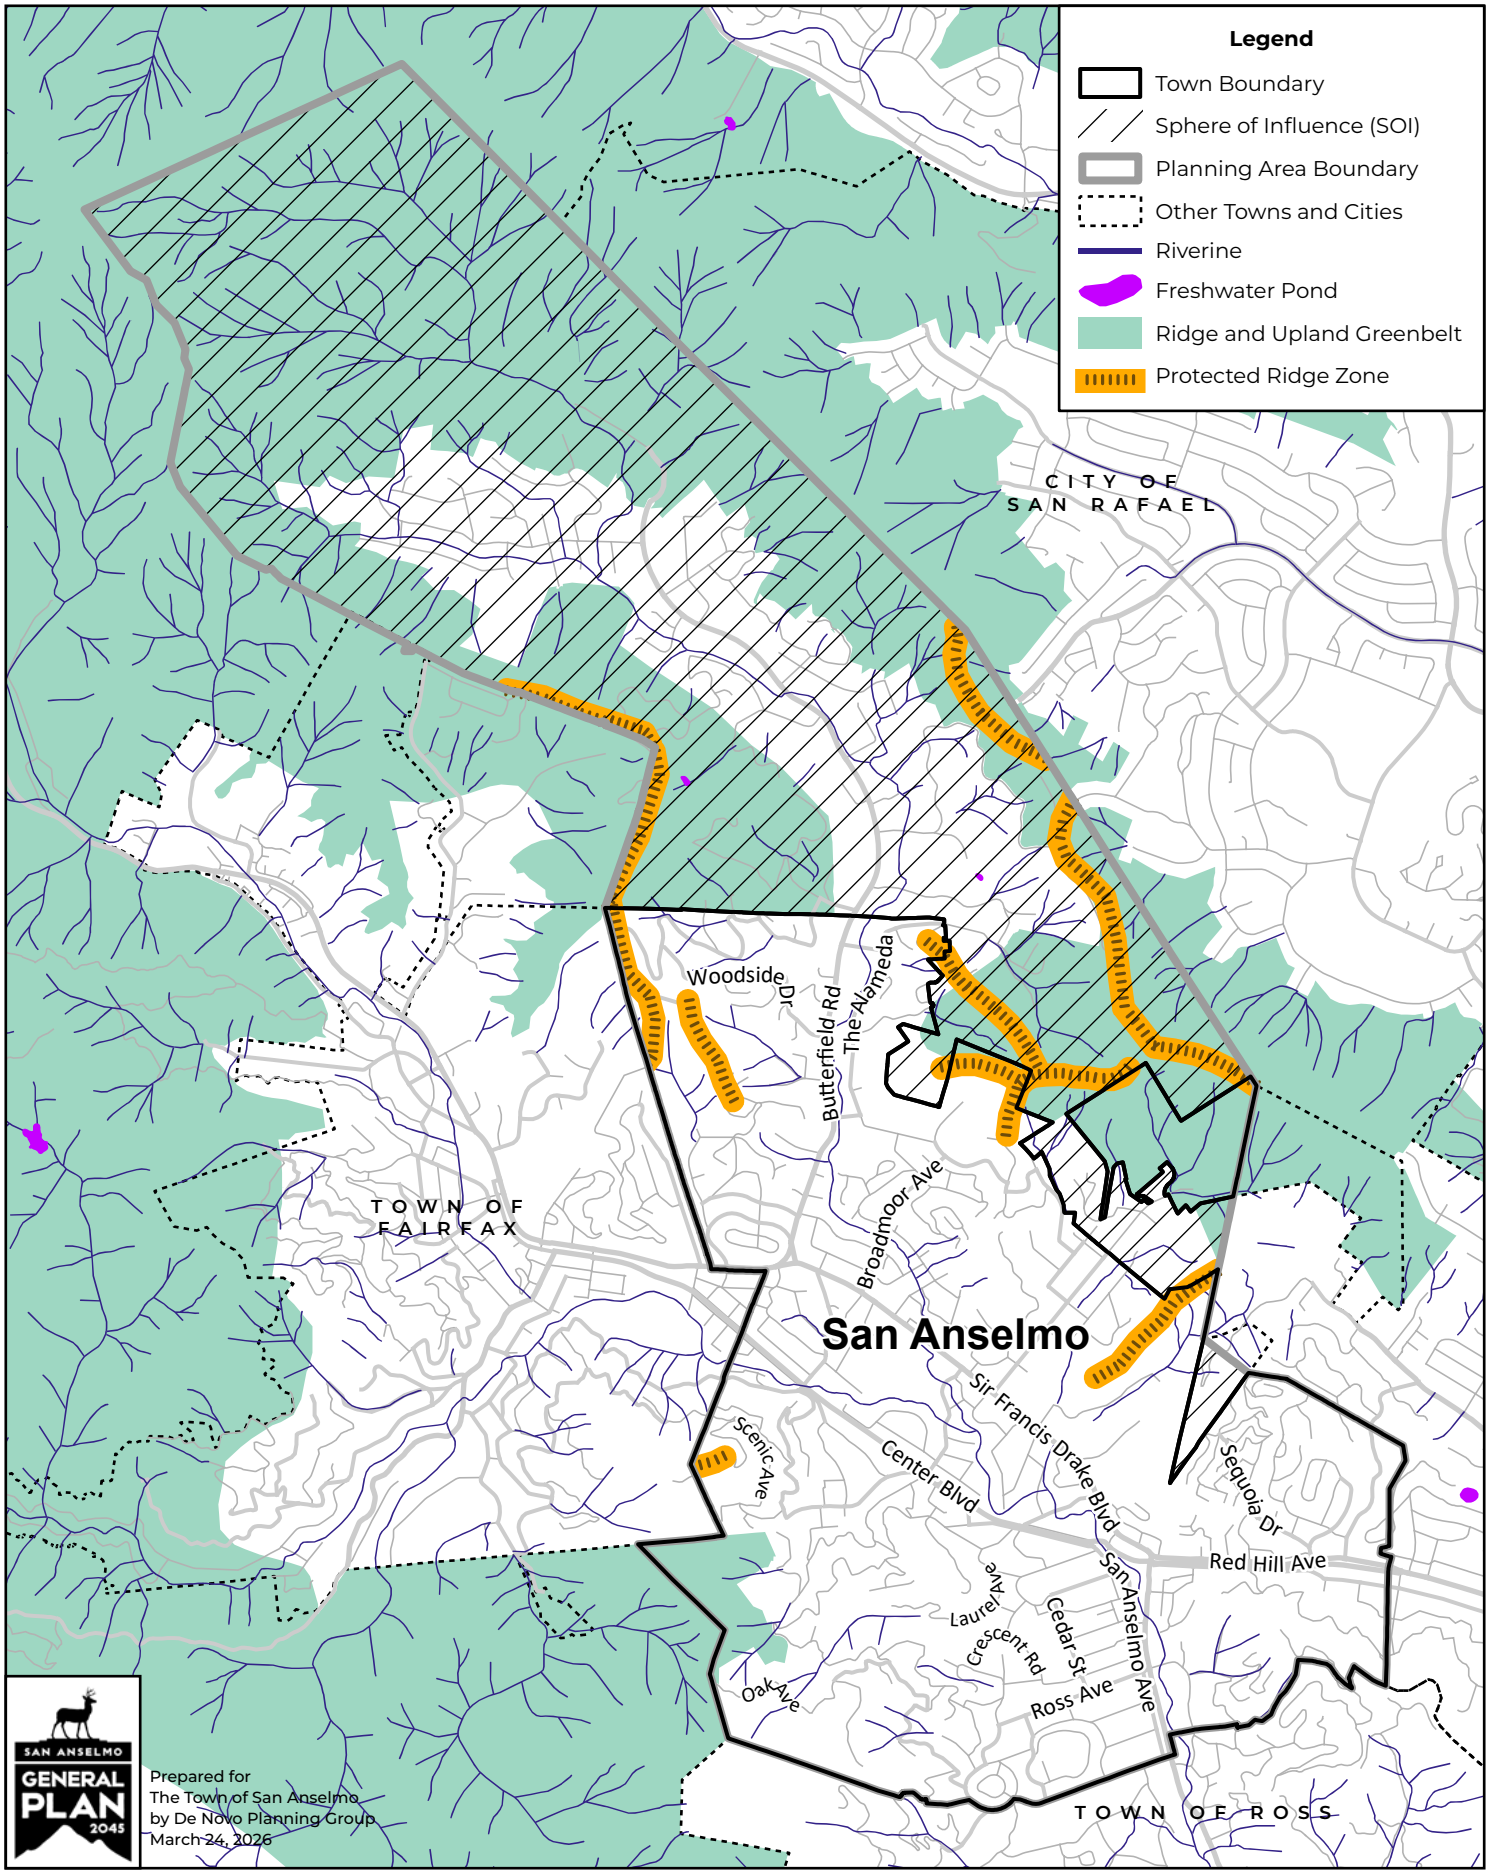

San Anselmo's commercial corridors along Sir Francis Drake Boulevard and Red Hill/Greenfield Avenues are vital to the San Anselmo community and the broader Marin County region. Serving as key transportation routes, these corridors also act as visual gateways to the Town, shaping how many visitors first experience San Anselmo.

Attractive, pedestrian-oriented design is essential when redeveloping commercial corridors.

Because the General Plan supports the redevelopment of aging and underutilized parcels, these corridors present important opportunities for reinvestment and new development. Goals, policies, and actions related to community design ensure that redevelopment results in high-quality architecture and site design that create attractive, welcoming entries to the Town.

Along Greenfield Avenue and the portion of Sir Francis Drake Boulevard south of The Hub, pedestrian connectivity is especially important. The General Plan encourages active ground-floor uses, such as storefronts and businesses that open directly onto the street, to promote pedestrian activity and economic vitality.

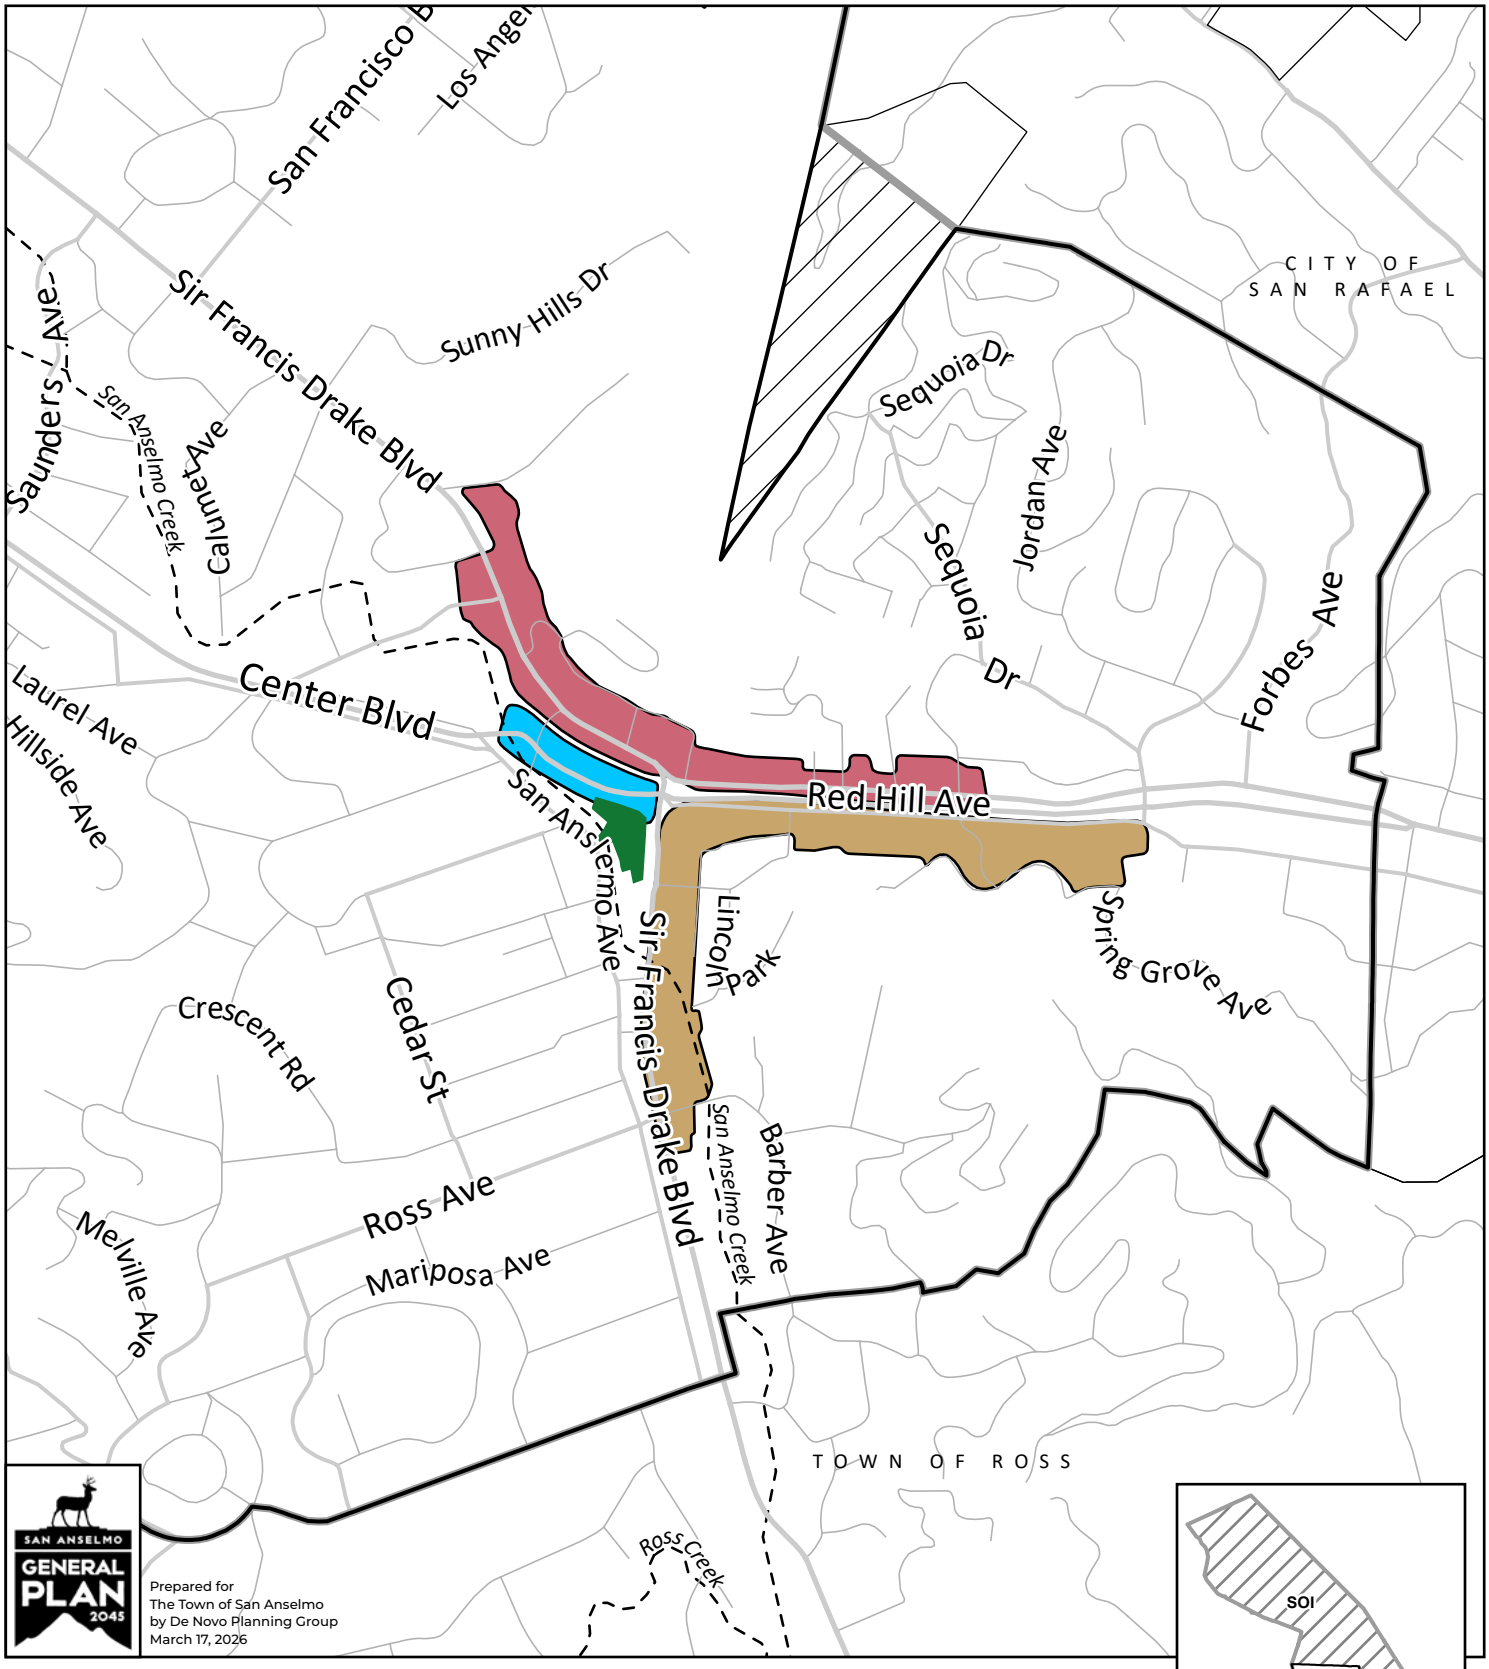

Furthermore, goals, policies, and actions support the enhancement of the public right-of-way through added street trees and landscaping, and pedestrian amenities, creating a more comfortable, shaded, and engaging environment. Together, these improvements will help reinforce the pedestrian-oriented character that defines San Anselmo's commercial corridors.

Commercial Corridors

2.5 DEVELOPMENT PROJECTIONS

Since the adoption of the previous General Plan in 1988, San Anselmo has experienced limited land use changes. Land use patterns have remained largely consistent over the past 50 years, and the town now contains very few vacant parcels. Most remaining undeveloped land is constrained by steep slopes, wildfire risk, flooding, and landslide hazards. As a result, future growth in San Anselmo will occur primarily through the redevelopment or intensification of existing developed areas.

Marin County's population is projected to decline by 2%, while residents age 65 and older are projected to comprise one-third of the population.

As of 2025, San Anselmo contained approximately 5,621 housing units, the majority of which were single-family detached homes, and about 1,051,000 square feet of commercial and non-residential uses, as shown in Table LU-3 below. If all development allowed by the General Plan were fully realized by 2045, the town could accommodate 7,900 units and approximately 1.8 million square feet of commercial and non-residential uses.

Development projections are based on an analysis of vacant and underutilized parcels and their potential use under the applicable land use designations. Underutilized sites are generally defined as those developed at 60 percent or less of the maximum permitted residential density or 50 percent or less of the maximum floor area ratio (FAR).

These projections are theoretical and represent the maximum buildout potential under the General Plan. In practice, it is unlikely that every parcel will develop to its maximum capacity during the planning horizon. Actual growth will depend on market conditions, property owner decisions, infrastructure capacity, and site-specific constraints.

Table LU-3 Development Projections

Land Use	Existing Built	Additional Development Potential	Development at Build-Out
Residential	5,621 units[1]	2,279 units[3]	7,900 units
Commercial and Other Non-Residential	1,051,000 sq. ft.[2]	752,133 sq. ft.	1,803,133 sq. ft.

[2]Town of San Anselmo Economic Development Analysis Report. Square footage is estimated from CoStar Group data.
[3]Includes 319 accessory dwelling units.

2.6 NAVIGATING TOWARDS 2045

San Anselmo's land use policies will evolve thoughtfully as demographic shifts reshape the needs of residents. An aging population, changing household compositions, and increasing diversity will guide decisions about where and how new housing forms, community spaces, and services are integrated. The Town will refine land use strategies to support a wider range of housing options, foster inclusive neighborhoods, and ensure that local businesses can adapt to emerging patterns in how people live, work, and gather. This approach will allow San Anselmo to maintain its character while responding to the social and economic realities of a dynamic population.

Climate change and new technologies will also play a defining role in shaping land use over the next two decades. Policies will increasingly prioritize resilience through careful placement of development, enhanced protections for natural resources, and design standards that reduce risk from wildfire, flooding, and extreme heat. At the same time, advances in transportation, building systems, and digital infrastructure will influence how the Town plans for mobility, energy use, and the public realm. By continuously updating its land use policies, the Town will create a more sustainable and adaptable built environment that supports long-term community well-being.

Upholding the Town's belonging standard in land use decisions involves ongoing attention to ensuring that growth and investment

benefit a diverse range of residents and contribute to an inclusive, stable community. The Town will apply its DEIB principles as a guiding lens in evaluating land use priorities, promoting development patterns that enable renters, lower-income households, older adults, and residents of color to remain, participate, and thrive. Civic engagement processes will be designed to broaden participation and build trust by meaningfully connecting with residents whose voices have not always been fully represented.

2.7 GOALS, POLICIES, AND ACTIONS

2.7.1 GROWTH MANAGEMENT

Goal LU-A Manage future growth to prioritize a compact, walkable community, the efficient extension of urban services, preservation of natural and cultural resources, and protection of the area's environmental setting.

Policy LU-A.1: Sustainable Growth. Plan for responsible and balanced growth that maximizes efficient use of existing land resources and infrastructure, reduces sprawl, minimizes environmental impacts, and supports economic vitality.

Action LU-A.1.a: Implementation of Land Use Map. Implement the Land Use Map (Figure LU-1) by approving new development projects consistent with the land use definitions, densities, and intensities as set forth in this Element. Ensure consistency between the General Plan, Zoning Code, and other land use regulations.

Policy LU-A.2: Infill Development. Focus new development on vacant or underutilized parcels within the existing developed areas to maximize land use efficiency and prevent urban sprawl.

Policy LU-A.3: Public Infrastructure and Service Capacity for New Development. Coordinate growth and development with sewer, water, transportation, schools, fire protection, parks, waste disposal, and other service providers to ensure essential infrastructure and

services have adequate capacity to serve new development prior to approving entitlements or issuing building permits. Ensure anticipated traffic conditions are consistent with the Town's adopted Vehicle Miles Traveled (VMT) and Level of Service (LOS) standards. Require new development to pay its fair share of necessary infrastructure improvements to the extent allowed by law.

Action LU-A.3.a: Impacts of New Development on Infrastructure and Services. Analyze infrastructure and service capacity during development and CEQA review and require necessary improvements in consultation with provider agencies. Coordinate growth projections and long-term infrastructure planning with urban service providers, including water, sanitary, school, fire, and waste disposal agencies, to ensure adequate capacity for existing and future development. Monitor land use changes and new development and adjust growth projections as warranted.

Policy LU-A.4: Annexation and Sphere of Influence Coordination. Coordinate with Marin County and LAFCo on annexation proposals and development within the Town's Sphere of Influence to ensure consistency with the General Plan, compatibility with nearby land uses, and efficient delivery of services. Support annexations of contiguous, developed unincorporated areas when they enhance the community, further General Plan goals, eliminate unincorporated islands, have resident support, and can be served in a fiscally responsible manner without adversely affecting service levels for existing residents.

Action LU-A.4.a: Municipal Service Review. Actively coordinate with LAFCo during the regular Municipal Service Review (MSR) process to provide data on the capacity of existing services and fiscal sustainability. Use the MSR as a tool to ensure future land-use and infrastructure decisions are consistent with the General Plan.

Action LU-A.4.b: Resolution of Parcels with Split Jurisdiction. Actively support and coordinate with Marin County LAFCo and neighboring jurisdictions to facilitate the annexation and de-annex-

ation of properties, as appropriate, that are currently split across multiple jurisdictions.

Policy LU-A.5: Reserve Areas. Consider increases in density and modified development standards or incentives in areas designated as Reserve Areas (see Glossary) on Figure LU-2 to address future housing needs and help meet the Town's future Regional Housing Needs Allocations, if necessary.

See the Sustainability, Climate Change, and Resiliency Element, the Parks, Recreation, and Public Facilities Element, and the Housing Element for additional policies and actions related to sustainable land uses, public facilities, and housing.

Goal LU-B Allow for a variety of land uses that accommodate the needs of a socially and economically diverse community.

Policy LU-B.1: Commercial Development. Evaluate the size and intensity of commercial businesses to support a balanced, vibrant local economy and ensure they align with the town's unique qualities.

Policy LU-B.2: Cannabis Business Uses. Preclude cannabis business uses within the Town limits except medicinal cannabis delivery from

businesses located outside of the Town limits. Recreational cannabis delivery from businesses located outside of the Town limits may be allowed if required by State law.

Policy LU-B.3: Mixed-Use Development. Encourage mixed-use development in downtown and along the Sir Francis Drake Boulevard and Red Hill Avenue/Greenfield Avenue corridors as a means of increasing the customer base for local businesses while creating new mixed-use and housing opportunities for residents in close proximity to services and transit.

Policy LU-B.4: Redevelopment with Housing. Support the reuse of Town-identified properties for housing, prioritizing affordable and multifamily development through incentives such as site prioritization, streamlined approvals, or waivers to development standards and permit fees.

Action LU-B.4.a: Affordable Housing Overlay Zone. Amend the Municipal Code to identify maximum density and floor area ratio and minimum parking requirements for the Affordable Housing Overlay Zoning District.

Policy LU-B.5: Neighborhood Commercial. Encourage the retention and improvement of neighborhood-serving retail stores and services.

Action LU-B.5.a: Revitalization Incentives. Consider zoning and economic development incentives that keep local neighborhood centers viable, such as allowing additional floor area when neighborhood-serving uses are included or retained.

Policy LU-B.6: Reuse of Private Schools and Church Sites. If redevelopment of a private school and church site is sought by the landowner, encourage redevelopment with land uses compatible with development in the immediate area, with complementary scale and public benefits such as affordable housing, childcare facilities, and public open space.

Action LU-B.6.a: Rezoning of Public School Sites. Rezone public school sites from residential to the Public Facilities District and allow educational uses and housing development up to 40 units per acre.

Policy LU-B.7: Parks. Strive for a balanced distribution of neighborhood and community parks throughout the town.

Action LU-B.7.a: Parks Zoning District. Amend the Municipal Code to create a new Parks zoning district and apply it to parcels having a Parks land use designation.

See the Parks, Recreation, and Public Facilities Element and the Housing Element for additional policies and actions related to parks, public facilities, and housing.

2.7.2 COMMUNITY DESIGN

Goal LU-C Preserve and enhance San Anselmo's natural setting as a unique asset that supports the community.

Policy LU-C.1: Open Space and Natural Resources. Protect and enhance open spaces and scenic vistas, natural features, and wildlife habitats, ensuring that development respects these natural assets and integrates with the town's natural environment.

Action LU-C.1.a: Development in Open Space and Low Density Areas. Prohibit development in areas designated as Open Space on the Land Use Map (Figure LU-1) and continue to allow very low-density residential development on private property in areas designated as Very Low Density and Single-Family – Conservation on the Land Use Map (Figure LU-1).

Policy LU-C.2: Hillside Protection. Protect the visual integrity and natural resources of San Anselmo's hillsides. Where hillside construction is permitted, design structures to:

- Minimize visual impacts by limiting building size and height, screening the structure within the existing landscape, minimizing glare and light spillage, and using exterior colors and materials that blend with the surrounding environment,
- Limit grading to preserve the existing topography,
- Provide slope and foundation stability, drainage, and erosion control,
- Provide adequate parking and emergency access,
- Address Wildland Urban Interface requirements, and
- Restore natural habitats.

Action LU-C.2.a: Hillside Density District. Amend Table 4D, R-1-H (Hillside Density District) Parcels, in the Municipal Code to remove outdated parcel numbers and update parcel-specific density limits to align with State law. The density on the remaining hillside parcels shall be no greater than the number of dwelling units specified in the table.

Policy LU-C.3: Ridge Zone Protection. Prohibit development, including structures, roads, and public facilities within the protected ridge zone, which is 150 horizontal feet in both directions from the lowest elevation of the ridgeline, or 50 feet vertically, whichever is more restrictive, of visually prominent ridgelines, identified on Figure LU-3. Exceptions may be considered on existing legal lots when it is demonstrated that development outside of these areas is not feasible for geologic, soils, or hydrologic reasons, and development would not impact a unique natural habitat. In such cases, visibility of new structures should be minimized by limiting building size and height and integrating the structure within the existing landscape.

Action LU-C.3.a: Conservation and Low Density Development Review. Continue to require design review for new structures and upper-floor additions for hillside or protected ridge zone parcels to minimize visual, environmental, and safety impacts.

Action LU-C.3.b: Hillside and Ridge Zone Development Regulations. Prepare and adopt objective development and design standards in the Municipal Code to minimize the impacts of hillside and protected ridge zone development, including but not limited to:

- Creating opportunities to cluster development and/or transfer of development rights to preserve open space, natural features, and scenic resources,

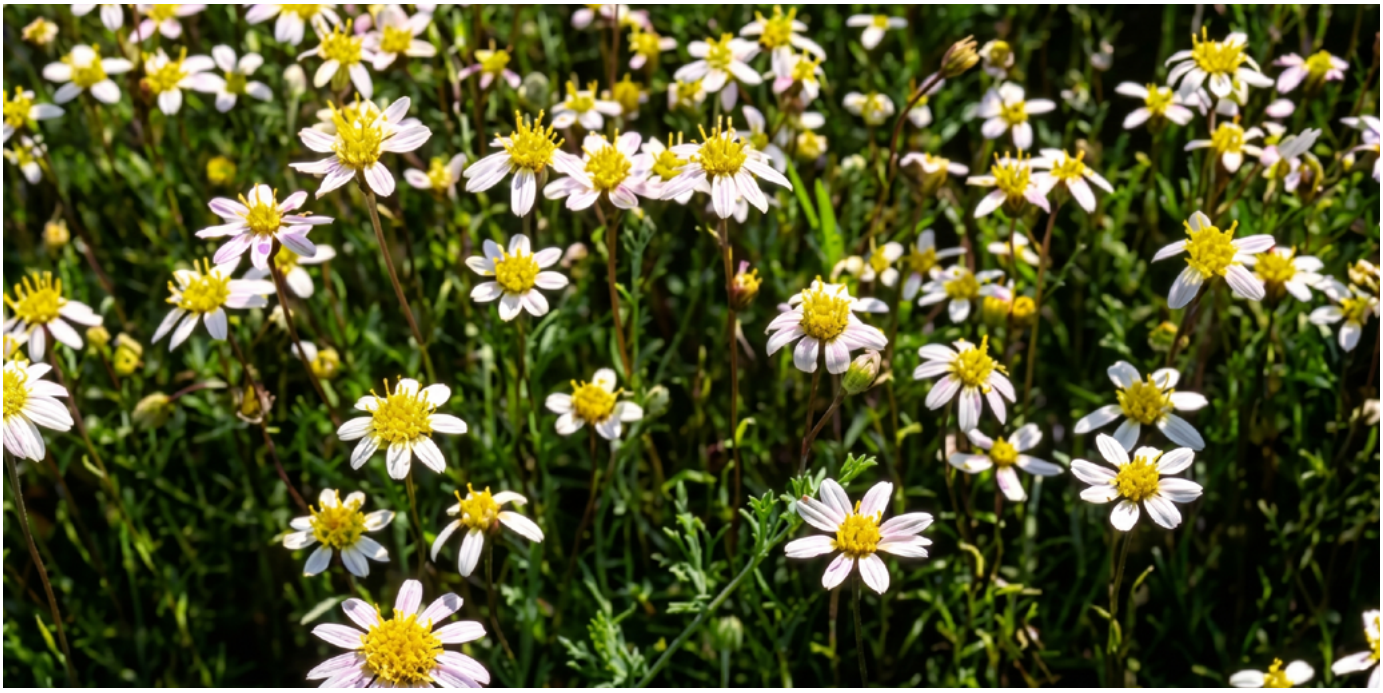

- Limiting grading to preserve natural topography, minimize erosion, and prevent slope failure,

- Regulating building design and scale, including height and massing, to achieve residential development that is compatible with existing hillside neighborhoods,
- Minimizing off-site and night sky impacts of outdoor lighting and glare, and
- Establishing fire safety standards.

Incorporate the protected ridge zone development restrictions in Policy LU-C.3 into the Zoning Code.

Policy LU-C.4: Habitat Continuity and Biodiversity. Provide habitat continuity between open space and the built environment by promoting the use of locally native plants and trees throughout the community.

See the Conservation and Open Space Element for additional policies and actions related to conservation, hillside development, and open space protection.

Endangered species: white rayed pentachaeta

Goal LU-D Strengthen San Anselmo's unique community fabric by maintaining its human-scaled pedestrian-friendly built environments and public places, and complementing these with attractive and context-sensitive new development.

Policy LU-D.1: Community Character and Sense of Place. Ensure new development enhances San Anselmo's unique character through context-sensitive, human-scaled design that complements historic patterns and supports high-quality construction.

Policy LU-D.2: Design Excellence and Livability. Require new development to use context-sensitive, human-scaled, and high-quality design that:

- Enhances San Anselmo's unique character and complements historic development patterns;
- Fosters social interaction and provides access to air, light, natural surroundings, and open space; and
- Respects the scale and form of existing commercial and residential neighborhoods while accommodating high-quality contemporary design; and
- Prioritizes habitat value through climate-appropriate landscaping in suburban and urban settings.

Action LU-D.2.a: Development Review. Use objective development standards, the design review process, and the California Environmental Quality Act in the review of proposed development projects to promote high quality design, ensure compatibility with surrounding properties and uses, and minimize environmental impacts and conflicts between residential and non-residential uses.

Action LU-D.2.b: Update Regulations. Regularly evaluate and update development standards to ensure that new development is compatible with the natural surroundings and built environment of the immediate neighborhood.

Policy LU-D.3: Community Gathering Places. Promote and integrate well-designed public gathering places throughout the town to strengthen community connections and plan for and integrate well-designed public gathering places throughout the town that foster a sense of belonging and are welcoming and accessible to people of all backgrounds, ages, incomes, and abilities.

Action LU-D.3.a: Gathering Place Design. Emphasize the design and physical function of commercial districts as community gathering places. Where feasible, require public plans and projects to include community services, public space, and amenities that create a strong sense of place and opportunities to congregate.

Action LU-D.3.b: Outdoor Dining and Gathering Areas. Encourage physical design and layout that supports outdoor dining, walkability, and a cohesive human-scaled streetscape.

Action LU-D.3.c: Pilot Urbanism Projects. Test small-scale, temporary placemaking projects (e.g., parklets, pop-up plazas) to evaluate possible long-term public improvements that foster community gathering.

Policy LU-D.4: Downtown. Maintain and enhance downtown as a pedestrian-friendly center for community life, with a dynamic mix of commercial and cultural destinations, businesses and housing, and attractive amenities.

Action LU-D.4.a: Pedestrian-Friendly Building Frontage. Encourage ground-floor businesses and building designs along San Anselmo Avenue (between Tamalpais and Bolinas Avenues) that actively engage pedestrians through frequent entrances, ample windows providing views into the businesses, and thoughtful façade design.

Action LU-D.4.b: Pedestrian-Friendly Connections. Strengthen pedestrian connections that extend from downtown to other local destinations, especially to Creek Park and across Sir Francis Drake Boulevard. Highlight and enhance downtown's paseos and bridges through signage, lighting, and other improvements.

Action LU-D.4.c: Public Spaces and Programming. Provide lively public spaces for programming with cultural activities and events, such as Live on the Avenue.

Action LU-D.4.d: San Anselmo Avenue Master Plan. Develop a master plan for San Anselmo Avenue between San Rafael and Bolinas Avenues to address land use, circulation, parking, economic viability, design, walkability, and other area-specific considerations holistically. The plan should include strategies for public space enhancements, façade improvements, streetscape beautification and habitat restoration, pedestrian and bike infrastructure, parking solutions, and programs that support businesses.

Policy LU-D.5: Commercial Corridors. Enhance San Anselmo's commercial corridors along Sir Francis Drake Boulevard and Red Hill/Greenfield Avenues as shown in Figure LU-4 to become vibrant, mixed-use corridors with more housing and economic vitality. Design corridor improvements to address unique land use and circulation conditions and the surrounding context.

Action LU-D.5.a: Greenfield Avenue and Sir Francis Drake Boulevard (South). For development along Sir Francis Drake Boulevard (south of the Hub) and along Greenfield Avenue (east of the Hub) as shown in Figure LU-4, update use and development standards to:

- Encourage mixed-use development where housing can be above or behind commercial or other public-serving uses;

- Encourage pedestrian-friendly ground-floor commercial design where storefronts face the sidewalk, canopies and awnings provide shade and support business identity, signage is oriented to pedestrians, and visibility between the sidewalk and building interiors visually connects pedestrians to businesses; and

- Adjust standards that may limit development feasibility on shallow and hillside lots to allow zero front setback and encourage generous windows and frequent entrances on ground-floor facades.

Action LU-D.5.b: Red Hill Avenue and Sir Francis Drake Boulevard (North). Along Red Hill Avenue and Sir Francis Drake Boulevard (north of the Hub) as shown in Figure LU-4, update use and development standards to:

- Require landscaped building setbacks; and

- Allow uses that have community support but are not currently allowed in the C-L District, such as restaurants and entertainment uses.

Action LU-D.5.c: Center Boulevard near the Hub. Facilitate new mixed-use development along Center Boulevard between San Anselmo Avenue and Sir Francis Drake Boulevard as shown in Figure LU-4 by working proactively with property owners and potential developers to support both housing development and the continuation of existing community-serving commercial uses along this important gateway to downtown.

Action LU-D.5.d: Streetscape Design and Beautification. Plan and fund streetscape improvements along the town's commercial corridors to make them safer, more attractive, and accessible. These upgrades and plans may include:

- Developing a streetscape master plan for Greenfield Avenue and Sir Francis Drake Boulevard (North) to guide future improvements in the public right-of-way;
- Updating sidewalks and adding pedestrian-friendly lighting, seating, and landscaping to create welcoming public spaces;
- Improving pedestrian crossings on Sir Francis Drake Boulevard, including the Hub intersection, with elements such as shorter pedestrian crossing distances and traffic-calming features;
- Adding landscape strips and street trees between sidewalks and traffic lanes along Red Hill Avenue and Sir Francis Drake Boulevard (North) where feasible;
- Planting street trees along sidewalks on Greenfield Avenue and Sir Francis Drake Boulevard (South);
- Installing pedestrian and transit infrastructure improvements, such as wider sidewalks, landscaping, seating, and traffic-calming elements, in new development and redevelopment along Center Boulevard near the Hub intersection;
- Expanding and upgrading bicycle facilities and bicycle-friendly infrastructure;

- Identifying funding sources to make these streetscape improvements possible; and

- Prioritizing native plants in municipal plantings to promote biodiversity.

Policy LU-D.6: Gateways and Wayfinding. Enhance San Anselmo's sense of place and ease of navigation within it with gateway features and wayfinding.

Action LU-D.6.a: Gateways Location and Design. Create attractive gateways at well-traveled entry points into San Anselmo, including the entry points along Sir Francis Drake Boulevard, Center Boulevard, and Red Hill Avenue, through landscaping, signage, lighting, and other outdoor design features.

Action LU-D.6.b: Wayfinding. Maintain and update, as necessary, wayfinding signage to direct motorists to the downtown and consider expansion of wayfinding signage to include other commercial districts.

Policy LU-D.7: Low-Impact Design. Encourage the use of low-impact design features and practices that minimize the environmental impacts of new development and public infrastructure, including features that minimize stormwater runoff, conserve energy and water, create pollinator and wildlife habitat, promote groundwater

recharge, and avoid urban heat island effects.

Policy LU-D.8: Age- and Disability-Friendly Communities. Plan for development patterns, infrastructure, transportation options, and community design that meet the needs of older adults, people with disabilities, and others with access and mobility needs, supporting accessibility, independence, and full participation in community life.

Action LU-D.8.a: Accessibility Standards for Public Spaces. Ensure public spaces, including parks, plazas, and community facilities, meet or exceed Americans with Disabilities Act (ADA) standards for accessibility. When feasible, incorporate features such as wheelchair-accessible paths, seating areas with shade, audible crosswalk signals, and clear signage to enhance usability for people of all abilities.

Action LU-D.8.b: Age-Friendly Land Use Planning. Collaborate with public agencies and local stakeholders to assess and incorporate age- and disability-friendly considerations, including access to services and proximity to transit, into land use decisions.

Action LU-D.8.c: Incentives for Universal Design. Offer incentives, such as reduced permit fees or expedited processing, for new developments that incorporate universal design principles.

See the Economic Vitality Element and the Parks, Recreation, and Public Facilities Element for additional policies and actions related to Town branding and wayfinding, commercial districts, the downtown, community gathering places, and age-friendly living.

Policy LU-D.9: Residential and Other Receptor Protections. Locate residences and sensitive receptors away from areas of excessive noise, smoke, dust, odor, and lighting, and ensure that adequate provisions, including buffers or transitional uses, such as office, professional, or commercial uses, separate the proposed residential uses from more intensive uses to ensure the health and well-being of existing and future residents.

Action LU-D.9.a: Employment-Generating Use Site Design. As part of the Town's development review process, continue to ensure that employment-generating projects are designed to minimize conflicts with residential uses and other sensitive receptors. Review of employment-generating projects should ensure that the following design concepts are addressed in projects that abut residential areas or sensitive receptors:

- Appropriate building scale and/or siting;
- Site design and features to protect residential uses and other sensitive receptors, developed or undeveloped, from impacts of non-residential development activities that may cause unwanted nuisances and to ensure that disadvantaged communities are not exposed to disproportionate environmental risks. The site design and features shall be based on best management practices as recommended by the California Air Resources Board (CARB), Bay Area Air District (BAAD), and the California Attorney General;
- Site design and noise-attenuating features to avoid exposure to excessive noise due to long hours of operation or inappropriate location of accessory structures;
- Site and structure design to avoid excessive glare or excessive impacts from light sources onto adjacent properties; and
- Site design to avoid unnecessary loss of community and environmental resources (archeological, historical, ecological, recreational, etc.).

Goal LU-E Preserve, protect, and enhance elements of the town's history to connect San Anselmo with the past.

Policy LU-E.1: Historic Preservation. Endeavor to protect from demolition or destruction or major alteration any building, feature, or site of local, State, or federal historic value.

Action LU-E.1.a: Historic Context Statement. Prepare a historic context statement to better understand the cultural and historical themes and patterns that shaped the town over time.

Action LU-E.1.b: Historic Survey and Inventory. Prepare a historic survey and maintain an inventory of potential sites and structures of architectural, historic, archeological, and cultural significance. Consider listing the most significant structures or sites on the California Register of Historical Resources and the National Register of Historic Places or adopting a local historic register.

Action LU-E.1.c: Historic Preservation Ordinance. Develop and adopt a historic preservation ordinance and program to protect historic resources and culturally important areas.

Action LU-E.1.d: Historic District Formation. Consider the establishment of a historic district(s). Upon establishment, apply to be a Certified Local Government in order to be eligible for grant funding related to historic preservation efforts.

Action LU-E.1.e: Historic Survey. Prior to any construction activities within or adjacent to historic resources in the town, including sites listed or eligible for the National Register of Historic Places or sites listed on or eligible for the California Register of Historic Resources Places, a qualified historian or architectural historian shall survey adjacent parcels for potential historic resources on those parcels. The survey shall include archival research, field inspection, and consultation with local historical societies or preservation organizations. Based on the survey findings, the project proponent shall develop a Historic Resource Protection Plan (HRPP) that outlines specific measures for the avoidance, protec-

tion, and documentation of those identified historic resources. If resources adjacent to the proposed project site are determined to be eligible for listing on the Historic Register, or are already registered as such, the HRPP shall include additional mitigation measures, such as avoidance, preservation in place, or data recovery to ensure that no significant historic resources are inadvertently damaged or destroyed during construction. Measures identified in the HRPP shall reflect the requirements identified in the Secretary of the Interior's Standards for the Treatment of Historic Properties. The HRPP shall be prepared by a qualified historian or architectural historian, and subject to review and approval by the Town of San Anselmo Community Development Director or the Historical Commission, as appropriate.

Policy LU-E.2: Preservation Organizations. Support the efforts of the San Anselmo Historical Commission and Historical Society to preserve and document the town's historical heritage and promote historical awareness and appreciation among residents.

Goal LU-F Maintain and enhance residential neighborhoods by supporting development design that is pedestrian-friendly and integrates with the immediate neighborhood and natural surroundings.

Policy LU-F.1: Neighborhood Livability. Foster vibrant, safe, and well-connected neighborhoods that offer a high quality of life for residents, with access to essential services, parks, and recreational spaces.

Action LU-F.1.a: New Single-Family Development. Require new single-family residential development, including rehabilitation and expansion projects, to maintain and enhance neighborhood visual and architectural design through context-sensitive building scale and materials, privacy, and architectural style.

Action LU-F.1.b: New Multifamily Development. Require new multifamily development, including rehabilitation and expansion projects, to enhance neighborhood visual and architectural style through context-sensitive building and human-scale elements and details, amenities, open spaces, and high-quality materials. Avoid monotonous structures through variation of building heights and exterior wall and roof articulation.

Action LU-F.1.c: Livable Streets. Within residential neighborhoods, maintain and expand pedestrian and bicycle facilities that are shaded, safe, and foster neighborhood connectivity.

See the Safety Element, Sustainability, Climate Change, and Resiliency Element, the Circulation Element and the Housing Element for additional policies and actions related to sustainable and resilient development, hazard mitigation in development, transportation, and housing.

Goal LU-G: Artistic and Cultural Expression. Integrate public art that enhances the cultural life of the community.

Policy LU-G.1: Cultural Placemaking. Promote arts-driven and culturally centered placemaking efforts by supporting public art, multicultural events, and community spaces that celebrate the diverse identities and histories of the San Anselmo population.

Action LU-G.1.a: Public Art Installations. Consider establishing a rotating or permanent public art program to highlight local artists.

Action LU-G.1.b: Art with Development. Encourage the installation of public art in conjunction with new public and private development and major rehabilitation or major expansion of existing development.

See the Economic Vitality Element and the Parks, Recreation, and Public Facilities Element for additional policies and actions related to community gatherings and events.

2.7.3 GOVERNANCE AND INCLUSION

Goal LU-H Facilitate the authentic, equitable, and inclusive participation of all residents in local government and decision-making.

Policy LU-H.1: Effective Governance. Practice responsive and effective governance through a planning, budgeting, and implementation processes that are transparent, easy to understand, and accessible to residents of different languages, abilities, and levels of familiarity with government processes, while remaining predictable and timely.

Action LU-H.1.a: Community Planning and Budget Transparency Dashboard. Provide information about Town services, programs, resources, and decision-making in clear, accessible formats, including through a community planning and budget transparency dashboard. Ensure that priority materials, such as the General Plan summary, major public hearing notices, and housing-related program information, are available in multiple languages. Annually review and update the Town's language access approach as community demographics evolve. Use a variety of communication methods, including digital platforms, social media, email newsletters, and in-person outreach, to broaden engagement and reach residents who may not typically participate in municipal communications.

Action LU-H.1.b: Technology in Governance. Continue to explore and implement technologies that improve the efficiency and accessibility of Town services, enhance public safety, support local businesses, and expand opportunities for residents, including those with limited English proficiency or limited digital access, to engage with Town processes.

Action LU-H.1.c: Accessible and Inclusive Communications. Establish and maintain responsive and effective governance through planning, budgeting, and implementation processes that

are transparent, easy to understand, and accessible to residents of different languages, abilities, and levels of familiarity with government processes. Provide multiple, accessible options for public input, including formats that support individuals who may have difficulty verbalizing comments, and maintain predictable and timely processes. Maintain a language translation tool on the Town's public website to expand access for residents who prefer a language other than English, and provide priority materials, including the General Plan summary, major public hearing notices, and housing-related program information, in multiple languages. Periodically review and update language access approaches as community demographics evolve.

Policy LU-H.2: Fiscal Sustainability. Ensure the Town organization is financially and operationally sustainable.

Action LU-H.2.a: Budget and Capital Improvement Plan. Prepare an annual budget and capital improvement program that align with the General Plan.

Policy LU-H.3: Customer Service. Continuously improve the quality and responsiveness of Town services to enhance efficiency, effectiveness, customer service, and positive outcomes for employees, residents, businesses, and other stakeholders.

Action LU-H.3.a: Community Feedback. Regularly solicit feedback from service users and evaluate Town service performance using measurable metrics. Ensure performance data are publicly available.

Policy LU-H.4: Community Participation. Encourage and support inclusive public participation by reducing barriers to engagement, including meeting format, timing, language, and accessibility, and by fostering respectful dialogue that values differing perspectives in the development and review of policies, projects, and Town activities. Ensure that Town communications are accessible to all residents, including individuals with disabilities and other access needs.

Policy LU-H.5: Boards, Commissions, and Committees. Promote inclusive, equitable, active, and informed participation in governance by reducing structural barriers to participation and improving outreach, recruitment, and retention processes.

Action LU-H.5.a: Action Plans. Review and oversee the annual work plans of all boards, commissions, and committees, subject to Town Council approval.

Support inclusive participation by:

- Evaluating and implementing flexible meeting formats, including remote or hybrid options, to expand participation.
- Expanding outreach for boards and commissions through partnerships with community organizations and broader recruitment channels.
- Providing clear, accessible information about available positions, application processes, and expectations.
- Encouraging training and onboarding for members to support effective participation.

Action LU-H.5.b: Recruitment and Outreach. Develop and implement active recruitment strategies to broaden the demographic range of applicants for boards, commissions, and committees. Strategies shall include outreach to community-based organizations serving Marin County residents with connections to San Anselmo, distribution of vacancy listings through channels beyond the Town website, and tracking of outreach methods and applicant demographics in annual reporting.

Action LU-H.5.c: Participation Supports. Pursue grant funding and partnerships with the Recreation Department to develop supports that reduce barriers to civic service, including flexible and hybrid meeting formats, childcare options, and modest participation stipends where feasible. Provide equity lens orientation and ongoing training for new appointees to support effective and informed participation.

Policy LU-H.6: Youth in Government. Support and encourage youth and young adult involvement in government, especially on relevant issues such as climate change, education, transportation, recreation, and youth services.

Policy LU-H.7: Leadership in Equity, Inclusion, and Belonging. Establish the Town as a regional leader in the incorporation of diversity, equity, inclusion, and belonging principles into local decision-making and hiring practices, consistent with federal and State law. The Town shall work to increase diversity and representation across boards, commissions, committees, and Town staff, reflecting the community's full range of backgrounds, including differences in race, income, housing tenure, age, and other characteristics.

Action LU-H.7.a: Training and Education. Provide education and training on inclusion, equity, diversity, and belonging for San Anselmo staff, boards, commissions, committees, and other civic bodies, consistent with federal and State law. Provide an annual Brown Act refresher training, recorded and posted on the Town website for on-demand access, to ensure all board and commission members have consistent access to governance fundamentals regardless of when they joined.

Action LU-H.7.b: Equity Lens in Staff Reports. Within one year of General Plan adoption, revise Planning Commission and Town Council staff report templates to include a racial equity analysis section. This section shall require that project proposals and Town actions be assessed for their consistency with the General Plan's DEIB principles, and for their anticipated effects on historically underserved populations.

Action LU-H.7.c: Racial Equity in Recruitment and Appointments. In implementing State requirements related to equitable recruitment and personnel practices, apply an explicit racial equity lens to recruitment strategies, vacancy outreach, and hiring practices for Town positions and board and commission appointments.

Action LU-H.7.d: Trust-Building with Underrepresented Communities. Advance inclusive civic participation by expanding meaningful and welcoming opportunities for all residents to engage in local decision-making. Build on an understanding of the Town's history, including the displacement of Coast Miwok people, the legacy of racially restrictive housing covenants, and patterns of underrepresentation in local governance, to inform engagement practices that are inclusive, accessible, and responsive. The Town shall develop and implement a trust-building strategy that removes barriers to participation and fosters strong, lasting relationships with the community. This strategy shall include hosting

regular community listening sessions in formats and locations that broaden participation; tracking and transparently reporting on community engagement to better understand participation and guide outreach; and continuously evaluating and refining Town processes and governance practices to reflect and advance the Town's belonging standard.

Policy LU-H.8: Inter-Agency Collaboration. Continue to collaborate with surrounding jurisdictions and special districts regarding regional issues such as population growth, water supply, traffic congestion, climate change and sustainability, transportation, the provision of infrastructure and services, economic growth, and natural hazards.

Policy LU-H.9: General Plan Implementation. Maintain consistent and effective implementation of the General Plan through regular review, update, and coordination of Town land use regulations, policies, and programs. Periodically review participation in Town boards, committees, commissions, and engagement processes relative to community demographics, and identify strategies to improve representation over time.

Action LU-H.9.a: Municipal Code Consistency. Revise the Zoning Map and Municipal Code to ensure consistency between the General Plan, Zoning Ordinance, and other land use regulations and to reflect the goals, policies, densities, intensities, and land use designations of the General Plan.

Action LU-H.9.b: General Plan Updates. Update the General Plan as necessary to assure compliance with State law and to reflect changing Town needs and priorities.

Action LU-H.9.c: Annual Review of Implementation Actions. Annually review the implementation of General Plan actions and update priorities based on relevance, available funding, and staffing capacity. This review shall include an assessment of progress on equity-related actions and outcomes, using the belonging standard established in Section 1.9 as the evaluative framework. The Town shall draw from the Racial Equity Committee's Action Plan (May 2023), as well as future equity-focused plans and initiatives, as complementary resources to inform ongoing implementation and decision-making. Provide public access to implementation status, annual reviews, and related resources through a dedicated General Plan Implementation webpage to support transparency and ongoing public engagement.

Action LU-H.9.d: Five-Year General Plan Status Review. Every five years, prepare and present to the Town Council a General Plan Status Report evaluating progress toward key goals and the continued relevance of General Plan policies. The report shall identify changes in State law, community conditions, hazards/climate considerations, infrastructure and service capacity, and implementation progress, and shall recommend whether targeted amendments or a focused update work program is warranted, consistent with available funding and staffing.

See the Circulation Element, Open Space and Conservation Element, Economic Vitality Element, Parks, Recreation, and Public Facilities Element, and the Sustainability, Climate Change, and Resiliency Element for additional policies and actions related to diversity, equity, inclusion, belonging, customer service, performance data, and community engagement.

3. OPEN SPACE AND CONSERVATION

San Anselmo's natural environment is central to the community's identity; residents value the open hillsides, creeks, and habitats that shape the town's unique sense of place. The Town is committed to expanding and safeguarding open space, ecological resources, and vital wildlife corridors as climate change intensifies the need for resilient landscapes and protected natural areas.

Jump to Goals, Policies, and Actions

3.1 PURPOSE OF THE ELEMENT

The purpose of this element advances equitable access to parks and open space, ensuring that natural and recreational resources serve the full range of San Anselmo's residents, including lower-income households, communities of color, people with disabilities, and renters. Its policies are grounded in the Town's belonging standard: open space should be not just physically accessible but genuinely welcoming to everyone who lives here.

The Open Space and Conservation Element establishes a framework for guiding how San Anselmo will protect, maintain, and enhance its natural and cultural resources for the benefit of current and future generations.

Natural resources, including open spaces, habitat, wildlife, plants and trees, air, water, provide essential benefits such as biodiversity, reducing flood risk, protecting against hazardous conditions, and advancing climate change mitigation and adaptation.

Cultural resources include buildings, sites, structures, or objects with archeological, cultural, or tribal significance.

The Town recognizes that development of open space lands can degrade its natural resources and diminish the many benefits they provide. Accordingly, the Town seeks to discourage the conversion of open space to urban uses and to expand the protection of these lands.

The Open Space and Conservation Element includes the following sections:

3.2 Open Space. Identifies open space areas in San Anselmo.

3.3 Natural Communities and Ecological Resources. Describes the natural habitats in San Anselmo, including grasslands, woodlands, and developed lands, and the wildlife and plants that occur in the San Anselmo vicinity.

3.4 Watersheds and Waterways. Provides an overview of San Anselmo's watershed and creeks.

3.5 Water Quality. Describes pollutants impacting streams and measures to protect water quality for wildlife and natural habitats.

3.6 Air Quality. Describes air quality and pollutants in the San Anselmo area.

3.7 Cultural Resources. Provides an overview of human presence in the San Anselmo area and describes archaeological and cultural resources.

3.8 Navigating Towards 2045. Emphasizes the Town's commitment to equitable access to open space by prioritizing connections to underserved neighborhoods and ensuring that open spaces and trails are designed and programmed to serve a diverse community. The section also addresses how environmental, social, and technological changes may influence how the Town plans for and manages open space and natural resources in the future.

3.9 Goals, Policies, and Actions. Identifies goals, policies, and actions to protect and conserve natural and cultural resources.

When asked what makes San Anselmo a great place to live, work, and visit, residents overwhelmingly pointed to its natural environment and open space.

3.2 OPEN SPACE

Open space and preservation of the natural environment are defining and highly valued characteristics of San Anselmo. A variety of open space areas, ranging in type, size, and function, are located throughout the planning area. These areas serve multiple purposes, including the protection of natural resources, the provision of outdoor recreation opportunities, and the preservation of Native American cultural sites. Open spaces also contribute to public health and safety by reducing flood risks, providing protection from hazardous areas, and supporting the town's resilience to climate change.

> "I'm so grateful about the recent protection of Bald Hill - I think this is a great example of a smart acquisition given it connects to the larger Tam Watershed and state parks."

The Town of San Anselmo has a long-standing history of community-based efforts to preserve open space. In 1981, the Town established the Open Space Committee to help implement the goals and objectives of the General Plan. The results of these efforts are reflected in Figure OSC-1. In addition to planning and advocating for the protection of open space, the Committee supports fundraising efforts and, through 2025, has contributed to nine open space land acquisitions.

The Open Space Committee has also supported the creation of recreational resources, including the Red Hill Trail and the Memorial Ridge Trail, and continues to assist with efforts to restore and enhance the ecological health of the Town's open spaces. Public outreach through events, publications, and a dedicated website helps keep the community informed about open space resources and ongoing projects.

Table OSC-1: Public Open Space in the Planning Area

	Acres
Town of San Anselmo	
Bald Hill-Adjacent Open Space	0.8
Frederick Faude Park	15.0
Halperin Park	3.9
Hawthorne Hills Open Space*	32.9
Kite Hill	0.5
Oak Park	0.9
Red Hill Open Space	9.0
Sir Francis Drake Boulevard- Butterfield Road Landscape	0.2
Sorich Ranch Park	61.3
Subtotal	124.5
Marin County Open Space District	
Bald Hill Open Space Preserve*	32.6
Terra Linda/Sleepy Hollow Divide Open Space Preserve	1,082.9
Subtotal	1,115.5
Total	**1,240**

*Acreage does not include land outside the SOI.

The planning area consists of 1,240 acres of protected and publicly owned open space land as shown in Table OSC-1 and Figure OSC-1. Of this total, nearly 125 acres are owned and managed by the Town, while the remaining open space areas within the unincorporated planning area are owned and managed by the Marin County Open Space District.

In addition, Figure OSC-1 identifies areas within and adjacent to the planning area that the Town seeks to acquire or otherwise permanently protect as dedicated open space. Policies and actions contained in Section 3.9 emphasize the preservation and conservation of existing open space lands, the expansion of the open space network, and the maintenance of appropriate public access, for recreation and enjoyment.

Sorich Ranch Park, Faude Park, and other Town-owned open space parks also provide passive recreational opportunities and are part of the Town's broader park and recreation system. See the Parks and Recreation Element for additional policies related to recreation, public access, trails, and park use.

Protected Open Space

3.3 NATURAL COMMUNITIES AND ECOLOGICAL RESOURCES

Although most land within the San Anselmo town limits is developed with urban land uses, the planning area includes significant areas of natural landscape, as shown in Figure OSC-2. The hillside and open space surrounding the community are characterized primarily by annual grasslands and coastal oak woodlands, which support a variety of native plant and wildlife species.

Vegetation in the planning area provides habitat for both common and special-status wildlife. Commonly observed wildlife species include California ground squirrel, California vole, black-tailed deer, coyote, raccoon, opossum, striped skunk, gray fox, bobcat, red-tailed hawk, great horned owl, turkey vultures, gopher snake, garter snake, and western fence lizard, as well as several bat species and numerous native insect species. Mountain lions are occasionally sighted in the hills, and steelhead trout use San Anselmo Creek, which also historically supports coho salmon.

Locally common and abundant wildlife species are integral components of the ecosystem. As habitat areas become more fragmented by urban development, many species have adapted to using ornamental vegetation for cover, foraging, dispersal, and nesting. Maintaining wildlife movement corridors, which connect otherwise isolated habitat areas, is essential to the survival of many species. In San Anselmo, riparian habitat, streams, and foothill access routes function as key wildlife movement corridors. Section 3.9 supports the preservation and enhancement of wildlife habitat and connectivity.

SAN ANSELMO GENERAL PLAN 2045

Land Cover Types

3.3.1 SPECIAL STATUS SPECIES

Special-status species are plant and animal species recognized for their rarity or vulnerability to habitat loss or population decline. These species are identified and protected under federal, State, and regional programs based on scientific and policy determinations of their status. The California Natural Diversity Database identifies 20 plant and 16 animal special status species within two miles of the San Anselmo planning area.

A special status species is a plant or animal that is endangered, threatened, or rare.

Under the Federal Endangered Species Act, endangered species are those in danger of extinction throughout all or a significant portion of their range, while threatened species are likely to become endangered in the foreseeable future. Federal laws also protect migratory birds, including their nests and eggs, as well as bald and golden eagles.

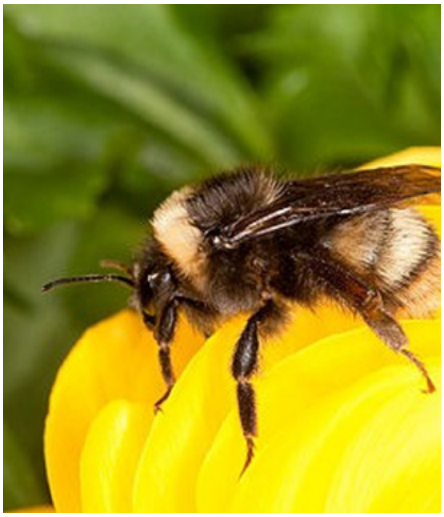

The California Endangered Species Act (CESA) provides additional protections for species that have special ecological, educational, historical, recreational, aesthetic, economic, and scientific value to the people of the State. Under CESA, species may be designated as endangered, threatened, or rare. The rare classification applies to native plant species that are not currently threatened with extinction but are found in such small numbers that they may become endangered if their environment deteriorates.

Threatened and endangered animal species known or suspected within two miles of the San Anselmo planning area include the salt-marsh harvest mouse, coho salmon, tidewater goby, California black rail, California Ridgway's rail, California spotted owl, western bumble bee, and northwestern pond turtle. Threatened and endangered plant species include the Marin western flax, Santa Cruz tarplant, white-rayed pentachaeta, two-fork clover, and North Coast semaphore grass.

A complete list of all special status species known or potentially occurring within the San Anselmo area is provided in the General Plan Existing Conditions Report. Policies and actions in Section 3.9 further guide the conservation and protection of special status species and their associated habitats.

The California Ridgway's rail is an endangered species found in saltwater and brackish marshes.

The western bumble bee is a candidate for listing as an endangered species by the State of California.

Marin western flax is a threatened plant species found in chapparal and grassland habitats.

3.4 WATERSHEDS AND WATERWAYS

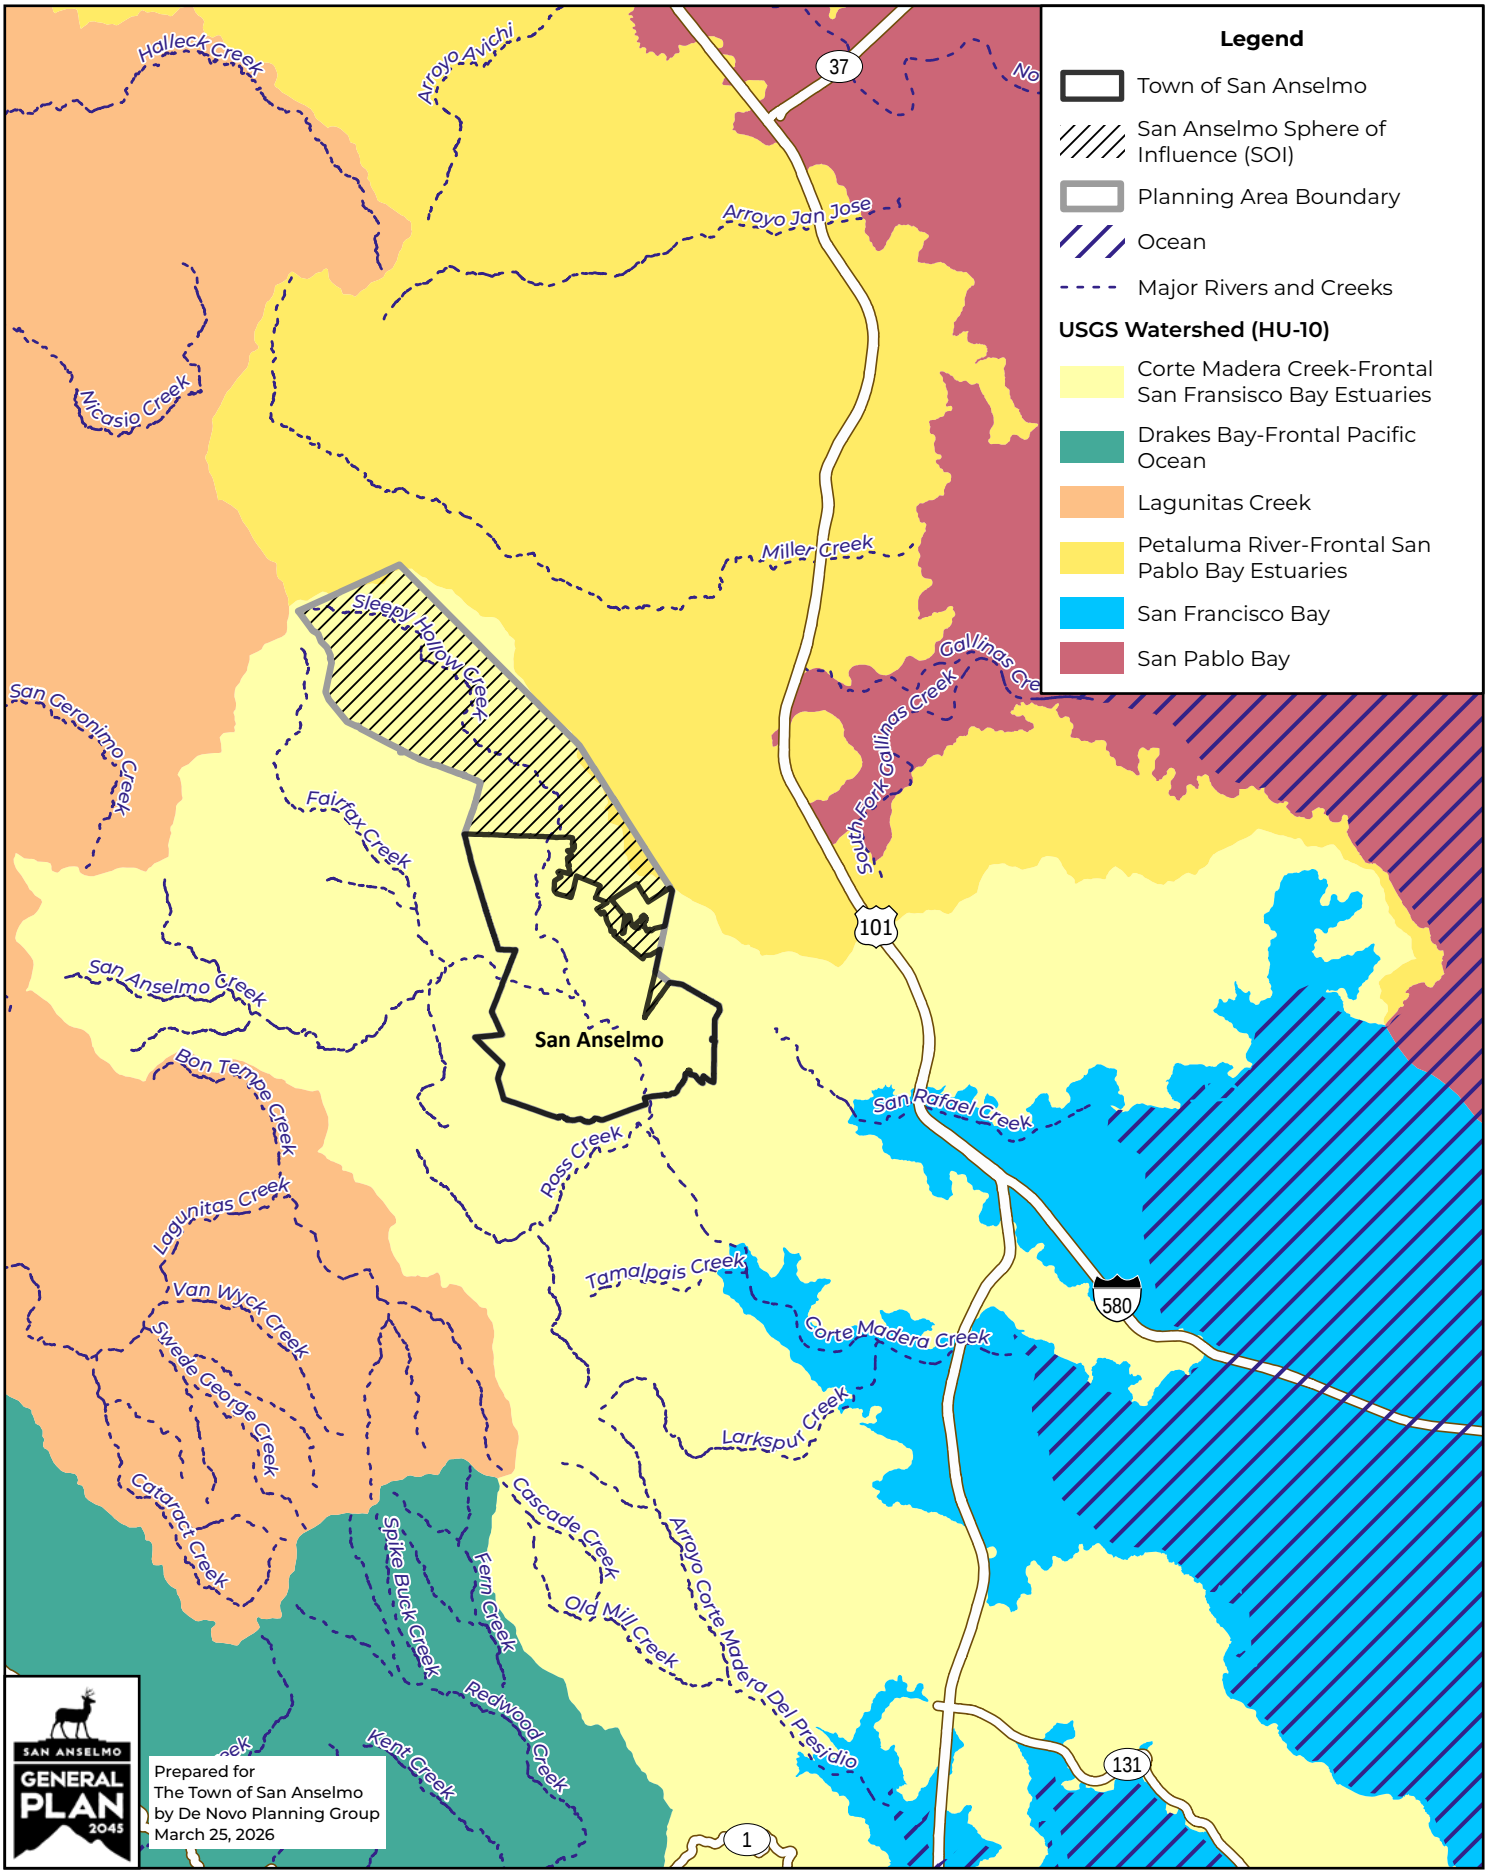

A watershed is an area that drains rainfall and runoff to a common watercourse or body of water. Watersheds serve an important biological function, often supporting an abundance of aquatic and terrestrial wildlife including special-status species and anadromous and native local fisheries. Watersheds also provide fresh water for domestic and enjoyment of natural resources.

San Anselmo is located within the Larkspur-Corte Madera Creek-Frontal San Francisco Bay Estuaries watershed as shown in Figure OSC-3. The Town's primary creeks are San Anselmo Creek and Sleepy Hollow Creek, which joins San Anselmo Creek near Saunders Avenue. The creeks collect water from upstream tributaries in Fairfax and Sleepy Hollow, draining the surrounding foothills of Mt. Tamalpais. San Anselmo Creek flows through downtown and joins Ross Creek in Ross to form Corte Madera Creek, ultimately reaching San Francisco Bay. Winter storms can push creek levels up quickly, while summer flows are low.

As San Anselmo and the Ross Valley developed, portions of the creek corridor were straightened, channelized, and confined by bridges, culverts, and nearby structures. These modifications have narrowed riparian zones, limited natural floodplain functions, impeded fish passage, and reduced the overall ecological health of the creek system.

Growth and development have altered much of the creek corridor, reducing habitat, limiting natural flood functions, and hindering fish passage.

Despite these alterations, San Anselmo's creeks are valuable physical, aesthetic, recreational, and ecological assets. They define much of the town's natural character and offer opportunities for habitat restoration, flood risk reduction, and community enjoyment. Policies and actions contained in this General Plan seek to protect and enhance the town's waterways by improving surface water quality, supporting biodiversity and habitat connectivity, minimizing streambank erosion, preventing downstream sedimentation, and reducing flood risks.

Base Data Sources: Marin County LAFCO; USGS National Transportation Dataset.
Theme Sources: USGS Watershed Boundary Dataset; USGS National Hydrography Dataset.

Figure OSC-3
Watersheds and Waterways

3.5 WATER QUALITY

Water quality is an important environmental resource that directly affects both wildlife and habitat health. In San Anselmo, stormwater runoff from streets, parking lots, and rooftops can carry pollutants, such as oil, metals, and debris, into local creeks and, ultimately, into the San Francisco Bay. These pollutants degrade aquatic ecosystems, harm wildlife, and impair the function of flood control facilities.

When rainfall occurs on paved or impervious surfaces, it generates significantly more runoff than on vegetated ground. This increased runoff moves rapidly into creeks and wetlands, contributing to flooding, streambank erosion, and the loss of riparian habitat essential to aquatic and terrestrial species. Similarly, excessive or poorly managed grading and vegetation removal can accelerate erosion, resulting in sedimentation of creeks and wetlands. Over time, sediment buildup reduces channel capacity, affects aquatic habitats, and diminishes the effectiveness of flood control infrastructure.

Implementing stormwater management practices helps reduce runoff volume, slow water flow, and remove pollutants before they reach natural waterways. These techniques aim to restore or replicate the natural hydrologic functions that existed prior to land development by allowing water to infiltrate and filter through soil and vegetation. Examples include integrating permeable paving, vegetated swales, rain gardens, and biofiltration systems into site design. Such features enable soils and plants to naturally filter or biodegrade contaminants that would otherwise flow into streams, wetlands, and the Bay.

Policies and actions in Section 3.9 promote the protection of water

quality throughout San Anselmo by minimizing pollutants in stormwater, improving watershed health, and requiring the use of effective stormwater management practices in new development and redevelopment projects.

3.6 AIR QUALITY

San Anselmo generally experiences good air quality, due largely to the prevailing westerly flow that brings clean marine air from the Pacific Ocean. There are few pollution sources to the west, and San Anselmo benefits from frequent atmospheric ventilation. However, episodes of degraded air quality can occur in late fall and winter when high pressure over the interior West, known as the Great Basin High, produce extended periods of light winds and temperature inversions. These conditions trap pollutants near the ground, reducing atmospheric mixing and allowing fine particulates to accumulate. In recent years, wildfire smoke from around the region has also contributed to temporary but significant declines in air quality, particularly during the dry months.

San Anselmo is located within the Bay Area Air District (BAAD), which is responsible for ensuring that national and State air quality standards are met throughout the San Francisco Bay Area Air Basin. BAAD regulates stationary sources of air pollutant sources, issues permits, monitors ambient air quality, and adopts and enforces rules to reduce emissions from industrial and commercial activities.

Areas that meet air quality standards are considered to have at-

tained those standards, while areas that exceed them are designated as nonattainment areas. The Bay Area does not currently meet the federal or State standards for ozone (O_3) and particulate matter (PM10 and PM2.5). BAAD's 2017 Clean Air Plan Spare the Air, Cool the Climate outlines regionwide control measures aimed at reducing ozone precursors, particulate matter, air toxics, and greenhouse gas emissions. Although regional air quality has improved substantially in recent decades, resulting in measurable public health benefits, exposure to fine particulate matter (PM2.5) remains the most significant air quality related health concern in the Bay Area, with some communities experiencing disproportionate impacts.

Wood smoke and vehicle emissions are the main sources of air pollution, especially during cold, still winter evenings when stagnant air traps pollutants near the ground.

The nearest air quality monitoring station in San Anselmo is located in downtown San Rafael, the only station in Marin County. Monitoring data from 2020-2022 show that particulate matter standards were exceeded several times during that period. The federal standard for respirable particulate matter (PM10) was exceeded six times, and the federal standard for fine particulate matter (PM2.5) was exceeded nine times. The primary sources of these pollutants include wood smoke and vehicle emissions, with concentrations typically peaking during cold, stagnant winter evenings when temperature inversions inhibit the dispersal of pollutants.

Policies and actions in Section 3.9 aim to reduce emissions, improve local and regional air quality, and protect public health by supporting cleaner transportation modes, energy efficiency, and sustainable land use practices.

3.7 TRIBAL CULTURAL RESOURCES

Humans are believed to have inhabited southern Marin County for the past 13,000 years. According to U.S. Department of Interior, the Coast Miwok people first settled the Tomales Bay area between 2,000 and 4,000 years ago. The Coast Miwok occupied what is now Marin County and part of Sonoma County, extending north to the vicinity of Sebastopol. Other indigenous groups, including the Southern Popo people, also inhabited Marin before colonization.

Native villages were strategically located near seasonal food resources, allowing tribal members to move among coastal areas, marshes, and interior valleys to take advantage of the most abundant supplies of fish, shellfish, game, and plants throughout the year. These movements reflected a deep understanding of local ecosystems and a sustainable relationship with the land.

The arrival of the Spanish colonizers and the establishment of missions in the late 18th century brought devastating changes to the Coast Miwok's ancestral lands and way of life. Many Indigenous people were forcibly relocated to mission communities, where they were exposed to new diseases and denied access to traditional territories and cultural practices. By the end of the Spanish occupation, the Coast Miwok population had declined from approximately 3,000 individuals to between 300 and 500 members, marking a profound loss of life, culture, and autonomy.

Tribal cultural resources are defined as sites, features, places, cultural landscapes, sacred places, and objects that hold cultural, spiritual, or historical significance to California Native American Tribes. Such resources may include places of habitation, ceremonial areas, or other locations of importance where the land itself carries cultural meaning. Within the San Anselmo planning area, three prehistoric sites have been identified that reflect the region's long history of Native settlement and cultural continuity. Policies and actions in Section 3.9 guide the protection, recognition, and respectful treatment of tribal cultural resources in coordination with California Native American Tribes and consistent with State law.

3.8 NAVIGATING TOWARDS 2045

Looking toward 2045, environmental, social, and technological changes will increasingly shape how the Town of San Anselmo plans for and manages its open space and natural resources. Climate change is expected to intensify flood risk, drought, wildfire potential, and habitat stress, requiring a greater focus on protecting riparian corridors, enhancing watershed function, preserving climate-resilient habitats, and supporting species adaptation through habitat connectivity and restoration.

At the same time, social changes, including population growth, an aging population, and increased demand for access to nature, will place additional pressure on open spaces while also elevating their importance for public health, education, and cultural connection. Advances in environmental monitoring, mapping, and data analysis will improve the Town's ability to track ecosystem health, identify vulnerable resources, and more effectively target conservation and restoration efforts.

Together, these trends highlight the need for adaptive, science-informed planning that balances resource protection with appropriate public access, strengthens partnerships, and ensures that San Anselmo's open spaces, natural communities, and cultural resources continue to provide ecological, cultural, and climate resilience benefits for future generations.

Ensuring equitable access to open space is central to the Town's belonging principles. As the Town pursues open space acquisition and trail improvements, it will prioritize connections to neighborhoods with the least access and design and program open spaces to serve residents of all ages, abilities, and cultural backgrounds, supporting inclusive access to parks and natural areas.

3.9 GOALS, POLICIES, AND ACTIONS

3.9.1 OPEN SPACE

Goal OSC-A Protect, preserve, and enhance the town's ridge zones, hillsides, and undeveloped open space for their scenic beauty, natural habitat, hazard mitigation, climate change resilience, recreational value, and contributions to community well-being.

Policy OSC-A.1: Open Space Land Use. Protect lands designated as Open Space on the Land Use Map (Figure LU-1) for environmental protection, resource management, hazard reduction, passive recreation, and climate resilience.

Policy OSC-A.2: New Development. Ensure that new development respects the ecological, visual, and safety benefits of ridge zones, hillsides, and other natural areas for the community.

Action OSC-A.2.a: Online Maps. Use online mapping tools to identify the ridge zones, hillsides, and other natural areas and ensure this information is readily available to the public in clear and accessible formats.

See the Land Use and Community Design Element for additional policies and actions related to open space and ridge zone protection.

Policy OSC-A.3: Expand Open Space Network. Pursue opportunities to expand the Town's open space network to create wildlife corridors, protect critical habitat, prevent sprawl, separate developed areas, and enhance passive recreation opportunities for a wide range of users.

Action OSC-A.3.a: Priority Properties for Protection. Support the acquisition and preservation of open space areas under private ownership identified in Figure OSC-1.

Action OSC-A.3.b: New Development Review. Through the development review process, consider opportunities to permanently preserve areas as open space and to obtain public access easements to connect to existing trails to improve access for residents and visitors, as shown on the adopted Open Space and Conservation Map (Figure OSC-1).

Action OSC-A.3.c: **Permanent Protection and Stewardship.** Permanently protect open space areas through tools such as purchase, dedication, conservation or access easements, or other instruments acceptable to the Town. When evaluating dedication of open space, prioritize parcels contiguous to existing public open space and consider long-term maintenance responsibilities. For privately-owned open space, ensure long-term stewardship that conserves natural resources, reduces hazards, and restricts incompatible structures or vegetation.

Action OSC-A.3.d: Partnerships for Open Space Acquisition. Work with the Open Space Committee, public agencies, and non-profit organizations to identify, acquire, lease, or otherwise protect parcels that support a connected open space network within and adjacent to the Planning Area.

Policy OSC-A.4: Open Space Greenbelts. Create open space greenbelts which serve as natural connections between the town and adjacent communities.

Policy OSC-A.5: Public Access and Open Space. Ensure equitable and environmentally responsible public access to open space

through trail easements, neighborhood connections, and the protection of sensitive habitats and areas subject to slope failure or flooding. Plan and program open spaces to serve residents of all ages, abilities, income levels, and cultural backgrounds, with a focus on expanding access and amenities in underserved communities, including neighborhoods with limited existing access. Design open space improvements and programming to be inclusive and responsive to a diverse community, supporting meaningful use and enjoyment for all residents.

Action OSC-A.5.a: Trail Easements and Connections. Seek opportunities through development review and partnerships to secure trail easements and create trail connections linking neighborhoods, communities, and existing public trails.

Policy OSC-A.6: Trail and Stairs, Lanes, and Trails Network. Expand and improve the Town's trails and Stairs, Lanes, and Trails (SLT) network to support safe and accessible use for pedestrians, including older adults, people with disabilities, families with children, and others with varying mobility needs, while enhancing connections for everyday travel, recreation, and emergency evacuation.

Action OSC-A.6.a: Stairs, Lanes, and Trails Program. Regularly review and update the SLTs Program to guide maintenance, upgrades, mapping, and funding for stairs, lanes, and trails.

Policy OSC-A.7: Trail Connections. Encourage trail connections that allow for non-vehicular access between neighborhoods and communities.

Action OSC-A.7.a: Countywide Trails Plan. Work with Marin County and other agencies to maintain and expand trails in accordance with the Countywide Trails Plan.

See the Parks, Recreation, and Public Facilities Element for additional policies and actions related to recreation.

Policy OSC-A.8: Open Space Stewardship. Maintain and manage public open space lands to reduce natural hazards and wildfire risks, support recreational opportunities, maximize ecological value and biodiversity, support climate resilience, and preserve aesthetics.

Action OSC-A.8.a: Tree Protection in Open Space. Update Town procedures guiding the protection and management of trees in public open space to incorporate best practices for tree health, hazards, native biodiversity, and environmental stewardship.

Action OSC-A.8.b: Conservation and Open Space Stewardship Plan. Prepare a conservation and open space stewardship plan in collaboration with the Ross Valley Fire Department, Marin County Parks and Open Space District, Marin Wildfire Prevention Authority, environmental organizations and the public to reflect a broad range of community perspectives. The plan will address maintenance priorities, habitat restoration and rewilding opportunities, hazard reduction, passive recreation and education opportunities, and potential funding sources.

Action OSC-A.8.c: Open Space Funding. Explore funding mechanisms, including an impact fee, to support the creation of the open space stewardship plan and the purchase and ongoing maintenance of open space in San Anselmo.

Action OSC-A.8.d: Community Involvement. Host and encourage community and areawide meetings, exhibits, and events to raise awareness and funding for open space acquisition, maintenance, stewardship, and restoration using inclusive and accessible outreach approaches.

Action OSC-A.8.e: Tribal Partnership and Acknowledgement. Collaborate with Native American Tribes on stewardship, native plantings, habitat restoration, and interpretive signage that acknowledges Indigenous history and Traditional Ecological Knowledge.

See the Safety Element for additional policies and actions related to vegetation management.

3.9.2 CONSERVATION

Goal OSC-B Protect and improve the quality of the natural environment through collaborative conservation, restoration, management, regenerative practices, and pollution reduction and control.

Policy OSC-B.1: Habitat Preservation. Preserve and enhance wildlife and plant communities in open spaces, riparian corridors, and other biologically sensitive areas to the greatest extent possible, while supporting environmental health and community well-being.

Policy OSC-B.2: Wildlife Corridors. Preserve and protect areas that function as wildlife corridors, particularly those areas that provide connections and mobility between larger natural areas.

Action OSC-B.2.a: Wildlife Corridor Analysis and Development Review. Conduct a wildlife corridor identification and analysis in collaboration with relevant agencies to implement AB 1889. Require development projects on vacant or connected sites to assess potential impacts on wildlife movement and incorporate feasible measures to maintain habitat connectivity.

Action OSC-B.2.b: Rewilding Campaign. Explore the feasibility of a "Rewild San Anselmo" campaign to encourage ecological restoration and biological diversity on private and public lands. This effort may include developing accessible public resources, such as planting guides and design templates, organizing volunteer habitat restoration days open to a broad range of participants, and partnering with schools and community organizations to expand engagement and awareness.

Action OSC-B.2.c: Wildlife Fencing. Adopt wildlife-friendly fencing guidelines to minimize habitat fragmentation, especially near creeks and the Wildland-Urban Interface.

Policy OSC-B.3: Special Status Species**.** Conserve and protect special status plants and animals and their associated habitats, including those listed by the State or federal agencies as threatened and/or endangered, those considered to be candidate species for listing, and other species that have been assigned special status by the California Native Plant Society and the California Fish and Game Code. Avoidance of impacts, accompanied by habitat restoration, is the preferred approach to conservation, but mitigation strategies shall be considered when avoidance is not possible.

Action OSC-B.3.a: Biological Surveys. Require surveys of sites, including buffer areas potentially affected by proposed projects, with potentially suitable habitat for special status species, including creek corridors, to determine the presence or absence of special status species, critical habitat, and riparian habitat. Surveys are to be prepared by a qualified biologist prior to development and other management approvals. Require projects to implement measures to avoid or minimize harm to special status species,

critical habitat, riparian habitat, and other sensitive biological resources to a less than significant level. Consult with resource agencies as required by federal and State regulations. Document compliance with these requirements through the Town's General Plan implementation checklist or other applicable review procedure. Qualified biologists conducting surveys pursuant to this Action shall submit qualifying observations of special-status species and sensitive natural communities to the California Natural Diversity Database (CNDDB) and/or Spotted Owl Observations Database (SPOWDB), as applicable, consistent with applicable reporting protocols.

Action OSC-B.3.b: Avoidance of Nesting Birds. Avoid disturbance of nests of native birds in compliance with State and federal regulations which may include precluding vegetation clearing and construction on sites where nesting birds may be present during nesting season (typically February 1 through August 31). Require pre-construction surveys by a qualified biologist prior to any disturbance. If nests are found, the project shall implement appropriate avoidance measures, such as fenced buffer areas or staged tree removal periods.

Policy OSC-B.4: Creek Protection. Protect and conserve creeks for riparian habitat, fish and wildlife movement, biodiversity, groundwater recharge, and stormwater conveyance for ecological function and community benefit.

Action OSC-B.4.a: Agency Consultation. Refer proposals for grading, filling, or construction that would alter a watercourse shown on Figure OSC-3 to the State Department of Fish and Wildlife, U.S. Army Corps of Engineers, San Francisco Bay Regional Water Quality Control Board, the Marin County Flood Control District, and other regulatory agencies for consultation.

Action OSC-B.4.b: Creek Setbacks. Continue to require development to comply with the creek setback standards in the Town's Watercourse regulations.

Policy OSC-B.5: Creek Enhancement. Require creek enhancement and riparian habitat restoration for construction projects adjacent to creeks and drainageways to reduce erosion, maintain storm flows, improve water quality, improve habitat value, and preserve natural shade, whenever possible.

Policy OSC-B.6: Water Quality. Minimize pollutants in stormwater runoff including discharge of soil sediments.

Action OSC-B.6.a: Watershed Management. Ensure that new development complies with the requirements of the federal and State Clean Water Acts, National Pollutant Discharge Elimination System (NPDES), and the Town's Urban Runoff Pollution Prevention regulations.

Action OSC-B.6.b: Low-Impact Design Measures. Require the incorporation of Low-Impact Design (LID) measures and other site design elements that slow stormwater flows, promote groundwater recharge, and filter out pollutants.

Policy OSC-B.7: Creek Education and Awareness. Increase awareness and appreciation of San Anselmo's creeks and their role in sustaining fish and wildlife and providing flood protection through accessible education and outreach.

Action OSC-B.7.a: Creek Signage and Education. Develop signage and educational displays in clear and accessible formats that describe native habitat, history, and restoration efforts. Partner

with local schools, conservation and environmental groups, and community groups to increase awareness of the town's creeks.

See the Safety Element for additional policies and actions related to creek preservation and maintenance and flood management.

Policy OSC-B.8: Tree Protection. Continue to maintain and preserve protected and heritage trees as defined in the Municipal Code to preserve the natural and cultural characteristics of the town.

Policy OSC-B.9: Pollution Prevention. Prevent or minimize the emission of air pollutants in compliance with State and federal air quality standards.

Action OSC-B.9.a: Air Quality Standards and Project Review. Implement the Bay Area Air District's Clean Air Plan, rules, and best practices in reviewing construction, development, and commercial operations, including evaluation of toxic air contaminants, odors, and criteria pollutants.

Action OSC-B.9.b: Particulate Emissions. Reduce emissions of particulate matter from construction sites, roads, parking lots, and other sources by requiring development and construction projects to implement best management practices.

Action OSC-B.9.c: Idling Prevention. Adopt an ordinance that matches or is more stringent than the State's maximum idling law, and coordinate with CARB, BAAD, and law enforcement to achieve compliance.

See the Land Use and Community Design Element, Circulation Element, and Sustainability, Climate Change, and Resiliency Element for additional policies and actions related to air quality, transportation and equipment emissions, carbon sequestration, greenhouse gas emissions, and more.

Goal OSC-C Honor and protect San Anselmo's Native American heritage.

Policy OSC-C.1: Protection of Archeological Resources. Protect significant archaeological, tribal cultural, and paleontological resources.

Action OSC-C.1.a: Development Review. Require that projects proposed for sites that have the possibility of containing cultural and tribal cultural resources and resulting in-ground disturbance be evaluated by a qualified archaeologist prior to project approval and require such projects to implement mitigation strategies to reduce or avoid impacts to any identified or inadvertently discovered cultural resources. Continue to refer development proposals to the Northwest Information Center of the California Archeological Inventory, Native American Heritage Commission, and local Native American Tribes for review and recommendations regarding supplemental field investigation.

Action OSC-C.1.b: Tribal Consultation. Consult with Native American Tribes, as required by Senate Bill 18 and Assembly Bill 52, during the environmental review process for new development proposals and amendments to the General Plan to facilitate identification and preservation of tribal cultural resources.

Action OSC-C.1.c: Discovery of Archaeological and Cultural Resources. If previously undiscovered, suspected historic, cultural, tribal cultural, or archaeological resources are encountered during ground-disturbing activities, construction activities shall be halted within 50 feet of the find. A qualified archaeologist shall evaluate the resources to assess the find. Further ground disturbances in the vicinity of the find shall remain stopped while an assessment is underway and until the archaeologist can provide recommendations for treatment of the discovery. If a potentially significant find cannot be avoided by the project, the retained archaeologist, who meets the Secretary of the Interior's Professional Qualifications Standards, will develop an evaluation plan in consultation with the Town that contains a research design to

guide assessments of the resource's significance and scientific potential. The recommendations provided in the report shall be implemented.

Action OSC-C.1.d: Discovery of Human Remains. If an inadvertent discovery of human remains is made at any time during project-related construction activities or project planning, the following performance standards shall be met before implementing or continuing actions such as construction that may result in damage to or destruction of human remains. In accordance with the California Health and Safety Code (HSC), if human remains are encountered during ground-disturbing activities, the Town shall immediately halt potentially damaging excavation in the area of the remains and notify the Marin County Coroner and a qualified archeologist (meeting the Secretary of the Interior's Professional Qualifications Standards for Archeology) to determine the nature of the remains. The coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or State lands (HSC Section 7050.5[b]).
If the human remains are of historic age and are determined by the Marin County Coroner to be not of Native American origin, the Town will follow the provisions of HSC Section 7000 et seq. regarding the disinterment and removal of non–Native American human remains.
If the coroner determines that the remains are those of a Native American, the coroner must contact the Native American Heritage Commission (NAHC) by phone within 24 hours of making that determination (HSC Section 7050[c]). After the coroner's findings have been made, the archaeologist and the NAHC-designated Most Likely Descendant, in consultation with the landowner, shall determine the ultimate treatment and disposition of the remains. The responsibilities of the Town for acting upon notification of a discovery of Native American human remains are identified in Public Resources Code Section 5097.9 et seq.

Policy OSC-C.2: Partner with Native American Tribes. Partner with Native American Tribes to steward and celebrate cultural heritage and sites.

4. SUSTAINABILITY, CLIMATE CHANGE, AND RESILIENCY

San Anselmo is committed to building a sustainable, low-carbon community where people and nature thrive in balance, supported by renewable energy, efficient buildings, and responsible resource use. As climate conditions continue to change, the Town will mitigate greenhouse gas emissions and strengthen resilience through adaptation strategies that protect residents, infrastructure, and natural systems for generations to come.

Jump to Goals, Policies, and Actions

4.1 PURPOSE OF THE ELEMENT

The purpose of this element is to support a sustainable and resilient future that benefits all members of the community, recognizing that the impacts of climate change and access to environmental resources and solutions may be experienced differently across the community. It promotes inclusive and accessible approaches to sustainability that support community well-being, resilience, and long-term environmental stewardship.

San Anselmo recognizes its responsibility to live sustainability and resiliently for current and future generations. The Town envisions a future where humans and nature co-exist in productive harmony while maintaining a prosperous and high quality of life. This element presents a framework of goals, policies, and actions to guide how the Town will foster a sustainable and resilient community that is both committed to reducing greenhouse gas emissions and prepared to adapt to the impacts of climate change.

This approach includes transitioning to renewable energy, electrification of buildings and vehicles, waste reduction, sustainable agriculture, and other strategies. The element will continue to evolve as new technologies emerge, climate science advances, and the community learns from experience.

The Sustainability, Climate Change, and Resiliency Element includes the following sections.

4.2 Sustainability. Describes the concept of sustainability and how it's woven throughout the General Plan.

4.3 Climate Change Impacts. Provides an overview of existing and projected climate change impacts in California and San Anselmo, including rising temperatures, extreme heat events, wildfire, drought, and storms.

4.4 Greenhouse Gas Emissions and the Climate Action Plan. Describes greenhouse gas emissions and the Town's actions to quantify and reduce community-wide greenhouse gas emissions.

4.5 Adaptation and Resiliency. Explains the need for adaptation to climate change and measures the Town can take to improve the community's resiliency.

4.6 Navigating Towards 2045. Identifies strategies to ensure the element remains relevant and responsive to changing conditions during the life of the General Plan.

4.7 Goals, Policies, and Actions. Identifies goals, policies, and actions to create a sustainable and resilient community. San Anselmo commits to regularly reassessing and adapting these strategies as the Town navigates toward 2045.

4.2 SUSTAINABILITY

In 1987, the United Nations defined sustainability as "meeting the needs of the present without compromising the ability of future generations to meet their own needs." Today in San Anselmo, we often think of sustainability as the integration of environmental, social, and economic health and vitality to create a thriving, diverse, and resilient community for this generation and generations to come.

Similarly, issues related to sustainability are addressed throughout the General Plan. While this element focuses on climate change, adaptation, and resiliency, other elements also incorporate these concepts:

- The **Land Use and Community Design Element** supports higher-density infill development in the town's core, recognizing that such land use patterns are more sustainable and resilient to climate change.
- The **Open Space and Conservation Element** addresses other environmental issues such as loss of biodiversity, land degradation, and air and water pollution.
- **The Circulation Element** promotes the use of public transit and streets that are safer for walking and bicycling.
- The **Safety Element** addresses emergency preparedness and hazards like flooding, drought, extreme heat, and wildfire that will be exacerbated by climate change.

4.3 CLIMATE CHANGE IMPACTS

Climate change is already affecting San Anselmo through hotter summers, longer wildfire seasons, variable rainfall, and more intense storms. As temperatures continue to rise, regional projections for serious and potentially catastrophic climate change impacts include:

- More intense and frequent heat waves and droughts
- More severe and frequent wildfires
- More severe storms, extreme weather events, and flooding
- Shrinking snowpack and changes in precipitation
- Accelerating sea level rise and greater riverine flows
- Increase in vector-borne diseases and heat-related deaths and illnesses
- Increase in harmful impacts to vegetation and wildlife, including algal blooms in marine and freshwater environments, the spread of disease-causing pathogens and insects in forests, and invasive agricultural pests
- Ocean acidification, hypoxia (depleted oxygen in the water), and warming

Table SU-1 identifies the baseline/historical conditions and projected future conditions for San Anselmo's temperatures, extreme heat days, precipitation, and wildfire risk. These projections are modeled for a medium emissions scenario, where global emissions peak around 2040 and then decline, and a high emissions scenario, where global emissions continue to rise throughout this century. These projections illustrate the range of potential changes the Town must address.

Table SU-1: Potential Climate Change Effects for San Anselmo

Historical/Baseline Conditions (1961-1990)	Future Conditions (2070-2099 Average)	
	Medium Emissions Scenario	High Emissions Scenario
Annual Mean Temperature		
69.2 °F	73.2 °F (4 °F increase)	76.0° F (6.8 °F increase)
Extreme Heat Days above 95.3 °F		
3 days per year	10 days per year	19 days per year
Annual Mean Precipitation		
41.6 inches	43.3 inches	45.1 inches
Annual Average Area Burned		
47.1 acres	41.4 acres	47.0 acres

SOURCE: https://cmip5.cal-adapt.org/tools/local-climate-change-snapshot

Note: Although the General Plan's horizon year is 2045, end-of-century projections assist in ensuring new development, infrastructure, and public services are planned and built to adapt to anticipated climate change impacts. Additional detail regarding potential climate change effects is located in the Marin County Multi-Jurisdiction Hazard Mitigation Plan (MJHMP), which includes an annex for the Town of San Anselmo.

As the climate changes, warmer temperatures will impact the San Anselmo community. Extreme heat events are likely to increase the risk of heat-related illnesses, such as heat stroke and dehydration, and exacerbate existing chronic health conditions. Higher temperatures will also make San Anselmo more vulnerable to wildfire, water supply shortages and drought, severe storms and inland flooding, loss of species, and sea level rise. Although the town is not located on a coastline, sea level rise will impair the community's ability to access services and roadways, and will impact public facilities that the community relies upon like the wastewater treatment plant. The goals, policies, and actions in Section 4.6 focus on reducing emissions, improving preparedness, and strengthening local infrastructure and social systems to address these risks.

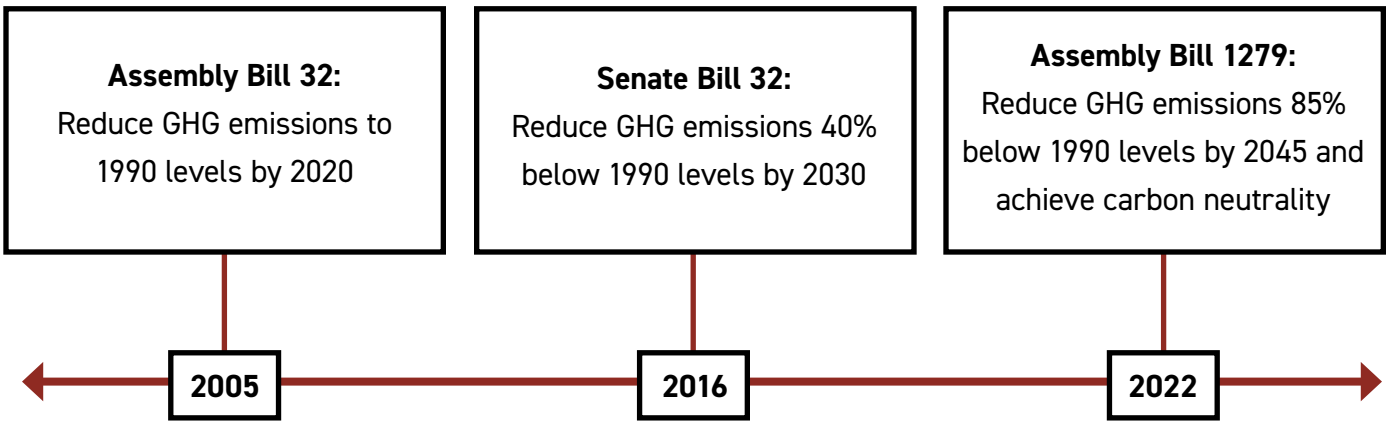

4.4 GREENHOUSE GAS EMISSIONS AND THE CLIMATE ACTION PLAN

Greenhouse gases (GHGs) are naturally occurring gases, such as carbon dioxide, methane, and nitrous oxide, that trap heat in the Earth's atmosphere and help maintain steady temperatures. Human activities, such as electrical production and motor vehicle use, increase the concentrations of GHGs, intensifying the "greenhouse effect" of trapping more heat and causing global warming.

In 2015, the United States, the European Union, and 193 other countries signed the Paris Agreement, the international accord to strengthen the global response to the threat of climate change. The agreement sets a target of limiting the global temperature increase to 1.5 °C (2.7 °F) above pre-industrial levels, the threshold scientists generally agree will avert the most severe consequences of climate change. As of 2024, global temperatures had increased by 1.35 °C (2.62 °F) since the 19th century. Projections based on current governmental policies around the world indicate that this target may not be met; the Earth is currently on pace to warm somewhere between 1.9 and 3.7 °C (3.4 and 6.7 °F) above preindustrial levels by the end of this century. Impacts from this magnitude of warming are shown in Table SU-1 in Section 4.3.

Since 2005, the State of California has responded to growing concerns over the effects of climate change by passing a series of target-setting legislation and adopting a comprehensive approach to addressing GHG emissions in the public and private sectors. Legislative milestones are shown in Figure SU-1.

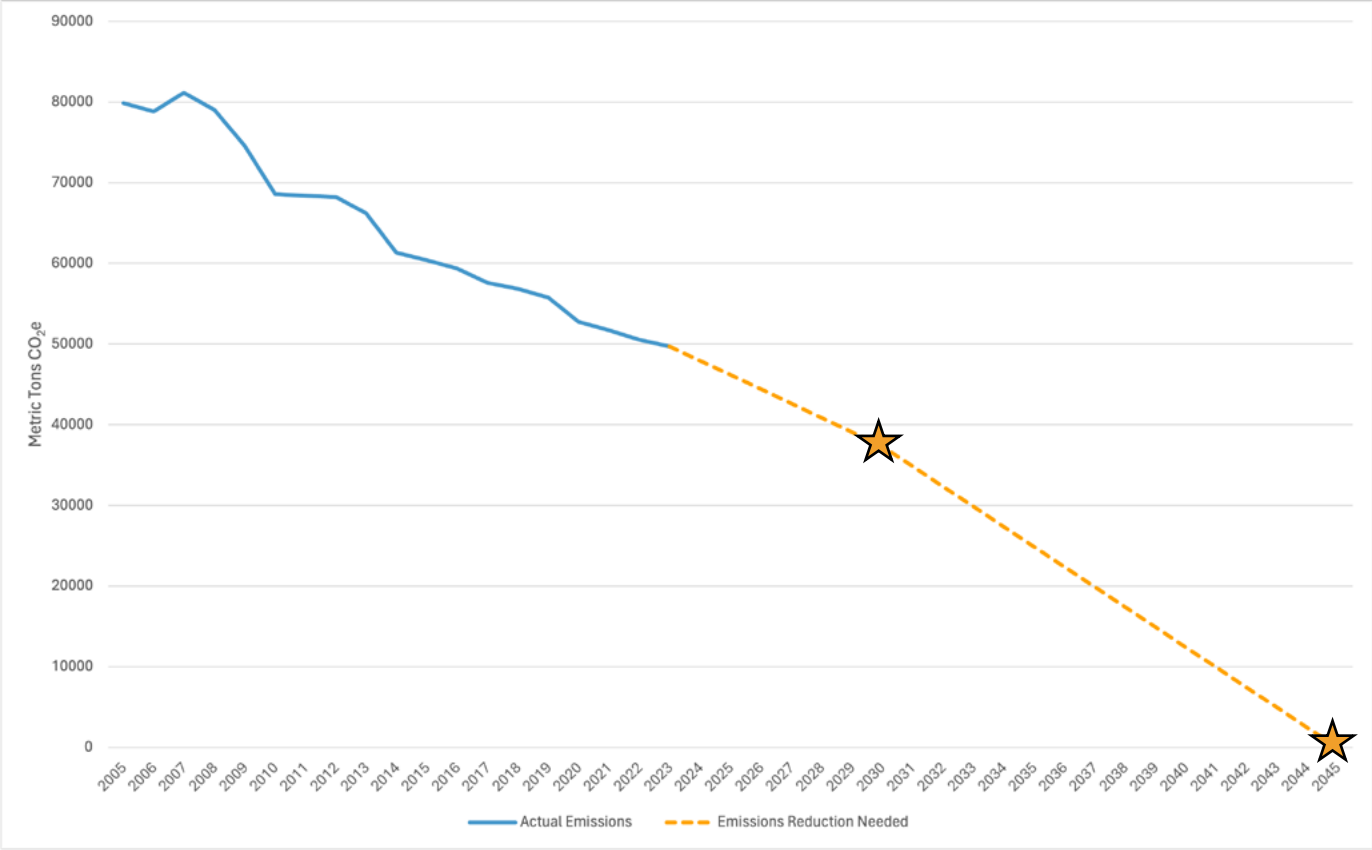

Figure SU-1: State Legislation to Reduce Statewide GHG Emissions

San Anselmo recognizes its vital role in reducing greenhouse gas emissions and adapting to climate change. In 2019, the Town adopted Climate Action Plan 2030 that establishes actions the Town's government and community can take to reduce emissions 45% below 1990 levels by the year 2030.

Figure SU-2 shows San Anselmo's actual emissions between 2005 and 2023, and the emission reductions needed to meet the Town's GHG reduction goal for 2030 and the long-term target of zero net emissions. While the Town currently targets a 45% reduction by 2030, new technologies and approaches will emerge. The Town commits to reassessing emission reduction targets every five years, potentially accelerating the timeline toward carbon neutrality.

Figure SU-2: Community Emissions Trend and Targets

Through annual emissions inventories, periodic updates to the Climate Action Plan, and other actions outlined in Section 4.6, San Anselmo will continue to track progress, refine strategies, and demonstrate leadership in creating a low-carbon, resilient community. Strategies will be evaluated every five years and adjusted based on technological advances, emerging best practices, and community feedback.

As we move toward 2045, developments in carbon capture, renewable energy production and storage, and electrification may transform the Town's approach. The Town commits to staying informed about emerging trends and adapting our strategies accordingly. The Town recognizes that solutions not yet imagined today may become central to the community's efforts tomorrow.

4.5 ADAPTATION AND RESILIENCY

San Anselmo must adapt to the unavoidable impacts of a changing climate. Rising temperatures, more frequent and intense storms and wildfires, and the increased likelihood of flooding put residents, infrastructure, and the local economy at risk. The General Plan includes a framework to prepare for emergencies and also create systems that allow the town to thrive even when faced with extreme conditions.

In San Anselmo, adaptation begins with acknowledging the specific challenges our community faces. Increasing temperatures and more frequent extreme heat events, which can have serious health impacts, especially for older adults, children, and those with preex-

isting conditions, will require measures such as expanding shade and green infrastructure to cool neighborhoods. In response to the growing threat of drought and water scarcity, the San Anselmo community can redouble efforts to conserve water through measures outlined in this General Plan. At the same time, more intense storm events will increase the risk of flooding, particularly in areas alongside San Anselmo Creek, underscoring the importance of improving stormwater and floodplain management.

> I would like San Anselmo to sustain a vision of a fossil fuel-free community and to closely monitor progress in implementation of the Climate Action Plan.

Beyond immediate protective measures, San Anselmo can invest in innovative solutions like microgrids, resilience hubs, and other emerging technologies to enhance local resilience and support equitable access. When located in neighborhoods with higher concentrations of vulnerable populations, they can help ensure that everyone, regardless of income or background, has a safe place to turn during climate-related emergencies. These innovations and other strategies can not only reduce risk but also strengthen social cohesion and prepare the community to face the challenges of a changing climate together.

The goals, policies, and actions in Section 4.7 carry these ideas forward in San Anselmo by advancing equitable access, supporting collaboration, and embedding climate adaptation and resiliency considerations into Town planning and capital improvement decisions. Adaptation strategies will evolve as the Town learns which solutions work best for San Anselmo. The Town will pilot innovative approaches, measure their effectiveness, and scale successful programs while phasing out less effective ones. This iterative approach ensures the Town remains agile in responding to both climate impacts and emerging solutions.

4.6 NAVIGATING TOWARDS 2045

Reaching 2045 is less a straight line and more a carefully guided journey, one the Town will navigate using a clear set of indicators to understand progress and inform adjustments over time. Greenhouse gas emissions trends, along with key indicators such as solar and battery installations and electric vehicle adoption rates, will be evaluated annually to assess whether overall climate impacts are declining at the necessary pace. Community resilience, including preparedness for heat, wildfire, flooding, and other climate risks, will be assessed every five years to help ensure residents are supported and protected, particularly those most affected by climate impacts. Emerging technologies will be monitored continuously to identify tools that are transitioning from pilot concepts into everyday practice.

Climate change does not affect all residents equally. Lower-income households, older adults, people with disabilities, and residents of color may face disproportionate impacts, including extreme heat, flooding, and limited access to resources for adaptation. The Town will prioritize outreach, investment, and program design to support these populations and will track equity outcomes as part of its regular review cycles.

These indicators will inform regular review cycles every two to three years, during which the Town will evaluate progress, identify gaps, and refine strategies. As new solutions become viable, such as advanced battery storage, carbon capture, and AI-driven applications, the Town will follow a defined process to test, integrate, and scale them where appropriate. Ongoing community engagement will ensure that this work reflects a broad range of perspectives, with residents, businesses, and community organizations contributing input, sharing lived experiences, and helping shape solutions.

The Town will also rely on flexibility triggers, such as new State requirements, technological advancements, or extreme climate events, to prompt more immediate adjustments between formal review cycles when conditions change rapidly. Throughout this process, the Town will continue learning from peer communities, tracking successful innovations, and adapting proven approaches to the local context.

Pathways to 2045: Scenarios and Preparedness

The Town's planning framework recognizes multiple possible futures and prepares for each, with a focus on supporting community resilience and well-being. In a best-case pathway, rapid technological advancement is paired with strong community engagement, leading to widespread adoption of clean energy and faster-than-expected emissions reductions. In a moderate pathway, progress is steady and incremental, requiring sustained effort to remain on track. In a more challenging pathway, climate impacts intensify, requiring accelerated adaptation and strengthened resilience measures.

By pairing clear indicators with regular review cycles, community engagement, and defined flexibility triggers, the Town will remain prepared to navigate any of these pathways. If conditions align with the best case, the Town can accelerate progress and expand benefits for community health, inclusion, and economic vitality. If progress is more gradual, the Town can adjust policies and investments to maintain momentum. If conditions become more challenging, the Town will be prepared to respond quickly, prioritizing adaptation, protecting those most affected by climate impacts, and advancing solutions that deliver the greatest benefit. In all cases, this adaptive approach ensures that the path to 2045 remains intentional, transparent, and resilient as conditions evolve.

4.7 GOALS, POLICIES, AND ACTIONS

Goal SU-A Empower residents and businesses to reduce their carbon footprints and prepare for the impacts of climate change.

Policy SU-A.1: Sustainability Education and Empowerment. Provide comprehensive outreach, education, and community engagement programs that support residents and businesses in reducing emissions, improving energy efficiency, conserving resources, and preparing for climate impacts. Partner with local volunteers, schools, and community organizations, such as the Climate Action Commission, to expand the reach of these efforts. Design outreach and education programs to be inclusive and accessible to a broad range of participants, including lower-income households, renters, and non-English-speaking residents. Track participation and engagement trends to identify gaps and refine outreach strategies to broaden and diversify community involvement.

Action SU-A.1.a: Community Sustainability, Electrification, and Renewable Energy Programs. Partner with regional agencies, Marin jurisdictions, and the Climate Action Commission to provide coordinated programs, technical assistance, and permitting support that advance energy efficiency, building and vehicle electrification, and renewable energy adoption. This action includes:

- Sustainability & Electrification Resource Hub: Collaborate with Marin jurisdictions to provide a shared regional hub offering integrated resources, information, demonstrations, incentives, and permitting assistance .
- Community Energy Use: Encourage the installation of solar generation and storage systems by streamlining regulations and permitting, and by promoting 100% renewable energy purchasing options.

- Electrification Assistance: Promote local, regional, and State technical assistance, incentive, rebate, and concierge programs supporting the electrification of residential and commercial buildings.

- Equitable Access: Increase awareness of incentive programs for lower-income households and explore opportunities for local subsidies, permit fee reductions, or other supportive measures for electrification.

Action SU-A.1.b: Community Education, Engagement, and Waste Reduction and Alternative Transportation Initiatives. Engage, educate, and support the community in adopting sustainable lifestyle choices, reducing waste, and shifting travel behavior to support greenhouse gas reduction and public health. Collaborate with the Climate Action Commission and regional partners to:

- Climate Education & Engagement: Provide information and engagement opportunities on climate vulnerabilities, health connections, greenhouse gas reduction strategies, and community resilience.

- Sustainable Practices Outreach: Promote actions that reduce natural resource consumption, increase community awareness of sustainable behaviors, and support achievement of Town sustainability goals.

- Low-Carbon Footprint Diet: Promote the environmental, ecological, and health benefits of low-carbon dietary choices through education, outreach, and partnerships with local organizations.

- Plastic Waste Reduction: Conduct public outreach on the impacts of plastic pollution, encourage waste reduction strategies, and support compliance with the Town's Single-Use Plastics Ordinance.

- Public Transit Education: Partner with transit agencies to publicize available transit options and improve first-mile/last-mile connections to transit stops.

- Active Transportation Promotion: Encourage walking and bicycling among residents and employees as a strategy to reduce greenhouse gas emissions and improve public health. Publicize bicycle routes at schools, parks, and transit facilities, and support bicycle awareness and safety campaigns.

See the Land Use and Community Design Element and the Safety Element for additional policies and actions related to community engagement and the community's emergency preparedness.

Goal SU-B Create a sustainable community that ensures residents may meet their own needs without compromising the needs of future generations.

Policy SU-B.1: Waste Diversion Targets. Strive to meet or exceed waste diversion and food recovery targets set by the State.

Action SU-B.1.a: Waste Reduction Programs. Partner with Marin Sanitary Services and Zero Waste Marin to support implementation of commercial and organic waste diversion programs to meet SB 1383 requirements. Provide technical assistance and educational resources to business owners to help them understand and comply with State waste diversion and food recovery mandates.

Action SU-B.1.b: Business Waste Management Plans. Require that businesses prepare and implement waste management plans to maximize recycling and food recovery and minimize disposal of organic waste where appropriate as a condition of approval of use permits.

Policy SU-B.2: Plastic Waste Reduction. Seek to reduce plastic waste pollution through legislation, education, and promoting alternatives.

Action SU-B.2.a: Single-Use Plastic Reduction. Prohibit the sale of single-use plastic beverage bottles and explore opportunities to phase out use of all single-use plastics in Town buildings and at Town events. Provide more water refill stations in public places.

Action SU-B.2.b: Extended Producer Responsibility **Legislation.** Support legislation that puts significant responsibility on manufacturers for the end-of-life management of their products and packaging to encourage design of more sustainable packaging and repairable or reusable products.

Policy SU-B.3: Municipal Waste Reduction. Maximize recycling, composting, reuse, waste reduction, and food recovery within municipal operations and at public parks and facilities.

Action SU-B.3.a: Recycling Facilities. Provide sufficient recycling and composting bins for public and staff use. In public projects, design facilities and refuse storage areas to facilitate recycling.

Action SU-B.3.b: Environmentally Preferable Purchasing. Continue to give preference to purchasing products that are reusable, recyclable, made from recycled materials, and minimize packaging. Explore opportunities to expand the Town's purchasing policy to include consideration of lifecycle emissions and low carbon alternatives.

Policy SU-B.4: Local Food System. Support efforts to reduce greenhouse gas emissions from food production, transportation, and waste, and encourage practices that strengthen the sustainability and resilience of the local food system.

Action SU-B.4.a: Local Sourcing. Encourage businesses to source their products from local farms to reduce carbon emissions generated from food and material production and transportation.

Action SU-B.4.b: Regional Agriculture. Advocate for and support regional efforts to promote regenerative and climate-smart agricultural practices that enhance soil health, sequester carbon, and contribute to a sustainable local food system.

Policy SU-B.5: Sustainable Land Uses. Promote environmental sustainability and resilience through thoughtful land use planning and development review that addresses climate change, reduces carbon footprints, and manages resources responsibly.

See the Land Use and Community Design Element for additional policies and actions related to sustainable land use planning.

Goal SU-C Reduce greenhouse gas emissions in the community and within government operations to mitigate the effects of climate change.

Policy SU-C.1: Greenhouse Gas Emission Reductions. Mitigate the impacts of climate change by reducing community greenhouse gas emissions.

Action SU-C.1.a: Greenhouse Gas Emissions Reduction and Monitoring. Implement strategies to achieve community-wide reductions of at least 45 percent below 1990 levels by 2030 and to support the State's goal to achieve zero net emissions statewide by 2045. Regularly track progress by annually updating the community greenhouse gas inventory and evaluating government operations emissions to monitor reductions and inform implementation of the Climate Action Plan.

Action SU-C.1.b: Climate Action Plan. Implement the Town's Climate Action Plan and update the plan every five years to incorporate new emission reduction targets, strategies, and best practices.

Policy SU-C.2: Renewable Energy and Electrification. Accelerate the conversion to renewable energy sources.

Action SU-C.2.a: Building and Appliance Electrification. Consider building regulations which preclude gas appliances and infrastructure in new buildings and require installation of high-efficiency electric appliances at time of replacement.

Action SU-C.2.b: Building Permitting for Electrification. Streamline the building permit process for heat pump water and space heaters and electrical panel upgrades. Through regional collaboration, explore a fee reduction pilot program to incentivize conversion of natural gas appliances to electric versions.

Action SU-C.2.c: Municipal Energy Use. Evaluate solar energy production and storage systems at all municipal buildings and

facilities and plan for replacement of natural gas appliances and equipment. Continue to purchase 100% renewable energy for Town buildings and facilities.

Action SU-C.2.d: Zero-Emission Infrastructure. Continue to prohibit the location of new gas stations in San Anselmo and support the phased transition of legal non-conforming gas stations to zero-emissions fueling stations. Support businesses in complying with these requirements through technical assistance and public outreach.

Action SU-C.2.e: Landscaping Equipment. Enforce the ban on gas-powered landscape equipment in San Anselmo and explore opportunities to further reduce emissions from landscaping activities, as feasible.

Policy SU-C.3: Building Energy Efficiency. Encourage energy efficiency improvements in residential and commercial buildings to reduce energy use.

Action SU-C.3.a: Green Building Regulations. Consider adopting green building regulations for new construction and building remodels and additions that exceed minimum State building and energy code requirements.

Action SU-C.3.b: Energy Efficiency Programs. Promote programs and incentives to property owners to improve energy efficiency. Explore the feasibility of requiring energy audits at the time of building sale or major remodel.

Policy SU-C.4: Carbon Sequestration. Support carbon sequestration on natural lands, tiny forests, and urban green spaces.

Action SU-C.4.a: Urban Forest Master Plan. Prepare an Urban Forest Master Plan to preserve and, where appropriate for ecosystem health, plant additional native trees on public parks, medians, and rights-of-way.

Action SU-C.4.b: Sustainable Landscaping. Incorporate sustain-

able landscaping practices into public projects, when applicable, and encourage community members to apply compost and select native or climate-adapted plant species on private lands. Select plantings for public projects based on their resilience to changing climate conditions to support long-term habitat sustainability and biodiversity with an emphasis on locally native plants.

Policy SU-C.5: Municipal Energy Efficiency, Electrification, and Resilient Operations. Continue to improve energy efficiency, electrify equipment and buildings, and integrate renewable energy and microgrid technologies into Town facilities.

Action SU-C.5.a: Municipal Microgrid and Electrification Plan. Plan and implement microgrids, solar and battery systems, and phased electrification of municipal facilities and equipment.

Goal SU-D Create a resilient and adaptable community that anticipates and reduces the risk from future climate change impacts.

Policy SU-D.1: Resilient Community. Enhance the community's capacity to adapt to climate-related risks by integrating climate adaptation and resilience strategies in the Town's development, capital improvement, and emergency preparedness and response plans and projects, with attention to populations most vulnerable to climate impacts, including lower-income households, seniors, and renters.

Action SU-D.1.a: Resilience Hubs. Identify opportunities to enhance the capacity of Town and school facilities to become Resilience Hubs, evacuation centers, cooling centers, and charging stations during extreme heat or weather events.

Action SU-D.1.b: Equitable Community Resilience. Ensure equitable access to resources and support systems for resilience and adaptation planning and evaluate whether programs are effectively reaching underserved populations both during planning efforts and climate-related events.

Action SU-D.1.c: Urban Heat Island Effect. Reduce urban heat island effects by encouraging installation of landscaped surfaces, cool roofs, ample tree cover, reduced expanses of heat-absorbing pavement, and other urban cooling strategies in new development. For Town projects, incorporate urban cooling measures when feasible.

Action SU-D.1.d: Vulnerable Populations. Engage vulnerable populations to identify gaps in community resilience planning and work together to reduce hazards from climate change impacts.

Action SU-D.1.e: Agency Collaboration. Collaborate with Marin jurisdictions, school districts, special districts, and regional, State, and federal agencies to develop, coordinate, fund, and implement adaptation and resiliency strategies and projects.

Action SU-D.1.f: Adaptive Management and Climate Monitoring. Monitor climate indicators, greenhouse gas emission trends, and adaptation outcomes, and adjust Town policies and programs accordingly.

Action SU-D.1.g: Technology Horizon Scanning. Monitor emerging climate technologies and adaptation strategies with annual reports to the Climate Action Commission on potential applications for San Anselmo.

Policy SU-D.2: Preparation for Extreme Weather. Support policies and programs to help residents and businesses prepare for future extreme weather conditions.

Action SU-D.2.a: SU Element Updates. Regularly update the Sustainability, Climate Change, and Resiliency (SU) Element in alignment with the Town's adaptive management approach, ensuring compliance with current climate regulations and ongoing assessment of climate and hazards impacts on historically marginalized communities.

Action SU-D.2.b: Public Information. Maintain guidelines for monitoring and disseminating public information related to hazards exacerbated by climate change (extreme heat, flooding, severe weather).

Action SU-D.2.c: Climate Conditions. Monitor changing climatic conditions and assess how they may affect Town operations and processes.

Policy SU-D.3: Public Health Benefits. Support and promote climate mitigation and adaptation strategies that also provide public health benefits, such as improved air quality, reduced heat exposure, enhanced community connection, or increased access to green space.

See the Land Use and Community Design Element and the Safety Element for additional policies and actions related to low impact design and development and hazard mitigation planning.

Goal SU-E Prioritize use of zero emission vehicles and promote active transportation and the public transit system as alternative modes of travel to reduce greenhouse gas emissions and support community health.

Policy SU-E.1: Low Carbon Transportation. Minimize transportation-related greenhouse gas emissions by expanding zero-emission mobility options, supporting clean transit, and promoting adoption of low-carbon personal transportation such as electric vehicles and electric bicycles.

Action SU-E.1.a: Zero Emission Vehicles. Implement a comprehensive program to significantly increase the use of zero emission vehicles through public education and promotion, updating building code requirements for electric vehicle charging infrastructure, and installation of Level 2 and 3 public charging facilities near downtown, commercial districts, multifamily housing, and Town parking lots.

Action SU-E.1.b: Electric Bicycles. Promote electric bicycle adoption through community education and outreach, financial incentives, expansion of secure bicycle parking and related infrastructure, and partnerships with employers and retailers to improve access and reduce barriers to ownership.

Action SU-E.1.c: Fleet Vehicle Replacements. Give priority to electric and zero emissions vehicles when replacing vehicles in the Town's fleet in accordance with the Town's Fleet Zero-Emissions Policy, with the goal of achieving a zero-emissions fleet by 2030.

Action SU-E.1.d: Clean Transit. Support local transit providers' efforts to transition to zero-emission vehicles by supporting transportation infrastructure, policies, and funding efforts that align with the Town's air quality and energy conservation goals.

Action SU-E.1.e: Active Transportation Promotion. Promote walking, bicycling, and safe routes to schools and community destinations through outreach, maps, and campaigns.

Action SU-E.1.f: Public Transit Awareness. Work with transit agencies to improve awareness of transit options and strengthen first- and last-mile connections.

See the Circulation Element for additional policies and actions related to active transportation, public transit, and transportation demand management.

5. ECONOMIC VITALITY

San Anselmo's commercial districts are shaped by locally owned shops, restaurants, and community-oriented businesses that reflect the town's creative spirit and strong sense of place. As consumer preferences, technologies, and the regional economy evolve, the Town will support adaptive business models, welcoming public spaces and a vibrant mixed-use environment to support a resilient and thriving local economy.

Jump to Goals, Policies, and Actions

5.1 PURPOSE OF THE ELEMENT

The purpose of this element is to advance a resilient and inclusive local economy that expands access to economic opportunity for all who live and work in San Anselmo, including small business owners, entrepreneurs, and workers from a wide range of backgrounds, incomes, and experiences, including supporting opportunities for women, immigrants, people of color, and lower-income residents. The element promotes a business environment that is welcoming, adaptable, and responsive to the needs of both businesses and the broader community. Its policies are grounded in the Town's belonging standard, ensuring that economic vitality strengthens the character and accessibility of San Anselmo's commercial districts for the full range of the community.

San Anselmo's economy is shaped by its distinctive mix of locally owned shops, restaurants, and community events that embody the town's creative spirit and welcoming character. In collaboration with business owners and community stakeholders, the Town is committed to sustaining a vibrant and resilient economy that supports residents, attracts visitors, and fosters entrepreneurship.

While San Anselmo's economy has evolved alongside regional and national trends, its enduring strengths, including authentic small-scale businesses, a strong sense of community, and an engaged local customer base, have allowed it to adapt and thrive. Businesses continue to navigate challenges such as competition from online retail, changing consumer preferences, and broader economic fluctuations. At the same time, the town's diverse business mix, community-centered events, and village-like charm continue to create opportunities for innovation, local investment, and long-term fiscal stability. Many of San Anselmo's enterprises are long-standing, family-owned businesses that contribute to the town's sense of continuity and local identity. The vitality of its commercial districts helps preserve an inviting, walkable environment, where connection and local pride define the experience.

The Economic Vitality Element highlights San Anselmo's economic strengths and identifies opportunities for sustainable growth that enhance its distinctive character and sense of community. Through

ongoing collaboration among the Town, business owners, and community partners, San Anselmo seeks to foster a resilient, inclusive, and dynamic economy that supports a broad range of participants while embracing new opportunities for the future.

The Economic Vitality Element includes the following sections:

5.2 Business-Friendly Environment. Promotes San Anselmo's economic strengths and overall business environment and diversity and establishes ongoing coordination with business-focused organizations stakeholders.

5.3 Strategic Placemaking Improvements. Fosters economic growth and reduces vacancy in commercial spaces through placemaking that makes San Anselmo an attractive and vibrant place while preserving its charm and identity.

5.4 Business Sustainability and Growth. Improves the local business climate through regulatory updates, recurring events, marketing campaigns, and data analysis to promote economic activity.

5.5 Downtown San Anselmo as the Center of Town Life. Focuses on economic development efforts in downtown San Anselmo, reinforcing the town's social, civic, and economic center.

5.6 Navigating Towards 2045. Describes how the town may evolve over time in response to changes in consumer preferences and technological advances.

5.7 Goals, Policies, and Actions. Identifies goals, policies, and actions to ensure ongoing business sustainability and build on opportunities for a diverse and business-friendly local economy.

> San Anselmo needs to be more proactive about the mix of businesses.

5.2 BUSINESS-FRIENDLY ENVIRONMENT

San Anselmo's economy is driven by small, locally owned businesses representing a range of backgrounds, cultures, and economic perspectives, that collectively shape the Town's character and sense of place. Across its commercial districts—Downtown, Greenfield Avenue, and Sir Francis Drake Boulevard—the diverse mix of shops, restaurants, and services reflects San Anselmo's creative spirit and community values. The downtown commercial area, with its walkable streets and long-standing, family-owned establishments, anchors this local economy and serves as a welcoming hub for residents and visitors alike.

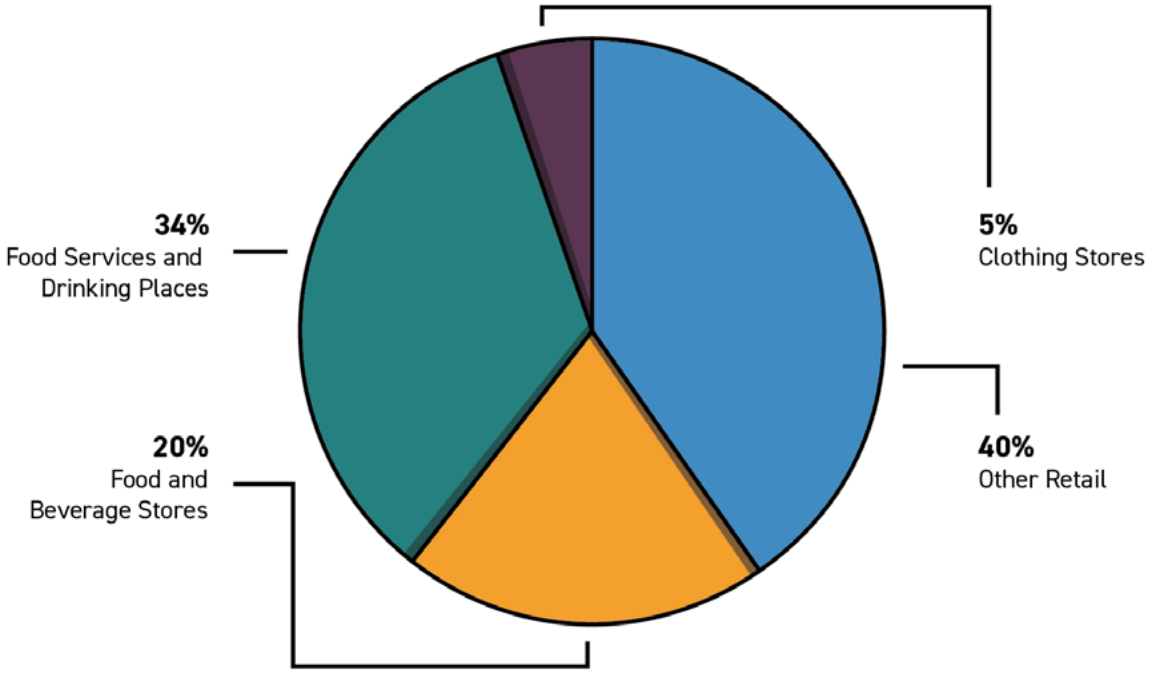

5.2.1 BUSINESS MIX AND LAND USE CHARACTERISTICS

Retail and dining establishments represent San Anselmo's most prominent non-residential land use, offering a range of shopping and dining experiences that serve residents and visitors alike. The town's mix of retail and restaurants complements its village-scale character and built form. Downtown San Anselmo is distinguished by its boutique shops and unique dining options, while other commercial corridors, such as Greenfield Avenue and Sir Francis Drake Boulevard, provide everyday conveniences including grocery stores, pharmacies, personal services, and other essential goods within stand-alone buildings and small shopping plazas.

San Anselmo contains more than one million square feet of commercial space, with approximately 750,000 square feet occupied by retail stores and restaurants. Offices comprise about 200,000 square feet. San Anselmo's commercial office market is relatively limited, consisting primarily of small offices in the downtown that are generally occupied by local and community-serving businesses, such as medical offices, design firms, and other professional services.

In addition to serving residents and visitors, retail activity generates significant sales tax revenue for the Town. Sales taxes contribute nearly eight percent of the Town's General Fund revenue, and Measure J provides additional sales tax funding for Town infrastructure improvements. Major taxable retail categories include food service establishments and food and beverage stores. The town does not contain any large-format, "big-box" retail establishments.[4]

Figure EV-1 Taxable Retail Spending, 2023

Source: Town of San Anselmo and Economic & Planning Systems

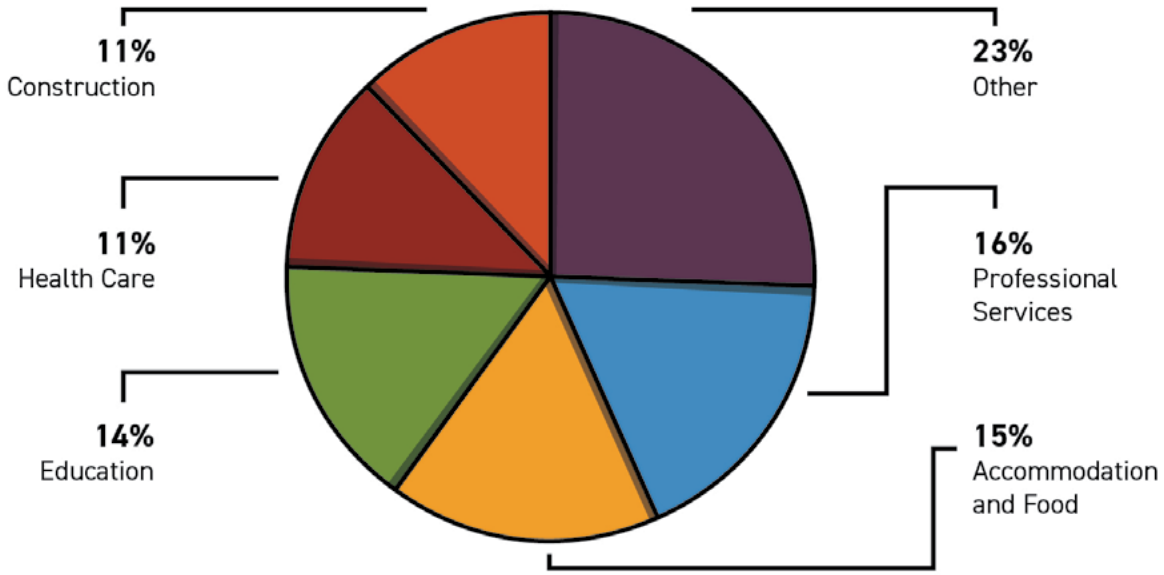

5.2.2 EMPLOYMENT

San Anselmo supports approximately 3,500 jobs, accounting for 3 percent of countywide employment. Roughly a quarter of the local jobs are in the retail and food service employment sectors, underscoring the Town's economic focus on local-serving commerce. Despite this concentration, the economy remains diversified with other major sectors including professional & technical services, education, and health care. Professional services employment has grown in

[4]At about 100,000 square feet, the Safeway-anchored Red Hill Shopping Center is the largest retail property in town.

recent years, in part due to the shift toward remote (home-based) and hybrid work arrangements. Data from the US Census Bureau indicates that about a quarter of employees based in San Anselmo worked remotely in 2022.[5]

Figure EV-2 San Anselmo Employment by Industry

Source: JobsEQ and Economic & Planning Systems

Although total job counts have fluctuated over the past two decades, recent data indicate gradual recovery and stability across most sectors.

5.2.3 EXISTING ECONOMIC DEVELOPMENT EFFORTS

The Town, in coordination with the Economic Development Committee (EDC), the Chamber of Commerce, and other business representatives, continues to advance economic development efforts through collaboration, coordinated initiatives, and the promotion of local business activity.

[5]American Community Survey, U.S. Census Bureau (2022)

Economic Development Strategic Plan

Originally adopted by the EDC in 2018, the Economic Development Strategic Plan identifies San Anselmo's key strengths and economic opportunities, including arts and cultural assets, culinary offerings, and historic character. The Plan outlines nine strategic focus areas, including business mix, permitting, parking, special events, signage, amenities, beautification, marketing, and financing. The EDC prepares an annual Action Plan to organize and implement these strategies, ensuring ongoing process and accountability.

5.3 STRATEGIC PLACEMAKING IMPROVEMENTS

Placemaking refers to planning and design efforts that enhance the attractiveness, functionality, and identity of a place. It serves as both an urban design approach and an economic development strategy that supports the creation of vibrant, connected, and resilient communities.

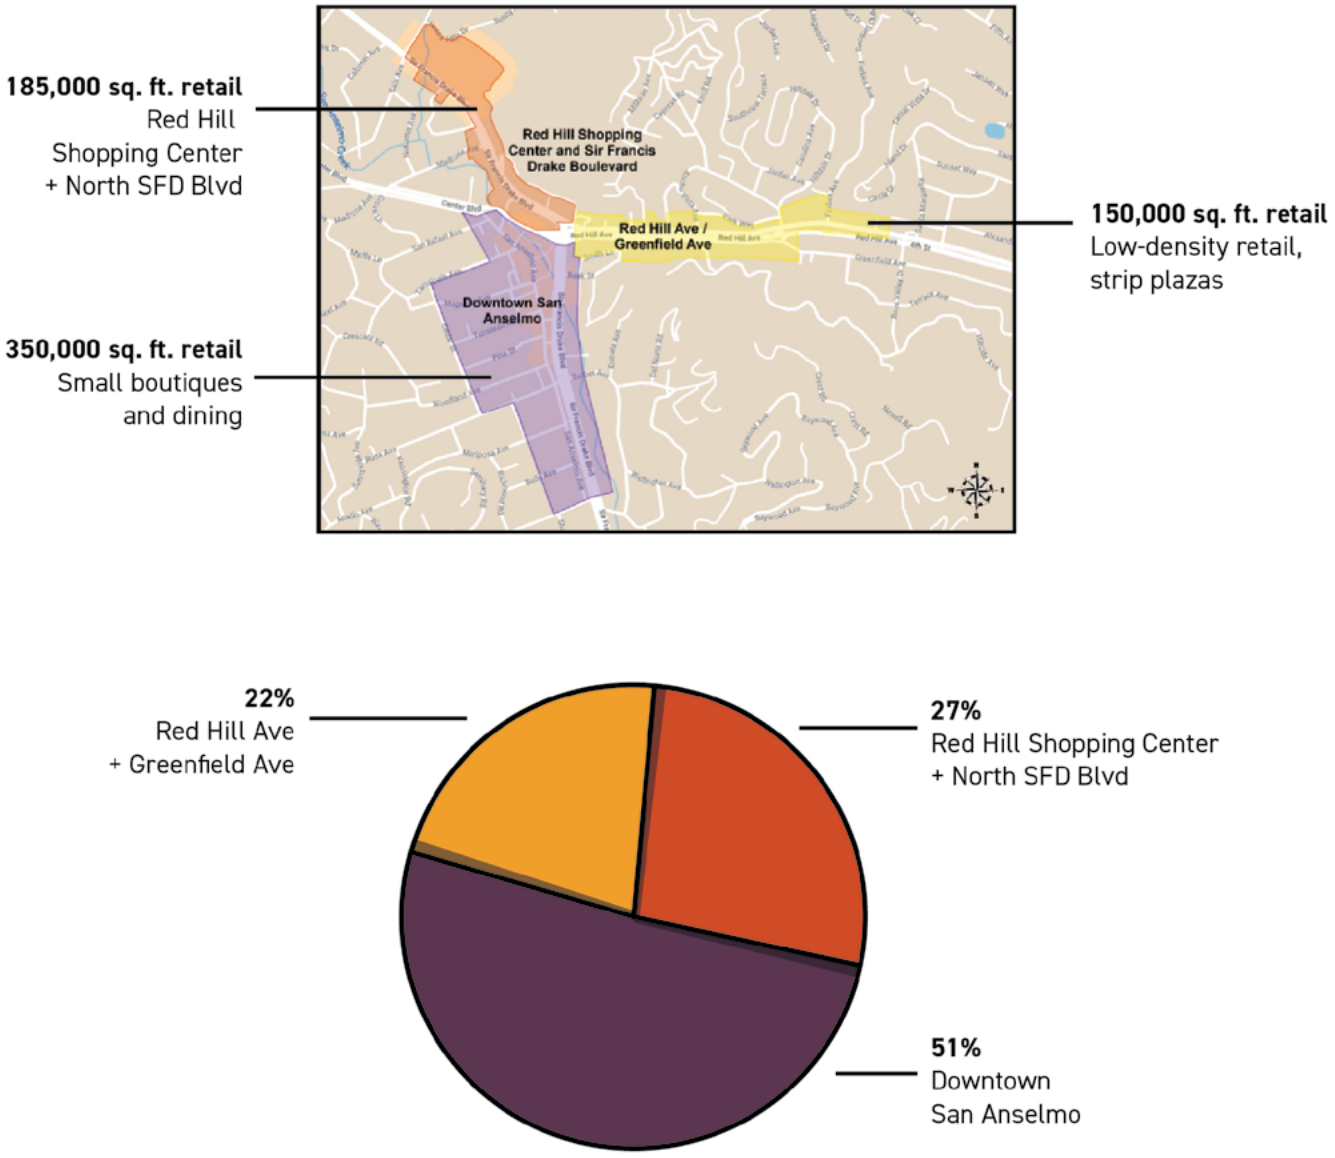

Strategic placemaking improvements, such as public art, green spaces, pedestrian-oriented design, and the creation of welcoming "third spaces," strengthen neighborhood character, support community gathering, and foster connections between people and local businesses and ensure public spaces are welcoming and accessible to people of all backgrounds, ages, incomes, and abilities. Third spaces, such as cafés, courtyards, patios, and small public plazas, provide informal settings for residents and visitors to connect outside of their homes and workspaces. By enriching daily life and promoting a sense of belonging, these spaces help sustain the town's lively commercial districts and reinforce the social and economic fabric of the community.

Well-designed public spaces and commercial areas contribute to higher property values, stimulate consumer activity, and enhance overall economic vitality, reinforcing the town's identity as a desirable and dynamic place to live, work, and visit. They also foster a sense of belonging, where residents and visitors feel welcomed, represented, and safe.

5.3.1 COMMERCIAL DISTRICTS

There are three distinct commercial districts in San Anselmo: Downtown, Red Hill/Greenfield Avenue, and Sir Francis Drake Boulevard. Each district offers a distinct mix of land uses, build form, and identity that contribute to defining the Town's commercial landscape and local economy.

Figure EV-3 SAN ANSELMO COMMERCIAL DISTRICTS

Source: Economic & Planning Systems

DOWNTOWN SAN ANSELMO

Organized around San Anselmo Avenue, the downtown district is the town's most walkable and active commercial area. It features a concentration of historic buildings, public spaces, and locally owned businesses that together create a traditional "Main Street" setting. Downtown offers a diverse range of dining and retail options, from boutiques stores to fine dining and neighborhood restaurants. This area also includes fitness studios, personal care services, and small professional offices.

Downtown is interwoven with civic and cultural destinations, including Creek Park, Imagination Park, the Library, Town Hall, and the San Anselmo Historical Museum. Together, these land uses reinforce downtown's role as the social, cultural, and economic heart of the community. The district encompasses roughly 350,000 square feet of retail space along a half mile stretch of San Anselmo Avenue and Sir Francis Drake Boulevard, including adjacent side streets.

San Anselmo Avenue is at the heart of downtown.

RED HILL AVENUE/GREENFIELD AVENUE

The Red Hill Avenue and Greenfield Avenue corridors provide a mix of stand-alone retail stores, restaurants, and small neighborhood plazas that serve the daily needs of residents. Red Hill Avenue features United Market and other retail and service-oriented uses. Greenfield Avenue, which runs parallel to Red Hill Avenue, offers an eclectic mix of local businesses, fitness studios, and other community-oriented uses, including the Stapleton School of Performing Arts. Together, these corridors encompass approximately 150,000 square feet of space and play an important role in supporting San Anselmo's broader local economy.

Businesses line Greenfield Avenue (left) and Red Hill Avenue (right).

RED HILL SHOPPING CENTER AND SIR FRANCIS DRAKE BOULEVARD

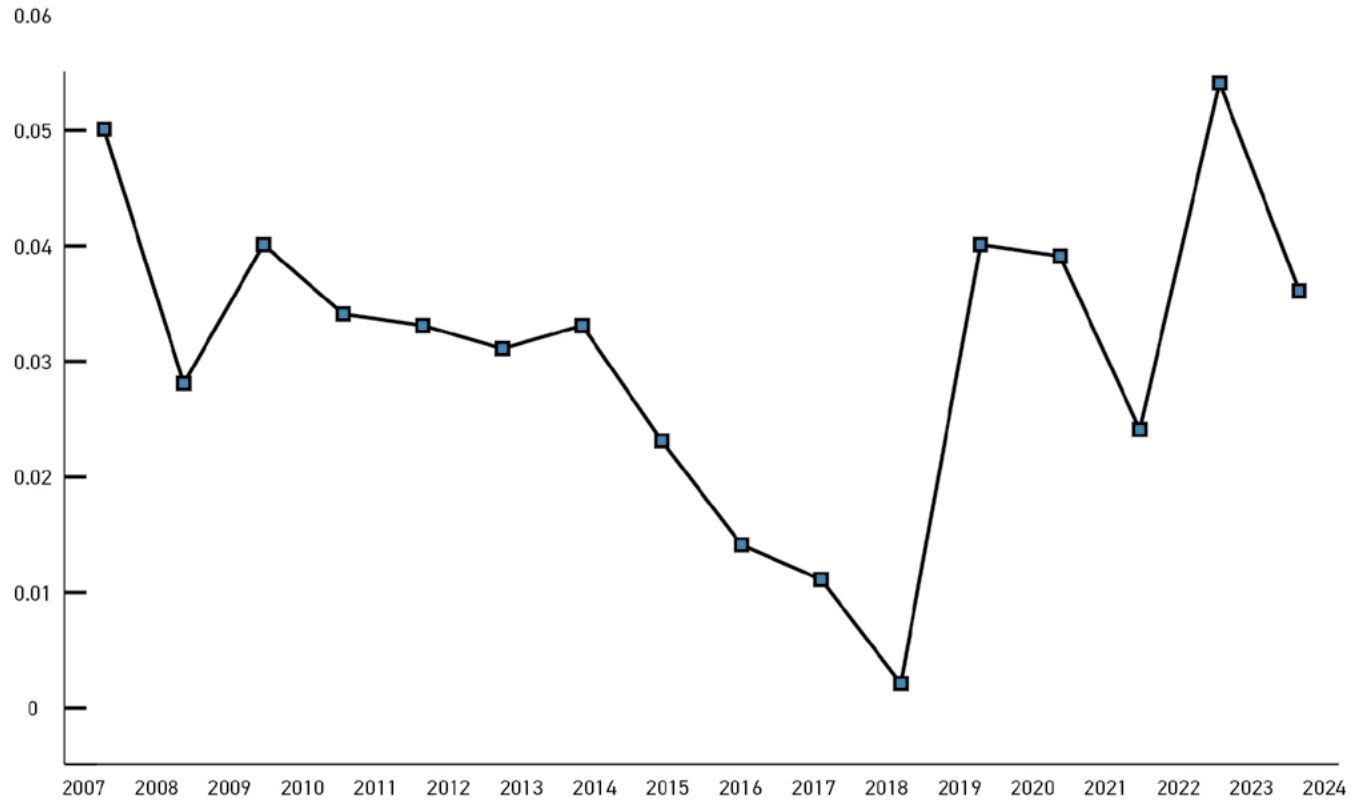

The Sir Francis Drake Boulevard corridor, extending from the Town's northern boundary to "The Hub" intersection, has approximately 185,000 square feet of retail space. This district is primarily composed of retail and dining establishments, offering convenient access for daily errands and neighborhood shopping. Anchoring the area is the Red Hill Shopping Center, San Anselmo's only major multi-tenant retail plaza, which includes national retailers such as Safeway and CVS, along with coffee shops, casual dining, and a bank branch. Compared to the more walkable downtown core, Red Hill is oriented toward automobile access and convenience shopping and serves as a key commercial gateway to the community.

Red Hill Shopping Center is the town's only multi-tenant shopping plaza.

Across San Anselmo's commercial districts, the town maintains a healthy business environment, reflected in its consistently low retail vacancy rates that have typically remained below five percent. While limited vacancies indicate a strong market, constrained real estate supply can restrict opportunities for new business growth. However, retail lease rates remain comparable to countywide averages, signaling steady local demand. Building on these strengths, the Town continues to promote business vibrancy through targeted economic development and placemaking initiatives. Section 5.7 outlines policies and actions designed to sustain economic growth, address persistent vacancies, and implement public space improvements that preserve San Anselmo's small-town character while enhancing its commercial vitality.

Source: CoStar Group and Economic & Planning Systems

5.4 BUSINESS SUSTAINABILITY AND GROWTH

San Anselmo's economic success depends on supporting existing businesses while creating opportunities for new investment and innovation. The Town continues to collaborate with business stakeholders to enhance economic sustainability, attract new enterprises, and maintain a vibrant local economy.

5.4.1 BUSINESS SUPPORT AND RETENTION

> Strategic initiatives to attract diverse, community focused businesses can help revitalize vacant spaces, boost tax revenue, and enhance the town's appeal.

Town staff and the EDC work closely with business and property owners to strengthen local commerce through direct assistance, communication, and policy support. Initiatives include a business welcome and onboarding program to promote new businesses and ensure they are well-supported from the outset. Staff maintain regular communication with the Chamber of Commerce, business representatives, and local stakeholders to identify challenges, share information, and remove barriers to growth. The Town will continue to support a business environment that is accessible and inclusive to entrepreneurs of varying incomes, experience levels, and backgrounds.

To reduce vacancies and encourage new ventures, the Town has implemented a "pop-up" one-year Conditional Use Permit (CUP) program, allowing entrepreneurs to test business concepts in high-visibility locations. This initiative helps activate ground-floor spaces and diversify downtown uses. Staff also maintain a business inventory, monitor vacancies, and work with property owners to track and respond to changing market conditions. Looking ahead, the Town may consider reviewing and updating zoning regulations to further support mixed-use and adaptive reuse opportunities that align with community goals.

5.4.2 COMMUNITY EVENTS

Community events play an essential role in shaping San Anselmo's culture, identity, and economic vitality. They draw visitors, foster civic pride, and strengthen the connection between residents and local businesses. With strong support from the business community, the Town hosts several annual events that have become part of San Anselmo's tradition.

Live on the Avenue, a summer concert series that transforms San Anselmo Avenue into a pedestrian-only gathering space, exemplifies how community events can activate public spaces and support downtown businesses. Now in its fourth year under Town sponsorship, the series originated in 2020 as a community-led effort. Other popular events, such as the Community Parade, reinforce San Anselmo's reputation as a lively, family-friendly destination that celebrates creativity and local spirit.

Downtown hosts many community events like Live on the Avenue.

5.4.3 MARKETING AND BRANDING

Marketing and branding efforts help strengthen San Anselmo's identity as a welcoming, distinctive, and economically vibrant community. Over the years, the Town, Chamber of Commerce, business owners, and community members have partnered on initiatives that raise awareness and celebrate San Anselmo's character.

Examples include wayfinding signage along Red Hill Avenue guiding visitors toward Downtown and the adoption of the "Sugarfoot" deer mascot, a recognizable symbol of the Town's history and creativity, which is used in signage, posters, and digital media. During the pandemic, coordinated signage campaigns helped communicate business openings and maintain community engagement.

The Town's branding logo shows the Sugarfoot deer statue, which is currently in front of the San Anselmo Public Library. Source: Town of San Anselmo, San Anselmo Historical Museum

While these efforts have been successful, local business stakeholders recognize the need for a more coordinated marketing strategy that unifies outreach and promotion across all commercial districts. Section 5.7 includes policies and actions that build on these successes, enhancing business activity, strengthening community cohesion, and supporting townwide marketing and branding initiatives that highlight San Anselmo as an attractive place to live, work, and visit.

5.5 DOWNTOWN SAN ANSELMO AS THE CENTER OF TOWN LIFE

Downtown San Anselmo serves as the town's most recognizable and active commercial district, central to its identity and community life. It is a regional destination for shopping, dining, and cultural experiences, drawing visitors from across Marin County and beyond. The district features a diverse mix of locally owned shops, cafés, and restaurants that reflect San Anselmo's creative and community-oriented character.

> Encouraging residents and visitors to shop locally helps strengthen small businesses, boosts sales tax revenue, and fosters a sense of community pride.

In recent years, the emergence of outdoor dining, fine dining establishments, and new evening entertainment options has strengthened downtown's reputation as a "foodie" destination. These evolving offerings, combined with the town's walkable scale and inviting atmosphere, have extended activity into the evening hours and enriched the downtown experience for residents and visitors alike. Civic and cultural destinations, including Creek Park, Imagination Park, the San Anselmo Historical Museum, Town Hall, and the historic Carnegie public library, further enhance the area's vibrancy and sense of place. Recognizing downtown's vital role in the town's overall economic health, San Anselmo has long invested in placemaking, and business development initiatives designed to attract visitors, support local enterprises, and reduce storefront vacancies.

5.5.1 DOWNTOWN STOREFRONT INVENTORY

Downtown San Anselmo extends over a half mile stretch centered on San Anselmo Avenue between Center Street and Bolinas Avenue, including adjacent commercial side streets such as Tunstead and Tamalpais Avenues. A fall 2024 visual survey identified approximately 115 non-residential spaces, of which 10 were vacant, representing a 9 percent vacancy rate. Restaurants comprise the largest share of businesses, followed by offices, personal care services, and clothing and jewelry retailers.

Figure EV-5: Downtown San Anselmo Business Inventory

Source: Economic & Planning Systems

5.5.2 ECONOMIC DEVELOPMENT STRATEGIC PLAN

The Town's Economic Development Strategic Plan identifies downtown as San Anselmo's commercial and cultural core and a focal point for future economic initiatives. The Plan outlines strategies for beautification and placemaking, such as public art, community events, enhanced wayfinding, and parking management, to strengthen downtown's appeal and accessibility. The Town's goal is to sustain downtown's vitality by supporting local business growth and visitor activity while preserving its distinctive character. Section 5.7 details policies and actions to reinforce downtown San Anselmo's role as the center of town life and activity, fostering cultural vibrancy, economic resilience, and the flourishing foodie and small-business culture.

5.6 NAVIGATING TOWARDS 2045

Over the next two decades, evolving consumer preferences will continue to reshape how people shop, socialize, and spend time in San Anselmo. The Town will monitor trends such as the rise of experiential retail, increased demand for outdoor gathering spaces, and a growing preference for walkable destinations that offer more than traditional shopping. As retail patterns shift, San Anselmo may support the conversion of some commercial spaces into "third spaces" where people gather, recreate, and participate in community activities, such as indoor play and wellness spaces, shared work lounges, maker studios, or flexible community rooms. These spaces can help foster social connection and create welcoming environments for a broad range of residents and visitors. By staying attentive to these shifts, the Town can help local businesses remain competitive while maintaining the intimate scale and character residents value.

At the same time, digital commerce and changing work habits will influence how businesses operate and how customers interact with commercial districts. The Town will adapt its economic development strategies by encouraging mixed-use districts with diverse offerings, promoting street-level activation that keeps downtown lively throughout the day, and supporting small businesses in adopting technologies that enhance customer engagement. Efforts will also focus on ensuring that businesses of varying size and backgrounds can access tools and resources, services, and social connection in place of purely transactional retail. San Anselmo will continue to collaborate with business owners and community partners to cultivate vibrant districts where local identity, creativity, and community interaction are reflected and accessible to a wide range of participants.

Economic vitality and belonging are connected. Small businesses owned by people of color, immigrants, and women play a role in shaping the character and accessibility of San Anselmo's commercial districts. The Town's economic development strategies should reflect and support this diversity, including through targeted outreach to underrepresented entrepreneurs and attention to affordability in commercial leasing markets.

5.7 GOALS, POLICIES, AND ACTIONS

Goal EV-A: Sustain and grow a diverse, collaborative, business-friendly, and resilient townwide economy that supports community wellbeing.

Policy EV-A.1: Business Support and Partnership. Encourage and support a balanced, complementary, and diverse mix of businesses representing a range of sizes, ownership types, and backgrounds that serve residents, workers, and visitors by adapting to evolving community needs and market trends, streamlining regulations and processes, and coordinating with economic partners to foster a business-friendly environment.

Action EV-A.1.a: Business Support, Streamlining, and Entrepreneurship. Regularly update Town regulations, provide permitting assistance, offer business resources, and support local entrepreneurship, including entrepreneurs who may face barriers to starting or growing business, through responsive programs and emerging opportunities such as temporary and pilot uses.

Action EV-A.1.b: Business Communication and Stakeholder Coordination. Maintain proactive communication with business owners, property owners, real estate representatives, business organizations, and a broad range of business stakeholders to identify needs, address challenges, and support business recruitment and retention.

Action EV-A.1.c: Economic Development Collaboration. Collaborate with the Economic Development Committee and Chamber of Commerce on business attraction strategies, community needs assessments, and economic vitality initiatives.

Policy EV-A.2: Economic Vitality Investments and Metrics. Establish and maintain funding sources for economic vitality programs, investments, and partnership initiatives, such as collaborations with

local business advocacy groups like the San Anselmo Chamber of Commerce, while using economic data to guide Town priorities and ensuring that funding mechanisms do not place undue burdens on small businesses and support equitable access to resources and opportunities.

Action EV-A.2.a: Funding, Grants, and Financing Mechanisms. Pursue grants, public-private partnerships, and business-friendly financing tools to support economic vitality initiatives with attention to accessibility for a range of businesses and entrepreneurs, and a focus on placemaking projects, small business support, and the activation of underutilized commercial spaces.

Action EV-A.2.b: Placemaking and Public Realm Investment. Coordinate with business groups to plan and deliver placemaking projects, beautification efforts, and public realm improvements in commercial areas, and explore sustainable, business-friendly financing mechanisms, such as low-interest loans, grants, or a business improvement district, without imposing undue burdens on small businesses.

Policy EV-A.3: Stakeholder Coordination. Maintain ongoing communication, coordination, and partnerships with the Economic Development Committee, San Anselmo Chamber of Commerce, employers, property owners, Marin County, and other stakeholders in San Anselmo's local economy to foster partnerships, collect feedback on issues, disseminate information, and inform Town decision-making.

Action EV-A.3.a: Communication with Business Stakeholders. Enhance communication with commercial property owners, business owners, the San Anselmo Chamber of Commerce and other stakeholders through targeted digital and in-person outreach, and other communication channels.

Action EV-A.3.b: Collaboration with Business Advocacy Groups. Facilitate increased collaboration among San Anselmo's multiple business advocacy groups to support synergistic townwide economic vitality activities.

Action EV-A.3.c: Economic Development Committee Engagement. Continue to regularly present to and engage the Economic Development Committee on local economic vitality issues, strategy, and implementation to ensure business community input and support for Town decision-making.

Action EV-A.3.d: Economic Vitality Action Plan. Work with the Economic Development Committee to prepare and implement an annual or biannual action plan that identifies priority, near-term economic vitality initiatives, with progress updates provided to the Town Council.

See the Land Use and Community Design Element for additional policies and actions related to land use planning, community engagement, and Town communications and budgeting.

Goal EV-B: Support economic growth throughout San Anselmo by preserving its village-like charm, residential character, and small-town appeal, while implementing strategic placemaking improvements to public spaces and amenities that foster a vibrant business community and enhance connections between people, places, and local businesses.

Policy EV-B.1: Community-Focused Investments. Encourage investments throughout San Anselmo, including the downtown core along San Anselmo Avenue and commercial hubs along Greenfield Avenue, Red Hill Avenue, and Sir Francis Drake Boulevard, to maintain and enhance defining features of the town.

Action EV-B.1.a: Town Beautification. Leverage Town committees and commissions to identify and support efforts to beautify the town.

Action EV-B.1.b: Public Infrastructure. Plan, fund, and implement public realm improvements in each commercial hub, such as improved streetscapes, parks and open space, wayfinding signage, and other public amenities.

Policy EV-B.2: Minimize Vacancies and Activate Spaces. Minimize the impacts of vacancies by improving property maintenance, addressing storefront vacancies through creative tenanting strategies, and activating underutilized commercial spaces to enhance community aesthetics and strengthen economic potential.

Action EV-B.2.a: Vacancy Activation and Temporary Use. Encourage pop-ups, short-term uses, window exhibits, and innovative interim uses to maintain vibrancy.

Action EV-B.2.b: Vacancy and Business Inventory Tracking. Maintain up-to-date vacancy and business inventory data, evaluate tools such as vacancy taxes to encourage leasing, and where vacancies persist, promote window exhibits and other strategies to reduce the aesthetic and vibrancy impacts of unoccupied spaces.

Policy EV-B.3: Third Spaces and Community Gathering Areas. Encourage the activation and economic sustainability of "third spaces," informal gathering places such as cafés, patios, courtyards, small-scale food collectives, shared dining spaces, and public plazas, that foster social connection, and create welcoming spaces for people of all backgrounds, ages, and incomes, supporting community identity, and economic vitality within San Anselmo's commercial districts.

Action EV-B.3.a: Public Realm Integration. Incorporate third space design principles that support economic vitality and community interaction, and accessibility for people of all abilities, such as flexible seating for outdoor dining establishments, outdoor retail, and shared work areas, into streetscape and public space improvements in commercial districts.

Action EV-B.3.b: Community Activation Partnerships. Partner with the Chamber of Commerce, businesses, and community organizations to program events and activities that bring people into third spaces and support local economic vitality.

See the Land Use and Community Design Element and the Parks, Recreation, and Public Facilities Element for additional policies and actions related to community gateways, placemaking, community design, and public realm improvements.

Goal EV-C: Sustain and grow San Anselmo business activity for the benefit of residents, workers, and visitors. Support new and recurring cultural, educational, and entertainment events that increase economic activity and promote community cohesion.

★ **Consider programs, events, and other initiatives throughout the town that respond to evolving community demands and market trends, draw in visitors, add retail activity, and increase local employment, and support participation across a broad cross-section of the community.**

Policy EV-C.1: Land Use Planning for Economic Growth. Ensure that land use planning provides capacity for economic growth.

Action EV-C.1.a: Development Incentives. Encourage the development of new commercial spaces, live-work units, and mixed-use projects by providing development incentives such as streamlined approval processes. Focus on commercial areas with high potential for revitalization, ensuring that new developments support a diverse range of land uses, including housing, retail, lodging, and services, to foster long-term economic growth and vitality.

Action EV-C.1.b: Zoning Updates. Revisit zoning and other Town regulations, as needed, to adapt to changing demands and improve progress toward land use objectives.

Action EV-C.1.c: Temporary Use Permits. Continue to allow temporary use permits that enable new businesses to pilot emerging and innovative concepts on a smaller, experimental scale.

Policy EV-C.2: Community Events. Continue regular and special events, including music, shows, markets, and more, throughout the town that increase visitation, invigorate San Anselmo-based businesses, and foster community spirit.

Action EV-C.2.a: Town-Led Events. Engage residents of all ages and backgrounds and foster San Anselmo's vibrant community spirit by continuing to provide successful Town-led events and programs, such as Live on the Avenue, and exploring opportuni-

ties for smaller-scale, recurring activities, such as weekly music nights, holiday festivities, and art walks at local destinations including Creek Park, Memorial Park, Greenfield Avenue, Red Hill Shopping Center, and other community hubs.

Action EV-C.2.b: Community-Led Events and Programs. Encourage and support the San Anselmo Chamber of Commerce and/or individual businesses in creating and hosting events and programs that are accessible and inclusive to a wide range of participants and are financially sustainable over the long term.

Action EV-C.2.c: Local Event Synergy. Collaborate with the business community to create strategic connections between events and local business activity, maximizing the economic benefits of local events.

Policy EV-C.3: Economic Metrics. Maintain data that reveals economic conditions and trends and help guide Town priorities for economic vitality initiatives.

Action EV-C.3.a: Economic Data. Continue to gather and analyze economic data (e.g., visitor counts, retail spending, permitting timelines and trends) and gather input from commercial real estate brokers, business owners, property owners, and a range of stakeholders representing different business types and experiences on an ongoing basis to identify economic trends, address barriers to business growth, and inform attraction and retention efforts.

Action EV-C.3.b: Business Inventory. Create and maintain an up-to-date inventory of businesses within the town and establish a platform that collects and analyzes economic data from business licenses. This platform will define key business characteristics, such as industry type, size, and location, and will be used to track evolving community needs and inform Town programs, policies, and strategic planning efforts to support economic growth and business development.

See the Land Use and Community Design Element and the Parks, Recreation, and Public Facilities Element for additional policies and actions related to land use planning, governance, and recreation events and programming.

Goal EV-D: Continue to coordinate townwide marketing and branding efforts to promote the town as a destination, attract new and returning visitors, and leverage the positive reputation of San Anselmo as a place to live, work, and visit.

Policy EV-D.1: Town-Led Marketing, Branding, and Promotion. Continue to promote San Anselmo as a destination through integrated townwide marketing, branding, and collaborative promotional efforts.

Action EV-D.1.a: Marketing, Branding, and Promotional Strategy. Develop and maintain a comprehensive Town-led marketing and branding program that highlights San Anselmo's unique assets, promotes local businesses and events, supports all commercial hubs with consistent messaging and signage, and uses both digital and traditional channels. Coordinate with partners such as the San Anselmo Chamber of Commerce and regional tourism organizations, incorporate ongoing business feedback, and tailor outreach to diverse consumer segments and reflect the diversity of the community in marketing and branding efforts.

Goal EV-E: Strengthen downtown San Anselmo as the heart of community life, historic, walkable, welcoming, and economically vibrant for residents and visitors of all backgrounds and abilities, while supporting all commercial districts as accessible, attractive destinations for residents and visitors. Foster a mix of businesses, events, and public spaces that celebrate the Town's character, enhance economic resilience, and ensure accessibility for people of all abilities.

Policy EV-E.1: Downtown Charm. Preserve downtown's "Main Street" charm and maintain physical building facades while integrating new uses and building environmental resilience.

Action EV-E.1.a: Town History. Leverage the efforts and resources of the San Anselmo Historical Commission and the San Anselmo Historical Museum to promote the significance and value of downtown buildings with vintage charm.

Action EV-E.1.b: Adaptive Reuse and Restoration. Promote the preservation, restoration, and adaptive reuse of older and classic buildings and facades for new purposes while maintaining the old-town feel of downtown.

Action EV-E.1.c: Downtown Regulations. Continue ongoing review and evolution of downtown regulations to increase economic potential, evolve with community needs, and support the mix of land uses downtown.

Action EV-E.1.d: Improvements Financing. Consider grants, permitting incentives, financing assistance, or other Town support for priority building improvements, such as façade upgrades or seismic retrofits, that enhance high-visibility structures, preserve town charm, and/or address deterioration.

Action EV-E.1.e: Flood Risk Mitigation. Support ongoing efforts to mitigate risk of loss due to flooding downtown.

Action EV-E.1.f: Building Upgrades. Encourage building owners to pursue renovations, modernizations, flood mitigation, or other measures to preserve aging spaces.

Policy EV-E.2: Increase Downtown Visitation. Encourage a diverse mix of businesses and events that appeal to and are accessible to a wide range of residents and visitors to the downtown.

Action EV-E.2.a: Ground-floor Spaces. Encourage tenanting downtown ground-floor spaces with land uses that promote a vibrant, pedestrian-friendly commercial hub.

Action EV-E.2.b: Downtown Events. Continue to produce downtown events that promote local business and reinforce San Anselmo as a regional destination in Marin County.

Policy EV-E.3: Downtown Accessibility. Improve downtown accessibility to make the area desirable and convenient for visitors to reach.

Action EV-E.3.a: Downtown Wayfinding. Enhance downtown wayfinding to attract and direct visitors.

Action EV-E.3.b: Parking Management. Implement parking strategies that ensure parking is convenient for visitors and suitable for employees.

Action EV-E.3.c: Pedestrian Accessibility. Seek opportunities to increase foot traffic downtown through improvements to pedestrian-friendly infrastructure, enhanced bicycle parking, and exploration of shuttle or alternative transit options, while improving accessibility and comfort for all users.

Action EV-E.3.d: Universal Design Principles for Accessibility. Ensure that commercial hubs in San Anselmo are accessible to people of all abilities by adhering to universal design principles.

Action EV-E.3.e: Bike Safety and Infrastructure. Promote safe biking initiatives and collaborate with local cycling groups to assess infrastructure improvements that enhance San Anselmo's reputation as a bike-friendly town.

Policy EV-E.4: Commercial Districts as a Destination. Promote San Anselmo's downtown, Greenfield, Red Hill, and neighborhood commercial areas as vibrant destinations for shopping, dining, services, and community gathering.

Action EV-E.4.a: District Identity and Promotion. Promote the unique features, character, and offerings of downtown, Greenfield, Red Hill, and other neighborhood commercial districts, including local boutiques, dining, services, and gathering spaces, to strengthen the Town's overall identity and visibility.

Action EV-E.4.b: Regional Attractor. Plan, promote, and support events and activities across downtown, Greenfield, Red Hill, and neighborhood commercial areas that attract visitors from Marin County, the Bay Area, and beyond.

See the Land Use and Community Design Element, Circulation Element, and Safety Element for additional policies and actions related to placemaking, community design, historic preservation, transportation, and flooding in the downtown.

6. HOUSING

An adequate supply of housing is essential to creating and maintaining a vibrant and diverse community. As demographics and housing needs shift, the Town will proactively encourage the housing types and amenities that are in demand.

6.1 PURPOSE OF THE ELEMENT

San Anselmo's residents live in a variety of housing types, including single-family homes, duplexes, multifamily buildings, and accessory dwelling units (ADUs). Housing development over the past decade has been slow and limited, consisting primarily of single family homes on the few remaining vacant lots in town, a smaller number of multifamily buildings, and a steady addition of ADUs.

Given the constrained housing supply and the desirability of living in San Anselmo, housing costs remain high, limiting access for many households, including younger families, essential and service workers, and others seeking to live and work in the community. The Town recognizes that providing a range of housing, including affordable housing, is essential to supporting a vibrant, inclusive, and sustainable community.

As demographics and housing needs evolve, the Town will continue to proactively plan for a diversity of housing types and amenities that Respond to changing needs and expand access to housing opportunities for a broad range of residents.

The Housing Element includes the following sections.

6.2 Housing Element Process. Provides an overview of the State-mandated housing element process, the Town's current share of the regional housing need, and the Town's Housing Element for the 2023-2031 planning period contained in Appendix A.

6.3 Housing Opportunities. Highlights housing opportunity sites and strategies contained in the current Housing Element.

6.4 Navigating Towards 2045. Describes how the Town plans to evaluate and meet future housing needs.

6.2 HOUSING ELEMENT PROCESS

The Town addresses its housing challenges through a comprehensive set of goals, policies, and actions in the Housing Element. Because housing is of critical concern to California, the State government requires cities and towns to update their housing element regularly. The Housing Element is subject to detailed statutory requirements and mandatory review by the State Department of Housing and Community Development (HCD).

The Town is required by State law to plan for 833 new housing units by 2031.

The Housing Element process begins with HCD allocating a region's share of the statewide housing need to the local Council of Governments based on State Department of Finance population projections and forecasts used in preparing regional transportation plans. The Council of Governments for San Anselmo and the nine-county Bay Area region is the Association of Bay Area Governments (ABAG). ABAG, in collaboration with the Metropolitan Transportation Commission, develops a Regional Housing Needs Allocation (RHNA) Plan that assigns the regional housing need to the individual cities, towns, and counties within the Bay Area. San Anselmo's share of the regional housing need for the current 2023-2031 planning period is 833 units, which represents 5.8 percent of the 14,405 units allocated to Marin County.

The regional share is further allocated according to four income levels: very low income, low income, moderate income, and above moderate income. San Anselmo's regional housing need of 833 units is distributed among the four income categories as follows:

- 253 units affordable to very low-income households (up 50 percent of the area median income)
- 145 units affordable to low-income households (50 to 80 percent of the area median income)
- 121 units affordable to moderate-income households (80 to 120 percent of the area median)
- 314 units affordable to above moderate-income households (over 120 percent of the area median income)

Affordable housing is generally defined as housing that costs no more than 30 percent of a household's gross income. Affordable housing may be market rate housing or income-restricted housing that is required under financing agreements, deed restrictions, and/or development agreements to provide units affordable to very low-, low-, or moderate-income households.

> Let's put housing above downtown, Red Hill and along SFD with offices and commercial underneath.

Local governments are not required to build or finance housing, but they are required to ensure there are adequate vacant and underutilized sites, appropriately zoned, to meet the projected housing need. The process provides local control over where and what type of development should occur while creating opportunities for private for-profit and non-profit developers to meet market demand. The Town's Housing Element demonstrates that the Town can accommodate its projected housing need through redevelopment of underutilized sites and new ADUs.

The 2023-2031 Housing Element was adopted in December 2023 and is included as Appendix A. The current Housing Element contains an evaluation of the previous housing element programs and accomplishments; an overview of the housing element's public participation process; a detailed analysis of housing needs, including special populations' needs; a comprehensive description of housing sites and strategies, including ADU development; a detailed analysis of governmental and non-governmental constraints to housing production; the newly required Affirmatively Furthering Fair Housing analysis; and goals, policies, and actions with clearly defined objectives and timelines for implementation.

The Housing Element is required to be updated according to a schedule established by the State Department of Housing and Community Development. The next revision of the Housing Element is scheduled for 2031 at which time the Town will need to address a new RHNA requirement for the next eight-year planning period.

6.3 HOUSING OPPORTUNITIES

Most of the sites within residential zones in San Anselmo are already developed or are constrained by environmental and topographical conditions, which limits opportunities for high-density housing. As a result, the Town seeks to meet its RHNA obligation through a combination of ADU construction and new housing development on 63 housing opportunity sites as identified in Figure 6.1 in Appendix A. These sites are primarily underutilized commercial properties along Sir Francis Drake Boulevard and Red Hill Avenue, where multifamily and mixed-use development is allowed, and highly accessible to public transportation, jobs, and services.

San Anselmo's RHNA requirement is 833 units. With 54 pipeline units and 160 projected ADUs, the remaining need is 619 units. The 63 opportunity sites across 151 parcels can reasonably accommodate 794 units, providing nearly a 30 percent buffer. This buffer ensures adequate site capacity even if some parcels develop at lower densities than assumed. Section 6 of Appendix A describes the site methodology and the Town's overall strategy to meet and exceed its RHNA requirement.

6.4 NAVIGATING TOWARDS 2045

Looking forward to 2045, several long-term trends will continue to shape housing needs in San Anselmo. State and regional forecasts indicate an aging population and a continued decline in average household size, with more single adults, couples without children, and older residents seeking to remain in their community as they age. At the same time, high housing costs and evolving work patterns are increasing the demand for smaller units, rental opportunities, and flexible living arrangements.

Consistent with State Housing Element law requiring jurisdictions to plan for a full range of income levels and household types, the Town will continue to facilitate a broader mix of housing options, including ADUs, duplexes and townhomes, apartments, mixed-use housing in appropriate commercial areas, and homes designed to support seniors and people with disabilities. These efforts will help expand access to housing opportunities and support a diverse and inclusive community. Zoning and development standards will be periodically updated to remove unnecessary constraints, encourage production of multifamily and affordable housing on identified sites, and support aging in place through accessible design and proximity to services and transit.

Future housing will also be influenced by emerging technologies and the Town's climate and electrification goals, as reflected in the General Plan and Climate Action Plan. To ensure that new and existing homes remain functional, efficient, and resilient, the Town will promote building and retrofit standards that support all-electric construction, electric vehicle charging, on-site renewable energy, and sufficient electrical capacity for future needs.

By monitoring progress through Housing Element and Climate Action Plan annual reports, the Town will remain responsive to demographic, technological, and regulatory changes while continuing to support safe, sustainable, and inclusive supply that serves a broad range of residents over time.

7. CIRCULATION

San Anselmo's circulation system supports safe and accessible travel by car, bicycle, foot, and transit, connecting neighborhoods, businesses, and community destinations throughout the town. As technologies and travel behaviors evolve, the Town will adapt its streets, curb space, and multimodal facilities to ensure a safer, more efficient, and more sustainable transportation network for all users.

Jump to Goals, Policies, and Actions

7.1 PURPOSE OF THE ELEMENT

The purpose of this element is to advance a transportation system that is safe, accessible, and equitable for all who live in San Anselmo. It recognizes that mobility, safety, and affordability needs vary across the community, and that many residents, including lower-income households, older adults, people with disabilities, pedestrians, bicyclists, transit riders, and those without access to a private vehicle, depend on a well-functioning, affordable, and connected system. Transportation access is a fundamental component of belonging. The policies in this element are intended to improve access and connectivity for a wide range of users and to ensure that circulation investments reflect the needs of those who rely on them most.

The Circulation Element describes how San Anselmo will plan for an implement a safe, convenient, and efficient transportation system for the movement of people and goods. In the context of a General Plan, "circulation" refers to various ways people and goods travel by car, bicycle, foot, or by transit, and the network of roadways, sidewalks, bicycle lanes and paths, and transit routes that support these movements.

Ensuring that this network is accessible to all users, including children, older adults, and persons with disabilities, is essential to enhancing livability in San Anselmo. A well-designed circulation system improves mobility, reduces greenhouse gas (GHG) emissions, and supports public health and community well-being.

The Circulation Element recognizes that local transportation decisions affect neighboring communities and emphasizes the importance of regional collaboration, as well as coordination with other General Plan Elements, to achieve shared transportation, environmental, and community goals.

The Circulation Element includes the following sections:

- **7.2 Local Planning Context.** Summarizes concurrent planning efforts, regional and State requirements, and emerging issues that the Circulation Element addresses.
- **7.3 Multi-Modal Roadway Network and Travel.** Summarizes road-

way classifications and traffic patterns in San Anselmo as well as sources of traffic congestion.

- **7.4 Safe Transportation.** Describes current roadway safety levels in San Anselmo and highlights the Town's strategies to improve safety for all roadway users.
- **7.5 Active Transportation and Transit.** Defines bikeway types and includes policy guidance to expand opportunities for alternative transportation, which includes walking, biking, public transportation, and other rolling forms of travel that support active lifestyles and health.
- **7.6 Parking**. Summarizes parking trends and patterns in San Anselmo.
- **7.7 Navigating Towards 2045.** Describes how the Town will respond to anticipated changes in technology and travel behavior over the next two decades.
- **7.8 Goals, Policies, and Actions.** Identifies the goals, policies, and actions to improve circulation and the local transportation system for all users.

7.2 LOCAL PLANNING CONTEXT

7.2.1 TRANSPORTATION SETTING AND HISTORY

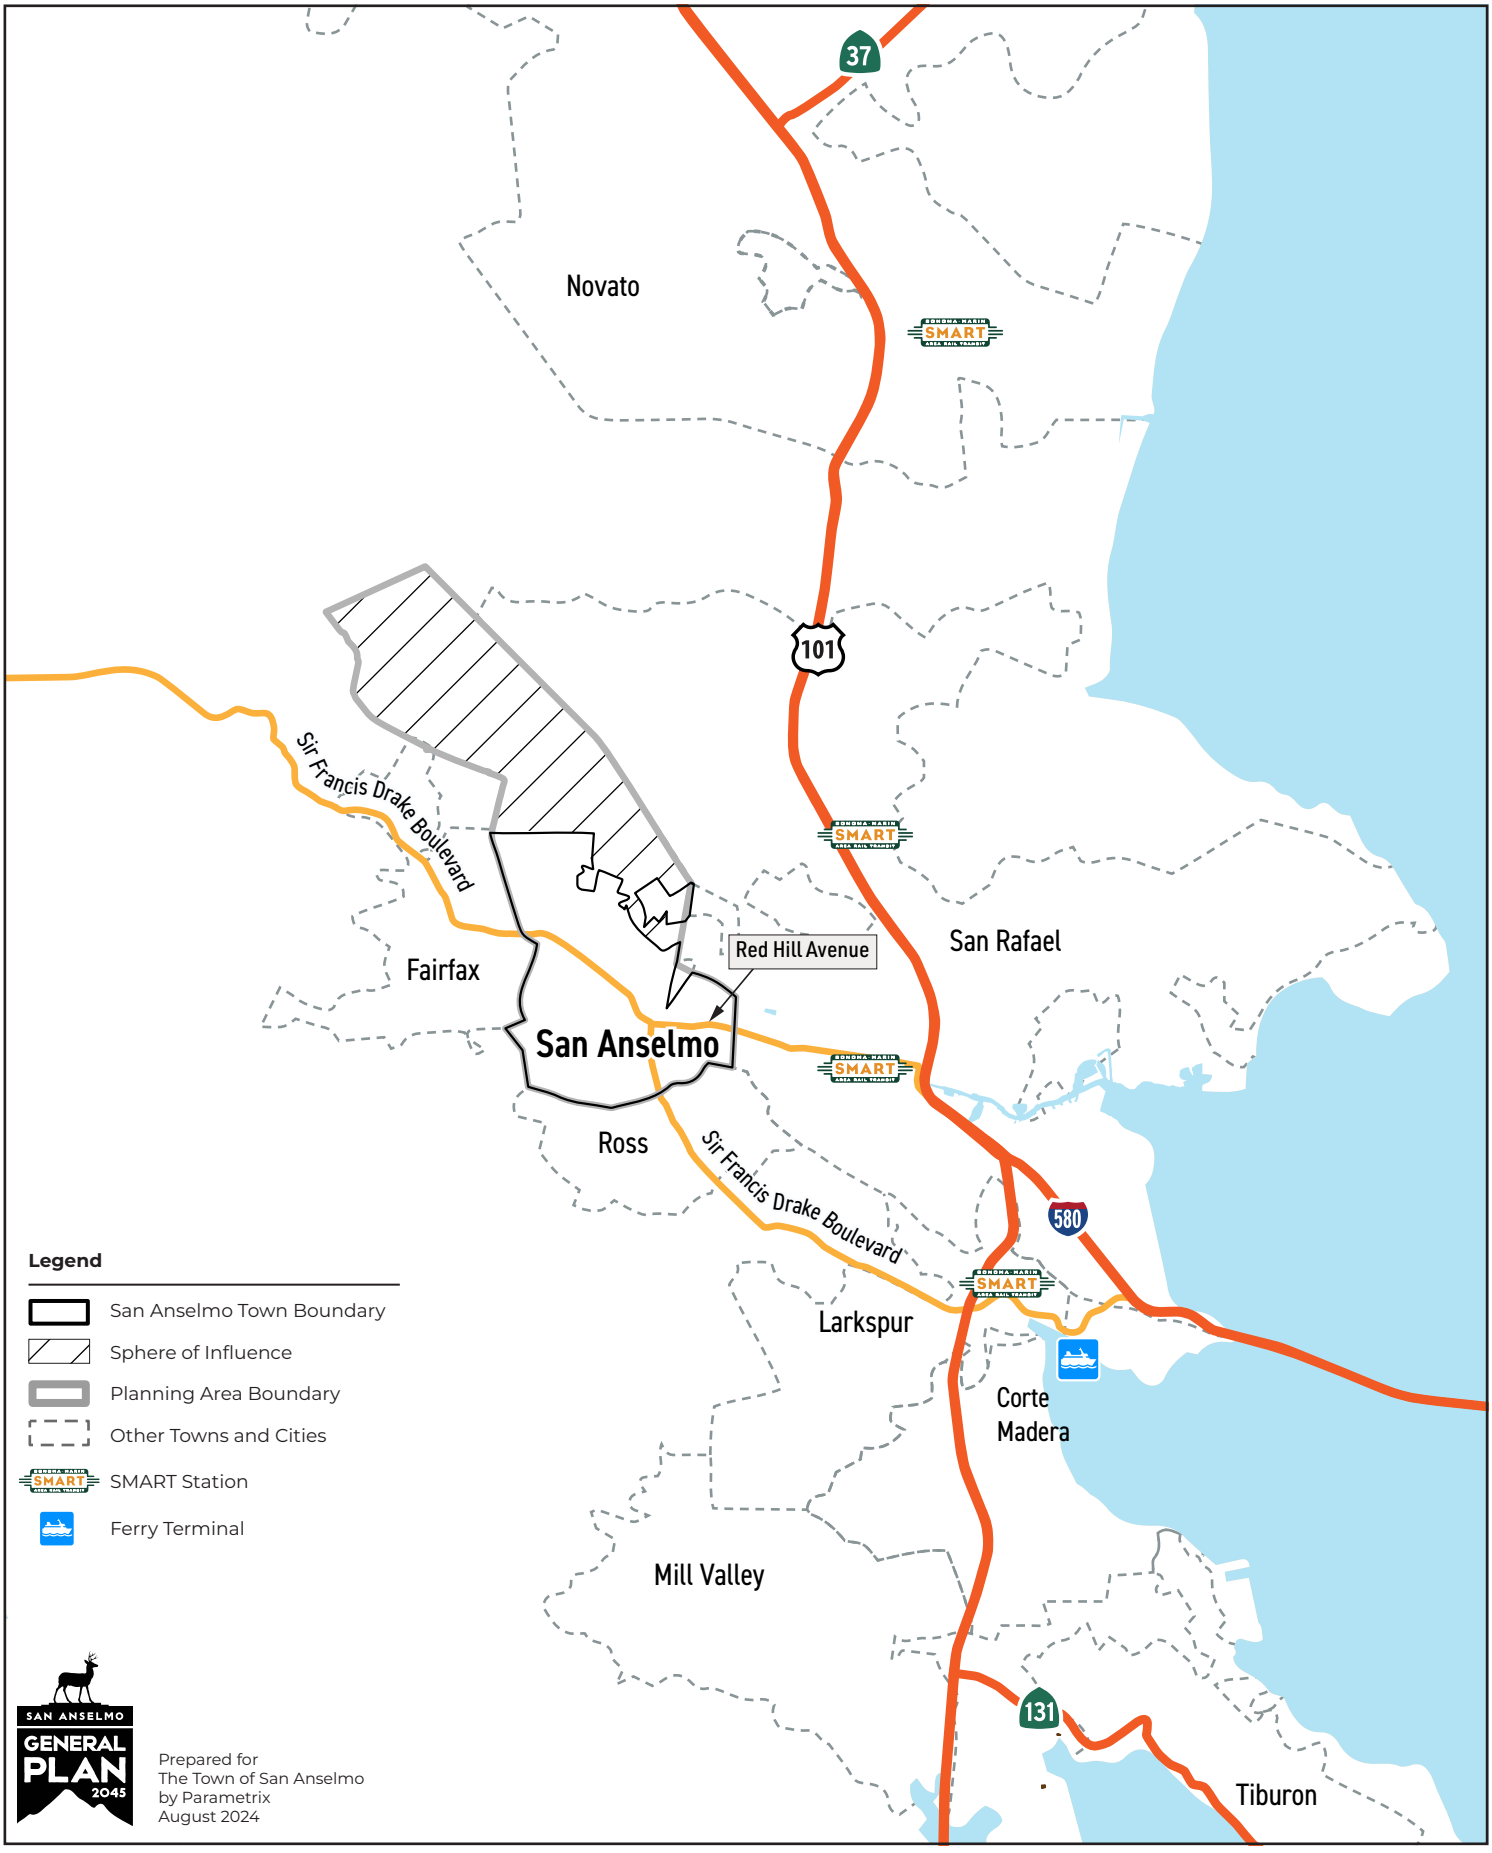

San Anselmo lies in a valley, and the natural terrain facilitated railroad transportation service around which the town grew. A substantive shift to motor vehicle travel began to increase in the 1930s, particularly following the construction of the Golden Gate Bridge. Railroad service through San Anselmo ended in 1941, and tracks were replaced with roadways to accommodate passenger cars and buses.

The original railroad rights-of-way persist to this day in the form of Red Hill Avenue, Center Boulevard, and Sir Francis Drake Boulevard. The intersection of these three major thoroughfares, commonly known as "the Hub," stitch together destinations from western Marin

County to Highway 101 and beyond, as illustrated in Figure C-1. Today, the town's street network includes a mix of flat and steep roads, and main transportation routes align with the rail infrastructure of the past.

San Anselmo's modern roadway network is built upon the corridors of its original rail system.

Figure C-1

Regional Transportation Settin

7.2.2 INTEGRATED REGIONAL APPROACH TO TRANSPORTATION PLANNING

San Anselmo is part of a larger, regional transportation network. The Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) coordinate regional transportation planning and administer Plan Bay Area, the long-range transportation plan that promotes the reduction of GHG emissions and sustainable growth.

MTC also requires local transportation authorities to develop transportation plans that integrate with the Regional Transportation Plan. The Transportation Authority of Marin (TAM) fulfills this role for Marin County by establishing priorities and funding transportation projects and programs through its Countywide Transportation Plan. A San Anselmo Town Council member serves on TAM's Board of Commissioners, ensuring local input in regional decision-making.

The Circulation Element establishes a unified local vision for San Anselmo's transportation system while aligning with regional and statewide priorities. This coordinated approach allows the Town to address both local transportation challenges and regional goals.

During General Plan implementation, the Town will coordinate with TAM, transit operators, neighboring jurisdictions, and other regional partners on traffic safety, travel along Sir Francis Drake Boulevard and other regional corridors, transit priority and coordination, VMT reduction, active transportation, emergency mobility, and emerging transportation technologies.

7.2.3 LEVEL OF SERVICE (LOS) AND VEHICLE MILES TRAVELED (VMT)

Historically, the Town measured traffic on streets and intersections using a metric called level of service (LOS). LOS measures how congested roads are and how long vehicles are delayed during travel.

In 2013, California Senate Bill (SB) 743 updated how towns can evaluate transportation impacts under the California Environmental

Quality Act (CEQA). Instead of using LOS, San Anselmo is now required to use Vehicle Miles Traveled (VMT).

VMT measures the number of vehicle trips and trip lengths. Unlike LOS, which focuses on traffic congestion, VMT links driving directly to its environmental and personal health impacts. Tracking VMT helps measure and quantify how transportation choices contribute to GHG emissions, air quality, and road safety.

San Anselmo, along with the rest of Marin County, uses the Transportation Authority of Marin Demand Model (TAMDM) to forecast VMT and traffic impacts. Section 7.8 includes policies and actions that support VMT reductions. San Anselmo will also maintain a standard for LOS, which is also addressed in Section 7.8.

Vehicle Miles Traveled is a measure of the number of vehicle trips and trip lengths.

7.2.4 LAND USE AND TRANSPORTATION

Land use and transportation are inextricably linked; how communities are zoned strongly impacts both housing affordability and transportation options. When housing costs force people to move farther away from their work and community, additional strain is placed on the transportation system. This makes it more difficult to meet State-mandated GHG reduction targets and increases personal costs and time spent traveling. As such, coordinating the Land Use and Community Design Element and Circulation Element is essential.

The Circulation Element and Land Use and Community Design Element both include goals, policies, and actions which promote more mixed-use development and land uses that work to reduce VMT, provide more travel options, and ultimately improve livability in San Anselmo. This builds on local efforts identified in the Housing Element to increase housing capacity near commercial centers, offices, and transit stops. By locating housing near everyday destinations, residents can reduce the number and length of drive-alone trips and more easily use active modes to reach local destinations, thereby reducing VMT.

Greater distances between housing and commercial centers limit transportation options and increase VMT.

7.2.5 EMERGING TRANSPORTATION TECHNOLOGIES

Advances in technology continue to transform how people get around. New and emerging mobility options, like Transportation Network Companies (TNCs), micromobility services, and autonomous vehicles, are reshaping travel choices and improving accessibility while also presenting new challenges that the Town will monitor and address over time.

TNCs, such as Uber and Lyft, provide convenient door-to-door transportation with short waiting times and enable better mobility for people who do not own a personal vehicle. However, TNCs can contribute to higher VMT and congestion, supplant public transit ridership, and are subject to fare increases during times of high demand.

Bike- and scooter-shares, referred to as micromobility services, are increasingly popular with younger people and convenient for short trips in denser environments, especially in areas with limited parking. In Marin County, micromobility services are increasingly being integrated with public transit to meet first and last mile trip needs. However, they can be less effective in suburban and rural environments and less accessible to children, older adults, people with disabilities, and for long travel distances.

Electric Vehicles (EVs) and electric bicycles (e-bikes) have also contributed to reduced GHG emissions, and State regulations will phase in zero-emission vehicles by 2035. As use of e-bikes grows, ensuring safe streets and responsible operation will amplify in importance to keep all residents safe in San Anselmo.

Autonomous vehicles and other emerging technologies will further shape how people travel in San Anselmo and beyond. Section 7.8 of the Circulation Element includes policies and actions to guide integration of emerging transportation technologies and enhance micromobility services. Policies and actions to promote the use of EVs are located in the Sustainability, Climate Change, and Resiliency Element.

7.3 MULTI-MODAL ROADWAY NETWORK AND TRAVEL

7.3.1 ROADWAY NETWORK

San Anselmo's road network consists of arterial, collector, and local residential streets, with no freeways or expressways within the town limits. The town's major arterial roads serve as regional thoroughfares, connecting Fairfax and west Marin to cities and towns along Highway 101. These routes accommodate weekday commuter traffic as well as weekend visitors heading to recreational and other

destinations in the area. The major roadways that serve local and regional traffic are summarized below in Table C-1 and illustrated in Figure C-2.

Section 7.8 includes policies and actions to manage a safe, efficient, and multi-modal roadway network by maintaining effective circulation, improving key corridors for all users, and calming traffic on local streets.

Table C-1: Major Roadways in San Anselmo

Roadway	Connecting Extent	Travel Lanes	Speed Limit	Sidewalk Description	Bicycle Facility Description
Sir Francis Drake Boulevard (North of the Hub)	Fairfax to the Hub	4 (undivided)	30 mph	Both sides	No bicycle facilities
Sir Francis Drake Boulevard (South of the Hub)	The Hub to Ross	4 (with median)	35 mph	Both sides	No bicycle facilities
Center Boulevard	Fairfax to the Hub	2 (undivided)	30 mph	Discontinuous	No bicycle facilities
Red Hill Avenue	The Hub to San Rafael	4 (with divided median)	35 mph	Exists on north side of westbound lanes	No bicycle facilities
Butterfield Road	Sleepy Hollow to Sir Francis Drake	2 (undivided)	25 mph	Discontinuous	Class II (on-street bike lanes)

Vehicles queue on Sir Francis Drake Boulevard at the Hub.

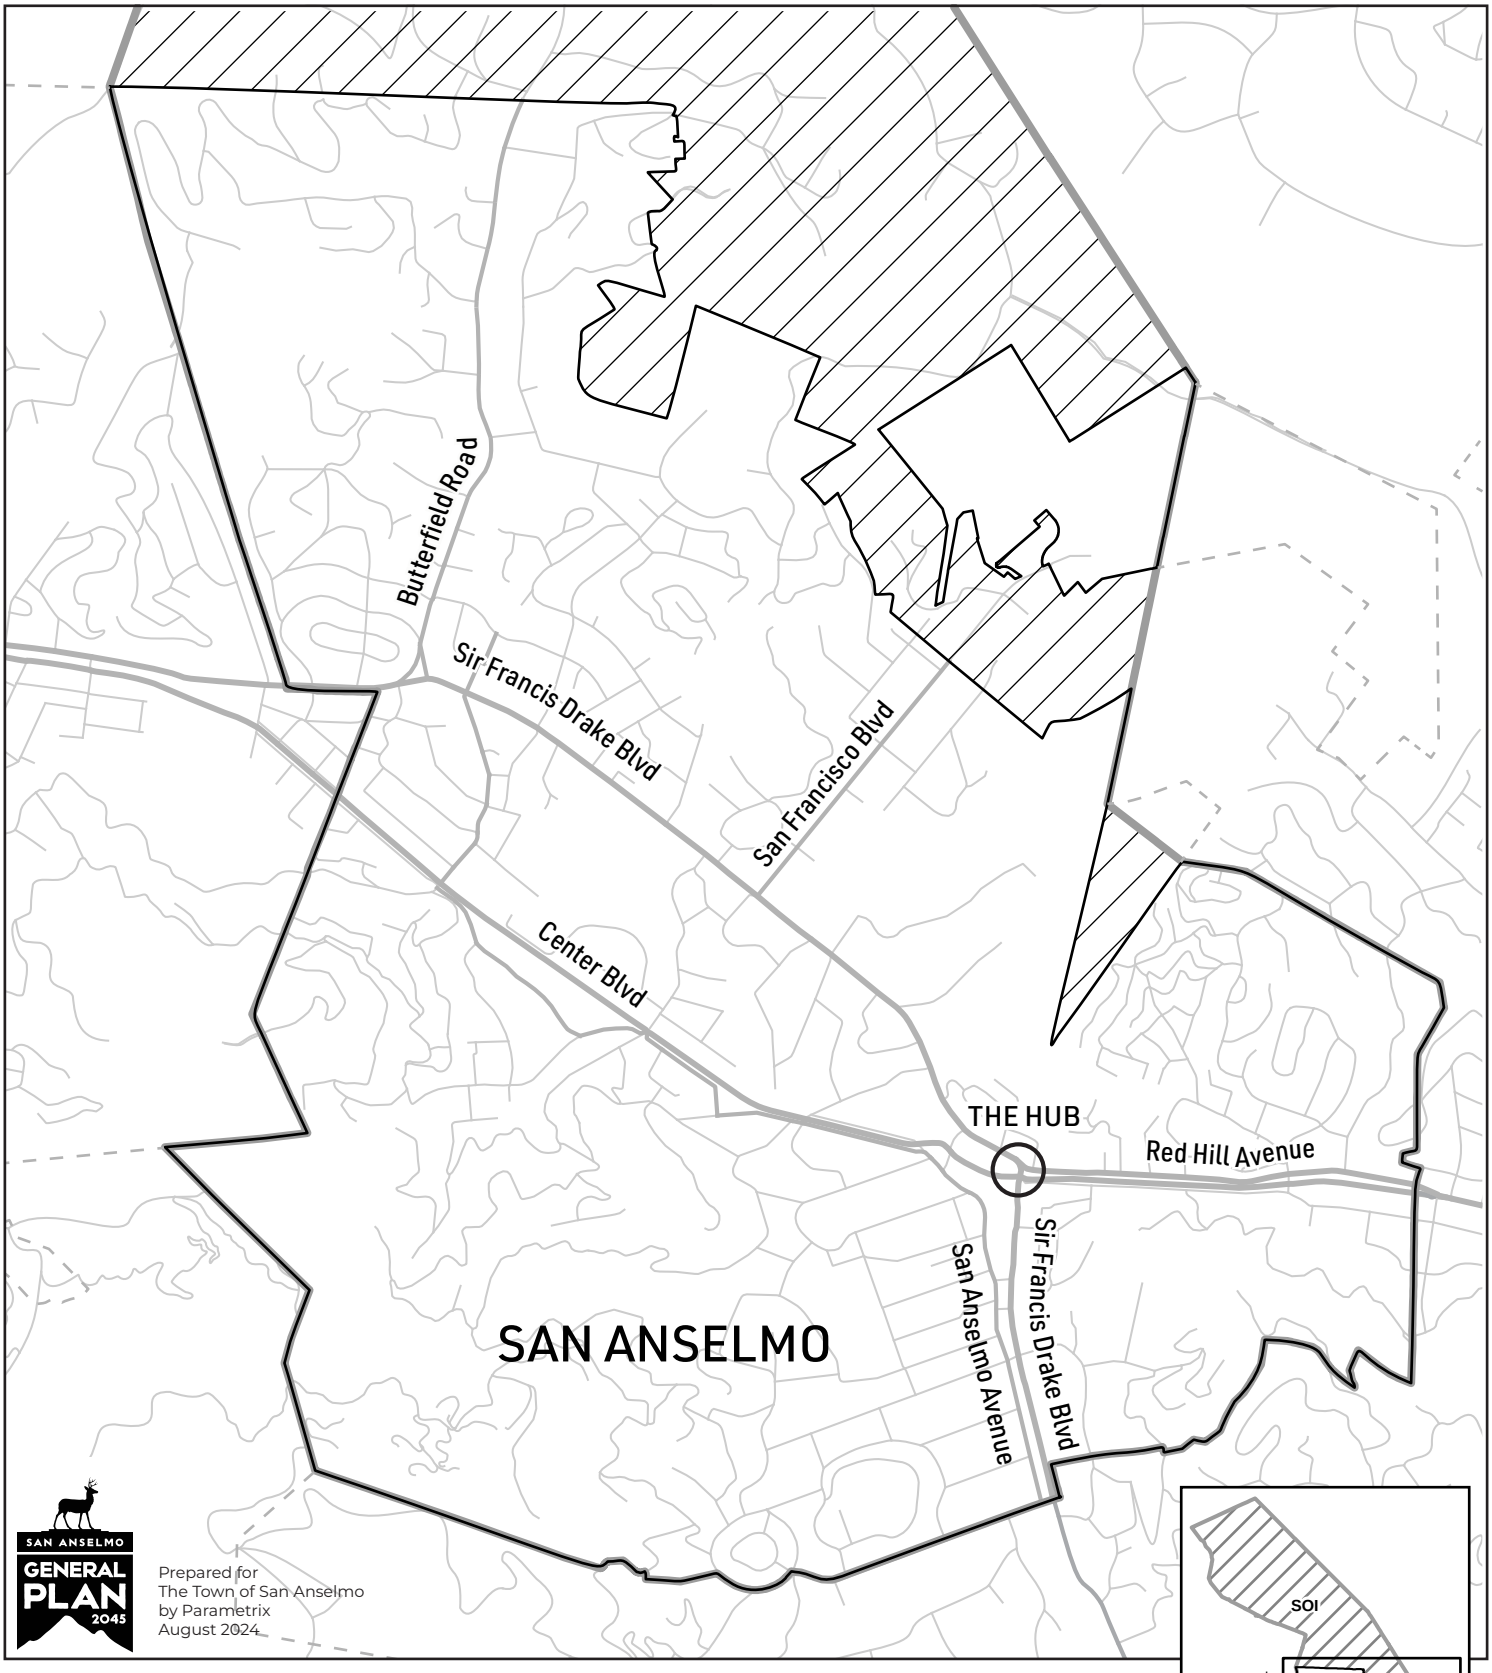

Figure C-2

San Anselmo Roadway Netwo

7.3.2 COMPLETE STREETS

Traditional roadway functional classifications have historically prioritized higher-speed vehicle travel over the safety and comfort of other users. In 2008, the State began requiring all cities and towns to plan for Complete Streets in their General Plans. Complete Streets are streets designed to be safe, convenient, and comfortable for all users, regardless of their age, ability, or mode of travel. San Anselmo adopted its Complete Streets policy in 2013 to promote walking, biking, rolling, and public transit, strengthen connections between neighborhoods and destinations, and reduce GHG emissions.

The Circulation Element includes a policy and several actions to prioritize and implement Complete Streets throughout San Anselmo. In prioritizing transportation improvements, the Town will give particular attention to routes and intersections serving lower-income neighborhoods, schools, transit stops, and destinations frequently used by residents without access to private vehicles. Safety and accessibility improvements in these areas will be prioritized in capital planning.

7.3.3 TRAFFIC PATTERNS

> “65,000 cars go through the hub each day. Prioritizing cars at the hub is a necessary reality.

San Anselmo is located at a significant crossroads within Marin County. As such, the roadways service both local and pass-through traffic. Approximately 65,000 vehicles travel through the Hub each day carrying approximately 97,500 people. In the morning, the Hub accommodates a large volume of traffic traveling eastbound towards San Rafael and Highway 101, while afternoon commute patterns shift toward west- and northbound travel, opposite the general flow of the morning peak.

The vast majority of total trips that start from and end in San Anselmo are relatively short. Based on data from the Replica activity-based travel model, most people destined for San Anselmo are coming from nearby communities; over half of all trips are three miles or less in distance. Based on projections from the Transportation Authority of Marin, the average VMT per person generated by San Anselmo residents is forecast to decrease by eight percent

by 2045, while the average VMT per employee commuting to San Anselmo is forecast to increase by nine percent.

San Anselmo can reduce single-occupancy vehicle demand and VMT by prioritizing walkable infrastructure, supporting infill development in low-VMT areas such as the Downtown, and implementing additional strategies detailed in Section 7.8.

The Hub plays an important transportation role not just for San Anselmo, but also for the larger region.

7.4 SAFE TRANSPORTATION

Roadways in San Anselmo that were originally designed to move cars quickly and efficiently may be less safe or comfortable for walkers or bicyclists. According to the Transportation Authority of Marin, there were 126 crashes in San Anselmo between 2017 and 2021, including two fatal crashes, one of which involved a pedestrian (see Figure C-3). Unsafe speeds accounted for almost 32 percent of injury crashes, which is higher than the county's rate of 26 percent. Approximately 25 percent of crashes resulting in injury involved bicyclists, and about half of the pedestrians involved in crashes were crossing in a crosswalk at the time of the crash. In addition, the por-

tion of San Anselmo Avenue running through the Downtown ranks among the highest crash rate-roadways in Marin County.

San Anselmo's roads can be redesigned to make walking, biking, and rolling safer and more comfortable. Section 7.8 includes policies and actions to improve roadway safety outcomes by implementing Complete Streets designs, deploying traffic calming on neighborhood streets, enhancing pedestrian and bicycle infrastructure, and improving transit stop accessibility to protect all users.

Safety outcomes depend heavily on how vehicles interact with people walking, biking, and using mobility devices on our streets.

7.5 ACTIVE TRANSPORTATION AND TRANSIT

7.5.1 BIKEWAYS

In San Anselmo, bicycling plays an important role in enhancing mobility, reducing greenhouse gas emissions, and improving both personal and community health. San Anselmo's bicycle facilities play a key role in providing residents with access to schools, parks, shops, outdoor recreational opportunities, and other destinations. The Town's Complete Streets Policy and Bicycle and Pedestrian Master Plan established the framework for creating safer, more connected routes for people walking and bicycling, and continue to guide future improvements.

San Anselmo's bicycle network includes a mix of on-street bike lanes, shared roadways, and local connections that generally follow the Town's valley corridors. These facilities provide access to key

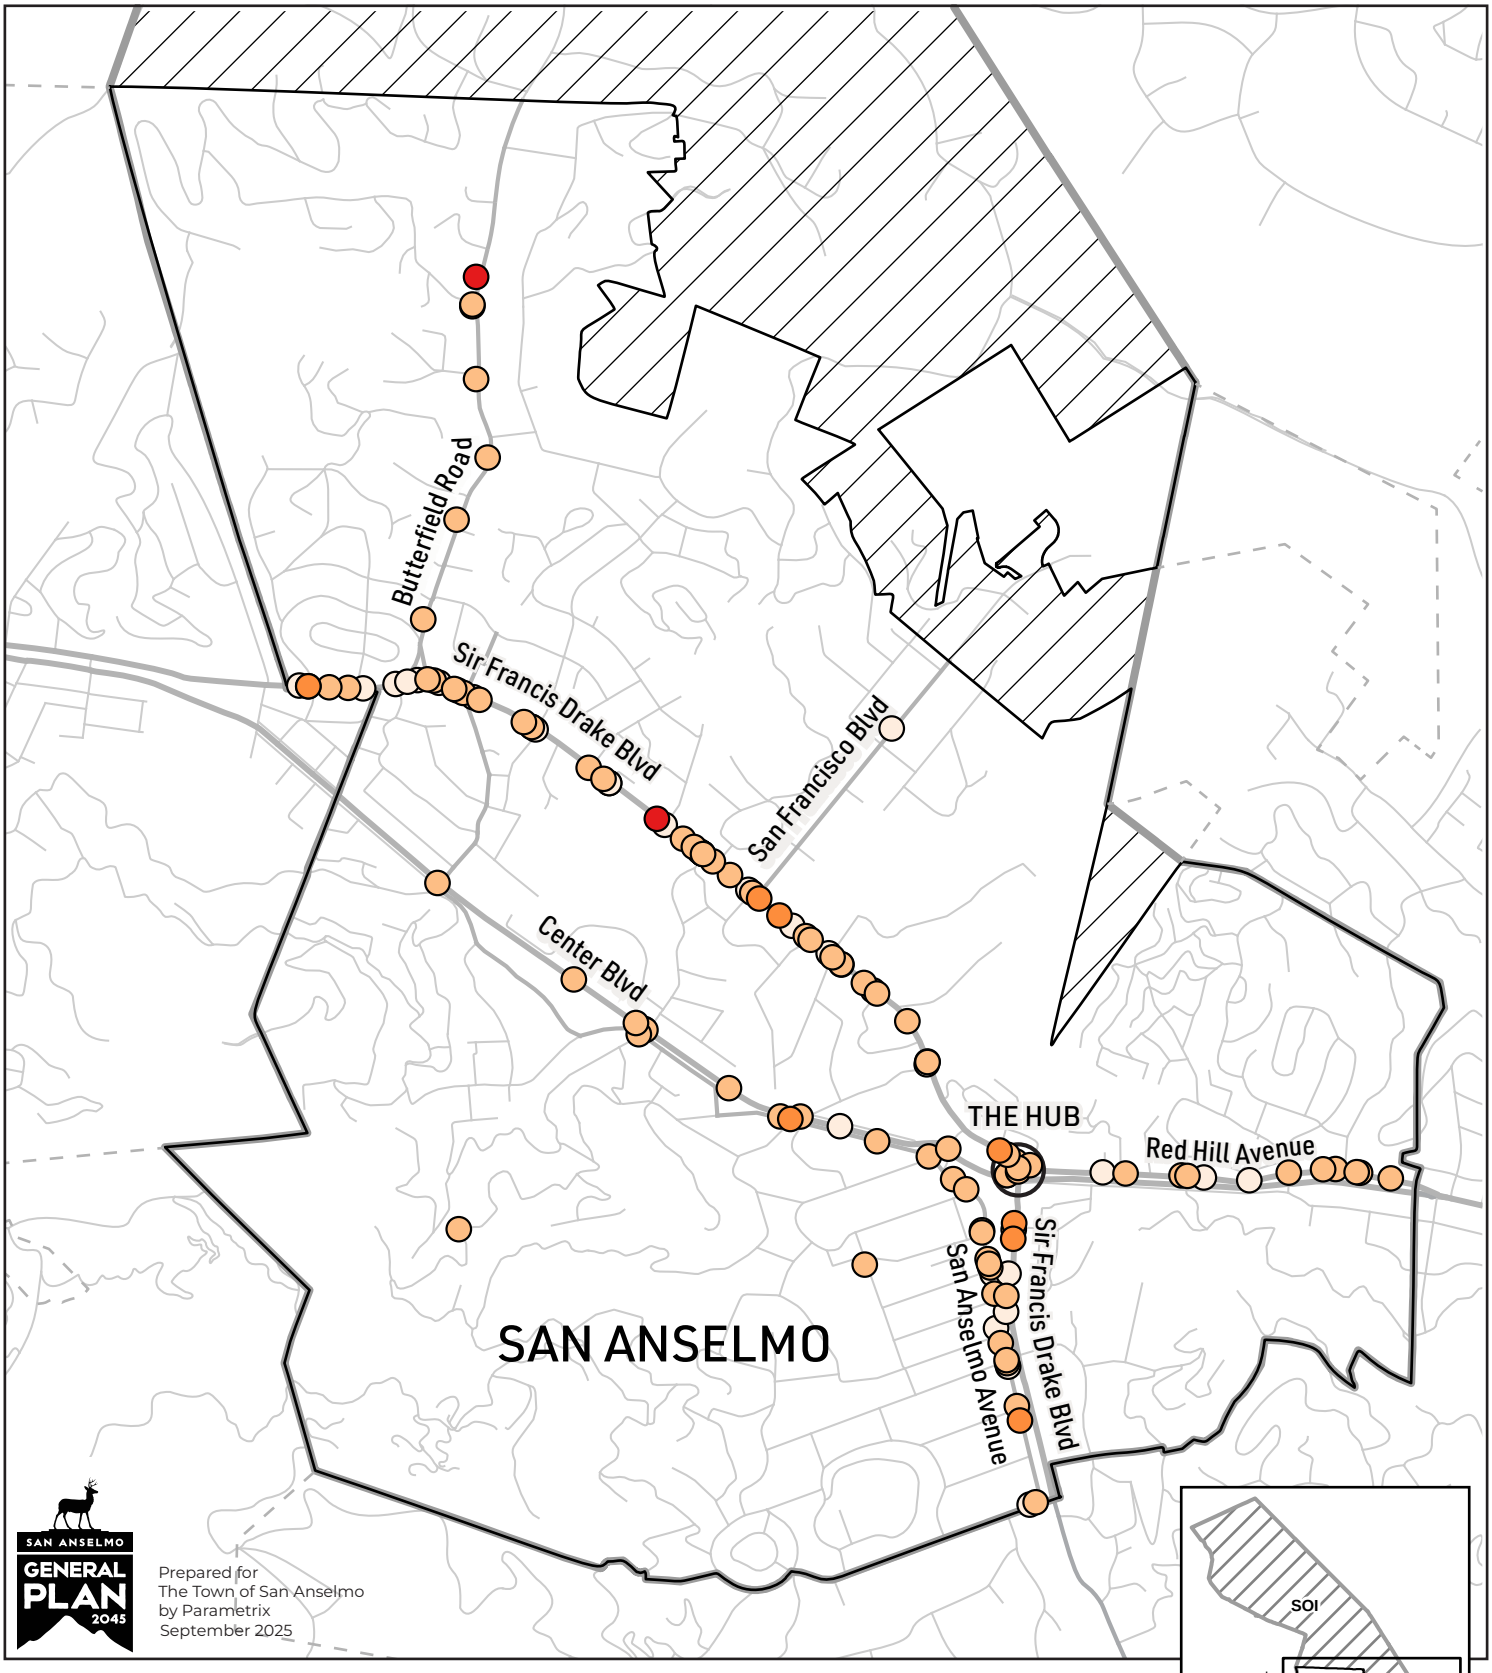

Figure C-3

San Anselmo Roadway Crash Locations (2017-202

destinations and link to regional trails and routes throughout Marin County. Existing bikeways in San Anselmo are illustrated in Figure C-4, and are comprised of three facility types as described below.

Section 7.8 includes policies and actions to create a safe, accessible, and connected network for bicycling to daily destinations through targeted infrastructure, traffic calming, and local programming.

CLASS II BIKEWAY (BICYCLE LANE)

Often referred to as a "bike lane," a Class Il bikeway is designated by a striped lane for one-way travel on a street or highway. It provides dedicated space for cyclists within the roadway.

CLASS III BIKEWAY (BICYCLE ROUTE)

A Class III bikeway provides shared use with motor vehicle traffic and is identified by signage and shared roadway bicycle pavement markings, also known as "sharrows." Class III Bikeways are typically used on streets where dedicated bike lanes are not feasible due to space constraints, or on local streets that provide connections between other bicycle facilities.

Class II Bikeway – Butterfield Road

Class III Bikeway – San Anselmo Avenue

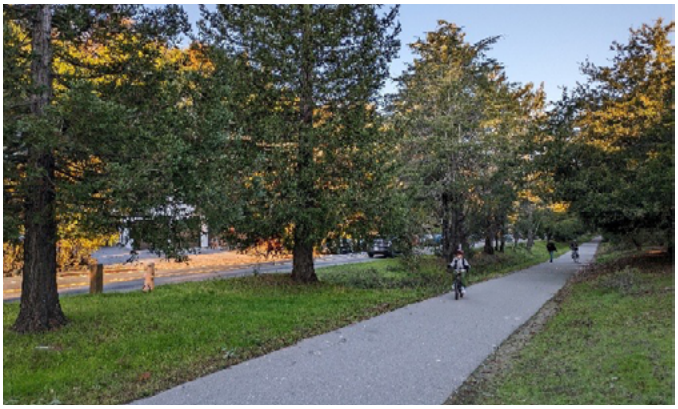

Class IIIS Bikeway – Bolinas Avenue

CLASS IIIS BIKEWAY (BICYCLE ROUTE)

Class IIIS bikeways are Class III facilities which have been designated and signed as a "School Route." These facilities comprise the Town's Bike Spine, or primary routes children use when bicycling to school. Special "School Route" signage and green-backed sharrows are placed along these roadways to alert drivers and clearly identify the routes. The Town shares this unique bike routing system for schoolchildren with the Town of Fairfax.

OTHER BIKEWAYS

Other types of bikeways that do not currently exist in San Anselmo include Class I multi-use paths, which provide bicycle travel on a paved right-of-way completely separated from any roadway, and Class IV protected bikeways, which minimize interactions with motor vehicles by providing vertical element separation.

Class I Bikeway -
Magnolia Avenue in Larkspur

Class IV Bikeway -
Second Street in San Rafael

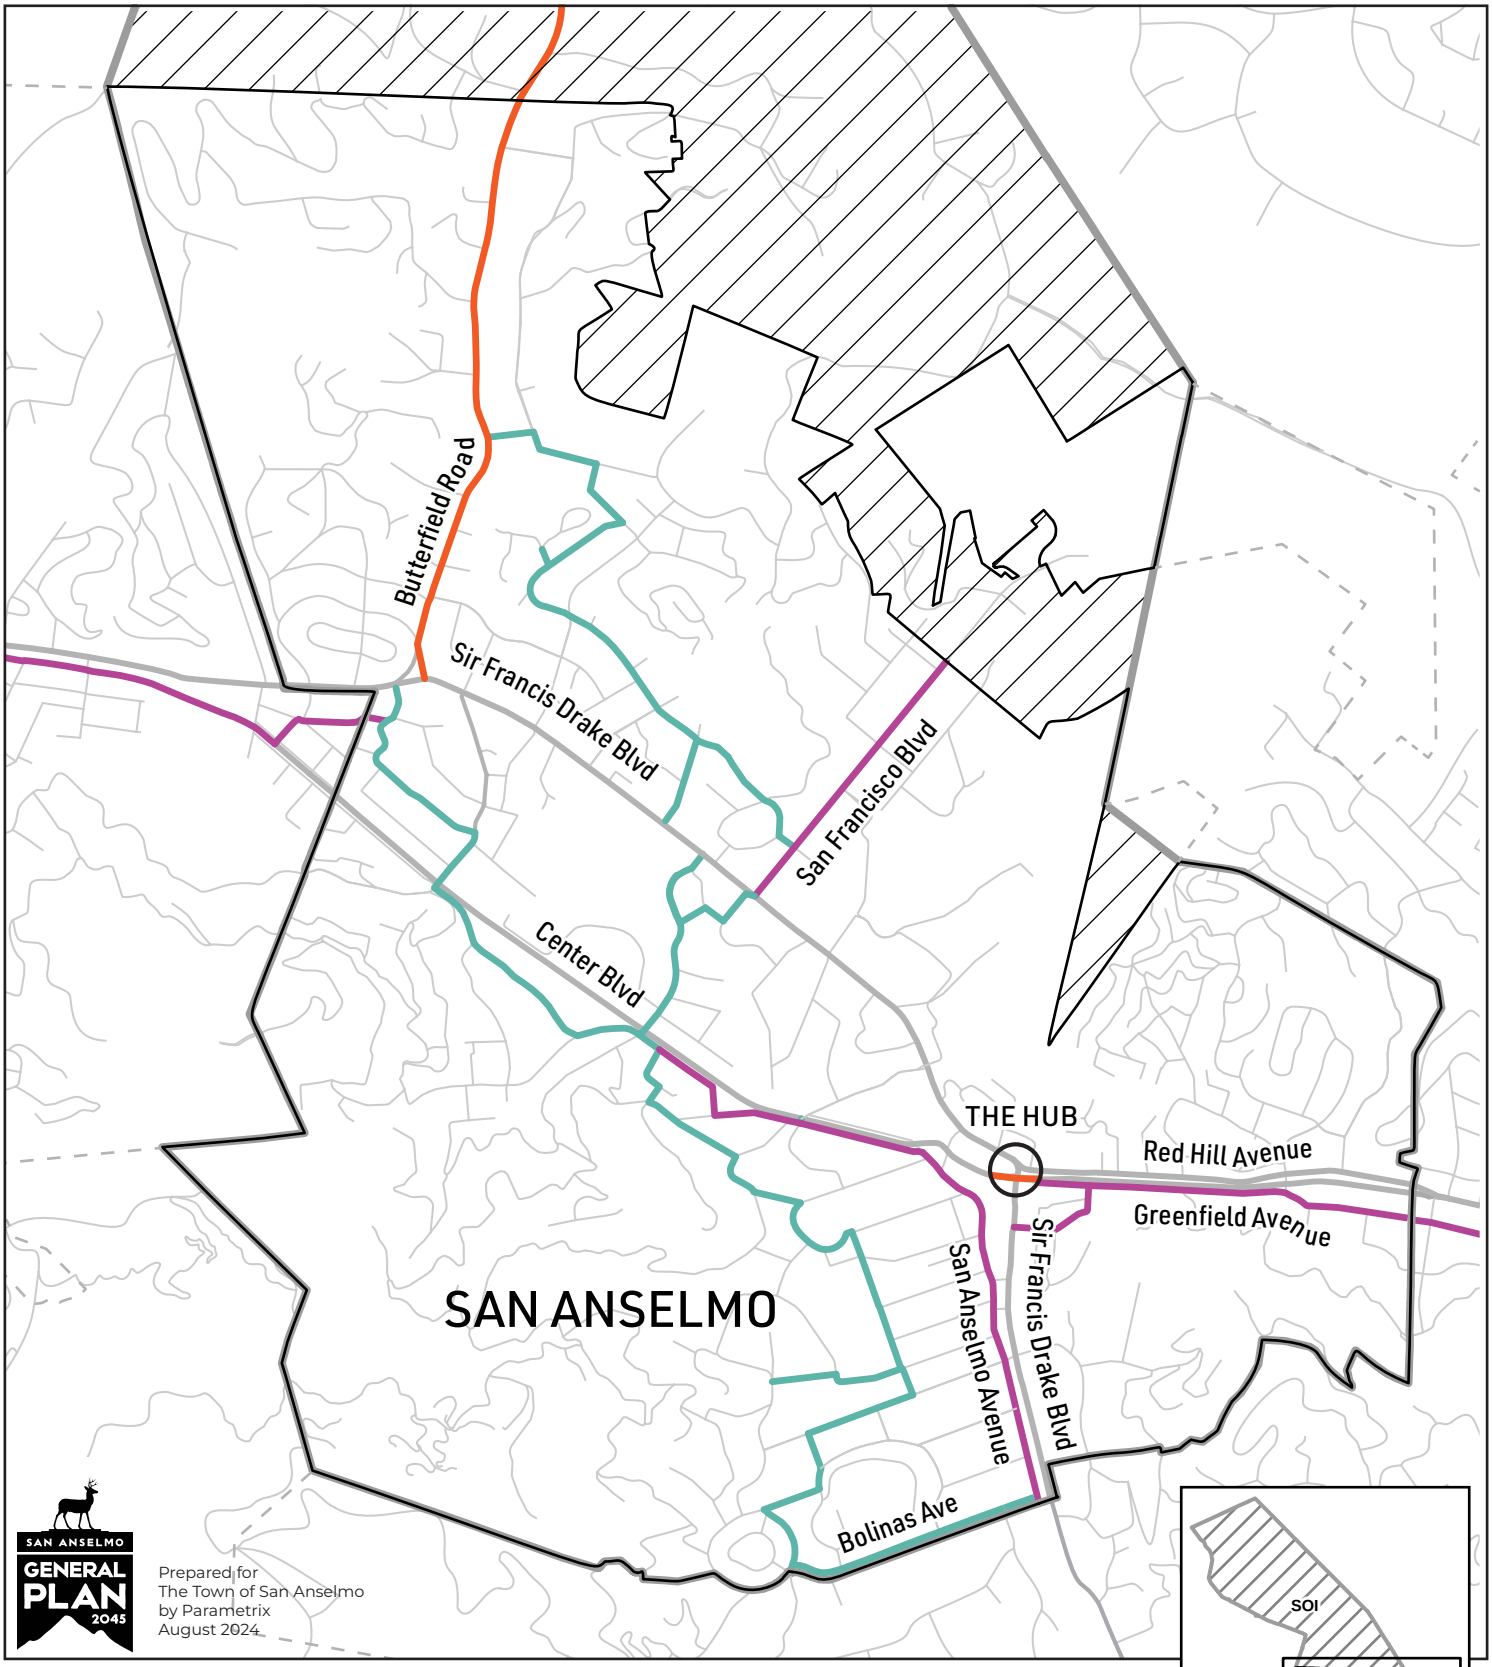

Figure C-4

San Anselmo Existing Bicycle Facilitie

7.5.2 PEDESTRIAN ROUTES

Walking is a fundamental and sustainable way to travel in San Anselmo. A safe, accessible, and comfortable pedestrian network allows residents to reach important destinations such as schools, retail services, the post office, and the library without relying upon a car.

> Any stairs, trails and lanes that would increase pedestrian safety between the downtown area and open space on the Bald Hill side of the valley should be prioritized.

Most neighborhoods in San Anselmo have sidewalks or shoulders that accommodate walking, although sidewalk width and condition vary across the community. Downtown San Anselmo experiences high levels of pedestrian activity, with connected sidewalks and visible crosswalks. Many hillside neighborhoods have limited right-of-way, steep slopes, and mature landscaping, making sidewalk construction challenging.

San Anselmo also boasts a historic network of stairs, lanes, and trails that enrich its pedestrian infrastructure, as illustrated in Figure C-5. The stairways, originally constructed as shortcuts from hillside neighborhoods to lower-lying areas where transportation hubs like train stations were located, continue to serve as vital pedestrian pathways.

Section 7.8 includes policies and actions to maintain and enhance these pedestrian connections, along with improving accessibility and pedestrian safety, which will help the Town create a more complete and connected network for all ages and abilities.

Pedestrians cross Sir Francis Drake Boulevard at Saunders Avenue near Archie Williams High School.

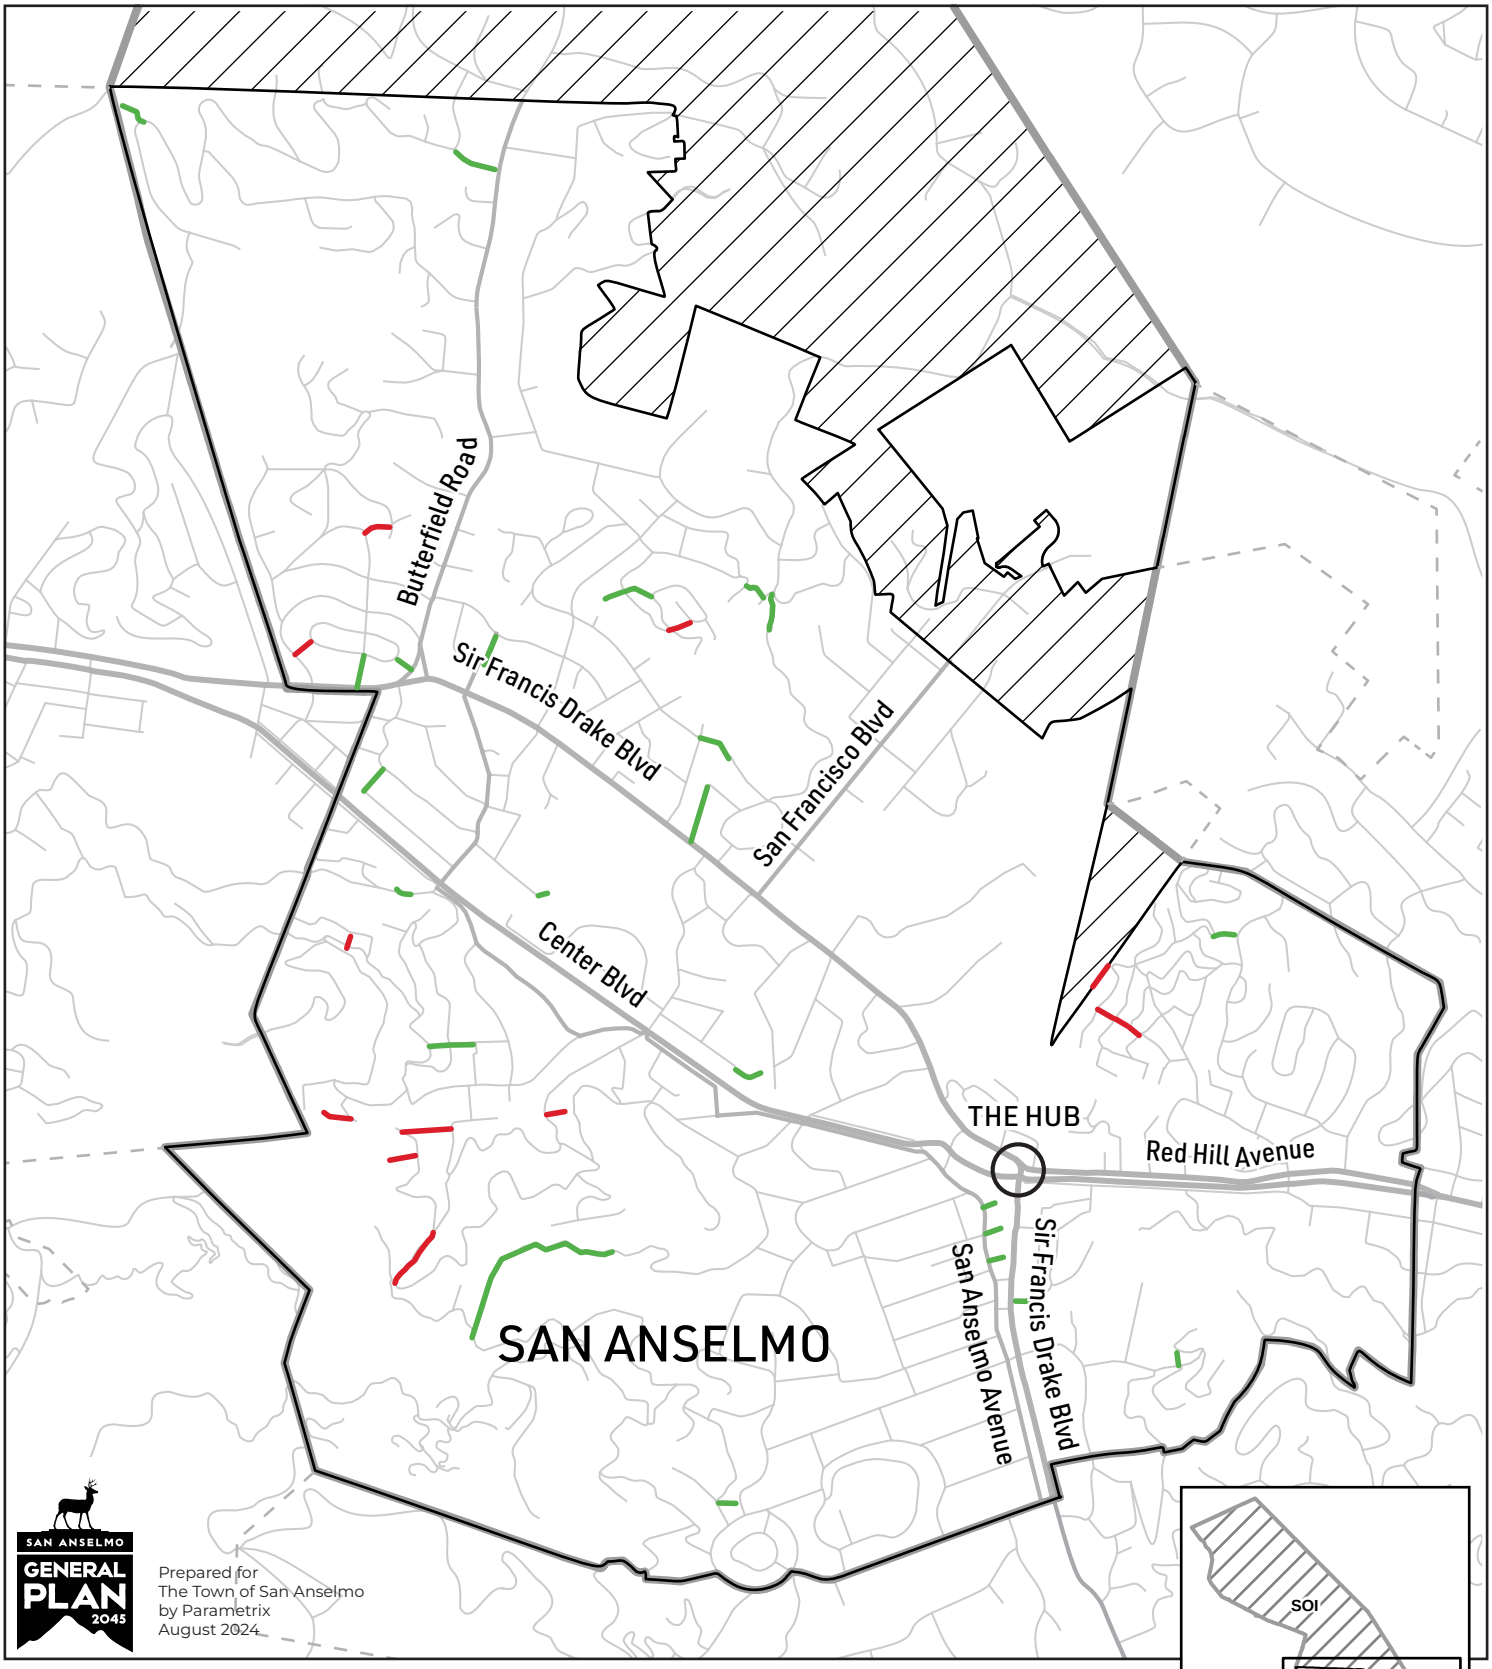

Figure C-5

San Anselmo Stairs, Lanes, and Trai

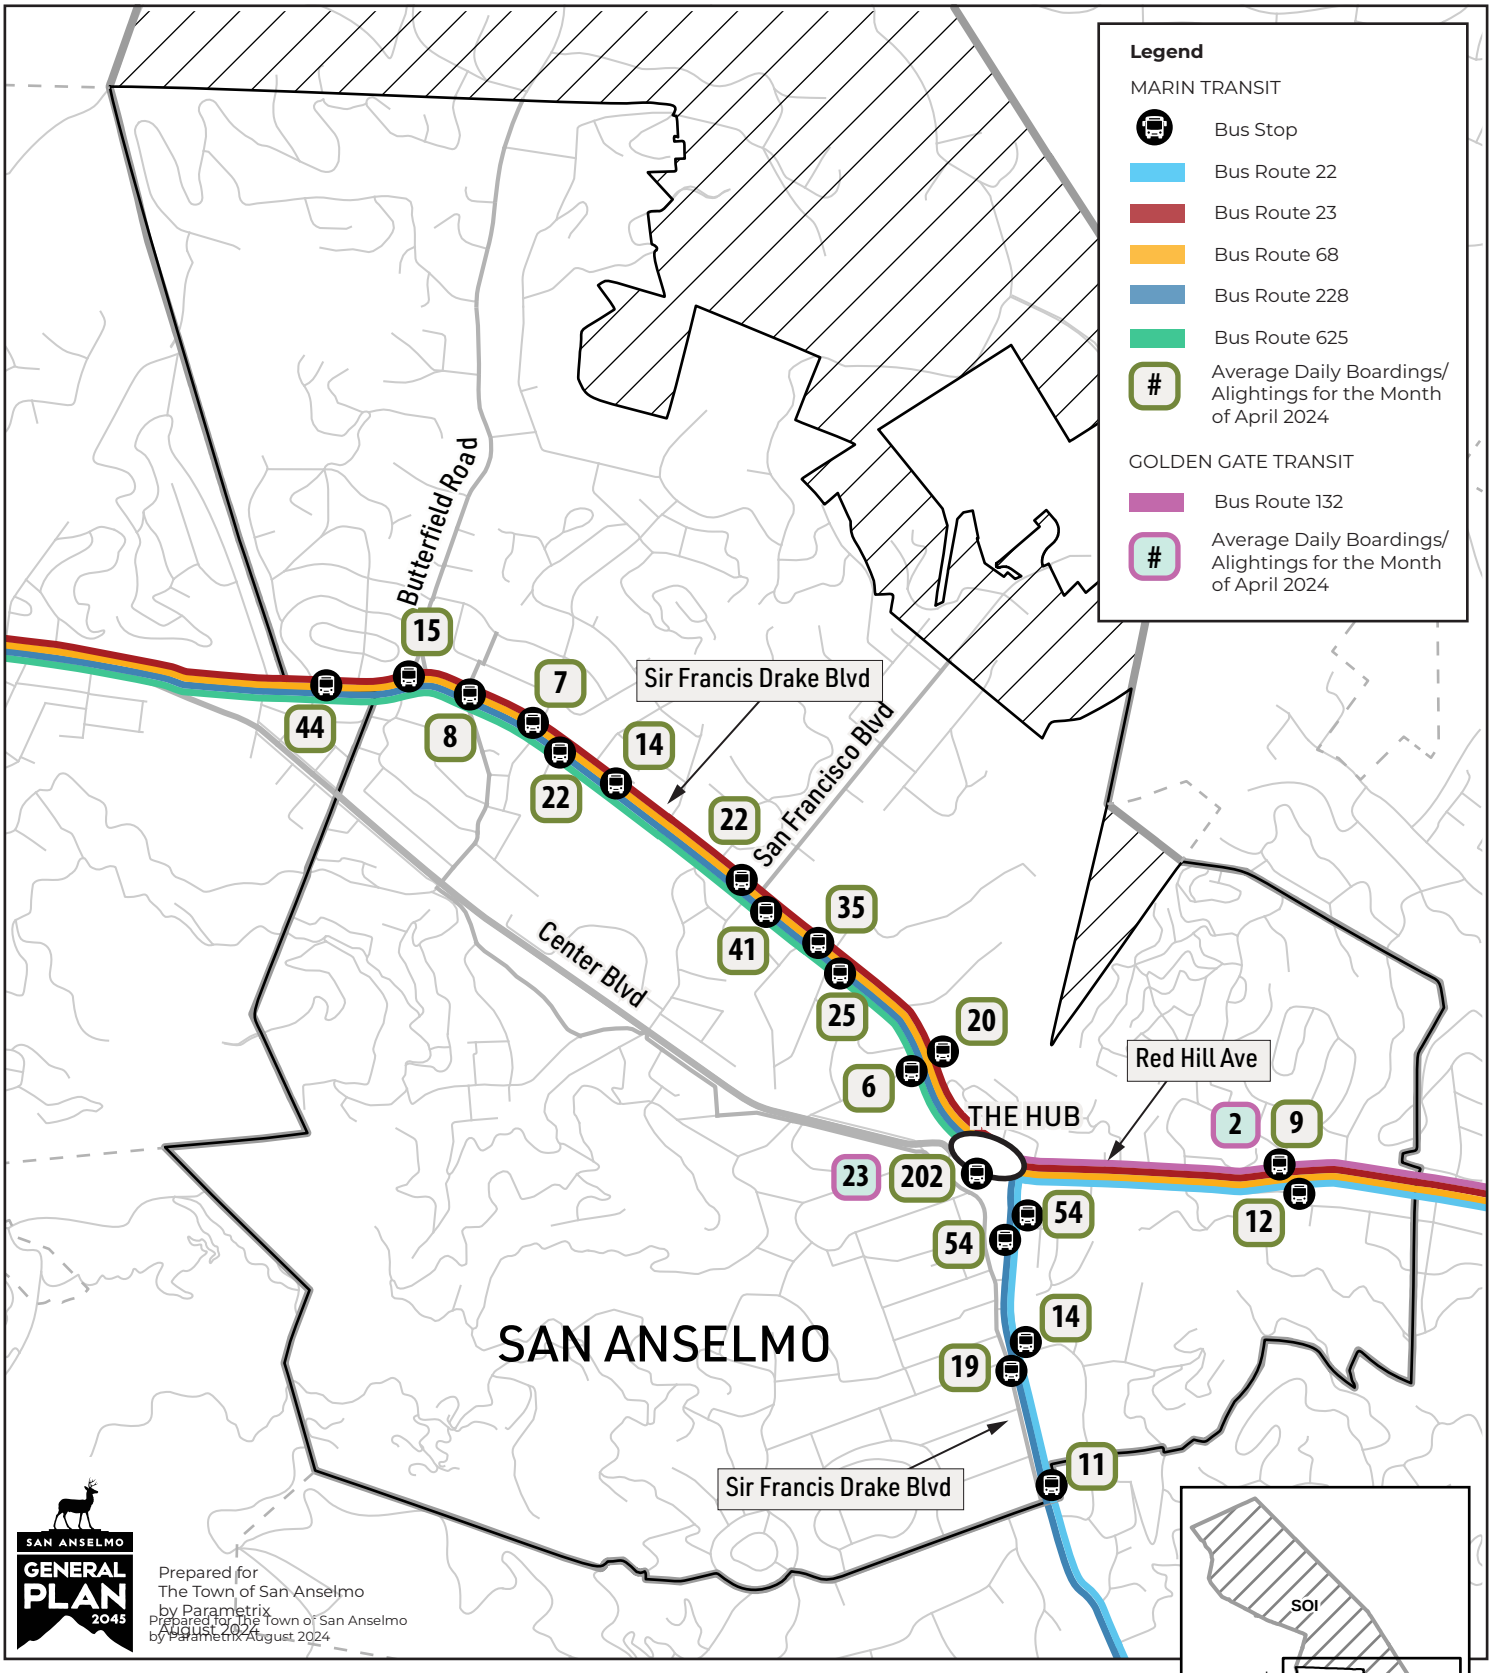

7.5.3 PUBLIC TRANSIT

Public transit provides San Anselmo residents and visitors with an important alternative to driving, supporting a more balanced and sustainable transportation network. San Anselmo's public transportation is provided by Marin Transit and Golden Gate Transit. Marin Transit operates local transit routes connecting the town to nearby areas such as Fairfax and San Rafael, while Golden Gate Transit offers regional service to San Francisco and other parts of the Bay Area. These services complement the town's bikeways and pedestrian pathways and offer connections for longer trips outside of town.

The San Anselmo Hub, located at the intersection of Sir Francis Drake Boulevard, Red Hill Avenue, and Center Boulevard, serves as a major transit stop for both Marin Transit and Golden Gate Transit service. It is one of the busiest stops along one of Marin County's most active transit corridors. The Hub's central location makes it an important focal point for future efforts to enhance transit access, safety, and rider comfort. Figure C-6 illustrates existing transit routes in San Anselmo and average daily ridership as of April 2024.

Marin Access Paratransit, operated by Marin Transit, provides pre-scheduled us transportation in San Anselmo for persons with disabilities who are unable to use fixed-route transit services. This service helps ensure mobility options are available to a broad range of community members.

Section 7.8 includes policies and actions to enhance local and regional transit service through agency partnerships, improved accessibility for all users, and upgraded transit stop amenities and connections.

Sources: Marin County GIS, Marin County LAFCo; USGS NHD, Marin Transit, Golden Gate Bridge, Highway and Transportation District.

Figure C-6

San Anselmo Existing Transit Routes and Average Daily April 2024 Ridersh

7.6 PARKING

Parking in San Anselmo supports residents, employees, visitors, and businesses throughout the town. Public parking is provided on streets and in designated lots in commercial areas and on streets in residential areas. Parking regulations, such as posted signs and red curbs, help maintain safety and efficient use of available spaces.

Residential neighborhoods accommodate vehicle parking through a mixture of on-street parking spaces and private driveways. In Downtown San Anselmo, public parking is concentrated on San Anselmo Avenue and in three public lots, as well as parts of Sir Francis Drake Boulevard, and on side streets, and serves customers, visitors, merchants, employees, and residents.

Electric vehicle (EV) ownership is growing in San Anselmo and across Marin County, increasing the need for accessible EV charging infrastructure. The Town has installed publicly available EV charging stations in public parking lots, with plans to expand as demand increases and funding is available.

Public bicycle parking is located at various locations throughout the town such as along streets in the Downtown, in public parks, and at the Hub's transit stop. Standard bike racks are installed on sidewalks and, in some locations, replace on-street vehicle parking.

Section 7.8 includes policies and actions to manage parking in a balanced way that meets demand, improves efficiency, reduces on-street conflicts, and enhances community aesthetics.

7.7 NAVIGATING TOWARDS 2045

Over the next two decades, technological innovations will reshape how people travel through San Anselmo. Autonomous vehicles, advanced safety systems, and new forms of shared mobility have the potential to improve roadway safety and expand travel options for a wide range of users. As these technologies evolve, they may encourage more people to walk, bicycle, and use shared transportation, increasing demand for protected bike lanes, traffic calming, and connected multi-use paths. In response, the Town will adapt its circulation network by prioritizing safe street design, expanding

multimodal infrastructure, and ensuring that emerging technologies enhance, rather than replace, active transportation.

Behavioral changes will also influence how people move through the community. The growth of shared mobility and evolving travel patterns may increase the need for dedicated drop-off and pick-up areas while reducing demand for long-term parking. These shifts create opportunities to reimagine curb space and underutilized parking areas, allowing for expanded bicycle facilities, wider sidewalks, street trees, and public gathering spaces that improve walkability and overall quality of life. By monitoring travel trends and coordinating with regional partners, the Town will continue to refine its circulation policies to remain safe, efficient, and responsive to changing needs.

Throughout this transition, the Town will continue to advance a transportation system that is safe, accessible, and convenient for all users. Transportation access is a fundamental component of belonging, and the Town will prioritize circulation investments that support residents who rely most on walking, bicycling, and public transit, including lower-income residents, older adults, people with disabilities, and those without access to a private vehicle. Efforts will focus on improving mobility for a diverse range of users and ensuring that the benefits of new mobility options are broadly shared across the community, with access and inclusion serving as key factors in prioritizing infrastructure improvements.

7.8 GOALS, POLICIES, AND ACTIONS

7.8.1 SAFE, SUSTAINABLE, AND ACTIVE TRANSPORTATION

Goal C-A: Promote a safe multimodal transportation network that helps reduce greenhouse gas emissions and offers strong transit, pedestrian, and bikeway alternatives to the automobile.

Policy C-A.1: Complete Streets. Provide Complete Streets that ensure safe, comfortable, and convenient multimodal access to essential community destinations, increase the use of alternative modes of transportation, encourage active travel as part of daily activities, reduce pollution, and meet the evolving needs of all roadway users.

Action C-A.1.a: Complete Streets and Human-Scale Enhancements. Approach every transportation project and program as an opportunity to improve safety, accessibility, and mobility for users of all ages, abilities, and transportation needs. Work with relevant departments, agencies, and jurisdictions to incorporate Complete Streets design features, such as accessible curb ramps, crosswalks, transit facilities, sidewalks, and bicycle infrastructure, into existing streets. Where feasible, integrate human-scale amenities including street trees, landscaping, benches, and pedestrian-scale lighting to enhance comfort, visual quality, and encourage walking, bicycling, and transit use.

Action C-A.1.b: Safe System Approach. Incorporate a Safe System approach into the planning, design, operation, and maintenance of the transportation network. Design and manage transportation infrastructure to anticipate human error, encourage safe speeds, reduce conflicts, and provide multiple layers of protection so that crashes do not result in fatalities or serious injuries. Coordinate implementation with TAM's countywide Local Road Safety Plan and subsequent local and regional safety planning efforts.

Action C-A.1.c: Standards for Infrastructure Improvements. Develop Public Improvement Engineering Standards or other objective standards for property subdivision or development projects to specify required off-site infrastructure improvements, such as sidewalks, that would accommodate or mitigate estimated project traffic impacts.

Action C-A.1.d: Multimodal Transportation Performance Monitoring. Monitor and evaluate multimodal transportation performance using available indicators such as fatal and serious-injury crashes, completion of pedestrian and bicycle network improvements, transit accessibility and reliability, mode share, VMT per capita, pavement condition, and travel conditions along key corridors. Apply the results to assess progress toward General Plan goals, identify emerging needs, support grant applications, and prioritize transportation investments.

Policy C-A.2: Existing Infrastructure. Prioritize the maintenance and continued improvement of existing multimodal transportation infrastructure within current rights-of-way as opposed to roadway widening or extensions.

Policy C-A.3: Reduction of Vehicle Miles Traveled (VMT). Support infill, context-sensitive development, walkable neighborhoods, and infrastructure improvements that reduce the demand for single-occupancy vehicle travel while recognizing that many families and people with mobility limitations or limited access to alternative transportation options will continue to depend on cars.

Action C-A.3.a: VMT and Land Use. Encourage residential housing development in areas with low levels of home-based VMT, such as those near transit and retail services to support access to daily needs for residents of varying incomes and transportation options that offer greater potential for alternatives to driving and shorter trips to daily destinations.

Action C-A.3.b: VMT and Transportation Improvements. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT and evaluate opportunities to reduce automobile travel through land use planning, transportation demand management, active transportation, transit, shared mobility, and parking strategies.

Policy C-A.4: VMT in Transportation Impact Evaluations. Evaluate land use projects for potential transportation impacts by considering the effect on VMT.

Action C-A.4.a: VMT Policy and Regional Coordination. Continue to apply San Anselmo's VMT Screening Criteria and Thresholds of Significance for evaluation of VMT associated with discretionary land use projects and update these thresholds as appropriate to reflect new data, standards, or local conditions. Coordinate with the Transportation Authority of Marin to reduce VMT and enhance multimodal transportation by applying guidance from the VMT Reduction / Mobility Enhancement Toolkit.

Action C-A.4.b: VMT Mitigation. Develop and implement VMT mitigation measures and an in-lieu fee structure that can be applied to applicable projects to reduce potential VMT impacts to less-than-significant levels.

Policy C-A.5: Emerging Transportation Technologies. Explore and support implementation of emerging transportation technologies and strategies to reduce greenhouse gas emissions and VMT, enhance social equity by improving access and affordability across the community, and support economic vibrancy.

Action C-A.5.a: Effective and Equitable Emerging Transportation Strategies. Establish evaluation criteria to assess alignment of emerging transportation solutions, prioritizing emerging mobility strategies that are affordable and accessible to residents with limited incomes, older adults, and persons with disabilities.

See the Parks, Recreation, and Public Facilities Element for additional policies and actions related to sidewalk and pavement maintenance, repair, and capital improvement coordination.

7.8.2 ROADWAY NETWORK

Goal C-B: Continue improving the roadway network to ensure mobility, accessibility, and a high quality of life for all community members.

Policy C-B.1: Local Neighborhood Streets. Protect the quality of life and safety of residents, particularly pedestrians, children, older adults, and people with disabilities, on local neighborhood streets from the effects of speeding vehicles and cut-through traffic. Use traffic calming measures that slow vehicle speeds and direct pass-through traffic to arterial streets designed to accommodate higher vehicle speeds and volumes.

Action C-B.1.a: Traffic Calming Implementation and Community Engagement. Implement appropriate traffic calming treatments on residential streets to enhance safety, reduce vehicle speeds, and support comfortable walking and biking conditions. Support resident-driven traffic calming efforts by providing technical resources and assistance to help community members identify, prioritize, and implement feasible measures, and evaluate the effectiveness of installed improvements to ensure they achieve desired traffic-volume and speed reductions.

Policy C-B.2: Multimodal Corridor Planning. Plan for and manage Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, Butterfield Road, the Hub, and downtown as integrated multimodal corridors that balance local and regional mobility with the needs of all transportation system users.

Action C-B.2.a: Progress Evolution of The Hub. Develop designs and secure funding for near-term improvements to the Hub as identified in The Hub Transportation Study. This includes incorporation of traffic, transit, pedestrian, and bicycle enhancements.

Action C-B.2.b: Major Thoroughfare Roadway Improvements. Improve Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, and intersections along these roadways by investing in transportation infrastructure that addresses safety, traffic operations, pedestrian and bicycle access, transit reliability, emergency response, and regional travel as interconnected objectives.

Policy C-B.3: Circulation in Commercial Hubs. Ensure efficient and distinguishable access to and within the town's downtown and commercial hub along Greenfield Avenue through targeted multimodal improvements.

Action C-B.3.a: Circulation Monitoring. Continue to monitor and study traffic circulation, safety, and parking within the town's commercial hubs and implement improvements as recommended.

See the Land Use and Community Design Element and the Economic Development Element for additional policies and actions related to community design and commercial hubs.

Policy C-B.4: Hillside Roadways. Allow limited improvements to existing roadways serving hillside properties on a case-by-case basis for restricted efforts such as spot widening and access/egress improvements. Efforts should be made to balance mobility and safety needs with the desire to maintain the residential identity.

Action C-B.4.a: Hillside Roadways and Emergency Access. Evaluate and implement limited improvements to existing hillside

roadways, such as spot widening and access/egress enhancements, on a case-by-case basis to support mobility and safety while maintaining the area's residential character. As part of this effort, study and identify hillside roadways where temporary on-street parking restrictions may be necessary during elevated fire-risk days to ensure adequate access for fire response vehicles.

Action C-B.4.b: Limited Construction Impact on Hillside Roadways. Require the submission and approval of a Construction Management Plan prior to the issuance of any grading or building permits for any improvements on hillside properties.

See the Land Use and Community Design Element and the Safety Element for additional policies and actions related to hillside development and emergency response planning.

Policy C-B.5: Roadway Extensions to Adjoining Communities. Prioritize protection of existing neighborhoods by discouraging new vehicular roadway extensions north of Sir Francis Drake Boulevard or Red Hill Road, while retaining flexibility to review potential connections should future studies identify significant mobility or safety benefits.

See the Land Use and Community Design Element for additional policies and actions related to growth management.

Policy C-B.6: Traffic Level of Service. Maintain a traffic Level of Service (LOS) standard of "E" for signalized intersection operations during peak hours to ensure an efficient roadway network and allow for consistent evaluation of development project impact on local roadway traffic.

Action C-B.6.a: Traffic Impact Studies. Require that discretionary development projects be evaluated for level of service impacts in accordance with the Town of San Anselmo's Vehicle Miles Traveled (VMT) Screening Criteria and Thresholds of Significance. Projects that exceed the level of service threshold for signalized intersections shall provide feasible mitigation measures to reduce level of service impacts to levels consistent with Town policy.

7.8.3 ACTIVE TRANSPORTATION AND TRANSIT

Goal C-C: Promote a universally accessible transportation network which offers strong transit, pedestrian, and bikeway alternatives to the automobile for all ages and abilities.

Policy C-C.1: Bicycle and Pedestrian Master Plan. Regularly review, update, and implement the Town's Bicycle and Pedestrian Master Plan to maintain eligibility for grant funding and to advance a safe, accessible, and connected active transportation network for users of all ages and abilities. Future updates should comprehensively address walking, conventional bicycles, e-bikes and other emerging micromobility, accessibility, Safe Routes to School, intersection safety, and first- and last-mile connections to transit.

Action C-C.1.a: Maintenance of Pedestrian and Bicycle Facilities. Develop a program to prioritize and fund the construction and maintenance of pedestrian and bicycle facilities based on safety, connectivity, removal of access barriers for people with disabilities, older adults, and others with mobility challenges, and the relationship to existing and planned land uses, along with other adopted evaluation criteria.

Action C-C.1.b: Pedestrian-Oriented Improvements in Commercial Hubs. Implement sidewalk, pedestrian crossing, and other pedestrian-oriented improvements identified in the Town's Bicycle

and Pedestrian Master Plan—including those along Sir Francis Drake Boulevard, San Anselmo Avenue, Red Hill Avenue, and Greenfield Avenue, and evaluate and implement feasible recommendations from the Downtown Active Transportation & Circulation Study to enhance walkability and safety in Downtown and key commercial hubs.

Policy C-C.2: Pedestrian Safety and Access. Provide a safe and accessible walking environment along San Anselmo's pedestrian network, linking residential areas to schools, shopping, work, recreation areas, essential services, and other important community destinations for residents of all ages, abilities, and incomes.

Action C-C.2.a: Accessibility Improvements. Continue to construct improvements that provide access for all individuals along the Town's pedestrian network, including reconstruction of facilities in compliance with federal and State accessibility requirements.

Action C-C.2.b: Downtown Pedestrian Infrastructure. Implement sidewalk and pedestrian crossing improvement recommendations as included in the Pedestrian and Bicycle Master Plan. Evaluate and implement the recommendations in the Downtown Active Transportation & Circulation Study, where feasible.

Policy C-C.3: Bicycle Network. Continue to expand San Anselmo's bicycle network to safely and comfortably connect residents to schools, shopping, work, recreation, the Cross-Marin Bikeway, and other local and regional destinations, with a focus on improved paths and crossings at larger and high vehicle volume roadways and traffic calming installations and signage on local streets.

Action C-C.3.a: Bicycle Infrastructure. Implement bicycle infrastructure recommendations, such as multi-use paths, bicycle priority routes, bike racks, and lockers in areas with high demand, and traffic calming installations, as included in the Pedestrian and Bicycle Master Plan.

Policy C-C.4: Bicycle Parking. Seek opportunities to install bicycle parking facilities at public destinations, including at transit stops, parks, schools, shopping locations, and other essential public facilities, and require bicycle parking facilities in new development.

Action C-C.4.a: Bicycle Parking Requirements. Require short-term and long-term bicycle parking facilities for commercial and multifamily developments in accordance with or more stringent than the California Green Building Standards Code.

Policy C-C.5: Safe Routes to School. Coordinate with the Transportation Authority of Marin to identify locations for improvements that provide safe walking and bicycling routes for students of all backgrounds, including those who rely on walking, biking, or transit to travel to and from school.

Policy C-C.6: Transit Service. Continue to support the improvement and expansion of local and regional transit and paratransit service to improve access for residents who rely on transit, including older adults, youth, lower-income households, and people with disabilities.

Action C-C.6.a: Transit Agency Partnerships. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends.

In coordination with TAM and transit operators, identify and support feasible transit-priority improvements that increase transit travel speeds and reliability along local roadways identified in TAM's Countywide Transportation Plan Transit Priority Network.

Action C-C.6.b: Transit-dependent Population. Actively encourage local and regional transit agencies, providers, and local initiatives to expand reliable and accessible paratransit, shuttles, and other alternative transportation options for non-driving adults, persons with disabilities, and others without access to a private vehicle in San Anselmo.

Policy C-C.7: Transit Stop Access and Provisions. Collaborate with local and regional transit operators to provide transit stops that are safe, accessible, and comfortable for people of all ages and abilities.

Action C-C.7.a: Transit Stop Accessibility, Amenities, and Connections. Partner with local and regional transit operators to ensure transit stop amenities, such as benches, shelters, lighting, signage, and trash receptacles, and locate or align transit stops to connect seamlessly with bicycle and pedestrian routes. For development projects within 200 feet of a transit stop, require ADA-compliant infrastructure improvements that provide fully accessible and comfortable access to the stop.

Action C-C.7.b: Mobility Hub Access and Multimodal Connections. Improve transit vehicle access and circulation at the Hub by implementing recommendations from the Hub Transportation Study. Work with the Transportation Authority of Marin to evaluate participation in the Metropolitan Transportation Commission's Bay Area Mobility Hub Program, supporting first- and last-mile travel options at major transit locations. In coordination with transit and regional agencies, identify locations near major corridors suitable for ridesharing, carpool pick-ups, and park-and-ride facilities.

7.8.4 PARKING

Goal C-D: Provide and manage parking in a manner that meets resident, business, and visitor needs while balancing the guiding principles of economic development, sustainability, and excellence in governance.

Policy C-D.1: Adequate Parking. Encourage provision of public and private parking that serves measured demand and supports travel by means other than by single-occupancy vehicle, while recognizing varying transportation needs across the community.

Action C-D.1.a: Parking Needs Assessment. Regularly conduct a study of appropriate parking types (e.g., long-term spaces, two-hour spaces, 10-minute spaces) and locations for public parking facilities within commercial hubs.

Action C-D.1.b: Parking Ordinance Updates. Continue to monitor and amend, as needed, the Town's parking ordinance to accommodate varied land uses, encourage efficient use of limited space for parked vehicles, balance parking demand with other community goals, and reflect parking best practices from other jurisdictions.

Policy C-D.2: Parking Management. Use parking regulations, metered parking, enforcement, and curb management strategies to manage growing parking demand and maximize efficient use of the parking supply in downtown, while monitoring and addressing potential spillover parking impacts on surrounding neighborhoods.

Action C-D.2.a: Parking Management Recommendations. Continue to implement general and location-specific recommendations from the San Anselmo Downtown Parking Study to increase effective turnover and utilization of existing parking through enforcement, management strategies, fee adjustments, and reduced maximum parking durations. As parking demand evolves, monitor for potential spillover effects in adjacent neighborhoods and consider impacts on surrounding residential areas, applying appropriate management strategies, such as time limits, permitting, or

enforcement adjustments, to minimize impacts without constructing additional parking. These strategies are intended to optimize existing supply and do not preclude the Town from considering additional parking facilities if needed in the future.

Action C-D.2.b: Residential Parking Permit Program. Develop a framework for an on-street residential parking permit program for neighborhoods adjacent to the downtown to manage spillover parking and maintain access for residents. Design the program to account for the varied needs of residents, including renters, lower-income households, caregivers, and individuals with limited mobility, and assess how parking access, pricing, and eligibility may affect these groups. Identify implementation options and recommendations for future Town Council direction, with the goal of supporting equitable access, neighborhood livability, and downtown vitality.

Policy C-D.3: Residential Off-Street Parking. Require the provision of off-street parking spaces on residential lots, to the extent permitted by State law, to reduce on-street parking demand and circulation network conflicts.

Policy C-D.4: Attractive Parking. Provide public and private parking in an attractive manner that enhances the sense of place, aligns with neighborhood context, and mitigates the urban heat island effect.

Action C-D.4.a: Parking Landscaping Requirements. Require that all parking lots be landscaped, set back from the right-of-way, and screened from public view; for parking lots with eight or more parking spaces, require them to minimize impervious surface area and provide shade through shade trees, solar arrays, and other cooling technologies.

See the Economic Development Element, Land Use and Community Design Element, and Sustainability, Climate Change, and Resiliency Element for additional policies and actions related to parking provision and management, community design, electric vehicle (EV) charging, and resilience.

8. PARKS, RECREATION, AND PUBLIC FACILITIES

San Anselmo's parks, library, and public facilities anchor community life; they offer spaces for recreation, learning, fitness, and connection that strengthen the Town's social fabric. As demographics evolve, the Town will enhance and modernize its parks, facilities, and programs to serve the needs of an increasingly diverse community.

Jump to Goals, Policies, and Actions

8.1 PURPOSE OF THE ELEMENT

The purpose of this element is to advance inclusive and equitable access to recreation programs, parks, and public facilities for all who live in San Anselmo. It recognizes that community needs and experiences vary and places particular attention on expanding participation for lower-income households, non-English-speaking residents, people with disabilities, and others who may face barriers to access. The element promotes facilities and services that are welcoming, adaptable, and responsive to a diverse community. Its policies are grounded in the Town's belonging standard, guiding the design and programming of parks and public facilities to reflect the full range of the community's cultural backgrounds, ages, abilities, and needs, and to foster meaningful and inclusive participation.

This element also establishes a framework to guide future decisions about how San Anselmo will provide, maintain, and enhance parks, recreational opportunities, and public facilities for today's residents, as well as future generations.

The Parks, Recreation, and Public Facilities Element includes the following sections.

8.2 Parks and Recreation. Describes the parks and recreational facilities and programming in San Anselmo.

8.3 Public Facilities. Provides an overview of public facilities and services.

8.4. Navigating Towards 2045. Discusses how future social, environmental, and technological changes may affect how the Town plans for parks, recreational programs, and public facilities.

8.5 Goals, Policies, and Actions. Identifies goals, policies, and actions to maintain and improve parks and recreational and public facilities.

8.2 PARKS AND RECREATION

8.2.1 TOWN PARKS

The Town owns and operates seven parks throughout San Anselmo totaling 17.8 acres, as illustrated in Table PR-1 and Figure PR-1. These park facilities primarily include developed recreational uses and amenities that support active recreation. Open space areas are discussed in the Open Space and Conservation Element.

Table PR-1: Parks in San Anselmo

Park Name	Acreage
Creek Park	1.2
Imagination Park	0.2
Memorial Park	12.2
Robson-Harrington Park	2.6
Lansdale Park	0.6
Hilldale Park	0.03
Red Hill Dog Park	1.0
Total	17.8

Creek Park, located in the downtown, serves as a central gathering space for the community and is the site of many local events, such as Live on the Avenue. In 2019, the Town initiated a project to reimagine the one-acre Creek Park. The recommended design includes a creek plaza, a bridge leading to a lawn area with stage, a multi-level deck area, a children's play area, a pollinator garden, and new public restrooms. The General Plan includes an action to implement the planned improvements for Creek Park.

Imagination Park, located in the heart of downtown San Anselmo and adjacent to the San Anselmo Town Hall, serves as a central public gathering place featuring open lawn areas, public art, and seating. It provides space for informal recreation, relaxation, and community events that contribute to the vibrancy of downtown. The park complements nearby Creek Park by offering a smaller, more contemplative setting for residents and visitors.

Imagination Park is located in the heart of downtown San Anselmo.

Memorial Park is a community park and the town's most developed recreational facility, featuring multiple sports fields, grassy areas, sports courts, a children's playground, a skate park, a community garden, picnic tables, and restrooms. The park has an adopted master plan, and the General Plan includes an action to continue the phased implementation of the plan and, if opportunities arise, to consider minor updates.

Robson-Harrington Park, located two blocks from the downtown area, features benches, picnic areas, and a community garden with approximately 30 small garden plots. The park includes the Robson House, a turn-of-the-20th century mansion that is available to rent as an indoor facility for events and meetings. Robson House also houses the Town's childcare program and after-school activities. The General Plan includes an action to improve landscaping, restore historical features of the property, and complete necessary maintenance, structural repairs, and accessibility upgrades to the property.

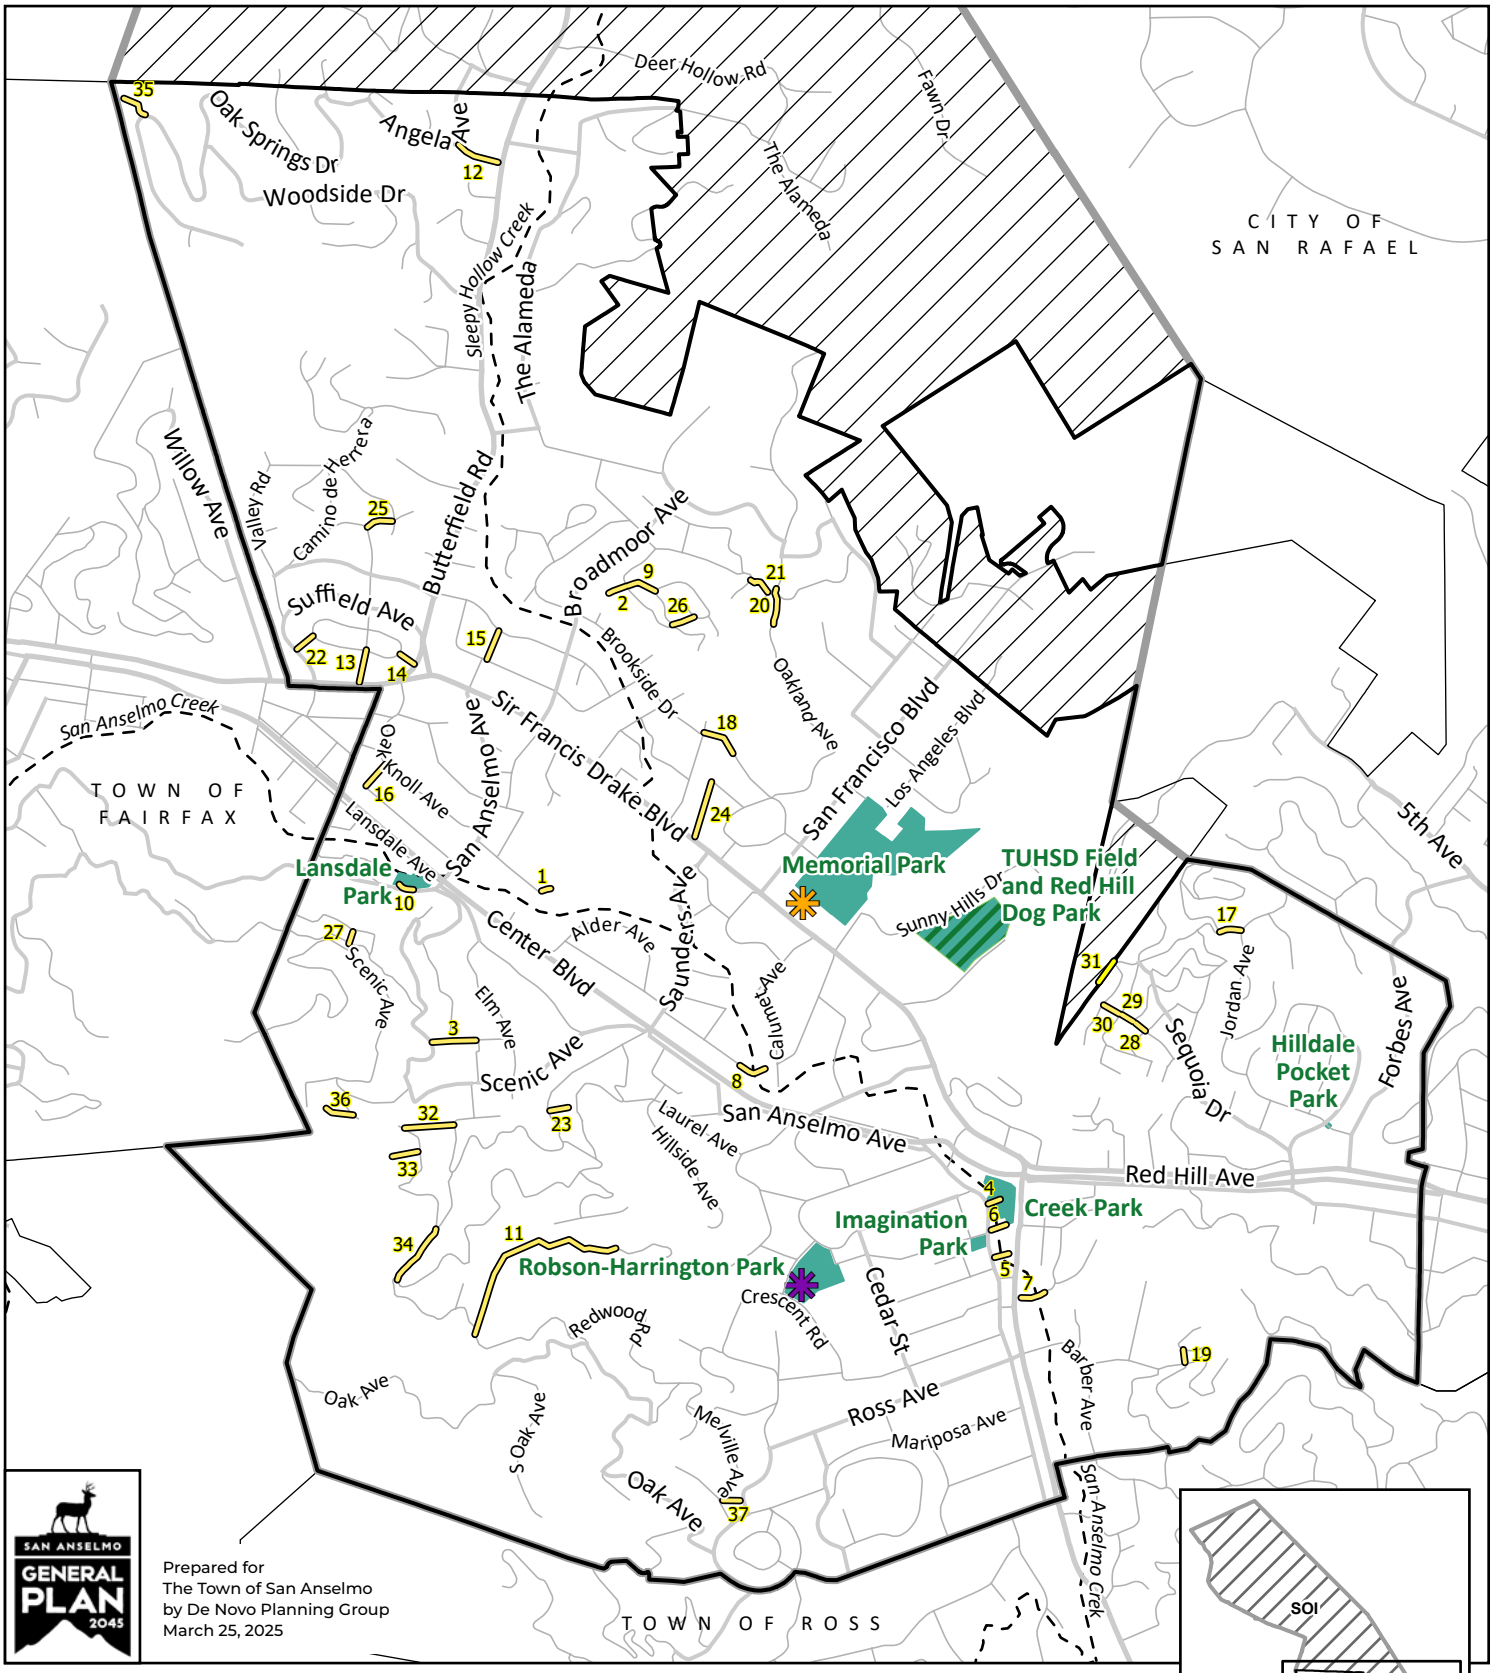

San Anselmo has two neighborhood pocket parks. **Lansdale Park** offers a playground, benches, and picnic tables. **Hilldale Park,** the Town's newest park, was created through the conversion of a dead-end street. The General Plan includes an action to create additional pocket parks, as opportunities arise, to fill gaps in the town's network of parks.

The **Red Hill Dog Park,** located behind the Red Hill Shopping Center, is owned by the Tamalpais Union High School District and managed by the Town.

In addition to the Town's developed parks and recreational facilities, San Anselmo includes Town-owned open space parks, including Sorich Ranch Park and Faude Park. These properties are an important part of the Town's overall park and recreation system and provide opportunities for passive recreation, including hiking, walking, nature appreciation, and access to trails and surrounding open space. Because their primary character and purpose are associated with the preservation and stewardship of natural open space, these properties are described in greater detail in the Open Space and Conservation Element. Applicable goals, policies, and actions of the Parks and Recreation Element also apply to these properties where relevant to public access, trails, recreation, park management, accessibility, and recreational use.

Robson House provides after school activities.

SAN ANSELMO GENERAL PLAN 2045

Town Parks and Recreation Facilities

8.2.2 RECREATIONAL FACILITIES AND PROGRAMS

The Town provides a wide range of recreational programming and services, including community events, youth programs, and adult activities. Recreational facilities include the Robson-Harrington House, described above, and the Isabel Cook Community Center (see Figure PR-1). The General Plan includes an action to identify potential improvements or redevelopment options for the Community Center to ensure it continues to meet community needs and to maintain high-quality, accessible facilities and programs for all residents.

8.3 PUBLIC FACILITIES

Public facilities in San Anselmo include Town Hall, the library, as well as streets, sidewalks, and the storm drainage system. Town Hall serves as the central hub for the Town's government services and houses administrative offices and the Council Chambers for public meetings. The San Anselmo Library, constructed in 1915 as a Carnegie Library, offers a wide range of programs for all ages, with a particular focus on children, teens, and older adults.

Section 8.5 incudes policies and actions to maintain and upgrade Town facilities and infrastructure, and to coordinate with partner agencies that provide public services in San Anselmo, such as schools, fire protection, police, and utilities.

The San Anselmo Library provides programming for all ages.

8.4 NAVIGATING TOWARDS 2045

Technological, demographic, and social changes will continue to shape how San Anselmo plans for parks, recreation, and public facilities through 2045. An aging population will increase demand for accessible park design, low-impact recreation, wellness programming, shaded seating, and facilities that support mobility, comfort, and social connection. A more diverse community will benefit from a broader range of culturally responsive programs, flexible gathering spaces, and inclusive amenities. Evolving lifestyles and post-pandemic patterns have reinforced the importance of outdoor spaces for mental and physical health, informal social interaction, and community life, increasing expectations for high-quality, adaptable public spaces that serve a wide range of needs. These trends will require the Town to actively design and program parks and public facilities to reflect the full range of the community's cultural backgrounds, languages, ages, and abilities.

Climate change will further influence planning and investment decisions. Increased storm intensity and flood risk will require flood control and stormwater infrastructure associated with creeks, parks, and public rights-of-way to safely manage higher flows and protect surrounding neighborhoods. Public facilities will play an expanded role in climate resilience by serving as cooling centers and resilience hubs during extreme heat, power outages, and other emergencies, ensuring residents have access to safe, supportive spaces during disruptions. Parks and open spaces will also support biodiversity through native landscaping, riparian restoration, and habitat features that help species adapt to changing climate conditions.

Technological advances will complement these shifts by improving how facilities are designed, managed, and used. The growing use of micromobility, such as e-bikes and scooters, will influence trail design, safety, and parking needs, while smart infrastructure, energy-efficient systems, and water-saving technologies can enhance sustainability and reduce operating costs. Expanded digital access, including public Wi-Fi and technology-enabled programming, will become an increasingly important feature of parks and community facilities.

Together, these trends highlight the need for parks and public facilities that are flexible, inclusive, and resilient, and that can adapt to changing community needs, climate conditions, and technological innovation over time. The Town will engage community members, including those not typically represented in civic processes, in park planning and programming decisions to ensure that public investments reflect a broad range of needs and preferences. Recreation programs and public facilities will continue to evolve to support accessibility, inclusivity, and broad participation.

8.5 GOALS, POLICIES, AND ACTIONS

Goal PR-A Upgrade, maintain, and improve parks and recreational facilities to ensure safe, inclusive, sustainable, and accessible spaces for all ages, abilities, and user groups. Integrate climate-resilient design, native landscaping, and universal accessibility while supporting diverse recreational needs, including children, teens, older adults, people with disabilities, and dog owners.

Policy PR-A.1: Park and Facility Improvements. Regularly upgrade and replace aging or deficient Town facilities and parks to meet the community's recreational needs and enhance accessibility. Effectively balance the needs of various groups, including the aging community, children, teenagers, people with disabilities, and dog owners.

Action PR-A.1.a: Park Needs Assessment and Funding Strategy. Every five years, conduct a community-informed assessment of park and facility needs using inclusive outreach methods to reach a broad cross-section of the community, and establish funding strategies to support ongoing improvements and long-term maintenance.

Action PR-A.1.b: Park and Recreation Master Plans. Prepare or update master plans, develop cost estimates, and identify possible funding sources to improve neighborhood and community parks and recreation facilities, including the following:

- All Parks: Identify and implement accessibility improvements to ensure all parks, playgrounds, and facilities are usable by children, older adults, and people with all abilities. Incorporate landscaping improvements that support biological diversity and climate resilience through the increased use of California native plants, prioritizing locally native plant species where they best meet site needs and functions.

- Robson-Harrington House and Park: Identify and prioritize needed maintenance, structural repairs, accessibility upgrades, and supporting infrastructure improvements, such as a public restroom facility, to enhance public use of the mansion, improve the surrounding landscape, and restore and preserve historic features.

- Sorich Park: Update the park master plan, including consideration of possible relocation of the Town's corporation yard and/or visual enhancements that would improve the interface with the adjacent public uses.

- Isabel Cook Community Center: Identify improvements or potential redevelopment options, including the feasibility or a new or substantially modernized community center, to support programs that evolve with community needs, consistent with the 2015 Community Facilities Master Plan. Develop cost estimates and identify possible funding sources.

- Memorial Park: Continue the phased implementation of the adopted master plan. If the opportunity arises, consider minor updates to the plan.

- Creek Park: Implement the planned improvements to Creek Park.

Action PR-A.1.c: Parkland Expansion Strategy. Evaluate opportunities to expand the Town's park system, including new pocket parks, and amend the Municipal Code to establish a parkland dedication and in-lieu fee ordinance consistent with the Quimby Act,

ensuring new subdivisions contribute to meeting community park needs. Assess the feasibility of exemptions for deed-restricted affordable units and regularly update in-lieu fees to reflect current and anticipated land and facility costs.

Policy PR-A.2: Memorial Park. In accordance with Measure D, approved by the San Anselmo voters in November 2015, Memorial Park may not be utilized as a flood detention basin, nor may any non-recreational uses be permitted that adversely affect or reduce the recreational amenities of the park. Additionally, no public land within Memorial Park may be sold or transferred by the Town without voter approval in a general election.

Policy PR-A.3: Park and Facility Maintenance. Continually improve the condition of parks and recreation facilities to create a high quality, safe, diverse, and enjoyable recreation experience that is welcoming and accessible to all residents.

Action PR-A.3.a: Funding for Maintenance. Identify and pursue new funding strategies to increase resources dedicated to maintaining park and recreation facilities.

Action PR-A.3.b: Sustainable Park Operations and Design. Incorporate sustainability principles such as reduced water and energy, use of recycled and non-toxic materials, stormwater capture, and carbon sequestration in the design of park facilities. Parks should be maintained and managed to enhance their value as biological resources and natural habitat.

Action PR-A.3.c: Dog Use of Parks. Educate park users about permitted dog use of parks through communications and infrastructure, such as signage and clean up materials.

Action PR-A.3.d: Public Safety in Parks. Work with local law enforcement and the Town Council to address issues related to public safety and the quality of the parks experience for all users.

Policy PR-A.4: Parkland Acreage Standard. Strive to achieve a city-wide standard of 3.0 acres of improved park and recreation land per 1,000 residents, and pursue opportunities to enhance and expand park facilities over time to move toward this standard.

Policy PR-A.5: Coordinate Park and Recreation Planning. Continue to build strong working relationships between departments and appointed bodies responsible for park and recreation planning, design, and maintenance.

Policy PR-A.6: Community Connection. Continue to build a strong connection between the Public Works Department, the Recreation Department, and the San Anselmo community.

Policy PR-A.7: Community Support. Actively encourage and support volunteerism by promoting accessible participation opportunities and fundraising initiatives to support high-quality park facilities and recreation programs. Support sustainable, long-term initiatives that could include partnerships with individuals, businesses, non-profit organizations, and community groups.

Action PR-A.7.a: Encouragement and Promotion. Promote the benefits and opportunities of private fundraising for parks through public awareness campaigns, informational materials, and community outreach. Offer incentives to encourage private donations, such as naming rights, plaques, public acknowledgements, and tax deductions. Celebrate contributions through official events and press releases.

Goal PR-B Provide high-quality recreational services and programs that meet the needs of and are accessible to all residents, promoting fitness, health, knowledge, and cultural understanding.

Policy PR-B.1: Adaptive and Inclusive Recreational Programming. Provide accessible, affordable, financially sustainable, and responsive to varying needs across the community needs. Ensure programs that adapt over time to changing interests, align offerings and fee structures with demonstrated demand, promote fitness, health, cultural understanding, and support inclusive community use of parks and facilities.

Action PR-B.1.a: Community Recreation Needs Assessment and Program Alignment. Regularly, and at least once every five years, conduct community recreation needs assessments using inclusive outreach methods and multiple languages and formats, as appropriate, to reach residents of different ages, incomes, abilities, and backgrounds, and inform recreation programing and fee structures. Align programs and fees with demonstrated demand, equitable access, and long-term financial sustainability.

Policy PR-B.2: Coordinated Programming. Work across Town departments and with local schools, the County of Marin, sports leagues, and athletic associations to provide complementary and mutually supportive programming year-round.

Action PR-B.2.a: Joint Use. Explore joint use and maintenance agreements with local schools to utilize their facilities available for mutually supportive programming.

Policy PR-B.3: Equal Access to Recreation Programs. Ensure recreation programming is responsive to and serves the needs, interests, and desires of the entire community, including those of different ages, abilities, and income levels.

Action PR-B.3.a: Facility and Event Locations. Continue to identify Town facilities and locate Town events in places that are easily accessible by public transit, walking, biking, and rolling to the greatest extent possible.

Action PR-B.3.b: Financial Assistance. Establish a framework for expanding the fee assistance program for recreation programs and services. Conduct annual outreach to lower-income residents, including Spanish-speaking and other non-English-speaking households, to ensure awareness of financial assistance options. Report on participation demographics and program uptake as part of annual recreation program review.

Policy PR-B.4: Age-Specific Programs. Provide facilities, programs, and resources that are specifically designed to meet the needs of children, teens, and older adults, as well as those designed for intergenerational participants.

Action PR-B.4.a: Age-Friendly Community Implementation. Implement the San Anselmo Age and Disability Action Plan, annually reviewing progress and prioritizing age-friendly and accessible programs, services, and infrastructure improvements to support the Town's goal of becoming an age-friendly community.

Action PR-B.4.b: Older Adult and Healthy Aging. Partner with agencies and service providers to expand healthy aging resources, and provide regular and accessible outreach to older adults in formats that reach a broad range of participants about available programs and services.

Policy PR-B.5: Community Events. Improve community health and unity by providing community-wide, family-oriented special events that bring the community together in inclusive and welcoming ways.

Goal PR-C Provide high-quality public facilities and infrastruture that meet the needs of current and future residents, businesses, and visitors in the most efficient and cost-effective ways possible.

Policy PR-C.1: Ongoing Maintenance. Proactively maintain public facilities and infrastructure through ongoing preventative care, and ensure the timely repair, replacement, and upgrading of Town facilities, infrastructure, and equipment.

Action PR-C.1.a: Capital Improvement and Agency Coordination Program. Maintain and update a multi-year Capital Improvement Plan for Town infrastructure and facilities, and coordinate with partner agencies to align projects, maximize resources, achieve economies of scale, and reduce construction impacts.

Action PR-C.1.b: Asset Management Program. Develop a proactive Asset Management Program to identify needed facility and infrastructure maintenance, upgrade, and replacement timing and costs. Seek additional funding opportunities and strategies to avoid increased costs of deferred maintenance.

Policy PR-C.2: Sustainable Design and Operations. Design and operate public facilities and infrastructure to minimize non-renewable energy and resource consumption, improve environmental quality, and reduce greenhouse gas emissions.

Policy PR-C.3: Schools. Maintain effective, collaborative relationships with the Ross Valley School District, Tamalpais Union High School District, and University of Redlands to optimize the use of school facilities for public benefit.

Policy PR-C.4: Emergency Services. Work closely with the Central Marin Police Authority and the Ross Valley Fire Department to provide exceptional fire, public safety, and paramedic services.

Action PR-C.4.a: Public Safety Data Collection and Outcomes Analysis. Support the objective and transparent collection of public safety data. Analyze outcomes and identify ways in which the community can be better served and protected.

Policy PR-C.5: Traffic Safety. Coordinate traffic enforcement programs with the Central Marin Police Authority to ensure the safety of pedestrians, bicycles, and motorists and to evaluate and mitigate potential traffic hazards.

Policy PR-C.6: Street Maintenance. Provide efficient, effective street maintenance, sweeping, and lighting programs to assure well-maintained and safe streets.

Action PR-C.6.a: Pavement Maintenance. Continue to maintain and implement the Pavement Condition Index (PCI) program to evaluate and prioritize street resurfacing projects. Regularly review and adjust prioritization criteria to ensure that pavement condition, traffic safety, equity, and community input are considered in decision making.

Action PR-C.6.b: Sidewalk Repair. Continue to implement the Sidewalk Improvement Program to repair sidewalks on an ongoing basis and to require that new development upgrade street frontages to current standards, where practicable, to enhance accessibility.

Policy PR-C.7: Storm Drainage. Continue to monitor and pursue improvements to the storm drainage system, including programs to reduce flooding, improve water quality, remove debris, and respond to climate-related changes. Evaluate the potential for restoration of the natural hydrologic function of creeks and drainageways where possible.

Policy PR-C.8: Potable Water. Work with the Marin Municipal Water District (Marin Water) to meet projected water demand, encourage water conservation, and ensure the reliability and safety of the water supply and distribution system.

Policy PR-C.9: Energy Reliability and Backup Systems. Support improvements to local energy infrastructure and work with energy providers and public agencies to enhance grid safety and resilience, including accelerating electric infrastructure planning. Strengthen energy reliability at Town facilities by evaluating and upgrading backup power systems with renewable and non-diesel alternatives such as solar generation, battery storage, and renewable fuel cells.

Policy PR-C.10: Utility Undergrounding. Continue to pursue undergrounding of overhead utility lines, and support utility maintenance and replacement programs to reduce wildfire hazards.

Policy PR-C.11: Wastewater. Support efforts by the Ross Valley Sanitary District to maintain high quality wastewater collection and treatment facilities and implement sustainability programs.

See the Land Use and Community Design Element, Circulation Element, Safety Element, Conservation and Open Space Element, and the Sustainability, Climate Change, and Resiliency Element for additional policies and actions related to utilities, sidewalks, flooding, stormwater, water quality, energy, and sustainability in Town facilities and services.

Goal PR-D Cultivate a vibrant, accessible, and financially sustainable library that serves as a vital community hub, enriching lives through diverse programs, resources, and technological opportunities for all residents of all ages, backgrounds, and abilities.

Policy PR-D.1: Library Services and Resources. Continue to enhance and adapt library services and resources to support individual and community connection, discovery, and lifelong learning.

Action PR-D.1.a: Library Services. Maintain adequate staffing and service hours to support high-quality library programs, services, and resources that meet community needs.

Action PR-D.1.b: Technological Resources. Continue to provide access to the internet and digital resources for residents with varying levels of access and technology at the library to meet community needs and adapt to ongoing changes in information technology.

Policy PR-D.2: Library Funding. Maintain a dedicated and sustainable funding source for the library to provide high-quality services, resources, and facilities while evaluating opportunities for facility and service enhancements that adapt with evolving needs of the community.

Action PR-D.2.a: Library Grants. Actively seek and apply for grants and alternative funding sources to further enhance library offerings.

Action: PR-D.2.b: Funding Strategies and Coordination. Within five years, conduct a feasibility study to identify sustainable funding strategies (including dedicated revenue, grants, and public-private partnerships) and assess future library space, program, and expansion needs to ensure the library's continued role as a vibrant community hub.

9. SAFETY

San Anselmo faces a range of environmental hazards, including wildfire, flooding, landslides, earthquakes, and extreme weather, many of which are expected to intensify with climate change. The Town will strengthen preparedness, invest in resilient infrastructure, and use emerging technologies to anticipate risks and protect community safety in the years ahead.

Jump to Goals, Policies, and Actions

9.1 PURPOSE OF THE ELEMENT

The purpose of this element is to advance a proactive and inclusive approach to community safety by strengthening preparedness, response, and recovery for all who live in San Anselmo. It recognizes the diversity of community needs and experiences and emphasizes the importance of ensuring that all residents, including lower-income households, renters, older adults, people with disabilities, and non-English-speaking community members, are effectively supported during emergencies. The element promotes strategies that expand access to information, resources, and services so that all residents can prepare for and respond to emergencies with confidence. Its policies are grounded in the Town's belonging standard, ensuring that safety and preparedness systems are designed to reach and support the full range of the community.

San Anselmo faces a range of hazards that can affect community safety, including earthquakes, geologic instability leading to landslides, wildland fires, flooding, high winds and extreme weather, and drought. Having experienced these events in the past, the Town plans for their continued occurrence with some hazards expected to increase in frequency or intensity as a result of climate change. Rising temperatures may elevate wildfire risk and extend drought conditions, while more intense winter storms could increase flooding in new areas and contribute to unstable hillside and slope conditions.

The Safety Element establishes a comprehensive framework for goals, policies, and actions to address these risks and strengthen the Town's ability to prepare for, respond to, and recover for emergencies. Through coordinated planning and ongoing adaptation, the Town seeks to reduce impacts and enhance resilience across the community.

San Anselmo is committed to safeguarding the well-being of its residents by anticipating potential emergencies and planning effective response strategies for natural and human-caused hazards. This element provides the context needed to understand the risks facing the community and outlines practical, forward-looking actions to support safety, resilience, and long-term community well-being.

The Safety Element includes the following sections.

9.2 Hazard Mitigation, Emergency Preparedness, Response, and Recovery. Provides an overview of the Town's approach to reducing safety risks and responding to disasters when they occur.

9.3 Seismic and Geologic Hazards. Describes seismic and geologic hazards including earthquakes, liquefaction, and landslides.

9.4 Flooding Hazards. Describes flooding hazards from heavy rainfall and dam failure.

9.5 Fire Hazards. Discusses wildfire and urban fire risks and fire hazard zones.

9.6 Climate and Weather-Related Hazards. Discusses hazards related to drought, extreme heat, and severe wind.

9.7 Navigating Towards 2045. Describes how the Town will modify policies and integrate new technologies to prepare for and respond to environmental hazards and a changing climate.

9.8 Goals, Policies, and Actions. Identifies goals, policies, and actions to minimize hazards and risks to life and property.

9.2 HAZARD MITIGATION, EMERGENCY PREPAREDNESS, RESPONSE, AND RECOVERY

The ability to anticipate, evaluate, and mitigate potential risks posed by natural and human-caused hazards is paramount to a community's longevity. Although this element specifically addresses natural and human-caused hazards, hazard mitigation and emergency preparedness involve many more considerations beyond identifying the hazards themselves.

9.2.1 PUBLIC SAFETY

Police Services

The Central Marin Police Authority (CMPA), created in 2013, is a full-service police agency for the communities of Corte Madera, Larkspur, San Anselmo, and portions of Greenbrae . Formed under

a Joint Powers Agreement (JPA) between the communities it services, two members from each City/Town Council oversee the CMPA and are on the CMPA Police Council. General management of the CMPA is the function of the JPA's Management Committee that is comprised of the City and Town Managers of each jurisdiction, while operational function is assigned to the Chief of Police. The CMPA provides police services to these communities, comprising approximately 35,000 residents.

Fire Services

Ross Valley Fire Department is a consolidated department with the mission of protecting lives, property, and the environments of the communities of Ross, San Anselmo, Sleepy Hollow, and Fairfax through education, prevention, and community service. Ross Valley Fire Department is governed by a JPA that includes the Town of San Anselmo, the Town of Fairfax, the Town of Ross, and the Sleepy Hollow Fire Protection District.

Central Marin Police Authority police officers.

Ross Valley firefighters fight an early morning structure fire in Sleepy Hollow.

The Ross Valley Fire Department is an all-risk, full-time professional fire department with a total of four stations staffed with four engine companies that include firefighter EMTs and/or Paramedics 24 hours per day, 365 days per year. The department responds to all requests for emergency and non-emergency assistance within their service area as well as for neighboring areas of Marin, and State or nation-wide on an automatic or mutual-aid basis. Services provided by the department include fire suppression (urban fires, wildland, and vegetation fires), emergency medical services, fire prevention and inspection, community education (Community Emergency Response Team [CERT] training), hazardous materials spills and leaks, vehicle accidents, and disaster response (floods and landslides).

The incorporated boundaries of the town are within the Ross Valley Fire Department Local Responsibility Area (LRA). Outside of the Town of San Anselmo boundaries and adjacent to the town, there are lands that are within the State Responsibility Area (SRA). The SRA is served by the Marin County Fire Department (responsible for initial response in the SRA) and augmented by the California Department of Forestry and Fire Protection (CalFire) should the initial response escape containment and further aid be required.

Marin County Community Wildfire Protection Plan

The Marin County Community Wildfire Protection Plan (CWPP) provides a scientifically based assessment of wildfire hazard and threat to homes in Marin County's wildland urban interface (WUI). The CWPP was developed through a collaborative process involving Marin County fire agencies, county officials, county, State, and federal land management agencies, and community members. The purpose of the CWPP is to provide fire agencies, land managers, and other stakeholders with guidance and strategies to reduce fire hazard and the risk of catastrophic wildfires in the WUI, while promoting the protection and enhancement of the county's economic assets and ecological resources.

9.2.2 HAZARD MITIGATION

The Marin County Multi-Jurisdiction Hazard Mitigation Plan (MJHMP) identifies and assesses the natural and human-caused hazards that threaten San Anselmo and recommends proactive policy and procedural actions to reduce these risks. This preemptive planning is intended to decrease the probability of future emergency situations and minimize the effects should one occur. Examples of hazard mitigation and prevention can be found in many Town policies, but they are most prominently displayed in the numerous codes regulating construction and development.

> A wildfire in the hills is the biggest concern I have about living here.

The 2024 MJHMP includes a specific annex for the Town of San Anselmo ("Town of San Anselmo Annex"). The 2024 MJHMP, including the Town of San Anselmo Annex, for the Town of San Anselmo planning area was developed in accordance with the Disaster Mitigation Act of 2000 and followed the Federal Emergency Management Agency's (FEMA) Local Hazard Mitigation Plan guidance. The MJHMP incorporates a process where hazards are identified and profiled, the people and facilities at risk are analyzed, and mitigation actions are developed to reduce or eliminate hazard risk. The implementation of these mitigation actions includes both short and long-term strategies and involves planning, policy changes, programs, projects, and other activities. The 2024 MJHMP, including the Town of San Anselmo Annex, was approved and adopted by the Town of San Anselmo on August 27, 2024, and received approval from FEMA in 2024. Therefore, the Town is eligible to apply for federal hazard mitigation grant funding that can be used to mitigate many of the naturally occurring hazards identified in San Anselmo. Sections of the Safety Element are supplemented by the MJHMP, which is incorporated by reference in this element, as allowed by California Government Code Section 65302(g). (Weblink: https://www.townofsananselmo.org/94/Disaster-Preparedness.)

9.2.3 EMERGENCY MANAGEMENT

Emergency management is provided by the Marin County Sheriff's Department Office of Emergency Services. This division provides all

aspects of emergency management, including disaster mitigation, preparedness, response, and recovery activities.

Preparedness (Emergency Operations Plan)

The Marin Operational Area (OA) Emergency Operations Plan (EOP) is primarily responsible for identifying the Town's emergency management strategies. Preparedness activities focus on ensuring Town Departments are adequately trained and prepared for future hazard events as well as ensuring the Town's Emergency Operations Center (EOC) is ready and capable of supporting Town needs in the event of an emergency.

The EOP addresses the planned response to extraordinary emergency situations associated with large-scale disasters affecting Marin County. The Marin OA consists of the cities/towns, special districts, and unincorporated areas within the county. The plan also addresses integration and coordination with other governmental agencies when required. This document serves as a planning reference and a basis for effective response to any hazard threatening Marin County. This is accomplished through the following:

- Establishes the emergency management organization required to mitigate any significant emergency or disaster affecting the Marin OA.
- Establishes the overall operational concepts associated with Marin County's EOC activities and the recovery process.

The 1999 Town of San Anselmo EOP identifies the Town's emergency planning, organization, and response policies and procedures and how they are integrated and coordinated with other governmental entities when required. The plan addresses how preparation and response to extraordinary events or disasters should occur as well as recovery from these types of events.

Response

Emergency response activities typically focus on actions necessary to save lives and prevent further property damage during an emergency or disaster. Many of these activities are conducted in tandem with the Marin County Sheriffs' Department, the Central Marin Police Authority, and the Ross Valley Fire Department's standard emergency response procedures. To guide response activities, the Town relies on the EOP and works closely with first responders and volunteer organizations like CERT, to help orchestrate internal and external communications, logistics, and assistance during large-scale emergencies. If resources become overwhelmed, the Town will request support through the Operational Area using automatic aid and mutual aid agreements currently in place. However, the Town recognizes that mutual aid resources depend on availability and may be limited during a large regional incident. Therefore, consideration for strengthening self-sufficiency is a priority.

Evacuation

As part of the Town's preparedness initiatives, an Evacuation Analysis has been prepared that identifies the routes used for evacuation purposes. These constrained locations are required to be identified by California Government Code Section 65302(g)(5). Figure S-1 depicts the potential evacuation routes that could be used during a hazard event. These roadways are intended to meet evacuation needs; however, the Town recognizes that some constraints may affect evacuation, namely narrow roadways, bridges, and dead ends, which could experience failure or blockage, exacerbating conditions. During an evacuation incident, specific routes will be designated by Ross Valley Fire Department in coordination with the Town and Central Marin Police Authority. The specific routes and directions identified will be made on a case-by-case basis using incident specific information to ensure travelers can relocate to a safe location.

Figure S-2 identifies both constrained access roadways (single ingress/egress conditions, identified in red) and the locations that use these roadways (constrained access parcels, identified in orange).

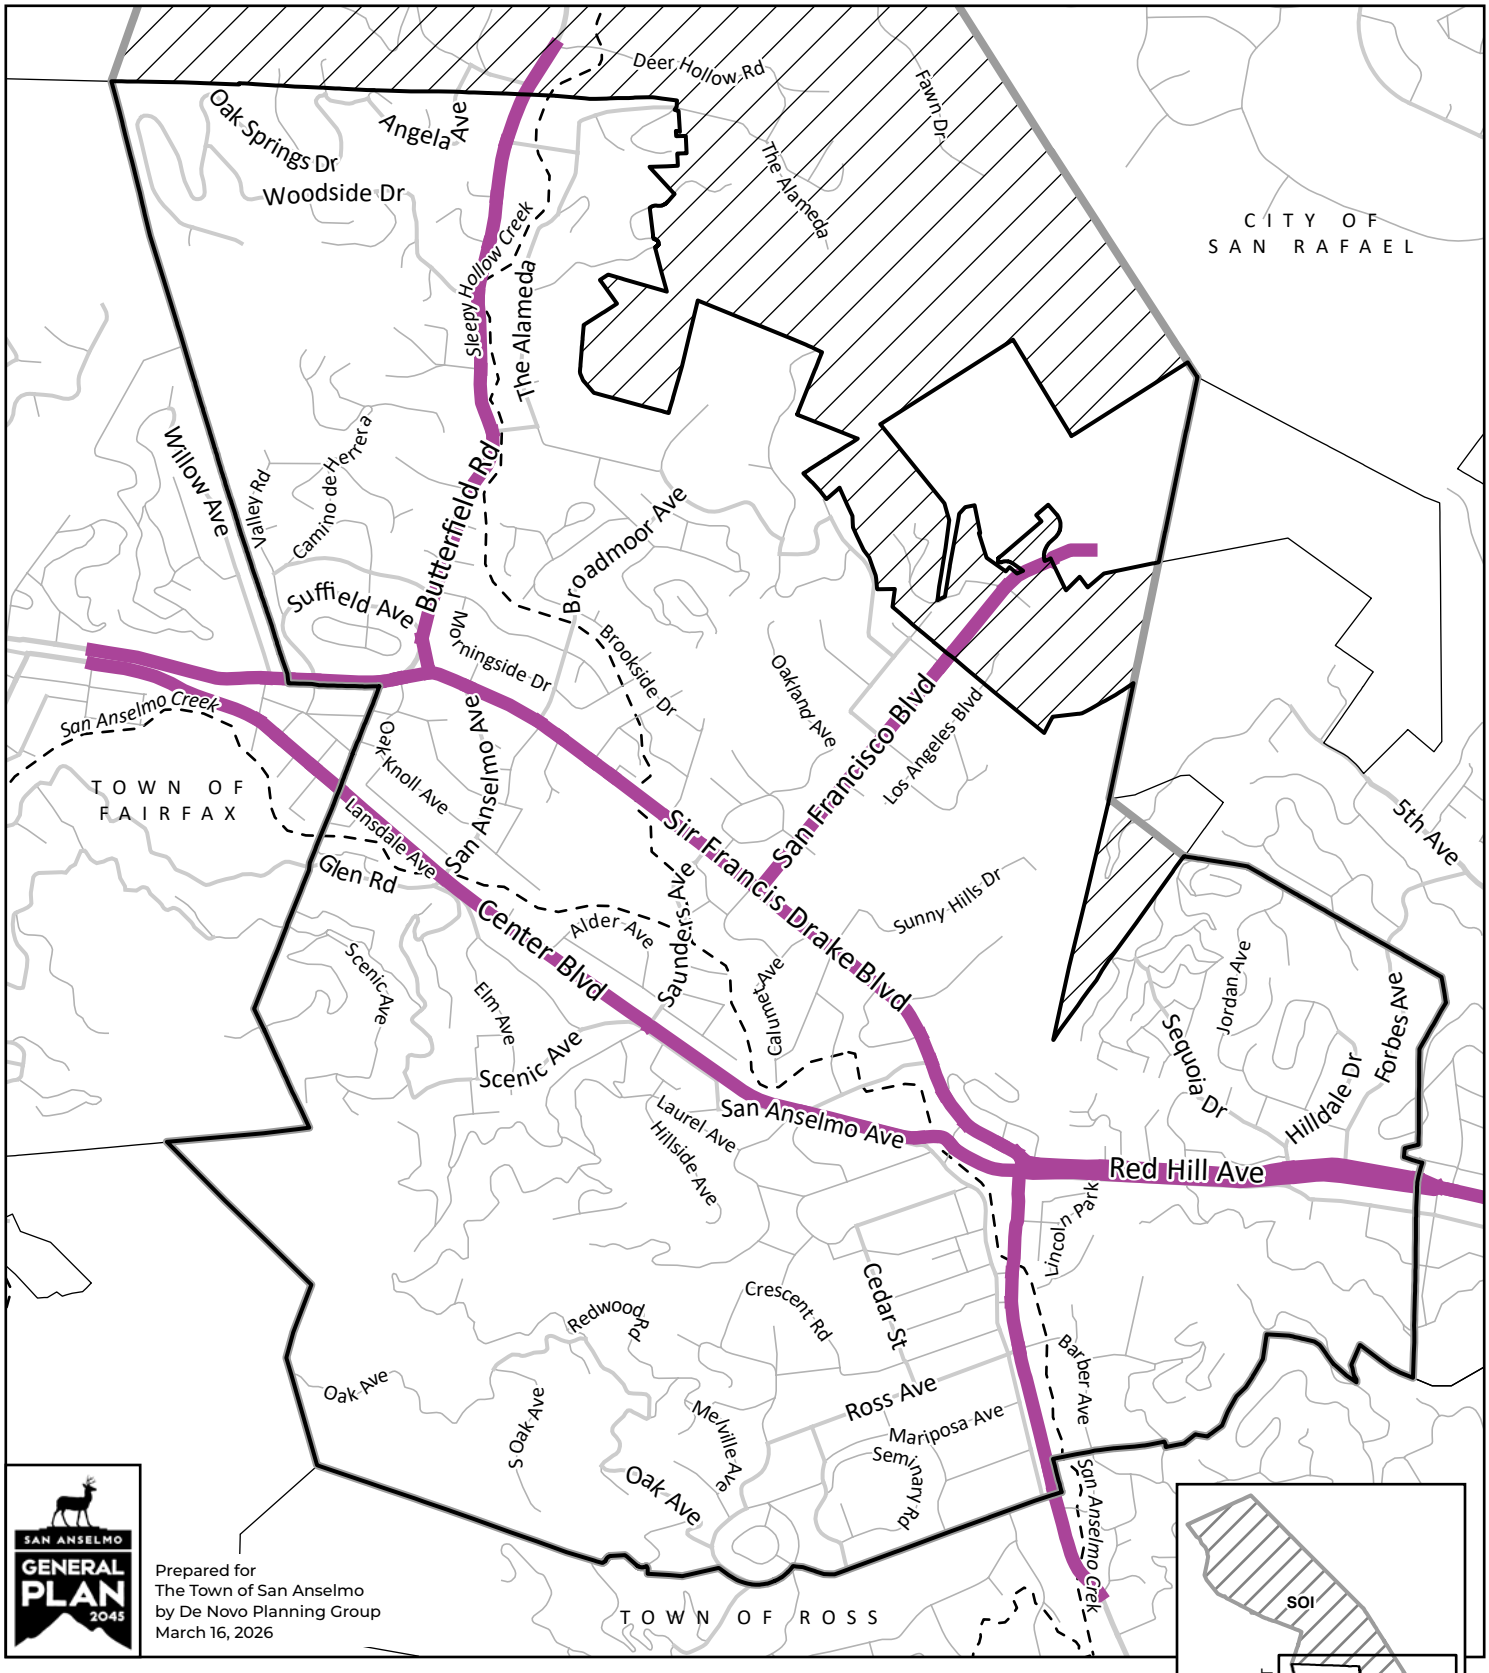

> The biggest issue as I see it is that if there was a fire burning in San Anselmo, there would be no way for citizens to get out quickly.

These constrained access parcels are grouped based on guidelines recommended by CalFire, which identify areas with 30 parcels or more. These locations are identified as they could potentially be more vulnerable during evacuation scenarios, given the limited ingress/egress conditions. The residential areas of town are generally developed, meaning most new home construction is anticipated as infill type developments or redevelopments and accessory dwelling units (ADUs).

Recovery

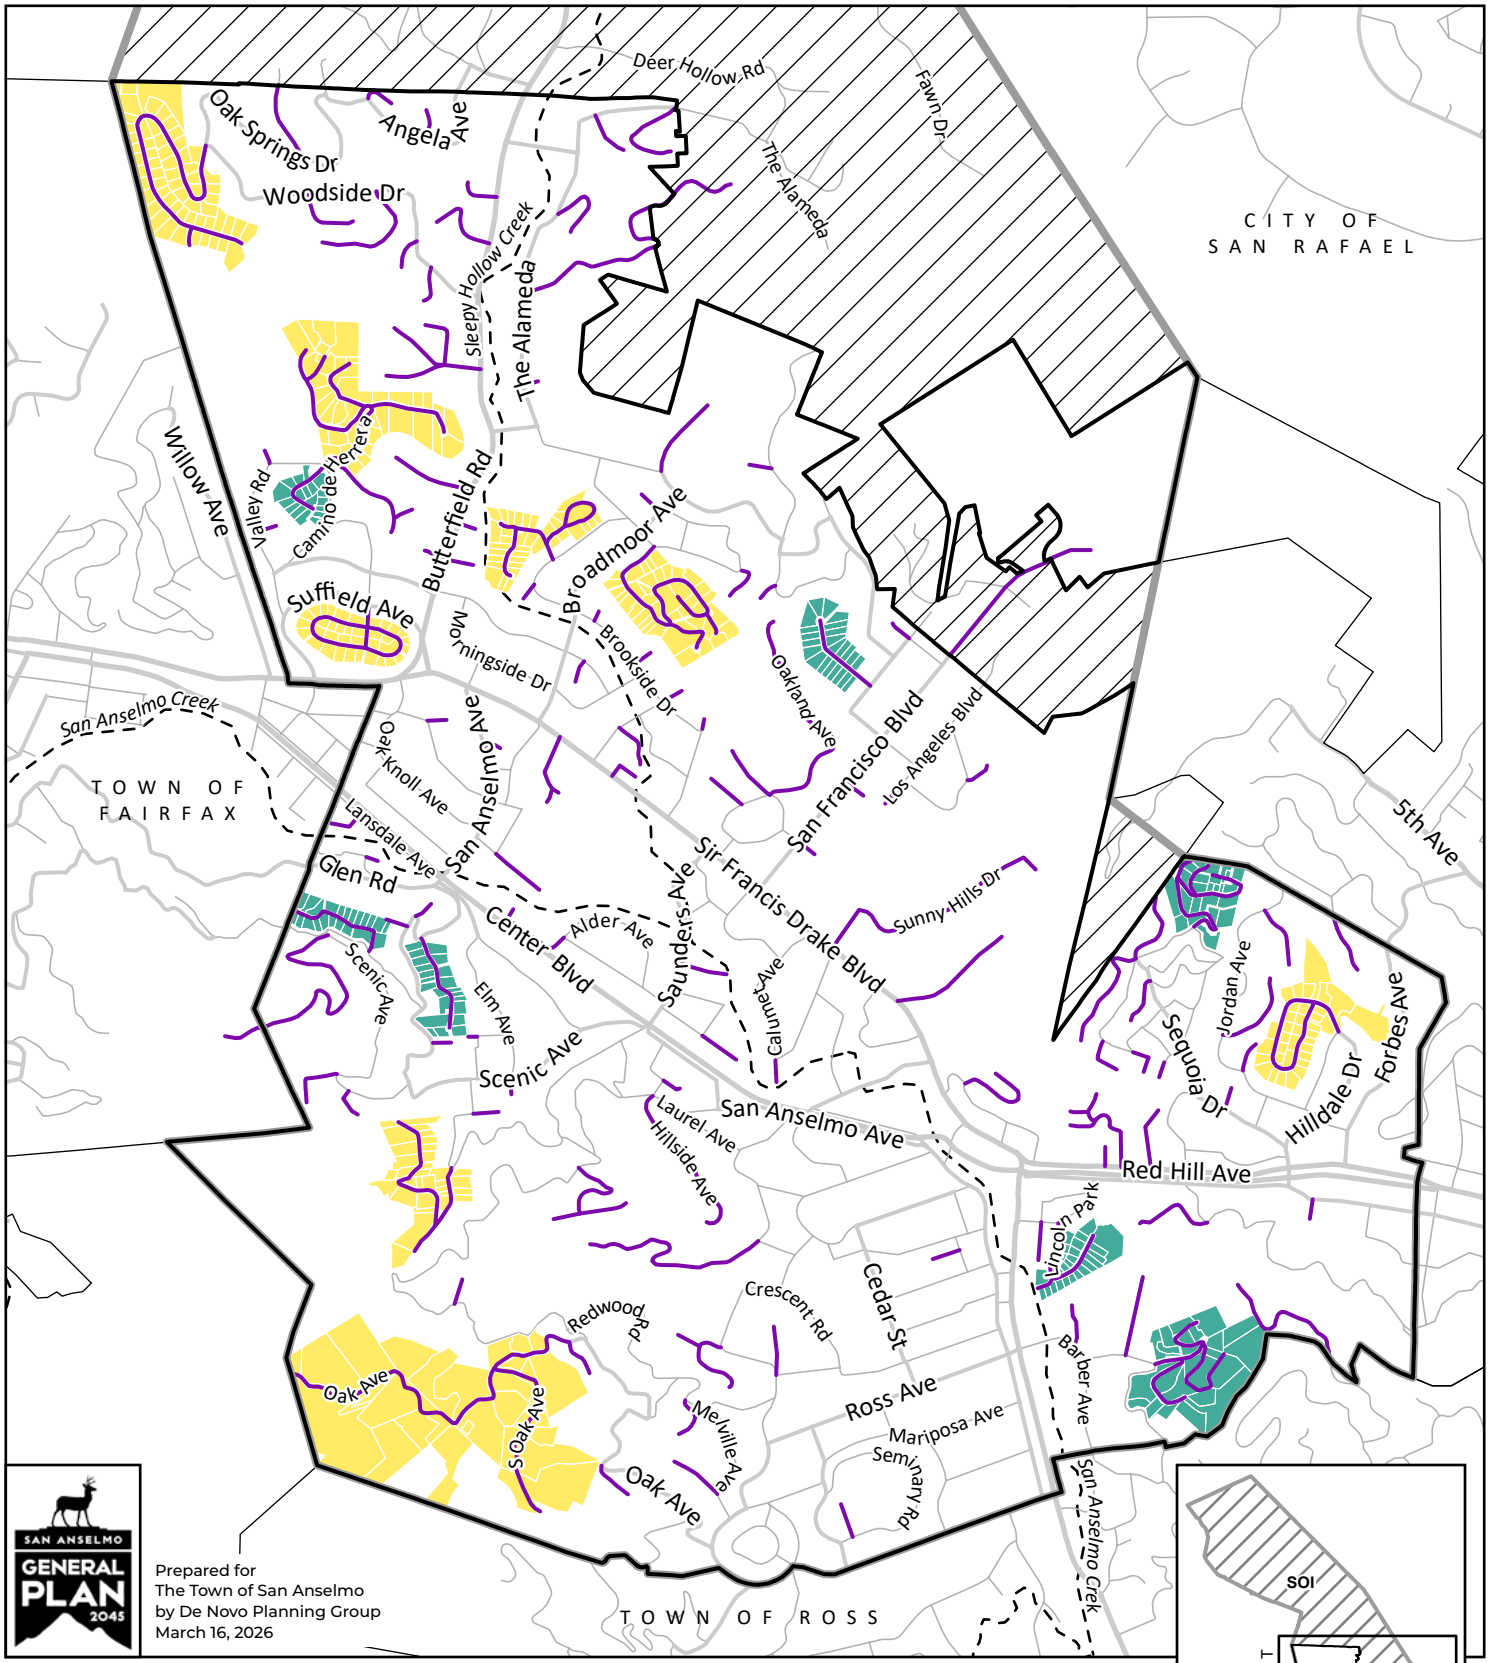

Recovery activities typically occur after an emergency or disaster event. These activities focus on reestablishing services to any impacted areas, repairing and/or reconstructing damaged buildings and infrastructure, and aiding residents and businesses with permitting and approvals of building plans as part of the reconstruction process. Depending on the scale and type of incident, recovery could occur in specific community locations and/or require specialized expertise to address the issues created. Cleanup of hazardous waste is considered part of the recovery from a major disaster event (fire, flood, landslide, earthquake).

9.3 SEISMIC AND GEOLOGIC HAZARDS

Seismic and geologic hazards are traditionally addressed together because they both involve the movement of the Earth's surface. Although some geologic events (landslide, subsidence, erosion, etc.) can and do happen independently, the primary catalyst for their occurrence is often a seismic event, commonly referred to as an earthquake. This section identifies four common seismic and geologic hazards that threaten San Anselmo. A key consideration for seismic and geologic hazards is the potential for cascading effects resulting from an event. When an earthquake occurs, the seismic shaking can cause natural gas and water/sewer pipelines to rupture, which may cause other impacts like flooding, erosion, or fires. The goals, policies, and actions in this element are designed to work together to reduce both the individual and collective risk of these hazards.

9.3.1 SEISMIC HAZARDS

Northern California is a seismically active region that experiences earthquakes on a regular basis. San Anselmo is prone to seismic hazards due to its location and proximity to active earthquake faults. These hazards are described below.

Surface Rupture

The Earth is covered in tectonic plates, which are large sections of the Earth's crust that are constantly shifting and moving closer together, further apart, or past one another. The movement of two plates past one another frequently causes friction resulting in plates that "stick." When this occurs, the same forces that push the plates past each other are now concentrated in certain areas. In time, friction can no longer hold the plates together, and the plates suddenly shift, releasing a massive build-up of energy (i.e., earthquake). This rapid movement and release of energy can cause the Earth to fracture and displace the land around it, resulting in an earthquake fault. Some faults are buried beneath the surface, while others are located at the surface of the Earth. Surface rupture of a fault is especially dangerous if structures are built on top of the fault, or infrastructure crosses the fault, as these facilities could be damaged by fault movement. If a surface rupture occurs, the movement could break

pipelines and damage roads and bridges, rendering them useless after the event. Areas of known surface rupture hazard in California are identified in Alquist-Priolo Special Study Zones. The San Anselmo planning area does not currently have any Alquist-Priolo Special Study Zones, reducing the concern associated with surface fault rupture.

There is a 72% chance that the Bay Area will experience an earthquake with a magnitude of 6.7 or greater in the next 30 years.

Seismic Shaking

Seismic shaking is the recognizable movement caused by the energy released from an earthquake. The same mechanism that creates a surface rupture is also responsible for seismic shaking and can produce an equally devastating effect. Earthquakes may occur without surface rupture, which can still cause significant damage to buildings and other structures. Infrastructure such as roads, pipelines, and power lines are also susceptible to damage and pose additional safety concerns. Unlike surface rupture, seismic shaking consequences are not restricted to the area immediately surrounding the fault. Energy resonating through the ground can travel hundreds of miles and simultaneously cause damage in many locations. The closer to the earthquake's source (epicenter), the stronger the shaking will be. Seismic shaking is of particular concern for San Anselmo due to the proximity to active faults that can generate significant earthquakes. Several faults are located within 15 miles of San Anselmo, which include the San Andreas Fault (capable of generating a magnitude 8.0 earthquake), the Hayward Fault (capable of generating magnitude 7.2 and 7.4 earthquakes), the Rodgers Creek Fault (capable of generating a magnitude 7.0 earthquake) and the San Gregorio fault (capable of generating a magnitude 7.3 earthquake). Of these faults, the San Andreas Fault is the closest in proximity at approximately 8 miles southwest of the town. Figure S-3 depicts the locations of regional faults closest to San Anselmo.

Liquefaction

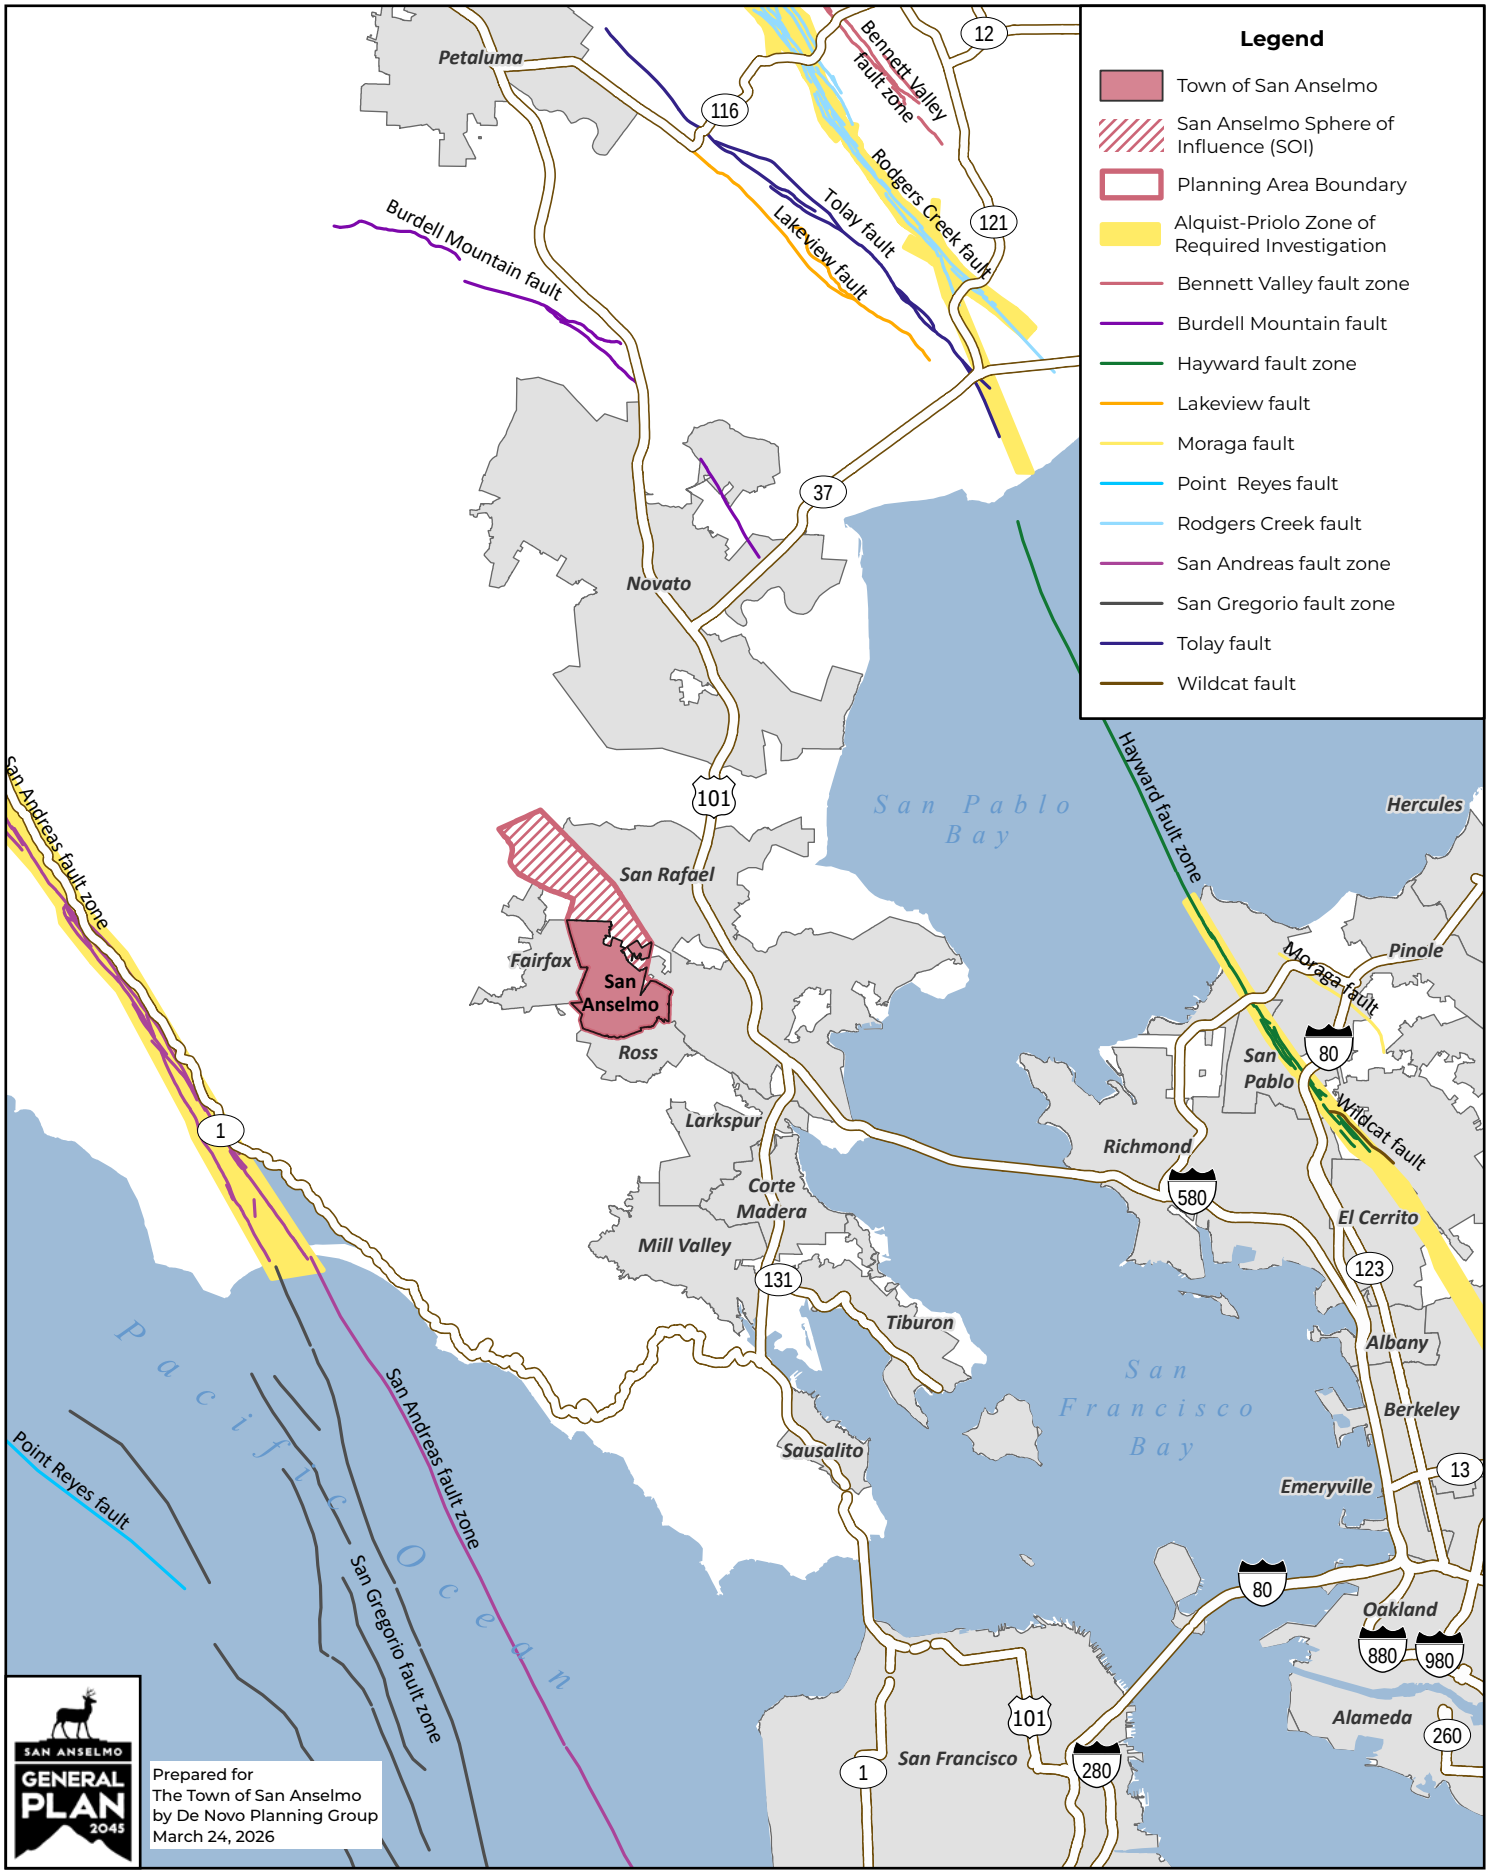

Liquefaction is a phenomenon that occurs when intense vibrations from an earthquake cause saturated soil to lose stability and act more like a liquid than a solid. This poses significant problems for

buildings and other structures in areas where liquefaction can occur, as the ground may give way under the weight of the structure and its foundation. In addition, underground structures are vulnerable to liquefaction. In San Anselmo, the areas along the existing and filled stream channels may be subject to liquefaction. These low-lying areas adjacent to creeks and drainages are the portions of town with moderate and high liquefaction susceptibility levels. Figure S-4 depicts the liquefaction susceptibility areas within the town; however, analysis of these conditions should occur on a site-by-site basis.

Landslides

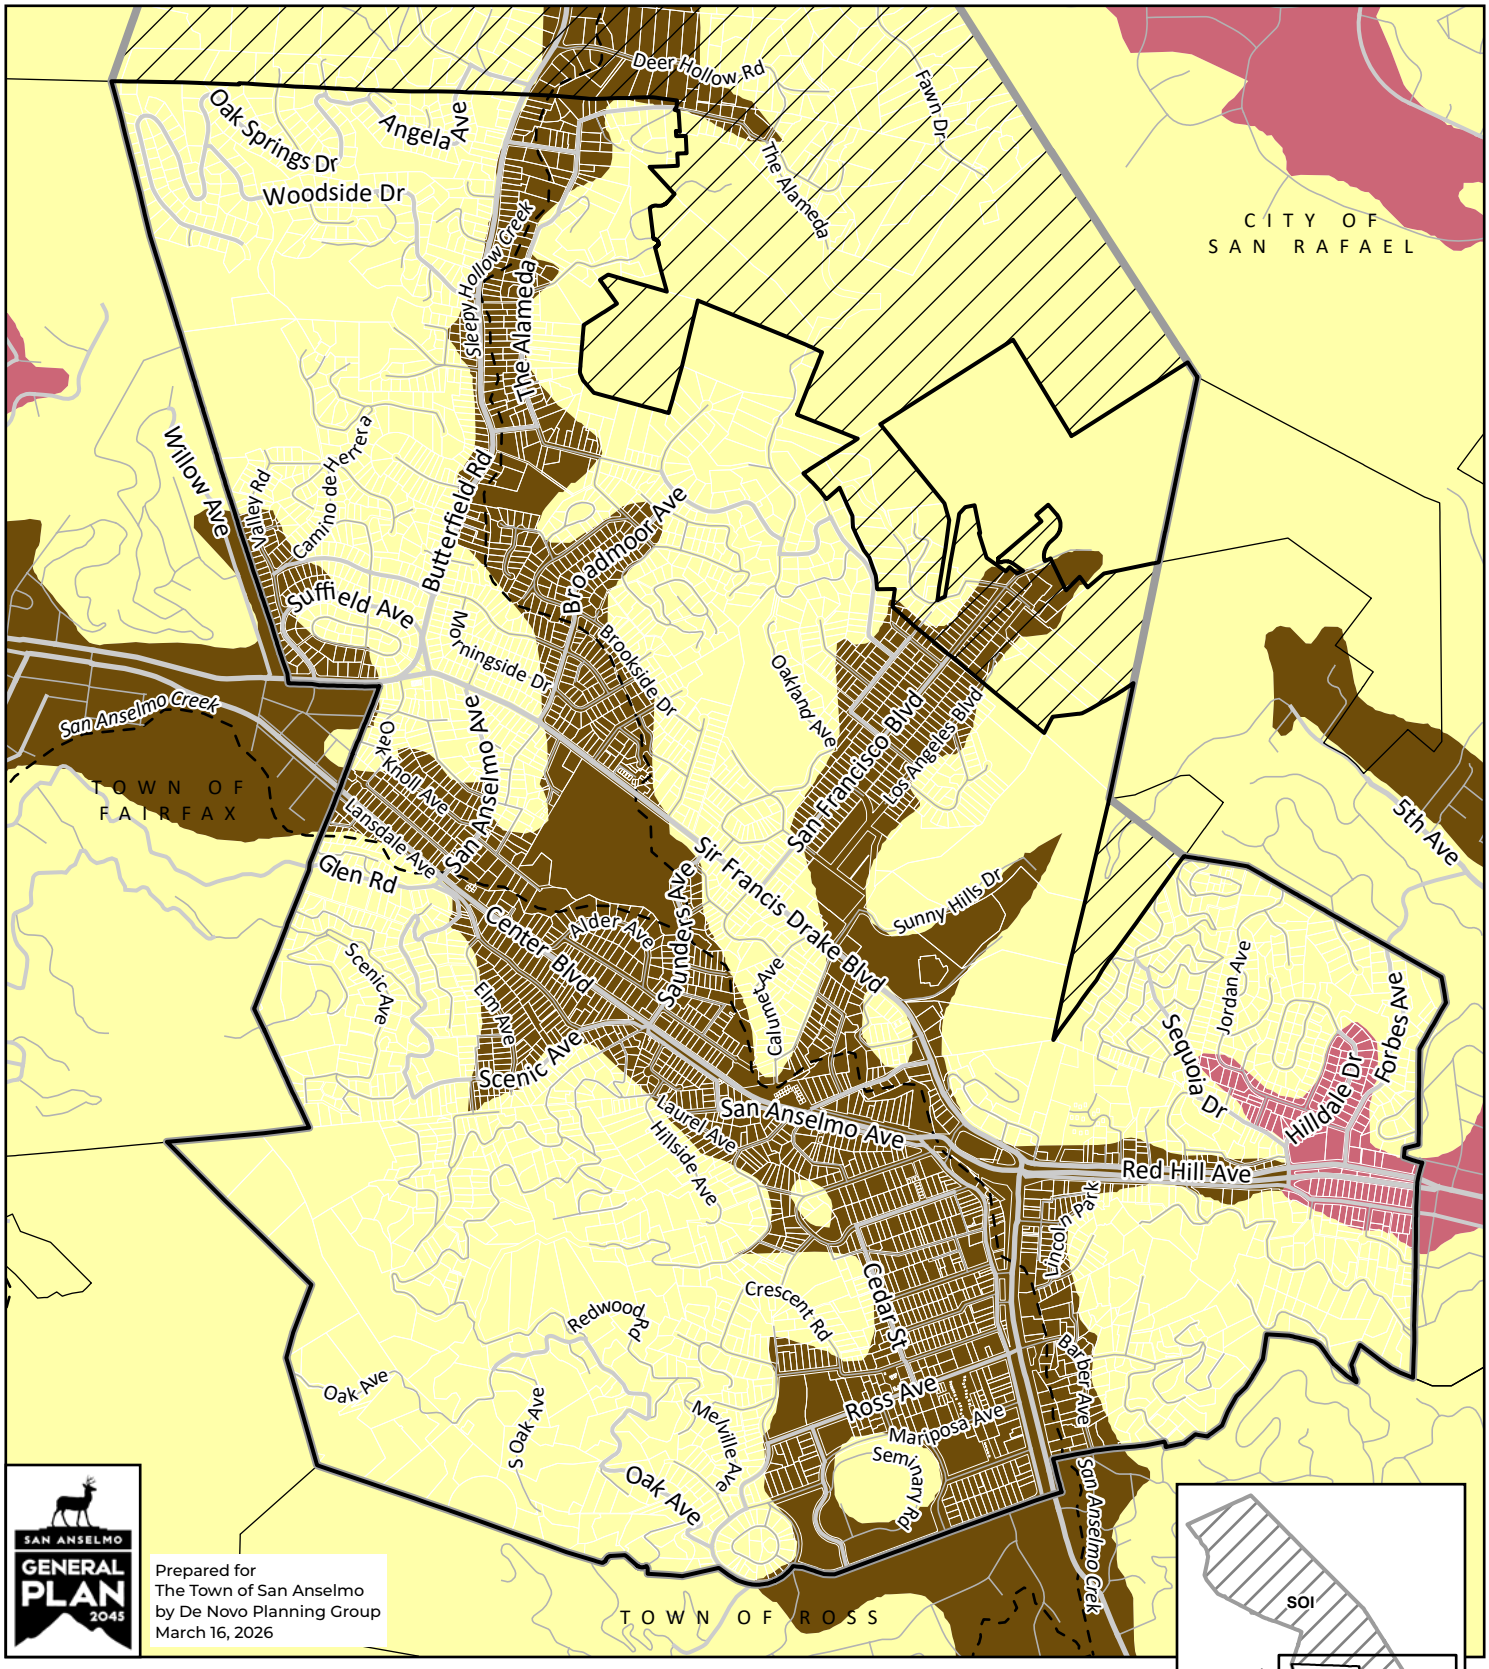

A landslide is the movement of earth material down slopes and areas of steep topography. Although earthquakes often cause them, landslides can occur when a sloped surface can no longer support the material contained within or sitting above it. The instability can be caused by the sheer weight of the material or can be rendered unstable by other events such as heavy rain. Slopes can become unstable due to erosion and trigger a landslide. Landslides can also be a secondary hazard caused by earthquakes and seismic shaking. When rain causes a slope to fail, the movement of earth materials is typically referred to as a mudslide.

Landslides can move with great force and pose a significant danger to buildings and other structures. In some circumstances, these events may cause bodily harm if bystanders cannot move out of their path in time. The parts of San Anselmo at greatest risk of landslides are primarily along the periphery of the town border, where the steep topography and soil composition combine to create areas that are susceptible to landslide. Anticipating the risk of landslides in the areas identified in Figure S-5 will be essential for protecting the community from these events.

9.4 FLOODING HAZARDS

9.4.1 FLOOD

Flooding is caused by the accumulation of water on the ground surface. This typically occurs after heavy rainfall but can also result from water delivery/storage infrastructure failures such as pipes, storage containers, and dams/reservoirs. Worsening drought conditions caused by climate change may exacerbate the effects of flooding, as surfaces that typically absorb water can quickly dry out and become less permeable. Flooding presents dangers to people and structures alike. Standing water may be deep enough to cause drowning, while shallow waters can easily damage buildings and property. Fast-moving water is hazardous, as it may sweep people or cars downstream or cause damage to structures.

Ross Valley, including San Anselmo, is naturally prone to flooding. The topography and geologic makeup of the region (steep slopes and shallow soils with a low absorption capacity), the naturally occurring local watershed runoff which has been altered and placed in culverts, coupled with an increase in the probability of intense rainfall, are all factors increasing the likelihood of flooding.

The town is susceptible to periodic flooding from the San Anselmo and Sleepy Hollow creeks, which impacts the low-lying areas of the town and neighboring communities bordering these drainages. Historically, the creeks have caused floods as the volume of water during large storm events becomes more than the creek capacity can effectively manage. Localized flooding is most often associated with excessive ponding and overflow into lower-lying properties, even during smaller 5-year storm events. This localized flooding is generally the result of the drainage network having inadequate capacity and can occur within or outside of FEMA-identified floodplains. Figure S-6 displays the designated FEMA floodplains in and near San Anselmo.

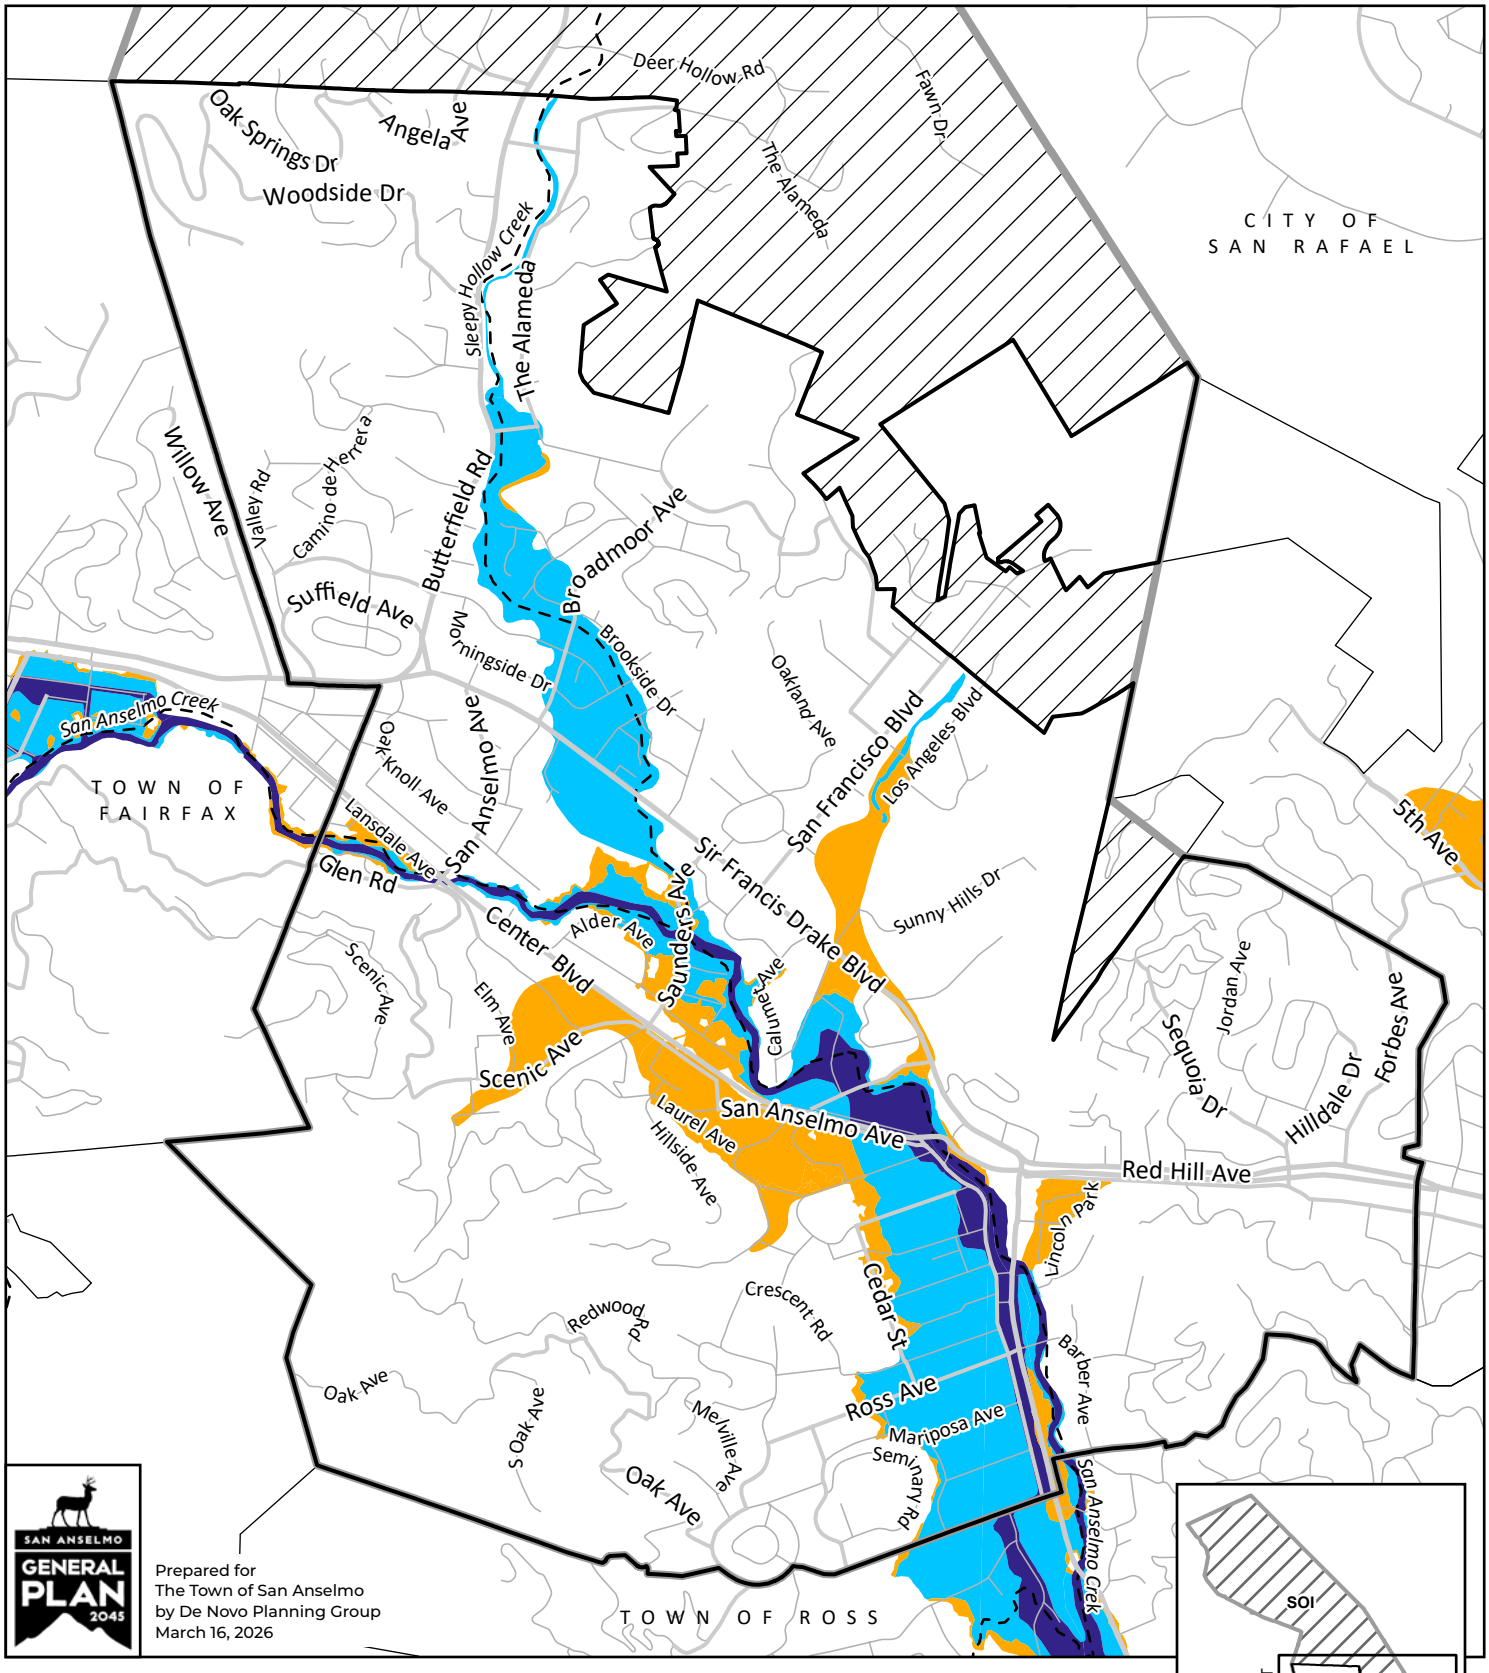

Two of the most severe floods in the past fifty years occurred in the winters of 1982 and 2005. In 1982, floodwaters were three to four feet deep on San Anselmo Avenue. All commercial buildings in the Downtown area suffered water damage and one house was destroyed. From December 31, 2005, to January 1, 2006, an atmospheric river event caused San Anselmo Creek to overflow its banks, resulting in more than four feet of water rushing down San Anselmo Avenue in the Downtown area. Town facilities, including the police station, San Anselmo Library, Council Chambers, and Fire Station 19, were damaged as well as 140 businesses and 290 homes.

Flooding on Bolinas Avenue as storm drains exceed capacity during peak rainfall.

9.4.2 DAM FAILURE

When dams that are designed to hold water fail, the body of water suddenly and abruptly moves downstream. These downstream areas can become inundated depending on how much water is behind the dam and the topography of the downstream areas. The specific areas of land that would become flooded and covered with water resulting from a dam break are considered an "inundation zone." These downstream areas are typically much larger than the areas identified on flood maps because the volume of water released will often overwhelm any stormwater infrastructure in these areas. The Phoenix Lake Dam, owned by the Marin Municipal Water District (Marin Water), is located in the neighboring Town of Ross, south of San Anselmo. Failure of this dam could inundate a small portion of southern San Anselmo that includes approximately 30 parcels located between Bolinas and Belle Avenues. The damage potential would be small given Phoenix Lake's overall storage capacity; however, damage within this portion of the town could still occur. Figure S-7 identifies the dam inundation zone within San Anselmo.

9.5 FIRE HAZARDS

9.5.1 WILDFIRES

The most common type of natural hazard in California is wildfire, which can quickly burn large areas of undeveloped or natural land. Wildfires often begin as smaller fires caused by lightning strikes, downed power lines, mechanical equipment use, or unattended campfires but may rapidly expand in size if conditions are dry and/or windy. The recent trend toward more prolonged periods of drought within the western United States increases the likelihood of a wildfire. Typically, wildfires pose minimal threats to people and buildings in urban areas, but increasing human encroachment and development into natural areas increases the likelihood of bodily harm or structural damage. This encroachment occurs in areas called the wildland-urban interface (WUI), which is considered an area within a fire hazard severity zone, as defined by CalFire.

The Town of San Anselmo is located within a mapped WUI area and borders open space lands managed by Marin Water. The hillsides and canyons within the town and surrounding areas carry some wildfire hazard potential, which is a risk to urbanized areas within the town. Figure S-8 depicts the fire threat classifications within the town and surrounding areas. Based on this mapping, the northeastern and southwestern portions of the town are considered to have moderate to high wildfire threat conditions. However, San Anselmo

Wildfire burning on the San Anselmo side of the Terra Linda- Sleepy Hollow Divide.

does not currently have any Very High Fire Hazard Severity Zones identified by CalFire.

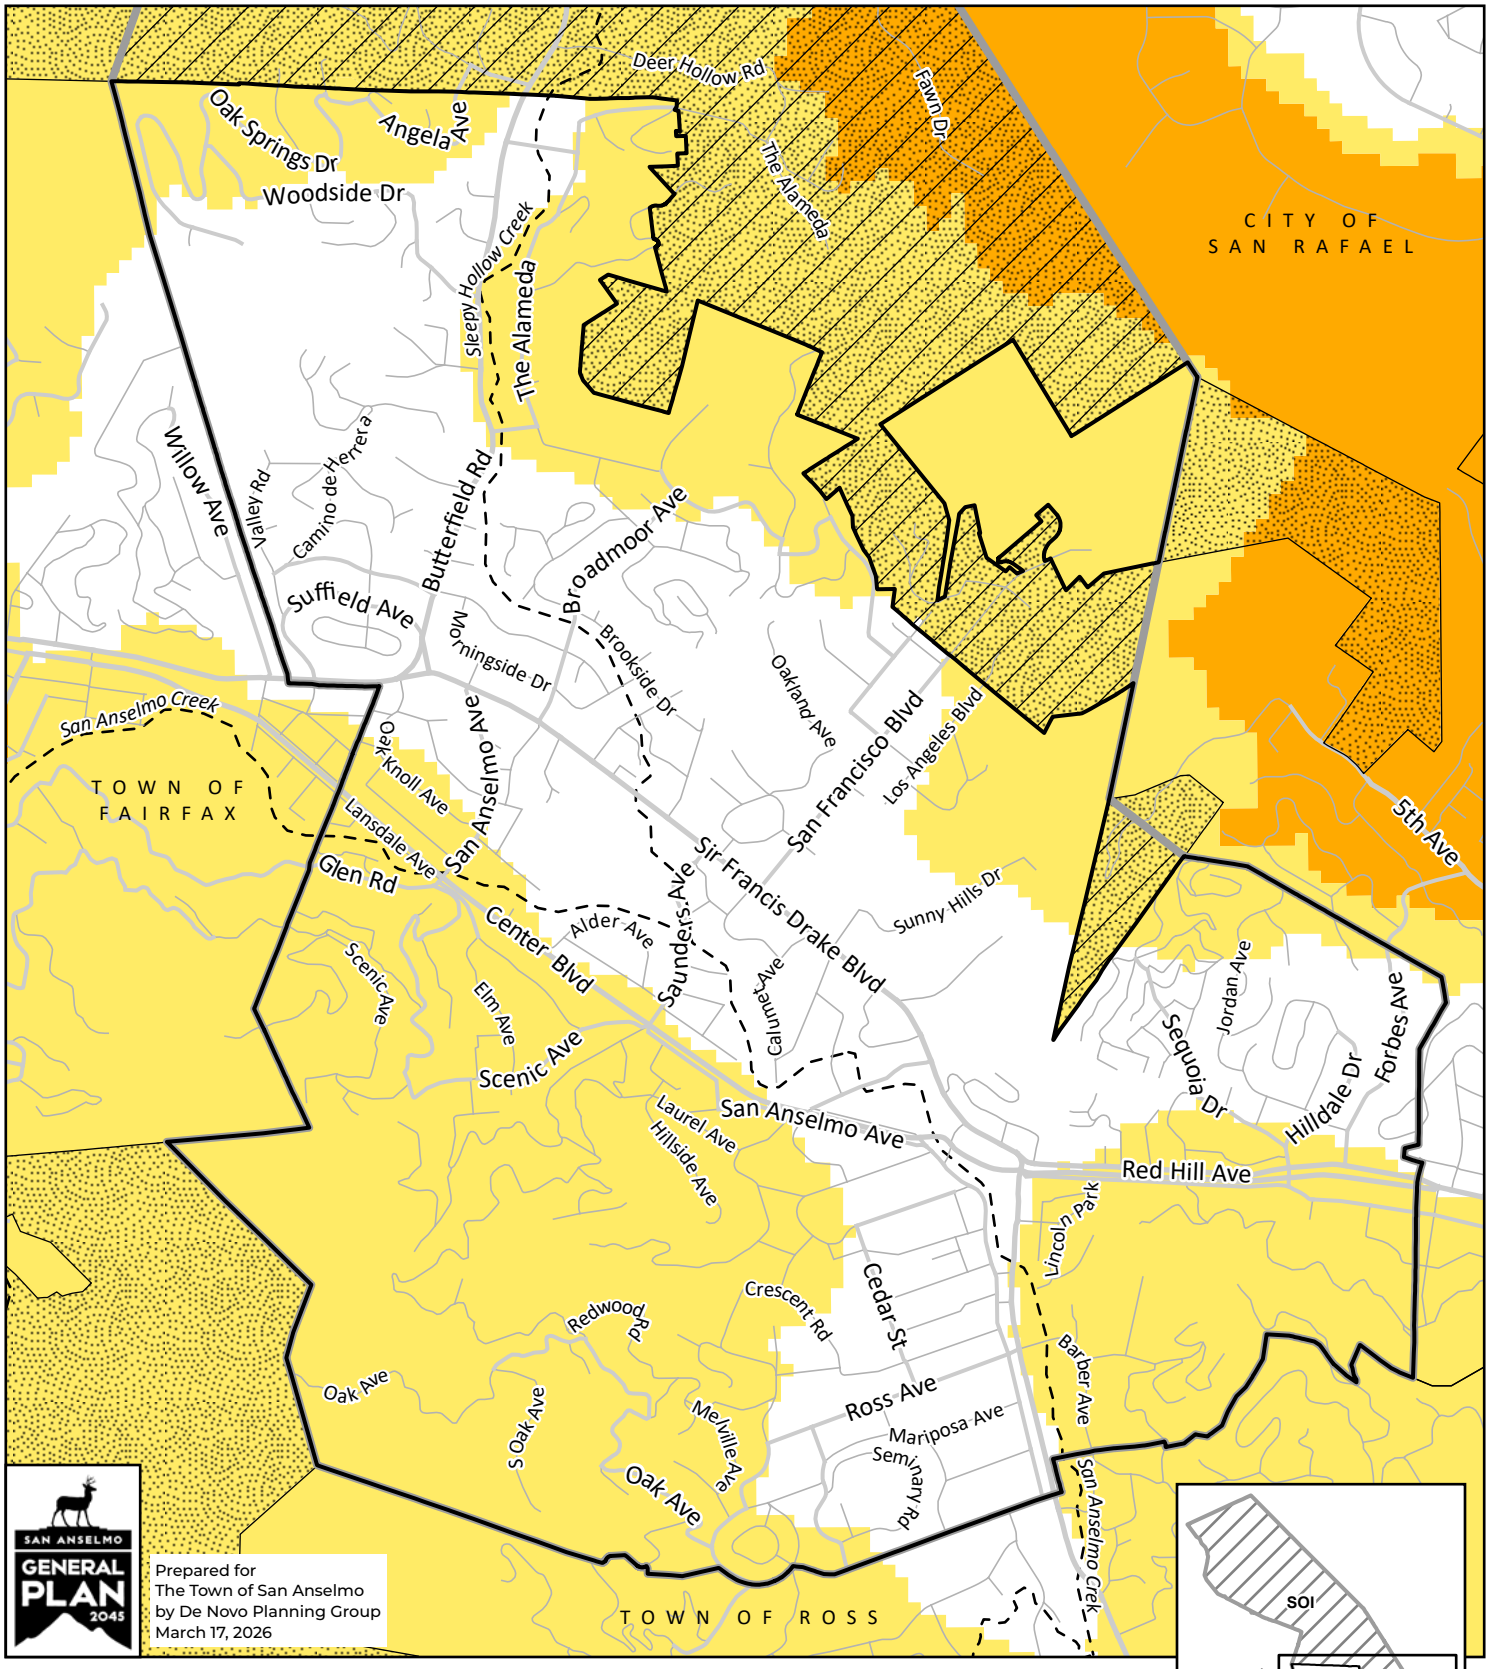

Significant wildfires have occurred in San Anselmo and Marin County in the past and will continue to pose a threat to people and property. The last major wildfire to occur within the perimeters of the town boundary was the Sorich Park fire in 1976, which burned over 284 acres in and around San Anselmo. Figure S-9 depicts the WUI in the San Anselmo planning area.

9.5.2 URBAN FIRES

The possibility of an urban fire confronts every community. Many urban fires begin as isolated incidents caused by faulty electrical appliances, cooking mishaps, improper storage of chemicals, or industrial malfunction but can spread to other buildings if conditions permit. Many factors contribute to urban fires' severity and extent, but modern building codes and practices have helped reduce their effects. Despite these improvements, it is important to acknowledge the risks associated with fires in urban areas. No matter its size, any fire can be fatal or cause people severe harm and can damage buildings and other structures.

9.5.3 WATER SUPPLY

Marin Water provides water service in San Anselmo. The district owns approximately 21,600 acres of watershed land and provides water service to communities from the Golden Gate Bridge to southern Novato and west from the San Francisco Bay to the San Geronimo Valley. According to Marin Water's Urban Water Management Plan, adequate water supplies are expected during normal years, single dry years, and multiple dry years to meet expected demand within the town and service area through 2045. This is especially important for ensuring adequate supplies are available for fire suppression needs within San Anselmo. As a standard practice, new developments and major remodels are required to conduct water pressure/flow testing and mitigate issues if water flows are deemed inadequate.

9.6 CLIMATE AND WEATHER-RELATED HAZARDS

Severe weather hazards in San Anselmo include drought, extreme heat, and severe wind and storm events. These hazards have affected plants and animals and damaged properties and vehicles. Future effects are anticipated due to climate change, which can contribute to the frequency and intensity of severe weather events.

9.6.1 TEMPERATURE

Increasing temperatures associated with climate change can act as a hazard multiplier. Increased temperatures can affect both water supplies and vegetation growth. With drier conditions, vegetation growth may be reduced, which can reduce wildfire vulnerability; however, if dry conditions persist for longer periods, the reduced vegetation may be drier than normal. These two conditions may change the wildfire risks within the town and the surrounding area, or cause areas that have not burned historically to be at greater risk of ignition.

Credit: Marin Water

9.6.2 DROUGHT

A drought is a long period with substantially less precipitation than usual. The primary direct impact of a drought is the reduction of available water supplies. Water reduction is particularly concerning in agricultural areas and natural environments, but it can also affect landscaping in urban areas or human health in extreme cases. Droughts are generally regional events; however, some communities experience "long-distance drought" if the water source areas—potentially hundreds of miles away—are experiencing drought. San Anselmo receives water from Marin Water. The town and many residents have groundwater wells that are used for irrigation. Marin Water has a long-term water supply and management plan that includes a drought analysis that accounts for impacts associated with climate change.

9.6.3 EXTREME HEAT

Extreme heat is a period when temperatures are abnormally high relative to the normal temperature range. Extreme heat events include:

- Extreme Heat Days: a day during which the maximum temperature surpasses 98 percent of all historic high temperatures for the area.

- Warm Nights: a day between April and October when the minimum temperature exceeds 98 percent of all historic minimum daytime temperatures.

- Extreme Heat Waves: a successive series of extreme heat days and warm nights where extreme temperatures do not abate; typically, four successive extreme heat days and warm nights.

According to Cal-Adapt, the State's portal for local climate change projections, an extreme heat day for San Anselmo is when the temperature exceeds 95.3° F, and a warm night exceeds 58.8°F. From 1961 to 1990, the Town experienced an average of 4 extreme heat days annually, which are projected to increase between 11 and 20 days by the end of the century due to climate change.

9.6.4 SEVERE WIND

Wind is simply the movement of air caused by differences in atmospheric pressure and temperature. High-pressure air will naturally move to areas of low pressure. During certain times of the year, these conditions can cause high-speed winds (Diablo Winds), which are fast and forceful enough to damage public facilities, infrastructure, homes, utilities, and uproot or topple mature trees. During these events, debris is transported with enough force to damage property and injure people. Severe wind events can also cause Public Safety Power Shutoff events by utility providers (Pacific Gas & Electric) that distribute electricity to the town. These events de-energize power lines during wind events to reduce the potential of wildfire ignition and spread.

9.6.5 PRECIPITATION

Climate change projections suggest that annual mean precipitation may increase as temperatures are anticipated to increase in the coming decades. Even with increases projected, there is the potential that the increased precipitation may fall during more intense weather events, which could increase flooding. By the end of the century, maximum 1-day precipitation events could increase by 20%, which could overwhelm existing infrastructure and potentially

inundate areas that haven't experienced flooding. With greater and more intense precipitation, the town could also experience greater instability within hillside areas, causing an increase in landslides and mudslides.

With future temperature increases coupled with increased precipitation amounts, future wildfire impacts are projected to decrease or remain the same by the end of the century. This projection is based on the increase in precipitation, which may occur in fewer larger rain events coupled with higher average temperatures. This projection suggests that vegetation growth will experience an overall reduction or change that reduces future acres burned. Based on historical fires that have occurred, the Town has experienced an annual average of 47.1 acres burned (total acreage burned divided by the number of years analyzed), which is projected to reduce slightly (41.4 acres) or remain approximately the same (47.0 acres) by the end of the century.

A further discussion of the effects of climate change effects, as well as adaptation and resiliency to expected impacts, can be found in the Sustainability, Climate Change, and Resiliency Element.

9.7 NAVIGATING TOWARDS 2045

Over the next two decades, San Anselmo will respond to evolving climatic conditions by strengthening its approach to hazard mitigation, preparedness, and long-term resilience. As wildfire risk, flooding potential, and extreme weather events intensify, the Town will continue to refine land use decisions, expand defensible space practices, improve stormwater systems, and reinforce slopes and hillsides where instability is likely. These efforts will be supported by updated emergency plans, expanded community preparedness programs, and the development of resilience hubs that provide safe, accessible, and welcoming spaces for residents to gather, receive services, and access critical information during emergencies. Together, these actions will help reduce vulnerabilities and maintain public safety across all neighborhoods.

Advances in technology will also enhance the Town's ability to anticipate and respond to environmental hazards. Real-time monitoring tools, early warning systems, and improved modeling software will help track wildfire conditions, rainfall intensity, soil movement, and other indicators of emerging risks. Remote sensing, data-sharing platforms, and communication technologies will support rapid coordination during emergencies, while resilience hubs may incorporate backup power, cooling and air filtration systems, and digital communications to serve residents during disruptions. By pairing modern tools with proactive planning and community-focused facilities, San Anselmo will strengthen its ability to protect public safety and adapt to future climatic challenges.

Emergency preparedness and disaster recovery have important equity dimensions that require explicit attention. Lower-income residents, renters, people with disabilities, older adults, and non-English-speaking community members may face heightened vulnerability during emergencies and have less access to recovery resources. The Town will design and implement emergency preparedness outreach, evacuation planning, and recovery programs to effectively reach and support these populations.

9.8 GOALS, POLICIES, AND ACTIONS

9.8.1 HAZARD MITIGATION, EMERGENCY PREPAREDNESS, RESPONSE, AND RECOVERY

Goal S-A Promote a culture of resilience and preparedness within San Anselmo where all community members and businesses are informed, equipped, and prepared for natural and human-caused emergencies.

Policy S-A.1: Structural Hazards. Support efforts to reduce the number of structures subject to natural hazards.

Action S-A.1.a: Building Code Updates. Regularly update building codes and regulations to address changing hazard conditions and requirements.

Policy S-A.2: Hazard Education. Increase education, outreach, and awareness of hazards and hazard mitigation, especially for vulnerable populations, including older adults, people with disabilities, lower-income households, and others who may face barriers to accessing information.

Action S-A.2.a: Multilingual and Community-Based Outreach. Expand emergency preparedness outreach through multilingual communication and partnerships with community-based organizations to broaden access to information on evacuation routes, shelter locations, and recovery resources. Use a variety of communication methods and trusted community channels to reach residents who may not engage with standard municipal communications, and adapt outreach strategies over time as San Anselmo's demographics evolve.

Policy S-A.3: Hazards in New Development. Encourage new development in locations that avoid or reduce exposure to hazards for future residents and users.

Action S-A.3.a: Essential Public Facilities. Locate, when feasible, new essential public facilities outside of identified hazard areas, including hospitals and health care facilities, emergency shelters,

fire stations, emergency command centers, and emergency communications facilities.

Action S-A.3.b: Public Facilities in Hazard Areas. Identify appropriate construction methods to minimize damage to public facilities located within an identified hazard area.

Policy S-A.4: Resilient Utilities and Public Safety Services. Work with public utilities and special districts that provide water, sewer, fire protection, and public safety services in order to maintain and improve upon the present level of service and resiliency to natural hazards.

Policy S-A.5: Resilient Town Buildings. Require that Town-owned buildings are maintained to support their resilience in the face of natural disasters.

Action S-A.5.a: Resilient Public Facilities. Maintain the structural and operational integrity of essential public facilities during hazard events.

Policy S-A.6: Agency Coordination. Increase cooperation and coordination among private entities, local agencies, special districts, State and federal agencies, and tribal organizations to improve service delivery and communication to the community.

Policy S-A.7: Staff Training. Ensure Town staff are adequately trained to implement State and local regulations designed to avoid loss of life, injury, and property damage from natural disasters.

Action S-A.7.a: Hazard Mitigation Program Review and Integration. Conduct an annual review of hazard mitigation goals and strategies and integrate the findings into the annual budget, staffing allocations, and updates to the Capital Improvement Plan.

Policy S-A.8: Pedestrian Evacuation Routes. Support the development of pedestrian rights-of-way as temporary pathways to serve as additional evacuation routes for residents without access to private vehicles or with mobility limitations.

Policy S-A.9: Emergency Response and Evacuation Plans. Support the preparation, implementation, and regular update of local preparedness and evacuation plans, ensuring plans are accessible and responsive to the needs of diverse abilities, and promote multi-jurisdictional cooperation and communication for emergency situations.

Action S-A.9.a: Emergency Planning, Coordination and Training Program. Maintain and update the Town's Emergency Operations Plan (EOP) to ensure a clear chain of command and strong coordination with the Marin County Operational Area, and participate in regional emergency planning efforts, including updates to the Marin County Multi-Jurisdictional Hazard Mitigation Plan (MJHMP). Adopt each updated MJHMP to remain eligible for FEMA hazard mitigation funding and ensure the plan includes analysis of climate-related risks, identification of vulnerable assets and populations, and strategies to address their specific needs and strengthen community resilience.

Policy S-A.10: Post-Disaster Recovery. Expand and enhance post disaster recovery strategies, prioritizing community resilience, sustainability, and equitable recovery for all residents.

Action S-A.10.a: Post-Disaster Recovery Framework. Develop an all-hazards Post-Disaster Recovery Framework for use after a major incident or event that considers the needs of different segments of the community.

Policy S-A.11: Community Education. Educate community residents and businesses on emergency preparedness, response, evacuation procedures and mitigation strategies using accessible formats and inclusive communication methods.

Action S-A.11.a: Public Outreach. Provide community outreach and education programs on a regular basis to keep residents informed about emergency procedures, shelters, safe refuge areas, and evacuation routes using multiple communication channels and accessible formats.

Policy S-A.12: Circulation System for Evacuations. Continue to study the Town's circulation network and emergency response capabilities to provide effective evacuations during an emergency for all residents, including those with limited mobility and transportation options.

Policy S-A.13: Property Identification. Identify properties through clear street naming and numbering systems for emergency response vehicles.

Policy S-A.14: Access Routes for New Development. Require all new developments and redevelopments to provide a minimum of two points of access by means of public roads that can be used for emergency vehicle response and evacuation purposes for residents and emergency responders.

Action S-A.14.a: Emergency Access Improvements and Roadway Standards. Evaluate and implement feasible emergency access improvements for existing and new development, including

roadway widening, parking restrictions, vehicle pullouts, roadside clearance, and new or improved access routes, and require necessary upgrades during discretionary review when a nexus exists. For areas that do not meet minimum emergency access standards, assess targeted solutions such as hillside pullouts, limited on-street parking, enhanced clearance, or supplemental access routes, with improvements limited to property frontage where appropriate.

Policy S-A.15: Private Road Design. Ensure all private roads are designed and maintained to allow unrestricted emergency equipment and personnel access.

Policy S-A.16: Updated Evacuation Routes. Ensure all Town and Marin County transportation plans reflect updated evacuation routes, strategies, and data.

Policy S-A.17: Emergency Response Capability. Maintain a high level of emergency response capability to serve all members of the community effectively.

Action S-A.17.a: Budget for Emergency Services. Account for current and future emergency service needs during annual budgeting cycles.

Action S-A.17.b: Emergency Service Priorities. Regularly review and update the Town's priorities for future emergency service needs to reflect changing conditions and community needs.

Action S-A.17.c: Development Review. Consult Fire and Police staff in the development review process to ensure development adequately addresses service levels, security concerns, and safety.

9.8.2 SEISMIC AND GEOLOGIC HAZARDS

Goal S-B Minimize the risk of injury and structure damage from seismic hazards.

Policy S-B.1: Seismic Codes. Require that new development and redevelopment meet the most up-to-date seismic codes and regulations and use methods of construction to withstand stress caused by an earthquake.

Action S-B.1.a: Compliance with Safety Codes. Review all new building plans or substantial renovations for compliance with State and federal seismic safety regulations prior to permit approval.

Policy S-B.2: Earthquake Education. Ensure residents and businesses are educated on emergency preparedness and response procedures during an earthquake through accessible formats and communication methods.

Policy S-B.3: Seismic Safety Upgrades. Facilitate and support maintenance and improvement of structures potentially vulnerable to seismic hazards and support residents who may be disproportionately affected by structural risks.

Action S-B.3.a: Inventory of Seismically Vulnerable Structures. Conduct an inventory of seismically vulnerable structures as a first step in establishing voluntary or mandatory programs for retrofitting these structures and identify potential impacts on occupants and tenants. Ensure this inventory highlights historic structures.

Action S-B.3.b: Seismic Hazard Disclosure and Tenant Notification Program. Require property owners to disclose seismic vulnerabilities, including unreinforced masonry status, retrofit standards, and the potential need for temporary displacement after a major earthquake, to existing and prospective tenants, ensuring they understand associated risks and necessary preparedness measures through clear and accessible information.

Action S-B.3.c: Seismic Upgrades. Establish incentives for owners of historic or architecturally significant buildings to undertake mitigation to levels that will minimize the likelihood that these buildings will need to be demolished after a disaster and/or establish preservation-sensitive measures for the repair and re-occupancy of historically significant structures.

Policy S-B.4: Infrastructure Resilience. Advocate for and work with regional utilities to enhance the preparedness, protection, and resilience of water, energy, and telecommunications infrastructure.

Goal S-C Ensure landslide and slope stability hazards are effectively mitigated throughout the town.

Policy S-C.1: Development in Areas of Slope Instability or Steep Topography. Require development in areas of slope instability or steep topography to minimize the potential for landslide and geologic hazards to jeopardize public health, safety, and welfare. Require mitigation of landslides and steep slopes as part of the development process, and discourage and avoid locating development in areas of slope instability.

Policy S-C.2: Geologic Hazards. Continue to protect the community from hazards associated with soil erosion, weak and expansive soils, and liquefaction.

Action S-C.2.a: Enforcement of Building Codes. Continue to enforce building codes and relevant legislation on all new development and redevelopment.

Action S-C.2.b: Inspection of Slope Improvements. Establish a periodic inspection and maintenance program for existing slope improvements.

Policy S-C.3: Building Foundations. Require that new development and redevelopment include proper foundation and support in areas of potential slope instability.

9.8.3 FLOOD HAZARDS

Goal S-D Minimize the effects of natural flooding and potential inundation from dam failure.

Policy S-D.1: Development within Floodplains. Development within floodplains shall be designed to minimize risks to life and property and satisfy Federal Emergency Management Agency requirements for residents and businesses.

Action S-D.1.a: Flood Insurance. Continue to participate in the National Flood Insurance Program and the Community Rating System to reduce flood risk and improve flood insurance affordability.

Action S-D.1.b: Floodplain Regulations, Enforcement, and Updates. Continue to enforce and update floodplain, drainage, and development regulations to maintain consistency with State and federal requirements.

Action S-D.1.c: Stream Bank Protection. Develop an approach and identify locations for bank protection strategies that should not be limited to:

- An assessment of banks to inventory areas that appear prone to failure;
- Bank stabilization, including installation of rip rap or whatever regulatory agencies allow;
- Stream bed depth management using dredging; and
- Removal of out-of-date coffer dams in rivers and tributary streams.

Policy S-D.2: Drainage Infrastructure. Support modifications and updates to public infrastructure to reduce flooding.

Action S-D.2.a: Flood Infrastructure Evaluation, Funding, and Implementation Program. Evaluate and map waterways and existing flood protection infrastructure to identify, prioritize, and design needed flood control and storm drainage improvements, and pursue funding to construct projects that reduce flood risks and protect vulnerable properties and reduce impacts on affected residents and businesses.

Action S-D.2.b: Flood Management. Identify flood management solutions (i.e., property acquisitions, detention and retention basins, channel widening, acquisitions, relocations, and environmental mitigations) to reduce flood impacts within the town.

Action S-D.2.c: Nature-based Solutions. Promote nature-based methods and best management practices (e.g., bioswales, natural ground cover) through the Town's urban pollution runoff stormwater program.

Policy S-D.3: Best Stormwater Management Practices. Consider best practices regarding natural waterways and constructed stormwater conveyance structures when reviewing development applications, plans, and programs.

Action S-D.3.a: Hydrologic Analysis. Continue to improve existing hydrologic analysis of runoff and drainage systems to predict areas of insufficient capacity in the storm drain and natural creek system.

Action S-D.3.b: Impervious Surfaces. Update existing guidelines and regulations that limit the use of impervious surfaces and/or require the use of permeable surfaces, implement other regulations to effectively channel and minimize site runoff, and allow water to percolate, increasing groundwater recharge.

Action S-D.3.c: Hydraulic Models. Update hydraulic models as needed in response to major developments in the watershed or major changes to land uses within cities or counties.

Action S-D.3.d: Flood Insurance Map Updates. As new flood-control projects are completed, request revisions to flood-insurance rate maps to reflect flood risks as accurately as possible.

Policy S-D.4: Coordination on Flood Management and Mitigation. Coordinate with neighboring jurisdictions, stakeholders, and resource agencies on flood mitigation and management projects.

Action S-D.4.a: Interagency Flood Mitigation Coordination Program. Collaborate annually with flood control districts, utilities, and neighboring jurisdictions to assess mitigation projects, infrastructure needs, and capital planning.

Action S-D.4.b: Water Efficient Landscape and Impervious Surface Management Program. Promote drought-tolerant and water-efficient landscape design, incorporate xeriscape practices and permeable surfaces in Town projects where feasible, and adopt updates to the Marin Municipal Water District's Water Efficient Landscape Ordinance to reduce water demand, enhance conser-

vation, and support groundwater recharge.

Policy S-D.5: Preparation for Potential Dam Inundation. Ensure Town staff and residents are informed and prepared for potential dam inundation events through accessible communication methods.

Action S-D.5.a: Inundation Map Updates. Encourage Marin Municipal Water District to update inundation mapping with depth information.

Action S-D.5.b: Flood Evacuation Preparedness. Review the updated mapped inundation areas and coordinate with Marin Municipal Water District on procedures for emergency evacuations.

Action S-D.5.c: Property Owner Information. Provide dam inundation information to potentially affected property owners whenever new or updated information becomes available in clear and accessible formats.

9.8.4 WILDLAND AND URBAN FIRES

Goal S-E Prepare and ready the community to respond to fire hazards.

Policy S-E.1: Vegetation Management along Creeks and Steep Slopes. Ensure fuel modification activities and vegetation management techniques along creeks and steep slopes do not contribute to landslide and erosion hazards.

Action S-E.1.a: Vegetation Management in Fire-Sensitive Areas. Require that vegetation management in fire-sensitive areas include thinning of high fuel vegetation or replanting with fire resistant plant materials.

Action S-E.1.b: Non-native Species. Prioritize the removal of non-native species.

Action S-E.1.c: Structural Mitigations. Identify structural mitigations rather than vegetation management in the most fire-sensitive areas (i.e., areas within the WUI), when feasible.

Action S-E.1.d: Biodiversity, Fire, and Fuels Integrated Plan. Prepare a Biodiversity, Fire, and Fuels Integrated Plan (BFFIP) in conjunction with Ross Valley Fire Department, the Marin Wildfire Prevention Authority and environmental stakeholders, including the California Native Plant Society that describes actions necessary to minimize fire hazards and maximize ecological health in Town open space areas in compliance with the Marin County Community Wildfire Protection Plan and principles of the Ecologically Sound Practices Partnership.

Policy S-E.2: Community- and Neighborhood-Based Approach. Encourage a community- and neighborhood-based approach to wildfire education and action through local Fire Safe Councils and the Fire Wise Program, supporting participation from a broad range of residents.

Action S-E.2.a: Wildfire Actions Plans. Engage with property owners and residents in the WUI to prepare a wildfire action plan.

Policy S-E.3: Fire Patrolling. Encourage the Fire Department to increase local patrolling during periods of high fire weather.

Policy S-E.4: Safety Standards in Fire Hazard Areas. Regularly re-evaluate specific fire hazard areas and adopt reasonable safety standards covering such elements as fuel modification around homes, adequacy of existing and future water supplies, fire flow tests, fire hydrants, routes or throughways for fire equipment access, clarity of addresses and street signs, and long-term maintenance.

Policy S-E.5: Code Consistency. Maintain consistency with the California Building and Fire Codes and Ross Valley Fire Department Standards and best practices.

Action S-E.5.a: Fire Code Consistency and Development Review Requirements. Maintain and enforce Town regulations to remain consistent with the California Building Code and Ross Valley Fire Department requirements and require fire risk analysis and appropriate mitigation measures for subdivisions and development in high fire hazard areas. Prior to approving any subdivision in

these areas, review and approve a fire risk study that identifies contributing risk factors, recommended mitigation actions, the costs and means of providing fire protection, and the parties responsible for funding and benefiting from these measures.

Action S-E.5.b: Properties with Limited Access. Establish mitigations for properties in fire hazard areas with restricted and single points of access, including parking restrictions, and investigate the feasibility of establishing special assessment districts to improve road capacity and adequate water supply.

Policy S-E.6: Public Facilities in High and Very High Fire Severity Zones. Prohibit new public/critical facilities (schools, hospitals, fire stations, etc.) from being located in High and Very High Fire Hazard Severity Zones to the greatest extent feasible. If located in these areas, require adequate fire response and evacuation capabilities.

Policy S-E.7: Fire Prevention Programs. Support fire prevention, public education, early detection programs, and property inspections to identify and reduce fire hazards, using accessible formats and community methods.

Action S-E.7.a: Property Maintenance for Fire Control. Implement and enforce fire safety and vegetation management requirements on private property, including taking necessary fire prevention actions on undeveloped or hazardous sites and recovering associated costs from property owners. Provide comprehensive public education for residents and businesses on defensible space, vegetation management, landscaping practices, and fire hazard reduction strategies, using multiple communication channels.

Policy S-E.8: Vegetation Clearance. Require vegetation clearance and maintenance for all public and private roads and properties in the fire hazard areas.

Policy S-E.9: Fire Defense Improvements. Allocate adequate funding for fuel breaks and other fire defense improvements on public property and require similar measures for private property in compliance with fire safe regulations.

Action S-E.9.a: Grazing for Fuel Management. Continue to consider grazing in open space for grass/light fuel maintenance.

Policy S-E.10: Private Water Sources. Coordinate with owners of private water sources, such as swimming pools, in or adjacent to high fire risk areas for on-site fire protection use.

Policy S-E.11: Prioritization of New Development. Prioritize development in areas with sufficient water supply infrastructure and roadway capacity to provide adequate evacuation and emergency equipment access for future residents and users.

Policy S-E.12: Adequate Water Supply. Coordinate with Marin Municipal Water District to ensure adequate water supply and infrastructure for existing and future daily demands and firefighting suppression requirements.

9.8.5 WEATHER-RELATED HAZARDS

Goal S-F Ensure the community can anticipate and adapt to weather-related events with attention to populations that may be more vulnerable to extreme conditions.

Policy S-F.1: Construction Techniques. Encourage construction and design techniques that support increased efficiency and greater insulation to accommodate future weather extremes.

Policy S-F.2: Tree Trimming. Encourage tree trimming and other hazard reduction activities that minimize or prevent impacts from high wind events.

Policy S-F.3: Energy and Water Conservation Code Updates. Require that updated code adoptions include provisions for greater energy and water conservation measures to reduce impacts from drought and extreme temperatures.

10. NOISE

From the rustle of oaks in the hills to the hum of traffic on the boulevards to the joyous clamor of a downtown event, sound is a defining characteristic of San Anselmo. As the community evolves and new noise sources emerge, the Noise Element's policies will ensure the town preserves its tranquility while remaining a vibrant, welcoming place to live, work, and gather.

Jump to Goals, Policies, and Actions

10.1 PURPOSE OF THE ELEMENT

The purpose of this element is to advance a healthy and comfortable sound environment for all who live in San Anselmo. It recognizes that noise impacts vary across the community, and that some residents, including lower-income households and renters, may experience greater exposure due to proximity to commercial corridors and high-traffic roadways and may have fewer resources to mitigate noise. The element promotes policies that minimize noise impacts and support community well-being across all neighborhoods and living environments. Its policies are grounded in the Town's belonging standard, guiding noise mitigation efforts to address areas with the greatest impacts and support residents with the least capacity to reduce exposure.

This element identifies sources of noise and noise levels in San Anselmo and establishes standards and strategies to manage exposure to both current and future noise sources. The primary source of noise in San Anselmo is vehicle traffic along major corridors and collector roads. Other contributors include commercial activity, recreation, construction, landscape maintenance, and truck loading and unloading.

The purpose of the Noise Element is to proactively maintain existing acoustic conditions and prevent increases in noise levels as the community evolves, while protecting residents and other sensitive uses from excessive noise, particularly in areas and at times where quieter conditions are most important. The goals, policies, and actions in this element will be implemented through the development review process, updates to the Municipal Code, and ongoing coordination with regional partners.

As noise sources and mitigation technologies evolve, the Town will periodically review and refine noise standards to ensure they remain effective, practical, and supportive of community character and quality of life.

The Noise Element includes the following sections.

10.2 Fundamentals of Noise. Describes the fundamentals of sound and noise-related terms.

10.3 Existing Noise Conditions. Discusses the most significant sources of noise in San Anselmo, including roadways and stationary sources.

10.4 Noise and Land Use Compatibility Standards. Presents standards that should be used to evaluate compatibility between new land uses and development projects and noise levels in San Anselmo.

10.5 Future Noise Environment. Describes future noise conditions expected with development projected under the General Plan.

10.6 Navigating Towards 2045. Discusses how technological changes may affect noise sources and how the Town monitors and manages noise in the future.

10.7 Goals, Policies, and Actions. Identifies goals, policies, and actions to limit the community's exposure to noise and vibration.

10.2 FUNDAMENTALS OF NOISE

Noise is a subjective reaction to sound that is loud, unpleasant, unexpected, or undesired.

The effects of noise on people can be placed in three categories:

- Subjective effects of annoyance, nuisance, and dissatisfaction;
- Interference with activities such as speech, sleep, and learning; and
- Physiological effects such as hearing loss or sudden startling.

Environmental noise typically produces effects in the first two categories. Workers can experience noise in the last category. A wide variation in individual thresholds of annoyance exists and different tolerances to noise tend to develop based on an individual's past experiences with noise.

A decibel (dB) is the fundamental unit of sound, and sound is measured on a decibel scale. The decibel scale is logarithmic, not linear, which means that an increase in 10 dB is 10 times greater than the base number. The perceived loudness of sound is dependent upon many factors, including sound pressure and frequency. The A-weighted decibel scale is used to give greater weight to the frequencies of sound to which the human ear is most sensitive by de-emphasizing the very low and very high frequencies. The A-weighted sound level is expressed as dBA and is the most common method to characterize sound in California. Representative outdoor and indoor noise levels in units of dBA are identified in Figure N-1.

Figure N-1: Typical A-Weighted Sound Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	110	Rock Band
Jet fly-over at 1,000 ft	100	
Gas lawn mower at 3 ft	90	
Diesel truck at 50 ft. and 50 mph	80	Food blender at 3 ft
Gas lawn mower at 100 ft	70	Vacuum cleaner at 10 ft
Heavy traffic at 300 ft	60	Normal speech at 3 ft
	50	Dishwasher in next room
Quiet urban nighttime	40	
	30	Library
Quiet rural nighttime	20	Bedroom at night

Source: Caltrans, Technical Noise Supplement, Traffic Noise Analysis Protocol 2013.

Residents identified property maintenance, construction, and traffic as top noise concerns and called for stronger enforcement of noise regulations.

The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. A 3 dBA change is a just-perceivable difference. Generally, a change in level of at least 5 dBA is required before any noticeable change would be expected. A 10 dBA change sounds like the noise has approximately doubled.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level of a given environment consisting of all noise sources audible at that location. A common statistical tool to measure ambient noise is average, or equivalent, sound level.

The day/night average level (Ldn) is based on the average noise level over a 24-hour day, with a 10-decibel weighting applied to noise occurring during nighttime (10 p.m. to 7 a.m.) hours. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were twice as loud as daytime exposures. Because Ldn represents a 24-hour average, it tends to disguise short-term variations in the noise environment.

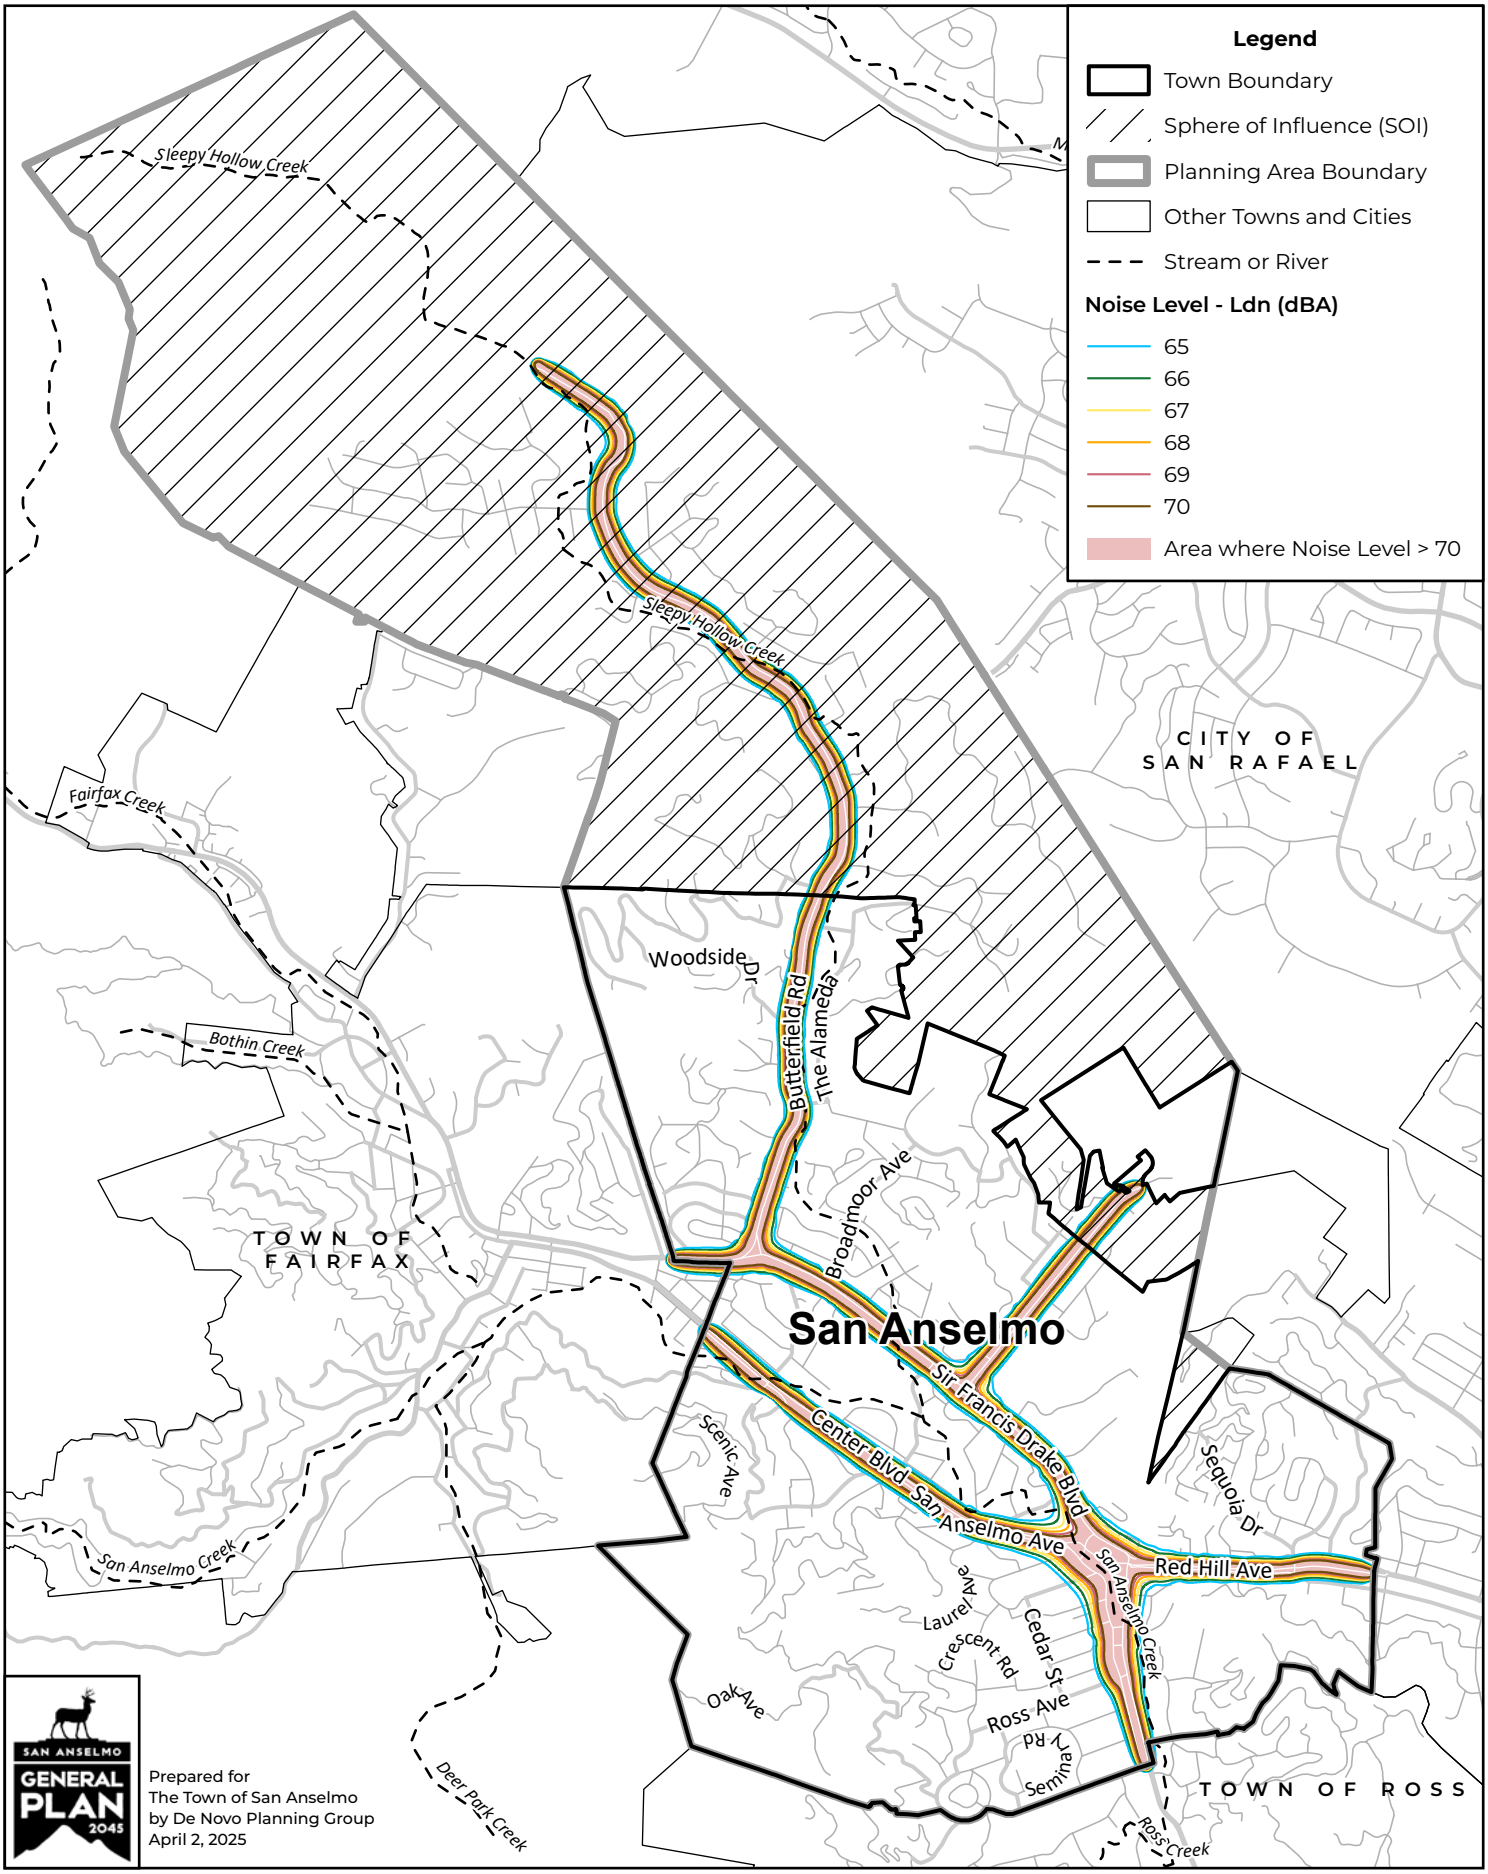

10.3 EXISTING NOISE CONDITIONS

10.3.1 ROADWAY NOISE

Existing traffic volumes and generally accepted noise modeling techniques were used to develop noise contours for the major roadways in the planning area. Figure N-2 shows noise contours where noise levels are at or above the 65 dBA level. These include Sir Francis Drake Boulevard, Greenfield Avenue, Red Hill Avenue, Center Boulevard, San Francisco Boulevard, and Butterfield Road. Commercial properties at the Hub are most impacted by high noise levels. The contours indicate maximum noise exposure assuming line-of-sight to the noise source and fall from the roadways since noise decreases exponentially with distance. These contours are intended for screening purposes to identify locations where site-specific noise studies may be required when considering new development or changes in land use.

The General Plan includes policies and actions to protect the community from excessive noise from new land uses and to ensure new development is not located too close to noise-generating sources.

10.3.2 STATIONARY NOISE SOURCES

Commercial activity, construction, landscape maintenance, parking lots, loading docks, parks, and schools are among the stationary noise sources in San Anselmo. Stationary noise sources also include mechanical systems for heating, ventilation, and air conditioning; service and delivery trucks idling, loading, and unloading; and recreation activities. The Town Municipal Code establishes maximum noise levels for residential and commercial areas at different times of the day and prohibits the operation of any powered equipment that emits noise at or above 80 dBA at 50 feet from the equipment. Hours for construction and demolition work are regulated, and the operation of gas-powered landscape equipment is restricted. Section 10.6 includes policies and actions to continue to protect the community from unwanted noise.

10.4 NOISE AND LAND USE COMPATIBILITY STANDARDS

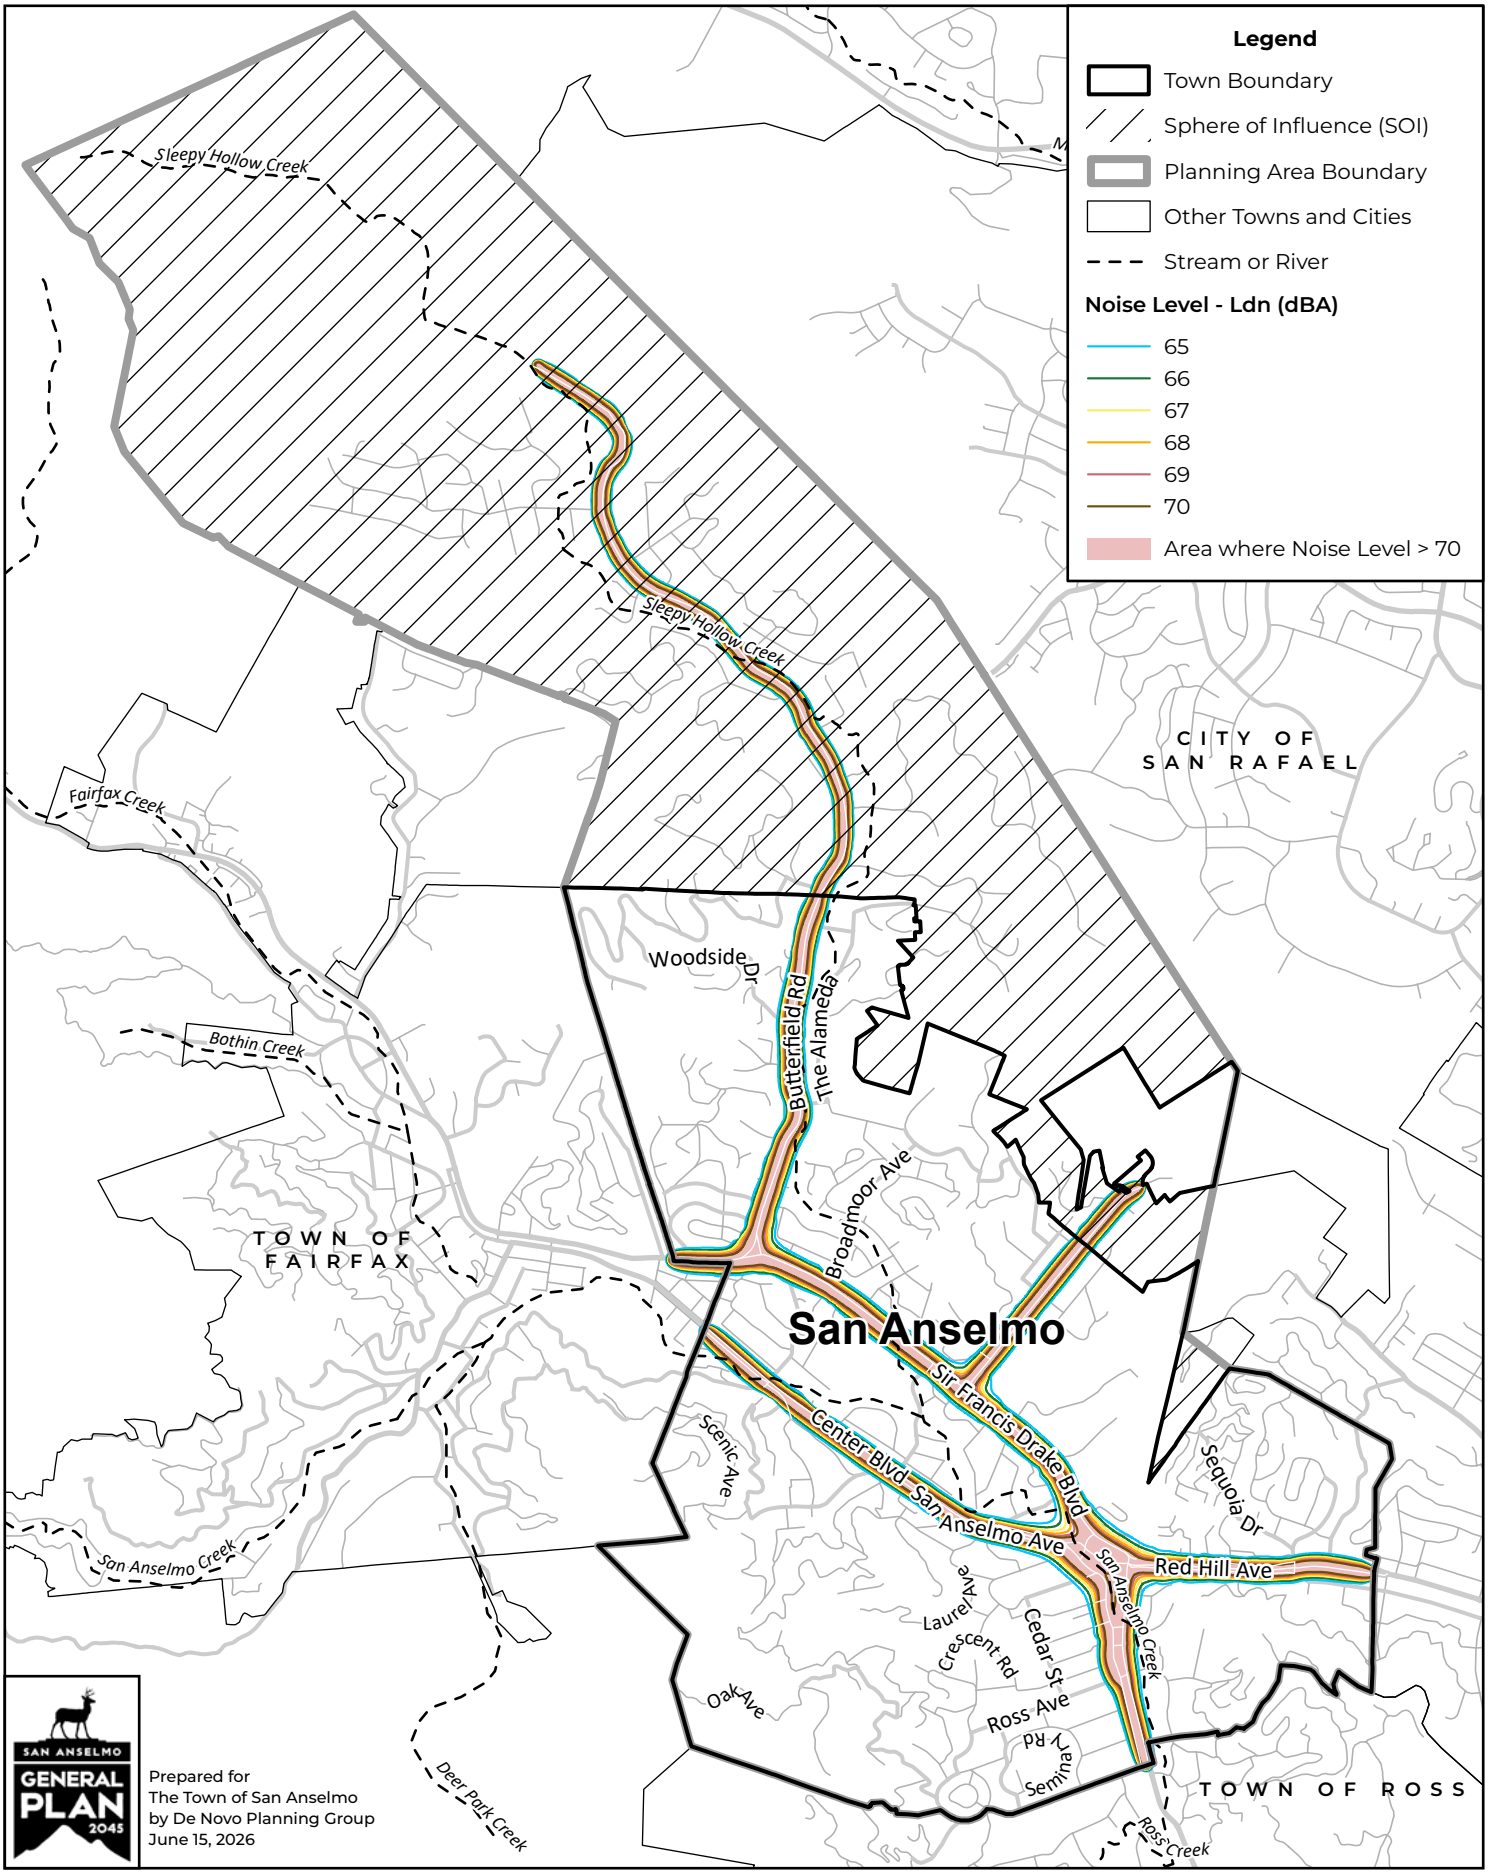

The standards listed in Figure N-3 should be used to evaluate the compatibility between new land uses and future noise in San Anselmo. These standards, together with Figures N-2 and N-4, help determine whether a proposed development or land use is located in an area where noise levels exceed the normally acceptable noise exposure for that land use type, and whether an acoustical analysis and/or special noise mitigating measures are required. The land use compatibility standards also serve as a guide determining whether noise from stationary sources is acceptable.

Figure N-3: Noise and Land Use Compatibility Guidelines

10.5 FUTURE NOISE LEVELS

Future increases in noise levels will be largely attributable to vehicular traffic. Projected noise contours are shown in Figure N-4, which identifies areas that may be exposed to excessive noise levels. Policies and actions in the Noise Element address these noise issues through implementation of a variety of noise-mitigating measures and, where feasible, by conditioning future development to limit future noise exposure.

Base Data Sources: Marin County LAFCO; Marin County GIS; USGS National Hydrography Dataset.
Theme Source: Saxelby Acoustics.

Future Transportation Noise Contours

10.6 NAVIGATING TOWARDS 2045

As San Anselmo looks toward 2045, technological change will introduce new and evolving noise sources while also transforming how noise is monitored and managed. Emerging technologies, such as delivery drones, increased use of micromobility devices, autonomous and connected vehicles, and new building and mechanical systems, may shape the community's acoustic environment in ways not fully anticipated today. At the same time, advances in noise monitoring, including low-cost sensors, real-time data collection, and improved modeling tools, will enhance the Town's ability to identify noise hotspots, evaluate cumulative impacts, and respond more effectively to community concerns. These tools can support more proactive, data-informed approaches to enforcement and help guide updates to noise standards as conditions change.

Periodic review of regulations will help ensure that noise management strategies remain effective, adaptable, and responsive to evolving conditions, while protecting noise-sensitive uses, preserving community character, and supporting a healthy and comfortable environment. These efforts will consider a range of living environments and community needs, particularly in areas where quieter conditions are important for well-being, while accommodating innovation and growth.

Noise impacts are not experienced equally across the community. Residents in lower-income households and renters are more likely to live near noise-generating uses, such as commercial corridors and high-traffic roadways, and may have fewer resources to mitigate noise exposure. The Town will incorporate these considerations in identifying noise mitigation priorities and will protect noise-sensitive land uses, including those serving lower-income populations, through the standards established in this element.

Overall, noise management strategies will continue to support a healthy, livable, and inclusive environment for all residents, helping ensure that the benefits of a well-managed sound environment are experienced across the community.

10.7 GOALS, POLICIES, AND ACTIONS

Goal N-A Protect and preserve the peace and quiet of San Anselmo by minimizing exposure to excessive noise and vibration for residents and businesses.

Policy N-A.1: Compatibility of New Land Uses. Use the Noise and Land Use Compatibility Guidelines in Figure N-3 to establish and maintain acceptable noise levels for different land uses, consistent with State and federal guidelines, to protect the health and wellbeing of residents and occupants. Require acoustical analysis and feasible noise attenuation methods for new development and/or land uses that may be exposed to or generate noise exceeding applicable standards.

Action N-A.1.a: Acoustical Study Requirements. Require acoustical studies for development projects subject to discretionary review that may be exposed to or create noise levels exceeding the Noise and Land Use Compatibility Guidelines in Figure N-3. Identified noise control measures shall ensure compliance with applicable standards, including maintaining interior noise levels of 45 dBA Ldn or lower for new residential uses to ensure a comfortable and healthy living environment.

Action N-A.1.b: Landscaping Equipment Noise. Advance and implement regulations to limit noise from landscaping equipment, such as quiet hours, and continue enforcing the Town's ban on gas-powered landscape equipment to reduce impacts on nearby residents, workers, and sensitive receptors.

Action N-A.1.c: Noise Ordinance and Objective Noise Standards. Review and update the Town's Noise Ordinance within five years of General Plan adoption to establish clear, objective noise limits for residential, commercial, and mixed-use areas, including temporary construction noise. Apply these standards through the development review and permitting process by incorporating appropriate conditions of approval for noise-generating activities

and equipment, and enforce the standards once projects become operational.

Policy N-A.2: Significant Noise Increases. Protect noise-sensitive receptors, such as residents, schools, and care facilities, from adverse noise exposure by requiring feasible mitigation for discretionary projects that would permanently increase ambient noise by:

- > 5 dB where baseline is < 60 dB
- > 3 dB where baseline is 60–65 dB
- > 1.5 dB where baseline is > 65 dB

Where no noise-sensitive receptors are present, the Town may determine that no significant noise impact exists.

Policy N-A.3: Construction Noise. Minimize noise impacts from construction by enforcing limits on construction hours, requiring feasible noise-reducing measures, and applying best management practices to protect nearby residents, schools, and other sensitive populations.

Action N-A.3.a: Construction Noise Limits and Mitigation Measures. Enforce limitations on construction hours and require feasible noise-reduction measures, such as sound barriers, muffled and properly maintained equipment, and other appropriate technologies, through the development review process. For CEQA analyses, use a 12 dBA increase as the temporary construction noise threshold of significance.

Action N-A.3.b: Construction Notification and Noise Management Plans. Require project applicants to provide advance notice of construction to nearby residents and businesses, including timelines, allowable construction hours, and contact information, using clear and accessible communication. Develop guidelines for notice content and distribution. Require major projects to prepare Construction Noise Management Plans detailing monitoring and noise-reduction strategies.

Policy N-A.4: Traffic Noise. Minimize residents' exposure to traffic noise across the community through land use planning, enforcement, street design, and landscaping.

Action N-A.4.a: Vehicle Code Noise Enforcement. Enforce the California Vehicle Code provisions related to excessively loud vehicles operating on Town streets.

Action N-A.4.b: Pavement and Street Design. Evaluate the use of roadway surfacing materials or other treatments that reduce traffic noise along arterial and collector streets.

Action N-A.4.c: Sound Barriers and Alternatives. Discourage sound walls where alternative measures, such as berms, landscaping, or building placement, can effectively reduce noise. Where sound walls are necessary, require aesthetically compatible design, appropriate screening, regular maintenance, and measures to minimize sound reflection that supports neighborhood character and quality of life.

Policy N-A.5: Vibration Impacts. Require evaluation and mitigation of vibration during demolition and construction projects to avoid potential impacts on nearby residents and structures.

GLOSSARY

Adaptation. The process of adjusting to and preparing for the current and future impacts of climate change.

Age-Friendly Community. A place that adapts its services and physical structures to be more inclusive and receptive to the needs of its population to improve their quality of life as they age.

Ambient Noise. The distinctive acoustical characteristics of a given area consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.

Americans with Disabilities Act (ADA). A federal civil rights law that prohibits discrimination against individuals with disabilities and requires public facilities, programs, services, and transportation systems to be accessible.

Bay Area Air District (BAAD). The public agency that regulates the stationary sources of air pollution in the nine counties of the San Francisco Bay Area.

Belonging. The felt and lived experience of being valued, safe, respected, and essential within a community, such that individuals feel secure being their authentic selves without fear of marginalization or exclusion. Belonging emerges when diversity is welcomed, equity is practiced, and inclusion is sustained—resulting in environments where people not only have access and voice, but also feel they matter and are integral to the shared purpose and culture of the community.

Big-Box Store. A large-format retail establishment, typically 50,000 square feet or larger and part of a national or regional chain, operating in a stand-alone building designed for high-volume sales and automobile access.

California Environmental Quality Act (CEQA). California's environmental review law requiring public agencies to identify, disclose, and, where feasible, reduce or mitigate the significant environmental impacts of discretionary projects before approval.

Carbon Sequestration. The process of capturing and storing atmospheric carbon dioxide (CO_2) to mitigate or delay the effects of climate change.

Certified Local Government. A local government whose historic preservation program has been certified by the National Park Service and the California Office of Historic Preservation, recognizing that it meets established standards for protecting historic resources and enabling it to receive preservation funding, technical assistance, and participate in historic preservation planning.

CNEL. Community Noise Equivalent Level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 p.m. - 10 p.m.) weighted by a factor of three and nighttime hours weighted by a factor of 10 prior to averaging.

Commercial Corridors. An area along a major arterial roadway that is lined by commercial uses with goods and services serving the community and surrounding communities.

Community. For purposes of this General Plan, the community of San Anselmo includes all people who live, work, or spend time in the Town, with particular attention to residents who have historically faced barriers to participation in civic life, including renters, low-income households, non-English-speaking residents, immigrants, people with disabilities, LGBTQ+ individuals, and communities of color. Where goals, policies, and actions reference the community, this definition applies.

Complete Streets. Streets that are planned, designed, operated, and maintained to safely and conveniently accommodate all users—including pedestrians, bicyclists, transit riders, motorists, freight vehicles, and people of all ages and abilities—while improving accessibility, connectivity, and mobility.

Criteria Pollutants. Six gaseous pollutants (carbon monoxide, nitrogen dioxide, ozone, and sulfur dioxide) used by the Environmental Protection Agency and California Air Resources Board as indicators of regional air quality, setting maximum concentration limits for each pollutant, above which adverse effects on human health may occur.

Critical Habitat. The specific areas within the geographic area, occupied by the species at the time it was listed, that contain the physical or biological features that are essential to the conservation of endangered and threatened species and that may need special management or protection. Critical habitat may also include areas that were not occupied by the species at the time of listing but are essential to its conservation.

Cultural Resource. A historical resource or a unique archaeological resource as defined under CEQA Guidelines Section 15064.5. This definition includes objects, buildings, structures, sites, areas, places, records and manuscripts of historical, architectural, or cultural importance.

Decibel or dB. Fundamental unit of sound, defined as ten times the logarithm of the ratio of the sound pressure squared over the reference pressure squared.

Density. The number of dwelling units per gross acre.

Disadvantaged Communities. Areas which are experiencing disproportionately high and adverse economic, health, environmental, and social burdens.

Diversity. The full spectrum of differences that everyone brings to the table. It includes characteristics such as race, ethnicity, gender identity, sexual orientation, age, disability, language, and socioeconomic status, as well as neurodiversity, worldviews, and life experiences. Embracing diversity acknowledges the value of multiple perspectives, ideas, and solutions provided when individuals with different backgrounds, identities, and views collaborate and are heard.

Economic Development. The creation of wealth in which community benefits are realized. It is an investment in growing the economy.

Economic Vitality. The capacity of a community to maintain and grow its economic activities through productive means and resourcefulness, ensuring a sustainable future.

Equity. Fair treatment and access to all individuals or groups irrespective of their identity. Equity is not sameness; it is justice in design, practice, and outcome. This requires the identification, recognition, and remediation of historic, systemic, and structural barriers that create unequal access to resources, opportunities, and power.

Essential Public Facilities. Facilities such as hospitals and health care facilities, emergency shelters, fire and police stations, emergency command centers, and emergency communications facilities.

Extended Producer Responsibility. A policy approach that makes manufacturers responsible for the collection, recycling, reuse, or safe disposal of their products and packaging at the end of their useful life, encouraging waste reduction and more sustainable product design.

Floor Area Ratio. The ratio of a building's total floor area to the area of the lot on which it is situated.

Frequency. The measure of the rapidity of alterations of a periodic acoustic signal, expressed in cycles per second or Hertz.

Fuel Cells. Devices that generate electricity through an electrochemical process by converting hydrogen or other fuels into energy, producing minimal emissions.

Fuel Modification. The practice of reducing or modifying vegetation to decrease fire intensity and spread in fire-sensitive areas.

Greenbelt. Natural or undeveloped lands that surround urban areas.

Gross Acre. All of the land within the property lines of a given parcel or all the land within the boundary line of a given development

proposed. The only land excluded in the calculation of gross acreage is any land within an established public right-of-way or other public uses.

Heritage Tree. A tree with a trunk diameter of at least 22 inches measured at 4.5 feet above ground, or a tree of special significance designated by the Town Council. Designated nuisance tree species are excluded from this definition.

Hillsides. All land area located above 150 feet mean sea level.

Historic Context Statement. A planning document that describes the historical development of an area through defined themes, geographic boundaries, and periods of significance, providing the framework for identifying, evaluating, and designating historic resources and historic districts.

Hydraulic Models. Simulations that predict how water flows through drainage systems and waterways under different conditions.

Inclusion. The active, continuous practice of reshaping environments, relationships, and systems so that all individuals and groups can fully participate, contribute, and lead in the greater community. It includes valuing difference as a resource and building cultures rooted in trust, respect, and shared purpose.

L_{dn}. Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.

Level of Service (LOS). A measure of traffic operations that describes the quality of vehicle flow on a roadway or at an intersection, typically rated from A (free-flowing traffic) to F (severe congestion).

Lifecycle Emissions. The total emissions produced during the production, use, and disposal of a product or service.

Low-Carbon Footprint Diet. A way of eating that prioritizes plant-based, locally sourced, seasonal, and minimally processed foods in sustainable packaging while reducing food waste and limiting high-emission products (like red meat and dairy) to minimize greenhouse gas emissions.

Local Agency Formation Commission (LAFCo). An independent county-level agency that oversees the creation, expansion, consolidation, and dissolution of cities and special districts to promote orderly growth and efficient delivery of public services.

Low-Impact Design (LID). A land development approach that aims to minimize the environmental impact of a site by mimicking natural processes to manage stormwater runoff, primarily through techniques like infiltration, filtration, and retention, rather than relying on traditional storm drains and pipes to convey water away from the site; essentially, it seeks to maintain a site's pre-development water flow patterns by capturing and treating rainwater where it falls.

Microgrid. A localized energy system that can operate independently from the larger power grid during outages, often powered by renewable sources like solar panels paired with battery storage. A microgrid can connect and disconnect from the grid to enable it to operate in both grid-connected or island mode. These systems improve reliability and reduce dependence on vulnerable centralized infrastructure.

Mixed-Use Development. Any combination of land uses, including mixing housing with commercial, offices with retail, or housing with offices and retail, within a defined area. Vertical mixed use is the mix of uses within one building; horizontal mixed use is the mix of uses behind or next to each other but in different buildings on the same site.

Municipal Service Review (MSR). A comprehensive evaluation prepared by LAFCo that assesses the performance, capacity, and future needs of local government services—such as water, sewer, fire protection, and parks—to guide boundary and governance decisions.

National Pollutant Discharge Elimination System (NPDES). A permit program that regulates the discharge of pollutants to navigable waters of the United States, which includes any discharge to surface waters, including lakes, rivers, streams, bays, the ocean, dry stream beds, wetlands, and storm sewers that are tributary to any surface

water body. NPDES permits are issued under the Federal Clean Water Act.

Non-Vehicular Access. Travel by modes other than motorized vehicles, generally along paths, trails, or other routes not intended for cars, motorcycles, or similar vehicles.

Noise-Sensitive Receptors. Land uses consisting of, but not limited to, schools, residences, libraries, hospitals, and other care facilities, where excessive noise could adversely affect people or planned activities.

Ocean Acidification. A reduction in the pH of the ocean over an extended period of time, caused primarily by uptake of carbon dioxide (CO2) from the atmosphere. Ocean acidification can make building and maintaining shells difficult for organisms such as oysters, clams, sea urchins, and corals, with negative consequences to the food web.

Parks.

Community Park. A park that serves the needs of a range of people, from several neighborhoods to the entire town. They typically contain a wide variety of facilities for active and passive recreation and organized sports. They also provide amenities typical of neighborhood parks for use by the surrounding residents. Parks containing fewer elements but that contain facilities that serve the entire town may be considered to be community parks.

Neighborhood Park. A park that provides for the daily recreation needs of nearby residents with primarily passive and informal recreation facilities. Neighborhood parks often include play areas, picnic areas, open turf areas or green space, basketball courts, and tennis courts. A neighborhood park may also contain play fields.

Pocket Parks. Small, urban green spaces, typically less than one acre, designed to provide recreational opportunities, natural areas, and community gathering spots in denser neighborhoods or underutilized urban spaces.

Particulates. A mixture of many chemical solids and aerosols composed of small droplets of liquid, dry solid fragments, and solid cores with liquid coatings which may have adverse health impacts to human populations exposed to high concentrations of particles.

Paseo. A pedestrian-only pathway such as an alley connecting two streets, a passageway between two buildings, or a public staircase.

Pilot Urbanism. The use of short-term, small-scale projects to evaluate potential long-term changes to public spaces and urban areas, without major investments.

Planning Area. The geographic area addressed by this General Plan, including all land within the Town of San Anselmo's incorporated boundaries and its adopted Sphere of Influence.

Protected Ridge Zones. Areas within 150 horizontal feet in both directions from the lowest elevation of the ridgelines, or 50 feet vertically, whichever is more restrictive, as mapped on Figure LU-3.

Recreation, Active. A type of recreation or activity that requires the use of organized play areas including, but not limited to, softball, baseball, football and soccer fields, tennis and basketball courts, and various forms of children's play equipment.

Recreation, Passive. Outdoor recreational activities that require minimal development or disturbance of natural landscapes and infrastructure. Unlike active recreation, which typically involves constructed facilities such as sports fields, playgrounds, or paved courts, passive recreation emphasizes low-impact interaction with the natural environment. These activities often depend on existing natural features and are designed to maintain the ecological health and integrity of a site. Examples may include, but are not limited to, the following activities:

- Hiking and walking
- Bird watching
- Wildlife observation and photography

- Nature study
- Horseback riding on designated trails
- Picnicking
- Fishing
- Swimming in natural water bodies
- Climbing (e.g., bouldering, scrambling)
- Bicycling on designated trails
- Running and jogging

Regional Housing Needs Allocation (RHNA). The number of housing units a local government must plan for during an eight-year housing element cycle. The allocation is made through a process that is prescribed by State law.

Reserve Areas. Areas shown in Figure LU-2 intended for potential future increases in residential density and development incentives. These areas are held in reserve to accommodate anticipated housing needs over time, allowing growth to occur in a planned and orderly manner while ensuring that infrastructure, services, and the visual design of the community are maintained.

Resilience. The ability of people and their communities to anticipate, accommodate, and positively adapt to or thrive amidst changing climate conditions and hazard events. Resilient communities enjoy a high quality of life, reliable systems, and economic vitality, and they conserve resources for present and future generations.

Resilience Hub. A community-serving facility, often a library, school or recreation center, that supports residents and local government operations before, during, and after emergencies and power outages. The hub is equipped with clean water, medical supplies, communication resources, and backup power (often from a microgrid) to operate independently of the grid. The backup power of-

ten combines a solar energy system, battery storage, and electric vehicle charging, which operate outside of emergencies to provide renewable energy and reduce greenhouse gas emissions. A resilience hub also provides a site for gathering, sharing information, and accessing resources. During emergencies, indoor space provides cooling, heating, relief from wildfire smoke, Wi-Fi access, and device charging.

Ridgelines. Those specific ridges delineated by Figure LU-3.

Riparian Corridor. An area of vegetation and habitat along a creek, river, or stream that provides flood protection, water filtration, and wildlife habitat.

Rip Rap. Large stones or concrete blocks placed along shorelines or slopes to prevent erosion from water flow.

Safe Routes to School. Programs and infrastructure improvements that make walking, bicycling, and other forms of active transportation safer and more accessible for students traveling to and from school.

Sensitive Receptors. A location where human populations, especially children, seniors, and sick persons, are present and where there is a reasonable expectation of continuous human exposure to pollutants. Examples of sensitive receptors include residences, hospitals, and schools.

Sir Francis Drake Boulevard (North). The segment of Sir Francis Drake Boulevard in San Anselmo that is located north of the Hub.

Sir Francis Drake Boulevard (South). The segment of Sir Francis Drake Boulevard in San Anselmo that is located south of the Hub.

Special-Status Species. Plants and animals that, because of their recognized rarity or vulnerability to various causes of habitat loss or population decline, are recognized by federal, State, or other agencies.

Sphere of Influence (SOI). A planning boundary established by a local agency formation commission that represents the probable future physical boundary and service area of that city or special district.

Stairs, Lanes, and Trails (SLT). A network of public pedestrian pathways—including stairways, narrow pedestrian lanes, and trails—that connect neighborhoods, parks, schools, open spaces, and community destinations, providing safe and convenient nonmotorized access throughout the town.

Stewardship. Active and responsible management, care, and protection of open spaces through a long-term commitment to restoring, preserving, and enhancing ecological health and biodiversity.

Stormwater Capture. The process of collecting and managing rainwater or runoff from storms before it flows into storm drains, rivers, or oceans to minimize flooding, water pollution, and erosion.

Stormwater Management. The practice of controlling and treating rainwater runoff to prevent flooding and water pollution.

Sustainable Landscaping. The practice of designing, creating, and maintaining landscapes in an environmentally friendly and climate-appropriate manner for long-term resilience. This approach may include the use of native or drought-tolerant plants, permeable surfaces, electric or manual gardening tools, composting, soil enrichment, and other techniques that promote resource efficiency and ecological health.

The Hub. The roadway intersection in San Anselmo where Sir Francis Drake Boulevard, Red Hill Avenue, Greenfield Avenue, and Center Boulevard intersect.

Third Space. A place distinct from home and work where people gather to socialize, connect, and build community. Examples include parks, plazas, cafés, libraries, community centers, farmers markets, cultural venues, performance spaces, co-working lounges, and other accessible public or semi-public gathering spaces. Third spaces

foster interaction, creativity, and inclusion, helping to strengthen neighborhood identity, support local businesses, and enhance overall quality of life.

Tiny Forest. A small, dense, fast-growing woodland, typically planted in an urban area and in a plot about the size of a tennis court. Tiny forests are densely planted with native trees and shrubs and are designed to mimic the natural structure of a woodland. They provide a variety of benefits, including wildlife habitat and carbon sequestration.

Tribal Cultural Resource. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe or determined by a lead agency as established by Public Resources Code Section 21074.

Universal Design. The design of environments and structures to be usable by all people, to the greatest extent possible, without the need for adaptation or specialized design.

Urban Heat Island Effect. An urban heat island effect occurs when a city experiences much warmer temperatures than nearby rural areas. A major cause of the heat island effect is the use of concrete, asphalt, and other materials that absorb heat. Other causes are the reduction of trees and vegetation, and waste heat generated by energy usage in buildings and vehicles.

Vehicle Miles Traveled (VMT). The total number of miles driven by all vehicles within a defined area over a given period. In California, VMT is commonly used to evaluate a project's transportation and greenhouse gas impacts under CEQA, replacing Level of Service for most land use projects.

Vulnerable Populations. Vulnerable populations include, but are not limited to, people with disabilities and limited mobility; children and seniors; people with existing health conditions that may be exacerbated by heat, smoke, and utility disruptions; and people with limited English proficiency.

Waste Diversion. The process of diverting waste from landfills through activities such as source reduction, reuse, recovery, recycling, composting, and energy production.

Watershed. A land area that drains water into a body of water, such as a stream, river, bay, or ocean.

Wildland Urban Interface (WUI). The geographical area where structures and other human development meet or intermingle with wildland and vegetative fuels, as identified by CAL FIRE and the Ross Valley Fire Department.

Wildlife Corridor. A habitat linkage that connects two or more areas of wildlife habitat, allowing fish and wildlife to move safely between them. Wildlife corridors help maintain biodiversity, support migration and dispersal, and improve ecosystem resilience to habitat fragmentation and climate change.

Xeriscape. Landscaping designed to reduce or eliminate the need for irrigation by using drought-tolerant plants and efficient design.

IMPLEMENTATION PLAN

The Implementation Plan contains information to support staff and community implementation of the General Plan actions to effectively integrate them into budgets, the capital improvement program, and other work plans. The actions are intended to help achieve, and be consistent with, the Town's General Plan vision and goals. The Town is to be mindful of the principles of diversity, equity, inclusion, and belonging in executing the actions set forth in the Implementation Plan.

The headings included in the Implementation Plan are defined as follows:

Number (No.): The number that is used to refer to the action in the General Plan.

Action: The title and description of the action.

Lead Department: The lead Town department, office, or agency responsible for implementing the measure. Some actions may require involvement and collaboration by more than one department, division, or office. The Town Manager may assign or reassign responsibilities, as necessary.

AF Administration and Finance

BLD Building

HR Human Resources

LIB Library

CDD Community Development

PW Public Works

REC Recreation

RVF Ross Valley Fire Department

TA Town Attorney

TC Town Clerk

TM Town Manager

Timing: The timeframe within which an action should be implemented. Once effective, many actions will continue through 2045. Timeframes are described as follows:

Ongoing (continuation of an action that has been implemented)

Short (1-5 years)

Long (5-20 years)

Cost Range: The estimated cost to the Town, including estimated staff costs which exceed existing staff capacity, to complete implementation of the action, identified as follows:

$ = Up to $50,000

$$ = $50,001 - $100,000

$$$ = $100,001 - $250,000

$$$$ = $250,001 - $1,000,000

$$$$$ = $1,000,000+

Financing: The source of funds to complete the action, including the following:

New Capital Improvement Program (CIP)

Operating Budget

Other Financing, which may include grants, tax measures, special funds, and donations

Implementation: The type of implementation to be taken, including the following:

Ordinance or Other Legislation

Study, Plan, or Program

Capital Improvement

Guidelines, Standards, or Monitoring

Interagency Coordination

Development Review

Public Education & Outreach

Land Use and Community Design

No.	Action	General		Resources	Financing			Implementation						
		Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
LU-A.1.a	**Implementation of Land Use Map.** Implement the Land Use Map (Figure LU-1) by approving new development projects consistent with the land use definitions, densities, and intensities as set forth in this Element. Ensure consistency between the General Plan, Zoning Code, and other land use regulations.	CDD	Ongoing	$				X					X	
LU-A.3.a	**Impacts of New Development on Infrastructure and Services.** Analyze infrastructure and service capacity during development and CEQA review and require necessary improvements in consultation with provider agencies. Coordinate growth projections and long-term infrastructure planning with urban service providers, including water, sanitary, school, fire, and waste disposal agencies, to ensure adequate capacity for existing and future development. Monitor land use changes and new development and adjust growth projections as warranted.	CDD	Ongoing	$									X	
LU-A.4.a	**Municipal Service Review**. Actively coordinate with LAFCo during the regular Municipal Service Review (MSR) process to provide data on the capacity of existing services and fiscal sustainability. Use the MSR as a tool to ensure future land-use and infrastructure decisions are consistent with the General Plan.	PW/ CDD	Short	$		X						X		

Land Use and Community Design															
		General		Resources	Financing			Implementation							
No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
LU-A.4.b	**Resolution of Parcels with Split Jurisdiction.** Actively support and coordinate with Marin County LAFCo and neighboring jurisdictions to facilitate the annexation and de-annexation of properties, as appropriate, that are currently split across multiple jurisdictions.	PW/ CDD	Short	$		X						X		
LU-B.4.a	**Affordable Housing Overlay Zone.** Amend the Municipal Code to identify maximum density and floor area ratio and minimum parking requirements for the Affordable Housing Overlay Zoning District.	CDD	Short	$				X						
LU-B.5.a	**Revitalization Incentives.** Consider zoning and economic development incentives that keep local neighborhood centers viable, such as allowing additional floor area when neighborhood-serving uses are included or retained.		Short	$				X			X			X
LU-B.6.a	**Rezoning of Public School Sites.** Rezone public school sites from residential to the Public Facilities District and allow educational uses and housing development up to 40 units per acre.	CDD	Short	$				X						
LU-B.7.a	**Parks Zoning District.** Amend the Municipal Code to create a new Parks zoning district and apply it to parcels having a Parks land use designation.	CDD	Long	$$				X						

Land Use and Community Design															
		General		Resources	Financing			Implementation							
No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
LU-C.1.a	**Development in Open Space and Low Density Areas.** Prohibit development in areas designated as Open Space on the Land Use Map (Figure LU-1) and continue to allow very low-density residential development on private property in areas designated as Very Low Density and Single-Family – Conservation on the Land Use Map (Figure LU-1).	CDD	Ongoing	$									X	
LU-C.2.a	**Hillside Density District.** Amend Table 4D, R-1-H (Hillside Density District) Parcels, in the Municipal Code to remove outdated parcel numbers and update parcel-specific density limits to align with State law. The density on the remaining hillside parcels shall be no greater than the number of dwelling units specified in the table.	CDD	Short	$				X						
LU-C.3.a	**Conservation and Low Density Development Review.** Continue to require design review for new structures and upper-floor additions for hillside or protected ridge zone parcels to minimize visual, environmental, and safety impacts.	CDD	Ongoing	$									X	

Land Use and Community Design															
		General		Resources	Financing			Implementation							
No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
LU-C.3.b	**Hillside and Ridge Zone Development Regulations.** Prepare and adopt objective development and design standards in the Municipal Code to minimize the impacts of hillside and protected ridge zone development, including but not limited to: • Creating opportunities to cluster development and/or transfer of development rights to preserve open space, natural features, and scenic resources, • Limiting grading to preserve natural topography, minimize erosion, and prevent slope failure, • Regulating building design and scale, including height and massing, to achieve residential development that is compatible with existing hillside neighborhoods, • Minimizing off-site and night sky impacts of outdoor lighting and glare, and • Establishing fire safety standards. Incorporate the protected ridge zone development restrictions in Policy LU-C.3 into the Zoning Code.	CDD	Short	$				X			X			
LU-D.2.a	**Development Review.** Use objective development standards, the design review process, and the California Environmental Quality Act in the review of proposed development projects to promote high quality design, ensure compatibility with surrounding properties and uses, and minimize environmental impacts and conflicts between residential and non-residential uses.	CDD	Ongoing	$									X	

Land Use and Community Design														
		General		Resources	Financing			Implementation						
No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
LU-D.2.b	**Update Regulations.** Regularly evaluate and update development standards to ensure that new development is compatible with the natural surroundings and built environment of the immediate neighborhood.	CDD	Ongoing	$				X			X			
LU-D.3.a	**Gathering Place Design.** Emphasize the function of commercial districts as community gathering places. Where feasible, require public plans and projects to include community services, public space, and amenities that create a strong sense of place and opportunities to congregate.	CDD	Ongoing	$									X	
LU-D.3.b	**Outdoor Dining and Gathering Areas.** Encourage physical design and layout that supports outdoor dining, walkability, and a cohesive human-scaled streetscape.	CDD	Ongoing	$										X
LU-D.3.c	**Pilot Urbanism Projects.** Test small-scale, temporary placemaking projects (e.g., parklets, pop-up plazas) to evaluate possible long-term public improvements that foster community gathering.	PW/ CDD	Long	$$$	X				X					
LU-D.4.a	**Pedestrian-Friendly Building Frontage.** Encourage ground-floor businesses and building designs along San Anselmo Avenue (between Tamalpais and Bolinas Avenues) that actively engage pedestrians through frequent entrances, ample windows providing views into the businesses, and thoughtful façade design.	CDD	Ongoing	$									X	X

OSC-C.1.c	**Discovery of Archaeological and Cultural Resources.** If previously undiscovered, suspected historic, cultural, tribal cultural, or archaeological resources are encountered during ground-disturbing activities, construction activities shall be halted within 50 feet of the find. A qualified archaeologist shall evaluate the resources to assess the find. Further ground disturbances in the vicinity of the find shall remain stopped while an assessment is underway and until the archaeologist can provide recommendations for treatment of the discovery. If a potentially significant find cannot be avoided by the project, the retained archaeologist, who meets the Secretary of the Interior's Professional Qualifications Standards, will develop an evaluation plan in consultation with the Town that contains a research design to guide assessments of the resource's significance and scientific potential. The recommendations provided in the report shall be implemented.	CDD	Ongoing			X					X		X

OSC-C.1.d	**Discovery of Human Remains.** If an inadvertent discovery of human remains is made at any time during project-related construction activities or project planning, the following performance standards shall be met before implementing or continuing actions such as construction that may result in damage to or destruction of human remains. In accordance with the California Health and Safety Code (HSC), if human remains are encountered during ground-disturbing activities, the Town shall immediately halt potentially damaging excavation in the area of the remains and notify the Marin County Coroner and a qualified archeologist (meeting the Secretary of the Interior's Professional Qualifications Standards for Archeology) to determine the nature of the remains. The coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or State lands (HSC Section 7050.5[b]). If the human remains are of historic age and are determined by the Marin County Coroner to be not of Native American origin, the Town will follow the provisions of HSC Section 7000 et seq. regarding the disinterment and removal of non–Native American human remains. (cont.)	If the coroner determines that the remains are those of a Native American, the coroner must contact the Native American Heritage Commission (NAHC) by phone within 24 hours of making that determination (HSC Section 7050[c]). After the coroner's findings have been made, the archaeologist and the NAHC-designated Most Likely Descendant, in consultation with the landowner, shall determine the ultimate treatment and disposition of the remains. The responsibilities of the Town for acting upon notification of a discovery of Native American human remains are identified in Public Resources Code Section 5097.9 et seq.

No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
S-D.4.a	**Interagency Flood Mitigation Coordination Program.** Collaborate annually with flood control districts, utilities, and neighboring jurisdictions to assess mitigation projects, infrastructure needs, and capital planning.	PW	Ongoing	$$$$$	X							X		X
S-D.4.b	**Water Efficient Landscape and Impervious Surface Management Program.** Promote drought-tolerant and water-efficient landscape design, incorporate xeriscape practices and permeable surfaces in Town projects where feasible, and adopt updates to the Marin Municipal Water District's Water Efficient Landscape Ordinance to reduce water demand, enhance conservation, and support groundwater recharge.	PW	Short	$		X						X		
S-D.5.a	**Inundation Map Updates.** Encourage Marin Municipal Water District to update inundation mapping with depth information.	PW	Short	$		X						X		
S-D.5.b	**Flood Evacuation Preparedness.** Review the updated mapped inundation areas and coordinate with Marin Municipal Water District on procedures for emergency evacuations.	PW	Short	$	X							X		
S-D.5.c	**Property Owner Information.** Provide dam inundation information to potentially affected property owners whenever new or updated information becomes available in clear and accessible formats.	PW	Short	$$	X									X

Safety														
		General		Resources	Financing			Implementation						
No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
S-E.1.a	**Vegetation Management in Fire-Sensitive Areas.** Require that vegetation management in fire-sensitive areas include thinning of high fuel vegetation or replanting with fire resistant plant materials.	RVF	Ongoing	$							X		X	
S-E.1.b	**Non-native Species.** Prioritize the removal of non-native species.	PW/ CDD/ RVF	Ongoing	$$	X				X				X	
S-E.1.c	**Structural Mitigations.** Identify structural mitigations rather than vegetation management in the most fire-sensitive areas (i.e., areas within the WUI), when feasible.	PW/ CDD/ RVF	Ongoing	$$$	X								X	
S-E.1.d	**Biodiversity, Fire, and Fuels Integrated Plan.** Prepare a Biodiversity, Fire, and Fuels Integrated Plan (BFFIP) in conjunction with Ross Valley Fire Department, the Marin Wildfire Prevention Authority and environmental stakeholders, including the California Native Plant Society, that describes actions necessary to minimize fire hazards and maximize ecological health in Town open space areas in compliance with the Marin County Community Wildfire Protection Plan and principles of the Ecologically Sound Practices Partnership.	RVF	Long	$$$					X			X		
S-E.2.a	**Homeowner Wildfire Actions Plans.** Engage with property owners and residents in the WUI to prepare a wildfire action plan.	RVF	Long	$$							X			X

Safety														
		General		Resources	Financing			Implementation						
No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
S-E.5.a	**Fire Code Consistency and Development Review Requirements.** Maintain and enforce Town regulations to remain consistent with the California Building Code and Ross Valley Fire Department requirements and require fire risk analysis and appropriate mitigation measures for subdivisions and development in high fire hazard areas. Prior to approving any subdivision in these areas, review and approve a fire risk study that identifies contributing risk factors, recommended mitigation actions, the costs and means of providing fire protection, and the parties responsible for funding and benefiting from these measures.	CDD	Ongoing	$				X			X			X
S-E.5.b	**Properties with Limited Access.** Establish mitigations for properties in fire hazard areas with restricted and single points of access, including parking restrictions, and investigate the feasibility of establishing special assessment districts to improve road capacity and adequate water supply.	PW	Ongoing	$$		X			X				X	

Safety															
		General		Resources	Financing			Implementation							
No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
S-E.7.a	**Property Maintenance for Fire Control.** Implement and enforce fire safety and vegetation management requirements on private property, including taking necessary fire prevention actions on undeveloped or hazardous sites and recovering associated costs from property owners. Provide comprehensive public education for residents and businesses on defensible space, vegetation management, landscaping practices, and fire hazard reduction strategies, using multiple communication channels.	RVF	Short	$					X					X
S-E.9.a	**Grazing for Fuel Management.** Continue to consider grazing in open space for grass/light fuel maintenance.	PW	Ongoing	$$$	X				X					

Noise														
		General		Resources	Financing			Implementation						
No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
N-A.1.a	**Acoustical Study Requirements.** Require acoustical studies for development projects subject to discretionary review that may be exposed to or create noise levels exceeding the Noise and Land Use Compatibility Guidelines in Figure N-3. Identified noise control measures shall ensure compliance with applicable standards, including maintaining interior noise levels of 45 dBA Ldn or lower for new residential uses to ensure a comfortable and healthy living environment.	CDD	Ongoing	$									X	
N-A.1.b	**Landscaping Equipment Noise.** Advance and implement regulations to limit noise from landscaping equipment, such as quiet hours, and continue enforcing the Town's ban on gas-powered landscape equipment to reduce impacts on nearby residents, workers, and sensitive receptors.	PW/ CDD	Ongoing	$				X			X			
N-A.1.c	**Noise Ordinance Updates and Objective Noise Standards.** Review and update the Town's Noise Ordinance within five years of General Plan adoption to establish clear, objective noise limits for residential, commercial, and mixed-use areas, including temporary construction noise. Apply these standards through the development review and permitting process by incorporating appropriate conditions of approval for noise-generating activities and equipment, and enforce the standards once projects become operational.	CDD	Short	$$$				X			X			

Noise														
		General		Resources	Financing			Implementation						
No.	Action	Lead Dept.	Timing	Cost Range	New CIP	Operating Budget	Other Financing	Ordinance or other Legislation	Study, Plan or Program	Capital Improv.	Guidelines, Standards or Monitoring	Interagency Coordination	Development Review	Public Education & Outreach
N-A.3.a	**Construction Noise Limits and Mitigation Measures.** Enforce limitations on construction hours and require feasible noise-reduction measures, such as sound barriers, muffled and properly maintained equipment, and other appropriate technologies, through the development review process. For CEQA analyses, use a 12 dBA increase as the temporary construction noise threshold of significance.	CDD	Ongoing	$									X	
N-A.3.b	**Construction Notification and Noise Management Plans.** Require project applicants to provide advance notice of construction to nearby residents and businesses, including timelines, allowable construction hours, and contact information, using clear and accessible communication. Develop guidelines for notice content and distribution. Require major projects to prepare Construction Noise Management Plans detailing monitoring and noise-reduction strategies.	CDD	Ongoing	$									X	
N-A.4.a	**Vehicle Code Noise Enforcement.** Enforce the California Vehicle Code provisions related to excessively loud vehicles operating on Town streets.	POL	Ongoing	$					X					
N-A.4.b	**Pavement and Street Design.** Evaluate the use of roadway surfacing materials or other treatments that reduce traffic noise along arterial and collector streets.	PW	Long	$$$$$	X					X				

Noise

SAN ANSELMO GENERAL PLAN 2045
DRAFT ENVIRONMENTAL IMPACT REPORT

Chapter **Page Number**

ES Executive Summary

ES-1. Purpose ES-1
ES-2. Project Location ES-1
ES-3. Introduction ES-2
ES-4. Project Objectives ES-2
ES-5. Project Description ES-3
ES-6. Significant and Unavoidable Adverse Impacts ES-9
ES-7. Summary of Alternatives to the General Plan 2045 ..... ES-9
ES-8. Areas of Controversy ES-9
ES-9. Public Review of the Draft EIR ES-11

1.0 Introduction

1.1 Introduction 1.0-1
1.2 Purpose of the EIR 1.0-2
1.3 Type of EIR 1.0-2
1.4 Intended Uses of the EIR 1.0-3
1.5 Known Responsible and Trustee Agencies 1.0-3
1.6 Environmental Review Process 1.0-4
1.7 Organization and Scope 1.0-6
1.8 Comments Received on the Notice of Preparation 1.0-8

2.0 Project Description

2.0.1 Background and Overview 2.0-1
2.0.2 Project Location 2.0-9
2.0.3 Project Objectives 2.0-9
2.0.4 Description of Proposed General Plan 2045 Project 2.0-10
2.0.5 General Plan Buildout Analysis 2.0-14
2.0.6 Uses of the EIR and Required Agency Approvals 2.0-16

3.0 Environmental Impact Analysis

3.0.1 Introduction to the Analysis 3.0-1
3.0.2 Definitions of Terms Used in the EIR 3.0-1
3.0.3 Section Format 3.0-2

Aesthetics and Visual Resources

3.1.1 Environmental Setting 3.1-3
3.1.2 Regulatory Setting 3.1-7
3.1.3 Impacts and Mitigation Measures 3.1-11

3.2 Agriculture and Forest Resources

3.2.1. Environmental Setting 3.2-1
3.2.2. Regulatory Setting 3.2-3
3.2.3. Impacts and Mitigation Measures 3.2-8

3.3 Air Quality

3.3.1. Environmental Setting 3.3-1
3.3.2. Regulatory Setting 3.3-13
3.3.3. Impacts and Mitigation Measures 3.3-21

3.4 Biological Resources

3.4.1 Environmental Setting 3.4-2
3.4.2 Regulatory Setting 3.4-19
3.4.3 Impacts and Mitigation Measures 3.4-25

3.5 Cultural and Tribal Cultural Resources

3.5.1. Environmental Setting 3.5-1
3.5.2. Regulatory Setting 3.5-31
3.5.3. Impacts and Mitigation Measures 3.5-34

3.6 Energy

3.6.1 Environmental Setting 3.6-1
3.6.2 Regulatory Setting 3.6-4
3.6.3 Impacts and Mitigation Measures 3.6-10

3.7 Geology, Soils, and Seismicity

3.7.1 Environmental Setting 3.7-1
3.7.2 Regulatory Setting 3.7-11
3.7.3 Impacts and Mitigation Measures 3.7-17

3.8 Greenhouse Gases and Climate Change

3.8.1 Environmental Setting 3.8-1
3.8.2 Regulatory Setting 3.8-6
3.8.3 Impacts and Mitigation Measures 3.8-21

3.9 Hazards and Hazardous Materials

3.9.1. Environmental Setting 3.9-1
3.9.2. Regulatory Setting 3.9-7
3.9.3. Impacts and Mitigation Measures 3.9-16

3.10 Hydrology and Water Quality

3.10.1. Existing Setting 3.10-1
3.10.2. Regulatory Setting 3.10-8
3.10.3. Impacts and Mitigation Measures 13.10-8

3.11 Land Use, Planning, and Population/Housing

3.11.1. Environmental Setting 3.11-1
3.11.2. Regulatory Setting 3.11-6
3.11.3. Impacts and Mitigation Measures 3.11-16

3.12 Noise

3.12.1 Environmental Setting 3.12-2
3.12.2 Regulatory Setting 3.12-10
3.12.3 Impacts and Mitigation Measures 3.12-15

3.13 Public Services and Recreation

3.13.1 Existing Conditions 3.13-1
3.13.2 Regulatory Setting 3.13-22
3.13.3 Impacts and Mitigation Measures 3.13-33

3.14 Transportation and Circulation

3.14.1. Environmental Setting 3.14-1
3.14.2. Regulatory Setting 3.14-7
3.14.3. Impacts and Mitigation Measures 3.14-17

3.15 Utilities and Service Systems

3.15.1. Water Supplies 3.15-1
3.15.2. Environmental Setting 3.15-1
3.15.3. Regulatory Setting – Water Supplies 3.15-10
3.15.4. Impacts and Mitigation Measures 3.15-15
3.15.5. Wastewater 3.15-20
3.15.6. Environmental Setting 3.15-20
3.15.7. Regulatory Setting - Wastewater 3.15-22
3.15.8. Impacts and Mitigation Measures 3.15-27

3.15.9. Stormwater Drainage 3.15-31
3.15.10. Environmental Setting 3.15-31
3.15.11. Regulatory Setting - Stormwater Drainage.....3.15-34
3.15.12. Impacts and Mitigation Measures 3.15-41
3.15.13. Solid Waste.....3.15-47
3.15.14. Environmental Setting 3.15-47
3.15.15. Regulatory Setting – Solid Waste 3.15-53
3.15.16. Impacts and Mitigation Measures 3.15-58

3.16 Wildfire
3.16.1 Environmental Setting 3.16-1
3.16.2 Regulatory Setting 3.16-2
3.16.3 Impacts and Mitigation Measures 3.16-11

4.0 Other CEQA-Required Topics
4.0.1 Introduction 4.0-1
4.0.2 Significant Unavoidable Impacts.....4.0-1
4.0.3 Significant Irreversible Effects.....4.0-2
4.0.4 Mandatory Findings of Significance.....4.0-5
4.0.5 Growth-Inducing Impacts.....4.0-6

5.0 Alternatives to the Proposed Project
5.0.1 CEQA Requirements 5.0-1
5.0.2 Factors Guiding Selection of Alternatives 5.0-1
5.0.3 Alternatives Considered but Dismissed from Further Evaluation 5.0-2
5.0.4 Alternatives Analyzed in This EIR.....5.0-3
5.0.5 Environmental Analysis 5.0-7
5.0.6 Environmentally Superior Alternative.....5.0-16

6.0 Report Preparers and Contributors 6.0-1

7.0 References 7.0-1

ES-1. PURPOSE

This Draft Environmental Impact Report (Draft EIR) was prepared in accordance with and in fulfillment of the California Environmental Quality Act (CEQA) and the State CEQA Guidelines. As described in CEQA Guidelines Section 15121(a), an EIR is a public information document that assesses the potentially significant environmental impacts of a project. CEQA requires that an EIR be prepared by the agency with primary responsibility over the approval of a project (the lead agency). The Town of San Anselmo (Town) is the lead agency for the proposed Town of San Anselmo General Plan 2045 Update (General Plan 2045 or proposed project) EIR. Public agencies are charged with the duty to consider and minimize environmental impacts of proposed development where feasible and have the obligation to balance economic, environmental, and social factors.

This Draft EIR has been prepared according to CEQA requirements to evaluate the potential environmental impacts associated with the implementation of the General Plan 2045. This Draft EIR also discusses alternatives to the General Plan 2045 and identifies proposed goals, policies, and actions that would offset, minimize, or otherwise avoid potentially significant environmental impacts. This Draft EIR is intended to provide decision-makers and the public with information that enables consideration of the environmental consequences of the General Plan 2045, and has been prepared in accordance with CEQA (California Public Resources Code [PRC] § 21000 *et seq.*) and the CEQA Guidelines (California Code of Regulations [CCR] Title 14, Division 6, Chapter 3).

ES-2. PROJECT LOCATION

The Town of San Anselmo is an incorporated municipality in Marin County, California. The town is bordered by San Rafael to the east, Fairfax and unincorporated Marin County to the west, Ross to the south, and unincorporated Marin County to the north. San Anselmo is located approximately 20 miles north of San Francisco, as shown on **Figure ES-1**. The town is situated in a series of small valleys created by streams bordered by moderate to steep hillside slopes and ridge tops. The Planning Area has an average elevation of approximately 194 feet above mean sea level, with the elevation varying across the town due to its hilly terrain, and drains primarily to the Ross Valley Watershed. San Anselmo is at the juncture of major arterials leading from the San Francisco Bay Area to western Marin County. The town is accessible by road from Sir Francis Drake Boulevard, which connects Highway 101 to the town and continues west through San Anselmo from Ross to Fairfax, and from Red Hill Avenue, which becomes 4th Street in San Rafael and provides another connection between San Anselmo and Highway 101.

In addition to the lands within the town boundaries, State law requires that a municipality adopt a General Plan that addresses "any land outside its boundaries which in the planning agency's judgment bears relation to its planning (California Government Code §65300)." The Town's Planning Area is the extent of the area addressed by the General Plan. The Town's Planning Area is defined as all lands within the town limits and San Anselmo Sphere of Influence (SOI), as shown on **Figure ES-2.**

ES-3. INTRODUCTION

The Town of San Anselmo, as the lead agency, determined that the proposed General Plan 2045 is a "project" within the definition of CEQA. CEQA requires the preparation of an environmental impact report (EIR) prior to approving any project, which may have a significant impact on the environment. For the purposes of CEQA, the term "project" refers to the whole of an action, which has the potential for resulting in a direct physical change or a reasonably foreseeable indirect physical change in the environment (CEQA Guidelines Section 15378[a]).

The EIR contains a description of the General Plan 2045, description of the environmental setting, identification of project impacts, and mitigation measures for impacts found to be significant, as well as an analysis of project alternatives, identification of significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. This EIR identifies issues determined to have no impact or a less than significant impact, and provides detailed analysis of potentially significant and significant impacts. Comments received in response to the Notice of Preparation (NOP) were considered in preparing the analysis in this EIR.

ES-4. PROJECT OBJECTIVES

California Environmental Quality Act (CEQA) Guidelines Section 15124(b) requires that an EIR project description include a statement of the objectives from an applicant intended to be achieved by the project. The objectives describe the purpose of the project and are intended to assist the lead agency in developing a reasonable range of alternatives for consideration in the EIR, and to assist the decision makers in assessing the feasibility of mitigation measures and alternatives. The San Anselmo General Plan 2045 addresses issues of concern identified through the visioning and community outreach efforts. The objectives of the General Plan 2045 are listed below.

1. Maintain and enhance San Anselmo's character by preserving its scenic beauty, open space, and natural resources while ensuring new development complements the historic qualities of the built environment.
2. Foster a sense of community and belonging for town residents by providing equitable access to public services, recreation opportunities, and social engagement.
3. Enhance the town's economic vitality by fostering a variety of businesses, encouraging sustainable economic practices, and ensuring that economic growth is inclusive, responsive to the changing needs of the community, and in alignment with the Town's environmental and social goals.
4. Manage the location, type, and amount of growth to ensure the safety and well-being of all residents through high-quality public services, resilient infrastructure, improved safety and noise regulation, and robust emergency preparedness and response plans.
5. Prioritize multi-modal transportation options and improvements that eliminate greenhouse gas emissions, such as zero-emission vehicles, public transit, cycling, and pedestrian-friendly infrastructure, while improving vehicular circulation, promoting safety, ensuring accessibility, and improving traffic flow.

6. Promote a wide range of housing options that are affordable at all income levels, accessible, sustainable, meet the needs of existing residents, and welcomes a diverse spectrum of future residents.
7. Ensure consistency with State, regional, and local regulatory requirements, including housing, climate, and environmental mandates.
8. Improve community resilience to climate change and natural hazards, including wildfire, flooding, and extreme weather.
9. Protect and enhance environmental resources, including air and water quality, biological resources, and urban forest.
10. Promote efficient land use and infill development patterns that support sustainability and reduce greenhouse gas emissions.

ES-5. PROJECT DESCRIPTION

The Town was incorporated in April 1907. The Town of San Anselmo last comprehensively adopted its General Plan in 1975, with more recent targeted updates to the Land Use, Circulation, and Open Space Elements in 1988. In November 2023, the Town issued a request for proposals (RFP) inviting bids from qualified consulting firms to assist the Town in the preparation of a comprehensive update to the General Plan.

The process to update the San Anselmo General Plan began in May 2024 and is scheduled to be completed with the adoption of the San Anselmo General Plan 2045 Update (General Plan 2045 or proposed project) by the Town Council in 2026. The San Anselmo General Plan 2045 was developed with extensive community input.

The General Plan 2045 is the policy document that serves as the Town's General Plan. The General Plan 2045 is supported by a number of reports and documents that informed its development, established conditions in the town, and evaluated the effects of the General Plan. Supporting documents prepared as part of the General Plan 2045 effort included the Vision and Guiding Principles Report, Economic Development Analysis Report, Existing Conditions Reports, and General Plan 2045 (Policy Document).

DESCRIPTION OF PROPOSED GENERAL PLAN 2045 PROJECT

The San Anselmo General Plan 2045 will include a comprehensive set of goals, policies, and actions, as well as a revised Land Use Map (see **Figure ES-3**). The definitions of goals, policies, and actions are listed below:

- A goal is a description of the general desired result that the Town seeks to create through the implementation of the General Plan.
- A policy is a specific statement that guides decision-making as the Town works to achieve its goals. Once adopted, policies represent statements of Town regulations. The General Plan's policies set out the standards that will be used by Town staff, the Planning Commission, and the Town Council in their review of land development projects, resource protection activities, infrastructure improvements, and other Town

actions. Policies are on-going and don't necessarily require specific action on behalf of the Town.

- An implementation measure is an action, procedure, technique, or specific program to be undertaken by the Town to help achieve a specified goal or implement an adopted policy. The Town must take additional steps to implement each action in the General Plan. An action is something that can and will be completed.

A General Plan covers a wide range of social, economic, infrastructure, and natural resource issues. The San Anselmo General Plan 2045 will include goals, policies, and actions to address the State-mandated topics and will continue to have components that address optional topics, including growth management, urban design, downtown, economic vitality, youth and recreation, and public facilities.

Land Use & Community Design Element

The Land Use & Community Design Element establishes the framework for the goals, policies, and actions that will shape the physical form of San Anselmo. The Land Use & Community Design Element addresses growth management, diverse land uses, community design, downtown, commercial corridors, historic preservation, residential neighborhoods, arts and culture, and governance and inclusion. The Land Use & Community Design Element guides the intensity and distribution of land uses and identifies areas of the Town where change will be encouraged and those areas where the existing land use patterns will be maintained and enhanced.

The Land Use & Community Design Element also establishes the land use designations, including the allowed uses, intensities, and densities of development, established by the Land Use Map, shown in Figure ES-3.

Table ES-1 lists each land use designation and provides the density and FAR requirements for each designation, including any modifications associated with each.

TABLE ES-1: SAN ANSELMO GENERAL PLAN 2045 LAND USE DESIGNATIONS

GENERAL PLAN LAND USE DESIGNATION OR OVERLAY	PROPOSED SAN ANSELMO GENERAL PLAN 2045 MAXIMUM DENSITY[1] / FAR
Residential Designations	
Very Low Density Residential	1 du/acre
Single-Family Residential-Conservation	1 du/acre
Single-Family Residential	1-6 units/acre
Medium Density Residential	6-12 units/acre
High Density Residential	13-30 units/acre[2]
Downtown Mixed Residential	6-30 units/acre[2] 2.0 FAR
Mixed Use, Commercial, and Office Designations	
Central Commercial	13-30 units/acre 2.0 FAR
General Commercial	13-30 units/acre[2]

GENERAL PLAN LAND USE DESIGNATION OR OVERLAY	PROPOSED SAN ANSELMO GENERAL PLAN 2045 MAXIMUM DENSITY[1] / FAR
	2.0 FAR
Limited Commercial	13-20 units/acre 1.0 FAR (1.25 for mixed use projects with 8-10 units)
Neighborhood Commercial	13-20 units/acre 1.0 FAR (1.25 for mixed use projects with 8-10 units)
Public, Quasi-Public, Recreation, and Other Designations	
Parks	Density/FAR: Not applicable
Open Space	Density/FAR: Not applicable
Public Facilities	40 units/acre proposed (see Action LU-B.4.a) FAR: Not applicable

NOTES:

1: RESIDENTIAL DENSITIES ARE IN UNITS PER GROSS ACRE. THE TERM 'GROSS ACRE' AS USED IN THE GENERAL PLAN REFERS TO ALL THE LAND WITHIN THE PROPERTY LINES OF A GIVEN PARCEL OR ALL THE LAND WITHIN THE BOUNDARY LINE OF A GIVEN DEVELOPMENT PROPOSED. THE ONLY LAND TO BE EXCLUDED IN THE CALCULATION OF GROSS ACREAGE IS ANY LAND WITHIN AN ESTABLISHED PUBLIC RIGHT-OF-WAY OR ADOPTED PLAN LINE.

2: RESIDENTIAL DENSITIES UP TO 40 UNITS PER ACRE MAY BE ALLOWED FOR PROPERTIES SUBJECT TO THE AFFORDABLE HOUSING OVERLAY DISTRICT IN THE ZONING MAP.

SOURCE: TOWN OF SAN ANSELMO, 2025

Table ES-2 shows the total acreages for each land use designation shown on the proposed Land Use Map.

TABLE ES-2: SAN ANSELMO GENERAL PLAN 2045 LAND USE DESIGNATIONS BY ACREAGE

LAND USE DESIGNATION	ACRES
Residential Designations	
Very Low Density Residential	206
Single-Family Residential-Conservation	24
Single-Family Residential	813
Medium Density Residential	15
High Density Residential	43
Downtown Mixed Residential	67
Mixed Use, Commercial, and Office Designations	
Central Commercial	8
General Commercial	35
Limited Commercial	5
Neighborhood Commercial	2

LAND USE DESIGNATION	ACRES
Public, Quasi-Public, Recreation, and Other Designations	
Parks	10
Open Space	170
Public Facilities	60
Right-of-Way / Not Designated	2
Sphere of Influence	
Not Designated	1,749
Total	**3,211**

SOURCE: MARIN COUNTY GIS/ASSESSOR DATA, 2024; TOWN OF SAN ANSELMO, 2025; DE NOVO PLANNING GROUP, 2025

Open Space & Conservation Element

The Open Space & Conservation Element addresses the protection and acquisition of open space for scenic beauty, resource protection, safety, climate change resilience, and public access and the conservation of natural resources, including wildlife and habitat protection, streams and riparian corridors, trees, air quality, and tribal cultural resources.

Sustainability, Climate Change, & Resiliency Element

The Sustainability, Climate Change, & Resiliency Element addresses improving community resilience, enhancing climate change preparedness and adaptation, and increasing local sustainability, and reducing carbon footprints.

Economic Vitality Element

The Economic Vitality Element addresses the policy approach to sustain and grow the town's economy, preserve and enhance the town's built environment and image, support community-oriented cultural, educational, and entertainment events, and maintain the commercial hubs as the center of town activity.

Housing Element

The Housing Element, as adopted in 2023, will continue to provide local housing programs to meet the fair share of existing and future housing needs for all income groups, preserve and maintain housing, and affirmatively further fair housing.

Circulation Element

The Circulation Element addresses the Town's long-term transportation system, primarily through policies and standards to encourage complete streets, adequate capacity, and linkages to further an integrated multi-modal transportation system, including walking, cycling, and transit access, and parking.

Parks, Recreation, & Public Facilities Element

The Parks, Recreation, & Public Facilities Element addresses the provision of parks and recreational facilities, recreational services and programs, public facilities and infrastructure, and library services.

Safety Element

The Safety Element addresses natural and human-caused hazards that can adversely impact public safety, establishing goals, policies, and actions to address disaster preparedness and response, seismic and geologic hazards, landslides, flooding, wildland and urban fires, and weather-related hazards.

Noise Element

The Noise Element addresses exposure of existing and future community members to noise sources, including transportation-related noise, source-point noise, and intermittent noise.

GENERAL PLAN BUILDOUT ANALYSIS

The EIR evaluates the theoretical development that could occur within the Planning Area at the densities and intensities allowable under the proposed General Plan. While no specific development projects are proposed as part of the General Plan Update, the General Plan would provide the policy framework under which future growth could occur, including the development of new businesses, expansion of existing businesses, and new residential uses consistent with the Land Use Designations (Table 2.0-2) and Draft Land Use Map (Figure ES-3). **Table ES-3** summarizes the theoretical development potential under the proposed San Anselmo General Plan 2045. The theoretical buildout assumes development of vacant and underutilized parcels at the maximum density or intensity permitted under the General Plan, including realistic development of residentially-designated sites identified in the existing Housing Element. Residential development on sites identified in the Housing Element is limited to the realistic capacity specified in the Housing Element.[1]

The buildout analysis is a planning-level analytical tool prepared for purposes of this Program EIR. Consistent with CEQA's requirement to evaluate the reasonably foreseeable environmental consequences of implementing the General Plan, the analysis assumes a conservative theoretical buildout based on the maximum development potential permitted under the proposed land use designations, while accounting for known development constraints and realistic assumptions where applicable (including Housing Element site capacity assumptions). This analytical scenario does not represent a forecast of future development, nor does it imply that all properties will redevelop or that development will occur within the General Plan planning horizon. Actual future development will occur incrementally over time and will depend upon numerous factors beyond the Town's control, including economic conditions, property owner decisions, infrastructure capacity, financing, and future regulatory requirements.

[1] Town of San Anselmo, 2023. 2023-2031 Housing Element, December 12, 2023. Pp. 141-152.

The actual amount of development that will occur throughout the planning horizon of the General Plan, which is approximately 20 years, is based on many factors outside of the Town's control. Actual future development would depend on future real estate and labor market conditions and costs, property owner preferences and decisions, site-specific constraints, evolving State and federal regulations, and other factors. New development and growth are largely dictated by existing development conditions, market conditions, and land turnover rates. Very few communities actually develop to the full potential allowed in their respective general plans during the planning horizon. For purposes of environmental review under CEQA, the buildout analysis represents a conservative analytical scenario that evaluates the maximum reasonably foreseeable development that could occur under the proposed General Plan 2045. The buildout analysis is intended to provide a comprehensive assessment of the potential environmental effects associated with implementation of the General Plan and should not be interpreted as a prediction or forecast of the amount, timing, or location of future development, which will depend on market conditions, property owner decisions, infrastructure availability, financing, regulatory requirements, and other factors.

The General Plan does not designate land within the Town's Sphere of Influence for development. Implementation of the General Plan would not result in any changes to land use designations outside of the Town boundary but within the Sphere of Influence. Any development that occurs within the SOI but outside of the Town boundary would be subject to the Marin County General Plan. Any future projects proposed within the SOI and seeking annexation to the Town of San Anselmo would be subject to their own environmental review and growth analysis. The EIR's cumulative analysis considers potential cumulative growth within both the Town of San Anselmo and within its SOI.

As shown in Table ES-3, theoretical full buildout conditions under the General Plan would be anticipated to result in 2,279 new residential units accommodating an additional 5,356 residents and an addition of approximately 752,133 square feet of non-residential uses.

TABLE ES-3: SAN ANSELMO GENERAL PLAN NEW DEVELOPMENT POTENTIAL

LAND USE DESIGNATION	DWELLING UNITS	POPULATION[1]	NON-RESIDENTIAL SQUARE FEET
Residential Designations			
Very Low Density Residential	43	101	0
Single-Family Residential-Conservation	2	5	0
Single-Family Residential	452	1,062	0
Medium Density Residential	41	96	0
High Density Residential	248	583	0

ES-6. SIGNIFICANT AND UNAVOIDABLE ADVERSE IMPACTS

Section 15126.2(b) of the CEQA Guidelines requires that an EIR describe any significant impacts that cannot be avoided, even with the implementation of feasible mitigation measures. The environmental effects of the General Plan 2045 on various aspects of the environment are discussed in detail in Chapter 3, Environmental Impacts, Setting, and Mitigation Measures. The analysis contained in Chapter 3 did not identify any project-specific or cumulative impacts that could not be avoided if the General Plan 2045 is approved as proposed.

ES-7. SUMMARY OF ALTERNATIVES TO THE GENERAL PLAN 2045

ALTERNATIVE 1: NO PROJECT

Under Alternative 1, the Town would not adopt the General Plan 2045. The existing Town of San Anselmo General Plan would continue to be implemented and no changes to the General Plan, including the Land Use Map, Circulation Diagram, goals, policies, or actions would occur. Changes to address land use, housing, mobility, sustainability and climate resilience, open space and conservation, safety, economic vitality, recreation, public facilities, and diversity, equity, inclusion, and belonging would not be implemented. Subsequent projects, such as amending the Municipal Code (including the zoning map), would not occur.

ALTERNATIVE 2: RESERVE OVERLAY INTENSIFICATION

Alternative 2 would increase density in Reserve Areas along major transportation corridors in San Anselmo where future increases in residential density and additional development incentives could be considered to encourage new housing. Reserve Areas provide a framework for accommodating

growth in a planned and orderly manner while ensuring that infrastructure, public services, and community design standards are maintained. This Alternative would also further the purpose of General Plan 2045 Policy LU-A.6: Reserve Areas: Consider increases in density and modified development standards or incentives in areas designated as Reserve Areas … to address future housing needs and help meet the Town's future Regional Housing Needs Allocations, if necessary.

ALTERNATIVE 3: RESERVE OVERLAY HOUSING ELEMENT

Alternative 3 would apply a Reserve Overlay calibrated to the Town's adopted Housing Element, directing modest additional housing capacity to areas already served by infrastructure and services while preserving open space, hillsides, and environmentally sensitive areas. Like Alternative 2, this alternative would further the purpose of General Plan 2045 Policy LU-A.6 by accommodating growth in a planned and orderly manner.

ES-8. AREAS OF CONTROVERSY

Pursuant to CEQA Guidelines Section 15123(b), a summary section must address areas of controversy known to the lead agency, including issues raised by agencies and the public, and it must also address issues to be resolved, including the choice among alternatives and whether or how to mitigate significant effects.

In accordance with CEQA Guidelines Section 15082, the Town of San Anselmo circulated a Notice of Preparation (NOP) of an EIR for the General Plan 2045 on October 20, 2025, to trustee and responsible agencies, the State Clearinghouse (SCH), and the public. The 30-day public review period for the NOP then ended on November 19, 2025. A scoping meeting was held on November 13, 2025, which was attended by members of the public. The NOP and all comment letters received on the NOP are presented in Appendix A.

The NOP identified potential for significant impacts on the environment related to the following topical areas:

- Aesthetics and Visual Resources
- Agricultural Resources
- Air Quality
- Biological Resources
- Cultural and Tribal Cultural Resources
- Energy
- Geology, Soils, and Seismicity
- Greenhouse Gases and Climate Change
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use, Planning and Population/Housing
- Noise
- Public Services and Recreation
- Transportation and Circulation
- Utilities and Service Systems
- Wildfire

The NOP also identified certain topical areas where the General Plan 2045 would have no impact because the resources are not present in the Planning Area. There is no designated forest or timber land in the Town and Planning Area. Therefore, the General Plan 2045 would have no impact related to forestry resources. There are no known mineral resources of value and there are no known locally important mineral resource recovery sites in the Town and Planning Area. Therefore, the General

Plan 2045 would have no impact related to mineral resources. The Town and Planning Area are not located within an airport land use plan nor within two miles of a public airport or public use airport. Therefore, the General Plan 2045 would have no impact related to airport-associated hazards or exposure to excessive noise levels related to airport use. These topics are not discussed further in the EIR.

DISAGREEMENT AMONG EXPERTS

This Draft EIR contains substantial evidence to support all conclusions presented herein. It is possible that there will be disagreement among various parties regarding these conclusions, although the Town of San Anselmo is not aware of any disputed conclusions at the time of this writing. Both the CEQA Guidelines and case law clearly provide standards for treating disagreement among experts. Where evidence and opinions conflict on an issue concerning the environment, and the lead agency knows of these controversies in advance, the EIR must acknowledge the controversies, summarize conflicting opinions of the experts, and include sufficient information to allow the public and decision makers to make an informed judgment about environmental consequences of the General Plan 2045.

POTENTIALLY CONTROVERSIAL ISSUES

It is also possible that evidence will be presented during the 45-day statutory Draft EIR public review period that may create disagreement. Decision makers would consider this evidence during the public hearing process.

In rendering a decision on a project where there is disagreement among experts, decision makers are not obligated to select the most environmentally preferable viewpoint. Decision makers are vested with the ability to choose whatever viewpoint is preferable and need not resolve a dispute among experts. In their proceedings, decision makers must consider comments received concerning adequacy of the Draft EIR and address any objections raised in these comments. However, decision makers are not obligated to follow any directives, recommendations, or suggestions presented in comments on the Draft EIR, and can certify the Final EIR without needing to resolve disagreements among experts.

ES-9. PUBLIC REVIEW OF THE DRAFT EIR

Upon completion of the Draft EIR for the General Plan 2045, the Town of San Anselmo filed a Notice of Completion (NOC) with the State Clearinghouse (SCH) of the Governor's Office of Land Use and Climate Innovation to begin the public review period (PRC Section 21161) on July 24, 2026.

Concurrent with the NOC, the Town provided a public Notice of Availability (NOA) for the Draft EIR, and invited comment from the general public, agencies, organizations, and other interested parties, consistent with CEQA requirements. The NOA was filed with the State Clearinghouse (SCH# 2025100912). The Draft EIR is available for public review from July 24, 2026 through September 8, 2026.

Upon completion of the public review period, written responses to all significant environmental issues raised will be prepared and made available for review by the commenting agencies at least 10 days prior to the public hearing before the San Anselmo Town Council, at which the certification of the Final EIR will be considered. Comments received and the responses to comments will be included as part of the record for consideration by decision makers for the General Plan 2045.

Table ES-4 provides a summary of the General Plan 2045's impacts, mitigation measures if any, and level of significance.

TABLE ES-4: PROJECT IMPACTS AND IMPACT CONCLUSIONS

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
3.1 AESTHETICS AND VISUAL RESOURCES			
Impact 3.1-1: General Plan implementation would not have a substantial adverse effect on a scenic vista	Less than Significant	None Required	Less than Significant
Impact 3.1-2: General Plan implementation would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway	Less than Significant	None Required	Less than Significant
Impact 3.1-3: General Plan implementation would not, in a non-urbanized area, substantially degrade the existing visual character or quality of public views of the site and its surroundings	Less than Significant	None Required	Less than Significant
Impact 3.1-4: General Plan implementation could result in the creation of new sources of nighttime lighting and daytime glare	Less than Significant	None Required	Less than Significant
Impact 3.1-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to aesthetics and scenic resources	Less than Significant	None Required	Less than Significant
3.2 AGRICULTURAL AND FOREST RESOURCES			
Impact 3.2-1: General Plan implementation would not result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to non-agricultural use	Less than Significant	None Required	Less than Significant
Impact 3.2-2: General Plan implementation would not result in conflicts with existing zoning for agricultural use, or a Williamson Act contract	Less than Significant	None Required	Less than Significant

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
Impact 3.2-3: General Plan implementation would not involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use	Less than Significant	None Required	Less than Significant
Impact 3.2-4: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to agricultural or forestry resources.	Less than Significant	None Required	Less than Significant
3.3 AIR QUALITY			
Impact 3.3-1: General Plan 2045 implementation would not conflict with or obstruct implementation of the applicable air quality plan	Less than Significant	None Required	Less than Significant
Impact 3.3-2: General Plan 2045 implementation could result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard	Less than Significant	None Required	Less than Significant
Impact 3.3-3: General Plan 2045 implementation would expose sensitive receptors to substantial pollutant concentrations	Less than Significant	None Required	Less than Significant
Impact 3.3-4: General Plan 2045 implementation would not result in other emissions (such as those leading to odors adversely affecting a substantial number of people)	Less than Significant	None Required	Less than Significant
Impact 3.3-5: General Plan 2045 implementation, in combination with other cumulative development, would result in adverse impacts on air quality.	Less than Significant	None Required	Less than Significant

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
3.4 BIOLOGICAL RESOURCES			
Impact 3.4-1: General Plan implementation could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service	Less than Significant	None Required	Less than Significant
Impact 3.4-2: General Plan implementation could have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service	Less than Significant	None Required	Less than Significant
Impact 3.4-3: General Plan implementation could have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means	Less than Significant	None Required	Less than Significant
Impact 3.4-4: General Plan implementation would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites	Less than Significant	None Required	Less than Significant
Impact 3.4-5: The General Plan would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance	Less than Significant	None Required	Less than Significant
Impact 3.4-6: General Plan implementation would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan	Less than Significant	None Required	Less than Significant

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
Impact 3.4-7: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to biological resources.	Less than Significant	None Required	Less than Significant
3.5 CULTURAL AND TRIBAL CULTURAL RESOURCES			
Impact 3.5-1: General Plan implementation could cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5	Less than Significant	None Required	Less than Significant
Impact 3.5-2: General Plan implementation could cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5	Less than Significant	None Required	Less than Significant
Impact 3.5-3: Implementation of the General Plan could lead to the disturbance of any human remains	Less than Significant	None Required	Less than Significant
Impact 3.5-4: Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or a resource determined by the lead agency	Less than Significant	None Required	Less than Significant
Impact 3.5-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to cultural or tribal cultural resources.	Less than Significant	None Required	Less than Significant
3.6 ENERGY			
Impact 3.6-1: Project implementation would not result in the wasteful, inefficient, or unnecessary consumption of energy resources.	Less than Significant	None Required	Less than Significant.

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
Impact 3.6-2: General Plan implementation would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency	Less than Significant	None Required	Less than Significant
Impact 3.6-3: General Plan implementation, in combination with cumulative development, would not result in the wasteful, inefficient, or unnecessary consumption of energy resources or conflict with or obstruct a state or local plan for renewable energy or energy efficiency	Less than Significant	None Required	Less than Significant
3.7 GEOLOGY, SOILS, AND SEISMICITY			
Impact 3.7-1: General Plan implementation has the potential to expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, or landslides.	Less than Significant	None Required	Less than Significant
Impact 3.7-2: General Plan implementation has the potential to result in substantial soil erosion or the loss of topsoil.	Less than Significant	None Required	Less than Significant
Impact 3.7-3: General Plan implementation has the potential to result in development located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse.	Less than Significant	None Required	Less than Significant
Impact 3.7-4: General Plan implementation has the potential to result in development on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property	Less than Significant	None Required	Less than Significant

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
Impact 3.7-5: General Plan implementation does not have the potential to have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.	Less than Significant	None Required	Less than Significant
Impact 3.7-6: General Plan implementation has the potential to directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.	Less than Significant	None Required	Less than Significant
Impact 3.7-7: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to geology, soils, or seismicity.	Less than Significant	None Required	Less than Significant
3.8 GREENHOUSE GASES AND CLIMATE CHANGE			
Impact 3.8-1: Project implementation could generate greenhouse gas emissions that could have a significant impact on the environment and could conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases	Less than Significant	None Required	Less than Significant
3.9 HAZARDS AND HAZARDOUS MATERIALS			
Impact 3.9-1: General Plan 2045 implementation has the potential to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, or through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment	Less than Significant	None Required	Less than Significant
Impact 3.9-2: General Plan 2045 implementation has the potential to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school	Less than Significant	None Required	Less than Significant

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
Impact 3.9-3: General Plan 2045 implementation has the potential to have projects located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5	Less than Significant	None Required	Less than Significant
Impact 3.9-4: General Plan 2045 implementation is not located within an airport land use plan, two miles of a public airport or public use airport, and would not result in a safety hazard for people residing or working in the project area	Less than Significant	None Required	Less than Significant
Impact 3.9-5: General Plan 2045 implementation has the potential to impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan	Less than Significant	None Required	Less than Significant
Impact 3.9-6: General Plan 2045 implementation has the potential to expose people or structures to a significant risk of loss, injury or death involving wildland fires	Less than Significant	None Required	Less than Significant
Impact 3.9-7: General Plan 2045 implementation, in combination with other cumulative development, would not result in adverse impacts to hazards and hazardous materials.	Less than Significant	None Required	Less than Significant
3.10 HYDROLOGY AND WATER QUALITY			
Impact 3.10-1: General Plan 2045 implementation would not violate water quality standards or waste discharge requirements or otherwise substantially degrade water quality or obstruct implementation of a water quality control plan	Less than Significant	None Required	Less than Significant
Impact 3.10-2: General Plan implementation would not result in the depletion of groundwater supplies or interfere substantially with groundwater recharge or conflict with a groundwater management plan.	Less than Significant	None Required	Less than Significant

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
Impact 3.10-3: General Plan implementation would not alter the existing drainage pattern in a manner which would result in substantial erosion, siltation, flooding, impeded flows, or polluted runoff	Less than Significant	None Required	Less than Significant
Impact 3.10-4: General Plan implementation would not release pollutants due to project inundation by flood hazard, tsunami, or seiche	Less than Significant	None Required	Less than Significant
Impact 3.10-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to hydrology and water quality.	Less than Significant	None Required	Less than Significant
3.11 LAND USE, PLANNING AND POPULATION/HOUSING			
Impact 3.11-1: General Plan 2045 implementation would not physically divide an established community	Less than Significant	None Required	Less than Significant
Impact 3.11-2: General Plan 2045 implementation would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect	Less than Significant	None Required	Less than Significant
Impact 3.11-3: General Plan 2045 implementation would not induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)	Less than Significant	None Required	Less than Significant
Impact 3.11-4: General Plan 2045 implementation would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere	Less than Significant	None Required	Less than Significant
Impact 3.11-5: General Plan 2045 implementation, in combination with other cumulative development, would not result in adverse impacts to land use, population, or housing.	Less than Significant	None Required	Less than Significant

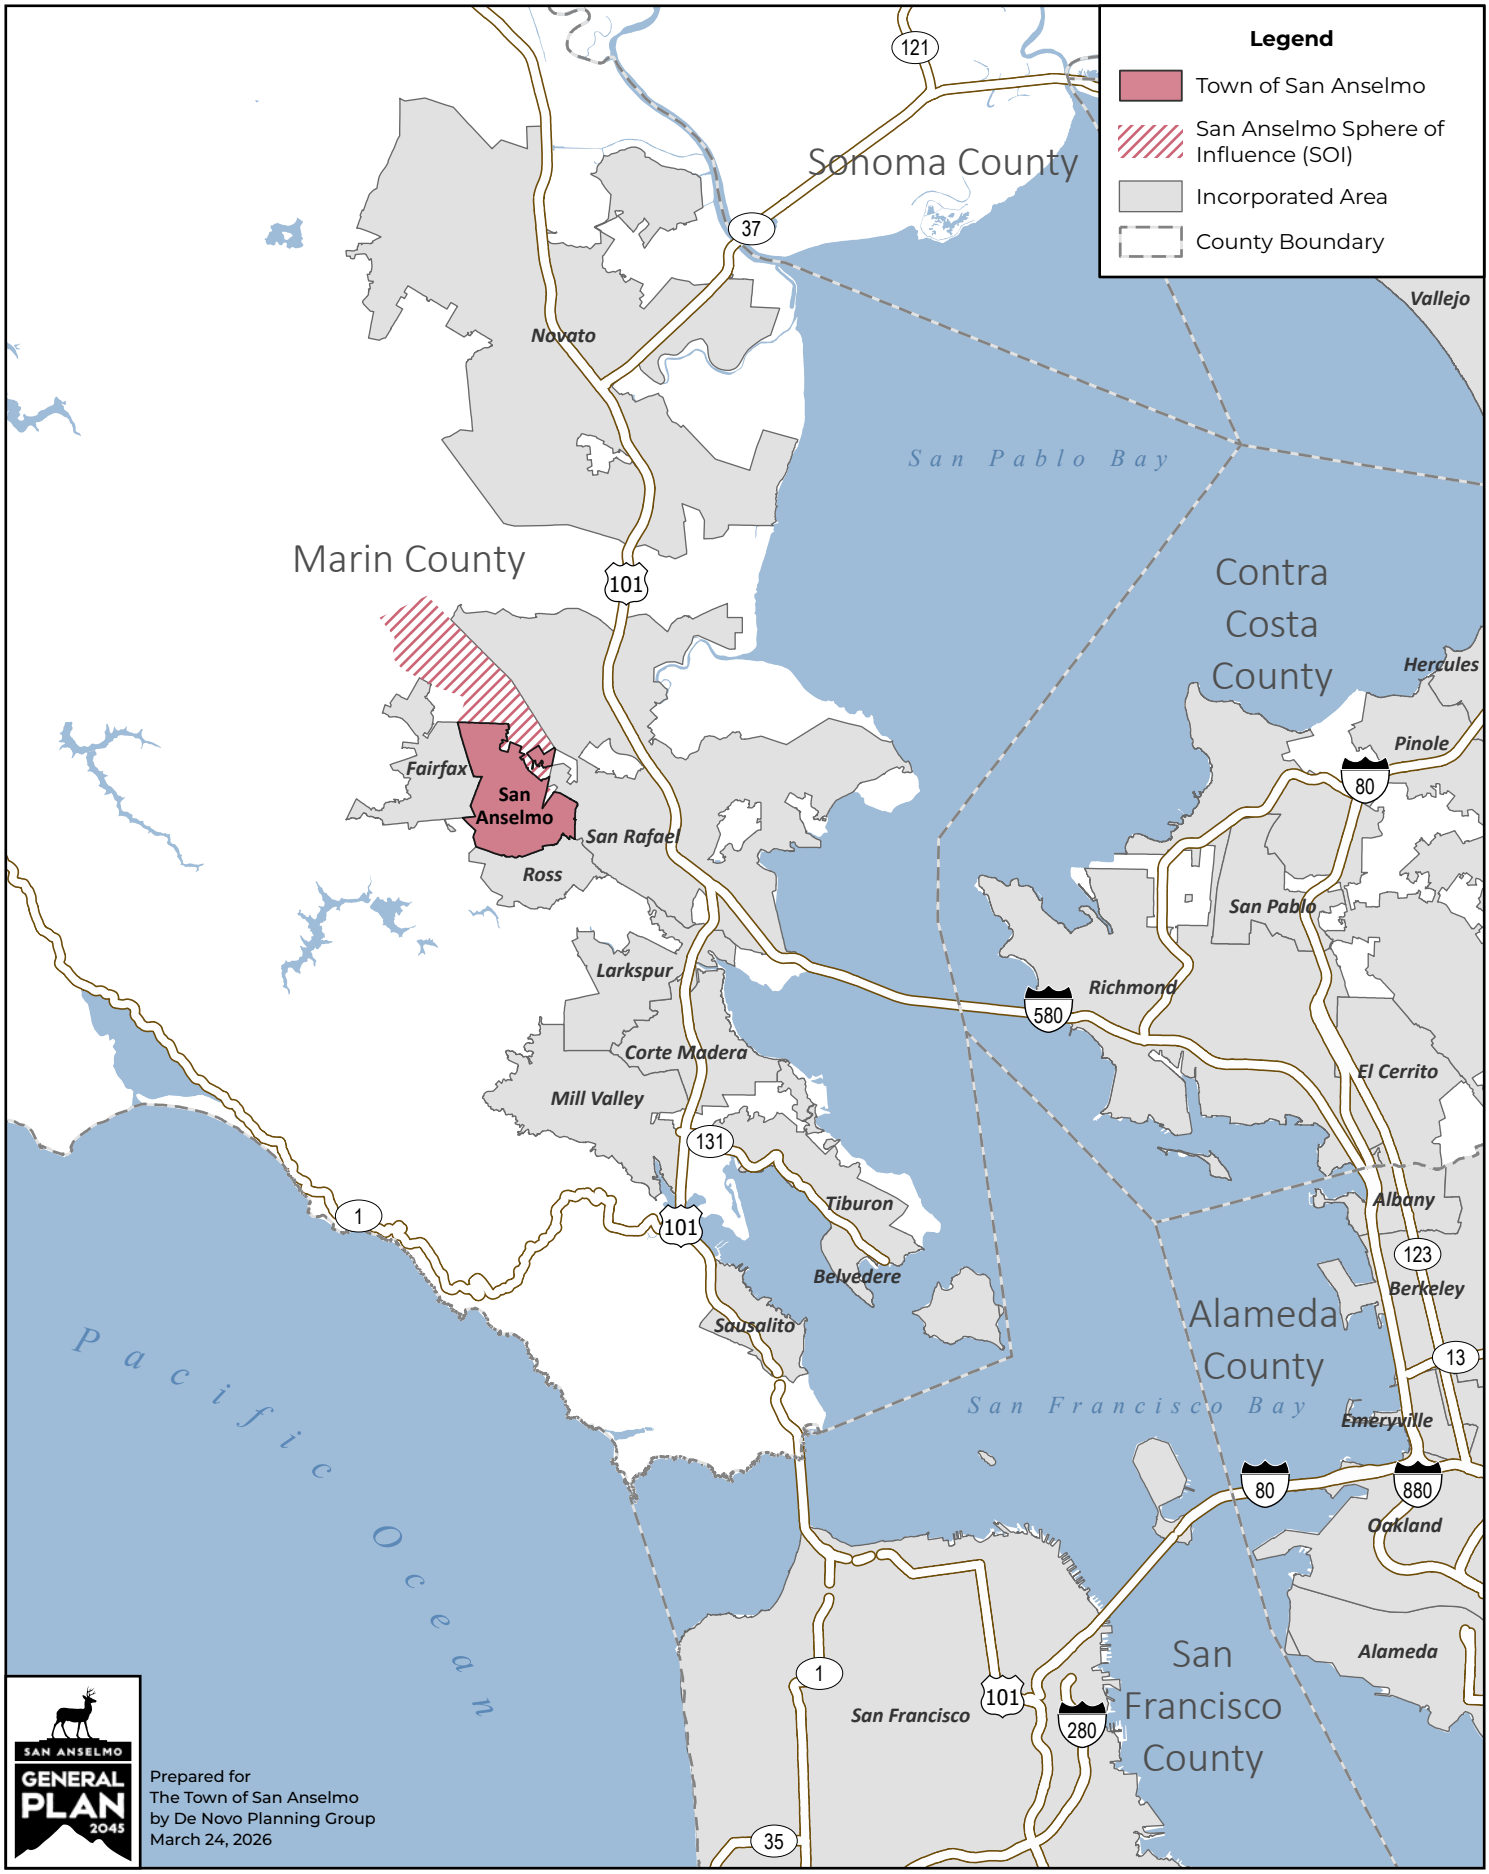

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
3.12 NOISE			
Impact 3.12-1: General Plan implementation could result in exposure to significant traffic noise sources	Less than Significant	None Required	Less than Significant
Impact 3.12-2: Implementation of the General Plan could result in the generation of excessive stationary noise sources	Less than Significant	None Required	Less than Significant
Impact 3.12-3: General Plan implementation may result in an increase in construction noise sources	Less than Significant	None Required	Less than Significant
Impact 3.12-4: General Plan implementation may result in construction vibration	Less than Significant	None Required	Less than Significant
Impact 3.12-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts related to noise	Less than Significant	None Required	Less than Significant
3.13 PUBLIC SERVICES AND RECREATION			
Impact 3.13-1: General Plan implementation could result in adverse physical impacts on the environment associated with the need for new fire protection facilities or the need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts and the provision of public services	Less than Significant	None Required	Less than Significant
Impact 3.13-2: General Plan implementation could result in adverse physical impacts on the environment associated with the need for new police protection facilities or the need for new or physically altered police protection facilities, the construction of which could cause significant environmental impacts and the provision of public services	Less than Significant	None Required	Less than Significant

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
Impact 3.13-3: General Plan implementation could result in adverse physical impacts on the environment associated with the need for new school facilities or the need for new or physically altered school facilities, the construction of which could cause significant environmental impacts and the provision of public services	Less than Significant	None Required	Less than Significant
Impact 3.13-4: General Plan implementation could result in adverse physical impacts on the environment associated with the need for new park facilities or the need for new or physically altered park facilities, the construction of which could cause significant environmental impacts and the provision of public services	Less than Significant	None Required	Less than Significant
Impact 3.13-5: General Plan implementation could result in adverse physical impacts on the environment associated with the need for other public facilities or the need for new or physically facilities, the construction of which could cause significant environmental impacts and the provision of public services	Less than Significant	None Required	Less than Significant
Impact 3.13-6: General Plan implementation may result in adverse physical impacts associated with the deterioration of existing parks and recreation facilities or the construction of new parks and recreation facilities	Less than Significant	None Required	Less than Significant
Impact 3.13-7: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to public services and recreation.	Less than Significant	None Required	Less than Significant

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
3.14 TRANSPORTATION AND CIRCULATION			
Impact 3.14-1: General Plan 2045 implementation would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)	Less than Significant	None Required	Less than Significant
Impact 3.14-2: General Plan 2045 implementation would not conflict with a program, plan, policy, or ordinance addressing the circulation system, including transit, bicycle, and pedestrian facilities	Less than Significant	None Required	Less than Significant
Impact 3.14-3: General Plan 2045 implementation would not increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)	Less than Significant	None Required	Less than Significant
Impact 3.14-4: General Plan 2045 implementation would not result in inadequate emergency access	Less than Significant	None Required	Less than Significant
Impact 3.14-5: General Plan 2045 implementation, in combination with other cumulative development, would not have an adverse impact on transportation and circulation	Less than Significant	None Required	Less than Significant
3.15 UTILITIES AND SERVICE SYSTEMS			
Impact 3.15-1: General Plan implementation would not result in insufficient water supplies available to serve the Town and reasonably foreseeable future development during normal, dry, and multiple-dry years.	Less than Significant	None Required	Less than Significant
Impact 3.15-2: General Plan implementation may require or result in the construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects	Less than Significant	None Required	Less than Significant

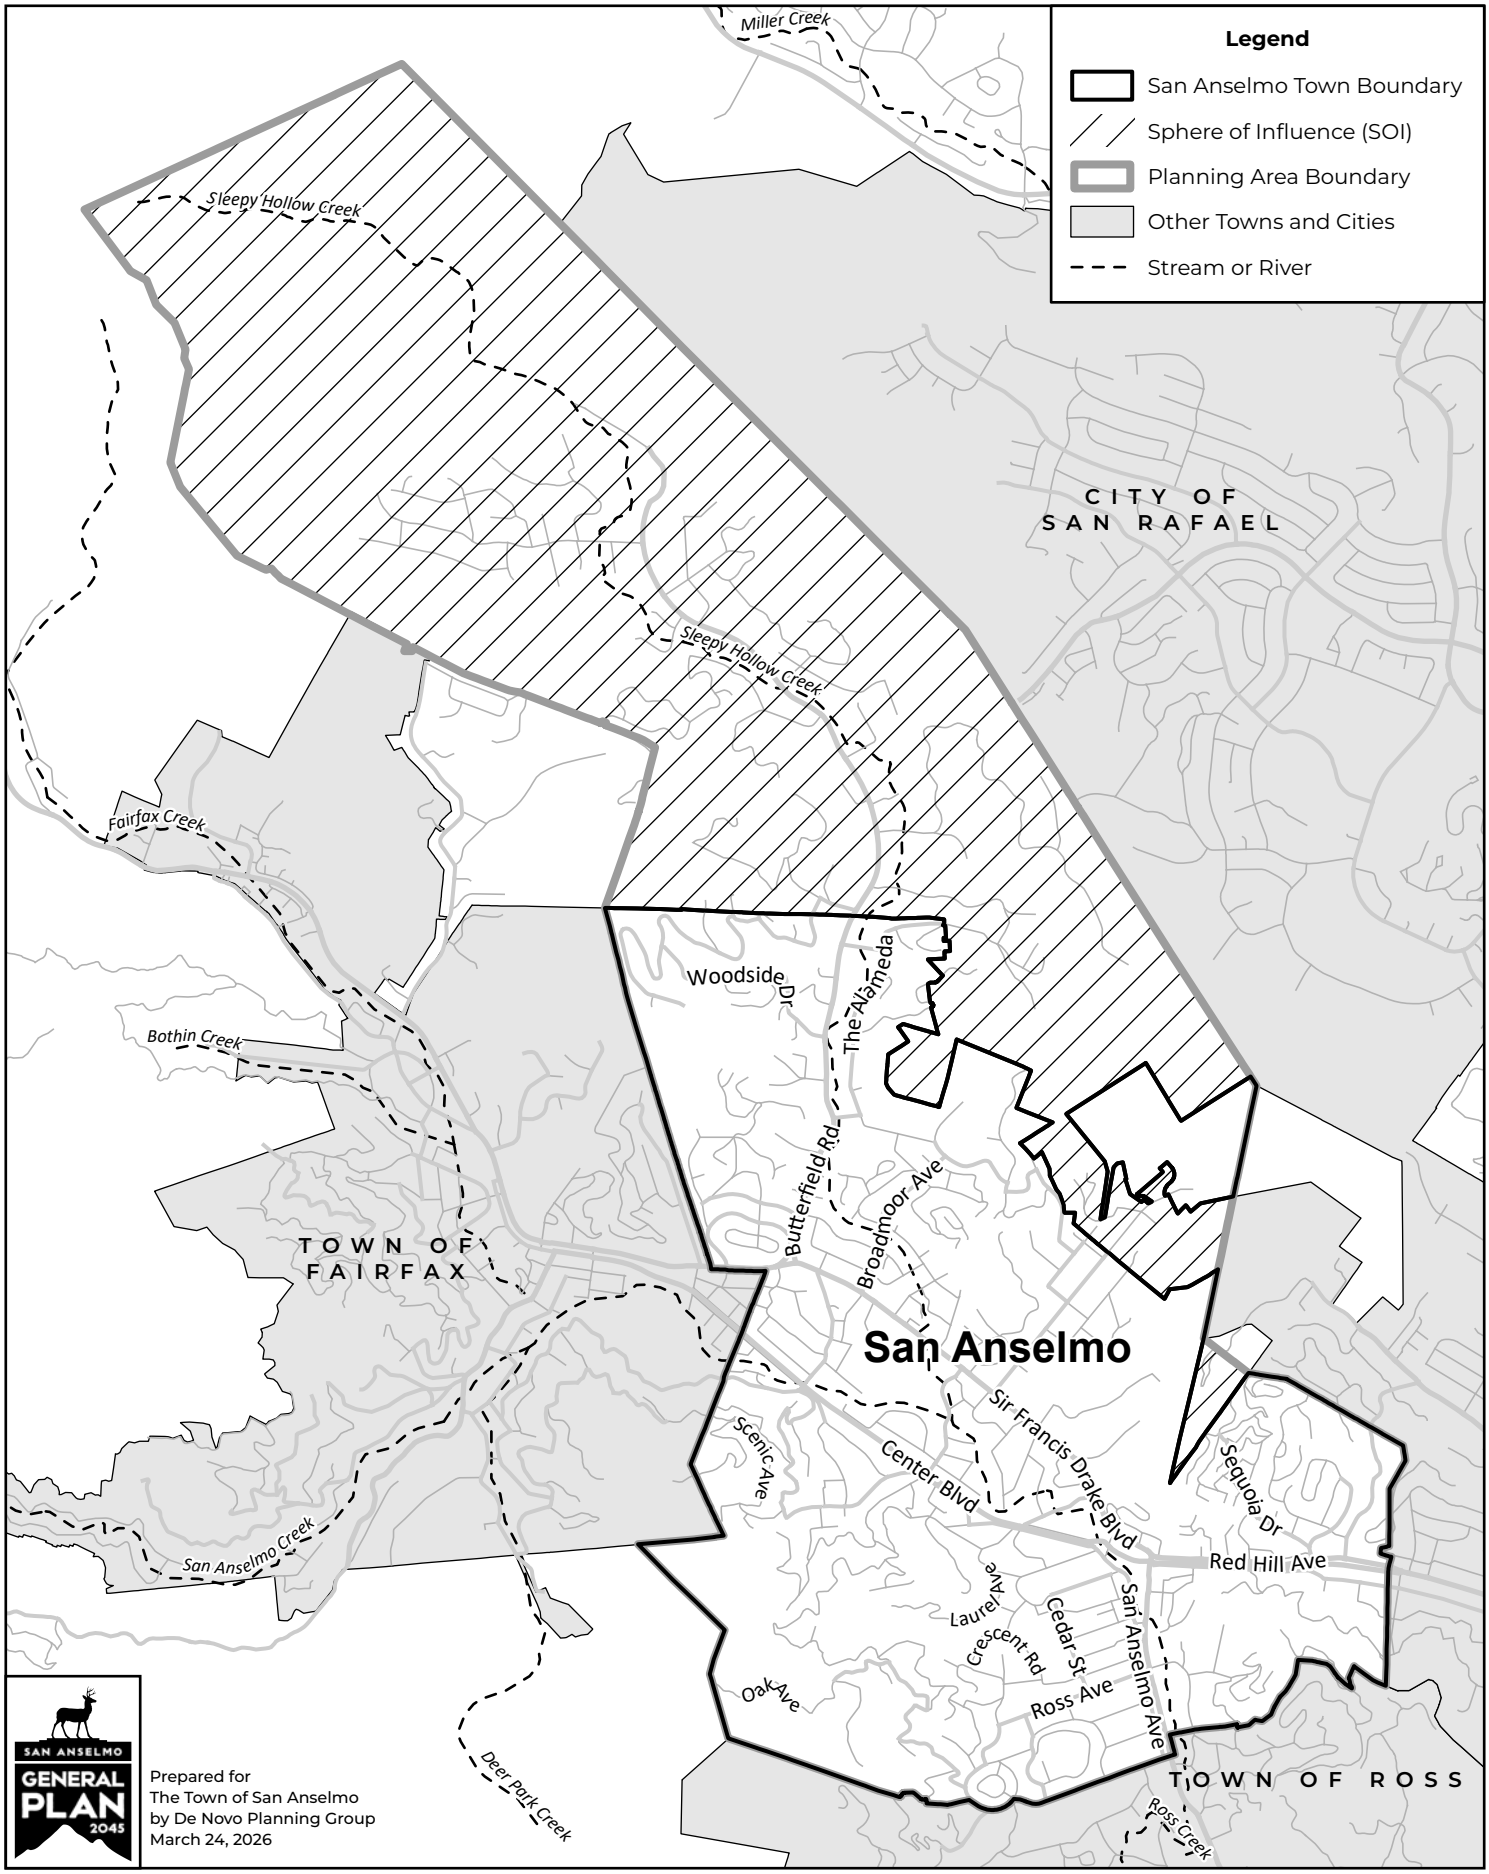

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
Impact 3.15-3: General Plan implementation has the potential to result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments	Less than Significant	None Required	Less than Significant
Impact 3.15-4: General Plan implementation may require or result in the relocation or construction of new or expanded wastewater facilities, the construction or relocation of which could cause significant environmental effects	Less than Significant	None Required	Less than Significant
Impact 3.15-5: General Plan implementation may require or result in the relocation or construction of new or expanded storm water drainage facilities, the construction or relocation of which could cause significant environmental effects	Less than Significant	None Required	Less than Significant
Impact 3.15-6: General Plan implementation would comply with federal, state, and local management and reduction statutes and regulations related to solid waste, and would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals	Less than Significant	None Required	Less than Significant
Impact 3.15-7: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to utilities and service systems.	Less than Significant	None Required	Less than Significant
3.16 WILDFIRE			
Impact 3.16-1: Implementation of the General Plan 2045 would not substantially impair an adopted emergency response plan or emergency evacuation plan.	Less than Significant	None Required	Less than Significant

IMPACTS	LEVEL OF SIGNIFICANCE BEFORE MITIGATION	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION
Impact 3.16-2: General Plan implementation would not, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.	Less than Significant	None Required	Less than Significant
Impact 3.16-3: General Plan implementation would not require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment.	Less than Significant	None Required	Less than Significant
Impact 3.16-4: General Plan implementation would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.	Less than Significant	None Required	Less than Significant
Impact 3.16-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to wildfire.	Less than Significant	None Required	Less than Significant

GENERAL PLAN LAND USE MAP

1.1 INTRODUCTION

In 2024, the Town of San Anselmo (Town) began a multi-year process to update the Town's General Plan. State law requires every city, town, and county in California to prepare and maintain a planning document called a general plan. A general plan is a "constitution" or "blueprint" for the future physical development of a county or city. As part of the San Anselmo General Plan 2045 Update process, a General Plan Existing Conditions Report was prepared to establish a baseline of existing conditions in the town.

The proposed General Plan 2045 Update includes a framework of goals, policies, and actions that will guide the community toward its common vision. The General Plan 2045 Update is supported with a variety of maps, including a Land Use Map and Circulation Diagram.

GENERAL PLAN 2045 UPDATE

The San Anselmo General Plan 2045 Update (General Plan 2045 or proposed project) is the overarching policy document that guides land use, housing, transportation, open space, public safety, community services, and other policy decisions throughout San Anselmo. The General Plan includes the seven elements mandated by State law, to the extent that they are relevant locally, including: Circulation, Conservation, Housing, Land Use, Noise, Open Space, and Safety. The Town may also address other topics of interest; this General Plan includes elements related to Economic Development; Community Services and Facilities; Cultural, Tribal, and Historic Resources; and Sustainability and Climate Change. The General Plan sets out the goals, policies, and actions in each of these areas, serves as a policy guide for how the Town will make key planning decisions in the future, and guides how the Town will interact with Marin County, surrounding cities, and other local, regional, State, and Federal agencies.

The General Plan contains the goals and policies that will guide future decisions within the Town and its Sphere of Influence (SOI). It also identifies implementation programs, in the form of actions, that will ensure the goals and policies in the General Plan are carried out. As part of the General Plan 2045, the Town and the consultant team prepared several supporting documents that serve as the building blocks for the General Plan and analyze the environmental impacts associated with implementing the General Plan. Outreach efforts and supporting documents associated with the General Plan 2045 are summarized in Chapter 2.0, Project Description.

GENERAL PLAN ENVIRONMENTAL IMPACT REPORT

An EIR responds to the requirements of the California Environmental Quality Act (CEQA) as set forth in Sections 15126, 15175, and 15176 of the CEQA Guidelines. The Planning Commission and Town Council will use the EIR during the General Plan 2045 process in order to understand the potential environmental implications associated with implementing the General Plan. This EIR was prepared concurrently with the General Plan policy document in order to facilitate the development of a General Plan that is largely self-mitigating. In other words, as environmental impacts associated with the new General Plan, including the Land Use Map, were identified; policies and actions were

incorporated into the General Plan policy document in order to reduce or avoid potential environmental impacts.

1.2 PURPOSE OF THE EIR

The Town of San Anselmo, as lead agency, determined that the San Anselmo General Plan 2045 is a "project" within the meaning of CEQA. CEQA requires the preparation of an EIR prior to approving any project that may have a significant impact on the environment. For the purposes of CEQA, the term "project" refers to the whole of an action, which has the potential for resulting in a direct physical change or a reasonably foreseeable indirect physical change in the environment (CEQA Guidelines Section 15378[a]).

This Draft EIR has been prepared according to CEQA requirements to evaluate the potential environmental impacts associated with the implementation of the General Plan 2045. A copy of the Public Draft General Plan is located on the San Anselmo General Plan 2045 website, at www.sananselmogp2045.org/. The Draft EIR also discusses alternatives to the General Plan and methods to offset, minimize, or otherwise avoid potentially significant environmental impacts. This Draft EIR has been prepared in accordance with CEQA, California Resources Code Section 21000 et seq.; and the Guidelines for the California Environmental Quality Act (California Code of Regulations, Title 14, Chapter 3).

An EIR must disclose the expected direct and indirect environmental impacts associated with a project, including impacts that cannot be avoided, growth-inducing effects, impacts found not to be significant, and significant cumulative impacts, as well as identify mitigation measures and alternatives to the proposed project that could reduce or avoid its adverse environmental impacts. CEQA requires government agencies to consider and, where feasible, minimize significant environmental impacts of proposed development.

1.3 TYPE OF EIR

The CEQA Guidelines identify several types of EIRs, each applicable to different project circumstances. This EIR has been prepared as a Program EIR pursuant to CEQA Guidelines Section 15168. Section 15168 states:

“A program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

1) Geographically;
2) As logical parts in the chain of contemplated actions;
3) In connection with issuance of rules, regulations, plans or other general criteria to govern the conduct of a continuing program; or
4) As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.”

The program-level analysis considers the broad environmental effects of the proposed project. This EIR will be used to evaluate subsequent projects and activities under the proposed project. This EIR is intended to provide the information and environmental analysis necessary to assist public agency decisionmakers in considering approval of the proposed project, but not to the level of detail to consider approval of subsequent development projects that may occur after adoption of the General Plan.

Additional environmental review under CEQA may be required for subsequent projects and would be generally based on the subsequent project's consistency with the General Plan and the analysis in this EIR, as required under CEQA. It may be determined that some future projects or infrastructure improvements may be exempt from environmental review. When individual subsequent projects or activities under the General Plan are proposed, the lead agency that would approve and/or implement the individual project will examine the projects or activities to determine whether their effects were adequately analyzed in this program EIR (CEQA Guidelines Section 15168). If the projects or activities would have no effects beyond those disclosed in this EIR, no further CEQA compliance would be required.

1.4 INTENDED USES OF THE EIR

The Town of San Anselmo, as the lead agency, has prepared this EIR to provide the public and responsible and trustee agencies with an objective analysis of the potential environmental impacts resulting from adoption of the General Plan 2045 and subsequent implementation of projects consistent with the General Plan. The environmental review process enables interested parties to evaluate the proposed project in terms of its environmental consequences, to examine and recommend methods to eliminate or reduce potential adverse impacts, and to consider a reasonable range of alternatives to the project. While CEQA requires that consideration be given to avoiding adverse environmental effects, the lead agency must balance adverse environmental effects against other public objectives, including the economic and social benefits of a project, in determining whether a project should be approved.

This EIR will be used as the primary environmental document to evaluate all subsequent planning and permitting actions associated with the General Plan. Subsequent actions that may be associated with the General Plan are identified in Chapter 2.0, Project Description. This EIR may also be used by other agencies within Marin County.

1.5 KNOWN RESPONSIBLE AND TRUSTEE AGENCIES

The term "Responsible Agency" includes all public agencies other than the Lead Agency that have discretionary approval power over the project or an aspect of the project (CEQA Guidelines Section 15381). For the purpose of CEQA, a "Trustee" agency has jurisdiction by law over natural resources that are held in trust for the people of the State of California (CEQA Guidelines Section 15386). While no Responsible Agencies or Trustee Agencies are responsible for approvals associated with adoption of the San Anselmo General Plan 2045, implementation of future projects within San Anselmo may require permits and approvals from such agencies, which may include the following:

- California Department of Fish and Wildlife (CDFW);
- Bay Area Air Quality Management District (BAAD);
- California Department of Transportation (Caltrans);
- California Department of Toxic Substances Control (DTSC);
- Regional Water Quality Control Board (RWQCB);
- U.S. Army Corps of Engineers (USACE);
- U.S. Environmental Protection Agency (USEPA);
- U.S. Fish and Wildlife Service (USFWS);
- Metropolitan Transportation Commission (MTC);
- California Department of Resources, Recycling, and Recovery (Cal Recycle);
- California Office of Historic Preservation (OHP);
- California Department of Conservation (DOC);
- Marin Water; and
- Ross Valley Sanitary District.

1.6 ENVIRONMENTAL REVIEW PROCESS

The review and certification process for the EIR has involved, or will involve, the following general procedural steps:

NOTICE OF PREPARATION

The Town of San Anselmo circulated a Notice of Preparation (NOP) of an EIR for the proposed project on October 20, 2025, to trustee and responsible agencies, the State Clearinghouse, and the public. A scoping meeting was held on November 13, 2025, in person at Town Hall and via a web-based video meeting. No public or agency comments on the NOP related to the EIR analysis were presented or submitted during the scoping meeting. However, during the 30-day public review period for the NOP, which ended on November 19, 2025, three written comment letters were received on the NOP. A summary of the NOP comments is provided later in this chapter. The NOP and all comments received on the NOP are presented in Appendix A.

DRAFT EIR

This document constitutes the Draft EIR. The Draft EIR contains a description of the project, description of the environmental setting, identification of the project's direct and indirect impacts on the environment and mitigation measures for impacts found to be significant, as well as an analysis of project alternatives, identification of significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. This Draft EIR identifies issues determined to have no impact or a less-than-significant impact and provides detailed analysis of potentially significant and significant impacts. Comments received in response to the NOP were considered in preparing the analysis in this EIR. Upon completion of the Draft EIR, the Town of San Anselmo will file the Notice of Completion (NOC) with the State Clearinghouse of the Governor's Office of Land Use and Climate Innovation to begin the public review period.

PUBLIC NOTICE/PUBLIC REVIEW

Concurrent with the NOC, the Town of San Anselmo will provide a public notice of availability for the Draft EIR, and invite comment from the general public, agencies, organizations, and other interested parties. Consistent with CEQA requirements, the review period for this Draft EIR is forty-five (45) days. Public comment on the Draft EIR will be accepted in written form. All comments or questions regarding the Draft EIR should be addressed to:

Heidi Scoble
Town of San Anselmo
Planning Department
525 San Anselmo Avenue
San Anselmo, CA 94960
E-mail: generalplanupdate@sananselmo.gov

RESPONSE TO COMMENTS/FINAL EIR

Following the public review period, a Final EIR will be prepared. The Final EIR will respond to written comments received during the public review period.

CERTIFICATION OF THE EIR/PROJECT CONSIDERATION

The San Anselmo Town Council will review and consider the Final EIR. If the Town finds that the Final EIR is "adequate and complete," the Town Council may certify the Final EIR in accordance with CEQA. As set forth by CEQA Guidelines Section 15151, the standards of adequacy require an EIR to provide a sufficient degree of analysis to allow decisions to be made regarding the proposed project that intelligently take account of environmental consequences.

Upon review and consideration of the Final EIR, the Town Council may take action to approve, revise, or deny the project. If the EIR determines that the project would result in significant adverse impacts to the environment that cannot be mitigated to less than significant levels, the Town Council would be required to adopt a statement of overriding considerations as well as written findings in accordance with State CEQA Guidelines Sections 15091 and 15093. If there are no significant and unavoidable impacts, a statement of overriding considerations would not be required. If additional mitigation measures are required (beyond the General Plan policies and actions that reduce potentially significant impacts, as identified throughout this EIR), a Mitigation Monitoring and Reporting Program (MMRP) would also be adopted in accordance with Public Resources Code Section 21081.6(a) and CEQA Guidelines Section 15097 for mitigation measures that have been incorporated into or imposed upon the project to reduce or avoid significant effects on the environment. The MMRP would be designed to ensure that these measures are carried out during project implementation, in a manner that is consistent with the EIR. If there are no mitigation measures required, then an MMRP would not be needed and would not be prepared.

1.7 ORGANIZATION AND SCOPE

Sections 15122 through 15132 of the State CEQA Guidelines identify the content requirements for Draft and Final EIRs. An EIR must include a description of the environmental setting, an environmental impact analysis, mitigation measures for any significant impacts, alternatives, significant irreversible environmental changes, growth-inducing impacts, and cumulative impacts. The EIR reviews environmental and planning documentation developed for the project, environmental and planning documentation prepared for recent projects located within Town of San Anselmo, and responses to the Notice of Preparation (NOP).

This Draft EIR is organized in the following manner:

EXECUTIVE SUMMARY

The Executive Summary summarizes the characteristics of the proposed project, known areas of controversy and issues to be resolved, and provides a concise summary matrix of the project's environmental impacts and possible mitigation measures. This chapter identifies alternatives that reduce or avoid at least one significant environmental effect of the proposed project.

CHAPTER 1.0 – INTRODUCTION

Chapter 1.0 briefly describes the proposed project, the purpose of the environmental evaluation, identifies the lead, trustee, and responsible agencies, summarizes the process associated with preparation and certification of an EIR, identifies the scope and organization of the Draft EIR, and summarizes comments received on the NOP.

CHAPTER 2.0 – PROJECT DESCRIPTION

Chapter 2.0 provides a detailed description of the proposed project, including the location, intended objectives, background information, the physical and technical characteristics, including the decisions subject to CEQA, subsequent projects and activities, and a list of related agency action requirements.

CHAPTER 3.0 – ENVIRONMENTAL SETTING, IMPACTS, AND MITIGATION MEASURES

Chapter 3.0 contains an analysis of environmental topic areas as identified below. Each subchapter addressing a topical area is organized as follows:

Environmental Setting. A description of the existing environment as it pertains to the topical area.

Regulatory Setting. A description of the regulatory environment that may be applicable to the project.

Impacts and Mitigation Measures. Identification of the thresholds of significance by which impacts are determined, a description of project-related impacts associated with the environmental topic, identification of appropriate mitigation measures, and a conclusion as to the significance of each impact.

The following environmental topics are addressed in this section:

Aesthetics and Visual Resources
Agricultural and Forest Resources
Air Quality
Biological Resources
Cultural and Tribal Cultural Resources
Energy
Geology, Soils, and Seismicity
Greenhouse Gas Emissions and Climate Change
Hazards and Hazardous Materials
Hydrology and Water Quality
Land Use and Planning/Population and Housing
Mineral Resources
Noise
Public Services and Recreation
Transportation
Utilities and Service Systems
Wildfire

CHAPTER 4.0 – OTHER CEQA-REQUIRED TOPICS

Chapter 4.0 evaluates and describes the following CEQA required topics: impacts considered less-than-significant, significant and irreversible impacts, growth-inducing effects, cumulative, and significant and unavoidable environmental effects.

CHAPTER 5.0 – ALTERNATIVES

Chapter 5.0 provides a comparative analysis between the merits of the proposed project and the selected alternatives. State CEQA Guidelines Section 15126.6 requires that an EIR describe a range of reasonable alternatives to the project, which could feasibly attain the basic objectives of the project and avoid and/or lessen any significant environmental effects of the project.

CHAPTER 6.0 – REPORT PREPARERS

Chapter 6.0 lists all authors and agencies that assisted in the preparation of the Draft EIR, by name, title, and company or agency affiliation.

APPENDICES

This section includes all notices and other procedural documents pertinent to the Draft EIR, as well as technical material prepared to support the analysis.

1.8 COMMENTS RECEIVED ON THE NOTICE OF PREPARATION

The Town received three comment letters on the NOP. Copies of these letters are provided in Appendix A of this Draft EIR and the comments are summarized below.

- Native American Heritage Commission, Matthew Lin, Cultural Resource Analyst, October 21, 2025: Recommended consultation with Native American tribes that are traditionally and culturally affiliated with the geographic area. Also provided a procedural overview of SB 18 and AB 52.
- California Department of Fish and Wildlife, Erin Chappell, Regional Manager, Bay Delta Region, November 13, 2025: Identified CDFW's role as a Trustee Agency and as a Responsible Agency. Also provided guidance on relevant regulatory requirements, recommended methods for the analysis of project impacts on biological resources, and suggested potential mitigation measures for limiting or avoiding potential impacts.
- Richard Berkson, November 17, 2025: Recommended that the EIR evaluate potential effects to unincorporated areas immediately adjacent to the town. Further requested consideration of potential new development in the Town's SOI area.

California Government Code Section 65300 et seq. requires all counties and cities to prepare and maintain a general plan for the long-term growth, development, and management of the land within the jurisdiction's planning boundaries. The general plan acts as a "constitution" for development and is the jurisdiction's lead legal document in relation to growth, development, and resource management issues. Development regulations (e.g., zoning and subdivision standards) are required by law to be consistent with the general plan.

General plans must address a broad range of topics, including, at a minimum, the following mandatory elements: land use, circulation, housing, conservation, open space, noise, and safety. General plans must also address the topics of environmental justice and climate adaptation and resiliency planning, either as separate elements or as part of other required elements. At the discretion of each jurisdiction, the general plan may combine these elements and may add optional elements relevant to the physical features of the jurisdiction.

The California Government Code also requires that a general plan be comprehensive, internally consistent, and plan for the long term. The general plan should be clearly written, easy to administer, and available to all those concerned with the community's development.

State planning and zoning law (California Government Code Section 65000 et seq.) establishes that zoning ordinances are required to be consistent with the general plan and any applicable specific plans, area plans, master plans, and other related planning documents. When amendments to the general plan are made, corresponding changes in the zoning ordinance may be required within a reasonable time to ensure consistency between the revised land use designations in the general plan (if any) and the permitted uses or development standards of the zoning ordinance (Government Code Section 65860, subd. [c]).

2.0.1 BACKGROUND AND OVERVIEW

GENERAL PLAN UPDATE PROCESS

The Town was incorporated in April 1907. The Town of San Anselmo last comprehensively adopted its General Plan in 1975, with more recent targeted updates to the Land Use, Circulation, and Open Space Elements in 1988. In November 2023, the Town issued a request for proposals (RFP) inviting bids from qualified consulting firms to assist the Town in the preparation of a comprehensive update to the General Plan.

The process to update the San Anselmo General Plan began in May 2024 and is scheduled to be completed with the adoption of the San Anselmo General Plan 2045 Update (General Plan 2045 or proposed project) by the Town Council in 2026. The San Anselmo General Plan 2045 was developed with extensive community input.

COMMUNITY OUTREACH

The Town actively sought out input from the community regarding community priorities, sustainability, economic development, community design, traffic and circulation, noise, parks, and open space. Public outreach was conducted through multiple channels and in several forums

including pop-up events, stakeholder meetings, online surveys, Town commission meetings, public workshops, General Plan Advisory Committee (GPAC) meetings, and Planning Commission meetings.

Outreach Objectives

The community outreach process sought to meaningfully engage the public and stakeholders. The General Plan update process was a community-wide effort to ensure that San Anselmo retains its distinctive sense of community while accommodating growth and encouraging positive change. It was a two-year planning process used to help define the community's shared values and explore a vision for the future. It was a public process, one that sought to engage the community as the General Plan was drafted and refined. To that end, the Town conducted a series of outreach events designed to:

- Gather meaningful input and feedback from the community at-large;
- Engage and empower community members in the visioning and planning process for their community;
- Provide an open and transparent process;
- Achieve broad demographic and geographic representation from community members and other stakeholders;
- Achieve an end product that has community support and ownership because community members feel that their voice has been heard;
- Develop easily understood informational materials that are culturally appropriate;
- Engage the community in a planning process that results in sustainable and implementable recommendations after the new general plan is adopted; and
- Involve stakeholders and the general public at key points with interactive participation that ranges from one-on-one activities to large scale community meetings and activities.

Outreach Events

A community outreach and public participation activities occurring prior to publication of this Draft EIR are summarized in **Table 2.0-1** and described below.

TABLE 2.0-1: COMMUNITY ENGAGEMENT EVENTS SUMMARY

DATE	*EVENT*	*TOPIC*
November 14, 2023	Town Council Meeting	Initiate General Plan Update (GPU)
April 23, 2024	Town Council Meeting	Authorize Contract for GPU
June 11, 2024	Town Council Meeting	Establishing General Plan Advisory Committee (GPAC)
May 22, 2024	Open Space Committee Meeting	Visioning and Issue Identification
June 5, 2024	Stakeholder Meeting with Local Schools and Churches	Visioning and Issue Identification
June 5, 2024	Stakeholder Meeting with Age-Friendly Living Advocates	Visioning and Issue Identification
June 7, 2024	Stakeholder Meeting with Youth and Families	Visioning and Issue Identification

DATE	*EVENT*	*TOPIC*
June 10, 2024	Stakeholder Meeting with Adjacent Jurisdictions	Visioning and Issue Identification
June 10, 2024	Stakeholder Meeting with Special Districts	Visioning and Issue Identification
June 11, 2024	Economic Development Committee Meeting	Visioning and Issue Identification
June 11, 2024	Stakeholder Meeting with Transportation Providers and Advocates	Visioning and Issue Identification
June 18, 2024	Parks & Recreation Commission Meeting	Visioning and Issue Identification
June 24, 2024	Climate Action Commission Meeting	Visioning and Issue Identification
July 2, 2024 through September 9, 2024	Town-Wide Survey	Setting Priorities Survey
July 12, 2024	Pop-Up Event at Live on the Avenue	Visioning and Issue Identification
July 17, 2024	Historical Commission Meeting	Visioning and Issue Identification
August 3, 2024	Pop-Up Event at Live on the Avenue	Visioning and Issue Identification
August 7, 2024	Bicycle & Pedestrian Advisory Committee Meeting	Visioning and Issue Identification
August 8, 2024	General Plan Advisory Committee Meeting	Visioning and Issue Identification
August 20, 2024	Racial Equity Committee Meeting	Visioning and Issue Identification
August 20, 2024	Economic Development Stakeholder Meeting #1	Visioning and Issue Identification
August 20, 2024	Economic Development Stakeholder Meeting #2	Visioning and Issue Identification
August 27, 2024	Economic Development Stakeholder Meeting #3	Visioning and Issue Identification
August 27, 2024	Economic Development Stakeholder Meeting #4	Visioning and Issue Identification
August 27, 2024	Economic Development Stakeholder Meeting #5	Visioning and Issue Identification
August 29, 2024	Economic Development Stakeholder Meeting #6	Visioning and Issue Identification
August 29, 2024	Economic Development Stakeholder Meeting #7	Visioning and Issue Identification
September 4, 2024	Economic Development Stakeholder Meeting #8	Visioning and Issue Identification
September 4, 2024	Economic Development Stakeholder Meeting #9	Visioning and Issue Identification
September 4, 2024	Economic Development Stakeholder Meeting #10	Visioning and Issue Identification

DATE	*EVENT*	*TOPIC*
September 6, 2024	Pop-Up Event at Live on the Avenue	Visioning and Issue Identification
September 12, 2024	General Plan Advisory Committee Meeting	Community Feedback and Vision Statement/Guiding Principles
September 18, 2024	Open Space Committee Meeting	Review of Example Open Space Goals, Policies, and Actions
September 27, 2024	Pop-Up Event at Live on the Avenue	Climate Change, Sustainability, and Resiliency
September 27, 2024 through November 29, 2024	Town-Wide Survey	Sustainability Survey
October 7, 2024	Planning Commission Meeting	Visioning and Issue Identification
October 10, 2024	Public Workshop on Zoom	Climate Change, Sustainability, and Resiliency
October 17, 2024	Infrastructure and Fiscal Monitoring Committee Meeting	Visioning and Issue Identification
October 22, 2024	Town Council Meeting	Visioning and Issue Identification
October 29, 2024	Racial Equity Committee Meeting	Review Example Diversity, Equity, Inclusion, and Belonging Goals, Policies, and Actions
November 20, 2024	Open Space Committee Meeting	Review Example Open Space Goals, Policies, and Actions
December 11, 2024	Pop-Up Event at Imagination Park	Commercial Districts: Economic Development and Community Design
December 12, 2024	General Plan Advisory Committee Meeting	Climate Change, Sustainability, and Resiliency
December 11, 2024 through February 5, 2025	Town-Wide Survey	Commercial Districts Survey
January 9, 2025	General Plan Advisory Committee Meeting	Review and Discuss Residential Hillside Land Use and Zoning Conflicts
January 23, 2025	Public Workshop at Town Hall	Commercial Districts: Economic Development and Community Design
February 13, 2025	General Plan Advisory Committee Meeting	Informational Update: Adopted Housing Element
February 13, 2025 through March 7, 2025	Town-Wide Survey	Circulation and Noise Survey
February 24, 2025	Climate Action Commission Meeting	Review Draft Goals, Policies, and Actions on Climate Change, Sustainability, and Resiliency
February 26, 2025	Public Workshop on Zoom	Circulation and Noise
March 7, 2025 through April 30, 2025	Town-Wide Survey	Community Programming, Parks, & Open Space Survey
March 8, 2025	Pop-Up Event at Softball Opening Day	Community Programming, Parks, and Open Spaces

DATE	*EVENT*	*TOPIC*
March 11, 2025	Economic Development Committee Meeting	Review Draft Goals, Policies, and Actions on Economic Development & Commercial Districts' Community Design
March 19, 2025	Open Space Committee Meeting	Community Programming, Parks, and Open Spaces
April 2, 2025	Open House at Robson-Harrington House	Community Programming, Parks, and Open Spaces
April 10, 2025	General Plan Advisory Committee Meeting	Commercial Districts: Economic Development + Community Design
April 15, 2025	Parks and Recreation Commission Meeting	Review Draft Goals, Policies, and Actions on Parks and Recreation
April 17, 2025	Bicycle & Pedestrian Advisory Committee Meeting	Review Draft Goals, Policies, and Actions on Circulation
April 19, 2025	Pop-Up Event at Wade Thomas Elementary School's Earth Day Fair	Community Programming, Parks, and Open Spaces
May 5, 2025	Planning Commission Meeting	Draft Land Use and Community Design Policies
May 8, 2025	General Plan Advisory Committee Meeting	Circulation and Noise
May 21, 2025	Open Space Committee Meeting	Review Draft Goals, Policies, and Actions on Open Space
June 12, 2025	General Plan Advisory Committee Meeting	Community Programming, Parks, and Open Spaces
July 10, 2025	General Plan Advisory Committee Meeting	Land Use Alternatives & Policies
August 11, 2025	GPAC Subcommittee	Community Programming, Parks, and Open Spaces
August 18, 2025	Planning Commission Meeting	Draft Land Use Map
September 11, 2025	General Plan Advisory Committee Meeting	Review of Draft Goals, Policies, and Actions
September 23, 2025	Town Council Meeting	Draft Land Use Map
October 6, 2025	Planning Commission Meeting	Review of Draft Goals, Policies, and Actions
Total	69 events	

SOURCE: TOWN OF SAN ANSELMO, 2025; DE NOVO PLANNING GROUP, 2025

Surveys and Workshops

The General Plan process began with a series of stakeholder interviews and a "Setting Priorities" survey to identify special characteristics about the town, key issues to address, and potential areas for change or improvement. Residents said they prized San Anselmo's natural environment and access to open space, downtown, lifestyle and community life, and location. The town's safety and security, parks and public gathering spaces, local businesses, and walkability and bikeability were

also noted. Key issues facing the town included: business viability, bike and pedestrian infrastructure, housing affordability, flooding, diversity, traffic, wildfire risk, and climate change.

A series of community workshops and an open house were held between October 2024 and April 2025. Workshops focused on specific topics of the General Plan as follows:

- Sustainability, Climate Change, and Resiliency
- Commercial Districts
- Circulation and Noise
- Community Programming, Recreation, Parks, Open Space and Conservation

Online and paper surveys were provided before and after each workshop to engage community members who could not participate during the scheduled event or who did attend but wanted to provide additional input.

GENERAL PLAN ADVISORY COMMITTEE

The General Plan update process was guided by a 15-member General Plan Advisory Committee (GPAC) that was appointed by the Town Council to provide input, feedback, and recommendations to the Town Council, Planning Commission, Town staff, and the consultant team. The GPAC included two Town Council members, two Planning Commissioners, and one representative each from the Climate Action Commission, Bicycle and Pedestrian Advisory Committee, Economic Development Committee, Open Space Committee, Parks and Recreation Commission, and Racial Equity Committee. Five at-large community members, including one high school student, were also appointed to the GPAC. The GPAC met 12 times over a period of three years.

COMMITTEES AND COMMISSIONS

The Town's committees and commissions, including the Climate Action Commission, Bicycle and Pedestrian Advisory Committee, Economic Development Committee, Historical Commission, Infrastructure and Fiscal Monitoring Committee, Open Space Committee, Parks and Recreation Commission, and Racial Equity Committee, provided initial input on issues to address in the General Plan, reviewed draft General Plan policies and actions related to their area of expertise, and provided recommendations.

GENERAL PLAN SUPPORTING DOCUMENTS

The General Plan 2045 is the policy document that serves as the Town's General Plan. The General Plan 2045 is supported by a number of reports and documents that informed its development, established conditions in the town, and evaluated the effects of the General Plan. Supporting documents prepared as part of the General Plan 2045 effort are listed below.

Vision and Guiding Principles Report

The Town, in collaboration with the public, developed an overarching vision for the town: "The Town of San Anselmo envisions a future where natural beauty, community well-being, and sustainable progress harmoniously coexist. We respectfully acknowledge that San Anselmo resides on the

ancestral lands of the Coast Miwok, and we honor their enduring connection to this land. Our town seeks to honor its heritage, scenic beauty, and sense of community and belonging while embracing innovation, inclusivity, climate action, sustainability, economic vitality, and fiscal responsibility. Together, we will strive to create a safe, welcoming, and vibrant community for all people, where the values of social equity, environmental stewardship, and community connection are fundamental."

Based on that vision, the Town developed 11 guiding principles to help shape the goals, policies, and actions that will constitute the General Plan. Those guiding principles are:

1. **Environmental Stewardship:** Protect and enhance our open spaces, wildlife habitats, and biological diversity through thoughtful land use and environmental policies, and support public access to open space and scenic vistas in ways that minimize environmental impact and preserve natural resources.

2. **Climate Action, Resilience, and Sustainability:** Lead in eliminating greenhouse gas emissions, mitigating and adapting to climate change, and building a resilient community that can withstand environmental challenges, prioritizing support for our most vulnerable populations. Embrace sustainable practices in all aspects of town life.

3. **Architectural and Scenic Beauty:** Maintain and complement the diverse and historic qualities of the built environment, and preserve and enhance the scenic beauty of San Anselmo.

4. **Economic Vitality:** Support a thriving local economy that strengthens Town revenues by fostering a variety of businesses, encouraging sustainable economic practices, and ensuring that economic growth is inclusive, responsive to the changing needs of the community, and in alignment with our environmental and social goals. Encourage businesses in the town's commercial hubs and downtown to foster vibrancy and contribute to attractive gateways to San Anselmo.

5. **Housing:** Promote a wide range of housing options that are affordable at all income levels, accessible, and sustainable while protecting the town's natural resources and respecting its charming architecture. Encourage housing that meets the needs of existing residents and welcomes a diverse spectrum of future residents.

6. **A Community of Belonging:** Foster an inclusive, welcoming, and socially connected community where people of all ages, backgrounds, and abilities have a sense of belonging, equitable access, and opportunities to thrive. Emphasize community engagement, connections, and volunteerism to enhance the social fabric of the town.

7. **Social Equity and Diversity:** Commit to promoting social equity, respect, and understanding in all community interactions. Actively promote diversity and inclusiveness as fundamental values that strengthen the town, to the extent consistent with federal and State law. Honor the history and enduring presence of the Coast Miwok.

8. **Healthy Community:** Offer and improve access to our parks, recreation programs, facilities, and events which provide affordable opportunities for active living, personal enrichment, education, and social connection to all members of the community.
9. **Sustainable Transportation:** Prioritize multi-modal transportation options and improvements that eliminate greenhouse gas emissions, such as zero-emission vehicles, public transit, cycling, and pedestrian-friendly infrastructure. Improve and promote safety, accessibility, and traffic flow.
10. **Safety and Preparedness:** Ensure the safety and well-being of all residents through high-quality public services, resilient infrastructure, improved safety and noise regulation, and robust emergency preparedness and response plans.
11. **Excellence in Governance:** Provide high-quality public facilities and infrastructure and fiscally responsible, innovative, transparent, and responsive local government services to ensure the health, safety, and welfare of the community. Communicate with and engage all members of the community to align leadership with the diverse needs and values of San Anselmo's residents.

Economic Development Analysis Report

The Economic Development Analysis Report was prepared in December 2024 and describes existing economic development conditions, including patterns in sectoral employment, business activity, retail sales, and the commercial and industrial real estate markets and addresses projected employment growth and the associated potential demand for new workspace during the buildout of the General Plan.

Existing Conditions Reports

The Existing Conditions Reports establish a baseline of existing conditions in the planning area for the General Plan 2045 process. Specifically, the report identifies development patterns, demographic and housing trends, circulation and transportation patterns and resources, community services and facilities, natural resources, and environmental constraints, and identifies the regulatory environment for each topic. The Existing Conditions Report is principally a technical document that comprises a substantial amount of data. To make this information more accessible to all readers, the report incorporates numerous maps and graphics. The report serves as a resource for the Town Council, the Planning Commission, members of the public, Town staff, and the consultant team through the General Plan 2045 process. This facilitates all parties' informed participation in the process, ensuring that the updated General Plan addresses San Anselmo's unique circumstances at the time it was prepared. The Existing Conditions Report also serves to inform users of this General Plan 2045 of the conditions and issues in the town that are addressed by the General Plan.

General Plan 2045 (Policy Document)

The General Plan 2045 establishes the Town's goals, policies, and strategies and addresses the State-mandated element, including land use, environmental justice, circulation, housing, open space,

conservation, noise, and safety, and optional elements addressing locally relevant topics (community design, sustainability, climate change, resilience, community facilities, recreation, growth management, urban design, Downtown, and economic development). The General Plan sets out the goals, policies, and action items in each of these areas and serves as a policy guide for how the Town will make key planning decisions in the future. It also identifies how the Town will interact with Marin County, adjacent and nearby cities and communities, and other local, regional, State, and Federal agencies on shared development-related decisions and actions.

2.0.2 PROJECT LOCATION

REGIONAL SETTING

The Town of San Anselmo is an incorporated municipality in Marin County, California. The town is bordered by San Rafael to the east, Fairfax and unincorporated Marin County to the west, Ross to the south, and unincorporated Marin County to the north. San Anselmo is located approximately 20 miles north of San Francisco, as shown on **Figure 2.0-1**. The town is situated in a series of small valleys created by streams bordered by moderate to steep hillside slopes and ridge tops. The Planning Area has an average elevation of approximately 194 feet above mean sea level, with the elevation varying across the town due to its hilly terrain, and drains primarily to the Ross Valley Watershed. San Anselmo is at the juncture of major arterials leading from the San Francisco Bay Area to western Marin County. The town is accessible by road from Sir Francis Drake Boulevard, which connects Highway 101 to the town and continues west through San Anselmo from Ross to Fairfax, and from Red Hill Avenue, which becomes 4th Street in San Rafael and provides another connection between San Anselmo and Highway 101.

ENVIRONMENTAL IMPACT REPORT PLANNING AREA

In addition to the lands within the town boundaries, State law requires that a municipality adopt a General Plan that addresses "any land outside its boundaries which in the planning agency's judgment bears relation to its planning (California Government Code §65300)." The Town's Planning Area is the extent of the area addressed by the General Plan. The Town's Planning Area is defined as all lands within the town limits and San Anselmo Sphere of Influence (SOI), as shown on **Figure 2.0-2.**

2.0.3 PROJECT OBJECTIVES

The San Anselmo General Plan 2045 addresses issues of concern identified through the visioning and community outreach efforts. The objectives of the General Plan 2045 are listed below.

1. Maintain and enhance San Anselmo's character by preserving its scenic beauty, open space, and natural resources while ensuring new development complements the historic qualities of the built environment.
2. Foster a sense of community and belonging for town residents by providing equitable access to public services, recreation opportunities, and social engagement.
3. Enhance the town's economic vitality by fostering a variety of businesses, encouraging sustainable economic practices, and ensuring that economic growth is inclusive, responsive

to the changing needs of the community, and in alignment with the Town's environmental and social goals.

4. Manage the location, type, and amount of growth to ensure the safety and well-being of all residents through high-quality public services, resilient infrastructure, improved safety and noise regulation, and robust emergency preparedness and response plans.
5. Prioritize multi-modal transportation options and improvements that eliminate greenhouse gas emissions, such as zero-emission vehicles, public transit, cycling, and pedestrian-friendly infrastructure, while improving vehicular circulation, promoting safety, ensuring accessibility, and improving traffic flow.
6. Promote a wide range of housing options that are affordable at all income levels, accessible, sustainable, meet the needs of existing residents, and welcomes a diverse spectrum of future residents.
7. Ensure consistency with State, regional, and local regulatory requirements, including housing, climate, and environmental mandates.
8. Improve community resilience to climate change and natural hazards, including wildfire, flooding, and extreme weather.
9. Protect and enhance environmental resources, including air and water quality, biological resources, and urban forest.
10. Promote efficient land use and infill development patterns that support sustainability and reduce greenhouse gas emissions.

2.0.4 DESCRIPTION OF PROPOSED GENERAL PLAN 2045 PROJECT

State law requires every California city and county – including incorporated towns such as the Town of San Anselmo – to adopt a comprehensive, long-term General Plan to guide the physical development of its planning area. As outlined in Government Code Section 65302, a General Plan must address the required elements: land use, circulation, housing, conservation, open space, noise, and safety, as well as environmental justice and climate adaptation, to the extent that these issues are applicable within San Anselmo's planning area. The Town may also include additional elements that relate to its physical development and community priorities. The level of detail and specificity within each General Plan element is determined by local conditions, community character, and the unique circumstances of the Town of San Anselmo.

Upon adoption, the General Plan 2045 will replace the Town's existing General Plan. The Town of San Anselmo last comprehensively adopted its General Plan in 1975, with more recent targeted updates to the Land Use, Circulation, and Open Space Elements in 1988. Since that time, the Town and the Bay Area have grown and changed. New social and environmental issues have emerged, new laws affecting General Plans have been passed, and new planning strategies and practices have been developed. This General Plan Update looks ahead to the future, addressing current issues and emerging trends and setting the community vision for the next 20 years. The General Plan Update also brings the General Plan into compliance with new laws related to climate change, complete streets, fire hazards, and more.

The Town updated its Housing Element in 2023, which addresses the Town's Regional Housing Needs Allocation and the 2023-2031 planning period, in a process separate from the General Plan Update. The Safety Element was also revised in 2023 to address regulatory requirements.

The Town will implement the General Plan by requiring development, infrastructure improvements, and other projects to be consistent with its policies and by implementing the actions included in the General Plan, including subsequent project-level environmental review, as required under CEQA.

This environmental impact report analyzes potential impacts to the environment associated with implementation and buildout of the proposed General Plan, which includes future development projects, infrastructure improvements, and the implementation of policies and actions included in the proposed General Plan.

GENERAL PLAN CONTENTS

The San Anselmo General Plan 2045 will include a comprehensive set of goals, policies, and actions, as well as a revised Land Use Map (see **Figure 2.0-3**). The definitions of goals, policies, and actions are listed below:

- A goal is a description of the general desired result that the Town seeks to create through the implementation of the General Plan.
- A policy is a specific statement that guides decision-making as the Town works to achieve its goals. Once adopted, policies represent statements of Town regulations. The General Plan's policies set out the standards that will be used by Town staff, the Planning Commission, and the Town Council in their review of land development projects, resource protection activities, infrastructure improvements, and other Town actions. Policies are on-going and don't necessarily require specific action on behalf of the Town.
- An implementation measure is an action, procedure, technique, or specific program to be undertaken by the Town to help achieve a specified goal or implement an adopted policy. The Town must take additional steps to implement each action in the General Plan. An action is something that can and will be completed.

A General Plan covers a wide range of social, economic, infrastructure, and natural resource issues. The San Anselmo General Plan 2045 will include goals, policies, and actions to address the State-mandated topics and will continue to have components that address optional topics, including growth management, urban design, downtown, economic vitality, youth and recreation, and public facilities.

Land Use & Community Design Element

The Land Use & Community Design Element establishes the framework for the goals, policies, and actions that will shape the physical form of San Anselmo. The Land Use & Community Design Element addresses growth management, diverse land uses, community design, downtown, commercial corridors, historic preservation, residential neighborhoods, arts and culture, and governance and inclusion. The Land Use & Community Design Element guides the intensity and

distribution of land uses and identifies areas of the Town where change will be encouraged and those areas where the existing land use patterns will be maintained and enhanced.

The Land Use & Community Design Element also establishes the land use designations, including the allowed uses, intensities, and densities of development, established by the Land Use Map, shown in Figure 2.0-3.

Table 2.0-2 lists each land use designation and provides the density and FAR requirements for each designation, including any modifications associated with each.

TABLE 2.0-2: SAN ANSELMO GENERAL PLAN 2045 LAND USE DESIGNATIONS

GENERAL PLAN LAND USE DESIGNATION OR OVERLAY	*PROPOSED SAN ANSELMO GENERAL PLAN 2045 MAXIMUM DENSITY[1] / FAR*
Residential Designations	
Very Low Density Residential	1 du/acre
Single-Family Residential-Conservation	1 du/acre
Single-Family Residential	1-6 units/acre
Medium Density Residential	6-12 units/acre
High Density Residential	13-30 units/acre[2]
Downtown Mixed Residential	6-30 units/acre[2] 2.0 FAR
Mixed Use, Commercial, and Office Designations	
Central Commercial	13-30 units/acre 2.0 FAR
General Commercial	13-30 units/acre[2] 2.0 FAR
Limited Commercial	13-20 units/acre 1.0 FAR (1.25 for mixed use projects with 8-10 units)
Neighborhood Commercial	13-20 units/acre 1.0 FAR (1.25 for mixed use projects with 8-10 units)
Public, Quasi-Public, Recreation, and Other Designations	
Parks	Density/FAR: Not applicable
Open Space	Density/FAR: Not applicable
Public Facilities	40 units/acre proposed (see Action LU-B.4.a) FAR: Not applicable

NOTES:

1: RESIDENTIAL DENSITIES ARE IN UNITS PER GROSS ACRE. THE TERM 'GROSS ACRE' AS USED IN THE GENERAL PLAN REFERS TO ALL THE LAND WITHIN THE PROPERTY LINES OF A GIVEN PARCEL OR ALL THE LAND WITHIN THE BOUNDARY LINE OF A GIVEN DEVELOPMENT PROPOSED. THE ONLY LAND TO BE EXCLUDED IN THE CALCULATION OF GROSS ACREAGE IS ANY LAND WITHIN AN ESTABLISHED PUBLIC RIGHT-OF-WAY OR ADOPTED PLAN LINE.

2: RESIDENTIAL DENSITIES UP TO 40 UNITS PER ACRE MAY BE ALLOWED FOR PROPERTIES SUBJECT TO THE AFFORDABLE HOUSING OVERLAY DISTRICT IN THE ZONING MAP.

SOURCE: TOWN OF SAN ANSELMO, 2025

Table 2.0-3 shows the total acreages for each land use designation shown on the proposed Land Use Map.

TABLE 2.0-3: SAN ANSELMO GENERAL PLAN 2045 LAND USE DESIGNATIONS BY ACREAGE

LAND USE DESIGNATION	*ACRES*
Residential Designations	
Very Low Density Residential	206
Single-Family Residential-Conservation	24
Single-Family Residential	813
Medium Density Residential	15
High Density Residential	43
Downtown Mixed Residential	67
Mixed Use, Commercial, and Office Designations	
Central Commercial	8
General Commercial	35
Limited Commercial	5

Total	**3,211**

SOURCE: MARIN COUNTY GIS/ASSESSOR DATA, 2024; TOWN OF SAN ANSELMO, 2025; DE NOVO PLANNING GROUP, 2025

Open Space & Conservation Element

The Open Space & Conservation Element addresses the protection and acquisition of open space for scenic beauty, resource protection, safety, climate change resilience, and public access and the conservation of natural resources, including wildlife and habitat protection, streams and riparian corridors, trees, air quality, and tribal cultural resources.

Sustainability, Climate Change, & Resiliency Element

The Sustainability, Climate Change, & Resiliency Element addresses improving community resilience, enhancing climate change preparedness and adaptation, and increasing local sustainability, and reducing carbon footprints.

Economic Vitality Element

The Economic Vitality Element addresses the policy approach to sustain and grow the town's economy, preserve and enhance the town's built environment and image, support community-oriented cultural, educational, and entertainment events, and maintain the commercial hubs as the center of town activity.

Housing Element

The Housing Element, as adopted in 2023, will continue to provide local housing programs to meet the fair share of existing and future housing needs for all income groups, preserve and maintain housing, and affirmatively further fair housing.

Circulation Element

The Circulation Element addresses the Town's long-term transportation system, primarily through policies and standards to encourage complete streets, adequate capacity, and linkages to further an integrated multi-modal transportation system, including walking, cycling, and transit access, and parking.

Parks, Recreation, & Public Facilities Element

The Parks, Recreation, & Public Facilities Element addresses the provision of parks and recreational facilities, recreational services and programs, public facilities and infrastructure, and library services.

Safety Element

The Safety Element addresses natural and human-caused hazards that can adversely impact public safety, establishing goals, policies, and actions to address disaster preparedness and response, seismic and geologic hazards, landslides, flooding, wildland and urban fires, and weather-related hazards.

Noise Element

The Noise Element addresses exposure of existing and future community members to noise sources, including transportation-related noise, source-point noise, and intermittent noise.

2.0.5 GENERAL PLAN BUILDOUT ANALYSIS

The EIR evaluates the theoretical development that could occur within the Planning Area at the densities and intensities allowable under the proposed General Plan. While no specific development projects are proposed as part of the General Plan Update, the General Plan would provide the policy framework under which future growth could occur, including the development of new businesses, expansion of existing businesses, and new residential uses consistent with the Land Use Designations (Table 2.0-2) and Draft Land Use Map (Figure 2.0-3). **Table 2.0-4** summarizes the theoretical development potential under the proposed San Anselmo General Plan 2045. The theoretical buildout assumes development of vacant and underutilized parcels at the maximum density or intensity permitted under the General Plan, including realistic development of residentially-designated sites identified in the existing Housing Element. Residential development

on sites identified in the Housing Element is limited to the realistic capacity specified in the Housing Element.[1]

The buildout analysis is a planning-level analytical tool prepared for purposes of this Program EIR. Consistent with CEQA's requirement to evaluate the reasonably foreseeable environmental consequences of implementing the General Plan, the analysis assumes a conservative theoretical buildout based on the maximum development potential permitted under the proposed land use designations, while accounting for known development constraints and realistic assumptions where applicable (including Housing Element site capacity assumptions). This analytical scenario does not represent a forecast of future development, nor does it imply that all properties will redevelop or that development will occur within the General Plan planning horizon. Actual future development will occur incrementally over time and will depend upon numerous factors beyond the Town's control, including economic conditions, property owner decisions, infrastructure capacity, financing, and future regulatory requirements.

The actual amount of development that will occur throughout the planning horizon of the General Plan, which is approximately 20 years, is based on many factors outside of the Town's control. Actual future development would depend on future real estate and labor market conditions and costs, property owner preferences and decisions, site-specific constraints, evolving State and federal regulations, and other factors. New development and growth are largely dictated by existing development conditions, market conditions, and land turnover rates. Very few communities actually develop to the full potential allowed in their respective general plans during the planning horizon. For purposes of environmental review under CEQA, the buildout analysis represents a conservative analytical scenario that evaluates the maximum reasonably foreseeable development that could occur under the proposed General Plan 2045. The buildout analysis is intended to provide a comprehensive assessment of the potential environmental effects associated with implementation of the General Plan and should not be interpreted as a prediction or forecast of the amount, timing, or location of future development, which will depend on market conditions, property owner decisions, infrastructure availability, financing, regulatory requirements, and other factors.

The General Plan does not designate land within the Town's Sphere of Influence for development. Implementation of the General Plan would not result in any changes to land use designations outside of the Town boundary but within the Sphere of Influence. Any development that occurs within the SOI but outside of the Town boundary would be subject to the Marin County General Plan. Any future projects proposed within the SOI and seeking annexation to the Town of San Anselmo would be subject to their own environmental review and growth analysis. The EIR's cumulative analysis considers potential cumulative growth within both the Town of San Anselmo and within its SOI.

As shown in Table 2.0-4, theoretical full buildout conditions under the General Plan would be anticipated to result in 2,279 new residential units accommodating an additional 5,356 residents and an addition of approximately 752,133 square feet of non-residential uses.

2.0.6 USES OF THE EIR AND REQUIRED AGENCY APPROVALS

This EIR may be used for the following direct and indirect approvals and permits associated with adoption and implementation of the proposed project.

TOWN OF SAN ANSELMO

San Anselmo is the lead agency for the proposed project. The General Plan 2045 will be presented to the Planning Commission for review and recommendation and to the Town Council for comment, review, and consideration for adoption. The Town Council has the sole discretionary authority to approve and adopt the San Anselmo General Plan 2045. In order to approve the proposed project, the Town Council would consider the following actions:

- Certification of the General Plan 2045 EIR;
- Adoption of required CEQA Findings;
- Adoption of a Mitigation Monitoring and Reporting Program; and
- Approval of the General Plan 2045.

SUBSEQUENT USE OF THE EIR

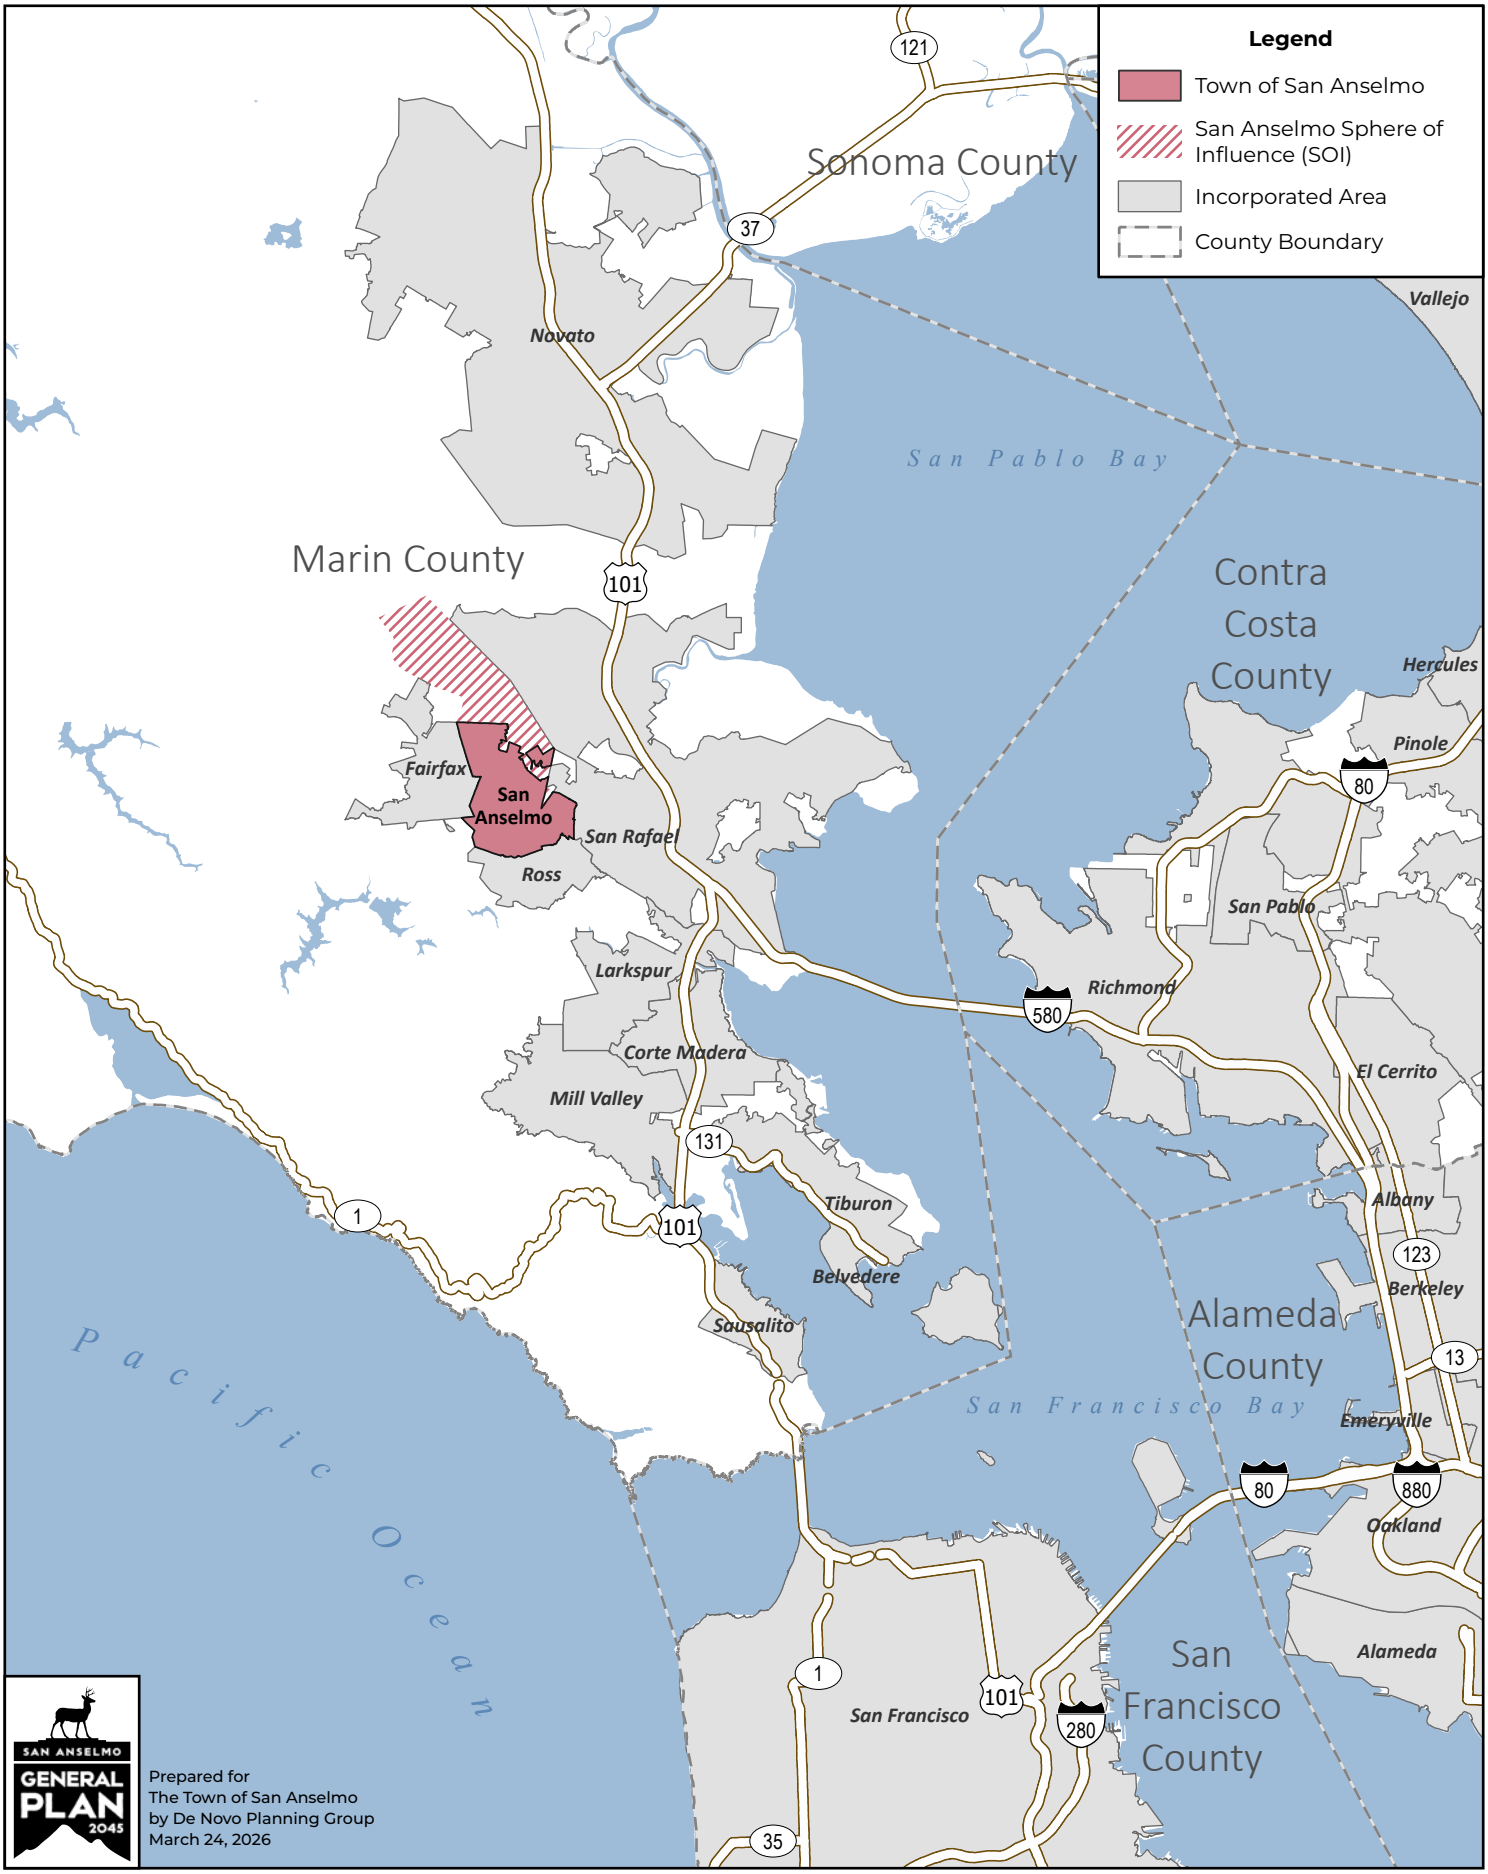

This EIR is a Program EIR prepared pursuant to CEQA Guidelines Section 15168. As such, it is an effective mechanism for environmental streamlining because it provides a program-level analysis that subsequent projects anticipated under the General Plan 2045 may tier from under CEQA. For purposes of analysis, this EIR is based on the maximum buildout allowed under the General Plan 2045 including land uses and development intensities. By establishing a comprehensive assessment of long-term buildout conditions and identifying applicable mitigation measures, the General Plan EIR enables future projects that are consistent with the General Plan's land use designations and policies to rely on this prior analysis, limiting additional review to project-specific impacts, if any, not previously addressed. It is intended that future projects consistent with the General Plan 2045's land use designations, intensities, and densities that do not result in new significant impacts not otherwise identified in this EIR, rely on the analysis in this EIR for CEQA compliance to the fullest extent allowed by law Anticipated subsequent actions and development activities that may benefit from this streamlined approach include infill and corridor-based housing; mixed use or commercial revitalization projects; public facility and infrastructure improvements; multimodal transportation enhancements; and parks and open space upgrades. Streamlining may also apply to a wide range of discretionary actions, such as the approval and funding of major projects and capital improvements; future Specific Plan, Planned Unit Development, or Master Plan approvals; revisions to the San Anselmo Municipal Code (Zoning Ordinance); development plan approvals including tentative subdivision maps, variances, conditional use permits, and other land use entitlements; approval of Development Agreements; property rezonings consistent with the General Plan 2045; permit issuances and other approvals necessary for public and private development projects; and approvals necessary for implementation of the General Plan 2045. Together, these mechanisms provide a predictable, efficient pathway for implementing the Town's long-term vision while maintaining compliance with CEQA.

OTHER GOVERNMENTAL AGENCY APPROVALS

Town approval of the proposed project would not require any actions or approvals by other public agencies. Subsequent projects and other actions to support implementation of the proposed project would require actions, including permits and approvals, by other public agencies that may include, but are not necessarily limited to:

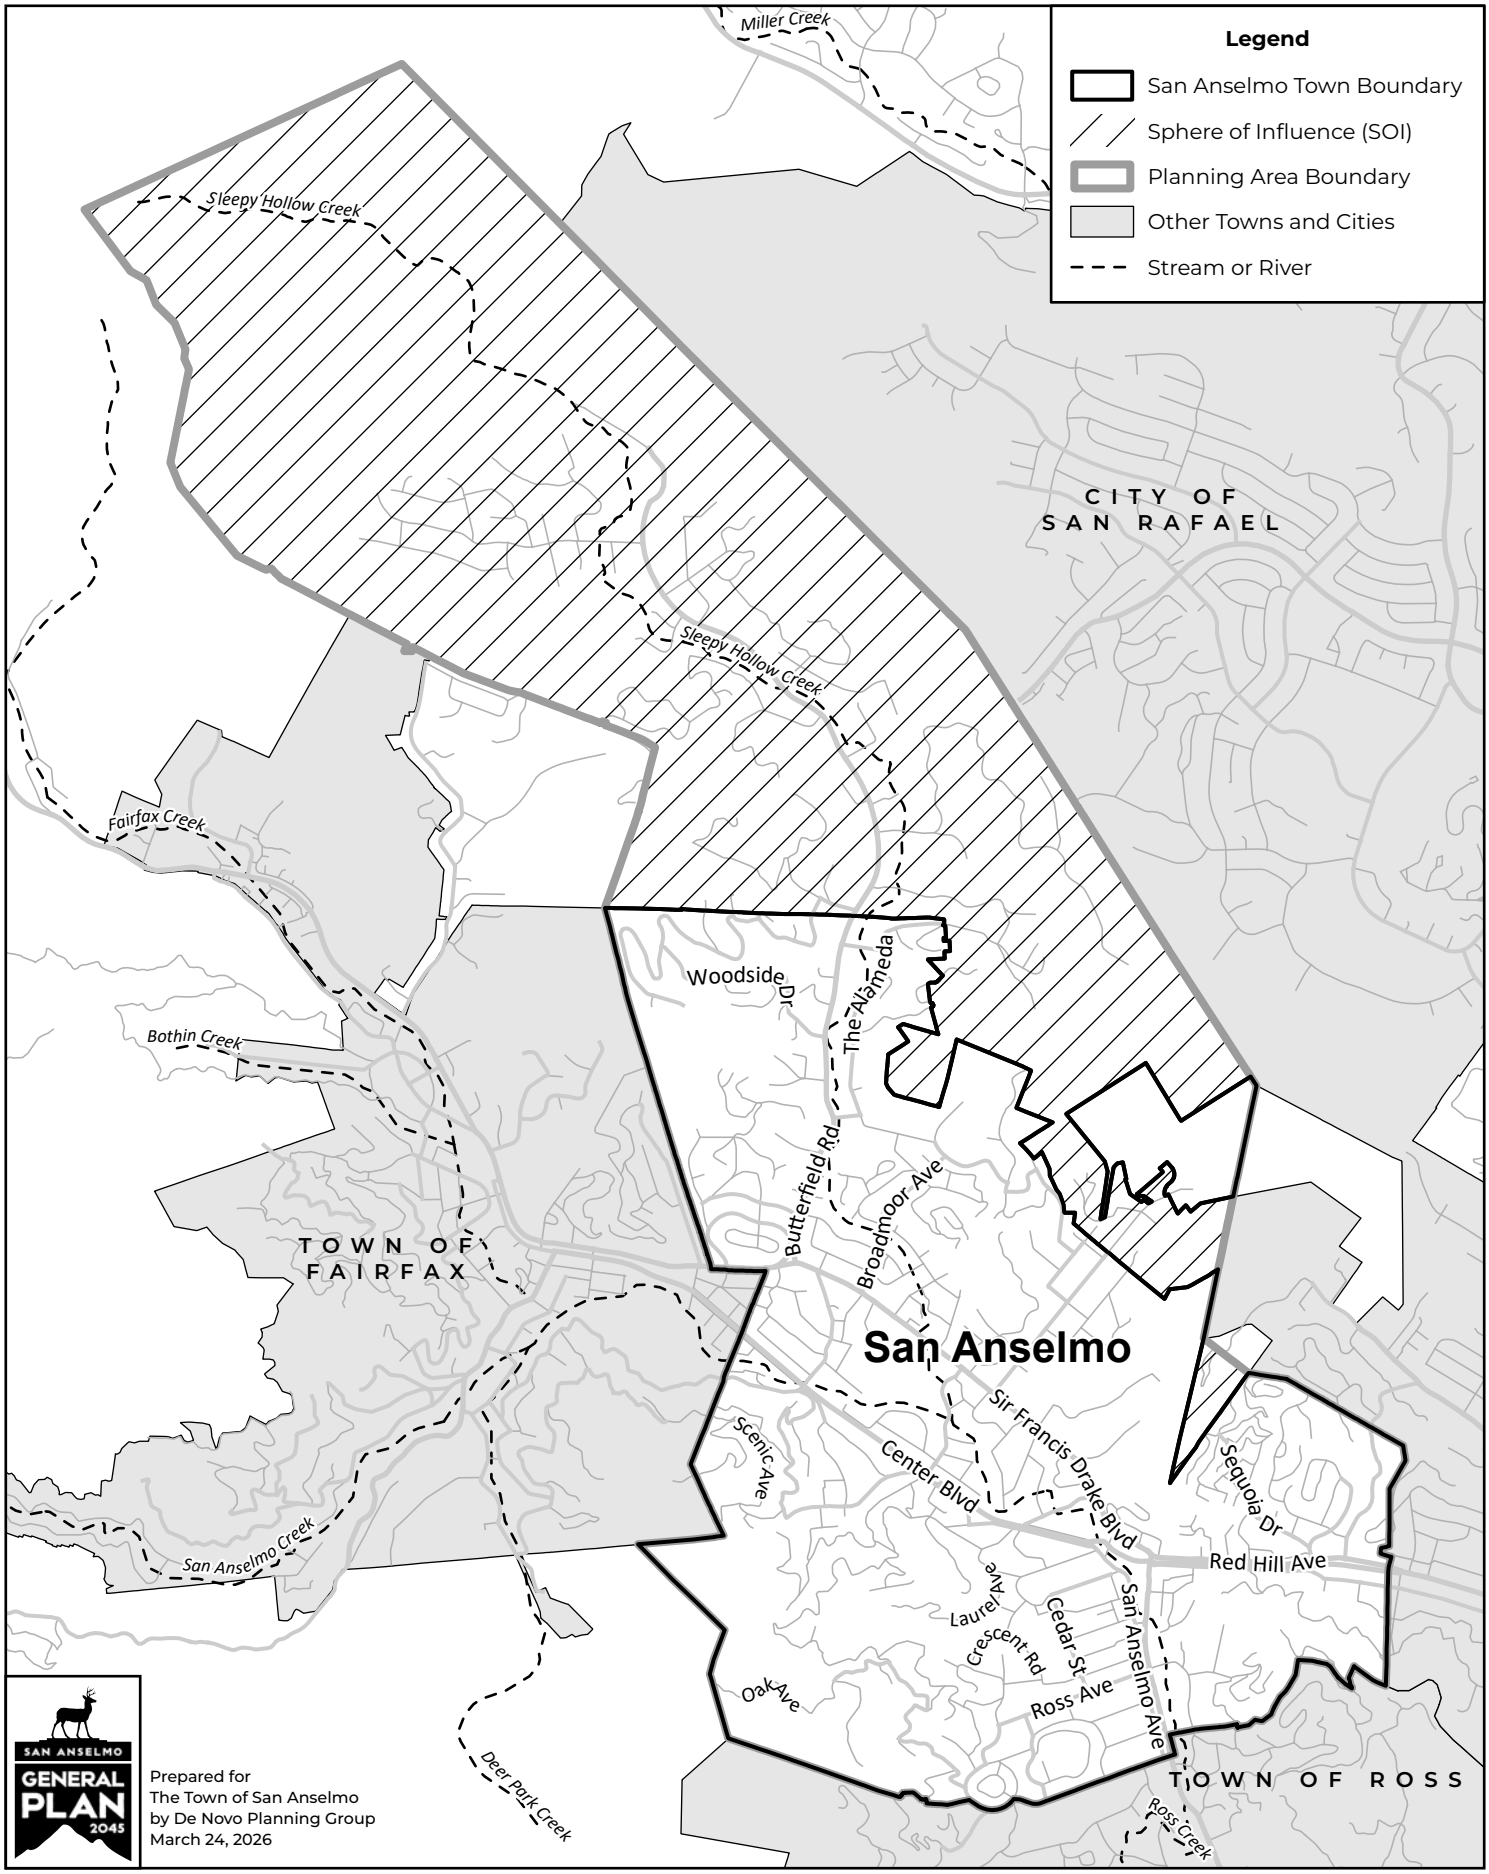

- California Department of Fish and Wildlife (CDFW);
- Bay Area Air Quality Management District (BAAD);
- California Department of Transportation (Caltrans);
- California Department of Toxic Substances Control (DTSC);
- Regional Water Quality Control Board (RWQCB);
- U.S. Army Corps of Engineers (USACE);

- U.S. Environmental Protection Agency (USEPA);
- U.S. Fish and Wildlife Service (USFWS);
- Metropolitan Transportation Commission (MTC);
- California Department of Resources, Recycling, and Recovery (Cal Recycle);
- California Office of Historic Preservation (OHP);
- California Department of Conservation (DOC);
- Marin Water; and
- Ross Valley Sanitary District.

GENERAL PLAN LAND USE MAP

3.0.1 INTRODUCTION TO THE ANALYSIS

This draft environmental impact report (EIR) evaluates and documents the physical environmental effects that could result from implementing the proposed San Anselmo General Plan 2045 Update (General Plan 2045 or proposed project) in accordance with the California Environmental Quality Act (CEQA) (Public Resources Code [PRC] Section 21000 *et seq.)* and the CEQA Guidelines (California Code of Regulations Title 14, Section 15000 *et seq*.). Sections 3.1 through 3.16 of this EIR consider the regulatory background, existing conditions, and environmental impacts associated with implementation of the proposed project, as well as mitigation measures to reduce project-specific and cumulative environmental impacts and, where applicable, reduce impacts to a less-than-significant level. This EIR discusses the physical environmental effects that could result from implementation of the proposed project.

3.0.2 DEFINITIONS OF TERMS USED IN THE EIR

This EIR uses a number of terms that have specific meanings under CEQA. Among the most important of the terms used in the EIR are those that refer to the significance of environmental impacts. The following terms are used to describe the environmental effects of the proposed project:

- **Significance Criteria:** The criteria used by the Town of San Anselmo, as lead agency under CEQA, to determine whether the magnitude of an adverse, physical environmental impact would be significant. In determining the level of significance, the analysis recognizes that the proposed project must comply with relevant federal, state, regional, and/or local regulations and ordinances that are regularly enforced through building codes and standards and/or other means.
- **Significant Impact:** The impact conclusion reached if the project would result in a substantial adverse change in the physical conditions of the environment. Significant impacts are identified by the evaluation of project-related physical change compared to applicable significance criteria. A significant impact is defined as "a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance."[1]
- **Less-than-Significant Impact:** The impact conclusion reached when the adverse physical environmental effect caused by the project would not exceed the applicable significance threshold or criterion.
- **Significant and Unavoidable Impact:** The impact conclusion reached when the project would result in a substantial adverse physical change in the environment that cannot be feasibly avoided or mitigated to a less-than-significant level, that is, to a magnitude below the applicable significance threshold or criterion.
- **Cumulative Impact:** Under CEQA, "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts."[2] Like any other significant impact, a significant cumulative impact is one in which the

[1] CEQA Guidelines Section 15382.
[2] CEQA Guidelines Section 15355.

cumulative adverse physical environmental effect would exceed the applicable significance criterion and the project's contribution is "cumulatively considerable."[3] If the contribution of a project to a significant cumulative impact is less than considerable, the cumulative impact would be less than significant.

- **Mitigation Measure:** A feasible action that could be taken that would avoid or reduce the magnitude of a significant impact. Section 15370 of the CEQA Guidelines defines mitigation as:

  (a) Avoiding the impact altogether by not taking a certain action or parts of an action;

  (b) Minimizing impacts by limiting the degree of magnitude of the action and its implementation;

  (c) Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;

  (d) Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action; and

  (e) Compensating for the impact by replacing or providing substitute resources or environments.

- **Feasible:** Under CEQA, "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors."[4]

3.0.3 SECTION FORMAT

Chapter 3 is divided into technical sections (e.g., Section 3.1, Aesthetics) that present for each environmental resource issue area the physical environmental setting, regulatory setting, significance criteria, methodology and assumptions, and impacts on the environment. Where required, potentially feasible mitigation measures are identified to lessen or avoid significant impacts. Each section includes an analysis of project-specific and cumulative impacts for each issue area.

INTRODUCTION

Each technical environmental section begins with an introduction that briefly discusses the issues addressed in the section, identifies issues that may have been raised in Notice of Preparation scoping comments, and identifies major information sources.

ENVIRONMENTAL AND REGULATORY SETTING

Each section provides a description of the proposed project's environmental setting and the regulatory setting as it pertains to relevant environmental resource issues. The environmental setting provides a point of reference for assessing the environmental impacts of the proposed project and alternatives. The

[3] CEQA Guidelines Section 15130(a).
[4] CEQA Guidelines Section 15364.

environmental setting describes the conditions that exist before implementation of the project. This setting establishes the baseline against which the proposed project and alternatives are compared to assess the significance of environmental impacts.

The regulatory setting presents relevant information about federal, state, regional, and/or local laws, regulations, plans and policies that pertain to the environmental resources addressed in each section.

SIGNIFICANCE CRITERIA

Each section presents significance criteria against which the adverse physical environmental effects of the proposed project are compared to determine the significance of impacts. The significance criteria used for the proposed project were derived from Appendix G of the CEQA Guidelines and, where applicable, thresholds established by trustee and responsible agencies.

METHODOLOGY AND ASSUMPTIONS

Each section describes the analytical methods and key assumptions used to evaluate the effects of the proposed project.

IMPACTS AND MITIGATION MEASURES

The methodology description is followed by a presentation of the adverse physical environmental impacts of the proposed project, and, if impacts would be significant or potentially significant, potentially feasible mitigation measures that, if implemented, could avoid or reduce the magnitude of the significant impact. As required by CEQA Guidelines Section 15126.2(a), direct, indirect, short-term, long-term, on-site, and/or off-site impacts are analyzed, as appropriate, for each environmental impact.

Where enforcement of applicable laws, regulations, and standards exists and compliance can be reasonably anticipated, this EIR assumes that the proposed project would meet the requirements of applicable laws and other regulations. The impact and mitigation discussions in each section are organized based on impact statements, prefaced by a number in boldfaced type. An explanation of each impact is followed by an analysis of and conclusion regarding its significance, based on the stated significance criterion. The environmental analysis considers impacts that could be caused during both construction and operation of the proposed project.

Where the impact for the proposed project would be significant, it is followed by a presentation of potentially feasible mitigation measures. While this EIR includes information about potentially feasible mitigation measures, the San Anselmo Town Council would make the final determination of feasibility of such measures.

The magnitude of reduction of an impact and the potential effect of that reduction in magnitude on the significance of the impact is presented. Each impact discussion concludes with a statement that the impact, following implementation of the mitigation measure(s) and/or the continuation of existing policies and regulations, either would be reduced to a less-than-significant level or would remain significant and unavoidable.

An example of the format is shown below.

Impact 3.X-1: Impact statement.

A discussion of the potential impact of the General Plan 2045 on the resource is introduced in paragraph form. To identify impacts that may be site- or project element-specific, where appropriate, the discussion differentiates between construction-related effects and operational effects. A statement of the level of significance before application of any mitigation measures is provided in **bold**.

MITIGATION MEASURE(S)

If all impacts for the proposed project are determined to be less than significant, the text here states, "None required."

If one or more impacts are determined to be potentially significant, mitigation is listed here.

Mitigation Measure 3.X-1 *Recommended mitigation measure will be presented here and numbered to match the impact.*

Where appropriate, one or more potentially feasible mitigation measures are described.

SIGNIFICANCE AFTER MITIGATION

A statement of the degree to which the available mitigation measure(s) would reduce the significance of the impact is described here and included in **bold**. If no mitigation is required, this section will not be included.

CUMULATIVE IMPACTS

An analysis of cumulative impacts follows the evaluation of project-specific impacts and mitigation measures in each section. A cumulative impact is an impact that is created as a result of the combination of the project evaluated in the EIR in conjunction with other past, present, and reasonably foreseeable projects causing related impacts.[5] The cumulative impact analysis in this EIR evaluates the buildout of the proposed General Plan 2045, as well as other projects anticipated to be developed during buildout in the region. Other planning documents, such as Plan Bay Area 2050+, may be used, as appropriate.

The beginning of the cumulative impact analysis in each technical section includes a description of the cumulative analysis methodology and the geographic or temporal context in which the cumulative impact is analyzed (e.g., the Town of San Anselmo, the Bay Area Air Quality Management District, Marin County projections, other activity concurrent with project construction). In some instances, a project-specific impact may be less than significant, but when considered in conjunction with other cumulative projects or activities, may be significant or potentially significant. As noted above, where a cumulative impact would be significant when compared to existing or baseline conditions, the analysis must address whether the project's contribution to the significant cumulative impact is "considerable." If the contribution of the

[5] CEQA Guidelines Section 15355.

project is considerable, then the EIR must identify potentially feasible measures that could avoid or reduce the magnitude of the project's contribution to a less-than-considerable level. If the project's contribution is not considerable, the cumulative impact would be less than significant and no mitigation of the project's contribution is required.[6] The cumulative impacts analysis is formatted in the same manner as the project-specific impacts.

[6] CEQA Guidelines Section 15130(a)(3).

The town of San Anselmo possesses numerous scenic resources, and there are also many scenic resources within the unincorporated areas of Marin County. These resources enhance the quality of life for San Anselmo residents and provide for numerous outdoor recreational uses. Landscapes can be defined as a combination of four visual elements: landforms, water, vegetation, and man-made structures. Scenic resource quality is an assessment of the uniqueness or desirability of a visual element.

This section was prepared based on existing reports and literature for San Anselmo and the surrounding areas in Marin County. Additional sources of information included the California Department of Transportation's (Caltrans) Designated Scenic Route map for Marin County.

This section provides a background discussion of the scenic highways and corridors, and natural scenic resources such as waterfront areas, wildlife areas, and prominent visual features found in the San Anselmo Planning Area. This section is organized with an existing setting, regulatory setting, and impact analysis.

There were no comments received during the NOP comment period related to this environmental topic.

CONCEPTS AND TERMINOLOGY

The aesthetic value of an area is a measure of its visual character and quality, combined with the viewer response to the area. Scenic quality can best be described as the overall impression that an individual viewer retains after driving through, walking through, or flying over an area. Viewer response is a combination of viewer exposure and viewer sensitivity. Viewer exposure is a function of the number of viewers, number of views seen, distance of the viewers, and viewing duration. Viewer sensitivity relates to the extent of the public's concern for a particular viewshed. These terms and criteria are described in detail below.

Visual Character. Natural and artificial landscape features contribute to the visual character of an area or view. Visual character is influenced by geologic, hydrologic, botanical, wildlife, recreational, and urban features. Urban features include those associated with landscape settlements and development, including roads, utilities, structures, earthworks, and the results of other human activities. The perception of visual character can vary significantly seasonally, even hourly, as weather, light, shadow, and elements that compose the viewshed change. The basic components used to describe visual character for most visual assessments are the elements of form, line, color, and texture of the landscape features. The appearance of the landscape is described in terms of the dominance of each of these components.

Visual Quality. Visual quality is evaluated using the well-established approach to visual analysis adopted by the Federal Highway Administration, employing the concepts of vividness, intactness, and unity, which are described below.

- Vividness is the visual power or memorability of landscape components as they combine in striking and distinctive visual patterns.

- Intactness is the visual integrity of the natural and human-built landscape and its freedom from encroaching elements; this factor can be present in well-kept urban and rural landscapes, and in natural settings.
- Unity is the visual coherence and compositional harmony of the landscape considered as a whole; it frequently attests to the careful design of individual components in the landscape.

Visual quality is evaluated based on the relative degree of vividness, intactness, and unity, as modified by visual sensitivity. High-quality views are highly vivid, relatively intact, and exhibit a high degree of visual unity. Low-quality views lack vividness, are not visually intact, and possess a low degree of visual unity.

Viewer Exposure and Sensitivity. The measure of the quality of a view must be tempered by the overall sensitivity of the viewer. Viewer sensitivity or concern is based on the visibility of resources in the landscape, proximity of viewers to the visual resource, elevation of viewers relative to the visual resource, frequency and duration of views, number of viewers, and type and expectations of individuals and viewer groups.

The importance of a view is related, in part, to the position of the viewer to the resource; therefore, visibility and visual dominance of landscape elements depend on their placement within the viewshed. A viewshed is defined as all of the surface area visible from a particular location (e.g., an overlook) or sequence of locations (e.g., a roadway or trail). To identify the importance of views of a resource, a viewshed must be broken into distance zones of foreground, middle ground, and background. Generally, the closer a resource is to the viewer, the more dominant it is and the greater its importance to the viewer. Although distance zones in a viewshed may vary between different geographic regions or types of terrain, the standard foreground zone is 0.25 to 0.5 mile from the viewer, the middle ground zone is from the foreground zone to three to five miles from the viewer, and the background zone is from the middle ground to infinity.

Visual sensitivity depends on the number and type of viewers and the frequency and duration of views. Visual sensitivity is also modified by viewer activity, awareness, and visual expectations in relation to the number of viewers and viewing duration. For example, visual sensitivity is generally higher for views seen by people who are driving for pleasure, people engaging in recreational activities such as hiking, biking, or camping, and homeowners. Sensitivity tends to be lower for views seen by people driving to and from work or as part of their work. Commuters and non-recreational travelers have generally fleeting views and tend to focus on commute traffic, not on surrounding scenery; therefore, they are generally considered to have low visual sensitivity. Residential viewers typically have extended viewing periods and are concerned about changes in the views from their homes; therefore, they are generally considered to have high visual sensitivity. Viewers using recreation trails and areas, scenic highways, and scenic overlooks are usually assessed as having high visual sensitivity.

Judgments of visual quality and viewer response must be made based on a regional frame of reference. The same landform or visual resource appearing in different geographic areas could have a different degree of visual quality and sensitivity in each setting. For example, a small hill may be a

significant visual element within a flat landscape but have very little significance in mountainous terrain.

Scenic Highway Corridor. The area outside of a highway right-of-way that is generally visible to persons traveling on the highway.

Scenic Highway/Scenic Route. A highway, road, drive, or street that, in addition to its transportation function, provides opportunities for the enjoyment of natural and human-made scenic resources and access or direct views to areas or scenes of exceptional beauty (including those of historic or cultural interest). The aesthetic values of scenic routes often are protected and enhanced by regulations governing the development of property or the placement of outdoor advertising. Until the mid-1980s, general plans in California were required to include a Scenic Highways Element.

View Corridor. A view corridor is a highway, road, trail, or other linear feature that offers travelers a vista of scenic areas within a city or county.

3.1.1 ENVIRONMENTAL SETTING

REGIONAL SCENIC RESOURCES

Visual resources are generally classified into two categories: scenic views and scenic resources. Scenic views are elements of the broader viewshed such as mountain ranges, valleys, and ridgelines. They are usually mid-ground or background elements of a viewshed that can be seen from a range of viewpoints, often along a roadway or other corridor. Scenic resources are specific features of a viewing area (or viewshed), such as trees, rock outcroppings, and historic buildings. They are specific features that act as the focal point of a viewshed and are usually foreground elements.

Aesthetically significant features occur in a diverse array of environments within the region, ranging in character from urban centers to rural agricultural lands to natural water bodies. Features of the built environment that may also have visual significance include individual or groups of structures that are distinctive due to their aesthetic, historical, social, or cultural significance or characteristics. Examples of the visually significant built environment may include bridges or overpasses, architecturally appealing buildings or groups of buildings, landscaped freeways, and a location where a historic event occurred.

SCENIC HIGHWAYS AND CORRIDORS

Scenic highways and corridors make major contributions to the quality of life enjoyed by the residents of a region. The development of community pride, the enhancement of property values, and the protection of aesthetically pleasing open spaces reflecting a preference for the local lifestyle are all ways in which scenic corridors are valuable to residents.

Scenic highways and corridors can also strengthen the tourist industry. For many visitors, highway corridors will provide their only experience of the region. Enhancement and protection of these corridors ensures that the tourist experience continues to be a positive one and, consequently, provides support for the tourist-related activities of the region's economy.

Scenic Highways: A scenic highway is generally defined by Caltrans as a public highway that traverses an area of outstanding scenic quality, containing striking views, flora, geology, or other unique natural attributes. A highway may be designated scenic depending upon how much of the natural landscape can be seen by travelers, the scenic quality of the landscape, and the extent to which development intrudes upon the traveler's enjoyment of the view.

Scenic Corridors: A scenic corridor is the view from the road that may include a distant panorama and/or the immediate roadside area. A scenic corridor encompasses the outstanding natural features and landscapes that are considered scenic. It is the visual quality of the man-made or natural environments within a scenic corridor that are responsible for its scenic value. Commonly, the physical limits of a scenic corridor are broken down into foreground views (zero to one quarter mile) and distant views (over one quarter mile). In addition to distinct foreground and distant views, the visual quality of a scenic corridor is defined by special features, which include:

- Focal points - prominent natural or man-made features which immediately catch the eye.
- Transition areas - locations where the visual environment changes dramatically.
- Gateways - locations which mark the entrance to a community or geographic area.

Many of the roadways throughout Marin County and within proximity to San Anselmo offer views of some of the county's most scenic resources. The entire stretch of State Route 1 and sections of U.S. 101 running through Marin County are eligible to be a State Scenic Highway.[1] The criteria for official designation and eligibility includes the scenic quality of the landscape, how much of the natural landscape can be seen by travelers, and the extent to which development intrudes upon the traveler's enjoyment of the view.

There are currently no designated State Scenic Highways or National Scenic Byways within the Planning Area. However, the Scenic Highways Element in San Anselmo identifies Red Hill Avenue, Sir Francis Drake Boulevard from the Ross line to the Fairfax town limits, and Center Boulevard from the Hub to the Fairfax town limits as locally designated scenic highways. The goals are focused on enhancing the visual appeal of these main thoroughfares, particularly at the entry points into the community. While there are no State highways eligible for State-designated scenic status in San Anselmo, the town aims to beautify these roads through landscaping, improved signage, lighting, and cohesive outdoor design elements. This initiative intends to create a distinct visual identity that signifies entry into and movement through the town's different neighborhoods.

RIDGELINES

Ridgelines are defined as a line formed along the highest points of a mountain ridge, or as an area of higher ground separating two adjacent streams or watersheds. Ridgelines are the most visually defining open space attribute in the Planning Area. Ridgelines also provide the greatest opportunity for community scenic value.

Figure 3.1-1 identifies significant ridgelines within the Planning Area. The protection of these ridgelines has been given the highest priority in the Open Space Element of the Town's General Plan.

[1] Caltrans. List of eligible and officially designated State Scenic Highways. October 2025.

Policies included in the General Plan aim to prevent development on the major ridgelines identified on the Open Space and Conservation Map in San Anselmo, as well as secondary ridges. Specific ridgelines include Bald Hill, Red Hill, Sunny Hills, Indian Rock, Camino de Herrera, and the perimeter ridgeline. Construction within the ridge zone shall be permitted only when the applicant has demonstrated to the satisfaction of the Town Engineer and Planning Commission that construction outside of the ridge zone would be detrimental with respect to soil and geologic conditions, vegetation removal, drainage, and such other factors as are determined to be pertinent.

OPEN SPACE AND OTHER SCENIC RESOURCES AREAS

Public parklands and open space land uses largely contribute to the visual environment of San Anselmo and Marin County. However, the community character of the built environment also plays a crucial role in defining the visual environment. While Mount Tamalpais State Park encompasses the most dominant natural landform in the county, other visually prominent ridgelines are designated within the Ridge and Upland Greenbelt areas. Restrictions are placed on development in these areas to protect the visual quality of the ridgelines, hills, and view corridors. In San Anselmo, the Ridge and Upland Greenbelt areas are primarily located along the major ridgelines and higher elevation zones within the town. These areas are specifically designated to preserve the natural beauty, ecological integrity, and scenic vistas of the region. Some of the ridgelines and upland areas that fall within these designated greenbelt zones include:

- **Bald Hill Ridgeline**: Extends from approximately 800 feet elevation in the town of Ross to about 400 feet elevation near the San Anselmo/Fairfax Boundary on the north.
- **Red Hill Ridgeline**: Runs roughly from east to west above the 300-foot elevation.
- **Sunny Hills Ridgeline**: Extends from Memorial Park on the west to the San Anselmo boundary on the east.
- **Indian Rock System of Ridgelines**: Located above elevation 300 feet, north of Sorich Park.
- **Camino de Herrera Ridgeline**: Extends from elevation 400 feet at the end of Camino de Herrera northward to the upper end of Woodside Drive at elevation 500.
- **Perimeter Ridgeline**: Extends from elevation 400 feet near the Fairfax/San Anselmo boundary northward along upper Oak Springs Drive to the northwest apex of the San Anselmo boundary, then northward, eastward, and southward around Sleepy Hollow to an end at elevation 500 feet in San Rafael east of the northeast boundary of Sorich Park.

These areas are defined and protected under San Anselmo's planning and zoning regulations to ensure they remain undeveloped or have limited development that is compatible with preserving their natural and scenic qualities.

Communities within Marin County, including San Anselmo, have traditionally strived to design compact villages, towns and cities that blend with the surrounding natural and agricultural landscapes. By encouraging residential development near city or town centers, walkable neighborhoods maintain a pedestrian-scale heritage, such as San Anselmo with its creekside areas, designed to promote public use with residential neighborhoods nearby. San Anselmo has a special visual character that benefits from attractive building design and layouts. County and local ordinances have protected nearby ridgeline and viewsheds. By regulating urban and low-density residential design standards, new structures, additions, lighting, signs, landscaping, infrastructure,

and other design elements can offer visual resources by complementing existing character and the surrounding natural environment and view corridors. When the scenic qualities of the built environment are protected, residents and visitors can enjoy a distinctive visual environment.

San Anselmo has a unique visual environment with an attractiveness and diversity of landscape that includes views of open space, hills and ridgelines, stands of various types of trees, and other natural features. The town of San Anselmo has nine open space areas, including Bald Hill-Adjacent Open Space, Faude Park, Halperin Park, Hawthorne Hills Open Space, Kite Hill, Oak Park, Red Hill Open Space, Sir Francis Drake Boulevard – Butterfield Road Landscape, and Sorich Ranch Park. As previously described, ridgelines are also described in the San Anselmo General Plan as the most visually defining open space attribute and greatest opportunity for community scenic value in the Planning Area. **Figure 3.1-2** shows parks, recreation, and open space lands within the Planning Area.

San Anselmo encompasses rolling hills with varying elevations, adorned predominantly with coastal oak woodlands and pockets of redwood forests. These vegetation types are indicative of the Mediterranean climate prevalent in the area, influencing the local biodiversity and ecosystem dynamics.

Trees and woodland areas are important natural resources which provide habitat for birds and shaded, protected areas for other animals, and help to stabilize hillsides. Trees and wooded areas also contribute to the visual character of the community. Trees and woodlands are valued by the town for their ecological importance, their visual enhancement of the community, and their contribution to residential privacy and quiet.

Furthermore, for the same reasons, streams and riparian habitat are an important scenic resource and are a critical component of high quality habitat. Woody vegetation provides shade that keeps water temperatures within tolerable ranges for aquatic organisms, stabilizes streambanks and floodplains, and provides protective cover for wildlife. They also offer unique areas to recreate and explore.

Figure 3.1-1 provides an overview of visual and scenic characteristics of the Planning Area, including Ridge and Upland Greenbelt Areas, San Anselmo General Plan designated ridgelines, locally designated scenic highways, freshwater ponds, and riverine features.

LIGHT AND GLARE

During the day, sunlight reflecting from structures is a primary source of glare, while nighttime light and glare can be divided into both stationary and mobile sources. Stationary sources of nighttime light include structure illumination, interior lighting, decorative landscape lighting, and streetlights. The principal mobile source of nighttime light and glare is vehicle headlamp illumination. This ambient light environment can be accentuated during periods of low clouds or fog.

The variety of urban land uses in the Planning Area are the main source of daytime and nighttime light and glare. They are typified by single and multi-family residences, commercial structures, industrial areas, vehicle headlights, and streetlights. These areas and their associated human activities (including vehicular traffic) characterize the existing light and glare environment present

during daytime and nighttime hours in the urbanized portions of the Planning Area. Areas to the west and south, outside of the town limits, near the fringes of the Planning Area, are characterized primarily by open space uses and lower intensity residential development, and generally have lower levels of ambient nighttime lighting and daytime glare.

Sources of glare in urbanized portions of the Planning Area come from light reflecting off surfaces, including glass and certain siding and paving materials, as well as metal roofing. The urbanized areas of San Anselmo contain sidewalks and paved parking areas which reflect street and vehicle lights. The existing light environment found in the project area is considered typical of suburban areas.

Sky glow is the effect created by light reflecting into the night sky. Sky glow is of particular concern in areas surrounding observatories, where darker night sky conditions are necessary, but is also of concern in more rural or natural areas where a darker night sky is either the norm or is important to wildlife. Due to the urban nature of the town limits, a number of existing light sources affect residential areas and illuminate the night sky. Isolating impacts of particular sources of light or glare is, therefore, not appropriate or feasible for the project.

3.1.2 REGULATORY SETTING

FEDERAL

There are no Federal regulations that apply to the proposed project related to visual resources in the study area.

STATE

California Department of Transportation – California Scenic Highway Program

California's Scenic Highway Program was created by the Legislature in 1963 to preserve and protect scenic highway corridors from change, which would diminish the aesthetic value of lands adjacent to highways. State laws governing the Scenic Highway Program are found in the Streets and Highways Code, Section 260 et seq. The State Scenic Highway System includes a list of highways that are either eligible for designation as scenic highways or have been so designated. These highways are identified in Section 263 of the Streets and Highways Code.

California Trails Act

This law requires every city and county to consider trail-oriented recreational uses and consider such demands in developing specific open space programs in their General Plan. Every city, county, and district must also consider the feasibility of integrating trail routes with appropriate segments of the State trail system.

California Building Standards Code

Title 24 of the California Building Standards Code serves as the basis for the design and construction of buildings in California. In addition to safety, sustainability, new technology and reliability, the

California Building Standards Code addresses light pollution and glare hazards through the establishment of maximum allowable backlight, up light, and glare (BUG) ratings.

LOCAL

Existing Town of San Anselmo General Plan

The following goals, policies, and actions are applicable to aesthetics and visual resources.

LAND USE ELEMENT

Objective 2: To preserve and enhance the unique natural and urban characteristics of the community while accommodating suitable new growth.

Policy 2.1. All land use decisions within the Town and the planning area will take into consideration the protection and preservation of the area's surrounding hillsides, ridges, water courses, and any unique natural habitats.

Policy 2.2. New development will be required to preserve some of the natural and cultural characteristics of their respective development sites.

Policy 2.3. Undeveloped and agricultural lands outside the urban service area boundary should be protected from urban expansion.

Objective 7: To protect and preserve those areas of unique natural and visual resources within the planning area (see Map 3 [of the General Plan]).

Policy 7.1. To limit or prohibit development in hazardous areas or areas of high resource value.

Policy 7.2. To prohibit or severely limit development along the Town's major and minor ridges and hilltops.

Policy 7.3. To preserve as open space land of aesthetic or recreational value.

Policy 7.4. Encourage open space corridors along easements and streams and provide public access where appropriate for bicycling, walking, and equestrians. (See Objective 4 of Open Space Element.)

Policy 7.5. Regulate construction on visible slopes to preserve the visual value of the hillside.

Policy 7.6. Continue to preserve open space and provide for the conservation of resources through innovative implementation including zoning, development controls (including grading, public and private acquisition, and incentives for private improvements which enhance the environment).

Objective 9: To regulate future development on hillside and ridge parcels so as to protect, maintain, and enhance the natural characteristics of the land which contribute to the open space qualities of the parcel.

Policy 9.2. No development including structures, roads, and public facilities shall be allowed on visible ridges and hillsides unless it has been demonstrated that development outside of these areas is not feasible for geologic, soils, or hydrologic reasons, or development would impact a unique natural habitat.

Policy 9.3. Should there be no other option but to allow development on a visible hillside or ridge, the Town may limit the size of development (i.e., square footage allowed within any structure), if such a limitation would reduce the visual impact of a development.

Policy 9.4. Development on hillside and ridge parcels shall be located so as to be screened by existing woodlands or by portions of the site where existing topography provides screening. Development within existing woodland may be allowed if tree removal is minimal.

Policy 9.6. New or existing roads serving hillside and ridge parcels shall remain rural in character and appearance.

Policy 9.7. Development on hillside and ridge parcels shall be so designed as to minimize grading and disruption of natural contours.

OPEN SPACE ELEMENT

Goal 1. Create "open space greenbelts" which serve as separation buffers between the Town and adjacent communities.

Goal 2. Protect ridgelines, including the ridge zone, and preservation of the natural features of hillside lands.

Goal 3. Protect highly visible hillside slopes and ridges from development, and maintain the visual presence of woodlands, riparian areas, and stream courses which are found on, or traverse, identified open space lands.

Objective 1: To protect from development those open space parcels which contribute directly to the Town's identity, its sense of separate place in relation to other communities, and the quality of life in the community. The properties which meet this criteria are listed in Appendix A [of the General Plan].

Policy 1.5. The Town's hillside and ridge protection policies and development densities will be used to protect the open space values of the properties listed in Appendix A [of the General Plan] if efforts to purchase open space have failed. Such efforts will include the establishment of lands designated as private open space.

Objective 2: To prohibit development on the ridgeline and within the ridge zone of the major ridges identified on the Open Space and Conservation Map, as well as the secondary ridges.

CONSERVATION ELEMENT

Goal 5. Preserve ridgetops and other locally important natural or man-made historic areas or features.

Goal 6. Preserve historic or architecturally important buildings.

Goal 7. Protect the scenic value of San Anselmo by reasonably regulating signs, billboards, unsightly uses, and the placement of utilities.

Policy 12. Visual qualities and view potential of both natural and man-made settings shall be an equal consideration with other factors in any project review. Tree cutting and other activity detrimental to trees that enhance the character of the town or neighborhood shall be avoided wherever possible.

SCENIC HIGHWAYS ELEMENT

Goal V: Improve the appearance and aesthetic quality of the planning area's main thoroughfares, especially the entryways to the community.

Implementation 1. San Anselmo has three entryways, all of which could be improved by landscaping, improved signing, lighting, and other outdoor design features.

Implementation 2. Divided highways in the planning area should have their landscaping, lighting, and street furniture upgraded in keeping with a common design theme that will visually signal that one has arrived and is moving through a different community.

Town of San Anselmo Municipal Code

Town Code Title 4, Chapter 9, establishes requirements for planting and maintaining street trees.

Town Code Title 4, Chapter 13, establishes permit requirements for the removal, destruction, or harm of any tree on undeveloped parcels and for the removal, destruction, or harm of heritage trees on developed parcels. A heritage tree is any tree with a diameter of 22 inches at breast height or a tree which has special significance and is of a species and size designated by the Council; heritage tree does not include acacia trees or trees designated as a nuisance by the Council.

Town Code Title 10, Chapter 3, establishes zoning standards for residential and non-residential development. Article 3 establishes development standards for each of the zones within the town, including height standards that address visual impacts on the ridge zone and siting of buildings and size of buildings to reduce visibility on hillsides and ridges. Article 3 establishes design review requirements to minimize adverse effects of the exterior design of development projects by providing for the review of the design of certain buildings and improvements. Article 3 requires findings to be made for design review, including findings that address functional and aesthetic compatibility with the surrounding area.

Town Code Title 10, Chapter 9, Signs, establishes comprehensive guidelines for the installation, regulation, and maintenance of signs throughout San Anselmo, emphasizing compatibility with surrounding architecture and environments while enhancing the town's visual appeal for residents and visitors alike. This Chapter also requires that light sources shall be concealed or shielded to prevent or minimize light spillage, glare, momentary blindness, or other annoyance, disability or discomfort to persons within the view of such light sources. Additionally, signs using exposed light

sources, such as neon tubing, unshielded light bulbs or fluorescent tubes, or any interior lighted sign with transparent or translucent faces may receive final approval only when the Planning Commission finds that the light from the sign does not cause unreasonable glare or annoyance to passersby or neighbors.

Town Code Title 10, Chapter 10, Signs on Town Property, outlines rules governing the placement, design, and maintenance of signs on property owned or controlled by the Town, as well as public rights-of-way.

3.1.3 IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

Future development under the General Plan 2045 was reviewed to determine if existing scenic resources would be obstructed or if light or glare would be created causing a public hazard or annoyance. These types of impacts would be the greatest where large infill opportunities exist or in undeveloped areas; therefore, these are the areas that are focused on in the analysis. Impacts are evaluated assuming full buildout of the Planning Area.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to aesthetics and visual resources.

LAND USE AND COMMUNITY DESIGN ELEMENT

Goal LU-C: Preserve and enhance San Anselmo's natural setting as a unique asset that supports the community.

Policy LU-C.1: Open Space and Natural Resources. Protect and enhance open spaces and scenic vistas, natural features, and wildlife habitats, ensuring that development respects these natural assets and integrates with the town's natural environment.

Action LU-C.1.a: Development in Open Space and Low Density Areas. Prohibit development in areas designated as Open Space on the Land Use Map (Figure LU-1), and continue to allow very low-density residential development on private property in areas designated as Very Low Density and Single-Family – Conservation on the Land Use Map (Figure LU-1).

Policy LU-C.2: Hillside Protection. Protect the visual integrity and natural resources of San Anselmo's hillsides. Where hillside construction is permitted, design structures to:

- Minimize visual impacts by limiting building size and height, screening the structure within the existing landscape, minimizing glare and light spillage, and using exterior colors and materials that blend with the surrounding environment,
- Limit grading to preserve the existing topography,
- Provide slope and foundation stability, drainage, and erosion control,

- Provide adequate parking and emergency access,
- Address Wildland Urban Interface requirements, and
- Restore natural habitats.

Action LU-C.2.a: Hillside Density District. Amend Table 4D, R-1-H (Hillside Density District) Parcels, in the Municipal Code to remove outdated parcel numbers and update parcel-specific density limits to align with State law. The density on the remaining hillside parcels shall be no greater than the number of dwelling units specified in the table.

Policy LU-C.3: Ridge Zone Protection. Prohibit development, including structures, roads, and public facilities within the protected ridge zone, which is 150 horizontal feet in both directions from the lowest elevation of the ridgeline, or 50 feet vertically, whichever is more restrictive, of visually prominent ridgelines, identified on Figure LU-3. Exceptions may be considered on existing legal lots when it is demonstrated that development outside of these areas is not feasible for geologic, soils, or hydrologic reasons, and development would not impact a unique natural habitat. In such cases, visibility of new structures should be minimized by limiting building size and height and integrating the structure within the existing landscape.

Action LU-C.3.a: Conservation and Low Density Development Review. Continue to require design review for new structures and upper-floor additions for hillside or protected ridge zone parcels to minimize visual, environmental, and safety impacts.

Action LU-C.3.b: Hillside and Ridge Zone Development Regulations. Prepare and adopt objective development and design standards in the Municipal Code to minimize the impacts of hillside and protected ridge zone development, including but not limited to:

- Creating opportunities to cluster development and/or transfer of development rights to preserve open space, natural features, and scenic resources,
- Limiting grading to preserve natural topography, minimize erosion, and prevent slope failure,
- Regulating building design and scale, including height and massing, to achieve residential development that is compatible with existing hillside neighborhoods, and
- Establishing fire safety standards.
- Incorporate the protected ridge zone development restrictions in Policy LU-C.3 into the Zoning Code.

Policy LU-D.6: Gateways and Wayfinding. Enhance San Anselmo's sense of place and ease of navigation within it with gateway features and wayfinding.

Action LU-D.6.a: Gateways Location and Design. Create attractive gateways at well-traveled entry points into San Anselmo, including the entry points along Sir Francis

Drake Boulevard, Center Boulevard, and Red Hill Avenue, through landscaping, signage, lighting, and other outdoor design features.

Action LU-D.6.b: Wayfinding. Maintain and update, as necessary, wayfinding signage to direct motorists to the downtown and consider expansion of wayfinding signage to include other commercial districts.

Policy LU-D.9: Residential and Other Receptor Protections. Locate residences and sensitive receptors away from areas of excessive noise, smoke, dust, odor, and lighting, and ensure that adequate provisions, including buffers or transitional uses, such as office, professional, or commercial uses, separate the proposed residential uses from more intensive uses to ensure the health and well-being of existing and future residents.

Action LU-D.9.a: Employment-Generating Use Site Design. As part of the Town's development review process, continue to ensure that employment-generating projects are designed to minimize conflicts with residential uses and other sensitive receptors. Review of employment-generating projects should ensure that the following design concepts are addressed in projects that abut residential areas or sensitive receptors:

- Appropriate building scale and/or siting;
- Site design and features to protect residential uses and other sensitive receptors, developed or undeveloped, from impacts of non-residential development activities that may cause unwanted nuisances and to ensure that disadvantaged communities are not exposed to disproportionate environmental risks. The site design and features shall be based on best management practices as recommended by the California Air Resources Board (CARB), Bay Area Air Quality Management District (BAAD), and the California Attorney General;
- Site design and noise-attenuating features to avoid exposure to excessive noise due to long hours of operation or inappropriate location of accessory structures;
- Site and structure design to avoid excessive glare or excessive impacts from light sources onto adjacent properties; and
- Site design to avoid unnecessary loss of community and environmental resources (archeological, historical, ecological, recreational, etc.).

Action LU-E.1.e: Prior to any construction activities within or adjacent to historic resources in the town, including sites listed or eligible for the National Register of Historic Places or sites listed on or eligible for the California Register of Historic Resources Places, a qualified historian or architectural historian shall survey adjacent parcels for potential historic resources on those parcels. The survey shall include archival research, field inspection, and consultation with local historical societies or preservation organizations. Based on the survey findings, the project proponent shall develop a Historic Resource Protection Plan (HRPP) that outlines specific measures for the avoidance, protection, and documentation of those identified historic resources. If resources adjacent to the proposed project site are determined to be eligible for listing on the Historic Register, or are already registered as such, the HRPP shall include

additional mitigation measures, such as avoidance, preservation in place, or data recovery to ensure that no significant historic resources are inadvertently damaged or destroyed during construction. Measures identified in the HRPP shall reflect the requirements identified in the Secretary of the Interior's Standards for the Treatment of Historic Properties. The HRPP shall be prepared by a qualified historian or architectural historian, and subject to review and approval by the Town of San Anselmo Community Development Director or the Historical Commission, as appropriate.

OPEN SPACE AND CONSERVATION ELEMENT

Goal OSC-A: Protect, preserve, and enhance the town's ridge zones, hillsides, and undeveloped open space for its scenic beauty, natural habitat, hazard mitigation, climate change resilience, recreational value, and contributions to community well-being.

Policy OSC-A.1: Open Space Land Use. Protect lands designated as Open Space on the Land Use Map (Figure LU-1 [of the General Plan]) for environmental protection, resource management, hazard reduction, passive recreation, and climate resilience.

Policy OSC-A.2: New Development. Ensure that new development respects the ecological, visual, and safety benefits of ridge zones, hillsides, and other natural areas.

Action OSC-A.2.a: Online Maps. Use online mapping tools to identify the ridge zones, hillsides, and other natural areas and ensure this information is readily available to the public in clear and accessible formats.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact on aesthetics if it will:

- Have a substantial adverse effect on a scenic vista;
- Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway;
- In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality;
- Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

IMPACTS AND MITIGATION MEASURES

Impact 3.1-1: General Plan implementation would not have a substantial adverse effect on a scenic vista (Less than Significant)

As noted previously, public parklands and open space land uses largely contribute to the visual environment of San Anselmo and Marin County. However, the community character of the built

environment also plays a crucial role in defining the visual environment. While Mount Tamalpais State Park encompasses the most dominant natural landform in the county, other visually prominent ridgelines are designated within the Ridge and Upland Greenbelt areas. Restrictions are placed on development in these areas to protect the visual quality of the ridgelines, hills, and view corridors. In San Anselmo, the Ridge and Upland Greenbelt areas are primarily located along the major ridgelines and higher elevation zones within the town. These areas are specifically designated to preserve the natural beauty, ecological integrity, and scenic vistas of the region. Some of the ridgelines and upland areas that fall within these designated greenbelt zones include:

- **Bald Hill Ridgeline**: Extends from approximately 800 feet elevation in the town of Ross to about 400 feet elevation near the San Anselmo/Fairfax Boundary on the north.
- **Red Hill Ridgeline**: Runs roughly from east to west above the 300-foot elevation.
- **Sunny Hills Ridgeline**: Extends from Memorial Park on the west to the San Anselmo boundary on the east.
- **Indian Rock System of Ridgelines**: Located above elevation 300 feet, north of Sorich Park.
- **Camino de Herrera Ridgeline**: Extends from elevation 400 feet at the end of Camino de Herrera northward to the upper end of Woodside Drive at elevation 500.
- **Perimeter Ridgeline**: Extends from elevation 400 feet near the Fairfax/San Anselmo boundary northward along upper Oak Springs Drive to the northwest apex of the San Anselmo boundary, then northward, eastward, and southward around Sleepy Hollow to an end at elevation 500 feet in San Rafael east of the northeast boundary of Sorich Park.

These areas are defined and protected under San Anselmo's planning and zoning regulations to ensure they remain undeveloped or have limited development that is compatible with preserving their natural and scenic qualities.

There are no areas within the town of San Anselmo that are designated for urban land uses by the proposed Land Use Map which are not already designated for urban uses by the existing General Plan Land Use Map. The proposed Land Use Map does not convert any open space lands to urban uses. However, the proposed Land Use Map does result in increased residential densities throughout areas of the town; this could increase building heights and sizes overall.

New development accommodated by implementation of the General Plan may result in changes to the existing availability of publicly available scenic vistas; however, the proposed General Plan includes measures to preserve scenic vistas and views to ridgelines from identified viewsheds and notes that preserving these ridgelines from development will help preserve the aesthetic value of the viewshed. Potential changes to scenic vistas resulting from project implementation are unknown, as the General Plan does not propose any development, in and of itself; however, future development projects would be required to comply with applicable urban design and other applicable policies and regulations related to the preservation of scenic vistas and within hillside areas. The currently adopted General Plan includes goals and policies which include measures to protect scenic vistas and hillsides, and the General Plan 2045 carries forward the protections to visual resources from the currently adopted General Plan. Buildout accommodated by the General Plan 2045 and implementation of the General Plan Land Use Map has the potential to result in new

or expanded development within areas identified by the General Plan as being within viewsheds to major ridgelines; however, General Plan policies related to the preservation of ridgelines and hillsides, as well as views of them, are provided under Goal OSC-A.

Additionally, as noted in greater detail in Chapter 2.0, Project Description, implementation of the 2045 General Plan could lead to new and expanded urban and suburban development throughout the town. This new development may result in changes to the skyline throughout the Planning Area, which may obstruct or interfere with views of visual features surrounding the Planning Area, including views of open space, viewshed areas, ridgelines, hillsides, and creeks.

The 2045 General Plan has been developed to preserve expansive areas of open space and to ensure that new development is located in and around existing urbanized areas, thus ensuring that new development is primarily an extension of the existing urban landscape and minimizes interruption of views of nearby visual features.

Future development would be required to be consistent with the 2045 General Plan. A central theme of the General Plan is to preserve and protect the town's natural resources and scenic resources. This is expressed in Policy LU-C.1, which seeks to protect and enhance open spaces and scenic vistas, natural features, and wildlife habitats, ensuring that development respects these natural assets and integrates with the town's natural environment. Action LU-C.1.a prohibits development in areas designated as Open Space on the General Plan 2045 Land Use Map, and continue to allow very low-density residential development on private property in areas designated as Very Low Density and Single-Family – Conservation on the General Plan 2045 Land Use Map. Policy LU-C.2 aims to protect the visual integrity and natural resources of San Anselmo's hillsides. In accordance with this policy, where hillside construction is permitted, design structures to:

- Minimize visual impacts by limiting building size and height, screening the structure within the existing landscape, minimizing glare and light spillage, and using exterior colors and materials that blend with the surrounding environment,
- Limit grading to preserve the existing topography,
- Provide slope and foundation stability, drainage, and erosion control,
- Provide adequate parking and emergency access,
- Address Wildland Urban Interface requirements, and
- Restore natural habitats.

Policy OSC-A.2 ensures that new development respects the ecological, visual, and safety benefits of ridge zones, hillsides, and other natural areas. Policy LU-C.3 prohibits development, including structures, roads, and public facilities within the protected ridge zone, which is 150 horizontal feet in both directions from the lowest elevation of the ridgeline, or 50 feet vertically, whichever is more restrictive, of visually prominent ridgelines, with some exceptions. Further, Action LU-C.3.a requires design review for new structures and upper-floor additions for hillside or protected ridge zone parcels to minimize visual, environmental, and safety impacts. Action LU-C.3.b requires preparation and adoption of objective development and design standards in the Municipal Code to minimize the impacts of hillside and protected ridge zone development, including but not limited to:

- Creating opportunities to cluster development and/or transfer of development rights to preserve open space, natural features, and scenic resources,
- Limiting grading to preserve natural topography, minimize erosion, and prevent slope failure,
- Regulating building design and scale, including height and massing, to achieve residential development that is compatible with existing hillside neighborhoods, and
- Establishing fire safety standards.

Policy LU-D.9 seeks to locate residences and sensitive receptors away from areas of excessive lighting, and ensure that adequate provisions, including buffers or transitional uses separate the proposed residential uses from more intensive uses to ensure the health and well-being of existing and future residents. Action LU-D.9.a would require the Town, as part of its development review process, to ensure that employment-generating projects are designed to minimize conflicts with residential uses and other sensitive receptors including ensuring appropriate building scale and/or siting, and ensure that site design avoid excessive glare or excessive impacts from light sources onto adjacent properties.

Lastly, Town Code Title 10, Chapter 3, establishes zoning standards for residential and non-residential development. Article 3 establishes development standards for each of the zones within the town, including height standards that address visual impacts on the ridge zone and siting of buildings and size of buildings to reduce visibility on hillsides and ridges. Article 3 establishes design review requirements to minimize adverse effects of the exterior design of development projects by providing for the review of the design of certain buildings and improvements. Article 3 requires findings to be made for design review, including findings that address functional and aesthetic compatibility with the surrounding area. Future development would be required to be consistent with the Municipal Code.

The implementation of the policies and actions contained in the 2045 General Plan listed previously would ensure that new urban residential and non-residential development in the San Anselmo Planning Area is located in and around existing urbanized areas and developed to be visually compatible with nearby open space resources. Additionally, the implementation of the policies and actions contained in the Land Use Community Design Element and Open Space and Conservation Element would further ensure that future development accommodated by the 2045 General Plan is designed in a way that enhances the visual quality of the community, complements the visual character of the town, and that adverse effects on public views are minimized. Therefore, the impact would be **less than significant**.

Impact 3.1-2: General Plan implementation would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway (Less than Significant)

As discussed above in the Existing Setting section, there are currently no designated State Scenic Highways or National Scenic Byways within the Planning Area. However, the Scenic Highways Element in San Anselmo identifies Red Hill Avenue, Sir Francis Drake Boulevard from the Ross line

to the Fairfax town limits, and Center Boulevard from the Hub to the Fairfax town limits as locally designated scenic highways. The goals are focused on enhancing the visual appeal of these main thoroughfares, particularly at the entry points into the community. While there are no State highways eligible for State-designated scenic status in San Anselmo, the town aims to beautify these roads through landscaping, improved signage, lighting, and cohesive outdoor design elements. This initiative intends to create a distinct visual identity that signifies entry into and movement through the town's different neighborhoods.

Given that no adopted State scenic highways are located within the Planning Area, and that no scenic highways provide views of the Planning Area, State scenic highway impacts associated with General Plan implementation would be **less than significant**.

Impact 3.1-3: General Plan implementation would not, in a non-urbanized area, substantially degrade the existing visual character or quality of public views of the site and its surroundings (Less than Significant)

CEQA Guidelines Section 15387 defines an urbanized area as a central city or a group of contiguous cities with a population of 50,000 or more, together with adjacent densely populated areas having a population density of at least 1,000 persons per square mile. The town of San Anselmo had a 2020 population of 12,623; as such, the town is not considered an urbanized area. Under this CEQA threshold, public views are those that are experienced from publicly accessible vantage points.

As noted in the Existing Setting, public parklands and open space land uses largely contribute to the visual environment of San Anselmo and Marin County. However, the community character of the built environment also plays a crucial role in defining the visual environment. While Mount Tamalpais State Park encompasses the most dominant natural landform in the county, other visually prominent ridgelines are designated within the Ridge and Upland Greenbelt areas. Restrictions are placed on development in these areas to protect the visual quality of the ridgelines, hills, and view corridors. In San Anselmo, the Ridge and Upland Greenbelt areas are primarily located along the major ridgelines and higher elevation zones within the town. These areas are specifically designated to preserve the natural beauty, ecological integrity, and scenic vistas of the region.

As noted previously, there are no areas within the town of San Anselmo that are designated for urban land uses by the proposed Land Use Map which are not already designated for urban uses by the existing General Plan Land Use Map. The proposed Land Use Map does not convert any open space lands to urban uses. However, the proposed Land Use Map does result in increased residential densities throughout areas of the town; this could increase building heights and sizes overall.

In order to further ensure that future development accommodated under the General Plan would not degrade the existing visual character of the environment from publicly accessible vantage points, the Town has included policies and actions in the General Plan to preserve the visual character of the Planning Area. Future development would be required to be consistent with the 2045 General Plan. A central theme of the General Plan is to preserve and protect the town’s natural resources and scenic resources. This is expressed in Policy LU-C.1, which seeks to protect and enhance open spaces and scenic vistas, natural features, and wildlife habitats, ensuring that development respects

these natural assets and integrates with the town's natural environment. Action LU-C.1.a prohibits development in areas designated as Open Space on the Land Use Map (Figure LU-1), and continue to allow very low-density residential development on private property in areas designated as Very Low Density and Single-Family – Conservation on the Land Use Map (Figure LU-1). Policy LU-C.2 aims to protect the visual integrity and natural resources of San Anselmo's hillsides. In accordance with this policy, where hillside construction is permitted, structures should be designed to:

- Minimize visual impacts by limiting building size and height, screening the structure within the existing landscape, and using exterior colors and materials that blend with the surrounding environment,
- Preserve the existing topography,
- Limit grading,
- Provide slope and foundation stability, drainage, and erosion control,
- Provide adequate parking and emergency access,
- Address Wildland Urban Interface requirements, and
- Restore natural habitats.

Policy OSC-A.2 ensures that new development respects the ecological, visual, and safety benefits of ridge zones, hillsides, and other natural areas. Policy LU-C.3 prohibits development, including structures, roads, and public facilities within the protected ridge zone, which is 150 horizontal feet in both directions from the lowest elevation of the ridgeline, or 50 feet vertically, whichever is more restrictive, of visually prominent ridgelines, identified on Figure LU-3 (with some exceptions). Further, Action LU-C.3.a requires design review for new structures and upper-floor additions for hillside or protected ridge zone parcels to minimize visual, environmental, and safety impacts. Action LU-C.3.b requires preparation and adoption of objective development and design standards in the Municipal Code to minimize the impacts of hillside and protected ridge zone development, including but not limited to:

- Creating opportunities to cluster development and/or transfer of development rights to preserve open space, natural features, and scenic resources,
- Limiting grading to preserve natural topography, minimize erosion, and prevent slope failure,
- Regulating building design and scale, including height and massing, to achieve residential development that is compatible with existing hillside neighborhoods, and
- Establishing fire safety standards.

Additionally, Policy LU-C.3 prohibits development, including structures, roads, and public facilities within the protected ridge zone, which is 150 horizontal feet in both directions from the lowest elevation of the ridgeline, or 50 feet vertically, whichever is more restrictive, of visually prominent ridgelines, identified on Figure LU-3. Action LU-C.3.a continues to require design review for new structures and upper-floor additions for hillside or protected ridge zone parcels to minimize visual, environmental, and safety impacts.

Policy LU-D.9 seeks to locate residences and sensitive receptors away from areas of excessive lighting, and ensure that adequate provisions, including buffers or transitional uses separate the proposed residential uses from more intensive uses to ensure the health and well-being of existing and future residents. Action LU-D.9.a would require the Town, as part of its development review process, to ensure that employment-generating projects are designed to minimize conflicts with residential uses and other sensitive receptors including ensuring appropriate building scale and/or siting, and ensure that site design avoid excessive glare or excessive impacts from light sources onto adjacent properties.

Lastly, as noted in Impact 3.1-1, Town Code Title 10, Chapter 3, establishes zoning standards for residential and non-residential development. Article 3 establishes development standards for each of the zones within the town, including height standards that address visual impacts on the ridge zone and siting of buildings and size of buildings to reduce visibility on hillsides and ridges. Future development would be required to be consistent with the Municipal Code.

Implementation of the General Plan would not in and of itself directly result in development, as policies in the proposed General Plan are intended to complement and further the intent of provisions regulating scenic quality and resources. Future development accommodated by the 2045 General Plan would be subject to compliance with these guidelines, as well as the applicable regulations set forth in the San Anselmo Municipal Code. Therefore, the proposed General Plan would not substantially degrade the existing visual character or quality of public views of the Planning Area and its surroundings. Scenic quality-related impacts associated with the General Plan implementation would thus be **less than significant**.

Impact 3.1-4: General Plan implementation could result in the creation of new sources of nighttime lighting and daytime glare (Less than Significant)

The primary sources of daytime glare are generally sunlight reflecting from structures, vehicles, and other reflective surfaces and windows. Implementation of the proposed General Plan would introduce new sources of daytime glare into previously developed areas of the Planning Area and increase the amount of daytime glare in existing urbanized areas. The General Plan Land Use Map identifies areas for the future development of residential, commercial, industrial, recreational, and public uses. Such uses may utilize materials that produce glare. Daytime glare impacts would be most severe in the limited areas of the town that have not been previously developed, including the limited number of vacant parcels designated for urbanized land uses, and in areas that receive a high level of daily viewership.

The primary sources of nighttime lighting are generally from exterior building lights, streetlights, and vehicle headlights. Exterior lighting around commercial and industrial areas may be present throughout the night to facilitate extended employee work hours, ensure worker safety, and to provide security lighting around structures and facilities. Nighttime lighting impacts would be most severe in areas that do not currently experience high levels of nighttime lighting. Increased nighttime lighting can reduce visibility of the night sky, resulting in fewer stars being visible and generally detracting from the quality of life in San Anselmo.

Future development would be required to be consistent with the General Plan, as well as glare and lighting design requirements in Town Code Title 10, Chapter 9, Signs. The proposed General Plan contains Policy LU-D.9 which requires that residences and sensitive receptors are located away from areas of excessive noise, smoke, dust, odor, and lighting. Additionally, Action LU-D.9.a requires that employment-generating projects sites and structures are designed to avoid excessive glare or excessive impacts from light sources onto adjacent properties. This policy and action would ensure that new development projects utilize appropriate building materials that do not result in significant increases in nighttime lighting or daytime glare.

Through the implementation of these actions during the development review process, the Town can ensure that adverse impacts associated with daytime glare and nighttime lighting are **less than significant**.

Impact 3.1-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to aesthetics and scenic resources. (Less than Significant)

The context for evaluating cumulative aesthetics and scenic resources impacts is Marin County.

As noted previously, public parklands and open space land uses largely contribute to the visual environment of San Anselmo and Marin County. However, the community character of the built environment also plays a crucial role in defining the visual environment. While Mount Tamalpais State Park encompasses the most dominant natural landform in the county, other visually prominent ridgelines are designated within the Ridge and Upland Greenbelt areas. Restrictions are placed on development in these areas to protect the visual quality of the ridgelines, hills, and view corridors. In San Anselmo, the Ridge and Upland Greenbelt areas are primarily located along the major ridgelines and higher elevation zones within the town. These areas are specifically designated to preserve the natural beauty, ecological integrity, and scenic vistas of the region. Some of the ridgelines and upland areas that fall within these designated greenbelt zones include:

- **Bald Hill Ridgeline**: Extends from approximately 800 feet elevation in the town of Ross to about 400 feet elevation near the San Anselmo/Fairfax Boundary on the north.
- **Red Hill Ridgeline**: Runs roughly from east to west above the 300-foot elevation.
- **Sunny Hills Ridgeline**: Extends from Memorial Park on the west to the San Anselmo boundary on the east.
- **Indian Rock System of Ridgelines**: Located above elevation 300 feet, north of Sorich Park.
- **Camino de Herrera Ridgeline**: Extends from elevation 400 feet at the end of Camino de Herrera northward to the upper end of Woodside Drive at elevation 500.
- **Perimeter Ridgeline**: Extends from elevation 400 feet near the Fairfax/San Anselmo boundary northward along upper Oak Springs Drive to the northwest apex of the San Anselmo boundary, then northward, eastward, and southward around Sleepy Hollow to an end at elevation 500 feet in San Rafael east of the northeast boundary of Sorich Park.

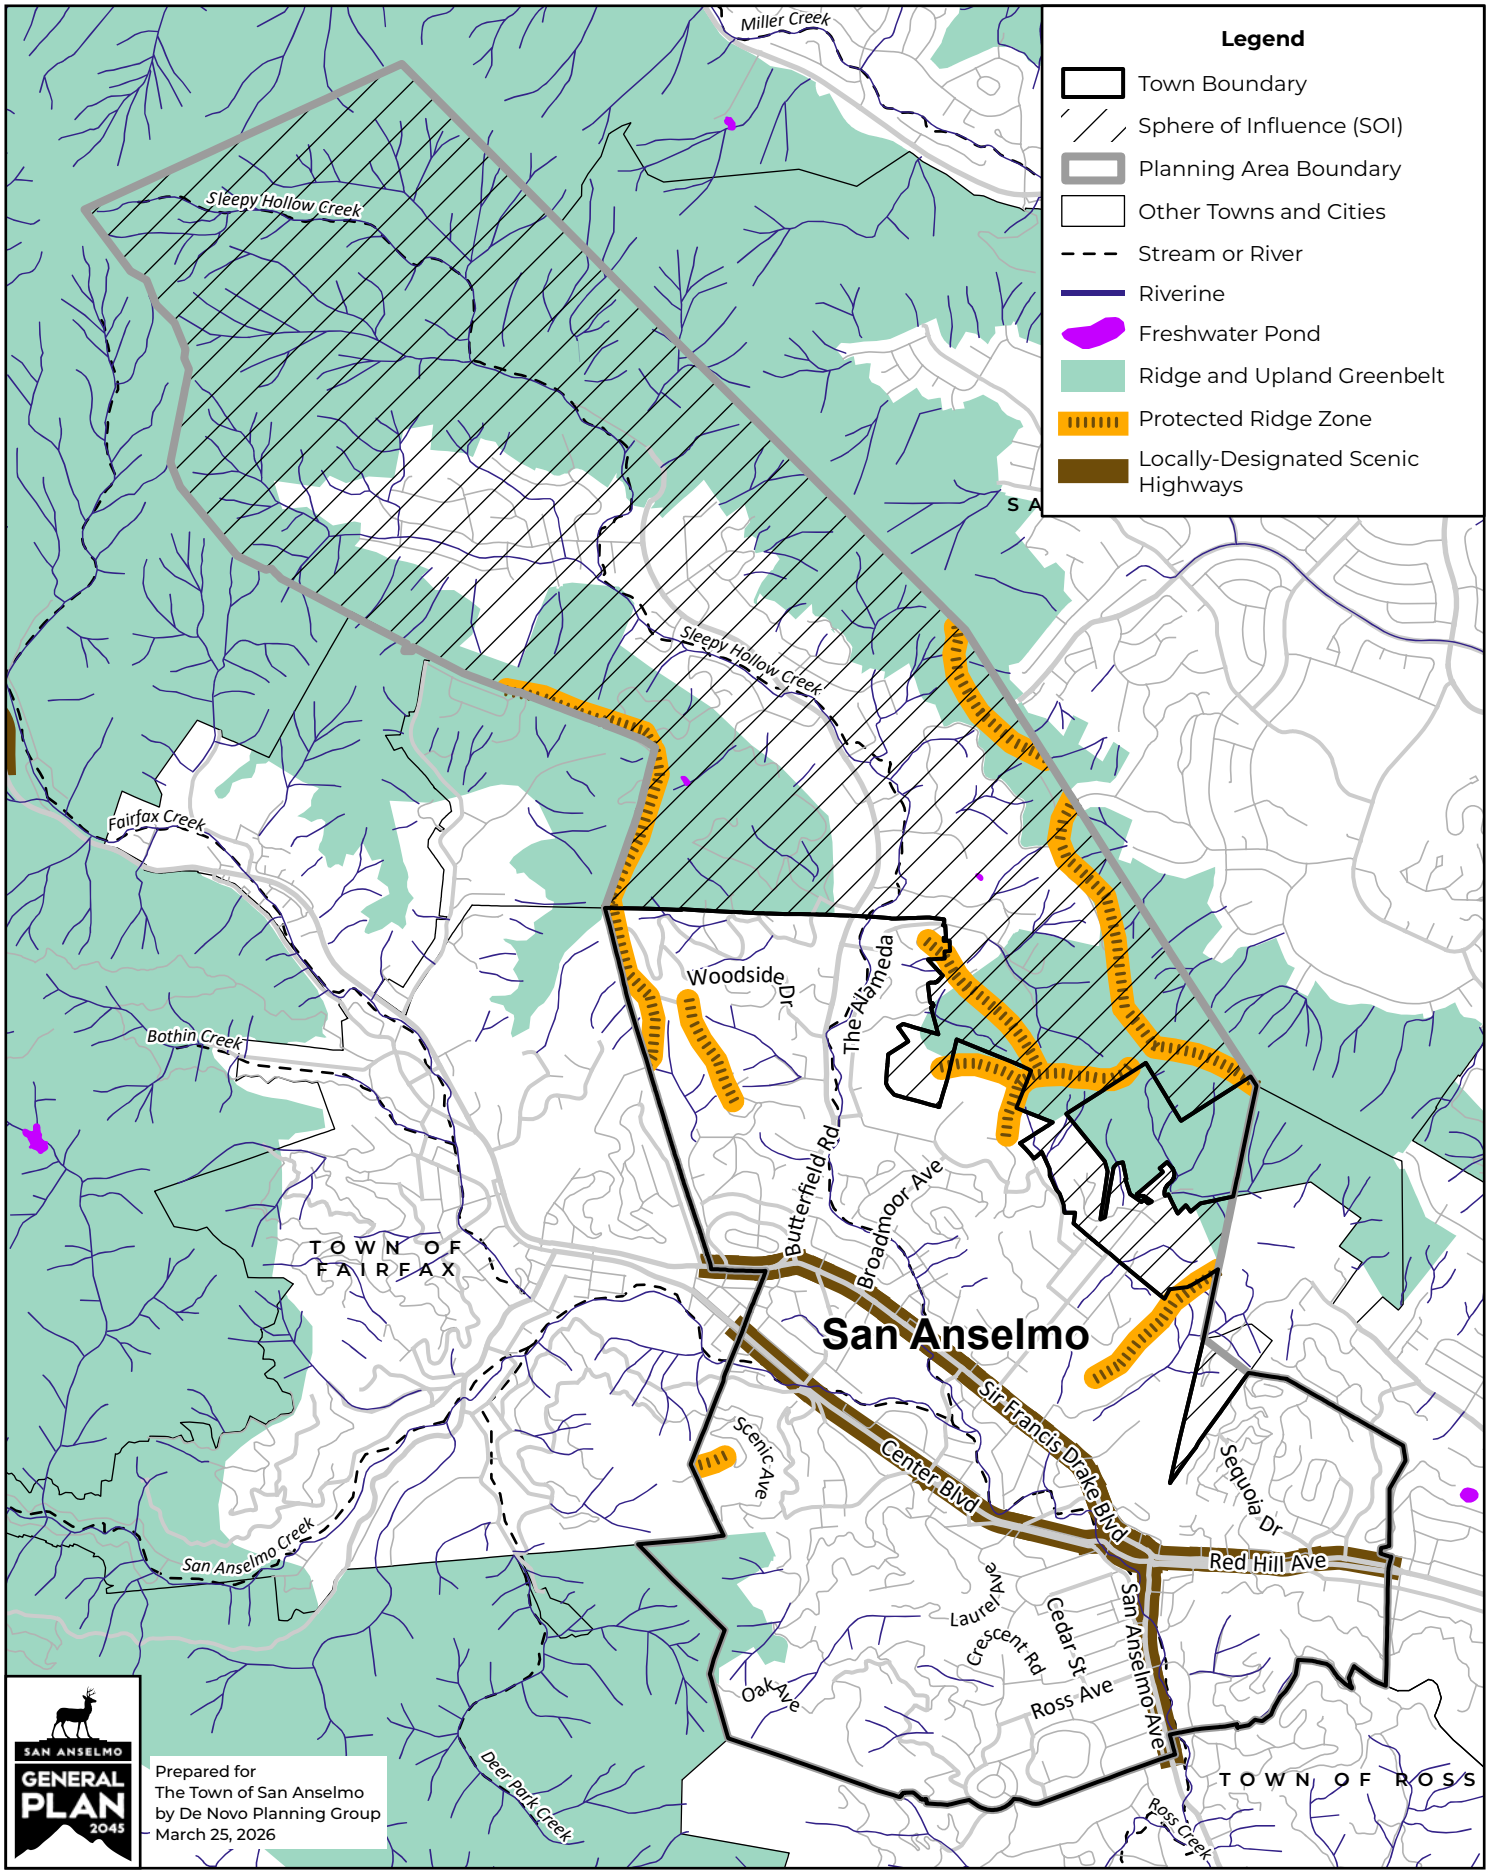

While growth is anticipated to occur in the San Anselmo Planning Area and within the other cities within Marin County, the majority of growth is anticipated to occur in and around existing urban

development. Development of land uses and associated infrastructure is planned to occur in the future to accommodate growth envisioned in the general plans that are effective within the cumulative analysis area, including Marin County and the nearby cities of San Rafael and Corte Madera.

Regional growth has and will continue to result in a cumulative aesthetic effect by converting undeveloped land into developed and occupied areas and increasing overall levels of nighttime lighting. Cumulative development entails grading/landform alteration, the development of structures, and the installation of roadways and other infrastructure that has altered and will continue to permanently alter the region's existing visual character. This is considered a potentially significant cumulative impact.

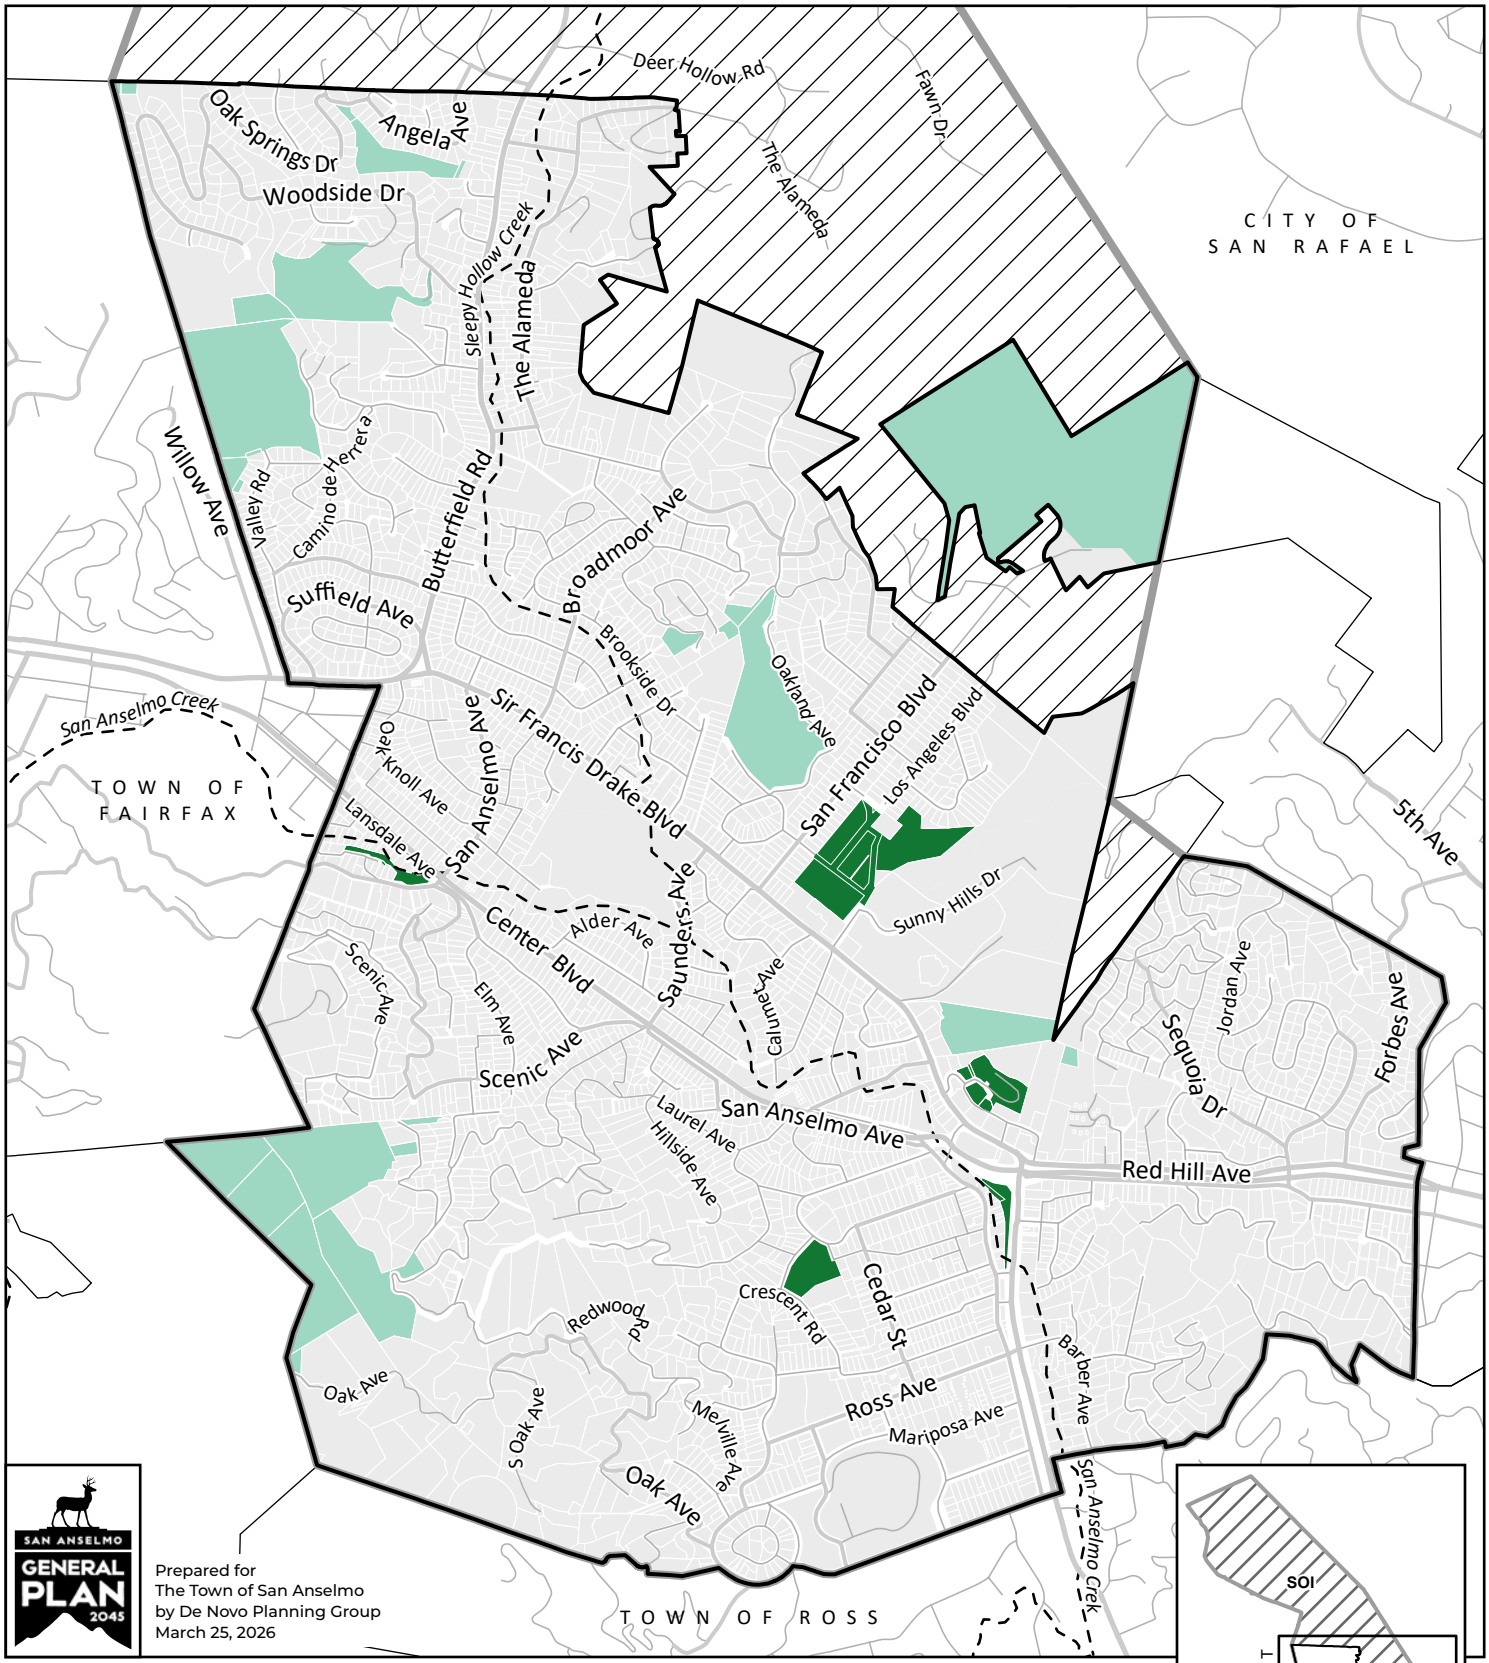

Subsequent projects implemented under the General Plan 2045 would be required to be consistent with the policies and actions of the General Plan 2045 and adopted regulations pertaining to aesthetics and lighting in San Anselmo. Preservation of view corridors, ridgelines, and open space areas would occur through implementation of General Plan 2045 Goal OSC-A and Policy LU-C.1. Policy LU-C.2 would protect the visual integrity and natural resources of San Anselmo's hillsides by requiring structures to minimize visual impacts by limiting building size and height, screening the structure within the existing landscape, minimizing glare and light spillage, and using exterior colors and materials that blend with the surrounding environment. Eliminating existing topography is discouraged.

With implementation of General Plan 2045 goals, policies, and actions, the proposed project would not considerably contribute to permanent changes in visual character, such as obstruction of scenic views, conversion of existing visual character, and increased lighting. Therefore, the General Plan 2045's contribution to this cumulative impact would not be considerable, and the cumulative impact would be **less than significant**.

FIGURE 3.1-2.
PARKS, RECREATION, AND OPEN SPACE LANDS
(GENERAL PLAN LAND USE MAP)

This section provides a background discussion of agricultural lands, agricultural resources, and forest/timber resources found in the San Anselmo Planning Area. This section is organized with an environmental setting, regulatory setting, and impact analysis.

No comments on this environmental topic were received during the NOP comment period.

3.2.1. ENVIRONMENTAL SETTING

AGRICULTURAL RESOURCES

There are almost no lands within the Planning Area that are designated for agricultural use on the existing or proposed San Anselmo Land Use Map.

Prime Farmland, Unique Farmland, or Farmland of Statewide Importance is not found in the Town's Planning Area. A small amount of land designated as Agriculture, Limited by Marin County exists north of the town, within the Sphere of Influence. The Agriculture, Limited (A2) designation is intended to preserve land for agricultural production and prevent the premature conversion of such land to urban uses. Permitted uses on Agriculture, Limited land include crop production, horticulture, orchards, nurseries, and livestock grazing.

Important Farmlands

The California Department of Conservation (DOC), as part of its Farmland Mapping and Monitoring Program (FMMP), prepares Important Farmland Maps indicating the potential value of land for agricultural production. The FMMP was created in DOC to continue the mapping activity with a greater level of detail, which was achieved by modifying the Land Inventory and Monitoring (LIM) criteria for use in California. The LIM criteria in California utilize the Soil Capability Classification and Storie Index Rating systems, but also consider physical conditions, such as a dependable water supply for agricultural production, soil temperature range, depth of the groundwater table, flooding potential, rock fragment content, and rooting depth.

Important Farmland Maps for California are compiled using the modified LIM criteria, as described above, and current land use information. The minimum mapping unit is 10 acres unless otherwise specified. Units of land smaller than 10 acres are incorporated into the surrounding classification.

The California Department of Conservation's Farmland Mapping and Monitoring Program identifies five agriculture-related categories and two non-agricultural categories.

Prime Farmland: Prime Farmland is land with the best combination of physical and chemical features able to sustain long-term agricultural production. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. The land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.

Farmland of Statewide Importance: Farmland of Statewide Importance is farmland similar to Prime Farmland but with minor shortcomings, such as greater slopes or less ability to store soil moisture.

The land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.

Unique Farmland: Unique Farmland is farmland of lesser quality soils used for the production of the state's leading agricultural crops. This land is usually irrigated, but may include nonirrigated orchards or vineyards as found in some climatic zones in California. Land must have been cropped at some time during the four years prior to the mapping date.

Farmland of Local Importance: Farmland of Local Importance is considered land important to the local agricultural economy but does not meet the criteria of Prime Farmland, Farmland of Statewide Importance, or Unique Farmland.

Grazing Land: Grazing land is land on which the existing vegetation is suitable for the grazing of livestock. This category was developed in cooperation with the California Cattlemen's Association, University of California Cooperative Extension, and other groups interested in the extent of grazing activities. The minimum mapping unit for this category is 40 acres.

Urban and Built-up Land: This category consists of non-agricultural land occupied by structures with a building density of at least 1 unit to 1.5 acres, or approximately 6 structures to a 10-acre parcel. This land is used for residential, industrial, commercial, construction, institutional, public administration, railroad and other transportation yards, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, water control structures, and other developed purposes.

Other Land: Other land is non-agricultural land not included in any other mapping category. Common examples include low density rural developments; brush, timber, wetland, and riparian areas not suitable for livestock grazing; confined livestock, poultry, or aquaculture facilities; strip mines and borrow pits; and water bodies smaller than 40 acres. Vacant and non-agricultural land surrounded on all sides by urban development and greater than 40 acres is mapped as Other Land.

IMPORTANT FARMLANDS IN PLANNING AREA

Limited agricultural production exists within the town. The existing agricultural land within the Town's Sphere of Influence is primarily located within one parcel. Although some land in the Planning Area is designated as Agriculture, Limited, it is not classified as Important Farmland. The Planning Area contains approximately 668.72 acres of grazing land and 714.69 acres of other land, primarily designated in the Marin County General Plan as Open Space, Single Family Residential, and Planned Residential. **Table 3.2-1** provides an overview of the land use types within the Town and Planning Area, and **Figure 3.2-1** shows the location of the grazing lands within the Town's Planning Area.

TABLE 3.2-1: AGRICULTURAL ACREAGES

LAND USE TYPE	*ACRES IN TOWN*	*ACRES IN SOI*	*GRAND TOTAL*
Urban/Built-Up Land	1,477.35	684.68	2,162.02
Grazing Land	--	668.72	668.72
Other Land	229.13	485.56	714.69
Grand Total	**1,706.48**	**1,838.95**	**3,545.43**

SOURCE: DEPARTMENT OF CONSERVATION, DE NOVO PLANNING GROUP 2026.

Farmland Preservation

The California Land Conservation Act, also known as the Williamson Act, was adopted in 1965 to encourage the preservation of the state's agricultural lands and to prevent their premature conversion to urban uses. The Williamson Act is described in greater detail under the Regulatory Setting section of this chapter.

There are no lands under a Williamson Act contract in the San Anselmo Planning Area. Locations of Agricultural Zoning in the Planning Area are shown in **Figure 3.2-2**. As shown, there are no Williamson Act lands within the mapped extent. None of the land within the Planning Area is within a Farmland Security Zone.

FOREST RESOURCES

Forest land is defined by Public Resources Code Section 12220(g) and includes "land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits."

Timber land is defined by Public Resources Code Section 4526, and means "land, other than land owned by the federal government and land designated by the board as experimental forest land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees. Commercial species shall be determined by the board on a district basis."

There are no forest lands or timber lands located within the San Anselmo Planning Area, although forestry resources are present in other areas of Marin County.

3.2.2. REGULATORY SETTING

FEDERAL

Farmland Protection Policy Act

The Natural Resource Conservation Service (NRCS), an agency within the U.S. Department of Agriculture, is responsible for implementation of the Farmland Protection Policy Act (FPPA). The purpose of the FPPA is to minimize Federal programs' contribution to the conversion of farmland to non-agricultural uses by ensuring that Federal programs are administered in a manner that is compatible with state, local, and private programs designed to protect farmland. The NRCS provides

technical assistance to Federal agencies, state and local governments, tribes, and nonprofit organizations that desire to develop farmland protection programs and policies. The NRCS summarizes FPPA implementation in an annual report to Congress.

Agricultural Conservation Easement Program – Agricultural Land Easements (ACEP-ALE)

The Agricultural Conservation Easement Program (ACEP) protects the agricultural viability and related conservation values of eligible land by limiting nonagricultural uses which negatively affect agricultural uses and conservation values, protect grazing uses and related conservation values by restoring or conserving eligible grazing land, and protecting and restoring and enhancing wetlands on eligible land.

ACEP has two components:

- Agricultural Land Easements (ALE) help private and tribal landowners, land trusts, and other entities such as state and local governments protect croplands and grasslands on working farms and ranches by limiting non-agricultural uses of the land through conservation easements.

- Wetland Reserve Easements (WRE) help private and tribal landowners protect, restore and enhance wetlands which have been previously degraded due to agricultural uses.

Additionally, through ACEP, USDA offers the Wetland Reserve Enhancement Partnership (WREP), a voluntary program through which NRCS enters into agreements with eligible partners to leverage resources to carry out high priority wetland protection, restoration, and enhancement and to improve wildlife habitat. A conservation plan must be developed for all lands enrolled based upon the standards contained in the NRCS Field Office Technical Guide. A minimum of 30 years is required for conservation easements, and priority is given to applications with perpetual easements. The NRCS provides up to 50 percent of the fair market value of the easement being conserved.[1] To qualify for a conservation easement, farm or ranch land must meet several criteria. The land must be:

- Prime, Unique, or other productive soil, as defined by NRCS based on factors such as water moisture regimes, available water capacity, developed irrigation water supply, soil temperature range, acid-alkali balance, water table, soil sodium content, potential for flooding, erodibility, permeability rate, rock fragment content, and soil rooting depth;
- Included in a pending offer to be managed by a nonprofit organization, state, tribal, or local farmland protection program;
- Privately owned;
- Placed under a conservation plan;

[1] Natural Resources Conservation Service (NRCS). 2022. United States Department of Agriculture (USDA). Agricultural Land Easements. Available: https://www.nrcs.usda.gov/sites/default/files/2022-10/5_Steps_to_ALE_0.pdf. Accessed: May 8, 2026.

- Large enough to sustain agricultural production;
- Accessible to markets for the crop that the land produces; and
- Surrounded by parcels of land that can support long-term agricultural production.

STATE

California Department of Conservation

DOC administers and supports a number of programs, including the Williamson Act, Farmland Security Zones, the California Farmland Conservancy Program (CFCP), the Williamson Act Easement Exchange Program (WAEEP), and the FMMP. These programs are designed to preserve agricultural land and provide data on conversion of agricultural land to urban use.

DOC has authority for the approval of agreements entered into under the WAEEP. Key DOC tools available for land conservation planning are conservation grants, tax incentives to keep land in agriculture or open space, and farmland mapping and monitoring.

Williamson Act

The California Land Conservation Act, also known as the Williamson Act, was adopted in 1965 to encourage the preservation of the state's agricultural lands and to prevent their premature conversion to urban uses. In order to preserve these uses, the Act established an agricultural preserve contract procedure by which any county or city taxes landowners at a lower rate, using a scale based on the actual use of the land for agricultural purposes, as opposed to its unrestricted market value. In return, the owners guarantee that these properties remain under agricultural production for a 10-year period. The contract is self-renewing; however, the landowner may notify the county or city at any time of the intent to withdraw the land from its preserve status. There are two means by which the landowner may withdraw the land from its contract preserve status. First, the landowner may seek to cancel the contract. This takes the land out of the contract quickly with a minimal waiting period but the landowner pays a statutory penalty to the State. Second, the landowner may notice a non-renewal or seek a partial non-renewal of the contract. Land withdrawal through the non-renewal process involves a 9- or 10-year period (depending on the timing of the notice) of tax adjustment to full market value before protected open space can be converted to urban uses.

Williamson Act subvention payments to local governments have been suspended since the fiscal year 2009-10 due to the State's fiscal constraints. The Williamson Act contracts between landowners and local governments remain in force, regardless of the availability of subvention payments.

Farmland Security Zones

A Farmland Security Zone is an area created within an agricultural preserve by a board of supervisors (board) or city council (council) upon request by a landowner or group of landowners. An agricultural preserve defines the boundary of an area within which a city or county will enter into contracts with landowners. The boundary is designated by resolution of the board or council having jurisdiction. Agricultural preserves must generally be at least 100 acres in size. Farmland Security Zone contracts offer landowners greater property tax reduction. Land restricted by a Farmland Security Zone

contract is valued for property assessment purposes at 65 percent of its Williamson Act valuation or 65 percent of its Proposition 13 valuation, whichever is lower.

CalFire Forest Practices Rules

The California Department of Forestry and Fire Protection (CalFire) implements laws which regulate timber harvesting on privately-owned lands. These laws are contained in the Z'berg- Nejedly Forest Practice Act of 1973 which established a set of rules known as the Forest Practice Rules (FPRs) to be applied to forest management related activities (i.e., timber harvests, timberland conversions, fire hazard removal, etc.). They are intended to ensure that timber harvesting is conducted in a manner that will preserve and protect fish, wildlife, forests, and streams. Under the Forest Practice Act, a Timber Harvesting Plan (THP) is submitted to CalFire by the landowner outlining what timber is proposed to be harvested, harvesting method, and the steps that will be taken to prevent damage to the environment. If the landowner intends to convert timberland to non-timberland uses, such as a winery or vineyard, a Timberland Conversion Permit (TCP) is required in addition to the THP. It is CalFire's intent that a THP will not be approved which fails to adopt feasible mitigation measures or alternatives from the range of measures set out or provided for in the Forest Practice Rules, which would substantially lessen or avoid significant adverse environmental impacts resulting from timber harvest activities. THPs are required to be prepared by Registered Professional Foresters (RPFs) who are licensed to prepare these plans[2]. For projects involving TCPs, CalFire acts as lead agency under CEQA, and the county or city acts as a responsible agency.

LOCAL

Existing Town of San Anselmo General Plan

The following goals is applicable to agricultural and forestry resources.

LAND USE ELEMENT

> **Policy 2.3.** Undeveloped and agricultural lands outside the urban service area boundary should be protected from urban expansion.

Marin County Right-to-Farm Ordinance

As described in the Marin County Code Chapter 8.80, Marin County's right-to-farm protections restrict nuisance claims such as noise, odors, or dust resulting from normal practices against agricultural operations. This ordinance was adopted in compliance with the Marin Countywide Plan for the purpose of protecting existing or future agricultural uses, and supports continued agricultural use in the unincorporated SOI.

Marin Agricultural Land Trust (MALT)

MALT is the nation's first agricultural land trust and holds conservation easements on nearly 59,000 acres of Marin County farmland. Although acquiring new agricultural conservation easements to protect land for agricultural use is the primary strategy to achieve its mission, the MALT 2025-2030

[2] California Department of Forestry and Fire Protection. 2026. 2026 California Forest Practice Rules.

Strategic Framework[3] expands its focus beyond land protection to emphasize active stewardship and strategic partnerships that help ensure agriculture and a diverse, inclusive agricultural community can thrive in Marin.

Marin Countywide Plan

The Marin Countywide Plan guides the conservation and development of Marin County. Overhauled in 2007, the plan was most recently updated in February 2026. The Countywide Plan provides policies and implementing programs to protect agricultural land in the unincorporated parts of Marin County.

NATURAL SYSTEMS & AGRICULTURE ELEMENT

GOAL AG-1. Preservation of Agricultural Lands and Resources. Protect agricultural land by maintaining parcels large enough to sustain agricultural production, preventing conversion to non-agricultural uses, and prohibiting uses that are incompatible with long-term agricultural production. Preserve important soils, agricultural water sources, and forage to allow continued agricultural production on agricultural lands.

Policy AG-1. Limit Non-Agricultural Zoning. Apply non-agricultural zoning only in areas where conflict with agricultural uses will be minimized, and ensure that development standards preserve and enhance nearby agricultural uses.

I**mplementing Program AG-1.j. Uphold Right-to-Farm Ordinance.** Continue to implement the right-to-farm ordinance that protects agricultural and mariculture operations from nuisance complaints by adjacent non-agricultural and non-mariculture property owners regarding allowable agricultural procedures and maricultural practices. The ordinance has established a grievance procedure to address the needs of all concerned.

Marin Regional Forest Health Strategy

The Marin Regional Forest Health Strategy (2023) is a science-based, data-driven strategic plan developed by One Tam — a collaborative partnership of the National Park Service, California State Parks, Marin Municipal Water District, Marin County Parks, and the Golden Gate National Parks Conservancy — in coordination with the Federated Indians of Graton Rancheria. Its purpose is to identify and locate stressors impacting forest resilience in Marin County and provide a framework for land managers to work together to address threats to the long-term health of key forests at a landscape scale. The Strategy fulfills this purpose by establishing a meaningful baseline for measuring future forest change, using best-available data and expert analysis to identify where and how agencies can make a difference across jurisdictional boundaries, and delivering a path forward for projects and programs designed to protect and improve forest health and resilience over a ten-year horizon.

[3] Marin Agricultural Land Trust. 2025. Strategic Framework: Building on 45 Years of Success, 2025 to 2030.

The lands the Strategy seeks to protect encompass Marin County's nearly 118,000 acres of forest and woodland, a vital resource for wildlife, residents, and visitors that has been home to Coast Miwok peoples since time immemorial. These forests span five key community types — Coast Redwood, Douglas-fir, Bishop Pine, Oak Woodland, and Mixed Evergreen — distributed across public lands managed by the NPS (Golden Gate National Recreation Area and Point Reyes National Seashore), California State Parks, Marin Water's watershed lands on Mt. Tamalpais, and Marin County Parks open space preserves. These forests and woodlands comprise over a third of Marin County and are essential for their cultural value, clean air, drinking water, recreational opportunities, and habitat for diverse species — all of which the Strategy aims to protect through coordinated, cross-jurisdictional stewardship and active management.

3.2.3. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

Impacts related to agricultural resources were evaluated using information from the NRCS and the San Anselmo General Plan. Future development under the General Plan 2045 was reviewed to determine if the proposed Project would have a significant impact on agricultural and forest resources. These types of impacts would be the greatest in areas currently in agricultural production, on soils suitable for agricultural production, or in open spaces. Impacts are evaluated assuming full buildout of the Planning Area.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to agricultural lands, agricultural resources, and forest/timber resources.

LAND USE AND COMMUNITY DESIGN ELEMENT

GOAL LU-A. Manage future growth to prioritize a compact, walkable community, the efficient extension of urban services, preservation of natural and cultural resources, and protection of the area's environmental setting.

Policy LU-A.1: Sustainable Growth. Plan for responsible and balanced growth that maximizes efficient use of existing land resources and infrastructure, reduces sprawl, minimizes environmental impacts, and supports economic vitality.

Action LU-A.1.a: Implementation of Land Use Map. Implement the Land Use Map (Figure LU-1) by approving new development projects consistent with the land use definitions, densities, and intensities as set forth in this Element. Ensure consistency between the General Plan, Zoning Code, and other land use regulations.

Policy LU-A.4: Annexation and Sphere of Influence Coordination. Coordinate with Marin County and LAFCo on annexation proposals and development within the Town's Sphere of Influence to ensure consistency with the General Plan, compatibility with nearby land uses, and efficient delivery of services. Support annexations of contiguous, developed unincorporated areas when they enhance the community, further General Plan goals,

eliminate unincorporated islands, have resident support, and can be served in a fiscally responsible manner without adversely affecting service levels for existing residents.

Action LU-A.4.a: Municipal Service Review. Actively coordinate with LAFCo during the regular Municipal Service Review (MSR) process to provide data on the capacity of existing services and fiscal sustainability. Use the MSR as a tool to ensure future land-use and infrastructure decisions are consistent with the General Plan.

Action LU-A.4.b: Resolution of Parcels with Split Jurisdiction. Actively support and coordinate with Marin County LAFCo and neighboring jurisdictions to facilitate the annexation and de-annexation of properties, as appropriate, that are currently split across multiple jurisdictions.

GOAL LU-C. Preserve and enhance San Anselmo's natural setting as a unique asset that supports the community.

Policy LU-C.1: Open Space and Natural Resources. Protect and enhance open spaces and scenic vistas, natural features, and wildlife habitats, ensuring that development respects these natural assets and integrates with the town's natural environment.

Action LU-C.1.a: Development in Open Space and Low Density Areas. Prohibit development in areas designated as Open Space on the Land Use Map (Figure LU-1) and continue to allow very low density residential development on private property in areas designated as Very Low Density and Single-Family-Conservation on the Land Use Map (LU-1).

Policy LU-C.2: Hillside Protection. Protect the visual integrity and natural resources of San Anselmo's hillsides. Where hillside construction is permitted, design structures to:

- Minimize visual impacts by limiting building size and height, screening the structure within the existing landscape, minimizing glare and light spillage, and using exterior colors and materials that blend with the surrounding environment,
- Limit grading to preserve the existing topography,
- Provide slope and foundation stability, drainage, and erosion control,
- Provide adequate parking and emergency access,
- Address Wildland Urban Interface requirements, and
- Restore natural habitats

Action LU-C.2.a: Hillside Density District. Amend Table 4D, R-1-H (Hillside Density District) Parcels, in the Municipal Code to remove outdated parcel numbers and update parcel-specific density limits to align with State law. The density on the remaining hillside parcels shall be no greater than the number of dwelling units specified in the table.

Policy LU-C.3: Ridge Zone Protection. Prohibit development, including structures, roads, and public facilities within the protected ridge zone, which is 150 horizontal feet in both directions from the lowest elevation of the ridgeline, or 50 feet vertically, whichever is more

restrictive, of visually prominent ridgelines, identified on Figure LU-3. Exceptions may be considered on existing legal lots when it is demonstrated that development outside of these areas is not feasible for geologic, soils, or hydrologic reasons, and development would not impact a unique natural habitat. In such cases, visibility of new structures should be minimized by limiting building size and height and integrating the structure within the existing landscape.

Action LU-C.3.a: Conservation and Low Density Development Review. Continue to require design review for new structures and upper-floor additions for hillside or protected ridge zone parcels to minimize visual, environmental, and safety impacts.

Action LU-C.3.b: Hillside and Ridge Zone Development Regulations. Prepare and adopt objective development and design standards in the Municipal Code to minimize the impacts of hillside and protected ridge zone development, including but not limited to:

- Creating opportunities to cluster development and/or transfer of development rights to preserve open space, natural features, and scenic resources,
- Limiting grading to preserve natural topography, minimize erosion, and prevent slope failure,
- Regulating building design and scale, including height and massing, to achieve residential development that is compatible with existing hillside neighborhoods,
- Minimizing off-site and night sky impacts of outdoor lighting and glare, and
- Establishing fire safety standards.

Incorporate the protected ridge zone development restrictions in Policy LU-C.3 into the Zoning Code.

OPEN SPACE AND CONSERVATION ELEMENT

GOAL OSC-A. Protect, preserve, and enhance the town's ridge zones, hillsides, and undeveloped open space for its scenic beauty, natural habitat, hazard mitigation, climate change resilience, recreational value, and contributions to community well-being.

Policy OSC-A.1: Open Space Land Use. Protect lands designated as Open Space on the Land Use Map (Figure LU-1) for environmental protection, resource management, hazard reduction, passive recreation, and climate resilience.

Policy OSC-A.2: New Development. Ensure that new development respects the ecological, visual, and safety benefits of ridge zones, hillsides, and other natural areas for the community.

Action OSC-A.2.a: Online Maps. Use online mapping tools to identify the ridge zones, hillsides, and other natural areas and ensure this information is readily available to the public in clear and accessible formats.

Policy OSC-A.3: Expand Open Space Network. Pursue opportunities to expand the Town's open space network to create wildlife corridors, protect critical habitat, prevent sprawl, separate developed areas, and enhance passive recreation opportunities for a wide range of users.

Action OSC-A.3.a: Priority Properties for Protection. Support the acquisition and preservation of open space areas under private ownership identified in Figure OSC-1.

Action OSC-A.3.b: New Development Review. Through the development review process, consider opportunities to permanently preserve areas as open space and to obtain public access easements to connect to existing trails to improve access for residents and visitors, as shown on the adopted Open Space and Conservation Map (Figure OSC-1).

Action OSC-A.3.c: Permanent Protection and Stewardship. Permanently protect open space through tools such as purchase, dedication, conservation or access easement, or other instruments acceptable to the Town. When evaluating dedication of open space, prioritize parcels contiguous to existing public open space and consider long-term maintenance responsibilities. For privately-owned open space, ensure long-term stewardship that conserves natural resources, reduces hazards, and restricts incompatible structures or vegetation.

Action OSC-A.3.d: Partnership for Open Space Acquisition. Work with the Open Space Committee, public agencies, and non-profit organizations to identify, acquire, lease, or otherwise protect parcels that support a connected open space network within and adjacent to the Planning Area.

Policy OSC-A.8: Open Space Stewardship. Maintain and manage public open space lands to reduce natural hazards and wildfire risks, support recreational opportunities, maximize ecological value and biodiversity, support climate resilience, and preserve aesthetics.

Action OSC-A.8.a: Tree Protection in Open Space. Update Town procedures guiding the protection and management of trees in public open space to incorporate best practices for tree health, hazards, native biodiversity, and environmental stewardship.

Action OSC-A.8.b: Conservation and Open Space Stewardship Plan. Prepare a conservation and open space stewardship plan with collaboration from the Ross Valley Fire Department, Marin County Parks and Open Space District, Marin Wildfire Prevention Authority, environmental organizations and the public to reflect a broad range of community perspectives. The plan will address maintenance priorities, habitat restoration and rewilding opportunities, hazard reduction, passive recreation and education opportunities, and potential funding sources.

3.2 AGRICULTURAL AND FOREST RESOURCES

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project would have a significant impact on agricultural and forest resources if it would:

- Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use;
- Conflict with existing zoning for agricultural use, or a Williamson Act contract;
- Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)) or timberland (as defined in Public Resources Code section 4526);
- Result in the loss of forest land or conversion of forest land to non-forest use; or
- Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use.

As described in the Existing Conditions Report (ECR), there are no forest lands or timber lands located in the San Anselmo Planning Area. There are also no parcels that are currently zoned as forest land, timber, or timber production. Therefore, implementation of the proposed General Plan would have no impact on forest land, timber, or timber production and impacts related to forest land and timber will not be discussed further.

IMPACTS AND MITIGATION MEASURES

Impact 3.2-1: General Plan implementation would not result in the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to non-agricultural use (Less than Significant)

Prime Farmland, Unique Farmland, or Farmland of Statewide Importance is not found in the Town's Planning Area. As shown in Table 3.2-1 and Figure 3.2-1, the northern portion of the Planning Area contains approximately 668.72 acres of grazing land. Areas outside of the existing town limits are not proposed for development as part of the project, and grazing land in the SOI area would not be converted to urban uses.

As shown in Figure 2-3 in Chapter 2, Project Description, all of the land within the town limits is planned for urban development in one form or another, with the exception of areas designated for Open Space or Park uses. Because no Farmland (Prime Farmland, Unique Farmland, or Farmland of Statewide Importance) is designated in the Planning Area, and therefore not converted to urban uses, this is considered a **less-than-significant** impact.

Impact 3.2-2: General Plan implementation would not result in conflicts with existing zoning for agricultural use, or a Williamson Act contract (Less than Significant)

A small amount of Agriculture, Limited (A2) land exists within the Town's Sphere of Influence, north and east of the Town limits, as shown in Figure 3.2-2. No other areas within the Town or the Planning Area are zoned for agricultural use. There is no land under a Williamson Act contract in the San Anselmo Planning Area.

The General Plan 2045 includes policies and actions that are intended to reduce conflicts between existing undeveloped open space lands, including those being used for agricultural purposes, with new development as a result of the General Plan 2045. Action LU-C.1.a in the General Plan 2045 prohibits development in areas designated as Open Space, while Action OSC-A.3.c seeks the permanent protection of open space through tools such as purchase, dedication, conservation or access easement, or other instruments acceptable to the Town. Further, Marin County's right-to-farm ordinance protects existing and future agricultural uses, and supports continued agricultural use in the unincorporated SOI. The potential for conflicts between agricultural and open space uses and non-agricultural uses would be minimized through these actions and ordinances designed to protect open space and agricultural areas. Because of this, and because there are no lands zoned for agricultural use or under a Williamson Act contract in the Planning Area, the impact would be **less than significant**.

Impact 3.2-3: General Plan implementation would not involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use (Less than Significant)

As noted above in Impact 3.2-1, the Planning Area contains approximately 668.72 acres of grazing land. Farmland, comprised of Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or Farmland of Local Importance, is not found in the Town's Planning Area and is not located in the area adjacent to the Planning Area.

Future development consistent with the General Plan Land Use Map would not result in conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland). Further, because Farmland is not located in or adjacent to the Planning Area, any future urbanization of the town would not lead to the direct or indirect conversion of Farmland. Areas within the Planning Area, but outside of the town limits, are not proposed for development under the General Plan 2045. Therefore, existing grazing lands and agriculturally designated lands within the Planning Area but outside of the town limits would not be converted to urban uses. Therefore, the impact would be less than significant.

Impact 3.2-4: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to agricultural or forestry resources. (Less than Significant)

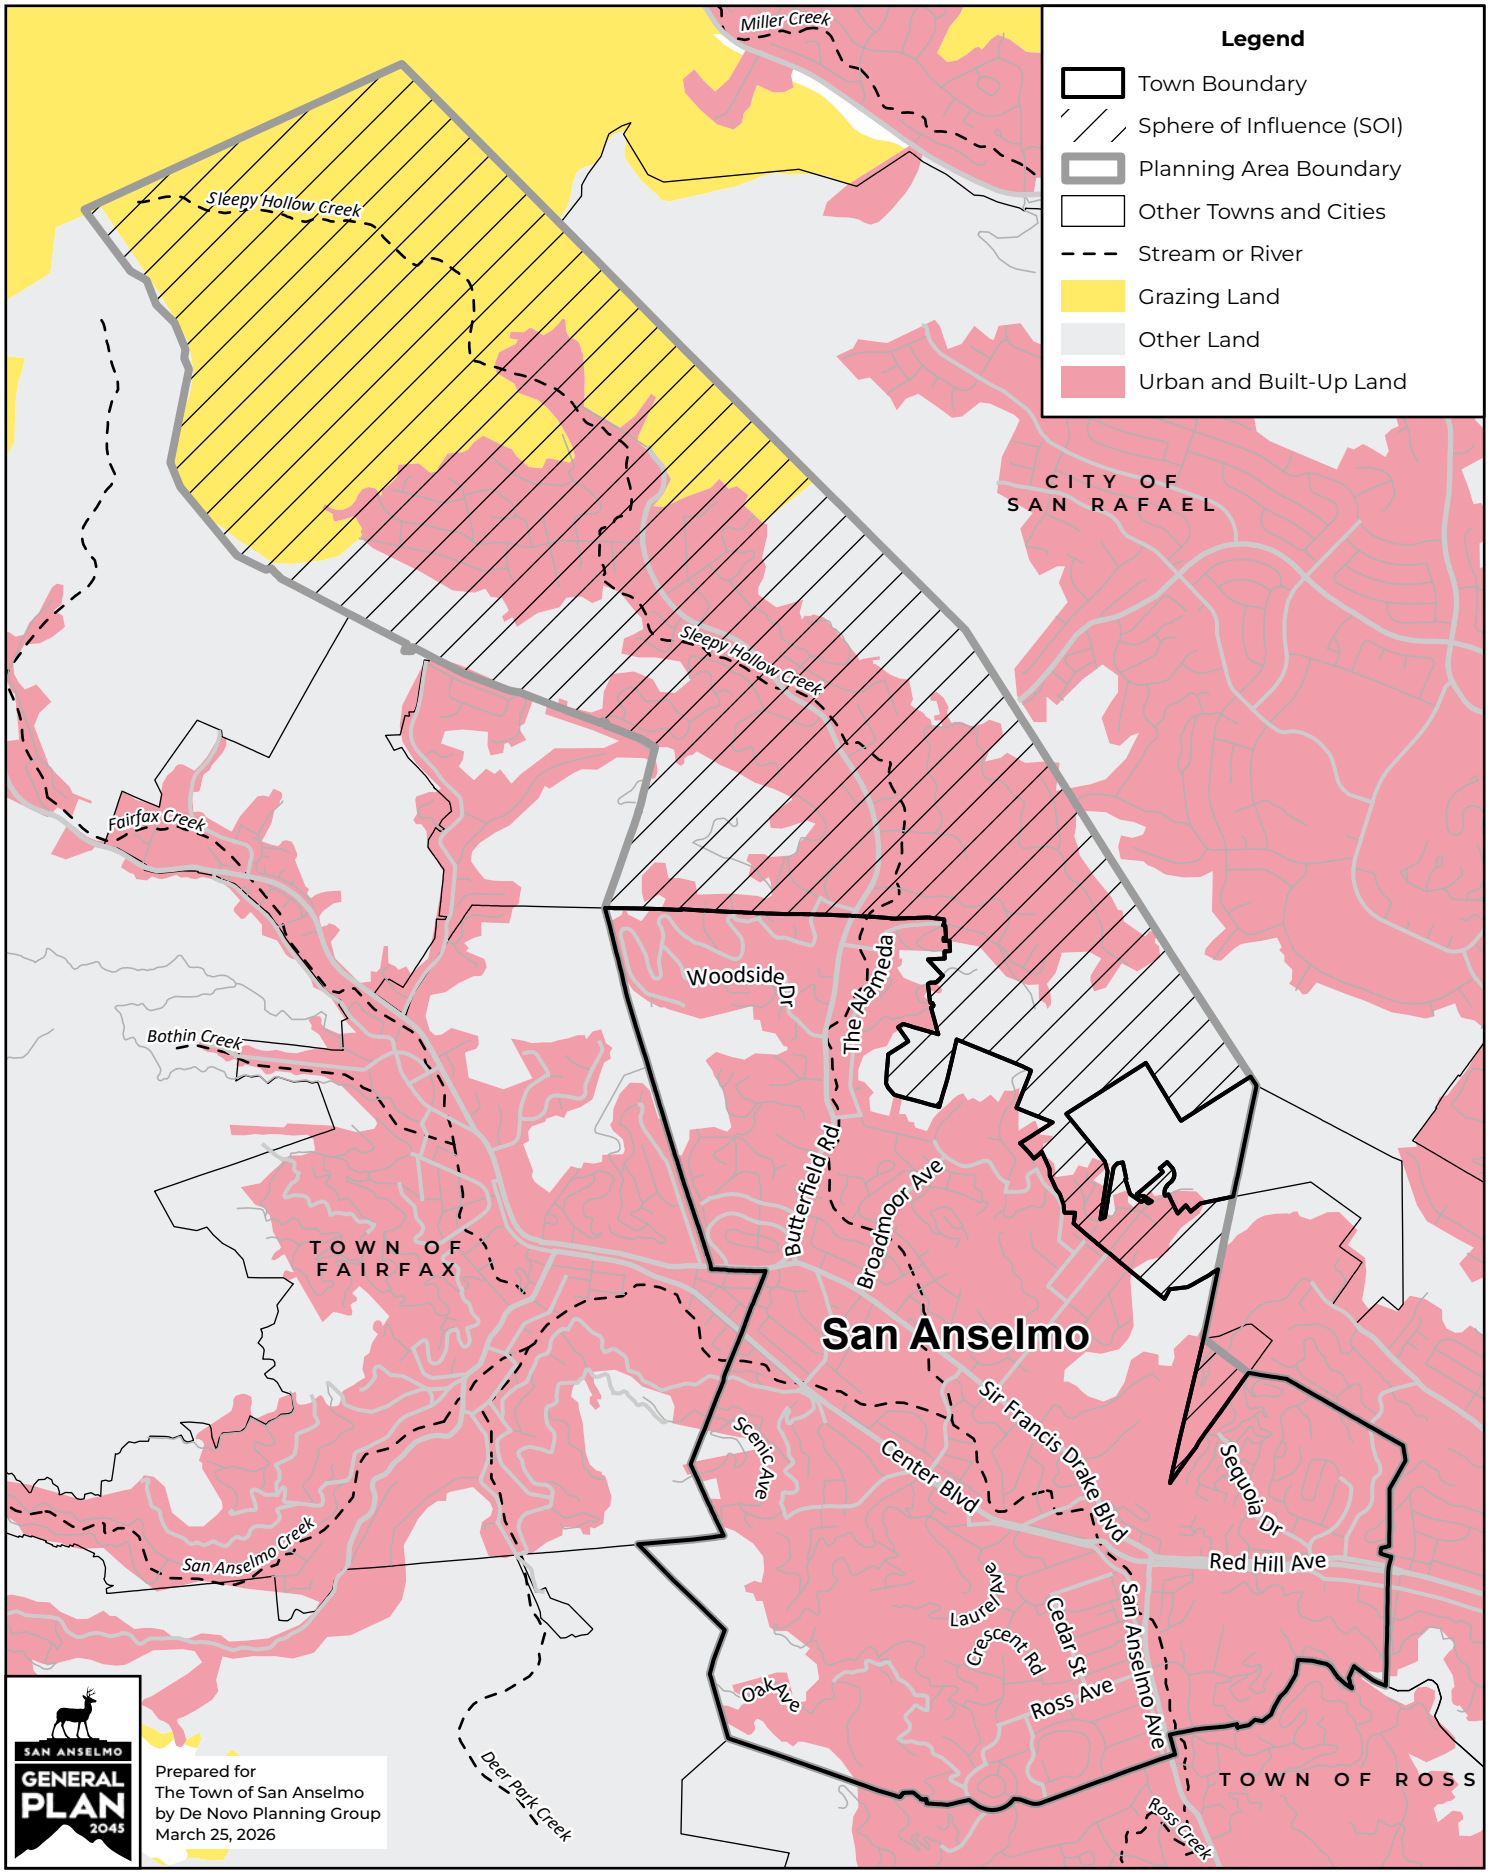

The cumulative context for the loss of agricultural land is Marin County, with an understanding of the historic trend in California to convert farmland to non-agricultural uses.

A significant cumulative impact could occur if the proposed project, in conjunction with other reasonably foreseeable projects in the area, results in indirect impacts that exert pressure on agricultural lands to convert to non-agricultural use. Such indirect impacts can include the division of large tracts of continuous agricultural land into smaller, less agriculturally viable tracts; the presence of incompatible uses adjacent to existing agricultural operations that could lead to the restriction of chemical use and/or complaints regarding noise, dust, and odors; increases in land values and taxes that exert pressure on agricultural landowners to convert to urban uses; and loss of agricultural support infrastructure, such as processing facilities. In addition, urban growth may increasingly compete with agriculture for the use of water resources, and may conflict with operational use of area roadways.

Marin County has developed a comprehensive and mutually reinforcing framework of regulatory, legal, and conservation mechanisms designed to prevent the conversion of agricultural land to non-agricultural uses. The foundation of this framework is the Coastal Agricultural Production Zone (C-APZ), which restricts land use in the coastal zone to agricultural production and compatible accessory uses, functioning as the primary regulatory barrier against residential or commercial encroachment. This zoning designation operates in concert with the County's use of restrictive covenants, a tool whose enforceability was affirmed in a 2025 legal precedent confirming Marin County's authority to prevent the fragmentation of agricultural parcels into residential developments.

In addition to this regulatory structure, a robust conservation easement program administered by MALT has permanently protected over 59,000 acres of farmland from development. Because MALT easements run with the land in perpetuity, they represent a durable reduction in the theoretical supply of agricultural land available for conversion, further constraining the cumulative development potential of the region's agricultural areas. The combined effect of C-APZ zoning and MALT easements significantly limits the extent to which any individual project, or series of projects, could cumulatively erode the County's agricultural land base.

Similarly, the protection of natural areas, including those with forestry resources, in the county is an important priority for the County. The Marin Regional Forest Health Strategy guides protection of the county’s natural resources and forest lands. By identifying forestry lands and coordinating their preservation through a regional, multi-jurisdictional effort, forest lands in Marin County would be protected from increasing urban development and encroachment over time. Therefore, the cumulative impact to agricultural resources and forestry resources would be **less than significant**.

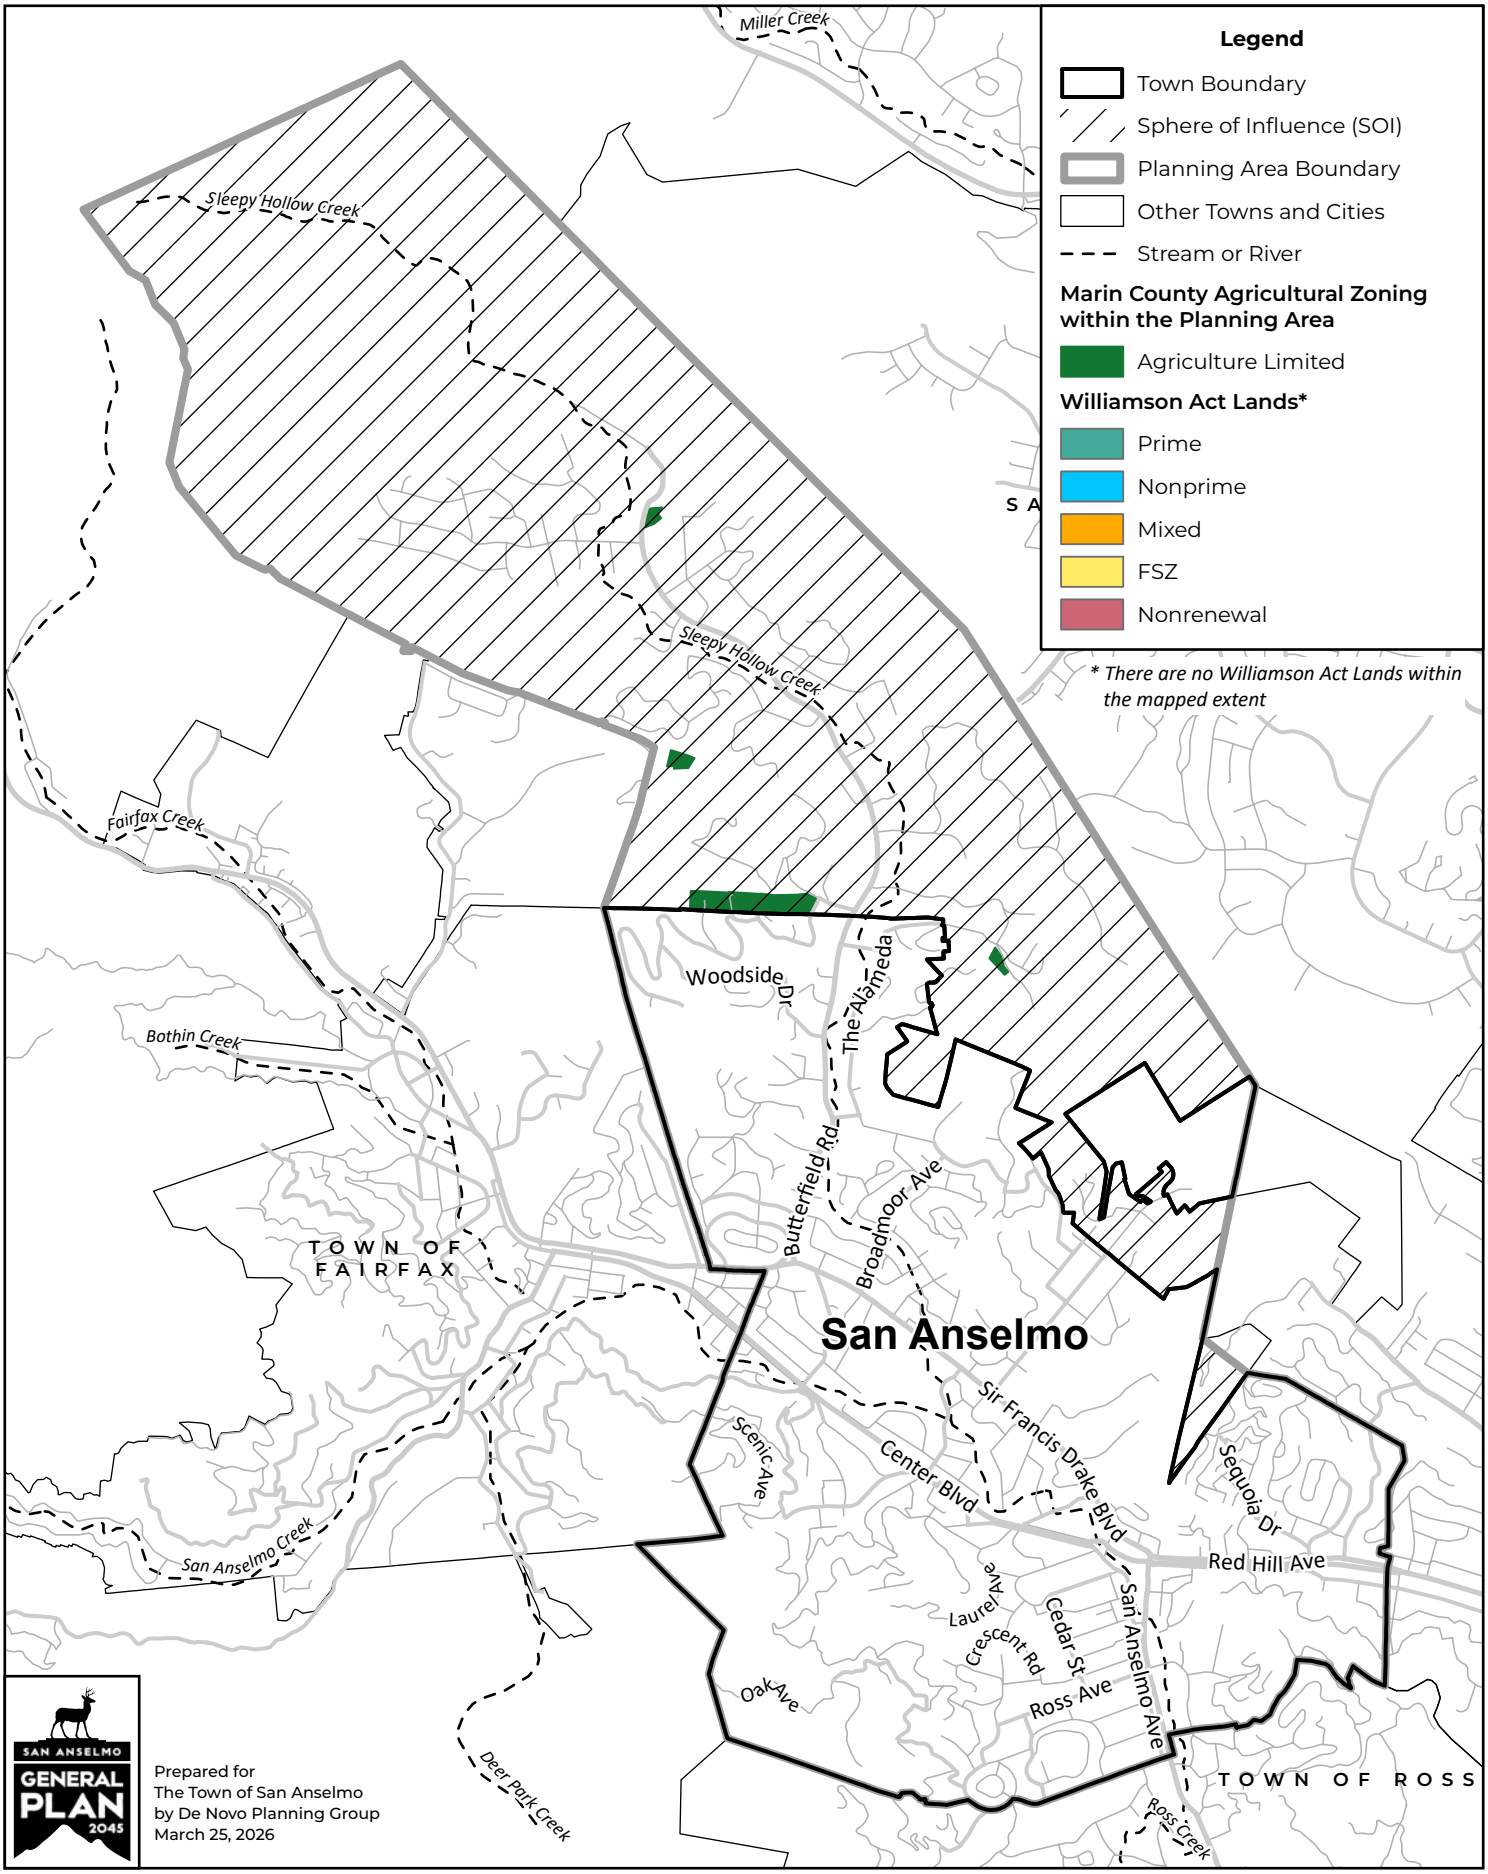

FIGURE 3.2-2.
AGRICULTURAL ZONING AND WILLIAMSON ACT LANDS

This section describes the regional air quality, current attainment status of the applicable air basin, local sensitive receptors, emission sources, and impacts that are likely to result from proposed project implementation.

There were no comments received during the Notice of Preparation (NOP) comment period regarding air quality. All comments are included in Appendix A.

3.3.1. ENVIRONMENTAL SETTING

The Bay Area Air District (BAAD) is the regional air quality agency for the San Francisco Bay Area Air Basin (SFBAAB), which comprises all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, and Santa Clara counties, the southern portion of Sonoma, and the southwestern portion of Solano County. Air quality in this area is determined by such natural factors as topography, meteorology, and climate, in addition to the presence of existing air pollution sources and ambient conditions. These factors along with applicable regulations are discussed below.

SAN FRANCISCO BAY AREA AIR BASIN (SFBAAB)

Air quality in the SFBAAB is determined by such natural factors as topography, meteorology, and climate, in addition to the presence of existing air pollution sources and ambient conditions. These factors along with applicable regulations are discussed below.

Topography

The topography of the SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys, and bays. This complex terrain, especially the higher elevations, distorts the normal wind flow patterns in the SFBAAB. The greatest distortion occurs when low-level inversions are present and the air beneath the inversion flows independently of air above the inversion, a condition that is common in the summertime.

The only major break in California's Coast Range occurs in the SFBAAB. Here the Coast Range splits into western and eastern ranges. Between the two ranges lies San Francisco Bay. The gap in the western coast range is known as the Golden Gate, and the gap in the eastern coast range is the Carquinez Strait. These gaps allow air to pass into and out of the SFBAAB and the Central Valley.

Climate

The SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys, and bays, which distort normal wind flow patterns. Climate in the SFBAAB is determined largely by a high pressure system, as discussed below. Within the Town, temperatures range from an average low of 47 degrees to an average high of 87 degrees.

HIGH PRESSURE CELL

During the summer, the large-scale meteorological condition that dominates the West Coast is a semi-permanent high-pressure cell centered over the northeastern portion of the Pacific Ocean. This

high-pressure cell keeps storms from affecting the California coast. Hence, the SFBAAB experiences little precipitation in the summer months. Winds tend to blow on shore out of the north/northwest.

The steady oceanic northwesterly flow induces upwelling of cold water from below. This upwelling produces a band of cold water off the California coast. When air approaches the California coast, already cool and moisture-laden from its long journey over the Pacific, it is further cooled as it crosses this bank of cold water. This cooling often produces condensation resulting in a high incidence of fog and stratus clouds along the Northern California coast in the summer.

Generally, in the winter, the Pacific high-pressure cell weakens and shifts southward, winds tend to flow offshore, upwelling ceases, and storms occur. During the winter rainy periods, inversions (layers of warmer air over colder air; see below) are weak or nonexistent, winds are usually moderate, and air pollution potential is low due to atmospheric dispersion conditions. The Pacific high-pressure cell does periodically become dominant, bringing strong inversions, light winds, and high pollution potential.

WIND PATTERNS

During the summer, winds flowing from the northwest are drawn inland through the Golden Gate and over the lower portions of the San Francisco Peninsula. Immediately south of Mount Tamalpais, the northwesterly winds accelerate considerably and come more directly from the west, as they stream through the Golden Gate. This channeling of wind through the Golden Gate produces a jet that sweeps eastward and splits off to the northwest toward Richmond and to the southwest toward San Jose when it meets the East Bay hills.

Wind speeds may be strong locally in areas where air is channeled through a narrow opening, such as the Carquinez Strait, the Golden Gate, or the San Bruno Gap. For example, the average wind speed at San Francisco International Airport in July is about 17 knots (from 3 p.m. to 4 p.m.), compared with only 7 knots at San Jose and less than 6 knots at the Farallon Islands.

The air flowing in from the coast to the Central Valley, called the sea breeze, begins developing at or near ground level along the coast in late morning or early afternoon. As the day progresses, the sea breeze layer deepens and increases in velocity while spreading inland. The depth of the sea breeze depends in large part upon the height and strength of the inversion. If the inversion is low and strong, and hence stable, the flow of the sea breeze will be inhibited, and stagnant conditions are likely to result.

In the winter, the SFBAAB frequently experiences stormy conditions with moderate to strong winds, as well as periods of stagnation with very light winds. Winter stagnation episodes are characterized by nighttime drainage flows in coastal valleys. Drainage is a reversal of the usual daytime air-flow patterns; air moves from the Central Valley toward the coast and back down toward the Bay from the smaller valleys within the SFBAAB.

TEMPERATURE

Summertime temperatures in the SFBAAB are determined in large part by the effect of differential heating between land and water surfaces. Because land tends to heat up and cool off more quickly

than water, a large-scale gradient (differential) in temperature is often created between the coast and the Central Valley, and small-scale local gradients are often produced along the shorelines of the Pacific Ocean and bays. The temperature gradient near the Pacific Ocean is also exaggerated, especially in summer, because of the upwelling of cold ocean bottom water along the coast. On summer afternoons, the temperatures at the coast can be 35 degrees Fahrenheit cooler than temperatures 15 to 20 miles inland. At night this contrast usually decreases to less than 10 degrees Fahrenheit.

In the winter, the relationship of minimum and maximum temperatures is reversed. During the daytime the temperature contrast between coastal and inland areas is small, whereas at nighttime, the variation in temperature is large.

PRECIPITATION

The SFBAAB is characterized by moderately wet winters and dry summers. Winter rains account for about 75 percent of the average annual rainfall. The amount of annual precipitation can vary greatly from one part of the SFBAAB to another even within short distances. In general, total annual rainfall can reach 40 inches in the mountains, but it is often less than 16 inches in sheltered valleys.

During rainy periods, ventilation (rapid horizontal movement of air and injection of cleaner air) and vertical mixing are usually high, and thus, pollution levels tend to be low. However, frequent dry periods do occur during the winter where mixing and ventilation are low and pollutant levels build up.

AIR POLLUTION POTENTIAL

The potential for high pollutant concentrations developing at a given location depends upon the quantity of pollutants emitted into the atmosphere in the surrounding area or upwind, and the ability of the atmosphere to disperse the contaminated air. The topographic and climatological factors discussed above influence the atmospheric pollution potential of an area. Atmospheric pollution potential, as the term is used here, is independent of the location of emission sources and is instead a function of factors described below.

WIND CIRCULATION

Low wind speed contributes to the buildup of air pollution because it allows the build-up of pollutants to be emitted into the air mass per unit of time. Light winds occur most frequently during periods of low sun (fall and winter, and early morning) and at night. These are also periods when air pollutant emissions from some sources are at their peak, namely, commute traffic (early morning) and wood burning appliances (nighttime). The problem can be compounded in valleys, when weak flows carry the pollutants up the valley during the day, and cold air drainage flows move the air mass down the valley at night. Such restricted movement of trapped air provides little opportunity for ventilation and leads to buildup of pollutants to potentially unhealthful levels.

INVERSIONS

An inversion is a layer of warmer air over a layer of cooler air. This results in limiting upward atmospheric circulation related to hot air rising. Inversions affect air quality conditions significantly

because they influence the mixing depth (i.e., the vertical depth in the atmosphere available for diluting air contaminants near the ground). The highest air pollutant concentrations in the SFBAAB generally occur during inversions.

There are two types of inversions that occur regularly in the SFBAAB. One is more common in the summer and fall, while the other is most common during the winter. The frequent occurrence of elevated temperature inversions in summer and fall months acts to cap the mixing depth, limiting the depth of air available for dilution. Elevated inversions are caused by subsiding air from the subtropical high-pressure zone, and from the cool marine air layer that is drawn into the SFBAAB by the heated low pressure region in the Central Valley.

The inversions typical of winter, called radiation inversions, are formed as heat quickly radiates from the earth's surface after sunset, causing the air in contact with it to rapidly cool. Radiation inversions are strongest on clear, low-wind, cold winter nights, allowing the build-up of such pollutants as carbon monoxide and particulate matter. When wind speeds are low, there is little turbulence to mix the air, resulting in a layer of warm air over a layer of cooler air next to the ground. Mixing depths under these conditions can be as shallow as 50 to 100 meters, particularly in rural areas. Urban areas usually have deeper minimum mixing layers because of heat island effects and increased surface roughness. During radiation inversions downwind transport is slow, the mixing depths are shallow, and turbulence is minimal, all factors which contribute to ozone formation.

Although each type of inversion is most common during a specific season, either inversion mechanism can occur at any time of the year. Sometimes both occur simultaneously. Moreover, the characteristics of an inversion often change throughout the course of a day. The terrain of the SFBAAB also induces significant variations among subregions.

SOLAR RADIATION

The frequency of hot, sunny days during the summer months in the SFBAAB is another important factor that affects air pollution potential. It is at the higher temperatures that ozone (O_3) is formed. In the presence of ultraviolet sunlight and warm temperatures, reactive organic gases (ROGs) and oxides of nitrogen (NO_x) react to form secondary photochemical pollutants, including ozone. Because temperatures in many of the SFBAAB inland valleys are so much higher than near the coast, the inland areas are especially prone to photochemical air pollution.

In late fall and winter, solar angles are low, resulting in insufficient ultraviolet light and warming of the atmosphere to drive the photochemical reactions. Ozone concentrations do not reach significant levels in the SFBAAB during these seasons.

SHELTERED TERRAIN

The hills and mountains in the SFBAAB contribute to the high pollution potential of some areas. During the day, or at night during windy conditions, areas in the lee sides of mountains are sheltered from the prevailing winds, thereby reducing turbulence and downwind transport. At night, when wind speeds are low, the upper atmospheric layers are often decoupled from the surface layers during radiation conditions. If elevated terrain is present, it will tend to block pollutant transport in that direction. Elevated terrain also can create a recirculation pattern by inducing air flows up the

valley during the day and reverse down the valley flows during the night, allowing little inflow of fresh air.

The areas with the highest air pollution potential tend to be those that experience the highest temperatures in the summer and the lowest temperatures in the winter. The coastal areas are exposed to the prevailing marine air, creating cooler temperatures in the summer, warmer temperatures in winter, and stratus clouds all year. The inland valleys are sheltered from the marine air and experience hotter summers and colder winters. Thus, the topography of the inland valleys creates conditions conducive to high air pollution potential.

POLLUTION POTENTIAL RELATED TO EMISSIONS

Although air pollution potential is strongly influenced by climate and topography, the air pollution that occurs in a location also depends upon the amount of air pollutant emissions in the surrounding area or transported from more distant places. Air pollutant emissions generally are highest in areas that have high population densities, high motor vehicle use, and/or industrialization. These contaminants created by photochemical processes in the atmosphere, such as ozone, may result in high concentrations many miles downwind from the sources of their precursor chemicals.

EXISTING AMBIENT AIR QUALITY: CRITERIA AIR POLLUTANTS

The California Air Resources Board (CARB) and the U.S. Environmental Protection Agency (USEPA) currently focus on the following air pollutants as indicators of ambient air quality: O_3, particulate matter (PM), nitrogen dioxide (NO_2), CO, sulfur dioxide (SO_2), and lead. Because these are the most prevalent air pollutants known to be harmful to human health and have ambient air quality standards, they are commonly referred to as "criteria air pollutants." Sources and health effects of the criteria air pollutants are summarized in **Table 3.3-1**.

TABLE 3.3-1: COMMON SOURCES OF HEALTH EFFECTS FOR CRITERIA AIR POLLUTANTS

POLLUTANTS	*SOURCES*	*HEALTH EFFECTS*
Ozone (O_3)	Atmospheric reaction of organic gases with nitrogen oxides in sunlight	Aggravation of respiratory and cardiovascular diseases; reduced lung function; increased cough and chest discomfort; heart attacks; premature mortality
Fine Particulate Matter (PM_{10} and $PM_{2.5}$)	Stationary combustion of solid fuels; construction activities; industrial processes; atmospheric chemical reactions	Reduced lung function; aggravation of respiratory and cardiovascular diseases; increased blood pressure; premature mortality
Nitrogen Dioxide (NO_2)	Motor vehicle exhaust; high temperature stationary combustion; atmospheric reactions	Aggravation of respiratory illness
Carbon Monoxide (CO)	Incomplete combustion of fuels and other carbon-containing substances, such as motor vehicle exhaust; natural events, such as decomposition of organic matter	Aggravation of some heart diseases; reduced tolerance for exercise; impairment of mental function; birth defects; death at high levels of exposure

POLLUTANTS	*SOURCES*	*HEALTH EFFECTS*
Sulfur Dioxide (SO_2)	Combination of sulfur-containing fossil fuels; smelting of sulfur-bearing metal ore; industrial processes	Aggravation of respiratory diseases; reduced lung function
Lead	Contaminated soil	Behavioral and hearing disabilities in children; nervous system impairment

SOURCE: BAY AREA AIR DISTRICT, 2017.

Ozone (O_3), or smog, is not emitted directly into the environment, but is formed in the atmosphere by complex chemical reactions between ROG and NO_x in the presence of sunlight. Exposure to ozone can damage the lungs and aggravate respiratory conditions such as asthma, bronchitis, and emphysema. Motor vehicles and industrial sources are the largest sources of ozone precursors in the Bay Area. Emissions of ozone precursors have been greatly reduced in recent decades. As a result, Bay Area ozone levels and population exposure to harmful levels of smog have decreased substantially. Despite this progress, the Bay Area has not yet fully attained State and federal ozone standards. This is primarily due to the progressively tightened federal ozone standard, but also to the amount of population and economic growth occurring within the Bay Area.

Particulate Matter refers to a wide range of solid or liquid particles in the atmosphere, including smoke, dust, aerosols, and metallic oxides. Respirable particulate matter with an aerodynamic diameter of 10 micrometers or less is referred to as PM_{10}. PM_{10} is primarily composed of particles from sources such as road dust, residential wood burning, construction/demolition activities, and emissions from on- and off-road engines that are small enough to enter the respiratory system. $PM_{2.5}$ includes a subgroup of finer particles that have an aerodynamic diameter of 2.5 micrometers or less. Some particulate matter, such as pollen, is naturally occurring. In the SFBAAB most particulate matter is caused by combustion, factories, construction, grading, demolition, agricultural activities, and motor vehicles. Extended exposure to particulate matter can increase the risk of chronic respiratory disease. PM_{10} is of concern because it bypasses the body's natural filtration system more easily than larger particles and can lodge deep in the lungs. $PM_{2.5}$ poses an increased health risk because the particles can deposit deep in the lungs and contain substances that are particularly harmful to human health. Motor vehicles are currently responsible for about half of particulates in the SFBAAB. Wood burning in fireplaces and stoves is another large source of fine particulates.

Nitrogen Dioxide (NO_2) is a reddish-brown gas that is a by-product of combustion processes. Automobiles and industrial operations are the main sources of NO_2. Aside from its contribution to ozone formation, nitrogen dioxide can increase the risk of acute and chronic respiratory disease and reduce visibility. NO_2 may be visible as a coloring component of a brown cloud on high pollution days, especially in conjunction with high ozone levels. Most of the Bay Area's NO_2 comes from on-road motor vehicles.

Carbon Monoxide (CO) is an odorless, colorless gas. It is formed by the incomplete combustion of fuels. The single largest source of CO in the SFBAAB is motor vehicles. Emissions are highest during cold starts, hard acceleration, stop-and-go driving, and when a vehicle is moving at low speeds. Findings indicate that CO emissions per mile are lowest at about 45 mph for the average light-duty motor vehicle and begin to increase again at higher speeds. When inhaled at high concentrations,

CO combines with hemoglobin in the blood and reduces the oxygen-carrying capacity of the blood causing asphyxiation at high concentrations. This results in reduced oxygen reaching the brain, heart, and other body tissues. This condition is especially critical for people with cardiovascular diseases, chronic lung disease, or anemia, as well as fetuses. Even healthy people exposed to high CO concentrations can experience headaches, dizziness, fatigue, unconsciousness, and even death.

Sulfur Dioxide (SO_2) is a colorless acidic gas with a pungent odor. It has potential to damage materials, and it can have health effects at high concentrations. It is produced by the combustion of sulfur-containing fuels, such as oil, coal, and diesel. SO_2 can irritate lung tissue and increase the risk of acute and chronic respiratory disease. Most of the Bay Area's SO_2 comes from petroleum refineries. Despite these major sources, the overall concentration of SO_2 in the region is low.

Lead is a metal found naturally in the environment as well as in manufactured products. The major sources of lead emissions have historically been mobile and industrial sources. As a result of the phase-out of leaded gasoline, metal processing is currently the primary source of lead emissions. The highest levels of lead in air are generally found near lead smelters. Other stationary sources are waste incinerators, utilities, and lead-acid battery manufacturers.

In the early 1970s, the USEPA set national regulations to gradually reduce the lead content in gasoline. In 1975, unleaded gasoline was introduced for motor vehicles equipped with catalytic converters. The USEPA banned the use of leaded gasoline in highway vehicles in December 1995. As a result of the USEPA's regulatory efforts to remove lead from gasoline, emissions of lead from mobile sources decreased 89 percent between 1980 and 2010. In the Bay Area, aircraft exhaust and manufacturing are the major sources of lead emissions. Contact with lead-based paint in older buildings and demolition activities are also a health concern in the region.[1]

Toxic Air Contaminants Health Effects

A Toxic Air Contaminant (TAC) is defined as an air pollutant that may cause or contribute to an increase in mortality or serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; however, their high toxicity or health risk may pose a threat to public health even at low concentrations. The California Almanac of Emissions and Air Quality presents the relevant concentration and cancer risk data for the 10 TACs that pose the most substantial health risk in California based on available data. The 10 TACs are acetaldehyde, benzene, 1.3-butadiene, carbon tetrachloride, hexavalent chromium, para-dichlorobenzene, formaldehyde, methylene chloride, perchloroethylene, and diesel particulate matter (DPM).

Some studies indicate that DPM poses the greatest health risk among the TACs listed above. DPM from diesel-fueled engines is a human carcinogen and that chronic (long-term) inhalation exposure to DPM poses a chronic health risk. In addition to increasing the risk of lung cancer, exposure to diesel exhaust can have other health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. Diesel exhaust is a major

[1] Association of Bay Area Governments, Metropolitan Transportation Commission, 2021. *Draft Plan Bay Area Environmental Impact Report*. State Clearinghouse No. 2020090519. June.

source of fine particulate pollution as well, and studies have linked elevated particle levels in the air to increased hospital admissions, emergency room visits, asthma attacks, and premature deaths among those suffering from respiratory problems.

DPM differs from other TACs in that it is not a single substance, but a complex mixture of hundreds of substances and is comprised of both solid particles and gases. Although DPM is emitted by diesel-fueled, internal combustion engines, the composition of the emissions varies, depending on engine type, operating conditions, fuel composition, lubricating oil, and whether an emission control system is present. Unlike the other TACs, however, no ambient monitoring data are available for DPM, because no routine measurement method currently exists. CARB has made preliminary concentration estimates based on a DPM exposure method. This method uses the CARB emissions inventory's PM_{10} database, ambient PM_{10} monitoring data, and the results from several studies to estimate concentrations of DPM.

Ambient Air Quality Standards and Designations

Both the USEPA and the CARB have established ambient air quality standards for common pollutants. These ambient air quality standards represent safe levels of contaminants that avoid specific adverse health effects associated with each pollutant.

The federal and California state ambient air quality standards are summarized in **Table 3.3-2** for important pollutants. The federal and state ambient standards were developed independently, although both processes attempted to avoid health-related effects. As a result, the federal and state standards differ in some cases. In general, the California state standards are more stringent. This is particularly true for ozone, $PM_{2.5}$, and PM_{10}.

The regulatory framework for ambient air quality relies on the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS), which establish pollutant concentration thresholds that provide standards to protect public health. At the federal level, the United States Environmental Protection Agency most recently revised the primary annual standard for fine particulate matter (PM2.5) on February 7, 2024, lowering the threshold to 9.0 micrograms per cubic meter; other federal criteria pollutant standards were last revised in 2015 for O_3, 2010 for both NO_2 and SO_2, 2008 for Pb, 2006 for PM10, and 1971 for CO (Environmental Protection Agency, 2026). The California Air Resources Board manages the state-level standards, which are generally more stringent and were last revised in 2007 for NO2, 2005 for O3, 2002 for both PM2.5 and PM10, 1991 for SO2, 1989 for CO, and 2008 for Lead; additionally, California maintains state-specific standards for visibility-reducing particles (last revised in 1989), vinyl chloride (1978), sulfates (1976), and hydrogen sulfide (1969).[2]

The current federal and state ambient air quality standards and attainment standards are presented in Table 3.3-2.

Monitoring Data

BAAD operates a regional air quality monitoring network that regularly measures the concentrations of the five major criteria air pollutants. Air quality conditions in the SFBAAB have improved significantly since the BAAD was created in 1955. Ambient concentrations and the number of days on which the region exceeds standards have declined dramatically. Neither federal nor state ambient air quality standards have been violated in recent decades for NO_2, SO_2, sulfates, lead, hydrogen sulfide, and vinyl chloride.

The CARB maintains air quality monitoring stations throughout California. **Table 3.3-3** provides the aggregated statistics obtained from the monitoring site nearest to San Anselmo, the San Rafael monitoring station (at 534 4th Street), between 2022 and 2024, for ozone (1-hour and 8-hour), PM_{10}, and $PM_{2.5}$.

Emissions Inventory

The BAAD estimates emissions of criteria air pollutants from approximately nine hundred source categories. The estimates are based on BAAD permit information for stationary sources (e.g., manufacturing industries, refineries, dry-cleaning operations), plus more generalized estimates for area sources (e.g., space heating, landscaping activities, use of consumer products) and mobile sources (e.g., trains, ships and planes, as well as on-road and off-road motor vehicles).

Attainment Status of the SFBAAB

Marin County is located within the SFBAAB, a region whose ambient air quality is governed by the BAAMD and evaluated against both the CAAQS and NAAQS. As shown in Table 3.3-3, the basin fails to attain the State standards for ozone, respirable particulate matter (PM_{10}), and fine particulate matter ($PM_{2.5}$), while also carrying nonattainment designations under federal standards for 8-hour ozone and $PM_{2.5}$. For all other criteria pollutants, including carbon monoxide, nitrogen dioxide, and sulfur dioxide, the basin is classified as either in attainment or unclassified.

EXISTING AMBIENT AIR QUALITY: TOXIC AIR CONTAMINANTS

In addition to the criteria air pollutants listed above, another group of pollutants, commonly referred to as toxic air contaminants (TACs) or hazardous air pollutants can result in health effects that can be quite severe. Many TACs are confirmed or suspected carcinogens or are known or suspected to cause birth defects or neurological damage. Additionally, many TACs can be toxic at very low concentrations. For some chemicals, such as carcinogens, there are no thresholds below which exposure can be considered risk-free.

Industrial facilities and mobile sources are significant sources of TACs; however, there are additional sources of TACs beyond these sources. Various common urban facilities also produce TAC emissions, such as gasoline stations (benzene), hospitals (ethylene oxide), and dry cleaners (perchloroethylene). Automobile exhaust also contains TACs such as benzene and 1,3-butadiene. Diesel particulate matter PM) has also been identified as a TAC by CARB. Diesel PM differs from other TACs in that it is not a single substance, but rather a complex mixture of hundreds of substances. BAAD research indicates that mobile-source emissions of diesel PM, benzene, and 1,3-butadiene represent a substantial portion of the ambient background risk from TACs in the SFBAAB.

Sensitive receptors, which include children, the sick, and the elderly, may be especially impacted by TACs. Health risks from diesel PM are highest in areas of concentrated emissions, such as near ports,

rail yards, freeways, or warehouse distribution centers. According to CARB, diesel engine emissions are responsible for the majority of California's known cancer risk from outdoor air pollutants. Those most vulnerable are children, whose lungs are still developing, and the elderly, who may have other serious health problems. Based on numerous studies, CARB has also stated that diesel PM is a contributing factor for premature death from heart and/or lung diseases. In addition, diesel PM reduces visibility and is a strong absorber of solar radiation that contributes to global warming.

According to CARB, levels of toxic air pollutants have decreased significantly with the adoption of airborne toxic control measures, stringent vehicle standards, requirements for low-emission vehicles, and cleaner fuels. As a result of these measures, more than 30,000 facilities in California have reduced their toxic emissions. This has led to the reduction of ambient cancer risk in California by about 80 percent since 1990. Several communities also have established community emission reduction plans that outline actions that stationary facilities and mobile sources can take to further reduce harmful air pollutants.

BAAD's Community Air Risk Evaluation (CARE) Program, initiated in 2004, works extensively with local governments, communities, and businesses to reduce air pollution and adverse health outcomes in disproportionately affected areas within the Bay Area. Periodically, the CARE Program identifies affected areas by overlaying maps that combine emissions, estimated cancer risks, predicted $PM_{2.5}$ concentrations, and health outcome data.

The CARE Program has brought together government, communities, and business in an effort to understand and address localized areas of elevated air pollution and adverse health impacts. While improvements in air quality continue to occur throughout the Bay Area, levels of air pollution and their impacts vary from location to location. Air pollution levels of many pollutants are highest in closer proximity to pollution sources, such as near freeways, busy roadways, busy distribution centers, and large industrial sources. Communities where these types of sources are concentrated often have areas within them where air pollution is relatively high and corresponding health impacts are greater.

In addition to tracking regional criteria pollution levels as measured at central monitoring sites, and in addition to tracking TAC pollution levels from individual permitted facilities, BAAD tracks the cumulative impacts of exposures to multiple pollutants and multiple sources in the neighborhoods where people live. With the shift toward more consideration of cumulative air pollution exposures, BAAD's staff continues to evaluate the health status of Bay Area residents and how health status affects vulnerability to air pollution. This gradual shift will continue to require closer collaboration between BAAD and the region's health departments and health professionals and researchers. By exploring the links between air pollution exposures and community health status, the CARE Program will continue to help focus BAAD's resources to achieve the greatest health benefits.[3]

[3] Association of Bay Area Governments, Metropolitan Transportation Commission, 2021. *Draft Plan Bay Area Environmental Impact Report*. State Clearinghouse No. 2020090519. June.

ODORS

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person's reaction to foul odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache).

With respect to odors, the human nose is the sole sensing device. The ability to detect odors varies considerably among the population and overall is quite subjective. Some individuals have the ability to smell minute quantities of specific substances; others may not have the same sensitivity but may have sensitivities to odors of other substances. In addition, people may have different reactions to the same odor; in fact, an odor that is offensive to one person (e.g., from a fast-food restaurant) may be perfectly acceptable to another.

It is also important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience. For instance, if a person describes an odor as flowery or sweet, then the person is describing the quality of the odor. Intensity refers to the strength of the odor. For example, a person may use the word "strong" to describe the intensity of an odor. Odor intensity depends on the odorant concentration in the air.

When an odorous sample is progressively diluted, the odorant concentration decreases. As this occurs, the odor intensity weakens and eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant reaches a detection threshold. An odorant concentration below the detection threshold means that the concentration in the air is not detectable by the average human. Odors become an issue not when it is detectable but when it rises to the magnitude of a public nuisance.

SENSITIVE RECEPTORS

Sensitive receptors are considered land uses or other types of population groups that are more sensitive to air pollution than others due to their exposure. Sensitive population groups include children, the elderly, the acutely and chronically ill, and those with cardio-respiratory diseases. These groups typically are located in land uses such as residences, hospitals, and schools, etc.

As a planning document, the General Plan 2045 identifies land use designations within the Planning Area which specify the type of allowed uses associated with each designation. However, site-specific development is not proposed as part of the General Plan 2045. San Anselmo has numerous sensitive land uses, in particular, residential communities and schools. These sensitive land uses would continue to exist, and new sensitive land uses are anticipated to occur within implementation of the General Plan 2045. As a conservative estimate of impacts, sensitive receptors are anticipated to be located directly adjacent to new development.

3.3.2. REGULATORY SETTING

Air quality, with respect to criteria air pollutants and TACs within the SFBAAB, is regulated by such agencies as the BAAD, CARB, and the USEPA. Each of these agencies develops rules, regulations, policies, and/or goals to attain the goals or directives imposed through legislation. Although the USEPA regulations may not be superseded, both state and local regulations may be more stringent.

FEDERAL

Clean Air Act

The Federal Clean Air Act (FCAA) was first signed into law in 1970. In 1977, and again in 1990, the law was substantially amended. The FCAA is the foundation for a national air pollution control effort, and it is composed of the following basic elements: National Ambient Air Quality Standards (NAAQS) for criteria air pollutants, hazardous air pollutant standards, state attainment plans, motor vehicle emissions standards, stationary source emissions standards and permits, acid rain control measures, stratospheric ozone protection, and enforcement provisions.

The USEPA is responsible for administering the FCAA. The FCAA requires the USEPA to set NAAQS for several problem air pollutants based on human health and welfare criteria. Two types of NAAQS were established: primary standards, which protect public health (with an adequate margin of safety, including for sensitive populations such as children, the elderly, and individuals suffering from respiratory diseases), and secondary standards, which protect the public welfare from non-health-related adverse effects such as visibility reduction.

NAAQS standards define clean air and represent the maximum amount of pollution that can be present in outdoor air without any harmful effects on people and the environment. Existing violations of the ozone and $PM_{2.5}$ ambient air quality standards indicate that certain individuals exposed to these pollutants may experience certain health effects, including increased incidence of cardiovascular and respiratory ailments. NAAQS standards have been designed to accurately reflect the latest scientific knowledge and are reviewed every five years by a Clean Air Scientific Advisory Committee.

Although there is some variability among the health effects of the NAAQS pollutants, each has been linked to multiple adverse health effects including, among others, premature death, hospitalizations, and emergency department visits for exacerbated chronic disease, and increased symptoms such as coughing and wheezing

The law recognizes the importance for each state to locally carry out the requirements of the FCAA, as special consideration of local industries, geography, housing patterns, etc., are needed to have full comprehension of the local pollution control problems. As a result, the USEPA requires each state to develop a State Implementation Plan (SIP) that explains how each state will implement the FCAA within their jurisdiction. A SIP is a collection of rules and regulations that a particular state will implement to control air quality within its jurisdiction. The CARB is the state agency that is responsible for preparing and implementing the California SIP.

Federal Hazards Air Pollutants Program

The 1977 FCAA Amendments required the USEPA to identify National Emissions Standards for Hazardous Air Pollutants (NESHAPs) to protect the public health and welfare. Hazardous air pollutants include certain volatile organic compounds (VOCs), pesticides, herbicides, and radionuclides that present a tangible hazard, based on scientific studies of exposure to humans and other mammals. Under the 1990 FCAA Amendments, which expanded the control program for hazardous air pollutants, 189 substances and chemical families were identified as hazardous air pollutants.

Federal Heavy-duty Engines and Vehicles Fuel Efficiency Standards

Between 2011 and 2024, the USEPA and NHTSA promulgated three phases of standards for heavy-duty trucks, culminating in the 2024 "Phase 3" GHG rule that mandated up to a 60% reduction in CO_2 for these vehicles by 2032. However, on February 18, 2026, the USEPA finalized the "Rescission of the Greenhouse Gas Endangerment Finding and Motor Vehicle Greenhouse Gas Emission Standards Under the Clean Air Act". This rule officially repealed the 2009 Endangerment Finding and all subsequent federal GHG emission standards for light-, medium-, and heavy-duty vehicles. The USEPA justified this deregulatory action by asserting it lacks statutory authority under Section 202(a) of the Clean Air Act to regulate global climate change effects.

While federal GHG-specific standards for heavy-duty trucks are fully repealed, the NHTSA continues to enforce fuel efficiency standards under the CAFE program, and the USEPA's 2022 "Heavy-Duty Engine and Vehicle Standards" for criteria pollutants (e.g., NO_x and particulate matter) remain operative. Concurrently, California's Advanced Clean Trucks (ACT) and Heavy-Duty Omnibus regulations continue to mandate zero emission vehicle sales and stringent NO_x limits within the State, despite ongoing preemption litigation and the federal government's recent attempts to limit California's inspection programs.

Transportation Conformity

Transportation conformity requirements were added to the FCAA in the 1990 amendments, and the USEPA adopted implementing regulations in 1997. See Section 176 of the FCAA (42 U.S.C. Section 7506) and 40 CFR Part 93, Subpart A. Transportation conformity serves much the same purpose as general conformity: it ensures that transportation plans, transportation improvement programs, and projects that are developed, funded, or approved by the United States Department of Transportation or that are recipients of funds under the Federal Transit Act or from the Federal Highway Administration, conform to the SIP as approved or promulgated by USEPA.

Currently, transportation conformity applies in nonattainment areas and maintenance areas (maintenance areas are those areas that were in nonattainment that have been redesignated to attainment, under the FCCA). Under transportation conformity, a determination of conformity with the applicable SIP must be made by the agency responsible for the project, such as the Metropolitan Planning Organization, the Council of Governments, or a federal agency. The agency making the determination is also responsible for all the requirements relating to public participation. Generally, a project will be considered in conformance if it is in the transportation improvement plan and the

transportation improvement plan is incorporated in the SIP. If an action is covered under transportation conformity, it does not need to be separately evaluated under general conformity.

Transportation Control Measures

One particular aspect of the SIP development process is the consideration of potential control measures as a part of making progress towards clean air goals. While most SIP control measures are aimed at reducing emissions from stationary sources, some are typically also created to address mobile or transportation sources. These are known as transportation control measures (TCMs). TCM strategies are designed to reduce vehicle miles traveled (VMT) and trips, or vehicle idling and associated air pollution. These goals are achieved by developing attractive and convenient alternatives to single-occupant vehicle use. Examples of TCMs include ridesharing programs, transportation infrastructure improvements such as adding bicycle and carpool lanes, and expansion of public transit.

STATE

California Clean Air Act

The California Legislature enacted the California Clean Air Act (CCAA) in 1988, to address air quality issues of concern not adequately addressed by the FCAA at the time. California's air quality problems were and continue to be some of the most severe in the nation and required additional actions beyond the federal mandates. CARB administers California Ambient Air Quality Standards (CAAQS) for the 10 air pollutants designated in the CCAA. The 10 state air pollutants are the six pollutants subject to federal standards listed above, as well as visibility reducing particulates, hydrogen sulfide, sulfates, and vinyl chloride. The USEPA authorized California to adopt its own regulations for motor vehicles and other sources that are more stringent than similar regulations implementing the FCAA. Generally, the planning requirements of the FCAA are less stringent than the CCAA; therefore, consistency with the CCAA will also demonstrate consistency with the FCAA.

CARB Mobile-Source Regulation

The State of California is responsible for controlling emissions from the operation of motor vehicles in the state. Rather than mandating the use of specific technology or the reliance on a specific fuel, CARB motor vehicle standards specify the allowable grams of pollution per mile driven. In other words, the regulations focus on the reductions needed rather than on the manner in which they are achieved. Towards this end, the CARB has adopted regulations that require auto manufacturers to phase in less-polluting vehicles.

CARB Air Quality and Land Use Handbook

CARB's *Air Quality and Land Use Handbook: A Community Health Perspective*[4] addresses the importance of considering health risk issues when siting sensitive land uses, including residential

[4] California Air Resources Board. April 2005. Available: https://ww2.arb.ca.gov/sites/default/files/2023-05/Land%20Use%20Handbook_0.pdf. Accessed: May 29, 2026.

development, in the vicinity of intensive air pollutant emission sources including freeways or high-traffic roads, distribution centers, ports, petroleum refineries, chrome plating operations, dry cleaners, and gasoline dispensing facilities. The CARB Handbook draws upon studies evaluating the health effects of traffic traveling on major interstate highways in metropolitan California centers within Los Angeles (Interstate [I] 405 and I-710), the San Francisco Bay, and San Diego areas. The recommendations identified by CARB, including siting residential uses a minimum of 500 feet from freeways or other high-traffic roadways, are consistent with those adopted by the state for location of new schools. Specifically, the CARB Handbook recommends, "Avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day."

California Air Quality Standards

Although NAAQS are determined by the US. EPA, states have the ability to set standards that are more stringent than the federal standards. As such, California established more stringent ambient air quality standards. Federal and state ambient air quality standards have been established for ozone, CO, NO2, SO2, PM10, and lead. In addition, California has created standards for pollutants that are not covered by federal standards. Although there is some variability among the health effects of the CAAQS pollutants, each has been linked to multiple adverse health effects including, among others, premature death, hospitalizations, and emergency department visits for exacerbated chronic disease, and increased symptoms such as coughing and wheezing. The existing state and federal primary standards for major pollutants are shown in Table 3.3-2.

Tanner Air Toxics Act (TACs)

California regulates TACs primarily through the Tanner Air Toxics Act (AB 1807) and the Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588). The Tanner Air Toxics Act sets forth a formal procedure for CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB can designate a substance as a TAC. To date, CARB has identified more than 21 TACs and has adopted USEPA's list of Hazardous Air Pollutants (HAPs) as TACs. Most recently, diesel PM was added to the CARB list of TACs. Once a TAC is identified, CARB then adopts an Airborne Toxics Control Measure (ATCM) for sources that emit that particular TAC. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure below that threshold. If there is no safe threshold, the measure must incorporate Best Available Control Technologies (BACT) to minimize emissions.

Transportation Control Measures

The SIP describes the infrastructure (i.e., authorities, resources, and programs) California has in place to implement, maintain, and enforce the NAAQS. One particular aspect of the development process is the consideration of potential control measures as a part of making progress towards clean air goals. While most SIP control measures are aimed at reducing emissions from stationary sources, some are typically also created to address mobile or transportation sources. These are known as TCMs, which are strategies are designed to reduce VMT and trips or vehicle idling and associated air pollution. These goals are achieved by developing attractive and convenient alternatives to single-occupant vehicle use. Examples of TCMs include ridesharing programs,

transportation infrastructure improvements such as adding bicycle and carpool lanes, and expansion of public transit.

Omnibus Low-NO_x Rule

CARB approved the Omnibus Low-NO_x Rule on August 28, 2020, which requires engine NO_x emissions to be cut to approximately 75 percent below current standards beginning in 2024, and 90 percent below current standards in 2027. The rule also places nine additional regulatory requirements on new heavy-duty trucks and engines. Those additional requirements include a 50 percent reduction in PM emissions, stringent new low-load and idle standards, a new in-use testing protocol, extended deterioration requirements, a new California-only credit program, and extended mandatory warranty requirements. The regulatory requirements in the Omnibus Low-NO_x Rule will first become effective in 2024, at the same time as the Advanced Clean Trucks regulations that CARB approved, requiring manufacturers to convert increasing percentages of their heavy-duty trucks sold in California to zero emission vehicles.

Low Emission Vehicle Program

CARB first adopted Low Emission Vehicle (LEV) program standards in 1990. These first LEV standards ran from 1994 through 2003. LEV II regulations, running from 2004 through 2010, represent continuing progress in emission reductions. As the state's passenger vehicle fleet continues to grow, and more sport utility vehicles and pickup trucks are used as passenger cars rather than work vehicles, the more stringent LEV II standards were adopted to provide reductions necessary for California to meet federally mandated clean air goals outlined in the 1994 SIP. In 2012, CARB adopted the LEV III amendments to California's LEV regulations. These amendments, also known as the Advanced Clean Car Program, include more stringent emission standards, for model years 2017 through 2025, for both criteria pollutants and GHG emissions for new passenger vehicles.

On September 23, 2020, Governor Gavin Newsom issued Executive Order N-79-20, establishing a goal that 100 percent of new passenger cars and trucks sold in California shall be zero emission by 2035. Executive Order N-79-20also sets a goal that, where feasible, all operations include zero emission medium- and heavy-duty trucks by 2045, and drayage trucks by 2035. Off-road vehicles have a goal to transition to 100 percent zero emission vehicles by 2035, where feasible.

On-Road Heavy-Duty Vehicle Program

CARB has adopted standards for emissions from various types of new on-road heavy-duty vehicles. Section 1956.8, Title 13, California Code of Regulations contains California's emission standards for on-road heavy-duty engines and vehicles, and test procedures. CARB has also adopted programs to reduce emissions from in-use heavy-duty vehicles including the Heavy-Duty Diesel Vehicle Idling Reduction Program, the Heavy-Duty Diesel In-Use Compliance Program, the Public Bus Fleet Rule and Engine Standards, and the School Bus Program and others.

California Air Resources Board Regulation for In-Use Off-Road Diesel Vehicles

On July 26, 2007, CARB adopted a regulation to reduce DPM and NO_x emissions from in-use (existing) off-road heavy-duty diesel vehicles in California. Such vehicles are used in construction, mining, and industrial operations. The regulation limits idling to no more than five consecutive minutes, requires reporting and labeling of the applicable diesel vehicles, and requires disclosure of the regulation upon vehicle sale. Performance requirements of the rule are based on a fleet's average NO_x emissions, which can be met by replacing older vehicles with newer, cleaner vehicles or by applying exhaust retrofits.

The latest amendments became effective on November 17, 2022. The amended regulation requires the phase-out of the oldest and highest-emitting off-road engines from operation, restricts the addition of vehicles with Tier 3 and 4 engines, requires contracting entities to obtain and retain a fleet's valid Certificate of Reported Compliance prior to awarding a contract or hiring a fleet, mandates the use of R99 or R100 Renewable Diesel for all fleets, provides voluntary compliance flexibility options for fleets that adopt zero emission technology, and includes additional requirements to increase enforceability, provide clarity, and provide additional flexibility for permanent low-use vehicles.

The regulation applies to nearly all privately and federally owned diesel-fueled trucks and buses and to privately and publicly owned school buses with a gross vehicle weight rating greater than 14,000 pounds. The regulation provides a variety of flexibility options tailored to fleets operating low use vehicles, fleets operating in selected vocations like agricultural and construction, and small fleets of three or fewer trucks.

Diesel Risk Reduction Plan

CARB's Diesel Risk Reduction Plan has led to the adoption of new state regulatory standards for all new on-road, off-road, and stationary diesel-fueled engines and vehicles to reduce DPM emissions by about 90 percent overall from year 2000 levels. The projected emission benefits associated with the full implementation of CARB's Diesel Risk Reduction Plan, including federal measures, are reductions in DPM emissions and associated cancer risks of 75 percent by 2010 and 85 percent by 2020.

CALGreen and Building Energy Efficiency Standards

The California Green Building Standards Code (CALGreen) is a set of mandatory green building standards for new construction. CALGreen was first developed by the California Building Standards Commission in an effort to meet the goals of Assembly Bill (AB) 32, which established a comprehensive program of cost-effective reductions of GHGs to 1990 levels by 2020. CALGreen applies to the planning, design, operation, construction, use, and occupancy of every newly-constructed building or structure on a statewide basis unless otherwise indicated. Additions and alterations to existing buildings which increase the building's conditioned area, interior volume, or size are also covered by the scope of CALGreen.

The California Building Standards Commission has the authority to propose CALGreen standards for nonresidential structures that include, but are not limited to, new buildings or portions of new buildings, additions and alterations, and all occupancies where no other state agency has the authority to adopt green building standards applicable to those occupancies.

Additionally, effective January 1, 2026, the latest (2025) version of the Title 24, Part 6 Energy Code updates took effect. The 2025 Building Energy Efficiency Standards focus on regulations for energy efficiency, water efficiency and conservation, material conservation and resource efficiency, environmental quality, as well as mandatory provisions for commercial, residential, and public school buildings, and appendices with voluntary provisions for all of these occupancies plus hospitals.

REGIONAL AND LOCAL

Bay Area Air District

The BAAD is responsible for attaining and maintaining air quality conditions in the SFBAAB through a comprehensive program of planning, regulation, enforcement, technical innovation, and promotion of the understanding of air quality issues. The clean air strategy of the BAAD includes the preparation of plans for the attainment of ambient air quality standards, adoption and enforcement of rules and regulations concerning sources of air pollution, and issuance of permits for stationary sources of air pollution. The BAAD also inspects stationary sources of air pollution and responds to citizen complaints, monitors ambient air quality and meteorological conditions, and implements programs and regulations required by the FCAA and the CCAA.

The BAAD has regulated TACs since the 1980s. At the local level, air pollution control or management districts may adopt and enforce CARB's control measures. Under Regulation 2-1 (General Permit Requirements), Regulation 2-2 (New Source Review), and Regulation 2-5 (New Source Review), all nonexempt sources that possess the potential to emit TACs are required to obtain permits from BAAD. Permits may be granted to these operations if they are constructed and operated in accordance with applicable regulations, including new source review standards and air TCMs. The BAAD limits emissions and public exposure to TACs through several programs. The BAAD prioritizes TAC-emitting stationary sources based on the quantity and toxicity of the TAC emissions and the proximity of the facilities to sensitive receptors. In addition, Regulation 11 Rules 2 and 14 address asbestos demolition renovation, manufacturing, and standards for asbestos containing serpentine.

BAAD Air Quality Plans

As stated above, the BAAD prepares plans to attain ambient air quality standards in the SFBAAB. The BAAD prepares ozone attainment plans (OAP) for the national ozone standard and clean air plans (CAP) for the California standard both in coordination with the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG). The 2017 Clean Air Plan: Spare the Air, Cool the Climate (2017 CAP) was developed to protect public health and to continue progress toward the attainment of California and federal ambient air quality standards.

Highlights of this Plan include:

- *Limit Fossil Fuel Combustion:* Develop a region-wide strategy to increase fossil fuel combustion efficiency at industrial facilities, beginning with the three largest sources of industrial emissions: oil refineries, power plants, and cement plants.
- *Stop Methane Leaks*: Reduce methane emissions from landfills, and oil and natural gas production, storage and distribution.
- *Reduce Exposure to Toxics:* Reduce emissions of toxic air contaminants by adopting more stringent limits and methods for evaluating toxic risks at existing and new facilities.
- *Put a Price on Driving*: Implement pricing measures to reduce travel demand.
- *Advance Electric Vehicles:* Accelerate the widespread adoption of electric vehicles.
- *Promote Clean Fuels:* Promote the use of clean fuels and low or zero carbon technologies in trucks and heavy-duty vehicles.
- *Accelerate Low Carbon Buildings:* Expand the production of low-carbon, renewable energy by promoting on-site technologies such as rooftop solar and ground-source heat pumps.
- *Support More Energy Choices:* Support community choice energy programs throughout the Bay Area.
- *Make Buildings More Efficient:* Promote energy efficiency in both new and existing buildings.
- *Make Space and Water Heating Cleaner:* Promote the switch from natural gas to electricity for space and water heating in Bay Area buildings.

BAAD CEQA Guidelines

The BAAD most recently published CEQA Air Quality Guidelines (CEQA Guidelines) in 2022, to assist lead agencies in evaluating air quality impacts of projects and plans proposed in the SFBAAB. BAAD's CEQA Air Quality Guidelines contain instructions on how to evaluate, measure, and mitigate air quality impacts generated for project-level and plan-level activities. The CEQA Air Quality Guidelines focus on criteria air pollutant, GHG, toxic air contaminant, and odor emissions generated from plans or projects. The CEQA Air Quality Guidelines are intended to help lead agencies navigate through the CEQA process. The CEQA Air Quality Guidelines offer step-by-step procedures for a thorough environmental impact analysis of adverse air emissions in the Bay Area.

BAAD CARE Program

The BAAD CARE Program aims to identify locations with high toxic emissions and sensitive populations, and to use the information to help BAAD establish policies for the use of its incentive funding, regulatory authority, and other programs to reduce toxic emissions in areas with high TAC exposures and sensitive populations.

The goals of the CARE Program are to:

- Identify areas where air pollution contributes most to health impacts and where populations are most vulnerable to air pollution.
- Apply sound scientific methods and strategies to reduce health impacts in these areas.
- Engage community groups and other agencies to develop additional actions to reduce local health impacts.

These areas have air pollution conditions which contribute most to health impacts and where populations are most vulnerable to air pollution.

3.3.3. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

Long range plans (e.g., general plan, etc.) present unique challenges for assessing impacts, because they contain development strategies for 20-year, or even longer, time horizons. Due to the SFBAAB's nonattainment status for ozone and PM, and the cumulative impacts of growth on air quality, these plans frequently have significant, unavoidable adverse air quality impacts. CEQA requires the lead agency to evaluate individual and cumulative impacts of general plans, and all feasible mitigation measures must be incorporated within the proposed plan to reduce significant air quality impacts.

The BAAD CEQA Air Quality Guidelines provide guidance on how to evaluate air quality impacts associated with implementation of long-range plans prepared within the SFBAAB pursuant to CEQA. As described in Section 3.4 of the 2022 CEQA Air Quality Guidelines, proposed plans (except regional plans) must show the following over the planning period of the plan to result in a less than significant impact:

- Consistency with current air quality plan control measures;
- A proposed plan's projected VMT or vehicle trips (VT) (either measure may be used) increase is less than or equal to its projected population increase;
- Overlay zones around existing and planned sources of TACs (including adopted Risk Reduction Plan areas);
- Overlay zones of at least 500 feet from all freeways and high-volume roadways; and
- Identify the location, and include policies to reduce the impacts, of existing or planned sources of odors.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to the analysis of air quality impacts.

Open Space and Conservation Element

Goal OSC-B. Protect and improve the quality of the natural environment through collaborative conservation, restoration, management, regenerative practices, and pollution reduction and control.

AIR QUALITY

Policy OSC-B.9: Pollution Prevention. Prevent or minimize the emission of air pollutants in compliance with state and federal air quality standards.

Action OSC-B.9.a: Clean Air Plan. Implement the Bay Area Air District's Clean Air Plan, rules, and best practices in reviewing construction, development, and commercial operations, including evaluation of toxic air contaminants, odors, and criteria pollutants.

Action OSC-B.9.b: Particulate Emissions. Reduce emissions of particulate matter from construction sites, roads, parking lots, and other sources by requiring development and construction projects to implement best management practices.

Action OSC-B.9.c: Idling Prevention. Adopt an ordinance that matches or is more stringent than the State's maximum idling law, and coordinate with CARB, BAAD, and law enforcement to achieve compliance.

CIRCULATION ELEMENT

Goal C-A: Promote a safe multimodal transportation network that helps reduce greenhouse gas emissions and offers strong transit, pedestrian, and bikeway alternatives to the automobile.

Policy C-A.1: Complete Streets. Provide Complete Streets that ensure safe, comfortable, and convenient multimodal access to essential community destinations, increase the use of alternative modes of transportation, encourage active travel as part of daily activities, reduce pollution, and meet the evolving needs of all roadway users.

Action C-A.1.a: Complete Streets and Human-Scale Enhancements. Approach every transportation project and program as opportunities to improve safety, accessibility, and mobility for users of all ages, abilities, and transportation needs. Work with relevant departments, agencies, and jurisdictions to incorporate Complete Streets design features, such as accessible curb ramps, crosswalks, transit facilities, sidewalks, and bicycle infrastructure, into existing streets. Where feasible, integrate human-scale amenities including street trees, landscaping, benches, and pedestrian-scale lighting to enhance comfort, visual quality, and encourage walking, bicycling, and transit use.

Action C-A.1.b: Standards for Infrastructure Improvements. Develop Public Improvement Engineering Standards or other objective standards for property subdivision or development projects to specify required off-site infrastructure improvements, such as sidewalks, that would accommodate or mitigate estimated project traffic impacts.

Policy C-A.2: Existing Infrastructure. Prioritize the maintenance and continued improvement of existing multimodal transportation infrastructure within current rights-of-way as opposed to roadway widening or extensions.

Policy C-A.3: Reduction of Vehicle Miles Traveled (VMT). Support infill, context-sensitive development, walkable neighborhoods, and infrastructure improvements that reduce the

demand for single-occupancy vehicle travel while recognizing that many families and people with mobility limitations or limited access to alternative transportation options will continue to depend on cars.

Action C-A.3.a: VMT and Land Use. Encourage residential housing development in areas with low levels of home-based VMT, such as those near transit and retail services to support access to daily needs for residents of varying incomes and transportation options that offer greater potential for alternatives to driving and shorter trips to daily destinations.

Action C-A.3.b: VMT and Transportation Improvements. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT.

Policy C-A.4: VMT in Transportation Impact Evaluations. Evaluate land use projects for potential transportation impacts by considering the effect on VMT.

Action C-A.4.a: VMT Policy and Regional Coordination. Continue to apply San Anselmo's VMT Screening Criteria and Thresholds of Significance for evaluation of VMT associated with discretionary land use projects and update these thresholds as appropriate to reflect new data, standards, or local conditions. Coordinate with the Transportation Authority of Marin to reduce VMT and enhance multimodal transportation by applying guidance from the VMT Reduction / Mobility Enhancement Toolkit.

Action C-A.4.b: VMT Mitigation. Develop and implement VMT mitigation measures and an in-lieu fee structure that can be applied to applicable projects to reduce potential VMT impacts to less-than-significant levels.

Policy C-A.5: Emerging Transportation Technologies. Explore and support implementation of emerging transportation technologies and strategies to reduce greenhouse gas emissions and VMT, enhance social equity by improving access and affordability across the community, and support economic vibrancy.

Action C-A.5.a: Effective and Equitable Emerging Transportation Strategies. Establish evaluation criteria to assess alignment of emerging transportation solutions, prioritizing emerging mobility strategies that are affordable and accessible to residents with limited incomes, older adults, and persons with disabilities.

ROADWAY NETWORK

Goal C-B: Continue improving the roadway network to ensure mobility, accessibility, and a high quality of life for all community members.

Policy C-B.2: Roadway Traffic Circulation. Maintain adequate traffic circulation while balancing the needs of all system users along Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, Butterfield Road, and in downtown.

Action C-B.2.a: Progress Evolution of The Hub. Develop designs and secure funding for near-term improvements to the Hub as identified in The Hub Transportation Study. This includes incorporation of traffic, transit, pedestrian, and bicycle enhancements.

Action C-B.2.b: Major Thoroughfare Roadway Improvements. Improve Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, and intersections along these roadways by investing in transportation infrastructure to improve safety and accessibility for pedestrians and other non-vehicle roadway users while maintaining adequate circulation for regional through traffic.

Policy C-B.3: Circulation in Commercial Hubs. Ensure efficient and distinguishable access to and within the town's downtown and commercial hub along Greenfield Avenue through targeted multimodal improvements.

Policy C-B.6: Traffic Level of Service. Maintain a traffic Level of Service (LOS) standard of "E" for signalized intersection operations during peak hours to ensure an efficient roadway network and allow for consistent evaluation of development project impact on local roadway traffic.

Action C-B.6.a: Traffic Impact Studies. Require that discretionary development projects be evaluated for level of service impacts in accordance with the Town of San Anselmo's Vehicle Miles Traveled (VMT) Screening Criteria and Thresholds of Significance. Projects that exceed the level of service threshold for signalized intersections shall provide feasible mitigation measures to reduce level of service impacts to levels consistent with Town policy.

Goal C-C: Promote a universally accessible transportation network which offers strong transit, pedestrian, and bikeway alternatives to the automobile for all ages and abilities.

Policy C-C.1: Bicycle and Pedestrian Master Plan. Regularly review, update, and implement the Town's Bicycle and Pedestrian Master Plan to maintain eligibility for grant funding and to advance a safe, accessible, and connected active transportation network for users of all ages and abilities.

Action C-C.1.a: Maintenance of Pedestrian and Bicycle Facilities. Develop a program to prioritize and fund the construction and maintenance of pedestrian and bicycle facilities based on safety, connectivity, removal of access barriers for people with disabilities, older adults, and others with mobility challenges, and the relationship to existing and planned land uses, along with other adopted evaluation criteria.

Action C-C.1.b: Pedestrian-Oriented Improvements in Commercial Hubs. Implement sidewalk, pedestrian crossing, and other pedestrian-oriented improvements identified in the Town's Bicycle and Pedestrian Master Plan—including those along Sir Francis Drake Boulevard, San Anselmo Avenue, Red Hill Avenue, and Greenfield Avenue, and evaluate and implement feasible recommendations from the Downtown Active Transportation & Circulation Study to enhance walkability and safety in Downtown and key commercial hubs.

Policy C-C.2: Pedestrian Safety and Access. Provide a safe and accessible walking environment along San Anselmo's pedestrian network, linking residential areas to schools, shopping, work, recreation

areas, essential services, and other important community destinations for residents of all ages, abilities, and incomes.

> **Action C-C.2.a: Accessibility Improvements**. Continue to construct improvements that provide access for all individuals along the Town's pedestrian network, including reconstruction of facilities in compliance with federal and State accessibility requirements.
>
> **Action C-C.2.b: Downtown Pedestrian Infrastructure**. Implement sidewalk and pedestrian crossing improvement recommendations as included in the Pedestrian and Bicycle Master Plan. Evaluate and implement the recommendations in the Downtown Active Transportation & Circulation Study, where feasible.

Policy C-C.3: Bicycle Network. Continue to expand San Anselmo's bicycle network to safely and comfortably connect residents to schools, shopping, work, recreation, and other daily destinations, with a focus on improved paths and crossings at larger and high vehicle volume roadways and traffic calming installations and signage on local streets.

> **Action C-C.3.a: Bicycle Infrastructure**. Implement bicycle infrastructure recommendations, such as multi-use paths, bicycle priority routes, bike racks, and lockers in areas with high demand, and traffic calming installations, as included in the Pedestrian and Bicycle Master Plan.

Policy C-C.4: Bicycle Parking. Seek opportunities to install bicycle parking facilities at public destinations, including at transit stops, parks, schools, shopping locations, and other essential public facilities, and require bicycle parking facilities in new development.

> **Action C-C.4.a: Bicycle Parking Requirements**. Require short-term and long-term bicycle parking facilities for commercial and multifamily developments in accordance with or more stringent than the California Green Building Standards Code.

Policy C-C.5: Safe Routes to School. Coordinate with the Transportation Authority of Marin to identify locations for improvements that provide safe walking and bicycling routes for students of all backgrounds, including those who rely on walking, biking, or transit to travel to and from school.

Policy C-C.6: Transit Service. Continue to support the improvement and expansion of local and regional transit and paratransit service to improve access for residents who rely on transit, including older adults, youth, lower-income households, and people with disabilities.

> **Action C-C.6.a: Transit Agency Partnerships**. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends.
>
> **Action C-C.6.b**: **Transit-dependent Population**. Actively encourage local and regional transit agencies, providers, and local initiatives to expand reliable and accessible paratransit, shuttles, and other alternative transportation options for non-driving adults, persons with disabilities, and others without access to a private vehicle in San Anselmo.

Policy C-C.7: Transit Stop Access and Provisions. Collaborate with local and regional transit operators to provide transit stops that are safe, accessible, and comfortable for people of all ages and abilities.

Action C-C.7.a: Transit Stop Accessibility, Amenities and Connections. Partner with local and regional transit operators to ensure transit stop amenities, such as benches, shelters, lighting, signage, and trash receptacles, and locate or align transit stops to connect seamlessly with bicycle and pedestrian routes. For development projects within 200 feet of a transit stop, require ADA-compliant infrastructure improvements that provide fully accessible and comfortable access to the stop.

Action C-C.7.b: Mobility Hub Access and Multimodal Connections. Improve transit vehicle access and circulation at the Hub by implementing recommendations from the Hub Transportation Study. Work with the Transportation Authority of Marin to evaluate participation in the Metropolitan Transportation Commission's Bay Area Mobility Hub Program, supporting first- and last-mile travel options at major transit locations. In coordination with transit and regional agencies, identify locations near major corridors suitable for ridesharing, carpool pick-ups, and park-and-ride facilities.

SAFETY ELEMENT

WEATHER-RELATED HAZARDS

Goal S-F Ensure the community can anticipate and adapt to weather-related events with attention to populations that may be more vulnerable to extreme conditions.

Policy S-F.1: Construction Techniques. Encourage construction and design techniques that support increased efficiency and greater insulation to accommodate future weather extremes.

Policy S-F.3: Energy and Water Conservation Code Updates. Require that updated code adoptions include provisions for greater energy and water conservation measures to reduce impacts from drought and extreme temperatures.

SUSTAINABILITY, CLIMATE CHANGE, AND RESILIENCY ELEMENT

Goal SU-A. Empower residents and businesses to reduce their carbon footprints and prepare for the impacts of climate change.

Policy SU-A.1: Sustainability Education and Empowerment. Provide comprehensive outreach, education, and community engagement programs that support residents and businesses in reducing emissions, improving energy efficiency, conserving resources, and preparing for climate impacts. Partner with local volunteers, schools, and community organizations, such as the Climate Action Commission, to expand the reach of these efforts. Design outreach and education programs to be inclusive and accessible to a broad range of participants, including lower-income households, renters, and non-English-speaking residents. Track participation and engagement trends to identify gaps and refine outreach strategies to broaden and diversify community involvement.

Action SU-A.1.a: Community Sustainability, Electrification, and Renewable Energy Programs. Partner with regional agencies, Marin jurisdictions, and the Climate Action Commission to provide coordinated programs, technical assistance, and permitting support that advance energy efficiency, building and vehicle electrification, and renewable energy adoption. This action includes:

- Sustainability & Electrification Resource Hub: Collaborate with Marin jurisdictions to provide a shared regional hub offering integrated resources, information, demonstrations, incentives, and permitting assistance.
- Community Energy Use: Encourage the installation of solar generation and storage systems by streamlining regulations and permitting, and by promoting 100% renewable energy purchasing options.
- Electrification Assistance: Promote local, regional, and state technical assistance, incentive, rebate, and concierge programs supporting the electrification of residential and commercial buildings.
- Equitable Access: Increase awareness of incentive programs for lower-income households and explore opportunities for local subsidies, permit fee reductions, or other supportive measures for electrification.

Action SU-A.1.b: Community Education, Engagement, and Waste Reduction Initiatives. Engage, educate, and support the community in adopting sustainable lifestyle choices, reducing waste, and shifting travel behavior to support greenhouse gas reduction and public health. Collaborate with the Climate Action Commission and regional partners to:

- Climate Education & Engagement: Provide information and engagement opportunities on climate vulnerabilities, health connections, greenhouse gas reduction strategies, and community resilience.
- Sustainable Practices Outreach: Promote actions that reduce natural resource consumption, increase community awareness of sustainable behaviors, and support achievement of Town sustainability goals.
- Low-Carbon Footprint Diet: Promote the environmental, ecological, and health benefits of low-carbon dietary choices through education, outreach, and partnerships with local organizations.
- Plastic Waste Reduction: Conduct public outreach on the impacts of plastic pollution, encourage waste reduction strategies, and support compliance with the Town's Single-Use Plastics Ordinance.
- Public Transit Education: Partner with transit agencies to publicize available transit options and improve first-mile/last-mile connections to transit stops.
- Active Transportation Promotion: Encourage walking and bicycling among residents and employees as a strategy to reduce greenhouse gas emissions and improve public health. Publicize bicycle routes at schools, parks, and transit facilities, and support bicycle awareness and safety campaigns.

Action SU-A.1.c: Plastic Waste Education and Compliance. Conduct outreach and education to reduce plastic pollution and support compliance with the Town's Single-Use Plastics Ordinance, in coordination with waste management partners.

Goal SU-B. Create a sustainable community that ensures residents may meet their own needs without compromising the needs of future generations.

Policy SU-B.4: Local Food System. Support efforts to reduce greenhouse gas emissions from food production, transportation, and waste, and encourage practices that strengthen the sustainability and resilience of the local food system.

Action SU-B.4.a: Local Sourcing. Encourage businesses to source their products from local farms to reduce carbon emissions generated from food and material production and transportation.

Action SU-B.4.b: Regional Agriculture. Advocate for and support regional efforts to promote regenerative and climate-smart agricultural practices that enhance soil health, sequester carbon, and contribute to a sustainable local food system.

Policy SU-B.5: Sustainable Land Uses. Promote environmental sustainability and resilience through thoughtful land use planning and development review that addresses climate change, reduces carbon footprints, and manages resources responsibly.

Goal SU-C. Reduce greenhouse gas emissions in the community and within government operations to mitigate the effects of climate change.

Policy SU-C.1: Greenhouse Gas Emission Reductions. Mitigate the impacts of climate change by reducing community greenhouse gas emissions.

Action SU-C.1.a: Greenhouse Gas Emissions Reduction and Monitoring. Implement strategies to achieve community-wide reductions of at least 45 percent below 1990 levels by 2030 and to support the State's goal to achieve zero net emissions statewide by 2045. Regularly track progress by annually updating the community greenhouse gas inventory and evaluating government operations emissions to monitor reductions and inform implementation of the Climate Action Plan.

Action SU-C.1.b: Climate Action Plan. Implement the Town's Climate Action Plan and update the plan every five years to incorporate new emission reduction targets, strategies, and best practices.**Policy SU-C.2: Renewable Energy and Electrification.** Accelerate the conversion to renewable energy sources.

Action SU-C.2.a: Building and Appliance Electrification. Consider building regulations which preclude gas appliances and infrastructure in new buildings and require installation of high-efficiency electric appliances at time of replacement.

Action SU-C.2.b: Building Permitting for Electrification. Streamline the building permit process for heat pump water and space heaters and electrical panel upgrades. Through

regional collaboration, explore a fee reduction pilot program to incentivize conversion of natural gas appliances to electric versions.

Action SU-C.2.c: Municipal Energy Use. Evaluate solar energy production and storage systems at all municipal buildings and facilities and plan for replacement of natural gas appliances and equipment. Continue to purchase 100% renewable energy for Town buildings and facilities.

Action SU-C.2.d: Zero-Emission Infrastructure. Continue to prohibit the location of new gas stations in San Anselmo and support the phased transition of legal non-conforming gas stations to zero-emissions fueling stations. Support businesses in complying with these requirements through technical assistance and public outreach.

Action SU-C.2.e: Landscaping Equipment. Enforce the ban on gas-powered landscape equipment in San Anselmo and explore opportunities to further reduce emissions from landscaping activities, as feasible.

Policy SU-C.3: Building Energy Efficiency. Encourage energy efficiency improvements in residential and commercial buildings to reduce energy use.

Action SU-C.3.a: Green Building Regulations. Consider adopting green building regulations for new construction and building remodels and additions that exceed minimum State building and energy code requirements.

Action SU-C.3.b: Energy Efficiency Programs. Promote programs and incentives to property owners to improve energy efficiency. Explore the feasibility of requiring energy audits at the time of building sale or major remodel.

Policy SU-C.4: Carbon Sequestration. Support carbon sequestration on natural lands, tiny forests, and urban green spaces.

Action SU-C.4.a: Urban Forest Master Plan. Prepare an Urban Forest Master Plan to preserve and, where appropriate for ecosystem health, plant additional native trees on public parks, medians, and rights-of-way.

Action SU-C.4.b: Sustainable Landscaping. Incorporate sustainable landscaping practices into public projects, when applicable, and encourage community members to apply compost and select native or climate-adapted plant species on private lands. Select plantings for public projects based on their resilience to changing climate conditions to support long-term habitat sustainability and biodiversity with an emphasis on locally native plants.

Policy SU-C.5: Municipal Energy Efficiency, Electrification, and Resilient Operations. Continue to improve energy efficiency, electrify equipment and buildings, and integrate renewable energy and microgrid technologies into Town facilities.

Action SU-C.5.a: Municipal Microgrid and Electrification Plan. Plan and implement microgrids, solar and battery systems, and phased electrification of municipal facilities and equipment.

Goal SU-D Create a resilient and adaptable community that anticipates and reduces the risk from future climate change impacts.

Policy SU-D.1: Resilient Community. Enhance the community's capacity to adapt to climate-related risks by integrating climate adaptation and resilience strategies in the Town's development, capital improvement, and emergency preparedness and response plans and projects, with attention to populations most vulnerable to climate impacts, including lower-income households, seniors, and renters.

Action SU-D.1.a: Resilience Hubs. Identify opportunities to enhance the capacity of Town and school facilities to become Resilience Hubs, evacuation centers, cooling centers, and charging stations during extreme heat or weather events.

Action SU-D.1.b: Equitable Community Resilience. Ensure equitable access to resources and support systems for resilience and adaptation planning and evaluate whether programs are effectively reaching underserved populations both during planning efforts and climate-related events.

Action SU-D.1.c: Urban Heat Island Effect. Reduce urban heat island effects by encouraging installation of landscaped surfaces, cool roofs, ample tree cover, reduced expanses of heat-absorbing pavement, and other urban cooling strategies in new development. For Town projects, incorporate urban cooling measures when feasible.

Action SU-D.1.d: Vulnerable Populations. Engage vulnerable populations to identify gaps in community resilience planning and work together to reduce hazards from climate change impacts.

Action SU-D.1.e: Agency Collaboration. Collaborate with Marin jurisdictions, school districts, special districts, and regional, state, and federal agencies to develop, coordinate, fund, and implement adaptation and resiliency strategies and projects.

Action SU-D.1.f: Adaptive Management and Climate Monitoring. Monitor climate indicators, greenhouse gas emission trends, and adaptation outcomes, and adjust Town policies and programs accordingly.

Action SU-D.1.g: Technology Horizon Scanning. Monitor emerging climate technologies and adaptation strategies with annual reports to the Climate Action Commission on potential applications for San Anselmo.

Goal SU-E Prioritize use of zero emission vehicles and promote active transportation and the public transit system as alternative modes of travel to reduce greenhouse gas emissions and support community health.

Policy SU-E.1: Low Carbon Transportation. Minimize transportation-related greenhouse gas emissions by expanding zero-emission mobility options, supporting clean transit, and promoting adoption of low-carbon personal transportation such as electric vehicles and electric bicycles.

Action SU-E.1.a: Zero Emission Vehicles. Implement a comprehensive program to significantly increase the use of zero emission vehicles through public education and promotion, updating building code requirements for electric vehicle charging infrastructure, and installation of Level 2 and 3 public charging facilities near downtown, commercial districts, multifamily housing, and Town parking lots.

Action SU-E.1.b: Electric Bicycles. Promote electric bicycle adoption through community education and outreach, financial incentives, expansion of secure bicycle parking and related infrastructure, and partnerships with employers and retailers to improve access and reduce barriers to ownership.

Action SU-E.1.c: Fleet Vehicle Replacements. Give priority to electric and zero emissions vehicles when replacing vehicles in the Town's fleet in accordance with the Town's Fleet Zero-Emissions Policy, with the goal of achieving a zero-emissions fleet by 2030.

Action SU-E.1.d: Clean Transit. Support local transit providers' efforts to transition to zero-emission vehicles by supporting transportation infrastructure, policies, and funding efforts that align with the Town's air quality and energy conservation goals.

Action SU-E.1.e: Active Transportation Promotion. Promote walking, bicycling, and safe routes to schools and community destinations through outreach, maps, and campaigns.

Action SU-E.1.f: Public Transit Awareness. Work with transit agencies to improve awareness of transit options and strengthen first-/last-mile connections.

THRESHOLDS OF SIGNIFICANCE

Per Appendix G of the CEQA Guidelines and BAAD recommendations, air quality impacts are considered significant if implementation of the General Plan 2045 would:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard;
- Expose sensitive receptors to substantial pollutant concentrations; or
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

IMPACTS AND MITIGATION MEASURES

Impact 3.3-1: General Plan 2045 implementation would not conflict with or obstruct implementation of the applicable air quality plan (Less than Significant)

CEQA requires lead agencies to determine whether a project is consistent with the applicable air quality plan. The BAAD's most current air quality plan is the 2017 CAP. The 2022 BAAD CEQA Air Quality Guidelines recommend that lead agencies consider the following questions relative to this consistency determination:

1. Does the project support the primary goals of the of the 2017 CAP?
2. Does the project include applicable control measures from the 2017 CAP?
3. Does the project disrupt or hinder implementation of the 2017 CAP control measures?

The primary goals of the 2017 CAP are to protect public health and the climate. The 2017 CAP contains 85 individual control measures that describe specific actions to reduce emissions of air and climate pollutants from the full range of emission sources. The control measures are categorized based upon the economic sector framework used by CARB for the AB 32 Scoping Plan Update. These sectors include:

- Stationary (Industrial) Sources
- Transportation
- Energy
- Buildings
- Agriculture
- Natural and Working Lands
- Waste Management
- Water
- Super-GHG Pollutants

Key elements of the control strategy for the 2017 CAP are described below:

Stationary sources:

- Decrease emissions of GHGs and criteria air pollutants through a region-wide strategy to reduce combustion and improve combustion efficiency at industrial facilities, beginning with the three largest sources of emissions: oil refineries, power plants and cement plants.
- Reduce methane emissions from landfills, and from oil and natural gas production and distribution.
- Reduce emissions of toxic air contaminants by adopting more stringent thresholds and methods for evaluating toxic risks at existing and new facilities.

Transportation:

- Reduce motor vehicle travel by promoting transit, bicycling, walking and ridesharing.

- Implement pricing measures to reduce travel demand.
- Direct new development to areas that are well-served by transit, and conducive to bicycling
- and walking.
- Accelerate the widespread adoption of electric vehicles.
- Promote the use of clean fuels and low- or zero carbon technologies in trucks and heavy-duty equipment.

Buildings and energy:

- Expand the production of low-carbon, renewable energy by promoting on-site technologies such as rooftop solar, wind and ground-source heat pumps.
- Support the expansion of community choice energy programs throughout the Bay Area.
- Promote energy and water efficiency in both new and existing buildings.
- Promote the switch from natural gas to electricity for space and water heating in Bay Area buildings.

The General Plan 2045 does not in and of itself propose development but proposes a land use plan and policy framework that include components specifically aimed at improving air quality. To assess whether the General Plan 2045 is consistent with the 2017 CAP, the recommendations provided by the BAAD's CEQA Air Quality Guidelines are used below to assess whether the Project would support the primary goals, inclusion of the applicable control measures, or hinderance of the control measures. As discussed previously, the 2017 CAP focuses on reducing emissions through the control strategy for stationary, transportation as well as building and energy categories. To demonstrate consistency with the 2017 CAP, each category of the control strategy will be repeated with the relevant General Plan 2045 policies and actions cited to demonstrate consistency with each of the 2017 CAP control strategy categories.

Stationary sources:

- Decrease emissions of GHGs and criteria air pollutants through a region-wide strategy to reduce combustion and improve combustion efficiency at industrial facilities, beginning with the three largest sources of emissions: oil refineries, power plants and cements plants.

  The General Plan 2045 does not include the development of oil refineries, power plants and cements plants. As such, the General Plan 2045 would not disrupt or hinder this control strategy.
- Reduce methane emissions from landfills, and from oil and natural gas production and distribution.

  The General Plan 2045 does not include the development of landfills, or oil production or distribution infrastructure. As such, the General Plan 2045 would not disrupt or hinder this control strategy.

- Reduce emissions of toxic air contaminants by adopting more stringent thresholds and methods for evaluating toxic risks at existing and new facilities.

  The Town does not directly regulate toxic air contaminants but would rely on the BAAD's thresholds, rules and regulations for the emission of toxics from stationary sources. The Town also does not directly regulate toxic emissions from transportation sources but relies on vehicular emission standards adopted by CARB. The Town would not disrupt or hinder this control strategy but would support this strategy through enforcement of development standards that incorporate BAAD requirements for stationary sources and policies that minimize transportation related emissions. The General Plan 2045 supports the reduction in toxic air contaminants through Policy OSC-B.9 Pollution Prevention which prevents or minimizes air pollution through compliance with State and federal air quality standards. The actions under this Policy applies to the implementation of BAAD's CAP, rules, and best practices in the review of construction development and commercial operations as well as the reduction in particulate emissions and vehicular idling minimization. In addition, the General Plan 2045 policies related to all criteria emission control strategies discussed below would also be consistent with the control strategy of reducing toxic air contaminants for existing and new facilities.

Transportation:

- Reduce motor vehicle travel by promoting transit, bicycling, walking and ridesharing.

  The Town supports multimodal transportation options and infrastructure that reduces single vehicle occupancy which includes the Town's Bicycle and Pedestrian Advisory Committee while General Plan 2045's Policy SU-E.1: Low Carbon Transportation has actions that include zero emission vehicles, electric bicycles, fleet vehicle replacements, clean transit, active transportation promotion (walking, bicycling, and safe routes to schools and community destinations), as well as public transit awareness. The General Plan 2045 also incorporates Goal C-C for alternative transportation which includes the Town's Complete Streets Policy and Bicycle and Pedestrian Master Plan through Policy C-C.1. Policy LU-D.4: Downtown maintains and enhances downtown as a pedestrian-friendly center.

- Direct new development to areas that are well-served by transit, and conducive to bicycling and walking.

  The General Plan 2045's Goal LU-A manages future growth and prioritizes a compact, walkable community, the efficient extension of urban services, preservation of natural and cultural resources, and protection of the area's environmental setting. Policy LU-A.3: Public Infrastructure and Service Capacity for New Development coordinates new development and growth with transportation such that consistency is achieved with the Town's VMT and Level of Service standards. Action LU-D.8.b: Age-Friendly Land Use Planning promotes age- and disability-friendly land use planning proximate to transit.

- Accelerate the widespread adoption of electric vehicles.

  General Plan 2045 Policy SU-C.2: Renewable Energy and Electrification accelerates the conversion to renewable energy sources through Action SU-C.2.d: Zero Emission Infrastructure which prohibits the location of new gas stations and transitions to zero emissions fueling stations. Goal SU-E prioritizes the use of zero emission vehicles as modes of travel as part of the Town's sustainability goals. Specifically, Action SU-E.1.a implements a comprehensive program to significantly increase the use of zero emission vehicles through public education and promotion, updating building code requirements for electric vehicle charging infrastructure, and installation of Level 2 and 3 public charging facilities near downtown, commercial districts, multifamily housing, and Town parking lots.

- Promote the use of clean fuels and low- or zero carbon technologies in trucks and heavy-duty equipment.

  As part of the Sustainability, Climate Change, and Resiliency Element of General Plan 2045, the Town supports CARB's sustainability requirements which include the Advanced Clean Trucks and Advanced Clean Fleets rules, manufacturers and fleet operators requirements to adopt zero emission vehicles, as well as In-Use Off-Road Diesel-Fueled Fleets Regulation retirement of older, high-polluting construction machinery. San Anselmo support this broader framework through General Plan 2045 as well as the Climate Action Plan 2030. Managed by its Climate Action Commission, the Town actively works to decarbonize regional transit and school bus fleets, implements municipal fleet electrification policies to systematically replace its own heavy equipment with zero emission alternatives, and aggressively builds out the public EV charging infrastructure needed to sustain medium- and heavy-duty vehicles.

Buildings and energy:

- Expand the production of low-carbon, renewable energy by promoting on-site technologies such as rooftop solar, wind and ground-source heat pumps.

  Action SU-A.1.a supports this control measure by coordinated programs, technical assistance, and permitting support that advance energy efficiency, building and vehicle electrification, and renewable energy adoption. Policy SU-C.2 accelerates the conversion to renewable energy sources through building appliance electrification including streamlining building permit processes for heat pump water and space heaters and electrical panel upgrades. For municipal operations, the Town will evaluate solar energy production and storage systems and replacement of natural gas appliance and equipment as well as continuation in the purchase of 100% renewable energy (MCE Deep Green) for town buildings and facilities as part of Action SU-C.2.c: Municipal Energy Use. Renewable energy for the Town is also supported by Policy SU-C.5: Municipal Energy Efficiency, Electrification, and Resilient Operations which continues to improve energy efficiency, electrify equipment and buildings, and integrate renewable energy and microgrid technologies into Town facilities.

- Support the expansion of community choice energy programs throughout the Bay Area.

  The Town does not have the authority to expand community choice energy programs throughout the Bay Area but Town businesses and residents have access to community choice for energy programs. These include clean energy options through MCE and PGE as well as solar photovoltaic and energy storage systems.

- Promote energy and water efficiency in both new and existing buildings.

  The Town supports conservation efforts through Policy SU-C.2: Renewable Energy and Electrification which promotes the acceleration in the conversion to renewable energy sources. Policy SU-C.3: Building Energy Efficiency also encourages energy efficiency improvements in residential and commercial buildings to reduce energy use. Policy SU-A.1: Sustainability Education and Empowerment also includes actions that promote energy efficiency through education about energy options. Policy SU-C.3: Building Energy Efficiency focuses on energy efficiency through green building regulations as well as incentives within energy efficiency programs. Energy efficiency is also supported for municipal facilities through Policy SU-C.5: Municipal Energy Efficiency, Electrification, and Resilient Operations.

- Promote the switch from natural gas to electricity for space and water heating in Bay Area buildings.

  The General Plan 2045 focuses on the transitions from natural gas to electricity through Action SU-C.2.b: Building Permitting for Electrification which incentivizes conversion of natural gas appliances to electric versions. Action SU-C.2.c also supports this transition at municipal facilities through solar energy production and storage systems as well as replacement of natural gas appliances and equipment.

If the General Plan 2045 would cause disruption, delay, or otherwise hinder the implementation of any air quality plan control measure, it may be considered inconsistent with the 2017 CAP. The Planning Area is surrounded by existing a mixture of open space and suburban uses. The General Plan 2045 emphasizes pedestrian-oriented neighborhoods, appropriately-scaled commercial areas with strong pedestrian and bicycle connections, and infill development within the Downtown with a commitment to develop more housing along with amenities and services to meet the day-to-day needs of residents in a pedestrian-friendly environment served by transit. The Land Use Map and policies and actions emphasize alternative transportation access and multi-modal connectivity throughout the Planning Area and into the surrounding areas. The General Plan 2045's proposed land use plan and policy framework would support the 2017 CAP and provide for future development that would support placement of land uses in proximity to each other and to transit; reduce vehicle trips; and address potential health-related impacts associated with new development, amongst others. All future development and infrastructure projects within the Planning Area would be subject to the General Plan 2045 goals, policies, and actions, which would

contribute to the reduction of emissions and air quality impacts. The General Plan 2045 does not cause the disruption, delay, or otherwise hinder the implementation of any quality plan control measure but would support the control measures identified within the 2017 CAP. Therefore, implementation of the General Plan 2045, which is consistent with all federal and state guidelines, would be consistent with the 2017 CAP.

As discussed previously, the BAAD's 2022 CEQA Air Quality Guidelines also identify thresholds of significance for criteria air pollutants and precursors for planning-level documents. As described in Section 3.4 of the 2022 CEQA Air Quality Guidelines, proposed plans (except regional plans) must show the following over the planning period of the plan to result in a less than significant impact:

- Consistency with current air quality plan control measures; and
- Project VMT or vehicle trip (VT) increase less than or equal to projected population increase.

The analysis provided above demonstrates that the General Plan 2045 would be consistent with the current air quality plan control measures.

Annual VMT for the existing condition (baseline) and buildout year 2045 was provided by Parametrix; refer to Section 3.14 (Transportation and Circulation). **Table 3.3-4** identifies the VMT per capita for the General Plan 2045. As shown in Table 3.3-4, the Project is estimated to result in a population growth of 5,356 persons. This results in a total population of 17,979, which represents an approximately 42% population growth from existing conditions. However, the VMT growth rate is only approximately 4% from existing conditions. Since the General Plan 2045's projected VMT would be substantially less than the population growth rate, this impact would be less than significant.

TABLE 3.3-4: VMT DATA COMPARISON BETWEEN EXISTING CONDITION AND GENERAL PLAN 2045

LAND USE	*UNITS*	*EXISTING CONDITION (BASELINE)*	*GENERAL PLAN 2045*	*GENERAL PLAN 2045 VS. EXISTING CONDITION*
San Anselmo Population	Persons	12,623	17,979	42%
Total VMT	VMT	204,604	212,246	+4%

SOURCE: PARAMETRIX, 2025

The General Plan 2045 would further the fundamental goals of the BAAD in reducing emissions of criteria pollutants associated with VMT by providing opportunities for pedestrian-oriented neighborhoods, appropriately-scaled commercial areas with strong pedestrian and bicycle connections, and infill development with a commitment to develop more housing along with amenities and services to meet the day-to-day needs of residents in a pedestrian-friendly environment served by transit. The Land Use Plan and policies and actions emphasize alternative transportation access and multi-modal connectivity throughout the Planning Area and into the surrounding areas. Implementation of the General Plan 2045 goals, policies, and actions would minimize criteria pollutant emissions. For the reasons described above, the General Plan 2045 would

not conflict with or obstruct implementation of the applicable air quality plan and this impact is considered **less than significant**.

Impact 3.3-2: General Plan 2045 implementation could result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (Less than Significant)

Development proposed under the General Plan 2045 would result in emissions on a townwide basis. As such, the BAAD had developed guidance on the assessment of criteria pollutants for long-range plans that are based on two requirements. As discussed previously, the two requirements are that the General Plan 2045 must be consistent with the 2017 CAP's control measures, and the projected growth rate of vehicle activity in VMT or vehicle trips being less than or equal to the project population growth rate. As discussed in Impact 3.3-1, the General Plan 2045 would support and be consistent with the 2017 CAP's control measures and consequently would result in less than significant impacts for criteria pollutants.

Because emissions from long range plans are inherently cumulative, the BAAD's guidance for long range plans are based on whether the overall emission controls of the 2017 CAP are supported and the projected growth rate for transportation is less than the projected population growth rate. Since the General Plan 2045 would result in less than significant impacts related to the BAAD's two significance thresholds for criteria air pollutants, the General Plan 2045 would likewise result in a less than significant impacts related to cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard. This impact is considered **less than significant**.

Impact 3.3-3: General Plan 2045 implementation would expose sensitive receptors to substantial pollutant concentrations (Less than Significant)

Subsequent land use activities associated with implementation of the General Plan 2045 could potentially include short-term construction sources of TACs and long-term operational sources of TACs, including stationary and mobile sources.

Health risks associated with TACs are most pronounced in the areas adjacent to freeway segments. Under the CARE program, the BAAD has designated certain areas as "Impacted Communities" if the following occur: the areas (1) are close to or within areas of high TAC emissions; (2) have sensitive populations, defined as youth and seniors, with significant TAC exposures; and (3) have significant poverty. The eastern portion of San Anselmo (the area east of Sir Francis Drake Boulevard and south of Red Hill Avenue) is mapped by the BAAD as an Impacted Community under the CARE Program.

Regardless of the existing health risks associated with TACs, the BAAD CEQA Air Quality Guidelines provide recommendations for all communities to ensure reduced health risks associated with TACs. The General Plan 2045 includes goals, policies, and actions that are intended to minimize exposure of TACs to sensitive receptors, as described below.

Temporary Construction Sources

Implementation of the General Plan 2045 would result in the potential construction of a variety of projects. This construction would result in short-term emissions of DPM, a TAC. Construction would result in the generation of DPM emissions from the use of off-road diesel equipment required for site grading and excavation, paving, and other construction activities. The amount to which the receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health risk (i.e., potential exposure to TAC emission levels that exceed applicable standards). Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer. The calculation of cancer risk associated with exposure to TACs is typically based on a 70-year period of exposure. The use of diesel-powered construction equipment, however, would be temporary and episodic and would occur over a relatively large area. Cancer risk and $PM_{2.5}$ exposure would have to be analyzed through project-level analysis to identify the potential for significant impacts and measures to reduce those impacts to less than significant. Implementation of the applicable General Plan 2045 policies and actions would require, in part, that future development of sensitive receptors within specific setback distances from sources of TACs and $PM_{2.5}$ to prepare a site-specific analysis of exposure pursuant to BAAD procedures. Additionally future non-residential developments would be evaluated through the CEQA process or BAAD permit process to ensure they do not cause a significant health risk. Sites would be required to be designed to be located away from pollution sources and trees and/or vegetation would be required as a buffer between sensitive receptors and pollution sources. The use of clean Tier 4 offroad diesel engines are also available to substantially reduce toxic air pollutants such as diesel particulate matter. Compliance with the required regulatory framework and General Plan 2045 goals, policies, and actions would result in temporary construction-related TAC impacts that are **less than significant**.

Long-Term Operational Sources

According to the BAAD CEQA Air Quality Guidelines, for a plan to have a less-than-significant impact with respect to TACs, overlay zones must be established around existing and proposed land uses that would emit these air pollutants. Overlay zones to avoid TAC impacts must be reflected in local plan policies, land use maps, or implementing ordinances. These overlay zones include:

1. Overlay zones around existing and planned sources of TACs (including adopted Risk Reduction Plan areas), and
2. Overlay zones of at least 500 feet from all freeways and high-volume roadways.

The BAAD CEQA Air Quality Guidelines consider exposure of sensitive receptors to air pollutant levels that result in an unacceptable cancer risk or hazard, to be significant. For cumulative sources, the BAAD CEQA Guidelines consider 100 in one million excess cancer risk, $PM_{2.5}$ concentrations that exceed 0.8 $\mu g/m^3$, and non-cancer Hazard Index greater than 10.0 to be significant. This risk and exposure level accounts for multiple pollutant sources.

The General Plan 2045 would permit and facilitate the development of new sensitive receptors, such as new homes, in locations near arterial and collector roadways, highways, and stationary sources of TAC emissions. The CARB's Air Quality and Land Use Handbook provides recommended buffer distances between sensitive land uses and major emission sources. For roadways, CARB

recommends "Avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day."[5] Based on the roadway segments analyzed within the Project's traffic study (Appendix E), estimated traffic volumes at the roadway segments with the highest traffic volumes in the year 2045 would be 39,575 ADT along Sir Francis Drake Boulevard between Mountain View and Cordone Drive, 14,452 ADT along Butterfield Road north of Sir Francis Drake Boulevard, and 13,529 ADT along Center Boulevard between San Anselmo Avenue and Saunders Avenue. These volumes are less than the CARB identified 100,000 ADT for urban roads and also the 50,000 ADT for rural roads. In addition, these traffic volumes were identified by CARB 21 years ago when vehicular tailpipe emissions were substantially more than they are today.

Traffic within San Anselmo would also involve a lower percentage of diesel trucks as to roadways occurring in cities with more industrial uses since the Town is comprised primarily with residential uses. Diesel exhaust is considered by CARB to result in substantially greater health effects as compared to gasoline combustion exhaust. Also, in Marin County, approximately 40% of new light-duty vehicle sales for 2024 were zero emission vehicles, which have no direct tailpipe emissions and would not contribute to local roadway air pollution. Due to continued technological advances and reductions in battery costs, it is anticipated that EV adoption will continue to increase with corresponding reductions in transportation related emissions. As such, the General Plan 2045 does not need a 500-foot overlay zone from freeways and high-volume roadways, and development under General Plan 2045 is consistent with this criterion.

However, Action OSC-B.9.a.: Air Quality Standards and Project Review involves review of projects relative to implementation of the Bay Area Air District's Clean Air Plan, rules, and best practices in reviewing construction, development, and commercial operations, including evaluation of toxic air contaminants, odors, and criteria pollutants. This allows the Town to review development on a project-by-project basis relative to exposure to both criteria and toxic air pollutants. Because of the residential nature of the Town and relatively low levels of vehicle traffic, the General Plan 2045 would involve siting of sensitive land uses proximate to substantial emission sources such as those found in larger cities with industrial sources and major highways. As such, the Town would review development on a project-by-project basis relative to exposure to air pollutants and would not involve placement of sensitive land uses in areas exposed to excessive pollution.

Stationary Sources

The Planning Area has numerous permitted stationary sources. These sources are located throughout the Town, but mostly in commercial areas. The impact of these sources can only be addressed on a project-by-project basis, since impacts are generally localized. To assist lead agencies, BAAD has provided a database of permitted sources for each county in its jurisdiction. The database is contained in a Google Earth tool that allows a user to identify stationary sources within 1,000 feet of a receptor. The database can then be accessed through Google Earth to determine conservative screening levels of cancer risk, hazards, and $PM_{2.5}$ concentrations. This allows many of the sources to be screened out for additional analysis. Stationary sources that show the potential

[5] California Air Resources Board. April 2005. Air Quality and Land Use Handbook: A Community Health Perspective.

for significant community risk impacts after this first level of review are further analyzed by contacting BAAD for additional information and applying distance adjustment factors. A refined modeling analysis would be required if there are sources that still have potentially significant impacts after this level of review. A refined analysis would include dispersion modeling of the source using emissions and source information provided by BAAD. If the source still has significant community risk impacts following this level of effort, then risk reduction strategies would have to be implemented by the project on a case-by-case basis.

When siting new sensitive receptors, the BAAD CEQA Air Quality Guidelines advise that lead agencies examine existing or future proposed sources of TAC and/or $PM_{2.5}$ emissions that would adversely affect individuals within the planned project. New residences and sensitive receptors could be located near stationary sources of TACs located throughout the Town, such as gasoline dispensing stations, emergency back-up diesel generators, and dry cleaners. Without proper setbacks or mitigation measures, these sources could result in TAC levels that would be significant for new sensitive receptors.

Gasoline Stations. The BAAD recommends a setback of 300 feet for large gasoline dispensing facilities (3.6 million gallons of throughput a year) and 50 feet for small facilities. This is consistent with CARB recommendations, which found that, except for the largest gasoline stations, health risks near gasoline stations should be less than 10 in one million at distances beyond 50 feet.

Dry Cleaning Facilities. Perchlorethylene (Perc) is the solvent used commonly in past dry-cleaning operations. Perc is a TAC because it has the potential to cause cancer. In 2005, CARB recommended setbacks of 300 feet between dry cleaning facilities that emit Perc and sensitive land uses. Since then, CARB has enacted new rules to substantially reduce Perc emissions and phase out the use of TACs in dry cleaning by 2023. However, CARB's recommended buffers are based on cancer risk based on a 70-year exposure computation. Therefore, the 300-foot setback may be overly conservative. Most dry-cleaning facilities would need to be analyzed on a project-by-project basis, starting by determining if the facility in question uses Perc in their cleaning process.

Emergency Back-Up Generators. Electricity generators that are powered by diesel engines are common. They are typically located at facilities where uninterrupted electricity is necessary. Common facilities include fire and police stations, hospital or medical treatment facilities, pump stations, schools, offices, and data centers. Diesel engines powering these generators are regulated by BAAD and CARB. CARB has established strict emissions limits and operating restrictions for engines larger than 50 horsepower. BAAD has developed criteria (Regulation 2 Rule 5) for approval of projects with new or modified emission sources of TACs. As a result, all new engines have very localized impacts and would not be permitted if they would cause significant cancer risks or hazards. Existing engines are only permitted to operate for 50 hours per year for maintenance or routine testing.

Specific stationary sources in the Planning Area were identified using BAAD's Stationary Source Screening Map, as described above. The BAAD data provide the screening risk, hazard and PM2.5 concentration levels associated with each source. **Table 3.3-5** identifies the cancer and chronic hazard risks from stationary sources that have potentially significant impacts using the screening

data provided by BAAD and the Cancer Risk and Hazard Distance Adjustment Multiplier tool. However, refined analysis of the effects from these sources through emissions and dispersion modeling would likely show lower TAC exposure. The information provided indicates that all the emission sources have cancer risk levels and chronic hazard indices that are less than levels considered by the BAAD as significant sources of air toxics.

Highway and Roadway Traffic

The BAAD indicates significant TAC exposures along the following highways and high-volume roadways[6] within San Anselmo in terms of cancer risk and $PM_{2.5}$ exposure: Sir Francis Drake Boulevard – 39,575 ADT, and Center Boulevard – 13,529 ADT, Butterfield Road - 14,452 ADT). Diesel exhaust is the primary source of TAC exposure from roadways. These roadways would have low levels of diesel exhaust due to the residential nature of the town and surrounding towns.

Cancer risks in San Anselmo are highest along the centerlines of Sir Francis Drake Blvd. and Red Hill Ave., the two major roadway corridors in the town. Mobile source cancer risk near the centerline of those roadways are 20.0-50.0 in a million. Areas along Center Blvd., Butterfield Rd., and areas within approximately 1-6 blocks of the Sir Francis Drake Blvd. and Red Hill Ave. centerlines have a cancer

[6] The definition of a high-volume roadway can vary depending on road type, location, and use purpose. As an example, for traffic data collection or monitoring purposes, the Federal Highway Administration typically used 50,000 AADT (annual average daily traffic) while for road dust emissions estimation the USEPA uses 10,000 AADT (AP-42 method).

risk of 5.0-20.0 in a million. All other areas within the Planning Area have a cancer risk of 0.0-5.0 in a million.[7]

Implementation of the General Plan 2045 goals, policies, and actions would reduce the exposure to sensitive receptors to pollutant concentrations from highways and roadway traffic by promoting multimodal transportation, reduction in vehicle idling, reductions in VMT, and zero emission vehicles. California has steadily increased the adoption of zero emission vehicles. Marin County had 40% of new light-duty vehicle sales as zero emission vehicles in 2024.[8] Continued purchases of zero or near zero emission vehicles will continue to decrease air pollution near roadways as older more polluting vehicles are retired.

Summary

The General Plan 2045 would allow growth of new residential land uses that would be sensitive receptors and new non-residential land uses that are a potential for new emissions sources. As discussed previously, potential air quality impacts were assessed against the CEQA impact evaluation guidance established by the BAAD. The BAAD guidance for long range plans is primarily based on whether the General Plan 2045 is consistent with the goals and control measures within the 2017 CAP. As discussed in Section 3.3-1, General Plan 2045 would be consistent with the 2017 CAP and would not disrupt or hinder implementation with the 2017 CAP control measures and would result in **less-than significant-impacts**.

Additionally, implementation of the General Plan 2045 goals, policies, and actions would reduce the exposure to sensitive receptors to pollutant concentrations. For example, Action OSC-B.9.c requires that all development and infrastructure projects for potential air quality impacts, including effects of toxic air contaminants and objectionable odors, to residences, congregate housing, schools, and other sensitive receptors. Overall, future non-residential developments would be evaluated through the CEQA process or BAAD permit process to ensure they do not cause a significant health risk. Sites would be required to be designed to be located away from pollution sources and trees and/or vegetation would be required as a buffer between sensitive receptors and pollution sources or implement Best Available Control Technology for emission sources. While implementation of General Plan 2045 goals, policies, and actions would reduce potential exposure, the General Plan 2045 would allow development in the immediate vicinity of TAC sources and it is possible that applying feasible methods to reduce TAC exposure would not be adequate to fully reduce exposure to a less than significant level for future projects. As discussed previously Action OSC-B.9.c requires that future development require a site-specific analysis to determine the level of TAC and PM2.5 exposure to sensitive land uses. The analysis would be conducted following procedures outlined by BAAD. If the site-specific analysis reveals significant exposures, such as cancer risk greater than 10 in one million or cumulative cancer risk greater than 100 in one million, additional measures would be employed to reduce the risk to below the threshold. Since the Town does not include industrial

land uses, most of the stationary sources of air pollutant emissions are likely going to be smaller and would not result in a large source of TACs. Therefore, the impact would be **less than significant**.

Impact 3.3-4: General Plan 2045 implementation would not result in other emissions (such as those leading to odors adversely affecting a substantial number of people) (Less than Significant)

Future construction activities could result in odorous emissions from diesel exhaust associated with construction equipment. However, because of the temporary nature of these emissions and the highly diffusive properties of diesel exhaust, exposure of sensitive receptors to these emissions would be limited and would not rise to the magnitude of a public nuisance.

Subsequent land use activities associated with implementation of the General Plan 2045 could allow for the development of uses that have the potential to produce odorous emissions either during the construction or operation of future development. Additionally, subsequent land use activities may allow for the construction of sensitive land uses (i.e., residential development, schools, parks, offices, etc.) near existing or future sources of odorous emissions.

Significant sources of offending odors are typically identified based on complaint histories received and compiled by BAAD. According to the BAAD CEQA Guidelines, an odor source with five or more confirmed complaints per year, averaged over three years, is considered to have a significant impact. Typically, larger sources of odors that result in complaints are wastewater treatment facilities, landfills including composting operations, food processing facilities, and chemical plants. Other sources, such as restaurants, paint or body shops, and coffee roasters typically result in localized sources of odors. **Table 3.3-6** identifies screening buffers included in the BAAD CEQA Air Quality Guidelines for those uses more typically associated with having the potential to be sources of odors. To avoid significant impacts, the BAAMQD CEQA Guidelines recommend that buffer zones to avoid adverse impacts from odors should be reflected in local plan policies, land use maps, or implementing ordinances.

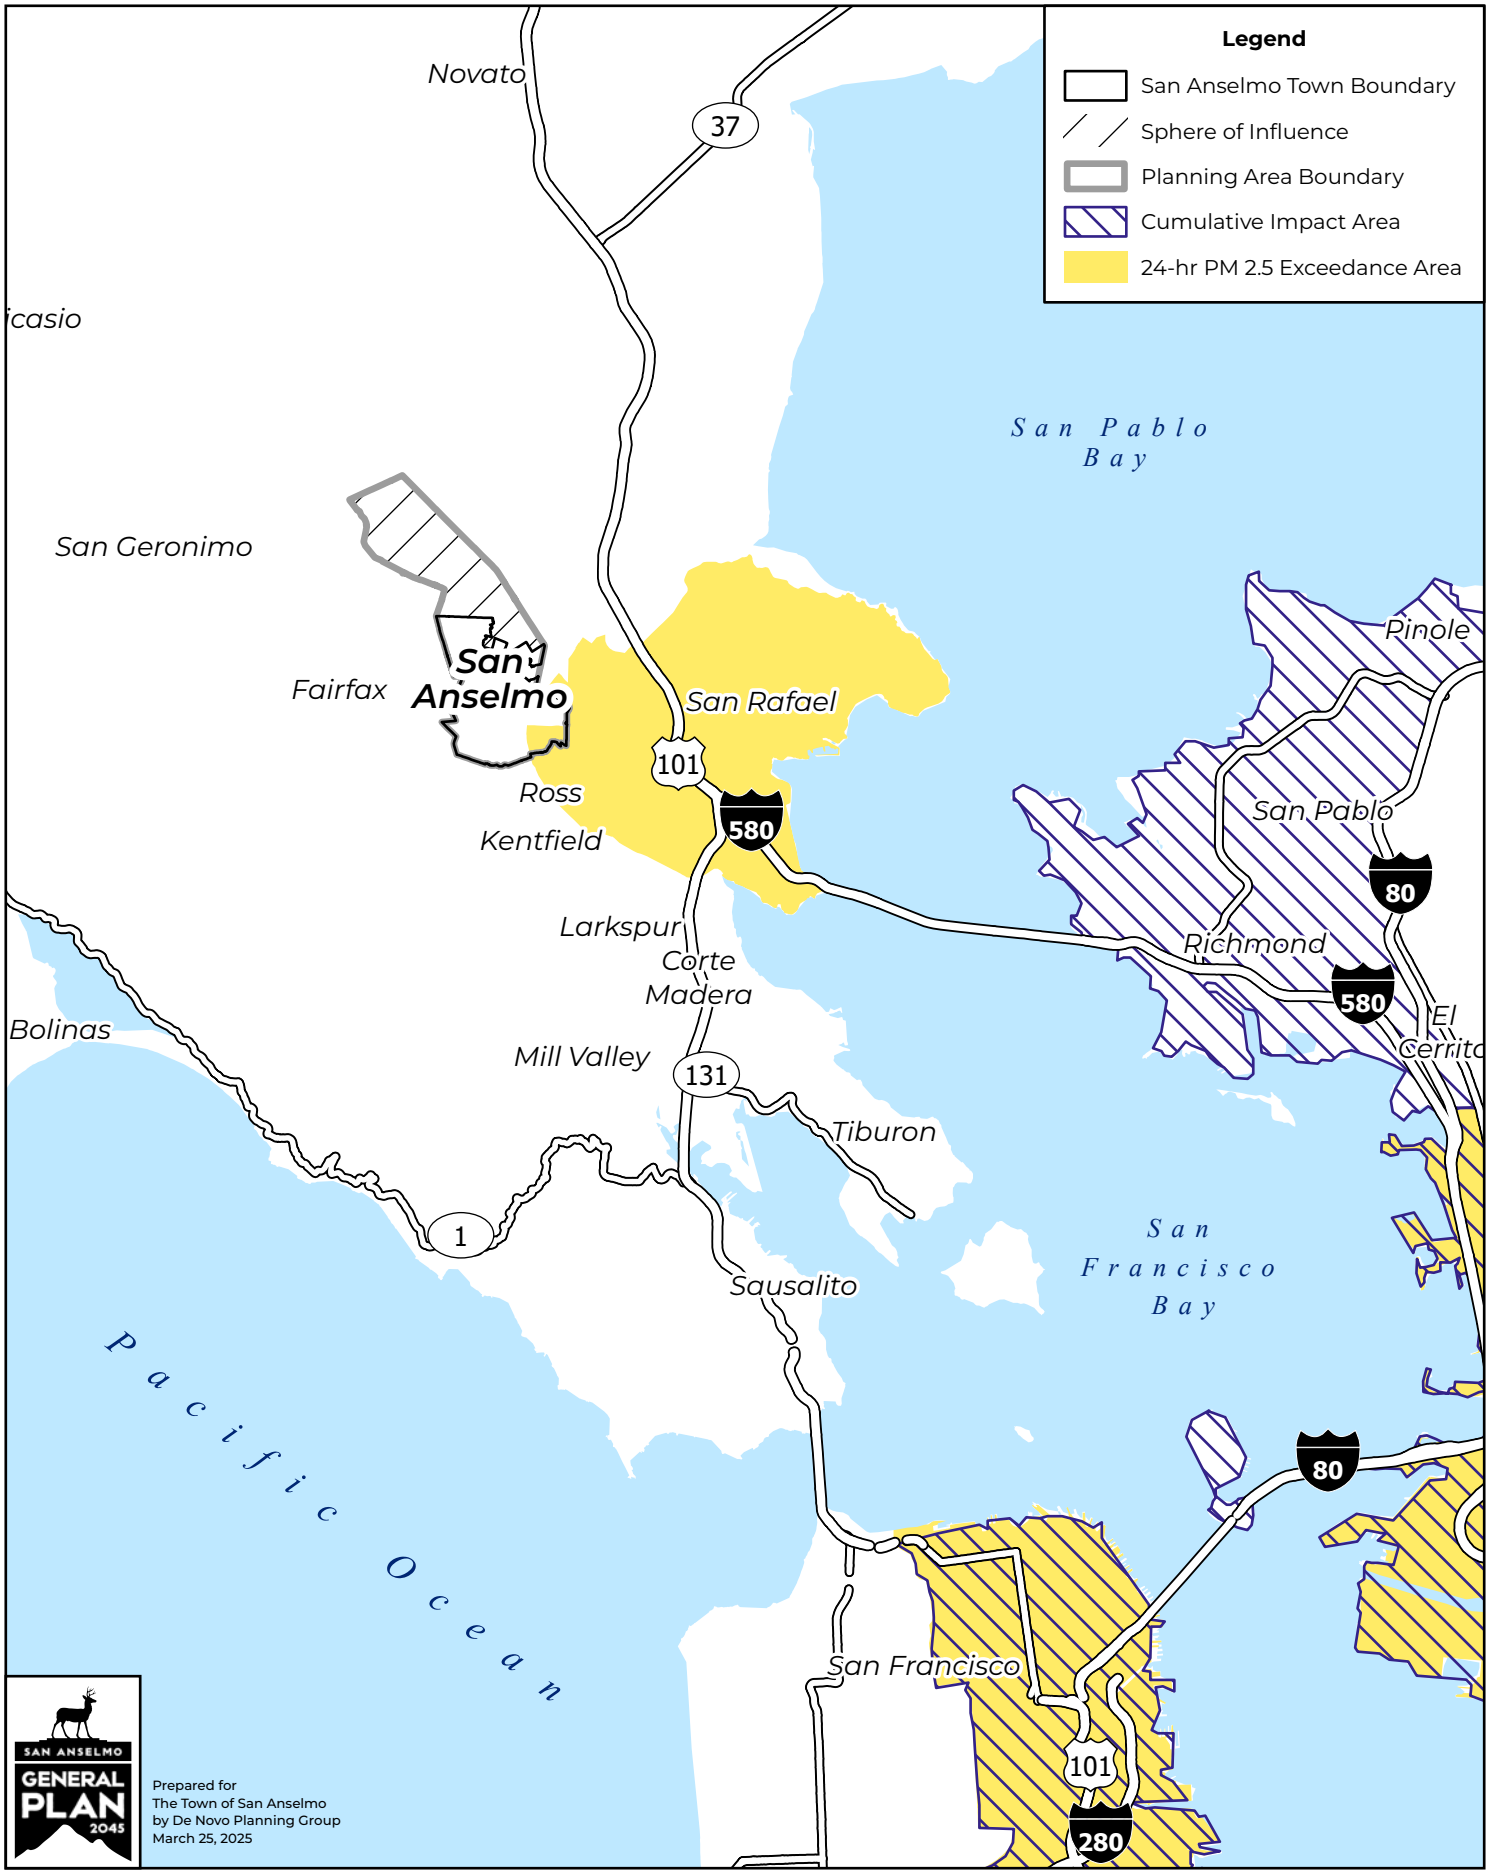

TABLE 3.3-6: ODOR SCREENING DISTANCES FOR THE GENERAL PLAN 2045

LAND USE/TYPE OF OPERATION	*PROJECT SCREENING DISTANCE*
Wastewater Treatment Plant	2 miles
Wastewater Pumping Facilities	1 mile
Sanitary Landfill	2 miles
Transfer Station	1 mile
Composting Facility	1 mile
Asphalt Batch Plant	2 miles
Chemical Manufacturing	2 miles
Fiberglass Manufacturing	1 mile
Painting/Coating Operations	1 mile
Coffee Roaster	1 mile
Food Processing Facility	1 mile
Green Waste and Recycling Operations	1 mile

The Planning Area includes potential odor sources that could affect new sensitive receptors. Most of these major existing sources are already buffered. However, it is possible that odors may be present. Responses to odors are subjective and vary by individual and type of use. Sensitive land uses that include outdoor uses, such as residences and possibly daycare facilities, are likely to be most affected by existing odors. The General Plan 2045 includes policies and actions that address potential conflicts in land uses that could result in odor complaints. For example, General Plan 2045 Open Space and Resource Conservation Element Action OSC-B.9.c requires the Town to reduce the potential for human discomfort or illness due to local concentrations of toxic contaminants, odors, and dust. Additionally, the policies and actions included as part of the General Plan 2045 (described above) would reduce mobile and stationary source emissions and odors associated with diesel fuel by focusing on land use patterns that improve air quality, reduce air pollution from stationary sources, and encourage/enable increased transit behavior. This Action requires the Town to coordinate land use planning to prevent odors and odor complaints. Action OSC-B.9.a requires the Town to implement the CAP relative to potential for odor sources from proposed development projects where the development could have the potential to adversely affect existing or planned sensitive receptors. Thus, General Plan 2045 implementation would not result in other emissions (such as those leading to odors adversely affecting a substantial number of people) and impacts would be **less than significant**.

Impact 3.3-5: General Plan 2045 implementation, in combination with other cumulative development, would result in adverse impacts on air quality. (Less than Significant)

The cumulative air quality impacts for the General Plan 2045 are analyzed based on development within the air basin. No specific development projects are proposed or would be approved as part of the General Plan 2045. Emissions occurring under a long range plan are inherently cumulative due to the Plan's proposed cumulative development. As discussed under Impact 3.3-1, the Project was evaluated under BAAD assessment guidance established for long range plans. Because the Project would be consistent with the goals of the 2017 CAP and would not disrupt or hinder the emission control measures in addition to resulting in substantially less VMT growth as compared to population growth, the General Plan 2045 is considered to result in **less than significant impacts** related to air pollutant emissions due to the Project.

Figure 3.3-1.
COMMUNITY AIR RISK EVALUATION (CARE) AREAS

This section describes biological resources in the Planning Area. This section provides a background discussion of the bioregions, regionally important habitat and wildlife, and special status species found in the vicinity of San Anselmo. This section is organized with an environmental setting, regulatory setting, and impact analysis.

One comment on this environmental topic was received during the NOP comment period from the California Department of Fish and Wildlife (CDFW) (November 13, 2025). Pertinent issues raised in the CDFW letter are addressed in this section. Full comments are included in Appendix A.

KEY TERMS

The following key terms are used throughout this section to describe biological resources and the framework that regulates them:

Hydric Soils. One of the three wetland identification parameters, according to the federal definition of a wetland, hydric soils have characteristics that indicate they were developed in conditions where soil oxygen is limited by the presence of saturated soil for long periods during the growing season. There are approximately 2,000 named soils in the United States that may occur in wetlands.

Hydrophytic Vegetation. Plant types that typically occur in wetland areas. Nearly 5,000 plant types in the United States may occur in wetlands. Plants are listed in regional publications of the U.S. Fish and Wildlife Service (USFWS) and include such species as cattails, bulrushes, cordgrass, sphagnum moss, bald cypress, willows, mangroves, sedges, rushes, arrowheads, and water plantains.

Sensitive Natural Community. A sensitive natural community is a biological community that is regionally rare, provides important habitat opportunities for wildlife, is structurally complex, or is in other ways of special concern to local, State, or Federal agencies. CEQA identifies the elimination or substantial degradation of such communities as a significant impact. The CDFW tracks sensitive natural communities in the California Natural Diversity Database (CNDDB).

Special Status Species. Special status species are those plants and animals that, because of their recognized rarity or vulnerability to various causes of habitat loss or population decline, are recognized by federal, State, or other agencies. Some of these species receive specific protection that is defined by Federal or State endangered species legislation. Others have been designated as "sensitive" on the basis of adopted policies and expertise of State resource agencies or organizations with acknowledged expertise, or policies adopted by local governmental agencies such as counties, cities, and special districts to meet local conservation objectives. These species are referred to collectively as "special status species" in this report, following a convention that has developed in practice but has no official sanction. For the purposes of this assessment, the term “special status” includes those species that are:

- Federally listed or proposed for listing under the Federal Endangered Species Act (50 CFR 17.11-17.12);
- Candidates for listing under the Federal Endangered Species Act (61 FR 7596-7613);

- State listed or proposed for listing under the California Endangered Species Act (14 CCR 670.5);
- Species listed by the USFWS or the CDFW as a species of concern (USFWS), rare (CDFW), or of special concern (CDFW);
- Fully protected animals, as defined by the State of California (California Fish and Game Code Section 3511, 4700, and 5050);
- Species that meet the definition of threatened, endangered, or rare under CEQA (CEQA Guidelines Section 15380);
- Plants listed as rare or endangered under the California Native Plant Protection Act (California Fish and Game Code Section 1900 et seq.); and
- Plants listed by the California Native Plant Society (CNPS) as rare, threatened, or endangered (List 1A and List 2 status plants in Skinner and Pavlik 1994).

Waters of the U.S. The federal government defines waters of the U.S. as "lakes, rivers, streams, intermittent drainages, mudflats, sandflats, wetlands, sloughs, and wet meadows" [33 C.F.R. §328.3(a)]. Following the Supreme Court's landmark decision in *Sackett v. Environmental Protection Agency*, 598 U.S. 651 (2023), the definition of waters of the United States (WOTUS) now hinges on a strict requirement of permanent presence and direct, visible connection. To qualify as a federally protected waterbody, a feature must either be a traditional navigable water—such as a major river, lake, or ocean—or a relatively permanent, standing, or continuously flowing body of water directly linked to one. Furthermore, wetlands are now only covered under the Clean Water Act (CWA) if they possess a continuous surface connection to these permanent waters, making the wetland and the waterbody visually and practically indistinguishable. By enforcing this rigid standard, the ruling effectively eliminated the broader "significant nexus" test, stripping federal jurisdiction from isolated wetlands, ephemeral streams that flow only after rainfall, and other intermittently flowing waters.

Waters of the State under the Porter-Cologne Act retain broader jurisdiction, including isolated wetlands and ephemeral drainages with a significant nexus to water quality.

Wetlands. Wetlands are ecologically complex habitats that support a variety of both plant and animal life. The federal government defines wetlands as “those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions” [33 C.F.R. §328.3(b)]. Wetlands require wetland hydrology, hydric soils, and hydrophytic vegetation. Examples of wetlands include freshwater marsh, seasonal wetlands, and vernal pool complexes that have a hydrologic link to WOTUS.

3.4.1 ENVIRONMENTAL SETTING

BIOREGIONS

San Anselmo is located within the Bay Area/Delta Bioregion. The Bay Area/Delta Bioregion extends from the Pacific Ocean to the Sacramento Valley and San Joaquin Valley bioregions to the northeast and southeast, and a short stretch of the eastern boundary joins the Sierra Bioregion at Amador and

Calaveras Counties. The bioregion is bounded by the Klamath/North Coast on the north and the Central Coast Bioregion to the south. The Bay Area/Delta Bioregion is one of the most populous areas of the state, encompassing the San Francisco Bay Area and the Sacramento-San Joaquin River Delta. The water that flows through the Delta supplies two-thirds of California's drinking water, irrigating farmland, and sustaining fish and wildlife and their habitat. The bioregion fans out from San Francisco Bay in a jagged semi-circle that takes in all or part of 12 counties: Alameda, Contra Costa, Marin, Napa, San Francisco, San Joaquin, San Mateo, Santa Clara, Solano, Sonoma, and parts of Sacramento and Yolo. The habitats and vegetation of the Bay Area/Delta Bioregion are as varied as the geography.

WILDLIFE MOVEMENT CORRIDORS

Wildlife movement corridors are a strip of natural habitat connecting populations of wildlife otherwise separated by cultivated land, roads, or other barriers. The Conservation Analysis Unit (CAU) develops and maintains spatial data and models of wildlife movement, corridors, and habitat connectivity across California. These maps and models are used by scientists and decision-makers to inform how to best conserve habitat connectivity, or the ability of species and ecological processes to move through the landscape.

The Terrestrial Connectivity dataset is one of the key components of the CDFW's Areas of Conservation Emphasis (ACE) suite of terrestrial conservation information. The Terrestrial Connectivity dataset summarizes information on terrestrial connectivity by ACE hexagon including the presence of mapped corridors or linkages and the juxtaposition to large, contiguous, natural areas. According to the California Terrestrial Habitat Connectivity map, as shown on **Figure 3.4-1**, the northern portion of the Planning Area contains terrestrial connectivity at the highest levels, including ACE Rank 5 (Irreplaceable and Essential Corridors) and ACE Rank 4 (Conservation Planning Linkages). ACE Rank 5 (Irreplaceable and Essential Corridors) includes priority wildlife movement corridors and channelized areas identified in The Nature Conservancy's Omniscape model, which are critical for maintaining animal movement, often representing the last connection between habitats, while ACE Rank 4 (Conservation Planning Linkages) represents habitat connectivity linkages that maintain connections between core natural areas, based on species-specific models, and offer more flexibility for conservation efforts.

Grassroot efforts are currently underway within the community to identify and map local wildlife movement corridors as well.

WILDLIFE REFUGES

The purpose of wildlife refuges is to preserve lands and waters for the conservation, management and, where appropriate, restoration of the fish, wildlife, and plant resources and their habitats within the United States for the benefit of present and future generations.

San Anselmo itself does not have designated wildlife refuges within its municipal boundaries. However, there are several nearby locations in Marin County where wildlife refuges and protected areas can be found.[1] These include:

- **San Pablo Bay National Wildlife Refuge**: Located to the east of San Anselmo, this refuge encompasses tidal marshes, mudflats, and seasonal wetlands along San Pablo Bay. It provides important habitat for migratory birds, including waterfowl and shorebirds.
- **Marin Islands Wildlife Refuge**: This refuge consists of two small islands (East Marin Island and West Marin Island) in San Pablo Bay. It's managed as part of the San Pablo Bay National Wildlife Refuge and serves as a nesting site for herons and egrets.
- **Audubon Canyon Ranch**: Although not a wildlife refuge in the traditional sense, Audubon Canyon Ranch, based in Stinson Beach, manages several preserves in Marin County, including Bolinas Lagoon Preserve and Cypress Grove Preserve. These areas provide habitat for diverse wildlife, including nesting sites for herons and egrets.

PLANT COMMUNITIES

Agricultural and natural plant communities provide habitat for a variety of biological resources in the region. Sensitive habitats include those that are of special concern to resource agencies or those that are protected under a Habitat Conservation Plan, Natural Community Conservation Plan, CEQA, the Fish and Game Code, or the Clean Water Act (CWA). Additionally, sensitive habitats are usually protected under specific policies from local agencies.

CALIFORNIA WILDLIFE HABITAT RELATIONSHIP SYSTEM

The California Wildlife Habitat Relationships (CWHR) System is a wildlife information system and predictive model for California's regularly occurring birds, mammals, reptiles, and amphibians. The CWHR System uses a habitat classification scheme to provide a systematic method for describing how California's various habitats support different fauna. When first published in 1988, the classification scheme had 53 habitats. At present, there are 59 wildlife habitats in the CWHR System: 27 tree, 12 shrub, 6 herbaceous, 4 aquatic, 8 agricultural, 1 developed, and 1 non-vegetated.

The CWHR System identified 12 cover types (wildlife habitat classifications) in the Planning Area out of the 59 types in the State. These include: Annual Cropland, Coastal Oak Woodland, Coastal Scrub, Eucalyptus, Mixed Chaparral, Montane Hardwood, Montane Hardwood-Conifer, Perennial Grassland, Redwood, Urban, Valley Oak Woodland, and Vineyard. **Table 3.4-1** identifies the total area by acreage for each cover type (classification) found in the Planning Area. **Figure 3.4-2** illustrates the location of each cover type. A brief description of each cover type follows.

[1] Town of San Anselmo. Town of San Anselmo General Plan Existing Conditions Report. Pages 23 and 24.

TABLE 3.4-1: COVER TYPES - CALIFORNIA WILDLIFE HABITAT RELATIONSHIP SYSTEM

COVER TYPE	*TOWN (ACRES)*	*SOI (ACRES)*	*PLANNING AREA (TOTAL ACRES)*

*NOTES: * INFORMATION PROVIDED BY THE CDFW FVEG SYSTEM DOES NOT NECESSARILY ALWAYS ALIGN WITH ON-THE-GROUND USES, AND MAY BE INDICATIVE OF PAST USES, OR HABITAT TYPES THAT SUPPORT THIS USE; REVIEW OF AERIAL PHOTOGRAPHY FOR THIS AREA INDICATES THERE IS NO VINEYARD IN THE PLANNING AREA.*

Developed Cover Types

Urban habitats are not limited to any particular physical setting. Three urban categories relevant to wildlife are distinguished: downtown, urban residential, and suburbia. A heavily developed downtown is usually at the center, surrounded by concentric zones of urban residential and suburbs. Development gradually decreases and vegetative cover increases as one moves away from the center. Species richness and diversity is extremely low in urban habitats. The structure of urban vegetation varies, with five types of vegetative structure defined: tree grove, street strip, shade tree/lawn, lawn, and shrub cover. A distinguishing feature of the urban wildlife habitat is the mixture of native and exotic species. Within the Planning Area, there are 1,211.3 acres of urban habitat.

Vineyards can be found on flat alluvial soils in the valley floors, in rolling foothill areas, or on relatively steep slopes. All are irrigated. Most vineyards are sprinkler irrigated. Large numbers of vineyards are irrigated by drip or trickle irrigation systems. Most vineyards are in valley or foothill areas. Vineyards have been planted on deep fertile soils which once supported productive and diverse natural habitats. Larger and more diverse populations of wildlife were also supported by these native habitats. Within the Planning Area, there are 1.1 acres of vineyards habitat identified by the CWHR System. However, information provided by the CWHR System does not align with on-the-ground uses as aerial inspection of this area indicates there is no vineyard within the Planning Area. The CWHR information may be indicative of past uses, or habitat types that support this use.

Herbaceous Cover Types

Annual Grassland habitat primarily exists on flat plains and gently rolling foothills. The dominant soil types are Entisols, found at lower elevations in floodplains and swales with minimal soil

development, and Alfisols, located at higher elevations above valley floors. The climate is Mediterranean, with cool, wet winters and hot, dry summers, and a frost-free season averaging 250 to 300 days. Annual precipitation is highest in northern California (i.e., 960 millimeters in Redding) and decreases to the south, reaching its lowest point in the southern San Joaquin Valley (i.e., 150 millimeters in Bakersfield). Within the Planning Area, there are 700.4 acres of annual grassland habitat.

Perennial Grassland habitat typically occurs on ridges and south-facing slopes, alternating with forest and scrub in the valleys and on north-facing slopes. Perennial Grassland habitats are most often found on Mollisols, a soil type characterized by high nutrient content. These soils may grade into Inceptisols in areas of northern California, with higher precipitation allowing for leaching of the mollic horizon, and into Alfisols in areas of southern California, under drier conditions. On the north coast of California, Perennial Grassland habitat may occasionally be found on Ultisols that were once occupied by Douglas-fir habitats. These areas, which have been cleared of trees, are now more suited to Perennial Grassland vegetation. Perennial Grassland habitat occurs in two forms in California: coastal prairie form, found in areas with marine influence including along the California coast from Monterey County northward, and relic form, habitats now dominated by annual grasses and forbs. The coastal prairie form is typically found below 3,280 feet in elevation and seldom more than 62 miles from the coast, and the relic form occurs in patches throughout the state. Within the Planning Area, there are 4.2 acres of perennial grassland habitat.

Tree-Dominated Cover Types

Coastal Oak Woodland habitats are common to mesic coastal foothills of California where moisture conditions are more favorable, such as north facing slopes and canyons, or higher elevations. Coastal oak woodlands occupy a variety of mediterranean-type climates that vary from north to south and west to east; the climate becomes hotter and drier toward the south and east. Precipitation occurs in the milder winter months, almost entirely as rainfall, followed by warm to hot, dry summers. Near the coast, the summers are tempered by fogs and cool, humid sea breezes. Mean annual precipitation varies from about 40 inches in the north to about 15 inches in southern and interior regions. Mean minimum winter temperatures are 29°F to 44°F, and the mean maximum summer temperatures are 75°F to 96°F. The growing season ranges from six months (180 frost-free days) in the north to the entire year in mild coastal regions to the south. The soils and parent material on which coastal oak woodlands occur are extremely variable. There are 1,206.4 acres of Coastal Oak Woodland habitat located throughout the Planning Area.

Eucalyptus habitats generally adjoin a number of other wildlife habitats and are found at low elevations, where freezing is not a problem. Most eucalyptus have been artificially established, usually in and around urban/rural areas. Other habitats found in proximity to eucalyptus include cropland, valley foothill riparian, Orchard-vineyard, Coastal Scrub, Chamise Redshank Chaparral, Annual Grass, Pasture, and Residential Park. Eucalyptus occurs in California from San Diego County and Imperial County in the south to Shasta County in the north. Eucalyptus is usually found at elevations below 1,500 feet, but it has been found at up to 2,100 feet elevation. Most eucalyptus, however, is found around populated areas of southern and central California. Eucalyptus habitats have been extensively planted throughout the state since their introduction in 1856 with large-scale

planting operations beginning in 1870. As such, they are found in locations with highly variable site characteristics. Generally, they are found on relatively flat or gently rolling terrain, occasionally in the foothills. Mediterranean climatic conditions, characterized by hot, dry summers and cool, mild winters, are ideal for Eucalyptus habitats. Precipitation ranges from approximately 12 inches to 24 inches. Temperature regimes in areas of eucalyptus groves range from a mean monthly low of 43°F in January to 73°F in August, with low temperatures occasionally reaching 32°F to 25 °F and high temperatures exceeding 100 °F. Eucalyptus trees demonstrate the ability to withstand variable temperature conditions, with the exception of prolonged cold or freezing weather. Within the Planning Area, there are 2.8 acres of Eucalyptus habitat primarily located in the eastern portion of Planning Area.

Valley Oak Woodland habitat occurs in a wide range of geological settings but is best developed on deep, well-drained alluvial soils, usually in valley bottoms. Most large, healthy valley oaks are rooted down to permanent water supplies. Stands of valley oaks are found in deep sills on broad ridgetops in the southern Coast Range. Where this habitat occurs near the coast, it is usually found away from the main fog zone. The climate is Mediterranean, with mild, wet winters and hot, dry summers. Remnant patches of this habitat are found in the Sacramento Valley and San Joaquin Valley from Redding south to the Tehachapi Mountains, and in valleys of the Coast Range from Lake County south to western Los Angeles County. Usually, this habitat occurs below 2,000 feet. Within the Planning Area, there are 2.7 acres of Valley Oak Woodland habitat primarily located in the central portion of the Planning Area.

Montane Hardwood habitats are primarily found throughout California, mostly west of the crest of the Cascade-Sierra Nevada Mountain Range. To the east of the crest, they are found only in more localized areas, such as in Placer, El Dorado, Alpine, and San Bernardino Counties. A typical Montane Hardwood habitat is composed of a pronounced hardwood tree layer, with an infrequent and poorly-developed shrub stratum and a sparse herbaceous layer. Canyon live oak and associates are found on a wide range of slopes, especially those that are moderate to steep. In the Coast Range, canyon live oak often forms pure stands on steep canyon slopes and rocky ridge tops. On more favorable sites, where conditions support healthier tree growth, individual trees or clumps of trees may be only 10 to 13 feet apart. On less favorable sites, where conditions are poorer, spacing increases to 26 to 33 feet. Where trees are closely spaced, crowns may close but seldom overlap. Elevations range from 300 feet near the Pacific Ocean to 9,000 feet in southern California. Annual precipitation varies from 110 inches in the northern Coast Range to 36 inches in the mountains of southern California. Within the Planning Area, there are 245.7 acres of Montane Hardwood habitat primarily located in the northern portions of the Planning Area within the SOI.

Montane Hardwood-Conifer habitats occur throughout California and are somewhat continuous from Santa Cruz County northward through the Coast Range into Oregon, usually inland from the coast. The habitat typically follows the upper and inland margins of the Coastal Redwood or Douglas Fir habitats. It can also be found on north-facing slopes of the inland northern Coast Range and the Santa Lucia Mountains, as well as small patches extending to Santa Barbara County. Montane Hardwood-Conifer habitat also occurs somewhat continuously down the Sierra Nevada Mountain

Range to the Transverse Ranges. Within the Planning Area, there are 71.3 acres of Montane Hardwood-Conifer habitat primarily located in the southern area of the town.

Redwood habitats are distributed along the coast of California from the Oregon border to San Luis Obispo County. The habitat can be found in various vegetative phases from the coast to approximately 31 miles inland. Redwood habitats are restricted to coastal areas where temperature regimes are relatively stable. Summer coastal fog and marine air flows inland have a great influence on the habitat. Temperatures in the redwood regions range from summer highs of about 100 °F to winter lows of about 16 °F. Ambient temperatures increase as one moves inland, as elevation increases and marine air flow decreases. Precipitation (mostly rain) occurs mostly during winter months, with an annual average of 40 inches. Precipitation in excess of 90 inches occurs in isolated coastal areas. Within the Planning Area, there are 16.4 acres of Redwood habitat primarily located in the southwestern area of the town within and near Bald Hill.

Shrub-Dominated Cover Types

Coastal Scrub habitats occur discontinuously in a narrow strip along the length of California. Two types of northern Coastal Scrub are usually recognized. The first type, which is limited in range, occurs as low-growing patches of bush lupine and many-colored lupine in exposed, oceanside areas. The second and more common type of northern Coastal Scrub usually occurs in less exposed areas, and coyote bush dominates the overstory. There are 78.9 acres of coastal scrub habitat located throughout the Planning Area.

Mixed Chaparral habitats occur as a mosaic on low to middle elevation slopes with mesic conditions below several woodland and forest habitat types. In Northern California, Mixed Chaparral habitat merges with Annual Grassland and Blue Oak-Foothill Pine habitats at lower elevations. Mixed Chaparral habitat is found at varying elevations, but it is typically located on north-facing slopes at lower elevations. This pattern is especially true in southern California. Generally, it occurs on steep slopes and ridges with relatively thin, well-drained soils. Mixed Chaparral habitat generally occurs below 5,000 feet elevation on mountain ranges throughout California, except in the deserts. Within the Planning Area, there are 4.2 acres of coastal scrub habitat primarily located in the northern portions of the Planning Area within the SOI.

SPECIAL STATUS SPECIES

The following discussion is based on a background search of special status species that are documented in the CNDDB. The background search was regional in scope and focused on the documented occurrences within two miles and the 11 U.S. Geological Survey [USGS] Quadrangle Radius of San Anselmo (11-quadrangle search area). The area covered by these 11 USGS quadrangles is approximately 647 square miles, spanning parts of Marin County and Sonoma County, with the northern and eastern boundaries extending into the San Francisco Bay Area. The northernmost parts of the quadrangles include areas around Petaluma and Novato, including the Petaluma River and surrounding wetlands extending to the edge of Sonoma County. San Rafael and the San Quentin quadrangles cover the northern part of the town as well as areas around San Pablo Bay. The southern edge includes parts of San Francisco Bay, stretching to the Golden Gate area. The coastal quadrangles, such as Bolinas and Point Bonita, encompass parts of the rugged coast along Marin

County including Point Reyes, Bolinas Lagoon, and Marin Headlands. The easternmost quadrangles extend toward the Sonoma Creek and San Pablo Bay areas.

Special Status Plants

The search revealed documented occurrences of 20 special status plant species within two miles of the Planning Area. The search revealed documented occurrences of 93 special status plant species within the 11-quadrangle search area of the Planning Area.

Table 3.4-2 and **Table 3.4-3** provide a list of special status plant species that are documented within two miles and the 11-quadrangle search area for the Planning Area, and their current status. **Figure 3.4-3** illustrates the special status species located within the 11-quadrangle search area for the Planning Area.

***GLOBAL RANK IS A REFLECTION OF THE OVERALL CONDITION AND IMPERILMENT OF AN ELEMENT THROUGHOUT ITS GLOBAL RANGE.*

GX PRESUMED EXTINCT (SPECIES) — NOT LOCATED DESPITE INTENSIVE SEARCHES AND VIRTUALLY NO LIKELIHOOD OF REDISCOVERY. EXTINCT (ECOLOGICAL COMMUNITIES AND SYSTEMS) — ELIMINATED THROUGHOUT ITS RANGE, WITH NO RESTORATION POTENTIAL DUE TO EXTINCTION OF DOMINANT OR CHARACTERISTIC TAXA AND/OR ELIMINATION OF THE SITES AND ECOLOGICAL PROCESSES ON WHICH THE TYPE DEPENDS.

GH POSSIBLY EXTINCT — KNOWN FROM ONLY HISTORICAL OCCURRENCES BUT STILL SOME HOPE OF REDISCOVERY. THERE IS EVIDENCE THAT THE SPECIES MAY BE EXTINCT OR THE ECOSYSTEM MAY BE ELIMINATED THROUGHOUT ITS RANGE, BUT NOT ENOUGH TO STATE THIS WITH CERTAINTY. EXAMPLES OF SUCH EVIDENCE INCLUDE 1) THAT A SPECIES HAS NOT BEEN DOCUMENTED IN APPROXIMATELY 20–40 YEARS DESPITE SOME SEARCHING OR SOME EVIDENCE OF SIGNIFICANT HABITAT LOSS OR DEGRADATION; 2) THAT A SPECIES OR ECOSYSTEM HAS BEEN SEARCHED FOR UNSUCCESSFULLY, BUT NOT THOROUGHLY ENOUGH TO PRESUME THAT IT IS EXTINCT OR ELIMINATED THROUGHOUT ITS RANGE.

G1 CRITICALLY IMPERILED — AT VERY HIGH RISK OF EXTINCTION DUE TO EXTREME RARITY (OFTEN 5 OR FEWER POPULATIONS), VERY STEEP DECLINES, OR OTHER FACTORS.

G2 IMPERILED — AT HIGH RISK OF EXTINCTION DUE TO VERY RESTRICTED RANGE, VERY FEW POPULATIONS (OFTEN 20 OR FEWER), STEEP DECLINES, OR OTHER FACTORS.

G3 VULNERABLE — AT MODERATE RISK OF EXTINCTION OR ELIMINATION DUE TO A RESTRICTED RANGE, RELATIVELY FEW POPULATIONS (OFTEN 80 OR FEWER), RECENT AND WIDESPREAD DECLINES, OR OTHER FACTORS.

G4 APPARENTLY SECURE — UNCOMMON BUT NOT RARE; SOME CAUSE FOR LONG-TERM CONCERN DUE TO DECLINES OR OTHER FACTORS.

G5 SECURE — COMMON; WIDESPREAD AND ABUNDANT.

GNR UNRANKED — GLOBAL RANK NOT YET ASSESSED.

GU UNRANKABLE — CURRENTLY UNRANKABLE DUE TO A LACK OF INFORMATION OR DUE TO SUBSTANTIALLY CONFLICTING INFORMATION ABOUT STATUS OR TRENDS.

G#G# RANGE RANK — A NUMERIC RANGE RANK (E.G., G2G3) IS USED TO INDICATE THE RANGE OF UNCERTAINTY ABOUT THE EXACT STATUS OF A TAXON OR COMMUNITY.

G#T# INFRASPECIFIC TAXON — THE STATUS OF INFRASPECIFIC TAXA (SUBSPECIES OR VARIETIES) ARE INDICATED BY A "T-RANK" FOLLOWING THE SPECIES' GLOBAL RANK. RULES FOR ASSIGNING T-RANKS FOLLOW THE SAME PRINCIPLES AS THOSE FOR GLOBAL RANKS. HOWEVER, A T-RANK CANNOT IMPLY THE SUBSPECIES OR VARIETY IS MORE ABUNDANT THAN THE SPECIES. WITH THE SUBSPECIES, THE G-RANK REFLECTS THE CONDITION OF THE ENTIRE SPECIES, WHEREAS THE T-RANK REFLECTS THE GLOBAL SITUATION OF JUST THE SUBSPECIES OR VARIETY.

Q QUALIFIER: QUESTIONABLE TAXONOMY — THE DISTINCTIVENESS OF THIS ENTITY AS A TAXON OR COMMUNITY AT THE CURRENT LEVEL IS QUESTIONABLE; RESOLUTION OF THIS UNCERTAINTY MAY RESULT IN CHANGE FROM A SPECIES TO A SUBSPECIES OR HYBRID, OR INCLUSION OF THIS TAXON OR TYPE IN ANOTHER TAXON OR TYPE, WITH THE RESULTING TAXON HAVING A LOWER-PRIORITY (NUMERICALLY HIGHER) CONSERVATION STATUS RANK.

C QUALIFIER: CAPTIVE OR CULTIVATED ONLY — THE TAXON OR COMMUNITY AT PRESENT IS PRESUMED OR POSSIBLY EXTINCT OR ELIMINATED IN THE WILD ACROSS ITS ENTIRE NATIVE RANGE BUT IS EXTANT IN CULTIVATION, IN CAPTIVITY, AS A NATURALIZED POPULATION (OR POPULATIONS) OUTSIDE ITS NATIVE RANGE, OR AS A REINTRODUCED POPULATION OR ECOSYSTEM RESTORATION, NOT YET ESTABLISHED.

***STATE RANK IS A REFLECTION OF THE CONDITION AND IMPERILMENT OF AN ELEMENT THROUGHOUT ITS RANGE WITHIN THE STATE.*

SX PRESUMED EXTIRPATED — SPECIES OR COMMUNITY IS BELIEVED TO BE EXTIRPATED FROM THE STATE. NOT LOCATED DESPITE INTENSIVE SEARCHES OF HISTORICAL SITES AND OTHER APPROPRIATE HABITAT, AND VIRTUALLY NO LIKELIHOOD THAT IT WILL BE REDISCOVERED.

SH *POSSIBLY EXTIRPATED (HISTORICAL) — SPECIES OR COMMUNITY OCCURRED HISTORICALLY IN THE STATE, AND THERE IS SOME POSSIBILITY THAT IT MAY BE REDISCOVERED. ALL SITES ARE HISTORICAL; THE ELEMENT HAS NOT BEEN SEEN FOR AT LEAST 20 YEARS, BUT SUITABLE HABITAT STILL EXISTS.*

S1 *CRITICALLY IMPERILED — CRITICALLY IMPERILED IN THE STATE BECAUSE OF EXTREME RARITY (OFTEN 5 OR FEWER OCCURRENCES) OR BECAUSE OF SOME FACTOR(S) SUCH AS VERY STEEP DECLINES MAKING IT ESPECIALLY VULNERABLE TO EXTIRPATION FROM THE STATE.*

S2 *IMPERILED — IMPERILED IN THE STATE BECAUSE OF RARITY DUE TO VERY RESTRICTED RANGE, VERY FEW POPULATIONS (OFTEN 20 OR FEWER), STEEP DECLINES, OR OTHER FACTORS MAKING IT VERY VULNERABLE TO EXTIRPATION FROM THE NATION OR STATE.*

S3 *VULNERABLE — VULNERABLE IN THE STATE DUE TO A RESTRICTED RANGE, RELATIVELY FEW POPULATIONS (OFTEN 80 OR FEWER), RECENT AND WIDESPREAD DECLINES, OR OTHER FACTORS MAKING IT VULNERABLE TO EXTIRPATION.*

S4 *APPARENTLY SECURE — UNCOMMON BUT NOT RARE; SOME CAUSE FOR LONG-TERM CONCERN DUE TO DECLINES OR OTHER FACTORS.*

S5 *SECURE — COMMON, WIDESPREAD, AND ABUNDANT IN THE STATE.*

SNR *UNRANKED — STATE CONSERVATION STATUS NOT YET ASSESSED.*

SU *UNRANKABLE — CURRENTLY UNRANKABLE DUE TO A LACK OF INFORMATION OR DUE TO SUBSTANTIALLY CONFLICTING INFORMATION ABOUT STATUS OR TRENDS.*

S#S# *RANGE RANK — A NUMERIC RANGE RANK (E.G., S2S3) IS USED TO INDICATE ANY RANGE OF UNCERTAINTY ABOUT THE STATUS OF THE SPECIES OR COMMUNITY.*

Sensitive Natural Communities

The CDFW considers sensitive natural communities to have significant biotic value, with species of plants and animals unique to each community, and the CDFW considers them "highest inventory priorities" for future conservation. The CNDDB search revealed four sensitive natural communities within 11 quadrangle search area of San Anselmo, as shown on Figure 3.4-3. This includes: (1) Coastal Brackish Marsh, salt marshes where a significant freshwater influx dilutes the seawater to brackish levels of salinity, (2) Northern Coastal Salt Marsh, a non-tidal, non-forested wetland that is continuously or frequently flooded and contains saltwater; (3) Northern Vernal Pool, a vernal pool wetland; and (4) Serpentine Bunchgrass, a valley and foothill grassland. None of the sensitive natural communities identified within the 11-quadrangle search area have been identified within the Planning Area.

3.4.2 REGULATORY SETTING

There are a number of regulatory agencies whose responsibility includes the oversight of the natural resources of the State and nation including the CDFW, the USFWS, the USACE, and the National Marine Fisheries Service (NMFS). These agencies often respond to declines in the quantity of a particular habitat or plant or animal species by developing protective measures for those species or habitat type. The following is an overview of the federal, State, and local regulations that are applicable to implementing the General Plan.

FEDERAL

Federal Endangered Species Act

The Federal Endangered Species Act (FESA), passed in 1973, defines an endangered species as any species or subspecies that is in danger of extinction throughout all or a significant portion of its

range. A threatened species is defined as any species or subspecies that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.

Once a species is listed, it is fully protected from a "take" unless a take permit is issued by the USFWS. A take is defined as the harassing, harming, pursuing, hunting, shooting, wounding, killing, trapping, capturing, or collecting wildlife species or any attempt to engage in such conduct, including modification of its habitat (16 USC 1532, 50 CFR 17.3). Proposed endangered or threatened species are those species for which a proposed regulation, but not a final rule, has been published in the Federal Register.

Migratory Bird Treaty Act

To kill, possess, or trade a migratory bird, bird part, nest, or egg is a violation of the Federal Migratory Bird Treaty Act (FMBTA: 16 U.S.C., §703, Supp. I, 1989), unless it is in accordance with the regulations that have been set forth by the Secretary of the Interior.

Bald and Golden Eagle Protection Act

The Bald and Golden Eagle Protection Act (16 USC Section 668) protects these birds from direct take and prohibits the take or commerce of any part of these species. The USFWS administers the Bald and Golden Eagle Protection Act, and reviews federal agency actions that may affect these species.

Clean Water Act – Section 404

CWA Section 404 regulates all discharges of dredged or fill material into WOTUS. Discharges of fill material includes the placement of fill that is necessary for the construction of any structure, or impoundment requiring rock, sand, dirt, or other material for its construction; site-development fills for recreational, industrial, commercial, residential, and other uses; causeways or road fills; and fill for intake and outfall pipes and subaqueous utility lines [33 C.F.R. §323.2(f)]. The USACE is the agency responsible for administering the permit process for activities that affect WOTUS. Executive Order 11990 is a federal implementation policy, which is intended to result in no net loss of wetlands.

Clean Water Act – Section 401

CWA Section 401 (33 U.S.C. 1341) requires an applicant who is seeking a 404 permit to first obtain a water quality certification from the Regional Water Quality Control Board (RWQCB). To obtain the water quality certification, the RWQCB must indicate that the proposed fill would be consistent with the standards set forth by the State.

Department of Transportation Act - Section 4(f)

Section 4(f) has been part of Federal law since 1966. It was enacted as Section 4(f) of the Department of Transportation (DOT) Act of 1966 and set forth in Title 49 United States Code (U.S.C.), Section 1653(f). In January 1983, as part of an overall recodification of the DOT Act, Section 4(f) was amended and codified in 49 U.S.C. Section 303. This law established policy on Lands, Wildlife and Waterfowl Refuges, and Historic Sites.

Rivers and Harbors Act of 1899

The Rivers and Harbors Act prohibits the obstruction or alteration of any navigable water of the United States. The Rivers and Harbors Act requires authorization from the USACE for any excavation or deposition of materials into these waters or for any work that could affect the course, location, condition, or capacity of rivers or harbors.

STATE

Fish and Game Code §2050-2097 - California Endangered Species Act

The California Endangered Species Act (CESA) protects certain plant and animal species when they are of special ecological, educational, historical, recreational, aesthetic, economic, and scientific value to the people of the State. CESA established that it is State policy to conserve, protect, restore, and enhance endangered species and their habitats.

CESA was expanded upon the original Native Plant Protection Act and enhanced legal protection for plants. To be consistent with federal regulations, CESA created the categories of "threatened" and "endangered" species. It converted all "rare" animals into CESA as threatened species, but did not do so for rare plants. Thus, there are three listing categories for plants in California: rare, threatened, and endangered. Under State law, plant and animal species may be formally designated through official listing by the California Fish and Game Commission.

Fish and Game Code §1900-1913 California Native Plant Protection Act

In 1977, the State legislature passed the California Native Plant Protection Act (NPPA) in recognition of rare and endangered plants of the state. The intent of the law was to preserve, protect, and enhance endangered plants. The NPPA gave the California Fish and Game Commission the power to designate native plants as endangered or rare, and to require permits for collecting, transporting, or selling such plants. The NPPA includes provisions that prohibit the taking of plants designated as "rare" from the wild, and a salvage mandate for landowners, which requires notification of the CDFW 10 days in advance of approving a building site.

Fish and Game Code §3503, 3503.5, 3800 - Predatory Birds

Under the California Fish and Game Code, all predatory birds in the order Falconiformes or Strigiformes in California, generally called “raptors,” are protected. The California Fish and Game Code indicates that it is unlawful to take, posses, or destroy the nest or eggs of any such bird unless it is in accordance with the code. Any activity that would cause a nest to be abandoned or cause a reduction or loss in a reproductive effort is considered a take. This generally includes construction activities.

Fish and Game Code §1601-1603 – Streambed Alteration

Under the California Fish and Game Code, CDFW has jurisdiction over any proposed activities that would divert or obstruct the natural flow or change the bed, channel, or bank of any lake or stream. Private landowners or project proponents must obtain a “Streambed Alteration Agreement” from

CDFW prior to any alteration of a lakebed, stream channel, or their banks. Through this agreement, the CDFW may impose conditions to limit and fully mitigate impacts on fish and wildlife resources. These agreements are usually initiated through the local CDFW warden and will specify timing and construction conditions, including any mitigation necessary to protect fish and wildlife from impacts of the work.

Public Resources Code § 21000 - California Environmental Quality Act

Public Resources Code Section 21000 enacts CEQA and identifies that a species that is not listed on the federal or State endangered species list may be considered rare or endangered if the species meets certain criteria. Under CEQA, public agencies must determine if a project would adversely affect a species that is not protected by FESA or CESA. Species that are not listed under FESA or CESA, but are otherwise eligible for listing (i.e., candidate or proposed) may be protected by the local government until the opportunity to list the species arises for the responsible agency.

Species that may be considered for review are included on a list of "Species of Special Concern," developed by the CDFW. Additionally, the CNPS maintains a list of plant species native to California that have low numbers, limited distribution, or are otherwise threatened with extinction. This information is published in the Inventory of Rare and Endangered Vascular Plants of California. List 1A contains plants that are believed to be extinct. List 1B contains plants that are rare, threatened, or endangered in California and elsewhere. List 2 contains plants that are rare, threatened, or endangered in California, but more numerous elsewhere. List 3 contains plants where additional information is needed. List 4 contains plants with a limited distribution.

Public Resources Code § 21083.4 - Oak Woodlands Conservation

In 2004, the California legislature enacted Senate Bill (SB) 1334, which added oak woodland conservation regulations to the Public Resources Code. SB 1334 law requires a county to determine whether a project, within its jurisdiction, may result in a conversion of oak woodlands that will have a significant effect on the environment. If a county determines that there may be a significant effect to oak woodlands, the county must require oak woodland mitigation alternatives to mitigate the significant effect of the conversion of oak woodlands. Such mitigation alternatives include conservation through the use of conservation easements; planting and maintaining an appropriate number of replacement trees; contribution of funds to the Oak Woodlands Conservation Fund for the purpose of purchasing oak woodlands conservation easements; and/or other mitigation measures developed by the county.

California Oak Woodland Conservation Act

The California legislature passed Assembly Bill (AB) 1334, known as the California Oak Woodland Conservation Act, in 2001 as a result of widespread changes in land use patterns across the landscape that were fragmenting oak woodlands' character over extensive areas. AB 1334 created the California Oak Woodland Conservation Program within the Wildlife Conservation Board. AB 1334 provides funding and incentives to ensure the future viability of California's oak woodlands resources by maintaining large scale land holdings or smaller multiple holdings that are not divided into fragmented, nonfunctioning biological units. AB 1334 acknowledged that the conservation of

oak woodlands enhances the natural scenic beauty for residents and visitors, increases real property values, promotes ecological balance, provides habitat for over 300 wildlife species, moderates temperature extremes, reduces soil erosion, sustains water quality, and aids with nutrient cycling, all of which affect and improve the health, safety, and general welfare of the residents of the state.

California Wetlands Conservation Policy

In August 1993, Governor Pete Wilson announced the "California Wetlands Conservation Policy." The goals of the policy are to establish a framework and strategy that will:

- Ensure no overall net loss and to achieve a long-term net gain in the quantity, quality, and permanence of wetland acreage and values in California in a manner that fosters creativity, stewardship, and respect for private property.
- Reduce procedural complexity in the administration of state and federal wetland conservation programs.
- Encourage partnerships to make landowner incentive programs and cooperative planning efforts the primary focus of wetland conservation and restoration.

Governor Wilson also signed Executive Order W-59-93, which incorporates the goals and objectives contained in the new policy and directs the Resources Agency to establish an Interagency Task Force to direct and coordinate administration and implementation of the policy.

Assembly Bill 1889 (The Room to Roam Act)

Signed by Governor Gavin Newsom, Executive Order N-80-20 (30x30 Initiative) commits California to conserving 30% of its land and coastal waters by 2030 to combat climate change and rapid biodiversity loss. Assembly Bill 1889 is one operational vehicle to achieve this macro goal.

Assembly Bill 1889, officially codified as the Room to Roam Act, fundamentally reshapes how California's local governments approach urban development by integrating ecological connectivity into the local planning pipeline. Signed into law in September 2024, the regulation amends the State's Planning and Zoning Law to mandate that cities and counties explicitly safeguard wildlife migration paths. Upon their next general plan revisions occurring on or after January 1, 2028, local jurisdictions must formally update their "conservation elements" to identify, analyze, and map existing habitat connectivity, permeability, and natural landscape features within their borders.

The regulation shifts the developer paradigm from reactive mitigation to proactive, early-stage conservation planning. Under AB 1889, local approval bodies are required to "avoid, minimize, or mitigate" structural impacts on wildlife movement, standardizing infrastructure designs to feature wildlife-friendly fencing, targeted low-impact lighting, and designated natural land bridges. By legally bridging the traditional gap between municipal land-use zoning and regional biological requirements, the bill prevents expanding infrastructure from creating fatal dead-ends or isolated genetic islands for native species such as mountain lions, desert tortoises, and amphibians.

Wildlife Connectivity Action Plan (AB 2344)

The Wildlife Connectivity Action Plan was legally established under Assembly Bill 2344 (the Safe Roads and Wildlife Protection Act) to build a synchronized, data-driven framework for mitigating traffic-related ecological fragmentation. Enacted in late 2022, this directive requires the California Department of Fish and Wildlife (CDFW) and the California Department of Transportation (Caltrans) to jointly author, publish, and systematically update a comprehensive statewide connectivity plan every five years. Grounded in deep systemic tracking, the plan generates highly detailed mapping layers to isolate regional "hotspots" where major transit corridors intersect critical migratory routes, directly resulting in elevated wildlife-vehicle collisions.

Operationally, the plan acts as a binding baseline for state transit infrastructure, removing bureaucratic barriers to wildlife highway infrastructure. Caltrans is mandated to complete rigorous wildlife barrier assessments before launching any State- or federally funded transit projects situated within areas mapped by the action plan. Furthermore, the State must implement at least 10 priority connectivity projects from this list annually—utilizing streamlined programmatic environmental reviews to rapidly build wildlife overpasses, subterranean culverts, and directional exclusionary fencing.

Natural Community Conservation Planning Act

The Natural Community Conservation Planning Act provides long-term protection of species and habitats through regional, multi-species planning before the special measures of the CESA become necessary.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act authorizes the SWRCB to regulate State water quality and protect beneficial uses.

LOCAL

Existing Town of San Anselmo General Plan

The following goals, objectives, policies, and actions are applicable to biological resources.

CONSERVATION ELEMENT

Goal 4. Preserve and protect significant habitats for fish, wildlife, and flora.

Policy 1. Air, water, and noise pollution shall be prevented or minimized.

Policy 2. Radioactive, chemical, and biological health hazards shall not be created, and existing levels shall be reduced.

Policy 3. Activities causing damage to hydrological and biological processes shall be discouraged.

Policy 4. Streams shall be maintained in or restored to their natural state. A flood channel maintaining the natural settings on San Anselmo Creek and Sleepy Hollow Creek shall be of adequate width and properly maintained to allow passage of flood waters and preservation of riparian vegetation and habitat. Removal of vegetation on the hillsides should be closely controlled in order to minimize erosion, siltation of watercourses, and runoff.

Policy 5. Unique geological, ecological, and historic sites shall be protected: a. Significant natural features shall be included for preservation in their natural state and in an appropriate setting in any design or plan. b. It is hereby declared to be the intent of the Town to preserve all buildings of architectural or historical merit, as may be designated by the Council from time to time, and to that end the Town shall withhold any razing permit for a period of one (1) year allowing time for the people of San Anselmo to consider whether they wish to assist in the maintenance or acquisition of such properties.

Policy 6. A diversity and abundance of wildlife and waterlife shall be maintained or encouraged where it does not now exist. Vegetation and animal habitats shall be preserved wherever possible.

Town of San Anselmo Municipal Code

San Anselmo Municipal Code (Town Code) Chapter 9, Street Trees, outlines regulations and responsibilities for managing trees in public spaces within the town. This chapter, established by Ordinance 1020, aims to regulate the management of street trees to maintain their health, preserve the urban landscape, and ensure public safety within the town.

3.4.3 IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

The General Plan 2045 (available online at: https://sananselmogp2045.org/) is the primary document used as the basis for the environmental setting and the analysis in this section. Specifically, the Open Space and Conservation Element addresses biological resources. Impacts related to biological resources were evaluated using the thresholds of significance listed below. Future development under the General Plan 2045 was reviewed to determine if existing biological resources (species and their associated habitat) would be converted or otherwise impacted. These types of impacts would be the greatest where large infill opportunities exist or in undeveloped areas; therefore, these are the areas that are focused on in the analysis. Impacts are evaluated assuming full buildout of the Planning Area.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to biological resources.

OPEN SPACE AND CONSERVATION ELEMENT

GOAL OSC-B. Protect and improve the quality of the natural environment through collaborative conservation, restoration, management, regenerative practices, and pollution reduction and control.

Policy OSC-B.1: Habitat Preservation. Preserve and enhance wildlife and plant communities in open spaces, riparian corridors, and other biologically sensitive areas to the greatest extent possible, while supporting environmental health and community well-being.

Policy OSC-B.2: Wildlife Corridors. Preserve and protect areas that function as wildlife corridors, particularly those areas that provide connections and mobility between larger natural areas.

Action OSC-B.2.a: Wildlife Corridor Analysis and Development Review. Conduct a wildlife corridor identification effort in collaboration with relevant agencies and stakeholders to implement AB 1889. Require development projects on vacant or connected sites to assess potential impacts on wildlife movement and incorporate feasible measures to maintain habitat connectivity.

Action OSC-B.2.b: Rewilding Campaign. Explore the feasibility of a "Rewild San Anselmo" campaign to encourage ecological restoration on private and public lands. This effort may include developing accessible public resources, such as planting guides and design templates, organizing volunteer habitat restoration days open to a broad range of participants, and partnering with schools and community organizations to expand engagement and awareness.

Action OSC-B.2.c: Wildlife Fencing. Adopt wildlife-friendly fencing guidelines to minimize habitat fragmentation, especially near creeks and the Wildland-Urban Interface.

Policy OSC-B.3: Special Status Species. Conserve and protect special status plants and animals and their associated habitats, including those listed by the State or federal agencies as threatened and/or endangered, those considered to be candidate species for listing, and other species that have been assigned special status by the California Native Plant Society and the California Fish and Game Code. Avoidance of impacts, accompanied by habitat restoration, is the preferred approach to conservation, but mitigation strategies shall be considered when avoidance is not possible.

Action OSC-B.3.a: Biological Surveys. Require surveys of sites, including buffer areas potentially affected by proposed projects, with potentially suitable habitat for special status species, including creek corridors, to determine the presence or absence of

special status species, critical habitat, and riparian habitat to be prepared by a qualified biologist prior to development and other management approvals. Require projects to implement measures to avoid or minimize harm to special status species, critical habitat, and riparian to a less than significant level. Consult with resource agencies as required by federal and State regulations.

Action OSC-B.3.b: Avoidance of Nesting Birds. Avoid disturbance of nests of native birds in compliance with State and federal regulations which may include precluding vegetation clearing and construction on sites where nesting birds may be present during nesting season (typically February 1 through August 31). Require pre-construction surveys by a qualified biologist prior to any disturbance. If nests are found, the project shall implement appropriate avoidance measures, such as fenced buffer areas or staged tree removal periods.

Policy OSC-B.4: Creek Protection. Protect and conserve creeks for riparian habitat, fish and wildlife movement, biodiversity, groundwater recharge, and stormwater conveyance for ecological function and community benefit.

Action OSC-B.4.a: Agency Consultation. Refer proposals for grading, filling, or construction that would alter a watercourse shown on Figure OSC-3 to the State Department of Fish and Wildlife, U.S. Army Corps of Engineers, San Francisco Bay Regional Water Quality Control Board, the Marin County Flood Control District, and other regulatory agencies for consultation.

Action OSC-B.4.b: Creek Setbacks. Continue to require development to comply with the creek setback standards in the Town's Watercourse regulations.

Policy OSC-B.5: Creek Enhancement. Require creek enhancement and riparian habitat restoration for construction projects adjacent to creeks and drainageways to reduce erosion, maintain storm flows, improve water quality, improve habitat value, and preserve natural shade, whenever possible.

Policy OSC-B.6: Water Quality. Minimize pollutants in stormwater runoff including discharge of soil sediments.

Action OSC-B.6.a: Watershed Management. Ensure that new development complies with the requirements of the federal and state Clean Water Acts, National Pollutant Discharge Elimination System (NPDES), and the Town's Urban Runoff Pollution Prevention regulations.

Action OSC-B.6.b: Low-Impact Design Measures. Require the incorporation of Low-Impact Design (LID) measures and other site design elements that slow stormwater flows, promote groundwater recharge, and filter out pollutants.

Policy OSC-B.7: Creek Education and Awareness. Increase awareness and appreciation of San Anselmo's creeks and their role in sustaining fish and wildlife and providing flood protection through accessible education and outreach.

Action OSC-B.7.a: Creek Signage and Education. Develop signage and education displays in clear and accessible formats that describe native habitat, history, and restoration efforts. Partner with local schools, conservation and environmental groups, and community groups to increase awareness of the town's creeks.

Policy OSC-B.8: Tree Protection. Continue to maintain and preserve protected and heritage trees as defined in the Municipal Code to preserve the natural and cultural characteristics of the town.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact on biological resources if it will:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service;
- Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;
- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or
- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

CEQA Guidelines Section 15065(a), Mandatory Findings of Significance, states that a project may have a significant effect on the environment if it would have *"... the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of an endangered, rare or threatened species ..."*

An evaluation of whether an impact on biological resources would be substantial must consider both the resource itself and how that resource fits into a regional and/or local context. Substantial impacts would be those that would substantially diminish or result in the loss of, an important

biological resource or those that would obviously conflict with local, State, or federal resource conservation plans, goals, or regulations. Impacts are sometimes locally adverse but not significant because, although they would result in an adverse alteration of existing conditions, they would not substantially diminish or result in the permanent loss of an important resource on a population- or region-wide basis.

CEQA Guidelines Section 15380, *Endangered, Rare or Threatened Species*, states that a lead agency can consider a non-listed species to be Rare, Threatened, or Endangered for the purposes of CEQA if the species can be shown to meet the criteria in the definition of Rare, Threatened, or Endangered. For the purposes of this discussion, the current scientific knowledge on the population size and distribution for each special status species was considered according to the definitions for Rare, Threatened, and Endangered listed in CEQA Guidelines Section 15380.

IMPACTS AND MITIGATION

Impact 3.4-1: General Plan implementation could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service (Less than Significant)

Approval of the General Plan 2045 would not directly approve or entitle any development or infrastructure projects. However, implementation of the General Plan 2045 and Land Use Map would allow and facilitate future development in San Anselmo, which could result in adverse impacts to special status plant and wildlife species, as well as sensitive natural habitat or wildlife movement corridors.

SPECIAL STATUS PLANT SPECIES

The search revealed documented occurrences of 20 special status plant species within two miles of the Planning Area. The search revealed documented occurrences of 93 special status plant species within the 11-quadrangle search area of the Planning Area. Tables 3.4-2 and 3.4-3 provide a list of special status plant species that are documented within two miles and the 11-quadrangle search area for the Planning Area, and their current status. Figure 3.4-3 illustrates the special status species located within the 11-quadrangle search area for the Planning Area.

Subsequent development under the proposed General Plan could result in the direct loss of habitat areas associated with these special status plant species, since suitable habitat for these species does occur in the region. Additionally, indirect impacts to special status plant species could occur with implementation of the General Plan 2045. Indirect impacts could include habitat degradation as a result of impacts to water quality.

Special status plant species receive protection from various federal and State laws and regulations, including FESA and CESA. These regulations generally prohibit the taking of the plant species without a special permit. Additionally, the proposed General Plan 2045 includes numerous policies and

actions intended to reduce or avoid impacts to special status plant species. These policies and actions are listed previously.

SPECIAL STATUS ANIMAL SPECIES

The search revealed documented occurrences of 16 special status animal species within two miles of the Planning Area. The search revealed documented occurrences of 76 special status animal species within the 11-quadrangle search area of the Planning Area. Tables 3.4-4 and 3.4-5 provide a list of the special status animal species that are documented within two miles and 11 quads of the Planning Area, and current status. Figure 3.4-3 illustrates the location of documented occurrences within 11 quads of the Planning Area.

While most new development in San Anselmo that would occur as a result of General Plan 2045 implementation would occur in areas that have been previously developed, subsequent development under the proposed General Plan 2045 could result in the direct loss of habitat areas associated with these special status animal species, since suitable habitat for these species does occur in the region, and may occur on future development project sites within San Anselmo. Additionally, indirect impacts to special status animal species could occur with implementation of the General Plan 2045. Indirect impacts could include habitat degradation as a result of impacts to water quality, increased human presence, and the loss of foraging habitat.

Special status animal species receive protection from various regulations, including FESA and CESA, which generally prohibit the taking of a species or direct impact to foraging and breeding habitat without a special permit. Additionally, the proposed General Plan 2045 includes numerous policies and actions intended to reduce or avoid impacts to special status animal species. These policies and actions are listed previously.

CONCLUSION

Construction and maintenance activities associated with future development projects under the proposed General Plan 2045 could result in the direct and indirect loss or indirect disturbance of special status plant or animal species or their habitats that are known to occur, or have potential to occur, in the region. Impacts to special status species or their habitats could result in a substantial reduction in local population size, lowered reproductive success, or habitat fragmentation. Significant impacts on special status species associated with individual subsequent projects could include:

- increased mortality caused by higher numbers of automobiles in new areas of development;
- direct mortality from the collapse of underground burrows, resulting from soil compaction;
- direct mortality resulting from the movement of equipment and vehicles through construction areas;
- direct mortality resulting from removal of trees with active nests;
- direct mortality or loss of suitable habitat resulting from the trimming or removal of obligate host plants;
- direct mortality resulting from fill of wetlands features;

- loss of breeding and foraging habitat resulting from the filling of seasonal or perennial wetlands;
- loss of breeding, foraging, and refuge habitat resulting from the permanent removal of riparian vegetation;
- loss of suitable habitat for vernal pool invertebrates resulting from the destruction or degradation of vernal pools or seasonal wetlands;
- abandoned eggs or young and subsequent nest failure for special status nesting birds, including raptors, and other non-special status migratory birds resulting from construction-related noises;
- loss or disturbance of rookeries and other colonial nests;
- loss of suitable foraging habitat for special status raptor species;
- loss of migration corridors resulting from the construction of permanent structures or features; and
- impacts to fisheries/species associated with waterways.

Implementation of the General Plan 2045 policies and actions listed previously would reduce the potential for impacts related to this topic. Subsequent development projects will be required to comply with the General Plan and applicable federal site-specific biological resources assessment as required by CEQA for development located in or adjacent to potential habitat or ecologically sensitive areas. If any special status species or sensitive habitats are identified, contact the appropriate resource agencies and establish appropriate management strategies to reduce impacts on sensitive habitat and special status species.

The Town has prepared the General Plan 2045 to include numerous policies and actions intended to protect special status plants and animals, including habitat, from adverse effects associated with future development and improvement projects. For example, Action OSC-B.3.a requires surveys of sites with potentially suitable habitat for special status species to determine the presence or absence of special status species, critical habitat, and riparian habitat to be prepared by a qualified biologist prior to development and other management approvals. This policy also requires projects to implement measures to avoid or minimize harm to special status species, critical habitat, and riparian to a less than significant level, and consult with resource agencies as required by federal and State regulations. Action OSC-B.3.b requires avoidance of nests of native birds in compliance with State and federal regulations, precludes vegetation clearing and construction on sites where nesting birds may be present during nesting season (typically February 1 through August 31), and requires pre-construction surveys by a qualified biologist prior to any disturbance. Further, Policy OSC-B.1 aims to preserve and enhance wildlife and plant communities in open spaces, riparian corridors, and other biologically sensitive areas to the greatest extent possible, while supporting environmental health and community well-being.

Adoption and implementation of the General Plan 2045 policies and actions, combined with federal and State laws protecting biological resources would ensure that adverse effects on significant biological resources are avoided. Therefore, the impact would be **less than significant**.

Impact 3.4-2: General Plan implementation could have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service (Less than Significant)

The CDFW considers sensitive natural communities to have significant biotic value, with species of plants and animals unique to each community. The CNDDB search revealed four sensitive natural communities within 11-quadrangle search area of San Anselmo, as shown on Figure 3.4-3. This includes: (1) Coastal Brackish Marsh, salt marshes where a significant freshwater influx dilutes the seawater to brackish levels of salinity, (2) Northern Coastal Salt Marsh, a non-tidal, non-forested wetland that is continuously or frequently flooded and contains saltwater; (3) Northern Vernal Pool, a vernal pool wetland; and (4) Serpentine Bunchgrass, a valley and foothill grassland. None of the sensitive natural communities identified within the 11-quadrangle search area have been identified within the Planning Area. All of these community types were once more widely distributed throughout California, but have been modified or destroyed by grazing, cultivation, and urban development.

While not always documented as a sensitive natural community in the CNDDB, streams, rivers, wet meadows, and vernal pools are of high concern, because they provide unique aquatic habitat for many endemic species, including special status plants, birds, invertebrates, and amphibians. The town contains aquatic habitats that qualify as sensitive habitats. The following aquatic resources are found in the Planning Area: Sleepy Hollow Creek and San Anselmo Creek.

Subsequent development projects will be required to comply with the General Plan 2045 and adopted federal, State, and local regulations for the protection of sensitive natural communities, including riparian habitat. The Town has prepared the General Plan 2045 to include numerous policies and actions intended to protect sensitive natural communities, including riparian habitat and creeks, from adverse effects associated with future development and improvement projects. For example, Action OSC-B.3.a requires surveys of sites, including buffer areas potentially affected by proposed projects, with potentially suitable habitat for special status species, including creek corridors, to determine the presence or absence of special status species, critical habitat, and riparian habitat to be prepared by a qualified biologist prior to development and other management approvals. As part of this action, future projects would be required to implement measures to avoid or minimize harm to special status species, critical habitat, and riparian habitat. Action OSC-B.4.a requires that prior to any alteration of a watercourse, the Town or project applicant must coordinate with the State Department of Fish and Wildlife, U.S. Army Corps of Engineers, San Francisco Bay Regional Water Quality Control Board, the Marin County Flood Control District, and other regulatory agencies for consultation. Additionally, disturbance to creeks and associated riparian habitat would be avoided because Action OSC-B.4.b requires development to comply with the creek setback standards in the Town's Watercourse regulations.

Adoption and implementation of the General Plan 2045 policies and actions, combined with federal and State laws protecting biological resources would ensure that adverse effects on significant

riparian and other sensitive habitat are avoided. Therefore, the impact would be **less than significant**.

Impact 3.4-3: General Plan implementation could have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means (Less than Significant)

Streams, rivers, wet meadows, and vernal pools (wetlands and jurisdictional waters) are of high concern because they provide unique aquatic habitat (perennial and ephemeral) for many endemic species, including special status plants, birds, invertebrates, and amphibians. These aquatic habitats oftentimes qualify as protected wetlands or jurisdictional waters and are protected from disturbance through the CWA.

San Anselmo contains aquatic and riparian habitats that qualify as State or federally protected wetlands and jurisdictional waters. The following aquatic resources are found in the Planning Area: Sleepy Hollow Creek and San Anselmo Creek. As noted in Impact 3.4-2, of the two sensitive natural communities documented within the 11-quadrangle search area for San Anselmo, neither of the sensitive natural communities identified within the 11-quadrangle search area have been identified within the Planning Area.

While CWA Section 404 requires compensatory mitigation for impacts to jurisdictional WOTUS, and California's Porter-Cologne Act and CDFW jurisdiction provide additional protections for State waters and streambed features, no regulatory framework guarantees a functional no-net-loss outcome in all cases.

Construction activities associated with individual future projects could result in the disturbance or loss of WOTUS. This includes perennial and intermittent drainages; unnamed drainages; vernal pools; freshwater marshes; and other types of seasonal and perennial wetland communities. Wetlands and other WOTUS could be affected through direct removal, filling, hydrological interruption (including dewatering), alteration of bed and bank, and other construction-related activities.

The proposed project is a planning document that does not itself approve any specific physical changes to the environment; therefore, adoption of the proposed project would not directly impact the environment. However, project implementation could have an indirect change on the physical environment through subsequently approved projects that are consistent with the buildout that is contemplated in the General Plan 2045. The implementation of an individual project would require a detailed and site-specific review to determine the presence or absence of water features. If water features are present and disturbance is required, federal and State laws, as implemented through the permit process, require measures to reduce, avoid, or compensate for impacts to these resources.

Subsequent development projects will be required to comply with the General Plan 2045 and adopted federal, State, and local regulations for the protection of sensitive natural communities,

including protected wetlands. The Town has prepared the General Plan 2045 to include numerous policies and actions intended to protect Sleepy Hollow Creek and San Anselmo Creek from adverse effects associated with future development and improvement projects. For example, Policy OSC-B.5 requires creek enhancement and riparian habitat restoration for construction projects adjacent to creeks and drainageways to reduce erosion, maintain storm flows, improve water quality, improve habitat value, and preserve natural shade, whenever possible. Action OSC-B.4.a requires that proposals for grading, filling, or construction that would alter a watercourse shown on Figure OSC-3 be referred to the State Department of Fish and Wildlife, U.S. Army Corps of Engineers, San Francisco Bay Regional Water Quality Control Board, the Marin County Flood Control District, and other regulatory agencies for consultation. Additionally, disturbance to creeks and associated riparian habitat would be avoided because Action OSC-B.4.b requires development to comply with the creek setback standards in the Town's Watercourse regulations.

Although future development facilitated by the General Plan 2045 could affect wetlands or other jurisdictional waters, such projects would be required to comply with applicable federal, State, and local regulations governing the protection of aquatic resources. These regulations require avoidance and minimization of impacts where feasible and compensatory mitigation for unavoidable impacts. In addition, implementation of General Plan policies and actions protecting creeks, riparian corridors, and sensitive habitats would further reduce the potential for adverse effects. Therefore, impacts to wetlands and other jurisdictional waters would be **less than significant**.

Impact 3.4-4: General Plan implementation would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites (Less than Significant)

Habitat loss, fragmentation, and degradation resulting from land use changes or habitat conversion can alter the use and viability of wildlife movement corridors (i.e., linear habitats that naturally connect and provide passage between two or more otherwise disjunct larger habitats or habitat fragments). Wildlife habitat corridors maintain connectivity for daily movement, travel, mate-seeking, and migration; plant propagation; genetic interchange; population movement in response to environmental change or natural disaster; and recolonization of habitats subject to local extirpation or removal. The suitability of a habitat as a wildlife movement corridor is related to, among other factors, the habitat corridor's dimensions (length and width), topography, vegetation, exposure to human influence, and the species in question.

Species utilize movement corridors in several ways. "Passage species" are those species that use corridors as thru-ways between outlying habitats. The habitat requirements for passage species are generally less than those for corridor dwellers. Passage species use corridors for brief durations, such as for seasonal migrations or movement within a home range. As such, movement corridors do not necessarily have to meet any of the habitat requirements necessary for a passage species everyday survival. "Corridor dwellers" are those species that have limited dispersal capabilities – a

category that includes most plants, insects, reptiles, amphibians, small mammals, and birds – and use corridors for a greater length of time.

San Anselmo contains two named aquatic habitats that may be used for wildlife movement. As noted in Impact 3.4-2, the following aquatic resources are found in the Planning Area: Sleepy Hollow Creek and San Anselmo Creek. Wildlife may use both creeks as migration corridors. Some channels of both creeks have been altered with culverts to divert the creeks underground at road crossings. Although some culverts on these creeks exist in the Planning Area, the creeks still support the necessary attributes needed to support animal movement, namely vegetation for cover and topography to guide animals up and downstream.

As shown in the proposed General Plan 2045 Land Use Map, Single Family Residential land uses are generally found adjacent to and along Sleepy Hollow Creek and San Anselmo Creek. It is noted, however, that the areas designated for Single Family Residential uses by the proposed Land Use Map near both creeks are generally developed with urban uses currently. With implementation of the proposed project, these areas would continue to be used by wildlife as movement corridors.

Because the proposed project is a planning document, and thus, no physical changes will occur to the environment, adoption of the proposed project would not directly impact the environment. There is a reasonable chance that movement corridors could be impacted throughout the buildout of subsequent individual projects accommodated by the General Plan 2045. The development of an individual project would require a detailed and site-specific review to determine the presence or absence of movement corridors on a given project site. If movement corridors are present and disturbance is required, federal and State laws, implemented through the permit process, require measures to reduce, avoid, or compensate for impacts to these resources.

Subsequent development projects will be required to comply with the General Plan 2045 and adopted federal, State, and local regulations for the protection of movement corridors. The Town has prepared the General Plan 2045 to include policies and actions intended to protect movement corridors and contiguous natural habitat areas from adverse effects associated with future development and improvement projects. For example, Action OSC-B.2.a requires development projects on vacant or connected sites to assess potential impacts on wildlife movement and incorporate feasible measures to maintain habitat connectivity. Adoption and implementation of the General Plan 2045 policies and actions, combined with federal and State laws protecting biological resources would ensure that adverse effects on migratory fish and wildlife are avoided. Therefore, the impact would be **less than significant**.

Impact 3.4-5: The General Plan would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (Less than Significant)

The proposed project is a policy document, in which local policies are established. This EIR presents the numerous policies of the General Plan 2045. The General Plan 2045 itself does not conflict with its policies. The General Plan 2045 carries forward or strengthens existing General Plan policies that protect biological resources. For example, Policy OSC-B.3 aims to conserve and protect special status

plants and animals and their associated habitats, including those listed by the State or federal agencies as threatened and/or endangered, those considered to be candidate species for listing, and other species that have been assigned special status by the California Native Plant Society and the California Fish and Game Code. Avoidance of impacts, accompanied by habitat restoration, is the preferred approach to conservation, but mitigation strategies shall be considered when avoidance is not possible. To support this policy, the General Plan 2045 includes Actions OSC-B.3.a and OSC-B.3.b, which require biological surveys for future projects and avoidance of nesting birds if present during nesting season.

Additionally, San Anselmo Municipal Code (Town Code) Chapter 9, Street Trees, outlines regulations and responsibilities for managing trees in public spaces within the town. This chapter, established by Ordinance 1020, aims to regulate the management of street trees to maintain their health, preserve the urban landscape, and ensure public safety within the town. As required by Section 4-906 of the code, no person, without a written permit therefor, shall cut, prune, break, injure, or remove any living tree in, upon, or along any street, sidewalk, or walkway, or cut, disturb, or interfere in any way with the roots of any tree in, upon, or along any street, sidewalk, or walkway, or spray with any chemical or insecticide any tree in, upon, or along any street, sidewalk, or walkway, or place any sign, poster, or other fixture on any tree or tree guard, or injure, misuse, or remove any device placed to protect any tree in, upon, or along any street, sidewalk, or walkway in the town. Additionally, whenever any tree shall, pursuant to a permit issued therefore, be cut down or removed in or from any sidewalk area, its butt and roots shall be dug up and removed or cut level with the ground as directed by the Public Works Director. Future development in accordance with the proposed General Plan 2045 would be required to comply with the Municipal Code, including Chapter 9, Street Trees.

Adoption and implementation of the General Plan 2045 policies and actions and the Town's Municipal Code, combined with federal and State laws protecting biological resources would not conflict with applicable policies or ordinances protecting biological resources. Therefore, the impact would be **less than significant**.

Subsequent development projects will be required to comply with the General Plan 2045 policies, as well as the Municipal Code. This impact would be **less than significant**, and no mitigation is required.

Impact 3.4-6: General Plan implementation would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan (No Impact)

The Town of San Anselmo is not subject to an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Therefore, **no impact** would occur.

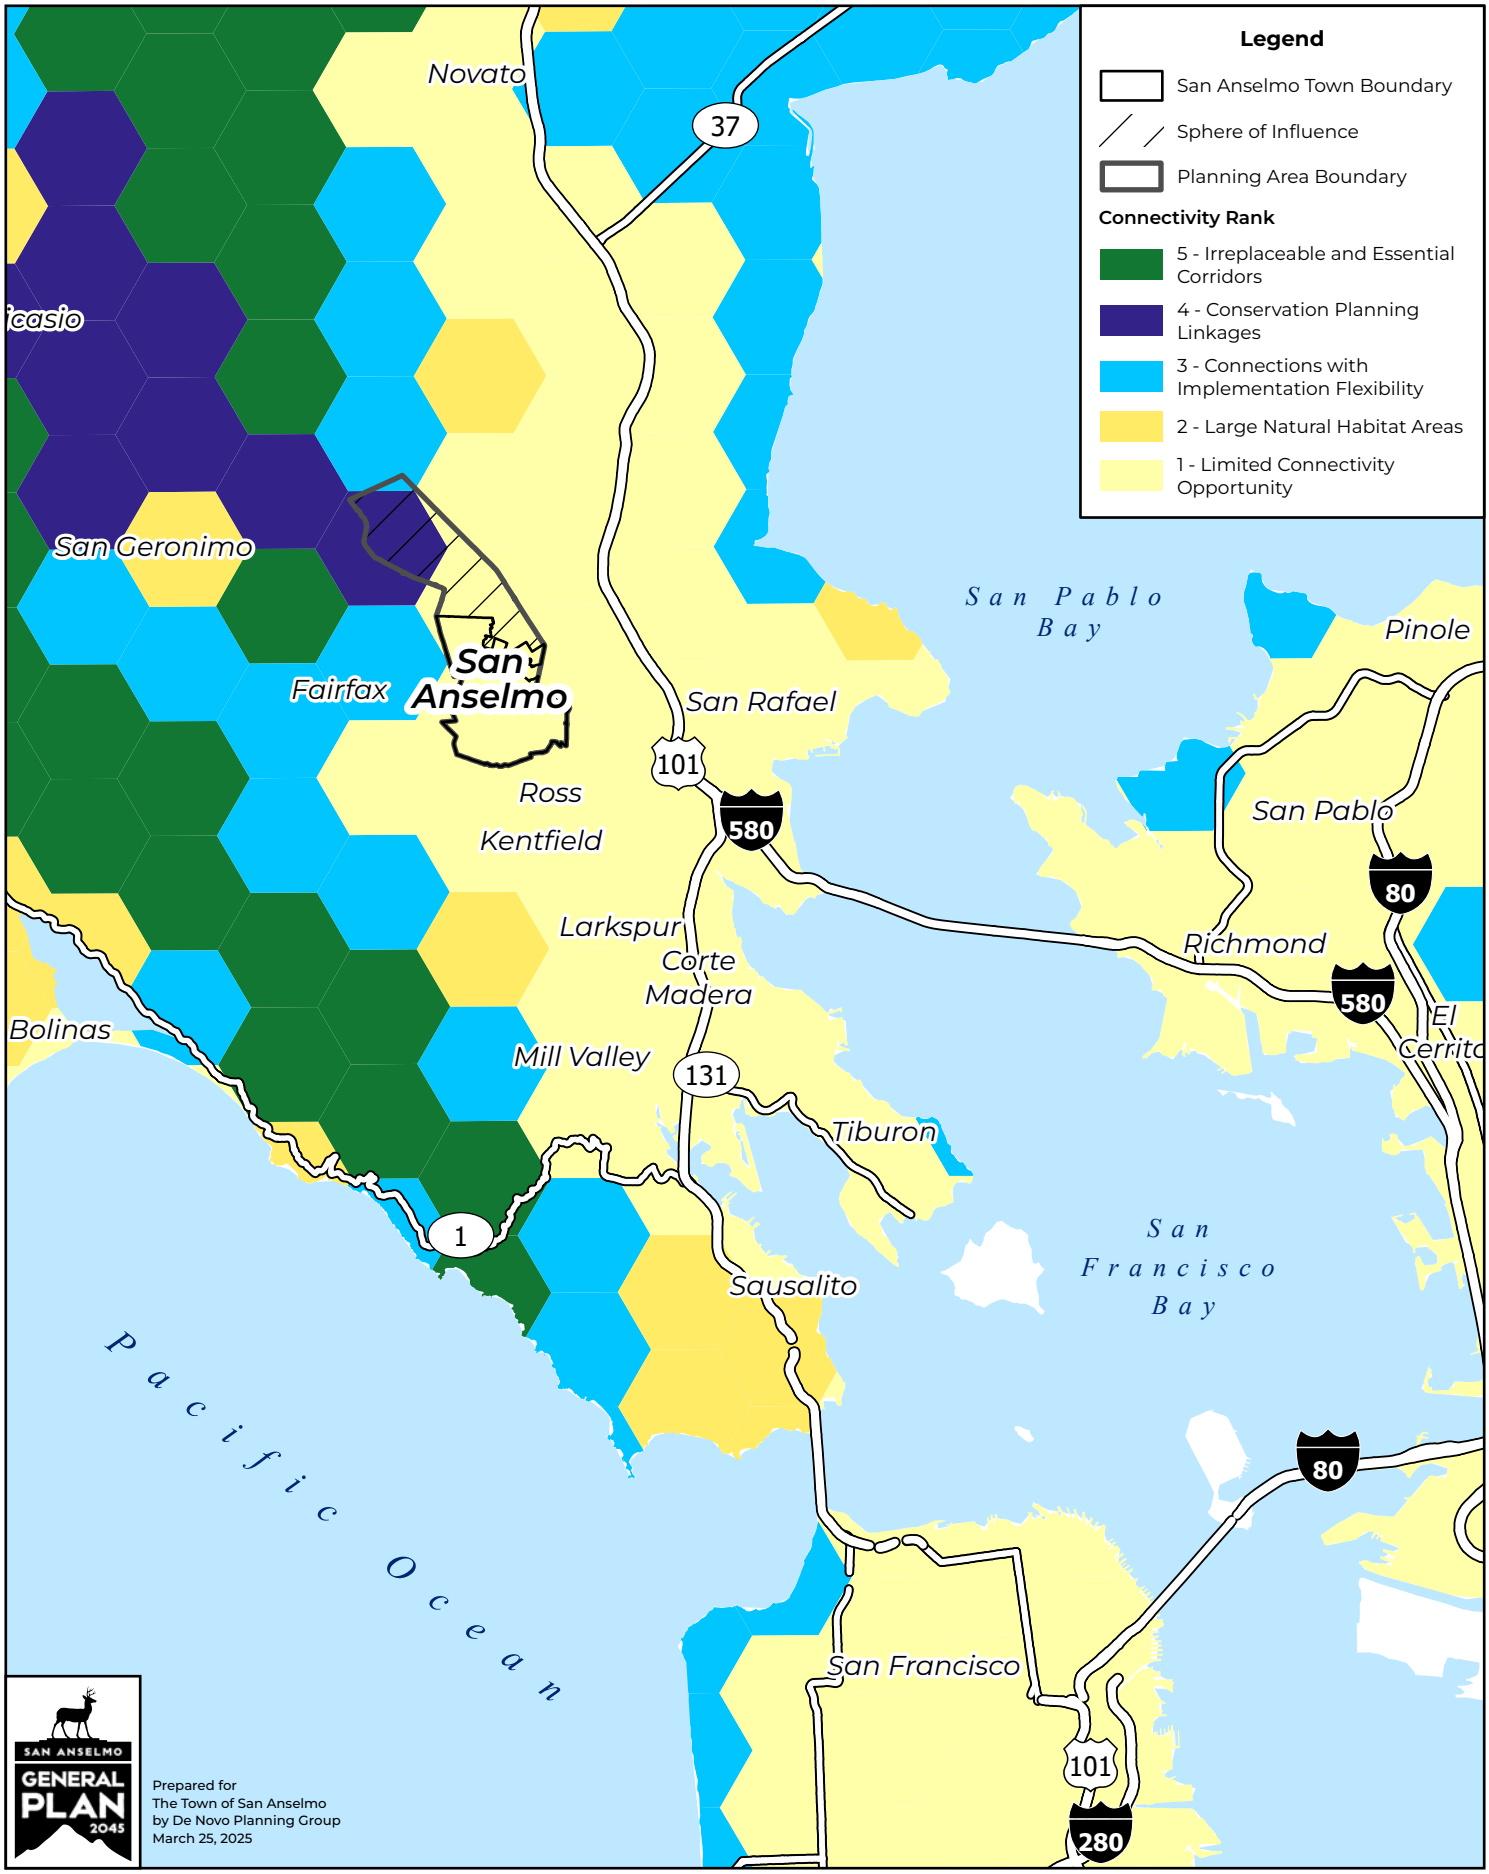

Impact 3.4-7: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to biological resources. (Less than Significant)

The context for cumulative impacts to biological resources is the whole of Marin County. The Marin Countywide Plan governs growth patterns throughout the county, and establishes goals, policies, and actions to preserve natural and biological resources. One of the overarching countywide goals is to protect, restore, and enhance Marin watersheds, natural habitats, wildlife corridors, and open space. Marin's geographic location lends itself to having a distinctive natural setting, with water surrounding the county on three sides. The county includes a number of important habitat types including riparian habitat, wetlands, Baylands, marshes, streams, forests, woodlands, grasslands, and chaparral. Preservation of large parts of Marin County has served to protect important biological resources and the biodiversity of the region. Nevertheless, future development may threaten sensitive resources in Marin County and contribute to further fragmentation of natural areas.[2] Construction in the county generally has left important physical features intact, such as ridgelines, hillsides, and riparian areas, with development generally directed to the City-Centered Corridor along Highway 101 in an intentional effort to keep development away from the Coastal Corridor, the Inland Rural Corridor, and the Baylands Corridor.[3] However, cumulative development anticipated throughout the greater Marin County region will result in impacts to biological resources, including the permanent loss of habitat for special status species, corridor fragmentation, direct and indirect impacts to special status species, and reduction and degradation of sensitive habitat. Cumulative impacts to biological resources are potentially significant.

Subsequent projects implemented under the General Plan 2045 would be required to be consistent with the policies and actions of the General Plan 2045 as well as applicable federal, State, and regional regulations. Development under the General Plan 2045 concentrate growth within the existing town limits, and would not extend development or infrastructure into the SOI beyond the town limits. By limiting development to areas that are primarily built out, impacts to sensitive habitats and species would be limited. The implementation of an individual project in the Planning Area would require a detailed and site-specific review of the site to determine the presence or absence of movement corridors, special status species, and sensitive habitat on a given project site. If movement corridors, special status species, or sensitive habitat are present and disturbance is required, federal and State laws require measures to reduce, avoid, or compensate for impacts to these resources. The requirements of these Federal and State laws are implemented through the permit process. However, with implementation of the policies and actions included within the General Plan 2045, implementation of the proposed project would not generate a significant impact on biological resources. Therefore, the proposed General Plan 2045's incremental contribution to this cumulative impact would not be considerable, and the cumulative impact to biological resources would be **less than significant**.

Cultural resources are defined as buildings, sites, structures, or objects that may have historical, architectural, archaeological, cultural, or scientific importance. Preservation of the Town's cultural heritage should be considered when planning for the future.

This section provides a background discussion of the prehistory, ethnology, historical period background, and cultural resources found in San Anselmo. This section is organized with an existing setting, regulatory setting, and impact analysis.

One comment letter was received during the NOP comment period related to this environmental topic (see Appendix A). The Native American Heritage Commission (NAHC) provided procedural guidance on the implementation of Senate Bill 18 (SB 18) and Assembly Bill 52 (AB 52). These topics are discussed in this section.

KEY TERMS

The following key terms are used throughout this section to describe cultural and tribal resources and the framework that regulates them:

Archaeology. The study of historic or prehistoric peoples and their cultures by analysis of their artifacts and monuments.

Ethnography. The study of contemporary human cultures.

Complex. A patterned grouping of similar artifact assemblages from two or more sites, presumed to represent an archaeological culture.

Midden. A deposit marking a former habitation site and containing such materials as discarded artifacts, bone and shell fragments, food refuse, charcoal, ash, rock, human remains, structural remnants, and other cultural leavings.

3.5.1. ENVIRONMENTAL SETTING

PREHISTORY

Humans are believed to have resided in southern Marin County for the past 13,000 years. Archaeologists who have studied these past cultures have uncovered evidence of widespread activities that allowed them to divide these previous 13,000 years into periods or phases based on the kinds of subsistence behaviors practiced.

Six periods have been identified with locally defined phases and regional cultures added to the mix. The six periods are:

- Early Holocene (Lower Archaic), 8000 B.C. - 3500 B.C
- The Early Middle Period (Middle Archaic), 3500 B.C. - 500 B.C.
- The Lower Middle Period (Initial Upper Archaic), 500 B.C. – A.D. 430
- Upper Middle Period (Late Upper Archaic), A.D. 430 – A.D. 1050

- Initial Late Period (Lower Emergent), A.D. 1050 – A.D. 1550
- Terminal Late Period: Protohistoric Ambiguities, A.D. 1550 – A.D. 1775[1]

EARLY HOLOCENE (LOWER ARCHAIC), 8000 B.C. – 3500 B.C.

Few Bay Area sites have been discovered to represent this time period. A pattern of generalized mobile foraging with artifacts such as the milling slab and hand stone (mano and metate), and large wide stem- and leaf-shaped projectile points are common.

THE EARLY MIDDLE PERIOD (MIDDLE ARCHAIC), 3500 B.C. – 500 B.C.

New technological advances involving the use of the mortar and pestle first appear during this period as does the first evidence for the manufacture of shell beads. Researchers suggest increased sedentism occurred along with an expansion in trade.

THE LOWER MIDDLE PERIOD (INITIAL UPPER ARCHAIC), 500 B.C. – A.D. 430

A dramatic shift in the types of shell beads being manufactured is observed at sites with components dating to this period. New types of bone tools, such as the barbless fishhooks, first appeared indicating an increasing exploitation of the immediate environment, probably brought on by increasing populations pressures.

UPPER MIDDLE PERIOD (LATE UPPER ARCHAIC), A.D. 430 – A.D. 1050

Another dramatic shift began in A.D. 430 when the selection of bead styles and the way people were buried changed. What caused this dramatic cultural upheaval is uncertain. The formally popular style of shell beads became obsolete with new, smaller varieties becoming widespread.

INITIAL LATE PERIOD (LOWER EMERGENT), A.D. 1050 – A.D. 1550

Population continued to increase, as did resource exploitation, and with it a whole new level of the manufacture of numerous, finely made grave goods that were buried with the dead. Social stratification can also be observed in the differing amounts of grave goods interred with a particular individual. The bow and arrow appeared in the area around A.D. 1250, causing a shift in the procurement of rock types and sources used in the manufacture in this new technological innovation.

TERMINAL LATE PERIOD: PROTOHISTORIC AMBIGUITIES, A.D. 1550 – A.D. 1775

Once again, the style of shell beads abruptly changed throughout the Bay Area. Grave goods became less common, and some researchers have suggested that populations were faced with increasing stress by overpopulation and perhaps the early introduction of European-based diseases.

ETHNOLOGY

COAST MIWOK

The voyages of Drake in 1579 and Cermeño in 1595 resulted in early accounts by the Europeans of encounters with the Coast Miwok people prior to disruption of the native culture. The Coast Miwok traditional way of life disappeared rapidly after the founding of the mission in San Francisco in 1776 and the later missions in San Rafael and Sonoma. Forced movement of the Coast Miwok people to

1 Jones, Terry I. and Katherine A. Klar, editors. 2009. California Prehistory. Alta Mira Press, London.

the missions and the determination of the friars to convert the natives to Christianity and destroy all vestiges of their former life, along with epidemic diseases of the whites, soon left few natives that could remember the pre-contact culture. The Russian colony at Fort Ross used Bodega Bay in Coast Miwok territory as a port, but the Russian policy was to interfere with Indian life only to the extent necessary to harvest the maximum number of sea otter pelts.

The Coast Miwok occupied what is now Marin County and part of Sonoma County, with the traditional territory extending from Sausalito in the south to as far north as the vicinity of Sebastopol and from the Pacific Ocean in the west to as far east as Sonoma. There is extensive coastline in this territory, and resources from the sea and salt marshes were important in Coast Miwok subsistence; however, the resources available in the interior of their territory were by no means ignored. Sea mammals were not part of the diet, but various species of fish were taken with nets, seines, weirs, spears, and line-with-gorge technologies. Even more important in the diet were clams and some species of mussel, resulting in the characteristic coastal shell middens familiar through archaeology.

The most important food resource, as with most California Native Americans, was the acorn. It was leached to remove most of the tannic acid and then ground into meal and prepared in various ways. It was particularly valuable because the meal could be stored against times of shortage of other foods. Kelp was collected, dried, and stored as another hedge against seasonal shortages. The interior of the territory provided, in addition to acorns, the many mammals and rodents that were hunted or trapped. Birds, both interior and coastal, were netted and a wide variety of vegetable foods were collected. Despite the relative abundance of their food sources, winter and early spring were still times of short food supply, and stored acorns and kelp were then the primary foods.

Villages were situated to be in proximity to food resources at various times of year. The Coast Miwok moved among residences on the coast, around salt or freshwater marshes, and on interior streams so that they would be close to the most abundant food supply available at a particular season. Dwellings were conical brush-on-frame structures capable of sheltering up to ten individuals. Other structures including sweat lodges and dance houses were round semi-subterranean structures. Sweat lodges served as something of a men's club, and--at major villages--a dance house for religious ceremonies. The dance house had an excavation about two feet deep and fifteen feet in diameter, forming the floor, and a timber framework supported a brush dome capped with earth.

Archaeology has provided an extensive collection of the stone tools that were used by the Coast Miwok including arrowheads, hand stones, drills, and mortars, but it is clear from ethnology that basketry and cordage were used for many utilitarian objects. These materials do not preserve well, so they are uncommon in archaeological sites. Basket making was a highly developed skill and baskets were woven tightly enough to hold water; cooking of acorn mush was accomplished by dropping hot rocks into baskets containing the mush. Cordage was used for the variety of nets used in taking fish, birds, and small mammals.

In terms of socio-political organization, the term Coast Miwok is primarily a convenience for anthropologists, denoting a group speaking the same language and occupying a contiguous territory. In fact, there was no overall political control of this group, and the real basis of social organization was the main village. Major villages were occupied by a group of related families under the authority

of a headman. Even at this level, the powers of the headman were limited and, basically, advisory. No overall authority for Coast Miwok was recognized, and village groups were sometimes on better terms with their Pomo or Patwin neighbors than with other Coast Miwok village groups. Within the village group, close ties were maintained through the extensive religious/ceremonial life and through kinship ties (Kelly 1978).

Through much of aboriginal California, shell beads served as a form of currency. As a coastal people, the Coast Miwok had access to the raw material, and bead manufacture was an important industry because it provided currency to trade for goods from neighboring groups. This allowed the Coast Miwok to import obsidian from the Wappo to the north to use in making arrowheads and other edged tools. Chert was used to form more utilitarian edged implements, but obsidian was the preferred material. Yellow ocher was also obtained from the Wappo for paint, and venison and magnesite cylinders were obtained from the Pomo (Kelly 1978). Despite their access to clam shell, the trade relationships of the Coast Miwok do not appear to have been very extensive. Perhaps this reflects the relative abundance of resources available in their own territory.

HISTORIC PERIOD BACKGROUND

The San Anselmo community has a well-documented history, supported by the efforts of the San Anselmo Historical Society. The group's volunteer efforts have resulted in the recordation of a major portion of older buildings in the community. The group also participated in the preparation of a pictorial book that has been published on the history of the community, with photographs documenting many buildings within San Anselmo:

Judy Coy and the San Anselmo Historical Society
2006 *Images of America: San Anselmo*. Arcadia Publishing, Charleston.

Two online sources provide information on different aspects of the history, community growth, and economy of the town:

- A Short History of San Anselmo: https://www.townofsananselmo.org/DocumentCenter/View/333/A-Short-History?bidId=
- A Brief History: https://sananselmohistory.org/brief-history/

In brief, the town lies on portions of three Mexican land grants. Cañada de Herrera was awarded in 1839 to Domingo Sais. Another grant was awarded to John Rogers Cooper in 1840: Punta de Quentin, Corte de Madera, La Laguna y Cañada de San Anselmo. Timothy Murphy received the third land grant in 1844 for San Pedro, Santa Margarita, and Las Gallinas. The land changed hands many times, broken down into smaller holdings. The land remained rural with scattered homes.

In 1874, the Northern Pacific Coast (NPC) railroad completed a narrow gauge line between Sausalito and San Rafael. In 1875, the line to the west was completed, with San Anselmo located in the middle. The area was called "Junction" until 1884, when the name changed to San Anselmo.

In 1902, the NPC became the North Shore Railroad, with tracks converted to standard gauge. In 1907, the railroad system was further consolidated with other lines and became the Northwestern

Pacific Railroad. The interurban train and ferry service provided service to San Francisco, leading to development along the route (Coy/SAHS 2013).

The San Francisco Theological Seminary, now located in San Anselmo, began as the dream of William Anderson Scott, a Doctor of Divinity. He came to San Francisco in 1854 with a vision of a training center for a Presbyterian ministry. The school began in San Francisco and moved within the city three times, with the last San Francisco move in 1877. A citizen of San Rafael, A. W. Foster, donated the San Anselmo property to the school in 1891. The substantial buildings were placed on a small hill that overlooks the community. The Montgomery Memorial Chapel, at the foot of the hill, was a gift from the chief benefactor of the seminary, Alexander Montgomery. His remains were interred there.

The establishment of the school, as well as a rapidly growing community in part resulting from the San Francisco earthquake and fire in 1906, led to incorporation of San Anselmo in 1907. The Mission-style Town Hall was completed in 1911, with the Spanish Revival-style library completed in 1915. The Mission-style train station, completed in 1911, was located just south of The Hub along the former Ross Landing & Red Hill County Road (now Sir Francis Drake Boulevard) across from Bank Street and was later razed in 1963.

The population increased in the post-World War II era, and the town continues to be characterized as a small family town.

CULTURAL RESOURCES IN THE SAN ANSELMO PLANNING AREA

California Historic Resources Inventory System

One hundred and forty-six eligible cultural resources have been identified within the town's boundaries according to files maintained by the Northwest Information Center (NWIC) of the California Historical Resources Information System (CHRIS). The identified cultural resources may represent both the prehistoric and historic periods (see **Table 3.5-1**) and include eligible sites, buildings, structures, districts, and a tribal cultural property. **Figures 3.5-1a-c** identify the eligible historic buildings described in Table 3.5-1.

Terminology

The following definitions, based on those provided in the California Code of Regulations Tit. 14, div. 3, ch. 11.5, app A, outline key terms used in the context of historic preservation:

- A **building** is a resource, such as a house, barn, church, factory, hotel, or similar structure, created principally to shelter or assist in carrying out any form of human activity. Building is also used to refer to a historically and functionally related unit such as a courthouse and jail or a house and barn.
- A **structure** is a construction made for a functional purpose rather than creating human shelter. A "structure" is distinguished from "building" as a structure does not typically create human shelter. Examples of structures include bridges, tunnels, gold dredges, fire towers, canals, turbines, dams, power plants, corncribs, silos, roadways, shot towers, windmills, grain elevators, kilns, mounds, cairns, palisade fortifications, earthworks,

railroad grades, systems of roadways and paths, boats and ships, railroad locomotives and cars, telescopes, carousels, bandstands, gazebos, and aircraft.

- A **site** is the location of a significant event, prehistoric or historic occupation or activity, or a building or structure, whether standing, vanished, or damaged, where the location itself possesses historic, cultural, or archaeological value regardless of the value of any existing building, structure, or object. A "site" need not be marked by physical remains if it is the location of a prehistoric or historic event and if no buildings, structures, or objects marked it at that time. Examples include trails, designed landscapes, battlefields, habitation sites, Native American ceremonial areas, petroglyphs, and pictographs.
- A **district** is a geographic area which possesses a significant concentration, linkage, or continuity of sites, buildings, areas, structures, or objects which are united historically, culturally, or aesthetically by plan, history, or physical development. This term is generally interchangeable with "Historic District."

Resources Identified in Planning Area

The types of eligible cultural resources present in the Planning Area are summarized below using the term for the type of resource. The majority of these identified resources are buildings, including both residential and commercial buildings and structures. These eligible resources are listed in Table 3.5-1.

BUILDINGS

There are 47 buildings used primarily for commercial purposes that have been identified. Many of these buildings have changed use several times since they were first built to serve the changing needs of the town residents. An additional 74 resources are residential buildings. A church (San Anselmo Seventh Day Adventist Church), a seminary (San Francisco Theological Seminary), and public buildings (San Anselmo Town Hall, San Anselmo Carnegie Library, and Post Office) are also identified. The primary types of resources identified in San Anselmo are buildings with a rating of "5S2". This means the buildings are eligible for local listing or designation. OHP provides a list of California Historical Resources Codes for various types of properties on the Built Environment Resources Directory (BERD) list which provides information regarding non-archaeological resources in the Office of Historic Preservation's (OHP) inventory.

STRUCTURES

Eighteen structures have been identified, all of which are bridges.

SITES

There are no historic sites in the Planning Area that are listed as eligible for the National Register of Historic Places or the CRHR. However as identified in Table 3.5-1, two eligible prehistoric sites have been identified in the Planning Area. The location of eligible prehistoric sites is confidential and cannot be published in this report. The number of waterways requiring bridges to cross them suggests that there could be more prehistoric sites present. They may be lost through historic use of the land or lie beneath older buildings in the town.

1. *STATUS CODES -*

   3D: APPEARS ELIGIBLE FOR NATIONAL REGISTER AS A CONTRIBUTOR TO A NATIONAL REGISTER ELIGIBLE MULTI-COMPONENT RESOURCE THROUGH SURVEY EVALUATION.

   3S: APPEARS ELIGIBLE FOR NATIONAL REGISTER AS AN INDIVIDUAL PROPERTY THROUGH SURVEY EVALUATION.

   5S2: INDIVIDUAL PROPERTY THAT IS ELIGIBLE FOR LOCAL LISTING OR DESIGNATION.

   6Y: DETERMINED INELIGIBLE FOR NATIONAL REGISTER BY CONSENSUS THROUGH SECTION 106 PROCESS – NOT EVALUATED FOR CALIFORNIA REGISTER OR LOCAL LISTING.

   7N: NEEDS TO BE REEVALUATED - FORMERLY CODED AS MAY BECOME NR ELIGIBLE WITH SPECIFIC CONDITIONS.

   7R: IDENTIFIED IN RECONNAISSANCE LEVEL SURVEY OR IN AN AREA OF POTENTIAL EFFECT (APE): NOT EVALUATED.

SOURCE: NORTHWEST INFORMATION CENTER, CALIFORNIA HISTORICAL RESOURCES INFORMATION SYSTEM, CALIFORNIA STATE UNIVERSITY, SONOMA; CALIFORNIA HISTORICAL RESOURCE STATUS CODES, 2020

DISTRICTS

No districts in the Planning Area have been listed on the National Register or the CRHR. A code of the current review status is included in Table 3.5-1. One prehistoric/historic district (Mount Tamalpais district) has been identified and extends into the southwest portion of San Anselmo, from the Town borders to approximately Sir Francis Drake Boulevard. There are several sites that could potentially contribute to an eligible district, with one site identified with a California Historical Resource Status Code 3D (appears eligible for National Register as a contributor to a National Register eligible multi-component resource through survey evaluation).

NATIVE AMERICAN CONSULTATION

In July 2024, the Native American Heritage Commission (NAHC) completed a check of the Sacred Lands files with negative results. The NAHC provided a list of tribes located within the boundaries of Marin County. This included the Federated Indians of Graton Rancheria and the Guidiville Indian Rancheria.

In 2024, the Town invited the Federated Indians of Graton Rancheria and the Guidiville Indian Rancheria to consult on the General Plan 2045. The Town did not receive a request for consultation from the Guidiville Indian Rancheria following that notification.

The Town and consultant team met with the Federated Indians of Graton Rancheria on October 14, 2024. The Federated Indians of Graton Rancheria requested that the General Plan 2045 acknowledge the Coast Miwok tribal history and contributions to the region, that information developed for the General Plan related to tribal cultural resources be shared with the tribe, and continued involvement in the General Plan 2045. Following that meeting, the Town provided the draft Vision Statement and Guiding Principles to the Federated Indians of Graton Rancheria for review. No comments were received, and no further consultation was requested at that time.

On November 19, 2025, the Town again invited the Federated Indians of Graton Rancheria and the Guidiville Indian Rancheria to consult on the General Plan 2045. No responses were received from either tribe.

HISTORIC GROUP CONSULTATION

Letters requesting information on concerns regarding cultural resources were sent to the San Anselmo Historical Museum and the Marin History Museum on June 26, 2024. To date, no reply has been received.

3.5.2. REGULATORY SETTING

FEDERAL

National Historic Preservation Act

Most regulations at the Federal level stem from the National Environmental Policy Act (NEPA) and historic preservation legislation such as the National Historic Preservation Act (NHPA) of 1966, as amended. NHPA established guidelines to "preserve important historic, cultural, and natural aspects

of our national heritage, and to maintain, wherever possible, an environment that supports diversity and a variety of individual choice." The NHPA includes regulations specifically for federal land-holding agencies, but also includes regulations (Section 106) which pertain to all projects that are funded, permitted, or approved by any Federal agency and which have the potential to affect cultural resources. All projects that are subject to NEPA are also subject to compliance with Section 106 of the NHPA and NEPA requirements concerning cultural resources. Provisions of NHPA establish a National Register of Historic Places (The National Register) maintained by the National Park Service, the Advisory Councils on Historic Preservation, State Historic Preservation Offices (SHPO), and grants-in-aid programs.

American Indian Religious Freedom Act and Native American Graves and Repatriation Act

The American Indian Religious Freedom Act recognizes that Native American religious practices, sacred sites, and sacred objects have not been properly protected under other statutes. It establishes as national policy that traditional practices and beliefs, sites (including right of access), and the use of sacred objects shall be protected and preserved. Additionally, Native American remains are protected by the Native American Graves and Repatriation Act of 1990.

Other Federal Legislation

Historic preservation legislation was initiated by the Antiquities Act of 1906, which aimed to protect important historic and archaeological sites. It established a system of permits for conducting archaeological studies on Federal land, as well as setting penalties for noncompliance. This permit process controls the disturbance of archaeological sites on Federal land. New permits are currently issued under the Archaeological Resources Protection Act (ARPA) of 1979. The purpose of ARPA is to enhance preservation and protection of archaeological resources on public and Native American lands. The Historic Sites Act of 1935 declared that it is national policy to "Preserve for public use historic sites, buildings, and objects of national significance."

STATE

California Register of Historic Resources (CRHR)

California state law also provides for the protection of cultural resources by requiring evaluations of the significance of prehistoric and historic resources identified in documents prepared pursuant to CEQA. Under CEQA, a cultural resource is considered an important historical resource if it meets any of the criteria found in Section 15064.5(a) of the CEQA Guidelines. Criteria identified in the CEQA Guidelines are similar to those described under the NHPA. SHPO maintains the California Register of Historic Resources (CRHR). Historic properties listed, or formally designated for eligibility to be listed, on The National Register are automatically listed on the CRHR. State Landmarks and Points of Interest are also automatically listed. The CRHR can also include properties designated under local preservation ordinances or identified through local historical resource surveys.

California Environmental Quality Act (CEQA)

CEQA requires that lead agencies determine whether projects may have a significant effect on archaeological and historical resources. This determination applies to those resources which meet significance criteria qualifying them as "unique," "important," listed on the CRHR, or eligible for listing on the CRHR. If the agency determines that a project may have a significant effect on a significant resource, the project is determined to have a significant effect on the environment, and these effects must be addressed. If a cultural resource is found not to be significant under the qualifying criteria, it need not be considered further in the planning process.

CEQA emphasizes avoidance of archaeological and historical resources as the preferred means of reducing potential significant environmental effects resulting from projects. If avoidance is not feasible, an excavation program or some other form of mitigation must be developed to mitigate the impacts. In order to adequately address the level of potential impacts, and thereby design appropriate mitigation measures, the significance and nature of the cultural resources must be determined. The following are steps typically taken to assess and mitigate potential impacts to cultural resources for the purposes of CEQA:

- identify cultural resources,
- evaluate the significance of the cultural resources found,
- evaluate the effects of the project on cultural resources, and
- develop and implement measures to mitigate the effects of the project on cultural resources that would be significantly affected.

California Public Resources Code

Section 5097 of the Public Resources Code specifies the procedures to be followed in the event of the unexpected discovery of historic, archaeological, and paleontological resources, including human remains, historic or prehistoric resources, paleontological resources on nonfederal land. The disposition of Native American burial falls within the jurisdiction of the NAHC. Section 5097.5 of the Code states the following:

> *No person shall knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor.*

State Laws Pertaining to Human Remains

Section 7050.5 of the California Health and Safety Code requires that construction or excavation be stopped in the vicinity of discovered human remains until the county coroner can determine whether the remains are those of a Native American. If the remains are determined to be Native American, the coroner must contact the NAHC. CEQA Guidelines (Section 15064.5) specify the procedures to be followed in case of the discovery of human remains on non-Federal land. The disposition of Native American burials falls within the jurisdiction of the NAHC.

Senate Bill 18 (Burton, Chapter 905, Statutes 2004)

Senate Bill (SB) 18 requires local (city and county) governments to consult with California Native American tribes to aid in the protection of traditional tribal cultural places ("cultural places") through local land use planning. This legislation, which amended §65040.2, §65092, §65351, §65352, and §65560, and added §65352.3, §65352.4, and §65562.5 to the Government Code; also requires the Governor's Office of Planning and Research (OPR) to include in the General Plan Guidelines advice to local governments on how to conduct these consultations. The intent of SB 18 is to provide California Native American tribes an opportunity to participate in local land use decisions at an early planning stage, for the purpose of protecting, or mitigating impacts to, cultural places. These consultation and notice requirements apply to adoption and amendment of both general plans (defined in Government Code §65300 et seq.) and specific plans (defined in Government Code §65450 et seq.).

Assembly Bill 978

In 2001, Assembly Bill (AB) 978 expanded the reach of Native American Graves Protection and Repatriation Act of 1990 and established a state commission with statutory powers to assure that federal and state laws regarding the repatriation of Native American human remains and items of patrimony are fully complied with. In addition, AB 978 also included non-Federally recognized tribes for repatriation.

Assembly Bill 52

Assembly Bill (AB) 52 establishes a formal consultation process for California tribes as part of CEQA and equates significant impacts on "tribal cultural resources" with significant environmental impacts (PRC Section 21084.2). AB 52 defines a "California Native American Tribe" as a Native American tribe located in California and included on the contact list maintained by the NAHC. AB 52 requires formal consultation with California Native American Tribes prior to determining the level of environmental document if a tribe has requested to be informed by the lead agency of proposed projects. AB 52 also requires that the consultation address project alternatives and mitigation measures, for significant effects, if requested by the California Native American Tribe, and that consultation be considered concluded when either the parties agree to measures to mitigate or avoid a significant effect, or the agency concludes that mutual agreement cannot be reached.

LOCAL

San Anselmo Historical Commission

San Anselmo established the San Anselmo Historical Commission (Historical Commission) in 1976. The Historical Commission is charged with researching aspects of San Anselmo history, interviewing residents, and recording their oral histories, and collecting memorabilia for permanent and temporary displays for the San Anselmo Historical Museum. Volunteers from the Historical Commission were responsible for assessing buildings within the town in 1987 which helped populate

the state's CHRIS database. The volunteers' effort was not an assessment of all potentially historic buildings in town, and it is likely that there are additional historic resources.

Town of San Anselmo Municipal Code

San Anselmo Municipal Code does not establish standards for cultural, historic, or tribal cultural resources.

3.5.3. IMPACTS AND MITIGATION MEASURES

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to cultural and tribal cultural resources.

LAND USE ELEMENT – COMMUNITY DESIGN

Goal LU-E: Preserve, protect, and enhance elements of the town's history to connect San Anselmo with the past.

Policy LU-E.1: Historic Preservation. Endeavor to protect from demolition or destruction or major alteration any building, feature, or site of local, State, or federal historic value.

Action LU-E.1.a: Historic Context Statement. Prepare a historic context statement to better understand the cultural and historical themes and patterns that shaped the town over time.

Action LU-E.1.b: Historic Survey and Inventory. Prepare a historic survey and maintain an inventory of potential sites and structures of architectural, historic, archaeological, and cultural significance. Consider listing the most significant structures or sites on the California Register of Historical Resources and the National Register of Historic Places or adopting a local historic register.

Action LU-E.1.c: Historic Preservation Ordinance. Develop and adopt a historic preservation ordinance and program to protect historic resources and culturally important areas.

Action LU-E.1.d: Historic District Formation. Consider the establishment of a historic district(s). Upon establishment, apply to be a Certified Local Government in order to be eligible for grant funding related to historic preservation efforts.

Action LU-E.1.e: Adjacent Resources. Prior to any construction activities within or adjacent to historic resources in the town, including sites listed or eligible for the National Register of Historic Places or sites listed on or eligible for the California Register of Historic Resources Places, a qualified historian or architectural historian shall survey adjacent parcels for potential historic resources on those parcels. The survey shall include archival research, field inspection, and

consultation with local historical societies or preservation organizations. Based on the survey findings, the project proponent shall develop a Historic Resource Protection Plan (HRPP) that outlines specific measures for the avoidance, protection, and documentation of those identified historic resources. If resources adjacent to the proposed project site are determined to be eligible for listing on the Historic Register, or are already registered as such, the HRPP shall include additional mitigation measures, such as avoidance, preservation in place, or data recovery to ensure that no significant historic resources are inadvertently damaged or destroyed during construction. Measures identified in the HRPP shall reflect the requirements identified in the Secretary of the Interior's Standards for the Treatment of Historic Properties. The HRPP shall be prepared by a qualified historian or architectural historian, and subject to review and approval by the Town of San Anselmo Community Development Director or the Historical Commission, as appropriate.

Policy LU-E.2: Preservation Organizations. Support the efforts of the San Anselmo Historical Commission and Historical Society to preserve and document the town's historical heritage and promote historical awareness and appreciation among residents.

OPEN SPACE AND CONSERVATION ELEMENT – TRIBAL CULTURAL RESOURCES

GOAL OSC-C: Honor and protect San Anselmo's Native American heritage.

Policy OSC-C.1: Protection of Archaeological Resources. Protect significant archaeological, tribal cultural, and paleontological resources.

Action OSC-C.1.a: Development Review. Require that projects proposed for sites that have the possibility of containing cultural and tribal cultural resources and resulting in-ground disturbance be evaluated by a qualified archaeologist prior to project approval and require such projects to implement mitigation strategies to reduce or avoid impacts to any identified or inadvertently discovered cultural resources. Continue to refer development proposals to the Northwest Information Center of the California Archaeological Inventory, Native American Heritage Commission, and local Native American Tribes for review and recommendations regarding supplemental field investigation.

Action OSC-C.1.b: Tribal Consultation. Consult with Native American Tribes, as required by Senate Bill 18 and Assembly Bill 52, during the environmental review process for new development proposals and amendments to the General Plan to facilitate identification and preservation of tribal cultural resources.

Action OSC-C.1.c: Undiscovered Resources. If previously undiscovered, suspected historic, cultural, tribal cultural, or archaeological resources are encountered during ground-disturbing activities, construction activities shall be halted within 50 feet of the find. A qualified archaeologist shall evaluate the resources to assess

the find. Further ground disturbances in the vicinity of the find shall remain stopped while an assessment is underway and until the archaeologist can provide recommendations for treatment of the discovery. If a potentially significant find cannot be avoided by the project, the retained archaeologist, who meets the Secretary of the Interior's Professional Qualifications Standards, will develop an evaluation plan in consultation with the Town that contains a research design to guide assessments of the resource's significance and scientific potential. The recommendations provided in the report shall be implemented.

Action OSC-C.1.d: Human Remains. If an inadvertent discovery of human remains is made at any time during project-related construction activities or project planning, the following performance standards shall be met before implementing or continuing actions such as construction that may result in damage to or destruction of human remains. In accordance with the California Health and Safety Code (HSC), if human remains are encountered during ground-disturbing activities, the Town shall immediately halt potentially damaging excavation in the area of the remains and notify the Marin County Coroner and a qualified archaeologist (meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology) to determine the nature of the remains. The coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or state lands (HSC Section 7050.5[b]).

If the human remains are of historic age and are determined by the Marin County Coroner to be not of Native American origin, the Town will follow the provisions of HSC Section 7000 et seq. regarding the disinterment and removal of non–Native American human remains.

If the coroner determines that the remains are those of a Native American, the coroner must contact the Native American Heritage Commission (NAHC) by phone within 24 hours of making that determination (HSC Section 7050[c]). After the coroner's findings have been made, the archaeologist and the NAHC-designated Most Likely Descendant, in consultation with the landowner, shall determine the ultimate treatment and disposition of the remains. The responsibilities of the Town for acting upon notification of a discovery of Native American human remains are identified in Public Resources Code Section 5097.9 et seq.

Policy OSC-C.2: Partner with Native American Tribes. Partner with Native American Tribes to steward and celebrate cultural heritage and sites.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project is considered to have a significant impact on cultural or tribal cultural resources if it will:

- Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5;

- Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5;
- Disturb any human remains, including those interred outside of dedicated cemeteries;
- Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
    - Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k); or
    - A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resources to a California Native American tribe.

IMPACTS AND MITIGATION MEASURES

Impact 3.5-1: General Plan implementation could cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5 (Less than Significant)

A substantial adverse change in the significance of an historic resource is defined in Section 15064.5 (b)(1) of the CEQA Guidelines as the "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired." Known historic and prehistoric resource sites are located throughout the Planning Area, as shown in Table 3.5-1, and it is expected that additional undiscovered historical sites may be located in various areas of the town as well.

On June 26, 2024, consultation letters were sent to the San Anselmo Historical Museum and the Marin History Museum requesting information regarding any concerns about historical resources. To date, no reply has been received.

While the General Plan 2045 does not directly propose any adverse changes to any historic resources, and there are no historic sites in the Planning Area that are listed as eligible for the National Register of Historic Places or the CRHR, future development allowed under the General Plan 2045 could affect known historical resources or unknown historical resources which have not yet been identified. There are no historic districts in the Planning Area on the National Register of the CRHR, although one prehistoric district (Mount Tamalpais district) has been identified and extends into southwest portion of San Anselmo, from the Town borders to approximately Sir Francis Drake Boulevard. As future development and infrastructure projects are considered by the Town, each project will be evaluated for conformance with the Town's General Plan 2045, Municipal Code, and other applicable state and local regulations.

The General Plan 2045 includes policies and actions that would reduce impacts to cultural and historic resources. General Plan 2045 Policy LU-E.1 would seek to protect any building, feature, or site of local, state, or federal historic value from demolition, destruction, or major alteration. Action LU-E.1.e would require a qualified historian or architectural historian to survey adjacent parcels for potential historic resources on those parcels and implement measures for the avoidance, protection, and documentation of those identified historic resources. Implementation of General Plan 2045 Policy LU-E.2 encourages the Town to support the efforts of the San Anselmo Historical Commission and Historical Society to preserve and document the town's historical heritage and promote historical awareness and appreciation among residents.

To better understand the historic resources in the town, General Plan 2045 Action LU-E.1.b would prompt the Town to prepare a historic survey and maintain an inventory of potential sites and structures of architectural, historic, archaeological, and cultural significance. The most significant structures or sites may be considered for listing on the California Register of Historical Resources and the National Register of Historic Places, or adopting a local historic register to further protect important historic resources.

In the event a suspected historic, cultural, tribal cultural, or archaeological resource is encountered during ground-disturbing activities, Action OSC-C.1.c would require construction activities to stop within 50 feet of the find and evaluated by a qualified archaeologist. An evaluation plan would be developed and would guide the treatment of the resource.

Adoption and implementation of the General Plan 2045 policies and actions, together with applicable federal, state and local regulations, would reduce the potential for adverse effects on historic resources through project-level review, resource identification, avoidance where feasible, and implementation of appropriate protective measures.Therefore, the impact would be **less than significant**.

Impact 3.5-2: General Plan implementation could cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5 (Less than Significant)

Undeveloped hillsides and areas along existing or previously daylighted water courses in San Anselmo and the surrounding area have the potential for subsurface prehistoric archaeological deposits. Details regarding the exact nature and location of archaeological resources are intentionally withheld from this EIR in order to help protect the integrity of these resources. Confidential versions of cultural resources reports are maintained by the Town of San Anselmo.

While the General Plan 2045 does not directly propose any adverse changes to any archaeological resources, future development allowed under the General Plan 2045 could affect known archaeological resources or unknown archaeological resources which have not yet been identified.

As future development and infrastructure projects are considered by the Town, each project will be evaluated for conformance with the Town's General Plan 2045 and other applicable state and local

regulations. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA.

The General Plan 2045 includes policies and actions that would reduce impacts to cultural, historic, and archaeological resources, as well as policies and actions for the conservation of cultural, historic, and archaeological resources. Specifically, Policy OSC-C-1 requires the protection of significant archaeological, tribal cultural, and paleontological resources from destruction in order to preserve, and potentially interpret, them for future scientific research, and public educational programs. Additionally, General Plan Action OSC-C.1.a requires that project sites that have the possibility of containing cultural and tribal cultural resources be evaluated by a qualified archaeologist prior to project approval, and require such projects to implement mitigation strategies to reduce or avoid impacts to any identified or inadvertently discovered cultural resources. In the event a suspected archaeological resource is encountered during ground-disturbing activities, Action OSC-C.1.c would require construction activities to stop within 50 feet of the find and evaluated by a qualified archaeologist. An evaluation plan would be developed and would guide the treatment of the resource. Therefore, the impact to archaeological resources would be **less than significant**.

Impact 3.5-3: Implementation of the General Plan could lead to the disturbance of any human remains (Less than Significant)

Humans are believed to have resided in southern Marin County for the past 13,000 years, and it is not always possible to predict where human remains may occur outside of formal burials. Therefore, excavation and construction activities allowed under the General Plan 2045 may yield human remains that may not be marked in formal burials.

Although Native American human remains are normally associated with former residential village locations, isolated burials and cremations have been found in many other locations. Future projects may disturb or destroy buried Native American human remains, including those interred outside of formal cemeteries. Consistent with state laws protecting these remains (that is, Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98), sites containing Native American human remains must be treated in a sensitive manner.

As future development and infrastructure projects are considered by the Town, each project will be evaluated for conformance with applicable state and local regulations. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Under CEQA, human remains are protected under the definition of archaeological materials as being “any evidence of human activity.” Public Resources Code Section 5097 has specific stop-work and notification procedures to follow in the event that Native American human remains are inadvertently discovered during development activities. Further, Action OSC-C.1.d requires the Town to immediately halt potentially damaging excavation in the area of the remains and notify the Marin County Coroner and a qualified archaeologist (meeting the Secretary of the Interior’s Professional Qualifications Standards for Archaeology) to determine the nature of the remains. The coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or state lands (HSC Section 7050.5[b]). If the human remains are of historic age and are determined by the Marin County Coroner to be not of Native

American origin, the Town will follow the provisions of HSC Section 7000 et seq. regarding the disinterment and removal of non–Native American human remains.

If the coroner determines that the remains are those of a Native American, the coroner must contact the Native American Heritage Commission (NAHC) by phone within 24 hours of making that determination (HSC Section 7050[c]). After the coroner's findings have been made, the archaeologist and the NAHC-designated Most Likely Descendant, in consultation with the landowner, shall determine the ultimate treatment and disposition of the remains.

While there is no indication that the Planning Area contains human remains, if previously unknown human remains are discovered during construction activities associated with the General Plan 2045, compliance with existing laws would protect such resources, and the impact would be **less than significant**.

Impact 3.5-4: Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or a resource determined by the lead agency (Less than Significant).

A check of the Sacred Lands Files through the NAHC was completed in July 2024. NAHC responded indicating that no properties in the vicinity of the Planning Area had been recorded as cultural resources.

The Town of San Anselmo conducted Native American consultations under SB 18 (Chapter 905, Statutes of 2004), also known as SB 18, which requires local governments to consult with Tribes prior to making certain planning decisions and requires consultation and notice for a general and specific plan adoption or amendments in order to preserve, or mitigate impacts to, cultural places that may be affected. In addition to SB 18 consultation, the Town conducted tribal consultations under the provisions of CEQA (Public Resources Code section 21080.3.1 subdivisions (b), (d) and (e)), also known as AB 52, which requires consulting for projects within the Town of San Anselmo's jurisdiction and within the traditional territory of the tribal organizations who have previously requested AB 52 consultations with the Town. Pursuant to these requirements, the Town sent letters to the Federated Indians of Graton Rancheria and the Guidiville Indian Rancheria.

In 2024, the Town invited the Federated Indians of Graton Rancheria and the Guidiville Indian Rancheria to consult on the General Plan 2045. The Town did not receive a request for consultation from the Guidiville Indian Rancheria following that notification.

The Town and consultant team met with the Federated Indians of Graton Rancheria on October 14, 2024. The Federated Indians of Graton Rancheria requested that the General Plan acknowledge the Coast Miwok tribal history and contributions to the region, that information developed for the General Plan related to tribal cultural resources be shared with the tribe, and continued involvement in the General Plan 2045. Following that meeting, the Town provided the draft Vision Statement and

Guiding Principles to the Federated Indians of Graton Rancheria for review. No comments were received, and no further consultation was requested at that time.

On November 19, 2025, the Town again invited the Federated Indians of Graton Rancheria and the Guidiville Indian Rancheria to consult on the General Plan 2045. No responses were received from either tribe.

While no specific resources have been identified through consultation with affiliated tribes, it is possible that unknown tribal cultural resources may be present within the Planning Area and could be adversely affected by future projects that may be accommodated by the General Plan 2045. In the event a suspected tribal cultural resource is encountered during ground-disturbing activities, Action OSC-C.1.c would require construction activities to stop within 50 feet of the find and evaluated by a qualified archaeologist. An evaluation plan would be developed and would guide the treatment of the resource.

Specific locations for future development and improvements have not been identified. Future projects would be required to be evaluated for project-specific impacts under CEQA at the time of application. The General Plan 2045 and CEQA Guidelines require tribal consultation and the protections of any identified archaeological and tribal resources.

All future development projects would be required to follow development requirements, including compliance with local policies, ordinances, and applicable permitting procedures related to protection of tribal resources. Subsequent projects would be required to prepare site-specific project-level analysis to fulfill CEQA requirements, which also may include additional AB 52 consultation that could lead to the identification of potential site-specific tribal resources. Therefore, impacts to tribal cultural resources would be **less than significant**.

Impact 3.5-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to cultural or tribal cultural resources. (Less than Significant)

The context of the cumulative impact assessment for historic resources is Marin County, and Marin County and Sonoma County for tribal cultural resources.

Rural areas in West Marin are defined by historic ranches and small towns. Historic residential and commercial architectural styles in the county are varied, and several small towns along the bay maintain their historic character and historic downtowns.[2]

In recent years, Marin County has seen a loss of its historical resources due to demolition and substantial alterations to historic structures. In rural areas this has occurred where large private family compounds replaced historic ranches. In the City-Centered Corridor this has occurred in historic subdivisions where smaller historic homes have been replaced or were substantially altered. The majority of archaeological sites in the county exist in the rural areas and inland along the bay.

2 Marin County, 2023. Marin Countywide Plan. Socioeconomic Element: Historical and Archaeological Resources. Adopted November 6, 2007. Revised January 24, 2023.

However, these resources remain at risk. Marin County contains many historic vistas that are endangered by future development, including rock outcroppings, groves of historic trees, and views along ridgelines. Increased tourism in Marin may also impact historic and archaeological resources if they are not carefully managed.[3]

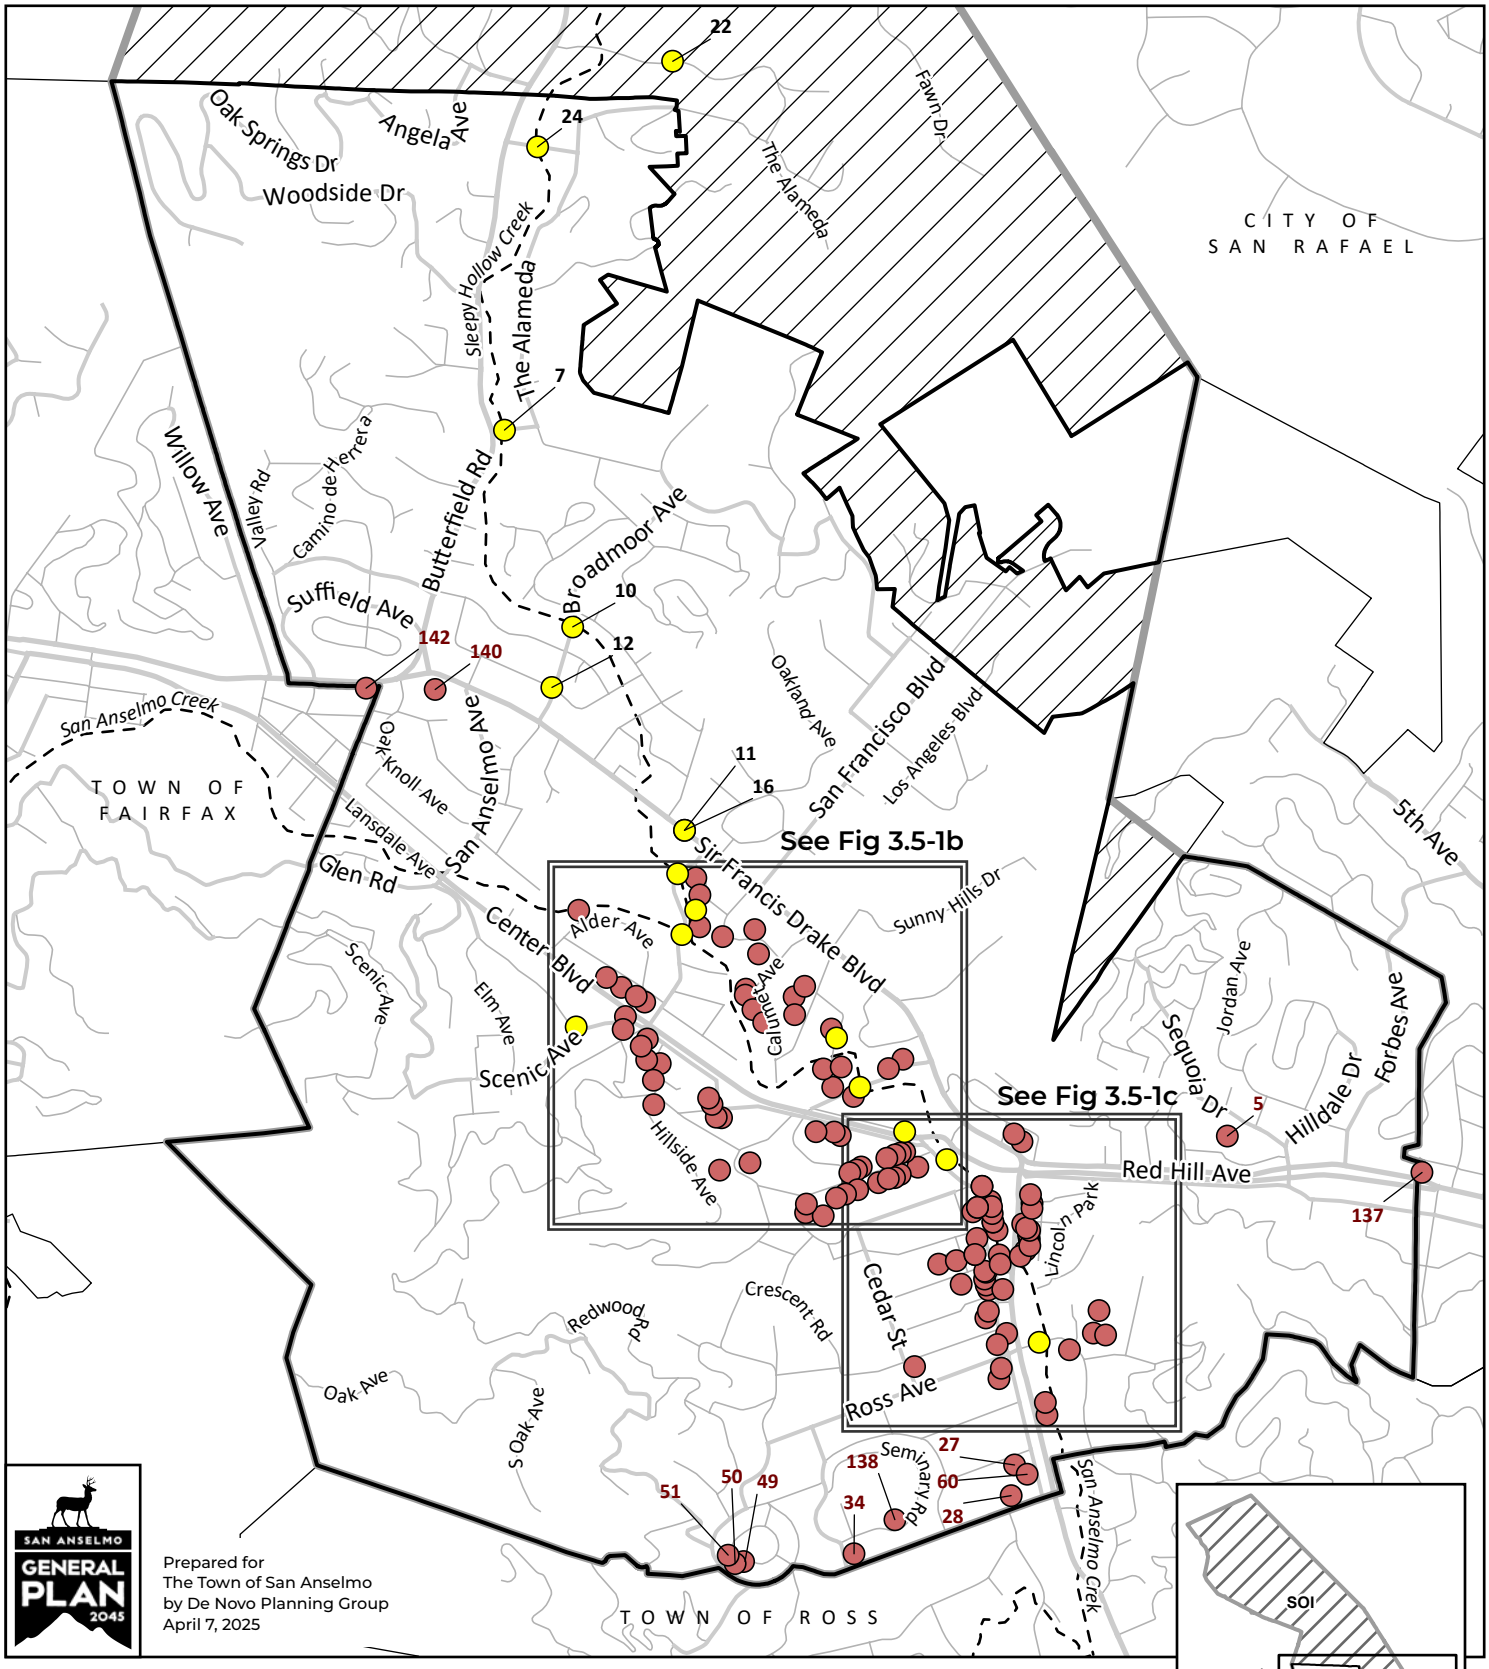

Although the Marin Countywide Plan seeks to identify and protect archaeological and historical resources throughout Marin County, the loss of previously unidentified historic, cultural, and archaeological resources may be impacted as development occurs throughout the county. Therefore, the cumulative impact to historic, cultural, and archaeological resources is potentially significant.

The Coast Miwok occupied what is now Marin County and part of Sonoma County, with the traditional territory extending from Sausalito in the south to as far north as the vicinity of Sebastopol and from the Pacific Ocean in the west to as far east as Sonoma. There is extensive coastline in this territory, and resources from the sea and salt marshes were important in Coast Miwok subsistence. Villages were situated to be in proximity to food resources at various times of year. The Coast Miwok moved among residences on the coast, around salt or freshwater marshes, and on interior streams so that they would be close to the most abundant food supply available at a particular season.

However, the continued development in Marin and Sonoma counties has the potential to adversely impact tribal cultural resources through the alteration, demolition, or removal of such resources during ground disturbing activities. Further, human remains interred outside of recognized cemeteries may be encountered during development construction. Therefore, the cumulative impact to tribal cultural resources is potentially significant.

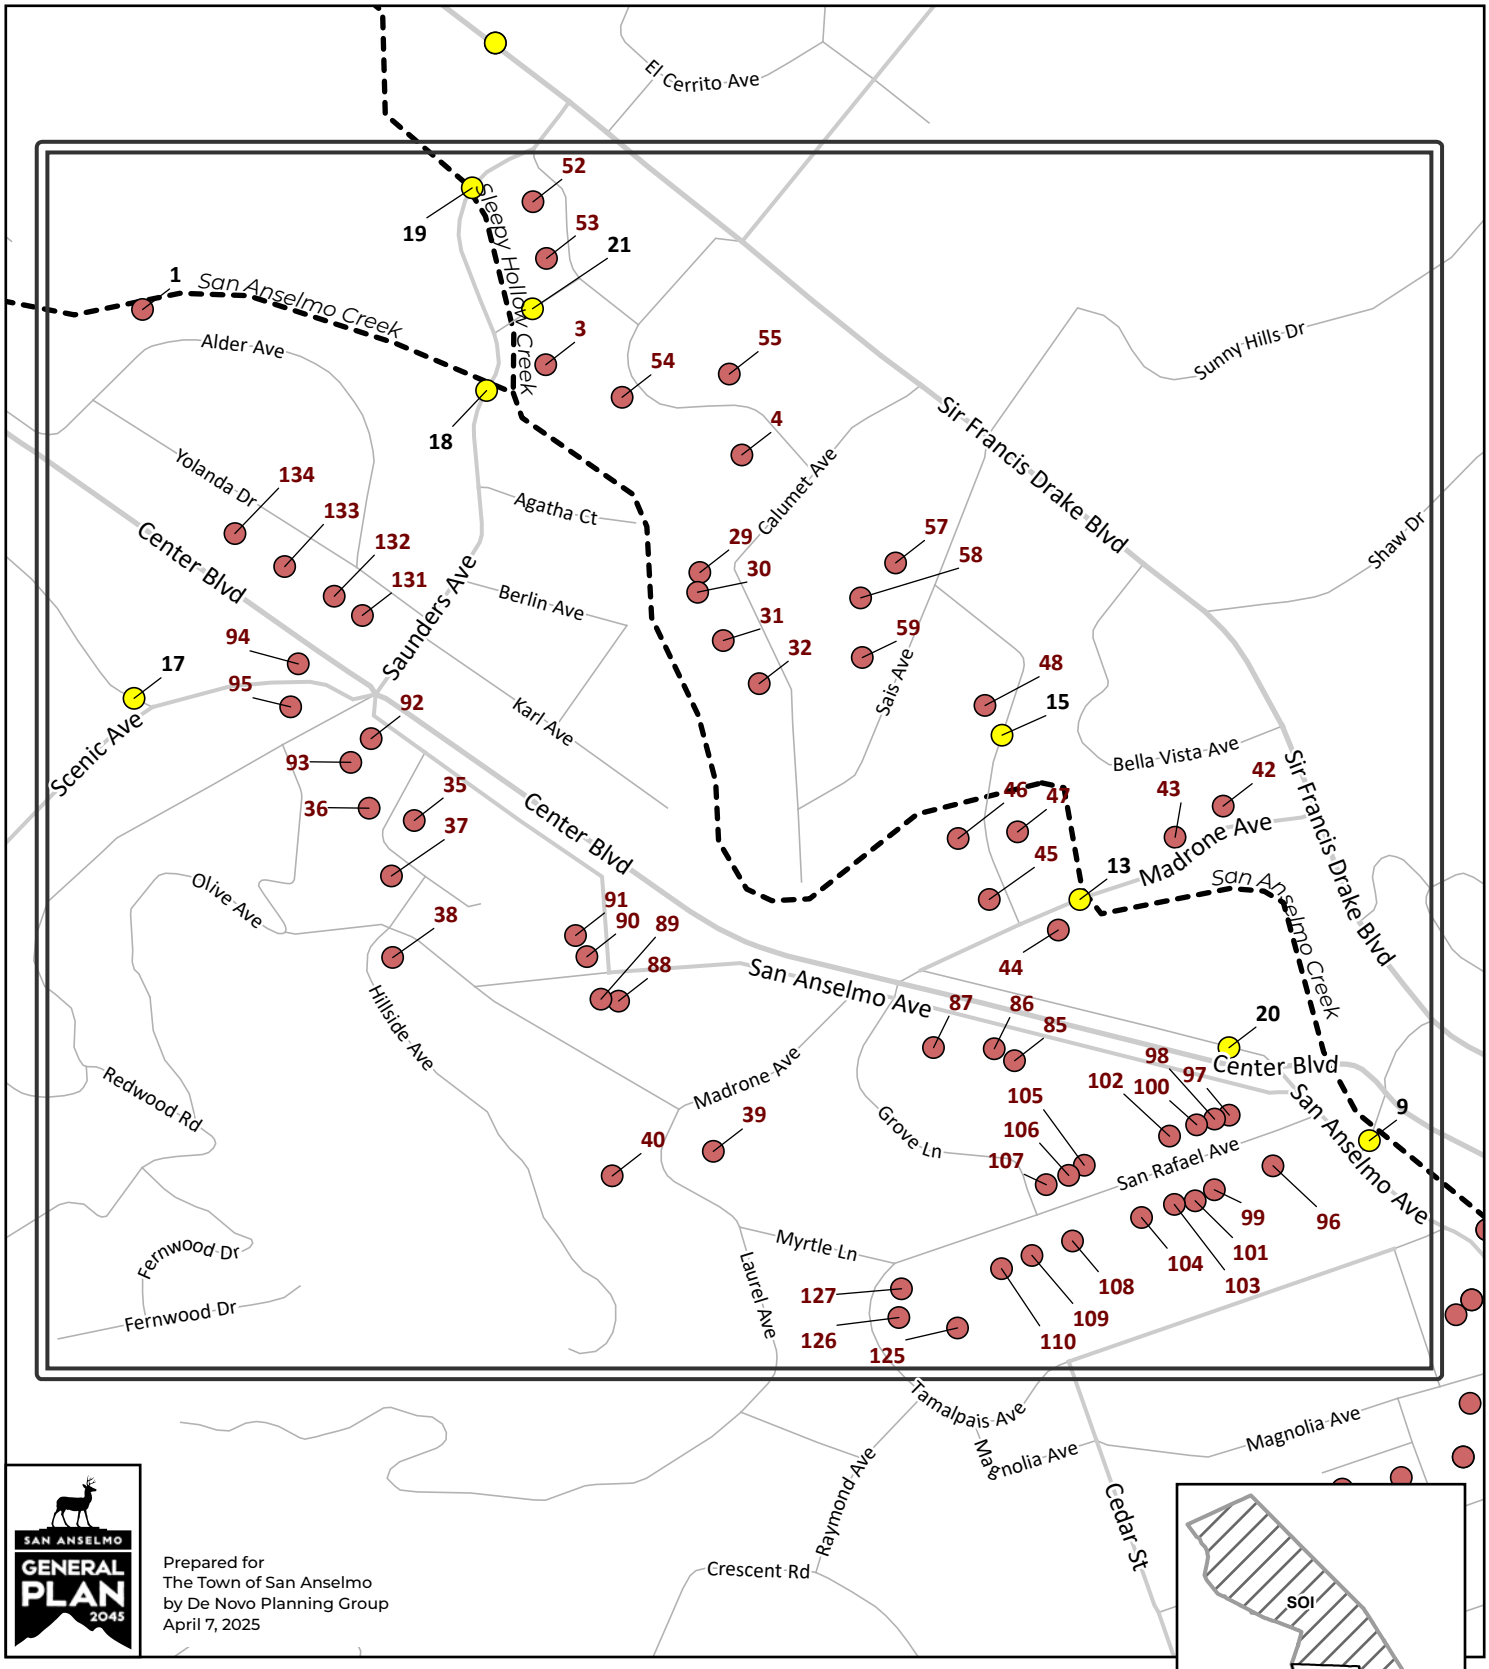

The General Plan 2045 includes policies and actions intended to preserve historic, cultural, archaeological, and tribal cultural resources. However, construction of the individual development projects allowed under the land use designations of the General Plan 2045 may result in the discovery and removal of cultural resources, including archaeological, historical, and Native American resources and human remains. The proposed General Plan 2045 policies and actions, as well as state and Federal regulations, would reduce the risk to resources in the region. Each project would require specific surveys for potential resources and the evaluation of any resources discovered during construction activities. Adherence to these policies, actions, and regulations would avoid and/or minimize a cumulative loss of these important resources if they are found during project-specific surveys or construction as a result of the General Plan 2045. Therefore, the contribution to the loss of cultural and tribal cultural resources of the General Plan 2045 would be less than considerable, and the cumulative impact on cultural and tribal cultural resources would be **less than significant**.

ELIGIBLE HISTORIC RESOURCES

The purpose of this EIR section is to identify the energy impacts that are likely to result from project implementation. Following this discussion is an assessment of consistency of the proposed project with applicable policies and local plans. Section 3.3, Air Quality, and Section 3.8, Greenhouse Gas Emissions and Climate Change, address similar, somewhat overlapping topics as this energy analysis. While the topics are interrelated, this section focuses solely on energy.

The analysis and discussion of the energy impacts in this section focus on the proposed Project's consistency with local, regional, statewide, and federal energy conservation efforts and discusses the context of these planning efforts as they relate to the proposed Project.

During the NOP comment period for the EIR, there were no comments received relating to this environmental topic (Appendix A).

3.6.1 ENVIRONMENTAL SETTING

ENERGY CONSUMPTION

Energy in California is consumed from a wide variety of sources. Fossil fuels (including gasoline and diesel fuel, natural gas, and energy used to generate electricity) are the most widely used form of energy in the State. However, renewable sources of energy (such as solar and wind) are growing in proportion to California's overall energy mix. A large driver of renewable sources of energy in California is the State's current Renewable Portfolio Standard (RPS), which requires the State to derive at least 60 percent of electricity generated by 2030, and to achieve zero carbon emissions by 2045 (as passed in September 2018, under Senate Bill 100). The 2021 SB 100 Joint Agency Report was published in 2021, which found that the long-term goals contained in SB 100 are technically achievable through multiple pathways, although achieving 100 clean electricity would increase the total annual electricity system cost by 6 percent relative to the cost under the state's Renewables Portfolio Standard requirement of having at least 60 percent clean electricity by the end of 2030. These estimates will change over time as markets change, new technologies are commercialized, and additional factors such as grid reliability are included in future analyses.

Overall, in 2019, California's per capita energy usage was ranked second-lowest in the nation. California's per capita rate of energy usage has remained relatively constant since the 1970s. Many State regulations since the 1970s, including new building energy efficiency standards, vehicle fleet efficiency measures, as well as growing public awareness, have helped to keep per capita energy usage in the State in check.

The consumption of non-renewable energy (i.e., fossil fuels) associated with the operation of passenger, public transit, and commercial vehicles results in GHG emissions that contribute to global climate change. Alternative fuels such as natural gas, ethanol, and electricity (unless derived from solar, wind, nuclear, or other energy sources that do not produce carbon emissions) also result in GHG emissions and contribute to global climate change.

Electricity Consumption

California relies on a regional power system composed of a diverse mix of natural gas, renewable, hydroelectric, and a very small amount of nuclear generation resources. California typically receives

between one-fifth and one-third of its electricity supply comes from facilities outside of the State. Much of the power delivered to California from states in the Pacific Northwest was generated by wind. States in the Southwest delivered power generated at coal-fired power plants, at natural gas-fired power plants, and from nuclear generating stations.[1] In 2024, approximately 35 percent of California's utility-scale net electricity generation was fueled by natural gas. In addition, about 57 percent of the State's electricity generation came from renewable sources, such as solar, wind, geothermal, hydropower, and biomass. Nuclear energy powered an additional 7 percent. The amount of electricity generated from coal was effectively zero. The percentage of renewable resources as a proportion of California's overall energy portfolio is increasing over time, as directed by the State's Renewable Portfolio Standard (RPS).[2] Total electricity consumption for the State is 282,783 GWh.[3]

PG&E is a publicly traded utility company that, under contract with the California Public Utilities Commission (CPUC), generates, purchases, and distributes energy. PG&E's service area covers 70,000 square miles, roughly extending north to south from Eureka to Bakersfield and east to west from the Sierra Nevada to the Pacific Ocean.

PG&E's electricity is generated from a combination of traditional sources, such as coal-fired plants, nuclear power plants, and hydroelectric dams, as well as newer sources of energy, such as wind turbines and photovoltaic plants, or "solar farms." "The grid," or bulk electric grid, is a network of high-voltage transmission lines that link power plants to the PG&E system. The distribution system, comprising lower-voltage secondary lines, is at the street and neighborhood level. It consists of overhead or underground distribution lines, transformers, and individual service "drops" that connect to individual customers.

In addition to its base plan, PG&E has three plan options, known as Solar Choice options and Green Saver, which give customers the option of purchasing energy from solar resources. The 50% Solar Choice option provides up to 70 percent of a customer's energy from solar resources, while the other option provides up to 100 percent of a customer's energy from solar resources, and the Green Saver option provides up to 100 percent of a customer's energy from solar resources.

Table 3.6-1 outlines PG&E's power mix in 2024, compared to the power mix for the state. The table identifies the renewable and non-renewable energy sources for PG&E. It should be noted that some GHG free sources are not considered renewable (e.g., nuclear is GHG free but not renewable).

[A.] ELECTRICITY FROM TRANSACTIONS THAT ARE NOT TRACEABLE TO SPECIFIC GENERATION SOURCES ARE CLASSIFIED AS UNSPECIFIED SOURCES OF POWER.

Oil

The primary energy source for the United States is oil, which is refined to produce fuels like gasoline, diesel, and jet fuel. Oil is a finite, nonrenewable energy source. World consumption of petroleum products has grown steadily in the last several decades. As of 2024, world consumption of oil had reached approximately 102 million barrels per day. The United States, with approximately five percent of the world's population, accounts for approximately 20 percent of world oil consumption, or approximately 20 million barrels per day.[4] The transportation sector relies heavily on oil. In California, petroleum-based fuels currently provide approximately 95 percent of the State's transportation energy needs[5].

[5] California Energy Commission. Light-Duty Vehicle Population in California. https://www.energy.ca.gov/data-reports/energy-almanac/zero-emission-vehicle-and-infrastructure-statistics-collection/light

Natural Gas/Propane

The State produces less than one-tenth of the State's total natural gas consumption[6], while obtaining 22 percent from Canada and 65 percent from the Rockies and the Southwest. PG&E is the largest publicly-traded utility in California and provides natural gas for residential, industrial, and agency consumers within Marin County. PG&E's natural gas (i.e., methane) delivery system includes 42,000 miles of natural gas distribution pipelines and 6,700 miles of transmission pipelines. PG&E's gas transmission system serves approximately 15 million energy customers in California. The system is operated under an inspection and monitoring program in real time on a 24-hour basis, with leak inspections, surveys, and patrols continuously taking place along the pipelines. Gas delivered by PG&E originates in gas fields in California, the Southwest, the Rocky Mountains, and Canada. Transmission pipelines send natural gas from the fields and storage facilities. The smaller distribution pipelines deliver gas to individual businesses or residences.

For 2024, California produced 124.4 billion cubic feet of natural gas.[7] PG&E is the largest investor-owned utility in California and provides natural gas for residential, industrial, and agency consumers within Marin County. In 2024, natural gas consumption in Marin County was 61 million therms.[8]

3.6.2 REGULATORY SETTING

FEDERAL

Energy Policy and Conservation Act

The Energy Policy and Conservation Act of 1975 sought to ensure that all vehicles sold in the U.S. would meet certain fuel economy goals. Through this Act, Congress established the first fuel economy standards for on-road motor vehicles in the United States. Pursuant to the Act, the National Highway Traffic and Safety Administration, which is part of the U.S. Department of Transportation (USDOT), is responsible for establishing additional vehicle standards and for revising existing standards.

Since 1990, the fuel economy standard for new passenger cars has been 27.5 mpg. Since 1996, the fuel economy standard for new light trucks (gross vehicle weight of 8,500 pounds or less) has been 20.7 mpg. In 2012, NHTSA established final passenger car and light truck CAFE standards for model years 2017-2021, which the agency projects will require in model year 2021, on average, a combined fleet-wide fuel economy of 40.3-41.0 mpg[9]. Heavy-duty vehicles (i.e., vehicles and trucks over 8,500 pounds gross vehicle weight) are not currently subject to fuel economy standards. Compliance with federal fuel economy standards is determined on the basis of each manufacturer's average fuel economy for the portion of its vehicles produced for sale in the U.S. The Corporate Average Fuel Economy (CAFE) program, which is administered by the EPA, was created to determine vehicle manufacturers' compliance with the fuel

economy standards. The EPA calculates a CAFE value for each manufacturer based on city and highway fuel economy test results and vehicle sales. Based on the information generated under the CAFE program, the USDOT is authorized to assess penalties for noncompliance.

STATE

Statutes Setting Target for the Use of Renewable Energy for the Generation of Electricity

CALIFORNIA RENEWABLES PORTFOLIO STANDARD

Senate Bill X1-2 (Stats. 2011, 1st Ex. Sess., Ch. 1) set aggressive statutory targets for renewable electricity, culminating in the requirement that 33 percent of the State's electricity come from renewables by 2020. This legislation applies to all electricity retailers in the State, including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators. All of these entities were required to meet renewable energy goals of 20 percent of retail sales from renewables by the end of 2013, 25 percent by the end of 2016, and 33 percent by the end of 2020. (See Pub. Utility Code, Section 399.11 et seq. [subsequently amended].) SB 350, discussed below, increases the Renewable Portfolio Standard to require 50 percent of electricity generated to be from renewables by 2030. (Pub. Utility Code, Section 399.11, subd (a); see also Section 399.30, subd. (c)(2).) In 2018, Senate Bill 100 (Stats. 2018, Ch. 312) revised the above-described deadlines and targets so that the State will have to achieve a 50 percent renewable resources target by December 31, 2026 (instead of by 2030) and achieve a 60 percent target by December 31, 2030. The legislation also establishes a State policy that eligible renewable energy resources and zero carbon resources supply 100 percent of retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045.

Statutes and CARB Regulations Addressing the Carbon Intensity of Petroleum-based Transportation Fuels

ASSEMBLY BILL 1493, PAVLEY CLEAN CARS STANDARDS

In 2002, the Legislature enacted Assembly Bill 1493 ("Pavley Bill") (Stats. 2002, ch. 200), which directed CARB to develop and adopt regulations that achieve the maximum feasible reduction of GHGs emitted by passenger vehicles and light-duty trucks beginning with model year 2009. (See Health and Safety Code Section 43018.5.) In September 2004, pursuant to this directive, CARB approved regulations to reduce GHG emissions from new motor vehicles beginning with the 2009 model year. These regulations created what are commonly known as the "Pavley standards." In September 2009, CARB adopted amendments to the Pavley standards to reduce GHG emissions from new motor vehicles through the 2016 model year. These regulations created what are commonly known as the "Pavley II standards." (See California Code of Regulations, Title 13, Sections 1900, 1961, and 1961.1 et seq.)

In 2012, CARB adopted an Advanced Clean Cars (ACC) program aimed at reducing both smog-causing pollutants and GHG emissions for vehicles model years 2017-2025. This historic program, developed in coordination with the USEPA and NHTSA, combined the control of smog-causing (criteria) pollutants and GHG emissions into a single coordinated set of requirements for model years 2015 through 2025. In 2022,

CARB adopted the Advanced Clean Cars II regulations to establish the next phase of regulations beginning with the 2026 model year.

- Increased the stringency of the smog-causing criteria pollutant standards, known as LEV IV
- Updated the zero emission vehicle regulation to require that 100% of new passenger vehicles meet zero emission standards (including plug-in hybrids) by the 2035 model year
- Established a suite of assurance measures to ensure zero emission vehicles can provide enduring emission reductions
- CARB did not amend the LEV III greenhouse gas emission standards during the 2022 Advanced Clean Cars II regulatory process
- Programs and initiatives created under Advanced Clean Cars II Resolution 22-12:
    - Zero-emission Vehicle Equity Task Force: The Zero-emission Vehicle (ZEV) Equity Task Force (Task Force) brings together leaders in zero emission transportation such as environmental justice advocates, automakers, state government, and other key organizations to develop strategies to expand communities' access to zero emission vehicles and zero emission mobility
    - Community Mobility Program Connections Directory: The Community Mobility Directory is a tool to help organizations and automakers find partners interested in collaborating to access these vehicle discounts
    - Executive Orders for Advanced Clean Cars II Environmental Justice Values: Executive Orders for Approved Community-based Clean Mobility Programs for Advanced Clean Cars II Environmental Justice Values

It is expected that the Pavley regulations will reduce GHG emissions from California passenger vehicles by about 34 percent below 2016 levels by 2025, all while improving fuel efficiency and reducing motorists' costs. These regulations were the first in the nation to limit greenhouse gas emissions from motor vehicles, a major source of climate-changing emissions in California. After the U.S. EPA adopted subsequent federal greenhouse gas standards that maintained the emission reductions achieved under the Pavley regulations, California amended its regulations to allow compliance with the federal standards to satisfy state requirements for the 2012 through 2016 model years. In 2012, the California Air Resources Board (CARB) adopted the LEV III greenhouse gas regulation, which requires additional reductions in passenger vehicle greenhouse gas emissions beginning with the 2017 model year and continuing thereafter.

Building Code Requirements Intended to Reduce Energy Consumption

CALIFORNIA ENERGY CODE

The California Energy Code (CCR Title 24, Part 6), which is incorporated into the Building Energy Efficiency Standards, was first established in 1978 in response to a legislative mandate to reduce California's energy consumption. Although these standards were not originally intended to reduce GHG emissions, increased energy efficiency results in decreased GHG emissions because energy efficient buildings require less electricity and thus less consumption of fossil fuels, which emit GHGs. The standards are updated

periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods.

The most recent Title 24 standards are the 2025 Title 24 standards. Buildings permitted on or after January 1, 2026, must comply with the 2025 Standards. The California Energy Commission updates the standards every three years. The CEC estimates that the 2025 Title 24 standards will reduce 10 million metric tons of GHG over 30 years. When compared to the 2022 Title 24 standards, the 2025 update focuses on: HVAC system performance, interior and exterior lighting control, solar & storage readiness, and electrification of appliances.

CALIFORNIA GREEN BUILDING STANDARDS CODE

The purpose of the California Green Building Standards Code (CALGreen) (CCR Title 24, Part 11) is to improve public health and safety and to promote the general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices in the following categories: 1) planning and design; 2) energy efficiency; 3) water efficiency and conservation; 4) material conservation and resource efficiency; and 5) environmental quality. CALGreen, which became effective on January 1, 2011, instituted mandatory minimum environmental performance standards for all ground-up new construction of commercial, low rise residential uses, and State-owned buildings, as well as schools and hospitals. The mandatory standards require the following:

- 20 percent mandatory reduction in indoor water use relative to baseline levels;
- 50 percent construction/demolition waste must be diverted from landfills;
- Mandatory inspections of energy systems to ensure optimal working efficiency; and
- Low pollutant emitting exterior and interior finish materials such as paints, carpets, vinyl flooring, and particle boards.

The voluntary standards require the following:

- Tier I: 15 percent improvement in energy requirements, stricter water conservation requirements for specific fixtures, 65 percent reduction in construction waste, 10 percent recycled content, 20 percent permeable paving, 20 percent cement reduction, and cool/solar reflective roof.
- Tier II: 30 percent improvement in energy requirements, stricter water conservation requirements for specific fixtures, 75 percent reduction in construction waste, 15 percent recycled content, 30 percent permeable paving, 30 percent cement reduction, and cool/solar reflective roof.

The latest version of CALGreen is the 2025 CALGreen Code, which became effective on January 1, 2026. Between 2010 and 2025, continuous updates and additions have been made to CALGreen, including water conservation and recycling, electric vehicle infrastructure and charging, and changes intended to eliminate conflicts with the California Energy Code, which is Part 6 of Title 24.

TITLE 20

CCR Title 20 requires manufacturers of appliances to meet state and federal standards for energy and water efficiency. The CEC certifies an appliance based on a manufacturer's demonstration that the appliance meets the standards. New appliances regulated under Title 20 include refrigerators, refrigerator-freezers, and freezers; room air conditioners and room air-conditioning heat pumps; central air conditioners; spot air conditioners; vented gas space heaters; gas pool heaters; plumbing fittings and plumbing fixtures; fluorescent lamp ballasts; lamps; emergency lighting; traffic signal modules; dishwashers; clothes washers and dryers; cooking products; electric motors; low voltage dry-type distribution transformers; power supplies; televisions and consumer audio and video equipment; and battery charger systems. Title 20 presents protocols for testing each type of appliance covered under the regulations, and appliances must meet the standards for energy performance, energy design, water performance, and water design. Title 20 contains three types of standards for appliances: federal and state standards for federally regulated appliances, state standards for federally regulated appliances, and state standards for non-federally regulated appliances.

SOLID WASTE

AB 939, AB 341, and AB 1826. In 1989, AB 939, known as the Integrated Waste Management Act (PRC Sections 40000 *et seq*.), was passed because of the increase in waste stream and the decrease in landfill capacity. The statute established the California Integrated Waste Management Board, which oversees a disposal reporting system. AB 939 mandated a reduction of waste being disposed where jurisdictions were required to meet diversion goals of all solid waste through source reduction, recycling, and composting activities of 25 percent by 1995 and 50 percent by 2000.

AB 341 (Chapter 476, Statutes of 2011 [Chesbro]) amended the California Integrated Waste Management Act of 1989 to include a provision declaring that it is the policy goal of the state that not less than 75 percent of solid waste generated be source-reduced, recycled, or composted by 2020, and annually thereafter. In addition, AB 341 required the California Department of Resources Recycling and Recovery (CalRecycle) to develop strategies to achieve the state's policy goal.

AB 1826 (Chapter 727, Statutes of 2014, effective 2016) requires businesses to recycle their organic waste (i.e., food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste) depending on the amount of waste they generate per week. This law also requires local jurisdictions across the state to implement an organic waste recycling program to divert organic waste generated by businesses, including multifamily residential dwellings that consist of five or more units. The minimum threshold of organic waste generation by businesses subject to the law decreases over time, which means an increasingly greater proportion of the commercial sector will be required to comply.

LOCAL

Metropolitan Transportation Commission/Association of Bay Area Governments

The Metropolitan Transportation Commission (MTC) is the transportation planning, financing and coordinating agency for the nine-county San Francisco Bay Area, which includes but is not limited to Solano County. The MTC was created by the California Legislature in 1970 to plan, finance and coordinate the Bay Area's transportation system. The MTC's scope over the years has expanded to address other regional issues, including housing and development. The MTC, alongside the Association of Bay Area Governments (ABAG), was responsible for developing *Plan Bay Area 2050+*, a 30-year regional plan that charts the course for the Bay Area. *Plan Bay Area 2050+* is the Bay Area's regional long-range plan adopted by MTC and the ABAG. The plan was developed in collaboration with Bay Area residents, partner agencies, and nonprofit organizations.

Existing San Anselmo General Plan

The San Anselmo General Plan sets forth objectives, policies, and principles to guide development throughout the town. The following objectives, policies, and principles apply to energy.

CIRCULATION ELEMENT

Objective 17: To work toward more widespread use of electric vehicles to lower greenhouse gas emissions from transportation.

> **Policy: 17.1 Zero Emission Vehicle readiness.** Provide a foundation for electric vehicle implementation efforts, including investments in electric vehicle infrastructure and guidance for ongoing Town initiatives, by preparing an Electric Vehicle Strategy. The strategy should establish a framework for near-term actions that support longer-term mobility goals and initiatives, including, but not limited to, Town policy on costs and fees for Town charging stations, regulations for residential and workplace electric vehicle readiness, and policies for conversion of the Town vehicle fleet.

CONSERVATION ELEMENT

Conservation and Environmental Policy Guidelines

13. The Town and County shall take measures to reduce existing and future inefficient or unnecessary energy or natural resources consumption.[10] Recyclable and biodegradable materials shall be utilized and used materials shall be recycled or reused whenever possible.

[10] The State Secretary for Resources has recently required that Environmental Impact Reports contain mitigation measures to reduce inefficient and unnecessary consumption of energy. Town of San Anselmo General Plan, Amended 2025.

3.6.3 IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

This analysis considers whether the energy demand of development anticipated under the General Plan 2045 would be wasteful or inefficient, or conflict with a state or local plan for renewable energy or energy efficiency consistent with the Appendix F and Appendix G CEQA Checklist questions. The type of development anticipated under the General Plan 2045 is described, and applicable regulations are considered. Estimating energy consumption for a General Plan is inherently inaccurate because it outlines broad, high-level visions rather than specific engineering and operational blueprints. Without micro-level details—such as the exact mix gasoline and electric vehicles, precise energy consumption rates for future regulations, operational hours, and human behavior—any calculation of energy consumption is speculative. This challenge is further compounded by the unpredictability of future conditions, where long-term planning horizons must contend with rapid technological disruptions, shifting grid electrification demands, and accelerating climate change. Because a General Plan relies on historical data, it cannot reliably forecast the dramatic energy changes associated with energy use and efficiency gains of next-generation technologies. As such, the evaluation of potential energy related impacts are based qualitatively on whether the Project would be consistent with the State of California's regulatory requirements, the Town's Climate Action Plan, and the thresholds of significance for energy impacts.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to potential energy impacts.

LAND USE AND COMMUNITY DESIGN ELEMENT

Policy LU-D.7: Low-Impact Design. Encourage the use of low-impact design features and practices that minimize the environmental impacts of new development and public infrastructure, including features that minimize stormwater runoff, conserve energy and water, create pollinator and wildlife habitat, promote groundwater recharge, and avoid urban heat island effects.

SUSTAINABILITY, CLIMATE CHANGE, AND RESILIENCY ELEMENT

Goal SU-A. Empower residents and businesses to reduce their carbon footprints and prepare for the impacts of climate change.

Policy SU-A.1: Sustainability Education and Empowerment. Provide comprehensive outreach, education, and community engagement programs that support residents and businesses in reducing emissions, improving energy efficiency, conserving resources, and preparing for climate impacts. Partner with local volunteers, schools, and community organizations, such as the Climate Action Commission, to expand the reach of these efforts. Design outreach and education programs to be inclusive and accessible to a broad range of participants, including lower-income households, renters, and non-English-speaking residents. Track participation and engagement trends to identify gaps and refine outreach strategies to broaden and diversify community involvement.

Action SU-A.1.a: Community Sustainability, Electrification, and Renewable Energy Programs. Partner with regional agencies, Marin jurisdictions, and the Climate Action

Commission to provide coordinated programs, technical assistance, and permitting support that advance energy efficiency, building and vehicle electrification, and renewable energy adoption. This action includes:

- Sustainability & Electrification Resource Hub: Collaborate with Marin jurisdictions to provide a shared regional hub offering integrated resources, information, demonstrations, incentives, and permitting assistance.
- Community Energy Use: Encourage the installation of solar generation and storage systems by streamlining regulations and permitting, and by promoting 100% renewable energy purchasing options.
- Electrification Assistance: Promote local, regional, and state technical assistance, incentive, rebate, and concierge programs supporting the electrification of residential and commercial buildings.
- Equitable Access: Increase awareness of incentive programs for lower-income households and explore opportunities for local subsidies, permit fee reductions, or other supportive measures for electrification.

Action SU-A.1.b: Community Education, Engagement, and Waste Reduction Initiatives. Engage, educate, and support the community in adopting sustainable lifestyle choices, reducing waste, and shifting travel behavior to support greenhouse gas reduction and public health. Collaborate with the Climate Action Commission and regional partners to:

- Climate Education & Engagement: Provide information and engagement opportunities on climate vulnerabilities, health connections, greenhouse gas reduction strategies, and community resilience.
- Sustainable Practices Outreach: Promote actions that reduce natural resource consumption, increase community awareness of sustainable behaviors, and support achievement of Town sustainability goals.
- Low-Carbon Footprint Diet: Promote the environmental, ecological, and health benefits of low-carbon dietary choices through education, outreach, and partnerships with local organizations.
- Plastic Waste Reduction: Conduct public outreach on the impacts of plastic pollution, encourage waste reduction strategies, and support compliance with the Town's Single-Use Plastics Ordinance.
- Public Transit Education: Partner with transit agencies to publicize available transit options and improve first-mile/last-mile connections to transit stops.
- Active Transportation Promotion: Encourage walking and bicycling among residents and employees as a strategy to reduce greenhouse gas emissions and improve public health. Publicize bicycle routes at schools, parks, and transit facilities, and support bicycle awareness and safety campaigns.

Action SU-A.1.c: Plastic Waste Education and Compliance. Conduct outreach and education to reduce plastic pollution and support compliance with the Town's Single-Use Plastics Ordinance, in coordination with waste management partners.

Goal SU-C. Reduce greenhouse gas emissions in the community and within government operations to mitigate the effects of climate change.

Policy SU-C.2: Renewable Energy and Electrification. Accelerate the conversion to renewable energy sources.

Action SU-C.2.a: Building and Appliance Electrification. Consider building regulations which preclude gas appliances and infrastructure in new buildings and require installation of high-efficiency electric appliances at time of replacement.

Action SU-C.2.b: Building Permitting for Electrification. Streamline the building permit process for heat pump water and space heaters and electrical panel upgrades. Through regional collaboration, explore a fee reduction pilot program to incentivize conversion of natural gas appliances to electric versions.

Action SU-C.2.c: Municipal Energy Use. Evaluate solar energy production and storage systems at all municipal buildings and facilities and plan for replacement of natural gas appliances and equipment. Continue to purchase 100% renewable energy for Town buildings and facilities.

Action SU-C.2.d: Zero-Emission Infrastructure. Continue to prohibit the location of new gas stations in San Anselmo and support the phased transition of legal non-conforming gas stations to zero-emissions fueling stations. Support businesses in complying with these requirements through technical assistance and public outreach.

Action SU-C.2.e: Landscaping Equipment. Enforce the ban on gas-powered landscape equipment in San Anselmo and explore opportunities to further reduce emissions from landscaping activities, as feasible.

Policy SU-C.3: Building Energy Efficiency. Encourage energy efficiency improvements in residential and commercial buildings to reduce energy use.

Action SU-C.3.a: Green Building Regulations. Consider adopting green building regulations for new construction and building remodels and additions that exceed minimum State building and energy code requirements.

Action SU-C.3.b: Energy Efficiency Programs. Promote programs and incentives to property owners to improve energy efficiency. Explore the feasibility of requiring energy audits at the time of building sale or major remodel.

Policy SU-C.4: Carbon Sequestration. Support carbon sequestration on natural lands, tiny forests, and urban green spaces.

Action SU-C.4.a: Urban Forest Master Plan. Prepare an Urban Forest Master Plan to preserve and, where appropriate for ecosystem health, plant additional native trees on public parks, medians, and rights-of-way.

Action SU-C.4.b: Sustainable Landscaping. Incorporate sustainable landscaping practices into public projects, when applicable, and encourage community members to apply compost and select native or climate-adapted plant species on private lands. Select plantings for public projects based on their resilience to changing climate conditions to support long-term habitat sustainability and biodiversity.

Policy SU-C.5: Municipal Energy Efficiency, Electrification, and Resilient Operations. Continue to improve energy efficiency, electrify equipment and buildings, and integrate renewable energy and microgrid technologies into Town facilities.

Action SU-C.5.a: Municipal Microgrid and Electrification Plan. Plan and implement microgrids, solar and battery systems, and phased electrification of municipal facilities and equipment.

CIRCULATION ELEMENT

Policy C-A.3: Reduction of Vehicle Miles Traveled (VMT). Support infill, context-sensitive development, walkable neighborhoods, and infrastructure improvements that reduce the demand for single-occupancy vehicle travel while recognizing that many families and people with mobility limitations or limited access to alternative transportation options will continue to depend on cars.

Action C-A.3.a: VMT and Land Use. Encourage residential housing development in areas with low levels of home-based VMT, such as those near transit and retail services to support access to daily needs for residents of varying incomes and transportation options that offer greater potential for alternatives to driving and shorter trips to daily destinations.

Action C-A.3.b: VMT and Transportation Improvements. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT.

Policy C-A.4: VMT in Transportation Impact Evaluations. Evaluate land use projects for potential transportation impacts by considering the effect on VMT.

Action C-A.4.a: VMT Policy and Regional Coordination. Continue to apply San Anselmo's VMT Screening Criteria and Thresholds of Significance for evaluation of VMT associated with discretionary land use projects and update these thresholds as appropriate to reflect new data, standards, or local conditions. Coordinate with the Transportation Authority of Marin to reduce VMT and enhance multimodal transportation by applying guidance from the VMT Reduction / Mobility Enhancement Toolkit.

Action C-A.4.b: VMT Mitigation. Develop and implement VMT mitigation measures and an in-lieu fee structure that can be applied to applicable projects to reduce potential VMT impacts to less-than-significant levels.

Policy C-A.5: Emerging Transportation Technologies. Explore and support implementation of emerging transportation technologies and strategies to reduce greenhouse gas emissions and VMT, enhance social equity by improving access and affordability across the community, and support economic vibrancy.

Action C-A.5.a: Effective and Equitable Emerging Transportation Strategies. Establish evaluation criteria to assess alignment of emerging transportation solutions, prioritizing emerging mobility strategies that are affordable and accessible to residents with limited incomes, older adults, and persons with disabilities.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendices F and G of the CEQA Guidelines, energy related impacts are considered significant if implementation of the proposed Project would do the following:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation; or
- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

In order to determine whether or not the proposed Project would result in a significant impact on energy use, this EIR includes an analysis of proposed Project energy use, as provided under *Impacts and Mitigation Measures* below.

IMPACTS AND MITIGATION MEASURES

Impact 3.6-1: Project implementation would not result in the wasteful, inefficient, or unnecessary consumption of energy resources. (Less than Significant)

According to the CEQA Guidelines, the means to achieve the goal of conserving energy include decreasing overall energy consumption, decreasing reliance on natural gas and oil, and increasing reliance on renewable energy sources. In particular, the proposed Project would be considered "wasteful, inefficient, and unnecessary" if it were to violate State and federal energy standards and/or result in significant adverse impacts related to Project energy requirements, energy inefficiencies, energy intensiveness of materials, effects on local and regional energy supplies or on requirements for additional capacity, compliance with existing energy standards, effects on energy resources, or transportation energy use requirements. In addition, the project could have a significant energy impact if it would conflict or create an inconsistency with an applicable plan, policy, or regulation for renewable energy or energy efficiency.

Implementation of the General Plan 2045 would result in greater overall energy efficiency through improvements in both building performance and transportation systems. Future development facilitated by the General Plan 2045 would be required to comply with applicable state and local energy efficiency standards, including the California Building Energy Efficiency Standards (Title 24, Part 6), which are periodically updated to achieve progressively higher levels of energy performance. These standards require more efficient building envelopes, lighting systems, appliances, heating and cooling equipment,

and ventilation systems compared to older construction. As a result, new and remodeled buildings developed under the General Plan 2045 would consume less energy per square foot than existing buildings and development constructed under prior standards. General Plan 2045 Action SU-A.1.a encourages the Town to partner with regional agencies to provide programs, technical assistance, and permitting support specifically to advance energy efficiency, building and vehicle electrification, and renewable energy adoption. Providing additional information and education to the Town's residents about sustainable lifestyle choices and ways to reduce energy consumption would also build a more resilient population (Action SU-A.1.b).

In addition, the General Plan 2045 promotes land use patterns and development policies that support energy efficient building design, such as compact development, walkable communities, infill growth, and mixed use development (Policy C-A.3). These strategies reduce building energy demand by encouraging shared walls, reduced heat loss, and more efficient infrastructure service delivery. The General Plan 2045 also includes actions that encourage the incorporation of energy efficient technologies, such as high-performance glazing, efficient electric heat pumps, advanced controls, and on-site renewable energy generation, further reducing long-term energy consumption (Action SU-C.2.b). Municipal buildings and facilities should consider using energy production and storage systems as a way to use renewable electricity and microgrid technologies instead of natural gas (Action SU-C.2.c, Policy SU-C.5).

Transportation-related energy efficiency would also improve under the General Plan 2045. The Plan's land use and circulation policies are intended to reduce vehicle miles traveled (VMT) by promoting compact development, job–housing balance, and proximity between residential areas and daily services. Reduced VMT directly lowers transportation energy use by decreasing overall fuel and electricity consumption associated with vehicle travel (Action C-A.3.a).

Furthermore, vehicles operating under the General Plan 2045 would increasingly reflect state and federal regulatory requirements that mandate improved fuel economy and reduced greenhouse gas emissions. California vehicle efficiency standards, including greenhouse gas and zero emission vehicle regulations adopted by the California Air Resources Board, require continued improvements in vehicle efficiency over time, thereby reducing energy consumption. As older, less efficient vehicles are replaced with newer, more efficient gasoline, hybrid, and electric vehicles, average fleet energy consumption per mile traveled would decline.

Collectively, these building and transportation efficiencies would result in lower energy consumption per capita and per unit of development compared to existing conditions. Therefore, although the General Plan 2045 would accommodate future growth, it would do so in a manner that improves overall energy efficiency and reduces energy demand relative to historic development patterns, consistent with CEQA energy conservation objectives and applicable state policies. As such, the General Plan 2045 would not result in inefficient, wasteful, or unnecessary use of energy resources, and the impact would be **less than significant**.

Impact 3.6-2: General Plan implementation would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency (Less than Significant)

The CEQA Guidelines require consideration of the potentially significant conflicts with State or local plans related to energy efficiency or renewable energy generation. The update to the General Plan contains energy related policies and actions. As shown in **Table 3.6-2**, policies and actions are evaluated to determine whether the General Plan 2045 would conflict or obstruct State and Town plans.

Implementation of the General Plan 2045 would not conflict with or obstruct applicable state or local plans related to renewable energy or energy efficiency. The General Plan 2045 is required to be consistent with statewide energy conservation and renewable energy policies, including the California Energy Commission's Building Energy Efficiency Standards (Title 24, Part 6), CALGreen, and the greenhouse gas reduction and vehicle efficiency programs administered by the California Air Resources Board and the San Anselmo Climate Action Plan 2030. Future development facilitated by the General Plan 2045 would be required to comply with these mandatory standards, which are designed to reduce energy consumption and increase the use of renewable energy over time.

The General Plan 2045 supports land use patterns that are consistent with energy efficiency objectives, such as compact development, infill growth, and mixed use land uses, which reduce building energy demand and vehicle miles traveled. These policies are consistent with state energy efficiency goals and do not interfere with the implementation of state or regional renewable energy programs.

In addition, the General Plan 2045 does not include policies or land use designations that would prohibit or unduly restrict the installation of renewable energy systems, such as rooftop solar photovoltaic systems, solar thermal systems, battery storage, or electric vehicle charging infrastructure. To the extent the General Plan 2045 includes policies encouraging energy efficient building design, electrification, and renewable energy integration, it would further support, rather than obstruct, implementation of applicable energy plans.

At the local level, the General Plan 2045 would be consistent with the adopted Climate Action Plan 2030 by reinforcing energy conservation strategies and supporting renewable energy deployment consistent with community goals. Therefore, the General Plan 2045 would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency, and impacts related to this criterion would be **less than significant**.

TABLE 3.6-2: CONSISTENCY OF THE GENERAL PLAN 2045 WITH STATE AND TOWN PLANS

STATE REQUIREMENTS		
CALIFORNIA BUILDING ENERGY EFFICIENCY STANDARDS (TITLE 24, PART 6)		Municipal Code Chapter 19 Green Building Requirements requires the Town to meet or exceed the CALGreen requirements. The General Plan 2045 policies and actions support the energy efficiency and renewable energy goals of CALGreen.
CALIFORNIA BUILDING ENERGY EFFICIENCY STANDARDS (TITLE 24, PART 11 CALGREEN)		Municipal Code Chapter 19 Green Building Requirements requires the Town to meet or exceed the CALGreen requirements. The General Plan 2045 policies and actions support the energy efficiency and renewable energy goals of CALGreen.

SOURCES: SAN ANSELMO GENERAL PLAN 2045, SAN ANSELMO CLIMATE ACTION PLAN 2030

As shown in Table 3.7-8, the General Plan 2045 has energy policies and actions that are consistent with energy goals and requirements for State and Town plans. Therefore, implementation of the General Plan 2045 would be consistent with State and Town energy plans and this impact is considered **less than significant**.

Impact 3.6-3: General Plan implementation, in combination with cumulative development, would not result in the wasteful, inefficient, or unnecessary consumption of energy resources or conflict with or obstruct a state or local plan for renewable energy or energy efficiency (Less than Significant)

The cumulative context for this energy analysis is Marin County, and focuses on how growth in the county would affect energy demand.

Plan Bay Area 2050+ aims to improve transportation, housing, the economy and the environment across the Bay Area by 2050. This long-range regional plan is a joint effort by the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) to guide growth and investment across the region's nine counties and 101 cities and towns. The plan identifies ways for the Bay Area at large to be more affordable, connected, diverse, healthy and vibrant for all by 2050. In Marin County, 12 transportation strategies work together to make it easier, safer and more reliable for residents to get where they need to go, whether by transit, car or active modes like walking, biking and rolling. These strategies, when used in combination with each other, guide sustainable transportation and growth in the county.

For example, Transportation Strategy T1 seeks to transition transit vehicles to zero emission transit vehicles, thereby reducing energy consumption. Transportation Strategy T12 seeks to better connect communities by strategically expanding transit services to new markets and previously unserved or underserved areas, thereby reducing single passenger vehicle trips and reducing VMT. Environment Strategy EN3 would provide financial support to reduce barriers to the conversion of Bay Area buildings to electric, energy efficient, and water efficient properties. Environment Strategies EN7, EN8, and EN9 would reduce climate emissions by expanding commuter benefits programs, funding incentives and disincentives to shift auto commuters to other means of transportation, expand investments in clean vehicles including new and expanded infrastructure, and encourage employees to carpool.

Further, the Marin County Climate Action Plan sets forth goals, policies, and actions to provide renewable energy to utility customers; install solar PV to serve municipal energy needs; incentivize the replacement of natural gas appliances with efficient electric units, including water heaters, furnaces, ranges, and cooktops; replacing municipal lighting with energy efficient LED fixtures; upgrading mechanical and ventilation equipment with high efficiency units; and adopted a model green building ordinance that encourages all-electric homes and commercial buildings and requires new buildings using natural gas to exceed State energy efficiency requirements. All of these measures would reduce energy consumption across the county, and would prevent the wasteful, inefficient, or unnecessary consumption of energy resources. The existing plans in place, including the Marin County CAP and the Plan Bay Area 2050+ would ensure that energy efficiency continues. Therefore, the cumulative impact on energy resources would be **less than significant**.

This section provides a background discussion of the seismic and geologic hazards found in the Town and the regional vicinity. This section is organized with an environmental setting, regulatory setting, and impact analysis.

No comments on this environmental topic were received during the NOP comment period (Appendix A).

3.7.1. ENVIRONMENTAL SETTING

REGIONAL GEOLOGY

The Planning Area lies within the Coast Range Geomorphic Provinces. The Coast Range is a series of parallel mountain ranges (ranging from 2,000 to 4,000 in elevation above sea level, but occasionally reaching 6,000 feet elevation) that runs along the Pacific Ocean coastline. The Coast Range is characterized by a landscape of forests, valleys, and coastal cliffs. The ranges and valleys trend northwest, subparallel to the San Andreas Fault. Strata dip beneath alluvium of the Great Valley. The coastline is uplifted, terraced, and wave-cut. The Coast Range is composed of thick Mesozoic and Cenozoic sedimentary strata. The northern and southern ranges are separated by a depression containing the San Francisco Bay. The northern Coast Ranges are dominated by irregular, knobby, landslide-topography of the Franciscan Complex. The eastern border is characterized by strike-ridges and valleys in Upper Mesozoic strata. In several areas, Franciscan rocks are overlain by volcanic cones and flows of the Quien Sabe, Sonoma, and Clear Lake volcanic fields. The Coast Ranges are subparallel to the active San Andreas Fault. The San Andreas Fault is more than 600 miles long, extending from Point Arena to the Gulf of California. West of the San Andreas Fault is the Salinian Block, a granitic core extending from the southern extremity of the Coast Ranges to north of the Farallon Islands.

LOCAL SETTING

TOPOGRAPHY

San Anselmo has an average elevation of approximately 194 feet above sea level. This elevation varies across different parts of the town due to its hilly terrain. San Anselmo does not have formally designated topographic zones. However, the town does exhibit varying topography due to its location in Marin County, which is known for its hills, valleys, and creeks.

SOILS

A Custom Soil Survey was completed for the Planning Area using the U.S. Natural Resources Conservation Service (NRCS) Web Soil Survey program. The NRCS Soils Map is provided in Figure 3.7-1. Table 3.7-1, below, identifies the type and range of soils found in the Planning Area. A brief description of prominent soils within the Planning Area follows the table.

TABLE 3.7-1: PLANNING AREA SOILS

NAME	TOWN OF SAN ANSELMO	SOI AREA WITHIN THE PLANNING AREA	TOTAL PLANNING AREA (ACRES)	TOTAL PLANNING AREA (PERCENT)
Los Osos-Bonnydoon complex, 30-50% slopes	--	136	136	3.8%
Saurin-Bonnydoon complex, 30-50% slopes	15	34	50	1.4%
Saurin-Bonnydoon complex, 50-75% slopes	--	70	70	2.0%
Saurin-Urban land-Bonnydoon complex, 30-50% slopes	104	--	104	2.9%
Tocaloma-McMullin complex, 50-75% slopes	135	269	405	11.4%
Tocaloma-McMullin-Urban land complex, 30-50% slopes	309	--	309	8.7%
Tocaloma-Saurin association, extremely steep	346	920	1,266	35.7%
Xerorthents-Urban land complex, 0-9% slopes	796	409	1,205	34.0%
Total[1]	1,706	1,839	3,545	100.0%

NOTE: 1. TOTALS MAY NOT SUM TO 100% DUE TO ROUNDING.

SOURCE: NRCS CUSTOM SOIL SURVEY 2024.

The **Los Osos** series consists of moderately deep, well drained soils that formed in material weathered from sandstone and shale. Runoff is considered very high and permeability is slow. This soil is primarily located at the northwestern portions of the San Anselmo Planning Area in the SOI.

The **Bonnydoon** series consists of shallow, somewhat excessively drained soils that formed in material weathered from sandstone and shale. Runoff is considered medium to very rapid and permeability is moderate. This soil is primarily located at the northwestern portions of the San Anselmo Planning Area.

The **Saurin** series consists of moderately deep, well drained soils that formed in material weathered from sandstone and shale. Runoff is slow to very rapid, and permeability is moderate. This soil is primarily located at the western and eastern portions of the San Anselmo Planning Area where there are steep slopes of 30% or more.

The **McMullin** series consists of shallow, well and somewhat excessively drained soils that formed in material weathered from shale, sandstone, basic igneous, and metamorphic rocks. Runoff is considered medium to very rapid and permeability is moderate. This soil is primarily located at the northern and southern portions of San Anselmo.

The **Tocaloma** series consists of moderately deep, well drained soils that formed in material weathered from sandstone and shale. Runoff is slow to very rapid and permeability is moderately

rapid. This soil is found in most areas of the San Anselmo Planning Area and nearly half of the area within the town limits.

The **Xerorthents** series consists of shallow, excessively drained soils that form in material derived from sedimentary rock, volcanic deposits, or alluvial sediments. Runoff is considered rapid due to steep slopes and minimal vegetation, and permeability varies from slow to moderate. This soil comprises 47% of the land area within the town limits and is primarily located at the central portions of San Anselmo.

FAULTS

A fault is a fracture in the crust of the earth along which rocks on one side have moved relative to those on the other side. A fault trace is the line on the earth's surface defining the fault. Displacement of the earth's crust along faults releases energy in the form of earthquakes and in some cases in fault creep. Most faults are the result of repeated displacements over a long period of time.

Surface rupture occurs when movement on a fault deep within the earth breaks through to the surface. Surface ruptures have been known to extend up to 50 miles with displacements of an inch to 20 feet. Fault rupture almost always follows preexisting faults, which are zones of weakness. Rupture may occur suddenly during an earthquake or slowly in the form of fault creep. Sudden displacements are more damaging to structures because they are accompanied by shaking.

The state designates faults as active, potentially active, and inactive depending on how recent the movement that can be substantiated for a fault. Table 3.7-2 presents the California fault activity rating system.

TABLE 3.7-2: FAULT ACTIVITY RATING

FAULT ACTIVITY RATING	*GEOLOGIC PERIOD OF LAST RUPTURE*	*TIME INTERVAL (YEARS)*
Active (A)	Holocene	Within last 11,000 years
Potentially Active (PA)	Quaternary	11,000-1.6 Million Years
Inactive (I)	Pre-Quaternary	Greater than 1.6 Million

SOURCE: CALIFORNIA GEOLOGICAL SURVEY, 2010.

U.S. Geological Survey data was used to identify potential earthquake fault lines within the vicinity of the Planning Area. The closest faults and fault zones include the San Andreas Fault Zone located approximately 8 miles to the west of the Planning Area, Hayward Fault Zone located approximately 10 miles east of the Planning Area, and the Rodgers Creek Fault located approximately 18 miles north of the Planning Area. Figure 3.7-2 provides a map of known area faults and fault zones. The San Andreas Fault Zone is located in Marin County, the Hayward Fault Zone extends through Alameda and Contra Costa Counties, and the Rodgers Creek Fault runs through Sonoma County.

SEISMICITY

The amount of energy available to a fault is determined by considering the slip-rate of the fault, its area (fault length multiplied by down-dip width), maximum magnitude, and the rigidity of the

displaced rocks. These factors are combined to calculate the moment (energy) release on a fault. The total seismic energy release for a fault source is sometimes partitioned between two different recurrence models, the characteristic and truncated Gutenberg-Richter (G-R) magnitude-frequency distributions. These models incorporate our knowledge of the range of magnitudes and relative frequency of different magnitudes for a particular fault.

Earthquakes are generally expressed in terms of intensity and magnitude. Intensity is based on the observed effects of ground shaking on people, buildings, and natural features. By comparison, magnitude is based on the amplitude of the earthquake waves recorded on instruments, which have a common calibration. The Richter scale, a logarithmic scale ranging from 0.1 to 9.0, with 9.0 being the strongest, measures the magnitude of an earthquake relative to ground shaking. Table 3.7-3 provides a description and comparison of intensity and magnitude.

TABLE 3.7-3: RICHTER MAGNITUDES AND EFFECTS

MAGNITUDE	*EFFECTS*
< 3.5	Typically not felt
3.5 – 5.4	Often felt but damage is rare
5.5 – < 6	Damage is slight for well-built buildings
6.1 – 6.9	Destructive potential over ±60 miles of occupied area
7.0 – 7.9	"Major Earthquake" with the ability to cause damage over larger areas
≥ 8	"Great Earthquake" can cause damage over several hundred miles

SOURCE: UNITED STATES GEOLOGICAL SURVEY, 1997.

In 2014, the United States Geological Survey updated the 30-year earthquake forecast for California, which concluded that there is a 72% probability of at least one earthquake of magnitude 6.7 or greater striking somewhere in the San Francisco Bay region before 2043. The 72% probability of a magnitude 6.7 or greater earthquake includes the well-known major plate-boundary faults, lesser-known faults, and unknown faults. As shown in Table 3.7-4, an earthquake at this magnitude is capable of causing widespread damage to over ±60 miles of occupied area.

TABLE 3.7-4: MODIFIED MERCALLI INTENSITY SCALE FOR EARTHQUAKES

RICHTER MAGNITUDE	*MODIFIED MERCALLI*	*EFFECTS OF INTENSITY*
0.1 – 0.9	I	Earthquake shaking not felt
1.0 – 2.9	II	Shaking felt by those at rest.
3.0 – 3.9	III	Felt by most people indoors, some can estimate duration of shaking.
4.0 – 4.5	IV	Felt by most people indoors. Hanging objects rattle, wooden walls and frames creak.
4.6 – 4.9	V	Felt by everyone indoors, many can estimate duration of shaking. Standing autos rock. Crockery clashes, dishes rattle and glasses clink. Doors open, close and swing.
5.0 – 5.5	VI	Felt by all who estimate duration of shaking. Sleepers awaken, liquids spill, objects are displaced, and weak materials crack.
5.6 – 6.4	VII	People frightened and walls unsteady. Pictures and books thrown, dishes and glass are broken. Weak chimneys break. Plaster, loose bricks and parapets fall.

RICHTER MAGNITUDE	*MODIFIED MERCALLI*	*EFFECTS OF INTENSITY*
6.5 – 6.9	VIII	Difficult to stand. Waves on ponds, cohesionless soils slump. Stucco and masonry walls fall. Chimneys, stacks, towers, and elevated tanks twist and fall.
7.0 – 7.4	IX	General fright as people are thrown down, hard to drive. Trees broken, damage to foundations and frames. Reservoirs damaged, underground pipes broken.
7.5 – 7.9	X	General panic. Ground cracks, masonry and frame buildings destroyed. Bridges destroyed and railroads bent slightly. Dams, dikes and embankments damaged.
8.0 – 8.4	XI	Large landslides, water thrown, general destruction of buildings. Pipelines destroyed and railroads bent.
8.5 +	XII	Total nearby damage, rock masses displaced. Lines of sight/level distorted. Objects thrown into air.

SOURCE: UNITED STATES GEOLOGICAL SURVEY, 1997.

The Significant United States Earthquake data published by the USGS in the National Atlas identifies earthquakes that caused deaths, property damage, and geologic effects or were felt by populations near the epicenter. No significant earthquakes are identified within the Planning Area; however, significant earthquakes are documented in the region. The following table presents the significant earthquakes in the region.

TABLE 3.7-5: SIGNIFICANT EARTHQUAKES IN THE REGION

MAGNITUDE	*INTENSITY*	*LOCATION*	*YEAR*
3.4	N/A	15 mi NE of Morgan Hill	2024
4.1	IV	9 miles southeast of Alum Rock	2017
4.0	IV	Piedmont	2015
4.1	IV	6 miles east of Yountville	2015
4.0	IV	2 miles north of Fremont	2015
6.0	VIII	South Napa	2014

ALQUIST-PRIOLO EARTHQUAKE FAULT ZONE

The California legislature passed the Alquist-Priolo Special Studies Zone Act in 1972 (the law was renamed the Alquist-Priolo Earthquake Fault Zoning Act in 1994) to address seismic hazards associated with faults and to establish criteria for developments for areas with identified seismic hazard zones. The California Geologic Survey (CGS) evaluates faults with available geologic and seismologic data and determines if a fault should be zoned as active, potentially active, or inactive. If CGS determines a fault to be active, then it is typically incorporated into a Special Studies Zone in accordance with the Alquist-Priolo Earthquake Fault Zone Act. Alquist-Priolo Earthquake Fault Zones are usually one-quarter mile or less in width, require site-specific evaluation of fault location, and require a structure setback if the fault is found traversing a project site. The Planning Area is not within an Alquist-Priolo Earthquake Fault Zone. The closest Alquist-Priolo Earthquake Fault Zones include the San Andreas Fault Zone located approximately eight miles to the west of the Planning Area, Hayward Fault Zone located approximately 10 miles east of the Planning Area, and the Rodgers Creek Fault located approximately 18 miles north of the Planning Area. Figure 3.7-2 provides a map of known area faults, fault zones, and Alquist-Priolo Earthquake Fault Zones.

SEISMIC HAZARDS

Seismic Ground Shaking

The potential for seismic ground shaking in California is expected. As a result of the foreseeable seismicity in California, the State requires special design considerations for all structural improvements in accordance with the seismic design provisions in the California Building Code. These seismic design provisions require enhanced structural integrity based on several risk parameters.

Fault Rupture

A fault rupture occurs when the surface of the earth breaks as a result of an earthquake, although this does not happen with all earthquakes. These ruptures generally occur in a weak area of an existing fault. Ruptures can be sudden (i.e., earthquake) or slow (i.e., fault creep). The Alquist-Priolo Fault Zoning Act requires active earthquake fault zones to be mapped, and it provides special development considerations within these zones. San Anselmo does not have surface expression of active faults, and fault rupture is not anticipated. Figure 3.7-2 shows regional faults in relation to the Town.

Liquefaction

Liquefaction typically requires a significant sudden decrease of shearing resistance in cohesionless soils and a sudden increase in water pressure, which is typically associated with an earthquake of high magnitude. The potential for liquefaction is highest when groundwater levels are high, and loose, fine, sandy soils occur at depths of less than 50 feet. Figure 3.7-3 provides a map of the liquefaction potential of the soils within the Planning Area and general vicinity. As shown in the figure, areas along major transportation corridors, streambanks, and valley floors near creeks in San Anselmo, including the downtown, areas surrounding Center Boulevard, the Brookside neighborhood, and Sleepy Hollow, could be subject to liquefaction during or after an earthquake.

Lateral Spreading

Lateral spreading typically results when ground shaking moves soil toward an area where the soil integrity is weak or unsupported, and it typically occurs on the surface of a slope, although it does not occur strictly on steep slopes. Oftentimes, lateral spreading is directly associated with areas of liquefaction. The potential for liquefaction exists in the flat and creek-adjacent areas of town, including the downtown, areas surrounding Center Boulevard, the Brookside neighborhood, and Sleepy Hollow; lateral spreading of soils may occur in these areas of the Planning Area.

Landslides

Landslides include rockfalls, deep slope failure, and shallow slope failure. Factors such as the geological conditions, drainage, slope, vegetation, and others directly affect the potential for landslides. Common causes of landslides include heavy rainfall events and construction activity that is associated with road building (i.e., cut and fill).

The potential for landslides is indexed by the California Geological Survey and considers past landslide inventory, geology, rock strength, and slope. Using that information, the CGS classifies landslide susceptibility on a scale of 0 (low) to 10 (high). The data reflects the generalization that landslide susceptibility on very low slopes is low even in weak materials, and landslide susceptibility increases with slope and in weak rocks. The landslide susceptibility matrix for the Planning Area, based on rock strength and slope steepness in degrees, is described in Table 3.7-6. There are eight landslide susceptibility classes in the Planning Area, including 0, 3, 5, 6, 7, 8, 9, 10, as shown on Figure 3.7-4. Areas with highest landslide susceptibility (classes 9 and 10) are located on the hillside areas of the Planning Area, particularly on the slopes of high elevations. The areas with moderate to high susceptibility to landslides are primarily located within the hillside regions of the Planning Area. Areas not vulnerable to landslide are located on the more developed areas of the Planning Area.

TABLE 3.7-6: LANDSLIDE SUSCEPTIBILITY CLASSES

SLOPES CLASS (SLOPE STEEPNESS IN DEGREES)	*ROCK STRENGTH*		
	1	*2*	*3*
1 (< 3)	*0*	*0*	*0*
2 (3 - 5)	*0*	*V*	*VII*
3 (5 - 10)	*0*	*V*	*VII*
4 (10 - 15)	*III*	*VIII*	*IX*
5 (15 - 20)	*VI*	*IX*	*X*
6 (20 - 30)	*VII*	*IX*	*X*
7 (30 - 40)	*VIII*	*IX*	*X*
8 (> 40)	*VIII*	*IX*	*X*

SOURCE: CALIFORNIA GEOLOGICAL SURVEY MAP SHEET 58, 2011.

Intense winter atmospheric rivers can contribute to landslide events in San Anselmo due to the area's steep hillsides. Significant geological failures have historically disrupted infrastructure and threatened residential areas, highlighted by a major February 2019 landslide that destroyed an 85-foot section of Summit Road, severed a sewer main, and sent debris onto Francis Avenue below.[1] Similar slope instabilities have repeatedly plagued Scenic Avenue, where mudslides in 2008 and 2011 forced road closures, endangered downhill properties, and required emergency shoring with k-rails. Additionally, infrastructure along Sir Francis Drake Boulevard suffered a 50-foot embankment failure during the 2019 storms, reinforcing regional geological assessments that classify San Anselmo's surrounding hills as high-hazard zones frequently compounded by the town's history of severe creek flooding.

NON-SEISMIC HAZARDS

Expansive Soils

Expansive soils can undergo significant volume change with changes in moisture content. They shrink and harden when dried and expand and soften when wet. If structures are underlain by expansive soils, it is important that foundation systems be capable of tolerating or resisting any potentially damaging soil movements. In addition, it is important to limit moisture changes in the surficial soils by using positive drainage away from buildings as well as limiting landscaping watering.

According to the NRCS Web Soil Survey, the soils in the Planning Area vary from a low shrink-swell potential to a moderate shrink-swell potential as shown in Figure 3.7-5. No areas within the Planning Area have a high expansive soil potential. The neighborhood north of Red Hill Avenue has a moderate expansive soil potential.

Erosion

Erosion naturally occurs on the surface of the earth as surface materials (i.e., rock, soil, debris, etc.) are loosened, dissolved, or worn away, and transported from one place to another by gravity. Two

[1] Rodriguez, Adrian (2019). "San Anselmo declares local state of emergency after storms." *Marin Independent Journal*, March 1.

common types of soil erosion include wind erosion and water erosion. The steepness of a slope is an important factor that affects soil erosion. Erosion potential in soils is influenced primarily by loose soil texture and steep slopes. Loose soils can be eroded by water or wind forces, whereas soils with high clay content are generally susceptible only to water erosion. The potential for erosion generally increases as a result of human activity, primarily through the development of facilities and impervious surfaces and the removal of vegetative cover.

The *Custom Soils Report* identified the erosion potential for the soils in the Planning Area. Erosion factor K indicates the susceptibility of a soil to sheet and rill erosion by water. Factor K is one of six factors used in the Universal Soil Loss Equation (USLE) and the Revised Universal Soil Loss Equation (RUSLE) to predict the average annual rate of soil loss by sheet and rill erosion in tons per acre per year. The estimates are based primarily on percentage of silt, sand, and organic matter and on soil structure and saturated hydraulic conductivity (Ksat). Values of K range from 0.02 to 0.69. Other factors being equal, the higher the value, the more susceptible the soil is to sheet and rill erosion by water. Within the Planning Area, the K factor varies from 0.28 to 0.32, which is considered a low to moderate potential for erosion. The wind erosion potential ranges from moderate-to-high during the spring, summer, and fall, however this potential for wind erosion diminishes during the winter.

Collapsible Soils

Collapsible soils undergo a rearrangement of their grains and a loss of cementation, resulting in substantial and rapid settlement under relatively low loads. Collapsible soils occur predominantly at the base of mountain ranges, where Holocene-age alluvial fan and wash sediments have been deposited during rapid run-off events. Soils prone to collapse are commonly associated with manmade fill, wind-laid sands and silts, and alluvial fan and mudflow sediments deposited during flash floods. During an earthquake, even slight settlement of fill materials can lead to a differentially settled structure and significant repair costs. Differential settlement of structures typically occurs when heavily irrigated landscape areas are near a building foundation. Examples of common problems associated with collapsible soils include tilting floors, cracking or separation in structures, sagging floors, and nonfunctional windows and doors. Collapsible soils have not been identified in the Planning Area as an issue. However, in areas subject to potential liquefaction, the potential for liquefaction-induced settlement is present.

Subsidence

Land subsidence is the gradual settling or sinking of an area with little or no horizontal motion due to changes taking place underground. It is a natural process, although it can also occur (and is greatly accelerated) as a result of human activities. Common causes of land subsidence from human activity include: pumping water, oil, and gas from underground reservoirs; dissolution of limestone aquifers (sinkholes); collapse of underground mines; drainage of organic soils; and initial wetting of dry soils. Subsidence has not been identified as an issue in the Planning Area.

Naturally Occurring Asbestos

The term “asbestos” is used to describe a variety of fibrous minerals that, when airborne, can result in serious human health effects. Naturally occurring asbestos is commonly associated with

ultramafic rocks and serpentinite. Ultramafic rocks, such as dunite, peridotite, and pyroxenite are igneous rocks comprised largely of iron-magnesium minerals. As they are intrusive in nature, these rocks often undergo metamorphosis, prior to their being exposed on the Earth's surface. The metamorphic rock serpentinite is a common product of the alteration process.

There are several potential issues related to public health and safety concerning serpentinite. Most prominent are slope stability and the natural presence of asbestos and several potentially toxic elements in the rock. Because of its sheared and fractured character and its ability to retain water, serpentinite is highly susceptible to landslides, particularly along roads. Mountainous areas with high precipitation are most vulnerable. Although irregularly distributed in serpentinite, asbestos, dominantly in the form of chrysotile, is a known carcinogen in humans. Tremolite asbestos and actinolite asbestos are also known in some bodies of serpentinite. If undisturbed, these minerals are generally not harmful, but if continually disturbed by dust-generating conditions and activities, such as windstorms, excavation, or by vehicles traveling over serpentinite-covered roads, prolonged exposure may produce disease in some people. Finally, the presence of elevated amounts of several metals in serpentinite can be detrimental to human health. These metals include chromium, nickel, cobalt, and, in some bodies of altered serpentinite, mercury.[2] Serpentine soils, which may include naturally occurring asbestos, are present within portions of the Town of San Anselmo and Marin County.

Paleontological Resources

Among the natural resources deserving conservation and preservation are the often-unseen records of past life buried in the sediments and rocks below the pavement, buildings, soils, and vegetation which now cover most of the area. These records – fossils and their geologic context – undoubtedly exist below the surface in areas in and near San Anselmo, and span millions of years in age of origin. Fossils constitute a non-renewable resource; once lost or destroyed, the exact information they contained can never be reproduced.

Paleontology is the science that attempts to unravel the meaning of these fossils in terms of the organisms they represent, the ages and geographic distribution of those organisms, how they interacted in ancient ecosystems and responded to past climatic changes, and the changes through time of all of these aspects.

The sensitivity of a given area or body of sediment with respect to paleontological resources is a function of both the potential for the existence of fossils and the predicted significance of any fossils which may be found there. The primary consideration in the determination of paleontological sensitivity of a given area, body of sediment, or rock formation is its potential to include fossils. Information that can contribute to assessment of this potential includes: 1) direct observation of fossils within the project area; 2) the existence of known fossil localities or documented absence of fossils in the same geologic unit (e.g., "Formation" or one of its subunits); 3) descriptive nature of sedimentary deposits (such as size of included particles or clasts, color, and bedding type) in the area of interest compared with those of similar deposits known elsewhere to favor or disfavor inclusion of fossils; and 4) interpretation of sediment details and known geologic history of the

[2] Higgins, C.T., 2022, CGS NOTE 57 Serpentinite and Serpentine in California, California Geological Survey.

sedimentary body of interest in terms of the ancient environments in which they were deposited, followed by assessment of the favorability of those environments for the preservation of fossils.

The most general paleontological information can be obtained from geologic maps, but geologic cross sections (slices of the layer cake to view the third dimension) must be reviewed for each area in question. These usually accompany geologic maps or technical reports. Once it can be determined which formations may be present in the subsurface, the question of paleontological resources must be addressed. Even though a formation is known to contain fossils, they are not usually distributed uniformly throughout the many square miles the formation may cover. If the fossils were part of a bay environment when they died, perhaps a scattered layer of shells will be preserved over large areas. If on the other hand, a whale died in this bay, you might expect to find fossil whalebone only in one small area of less than a few hundred square feet. Other resources to be considered in the determination of paleontological potential are regional geologic reports, site records on file with paleontological repositories, and site-specific field surveys.

Paleontologists consider all vertebrate fossils to be of significance. Fossils of other types are considered significant if they represent a new record, a new species, the oldest occurring species, the most complete specimen of its kind, a rare species worldwide, or a species helpful in the dating of formations. However, even a previously designated low potential site may yield significant fossils.

Marin County's geological history spans millions of years, influenced by tectonic activities, sea level changes, and sedimentary deposition. Fossils found in the region range from marine organisms to terrestrial mammals. The county contains a rich fossil record dating back to the Miocene epoch (about 23 to 5 million years ago) and includes marine fossils such as mollusks, sharks, and marine mammals. Terrestrial fossils of mammals and plants from the Pleistocene epoch (2.6 million to 11,700 years ago) are also found.

The University of California Museum of Paleontology (UCMP) Locality Search is an online database tool that allows users to search for specific fossil localities worldwide that are curated and documented by the museum. The USMP Locality Search database includes information such as geographical location, stratigraphic information, and taxonomic information. According to UCMP Locality Search, two fossil sites were found in the San Rafael quadrangle, an approximately 59-square mile area which encompasses the area around San Rafael, including San Anselmo and its surrounding regions in Marin County: an invertebrate from the Mesozoic era and estimated Triassic period and an invertebrate from the Cenozoic era, Quaternary period, and recent epoch.

3.7.2. REGULATORY SETTING

FEDERAL

Earthquake Hazards Reduction Act

The Earthquake Hazards Reduction Act of 1977 (42 USC, 7701 et seq.) requires the establishment and maintenance of an earthquake hazards reduction program by the federal government. Under the National Earthquake Hazards Reduction Program (NEHRP), four federal agencies have responsibility for long-term earthquake risk reduction: the USGS, the National Science Foundation

(NSF), the Federal Emergency Management Agency (FEMA), and the National Institute of Standards and Technology (NIST). NEHRP's mission includes improved understanding, characterization, and prediction of hazards and vulnerability; improvements of building codes and land use practices; risk reduction through post- earthquake investigation and education; development and improvement of design and construction techniques; improvement of mitigation capacity; and accelerated application of research results.

Executive Order 12699

Signed in January 1990, Presidential Executive Order 12699 implements provisions of the Earthquake Hazards Reduction Act for "federal, federally assisted or federally regulated new building construction" and requires the development and implementation of seismic safety programs by Federal agencies.

International Building Code (IBC)

The purpose of the International Building Code (IBC) is to provide minimum standards to preserve the public peace, health, and safety by regulating the design, construction, quality of materials, certain equipment, location, grading, use, occupancy, and maintenance of all buildings and structures. IBC standards address foundation design, shear wall strength, and other structurally related conditions.

STATE

California Building Standards Code

CCR Title 24, known as the California Building Standards Code (CBSC) or simply "Title 24," contains the regulations that govern the construction of buildings in California. The CBSC includes 12 parts: California Building Standards Administrative Code, California Building Code (CBC), California Residential Building Code, California Electrical Code, California Mechanical Code, California Plumbing Code, California Energy Code, California Historical Building Code, California Fire Code, California Existing Building Code, California Green Building Standards Code (CALGreen Code), and the California Reference Standards Code. Through the CBSC, the state provides a minimum standard for building design and construction. The CBSC contains specific requirements for seismic safety, excavation, foundations, retaining walls, and site demolition. It also regulates grading activities, including drainage and erosion control.

CBC Title 24, Part 2, Chapter 16 addresses structural design, Chapter 17 addresses structural tests and special inspections, and Chapter 18 addresses soils and foundations. Section 1610 provides structural design standards for foundation walls and retaining walls to ensure resistance to lateral soil loads. Section 1613 provides structural design standards for earthquake loads. Section 1704.7 requires special inspections for existing site soil conditions, fill placement and load-bearing requirements during the construction as specified in Table 1704.7 of this section. Sections 1704.8 through 1704.16 provide inspection and testing requirements for various foundation types, and construction material types. Section 1803.1.1.1 requires each city and county enact an ordinance which requires a preliminary soil report and that the report be based upon adequate test borings or

excavations, of every subdivision, where a tentative and final map is required pursuant to Section 66426 of the Government Code. Section 1803.5.3 defines expansive soils and specifies that in areas likely to have expansive soil, the building official shall require soil tests to determine where such soils do exist. Section 1803.5.4 specifies that a subsurface soil investigation must be performed to determine whether the existing ground-water table is above or within 5 feet (1524 mm) below the elevation of the lowest floor level where such floor is located below the finished ground level adjacent to the foundation. Section 1803.5.8 provides specific standards where shallow foundations will bear on compacted fill material more than 12 inches (305 mm) in depth. Sections 1803.5.11 and 1803.5.12 provide requirements for geotechnical investigations for structures assigned varying Seismic Design Categories in accordance with Section 1613. Section 1804 provides standards and requirements for excavation, grading, and fill. Sections 1808, 1809, and 1810 provide standards and requirements for the construction of varying foundations.

State Laws Pertaining to Paleontological Resources

Several sections of the PRC protect paleontological resources.

PRC Section 5097.5 prohibits "knowing and willful" excavation, removal, destruction, injury, and defacement of any "vertebrate paleontological site, including fossilized footprints," on public lands, except where the agency with jurisdiction has granted express permission. "As used in this section, 'public lands' means lands owned by, or under the jurisdiction of, the state, or any city, county, district, authority, or public corporation, or any agency thereof."

PRC Section 30244 requires reasonable mitigation for impacts on paleontological resources that occur as a result of development on public lands.

The sections of the California Administrative Code relating to the State Division of Beaches and Parks afford protection to geologic features and "paleontological materials" but grant the director of the State Park system authority to issue permits for specific activities that may result in damage to such resources, if the activities are in the interest of the State park system and for State Park purposes (California Administrative Code, Title 14, Section 4307 – 4309).

California Health and Safety Code

Section 19100 et seq. of the California Health and Safety Code establishes the state's regulations for earthquake protection. This section of the code requires structural designs to be capable of resisting likely stresses produced by phenomena such as strong winds and earthquakes.

Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act of 1972 sets forth the policies and criteria of the State Mining and Geology Board, which governs the exercise of governments' responsibilities to prohibit the location of developments and structures for human occupancy across the trace of active faults. The policies and criteria are limited to potential hazards resulting from surface faulting or fault creep within Earthquake Fault Zones, as delineated on maps officially issued by the State Geologist. Working definitions include:

- Fault – a fracture or zone of closely associated fractures along which rocks on one side have been displaced with respect to those on the other side;
- Fault Zone – a zone of related faults, which commonly are braided and sub parallel, but may be branching and divergent. A fault zone has a significant width (with respect to the scale at which the fault is being considered, portrayed, or investigated), ranging from a few feet to several miles;
- Sufficiently Active Fault – a fault that has evidence of Holocene surface displacement along one or more of its segments or branches (last 11,000 years); and
- Well-Defined Fault – a fault whose trace is clearly detectable by a trained geologist as a physical feature at or just below the ground surface. The geologist should be able to locate the fault in the field with sufficient precision and confidence to indicate that the required site-specific investigations would meet with some success.

"Sufficiently Active" and "Well Defined" are the two criteria used by the State to determine if a fault should be zoned under the Alquist-Priolo Earthquake Fault Zoning Act.

Seismic Hazards Mapping Act

The Seismic Hazards Mapping Act, passed in 1990, addresses non-surface fault rupture earthquake hazards, including liquefaction and seismically-induced landslides. Under the Seismic Hazards Mapping Act, seismic hazard zones are to be mapped by the State Geologist to assist local governments in land use planning. The program and actions mandated by the Seismic Hazards Mapping Act closely resemble those of the Alquist-Priolo Earthquake Fault Zoning Act (which addresses only surface fault-rupture hazards) and are outlined below:

The State Geologist is required to delineate the various "seismic hazard zones."

- Cities and Counties, or other local permitting authority, must regulate certain development "projects" within the zones. They must withhold the development permits for a site within a zone until the geologic and soil conditions of the site are investigated and appropriate mitigation measures, if any, are incorporated into development plans.
- The State Mining and Geology Board provides additional regulations, policies, and criteria, to guide cities and counties in their implementation of the law. The Board also provides guidelines for preparation of the Seismic Hazard Zone Maps and for evaluating and mitigating seismic hazards.
- Sellers (and their agents) of real property within a mapped hazard zone must disclose that the property lies within such a zone at the time of sale.

Caltrans Seismic Design Criteria

Caltrans has Seismic Design Criteria (SDC), which is an encyclopedia of new and currently practiced seismic design and analysis methodologies for the design of new bridges in California. The SDC adopts a performance-based approach specifying minimum levels of structural system performance, component performance, analysis, and design practices for ordinary standard bridges. The SDC has been developed with input from the Caltrans Offices of Structure Design, Earthquake Engineering and Design Support, and Materials and Foundations. Memo 20-1 outlines the bridge category and

classification, seismic performance criteria, seismic design philosophy and approach, seismic demands and capacities on structural components and seismic design practices that collectively make up Caltrans' seismic design methodology.

Division of Mines and Geology

The California Division of Mines and Geology (DMG) operates within the Department of Conservation. The DMG is responsible for assisting in the utilization of mineral deposits and the identification of geological hazards.

State Geological Survey

Similar to the DMG, CGS is responsible for assisting in the identification and proper utilization of mineral deposits, as well as the identification of fault locations and other geological hazards.

Surface Mining and Reclamation Act of 1975

The California Department of Conservation Surface Mining and Reclamation Act of 1975 (Section 2710), also known as SMARA, provides a comprehensive surface mining and reclamation policy that permits the continued mining of minerals, as well as the protection and subsequent beneficial use of the mined and reclaimed land. The purpose of SMARA is to ensure that adverse environmental effects are prevented or minimized and that mined lands are reclaimed to a usable condition and are readily adaptable for alternative land uses. The production and conservation of minerals are encouraged, while also giving consideration to values relating to recreation, wildlife, range and forage, as well as aesthetic enjoyment. Residual hazards to public health and safety are eliminated. These goals are achieved through land use planning by allowing a jurisdiction to balance the economic benefits of resource reclamation with the need to provide other land uses.

If a use is proposed that might threaten the potential recovery of minerals from an area that has been classified MRZ-2, SMARA would require the jurisdiction to prepare a statement specifying its reasons for permitting the proposed use, provide public notice of these reasons, and forward a copy of the statement to the State Geologist and the State Mining and Geology Board (Cal. Pub. Res. Code Section 2762). Lands classified MRZ-2 are areas that contain identified mineral resources.

LOCAL

Town of San Anselmo Municipal Code

Town Code Title 9, Chapter 1, (Article 1 – Construction Codes), states the following parts of Title 24, California Code of Regulations are adopted by reference as Construction Codes for the Town of San Anselmo, including the amendments noted in this Article.

> (a) 2025 edition of the California Administrative Code.
>
> (b) 2025 edition of the California Building Code (CBC) (Title 24 Part 1 and 2) based upon the 2024 International Building Code (IBC) including Appendix G, Flood-Resistant Construction; Appendix H, Signs; Appendix I, Patio Covers; Appendix J, Grading.

(c) 2025 edition of the California Existing Building Code, California Code of Regulations, (Title 24, Part 10) based upon International Existing Building Code 2024.

(d) 2025 edition of the California Residential Building Code (CRC) (Title 24 Part 2.5) based upon the 2024 International Residential Code including Appendix H, Patio Covers; Appendix I, Existing Buildings and Structures; Appendix K, Sound Transmission; Appendix Q, Tiny Houses.

(e) 2025 edition of the California Electrical Code (CEC) (Title 24 Part 3) based upon the NFPA 70, 2024 National Electrical Code (NEC).

(f) 2025 edition of the California Mechanical Code (CMC) (Title 24 Part 4) based upon the 2024 Uniform Mechanical Code (UMC).

(g) 2025 edition of the California Plumbing Code (CPC) (Title 24 Part 5) based upon the 2024 Uniform Plumbing Code (UPC).

(h) 2025 edition of the California Energy Code (CEC) (Title 24 Part 6).

(i) 2025 California Wildland-Urban Interface Code (WUI) (Title 24 Part 7).

(j) 2025 California Historical Building Code (Title 24 Part 8).

(k) 2025 California Green Building Standards Code (CAL Green) (Title 24 Part 11).

(l) 2025 International Property Maintenance Code (IPMC).

(m) 2024 International Swimming Pool and Spa Code (ISSPS).

(n) National Fire Protection Association ("NFPA") 54 and 58.

A copy of each of these documents is maintained in the office of the Building Official.

Town Code Title 9, Chapter 7, promotes public safety and welfare by reducing the risk of death or injury that may result from the effects of earthquakes on unreinforced masonry buildings, constructed prior to 1946 (the adoption date of the Building Code requiring earthquake resistant design of buildings). Of secondary benefit is the reduction of property damage. Such buildings have been widely recognized for sustaining life-hazardous damage during moderate to strong earthquakes.

The provisions of this chapter are intended as minimum standards for structural seismic resistance established primarily to reduce the risk of life loss or injury. Compliance with these standards will not necessarily prevent earthquake damage to rehabilitated buildings. This chapter does not require alteration of existing electrical, plumbing, mechanical or fire safety systems unless they constitute a hazard to life or property.

This chapter provides systematic procedures and standards for the identification and classification of unreinforced masonry buildings based upon their present use. Priorities, time periods and

standards are also established under which these buildings are required to be structurally analyzed and strengthened. Where the analysis finds deficiencies, this chapter requires the building to be strengthened, abandoned, or demolished.

Town Code Title 9, Chapter 18, establishes controls on excavation, grading, and fill within the Town. The controls are established for reasons of safety, erosion control, sound soil engineering practice, aesthetics, environmental protection, and water quality protection.

Town Code Title 10, Chapter 3 (Article 4 – Development Standards), establishes the development standards deemed the minimum necessary to promote and protect the public health, safety, and general welfare of the Town. The Slope Density/Lot Area Table, referred to as Table 4C, lists the minimum lot size for the R-1 District for lots which have average slopes of fifteen (15%) percent or greater.

Marin Multi-Jurisdictional Hazard Mitigation Plan

The Marin Multi-Jurisdictional Hazard Mitigation Plan (MJHMP)[3] is used to help guide and coordinate mitigation activities and decisions for local land use policy. Hazard mitigation planning is the process of making any sustained plan or course of action taken to reduce or eliminate long-term risk to people and property from both natural hazards and their effects. The Marin MJHMP establishes goals and recommendations for mitigation strategies for the unincorporated county, eleven (11) jurisdictions in the county, three special districts, and the North Marin Water District. Proactive mitigation planning will help reduce the cost of disaster response and recovery to communities and their residents by protecting critical community facilities, reducing liability exposure, and minimizing overall community impacts and disruptions. Marin County has been affected by hazards in the past and is committed to reducing future impacts from hazard events and becoming eligible for mitigation-related federal funding.

The Marin MJHMP describes the topography, risk factors, and potential hazards specific to the Town of San Anselmo.[4] The potential for earthquake, riverine flooding, landslide, wildfire, heat waves, tornados, strong wind, and drought is described and risk to the Town's social structure as well as critical infrastructure is disclosed. Mitigation strategies particular to each of the identified hazards is presented.

3.7.3. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

Impacts related to geology, soils, and seismicity were evaluated using the thresholds of significance listed below. Future development under the 2045 General Plan was reviewed to determine if the General Plan 2045 would have a significant impact on seismic and geologic hazards. These types of impacts would be the greatest in developments located on a geologic unit or soil that is unstable;

[3] County of Marin, 2023. Marin County Operational Area Multi-Jurisdictional Hazard Mitigation Plan 2023. Volume 1: Planning Area-Wide Elements.

[4] County of Marin, 2023. Marin County Operational Area Multi-Jurisdictional Hazard Mitigation Plan 2023. Volume 2. Chapter 11: Town of San Anselmo Community Profile.

therefore, these are the areas that are focused on in the analysis. Impacts are evaluated assuming full buildout of the Planning Area.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to the seismic and geologic hazards found in the Town.

SAFETY ELEMENT

GOAL S-A. Promote a culture of resilience and preparedness within San Anselmo where all community members and businesses are informed, equipped, and prepared for natural and human-caused emergencies.

Policy S-A.1: Structural Hazards. Support efforts to reduce the number of structures subject to natural hazards.

Action S-A.1.a: Building Code Updates. Regularly update building codes and regulations to address changing hazard conditions and requirements.

Policy S-A.2: Hazard Education. Increase education, outreach, and awareness of hazards and hazard mitigation, especially for vulnerable populations, including older adults, people with disabilities, lower-income households, and others who may face barriers to accessing information.

Action S-A.2.a: Multilingual and Community-Based Outreach. Expand emergency preparedness outreach through multilingual communication and partnerships with community-based organizations to broaden access to information on evacuation routes, shelter locations, and recovery resources. Use a variety of communication methods and trusted community channels to reach residents who may not engage with standard municipal communications, and adapt outreach strategies over time as San Anselmo's demographics evolve.

Policy S-A.3: Hazards in New Development. Encourage new development in locations that avoid or reduce exposure to hazards for future residents and users.

Action S-A.3.a: Essential Public Facilities. Locate, when feasible, new essential public facilities outside of identified hazard areas, including hospitals and health care facilities, emergency shelters, fire stations, emergency command centers, and emergency communications facilities.

Action S-A.3.b: Public Facilities in Hazard Areas. Identify appropriate construction methods to minimize damage to public facilities located within an identified hazard area.

Policy S-A.4: Resilient Utilities and Public Safety Services. Work with public utilities and special districts that provide water, sewer, fire protection, and public safety services in order to maintain and improve upon the present level of service and resiliency to natural hazards.

Policy S-A.5: Resilient Town Buildings. Require that Town-owned buildings are maintained to support their resilience in the face of natural disasters.

Action S-A.5.a: Resilient Public Facilities. Maintain the structural and operational integrity of essential public facilities during hazard events.

Policy S-A.6: Agency Coordination. Increase cooperation and coordination among private entities, local agencies, special districts, State and federal agencies, and tribal organizations to improve service delivery and communication to the community.

Policy S-A.7: Staff Training. Ensure Town staff are adequately trained to implement State and local regulations designed to avoid loss of life, injury, and property damage from natural disasters.

Action S-A.7.a: Hazard Mitigation Program Review and Integration. Conduct an annual review of hazard mitigation goals and strategies and integrate the findings into the annual budget, staffing allocations, and updates to the Capital Improvement Plan.

Policy S-A.8: Pedestrian Evacuation Routes. Support the development of pedestrian rights of way as temporary pathways to serve as additional evacuation routes for residents without access to private vehicles or with mobility limitations.

Policy S-A.9: Emergency Response and Evacuation Plans. Support the preparation, implementation, and regular update of local preparedness and evacuation plans, ensuring plans are accessible and responsive to the needs of diverse abilities, and promote multi-jurisdictional cooperation and communication for emergency situations.

Action S-A.9.a: Emergency Planning, Coordination and Training Program. Maintain and update the Town's Emergency Operations Plan (EOP) to ensure a clear chain of command and strong coordination with the Marin County Operational Area, and participate in regional emergency planning efforts, including updates to the Marin County Multi-Jurisdictional Hazard Mitigation Plan (MJHMP). Adopt each updated MJHMP to remain eligible for FEMA hazard mitigation funding and ensure the plan includes analysis of climate-related risks, identification of vulnerable assets and populations, and strategies to address their specific needs and strengthen community resilience.

Policy S-A.10: Post Disaster Recovery. Expand and enhance post disaster recovery strategies, prioritizing community resilience, sustainability, and equitable recovery for all residents.

Action S-A.10.a: Post Disaster Recovery Framework. Develop an all-hazards Post Disaster Recovery Framework for use after a major incident or event that considers the needs of different segments of the community.

Policy S-A.11: Community Education. Educate community residents and businesses on emergency preparedness, response, evacuation procedures and mitigation strategies using accessible formats and inclusive communication methods.

Action S-A.11.a: Public Outreach. Provide community outreach and education programs on a regular basis to keep residents informed about emergency procedures, shelters, safe refuge areas, and evacuation routes using multiple communication channels and accessible formats.

Policy S-A.12: Circulation System for Evacuations. Continue to study the Town's circulation network and emergency response capabilities to provide for effective evacuations during an emergency for all residents, including those with limited mobility and transportation options.

Policy S-A.13: Property Identification. Identify properties through clear street naming and numbering systems for emergency response vehicles.

Policy S-A.14: Access Routes for New Development. Require all new developments and redevelopments to provide a minimum of two points of access by means of public roads that can be used for emergency vehicle response and evacuation purposes for residents and emergency responders.

Action S-A.14.a: Emergency Access Improvements and Roadway Standards. Evaluate and implement feasible emergency access improvements for existing and new development, including roadway widening, parking restrictions, vehicle pullouts, roadside clearance, and new or improved access routes, and require necessary upgrades during discretionary review when a nexus exists. For areas that do not meet minimum emergency access standards, assess targeted solutions such as hillside pullouts, limited on-street parking, enhanced clearance, or supplemental access routes, with improvements limited to property frontage where appropriate.

Policy S-A.15: Private Road Design. Ensure all private roads are designed and maintained to allow unrestricted emergency equipment and personnel access.

Policy S-A.16: Updated Evacuation Routes. Ensure all Town and Marin County transportation plans reflect updated evacuation routes, strategies, and data.

Policy S-A.17: Emergency Response Capability. Maintain a high level of emergency response capability to serve all members of the community effectively.

Action S-A.17.a: Budget for Emergency Services. Account for current and future emergency service needs during annual budgeting cycles.

Action S-A.17.b: Emergency Service Priorities. Regularly review and update the Town's priorities for future emergency service needs to reflect changing conditions and community needs.

Action S-A.17.c: Development Review. Consult Fire and Police staff in the development review process to ensure development adequately addresses service levels, security concerns, and safety.

GOAL S-B. Minimize the risk of injury and structure damage from seismic hazards.

Policy S-B.1: Seismic Codes. Require that new development and redevelopment meet the most up-to-date seismic codes/regulations and use methods of construction to withstand stress caused by an earthquake.

Action S-B.1.a: Compliance with Safety Codes. Review all new building plans or substantial renovations for compliance with State and federal seismic safety regulations prior to permit approval.

Policy S-B.2: Earthquake Education. Ensure residents and businesses are educated on emergency preparedness and response procedures during an earthquake through accessible formats and communication methods.

Policy S-B.3: Seismic Safety Upgrades. Facilitate and support maintenance and improvement of structures potentially vulnerable to seismic hazards and support residents who may be disproportionately affected by structural risks.

Action S-B.3.a: Inventory of Seismically Vulnerable Structures. Conduct an inventory of seismically vulnerable structures as a first step in establishing voluntary or mandatory programs for retrofitting these structures and identify potential impacts on occupants and tenants. Ensure this inventory highlights historic structures.

Action S-B.3.b: Seismic Hazard Disclosure and Tenant Notification Program. Require property owners to disclose seismic vulnerabilities, including unreinforced masonry status, retrofit standards, and the potential need for temporary displacement after a major earthquake, to existing and prospective tenants, ensuring they understand associated risks and necessary preparedness measures through clear and accessible information.

Action S-B.3.c: Seismic Upgrades. Establish incentives for owners of historic or architecturally significant buildings to undertake mitigation to levels that will minimize the likelihood that these buildings will need to be demolished after a disaster and/or establish preservation-sensitive measures for the repair and re-occupancy of historically significant structures.

Policy S-B.4: Infrastructure Resilience. Advocate for and work with regional utilities to enhance the preparedness, protection, and resilience of water, energy, and telecommunications infrastructure.

GOAL S-C. Ensure landslide and slope stability hazards are effectively mitigated throughout the town.

Policy S-C.1: Development in Areas of Slope Instability or Steep Topography. Require development in areas of slope instability or steep topography to minimize the potential for landslide and geologic hazards to jeopardize public health, safety, and welfare. Require mitigation of landslides and steep slopes as part of the development process, and discourage and avoid locating development in areas of slope instability.

Policy S-C.2: Geologic Hazards. Continue to protect the community from hazards associated with soil erosion, weak and expansive soils, and liquefaction.

Action S-C.2.a: Enforcement of Building Codes. Continue to enforce building codes and relevant legislation on all new development and redevelopment.

Action S-C.2.b: Inspection of Slope Improvements. Establish a periodic inspection and maintenance program for existing slope improvements.

Policy S-C.3: Building Foundations. Require that new development and redevelopments include proper foundation and support in areas of potential slope instability.

LAND USE ELEMENT

GOAL LU-C. Preserve and enhance San Anselmo's natural setting as a unique asset that supports the community.

Policy LU-C.2: Hillside Protection. Protect the visual integrity and natural resources of San Anselmo's hillsides. Where hillside construction is permitted, design structures to:

- Minimize visual impacts by limiting building size and height, screening the structure within the existing landscape, minimizing glare and light spillage, and using exterior colors and materials that blend with the surrounding environment,
- Limit grading to preserve the existing topography,
- Provide slope and foundation stability, drainage, and erosion control,
- Provide adequate parking and emergency access,
- Address Wildland Urban Interface requirements, and
- Restore natural habitats

Action LU-C.2.a: Hillside Density District. Amend Table 4D, R-1-H (Hillside Density District) Parcels, in the Municipal Code to remove outdated parcel numbers and update parcel-specific density limits to align with State law. The density on the remaining hillside parcels shall be no greater than the number of dwelling units specified in the table.

Policy LU-C.3: Ridge Zone Protection. Prohibit development, including structures, roads, and public facilities within the protected ridge zone, which is 150 horizontal feet in both directions from the lowest elevation of the ridgeline, or 50 feet vertically, whichever is more restrictive, of visually prominent ridgelines, identified on Figure LU-3. Exceptions may be considered on existing legal lots when it is demonstrated that development outside of these areas is not feasible for geologic, soils, or hydrologic reasons, and development would not impact a unique natural habitat. In such cases, visibility of new structures should be minimized by limiting building size and height and integrating the structure within the existing landscape.

Action LU-C.3.a: Conservation and Low Density Development Review. Continue to require design review for new structures and upper-floor additions for hillside or protected ridge zone parcels to minimize visual, environmental, and safety impacts.

Action LU-C.3.b:Hillside and Ridge Zone Development Regulations. Prepare and adopt objective development and design standards in the Municipal Code to minimize the impacts of hillside and protected ridge zone development, including but not limited to:

- Creating opportunities to cluster development and/or transfer of development rights to preserve open space, natural features, and scenic resources,
- Limiting grading to preserve natural topography, minimize erosion, and prevent slope failure,
- Regulating building design and scale, including height and massing, to achieve residential development that is compatible with existing hillside neighborhoods,
- Minimizing off-site and night sky impacts of outdoor lighting and glare, and
- Establishing fire safety standards.

Incorporate the protected ridge zone development restrictions in Policy LU-C.3 into the Zoning Code.

OPEN SPACE

GOAL OSC-A. Protect, preserve, and enhance the town's ridge zones, hillsides, and undeveloped open space for its scenic beauty, natural habitat, hazard mitigation, climate change resilience, recreational value, and contributions to community well-being.

Policy OSC-A.1: Open Space Land Use. Protect lands designated as Open Space on the Land Use Map (Figure LU-1) for environmental protection, resource management, hazard reduction, passive recreation, and climate resilience.

Policy OSC-A.2: New Development. Ensure that new development respects the ecological, visual, and safety benefits of ridge zones, hillsides, and other natural areas for the community.

Action OSC-A.2.a: Online Maps. Use online mapping tools to identify the ridge zones, hillsides, and other natural areas and ensure this information is readily available to the public in clear and accessible formats.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact on geology and soils if it will:

- Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
    - Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault. Refer to Division of Mines and Geology Special Publication 42;

  - Strong seismic ground shaking;
  - Seismic-related ground failure, including liquefaction; or
  - Landslides.
- Result in substantial soil erosion or the loss of topsoil;
- Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;
- Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property;
- Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water; or
- Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

IMPACTS AND MITIGATION MEASURES

Impact 3.7-1: General Plan implementation has the potential to expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, or landslides. (Less than Significant)

There are no Alquist-Priolo Earthquake Fault Zones located within the Planning Area. However, there are numerous known active or potentially active faults located in the region. Figure 3.7-2 illustrates the location of these faults. The USGS Survey identifies that the closest faults and fault zones include the San Andreas Fault Zone located approximately 8 miles to the west of the Planning Area, Hayward Fault Zone located approximately 10 miles east of the Planning Area, and the Rodgers Creek Fault located approximately 18 miles north of the Planning Area. Figure 3.7-2 provides a map of known area faults and fault zones.

As a result, future development in the Town accommodated by the 2045 General Plan may expose people or structures to potential adverse effects associated with a seismic event, including strong ground shaking and seismic-related ground failure.

Seismic hazard zones are mapped within portions of the Planning Area pursuant to the Seismic Hazards Mapping Act (Public Resources Code Section 2690 et seq.), including areas with identified liquefaction potential and susceptibility to seismically-induced landslides, as depicted on Figure 3.7-3. Most areas of the Town susceptible to seismic-related landslides are located in the higher-elevation portions of the Town. Working Group on California Earthquake Probabilities predicts that the probability that an earthquake will occur in the San Francisco region within the next 30 years (2025-2055) is:

- 72 percent probability that an earthquake measuring magnitude 6.7 will occur;
- 51 percent probability that an earthquake measuring magnitude 7.0 will occur; and

- 20 percent probability that an earthquake measuring magnitude 7.5 will occur.[5]

All projects accommodated by the 2045 General Plan would be required to comply with the provisions of the CBSC, which requires development projects to perform geotechnical investigations in accordance with state law, engineer improvements to address potential seismic and ground failure issues, and use earthquake-resistant construction techniques to address potential earthquake loads when constructing buildings and improvements. As future development and infrastructure projects are considered by the Town, each project will be evaluated on a project-by-project basis for conformance with the CBSC, General Plan, Zoning Ordinance, and other regulations. Subsequent development and infrastructure would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. In addition to the requirements associated with the CBSC and the Municipal Code, the General Plan includes policies and actions to address potential impacts associated with seismic activity.

Development proposals would be reviewed to ensure compliance with California Health and Safety Code Section 19100 et seq. (Earthquake Protection Law), which requires that buildings be designed to resist stresses produced by natural forces such as earthquakes and wind. The General Plan Policy S-B.1 would require that new development and redevelopment meet the most up-to-date seismic codes/regulations and use methods of construction to withstand stress caused by an earthquake, while Action S-B.1.a would require all new building plans or substantial renovations to be reviewed for compliance with current State and federal seismic safety regulations prior to permit approval. Policy S-B.3, as well as its related actions, requires the maintenance and improvement of structures potentially vulnerable to seismic hazards. Furthermore, Policy S-C.1 minimizes the potential for landslide and geologic hazards for developments in areas of slop instability or steep topography, as well as mitigating landslides and steep slopes as part of the development process. Policy S-C.2 protects the community from hazards associated with soil erosion, weak and expansive soils, and liquefaction through actions including Action S-C.2.a, which enforces building codes and relevant legislation on all new development and redevelopment; and Action S-C.2.b, which establishes a periodic inspection and maintenance program for existing slope improvements.

All future projects are subject to CEQA review to address seismic safety issues and provide adequate mitigation for existing and potential hazards identified. With the implementation of the policies and actions in the General Plan, as well as applicable State and Town codes, impacts associated with a seismic event, including rupture of an earthquake fault, seismic ground shaking, liquefaction, and landslides would be **less than significant**.

Impact 3.7-2: General Plan implementation has the potential to result in substantial soil erosion or the loss of topsoil. (Less than Significant)

The General Plan would allow development and improvement projects that could involve land clearing, mass grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project construction. Construction-related erosion could result

[5] Field, E.H., and 2014 Working Group on California Earthquake Probabilities, 2015, UCERF3: A new earthquake forecast for California's complex fault system: U.S. Geological Survey 2015–3009, 6 p., https://dx.doi.org/10.3133/fs20153009.

in the loss of nonrenewable topsoil and could adversely affect water quality in nearby surface waters.

As identified by the NRCR Web Soil Survey, the erosion factor Kf varies from 0.28 to 0.32, which is considered a low to moderate potential for erosion. The NRCS does not provide erosion factors for the urban land soils in the Town.

As future development and infrastructure projects resulting from implementation of the 2045 General Plan are considered by the Town, each project will be evaluated on a project-by-project basis for conformance with the CBSC, General Plan, Zoning Ordinance, and all other applicable regulations. In addition to compliance with Town standards and policies, the RWQCB will require a project specific Storm Water Pollution Prevention Plan (SWPPP) to be prepared for each project that disturbs an area of one acre or larger. The SWPPPs will include project-specific best management practices (BMPs) that are designed to control drainage and erosion. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA.

The 2045 General Plan contains a range of policies and actions, including Policies S-C.1, S-C.2, S-C.3 and Actions S-C.2.a and S-C.2.b, ensuring that new development on unstable slopes is designed to avoid potential soil creep and debris flow hazards. With the implementation of the policies and actions in the 2045 General Plan, as well as applicable state and Town requirements, potential impacts associated with erosion and loss of topsoil would be **less than significant**.

Impact 3.7-3: General Plan implementation has the potential to result in development located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse. (Less than Significant)

Development allowed under the General Plan could result in the exposure of people and structures to conditions that have the potential for adverse effects associated with ground instability or failure. Soils and geologic conditions in the San Anselmo Planning Area have the potential for landslides, lateral spreading, subsidence, liquefaction, or collapse. Each are discussed below:

Landslide: The landslide potential is relatively low in the central and southeastern portion of the Town, where elevation change is relatively low. However, the landslide potential increases in the northern, eastern, and southwestern portions of the Town, which contain areas with increased elevation change and steep slopes.

Lateral Spreading: The greatest potential for lateral spreading in the Planning Area is in the flat and creek-adjacent areas of town, including the downtown, areas surrounding Center Boulevard, the Brookside neighborhood, and Sleepy Hollow. These areas may spread if open banks or unsupported cut slopes are inundated with floodwaters.

Subsidence: Drainage sufficient to create subsidence is uncommon within the Town, and subsidence in the Planning Area is not a significant issue.[6]

Liquefaction: Liquefaction typically requires a significant sudden decrease of shearing resistance in cohesionless soils and a sudden increase in water pressure, which is typically associated with an earthquake of high magnitude. Figure 3.7-3 shows liquefaction seismic hazard zones mapped within the Town, which delineates areas where liquefaction may occur during a strong earthquake. Areas along major transportation corridors, streambanks, and valley floors near creeks in San Anselmo, including the downtown, areas surrounding Center Boulevard, the Brookside neighborhood, and Sleepy Hollow, could be subject to liquefaction during or after an earthquake.

Collapse: Soil collapse and differential settlement of structures typically occurs when heavily irrigated landscape areas are near a building foundation. Examples of common problems associated with collapsible soils include tilting floors, cracking or separation in structures, sagging floors, and nonfunctional windows and doors. Collapsible soils have not been identified in the Planning Area as an issue. However, in areas subject to potential liquefaction, the potential for liquefaction-induced settlement is present.

Policies and actions in the proposed 2045 General Plan would reduce the potential for structures in the Planning Area to be affected by unstable geologic soils. As future development and infrastructure projects accommodated by the 2045 General Plan are considered by the Town, each project will be evaluated on a project-by-project basis for conformance with the CBSC, the General Plan, Zoning Ordinance, and other regulations. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Future development and improvement projects would be required to have a specific geotechnical study prepared and incorporated into the improvement design, consistent with the requirements of CBSC Section 1803, Geotechnical Reports. In addition to the requirements associated with the CBSC and the Municipal Code, the 2045 General Plan includes policies and actions, such as Policies S-B.3, S-C.1, S-C.2, and S-C.3, and Actions S-B.3.a, S-B.3.b, S-C.2.a, and S-C.2.b, to ensure that development projects located in areas of steep slopes, unstable soils, or other areas of geologic or seismic risks by requiring a geotechnical review, addressing potential geologic hazards, evaluating at-risk buildings and infrastructure for potential risks, and completing site-specific studies for areas subject to liquefaction. With the implementation of the policies and actions in the General Plan, as well as conformance with applicable federal, state and Town codes, impacts associated with ground instability or failure would be **less than significant**.

[6] Lund, J. (2015) "San Francisco Bay-Delta: Ground Zero for California water challenges – risks and water resources." Hendry Hydraulic Engineering Repository. Page 7.

Impact 3.7-4: General Plan implementation has the potential to result in development on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property. (Less than Significant)

Expansive soil properties can cause substantial damage to building foundations, piles, pavements, underground utilities, and/or other improvements. Structural damage, such as warping and cracking of improvements, and rupture of underground utility lines, may occur if the expansive potential of soils is not considered during the design and construction of all improvements.

Linear extensibility is a method for measuring expansion potential. The expansion potential is low if the soil has a linear extensibility of less than three percent; moderate if three to six percent; high if six to nine percent; and very high if more than 9 percent. If the linear extensibility is more than three percent, shrinking and swelling can cause damage to buildings, roads, and other structures and to plant roots, and special design considerations would commonly be needed.

According to the NRCS Web Soil Survey, the soils in the Planning Area soils vary from a low shrink-swell potential to a moderate shrink-swell potential. The portions of the Planning Area that have a moderate potential are located in the neighborhood north of Red Hill Avenue.

The Safety Element of the 2045 General Plan establishes policies that are designed to protect from geologic hazards, including expansive soils. Consistency with the General Plan policies will require identification of geologic hazards and risk inventory of existing at-risk buildings and infrastructure. As required by the CBSC and various General Plan policies and actions, including Policies S-C.2 and S-C.3 and Action S-C.2.a, building codes and relevant legislation will continue to be enforced on all new development and redevelopment. A periodic inspection and maintenance program will be established for existing slope improvements, as required by Action S-C.2.b. All new development and redevelopment will be required to include proper foundation and support in areas of potential instability.

As future development and infrastructure projects accommodated by the 2045 General Plan are considered by the Town, each project will be evaluated on a project-by-project basis for conformance with the CBSC, General Plan, Zoning Ordinance, and other applicable regulations. Subsequent development and infrastructure projects would also be analyzed for environmental impacts, consistent with the requirements of CEQA.

Design criteria and specifications set forth in design-level geotechnical investigations will ensure impacts from problematic or potentially expansive soils are minimized. Therefore, this impact is considered **less than significant**.

Impact 3.7-5: General Plan implementation does not have the potential to have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water. (Less than Significant)

Sewer services in the Planning Area are provided by Ross Valley Sanitary District (RVSD). RSVD maintains and owns the local sewage collection system that serves the Town's municipal users and the Town's wastewater is conveyed to Central Marin Sanitation Agency (CMSA) facilities for treatment. CMSA serves 11 sanitation districts in Marin County, including the RVSD that serves the Town of San Anselmo, and owns and operates the collection system that serves the Ross Valley area. CMSA provides wastewater treatment and owns and operates the regional interceptors and the sewage treatment plant located off Andersen Drive in San Rafael. The CMSA wastewater treatment plant (WWTP), located in San Rafael, has a 30.5 square mile service area with an average wastewater flow of 9 million gallons per day.

All new wastewater generated from future development resulting from implementation of the General Plan will be collected by the municipal wastewater system in San Anselmo and transmitted to the CMSA WWTP for treatment. There will be no septic tanks or alternative wastewater disposal systems utilized for new development anticipated under implementation of the 2045 General Plan. Therefore, this impact is considered **less than significant**.

Impact 3.7-6: General Plan implementation has the potential to directly or indirectly destroy a unique paleontological resource or site or unique geologic feature. (Less than Significant)

Significant paleontological resources are determined to be fossils or assemblages of fossils that are unique, unusual, rare, uncommon, or diagnostically important. Significant fossils can include remains of large to very small aquatic and terrestrial vertebrates or remains of plants and invertebrate animals previously not represented in certain portions of the stratigraphy. Assemblages of fossils that might aid stratigraphic correlation, particularly those offering data for the interpretation of tectonic events, geomorphologic evolution, and paleoclimatology are also critically important.

According to the University of California, Berkeley, Marin County has approximately 369 paleontological sites.[7] Many of those resources are located near the coastline, at Dillon Beach, Point Reyes, Stinson Beach, Bolinas, and other locales. Although paleontological resources may be present throughout Marin County due to the types of soils present, resources have not been located in San Anselmo.

Similar to archaeological resources, paleontological resources could be uncovered during ground-disturbing activities associated with implementation of the General Plan 2045. Action OSC-C.1.c requires that ground-disturbing activities cease within 50 feet of a previously undiscovered, suspected historic, cultural, tribal cultural, or archaeological resource if such a resource is

[7] UC Museum of Paleontology Localities. Marin County. Available: https://ucmpdb.berkeley.edu/loc.html. Accessed: May 14, 2026.

encountered, allowing a qualified professional to evaluate the find before work resumes. Consistent with this approach, if a previously undiscovered paleontological resource is encountered during construction, ground-disturbing work in the vicinity of the find would stop until a qualified paleontologist has evaluated the discovery. Depending on the findings, appropriate next steps may include specimen recovery, continued monitoring, or curation of significant fossils at an accredited repository, consistent with Society of Vertebrate Paleontology (SVP) standards. This inadvertent-discovery procedure, together with project-level CEQA review of future development under the General Plan, which would identify site-specific paleontological sensitivity and any warranted monitoring, would reduce the potential for loss of significant paleontological resources.

Implementation of the General Plan 2045 policies and actions would ensure steps would be taken to reduce impacts to paleontological resources in the event that they are discovered during construction. This impact would be **less than significant**.

Impact 3.7-7: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to geology, soils, or seismicity. (Less than Significant)

The geographic context for impacts to geological, soils, or paleontological resources is Marin County. Seismic-related impacts tend to affect larger geographies; therefore, the area considered for cumulative impacts of a seismic event is the state of California.

A significant cumulative impact to geological, soils, or paleontological resources could occur if the proposed Project, in conjunction with other reasonably foreseeable projects in the area, results in indirect impacts that adversely affect geology or soils in the region. Grading, excavation, removal of vegetation cover, and loading activities associated with construction activities could all result in indirect impacts that could include temporarily increased runoff, erosion, and sedimentation. In addition, other geologic risks such as liquefaction, landsliding, lateral spreading, and soil expansion are present within the area. A significant cumulative impact to seismicity could occur if a seismic event results in adverse effects in the area, including strong ground shaking and seismic-related ground failure.

Marin County has developed a comprehensive and mutually reinforcing framework of regulatory, legal, and hazard mitigation mechanisms designed to prevent adverse impacts to geological, soils, and paleontological resources, as well as reduce or eliminate long-term risk to people and property from the effects of local seismic events. This includes many federal and state regulations.

At the Federal level, regarding impacts to geology and soils, the Earthquake Hazards Reduction Act of 1977 (42 USC, 7701 et seq.) requires the establishment and maintenance of an earthquake hazards reduction program by the federal government; furthermore, International Building Code (IBC) standards address foundation design, shear wall strength, and other structurally related conditions. Through the California Building Standards Code (CBSC), the State provides a minimum standard for building design and construction. The CBSC contains specific requirements for seismic safety, excavation, foundations, retaining walls, and site demolition. It also regulates grading activities, including drainage and erosion control. Additionally, Public Resources Code (PRC) Section

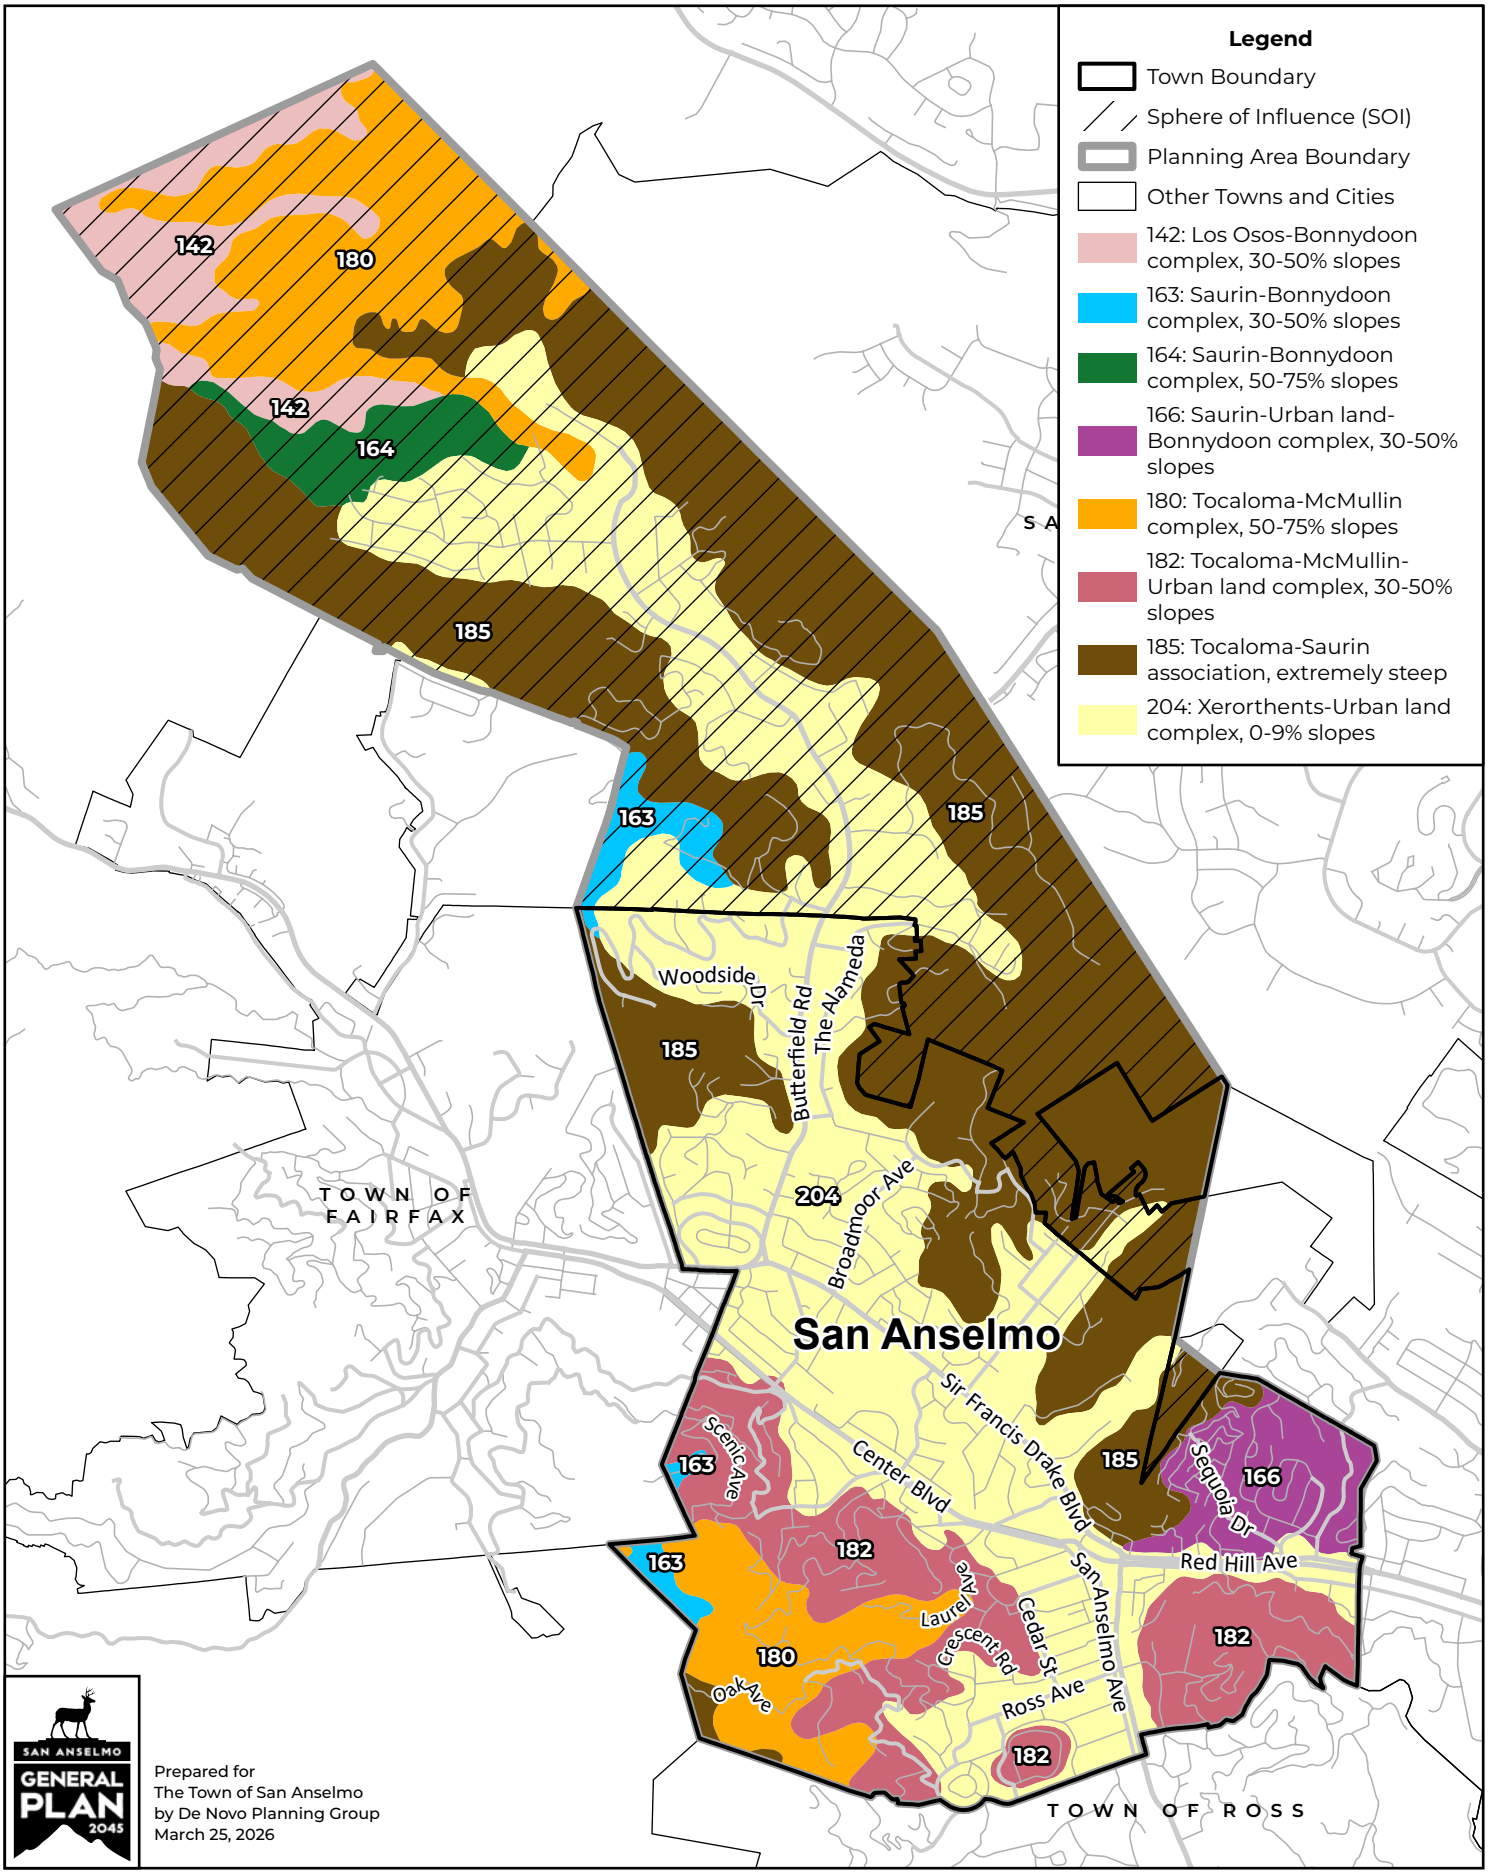

5097.5 prohibits "knowing and willful" excavation, removal, destruction, injury, and defacement of any "vertebrate paleontological site, including fossilized footprints," on public lands, except where the agency with jurisdiction has granted express permission. PRC Section 30244 requires reasonable mitigation for impacts on paleontological resources that occur as a result of development on public lands.

Regarding seismic-related impacts, the Alquist-Priolo Earthquake Fault Zoning Act of 1972 sets forth the policies and Criteria of the State Mining and Geology Board, which governs the exercise of governments' responsibilities to prohibit the location of developments and structures for human occupancy across the trace of active faults. In addition to this regulatory structure, Marin County has developed the Marin Multi-Jurisdictional Hazard Mitigation Plan (MJHMP),[8] which helps guide and coordinate mitigation activities and decisions for local land use policy. The Marin MJHMP describes the topography, risk factors, and potential hazards specific to the Town of San Anselmo.[9] The potential for earthquakes and landslides are described, and risks to the Town's social structure as well as critical infrastructure is disclosed. Mitigation strategies particular to each of the identified hazards are presented.

While some cumulative impacts will occur in the region as individual projects are constructed, adherence to local, state, and federal regulations will reduce the risk to people in the region. Considering the regulatory protections and development requirements by local, state, and federal agencies and their requirements for seismic design, the overall cumulative impact would be **less than significant**.

SHRINK-SWELL POTENTIAL OF SOILS

This section discusses regional greenhouse gas (GHG) emissions, climate change, and energy impacts that could result from future implementation of the General Plan 2045. This section provides a background discussion of GHGs and climate change linkages and effects of global climate change. This section also provides background discussion on energy use in San Anselmo. This section is organized with an existing setting, regulatory setting, approach/methodology, and impact analysis.

The analysis and discussion of the GHG, climate change, and energy impacts in this section focuses on the General Plan 2045's consistency with local, regional, statewide, and federal climate change and energy conservation planning efforts and discusses the context of these planning efforts as they relate to the proposed project. Disclosures of the estimated energy usage and GHG emissions due to implementation of the General Plan 2045 are provided.

Emissions of GHGs are cumulative by nature, and as such, they have the potential to adversely affect the environment in a cumulative context. The emissions from a single project will not cause global climate change; however, GHG emissions from multiple projects throughout the world could result in a cumulative impact with respect to global climate change. Therefore, the analysis of GHGs and climate change are presented in terms of the proposed project's contribution to cumulative impacts and the potential for resulting cumulatively considerable impacts related to GHGs and climate change.

There were no comments received during the NOP comment period regarding GHGs. All NOP comments are included in Appendix A.

3.8.1 ENVIRONMENTAL SETTING

GREENHOUSE GASES AND CLIMATE CHANGE LINKAGES

Various gases in the Earth's atmosphere, classified as atmospheric GHGs, play a critical role in determining the Earth's surface temperature. Solar radiation enters Earth's atmosphere from space, and a portion of the radiation is absorbed by the Earth's surface. The Earth emits this radiation back toward space, but the properties of the radiation change from high-frequency solar radiation to lower-frequency infrared radiation.

Naturally occurring greenhouse gases include water vapor, carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and ozone. Several classes of halogenated substances that contain fluorine, chlorine, or bromine are also GHGs, but they are, for the most part, solely a product of industrial activities. Although the direct GHGs CO_2, CH_4, and N_2O occur naturally in the atmosphere, human activities have changed their atmospheric concentrations. From the pre-industrial era (i.e., ending about 1750) to 2019, concentrations of these three GHGs have increased globally by 47, 156, and 23 percent, respectively.[1]

GHGs, which are transparent to solar radiation, are effective in absorbing infrared radiation. As a result, this radiation that otherwise would have escaped back into space is now retained, resulting

[1] Intergovernmental Panel on Climate Change. 2023. "Climate Change 2023 Synthesis Report." Available at: https://www.ipcc.ch/report/ar6/syr/downloads/report/IPCC_AR6_SYR_LongerReport.pdf.

in a warming of the atmosphere. This phenomenon is known as the greenhouse effect. Among the prominent GHGs contributing to the greenhouse effect are (CO_2) CH_4, ozone, water vapor, N_2, and chlorofluorocarbons (CFCs).

Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. In California, the transportation sector is the largest emitter of GHGs, followed by the industrial and electricity generation sectors[2].

As the name implies, global climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants, which are pollutants of regional and local concern, respectively. California produced 369 million gross metric tons of carbon dioxide equivalents ($MMTCO_2e$) in 2020.[3]

CO_2 equivalents are a measurement used to account for the fact that different GHGs have different potential to retain heat in the atmosphere and contribute to the greenhouse effect. This potential, known as the global warming potential of a GHG, is also dependent on the lifetime, or persistence, of the gas molecule in the atmosphere. Expressing GHG emissions in CO_2 equivalents takes the contribution of all GHG emissions to the greenhouse effect and converts them to a single unit equivalent to the effect that would occur if only CO_2 were being emitted.

Consumption of fossil fuels in the transportation sector was the single largest source of California's GHG emissions in 2020, accounting for 38 percent of total GHG emissions in the state. This category was followed by the industrial sector (23 percent), the electricity generation sector (including both in-state and out-of-state sources) (16 percent), the agriculture and forestry sector (nine percent), the residential energy consumption sector (eight percent), and the commercial energy consumption sector (six percent).[4]

EFFECTS OF GLOBAL CLIMATE CHANGE

The effects of increasing global temperature are far-reaching and extremely difficult to quantify. The scientific community continues to study the effects of global climate change. The California Fourth Climate Change Assessment (published in 2018)[5] provides the latest assessment of state-mandated scientific reports that evaluate the past, present, and future impacts of climate change on California's environment, economy, and communities. Unlike earlier assessments that focused primarily on global models, the Fourth Assessment downscaled data to assess vulnerabilities in California's infrastructure, communities, and natural systems.

[5] Governor's Office of Planning and Research, State of California Energy Commission, and California Natural Resources Agency. California's Fourth Climate Change Assessment. 2018. Available at: https://climateassessment.ca.gov/

A synopsis of its key findings across major sectors reveals the following:

1. Temperature Increases
   By 2100 average annual maximum daily temperature is projected to increase by 5.6°-8.8° depending on GHG reductions. The greatest increase is seen with business-as-usual emission levels where additional GHG reduction measures are not undertaken.

2. Water
   By 2100, water supply from snowpack is projected to decline by two-thirds. Water management practices in California face growing challenges from continued climate change and extreme weather. Promising technical adaptation options to reduce these negative water supply impacts include the use of hydrological forecasts, groundwater storage, and better measurements of the snowpack. There would also be impacts to agriculture and that by 2050, under certain precipitation conditions, a study estimates California's agricultural production could face climate-related water shortages of up to 16 percent in certain regions.

3. Wildfire
   By 2100, if greenhouse gas emissions continue to rise, one study found that the frequency of extreme wildfires would increase, and the average area burned statewide would increase by 77 percent. In the areas that have the highest fire risk, wildfire insurance is estimated to see costs rise by 18 percent by 2055. A Fourth Assessment review of forest health literature provides further scientific backing to the state's Forest Carbon Plan to increase forest restoration and treatment, such as prescribed fire, to an average of 35,000 acres a year by 2020.

4. Sea Level Rise
   31 to 67 percent of Southern California beaches may completely erode by 2100 without large-scale human interventions. $17.9 billion worth of residential and commercial buildings could be inundated statewide by sea level rise by 2050, with a projected 50 cm (~20 in) of sea level rise. A 100-year coastal flood, on top of this level of sea level rise, would almost double these costs.

   The Fourth Assessment funded a study providing technical guidance on design and implementation of natural infrastructure, such as the use of vegetated dunes, marsh sills, and native oyster reefs, for adaptation to sea-level rise. Without implementation of protective measures, airports in major urban areas such as San Francisco, Oakland, and San Diego will be susceptible to major flooding from a combination of sea-level rise and storm surge by 2040-2080. San Francisco airport is already at risk of flooding from storm surge. The miles of highways susceptible to coastal flooding in a 100-year storm event will triple from current levels to 370 miles by 2100, and with over 3,750 miles exposed to temporary flooding. Caltrans is currently conducting climate vulnerability assessments to address these and other impacts, to ultimately develop climate adaptation strategies for each of its 12 districts across the state.

5. Communities and Impacts to Public Health
   By 2050 heat waves in cities could cause 2-3 times more heat-related deaths with vulnerable populations experiencing the worst of these effects. Heat-Health Events (HHEs), which predict risk to populations vulnerable to heat, will worsen drastically throughout the state: by mid-century, the Central Valley is projected to experience average HHEs that are two weeks longer, and HHEs could occur 4 to 10 times more often in the Northern Sierra region.

6. Impacts to Energy
   Hotter temperatures will increase annual electricity demand for homes, driven mainly by the increased use of air conditioning units. However, increases in peak hourly demand during the hot months of the year could be more pronounced than changes in annual demand. This is a critical finding, because electricity-generating capacity must match peak electricity demand. California's Public Utilities Commission (CPUC) recently issued an Order Instituting Rulemaking to consider strategies and guidance for climate adaptation for electric and natural gas utilities, which will be informed by the Fourth Assessment.

7. Governance
   Climate change also presents a series of governance-related challenges for public agencies. One study surveyed local governments in California and found that while a lack of funding was identified as the most significant perceived barrier to climate adaptation, insufficient staff resources and capacity was identified as the second greatest perceived challenge among those surveyed. Uncertainty related to climate projections was one of the lowest ranked barriers. Because organizational barriers and governance challenges can delay and even prevent local governments from taking action, another study developed an "Adaptation Capability Advancement Toolkit." The Toolkit allows local governments to assess their capabilities to overcome organizational barriers, and to identify key actions and resources for increasing their capability to undertake climate change adaptation. In addition to these studies, the regional reports provide insight into regionally-specific governance challenges and, similarly, the topical reports highlight governance issues faced by tribes and environmental justice communities, as well as issues specific to California's ocean and coast.

GREENHOUSE GAS EMISSIONS IN SAN ANSELMO

GHG Emissions Inventories

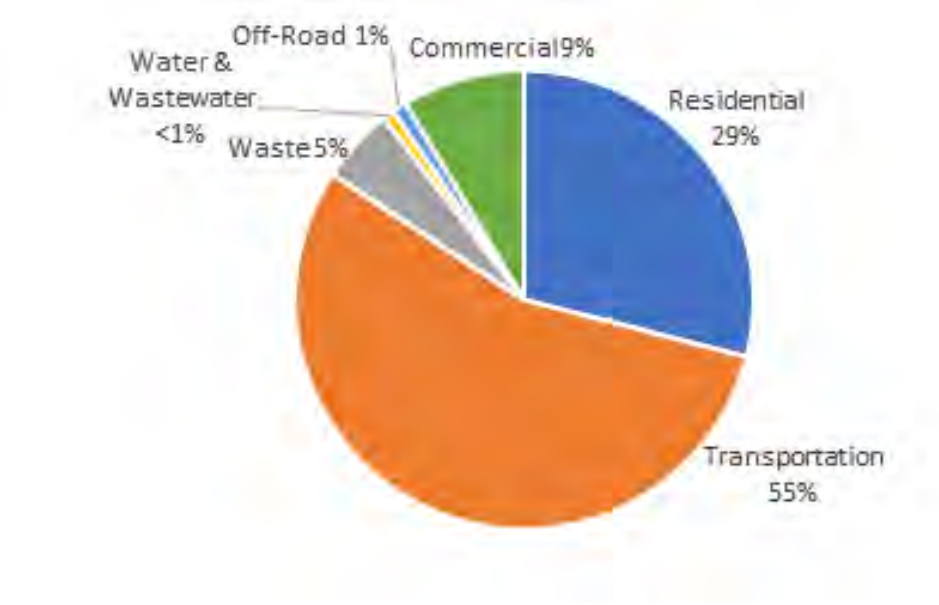

The Town of San Anselmo has developed emissions inventories as part of its Climate Action Plan 2030 (CAP). San Anselmo prepares an annual community-wide GHG inventory to track emissions in the following sectors:

- Transportation
- Residential energy use
- Commercial energy use
- Waste

- Water and wastewater
- Off-road vehicles and equipment

As shown in **Figure 3.8-1**, the majority of emissions come from vehicle trips generated by residents and related to commercial use. The Town generated 80,425 metric tons of carbon dioxide equivalents (MTCO2e; includes CO2 and other warming GHG) in 2005. By 2016, emissions had dropped to 60,769 MTCO2e, a 24% reduction. This is well below the state and locally-adopted target for San Anselmo, which is 15% below baseline (2005) emissions by 2020. While emissions declined in almost all sectors, the largest reductions were due to energy conservation and efficiency, a reduction in the carbon intensity of electricity, a decline in vehicle miles traveled, and improvements to vehicle fuel efficiency. Emissions from Town operations, which make up less than 1% of community-wide emissions, fell 18% by 2016.[6]

FIGURE 3.8-1: COMMUNITY EMISSIONS BY SECTOR, 2016

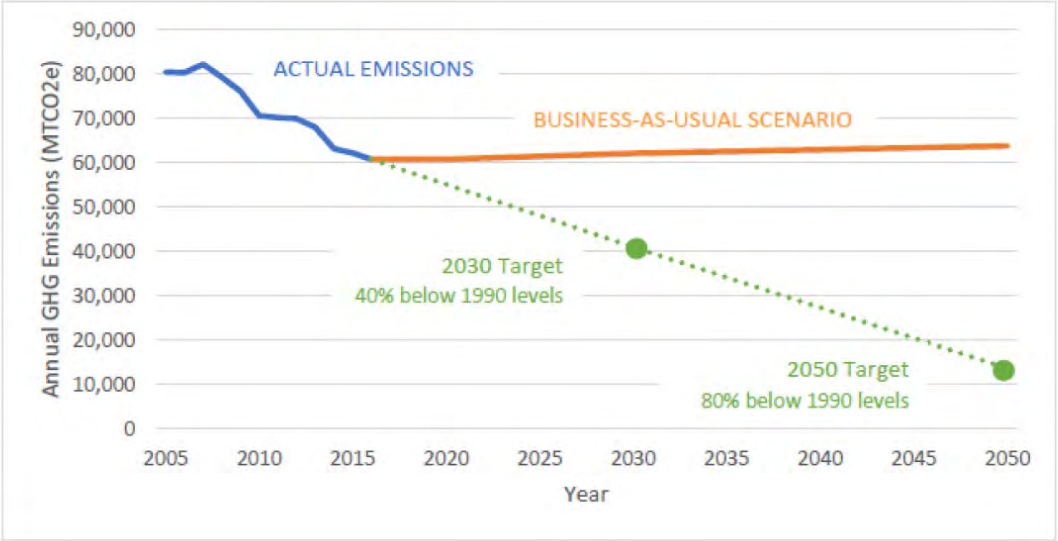

SOURCE: FIGURE 1, TOWN OF SAN ANSELMO CLIMATE ACTION PLAN 2030.

The CAP establishes targets similar to the State of California's goals. The Town's goal has a 54% GHG emissions reduction target by the year 2030 from a 2005 baseline (45% below 1990 levels) and 80% below 1990 levels by 2050. This results in emissions dropping by 41,020 MTCO2e by 2030 and 13,670 MTCO2e by 2050. The CAP lays out measures that will exceed the 2030 target and a trajectory to meet the 2050 goal. The community emissions trend, forecast and state targets are shown in **Figure 3.8-2**.

3.8.2 REGULATORY SETTING

FEDERAL

Clean Air Act

The Federal Clean Air Act (FCAA) was first signed into law in 1970. In 1977, and again in 1990, the law was substantially amended. The FCAA is the foundation for a national air pollution control effort, and it is composed of the following basic elements: NAAQS for criteria air pollutants, hazardous air pollutant standards, state attainment plans, motor National Ambient Air Quality Standards (NAAQS) vehicle emissions standards, stationary source emissions standards and permits, acid rain control measures, stratospheric ozone protection, and enforcement provisions.

The U.S. Environmental Protection Agency (USEPA) is responsible for administering the FCAA. The FCAA requires the USEPA to set NAAQS for several problem air pollutants based on human health and welfare criteria.

On April 2, 2007, in the case of *Massachusetts et al. vs. the USEPA et al*. (549 U.S. 497), the U.S. Supreme Court found that GHGs are air pollutants covered by the FCAA (42 USC Sections 7401-7671q). The U.S. Supreme Court held that the USEPA Administrator must determine whether or not emissions of GHGs from new motor vehicles cause or contribute to air pollution, which may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. In making these decisions, the USEPA Administrator is

required to follow the language of Section 202(a) of the FCAA. On December 7, 2009, the USEPA Administrator signed two distinct findings regarding GHGs under Section 202(a) of the FCAA:

- Endangerment Finding: The USEPA Administrator found that the current and projected concentrations of the six key well-mixed GHGs (carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride) in the atmosphere threaten the public health and welfare of current and future generations.

- Cause or Contribute Finding: The USEPA Administrator found that the combined emissions of these well-mixed GHGs from new motor vehicles and new motor vehicle engines contribute to the GHG pollution, which threatens public health and welfare.

These findings do not themselves impose any requirements on industry or other entities. However, the findings were a prerequisite for implementing GHG emission standards for vehicles. In collaboration with the National Highway Traffic Safety Administration (NHTSA) and CARB, the USEPA developed emission standards for light-duty vehicles (2012-2025 model years), and heavy-duty vehicles (2014-2027 model years).

Energy Policy and Conservation Act

The Energy Policy and Conservation Act of 1975 sought to ensure that all vehicles sold in the U.S. would meet certain fuel economy goals. Through the Energy Policy and Conservation Act, Congress established the first fuel economy standards for on-road motor vehicles in the U.S. Pursuant to the Energy Policy and Conservation Act, the NHTSA, which is part of the U.S. Department of Transportation (USDOT), is responsible for establishing additional vehicle standards and for revising existing standards.

The US Department of Transportation sets the fuel economy standards for vehicles in the US. In 2024, fuel economy will increase 2% per year for model years 2027-2031 for passenger cars, while light trucks will increase 2% per year for model years 2029-2031. These increases will bring the average light-duty vehicle fuel economy up to approximately 50.4 miles per gallon by model year 2031. Heavy-duty pickup truck and van fuel efficiency will increase 10% per year for model years 2030-2032 and 8% per year for model years 2033-2035. This will result in a fleetwide average of approximately 35 miles per gallon by model year 2035.[7] The Corporate Average Fuel Economy (CAFE) program, which is administered by the USEPA, was created to determine vehicle manufacturers' compliance with the fuel economy standards. The USEPA calculates a CAFE value for each manufacturer based on city and highway fuel economy test results and vehicle sales. Based on the information generated under the CAFE program, the USDOT is authorized to assess penalties for noncompliance.

Energy Policy Act of 1992 (EPAct)

The Energy Policy Act of 1992 (EPAct) was passed to reduce the country's dependence on foreign petroleum and improve air quality. EPAct includes several parts intended to build an inventory of

[7] US Department of Transportation. "USDOT Finalizes New Fuel Economy Standards for Model Years 2027-2031". June 7, 2024. Available at: https://www.nhtsa.gov/press-releases/new-fuel-economy-standards-model-years-2027-2031

alternative fuel vehicles (AFVs) in large, centrally fueled fleets in metropolitan areas. EPAct requires certain federal, state, and local government and private fleets to purchase a percentage of light duty AFVs capable of running on alternative fuels each year. In addition, financial incentives are included in EPAct. Federal tax deductions will be allowed for businesses and individuals to cover the incremental cost of AFVs. States are also required by the act to consider a variety of incentive programs to help promote AFVs.

Energy Policy Act of 2005

The Energy Policy Act of 2005 was signed into law on August 8, 2005. Generally, the Energy Policy Act provides for renewed and expanded tax credits for electricity generated by qualified energy sources, such as landfill gas; provides bond financing, tax incentives, grants, and loan guarantees for a clean renewable energy and rural community electrification; and establishes a federal purchase requirement for renewable energy.

Federal Climate Change Policy

According to the USEPA, "the United States government has established a comprehensive policy to address climate change" that includes slowing the growth of emissions; strengthening science, technology, and institutions; and enhancing international cooperation. To implement this policy, "the Federal government is using voluntary and incentive-based programs to reduce emissions and has established programs to promote climate technology and science." The USEPA administers multiple programs that encourage voluntary GHG reductions, including "ENERGY STAR", "Climate Leaders", and Methane Voluntary Programs. However, as of this writing, there are no adopted federal plans, policies, regulations, or laws directly regulating GHG emissions.

Mandatory Greenhouse Gas Reporting Rule

In 2009, USEPA issued a final rule for mandatory reporting of GHGs from large GHG emissions sources in the U.S. In general, this national reporting requirement will provide USEPA with accurate and timely GHG emissions data from facilities that emit 25,000 metric tons or more of CO_2 per year. This publicly available data will allow the reporters to track their own emissions, compare them to similar facilities, and aid in identifying cost effective opportunities to reduce emissions in the future. Reporting is at the facility level, except that certain suppliers of fossil fuels and industrial GHGs along with vehicle and engine manufacturers will report at the corporate level. An estimated 85 percent of the total U.S. GHG emissions, from approximately 10,000 facilities, are covered by this final rule.

STATE

The California Legislature has enacted a series of statutes in recent years addressing the need to reduce GHG emissions statewide. These statutes can be categorized into four broad categories: (i) statutes setting numerical statewide targets for GHG reductions, and authorizing CARB to enact regulations to achieve such targets; (ii) statutes setting separate targets for increasing the use of renewable energy for the generation of electricity throughout the state; (iii) statutes addressing the carbon intensity of vehicle fuels, which prompted the adoption of regulations by CARB; and (iv) statutes intended to facilitate land use planning consistent with statewide climate objectives. The discussion below will address each of these key sets of statutes, as well as CARB "Scoping Plans"

intended to achieve GHG reductions under the first set of statutes and recent building code requirements intended to reduce energy consumption.

Statutes Setting Statewide GHG Reduction Targets

ASSEMBLY BILL 32 (GLOBAL WARMING SOLUTIONS ACT)

In 2006, the California State Legislature enacted the California Global Warming Solutions Act of 2006 (Health & Safety Code Section 38500 et seq.), also known as Assembly Bill (AB) 32 (Stats. 2006, ch. 488). AB 32 establishes regulatory, reporting, and market mechanisms to achieve quantifiable reductions in GHG emissions and a cap on statewide GHG emissions. AB 32 requires that statewide GHG emissions be reduced to 1990 levels by 2020. AB 32 directs CARB to develop and implement regulations to reduce statewide GHG emissions from stationary sources.

SENATE BILL 32

Senate Bill (SB) 32 (Stats. 2016, ch. 249) added Section 38566 to the Health and Safety Code. It provides that "[i]n adopting rules and regulations to achieve the maximum technologically feasible and cost-effective greenhouse gas emissions reductions authorized by [Division 25.5 of the Health and Safety Code], [CARB] shall ensure that statewide greenhouse gas emissions are reduced to at least 40 percent below the statewide greenhouse gas emissions limit no later than December 31, 2030." In other words, SB 32 requires California, by 2030, to reduce its statewide GHG emissions so that they are 40 percent below those that occurred in 1990.

EXECUTIVE ORDERS ESTABLISHING STATEWIDE GHG AND ZEV TARGETS

Between AB 32 (2006) and SB 32 (2016), the California Legislature has codified some of the GHG reduction targets included within Executive Orders issued by the last two Governors. The 2020 target in AB 32 reflected the second of three reduction milestones set in former Governor Schwarzenegger's 2005 Executive Order S-3-05, which AB 32 expressly references. (See Health & Safety Code Section 38501, subd. (i).) The 2010 and 2020 milestones of S-3-05 have passed, and its 2050 goal of 80 percent below 1990 levels has been overtaken by the carbon neutrality target now codified in AB 1279 (2022).

In 2022, the Legislature codified a statewide carbon neutrality target through AB 1279 (Stats. 2022, ch. 337), the California Climate Crisis Act (Health & Safety Code Section 38562.2). AB 1279 establishes as state policy that California achieve net zero greenhouse gas emissions as soon as possible, and no later than 2045, and that statewide anthropogenic GHG emissions be reduced to at least 85 percent below 1990 levels by 2045. AB 1279 places into statute the carbon neutrality goal previously expressed only in Executive Order B-55-18 (2018), which it supersedes for planning purposes, and directs CARB to identify and implement the measures necessary to achieve these targets.

As discussed above, the 2045 carbon neutrality target is now codified in AB 1279 (2022). Additional references to a 2050 target also appear in statutes outside the Health and Safety Code. SB 350 (Stats. 2015, ch. 547) added to the Public Utilities Code language that essentially puts into statute the 2050 GHG reduction target already identified in Executive Order S-3-05, albeit in the limited context of new state policies (i) increasing the overall share of electricity that must be produced through

renewable energy sources and (ii) directing certain state agencies to begin planning for the widespread electrification of the California vehicle fleet. Section 740.12(a)(1)(D) of the Public Utilities Code now states that "[t]he Legislature finds and declares [that] … [r]educing emissions of [GHGs] to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050 will require widespread transportation electrification." Furthermore, Section 740.12(b) now states that the California Public Utilities Commission (PUC), in consultation with CARB and the CEC, must "direct electrical corporations to file applications for programs and investments to accelerate widespread transportation electrification to reduce dependence on petroleum, meet air quality standards, … and reduce emissions of greenhouse gases to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050."

Statute Setting Target for the Use of Renewable Energy for the Generation of Electricity

CALIFORNIA RENEWABLES PORTFOLIO STANDARD

California's Renewables Portfolio Standard (RPS) mandates that all electricity retailers including publicly owned utilities, investor-owned utilities, electricity service providers, and community choice aggregators—procure 50 percent of their electricity from eligible renewable energy resources by 2030. Additionally, state policy promotes transportation electrification to reduce petroleum dependence and improve air quality. Building upon the foundation of the original RPS legislation, California has since enacted even more aggressive climate measures that expand the scope of the state's clean energy goals. Senate Bill 100 (the 100% Clean Energy Act of 2018) officially increased the 2030 RPS mandate from 50 percent to 60 percent and established a historic statewide planning target to source 100 percent of all retail electricity from renewable and zero-carbon resources by 2045. To ensure the state stays on track, Senate Bill 1020 (the Clean Energy, Jobs, and Affordability Act of 2022) added strict interim benchmarks to this trajectory, legally requiring renewable and zero-carbon resources to supply 90 percent of California's retail electricity by 2035 and 95 percent by 2040 on the way to a completely carbon-free grid by 2045.

Executive Order B-16-12 (2012), which set interim ZEV deployment and infrastructure targets, has been superseded by Executive Order N-79-20 (2020). Executive Order N-79-20 establishes a state goal that 100 percent of in-state sales of new passenger cars and light-duty trucks be zero-emission by 2035, and that medium- and heavy-duty vehicles transition to zero-emission where feasible by 2045. CARB implemented the passenger-vehicle goal through its Advanced Clean Cars II regulation (adopted 2022), which requires an increasing percentage of new light-duty vehicle sales to be zero-emission or plug-in hybrid, reaching 100 percent by 2035.

In 2018, SB 100 (Stats. 2018, ch. 312) revised the above-described deadlines and targets so that the state will have to achieve a 50 percent renewable resources target by December 31, 2026 (instead of by 2030) and achieve a 60 percent target by December 31, 2030. The legislation also establishes a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all state agencies by December 31, 2045.

In summary, California has set a statutory goal of requiring that, by 2030, 60 percent of the electricity generated in California should be from renewable sources, with increased generation capacity sufficient to allow the mass conversion of the statewide vehicle fleet from petroleum-fueled vehicles to electrical vehicles and/or other ZEVs. By 2045, all electricity must come from renewable resources and other carbon-free resources. Former Governor Brown established a goal for the state of achieving carbon neutrality as soon as possible and by no later than 2045. The Legislature is thus looking to California drivers to buy electric cars, powered by green energy, to help the state meet its aggressive statutory goal, created by SB 32, of reducing statewide GHG emissions by 2030 to 40 percent below 1990 levels. Another key prong to this strategy is to make petroleum-based fuels less carbon-intensive. A number of statutes in recent years have addressed that strategy. These are discussed immediately below.

Statutes and CARB Regulations Addressing the Carbon Intensity of Petroleum-based Transportation Fuels

ASSEMBLY BILL 1493, PAVLEY CLEAN CARS STANDARDS

In 2002, the California Legislature enacted Assembly Bill 1493 ("Pavley Bill") (Stats. 2002, ch. 200), which directed CARB to develop and adopt regulations that achieve the maximum feasible reduction of GHGs emitted by passenger vehicles and light-duty trucks beginning with model year 2009. (See Health and Safety Code Section 43018.5.) In September 2004, pursuant to this directive, CARB approved regulations to reduce GHG emissions from new motor vehicles beginning with the 2009 model year. These regulations created what are commonly known as the "Pavley standards." In September 2009, CARB adopted amendments to the Pavley standards to reduce GHG emissions from new motor vehicles through the 2016 model year. These regulations created what are commonly known as the "Pavley II standards." (See California Code of Regulations, Title 13, Sections 1900, 1961, and 1961.1 et seq.)

In 2012, CARB adopted an Advanced Clean Cars (ACC) program aimed at reducing both smog-causing pollutants and GHG emissions for vehicles model years 2017-2025. This historic program, developed in coordination with the USEPA and NHTSA, combined the control of smog-causing (criteria) pollutants and GHG emissions into a single coordinated set of requirements for model years 2015 through 2025. The regulations focus on substantially increasing the number of plug-in hybrid cars and ZEVs in the vehicle fleet and on making fuels such as electricity and hydrogen readily available for these vehicle technologies. The components of the ACC program are the Low-Emission Vehicle regulations that reduce criteria pollutants and GHG emissions from light- and medium-duty vehicles, and the ZEV regulation, which requires manufacturers to produce an increasing number of pure ZEVs (meaning battery electric and fuel cell electric vehicles), with provisions to also produce plug-in hybrid electric vehicles in the 2018 through 2025 model years. (See California Code of Regulations, Title 13, Sections 1900, 1961, 1961.1, 1961.2, 1961.3, 1965, 1968.2, 1968.5, 1976, 1978, 2037, 2038, 2062, 2112, 2139, 2140, 2145, 2147, 2235, and 2317 et seq.)

It is expected that the Pavley regulations will reduce GHG emissions from California passenger vehicles by about 34 percent below 2016 levels by 2025, all while improving fuel efficiency and reducing motorists' costs.

Cap and Trade Program

In 2011, CARB adopted the final cap-and-trade program for California (See CCR Title 17, Sections 95801-96022.) The California cap-and-trade program creates a market-based system with an overall emissions limit for affected sectors. The program is intended to regulate more than 85 percent of California's emissions and staggers compliance requirements according to the following schedule: (1) electricity generation and large industrial sources (2012) and (2) fuel combustion and transportation (2015).

According to 2012 CARB guidance, "[t]he Cap-and-Trade Program will reduce GHG emissions from major sources (covered entities) by setting a firm cap on statewide GHG emissions while employing market mechanisms to cost-effectively achieve the emission-reduction goals. The statewide cap for GHG emissions from major sources, which is measured in metric tons of carbon dioxide equivalent ($MTCO_2e$), will commence in 2013 and decline over time, achieving GHG emission reductions throughout the program's duration. Each covered entity will be required to surrender one permit to emit (the majority of which will be allowances, entities are also allowed to use a limited number of CARB offset credits) for each ton of GHG emissions they emit. Some covered entities will be allocated some allowances and will be able to buy additional allowances at auction, purchase allowances from others, or purchase offset credits."

The guidance continues to say that "[s]tarting in 2012, major GHG-emitting sources, such as electricity generation (including imports), and large stationary sources (e.g., refineries, cement production facilities, oil and gas production facilities, glass manufacturing facilities, and food processing plants) that emit more than 25,000 $MTCO_2e$ per year will have to comply with the Cap-and-Trade Program. The program expands in 2015 to include fuel distributors (natural gas and propane fuel providers and transportation fuel providers) to address emissions from transportation fuels, and from combustion of other fossil fuels not directly covered at large sources in the program's initial phase." In early April 2017, the Third District Court of Appeal upheld the lawfulness of the cap-and-trade program as a "fee" rather than a "tax."[8] AB 398 (Stats. 2017, ch. 135) extended the life of the existing Cap and Trade Program through December 2030.

Statute Intended to Facilitate Land Use Planning Consistent with Statewide Climate Objectives

CALIFORNIA SENATE BILL 375 (SUSTAINABLE COMMUNITIES STRATEGY)

SB 375 is 2008 legislation built on the foundation established by AB 32, by setting forth a mechanism for coordinating land use and transportation on a regional level for the purpose of reducing GHGs. The focus is to reduce miles traveled by passenger vehicles and light trucks. CARB is required to set GHG reduction targets for each metropolitan region for 2020 and 2035. Each of California's metropolitan planning organizations then prepares a sustainable communities strategy that demonstrates how the region will meet its GHG reduction target through integrated land use, housing, and transportation planning. Once adopted by the metropolitan planning organizations, the sustainable communities strategy is to be incorporated into that region's federally enforceable

[8] California Chamber of Commerce et al. v. State Air Resources Board et al. 2017. Available: https://oag.ca.gov/sites/all/files/agweb/pdfs/environment/cal-chamber-v-abr-3rd-dca-opinion.pdf

regional transportation plan. If a metropolitan planning organization is unable to meet the targets through the sustainable communities strategy, then an alternative planning strategy must be developed which demonstrates how targets could be achieved, even if meeting the targets is deemed to be infeasible.

Climate Change Scoping Plans

AB 32 SCOPING PLAN

On December 11, 2008, CARB adopted its *Climate Change Scoping Plan* (Scoping Plan), which functions as a roadmap of CARB's plans to achieve GHG reductions in California required by AB 32 through subsequently enacted regulations. The Scoping Plan contains the main strategies California will implement to reduce carbon dioxide-equivalent (CO_2e) emissions by 169 million metric tons (MMT), or approximately 30 percent, from the state's projected 2020 emissions level of 596 MMT of CO_2e under a business-as-usual scenario. (This is a reduction of 42 MMT CO_2e, or almost 10 percent, from 2002–2004 average emissions, but requires the reductions in the face of population and economic growth through 2020.) The Scoping Plan also breaks down the amount of GHG emissions reductions CARB recommends for each emissions sector of the state's GHG inventory. The Scoping Plan calls for the largest reductions in GHG emissions to be achieved by implementing the following measures and standards:

- improved emissions standards for light-duty vehicles (estimated reductions of 31.7 MMT CO_2e);
- the Low-Carbon Fuel Standard (15.0 MMT CO_2e);
- energy efficiency measures in buildings and appliances and the widespread development of combined heat and power systems (26.3 MMT CO_2e); and
- a renewable portfolio standard for electricity production (21.3 MMT CO_2e).

CARB updated the Scoping Plan in 2013 (*First Update to the Scoping Plan*) and again in 2017 (the *Final Scoping Plan*). The 2013 Update built upon the initial Scoping Plan with new strategies and recommendations, and also set the groundwork to reach the long-term goals set forth by the state. Successful implementation of existing programs (as identified in previous iterations of the Scoping Plan) has put California on track to meet the 2020 target. The 2017 Scoping Plan reflects the 2030 target of reducing statewide GHG emissions by 40 percent below 1990 levels codified by SB 32.

CARB adopted the 2022 version of the Scoping Plan (the Scoping Plan for Achieving Carbon Neutrality) on November 16, 2022. The 2022 Scoping Plan Update assesses progress toward the statutory 2030 target, while laying out a path to achieving carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on the following GHG reduction strategies to achieve the target and carbon neutrality include:

- Identification of a path to keep California on track to meet its SB 32 GHG reduction target of at least 40 percent below 1990 emissions by 2030.
- Identification of technologically feasible, cost-effective path to achieve carbon neutrality by 2045 and a reduction in anthropogenic emissions by 85 percent below 1990 levels.

- Focuses on strategies for reducing California's dependency on petroleum to provide consumers with clean energy options that address climate change, improve air quality, and support economic growth and clean sector jobs.
- Integration of equity and protecting California's most impacted communities as driving principles throughout the document.
- Incorporation of the contribution of natural and working lands (NWL) to the state's GHG emissions, as well as their role in achieving carbon neutrality.
- Reliance on the most up-to-date science, including the need to deploy all viable tools to address the existential threat that climate change presents, including carbon capture and sequestration, as well as direct air capture.
- Evaluation of the substantial health and economic benefits of taking action.
- Identification of key implementation actions to ensure success.

The 2022 Scoping Plan discusses how these strategies would be implemented on both a state and local level to achieve the GHG reduction targets.

Building Standards

CALIFORNIA ENERGY CODE

The California Energy Code (CCR Title 24, Part 6), which is incorporated into the Building Energy Efficiency Standards, was first established in 1978 in response to a legislative mandate to reduce California's energy consumption. Although these standards were not originally intended to reduce GHG emissions, increased energy efficiency results in decreased GHG emissions because energy efficient buildings require less electricity and thus less consumption of fossil fuels, which emit GHGs. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods.

The most recent Title 24 standards are the 2025 Title 24 standards. Buildings permitted on or after January 1, 2026, must comply with the 2025 Standards. The California Energy Commission updates the standards every three years. The CEC estimates that the 2025 Title 24 standards will reduce $4.8 billion in statewide energy cost savings over 30 years. When compared to the 2022 Title 24 standards, the 2025 update focuses on: expanding the use of electric heat pump technology for space conditioning and water heating; encouraging electric-ready buildings; updating space conditioning system control standards for nonresidential buildings; expanding solar photovoltaic (PV) system and battery storage standards; and strengthening ventilation standards to improve indoor air quality.

CALIFORNIA GREEN BUILDING STANDARDS CODE

The purpose of the California Green Building Standards Code (CalGreen) (CCR Title 24, Part 11) is to improve public health and safety and to promote the general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices in the following categories: 1) planning and design; 2) energy efficiency; 3) water efficiency and conservation; 4) material conservation and resource efficiency; and 5) environmental quality. CalGreen, which became effective on January 1, 2011, instituted mandatory minimum environmental performance

standards for all ground-up new construction of commercial, low-rise residential uses, and state-owned buildings, as well as schools and hospitals. The latest version of CalGreen is the 2025 CalGreen Code, which became effective on January 1, 2026. CalGreen includes both mandatory and voluntary standards for building standards. The mandatory standards require the following:

- 20 percent mandatory reduction in indoor water use relative to baseline levels;
- 65 percent construction/demolition waste must be diverted from landfills;
- 10 percent performance reduction on embodied carbon or strict global warming potential caps;
- Electric vehicle (EV) infrastructure percentages with specific proportion of physical parking spaces allocated for future or immediate zero-emission vehicle infrastructure such as EV capable spaces or charging stations;
- Mandatory inspections of energy systems to ensure optimal working efficiency; and
- Environmental Quality (Indoor Air & Pollutant Control) which includes low-pollutant emitting exterior and interior finish materials such as paints, carpets, vinyl flooring, and particle boards, moisture control for building materials to avoid mold, as well as indoor ventilation for kitchens and bathrooms.

The voluntary standards require the following:

- Tier 1 voluntary standards raise California's energy reduction by targeting early-adopter sustainability metrics that exceed the baseline code. To achieve Tier 1 status, nonresidential buildings must achieve a 5% to 10% reduction in energy consumption beyond standard energy codes, while large-scale projects must demonstrate a 15% reduction in their structural carbon footprint (GWP) or retain at least 75% of an existing building's structure. Additionally, Tier 1 enforces enhanced efficiency across other core sectors, requiring an increase of 12% to 30% reduction in indoor water use, increased construction waste diversion to 65%, and expanded electric vehicle (EV) parking allocations with a higher percentage of operational charging stations.

- Tier 2 voluntary standards requiring entirely all-electric infrastructure for residential projects—alongside a strict 20% overall reduction in building embodied carbon. Water and waste requirements are similarly maximized, forcing a 20% to 35% reduction in indoor water usage, up to an 80% construction waste diversion rate, and advanced greywater recycling compatibility. Furthermore, Tier 2 implements the state's most stringent thresholds for indoor chemical pollutant controls, mandatory MERV 13 or higher air filtration systems, and maximum EV infrastructure deployment.

LOCAL

Bay Area Air District (BAAD)

CLEAN AIR PLAN

The BAAD attains and maintains air quality conditions in the SFBAAB through a comprehensive program of planning, regulation, enforcement, technical innovation, and promotion of the understanding of air quality issues. The clean air strategy of the BAAD includes the preparation of plans for the attainment of ambient air quality standards, adoption and enforcement of rules and regulations concerning sources of air pollution, and issuance of permits for stationary sources of air pollution. The BAAD also inspects stationary sources of air pollution and responds to citizen complaints, monitors ambient air quality and meteorological conditions, and implements programs and regulations required by the FCAA, FCAAA, and the CCAA. For state air quality purposes, the Bay Area is classified as a serious nonattainment area of the 1-hour ozone standard. The "serious" classification triggers various plan submittal requirements and transportation performance standards. One such requirement is that the Bay Area update the Clean Air Plan every three years to reflect progress in meeting the air quality standards and to incorporate new information regarding the feasibility of control measures and new emission inventory data.

The *2017 Clean Air Plan: Spare the Air, Cool the Climate* (2017 Clean Air Plan) was adopted on April 19, 2019, by BAAD in cooperation with the MTC, the San Francisco Bay Conservation and Development Commission, and the Association of Bay Area Governments (ABAG). The 2017 Clean Air Plan describes a multi-pollutant strategy to simultaneously reduce emissions and ambient concentrations of ozone, fine particulate matter, toxic air contaminants, as well as greenhouse gases that contribute to climate change. The 2017 Clean Air Plan provides a regional strategy to protect public health and protect the climate. To protect public health, the 2017 Clean Air Plan describes how BAAD will continue our progress toward attaining all state and federal air quality standards and eliminating health risk disparities from exposure to air pollution among Bay Area communities. To protect the climate, the 2017 Clean Air Plan defines a vision for transitioning the region to a post-carbon economy needed to achieve ambitious GHG reduction targets for 2030 and 2050, and provides a regional climate protection strategy that will put the Bay Area on a pathway to achieve those GHG reduction targets.

The 2017 Clean Air Plan includes a wide range of control measures designed to decrease emissions of the air pollutants that are most harmful to Bay Area residents, such as particulate matter, ozone, and toxic air contaminants; to reduce emissions of methane and other "super-GHGs" that are potent climate pollutants in the near-term; and to decrease emissions of carbon dioxide by reducing fossil fuel combustion.

PRIORITY CLIMATE ACTION PLAN

The 2024 Priority Climate Action Plan (PCAP) is the first phase of the Bay Area Regional Climate Action Planning Initiative led by the BAAD. It serves as an early implementation-ready climate strategy for the San Francisco–Oakland–Berkeley region that targets near-term greenhouse gas (GHG) reductions and delivers benefits to frontline communities.

Purpose and Focus

- The PCAP's goal is to identify high-impact climate actions that can be put into practice immediately or in the near term to cut greenhouse gas emissions and improve air quality in the Bay Area.
- It builds on existing regional climate work and local plans to ensure the measures align with what cities and counties are already doing.
- The plan places particular emphasis on ensuring benefits for frontline and disadvantaged communities that face disproportionate pollution burdens.

Priority Sectors

The PCAP specifically focuses on two major sources of emissions in the region:

- Passenger vehicles – strategies to reduce transportation emissions.
- Residential buildings – actions aimed at reducing emissions from building energy use, including building decarbonization.

Core Components

The plan includes:

- A set of priority GHG reduction measures that are ready for early implementation.
- A regional greenhouse gas emissions inventory for priority sectors.
- Supporting analyses including emissions quantification, frontline community benefits, workforce planning, and engagement documentation.
- Development and Collaboration
- PCAP was developed with input from a regional Advisory Working Group composed of local governments, regional agencies, and community stakeholders.
- There was extensive engagement with local governments and communities, including working sessions and public workshops, to shape the measures and ensure they reflect local needs.

Next Steps and Relationship to Broader Planning

The PCAP serves as an early step toward a broader Comprehensive Climate Action Plan (CCAP), which will extend to all major economic sectors and offer a fuller blueprint for meeting long-term regional climate targets.

BAAD 2022 CEQA GUIDELINES

The BAAD 2022 CEQA Air Quality Guidelines (CEQA Guidelines) are the latest version of the BAAD's CEQA Guidelines and were prepared to assist in the evaluation of air quality impacts of projects and plans proposed within the Bay Area. The guidelines provide recommended procedures for evaluating potential air impacts during the environmental review process consistent with CEQA requirements including thresholds of significance, mitigation measures, and background air quality information. They also include assessment methodologies for air toxics, odors, and GHG emissions. In June 2010, the BAAD's Board of Directors adopted CEQA thresholds of significance and an update of its CEQA Air Quality Guidelines. In May 2011, the updated BAAD CEQA Air Quality Guidelines were amended to include a risk and hazards threshold for new receptors and modify procedures for assessing impacts related to risk and hazard impacts.

The thresholds were challenged in court. Following litigation in the trial court, the Court of Appeal, and the California Supreme Court, all of the thresholds were upheld. However, in an opinion issued on December 17, 2015, the California Supreme Court held that CEQA does not generally require an analysis of the impacts of locating development in areas subject to environmental hazards unless the project would exacerbate existing environmental hazards. The Supreme Court also found that CEQA requires the analysis of exposing people to environmental hazards in specific circumstances, including the location of development near airports, schools near sources of toxic contamination, and certain exemptions for infill and workforce housing. The Supreme Court also held that public agencies remain free to conduct this analysis regardless of whether it is required by CEQA.

In view of the Supreme Court's opinion, local agencies may rely on thresholds designed to reflect the impact of locating development near areas of toxic air contamination where such an analysis is required by CEQA or where the agency has determined that such an analysis would assist in making a decision about the project. However, the thresholds are not mandatory and agencies should apply them only after determining that they reflect an appropriate measure of a project's impacts.

The CEQA Air Quality Guidelines for implementation of the thresholds are for information purposes only to assist local agencies. Recommendations in the CEQA Air Quality Guidelines are advisory and should be followed by local governments at their own discretion. These Guidelines may inform environmental review for development projects in the Bay Area, but do not commit local governments or BAAD to any specific course of regulatory action.

Land use projects and plans have the potential to generate air pollutants (and precursors) that contribute to the degradation of regional air quality, increase the exposure of local populations to harmful pollutants, and contribute to climate change. The purpose of the BAAD's CEQA Guidelines is to assist lead agencies in evaluating air quality and climate impacts from proposed land use projects and plans in the San Francisco Bay Area Air Basin. The CEQA Guidelines include nonbinding recommendations for how a lead agency can evaluate, measure, and mitigate air quality and climate impacts generated from land use construction and operational activities.

The CEQA Guidelines do not replace the State CEQA Statute and Guidelines; rather, they are designed to provide BAAD-recommended procedures for evaluating potential air quality and climate impacts during the environmental review process that are consistent with CEQA requirements. The revised CEQA Air Quality Guidelines dated April 2022 include revisions to address the Supreme Court's opinion and supersede BAAD's previous CEQA Air Quality Guidelines published in May 2017.

The CEQA Guidelines establish both Project-Level and Plan-Level significance thresholds. Project-Level thresholds are for individual development projects. Plan-Level thresholds were developed to assist lead agencies with long-range local and regional plans. Local long-range plans are discretionary, program-level planning efforts, including general plans and their elements, specific plans, area and community plans, congestion management plans, and land or service area annexations. The following BAAD's Plan-Level threshold for climate impacts within the CEQA Guidelines are applied to the operations phase of the General Plan 2045:

1. Meet state's goals to reduce emissions to 40% below 1990 levels by 2030 and carbon neutrality by 2045; or
2. Be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b)

If a Project meets these thresholds, the BAAD considers climate related impacts from the General Plan 2045 update to result in less than significant greenhouse gas and climate change impacts.

JUSTIFICATION REPORT: CEQA THRESHOLDS FOR EVALUATING THE SIGNIFICANCE OF CLIMATE IMPACTS FROM LAND USE PROJECTS AND PLANS

The BAAD prepared its Justification Report: CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans (Justification Report), in April 2022. The Justification Report presents the BAAD's recommended thresholds of significance for use in determining whether a proposed project will have a significant impact on climate change. BAAD recommends that these thresholds of significance be used by public agencies to comply with CEQA.

The BAAD recommends that cities and counties evaluate such plans based on whether they will be consistent with California's long-term climate goal of achieving carbon neutrality by 2045. To be consistent with this goal, these plans should reduce GHG emissions in the relevant jurisdiction to meet an interim milestone of 40 percent below the 1990 emission levels by 2030, consistent with SB 32, and to support the state's goal of carbon neutrality by 2045. Cities and counties planning to develop in a manner that is not consistent with meeting these GHG reduction targets will have a significant climate impact because they will hinder California's efforts to address climate change. Specifically, in order to demonstrate a less-than-significant impact to climate change under CEQA, the BAAD states that General Plans and related planning documents must demonstrate that the plan either: a) meets the state's goal to reduce emissions to 40 percent below 1990 levels by 2030 and carbon neutrality by 2045; or b) is consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).

Association of Bay Area Governments and Metropolitan Transportation Commission Plan Bay Area 2050

Plan Bay Area 2050 was jointly adopted by Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG) in October 2021 and is the Regional Transportation Plan/Sustainable Community Strategy (RTP/SCS). The Plan Bay Area is a long-range regional plan for the nine-county San Francisco Bay Area, encompassing housing, economic, transportation, and environmental strategies designed to make the Bay Area more equitable for all residents and more resilient in the face of unexpected challenges.

Plan Bay Area 2050 is composed of 35 integrated strategies across the four elements that provide a blueprint for how the Bay Area can accommodate future growth and make the region more equitable and resilient in the face of unexpected challenges and achieve regional GHG emissions reduction targets established by CARB, pursuant to SB 375.

In summary, Plan Bay Area 2050:

- Details housing and economic strategies ("land use") to invest $702 billion in expected revenues to accommodate 2.7 million new persons, 1.4 million new households, 1.5 million new forecasted housing units, and 1.4 million new jobs between 2015 and 2050;

- Details transportation strategies to invest $579 billion in expected revenues from federal, state, regional, and local sources over the next 30 years;
- Details environmental strategies to invest $102 billion in expected revenues to protect the region from at least two feet of future permanent sea level rise inundation, reduce climate emissions, and maintain and expand the region's parks and open space system; and
- Complies with SB 375, the state's SCS law, which requires integration of land use and transportation planning to reduce per-capita passenger vehicle GHG emissions by 2035 and provide adequate housing for the region's forecast of 2.7 million new persons and 1.4 million new households.

Adopted in March 2026, Plan Bay Area 2050+ is a focused update to the original 2021 blueprint, designed to address post-pandemic realities and the transit financial crisis while advancing equity and resilience across the nine-county San Francisco Bay Area. This update outlines 35 integrated strategies within a $1.4 trillion framework, focusing on housing, economic development, transportation, and environmental resilience to meet state-mandated GHG reduction targets.

- Housing/Economy: Allocates $468 billion to housing and $234 billion to economic strategies, supporting growth for 2.7 million new persons and 1.4 million new households through 2050.
- Transportation: Invests $578 billion over 30 years, restructured to address significant post-pandemic transit revenue deficits.
- Environment: Invests $102 billion to address sea level rise, reduce emissions, and expand open spaces.
- Compliance: Adheres to SB 375 by linking land use and transportation to meet 2035 GHG reduction targets.

Existing San Anselmo General Plan

The following goals, policies, and actions are pertinent to greenhouse gases and climate change.

CIRCULATION ELEMENT

Objective 17: To work toward more widespread use of electric vehicles to lower greenhouse gas emissions from transportation.

> **Policy: 17.1.** Zero Emission Vehicle readiness. Provide a foundation for electric vehicle implementation efforts, including investments in electric vehicle infrastructure and guidance for ongoing Town initiatives, by preparing an Electric Vehicle Strategy. The strategy should establish a framework for near-term actions that support longer-term mobility goals and initiatives, including, but not limited to, Town policy on costs and fees for Town charging stations,

regulations for residential and workplace electric vehicle readiness, and policies for conversion of the Town vehicle fleet.

San Anselmo Climate Action Plan 2030

The San Anselmo Climate Action Plan (CAP) establishes a framework to significantly reduce greenhouse gas emissions while improving community health and resilience. The Plan sets ambitious targets to reduce community-wide emissions by approximately 54 percent below 2005 levels by 2030 and to achieve carbon neutrality by 2045, exceeding California's statewide requirements. It is intended to guide local decision-making, support consistency with CEQA streamlining provisions, and align the Town with regional and state climate goals.

The CAP focuses on key emission sources and strategies, including reducing vehicle miles traveled (VMT), increasing energy efficiency, transitioning buildings away from natural gas through electrification, expanding the use of renewable electricity, and reducing emissions from waste and water use. It also emphasizes climate adaptation and carbon sequestration through protection of natural systems. Implementation is supported by ongoing emissions monitoring and guidance from the Climate Action Commission, with co-benefits that include improved air quality, lower energy costs, and increased resilience to climate-related hazards such as heat, wildfire smoke, and flooding. The CEQA Guidelines Section 15183.5(b) addresses how public agencies may choose to analyze and mitigate significant greenhouse gas emissions in a plan for the reduction of greenhouse gas emissions or similar document. The San Anselmo CAP satisfies the CEQA Guidelines Section 15183.5(b) criteria for a qualified GHG reduction plan by quantifying baseline and projected community emissions, establishing a reduction target of 54% below 2005 levels by 2030, and implementing a suite of specific, enforceable measures such as building electrification and organic waste diversion. Developed via a public process with an accompanying environmental review, the CAP integrates mandatory development standards and a robust monitoring framework to ensure continuous progress toward its goals. As a result, subsequent local development projects can legally "tier" off this plan; if a project demonstrates consistency with the CAP's mandatory measures, its cumulative GHG impacts are presumed less than significant, streamlining the project's environmental review process by bypassing redundant, individual emissions analyses.

3.8.3 IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

Future development under the General Plan 2045 was reviewed to determine if the General Plan 2045 would have a significant impact on greenhouse gases. These types of impacts would occur from mobile, energy, area, stationary, and other sources. Impacts are evaluated assuming full buildout of the Planning Area.

As detailed above, BAAD prepared its Justification Report in April 2022, presenting BAAD's recommended thresholds of significance for use in determining whether a proposed project will have a significant impact on climate change. BAAD recommends that these thresholds of significance be used by public agencies to comply with CEQA.

The BAAD recommends that cities and counties evaluate such plans based on whether they will be consistent with California's long-term climate goal of achieving carbon neutrality by 2045. To be consistent with this goal, these plans should reduce GHG emissions in the relevant jurisdiction to meet an interim milestone of 40 percent below the 1990 emission levels by 2030, consistent with SB 32, and to support the state's goal of carbon neutrality by 2045. Cities and counties planning to develop in a manner that is not consistent with meeting these GHG reduction targets will have a significant climate impact because they will hinder California's efforts to address climate change.

Specifically, in order to demonstrate a less-than-significant impact to climate change under the CEQA, the BAAD states that General Plans and related planning documents must demonstrate that the plan either: a) meets the state's goal to reduce emissions to 40 percent below 1990 levels by 2030 and carbon neutrality by 2045; and/or b) is consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).

It should also be noted that this analysis relies on, in part, the VMT analysis prepared in 2026 by Parametrix consultants and presented in Section 3.14, Transportation and Circulation.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to Greenhouse Gases and Climate Change.

Conservation and Open Space Element

Goal OSC-B. Protect and improve the quality of the natural environment through collaborative conservation, restoration, management, regenerative practices, and pollution reduction and control.

AIR QUALITY

Policy OSC-B.9: Pollution Prevention. Prevent or minimize the emission of air pollutants in compliance with State and federal air quality standards.

Action OSC-B.9.a: Air Quality Standards and Project Review. Implement the Bay Area Air District's Clean Air Plan, rules, and best practices in reviewing construction, development, and commercial operations, including evaluation of toxic air contaminants, odors, and criteria pollutants.

Action OSC-B.9.b: Particulate Emissions. Reduce emissions of particulate matter from construction sites, roads, parking lots, and other sources by requiring development and construction projects to implement best management practices.

Action OSC-B.9.c: Idling Prevention. Adopt an ordinance that matches or is more stringent than the State's maximum idling law, and coordinate with CARB, BAAD, and law enforcement to achieve compliance.

CIRCULATION ELEMENT

Goal C-A: Promote a safe multimodal transportation network that helps reduce greenhouse gas emissions and offers strong transit, pedestrian, and bikeway alternatives to the automobile.

Policy C-A.1: Complete Streets. Provide Complete Streets that ensure safe, comfortable, and convenient multimodal access to essential community destinations, increase the use of alternative modes of transportation, encourage active travel as part of daily activities, reduce pollution, and meet the evolving needs of all roadway users.

Action C-A.1.a: Complete Streets and Human-Scale Enhancements. Approach every transportation project and program as opportunities to improve safety, accessibility, and mobility for users of all ages, abilities, and transportation needs. Work with relevant departments, agencies, and jurisdictions to incorporate Complete Streets design features, such as accessible curb ramps, crosswalks, transit facilities, sidewalks, and bicycle infrastructure, into existing streets. Where feasible, integrate human-scale amenities including street trees, landscaping, benches, and pedestrian-scale lighting to enhance comfort, visual quality, and encourage walking, bicycling, and transit use.

Action C-A.1.b: Standards for Infrastructure Improvements. Develop Public Improvement Engineering Standards or other objective standards for property subdivision or development projects to specify required off-site infrastructure improvements, such as sidewalks, that would accommodate or mitigate estimated project traffic impacts.

Policy C-A.2: Existing Infrastructure. Prioritize the maintenance and continued improvement of existing multimodal transportation infrastructure within current rights-of-way as opposed to roadway widening or extensions.

Policy C-A.3: Reduction of Vehicle Miles Traveled (VMT). Support infill, context-sensitive development, walkable neighborhoods, and infrastructure improvements that reduce the demand for single-occupancy vehicle travel while recognizing that many families and people with mobility limitations or limited access to alternative transportation options will continue to depend on cars.

Action C-A.3.a: VMT and Land Use. Encourage residential housing development in areas with low levels of home-based VMT, such as those near transit and retail services to support access to daily needs for residents of varying incomes and transportation options that offer greater potential for alternatives to driving and shorter trips to daily destinations.

Action C-A.3.b: VMT and Transportation Improvements. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT.

Policy C-A.4: VMT in Transportation Impact Evaluations. Evaluate land use projects for potential transportation impacts by considering the effect on VMT.

Action C-A.4.a: VMT Policy and Regional Coordination. Continue to apply San Anselmo's VMT Screening Criteria and Thresholds of Significance for evaluation of VMT associated with discretionary land use projects and update these thresholds as appropriate to reflect new data, standards, or local conditions. Coordinate with the Transportation Authority of Marin to reduce VMT and enhance multimodal transportation by applying guidance from the VMT Reduction / Mobility Enhancement Toolkit.

Action C-A.4.b: VMT Mitigation. Develop and implement VMT mitigation measures and an in-lieu fee structure that can be applied to applicable projects to reduce potential VMT impacts to less-than-significant levels.

Policy C-A.5: Emerging Transportation Technologies. Explore and support implementation of emerging transportation technologies and strategies to reduce greenhouse gas emissions and VMT, enhance social equity by improving access and affordability across the community, and support economic vibrancy.

Action C-A.5.a: Effective and Equitable Emerging Transportation Strategies. Establish evaluation criteria to assess alignment of emerging transportation solutions, prioritizing emerging mobility strategies that are affordable and accessible to residents with limited incomes, older adults, and persons with disabilities.

Policy C-B.2: Roadway Traffic Circulation. Maintain adequate traffic circulation while balancing the needs of all system users along Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, Butterfield Road, and in downtown.

Action C-B.2.a: Progress Evolution of The Hub. Develop designs and secure funding for near-term improvements to the Hub as identified in The Hub Transportation Study. This includes incorporation of traffic, transit, pedestrian, and bicycle enhancements.

Action C-B.2.b: Major Thoroughfare Roadway Improvements. Improve Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, and intersections along these roadways by investing in transportation infrastructure to improve safety and accessibility for pedestrians and other non-vehicle roadway users while maintaining adequate circulation for regional through traffic.

Policy C-B.6: Traffic Level of Service. Maintain a traffic Level of Service (LOS) standard of "E" for signalized intersection operations during peak hours to ensure an efficient roadway network and allow for consistent evaluation of development project impact on local roadway traffic.

Action C-B.6.a: Traffic Impact Studies. Require that discretionary development projects be evaluated for level of service impacts in accordance with the Town of San Anselmo's Vehicle Miles Traveled (VMT) Screening Criteria and Thresholds of Significance. Projects that exceed the level of service threshold for signalized intersections shall provide

feasible mitigation measures to reduce level of service impacts to levels consistent with Town policy.

Goal C-C: Promote a universally accessible transportation network which offers strong transit, pedestrian, and bikeway alternatives to the automobile for all ages and abilities.

Policy C-C.1: Bicycle and Pedestrian Master Plan. Regularly review, update, and implement the Town's Bicycle and Pedestrian Master Plan to maintain eligibility for grant funding and to advance a safe, accessible, and connected active transportation network for users of all ages and abilities.

Action C-C.1.a: Maintenance of Pedestrian and Bicycle Facilities. Develop a program to prioritize and fund the construction and maintenance of pedestrian and bicycle facilities based on safety, connectivity, removal of access barriers for people with disabilities, older adults, and others with mobility challenges, and the relationship to existing and planned land uses, along with other adopted evaluation criteria.

Action C-C.1.b: Pedestrian-Oriented Improvements in Commercial Hubs. Implement sidewalk, pedestrian crossing, and other pedestrian-oriented improvements identified in the Town's Bicycle and Pedestrian Master Plan—including those along Sir Francis Drake Boulevard, San Anselmo Avenue, Red Hill Avenue, and Greenfield Avenue, and evaluate and implement feasible recommendations from the Downtown Active Transportation & Circulation Study to enhance walkability and safety in Downtown and key commercial hubs.

Policy C-C.2: Pedestrian Safety and Access. Provide a safe and accessible walking environment along San Anselmo's pedestrian network, linking residential areas to schools, shopping, work, recreation areas, essential services, and other important community destinations for residents of all ages, abilities, and incomes.

Action C-C.2.a: Accessibility Improvements. Continue to construct improvements that provide access for all individuals along the Town's pedestrian network, including reconstruction of facilities in compliance with federal and State accessibility requirements.

Action C-C.2.b: Downtown Pedestrian Infrastructure. Implement sidewalk and pedestrian crossing improvement recommendations as included in the Pedestrian and Bicycle Master Plan. Evaluate and implement the recommendations in the Downtown Active Transportation & Circulation Study, where feasible.

Policy C-C.3: Bicycle Network. Continue to expand San Anselmo's bicycle network to safely and comfortably connect residents to schools, shopping, work, recreation, and other daily destinations, with a focus on improved paths and crossings at larger and high vehicle volume roadways and traffic calming installations and signage on local streets.

Action C-C.3.a: Bicycle Infrastructure. Implement bicycle infrastructure recommendations, such as multi-use paths, bicycle priority routes, bike racks, and lockers in areas with high demand, and traffic calming installations, as included in the Pedestrian and Bicycle Master Plan.

Policy C-C.4: Bicycle Parking. Seek opportunities to install bicycle parking facilities at public destinations, including at transit stops, parks, schools, shopping locations, and other essential public facilities, and require bicycle parking facilities in new development.

Action C-C.4.a: Bicycle Parking Requirements. Require short-term and long-term bicycle parking facilities for commercial and multifamily developments in accordance with or more stringent than the California Green Building Standards Code.

Policy C-C.5: Safe Routes to School. Coordinate with the Transportation Authority of Marin to identify locations for improvements that provide safe walking and bicycling routes for students of all backgrounds, including those who rely on walking, biking, or transit to travel to and from school.

Policy C-C.6: Transit Service. Continue to support the improvement and expansion of local and regional transit and paratransit service to improve access for residents who rely on transit, including older adults, youth, lower-income households, and people with disabilities.

Action C-C.6.a: Transit Agency Partnerships. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends.

Action C-C.6.b: **Transit-dependent Population**. Actively encourage local and regional transit agencies, providers, and local initiatives to expand reliable and accessible paratransit, shuttles, and other alternative transportation options for non-driving adults, persons with disabilities, and others without access to a private vehicle in San Anselmo.

SUSTAINABILITY, CLIMATE CHANGE, AND RESILIENCY ELEMENT

Goal SU-A Empower residents and businesses to reduce their carbon footprints and prepare for the impacts of climate change.

Policy SU-A.1: Sustainability Education and Empowerment. Provide comprehensive outreach, education, and community engagement programs that support residents and businesses in reducing emissions, improving energy efficiency, conserving resources, and preparing for climate impacts. Partner with local volunteers, schools, and community organizations, such as the Climate Action Commission, to expand the reach of these efforts. Design outreach and education programs to be inclusive and accessible to a broad range of participants, including lower-income households, renters, and non-English-speaking residents. Track participation and engagement trends to identify gaps and refine outreach strategies to broaden and diversify community involvement.

Action SU-A.1.a: Community Sustainability, Electrification, and Renewable Energy Programs. Partner with regional agencies, Marin jurisdictions, and the Climate Action Commission to provide coordinated programs, technical assistance, and permitting support that advance energy efficiency, building and vehicle electrification, and renewable energy adoption. This action includes:

- Sustainability & Electrification Resource Hub: Collaborate with Marin jurisdictions to provide a shared regional hub offering integrated resources, information, demonstrations, incentives, and permitting assistance.
- Community Energy Use: Encourage the installation of solar generation and storage systems by streamlining regulations and permitting, and by promoting 100% renewable energy purchasing options.
- Electrification Assistance: Promote local, regional, and state technical assistance, incentive, rebate, and concierge programs supporting the electrification of residential and commercial buildings.
- Equitable Access: Increase awareness of incentive programs for lower-income households and explore opportunities for local subsidies, permit fee reductions, or other supportive measures for electrification.

Action SU-A.1.b: Community Education, Engagement, and Waste Reduction Initiatives. Engage, educate, and support the community in adopting sustainable lifestyle choices, reducing waste, and shifting travel behavior to support greenhouse gas reduction and public health. Collaborate with the Climate Action Commission and regional partners to:

- Climate Education & Engagement: Provide information and engagement opportunities on climate vulnerabilities, health connections, greenhouse gas reduction strategies, and community resilience.
- Sustainable Practices Outreach: Promote actions that reduce natural resource consumption, increase community awareness of sustainable behaviors, and support achievement of Town sustainability goals.
- Low-Carbon Footprint Diet: Promote the environmental, ecological, and health benefits of low-carbon dietary choices through education, outreach, and partnerships with local organizations.
- Plastic Waste Reduction: Conduct public outreach on the impacts of plastic pollution, encourage waste reduction strategies, and support compliance with the Town's Single-Use Plastics Ordinance.
- Public Transit Education: Partner with transit agencies to publicize available transit options and improve first-mile/last-mile connections to transit stops.
- Active Transportation Promotion: Encourage walking and bicycling among residents and employees as a strategy to reduce greenhouse gas emissions and improve public health. Publicize bicycle routes at schools, parks, and transit facilities, and support bicycle awareness and safety campaigns.

Action SU-A.1.c: Plastic Waste Education and Compliance. Conduct outreach and education to reduce plastic pollution and support compliance with the Town's Single-Use Plastics Ordinance, in coordination with waste management partners.

Goal SU-B Create a sustainable community that ensures residents may meet their own needs without compromising the needs of future generations.

Policy SU-B.4: Local Food System. Support efforts to reduce greenhouse gas emissions from food production, transportation, and waste, and encourage practices that strengthen the sustainability and resilience of the local food system.

Action SU-B.4.a: Local Sourcing. Encourage businesses to source their products from local farms to reduce carbon emissions generated from food and material production and transportation.

Action SU-B.4.b: Regional Agriculture. Advocate for and support regional efforts to promote regenerative and climate-smart agricultural practices that enhance soil health, sequester carbon, and contribute to a sustainable local food system.

Policy SU-B.5: Sustainable Land Uses. Promote environmental sustainability and resilience through thoughtful land use planning and development review that addresses climate change, reduces carbon footprints, and manages resources responsibly.

Goal SU-C Reduce greenhouse gas emissions in the community and within government operations to mitigate the effects of climate change.

Policy SU-C.1: Greenhouse Gas Emission Reductions. Mitigate the impacts of climate change by reducing community greenhouse gas emissions.

Action SU-C.1.a: Greenhouse Gas Emissions Reduction and Monitoring. Implement strategies to achieve community-wide reductions of at least 45 percent below 1990 levels by 2030 and to support the State's goal to achieve zero net emissions statewide by 2045. Regularly track progress by annually updating the community greenhouse gas inventory and evaluating government operations emissions to monitor reductions and inform implementation of the Climate Action Plan.

Action SU-C.1.b: Climate Action Plan. Implement the Town's Climate Action Plan and update the plan every five years to incorporate new emission reduction targets, strategies, and best practices.

Policy SU-C.2: Renewable Energy and Electrification. Accelerate the conversion to renewable energy sources.

Action SU-C.2.a: Building and Appliance Electrification. Consider building regulations which preclude gas appliances and infrastructure in new buildings and require installation of high-efficiency electric appliances at time of replacement.

Action SU-C.2.b: Building Permitting for Electrification. Streamline the building permit process for heat pump water and space heaters and electrical panel upgrades. Through regional collaboration, explore a fee reduction pilot program to incentivize conversion of natural gas appliances to electric versions.

Action SU-C.2.c: Municipal Energy Use. Evaluate solar energy production and storage systems at all municipal buildings and facilities and plan for replacement of natural gas appliances and equipment. Continue to purchase 100% renewable energy for Town buildings and facilities.

Action SU-C.2.d: Zero-Emission Infrastructure. Continue to prohibit the location of new gas stations in San Anselmo and support the phased transition of legal non-conforming gas stations to zero-emissions fueling stations. Support businesses in complying with these requirements through technical assistance and public outreach.

Action SU-C.2.e: Landscaping Equipment. Enforce the ban on gas-powered landscape equipment in San Anselmo and explore opportunities to further reduce emissions from landscaping activities, as feasible.

Policy SU-C.3: Building Energy Efficiency. Encourage energy efficiency improvements in residential and commercial buildings to reduce energy use.

Action SU-C.3.a: Green Building Regulations. Consider adopting green building regulations for new construction and building remodels and additions that exceed minimum State building and energy code requirements.

Action SU-C.3.b: Energy Efficiency Programs. Promote programs and incentives to property owners to improve energy efficiency. Explore the feasibility of requiring energy audits at the time of building sale or major remodel.

Policy SU-C.4: Carbon Sequestration. Support carbon sequestration on natural lands, tiny forests, and urban green spaces.

Action SU-C.4.a: Urban Forest Master Plan. Prepare an Urban Forest Master Plan to preserve and, where appropriate for ecosystem health, plant additional native trees on public parks, medians, and rights-of-way.

Action SU-C.4.b: Sustainable Landscaping. Incorporate sustainable landscaping practices into public projects, when applicable, and encourage community members to apply compost and select native or climate-adapted plant species on private lands. Select plantings for public projects based on their resilience to changing climate conditions to support long-term habitat sustainability and biodiversity with an emphasis on locally native plants.

Policy SU-C.5: Municipal Energy Efficiency, Electrification, and Resilient Operations. Continue to improve energy efficiency, electrify equipment and buildings, and integrate renewable energy and microgrid technologies into Town facilities.

Action SU-C.5.a: Municipal Microgrid and Electrification Plan. Plan and implement microgrids, solar and battery systems, and phased electrification of municipal facilities and equipment.

Goal SU-D Create a resilient and adaptable community that anticipates and reduces the risk from future climate change impacts.

Policy SU-D.1: Resilient Community. Enhance the community's capacity to adapt to climate-related risks by integrating climate adaptation and resilience strategies in the Town's development, capital improvement, and emergency preparedness and response plans and projects, with attention to populations most vulnerable to climate impacts, including lower-income households, seniors, and renters.

Action SU-D.1.a: Resilience Hubs. Identify opportunities to enhance the capacity of Town and school facilities to become Resilience Hubs, evacuation centers, cooling centers, and charging stations during extreme heat or weather events.

Action SU-D.1.b: Equitable Community Resilience. Ensure equitable access to resources and support systems for resilience and adaptation planning and evaluate whether programs are effectively reaching underserved populations both during planning efforts and climate-related events.

Action SU-D.1.c: Urban Heat Island Effect. Reduce urban heat island effects by encouraging installation of landscaped surfaces, cool roofs, ample tree cover, reduced expanses of heat-absorbing pavement, and other urban cooling strategies in new development. For Town projects, incorporate urban cooling measures when feasible.

Action SU-D.1.d: Vulnerable Populations. Engage vulnerable populations to identify gaps in community resilience planning and work together to reduce hazards from climate change impacts.

Action SU-D.1.e: Agency Collaboration. Collaborate with Marin jurisdictions, school districts, special districts, and regional, state, and federal agencies to develop, coordinate, fund, and implement adaptation and resiliency strategies and projects.

Action SU-D.1.f: Adaptive Management and Climate Monitoring. Monitor climate indicators, greenhouse gas emission trends, and adaptation outcomes, and adjust Town policies and programs accordingly.

Action SU-D.1.g: Technology Horizon Scanning. Monitor emerging climate technologies and adaptation strategies with annual reports to the Climate Action Commission on potential applications for San Anselmo.

Policy SU-D.2: Preparation for Extreme Weather. Support policies and programs to help residents and businesses prepare for future extreme weather conditions.

Action SU-D.2.a: SU Element Updates. Regularly update the Sustainability, Climate Change, and Resiliency (SU) Element in alignment with the Town's adaptive management approach, ensuring compliance with current climate regulations and ongoing assessment of climate and hazards impacts on historically marginalized communities.

Action SU-D.2.b: Public Information. Maintain guidelines for monitoring and disseminating public information related to hazards exacerbated by climate change (extreme heat, flooding, severe weather).

Action SU-D.2.c: Climate Conditions. Monitor changing climatic conditions and assess how they may affect Town operations and processes.

Policy SU-D.3: Public Health Benefits. Support and promote climate mitigation and adaptation strategies that also provide public health benefits, such as improved air quality, reduced heat exposure, enhanced community connection, or increased access to green space.

Goal SU-E Prioritize use of zero emission vehicles and promote active transportation and the public transit system as alternative modes of travel to reduce greenhouse gas emissions and support community health.

Policy SU-E.1: Low Carbon Transportation. Minimize transportation-related greenhouse gas emissions by expanding zero-emission mobility options, supporting clean transit, and promoting adoption of low-carbon personal transportation such as electric vehicles and electric bicycles.

Action SU-E.1.a: Zero Emission Vehicles. Implement a comprehensive program to significantly increase the use of zero emission vehicles through public education and promotion, updating building code requirements for electric vehicle charging infrastructure, and installation of Level 2 and 3 public charging facilities near downtown, commercial districts, multifamily housing, and Town parking lots.

Action SU-E.1.b: Electric Bicycles. Promote electric bicycle adoption through community education and outreach, financial incentives, expansion of secure bicycle parking and related infrastructure, and partnerships with employers and retailers to improve access and reduce barriers to ownership.

Action SU-E.1.c: Fleet Vehicle Replacements. Give priority to electric and zero emissions vehicles when replacing vehicles in the Town's fleet in accordance with the Town's Fleet Zero-Emissions Policy, with the goal of achieving a zero-emissions fleet by 2030.

Action SU-E.1.d: Clean Transit. Support local transit providers' efforts to transition to zero-emission vehicles by supporting transportation infrastructure, policies, and funding efforts that align with the Town's air quality and energy conservation goals.

Action SU-E.1.e: Active Transportation Promotion. Promote walking, bicycling, and safe routes to schools and community destinations through outreach, maps, and campaigns.

Action SU-E.1.f: Public Transit Awareness. Work with transit agencies to improve awareness of transit options and strengthen first-/last-mile connections.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project would result in a significant impact related to greenhouse gases and climate change if it would:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; and/or
- Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

IMPACTS AND MITIGATION MEASURES

Impact 3.8-1: Project implementation could generate greenhouse gas emissions that could have a significant impact on the environment and could conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases (Less than Significant)

Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Therefore, the cumulative global emissions of GHGs contributing to global climate change can be attributed to every nation, region, and city, and virtually every individual on Earth. A project's GHG emissions are at a micro-scale relative to global emissions but could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. Future development associated with implementation of the General Plan 2045 would contribute to increases of GHG emissions that are associated with global climate change. Estimated GHG emissions attributable to future development would be primarily associated with increases of CO_2 and other GHG pollutants, such as CH_4 and N_2O, from mobile sources and utility usage. Development that occurs because of implementation of the General Plan 2045 would include activities that emit greenhouse gas emissions over the short- and long-term.

SHORT-TERM EMISSIONS

Short-term GHG emissions would occur because of the use of construction equipment which could be used for construction activities, such as demolition, grading, paving, and other building construction activities associated with future development and infrastructure projects that would

be undertaken in San Anselmo over the buildout horizon of the General Plan 2045. GHG emissions would also result from worker and vendor trips to and from project sites and from demolition and soil hauling trips. Construction activities are short-term and cease to emit GHGs upon completion, unlike operational emissions that are continuous year after year until operation of the use ceases.

Implementation of the General Plan 2045 does not directly approve or otherwise entitle any new development projects or infrastructure improvement projects in the Town. As such, construction-related GHG emissions of future projects cannot be known or quantified at this time and would be highly speculative. Typically, construction-related GHG emissions contribute unsubstantially (less than one percent) to a project's annual GHG emissions inventory, and mitigation for construction-related emissions is not effective in reducing a project's overall contribution to climate change, given the incrementally small proportion of total construction emissions. Short-term climate change impacts due to future construction-related activities would be subject to state requirements related to the reduction of GHG emissions and would be assessed on project-by-project basis.

LONG-TERM EMISSIONS

Future development projects will result in continuous GHG emissions from mobile, area, and operational sources. Mobile sources, including vehicle trips to and from development projects, will result primarily in emissions of CO_2, with minor emissions of CH_4 and N_2O. The most significant GHG emission from natural gas usage will be CH_4. Electricity usage by future development and indirect usage of electricity for water and wastewater conveyance will result primarily in emissions of CO_2. Disposal of solid waste will result in emissions of CH_4 from the decomposition of waste at landfills coupled with CO_2 emission from the handling and transport of solid waste. These sources combine to define the long-term greenhouse gas inventory for typical development projects.

A GHG inventory was developed within the Town of San Anselmo's Climate Action Plan. The CAP includes a "business-as-usual" (BAU) forecast that projects emissions assuming no new policies or actions beyond the base year are implemented to reduce emissions. The forecast is based on scaling 2016 emissions using projected changes in population, households, and employment developed by the ABAG. Transportation emissions are estimated using data from the MTC, which account for anticipated VMT reductions from implementation of Plan Bay Area 2020 and the Regional Transportation Plan adopted in 2017. Under the BAU scenario, emissions are expected to increase by approximately 2.2 percent by 2030 and 3.6 percent by 2040. Although official regional projections are not available for 2050, extending the trend indicates emissions would reach about 63,805 $MTCO_2e$ by 2050.

The CAP sets greenhouse gas reduction targets that align with state goals. The Town's target is a 54 percent reduction in GHG emissions by 2030 relative to a 2005 baseline (equivalent to 45 percent below 1990 levels) and an 80 percent reduction below 1990 levels by 2050. Achieving these targets would require emissions to decline to approximately 41,020 $MTCO_2e$ by 2030 and 13,670 $MTCO_2e$ by 2050. The CAP identifies measures that exceed the 2030 target and establish a trajectory toward meeting the 2050 goal. Community emissions trends, forecasts, and state targets are previously shown in Figure 3.8-2. As such, the CAP establishes GHG reductions that are consistent with the BAAD Climate Plan-Level threshold to meet the state's goal to reduce emissions to 40 percent below

1990 levels by 2030 and carbon neutrality by 2045. This is reflected in San Anselmo's Long Term Climate Action Goals. To achieve municipal and community-scale carbon emissions reductions and sequestration, to prepare for and adapt to greater extremes, and to transition to carbon neutrality and a post-carbon community, all aligned with California's ambition, the Town committed to the following:

- Establish an interim target of 54% emissions reductions from a 2005 baseline emissions level by the year 2030 (45% below 1990 levels) and goal of carbon neutrality by 2045.
- Develop, adopt and implement actions that aim to achieve the interim 54% emission reduction target by 2030 and that align with the 2045 carbon neutrality/post-carbon community goal.
- Develop, adopt and implement adaptation strategies and ecosystem conservation programs in concert with the Town's Local Hazard Mitigation Plan.
- Adopt the following driving values and strategies as the framework for achieving carbon neutrality and a post-carbon economy

As discussed in Section 3.14, Transportation, vehicle miles per capita is expected to decrease over time, even though San Anselmo's population would continue to grow under the General Plan 2045. **Table 3.8-1** summarizes VMT outputs from the Transportation Authority of Marin (TAM) travel demand model, comparing San Anselmo with Marin County and the broader Bay Area region. The model forecasts a decrease in home-based VMT for San Anselmo residents between 2022 and 2050, reflecting projected demographic trends, changing travel behavior, and local jobs-housing relationships within the town. Similar reductions are projected countywide and regionally, consistent with broader planning efforts to reduce automobile dependence through improved land use patterns, expanded transportation options, and increased opportunities for walking, bicycling, transit use, and remote work.

TABLE 3.8-1: VEHICLE MILES TRAVELED ESTIMATES FOR SAN ANSELMO, MARIN COUNTY, AND BAY AREA

JURISDICTION	*VMT PER RESIDENT (RESIDENCE IS IN JURISDICTION)*		*VMT PER WORKER (JOB IS IN JURISDICTION)*	
	2022	*2050*	*2022*	*2050*
San Anselmo	11.8	11.3	15.6	14.4
Marin County	14.9	13.5	17.2	14.4
Bay Area	11.9	10.7	13.0	10.4

SOURCE: TRANSPORTATION AUTHORITY OF MARIN, 2026.

According to the CAP's GHG inventory shown previously in Figure 3.8-1, the transportation sector is the largest source of GHG emissions in the Town, accounting for approximately 55 percent of the Town's GHG inventory.[9] A typical passenger vehicle emits approximately 4.6 metric tons of CO_2 per year.[10] This number can vary based on a vehicle's fuel, fuel economy, and the number of miles driven per year. The reduction in VMT per capita and reduction in VMT per worker (under buildout for the

[9] San Anselmo. Climate Action Plan 2030. 2017. Available at: https://www.sananselmo.gov/1303/Climate-Action-Plan-2030

[10] United States Environmental Protection Agency (USEPA). 2018. Greenhouse Gas Emissions from a Typical Passenger Vehicle. Available at: https://www.epa.gov/greenvehicles/greenhouse-gas-emissions-typical-passenger-vehicle

General Plan 2045 compared with existing conditions) would have a substantial reduction in per capita and per employee GHG emissions.

In addition, the CAP was published in 2019 during which Marin County had light duty zero emission vehicle (ZEV) sales of 19% (year 2020). ZEV sales have doubled and represent 40% of new sales in 2024.[11] ZEV adoption is anticipated to continue due to decreased fuel and maintenance costs as well as environmental benefits. Technological improvements in electric vehicle (EV) range, reductions in battery costs, charging time, and availability of EV chargers are also anticipated to promote the purchase of EVs. The adoption of EVs, which do not have direct GHG emissions, contribute to the Town's GHG reduction targets and will become more pronounced as they replace GHG emitting gasoline and diesel fueled automobiles.

In addition to statewide measures such as the Renewable Portfolio Standards and Title 24 energy efficiency standards, the CAP focuses on the following local mitigation measures to meet the GHG emission reduction targets established by the State of California:

1. Low Carbon Transportation (T)
2. Energy Efficiency (E)
3. Renewable Energy (R)
4. Waste Reduction (W)
5. Water Conservation (C)
6. Sequestration (S)

The General Plan 2045 has goals, policies and actions that are consistent with the GHG reductions found within San Anselmo's Climate Action Plan. **Table 3.8-2** shows the CAP GHG reduction areas and the corresponding policies and actions within the General Plan 2045 that assist in the CAP's implementation.

SOURCE: SAN ANSELMO GENERAL PLAN 2045, SAN ANSELMO CLIMATE ACTION PLAN 2030

As shown in Table 3.8-2, the General Plan 2045 has GHG policies and action that address each GHG reduction area of the CAP. The General Plan 2045 integrates CAP targets into the environmental review process for all new developments, while its Land Use and Circulation Elements mandate dense infill housing and "Complete Streets" policies designed to lower VMT. Furthermore, promotion of all-electric building and equipment, organic waste diversion, and preserving open spaces for natural carbon sequestration, the General Plan effectively translates the CAP's climate mitigation and adaptation strategies into enforceable local zoning, design, and building laws. Although population and employment growth would continue to occur in San Anselmo under the General Plan 2045, per capita and per employee VMT would be less under the General Plan 2045 than under existing conditions, reducing emissions from being proportional to the growth in population. Because transportation emissions account for 55% of GHG emissions from the Town, GHG emissions from this transportation sources account for the majority of townwide emissions and is estimated to be substantially less under General Plan 2045.

Subsequent development projects would be required to comply with the General Plan 2045 and adopted federal, state, and local regulations for the reduction of GHG emissions. Implementation of the General Plan 2045 goals, policies, and actions would assist the Town in reducing GHG emissions and would support California's long-term climate goal of achieving carbon neutrality by 2045. Therefore, implementation of the General Plan 2045 would have a **less-than-significant impact** on GHG emissions.

Hazards include man-made or natural materials or man-made or natural conditions that may pose a threat to human health, life, property, or the environment. Hazardous materials and waste present health hazards for humans and the environment. These health hazards can result during the manufacture, transportation, use, or disposal of such materials if not handled properly. In San Anselmo, hazards to humans can also occur from natural or human induced wildfire and air traffic accidents.

This section provides a background discussion of the hazardous materials and waste, fire hazards, and hazards from air traffic found in the Town of San Anselmo. This section is organized with an existing setting, regulatory setting, and impact analysis. Additional analysis related to wildfire hazards is contained in Section 3.16, Wildfire, of this EIR.

No comments on this environmental topic received during the NOP comment period (Appendix A).

3.9.1. ENVIRONMENTAL SETTING

HAZARDOUS MATERIALS AND WASTE

Hazardous Materials

A hazardous material is a substance or combination of substances which, because of its quantity, concentration, or physical, chemical, or infectious characteristics, may either (1) cause or significantly contribute to an increase in mortality or an increase in serious, irreversible, or incapacitating irreversible illness; or (2) pose a substantial present or potential hazard to human health and safety, or the environment when improperly treated, stored, transported, or disposed of. Hazardous materials are mainly present because of industries involving chemical byproducts from manufacturing, petrochemicals, and hazardous building materials.

Hazardous Waste

Hazardous waste is the subset of hazardous materials that has been abandoned, discarded, or recycled and is not properly contained, including soil or groundwater that is contaminated with concentrations of chemicals, infectious agents, or toxic elements sufficiently high to increase human mortality or to destroy the ecological environment. If a hazardous material is spilled and cannot be effectively picked up and used as a product, it is considered to be hazardous waste. If a hazardous material site is unused, and it is obvious there is no realistic intent to use the material, it is also considered to be a hazardous waste. Examples of hazardous materials include flammable and combustible materials, corrosives, explosives, oxidizers, poisons, materials that react violently with water, radioactive materials, and chemicals.

Transportation of Hazardous Materials

The transportation of hazardous materials within California is subject to various federal, state, and local regulations. It is illegal to transport explosives or inhalation hazards on any public highway not designated for that purpose, unless the use of the highway is required to permit delivery, or the loading of such materials (California Vehicle Code Sections 31602(b), 32104(a)). The California

Highway Patrol (CHP) designates through routes to be used for the transportation of hazardous materials. Transportation of hazardous materials is restricted to these routes except in cases where additional travel is required from that route to deliver or receive hazardous materials to and from users.

HAZARDOUS SITES

Envirostor Data Management System

The DTSC maintains the EnviroStor Data Management System, which provides information on hazardous waste facilities (both permitted and corrective action) as well as any available site cleanup information. This site cleanup information includes: Federal Superfund Sites (NPL), State Response Sites, Voluntary Cleanup Sites, School Cleanup Sites, Corrective Action Sites, Tiered Permit Sites, and Evaluation / Investigation Sites. The hazardous waste facilities include: Permitted–Operating, Post-Closure Permitted, and Historical Non-Operating.

According to the Envirostor Data Management System, there is only one location within the Planning Area. **Table 3.9-1** provides the EnviroStor listing details and a discussion of the site follows the table.

TABLE 3.9-1: SAN ANSELMO SITE CLEANUP AND HAZARDOUS FACILITIES LIST (ENVIROSTOR)

NAME	*STATUS*	*PROJECT TYPE*	*ADDRESS*
Bolinas Avenue Center	Active	State Response	4 & 8 Bolinas Avenue & 21 San Anselmo Avenue

SOURCE: CALIFORNIA DEPARTMENT OF TOXIC SUBSTANCES CONTROL, ENVIROSTOR DATA MANAGEMENT SYSTEM, 2024.

Bolinas Avenue Center

The Bolinas Avenue Center is located at 4 and 8 Bolinas Avenue and 21 San Anselmo Avenue in San Anselmo, California, 94960. The site consists of a 0.32-acre parcel. There is a single-story building approximately 5,530 square feet and a parking lot on the parcel. It is located on the northwest corner of Bolinas Avenue and San Anselmo Avenue. The commercial building was built in 1957 and divided into three units in 1972. Currently 4 Bolinas Avenue and 21 San Anselmo Avenue are leased. North of the site are medical offices, a bicycle shop, a dental office, and a store; to the east across San Anselmo Avenue and Sir Francis Drake Boulevard are residential uses; to the south across Bolinas Avenue are residential uses; and to the west are residential uses.

Environmental investigations of the site began in 2009. The primary chemical identified is PCE, a chemical commonly used by dry cleaners in the past. It has been found in soil and soil vapor beneath the location where the dry cleaning equipment had operated until approximately 1982.[1] PCE and its break-down products have also been found in shallow groundwater, approximately 7 to 10 feet below the ground surface. This groundwater is not a source for drinking water. These chemicals are volatile and have also been found in soil vapor. This may have potential to impact indoor air. Current

[1] Environmental Audit, Inc., April 2020. Revised Remedial Action Completion Report. Available at: https://www.envirostor.dtsc.ca.gov/getfile?filename=/public%2Fdeliverable_documents%2F7667785465%2FRACR-2019(Rev.2)_text.tables.figures_Apdx%20A-C.pdf.

conditions do not pose an immediate health risk. The site will be cleaned up for future use, in order to protect health and safety of people and the environment.[2]

Cortese List

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies, and developers to comply with California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. Government Code Section 65962.5 requires the California Environmental Protection Agency to develop at least annually an updated Cortese List. The DTSC is responsible for a portion of the information contained in the Cortese List. Other State and local government agencies are required to provide additional hazardous material release information for the Cortese List. There is one Cortese List site within the Planning Area: Bolinas Avenue Center. Information about this site is provided in the previous EnviroStor discussion.

GeoTracker

GeoTracker is the SWRCB's online database that provides access to statewide environmental data and tracks regulatory data for the following types of sites:

- Leaking underground storage tank (LUST) cleanup sites
- Cleanup Program Sites (CPS; also known as Site Cleanups and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites)
- Military sites (consisting of military underground storage tank [UST] sites, military privatized sites, and military cleanup sites [formerly known as DoD non-UST])
- Land disposal sites (landfills)
- Permitted underground storage tank (UST) facilities

In August of 2024, a search was performed using GeoTracker to identify any known or suspected (reported but not yet confirmed) sources of environmental hazards within the Town of San Anselmo.

LEAKING UNDERGROUND STORAGE TANKS (LUST)

There are 20 locations with a San Anselmo address that are listed in the GeoTracker database for Leaking Underground Storage Tanks (LUST). Seventeen of the twenty locations have undergone LUST cleanup and the State has closed the case. Only the "Former Arco Service Station," "Former Chevron", operating as a gas station under a different name as of 2024, and "San Anselmo Creek Park Property" are listed as open. **Table 3.9-2** lists the location of LUSTs in San Anselmo.[3]

CLEANUP PROGRAM SITES

There is one location with a San Anselmo address that is listed in the GeoTracker database as a Cleanup Program Site. The site, known as "32 Red Hill Avenue," includes an active dry cleaning business and has a cleanup status of "Open – Assessment & Interim Remedial Action" as of May 22,

2026.[4] The potential contaminants of concern are Dichloroethene (DCE), Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl Chloride; and the potential media of concerns are indoor air, other groundwater (uses other than drinking water), soil, and soil vapor.

PERMITTED UST FACILITIES

There are three UST facilities located within the Planning Area.[5] The UST facilities details are listed in **Table 3.9-3**. One former UST site at 636 Sir Francis Drake Boulevard was closed when Building Bridge 2 (BB2) was removed from San Anselmo Creek in 2024.

TABLE 3.9-3: UST FACILITIES WITHIN SAN ANSELMO PLANNING AREA

HAZARDS FROM AIR TRAFFIC

The Planning Area is not located within an airport land use plan area or airport influence zone and is more than two miles from the nearest airport. According to the California Airport Land Use Planning Handbook (2011), prepared by the California Department of Transportation, Division of Aeronautics, aircraft accident data indicate that most general aviation accidents occur on or near airport runways,

[4] California State Water Resources Control Board, 2026. Geotracker. Available: https://geotracker.waterboards.ca.gov/map/?CMD=runreport&myaddress=san+anselmo. Accessed: May 22, 2026.
[5] Environmental Protection Agency, n.d. UST Finder. Available at: https://www.epa.gov/ust/ust-finder
[6] Cal Recycle. SWOS Facility/Site Summary. Available at: https://www2.calrecycle.ca.gov/SolidWaste/Site/Summary/1743

within the landing pattern, or along the extended runway centerline during approach and departure.[7] Because these accident patterns are concentrated near airport facilities and along runway approach/departure corridors, and the Planning Area is located more than two miles from the nearest airport and outside any adopted airport influence zone, the potential for the project to result in a safety hazard for people residing or working in the Planning Area due to aircraft accidents is low.Local Airport Facilities

San Rafael Airport. The San Rafael Airport is located at 400 Smith Ranch Road in the City of San Rafael, approximately 2.7 miles northeast of the San Anselmo town boundary. The San Rafael Airport is a privately-owned executive airport with a 2,700 feet runway. The airport is located at an elevation of approximately 5 feet above Mean Sea Level (MSL). The Planning Area is not located within the airport influence zone for this airport.

Gnoss Field Airport. The Marin County Department of Public Works operates the Marin County Airport (Gnoss Field Airport) for residents, visitors, businesses, and local government agencies needing personal air transportation. The airport occupies 120 acres just north of Novato and east of Highway 101. The facility is located north of Novato in unincorporated Marin County at 451 Airport Road, approximately 10 miles north of the San Anselmo town boundary.

Hayward Executive Airport (HWD). The Hayward Executive Airport is in the City of Hayward, approximately 31.4 miles southeast of the San Anselmo town boundary. HWD is owned and operated by the City of Hayward as a division of the Public Works Department. The airport is situated on 543 acres with two parallel runways of 5,694 and 3,107 feet each.[8] The Planning Area is not located within the airport influence zone for this airport.

Major Regional Airport Facilities

San Francisco International Airport (SFO): SFO is the largest airport in the region and serves as a hub for United Airlines. It provides a wide range of domestic airline service and all the region's long-haul international flights. San Francisco International Airport served 47 million passengers in 2023.[9]

San Francisco Bay Oakland International Airport (OAK): OAK has traditionally been the hub for low-cost carriers and serves as a major air cargo center due to operations by FedEx and UPS. San Francisco Bay Oakland International Airport served 11.2 million passengers in 2023.[10]

National Transportation Safety Board Aviation Accident Database

The National Transportation Safety Board Aviation Accident Database identifies zero aircraft accidents in San Anselmo between January 1, 1950, and August 20, 2024.[11]

Bald Hill Aviation Accident

On November 2, 1941, there was an aviation crash on Bald Hill. Two Army P-40 pursuit planes crashed into the side of the hill which resulted in the deaths of two pilots. A third pilot was bailed out of his plane near Lucas Valley Road.[12]

3.9.2. REGULATORY SETTING

FEDERAL

Aviation Act of 1958

The Federal Aviation Act resulted in the creation of the Federal Aviation Administration (FAA). The FAA is charged with the creation and maintenance of a National Airspace System.

Federal Aviation Regulations (CFR, Title 14)

The Federal Aviation Regulations establish regulations related to aircraft, aeronautics, and inspection and permitting.

Clean Air Act

In according with the Federal Clean Air Act (FCAA), the USEPA has established National Emissions Standards for Hazardous Air Pollutants. Exceeding the emissions standard for a given air pollutant may cause an increase in illnesses and/or fatalities.

Clean Water Act (CWA)

The Clean Water Act (CWA), which amended the Water Pollution Control Act (WPCA) of 1972, sets forth the Section 404 program to regulate the discharge of dredged and fill material into Waters of the U.S. and the Section 402 National Pollutant Discharge Elimination System (NPDES) to regulate the discharge of pollutants into Waters of the U.S. The Section 401 Water Quality Certification program establishes a framework of water quality protection for activities requiring a variety of Federal permits and approvals (including CWA Section 404, CWA Section 402, FERC Hydropower and Section 10 Rivers and Harbors).

[11] National Transportation Safety Board, 2024. Aviation Investigation Search. Available at: https://www.ntsb.gov/Pages/AviationQueryV2.aspx

[12] San Anselmo Historical Museum, n.d. Tragedy on Bald Hill. Available at: https://sananselmohistory.org/articles/tragedy-on-bald-hill/

Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation & Liability Act (CERCLA), commonly associated with the term "Superfund," established:

- Regulations concerning closed and abandoned hazardous waste sites
- Liability of parties responsible for any releases of hazardous waste at these sites
- Funding for cleanup when responsible parties cannot be identified

Environmental Protection Agency (USEPA)

The primary regulator of hazards and hazardous materials is the USEPA, whose mission is to protect human health and the environment. The Town of San Anselmo is located within USEPA Region 9, which includes Arizona, California, Hawaii, and New Mexico.

FY 2001 Appropriations Act

Title IV of the Appropriations Act required the identification of "Urban Wildland Interface Communities in the Vicinity of Federal Lands that are at High Risk from Wildfire" by the U.S. Departments of the Interior and Agriculture.

Hazardous Materials Transportation Act

The Hazardous Materials Transportation Act, as amended, is the statute regulating hazardous materials transportation in the United States. The purpose of the law is to provide adequate protection against the risks to life and property inherent in transporting hazardous materials in interstate commerce. This law gives the U.S. Department of Transportation (USDOT) and other agencies the authority to issue and enforce rules and regulations governing the safe transportation of hazardous materials.

Natural Gas Pipeline Safety Act

The Natural Gas Pipeline Safety Act authorizes the U.S. Department of Transportation Office of Pipeline Safety to regulate pipeline transportation of natural (flammable, toxic, or corrosive) gas and other gases as well as the transportation and storage of liquefied natural gas. The Office of Pipeline Safety regulates the design, construction, inspection, testing, operation, and maintenance of pipeline facilities. While the Federal government is primarily responsible for developing, issuing, and enforcing pipeline safety regulations, the pipeline safety statutes provide for State assumption of the intrastate regulatory, inspection, and enforcement responsibilities under an annual certification. To qualify for certification, a state must adopt the minimum Federal regulations and may adopt additional or more stringent regulations as long as they are not incompatible.

Resource Conservation and Recovery Act (RCRA)

The Resource Conservation and Recovery Act (RCRA) established the United States Environmental Protection Agency (USEPA) "cradle to grave" control (generation, transportation, treatment, storage, and disposal) over hazardous materials and wastes. In California, DTSC has RCRA authorization.

STATE

Aeronautics Act (Public Utilities Code Section 21001)

The Caltrans Division of Aeronautics bases the majority of its aviation policies on the Aeronautics Act. Policies include permits and annual inspections for public airports and hospital heliports and recommendations for schools proposed within two miles of airport runways.

Airport Land Use Commission Law (Public Utilities Code Section 21670 et seq.)

The law, passed in 1967, authorized the creation of Airport Land Use Commissions (ALUC) in California. Per the Public Utilities Code, the purpose of an ALUC is to protect *public health, safety, and welfare by encouraging orderly expansion of airports and the adoption of land use measures that minimizes exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses* (Pub. Util. Code Section21670). Furthermore, each ALUC must prepare an Airport Land Use Compatibility Plan (ALUCP). Each ALUCP, which must be based on a twenty-year planning horizon, should focus on broadly defined noise and safety impacts.

Assembly Bill 337

Per AB 337, local fire prevention authorities and the California Department of Forestry and Fire Protection (CalFire) are required to identify Very High Fire Hazard Severity Zones (VHFHSZ) in Local Responsibility Areas (LRA). Standards related to brush clearance and the use of fire resistant materials in fire hazard severity zones are also established.

California Code of Regulations

Title 3 of the California Code of Regulations (CCR) pertains to the application of pesticides and related chemicals. Parties applying regulated substances must continuously evaluate application equipment, the weather, the treated lands and all surrounding properties. Title 3 prohibits any application that would:

- Contaminate persons not involved in the application
- Damage non-target crops or animals or any other public or private property
- Contaminate public or private property or create health hazards on said property

Title 8 of the CCR establishes California Occupational Safety and Health Administration (Cal OSHA) requirements related to public and worker protection. Topics addressed in Title 8 include materials exposure limits, equipment requirements, protective clothing, hazardous materials, and accident prevention. Construction safety and exposure standards for lead and asbestos are set forth in Title 8.

Title 14 of the CCR establishes minimum standards for solid waste handling and disposal.

Title 17 of the CCR establishes regulations relating to the use and disturbance of materials containing naturally occurring asbestos.

Title 22 of the CCR sets forth definitions of hazardous waste and special waste. The section also identifies hazardous waste criteria and establishes regulations pertaining to the storage, transport, and disposal of hazardous waste.

Title 26 of the CCR is a medley of State regulations pertaining to hazardous materials and waste that are presented in other regulatory sections. Title 26 mandates specific management criteria related to hazardous materials identification, packaging, and disposal. In addition, Title 26 establishes requirements for hazardous materials transport, containment, treatment, and disposal. Finally, staff training standards are set forth in Title 26.

Title 27 of the CCR sets forth a variety of regulations relating to the construction, operation and maintenance of the state's landfills. The title establishes a landfill classification system and categories of waste. Each class of landfill is constructed to contain specific types of waste (household, inert, special, and hazardous).

California Department of Transportation

Caltrans has adopted policy and guidelines relating to traffic noise as outlined in the Traffic Noise Analysis Protocol (Caltrans 2011). The noise abatement criteria specified in the protocol are the same as those specified by FHWA.

California Government Code Section 65302

This section, which establishes standards for developing and updating General Plans, includes fire hazard assessment and Safety Element content requirements.

California Health and Safety Code

Division 20 of the Health and Safety Code establishes Department of Toxic Substances Control (DTSC) authority and sets forth hazardous waste and underground storage tank regulations. In addition, the division creates a state superfund framework that mirrors the federal program.

Division 11 of the Health and Safety Code establishes regulations related to a variety of explosive substances and devices, including high explosives and fireworks. Section 12000 et seq. establishes regulations related to explosives and explosive devices, including permitting, handling, storage, and transport (in quantities greater than 1,000 pounds).

Division 12.5 of the Health and Safety Code establishes requirements for buildings used by the public, including essential services buildings, earthquake hazard mitigation technologies, school buildings, and postsecondary buildings.

Division 26 of the Health and Safety Code establishes California Air Resources Board (CARB) authority. The division designates CARB as the air pollution control agency per Federal regulations and charges the Board with meeting Clean Air Act requirements.

California Health and Safety Code and UBC Section 13000 et seq.

State fire regulations are set forth in Section13000 *et seq*. of the California Health and Safety Code, which is divided into "Fires and Fire Protection" and "Buildings Used by the Public." The regulations provide for the enforcement of the UBC and mandate the abatement of fire hazards.

The Health and Safety Code establishes broadly applicable regulations, such as standards for buildings and fire protection devices, in addition to regulations for specific land uses, such as childcare facilities and high-rise structures.

California Vehicle Code Section 31600 (Transportation of Explosives)

This California Vehicle Code establishes requirements related to the transportation of explosives in quantities greater than 1,000 pounds, including licensing and route identification.

California Public Resources Code

The State's Fire Safety Regulations are set forth PRC Section 4290, which include the establishment of State Responsibility Areas (SRAs).

Public Resources Code Section 4291 sets forth defensible space requirements, which are applicable to anyone who "…owns, leases, controls, operates, or maintains a building or structure in, upon, or adjoining a mountainous area, forest-covered lands, brush-covered lands, grass-covered lands, or land that is covered with flammable material" (Section 4291(a)).

California Fire Code

The 2019 California Fire Code (CCR Title 24, Part 9) establishes regulations to safeguard against the hazards of fire, explosion, or dangerous conditions in new and existing buildings, structures, and premises. The Fire Code also establishes requirements intended to provide safety for and assistance to firefighters and emergency responders during emergency operations. The provisions of the Fire Code apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal, and demolition of every building or structure throughout California. The Fire Code includes regulations regarding fire-resistance-rated construction, fire protection systems such as alarm and sprinkler systems, fire services features such as fire apparatus access roads, means of egress, fire safety during construction and demolition, and wildland-urban interface areas.

Food and Agriculture Code

Division 6 of the California Food and Agricultural Code (FAC) establishes pesticide application regulations. The division establishes training standards for pilots conducting aerial applications as well as permitting and certification requirements.

State Oversight of Hazards and Hazardous Materials

The DTSC is chiefly responsible for regulating the handling, use, and disposal of toxic materials. The State Water Resources Control Board (SWRCB) regulates discharge of potentially hazardous materials to waterways and aquifers and administers the basin plans for groundwater resources in the various

regions of the state. The Regional Water Quality Control Board (RWQCB) oversees surface and groundwater. Programs intended to protect workers from exposure to hazardous materials and from accidental upset are covered under OSHA at the federal level and Cal-OSHA and the California Department of Health Services (DHS) at the state level. Air quality is regulated through the CARB and Bay Area Air District (BAAD). The State Fire Marshal is responsible for the protection of life and property through the development and application of fire prevention engineering, education, and enforcement; CalFire provides fire protection services for State and privately-owned wildlands.

Water Code

Division 7 of the California Water Code, commonly referred to as the Porter-Cologne Water Quality Control Act, created the SWRCB and RWQCB. In addition, water quality responsibilities are established for the SWRCB and RWQCBs.

LOCAL

Marin Multi-Jurisdictional Hazard Mitigation Plan (MJHMP)

The Marin Multi-Jurisdictional Hazard Mitigation Plan (MJHMP) [13] is used to help guide and coordinate mitigation activities and decisions for local land use policy. Hazard mitigation planning is the process of making any sustained plan or course of action taken to reduce or eliminate long-term risk to people and property from both natural hazards and their effects. The Marin MJHMP establishes goals and recommendations for mitigation strategies for the unincorporated county, eleven (11) jurisdictions in the county, three special districts, and the North Marin Water District. Proactive mitigation planning will help reduce the cost of disaster response and recovery to communities and their residents by protecting critical community facilities, reducing liability exposure, and minimizing overall community impacts and disruptions. Marin County has been affected by hazards in the past and is committed to reducing future impacts from hazard events and becoming eligible for mitigation-related federal funding.

The MJHMP addresses evacuation infrastructure while deferring tactical hazardous materials management to alternative county plans. Because the document focuses primarily on natural disasters, it actively assesses risks to transit infrastructure by integrating countywide evacuation route studies, fuels-reduction mapping along critical roadways, and the Zonehaven evacuation zoning system to preserve viable escape pathways. However, due to its FEMA-mandated scope targeting natural hazards, the MJHMP only touches upon hazardous materials tangentially—such as chemical releases secondary to floods or earthquakes—and officially relies on the companion Marin Operational Area Emergency Operations Plan (EOP) for dedicated, operational responses to toxic spills and tactical first-responder protocols.[14]

[13] County of Marin, 2023. Marin County Operational Area Multi-Jurisdictional Hazard Mitigation Plan 2023. Volume 1: Planning Area-Wide Elements.

[14] County of Marin, 2023. Marin County Operational Area Multi-Jurisdictional Hazard Mitigation Plan 2023. Volume 1: Planning Area-Wide Elements.

Existing Town of San Anselmo General Plan

The current Town of San Anselmo General Plan identifies the following policies and actions related to hazards.

HAZARDOUS MATERIALS

Conservation Element

Policy 2: Radioactive, chemical, and biological health hazards shall not be created, and existing levels shall be reduced.

Safety Element

Policy S-1.2: Increase education, outreach, and awareness of hazards and hazard mitigation, especially vulnerable populations (AFN, Disadvantaged Communities, etc.).

Policy S-1.3: Encourage new development in locations that avoid or reduce exposure to hazards.

Action S-1.3a: Locate, when feasible, new essential public facilities outside of identified hazard areas, including hospitals and health care facilities, emergency shelters, fire stations, emergency command centers, and emergency communications facilities outside of identified hazard zones.

Action S-1.3b: Identify appropriate construction methods to minimize damage to public facilities located within an identified hazard area.

FIRE RELATED POLICIES

Conservation Element

Policy 7: Construction shall be located and designed to avoid or minimize the hazards from earthquake, erosion, landslides, floods, fire, and accidents.

Policy 10: Projects shall not overburden the water supply, fire protection, waste disposal, schools, traffic and circulation, or other services and facilities, or adversely affect the financial or social environment of the community.

Policy N1: Fire Hazard: In areas which lack sufficient water pressure, and/or access for fire-fighting equipment, or areas which have a concentration of inflammable materials the development review process should require proper remedial measures as a condition of approval.

Land Use Element

Policy 13.1: To encourage the Fire District to require sprinkler systems in new residential buildings which the Water District cannot supply with the ISO recommended fire flow.

Policy 14.1: To prohibit on street parking on public and private roadways which, due to their width or circuitous routing, create problems for fire equipment access.

Policy 14.2: To prohibit the use of combustible roofing materials in residential areas that have a high wildfire potential (e.g., hillside and ridge areas).

Open Space Element

Policy 4.9: Access to fire roads will be provided to bicycles under conditions similar to those imposed by Marin Municipal Water District.

Public Facilities Element

Policy 12.1: To work with the special districts that provide water, sewer, and fire protection services in order to maintain and improve upon the present level of service.

Policy 12.2: To require all new development within the Town to be served by the public fire protection system and, where feasible, the public water and sewer system.

Policy 13.1: To encourage the Fire District to require sprinkler systems in new residential buildings which the Water District cannot supply with the ISO recommended fire flow.

Policy 14.1: To prohibit on street parking on public and private roadways which, due to their width or circuitous routing, create problems for fire equipment access.

Policy 14.2: To prohibit the use of combustible roofing materials in residential areas that have a high wildfire potential (e.g., hillside and ridge areas).

Safety Element

Goal S-5: Prepare and ready the community to respond to fire hazards.

Policy S-5.1: Ensure fuel modification activities and vegetation management techniques along creeks and steep slopes do not contribute to landslide and erosion hazards.

Policy S-5.2: Encourage the formation of a community- and neighborhood-based approach to wildfire education and action through local Fire Safe Councils and the Fire Wise Program.

Policy S-5.3: Encourage the Fire Department to increase local patrolling during periods of high fire weather.

Policy S-5.4: Regularly re-evaluate specific fire hazard areas and adopt reasonable safety standards covering such elements as fuel modification around homes, adequacy of existing and future water supplies, fire flow tests, fire hydrants, routes or throughways for fire equipment access, clarity of addresses and street signs, and long-term maintenance.

Policy S-5.5: Enforce and update Town regulations, as needed, to maintain consistency with the California Building and Fire Codes and Ross Valley Fire Department Standards and best practices.

Policy S-5.6: Prohibit new public/critical facilities (schools, hospitals, fire stations, etc.) from being located in High and Very High Fire Hazard Severity Zones to the greatest extent feasible. If located in these areas, require adequate fire response and evacuation capabilities.

Policy S-5.7: Support fire prevention, public education, early detection programs, and property inspections to identify and avoid fire hazards.

Policy S-5.8: Require vegetation clearance and maintenance for all public and private roads and properties in the fire hazard areas.

Policy S-5.9: Allocate adequate funding for fuel breaks and other fire defense improvements on public property and require similar measures for private property in compliance with fire safe regulations.

Policy S-5.10: Coordinate with owners of private water sources, such as swimming pools, in or adjacent to high fire risk areas for on-site fire protection use.

Policy S-5.11: Prioritize development in areas with sufficient water supply infrastructure and roadway capacity to provide adequate evacuation and emergency equipment access.

Policy S-5.12: Coordinate with Marin Municipal Water District to ensure adequate water supply and infrastructure for existing and future daily demands and firefighting suppression requirements.

Action S-5.1a: Require that vegetation management in fire-sensitive areas include thinning or replanting of vegetation with less flammable materials.

Action S-5.1b: Prioritize the removal of non-native species.

Action S-5.1c: Identify structural mitigations rather than vegetation management in the most sensitive areas.

Action S-5.1d: Prepare a Biodiversity, Fire, and Fuels Integrated Plan (BFFIP) that describes actions necessary to minimize fire hazards and maximize ecological health in Town open space areas in compliance with the Marin County Community Wildfire Protection Plan.

Action S-5.2a: Engage with homeowners in the Wildland Urban Interface to prepare a wildfire action plan.

Action S-5.5a: Enforce and update Town regulations, as needed, to maintain consistency with the California Building Code and Ross Valley Fire Department requirements and best practices.

Action S-5.5b: Prior to the approval of any subdivision of lands in an area of high fire risk, the Town should review and approve the results of a study that includes at least the following topics:

- A description of the risk and the factors contributing to the risk.
- Actions should be taken to reduce the risk to an acceptable level.
- The costs and means of providing fire protection to the subdivision.
- An indication of who pays for the costs involved and who receives the benefits.

Action S-5.5c: Establish mitigations for properties in fire hazard areas with restricted and single points of access, including parking restrictions, and investigate the feasibility of

establishing special assessment districts to improve road capacity and adequate water supply.

Action S-5.7a: Implement fire control maintenance measures as needed on undeveloped private property, provide the necessary fire prevention improvements on properties that pose a significant public safety threat, and pass along incurred costs to property owners.

Action S-5.7b: Educate residents and businesses on the Town's vegetation management practices, including fire safety, landscaping installation and maintenance, and fire hazard reduction strategies.

Action S-5.9a: Continue to consider grazing in open space for grass/light fuel maintenance.

3.9.3. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

This program-level analysis evaluates potential hazards and hazardous materials impacts that could result from implementation of the Town of San Anselmo General Plan 2045. The analysis considers federal and state regulatory requirements governing hazardous materials (including CERCLA, RCRA, and the California Health and Safety Code), information from DTSC's EnviroStor and the State Water Resources Control Board's GeoTracker databases, and local emergency planning resources such as the Marin County Operational Area Emergency Operations Plan, the Marin County Community Wildfire Protection Plan (CWPP), and the Town's Emergency Operations Plan. Because the EIR is programmatic, it identifies how implementation of General Plan goals, policies, and actions—particularly those in the Safety Element—will ensure that hazards and hazardous materials are addressed through future project-level review and adherence to applicable regulations.

Because this is a program-level review, the analysis is conducted at a town-wide scale; future site-specific environmental review may be required for individual development projects.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to Hazards and Hazardous Materials.

Safety Element

HAZARD MITIGATION, EMERGENCY PREPAREDNESS, RESPONSE, AND RECOVERY

Goal S-A Promote a culture of resilience and preparedness within San Anselmo where community members and businesses are prepared for natural and human-caused emergencies.

Policy S-A.1: Structural Hazards. Support efforts to reduce the number of structures subject to natural hazards.

Action S-A.1.a: Building Code Updates. Regularly update building codes and regulations to address changing hazard conditions and requirements.

Policy S-A.2: Hazard Education. Increase education, outreach, and awareness of hazards and hazard mitigation, especially for vulnerable populations, including older adults, people with disabilities, lower-income households, and others who may face barriers to accessing information.

Action S-A.2.a: Multilingual and Community-Based Outreach. Expand emergency preparedness outreach through multilingual communication and partnerships with community-based organizations to broaden access to information on evacuation routes, shelter locations, and recovery resources. Use a variety of communication methods and trusted community channels to reach residents who may not engage with standard municipal communications, and adapt outreach strategies over time as San Anselmo's demographics evolve.

Policy S-A.3: Hazards in New Development. Encourage new development in locations that avoid or reduce exposure to hazards for future residents and users

Action S-A.3.a: Essential Public Facilities. Locate, when feasible, new essential public facilities outside of identified hazard areas, including hospitals and health care facilities, emergency shelters, fire stations, emergency command centers, and emergency communications facilities.

Action S-A.3.b: Public Facilities in Hazard Areas. Identify appropriate construction methods to minimize damage to public facilities located within an identified hazard area.

Policy S-A.4: Resilient Utilities and Public Safety Services. Work with public utilities and special districts that provide water, sewer, fire protection, and public safety services in order to maintain and improve upon the present level of service and resiliency to natural hazards.

Policy S-A.5: Resilient Town Buildings. Require that Town-owned buildings are maintained to support their resilience in the face of natural disasters.

Action S-A.5.a: Resilient Public Facilities. Maintain the structural and operational integrity of essential public facilities during hazard events.

Policy S-A.6: Agency Coordination. Increase cooperation and coordination among private entities, local agencies, special districts, State and federal agencies, and tribal organizations to improve service delivery and communication to the community.

Policy S-A.7: Staff Training. Ensure Town staff are adequately trained to implement State and local regulations designed to avoid loss of life, injury, and property damage from natural disasters.

Action S-A.7.a: Hazard Mitigation Program Review and Integration. Conduct an annual review of hazard mitigation goals and strategies and integrate the findings into the annual budget, staffing allocations, and updates to the Capital Improvement Plan.

Policy S-A.8: Pedestrian Evacuation Routes. Support the development of pedestrian rights-of-way as temporary pathways to serve as additional evacuation routes for residents without access to private vehicles or with mobility limitations.

Policy S-A.9: Emergency Response and Evacuation Plans. Support the preparation, implementation, and regular update of local preparedness and evacuation plans ensuring plans are accessible and responsive to the needs of diverse abilities, and promote multi-jurisdictional cooperation and communication for emergency situations.

> **Action S-A.9.a: Emergency Planning, Coordination and Training Program**. Maintain and update the Town's Emergency Operations Plan (EOP) to ensure a clear chain of command and strong coordination with the Marin County Operational Area, and participate in regional emergency planning efforts, including updates to the Marin County Multi-Jurisdictional Hazard Mitigation Plan (MJHMP). Adopt each updated MJHMP to remain eligible for FEMA hazard mitigation funding and ensure the plan includes analysis of climate-related risks, identification of vulnerable assets and populations, and strategies to address their specific needs and strengthen community resilience.

Policy S-A.10: Post Disaster Recovery. Expand and enhance post disaster recovery strategies, prioritizing community resilience, sustainability, and equitable recovery for all residents.

> **Action S-A.10.a: Post Disaster Recovery Framework.** Develop an all-hazards Post Disaster Recovery Framework for use after a major incident or event that considers the needs of different segments of the community.

Policy S-A.11: Community Education. Educate community residents and businesses on emergency preparedness, response, and evacuation procedures and mitigation strategies using accessible formats and inclusive communication methods.

> **Action S-A.11.a: Public Outreach.** Provide community outreach and education programs on a regular basis to keep residents informed about emergency procedures, shelters, safe refuge areas, and evacuation routes using multiple communication channels and accessible formats.

Policy S-A.12: Circulation System for Evacuations. Continue to study the Town's circulation network and emergency response capabilities to provide for effective evacuations during an emergency for all residents, including those with limited mobility and transportation options.

Policy S-A.13: Property Identification. Identify properties through clear street naming and numbering systems for emergency response vehicles.

Policy S-A.14: Access Routes for New Development. Require all new developments and redevelopments to provide a minimum of two points of access by means of public roads that can be used for emergency vehicle response and evacuation purposes for residents and emergency responders

Action S-A.14.a: Emergency Access Improvements and Roadway Standards. Evaluate and implement feasible emergency access improvements for existing and new development, including roadway widening, parking restrictions, vehicle pullouts, roadside clearance, and new or improved access routes, and require necessary upgrades during discretionary review when a nexus exists. For areas that do not meet minimum emergency access standards, assess targeted solutions such as hillside pullouts, limited on-street parking, enhanced clearance, or supplemental access routes, with improvements limited to property frontage where appropriate.

Policy S-A.15: Private Road Design. Ensure all private roads are designed and maintained to allow unrestricted emergency equipment and personnel access.

Policy S-A.16: Updated Evacuation Routes. Ensure all Town and Marin County transportation plans reflect updated evacuation routes, strategies, and data.

Policy S-A.17: Emergency Response Capability. Maintain a high level of emergency response capability to serve all members of the community effectively.

Action S-A.17.a: Budget for Emergency Services. Account for current and future emergency service needs during annual budgeting cycles.

Action S-A.17.b: Emergency Service Priorities. Regularly review and update the Town's priorities for future emergency service needs to reflect changing conditions and community needs.

Action S-A.17.c: Development Review. Consult Fire and Police staff in the development review process to ensure development adequately addresses service levels, security concerns, and safety.

WILDLAND AND URBAN FIRES

Goal S-E Prepare and ready the community to respond to fire hazards.

Policy S-E.1: Vegetation Management along Creeks and Steep Slopes. Ensure fuel modification activities and vegetation management techniques along creeks and steep slopes do not contribute to landslide and erosion hazards.

Action S-E.1.a: Vegetation Management in Fire-Sensitive Areas. Require that vegetation management in fire-sensitive areas include thinning of high fuel vegetation or replanting with fire resistant plant materials.

Action S-E.1.b: Non-native Species. Prioritize the removal of non-native species.

Action S-E.1.c: Structural Mitigations. Identify structural mitigations rather than vegetation management in the most fire-sensitive areas (i.e., areas within the WUI), when feasible.

Action S-E.1.d: Biodiversity, Fire, and Fuels Integrated Plan. Prepare a Biodiversity, Fire, and Fuels Integrated Plan (BFFIP) that describes actions necessary to minimize fire hazards and

maximize ecological health in Town open space areas in compliance with the Marin County Community Wildfire Protection Plan.

Policy S-E.2: Community- and Neighborhood-Based Approach. Encourage a community- and neighborhood-based approach to wildfire education and action through local Fire Safe Councils and the Fire Wise Program, supporting participation from a broad range of residents.

Action S-E.2.a: Wildfire Actions Plans. Engage with property owners and residents in the Wildland Urban Interface to prepare a wildfire action plan.

Policy S-E.3: Fire Patrolling. Encourage the Fire Department to increase local patrolling during periods of high fire weather.

Policy S-E.4: Safety Standards in Fire Hazard Areas. Regularly re-evaluate specific fire hazard areas and adopt reasonable safety standards covering such elements as fuel modification around homes, adequacy of existing and future water supplies, fire flow tests, fire hydrants, routes or throughways for fire equipment access, clarity of addresses and street signs, and long-term maintenance.

Policy S-E.5: Code Consistency. Maintain consistency with the California Building and Fire Codes and Ross Valley Fire Department Standards and best practices.

Action S-E.5.a: Fire Code Consistency and Development Review Requirements. Maintain and enforce Town regulations to remain consistent with the California Building Code and Ross Valley Fire Department requirements and require fire risk analysis and appropriate mitigation measures for subdivisions and development in high fire hazard areas. Prior to approving any subdivision in these areas, review and approve a fire risk study that identifies contributing risk factors, recommended mitigation actions, the costs and means of providing fire protection, and the parties responsible for funding and benefiting from these measures.

Action S-E.5.b: Properties with Limited Access. Establish mitigations for properties in fire hazard areas with restricted and single points of access, including parking restrictions, and investigate the feasibility of establishing special assessment districts to improve road capacity and adequate water supply.

Policy S-E.6: Public Facilities in High and Very High Fire Severity Zones. Prohibit new public/critical facilities (schools, hospitals, fire stations, etc.) from being located in High and Very High Fire Hazard Severity Zones to the greatest extent feasible. If located in these areas, require adequate fire response and evacuation capabilities.

Policy S-E.7: Fire Prevention Programs. Support fire prevention, public education, early detection programs, and property inspections to identify and avoid fire hazards, using accessible formats and community methods.

Action S-E.7.a: Property Maintenance for Fire Control. Implement and enforce fire safety and vegetation management requirements on private property, including taking necessary fire prevention actions on undeveloped or hazardous sites and recovering associated costs

from property owners. Provide comprehensive public education for residents and businesses on defensible space, vegetation management, landscaping practices, and fire hazard reduction strategies, using multiple communication channels.

Policy S-E.8: Vegetation Clearance. Require vegetation clearance and maintenance for all public and private roads and properties in the fire hazard areas.

Policy S-E.9: Fire Defense Improvements. Allocate adequate funding for fuel breaks and other fire defense improvements on public property and require similar measures for private property in compliance with fire safe regulations.

Action S-E.9.a: Grazing for Fuel Management. Continue to consider grazing in open space for grass/light fuel maintenance.

Policy S-E.10: Private Water Sources. Coordinate with owners of private water sources, such as swimming pools, in or adjacent to high fire risk areas for on-site fire protection use.

Policy S-E.11: Prioritization of New Development. Prioritize development in areas with sufficient water supply infrastructure and roadway capacity to provide adequate evacuation and emergency equipment access for future residents and users.

Policy S-E.12: Adequate Water Supply. Coordinate with Marin Municipal Water District to ensure adequate water supply and infrastructure for existing and future daily demands and firefighting suppression requirements.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact from hazards and hazardous materials if it would:

- Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;
- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;
- Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area;
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or
- Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

IMPACTS AND MITIGATION MEASURES

Impact 3.9-1: General Plan 2045 implementation has the potential to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, or through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment (Less than Significant)

Future development, infrastructure, and other projects allowed under the General Plan 2045 may involve the transportation, use, and/or disposal of hazardous materials. Hazardous materials are typically used in industrial and commercial uses, as well as residential uses. Future uses may involve the transport and disposal of such materials from time to time. Future activities may involve equipment or construction activities that use hazardous materials (e.g., coatings, solvents and fuels, and diesel-fueled equipment), cleanup of sites with known hazardous materials, the transportation of excavated soil and/or groundwater containing contaminants from areas that are identified as being contaminated, or disposal of contaminated materials at an approved disposal site. While hazardous materials may be associated with industrial activities, hazardous materials may also be associated with the regular cleaning and maintenance of residential and other less intense uses.

The use, transportation, and disposal of hazardous materials is regulated and monitored by local fire departments, CUPAs, the Cal-OSHA and the DTSC consistent with the requirements of federal, state, and local regulations and policies. Facilities that store hazardous materials on-site are required to maintain a Hazardous Materials Business Plan in accordance with state regulations. In the event of an accidental release of hazardous materials, the local CUPA and emergency management agencies (e.g., police and fire departments) would respond. All future projects allowed under the General Plan 2045 would be required to comply with the provisions of federal, state, and local requirements related to hazardous materials. As future development and infrastructure projects are considered by the Town, each project would be evaluated for potential impacts, specific to the project, associated with hazardous materials as required under CEQA.

The General Plan 2045 establishes a clear framework for hazard prevention and preparedness through Goal S-A, which promotes a culture of resilience and preparedness. To support this goal, the Town will continue to reduce structural exposure to natural and human-caused hazards through its commitment to update building codes and regulations as conditions change, as described in Action S-A.1.a. The Town also intends to maintain resilient utilities and public safety services, consistent with Policy S-A.4, by coordinating with service providers to ensure that critical systems such as water, sewer, and emergency response infrastructure can operate during emergencies.

To minimize the potential for accidental releases, Town staff are required to stay current on state and local hazard regulations under the direction of Policy S-A.7, which calls for regular training to avoid loss of life, injury, and property damage. Furthermore, the Town promotes coordination with private entities and local, state, and federal agencies under Policy S-A.6 to ensure proper oversight of hazardous materials management. These measures, combined with state and county regulatory

programs governing hazardous materials storage, transport, and disposal, will ensure that any use or handling of hazardous materials under the General Plan 2045 is conducted safely.

The Town's hazard reduction policies complement state and federal regulations. Compliance with the Resource Conservation and Recovery Act ensures proper storage, transport, and disposal of hazardous waste. The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the California Health and Safety Code provide frameworks for cleanup of contaminated sites before redevelopment, including oversight of potentially hazardous releases. In addition, Titles 8 and 26 of the CCR require worker safety training and standards for hazardous materials handling.

Locally, the General Plan 2045 implements Goal S-A to promote community resilience, including Policy S-A.1 and Action S-A.1.a, which require updating building codes to mitigate hazards, and Policy S-A.7, which promotes staff training to prevent accidents. Coordination under Policies S-A.6 and calls for local actions to align with state and federal standards.

As described previously in the regulatory setting, hazardous materials regulations related to the use, handling, and transport of hazardous materials are codified in Titles 8, 22, and 26 of the CCR, and their enabling legislation set forth in the California Health and Safety Code. These laws were established at the state level to ensure compliance with federal regulations to reduce the risk to human health and the environment from the routine use of hazardous substances. These regulations must be implemented by employers/businesses, as appropriate, and are monitored by the state (e.g., Cal OSHA in the workplace or DTSC for hazardous waste) and/or the County.

Therefore, implementation of the General Plan 2045 policies and actions, as well as compliance with all applicable federal, state and local regulations, would ensure that potential impacts associated with the routine use, transport, storage, disposal, or accidental release of hazardous materials would be **less than significant**.

Impact 3.9-2: General Plan 2045 implementation has the potential to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school (Less than Significant)

The Town of San Anselmo is served by the Ross Valley School District and Tamalpais Union High School District (TUHSD). There are three Ross Valley School District school sites within the Planning Area, including Brookside Elementary, Hidden Valley Elementary School, and Wade Thomas Elementary. All three schools serve students from kindergarten through fifth grade. The nearest middle school is White Hill Middle School, located outside of the Planning Area. TUHSD provides ninth through twelfth grade education to 19 different communities in southern Marin County, including San Anselmo, at three high schools and two alternative programs. Archie Williams High School is located at 1327 Sir Francis Drake Boulevard in San Anselmo and serves San Anselmo residents.

The General Plan 2045 Land Use and Community Design Element includes land use designations, but does not propose actual development projects, designate new schools, or businesses. As such, it is

not possible to determine if a specific use will result in hazardous emissions or require handling of hazardous or acutely hazardous materials, substances, or waste. Standards under the Clean Air Act (NESHAPs) and California Air Resources Board regulations control emissions of hazardous air pollutants, while the Clean Water Act prevents contaminant runoff into waterways. Underground storage tanks are regulated under the Health & Safety Code and SWRCB oversight to prevent leaks that could affect nearby schools.

The General Plan 2045 is not anticipated to directly lead to the establishment of new businesses that would emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste because the General Plan does not approve any specific development project. However, given the unknown nature of future business establishments within the commercial and industrial use areas, the potential for hazardous materials is present, and may occur withing one-quarter mile of a school.

The General Plan directs new development away from hazard areas through Policy S-A.3 and requires essential facilities in hazard zones to implement protective construction under Action S-A.3.b. Policy S-A.2 and Action S-A.11.a ensure education and outreach to sensitive and vulnerable populations about potential hazards and emergency procedures using accessible formats and inclusive communication methods. Additionally, Action S-A.17.c calls for consultation with Fire and Police staff in the development review process to ensure development adequately addresses service levels, security concerns, and safety.

All hazardous materials would be required to be handled in accordance with Federal, State, County requirements, and local General Plan 2045 policies which would limit the potential for a project to expose nearby uses, including schools, to hazardous emissions or an accidental release. Hazardous emissions and releases, are monitored by the BAAD, RWQCB, DTSC and the local CUPA. In the event of a hazardous materials spill or release, notification and cleanup operations would be performed in compliance with applicable Federal, State, and local regulations and policies, including hazard mitigation plans.

New school sites in California are also subject to review by the California Department of Education (CDE) School Facilities Planning Division under its School Site Selection and Approval Guide, which requires evaluation of proximity to hazardous air emissions and facilities, toxic and hazardous substances, and other health hazards within a quarter mile of a proposed site, among other safety factors. Because any new school site within the Planning Area would be subject to this independent CDE review, in addition to the federal, state, and local requirements described above, the potential for a new or existing school to be sited in proximity to a hazardous materials or emissions source would be further reduced.

Evaluation safety factors for school site selection and approval includes the following:[15]

- Proximity to Airports;

[15] California Department of Education. Updated May 28, 2025. School Site Selection and Approval Guide. Available: https://www.cde.ca.gov/ls/fa/sf/schoolsiteguide.asp. Accessed: May 25, 2026.

- Proximity to High-Voltage Power Transmission Lines;
- Presence of Toxic and Hazardous Substances;
- Hazardous Air Emissions and Facilities Within a Quarter Mile;
- Other Health Hazards;
- Proximity to Railroads;
- Proximity to Pressurized Gas, Gasoline, or Sewer Pipelines;
- Proximity to High-Pressure Water Pipelines, Reservoirs, Water Storage Tanks;
- Proximity to Propane Tanks;
- Noise;
- Proximity to Major Roadways;
- Results of Geological Studies and Soils Analyses;
- Traffic and School Bus Safety Conditions;
- Safe Routes to School; and
- Safety Studies for Joint-Use Sites.

Compliance with all existing regulations, siting requirements and guidelines, as well as General Plan 2045 policies and actions related to land use compatibility and hazardous materials would ensure that the impact is **less than significant**.

Impact 3.9-3: General Plan 2045 implementation has the potential to have projects located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (Less than Significant)

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies, and developers to comply with California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. Government Code Section 65962.5 requires the California Environmental Protection Agency to develop at least annually an updated Cortese List. The DTSC is responsible for a portion of the information contained in the Cortese List. Other State and local government agencies are required to provide additional hazardous material release information for the Cortese List.

There is one Cortese List site within the Planning Area: Bolinas Avenue Center. The Bolinas Avenue Center is located at 4 and 8 Bolinas Avenue and 21 San Anselmo Avenue in San Anselmo, California, 94960. The site consists of a 0.32-acre parcel. There is a single-story building approximately 5,530 square feet and a parking lot on the parcel. It is located on the northwest corner of Bolinas Avenue and San Anselmo Avenue. The commercial building was built in 1957 and divided into three units in 1972. Currently 4 Bolinas Avenue and 21 San Anselmo Avenue are leased. North of the site are medical offices, a bicycle shop, a dental office, and a store; to the east across San Anselmo Avenue and Sir Francis Drake Boulevard are residential uses; to the south across Bolinas Avenue are residential uses; and to the west are residential uses.

Environmental investigations of the site began in 2009. The primary chemical identified is PCE, a chemical commonly used by dry cleaners in the past. It has been found in soil and soil vapor beneath

the location where the dry cleaning equipment had operated until approximately 1982.[16] PCE and its break-down products have also been found in shallow groundwater, approximately 7 to 10 feet below the ground surface. This groundwater is not a source for drinking water. These chemicals are volatile and have also been found in soil vapor. This may have potential to impact indoor air. Current conditions do not pose an immediate health risk. The site will be cleaned up for future use, in order to protect health and safety of people and the environment.[17]

Federal and state regulations ensure that existing hazards, including those associated with known hazardous materials sites, are addressed prior to development. Federal and state requirements mandate investigation, remediation, and regulatory oversight of these sites prior to redevelopment.

General Plan 2045 Policy S-A.3 encourages new development to avoid or minimize exposure to hazard sites, and Policy S-A.6 ensures increased cooperation and coordination among private entities, local agencies, special districts, State and federal agencies, and tribal organizations to improve service delivery and communication to the community. These measures, combined with regulatory compliance, minimize potential exposure to hazardous sites.

No specific development projects are proposed or would be approved by the General Plan 2045 process. The General Plan 2045 includes review and coordinating policies that are intended to ensure cleanup sites are identified, reviewed, and if needed, remediated, to prevent inappropriate release of hazardous materials. Overall, compliance with all applicable federal, state and local regulations and requirements included in the General Plan 2045 would ensure that potential impacts associated with the hazardous conditions on sites listed pursuant to Government Code Section 65962.5 would be **less than significant**.

Impact 3.9-4: General Plan 2045 implementation is not located within an airport land use plan, two miles of a public airport or public use airport, and would not result in a safety hazard for people residing or working in the project area (Less than Significant)

Hazards related to airports are typically grouped into two categories: air hazards and ground hazards. Air hazards jeopardize the safety of an airborne aircraft and expose passengers, pilots, and crews to danger. Examples of air hazards include tall structures, glare-producing objects, bird and wildlife attractants, radio waves from communication centers, or other features that have the potential to interfere with take-off or landing procedures, posing a risk to aircraft. Ground hazards jeopardize the safety of current and future residents and/or workers in the vicinity of an airport. The most obvious ground hazard is a crash, which may produce a serious, immediate risk to those residing in or using areas adjacent to the airport. Most accidents occur during take-off and landing. Therefore, the higher

[16] Environmental Audit, Inc., April 2020. Revised Remedial Action Completion Report. Available at: https://www.envirostor.dtsc.ca.gov/getfile?filename=/public%2Fdeliverable_documents%2F7667785465%2FRACR-2019(Rev.2)_text.tables.figures_Apdx%20A-C.pdf.

[17] California Department of Toxic Substances Control. October 2016. Community Update. Available: https://sananselmo-ca.granicus.com/DocumentViewer.php?file=sananselmo-ca_fcae58fa2f86310dcf08d34556b01699.pdf. Accessed: May 25, 2026.

the density around an airport, including transportation facilities, the higher the risk associated with this type of hazard.

There are no private or public airport facilities in the Planning Area. San Anselmo is not located within an airport influence zone. The closest airport facility to the Planning Area is the San Rafael Airport, approximately 2.7 miles northeast of the San Anselmo town boundary.

The Town of San Anselmo is not located within an airport land use plan area and is more than two miles from any public or private airport. Therefore, implementation of the General Plan 2045 would not result in an airport safety hazard for people residing or working in the Planning Area.

The General Plan 2045 does not include any policies or actions that would impact air hazards or safety. Future development associated with the General Plan 2045 would not affect the Runway Protection Zone, Inner/Outer Safety Zones, Inner Turning Zone, Sideline Safety Zone, Traffic Pattern Zone, or other safety-related zones for the local or regional airports. Implementation of the General Plan 2045 would result in a **less-than-significant impact**.

Impact 3.9-5: General Plan 2045 implementation has the potential to impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan (Less than Significant)

As described in Chapter 2.0 (Project Description), the General Plan 2045 would allow a variety of new development types including residential, commercial, and public projects, resulting in increased employment and population in the town. Road and infrastructure improvements would occur to accommodate the new growth. Future development and infrastructure projects are not anticipated to remove or impede any established evacuation routes within the town or region. Furthermore, the General Plan 2045 does not include land uses, policies, or other components that conflict with adopted emergency response or evacuation plans.

Emergency management in San Anselmo is coordinated through the Marin County Sheriff's Office of Emergency Services and guided by the Marin Operational Area Emergency Operations Plan (EOP). The EOP establishes procedures for emergency response, coordination among agencies, and recovery following disasters.

There are no official evacuation routes designated by the Town of San Anselmo. During an evacuation incident, specific routes will be designated by the Ross Valley Fire Department in coordination with the Town and the Central Marin Police Authority (CMPA). The specific routes and directions identified will be made on a case-by-case basis using incident specific information to ensure travelers can relocate to a safe location.

The General Plan 2045 includes sectional policies and actions that support emergency evacuation. Policy S-A.8 supports the development of pedestrian rights-of-way as temporary pathways to serve as additional evacuation routes for residents without access to private vehicles or with mobility limitations. Policy S-A.9 supports the preparation, implementation, and regular update of local preparedness and evacuation plans ensuring plans are accessible and responsive to the needs of

diverse abilities, and promote multi-jurisdictional cooperation and communication for emergency situations.

Action S-A.9.a calls for maintenance and updating of the Town's Emergency Operations Plan (EOP) to ensure a clear chain of command and strong coordination with the Marin County Operational Area, and participation in regional emergency planning efforts, including updates to the Marin County Multi-Jurisdictional Hazard Mitigation Plan (MJHMP).

The General Plan 2045's emphasis on maintaining emergency response capability (Policy S-A.17 and Actions S-A.17.a–c), budgeting for emergency services, and consulting Town Fire and Police staff in development review ensures new projects will preserve access, water flows for suppression, and evacuation function.

Given the combination of Town policies, Ross Valley Fire and CMPA involvement in project review, and adherence to Marin OA EOP, General Plan 2045 implementation would not impair emergency response or evacuations. Given the regulatory framework, and implementation of General Plan 2045 policies supporting preparedness and response capacity, potential interference with emergency response or evacuation would be **less than significant**.

Impact 3.9-6: General Plan 2045 implementation has the potential to expose people or structures to a significant risk of loss, injury or death involving wildland fires (Less than Significant)

Wildfires are a potential hazard to development and land uses located in the foothill and forested areas of the town. The severity of wildfire problems depends on a combination of vegetation, climate, slope, and people. The vegetation and topography found in the eastern portions of the Planning Area, coupled with hot, dry summers, present fire hazards during critical fire periods for much of the county. In addition to natural factors such as lightning, human activity is a primary factor contributing to the incidence of wildfires, including campfires, smoking, debris burning, arson, public utility infrastructure, and equipment use.

As described in greater detail in Section 3.16 (Wildfire), there are no areas identified as Very High Fire Hazard Severity Zones (VHFHSZs) in the Planning Area (see Figure 3.16-1); however, the Town includes areas of moderate to high wildfire risk within the wildland-urban interface (WUI).

Future development could increase exposure to wildfire hazards; however, this exposure would be minimized through compliance with existing regulatory requirements, including defensible space standards under Public Resources Code Section 4291, site-specific Fire Department review, and the California Fire Code, together with the General Plan 2045's suite of wildfire-related policies and actions. These include vegetation management and fuel reduction (Policy S-E.1 and Actions S-E.1.a–d), consistency with state building/fire codes and Ross Valley Fire standards (Policy S-E.5), vegetation clearance requirements (Policy S-E.8), siting restrictions for critical facilities in high fire severity zones (Policy S-E.6), prioritization of development where water supply and roadway capacity support evacuation and suppression (Policy S-E.11), coordination with Marin Water on firefighting supply and hydrant flows (Policy S-E.12), and defensible-space and fuel-reduction requirements paired with

public education (Policy S-E.7). Additional emergency-response and evacuation policies are addressed above under Policies S-A.6 through S-A.17. A full evaluation of these policies and actions, together with the Planning Area's fire hazard severity classifications and wildfire risk factors, is provided in Section 3.16 (Wildfire).

Through these combined regulatory requirements and General Plan policies, future development would apply fire-resistant design, maintain defensible space, and have adequate evacuation and suppression capacity, and exposure of people or structures to wildfire risk would be minimized. This impact would be **less than significant**.

Impact 3.9-7: General Plan 2045 implementation, in combination with other cumulative development, would not result in adverse impacts to hazards and hazardous materials. (Less than Significant)

The cumulative context of risk associated with hazards and hazardous materials is Marin County.

Construction of future development projects in Marin County may involve the transportation, use, and/or disposal of hazardous materials, which may involve the use of equipment that contains hazardous materials (e.g., solvents and fuels or diesel-fueled equipment), or the transportation of excavated soil and/or contaminants from areas that are identified as being contaminated. Some future land uses developed in the county could transport or use hazardous materials within ¼ mile of a school, or other sensitive receptors such as hospitals and residences.

Cumulative risk stems from regional increases in hazardous materials handling, development into the WUI, and multiple jurisdictions facing the same climate-driven fire trends. The MJHMP addresses evacuation infrastructure while deferring tactical hazardous materials management to alternative county plans. Because the document focuses primarily on natural disasters, it actively assesses risks to transit infrastructure by integrating countywide evacuation route studies, fuels-reduction mapping along critical roadways, and the Zonehaven evacuation zoning system to preserve viable escape pathways. For dedicated, operational responses to toxic spills and tactical first-responder protocols, the Marin Operational Area Emergency Operations Plan (EOP) provides guidance on appropriate actions.

Because regional and state regulatory frameworks apply across jurisdictions and regional plans embed ongoing coordination, monitoring, and minimizing policies, cumulative impacts related to hazards and hazardous materials would be **less than significant**.

This section provides a background discussion of the regional hydrology, flooding, water quality, water purveyors, and water sources in San Anselmo. This section is organized with an existing setting, regulatory setting, and impact analysis.

There were no comments received during the NOP comment period related to this environmental topic. See Appendix A for NOP comments received.

KEY TERMS

AF: Acre Feet; The volume of one acre of water to a depth of one foot. Each acre-foot of water is equal to approximately 325,851.4 gallons.

AFY: Acre Feet per Year

BGS: Below Ground Surface

CFS: Cubic Feet per Second

GPD: Gallons per Day

GPM: Gallons per Minute

Groundwater: Water that is underground and below the water table, as opposed to surface water, which flows across the ground surface. Water beneath the earth's surface fills the spaces in soil, gravel, or rock formations. Pockets of groundwater are often called "aquifers" and are the source of drinking water for a large percentage of the population in the United States. Groundwater is often extracted using wells which pump the water out of the ground and up to the surface. Groundwater is naturally replenished by surface water from precipitation, streams, and rivers when this recharge reaches the water table.

MG: Million Gallons

MGD: Million Gallons per Day

Surface water: Water collected on the ground or from a stream, river, lake, wetland, or ocean. Surface water is naturally replenished through precipitation but is naturally lost through evaporation and seepage into soil.

3.10.1. EXISTING SETTING

CLIMATE

San Anselmo is located in the Mediterranean-type climate zone typical of coastal central California. This zone is characterized by cool, wet winters and warm, dry summers, with almost all rain falling between the months of October and April. The mean annual precipitation in the San Anselmo area typically ranges between 30 to 40 inches per year. The precipitation levels can vary slightly from year to year based on weather patterns and climate fluctuations.

WATERSHEDS

A watershed is a region that is bound by a divide that drains to a common watercourse or body of water. Watersheds serve an important biological function, oftentimes supporting an abundance of aquatic and terrestrial wildlife including special-status species and anadromous and native local fisheries. Watersheds provide conditions necessary for riparian habitat.

The State uses a hierarchical naming and numbering convention to define watershed areas for management purposes. This means that boundaries are defined according to size and topography, with multiple sub-watersheds within larger watersheds. **Table 3.10-1** shows the primary watershed classification levels used by the State. The second column indicates the approximate size that a watershed area may be within a particular classification level, although variation in size is common.

TABLE 3.10-1: STATE OF CALIFORNIA WATERSHED HIERARCHY NAMING CONVENTION

WATERSHED LEVEL	*APPROXIMATE SQUARE MILES (ACRES)*	*DESCRIPTION*
Hydrologic Region (HR)	12,735 (8,150,000)	Defined by large-scale topographic and geologic considerations. California is divided into ten HRs.
Hydrologic Unit (HU)	672 (430,000)	Defined by surface drainage; may include a major river watershed, groundwater basin, or closed drainage, among others.
Hydrologic Area (HA)	244 (156,000)	Major subdivisions of hydrologic units, such as by major tributaries, groundwater attributes, or stream components.
Hydrologic Sub-Area (HSA)	195 (125,000)	A major segment of an HA with significant geographical characteristics or hydrological homogeneity.

SOURCE: CALWATER, CALIFORNIA INTERAGENCY WATERSHED MAPPING COMMITTEE, 2013. AVAILABLE AT: HTTPS://DATABASIN.ORG/DATASETS/F9EE90A6D42A48C0BC7CFC823978FE90/

Hydrologic Region

San Anselmo is located in the San Francisco Bay Hydrologic Region. The San Francisco Bay Hydrologic Region covers approximately 2.88 million acres (4,500 square miles) and includes all of San Francisco and portions of Marin, Sonoma, Napa, Solano, San Mateo, Santa Clara, Contra Costa, and Alameda counties. Significant geographic features include the Santa Clara, Napa, Sonoma, Petaluma, Suisun-Fairfield, and Livermore valleys; the Marin and San Francisco peninsulas; San Francisco, Suisun, and San Pablo bays; and the Santa Cruz Mountains, Diablo Range, Bolinas Ridge, and Vaca Mountains of the Coast Range.

The San Francisco Bay Hydrologic Region has 28 identified groundwater basins. Despite the tremendous urban development in the region, groundwater use accounts for only about five percent (68,000 acre-feet) of the region's estimated average water supply for agricultural and urban uses, and accounts for less than one percent of statewide groundwater uses. The Sacramento and San Joaquin rivers flow into the Delta and into San Francisco Bay. The Delta is the largest estuary on the West Coast, receiving nearly 40 percent of the state's surface water from the Sierra Nevada and the Central Valley. The interaction between Delta outflow and Pacific Ocean tides determines how far salt water intrudes into the Delta. The resulting salinity distribution influences the distribution of

many estuarine fish and invertebrates, as well as the distribution of plants, birds, and animals in wetlands areas.

The north lobe of San Francisco Bay is brackish and is known as San Pablo Bay. It is surrounded by Marin, Sonoma, Napa, and Solano counties. Suisun Marsh is between San Pablo Bay and the Delta and is the largest contiguous brackish marsh on the West Coast of North America, providing more than 10 percent of California's remaining natural wetlands. Within the San Francisco Bay Hydrologic Region, the Planning Area is located in the Corte Madera Creek-Frontal San Francisco Bay Estuaries, as shown on **Figure 3.10-1**.

GROUNDWATER

According to the DWR's Bulletin 118 Groundwater Basin Lookup, there are three groundwater basins identified within the Marin Water's service area, including the Ross Valley Groundwater Basin, San Rafael Valley Groundwater Basin, and portions of the Novato Groundwater Basin. All three basins are categorized by the California Statewide Groundwater Elevation Monitoring (CASGEM) program as very low priority basins.

Groundwater use within Marin Water's service area is limited to small, domestic use through private groundwater pumping wells. Marin Water has studied the potential for municipal groundwater use; however, several studies have determined the potential for municipal groundwater use within the boundaries of Marin Water's service area is very limited due to limited production capabilities, water quality constraints, and potential water rights issues. As a result of these studies, groundwater is not currently or planned to be used as a municipal water supply source by the district.[1]

LOCAL DRAINAGE

The Department of Public Works is responsible for the maintenance and improvement of all public infrastructure owned and managed by the Town. In addition to normal maintenance operations, they are a key agency in responding to emergencies involving the Town's infrastructure as well as weather related events and other disasters that have the potential for adverse impacts to public health or the environment. San Anselmo is responsible for maintaining the flood control system within the incorporated area. In the unincorporated parts of the Planning Area, responsibility for storm drain maintenance lies with the Marin County Flood Control and Water Conservation District (Marin Flood District).

The Planning Area is within the Corte Madera Creek-Frontal San Francisco Bay Estuaries. The Town's drainage system consists of a network of storm drains, culverts, and channels designed to collect and convey rainwater from streets, parking lots, and other impermeable surfaces. Storm drains are strategically placed to capture runoff and direct it into natural watercourses or detention basins to prevent flooding during heavy rainfall events. San Anselmo's creeks are also a key part of the Town's open space network. They are valuable physical, aesthetic, recreational, and ecological assets.

[1] Marin Water. 2024. 2020 Urban Water Management Plan. [page 54]

Protection of creeks not only preserves surface water quality, but also reduces flood risks, preserves biodiversity and habitat, minimizes erosion of stream banks, and prevents downstream siltation.

FLOODPLAIN MAPPING

FEMA Flood Zones

Federal Emergency Management Agency (FEMA) mapping provides important guidance to the Town in planning for flooding events and regulating development within identified flood hazard areas. FEMA's National Flood Insurance Program (NFIP) is intended to encourage state and local governments to adopt responsible floodplain management programs and flood measures. As part of the program, NFIP defines floodplain and floodway boundaries that are shown on Flood Insurance Rate Maps (FIRMs). The FEMA FIRM for the Planning Area is shown on **Figure 3.10-2**.

Areas that are subject to flooding are indicated by a series of alphabetical symbols, indicating anticipated exposure to flood events:

- **Zone A:** Subject to 100-year flooding with no base flood elevation determined. Identified as an area that has a one percent chance of being flooded in any given year.
- **Zone AE:** Subject to 100-year flooding with base flood elevations determined.
- **Zone AH:** Subject to 100-year flooding with flood depths between one and three feet being areas of ponding with base flood elevations determined.
- **500-year Flood Zone:** Subject to 500-year flooding. Identified as an area that has a 0.2 percent chance of being flooded in a given year.

Figure 3.10-2 identifies the areas within the Planning Area with a FEMA flood zone designation. Areas subject to flooding in the Planning Area generally follow San Anselmo and Sleepy Hollow Creeks, running from the northern and western portions of the Planning Area south toward the Town of Ross. Approximately 105 acres and 936 parcels in the town and less than 0.1 acre and two parcels in the SOI are located within the 100-year flood zone. The primary flood hazards are the low-lying residential areas adjacent to Broadmoor Avenue, Center Boulevard, Red Hill Avenue, and San Anselmo Avenue. The 500-year floodplain is largely adjacent to San Anselmo Avenue.

Existing Flood Conditions

Flooding in the Planning Area results from periodic flooding from San Anselmo and Sleepy Hollow Creeks. The Planning Area does not experience coastal flooding. The Downtown area of San Anselmo often floods in high rain events.[2] The low-lying areas of the Planning Area and its neighboring communities have experienced widespread flooding throughout history as creeks overflow their banks. Ross Valley, where the Planning Area is located, is naturally prone to flooding due to its location, geologic and geomorphic setting. Rainfall can be intense, soils are shallow with limited absorption capacity, slopes are steep, and stream channels are entrenched and, in many places,

[2] County of Marin. 2023. 2023 Marin County Operational Area Multi-Jurisdictional Hazard Mitigation Plan, Town of San Anselmo Community Profile. [page 70] Available at: https://storage.googleapis.com/proudcity/marindpwca/2024/05/Marin_County_MJHMP_2023_Final_resized1.pdf

narrow with relatively little storage capacity. As shown in **Figure 3.10-3** San Anselmo has 40 percent slope levels across much of the Planning Area. This steep terrain can lead to faster water runoff during heavy rains, which increases the risk of flooding in the lower-lying areas. Steep slopes are discussed further in Chapter 6, Geologic, Seismic, and Soil Hazards.

Historical Flood Events

The Planning Area has a long history of flooding, with two of the most severe floods occurring in the winters of 1982 and 2005.[3]

From January 3 to January 5, 1982, a severe storm caused serious flooding damage in the Planning Area. Floodwaters were three to four feet deep on San Anselmo Avenue, essentially turning it into a river. All commercial buildings in the Downtown area suffered water damage, with damages estimated at $4 million. One house was destroyed, and thirty or more homes and thirty-forty businesses were damaged. Utilities were out for several days, and a curfew was enforced.

From December 31, 2005 to January 1, 2006, an atmospheric river event caused San Anselmo Creek to overflow its banks, resulting in more than four feet of water rushing down San Anselmo Avenue in the Downtown area. Town facilities, including the police station, San Anselmo Library, Council Chambers, and Fire Station 19, were damaged as well as 140 businesses and 290 homes. Damage was estimated at $30 million. The San Anselmo Library lost around 1,000 books.

Flood Control Projects

The Town of San Anselmo, along with Marin Flood District, has been actively working on flood control projects within the town and Ross Valley.[4] The Ross Valley watershed is 28-square miles and extends from Mt. Tamalpais and White's Hill through the communities of Fairfax, Sleepy Hollow, San Anselmo, Ross, Kentfield, Greenbrae, Larkspur, and Corte Madera to the San Francisco Bay. The Town of San Anselmo was a part of Zone 9: Ross Valley until residents voted to remove the Town from the Zone 9 through Measure F, which passed in March 2024; however, property owners are still obligated to pay the voter-approved flood fee through June 30, 2027. The current flood control projects are detailed below:

Bridges

The Town has approximately 20 bridges, some of which are nearly 100 years old. The Town has obtained funding to replace five bridges in San Anselmo between 2024 and 2029, including the Nokomis Avenue, Madrone Avenue, Bridge Street, Saunders Avenue, and Center Boulevard Bridges. All five bridges have been identified as constriction points causing flooding in the town. In addition, the Town has obtained funding to repair the Peterson Bridge, a pedestrian bridge which connects Sais Avenue to Karl Avenue, by 2029.

[3] County of Marin. 2023. 2023 Marin County Operational Area Multi-Jurisdictional Hazard Mitigation Plan, Town of San Anselmo Community Profile. [page 74] Available at: https://storage.googleapis.com/proudcity/marindpwca/2024/05/Marin_County_MJHMP_2023_Final_resized1.pdf

[4] Town of San Anselmo. Current Flood Projects. Available at: https://www.townofsananselmo.org/1203/Current-Flood-Projects

Building Bridge 2 (BB2) is a bridge located on a parcel west of Creek Park in the Downtown area. The parcel is owned by the Marin Flood District, as described below in The San Anselmo Creek Restoration Project discussion.

San Anselmo Flood Risk Reduction (SAFRR) Project

The San Anselmo Flood Risk Reduction (SAFRR) Project consists of three main components: (1) creation of the Sunnyside Nursery Flood Diversion and Storage Basin at 3000 Sir Francis Drake Boulevard; (2) removal of the building at 634 San Anselmo Avenue and creek bank stabilization at the site; and (3) implementation of flood mitigation measures on downstream private properties that may see impacts from the project. The project has an overall goal to substantially reduce the frequency and severity of flooding throughout the upper Ross Valley Watershed in an economically viable manner while providing multiple benefits and minimizing environmental impacts.

The San Anselmo Creek Restoration Project

San Anselmo Creek runs through Creek Park, a Town-owned park east of San Anselmo Avenue in the Downtown area. Since 2011, multiple flood mitigation projects in Creek Park have been identified in the Town's Capital Improvement Plan to maximize flood flow capacity and reduce flooding in Creek Park, the surrounding areas, and downstream.

In 2018, the Marin Flood District acquired the property at 632-636 San Anselmo Avenue, adjacent to Creek Park, as part of the SAFRR Project. The site included a building and its supporting concrete platform, known as BB2, whose foundation restricted the creek's flow and exacerbated flooding during major storms. In 2020, the building was demolished through a collaborative effort between the Town and the District, marking the first step in restoring the creek and reducing flood risks for hundreds of structures in the town and downstream. During the COVID-19 pandemic, the Town leased the deck of BB2 from the District, transforming it into a community gathering space that connected Creek Park to San Anselmo Avenue. This plaza became an informal extension of Creek Park. In 2022, the District ended the Town's lease of BB2 due to engineering reports citing structural safety concerns.

On February 24, 2026, the Marin County Board of Supervisors and the San Anselmo Town Council unanimously approved a lease agreement allowing the Town to temporarily reopen and use the BB2 platform as a managed community gathering space (Creek Park Plaza/Commons). Structural monitoring has confirmed no active movement of the deck, enabling this short-term interim use.

Dam Inundation

Earthquakes centered close to a dam are the most likely cause of dam failure. Dam inundation maps have been required in California since 1972, following the 1971 San Fernando Earthquake and the resulting damage to the Lower Van Norman Dam. A portion of the Planning Area is within the dam inundation zone of Phoenix Lake Dam, operated by the Marin Water.[5] As shown in **Figure 3.10-4**, the inundation area extends to the southernmost portions of the Planning Area. The Phoenix Lake Reservoir has storage of 612-acre feet of water that could be released down Ross Creek in the event of a full sunny-day dam failure. Water could extend out 500 feet on both sides of Ross Creek in Ross

[5] The Marin Municipal Water District rebranded as Marin Water in 2020.

for about five miles at a depth up to thirty feet in some areas before it dumps into Corte Madera Creek and San Anselmo Creek. Flooding could continue north along San Anselmo Creek into San Anselmo, extending up to Creek Park. Flooding could extend out 1,000 feet along the west side of the creek in the southern part of the town and 200 feet along both sides of the creek further north, with San Anselmo Town Hall and the San Anselmo Emergency Operations Center in two to ten feet of water approximately ten to 20 minutes after the dam fails.[6] Dam inundation areas within this Planning Area are shown in Figure 3.10-4.

WATER QUALITY

Potential hazards to surface water quality include the following nonpoint pollution problems: high turbidity from sediment resulting from erosion of improperly graded construction projects, concentration of nitrates and dissolved solids from agriculture or surfacing septic tank failures, contaminated street and lawn run-off from urban areas, and warm water drainage discharges into cold water streams.

The most critical period for surface water quality is following a rainstorm which produces significant amounts of drainage runoff into streams at low flow, resulting in poor dilution of contaminants in the low flowing stream. Such conditions are most frequent during the fall at the beginning of the rainy season when stream flows are near their lowest annual levels. Besides the greases, oils, pesticides, litter, and organic matter associated with such runoff, heavy metals such as copper, zinc, and cadmium can cause considerable harm to aquatic organisms when introduced to streams in low flow conditions.

Urban stormwater runoff was managed as a non-point discharge (a source not readily identifiable) under the Federal Water Pollution Control Amendments of 1972 (PL 92-500, Section 208) until the mid-1980s. However, since then, the United States Environmental Protection Agency (USEPA) has continued to develop implementing rules which categorize urban runoff as a point source (an identifiable source) subject to National Pollutant Discharge Elimination System (NPDES) permits. Rules now affect medium and large urban areas, and further rulemaking is expected as programs are developed to meet requirements of federal water pollution control laws.

Surface water pollution is also caused by erosion. Excessive and improperly managed grading, vegetation removal, quarrying, logging, and agricultural practices all lead to increased erosion of exposed earth and sedimentation of watercourses during rainy periods. In slower moving water bodies these same factors often cause a buildup of siltation, which ultimately reduces the capacity of the water system to percolate and recharge groundwater basins, adversely affecting both aquatic resources and flood control efforts.

303(d) Impaired Water Bodies

Section 303(d) of the federal Clean Water Act requires states to identify waters that do not meet water quality standards or objectives and thus, are considered "impaired." Once listed, Section

[6] County of Marin, 2023. Marin County Operational Area Multi-Jurisdictional Hazard Mitigation Plan, Town of San Anselmo Community Profile. Available at: https://publicworks.marincounty.gov/documents/marin-county-operational-area-multi-jurisdictional-hazard-mitigation-plan-2023/

303(d) mandates prioritization and development of a Total Maximum Daily Load (TMDL). The TMDL is a tool that establishes the allowable loadings or other quantifiable parameters for a waterbody and thereby the basis for the states to establish water quality-based controls. The purpose of TMDLs is to ensure that beneficial uses are restored and water quality objectives are achieved.

Corte Madera Creek is listed by the San Francisco Bay Regional Water Quality Control Board as having limited water quality, as required by the Clean Water Act, Section 303(d). The only identified pollutant in the creek is a nonsystemic organophosphate formerly used as an insecticide.

Tsunami

A tsunami is a series of waves in a water body caused by the displacement of a large volume of water, generally in an ocean or a large lake due to earthquakes, volcanic eruptions, and other underwater explosions. Depending on the location of an incident, a tsunami can reach the California coast in as little as ten minutes for a local-source earthquake or may take from five to 14 hours for a distant-source earthquake. The Planning Area is not located within the Tsunami Hazard Area.[7]

3.10.2. REGULATORY SETTING

There are a number of regulatory agencies whose responsibility includes the oversight of the water resources of the state and nation including FEMA, USEPA, the State Water Resources Control Board (SWRCB), the U.S. Army Corps of Engineers (USACE), and the Regional Water Quality Control Board (RWQCB). The following is an overview of the federal, state, and local regulations that are applicable to the proposed project.

FEDERAL

Clean Water Act

The CWA, initially passed in 1972, regulates the discharge of pollutants into watersheds throughout the nation. CWA Section 402(p) establishes a framework for regulating municipal and industrial stormwater discharges under the NPDES Program. CWA Section 402(p) requires that stormwater associated with industrial activity that discharges either directly to surface waters or indirectly through municipal separate storm sewers must be regulated by an NPDES permit.

The USACE is the agency responsible for administering the permit process for activities that affect Water of the U.S. The SWRCB is responsible for implementing the CWA and does so through issuing NPDES permits to cities and counties through RWQCBs. Federal regulations allow two permitting options for stormwater discharges (individual permits and general permits). The SWRCB elected to adopt a Statewide General Permit (Water Quality Order No. 2013-001-DWQ-DWQ).

[7] California Department of Conservation. California Tsunami Maps. Available at: https://www.conservation.ca.gov/cgs/tsunami/maps

Federal Emergency Management Agency

FEMA operates the NFIP, and participants in the NFIP must satisfy certain mandated floodplain management criteria. The National Flood Insurance Act of 1968 has adopted as a desired level of protection, an expectation that developments should be protected from floodwater damage of the Intermediate Regional Flood (IRF). The IRF is defined as a flood that has an average frequency of occurrence on the order of once in 100 years, although such a flood may occur in any given year. Communities are occasionally audited by the California DWR to insure the proper implementation of FEMA floodplain management regulations.

National Flood Insurance Program

The National Flood Insurance Act of 1968 identified three fundamental purposes: better indemnify individuals for flood losses through insurance; reduce future flood damages through state and community floodplain management regulations; and reduce federal expenditures for disaster assistance and flood control. While the Act provided for subsidized flood insurance for existing structures, the provision of flood insurance by FEMA became contingent on the adoption of floodplain regulations at the local level. The National Flood Insurance Act of 1968 led to the creation of the NFIP.

The NFIP goals are two-fold:

- To provide flood insurance for structures and contents in communities that adopt and enforce an ordinance outlining minimal floodplain management standards.
- To identify areas of high and low flood hazard and establish flood insurance rates for structures inside each flood hazard area.

Flood Control Act

The Flood Control Act of 1944 (Section 11) and the Flood Control Act of 1962 are the foundational laws for Marin County's major flood control infrastructure. The legislation responded to severe flooding events in 1942, 1955, 1958, and 1960, leading to the construction of earthen and concrete channels by the USACE in the late 1960s and 1970s. The legislation authorized the Corte Madera Creek Flood Control Project, a comprehensive system designed to manage water flow from the headwaters in San Anselmo and Fairfax down to the Bay.

Flood Disaster Protection Act (FDPA)

The FDPA of 1973 was a response to the shortcomings of the NFIP, which were experienced during the flood season of 1972. The FDPA prohibited federal assistance, including acquisition, construction, and financial assistance, within delineated floodplains in non-participating NFIP communities. Furthermore, all federal agencies and/or federally insured and federally regulated lenders must require flood insurance for all acquisitions or developments in designated Special Flood Hazard Areas (SFHAs) in communities that participate in the NFIP.

Improvements, construction, and developments within SFHAs are generally subject to the following standards:

- All new construction and substantial improvements of residential buildings must have the lowest floor (including basement) elevated to or above the base flood elevation (BFE).
- All new construction and substantial improvements of non-residential buildings must either have the lowest floor (including basement) elevated to or above the BFE or dry-floodproofed to the BFE.
- Buildings can be elevated to or above the BFE using fill, or they can be elevated on extended foundation walls or other enclosure walls, on piles, or on columns.
- Extended foundation or other enclosure walls must be designed and constructed to withstand hydrostatic pressure and be constructed with flood-resistant materials and contain openings that will permit the automatic entry and exit of floodwaters. Any enclosed area below the BFE can only be used for the parking of vehicles, building access, or storage.

National Pollutant Discharge Elimination System (NPDES)

NPDES permits are required for discharges of pollutants to navigable waters of the United States, which includes any discharge to surface waters, including lakes, rivers, streams, bays, the ocean, dry stream beds, wetlands, and storm sewers that are tributary to any surface water body. NPDES permits are issued under the CWA, Title IV, Permits and Licenses, Section 402 (33 USC 466 et seq.)

The RWQCB issues these permits in lieu of direct issuance by the USEPA, subject to review and approval by the USEPA Regional Administrator. The terms of these NPDES permits implement pertinent provisions of the CWA and its implementing regulations, including pre-treatment, sludge management, effluent limitations for specific industries, and anti- degradation. In general, the discharge of pollutants is to be eliminated or reduced as much as practicable so as to achieve the CWA's goal of "fishable and swimmable" navigable (surface) waters. Technically, all NPDES permits issued by the RWQCB are also Waste Discharge Requirements issued under the authority of the CWA.

These NPDES permits regulate discharges from publicly owned treatment works, industrial discharges, stormwater runoff, dewatering operations, and groundwater cleanup discharges. NPDES permits are issued for five years or less and are, therefore, to be updated regularly. The rapid and dramatic population and urban growth in the Central Valley Region has caused a significant increase in NPDES permit applications for new waste discharges. To expedite the permit issuance process, the SWRCB has adopted several general NPDES permits, each of which regulates numerous discharges of similar types of wastes. The SWRCB has issued general permits for stormwater runoff from industrial and construction sites statewide. Stormwater discharges from industrial and construction activities in the San Francisco Bay Region can be covered under these general permits, which are administered jointly by the SWRCB and RWQCB. The Town is within the jurisdictions of the San Francisco Bay RWQCB.

The SWRCB and RWQCBs enforce California statutes that are equivalent to or more stringent than the federal statutes. RWQCBs are responsible for establishing water quality standards and objectives that protect the beneficial uses of various waters. In 2003, smaller (less than 100,000 population) municipalities and unincorporated counties were required to obtain coverage under a statewide NPDES Municipal General Stormwater Permit (Phase II Permit) issued by the State Water Resources Control Board. In Marin County, the County and all Marin's municipalities, including San Anselmo,

are subject to the conditions of the regulations described in the current 2013 Phase II Permit. Marin County Permittees are subject to NPDES Order No. 2013-0001-DWQ, NPDES No. CAS000004, as amended.

Rivers and Harbors Appropriation Act of 1899

One of the country's first environmental laws, the Rivers and Harbors Appropriation Act established a regulatory program to address activities that could affect navigation in Waters of the United States.

Water Pollution Control Act of 1972

The Water Pollution Control Act (WPCA) established a program to regulate activities that result in the discharge of pollutants to waters of the United States.

STATE

California Water Code

The CWA places the primary responsibility for the control of surface water pollution and for planning the development and use of water resources with the states, although this does establish certain guidelines for the states to follow in developing their programs and allows the USEPA to withdraw control from states with inadequate implementation mechanisms.

California's primary statute governing water quality and water pollution issues with respect to both surface waters and groundwater is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act) of 1970 (Division 7 of the California Water Code) (Porter-Cologne Act). The Porter-Cologne Act grants the SWRCB and each of the RWQCBs power to protect water quality and is the primary vehicle for implementation of California's responsibilities under the CWA. The Porter-Cologne Act grants the SWRCB and the RWQCBs authority and responsibility to adopt plans and policies, to regulate discharges to surface and groundwater, to regulate waste disposal sites and to require cleanup of discharges of hazardous materials and other pollutants. The Porter-Cologne Act also establishes reporting requirements for unintended discharges of any hazardous substance, sewage, or oil or petroleum product.

Each RWQCB must formulate and adopt a water quality control plan (Basin Plan) for its region, and the regional plans are to conform to the policies set forth in the Porter-Cologne Act and established by the SWRCB in its state water policy. The Porter-Cologne Act also provides that a RWQCB may include within its regional plan water discharge prohibitions applicable to particular conditions, areas, or types of waste.

Water Code Section 13260 requires all dischargers of waste that may affect water quality in waters of the state to prepare and provide a water quality discharge report to the RWQCB. Section 13260a-c is as follows:

(a) Each of the following persons shall file with the appropriate regional board a report of the discharge, containing the information that may be required by the regional board:

(1) A person discharging waste, or proposing to discharge waste, within any region that could affect the quality of the waters of the state, other than into a community sewer system.
(2) A person who is a citizen, domiciliary, or political agency or entity of this state discharging waste, or proposing to discharge waste, outside the boundaries of the state in a manner that could affect the quality of the waters of the state within any region.
(3) A person operating, or proposing to construct, an injection well.

(b) No report of waste discharge need be filed pursuant to subdivision (a) if the requirement is waived pursuant to Section 13269.
(c) Each person subject to subdivision (a) shall file with the appropriate regional board a report of waste discharge relative to any material change or proposed change in the character, location, or volume of the discharge.

Assembly Bill 162

Assembly Bill (AB) 162 revised Government Code Section 65302 to require a general plan's land use element to identify and annually review those areas covered by the general plan that are subject to flooding as identified by flood plain mapping prepared by FEMA or the DWR. AB 162 also requires the conservation element of the general plan to identify rivers, creeks, streams, flood corridors, riparian habitat, and land that may accommodate floodwater for purposes of groundwater recharge and stormwater management. By imposing new duties on local public officials, the bill creates a state-mandated local program.

AB 162 also requires the safety element to identify, among other things, information regarding flood hazards and to establish a set of comprehensive goals, policies, and objectives, based on specified information for the protection of the community from, among other things, the unreasonable risks of flooding.

Assembly Bill 70

AB 70 provides that a city or county may be required to contribute its fair and reasonable share of the property damage caused by a flood to the extent that it has increased the state's exposure to liability for property damage by unreasonably approving, as defined, new development in a previously undeveloped area, as defined, that is protected by a state flood control project, unless the city or county meets specified requirements.

Historically, the State of California bore most of the liability for failures of state flood control projects (like levees). AB 70 changed that dynamic by ensuring that local governments cannot simply approve risky housing developments in floodplains and expect the state to pick up 100% of the tab if the levees break.

Senate Bill 92

On June 27, 2017, Senate Bill (SB) 92 became effective and added Sections 6160 and 6161 to the Water Code, requiring owners of state-regulated dams, except those classified as low hazard, to

prepare emergency action plans (EAPs) containing inundation map(s) for emergency preparedness. An EAP contains a blueprint for emergency response following an incident involving a dam and details various failure scenarios of a dam and its related critical infrastructure. It provides special notification procedures. Dam owners must submit EAPs to the Governor's Office of Emergency Services (Cal OES) for approval by deadlines that are based on the dam's downstream hazard classification. The EAPs, including the inundation map(s), are to be updated every ten years, but if relevant circumstances change, then the update must be made sooner. SB 92 provides the DWR with enforcement tools, including fines and operational restrictions for failure to comply.

Water Quality Control Plan for the San Francisco Bay Basin

The Water Quality Control Plan for the San Francisco Bay Basin (Basin Plan) is the master policy document adopted by the San Francisco Bay Regional Water Quality Control Board (Region 2). It designates beneficial uses for surface and groundwaters within the region, sets narrative and numerical water quality objectives to protect those uses, and details strategy and implementation plans to achieve those objectives across the San Francisco Bay watershed (*Water Code § 13240*). The Basin Plan covers all coastal watersheds and marine waters from the Golden Gate eastward to the legal boundary of the Sacramento-San Joaquin Delta near Chipps Island.

The San Francisco Bay Regional Water Quality Control Board (SF Bay Water Board) acts as the lead regulatory agency responsible for adopting, implementing, and enforcing the Basin Plan. The State Water Resources Control Board (State Water Board) must review and approve all Basin Plan amendments before they become effective under state law.

The term "water quality standards," as used in the CWA, includes both the beneficial uses of specific water bodies and the levels of quality that must be met and maintained to protect those uses. The Basin Plan includes an implementation plan describing the actions by the RWQCB and others that are necessary to achieve and maintain the water quality standards.

The RWQCB regulates waste discharges to minimize and control their effects on the quality of the region's ground and surface water. Permits are issued under a number of programs and authorities. The terms and conditions of these discharge permits are enforced through a variety of technical, administrative, and legal means. Water quality problems in the region are listed in the Basin Plan, along with the causes, where they are known. For water bodies with quality below the levels necessary to allow all the beneficial uses of the water to be met, plans for improving water quality are included. The Basin Plan reflects, incorporates, and implements applicable portions of a number of national and statewide water quality plans and policies, including the California Water Code and the CWA.

State Water Resources Control Board Storm Water Strategy

The Storm Water Strategy is founded on the results of the Storm Water Strategic Initiative, which served to direct the SWRCB's role in storm water resources management and evolve the Storm Water Program by a) developing guiding principles to serve as the foundation of the storm water program, b) identifying issues that support or inhibit the program from aligning with the guiding

principles, and c) proposing and prioritizing projects that the Water Boards could implement to address those issues.

The SWRCB staff created a strategy-based document called the Strategy to Optimize Management of Storm Water (STORMS). STORMS includes a program vision, missions, goals, objectives, projects, timelines, and consideration of the most effective integration of project outcomes into the SWRCB's Storm Water Program.

California Fish and Wildlife Code

The California Department of Fish and Wildlife (CDFW) protects streams, water bodies, and riparian corridors through the streambed alteration agreement process under Section 1600 to 1616 of the California Fish and Game Code. The California Fish and Game Code establishes that "an entity may not substantially divert or obstruct the natural flow or substantially change the bed, channel or bank of any river, stream or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river stream, or lake" (Fish and Game Code Section 1602(a)) without notifying the CDFW, incorporating necessary mitigation and obtaining a streambed alteration agreement. The CDFWs jurisdiction extends to the top of banks and often includes the outer edge of riparian vegetation canopy cover.

California Code of Regulations

California Code of Regulations (CCR) Title 22, Chapter 15, Article 20 requires all public water systems to prepare a Consumer Confidence Report for distribution to its customers and to the Department of Health Services. The Consumer Confidence Report provides information regarding the quality of potable water provided by the water system. It includes information on the sources of the water, any detected contaminants in the water, the maximum contaminants levels set by regulation, violations and actions taken to correct them, and opportunities for public participation in decisions that may affect the quality of the water provided.

California Department of Health Services

The Department of Health Services, Division of Drinking Water and Environmental Management, oversees the Drinking Water Program. The Drinking Water Program regulates public water systems and certifies drinking water treatment and distribution operators. It provides support for small water systems and for improving their technical, managerial, and financial capacity. It provides subsidized funding for water system improvements under the State Revolving Fund and Proposition 50 programs. The Drinking Water Program also oversees water recycling projects, permits water treatment devices, supports and promotes water system security, and oversees the Drinking Water Treatment and Research Fund for Methyl Tertiary Butyl Ether (MTBE) and other oxygenates.

Consumer Confidence Report Requirements

California Code of Regulations (CCR) Title 22, Chapter 15, Article 20 requires all public water systems to prepare a Consumer Confidence Report for distribution to its customers and to the Department of Health Services. The Consumer Confidence Report provides information regarding the quality of potable water provided by the water system. It includes information on the sources of the water,

any detected contaminants in the water, the maximum contaminant levels set by regulation, violations and actions taken to correct them, and opportunities for public participation in decisions that may affect the quality of the water provided.

LOCAL

Existing Town of San Anselmo General Plan

The following goals, policies, and actions are applicable to hydrology and water quality.

LAND USE ELEMENT

Objective 16: To protect the community from danger to life and property caused by flooding.

Policy 16.1. All new developments in the Town should be designed to minimize vegetation removal, soils compaction, and site coverage.

Policy 16.2. To only allow development within the 100-year floodplain which is consistent with the Town's adopted Protection of Flood Hazard Areas and Water Course Ordinance.

Policy 16.3. To inform the citizens of the community of existing and potential flooding problems on an ongoing basis.

Policy 16.4. To repair and improve the Town's storm drainage system to handle existing and projected runoff.

Policy 16.5. To prepare evacuation plans for flood-prone areas and distribute information to affected residents, businesses, and property owners.

Objective 17: To ensure that facilities needed to function in a natural disaster are not located in the floodplain or, if there is no other choice, that they are designed to function adequately under emergency conditions.

Policy 17.1. Facilities designated as "critical" in the emergency preparedness plan should not be located in the 100-year floodplain, or if no other choice shall be designed to function adequately under emergency conditions.

Town of San Anselmo Municipal Code

San Anselmo Municipal Code (Town Code) Title 5 Chapter 8, Urban Runoff Pollution Prevention. The purpose of this chapter is to ensure the future health, safety, and general welfare of the citizens of the Town of San Anselmo and to protect and enhance watercourses, fish and wildlife habitat by:

a) Minimizing discharges other than storm runoff to storm drains or watercourses;
b) Responding to the discharge of spills, preventing and controlling the discharge of spills to storm drains or watercourses, and prohibiting dumping or disposal of materials other than stormwater;
c) Reducing pollutants in stormwater discharges to the maximum extent practicable;

d) Requiring operators of construction sites, new or redeveloped land, and industrial and commercial facilities to install, implement, and maintain appropriate best management practices (BMPs); and
e) Requiring development projects to maintain or reduce the volume, velocity, peak flow rate, and duration of runoff as compared to the pre-development stormwater runoff rates; and preventing stormwater pollution whenever possible, through stormwater management controls and ensuring that these management controls are properly maintained.

Town Code Title 7, Chapter 11, Protection of Flood Hazard. This chapter is designed to promote the public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas by legally enforceable regulations applied uniformly throughout the community to all publicly and privately owned land within flood prone, mudslide (i.e. mudflow), or flood related erosion areas. These regulations are designed to:

a) Protect human life and health.
b) Minimize expenditure of public money for costly flood control projects.
c) Minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public.
d) Minimize prolonged business interruptions.
e) Minimize damage to public facilities and utilities such as water and gas mains; electric, telephone and sewer lines; and streets and bridges located in areas of special flood hazard.
f) Help maintain a stable tax base by providing for the sound use and development of areas of special flood hazard so as to minimize future blighted areas caused by flood damage.
g) Ensure that potential buyers are notified that property is in an area of special flood hazard.
h) Ensure that those who occupy the areas of special flood hazard assume responsibility for their actions.

Town Code Title 7, Chapter 12 Watercourses. This chapter establishes additional standards and regulations related to zoning, parks and recreation and the obstruction, diverting, etc., of watercourses within the Town of San Anselmo.

Town Code Title 9, Chapter 22 Water Efficient Landscape. In this chapter, the Town adopts by reference the water efficient landscape requirements of Marin Water Code Title 13 "Water Service Conditions and Water Conservation Measures", Chapter 13.02 "Water Conservation and Dry Year Water Use Reduction Program", and Section 13.02.021 "Water Conservation: Normal Year Water Conservation" Subsections (2) "Definitions" and (5) "Water Efficient Landscaping".

San Francisco Bay Regional Water Quality Control Board Municipal Regional Stormwater NPDES Permit

The 1987 amendments to the CWA [Section 402(p)] provided for USEPA regulation of several new categories of nonpoint pollution sources within the existing NPDES. Phase 1 of the program involved the Water Board issuing county-wide municipal stormwater permits in the early 1990s to operators serving populations over 100,000. Additionally in Phase I, NPDES permits were issued for urban runoff discharges from: plants in industries recognized by the USEPA as being likely sources of stormwater pollutants, and construction activities that disturb more than five acres.

Phase II implementation, effective March 10, 2003, extended NPDES urban runoff discharge permitting to cities of 50,000 to 100,000 people and construction sites that disturb between one and five acres. The State Water Resources Control Board (SWRCB) Water Quality Order No. 2003-0005-DWQ, adopted April 30, 2003, established the Phase II NPDES General Permit No. CAS000004 to cover Small Municipal Separate Storm Sewer Systems (MS4). Marin County and the Town of San Anselmo are designated as Small MS4s and fall under this NPDES General Permit. Enforcement of permit conditions is the responsibility of the RWQCB staff, assisted by local municipal or county staff. In Marin, the County and all of Marin's municipalities are subject to the conditions of the regulations described in the current 2013 Phase II Permit Water Quality Order No. 2013-0001-DWQ NPDES No. CAS000004, as amended by Water Quality Orders No. 2015-0133-EXEC, 2016-0069-EXEC, 2017-XXXX-DWQ, 2018-0001-EXEC, and 2018-0007-EXEC.

Marin County Flood Control and Water Conservation District

The Marin Flood District addresses flood control planning, construction, operation, and maintenance for its eight flood control zones, Zones 1, 3, 4, 5, 6, 7, 9, and 10. San Anselmo is located in Flood Control Zone 9: Ross Valley (Zone 9). Zone 9 and the Ross Valley Flood Protection and Watershed Program was established by the Flood Control District after the flooding that occurred in Ross Valley during December 2005. The Zone 9 flood control objective is to substantially reduce the frequency and severity of flooding throughout the Ross Valley Watershed, in an economically viable manner while prioritizing public safety and minimizing environmental impacts. The Town of San Anselmo was a part of Zone 9: Ross Valley until the Town residents voted to remove the Town from the Flood Control Zone 9 through Measure F, which passed on March 2024. Measure F did not relieve property owners of their obligation to pay the voter-approved flood fee, which is set to expire on June 30, 2027.

Marin County Stormwater Pollution Prevention Program

The Marin County Stormwater Pollution Prevention Program (MCSTOPPP) is a joint effort of Marin's cities, towns, and unincorporated areas to prevent stormwater pollution, protect and enhance water quality in creeks and wetlands, preserve beneficial uses of local waterways, and comply with State and federal regulations. Each MCSTOPPP member agency implements a local stormwater pollution prevention program and funds the countywide MCSTOPPP, which provides for the coordination and consistency of approaches between the local stormwater programs. The MCSTOPPP program documents their efforts in annual reports. The annual reports include information on illegal discharge detection and elimination, street and storm drain cleaning, municipal and creek maintenance, stormwater and creek protection controls for development projects, business inspections, and public outreach, education, and participation. While MCSTOPPP provides guidance for compliance with NPDES permitting, permit compliance is administered by the specific municipality in which the project is proposed.

Bay Area Stormwater Management Agencies Post Construction Manual

MCSTOPPP has approved the most recent version of the Bay Area Stormwater Management Agencies (BASMAA) Post Construction Manual as the applicable California Storm Water Quality Association Best Management Practices Handbook for projects within MCSTOPPP. The BASMAA

Post Construction Manual helps development applicants prepare submittals that demonstrate how their project complies with the NPDES permit requirements. This manual is designed to facilitate the review of application and promote integrated Low Impact Development (LID) designs. LID design aims to mimic pre-project site hydrology as well as protect water quality. Runoff from roofs and impervious paved areas is dispersed to landscaped areas or routed to bioretention facilities distributed throughout the site. Bioretention facilities infiltrate some runoff and feature underdrains to convey treated stormwater to storm drains.

3.10.3. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

Future development under the General Plan 2045 was reviewed to determine if the Project would have a significant impact on hydrology and/or water quality. These types of impacts would be the greatest in areas located within or near to existing rivers, streams, drainage channels, and other water bodies; therefore, these are the areas that are focused on in the analysis. Impacts are evaluated assuming full buildout of the General Plan 2045.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to Hydrology and Water Quality.

OPEN SPACE AND CONSERVATION ELEMENT

Goal OSC-B Protect and improve the quality of the natural environment through collaborative conservation, restoration, management, regenerative practices, and pollution reduction and control.

Policy OSC-B.4: Creek Protection. Protect and conserve creeks for riparian habitat, fish and wildlife movement, biodiversity, groundwater recharge, and stormwater conveyance for ecological function and community benefit.

Action OSC-B.4.a: Agency Consultation. Refer proposals for grading, filling, or construction that would alter a watercourse shown on Figure OSC-3 to the State Department of Fish and Wildlife, U.S. Army Corps of Engineers, San Francisco Bay Regional Water Quality Control Board, the Marin County Flood Control District, and other regulatory agencies for consultation.

Action OSC-B.4.b: Creek Setbacks. Continue to require development to comply with the creek setback standards in the Town's Watercourse regulations.

Policy OSC-B.5: Creek Enhancement. Require creek enhancement and riparian habitat restoration for construction projects adjacent to creeks and drainageways to reduce erosion, maintain storm flows, improve water quality, improve habitat value, and preserve natural shade, whenever possible.

Policy OSC-B.6: Water Quality. Minimize pollutants in stormwater runoff including discharge of soil sediments.

Action OSC-B.6.a: Watershed Management. Ensure that new development complies with the requirements of the federal and state Clean Water Acts, National Pollutant Discharge Elimination System (NPDES), and the Town's Urban Runoff Pollution Prevention regulations.

Action OSC-B.6.b: Low-Impact Design Measures. Require the incorporation of Low-Impact Design (LID) measures and other site design elements that slow stormwater flows, promote groundwater recharge, and filter out pollutants.

Policy OSC-B.7: Creek Education and Awareness. Increase awareness and appreciation of San Anselmo's creeks and their role in sustaining fish and wildlife and providing flood protection through accessible education and outreach.

Action OSC-B.7.a: Creek Signage and Education. Develop signage and educational displays in clear and accessible formats that describe native habitat, history, and restoration efforts. Partner with local schools, conservation and environmental groups, and community groups to increase awareness of the town's creeks.

PARKS, RECREATION, AND PUBLIC FACILITIES ELEMENT

Goal PR-C Provide high-quality public facilities and infrastructure that meet the needs of current and future residents, businesses, and visitors in the most efficient and cost-effective ways possible.

Policy PR-C.1: Ongoing Maintenance. Proactively maintain public facilities and infrastructure through ongoing preventative care, and ensure the timely repair, replacement, and upgrading of Town facilities, infrastructure, and equipment.

Action PR-C.1.a: Capital Improvement and Agency Coordination Program. Maintain and update a multi-year Capital Improvement Plan for Town infrastructure and facilities, and coordinate with partner agencies to align projects, maximize resources, achieve economies of scale, and reduce construction impacts.

Action PR-C.1.b: Asset Management Program. Develop a proactive Asset Management Program to identify needed facility and infrastructure maintenance, upgrade, and replacement timing and costs. Seek additional funding opportunities and strategies to avoid increased costs of deferred maintenance.

Policy PR-C.7: Storm Drainage. Continue to monitor and pursue improvements to the storm drainage system, including programs to reduce flooding, improve water quality, remove debris, and respond to climate-related changes. Evaluate the potential for restoration of the natural hydrologic function of creeks and drainageways where possible.

Policy PR-C.8: Potable Water. Work with the Marin Municipal Water District (Marin Water) to meet projected water demand, encourage water conservation, and ensure the reliability and safety of the water supply and distribution system.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact on the environment associated with hydrology and water quality if it will:

- Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality.
- Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin.
- Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
    - Result in substantial erosion or siltation on- or off-site;
    - Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;
    - Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
    - Impede or redirect flood flows.
- In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation.

IMPACTS AND MITIGATION MEASURES

Impact 3.10-1: General Plan 2045 implementation would not violate water quality standards or waste discharge requirements or otherwise substantially degrade water quality or obstruct implementation of a water quality control plan (Less than Significant)

CONSTRUCTION-RELATED WATER QUALITY IMPACTS

Grading, excavation, removal of vegetation cover, and loading activities associated with future construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion impacts that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas.

As required by the CWA, each subsequent development project or improvement project will require an approved Storm Water Pollution Prevention Plan (SWPPP) that includes best management practices for grading and preservation of topsoil. A SWPPP is not required if the project will disturb less than one acre. SWPPPs are designed to control storm water quality degradation to the extent practicable using best management practices during and after construction.

Future development project applicants must submit the SWPPP with a Notice of Intent to the RWQCB to obtain a General Permit. The RWQCB is an agency responsible for reviewing the SWPPP with the Notice of Intent, prior to issuance of a General Permit for the discharge of storm water during construction activities. The RWQCB accepts General Permit applications (with the SWPPP and Notice of Intent) after specific projects have been approved by the lead agency. The lead agency for each specific project that is larger than one acre is required to obtain a General Permit for discharge of storm water during construction activities prior to commencing construction (per the CWA).

The General Plan 2045 sets policies and actions for future development in the town, but it does not envision or authorize any specific development project. Because of this, the site-specific details of potential future development projects are currently unknown and analysis of potential impacts of such projects is not feasible and would be speculative. However, each future project must include detailed project-specific drainage plans that control storm water runoff and erosion, both during and after construction. The RWQCB will require a project-specific SWPPP to be prepared for each future project that disturbs an area one acre or larger. The SWPPPs will include project-specific BMPs that are designed to control drainage and erosion.

NEW DEVELOPMENT-RELATED WATER QUALITY IMPACTS

New development and infrastructure improvements projects that would result from implementation of the General Plan 2045 could introduce constituents into the storm water system that are typically associated with urban runoff. These constituents include sediments, petroleum hydrocarbons, pesticides, fertilizers, and heavy metals, such as lead, zinc, and copper. These pollutants tend to build up during the dry months of the year. Precipitation during the early portion of the wet season (generally from November to April) washes away most of these pollutants, resulting in high pollutant concentrations in the initial wet weather runoff. This initial runoff is referred to as the "first flush" of storm events. Subsequent periods of rain would result in less concentrated pollutant levels in the runoff.

The majority of development allowed under the General Plan 2045 would be within areas currently developed with urban uses, and the amount and type of runoff generated by various future development and infrastructure projects would be similar to existing conditions. However, new development and infrastructure projects accommodated by the General Plan 2045 have the potential to result in increases in the amount of impervious surfaces throughout San Anselmo. Future increases in impervious surfaces would result in increased urban runoff, pollutants, and first flush roadway contaminants, as well as an increase in nutrients and other chemicals from landscaped areas. These constituents could result in water quality impacts to onsite and offsite drainage flows to area waterways.

Storm water runoff may play a role in the water quality impairments described above. Runoff that occurs as overland flow across yards, driveways, and public streets is intercepted by the storm water drainage system and conveyed to local drainages before eventually being routed to the Pacific Ocean. This storm water can carry pollutants that can enter the local waterways and result in the types of water quality impairments described above. Common sources of storm water pollution in the town include litter, trash, pet waste, paint residue, organic material (yard waste), fertilizers,

pesticides, sediments, construction debris, metals from automobile brake pad dust, air pollutants that settle on the ground or attach to rainwater, cooking grease, illegally dumped motor oil, and other harmful fluids.

Future development and infrastructure projects allowed by the General Plan 2045 could result in an increase in the overall volume of runoff in San Anselmo compared to existing conditions. If the Town's drainage system is not adequately designed, General Plan 2045 buildout could result in localized higher peak flow rates. Localized increases in flow would be significant if increases exceeded system capacity or contributed to bank erosion. This is considered a potentially significant impact, which would be mitigated to a less than significant level through the implementation of the policies and actions listed below, as well as the Town's adopted Municipal Code requirements.

The General Plan 2045 establishes the framework for future development and buildout of the Town, but it does not envision or authorize any specific development project. Because of this, the site-specific details of potential future development projects are currently unknown and analysis of potential impacts of such projects is not feasible and would be speculative. However, each future development and infrastructure project is required to prepare a detailed project-specific drainage plan, Water Quality Management Plan, and a SWPPP that will control storm water runoff and erosion, both during and after construction. If a project involves the discharge into surface waters the project proponent will need to acquire a Dewatering permit, NPDES permit, and Waste Discharge permit from the RWQCB and comply with all storm water sewer system (MS4) requirements.

As described above, under the Regulatory Setting, the Town is required to implement a range of measures and procedures when reviewing new development and infrastructure projects. These measures include but are not limited to the Town's stormwater regulations set forth in the Municipal Code, as well as the requirements set forth in the Marin County Stormwater Pollution Prevention Program (MCSTOPPP).

Chapter 8, Urban Runoff Pollution Prevention, of the Town's Municipal Code is intended to ensure the future health, safety, and general welfare of Town of San Anselmo citizens and to protect and enhance watercourses, fish, and wildlife habitat by:

> (a) Minimizing discharges other than storm runoff to storm drains or watercourses;
>
> (b) Responding to the discharge of spills, preventing and controlling the discharge of spills to storm drains or watercourses, and prohibiting dumping or disposal of materials other than stormwater;
>
> (c) Reducing pollutants in stormwater discharges to the maximum extent practicable;
>
> (d) Requiring operators of construction sites, new or redeveloped land, and industrial and commercial facilities to install, implement, and maintain appropriate best management practices (BMPs); and

(e) Requiring development projects to maintain or reduce the volume, velocity, peak flow rate, and duration of runoff as compared to the pre-development stormwater runoff rates; and preventing stormwater pollution whenever possible, through stormwater management controls and ensuring that these management controls are properly maintained.

Compliance with existing Town and County construction and stormwater management regulations would reduce the potential for impacts related to stormwater quality. In addition, prior to the issuance of grading permits, each site developed under the proposed General Plan 2045 would be required to submit a site-specific drainage study and SWPPP to the Town for approval.

While the primary regulatory mechanisms for ensuring that future development and infrastructure projects do not result in adverse water quality impacts are contained in the San Anselmo Municipal Code, the Town has developed the General Plan 2045 to include additional policies and actions that, when implemented, will further reduce water pollution from construction, new development, and new infrastructure projects, and protect and enhance natural storm drainage and water quality features. The policies and actions identified below include numerous requirements that would reduce the potential for development accommodated by the General Plan 2045 to result in increased water quality impacts. Actions by the Town during the development review process require the review of development projects to identify potential stormwater and drainage impacts and require development to include measures to ensure that off-site runoff is not increased beyond pre-development levels during rain and flood events. In addition, compliance with the CWA and regulations enforced by the RWQCB would ensure that construction-related impacts to water quality are minimized and future projects comply with all applicable laws and regulations.

Provision of stormwater detention facilities as needed would reduce runoff rates and peak flows. The implementation of the General Plan 2045 policies and actions listed below include policies aimed to enhance stormwater quality and infiltration as well as actions to review development projects to identify potential stormwater and drainage impacts and require development to include measures to ensure off-site runoff is not increased beyond pre-development levels. Existing regulatory requirements that manage water quality include requirements to obtain approval from the RWQCB for NPDES permits, other discharge permits, WQMPs, SWPPPs, and to implement BMPs. These regulatory requirements are intended to ensure that water quality does not degrade to levels that would violate water quality standards.

As previously described, the proposed General Plan 2045 includes policies and actions related to drainage and water quality. Goal OSC-B encourages protection and improvement of the natural environment through conservation restoration, management, regenerative practices, and pollution reduction and control. Policy OSC-B.4 encourages the protection and conservation of creeks for riparian habitat, fish and wildlife movement, biodiversity, groundwater recharge, and stormwater conveyance. Policy OSC-B.6 requires the minimization of pollutants in stormwater runoff including discharge of soil sediments. Action OSC-B.6.a ensures that new development complies with the requirements of the federal and state Clean Water Acts, National Pollutant Discharge Elimination System (NPDES), and the Town's Urban Runoff Pollution Prevention regulations. Action OSC-B.6.b requires the incorporation of LID measures and other site design elements that slow stormwater flows, promote groundwater recharge, and filter out pollutants. Policy OSC-B.7: Creek Education

and Awareness increases awareness and appreciation of San Anselmo's creeks and their role in sustaining fish and wildlife and providing flood protection.

Through implementation of the General Plan 2045 policies and actions, and implementation of the San Anselmo Municipal Code requirements, compliance with mandatory federal and state regulations, and compliance with the existing regulations for Corte Madera Creek-Frontal San Francisco Bay Estuaries watershed, impacts to drainage patterns and water quality would be **less than significant**.

Impact 3.10-2: General Plan implementation would not result in the depletion of groundwater supplies or interfere substantially with groundwater recharge or conflict with a groundwater management plan. (Less than Significant)

The Planning Area is located within the Corte Madera Creek-Frontal San Francisco Bay Estuaries watershed, as shown on Figure 3.10-1. Marin Water's water supplies presently come from a combination of water imported from Sonoma County Water Agency (SCWA), local surface water, and recycled water. Groundwater is not currently or planned to be used as a municipal water supply source by the district, though private groundwater wells are used in Marin Water's service area. Table 3.15-1 within Section 3.15, Utilities of this EIR summarizes, by source, the total amount of actual water supplied in 2020.

According to the DWR's Bulletin 118 Groundwater Basin Lookup, there are three groundwater basins identified within the Marin Water's service area, including the Ross Valley Groundwater Basin, San Rafael Valley Groundwater Basin, and portions of the Novato Groundwater Basin. All three basins are categorized by the California Statewide Groundwater Elevation Monitoring (CASGEM) program as very low priority basins.

As previously stated, groundwater use within Marin Water's service area is limited to small, domestic use through private groundwater pumping wells. Marin Water has studied the potential for municipal groundwater use; however, several studies have determined the potential for municipal groundwater use within the boundaries of Marin Water's service area is very limited due to limited production capabilities, water quality constraints, and potential water rights issues. As a result of these studies, groundwater is not currently or planned to be used as a municipal water supply source by the district.[8]

Projected General Plan 2045 growth—approximately 2,279 additional units and 5,356 new residents—represents a minor proportional increase in total district demand and were previously accounted for by Marin Water contained within the UWMP's regional demand projections. The increase in 5,356 new residents would require approximately 408 AFY,[9] which is a small proportion of the approximately 13,500 AFY available in 2025 and the 11,541 AFY projected to be available in

[8] Marin Water. 2024. 2020 Urban Water Management Plan. [page 54] Available: https://marinwater.org/wp-content/uploads/2024/01/MMWD-Updated-2020-UWMP-FINAL-January-2024_0.pdf.

[9] Based on the Marin Water's Water Efficiency Master Plan (2024) estimate of 68 gallons per capita per day, for baseline residential water use.

2045 (refer to Table 3.15-8 of Section 3.15, Utilities of this EIR, for further detail). As described previously, based on Marin Water's projections through 2045, Marin Water will have sufficient supplies to meet the demands during normal and dry water years and would run a substantial surplus under all scenarios.

General Plan policies ensure continued coordination and conservation. Goal PR-C requires the provision of high-quality public facilities and infrastructure that meet the needs of current and future residents, businesses, and visitors. Policy PR-C.1 requires the proactive maintenance of public facilities and infrastructure. Policy PR-C.8 requires working with the Marin Water to meet projected water demand, encourage water conservation, and ensure the reliability and safety of the water supply and distribution system.

If larger development projects occur within the Planning Area, such development would be subject to SB 610 and SB 221, which require preparation of a WSA to confirm whether current and projected water supplies could accommodate the development as proposed. Additionally, although the development capacity under the General Plan 2045 reflects the Town's long-term buildout potential, this growth would occur gradually over decades as individual projects are proposed, reviewed, and approved. Implementation of new housing units, nonresidential development, and supporting infrastructure will depend on market conditions, available funding, and local and regional planning priorities. As such, utility demand and infrastructure needs will evolve incrementally rather than all at once. The Town and its service providers will continue to periodically update their master plans, the Urban Water Management Plan, and Capital Improvement Programs to reflect actual development trends and regulatory requirements.

Lastly, although there would be an increase in impervious surfaces associated with General Plan 2045 buildout, this would not substantially interfere with groundwater recharge or impede the sustainable management of the underlying groundwater basin, based on the hydrogeologic setting and existing regulatory mandates. Specifically, the land use patterns under the General Plan 2045 emphasize infill development, revitalization, and intensification within established urban corridors. Because future development would occur primarily on sites that are already disturbed and heavily urbanized, the net expansion of the physical impervious footprint across the basin is highly constrained, preserving natural, high-pervious open space and hillside areas that function as primary regional recharge zones. Furthermore, any potential localized reduction in infiltration from new or replaced impervious surfaces is effectively neutralized by mandatory compliance with existing regulatory frameworks (for example, the applicable permits administered locally by the MCSTOPPP). These legally enforceable standards require project designs to mimic pre-project hydrologic site conditions. This is achieved by routing stormwater runoff from roofs and pavements into on-site green infrastructure—such as bioretention basins, rain gardens, vegetated swales, and permeable pavements—engineered to maximize localized infiltration into the underlying soil matrix. Because mandatory on-site LID measures capture, retain, and infiltrate stormwater close to its source, post-project infiltration volumes will remain substantially similar to baseline conditions. Therefore, the introduction of impervious surfaces associated with the General Plan 2045 buildout will not result in a substantial net decrease in groundwater recharge.

CONCLUSION

Subsequent development projects under the General Plan 2045, such as residential, commercial, industrial, and roadway projects would result in new impervious surfaces and could reduce rainwater infiltration and groundwater recharge. However, the majority of the developable areas within the Town are currently developed with urban uses. The amount of new pavement and impervious surfaces, and the extent to which they affect infiltration, depends on the site-specific features and soil types of a given project site. Projects located in urban areas would have less of an impact than projects converting open lands and spaces.

Implementation of and future development accommodated by the General Plan 2045 would not appreciably add to the volume of impervious surfaces in San Anselmo, when compared to the overall size of the regional groundwater basin recharge area. Additionally, the water needs of the General Plan 2045 would be far less than the available supply, in current and future years. Furthermore, groundwater is not currently or planned to be used as a municipal water supply source by Marin Water. General Plan 2045. Further, the General Plan 2045 includes policies and actions that address groundwater pollution and quality, and encourage groundwater recharge through water management strategies. Implementation of the General Plan 2045 policies and actions would further ensure that the General Plan 2045 would have a **less-than-significant** impact relative to this topic.

Impact 3.10-3: General Plan implementation would not alter the existing drainage pattern in a manner which would result in substantial erosion, siltation, flooding, impeded flows, or polluted runoff (Less than Significant)

Development and projects accommodated under the General Plan 2045 have the potential to impact the Planning Area's storm drainage system, primarily derived from development in underdeveloped and/or underutilized areas. Individual future projects accommodated by the General Plan 2045 would create new impervious surfaces, resulting in an incremental reduction in the amount of natural soil surfaces available for infiltration of rainfall and runoff, which could generate additional runoff during storm events. This increase in surface water runoff, coupled with expanded impervious surfaces, could increase the non-point source discharge of pollutants, including sediment, pesticides, oil and grease, nutrients, metals, bacteria, and trash. During the dry season, vehicles and other urban activities release contaminants onto impervious surfaces, where they accumulate. During the initial storm event, or "first flush," these concentrated pollutants would be transported via runoff to stormwater drainage systems, potentially degrading the water quality of receiving rivers, agricultural ditches, sloughs, and channels.

The Town of San Anselmo is subject to NPDES Permit No. CAS000004 (Order No. 2013-0001-DWQ, as amended), which regulates stormwater runoff discharge from storm drains and watercourses. This permit regulates trash, pollutants of concern, and excessive hydrologic runoff that can carry sediment and cause flooding. Construction activities are strictly regulated by the NPDES General Construction Storm Water Permit, which requires the preparation of a SWPPP containing BMPs to control the discharge of pollutants, including sediment, into local surface water drainages. Post-

construction, the Town requires implementation of a stormwater control plan, LID site design, and integrated stormwater management practices in new development and redevelopment in accordance with MCSTOPPP guidance. Future development consistent with the General Plan 2045 would be subject to these NPDES and RWQCB waste discharge permit requirements.

Each future development project as part of the General Plan 2045 must include detailed, individual project-specific floodplain and drainage studies that assess drainage characteristics and flood risks to ensure an appropriate storm drainage plan is prepared to control storm water runoff both during and after construction. These drainage plans will include individual project-specific best management measures designed to allow for natural recharge and infiltration of stormwater. Construction of storm drainage improvements would occur as part of overall development or infrastructure projects and is evaluated as part of project implementation.

By adhering to San Anselmo Municipal Code requirements and floodplain regulations, future development would be sited and designed to manage flows and avoid exacerbating flood conditions. Furthermore, by restricting the placement of unmitigated structures and pollutant sources within flood-prone areas and requiring infrastructure that safely conveys storm flows, the Town ensures that floodwaters would not substantially impede flows or mobilize urban contaminants during inundation events. For any work performed within a waterway that could alter drainage pathways, future project applicants would be required to obtain permits from the USACE and the CDFW.

The Town has developed the General Plan 2045 to include policies and actions that reduce flooding from new development, reduce storm water pollution, and protect and enhance natural storm drainage and water quality features. Specifically, Policy OSC-B.4 requires the protection and conservation of creeks for stormwater conveyance. Water quality would be protected by the implementation of Policy OSC-B.6 requiring the minimization of pollutants in stormwater runoff including the discharge of soil sediments, Action OSC-B.6.arequiring that new development complies with the requirements of the federal and state Clean Water Acts, NPDES, and the Town's Urban Runoff Pollution Prevention regulations, and Action OSC-B.6.b requiring the incorporation of LID measures and other site design elements that slow stormwater flows, promote groundwater recharge, and filter out pollutants.

Through implementation of the General Plan 2045 goals, policies, and actions, along with compliance with San Anselmo Municipal Code requirements, mandatory Federal and State regulations (including NPDES and RWQCB waste discharge permits), and existing MCSTOPPP guidance, impacts related to increased flooding, altered drainage patterns, and water quality impacts associated with polluted runoff would be **less than significant**.

Impact 3.10-4: General Plan implementation would not release pollutants due to project inundation by flood hazard, tsunami, or seiche. (Less than Significant)

FLOOD HAZARD

As noted previously, the Planning Area is subject to limited flooding problems along the natural creeks and drainages. Specifically, portions of the Planning Area are within the 100-year or 500-year

FEMA flood zones or regulatory floodways. The 100-year and 500-year floodplains are largely confined to the southern portion of the Town boundary.

The General Plan 2045 would allow development and improvement projects that would involve some land clearing, grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project construction. As required by the CWA, each subsequent development project or improvement project will require an approved SWPPP that includes best management practices for grading and preservation of topsoil. SWPPPs are designed to control storm water quality degradation to the extent practicable using best management practices during and after construction.

As described previously in the Regulatory Setting, the Town of San Anselmo regulates storm water discharge in accordance with the NPDES permit through San Anselmo Municipal Code (Town Code) Section 5-8, Urban Runoff Pollution Prevention. In addition, Town Code Section 7-11, Protection of Flood Hazard, is designed to promote the public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas.

In addition, the General Plan 2045 contains policies to reduce impacts associated with stormwater and drainage including policies to maintain storm drainage systems, improve flood management facilities, and other best practices in order to protect the community from flood hazards and minimize the discharge of materials into the storm drain system that are toxic. Implementation of the General Plan 2045 would result in a **less-than-significant** impact relative to this topic.

TSUNAMI AND SEICHES

Tsunamis and seiches are standing waves that occur in the ocean or relatively large, enclosed bodies of water that can follow seismic, landslide, and other events from local sources (California, Oregon, Washington coast) or distant sources (Pacific Rim, South American Coast, Alaska/Canadian coast).

San Anselmo is located in Marin County and approximately 20 miles from the Pacific Ocean at an elevation of approximately 46 feet above mean sea level. Based on tsunami inundation maps prepared by the DOC, Cal OES, and California Geological Survey, the Town is not identified as being within a tsunami inundation or run-up zone.

Seiches are typically caused when strong winds and rapid changes in atmospheric pressure push water from one end of a body of water to the other. When the wind stops, the water rebounds to the other side of the enclosed area. The water then continues to oscillate back and forth for hours or even days. In a similar fashion, earthquakes, tsunamis, or severe storms may also cause seiches along ocean shelves and ocean harbors, or other bodies large bodies of water. Any body of water may experience limited oscillation during storm events or following seismic events; however, oscillation in small bodies of water is generally limited. In smaller water bodies seiches may have the potential to damage or overtop dams. Generally, in lakes the threat of large-scale damage from seiches comes from downstream flooding that would be caused by large volumes of water overtopping a dam or reservoir.

As described previously, the Planning Area has the potential to be inundated by one dam: the Phoenix Dam. The dam inundation area for the Planning Area is shown in Figure 3.10-4. This dam does not have a history of failure; however, it is identified as having the potential to inundate habitable portions of the Planning Area in the unlikely event of dam failure. The Phoenix Dam owner/operator, Marin Water, is responsible for the management, monitoring, and improvements to the dam to reduce the risk of dam failure and inundation. Operation of the facility is strictly regulated by the California Department of Water Resources, Division of Safety of Dams (DSOD). To prevent failure, the DSOD conducts comprehensive annual physical inspections of the dam to identify any structural deficiencies, seismic vulnerabilities, hydrologic inadequacies, or deferred maintenance issues. If safety concerns are identified, the DSOD possesses the statutory authority to mandate immediate operational restrictions—such as lowering the maximum allowable reservoir water level—or to legally compel the owner to execute structural remediations to ensure the dam complies with modern safety and seismic standards.

In addition to structural oversight, state regulations mandate rigorous emergency preparedness to protect downstream populations from the potential for dam inundation. Pursuant to California Water Code Sections 6160 and 6161, and under the oversight of the Cal OES, Marin Water is required to maintain a Cal OES-approved Emergency Action Plan (EAP) for Phoenix Dam. The mandated EAP operates as a proactive mitigation framework and includes:

- Updated and highly detailed dam inundation maps.
- Clearly defined emergency detection and classification protocols.
- Formal, immediate notification procedures to rapidly alert the Marin County Sheriff's Office, the Town of San Anselmo, and local emergency management agencies in the event of a potential, developing, or imminent failure.

These state-mandated protocols integrate directly with the local hazard mitigation and emergency response plans utilized by the Town of San Anselmo and Marin County. This integration ensures that early warning systems and established evacuation routes can be rapidly activated to protect the public prior to an inundation event.

The Town of San Anselmo is not within a tsunami hazard area and would not be subject to substantial flooding hazards or impacts from seiche events. Therefore, impacts would be **less than significant**.

Impact 3.10-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to hydrology and water quality. (Less than Significant)

The context and geographic setting for hydrology and water quality are those projects located within the same watershed, under the jurisdiction of the same RWQCB, and served by Marin Water facilities.

WATER QUALITY

Future construction associated with cumulative development in the watershed would be required to comply with NPDES Permit regulations, including development and implementation of a SWPPP

and monitoring plan that includes erosion-control and sediment-control BMPs on a project-by-project basis to ensure water quality standard or waste discharge requirements would not be violated. Related cumulative development would also be required to comply with any specific water quality, waste discharge, and construction regulations adopted by the jurisdiction in which the site is located.

Subsequent development projects, could increase impervious surfaces, resulting in increased stormwater runoff when compared to existing site conditions. Qualifying new development and redevelopment projects would be required to be consistent with the Regional MS4 Permit and applicable local regulations, resulting in improved water quality conditions within the watershed.

Cumulative development within the watershed would be required to be consistent with the Regional MS4 Permit and implement all water quality requirements adopted by the jurisdiction in which the site is located as part of the site development process.

As previously discussed, Marin Water provides water service to Marin County. Marin Water does not rely on groundwater; thus, future development activities in the water basin associated with regional growth would not involve the use of groundwater. Therefore, groundwater supplies would not be depleted as a result of cumulative growth.

EROSION AND SILTATION

As projects associated with cumulative development build out, construction activities could potentially involve land clearing, mass grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project construction. The greatest onsite erosion risk would occur during construction. Depending upon the location of a specific project site, construction activities, and soil conditions, construction-related erosion could result in the loss of nonrenewable topsoil and could adversely affect water quality in nearby surface waters. As part of the development review process for each project within the water basin, detailed project-specific drainage plans that control storm water runoff and erosion, both during and after construction would be developed. Each subsequent project would also be required to comply with applicable water quality measures. Verification of compliance with the applicable local, State, and federal regulatory requirements would be required prior to project approval.

Cumulative projects would be required to comply with the applicable MS4 NPDES permit and assess potential erosion and siltation impacts on a project-by-project basis. In addition to compliance with the Regional MS4 Permit, development would be required to comply with the regulations of the specific jurisdiction in which the site is developed that address erosion. Therefore, cumulative effects involving substantially altering the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in erosion and siltation on- or offsite associated with operations would be less than significant.

SURFACE RUNOFF

Cumulative projects would be evaluated for conformance with the California Buildings Standards Commission (CBSC), NPDES permit, and other relevant regulations, including the specific regulations

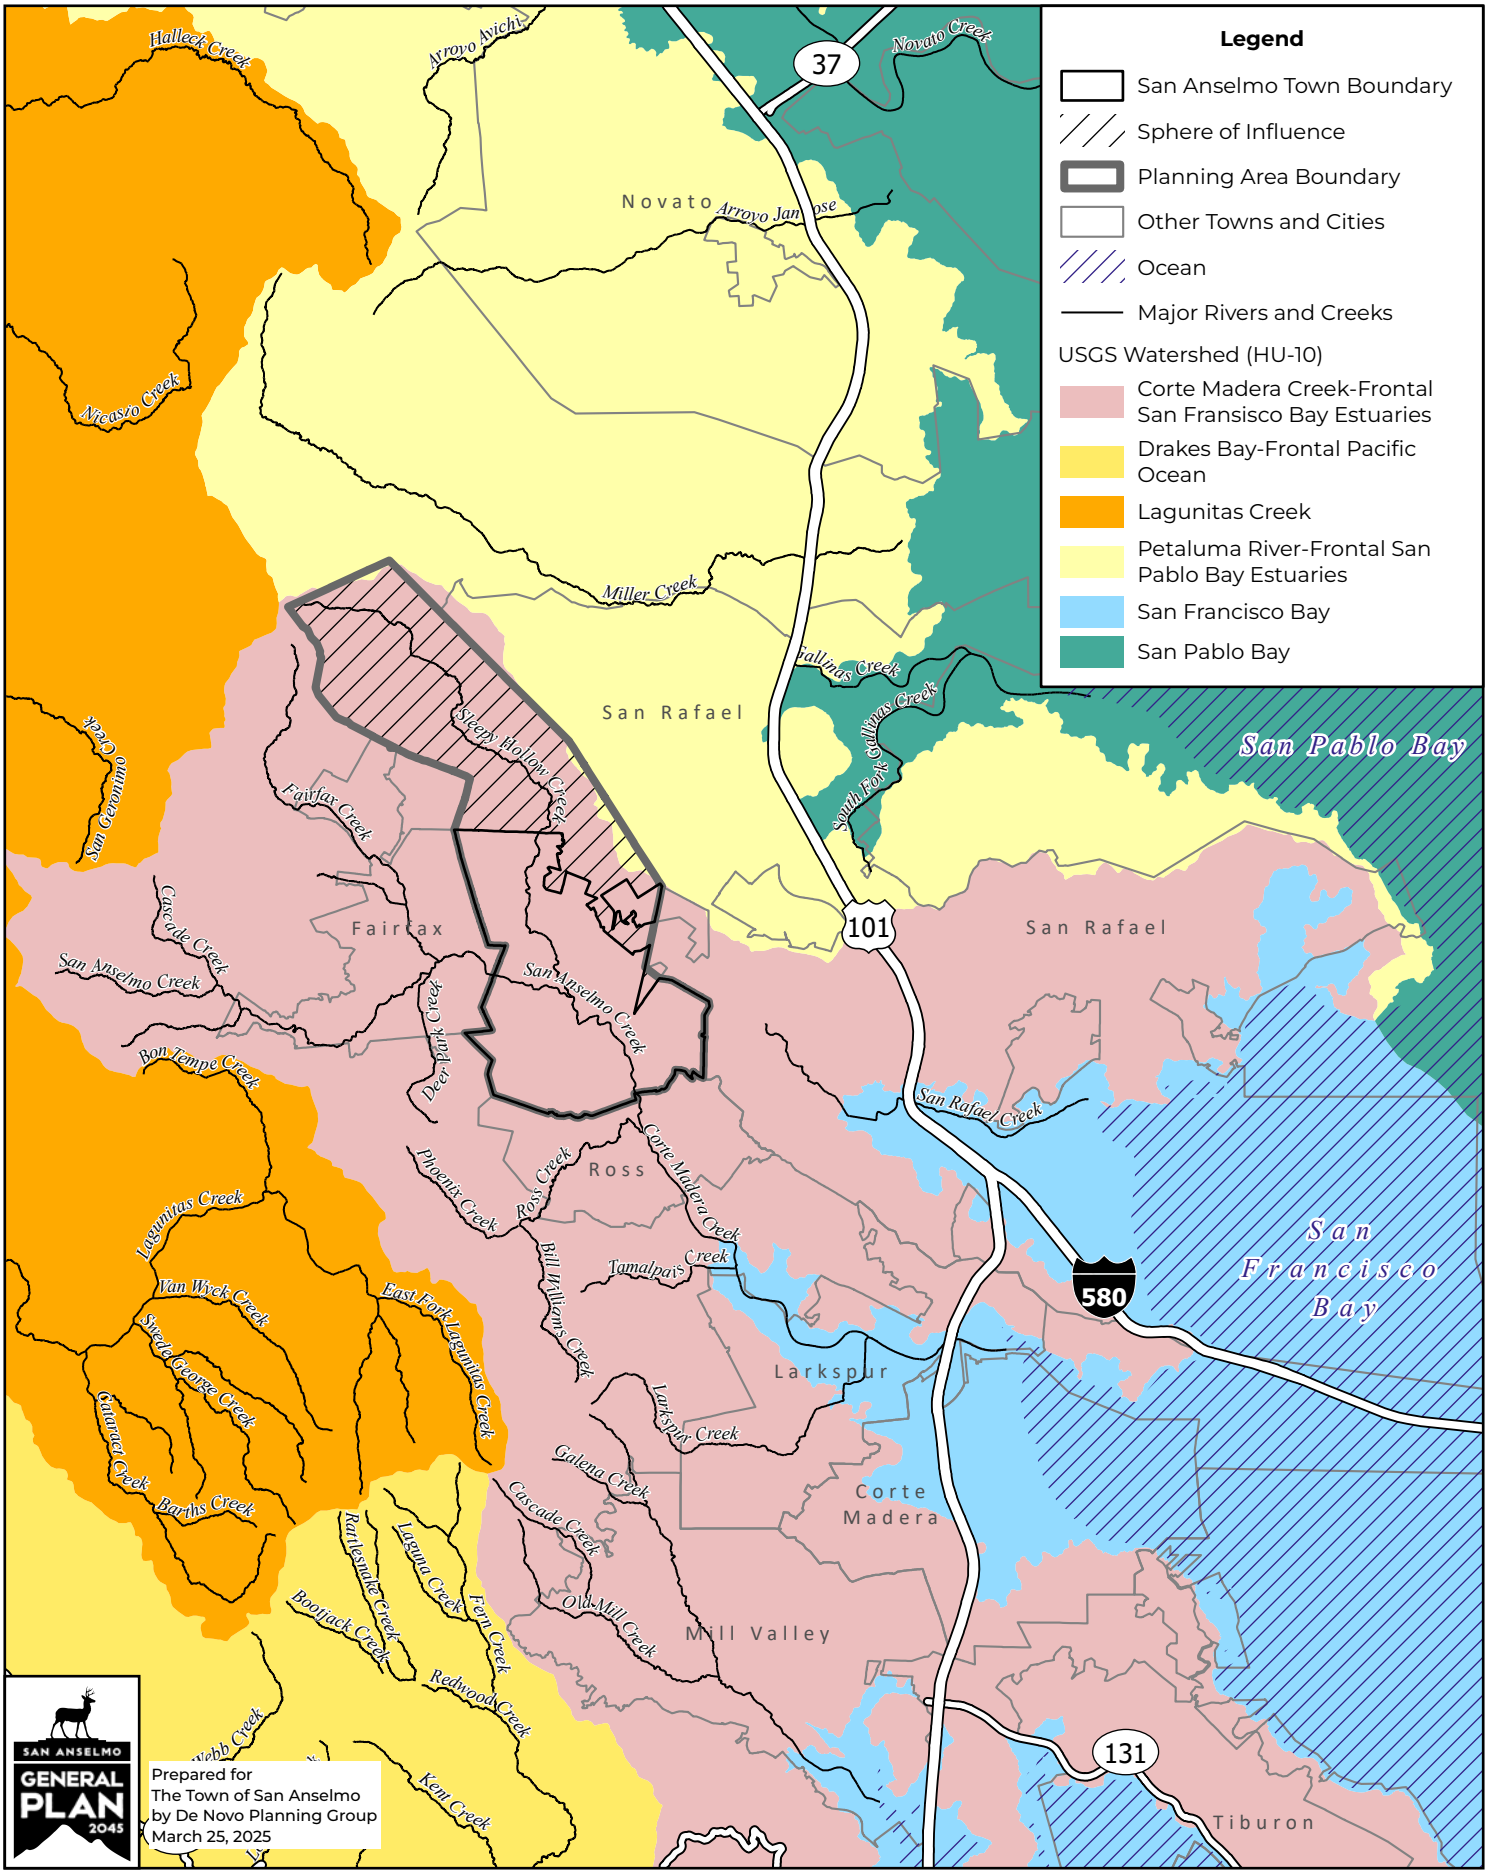

of the jurisdiction in which the site is located. Individual projects would be reviewed for compliance with the Construction General Permit, including the preparation of a SWPPP, implementation of BMPs appropriate for each major phase of construction, and compliance with applicable jurisdiction-specific grading regulations to ensure that the related cumulative project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite. Further, federal, State, and local regulations would require individual projects to provide the on-site storm drain infrastructure and any off-site infrastructure improvements to ensure stormwater runoff is adequately captured and conveyed. Thus, cumulative development would not alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would, result in a substantial increase in the rate or amount of surface runoff in a manner which would result in flooding on- or offsite associated with construction. Therefore, the cumulative impact would be less than significant.

STORMWATER DRAINAGE SYSTEMS

Grading, excavation, removal of vegetation cover, and loading activities associated with cumulative construction activities could temporarily increase runoff to stormwater drainage systems. As subsequent development and infrastructure projects are considered in the region, each project would be evaluated for conformance with the CBSC, applicable local Municipal Code, NPDES permit, and other relevant regulations. Through compliance with the Construction General Permit, including the preparation of a SWPPP, implementation of BMPs appropriate for each major phase of construction, and compliance with applicable federal, State, and local regulations, construction of subsequent development would not create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Therefore, cumulative development would not substantially alter the existing drainage patterns of the area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff associated with operations, and the cumulative impact would be less than significant.

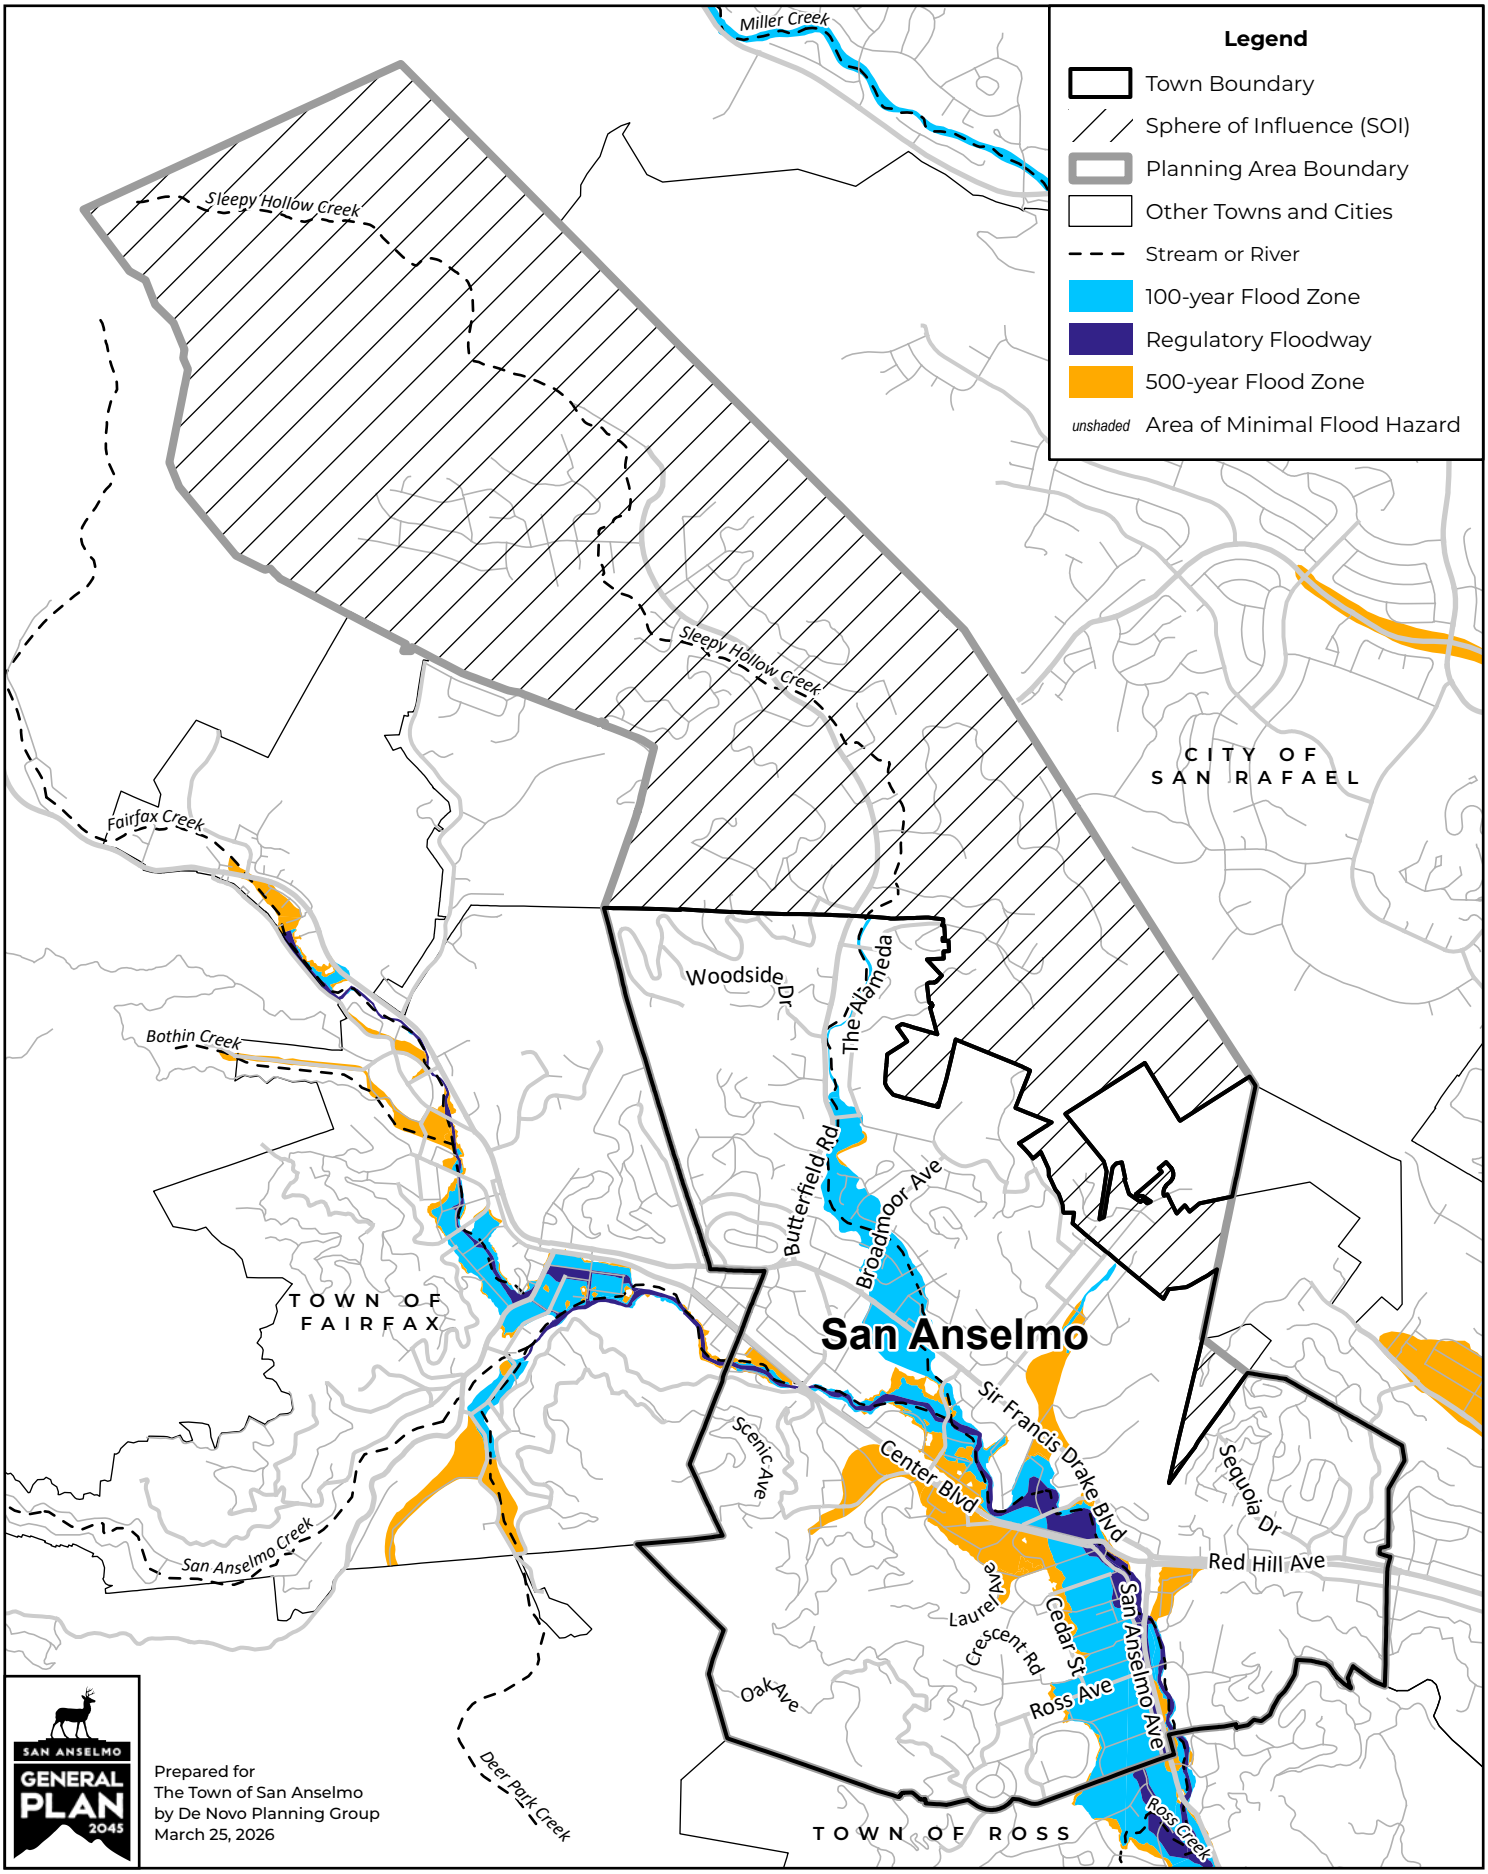

CONCLUSION

Cumulative regional development, including that in the watershed, would be guided by federal, State, and local regulations to reduce potential impacts on hydrology and water quality. Therefore, the cumulative impact on hydrology and water quality would be **less than significant**.

DAM INUNDATION AREA

This section identifies the existing land use conditions, discusses population and housing trends and projections, analyzes the project's consistency with relevant planning documents and policies adopted for the purpose of avoiding or mitigating an environmental effect, and recommends mitigation measures to avoid or minimize the significance of potential environmental impacts. General Plan 2045 policies associated with other specific environmental topics are discussed in the relevant sections of this EIR.

The following comments on this environmental topic were received during the NOP comment period: Richard Berkson (November 17, 2025). Full comments are included in Appendix A.

3.11.1. ENVIRONMENTAL SETTING

EXISTING CONDITIONS

San Anselmo is an incorporated town in central Marin County nestled in a picturesque valley straddling San Anselmo Creek, surrounded by wooded open spaces and the rolling hills of the Mount Tamalpais watershed. As shown in Figure 2.0-1, San Anselmo is bordered by the Town of Fairfax to the west; the City of San Rafael to the east; the Town of Ross to the south; and unincorporated areas to the west, north, and east.

San Anselmo is an established residential community with visitor- and neighborhood-serving businesses centered on the major transportation thoroughfares. Winding streets stem from the major roadways into residential neighborhoods and steep hillsides. Historic Downtown San Anselmo, one of the major commercial centers in San Anselmo, sits at the heart of the town and follows San Anselmo Creek.

The Town Limits include the area within the San Anselmo's municipal boundary, over which the Town exercises land use authority and provides public services. The Town's Sphere of Influence (SOI) is the probable physical boundary and service area of the Town, as adopted by Marin Local Agency Formation Commission (LAFCO). An SOI may include both incorporated and unincorporated areas within which a city, town, or special district will have primary responsibility for the provision of public facilities and services. For the purposes of the General Plan 2045, the Planning Area is the geographic area for which the General Plan 2045 provides a framework for long-term plans for growth and resource conservation. State law requires the General Plan 2045 to include all territory within San Anselmo's incorporated area as well as "any land outside its boundaries which in the planning agency's judgment bears relation to its planning" (California Government Code Section 65300). The Planning Area for the General Plan 2045 includes the entire town limits, and the town's SOI. Figure 2.0-2 in Chapter 2.0, Project Description, shows the Planning Area boundary.

Land Use Patterns

When discussing land use, it is important to distinguish between planned land uses and existing land uses. The General Plan 2045 land use designations identify the long-term planned use of land but do not present a complete picture of existing land uses. The Marin County Assessor's office maintains a database of existing land uses on individual parcels, which is used as the basis for property tax assessments. The acreages for each assessed land use within the Planning Area are

summarized in **Table 3.11-1** and depicted in **Figure 3.11-1**. Only one land use code is assigned to each parcel by the County Assessor's office; parcels with a mixture of uses are not identified.

SOURCE: MARIN COUNTY ASSESSOR'S OFFICE, 2024; DE NOVO PLANNING GROUP, 2026.

Existing land uses refer to the existing built environment, which may be different from the land use or zoning designations applied to land for planning purposes. Existing land uses are based on data provided by the County Assessor and are described below.

COMMERCIAL

Improved commercial land total acreage accounts for 44 acres of the Planning Area (including the Town Limits and SOI) while unimproved commercial land total acreage accounts for two acres of the Planning Area. As shown on Figure 3.11-1, the town's commercial uses are located in and around the downtown area and transportation corridors.

RESIDENTIAL

Residential uses in San Anselmo include single family attached, single-family, and multiple-family developments.

Single Family Attached refers to parcels that contain attached single-family residential housing units on parcels. The Planning Area contains three acres of Single Family Attached uses.

Single Residence refers to parcels that contain one housing unit per parcel. The Planning Area contains 1,690 acres of improved single residence uses and 139 acres of unimproved uses. Single family residential land uses are generally located throughout the town, as shown on Figure 3.11-1. The majority of single family residential units are typical single family residences, with one residence located on one parcel.

Multiple-Residential refers to parcels that contain more than one housing unit, including duplexes, triplexes, fourplexes, condominiums, townhomes, and apartment buildings. The Planning Area contains 86 acres of improved uses and one acre of unimproved multifamily residential uses. Multifamily uses are generally located near major roadways and commercial areas, as shown on Figure 3.11-1.

INDUSTRIAL

Industrial uses account for less than one acre of the Planning Area.

COMMON AREA

The common area category includes both residential and commercial parcels. A common area is the entire area of a common interest development (i.e., a community apartment, condominium, planned development, or stock cooperative), except for the separate interests therein parcels (i.e., individually owned parcels such as a condominium, home, or office suite) and is owned by all of the individual owners, typically through an ownership association. This category accounts for 12 acres of the Planning Area (including the Town Limits and SOI).

RURAL

The improved rural category accounts for 184 acres within the Planning Area.

EXEMPTION

The exemption category is for vacant or improved parcels that are exempt from tax on real property, such as entities formed under Internal Revenue Code Section 501(c)(3), including charities, educational organizations, including the San Francisco Theological Seminary, and land and resource

conservation organizations, such as the Marin Open Space Trust. This category accounts for 598 acres of improved uses and 6 acres of unimproved uses of the Planning Area.

TAX EXEMPT

The tax exempt category includes land owned by public entities, including the Town of San Anselmo, County of Marin, school districts, and various special districts, and land valued by the State Board of Equalization. The Planning Area contains 445 acres of non-taxable uses.

UNIMPROVED

There are approximately 65 acres of unimproved (vacant) land in the Town and 84 acres in the SOI. This includes the unimproved lands in all categories identified by the Assessor.

Special Planning Areas

There are several special planning areas within the Planning Area including the Bald Hill Area Plan area, the Sorich Ranch Master Plan area, and the Seminary Master Plan area. The Bald Hill Area Plan encompasses the area located on the southwest portion of the Planning Area, comprised of very low density residential, single family-conservation, and open space uses. The Sorich Ranch Master Plan area is located in the northeast portion of the Planning Area, and it is surrounded by lands within the City of San Rafael and unincorporated Marin County. The Seminary Master Plan area is located on the southern portion of the Planning Area, east of the Bald Hill Area Plan study area. The Seminary Master Plan area is comprised of specialized education uses associated with the Seminary, with ancillary high density residential and single family residential uses. Both the Bald Hill Area Plan and Seminary Master Plan areas are shown on **Figure 3.11-2**.

Population, Housing, and Household Trends

REGIONAL TRENDS AND FORECASTS

Plan Bay Area 2050+ is a long-range planning document that projects the course for the future of the nine-county San Francisco Bay Area, which includes the Town of San Anselmo. The Plan Bay Area 2050+ is jointly developed and adopted by the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG) every four years.

The regional growth forecast projects the Bay Area region's employment to grow by approximately 1.4 million to just over 5.4 million total jobs between 2015 and 2050. The population is forecasted to grow by approximately 1.9 million people to approximately 9.6 million. This population includes approximately 3.8 million households by 2050, for an increase of approximately 1.1 million households from 2015. Total population, employment, households, and associated housing units are included in **Table 3.11-2**.

TABLE 3.11-2: REGIONAL GROWTH FORECAST OF POPULATION, EMPLOYMENT, HOUSEHOLDS AND HOUSING UNITS

CATEGORY	2015	REGIONAL GROWTH FORECAST (M)							CHANGE 2015 TO 2050 (M)	CHANGE 2015 TO 2050 (%)
		2020	2025	2030	2035	2040	2045	2050		
BAY AREA REGION (M)										
Population	7.66	7.75	7.72	8.05	8.48	8.90	9.27	9.59	1.93	25%

LOCAL POPULATION AND HOUSEHOLD TRENDS

Figure 3.11-3 illustrates, and **Table 3.11-3**, summarizes, the population and household data for San Anselmo and Marin County from 1980 through 2025. The population of the town increased 0.8 percent between 2000 to 2020, compared to the county increase of 4.9 percent. Households for the town decreased 1.8 percent between 2000 to 2020, compared to the county increase of 4.1 percent. Population for both jurisdictions went down slightly between 2020 and 2025, while households stayed the same for San Anselmo and decreased slightly for Marin County (primarily due to economic displacement and a lack of housing supply).

TABLE 3.11-3: TOWN OF SAN ANSELMO AND MARIN COUNTY POPULATION AND HOUSEHOLD GROWTH

	1980	1990	2000	2010	2020	2025	1980-2000 CHANGE	2000-2025 CHANGE
SAN ANSELMO								
Population	12,053	11,743	12,521	12,203	12,623	12,602	3.9%	-0.17%
Households	5,102	5,185	5,320	5,118	5,224	5,224	4.3%	0.00%
Persons per household	2.34	2.25	2.30	2.33	2.40	2.41	-1.7%	0.41%
MARIN COUNTY								
Population	222,568	230,096	247,289	248,601	259,441	253,694	11.1%	-2.27%
Households	88,702	95,233	100,736	102,727	104,900	103,018	13.6%	-1.83%

HOUSING UNITS

The Town of San Anselmo had approximately 5,224 households in 2025. As shown in **Chart 3.11-1**, the majority of housing units are single family detached, which account for 75.0 percent of housing units. The remaining housing types include single family attached (5.3 percent), multi-family duplexes through fourplexes (6.6 percent), multi-family apartments with five or more units (12.4 percent), and mobile homes (0.6 percent).

SOURCE: CALIFORNIA DEPARTMENT OF FINANCE, 2025. E-5 POPULATION ESTIMATES FOR SAN ANSELMO

3.11.2. REGULATORY SETTING

FEDERAL

There are no federal regulations for the land use planning, population, and housing topics applicable to the General Plan 2045.

STATE

California General Plan Law

The General Plan is a set of goals, objectives, policies, implementation measures, and maps that form a blueprint for physical development within the Town and its Planning Area. Government Code Section 65300 requires that each county and city adopt a General Plan, as described in Section 1.1. The General Plan shall address each of the elements specified in Government Code Section 65302 to the extent that the subject of the element exists in the planning area. The plan addresses important community issues such as new growth, housing needs and environmental protection. Its policies are instrumental in planning infrastructure to accommodate future growth. State law

requires that all California Counties and Cities adopt General Plans which include seven mandatory elements (chapters): Land Use, Circulation, Housing, Conservation, Open Space, Noise, and Safety. Additionally, State law also mandates that if Disadvantaged Communities are present, a jurisdiction must also address Environmental Justice within the General Plan.

As further explained below, Housing Element Law (Government Code Sections 65580 through 65589.8) requires local governments to adopt a Housing Element that addresses existing and projected housing needs, including their share of the regional housing need (RHNA). A Housing Element must include an analysis of existing and projected housing needs, identification of governmental and non-governmental constraints to the provision of housing, an inventory of sites appropriate to accommodate the Town's RHNA, identification of resources available to assist with meeting housing needs, a review of the effectiveness of the previous Housing Element, and a plan to address the identified housing needs and constraints.

California Housing Element Law and Housing Laws

The California Housing Element Law mandates that all local jurisdictions—including the Town of San Anselmo—plan for and accommodate their RHNA by updating the Housing Element of their General Plan every eight years. Under this framework, the California Department of Housing and Community Development (HCD) reviews and certifies local Housing Elements to ensure adequate zoned capacity, development standards, and programs exist to meet the community's fair share of regional housing demand across all income tiers. This planning mandate intersects directly with CEQA thresholds of significance regarding land use compatibility and growth inducement. Pursuant to Government Code Section 65595.02, if an inconsistency arises between quantified development standards (such as density, height, or floor area ratios) across different elements of a General Plan, the standards set forth in the most recently adopted element—typically the 6th Cycle Housing Element—control the analysis. Consequently, a housing project that conforms to the newly certified Housing Element but conflicts with an older Land Use Element or Zoning Ordinance cannot be interpreted as creating a significant land use planning conflict, as the older local provisions are legally superseded for the purposes of establishing the regulatory baseline. At the time of this writing, San Anselmo operates under its 6th Cycle Housing Element (2023–2031).

The State of California has declared a housing emergency and in response, has adopted numerous laws intended to encourage and streamline the production of housing. California's housing laws including, but not limited to, those related to housing development approvals, accessory dwelling units, density bonus units, by-right and ministerial housing approvals, and objective development standards, may in certain instances, limit the Town's ability to apply design review, hold public hearings, and apply certain General Plan policies and actions and development standards that would otherwise trigger CEQA review including situations where the project is ministerially approved or exempt from CEQA.

California Zoning Law

Chapter 4 of Title 7, Planning and Land Use, Division 1, Planning and Zoning, outlines the State zoning law requirements. Pursuant to Government Code Section 65850, the legislative body of any county or city may adopt ordinances that do any of the following:

(a) Regulate the use of buildings, structures, and land as between industry, business, residences, open space, including agriculture, recreation, enjoyment of scenic beauty, use of natural resources, and other purposes.
(b) Regulate signs and billboards.
(c) Regulate all of the following:
(1) The location, height, bulk, number of stories, and size of buildings and structures.
(2) The size and use of lots, yards, courts, and other open spaces.
(3) The percentage of a lot which may be occupied by a building or structure.
(4) The intensity of land use.
(d) Establish requirements for off-street parking and loading.
(e) Establish and maintain building setback lines.
(f) Create civic districts around civic centers, public parks, public buildings, or public grounds, and establish regulations for those civic districts.
(g) Require, as a condition of the development of residential rental units, that the development include a certain percentage of residential rental units affordable to, and occupied by, households with incomes that do not exceed the limits for moderate-income, lower income, very low income, or extremely low income households specified in Sections 50079.5, 50093, 50105, and 50106 of the Health and Safety Code. The ordinance shall provide alternative means of compliance that may include, but are not limited to, in-lieu fees, land dedication, off-site construction, or acquisition and rehabilitation of existing units.

California Relocation Assistance Act

The California Relocation Assistance Act (Government Code Section 7260 et seq.) establishes uniform policies to provide for the fair and equitable treatment of people displaced from their homes or businesses as a direct result of state and/or local government projects or programs. The California Relocation Assistance Act requires that comparable replacement housing be made available to displaced persons within a reasonable period of time prior to the displacement. Displaced persons or businesses are assured payment for their acquired property at fair market value. Relocation assistance in the form of advisory assistance and financial benefits would be provided at the local level. This includes aid in finding a new home location, payments to help cover moving costs, and additional payments for certain other costs.

California Environmental Quality Act

CEQA was developed to protect the quality of the environment and the health and safety of persons from adverse environmental effects. Discretionary projects are required to be reviewed consistent with the requirements of CEQA to determine if there is potential for the project to cause a significant adverse effect on the environment. Depending on the type of project and its potential effects, technical traffic, noise, air quality, biological resources, and geotechnical reports may be needed. If potential adverse effects can be mitigated to less than significant levels, a mitigated negative declaration may be adopted. If potentially adverse effects cannot be mitigated to less than significant levels, an environmental impact report is required. These documents have mandated content requirements and public review times. Preparation of CEQA documents can be costly and time-consuming, potentially extending the processing time of a project by a year or longer.

LOCAL

Existing Town of San Anselmo General Plan

The following goals, policies, and actions are applicable to land use, planning, and population/housing. Existing San Anselmo General Plan land use designations are shown on **Figure 3.11-4**.

LAND USE ELEMENT

Objective 1: To manage future growth to ensure the orderly development of the community, the logical extension of urban services, preservation of the area's natural and cultural resources, and protection of the area's environmental setting.

Policy 1.1. Future growth through the year 2032 will be limited to the Town's present adopted urban service limit line. (See Map 2.)

Policy 1.2. Future growth will be managed based on the ability to provide needed public services, the constraints associated with development of the site, the costs and revenues associated with new development, and the effects of growth on local traffic conditions.

Policy 1.3. Ensure that new growth does not create intolerable traffic conditions.

Objective 2: To preserve and enhance the unique natural and urban characteristics of the community while accommodating suitable new growth.

Policy 2.1. All land use decisions within the Town and the planning area will take into consideration the protection and preservation of the area's surrounding hillsides, ridges, water courses, and any unique natural habitats.

Policy 2.2. New development will be required to preserve some of the natural and cultural characteristics of their respective development sites.

Policy 2.3. Undeveloped and agricultural lands outside the urban service area boundary should be protected from urban expansion.

Objective 3: To establish residential densities which are compatible with the environmental constraints of the area, and sensitive to adjacent land uses.

Policy 3.1. Very low density (hillside and ridge) and single-family conservation residential development should be located in areas of (1) relatively high visibility, (2) environmental hazards, (3) sensitive environmental resources, or (4) areas which are established as high priority open space lands.

Policy 3.2. Single-family residential development is most appropriate within and adjacent to existing single-family areas, and in areas easily served with water and sewer lines. Such areas should also serve as transition zones between mixed density and very low-density areas.

Policy 3.3. Mixed residential and affordable housing development is most appropriate where sites have few environmental constraints, and have adequate facilities, such as water, sewer, transit, and access to commercial services.

Policy 3.4. Mixed residential and affordable housing development is also appropriate along major traffic arterials and adjacent to commercial and office areas.

Objective 4: Maintain the existing size and intensity of commercial businesses in the Town.

Policy 4.1. Commercial land uses in the Town shall be divided into four categories: central commercial, general commercial, limited commercial, and neighborhood commercial.

Policy 4.2. Retail commercial is best suited for the central area.

Policy 4.3. General commercial is best suited for both retail and service commercial.

Policy 4.4. Neighborhood commercial should be located on collector streets within a short distance of residential areas.

Policy 4.5. Limited commercial uses shall be located along Sir Francis Drake Boulevard west of the Hub. Low intensity uses are low traffic generators.

Policy 4.6. Before the Town will consider a proposal for commercial expansion or intensification, the Town first needs to resolve current parking problems in the commercial areas of the community. Any commercial proposals which would compound the parking problem will not be approved.

Objective 5: To establish parking standards and a parking program for the central commercial area. (Also see Circulation Element Policies 9.1 and 12.1.)

Policy 5.1. To revise the parking standards in the Town's Zoning Ordinance recognizing that most businesses in the central area cannot provide parking onsite.

Policy 5.2. To establish a parking district or other mechanism in the central commercial area to generate the monies needed to develop sufficient parking in the area to support the Central Commercial District.

Objective 7: To protect and preserve those areas of unique natural and visual resources within the planning area (see Map 3). (Also see Open Space Element Policies 2.1-2.8.)

Policy 7.1. To limit or prohibit development in hazardous areas or areas of high resource value.

Policy 7.2. To prohibit or severely limit development along the Town's major and minor ridges and hilltops.

Policy 7.3. To preserve as open space land of aesthetic or recreational value.

Policy 7.4. Encourage open space corridors along easements and streams and provide public access where appropriate for bicycling, walking, and equestrians. (See Objective 4 of Open Space Element.)

Policy 7.5. Regulate construction on visible slopes to preserve the visual value of the hillside.

Policy 7.6. Continue to preserve open space and provide for the conservation of resources through innovative implementation including zoning, development controls (including grading, public and private acquisition, and incentives for private improvements which enhance the environment).

Objective 8: To limit future annexations to lands within the urban service area.

Policy 8.1. To determine which properties within the Town's Urban Service Area should be prezoned.

Policy 8.2. To prezone lands in conformance with all the policies of the San Anselmo General Plan.

Policy 8.3. To review and comment on all development proposals within the Town's adopted Urban Service Area Boundary.

Policy 8.4. Developments proposed on properties contiguous to the Town Limits and prezoned by the Town shall be annexed into the Town prior to any decisions on the development proposal.

Policy 8.5. All lands annexed into the Town will be zoned no less restrictively than the current County of Marin zoning. The Town will not consider annexation for purposes of increasing the density over that allowed by the County of Marin.

Objective 11: To preserve, maintain, and enhance the existing character, scale, and quality of life in San Anselmo's residential neighborhoods.

Policy 11.1. New development, including rehabilitation and expansion projects, shall be of a scale, intensity, and design that integrates with the existing character of the surrounding neighborhood.

Policy 11.2. Medium- and large-scale development projects in both single-family and mixed residential areas shall provide for a variation in building heights and exterior wall and roof articulation to avoid monotonous structures with a large, blank visual bulk and mass.

Policy 11.3. New developments of five or more units which overcrowd the local residential street network, and cannot make the necessary roadway improvements to mitigate the impact, will be required to be phased over a period of time or possibly be reduced in density. All roadway improvements will be paid for by the development creating the need for the improvements.

OPEN SPACE ELEMENT

Objective 1: To protect from development those open space parcels which contribute directly to the Town's identity, its sense of separate place in relation to other communities, and the quality of life in the community. The properties which meet this criteria are listed in Appendix A.

Policy 1.1. The Town will determine the relative importance of the properties listed in Appendix A in terms of their open space value.

Policy 1.2. The Town, in conjunction with one or more of the following agencies: the County of Marin, Fairfax, Ross, San Rafael, and the Marin County Open Space District, will establish a program for acquisition and preservation of priority open space properties.

Policy 1.3. The Town may sponsor community and areawide meetings, exhibits, and events to raise community awareness with regard to open space needs in San Anselmo and the surrounding area.

Policy 1.4. Any landowner or developer who intends to submit a land division or other development proposal for all or a portion of property listed in Appendix A will be required to meet with the San Anselmo Open Space Committee prior to submitting any development application.

The Committee must meet with the applicant within thirty (30) days of notification to discuss the Town's open space objectives and options for development. The applicant will be required to submit a written report of the findings of this meeting with the development application.

Policy 1.5. The Town's hillside and ridge protection policies and development densities will be used to protect the open space values of the properties listed in Appendix A if efforts to purchase open space have failed. Such efforts will include the establishment of lands designated as private open space.

Policy 1.6. To examine current management/maintenance arrangements and needs for existing open space lands and explore alternatives for meeting management goals.

Town of San Anselmo Municipal Code

Regional Transportation Plan and Sustainable Communities Strategy

Plan Bay Area 2050+ is a limited, focused update to the 2021 version of Plan Bay Area (Plan Bay Area 2050), which is a regional plan that integrates land use and housing strategies to address affordability and equity. Plan Bay Area 2050+ identifies 35 integrated strategies across transportation, housing, the economy, and the environment, aiming to make the Bay Area more affordable, connected, diverse, healthy, and vibrant by 2050. It does not fund specific infrastructure projects or override local policies; cities and counties retain all local land use authority, while the plan serves as a shared vision and policy framework for regional coordination.

Key housing and land use initiatives include concentrating growth in Growth Geographies, Priority Development Areas, and Tansit-Rich Areas to align housing supply with transit access. Strategies emphasize expanding the supply of affordable housing, allowing greater mix of densities and housing types, and repurposing underutilized commercial spaces like aging malls and office parks into mixed income neighborhoods. The plan also prioritizes preserving existing affordable housing and implementing renter protections to mitigate displacement and ensure that low income households gain improved access to opportunity and reduce cost-of-living burdens.

Regional Housing Needs Plan

California General Plan law requires each city, town, and county to have land zoned to accommodate a fair share of the regional housing need. For Bay Area jurisdictions, the share is based on the Final

Regional Housing Needs Allocation (RHNA) Plan: San Francisco Bay Area, 2023-2031 adopted by the ABAG in December 2021. San Anselmo's fair share of the adopted RHNA for 2023-2031 is summarized in **Table 3.11-4**.

The Town is not required to ensure that development to accommodate the RHNA occurs; however, the Town must facilitate housing production by ensuring that land is available, that unnecessary development constraints have been removed, and that the Town is taking actions to promote development of housing at all income levels. The Town's Housing Element, adopted in 2023, demonstrates the Town's ability to accommodate and facilitate the 2023-2031 RHNA that has been assigned to the Town of San Anselmo.

TABLE 3.11-4: REGIONAL HOUSING NEEDS ALLOCATION

JURISDICTION	VERY LOW INCOME (0-50% AMI)	LOW INCOME (51-79% AMI)	MODERATE INCOME (80-119% AMI)	ABOVE MODERATE INCOME (120% AMI+)	TOTAL
6TH CYCLE: 2023 - 2031					
Bay Area Region	114,442	65,892	72,712	188,130	441,176
Marin County	4,171	2,400	2,182	5,652	14,405
San Anselmo	253	145	121	314	833

SOURCE: FINAL REGIONAL HOUSING NEEDS ALLOCATION (RHNA) PLAN: SAN FRANCISCO BAY AREA, 2023-2021, 2021; TOWN OF SAN ANSELMO, 2023-2031 HOUSING ELEMENT

Town of San Anselmo Municipal Code

Town Code Title 4, Chapter 9, establishes requirements for planting and maintaining street trees.

Town Code Title 4, Chapter 13, establishes permit requirements for the removal, destruction, or harm of any tree on undeveloped parcels and for the removal, destruction, or harm of heritage trees on developed parcels. A heritage tree is any tree with a diameter of 22 inches at breast height or a tree which has special significance and is of a species and size designated by the Council; heritage tree does not include acacia trees or trees designated as a nuisance by the Council.

Town Code Title 10, Chapter 3, establishes zoning standards for residential and non-residential development. Article 3 establishes development standards for each of the zones within the Town, including height standards that address visual impacts on the ridge zone and siting of buildings and size of buildings to reduce visibility on hillsides and ridges. Article 3 establishes design review requirements to minimize adverse effects of the exterior design of development projects by providing for the review of the design of certain buildings and improvements. Article 3 requires findings to be made for design review, including findings that address functional and aesthetic compatibility with the surrounding area.

Town Code Title 10, Chapter 9, Signs, establishes comprehensive guidelines for the installation, regulation, and maintenance of signs throughout San Anselmo, emphasizing compatibility with surrounding architecture and environments while enhancing the town's visual appeal for residents and visitors alike. This Chapter also requires that light sources shall be concealed or shielded to prevent or minimize light spillage, glare, momentary blindness, or other annoyance, disability or

discomfort to persons within the view of such light sources. Additionally, signs using exposed light sources, such as neon tubing, unshielded light bulbs or fluorescent tubes, or any interior lighted sign with transparent or translucent faces may receive final approval only when the Planning Commission finds that the light from the sign does not cause unreasonable glare or annoyance to passersby or neighbors.

Town Code Title 10, Chapter 10, Signs on Town Property, outlines rules governing the placement, design, and maintenance of signs on property owned or controlled by the Town, as well as public rights-of-way.

ZONING ORDINANCE

Title 10, Chapter 3, Zoning, of the Town Code is the Town's Zoning Ordinance. The Zoning Ordinance carries out the policies of the General Plan by classifying and regulating the uses of land and structures within the Town, consistent with the General Plan. The ordinance establishes development standards deemed the minimum necessary to promote and protect the public health, safety, and general welfare of the Town. The Town's zoning map, amended most recently in April 2024, is shown on **Figure 3.11-5**.

Marin Local Agency Formation Commission

In 1963, the State Legislature created a LAFCo with the authority to regulate local agency boundary changes for each county. Subsequently, the State has expanded the authority of a LAFCo. The goals of a LAFCo include preserving agricultural and open space land resources and providing for the efficient delivery of services. The Marin LAFCo has authority over land use decisions in Marin County that affect local agency boundaries. Its authority extends to the incorporated cities, including annexation of County lands into a town, city, and special districts within the county. LAFCo has the authority to review and approve or disapprove the following:

- Annexations to or detachments from cities or districts;
- Formation or dissolution of districts;
- Incorporation or disincorporation of towns and cities;
- Consolidation or reorganization of towns, cities, or districts;
- Extensions of service beyond an agency's jurisdictional boundaries;
- Development of, and amendments to, SOIs. The SOI is the probable physical boundary and service area of each local government agency. This may extend beyond the current service area of the agency; and
- Provision of new or different services by districts.

In addition, LAFCo conducts Municipal Service Reviews (MSRs) for services within its jurisdiction. An MSR typically includes a review of existing municipal services provided by a local agency and its infrastructure needs and deficiencies. It also evaluates financing constraints and opportunities, management efficiencies, opportunities for rate restructuring and shared facilities, local accountability and governance, and other issues.

Marin County General Plan

Marin County adopted its General Plan in November 2007 and has amended the General Plan six times through January 2023. The County's General Plan provides a comprehensive set of goals,

policies, and implementation measures to guide the county's growth through the County's planning horizon. The County's General Plan only establishes land use designations for the unincorporated areas within Marin County.

The County's General Plan establishes allowed land uses within the unincorporated areas of the county, including the Town's SOI and unincorporated areas surrounding the Planning Area. Marin County has ultimate land use planning and project approval authority within the SOI and other unincorporated areas of the county unless the lands are annexed to a town or city. The County's land use designations for areas within the SOI are summarized in **Table 3.11-5** and shown on **Figure 3.11-6**.

TABLE 3.11-5: MARIN COUNTY LAND USE DESIGNATIONS IN SOI

LAND USE	SOI (ACRES)
Agriculture 3 (AG3)	1
Multi-Family 2 (MF2)	8
Multi-Family 2- Housing Overlay Designation (MF2-HOD)	11
Open Space (OS)	371
Public-Single-Family 4(PF-SF4)	11
Planned Residential (PR)	337
Planned Residential- Housing Overlay Designation (PR-HOD)	525
Single-Family 3 (SF3)	29
Single-Family 4 (SF4)	421
Single-Family 5 (SF5)	20
Single-Family 6 (SF6)	14
Single-Family 6- Housing Overlay Designation (SF6-HOD)	2

Special Planning Areas in San Anselmo

BALD HILL AREA PLAN

The Bald Hill Area Plan, adopted in 1996, was prepared for the Bald Hill area to address issues of fire safety, aesthetics, trails, open space, and infrastructure. The Bald Hill Working Group, a Town Council-appointed representative group of property owners and residents in Bald Hill and Town officials, met from 1993 to 1995 to formulate and present the draft plan. The Bald Hill Area Plan is adopted as part of the San Anselmo General Plan 2045. It is designed to supplement, rather than replace, General Plan 2045 policies and Town Code provisions relating to hillside development. An important aspect of the Plan is to further the policies set forth in the Open Space Element, which encourage private and public open space preservation to reduce the potential negative impacts of cumulative development and its effects on visual aesthetics, traffic circulation, topography, drainage, and emergency egress. Contents of this document include policies on land use/density, circulation/parking, water/sewer, drainage, visual, trail access, and fire protection.

Lands in the Bald Hill Area are designated and zoned respectively either as: the Very Low Density—Hillside and Ridge (VLD) use and R-1-H zone; the Single Family Residential-Conservation (SF-C) use and R-1-C zone; and the Single-Family Residential (SF) use and R-1 zone.

SORICH RANCH MASTER PLAN

The Sorich Ranch Park Master Plan, completed in 1992, guides the preservation and enhancement of the 64-acre park at San Anselmo's northeastern edge. The plan was developed through a community-driven process supported by the Town's Open Space Committee, Parks and Recreation Commission, and Planning Department. The plan balances conservation with low-impact recreational use, emphasizing passive recreation, environmental restoration, and improved access. The plan outlines policies for trail development, habitat preservation, fire safety, and site improvements while maintaining the land's natural character as a quiet, open space refuge for the community.

SEMINARY MASTER PLAN

The Campus Plan 2010, A Master Plan Amendment for the San Francisco Theological Seminary, (Seminary Master Plan) serves as a campus plan for the San Francisco Theological Seminary (Seminary), which provides private higher education uses. On March 13, 1990, the Town Council adopted Ordinance No. 910, which recognized the rezoning of the Seminary Campus area from R-1 Single Family to SP-O Specific Planned Development - Single Family and High Density Residential and simultaneously approved the San Francisco Theological Seminary Master Plan. The Seminary Master Plan reflects the overall uses approved in 1990 and plans for the organization of the Seminary Campus in accordance with the previously approved uses, which include Academic, Administrative, Student Center, Special Academic, Housing, Community, and Storage. The Seminar Master Plan addresses removal and reorganization of existing uses, establishes a Campus Master Plan Map, and addresses the scale and extent of new development. The Seminary Master Plan allows the San Francisco Theological Seminary to adapt to changes in patterns of enrollment and in the economy so that it can continue to carry out its 140-year-old mission in the Town of San Anselmo. The Seminary Master Plan does not result in the following: alteration of the exterior appearance or use of the historic structures, change the allowed uses in the Seminary, increased traffic/parking, nor increased drainage onto the adjacent properties. The Seminary Master Plan was amended in 1999, 2001, and 2012.

3.11.3. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

Future development under the General Plan 2045 was reviewed to determine if the project would have a significant impact on land use, planning, and/or population and housing. These types of impacts would be the greatest in areas located where development already exists and/or is anticipated to occur; therefore, these are the areas that are focused on in the analysis. Impacts are evaluated assuming full buildout of the Planning Area.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to land use planning and population/housing.

LAND USE AND COMMUNITY DESIGN ELEMENT

GOAL LU-A. Manage future growth to prioritize a compact, walkable community, the efficient extension of urban services, preservation of natural and cultural resources, and protection of the area's environmental setting.

Policy LU-A.1: Sustainable Growth. Plan for responsible and balanced growth that maximizes efficient use of existing land resources and infrastructure, reduces sprawl, minimizes environmental impacts, and supports economic vitality.

Action LU-A.1.a: Implementation of Land Use Map. Implement the Land Use Map (Figure LU-1) by approving new development projects consistent with the land use definitions, densities, and intensities as set forth in this Element. Ensure consistency between the General Plan, Zoning Code, and other land use regulations.

Policy LU-A.2: Infill Development. Focus new development on vacant or underutilized parcels within the existing developed areas to maximize land use efficiency and prevent urban sprawl.

Policy LU-A.3: Public Infrastructure and Service Capacity for New Development. Coordinate growth and development with sewer, water, transportation, schools, fire protection, parks, waste disposal, and other service providers to ensure essential infrastructure and services have adequate capacity to serve new development prior to approving entitlements or issuing building permits. Ensure anticipated traffic conditions are consistent with the Town's adopted Vehicle Miles Traveled (VMT) and Level of Service (LOS) standards. Require new development to pay its fair share of necessary infrastructure improvements to the extent allowed by law.

Action LU-A.3.a: Impacts of New Development on Infrastructure and Services. Analyze infrastructure and service capacity during development and CEQA review and require necessary improvements in consultation with provider agencies. Coordinate growth projections and long-term infrastructure planning with urban service providers, including water, sanitary, school, fire, and waste disposal agencies, to ensure adequate capacity for existing and future development. Monitor land use changes and new development and adjust growth projections as warranted.

Policy LU-A.4: Annexation and Sphere of Influence Coordination. Coordinate with Marin County and LAFCo on annexation proposals and development within the Town's Sphere of Influence to ensure consistency with the General Plan, compatibility with nearby land uses, and efficient delivery of services. Support annexations of contiguous, developed unincorporated areas when they enhance the community, further General Plan goals,

eliminate unincorporated islands, have resident support, and can be served in a fiscally responsible manner without adversely affecting service levels for existing residents**.**

Action LU-A.4.a: Municipal Service Review. Actively coordinate with LAFCo during the regular Municipal Service Review (MSR) process to provide data on the capacity of existing services and fiscal sustainability. Use the MSR as a tool to ensure future land-use and infrastructure decisions are consistent with the General Plan.

Action LU-A.4.b: Resolution of Parcels with Split Jurisdiction. Actively support and coordinate with Marin County LAFCo and neighboring jurisdictions to facilitate the annexation and de-annexation of properties, as appropriate, that are currently split across multiple jurisdictions.

Policy LU-A.5: Reserve Areas. Consider increases in density and modified development standards or incentives in areas designated as Reserve Areas (see Glossary) on Figure LU-2 to address future housing needs and help meet the Town's future Regional Housing Needs Allocations, if necessary.

Goal LU-B Allow for a variety of land uses that accommodate the needs of a socially and economically diverse community.

Policy LU-B.1: Commercial Development. Evaluate the size and intensity of commercial businesses to support a balanced, vibrant local economy and ensure they align with the town's unique qualities.

Policy LU-B.2: Cannabis Business Uses. Preclude cannabis business uses within the Town limits except medicinal cannabis delivery from businesses located outside of the Town limits. Recreational cannabis delivery from businesses located outside of the Town limits may be allowed if required by State law.

Policy LU-B.3: Mixed Use Development. Encourage mixed use development in downtown and along the Sir Francis Drake Boulevard and Red Hill Avenue/Greenfield Avenue corridors as a means of increasing the customer base for local businesses while creating new mixed use and housing opportunities for residents in close proximity to services and transit.

Policy LU-B.4: **Redevelopment with Housing.** Support the reuse of Town-identified properties for housing, prioritizing affordable and multifamily development through incentives such as site prioritization, streamlined approvals, or waivers to development standards and permit fees.

Action LU-B.4.a: Affordable Housing Overlay Zone. Amend the Municipal Code to identify maximum density and floor area ratio and minimum parking requirements for the Affordable Housing Overlay Zoning District.

Policy LU-B.5: Neighborhood Commercial. Encourage the retention and improvement of neighborhood-serving retail stores and services.

Action LU-B.5.a: Revitalization Incentives. Consider zoning and economic development incentives that keep local neighborhood centers viable, such as allowing additional floor area when neighborhood-serving uses are included or retained.

Policy LU-B.6: Reuse of Private Schools and Church Sites. If redevelopment of a private school and church site is sought by the landowner, encourage redevelopment with land uses compatible with development in the immediate area, with complementary scale and public benefits such as affordable housing, childcare facilities, and public open space.

Action LU-B.6.a: Rezoning of Public School Sites. Rezone public school sites from residential to the Public Facilities District and allow educational uses and housing development up to 40 units per acre.

Goal LU-C Preserve and enhance San Anselmo's natural setting as a unique asset that supports the community.

Policy LU-C.1: Open Space and Natural Resources. Protect and enhance open spaces and scenic vistas, natural features, and wildlife habitats, ensuring that development respects these natural assets and integrates with the town's natural environment.

Action LU-C.1.a: **Development in Open Space and Low Density Areas.** Prohibit development in areas designated as Open Space on the Land Use Map (Figure LU-1) and continue to allow very low-density residential development on private property in areas designated as Very Low Density and Single-Family – Conservation on the Land Use Map (Figure LU-1).

Policy LU-C.2: Hillside Protection. Protect the visual integrity and natural resources of San Anselmo's hillsides. Where hillside construction is permitted, design structures to:

- Minimize visual impacts by limiting building size and height, screening the structure within the existing landscape, minimizing glare and light spillage, and using exterior colors and materials that blend with the surrounding environment,
- Limit grading to preserve the existing topography,
- Provide slope and foundation stability, drainage, and erosion control,
- Provide adequate parking and emergency access,
- Address Wildland Urban Interface requirements, and
- Restore natural habitats.

Action LU-C.2.a: Hillside Density District. Amend Table 4D, R-1-H (Hillside Density District) Parcels, in the Municipal Code to remove outdated parcel numbers and update parcel-specific density limits to align with State law. The density on the remaining hillside parcels shall be no greater than the number of dwelling units specified in the table.

Policy LU-C.3: Ridge Zone Protection. Prohibit development, including structures, roads, and public facilities within the protected ridge zone, which is 150 horizontal feet in both directions from the lowest elevation of the ridgeline, or 50 feet vertically, whichever is more

restrictive, of visually prominent ridgelines, identified on Figure LU-3. Exceptions may be considered on existing legal lots when it is demonstrated that development outside of these areas is not feasible for geologic, soils, or hydrologic reasons, and development would not impact a unique natural habitat. In such cases, visibility of new structures should be minimized by limiting building size and height and integrating the structure within the existing landscape.

Action LU-C.3.a: Conservation and Low Density Development Review. Continue to require design review for new structures and upper-floor additions for hillside or protected ridge zone parcels to minimize visual, environmental, and safety impacts.

Action LU-C.3.b: Hillside and Ridge Zone Development Regulations. Prepare and adopt objective development and design standards in the Municipal Code to minimize the impacts of hillside and protected ridge zone development, including but not limited to:

- Creating opportunities to cluster development and/or transfer of development rights to preserve open space, natural features, and scenic resources,
- Limiting grading to preserve natural topography, minimize erosion, and prevent slope failure,
- Regulating building design and scale, including height and massing, to achieve residential development that is compatible with existing hillside neighborhoods,
- Minimizing off-site and night sky impacts of outdoor lighting and glare, and
- Establishing fire safety standards.

Incorporate the protected ridge zone development restrictions in Policy LU-C.3 into the Zoning Code.

Goal LU-D Strengthen San Anselmo's unique community fabric by maintaining its human-scaled pedestrian-friendly built environments and public places, and complementing these with attractive and context-sensitive new development.

Policy LU-D.1: Community Character and Sense of Place. Ensure new development enhances San Anselmo's unique character through context-sensitive, human-scaled design that complements historic patterns and supports high-quality construction.

Policy LU-D.2: Design Excellence and Livability. Require new development to use context-sensitive, human-scaled, and high-quality design that:

- Enhances San Anselmo's unique character and complements historic development patterns;
- Fosters social interaction and provides access to air, light, natural surroundings, and open space; and
- Respects the scale and form of existing commercial and residential neighborhoods while accommodating high-quality contemporary design; and

- Prioritizes habitat value through climate-appropriate landscaping in suburban and urban settings.

Action LU-D.2.a: Development Review. Use objective development standards, the design review process, and the California Environmental Quality Act in the review of proposed development projects to promote high quality design, ensure compatibility with surrounding properties and uses, and minimize environmental impacts and conflicts between residential and non-residential uses.

Action LU-D.2.b: Update Regulations. Regularly evaluate and update development standards to ensure that new development is compatible with the natural surroundings and built environment of the immediate neighborhood.

Policy LU-D.3: Community Gathering Places. Promote and integrate well-designed public gathering places throughout the town to strengthen community connections and plan for and integrate well-designed public gathering places throughout the town that foster a sense of belonging and are welcoming and accessible to people of all backgrounds, ages, incomes, and abilities.

Action LU-D.3.a: Gathering Place Design. Emphasize the design and physical function of commercial districts as community gathering places. Where feasible, require public plans and projects to include community services, public space, and amenities that create a strong sense of place and opportunities to congregate.

Action LU-D.3.b: Outdoor Dining and Gathering Areas. Encourage physical design and layout that supports outdoor dining, walkability, and a cohesive human-scaled streetscape.

Action LU-D.3.c: Pilot Urbanism Projects. Test small-scale, temporary placemaking projects (e.g., parklets, pop-up plazas) to evaluate possible long-term public improvements that foster community gathering.

Policy LU-D.4: Downtown. Maintain and enhance downtown as a pedestrian-friendly center for community life, with a dynamic mix of commercial and cultural destinations, businesses and housing, and attractive amenities.

Action LU-D.4.a: Pedestrian-Friendly Building Frontage. Encourage ground-floor businesses and building designs along San Anselmo Avenue (between Tamalpais and Bolinas Avenues) that actively engage pedestrians through frequent entrances, ample windows providing views into the businesses, and thoughtful façade design.

Action LU-D.4.b: Pedestrian-Friendly Connections. Strengthen pedestrian connections that extend from downtown to other local destinations, especially to Creek Park and across Sir Francis Drake Boulevard. Highlight and enhance downtown's paseos and bridges through signage, lighting, and other improvements.

Action LU-D.4.d: San Anselmo Avenue Master Plan. Develop a master plan for San Anselmo Avenue between San Rafael and Bolinas Avenues to address land use, circulation, parking, economic viability, design, walkability, and other area-specific considerations holistically. The plan should include strategies for public space enhancements, façade improvements, streetscape beautification and habitat restoration, pedestrian and bike infrastructure, parking solutions, and programs that support businesses.

Policy LU-D.5: Commercial Corridors. Enhance San Anselmo's commercial corridors along Sir Francis Drake Boulevard and Red Hill/Greenfield Avenues as shown in Figure LU-4 to become vibrant, mixed-use corridors with more housing and economic vitality. Design corridor improvements to address unique land use and circulation conditions and the surrounding context.

Action LU-D.5.a: Greenfield Avenue and Sir Francis Drake Boulevard (South). For development along Sir Francis Drake Boulevard (south of the Hub) and along Greenfield Avenue (east of the Hub) as shown in Figure LU-4, update use and development standards to:

- Encourage mixed-use development where housing can be above or behind commercial or other public-serving uses;
- Encourage pedestrian-friendly ground-floor commercial design where storefronts face the sidewalk, canopies and awnings provide shade and support business identity, signage is oriented to pedestrians, and visibility between the sidewalk and building interiors visually connects pedestrians to businesses; and
- Adjust standards that may limit development feasibility on shallow and hillside lots to allow zero front setback and encourage generous windows and frequent entrances on ground-floor facades.

Action LU-D.5.b: Red Hill Avenue and Sir Francis Drake Boulevard (North). Along Red Hill Avenue and Sir Francis Drake Boulevard (north of the Hub) as shown in Figure LU-4, update use and development standards to:

- Require landscaped building setbacks; and
- Allow uses that have community support but are not currently allowed in the C-L District, such as restaurants and entertainment uses.

Action LU-D.5.c: Center Boulevard near the Hub. Facilitate new mixed-use development along Center Boulevard between San Anselmo Avenue and Sir Francis Drake Boulevard as shown in Figure LU-4 by working proactively with property owners and potential developers to support both housing development and the continuation of existing community-serving commercial uses along this important gateway to downtown.

Action LU-D.5.d: Streetscape Design and Beautification. Plan and fund streetscape improvements along the town's commercial corridors to make them safer, more attractive, and accessible. These upgrades and plans may include:

- Developing a streetscape master plan for Greenfield Avenue and Sir Francis Drake Boulevard (North) to guide future improvements in the public right-of-way;
- Updating sidewalks and adding pedestrian-friendly lighting, seating, and landscaping to create welcoming public spaces;
- Improving pedestrian crossings on Sir Francis Drake Boulevard, including the Hub intersection, with elements such as shorter pedestrian crossing distances and traffic-calming features;
- Adding landscape strips and street trees between sidewalks and traffic lanes along Red Hill Avenue and Sir Francis Drake Boulevard (North) where feasible;
- Planting street trees along sidewalks on Greenfield Avenue and Sir Francis Drake Boulevard (South);
- Installing pedestrian and transit infrastructure improvements, such as wider sidewalks, landscaping, seating, and traffic-calming elements, in new development and redevelopment along Center Boulevard near the Hub intersection;
- Expanding and upgrading bicycle facilities and bicycle-friendly infrastructure;
- Identifying funding sources to make these streetscape improvements possible; and
- Prioritizing native plants in municipal plantings to promote biodiversity.

Policy LU-D.6: Gateways and Wayfinding. Enhance San Anselmo's sense of place and ease of navigation within it with gateway features and wayfinding.

Action LU-D.6.a: Gateways Location and Design. Create attractive gateways at well-traveled entry points into San Anselmo, including the entry points along Sir Francis Drake Boulevard, Center Boulevard, and Red Hill Avenue, through landscaping, signage, lighting, and other outdoor design features.

Action LU-D.6.b: Wayfinding. Maintain and update, as necessary, wayfinding signage to direct motorists to the downtown and consider expansion of wayfinding signage to include other commercial districts.

Policy LU-D.7: Low-Impact Design. Encourage the use of low-impact design features and practices that minimize the environmental impacts of new development and public infrastructure, including features that minimize stormwater runoff, conserve energy and water, create pollinator and wildlife habitat, promote groundwater recharge, and avoid urban heat island effects.

Policy LU-D.8: Age- and Disability-Friendly Communities. Plan for development patterns, infrastructure, transportation options, and community design that meet the needs of older adults, people with disabilities, and others with access and mobility needs, supporting accessibility, independence, and full participation in community life.

Action LU-D.8.a: Accessibility Standards for Public Spaces. Ensure public spaces, including parks, plazas, and community facilities, meet or exceed ADA standards for accessibility. When feasible, incorporate features such as wheelchair-accessible paths, seating areas with shade, audible crosswalk signals, and clear signage to enhance usability for people of all abilities.

Action LU-D.8.b: Age-Friendly Land Use Planning. Collaborate with public agencies and local stakeholders to assess and incorporate age- and disability-friendly considerations, including access to services and proximity to transit, into land use decisions.

Action LU-D.8.c: Incentives for Universal Design. Offer incentives, such as reduced permit fees or expedited processing, for new developments that incorporate universal design principles.

Goal LU-E Preserve, protect, and enhance elements of the town's history to connect San Anselmo with the past.

Policy LU-E.1: Historic Preservation. Endeavor to protect from demolition or destruction or major alteration any building, feature, or site of local, State, or federal historic value.

Goal LU-F Maintain and enhance residential neighborhoods by supporting development design that is pedestrian-friendly and integrates with the immediate neighborhood and natural surroundings.

Policy LU-F.1: Neighborhood Livability. Foster vibrant, safe, and well-connected neighborhoods that offer a high quality of life for residents, with access to essential services, parks, and recreational spaces.

Action LU-F.1.a New Single-Family Development. Require new single-family residential development, including rehabilitation and expansion projects, to maintain and enhance neighborhood visual and architectural design through context-sensitive building scale and materials, privacy, and architectural style.

Action LU-F.1.b New Multi-Family Development. Require new multifamily development, including rehabilitation and expansion projects, to enhance neighborhood visual and architectural style through context-sensitive building and human-scale elements and details, amenities, open spaces, and high-quality materials. Avoid monotonous structures through variation of building heights and exterior wall and roof articulation.

Action LU-F.1.c Livable Streets. Within residential neighborhoods, maintain and expand pedestrian and bicycle facilities that are shaded, safe, and foster neighborhood connectivity.

OPEN SPACE AND CONSERVATION ELEMENT

Goal OSC-A: Protect, preserve, and enhance the town's ridge zones, hillsides, and undeveloped open space for their scenic beauty, natural habitat, hazard mitigation, climate change resilience, recreational value, and contributions to community well-being.

Policy OSC-A.1: Open Space Land Use. Protect lands designated as Open Space on the Land Use Map (Figure LU-1) for environmental protection, resource management, hazard reduction, passive recreation, and climate resilience.

Policy OSC-A.2: New Development. Ensure that new development respects the ecological, visual, and safety benefits of ridge zones, hillsides, and other natural areas for the community.

Action OSC-A.2.a: Online Maps. Use online mapping tools to identify the ridge zones, hillsides, and other natural areas and ensure this information is readily available to the public in clear and accessible formats.

Policy OSC-A.3: Expand Open Space Network. Pursue opportunities to expand the Town's open space network to create wildlife corridors, protect critical habitat, prevent sprawl, separate developed areas, and enhance passive recreation opportunities for a wide range of users.

Action OSC-A.3.a: Priority Properties for Protection. Support the acquisition and preservation of open space areas under private ownership identified in Figure OSC-1.

Action OSC-A.3.b: New Development Review. Through the development review process, consider opportunities to permanently preserve areas as open space and to obtain public access easements to connect to existing trails to improve access for residents and visitors, as shown on the adopted Open Space and Conservation Map (Figure OSC-1).

Action OSC-A.3.c: Permanent Protection and Stewardship. Permanently protect open space areas through tools such as purchase, dedication, conservation or access easements, or other instruments acceptable to the Town. When evaluating dedication of open space, prioritize parcels contiguous to existing public open space and consider long-term maintenance responsibilities. For privately-owned open space, ensure long-term stewardship that conserves natural resources, reduces hazards, and restricts incompatible structures or vegetation.

Action OSC-A.3.d: Partnerships for Open Space Acquisition. Work with the Open Space Committee, public agencies, and non-profit organizations to identify, acquire, lease, or otherwise protect parcels that support a connected open space network within and adjacent to the Planning Area.

Policy OSC-A.4: Open Space Greenbelts. Create open space greenbelts which serve as natural connections between the town and adjacent communities.

Policy OSC-A.5: Public Access and Open Space. Ensure equitable and environmentally responsible public access to open space through trail easements, neighborhood connections, and the protection of sensitive habitats and areas subject to slope failure or flooding. Plan and

program open spaces to serve residents of all ages, abilities, income levels, and cultural backgrounds, with a focus on expanding access and amenities in underserved communities, including neighborhoods with limited existing access. Design open space improvements and programming to be inclusive and responsive to a diverse community, supporting meaningful use and enjoyment for all residents.

Action OSC-A.5.a: Trail Easements and Connections. Seek opportunities through development review and partnerships to secure trail easements and create trail connections linking neighborhoods, communities, and existing public trails.

Policy OSC-A.6: Trail and Stairs, Lanes, and Trails Network. Expand and improve the Town's trails and Stairs, Lanes, and Trails (SLT) network to support safe and accessible use for pedestrians, including older adults, people with disabilities, families with children, and others with varying mobility needs, while enhancing connections for everyday travel, recreation, and emergency evacuation.

Action OSC-A.6.a: Stairs, Lanes, and Trails Program. Regularly review and update the SLTs Program to guide maintenance, upgrades, mapping, and funding for stairs, lanes, and trails.

Policy OSC-A.7: Trail Connections. Encourage trail connections that allow for non-vehicular access between neighborhoods and communities.

Action OSC-A.7.a: Countywide Trails Plan. Work with Marin County and other agencies to maintain and expand trails in accordance with the Countywide Trails Plan.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact on land use and population/housing if it will:

- Physically divide an established community;
- Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect;
- Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure); or
- Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

IMPACTS AND MITIGATION MEASURES

Impact 3.11-1: General Plan 2045 implementation would not physically divide an established community (Less than Significant)

The General Plan 2045 establishes the Town's vision for future growth and development and does not propose any development, in and of itself. Many of the goals and policies within the General Plan 2045 help to ensure that General Plan implementation would not physically divide any established

community. For example, Goal LU-A of the General Plan 2045 addresses managing future growth to prioritize a compact, walkable community, the efficient extension of urban services, preservation of natural and cultural resources, and protection of the area's environmental setting. Goal LU-D aims to strengthen San Anselmo's unique community fabric by maintaining its pedestrian-friendly built environment and public places, and complementing these with attractive and context-sensitive new development. Policy LU-D.4 encourages the maintenance and enhancement of the downtown as a pedestrian-friendly center. Goal LU-F encourages the maintenance and enhancement of residential neighborhoods by supporting development design that is pedestrian-scale and integrates with the immediate neighborhood and natural surroundings. The land uses, development, and infrastructure accommodated by the General Plan 2045 would not physically divide an established community. Rather, the land uses allowed under the General Plan 2045 provide opportunities for cohesive new growth at in-fill locations within existing urbanized areas of the town, as well as new growth adjacent to existing urbanized areas; however, this would not create physical division within the community. New development and redevelopment projects would be designed to complement the character of existing communities and neighborhoods and provide connectivity between existing development and new development. The General Plan 2045 Land Use Map designates sites for a range of urban and rural developed uses as well as open space. The General Plan 2045 does not include any new areas designated for urbanization or new roadways, infrastructure, or other features that would divide existing communities. The General Plan 2045 would have a **less than significant** impact associated with the physical division of an established community.

Impact 3.11-2: General Plan 2045 implementation would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect (Less than Significant)

STATE PLANS

The General Plan 2045 was prepared in conformance with state laws and regulations associated with the preparation of general plans, including requirements for environmental protection. Discussion of the General Plan 2045's consistency with state regulations, plans, and policies associated with specific environmental issues (e.g., air quality, traffic, water quality, etc.) is provided in the relevant chapters of this Draft EIR. The state would continue to have authority over any state-owned lands in the vicinity of the Town and the General Plan 2045 would not conflict with continued application of state land use plans, policies, and regulations adopted to avoid or mitigate environmental effects.

PLAN BAY AREA 2050+

As noted previously, Plan Bay Area 2050+ is a limited, focused update to the 2021 version of Plan Bay Area (Plan Bay Area 2050), which is a regional plan that integrates land use and housing strategies to address affordability and equity. Plan Bay Area 2050+ identifies 35 integrated strategies across transportation, housing, the economy, and the environment, aiming to make the Bay Area more affordable, connected, diverse, healthy, and vibrant by 2050. Plan Bay Area 2050+ coordinates future land uses with the long-term transportation investments so that the region can grow smartly and sustainably. The proposed Land Use Plan is intended to accommodate and build on the land

uses anticipated under Plan Bay Area 2050+. The Land Use Plan also includes adequate sites to accommodate the Town's RHNA. The proposed General Plan 2045 does not conflict with Plan Bay Area 2050+.

TOWN PLANS

As set forth by state law, the General Plan serves as the primary planning document for the Town and subordinate documents and plans would be updated to be consistent with the General Plan. Similar to the existing General Plan, the General Plan 2045 focuses on a balanced land use pattern, creating a community where new development blends with existing neighborhoods, and promoting the town as a desirable place to live and work. The General Plan 2045 carries forward and enhances policies and measures from the town's existing General Plan that were intended for environmental protection and would not remove or conflict with Town plans, policies, or regulations adopted for environmental protection. The General Plan 2045 would require modifications to the Town's Zoning Ordinance to provide consistency between the General Plan and zoning; however, these modifications will not remove or adversely modify portions of the San Anselmo Municipal Code that address an environmental effect. For example, the General Plan 2045 Action LU-A.1.a requires consistency between the General Plan, Zoning Code, and other land use regulations.

CONCLUSION

Subsequent development and infrastructure projects accommodated by the General Plan 2045 would be required to be consistent with all applicable policies, standards, and regulations, including those land use plans, policies, and regulations adopted to mitigate environmental effects by the Town as well as those adopted by agencies with jurisdiction over components of future development projects. Any potential environmental impact associated with conflicts with land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect would be **less than significant**.

Impact 3.11-3: General Plan 2045 implementation would not induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure) (Less than Significant)

The General Plan 2045 accommodates future growth in San Anselmo, including new businesses, expansion of existing businesses, and new residential uses, but it does not propose any development projects, in and of itself. The General Plan 2045 has been designed to accommodate incremental growth in the town. Table 3.11-3, summarizes the population and household data for San Anselmo and Marin County from 1980 through 2025. The population of the town increased 0.8 percent between 2000 to 2020, compared to the county increase of 4.9 percent. Households for the town decreased 1.8 percent between 2000 to 2020, compared to the county increase of 4.1 percent. Population for both jurisdictions went down slightly between 2020 and 2025, while households stayed the same for San Anselmo and decreased slightly for Marin County (primarily due to economic displacement and a lack of housing supply).

Given the historical and current population, housing, and employment trends, growth in the town, as well as the entire state, is inevitable and would occur regardless of whether or not the General Plan 2045 is implemented. The primary factors that account for population growth are natural increase and net migration. Other factors that affect growth include the cost of housing, the location of jobs, the economy, the climate, and transportation.

Regionally, the entire San Francisco Bay Area is projected to experience a growth of over 441,000 households by 2030. To coordinate this forecast, Plan Bay Area 2050+ functions as the long-range plan integrating strategies for transportation, housing, the economy, and the environment to guide growth across the nine-county region. The General Plan 2045 establishes adequate sites to accommodate the town's fair share of regional housing needs, which are allocated by the ABAG, as well as housing and employment growth anticipated in Plan Bay Area 2050+.

Specifically, to manage and accommodate this growth locally, San Anselmo has been assigned a 6th Cycle RHNA target of 833 units for the 2023 to 2031 planning period. This regional mandate requires the Town to plan for 253 very low income, 145 low income, 121 moderate-income, and 314 above moderate-income housing units. The Town must ensure that the appropriate zoning is in place to accommodate its RHNA allocation. While these factors would likely result in growth in San Anselmo during the planning period of the General Plan 2045, growth will continue to occur based primarily on the demand of the housing market and demand for new commercial, industrial, and other non-residential uses.

Infrastructure and services would need to be extended to accommodate future growth. As future development occurs under the General Plan 2045, new roads, infrastructure, and services would be necessary to serve new development, and this infrastructure would accommodate planned growth. The General Plan 2045 includes policies and actions that mitigate environmental impacts associated with growth, such as air quality, noise, traffic, water supply, and water quality effects. Sections 3.1 through 3.16 and Chapter 4.0 of this EIR provide a discussion of environmental effects associated with development allowed under the General Plan 2045. Each of these EIR chapters include relevant policies and action items that would mitigate potential environmental impacts associated with growth, to the greatest extent feasible.

Under CEQA, a project triggers a significant impact only if it induces substantial unplanned population growth. It is critical to distinguish between forecasted growth evaluated through comprehensive planning and unforeseen expansion. The growth accommodated by the General Plan 2045 is an explicitly planned response to state mandates and regional blueprints. By aligning local land use capacity with the Town's 833-unit RHNA assignment and the macro-level planning frameworks of Plan Bay Area 2050+, the General Plan 2045 internalizes and prepares for regional demand rather than inducing unplanned expansion.

With implementation of General Plan 2045 policies and actions intended to guide growth to appropriate areas and provide services necessary to accommodate growth, the land uses allowed under the General Plan 2045, the infrastructure anticipated to accommodate proposed land uses, and the goal and policy framework would not induce growth that would exceed adopted thresholds, beyond those disclosed and analyzed throughout this EIR. Therefore, population and housing growth

associated with the General Plan 2045 would result a **less-than-significant** impact, as there are no additional potential environmental impacts, beyond those analyzed and disclosed in this EIR, that would result from growth accommodated by the General Plan 2045.

Impact 3.11-4: General Plan 2045 implementation would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere (Less than Significant)

The majority of developed land in the Planning Area is comprised of residential uses, which are not anticipated to undergo significant land use changes under the proposed project. The General Plan 2045 focuses infill development opportunities in vacant and underutilized areas in San Anselmo, as well as areas currently developed with commercial uses which may transition to mixed uses in the future. The General Plan 2045 Land Use Map includes residential land use designations that reflect the existing neighborhoods throughout the town. Throughout the Town, the General Plan 2045 is projected to increase the overall number of dwelling units and provide housing to serve the diverse needs of the community at various socioeconomic levels. While the General Plan 2045 accommodates growth, the General Plan does not entitle any development projects and does not require the removal or replacement of existing housing.

Therefore, impacts of the General Plan 2045 on the displacement of people or housing are considered **less than significant,** and no mitigation is required. The programs listed below would further ensure that a range of housing types are provided in the town, and that housing conditions are evaluated as the housing supply ages.

Impact 3.11-5: General Plan 2045 implementation, in combination with other cumulative development, would not result in adverse impacts to land use, population, or housing. (Less than Significant)

The cumulative context for land use and planning considers the ABAG region (i.e., the nine-county San Francisco Bay Area). Plan Bay Area 2050+ serves as the region's official Regional Transportation Plan and Sustainable Communities Strategy (SCS). The MTC and ABAG jointly adopted this blueprint to manage an influx of 1 million new households and 1.4 million jobs in the Bay Area by 2050. Regionally, this cumulative population growth, increased demand for housing, and potential for land use conflicts is potentially significant.

To manage this growth, Plan Bay Area 2050+ guides regional land use by directing 95% of household growth and 55% of job growth into designated "Growth Geographies," which include Priority Development Areas (PDAs), Transit-Rich Areas (TRAs), and High-Resource Areas (HRAs). By focusing density near major regional hubs and transit corridors, the blueprint steers growth away from environmentally sensitive lands, high-risk wildland-urban interfaces, and sea-level rise zones. Within this framework, the Town of San Anselmo is designated as a Growth Geography because it combines HRA metrics (e.g., high-performing schools, economic opportunity) with baseline transit connectivity.

The General Plan 2045 accommodates San Anselmo's proportional share of regional infill housing and economic expansion by identifying goals, policies, and actions that focus development onto infill sites and utilize the existing urban footprint, thereby preventing suburban-like sprawl.

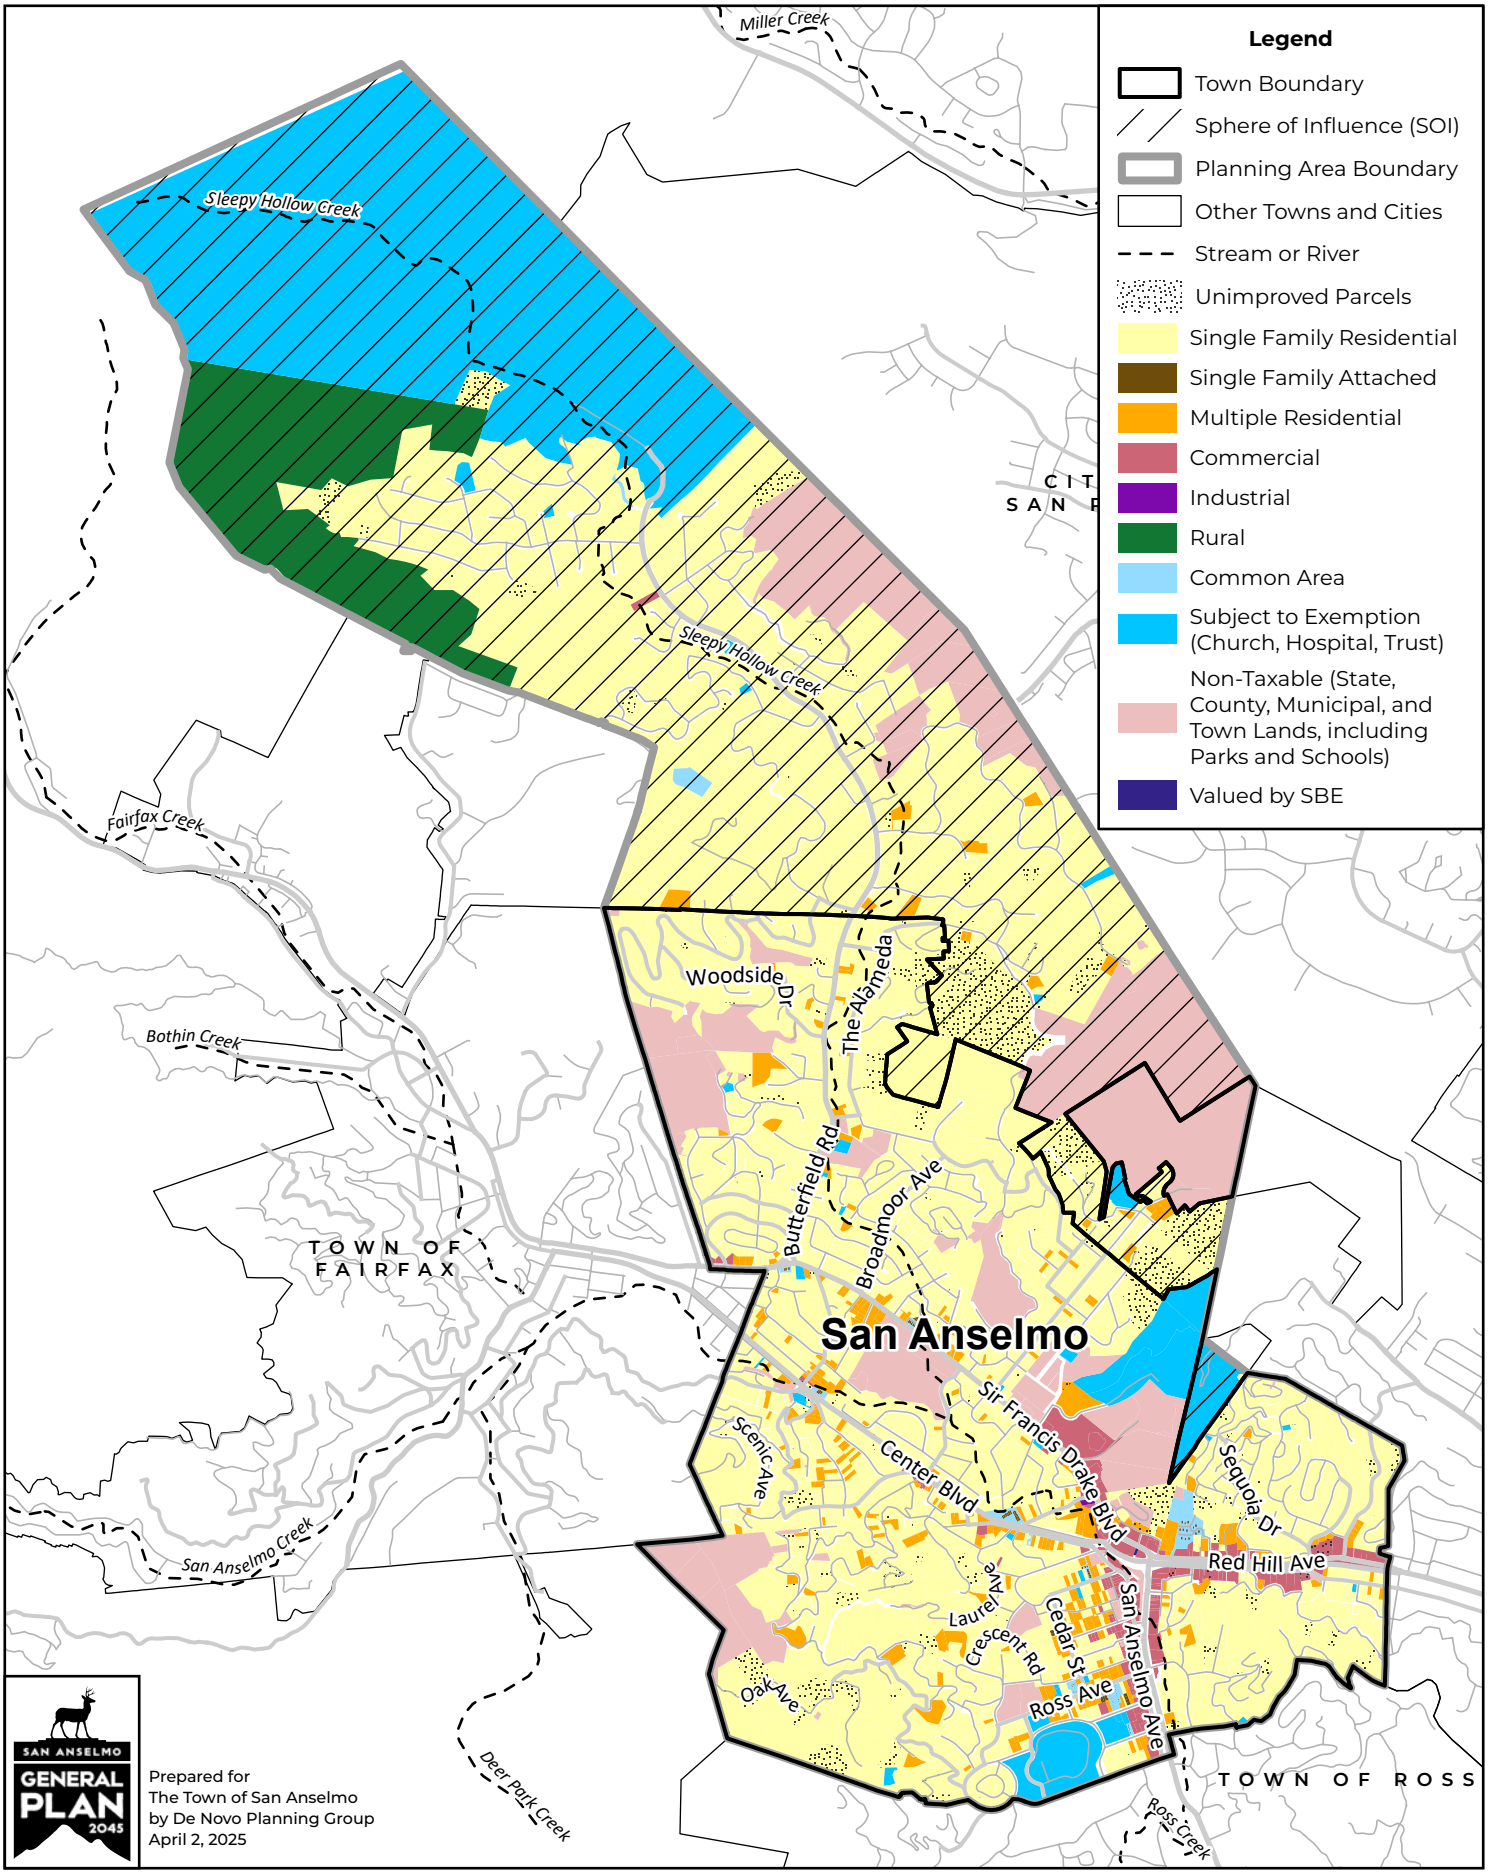

When evaluated against CEQA thresholds, the General Plan 2045's contribution to cumulative land use, population, and housing impacts is assessed as follows:

- Division of an Established Community: The land uses allowed under the General Plan 2045 provide opportunities for cohesive new growth at infill locations within existing urbanized areas, as well as limited new growth within the town, but would not create physical division within existing communities. The General Plan 2045 does not include any new roadways, infrastructure, or other features that would divide existing communities. New development and redevelopment projects would be designed to complement the character of existing neighborhoods and provide connectivity between existing development and new development within the cumulative analysis area.

- Unplanned Population Growth: With implementation of General Plan 2045 policies and actions intended to guide growth to appropriate areas and provide services necessary to accommodate growth, the land uses allowed under the General Plan 2045, the infrastructure anticipated to accommodate proposed land uses, and the goal and policy framework would not induce growth that would be unplanned.

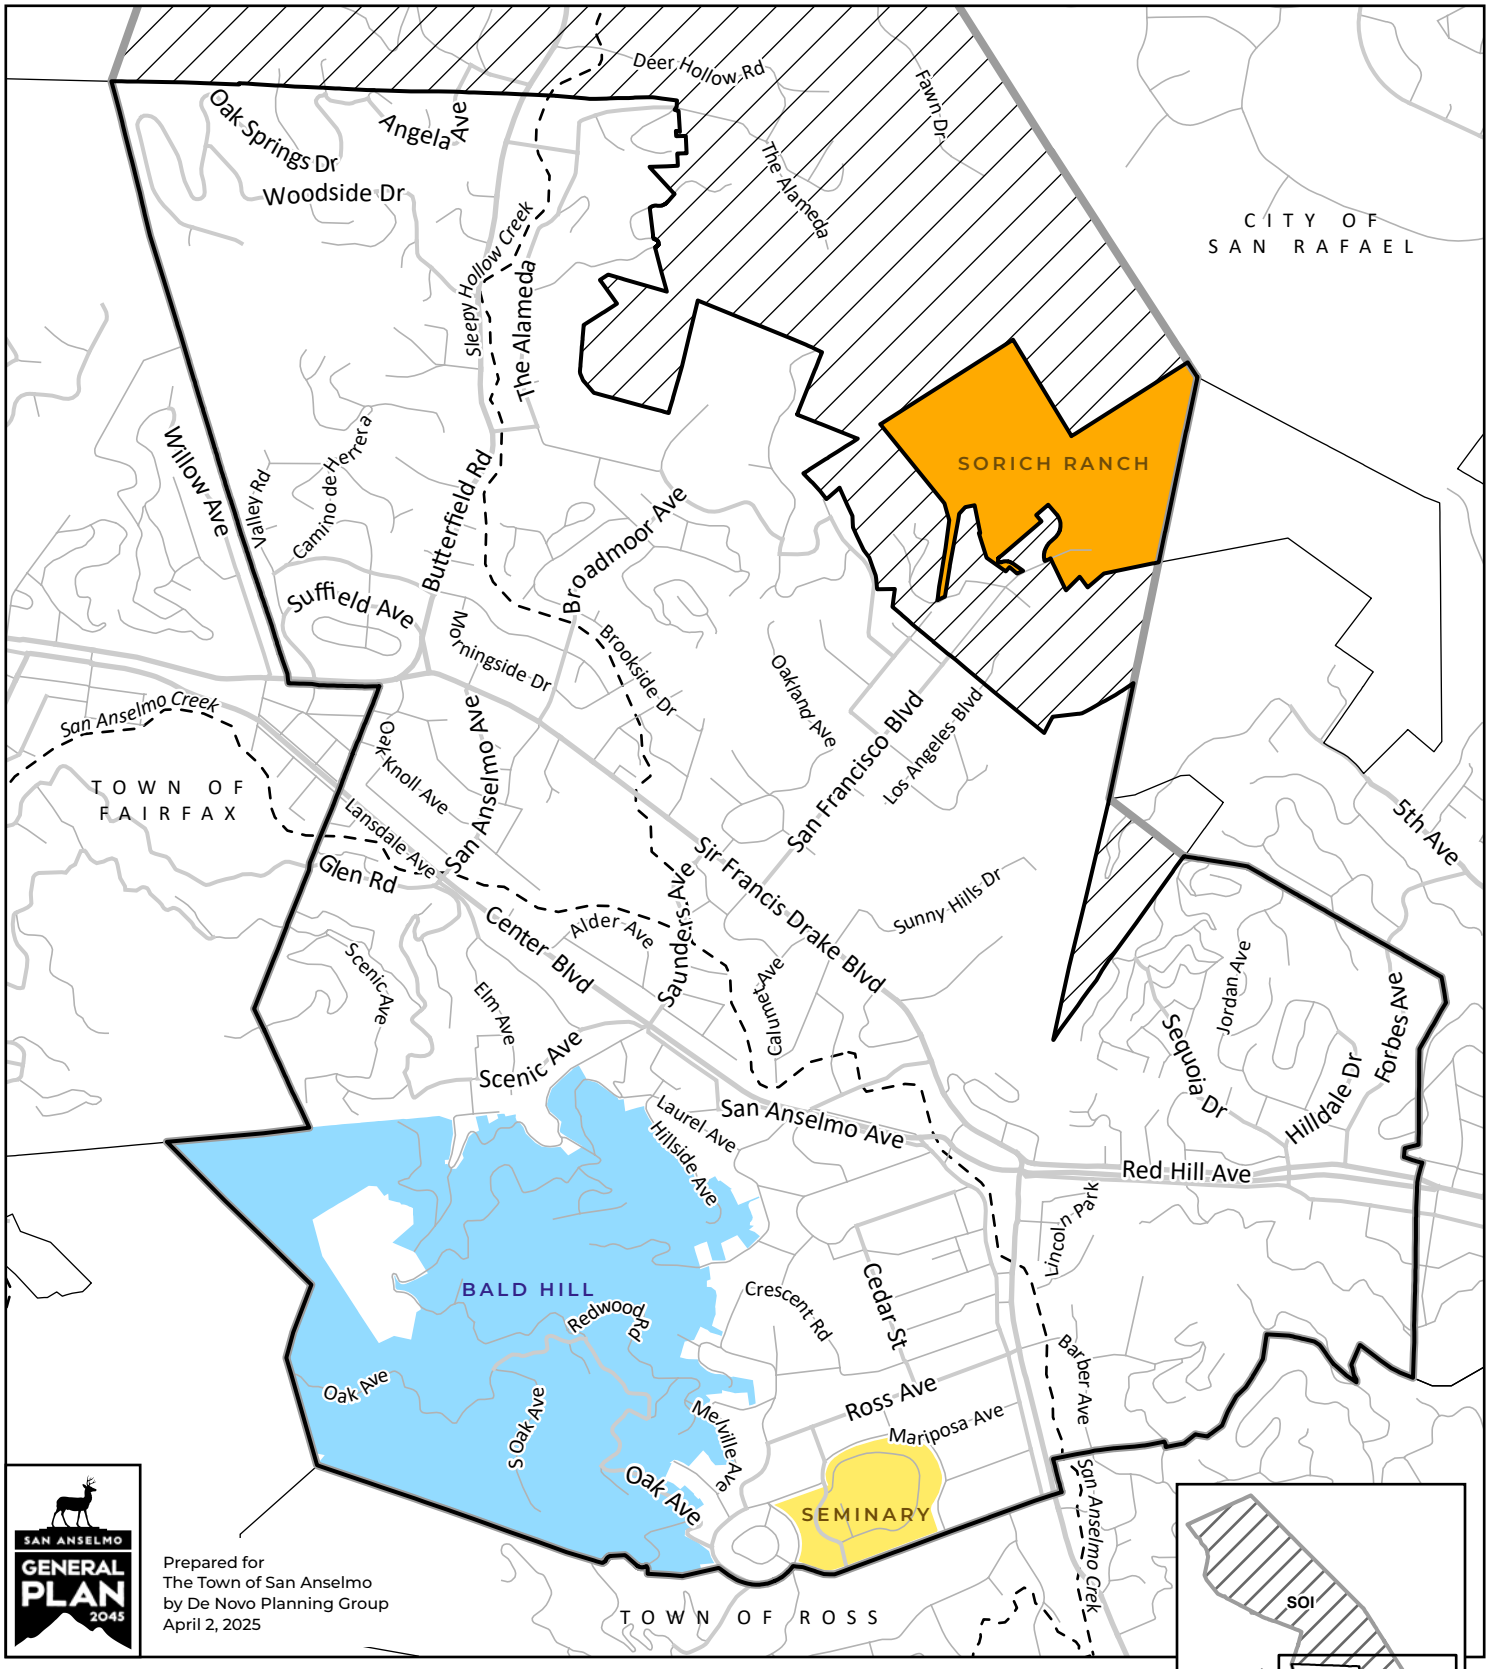

- Displacement: General Plan 2045 implementation would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere because no existing uses would be removed or relocated.

Because the project confines growth to established urban footprints, does not divide existing communities, and avoids the displacement of housing or populations, the General Plan 2045's contribution to this cumulative impact would not be cumulatively considerable. The cumulative impact would be **less than significant**.

This section provides a discussion of the regulatory setting and a general description of existing noise sources in the Town of San Anselmo. The analysis of potential noise-related impacts in this section was prepared with assistance from Saxelby Acoustics.

This section provides a background discussion of the noise environment found in the San Anselmo Planning Area. This section is organized with an existing setting, regulatory setting, and impact analysis.

There were no comments received during the NOP comment period related to this environmental topic (see Appendix A).

KEY TERMS

Acoustics	The science of sound.
Ambient Noise	The distinctive acoustical characteristics of a given area consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.
Attenuation	The reduction of noise.
A-Weighting	A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response.
Decibel or dBA	Fundamental unit of sound, defined as ten times the logarithm of the ratio of the sound pressure squared over the reference pressure squared. All dBA levels used in this report are A-weighted values, unless otherwise stated.
CNEL	Community Noise Equivalent Level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 - 10 p.m.) weighted by + 5 dBA and nighttime hours weighted by +10 dBA.
Frequency	The measure of the rapidity of alterations of a periodic acoustic signal, expressed in cycles per second or Hertz.
Impulsive	Sound of short duration, usually less than one second, with an abrupt onset and rapid decay.
Ldn	Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.
Leq	Equivalent or energy-averaged sound level.
Lmax	The highest root-mean-square (RMS) sound level measured over a given period of time.
L(n)	The sound level exceeded a described percentile over a measurement period. For instance, an hourly L50 is the sound level exceeded 50 percent of the time during the one hour period.
Loudness	A subjective term for the sensation of the magnitude of sound.

Noise Unwanted sound.

SEL A rating, in decibels, of a discrete event, such as an aircraft flyover or train passby, that compresses the total sound energy into a one-second event

3.12.1. ENVIRONMENTAL SETTING

FUNDAMENTALS OF ACOUSTICS

Acoustics is the science of sound. Sound may be thought of as mechanical energy of a vibrating object transmitted by pressure waves through a medium to human (or animal) ears. If the pressure variations occur frequently enough (at least 20 times per second), then they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound, and is expressed as cycles per second or Hertz (Hz).

Noise is a subjective reaction to different types of sounds. Noise is typically defined as (airborne) sound that is loud, unpleasant, unexpected, or undesired, and may therefore be classified as a more specific group of sounds. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a very large and awkward range of numbers. To avoid this, the decibel scale was devised. The decibel scale uses the hearing threshold (20 micropascals), as a point of reference, defined as 0 dBA. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The decibel scale allows a million-fold increase in pressure to be expressed as 120 dBA, and changes in levels (dBA) correspond closely to human perception of relative loudness.

The perceived loudness of sounds is dependent upon many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable, and can be approximated by A-weighted sound levels. There is a strong correlation between A-weighted sound levels (expressed as dBA) and the way the human ear perceives sound. For this reason, the A-weighted sound level has become the standard tool of environmental noise assessment. All noise levels reported in this section are in terms of A-weighted levels, but are expressed as dBA, unless otherwise noted.

The decibel scale is logarithmic, not linear. In other words, two sound levels 10 dBA apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70 dBA sound is half as loud as an 80 dBA sound, and twice as loud as a 60 dBA sound.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given environment. A common statistical tool to measure the ambient noise level is the average, or equivalent, sound level (Leq), which corresponds to a steady-state A weighted sound level containing the same total energy as a time varying signal over a given time period (usually one hour). The Leq is the foundation of the composite noise descriptor, Ldn, and shows very good correlation with community response to noise.

The day/night average level (Ldn) is based upon the average noise level over a 24-hour day, with a +10 decibel weighing applied to noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were twice as loud as daytime exposures. Because Ldn represents a 24-hour average, it tends to disguise short-term variations in the noise environment. CNEL is similar to Ldn, but includes a +3 dBA penalty for evening noise. **Table 3.12-1** lists several examples of the noise levels associated with common situations.

TABLE 3.12-1: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	NOISE LEVEL (DBA)	COMMON INDOOR ACTIVITIES
	--110--	Rock Band
Jet Fly-over at 300 m (1,000 ft)	--100--	
Gas Lawn Mower at 1 m (3 ft)	--90--	
Diesel Truck at 15 m (50 ft), at 80 km/hr (50 mph)	--80--	Food Blender at 1 m (3 ft) Garbage Disposal at 1 m (3 ft)
Noisy Urban Area, Daytime Gas Lawn Mower, 30 m (100 ft)	--70--	Vacuum Cleaner at 3 m (10 ft)
Commercial Area Heavy Traffic at 90 m (300 ft)	--60--	Normal Speech at 1 m (3 ft)
Quiet Urban Daytime	--50--	Large Business Office Dishwasher in Next Room
Quiet Urban Nighttime	--40--	Theater, Large Conference Room (Background)
Quiet Suburban Nighttime	--30--	Library
Quiet Rural Nighttime	--20--	Bedroom at Night, Concert Hall (Background)
	--10--	Broadcast/Recording Studio
Lowest Threshold of Human Hearing	--0--	Lowest Threshold of Human Hearing

EFFECTS OF NOISE ON PEOPLE

The effects of noise on people can be placed in three categories:

- Subjective effects of annoyance, nuisance, and dissatisfaction;
- Interference with activities such as speech, sleep, and learning; and
- Physiological effects such as hearing loss or sudden startling.

Environmental noise typically produces effects in the first two categories. Workers in industrial plants can experience noise in the last category. There is no completely satisfactory way to measure the subjective effects of noise or the corresponding reactions of annoyance and dissatisfaction. A wide variation in individual thresholds of annoyance exists and different tolerances to noise tend to develop based on an individual's past experiences with noise.

Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted: the so-called ambient noise level.

In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will be judged by those hearing it.

With regard to increases in A-weighted noise level, the following relationships occur:

- Except in carefully controlled laboratory experiments, a change of 1 dBA cannot be perceived;
- Outside of the laboratory, a 3 dBA change is considered a just-perceivable difference;
- A change in level of at least 5 dBA is required before any noticeable change in human response would be expected; and
- A 10 dBA change is subjectively heard as approximately a doubling in loudness, and can cause an adverse response.

Stationary point sources of noise – including stationary mobile sources such as idling vehicles – attenuate (lessen) at a rate of approximately 6 dBA per doubling of distance from the source, depending on environmental conditions (i.e. atmospheric conditions and either vegetative or manufactured noise barriers, etc.). Widely distributed noises, such as a large industrial facility spread over many acres, or a street with moving vehicles, would typically attenuate at a lower rate.

EXISTING NOISE LEVELS

Traffic Noise Levels

The FHWA Highway Traffic Noise Prediction Model (FHWA-RD 77-108) was used to develop Ldn (24-hour average) noise contours for all major roadways in the Planning Area. The model is based upon the California Vehicle Noise (CALVENO) noise emission factors for automobiles, medium trucks, and heavy trucks, with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the site. The FHWA Model predicts hourly Leq values for free-flowing traffic conditions and is generally considered to be accurate within 1.5 dBA. To predict Ldn values, it is necessary to determine the hourly distribution of traffic for a typical 24-hour period.

Existing traffic volumes were obtained from the traffic counts and analysis performed for the Planning Area in 2024, as described in the Vehicular Travel section of the *Circulation Existing Conditions Report*. Day/night traffic distributions were based upon continuous hourly noise measurement data and Saxelby Acoustics file data for similar roadways. Using these data sources and the FHWA traffic noise prediction methodology, traffic noise levels were calculated for existing and future conditions. **Tables 3.12-2, 3.12-3 and 3.12-4** show the results of this analysis. **Figure 3.12-1** shows the town wide traffic noise contours.

TABLE 3.12-2: PREDICTED EXISTING TRAFFIC NOISE LEVELS

ROADWAY	SEGMENT	NOISE LEVEL AT CLOSEST RECEPTORS (DBA, Ldn)[1]	DISTANCES TO TRAFFIC NOISE CONTOURS, LDN (FEET)[2]

Traffic noise levels are extrapolated at the sensitive receptors located at the closest typical setback distance along each Planning Area roadway segment. In some locations, sensitive receptors may be located at distances which vary from the assumed calculation distance and may experience shielding from intervening barriers or sound walls. However, the traffic noise analysis is believed to be representative of the majority of sensitive receptors located closest to the Planning Area roadway segments analyzed.

The actual distances to noise level contours may vary from the distances predicted by the FHWA model due to roadway curvature, grade, shielding from local topography or structures, elevated roadways, or elevated receivers. The distances reported in Table 3.12-2 are generally considered to be conservative estimates of noise exposure along roadways in the town.

Fixed Noise Sources

The production of noise is a result of many industrial processes, even when the best available noise control technology is applied. Noise exposures within industrial facilities are controlled by federal and State employee health and safety regulations (OSHA and Cal OSHA), but exterior noise levels may exceed locally acceptable standards. Commercial, recreational, and public service facility activities can also produce noise which affects adjacent sensitive land uses. These noise sources can be continuous and may contain tonal components which have the potential to annoy individuals who live nearby. In addition, noise generation from fixed noise sources may vary based upon climatic conditions, time of day, and existing ambient noise levels.

In San Anselmo, fixed noise sources typically include parking lots, loading docks, parks, schools, and other commercial/retail use noise sources (HVAC, exhaust fans, etc.).

From a land use planning perspective, fixed-source noise control issues focus upon two goals:

1. To prevent the introduction of new noise-producing uses in noise-sensitive areas, and
2. To prevent encroachment of noise sensitive uses upon existing noise-producing facilities.

The first goal can be achieved by applying noise level performance standards to proposed new noise-producing uses. The second goal can be met by requiring that new noise-sensitive uses in near proximity to noise-producing facilities include mitigation measures that would ensure compliance with noise performance standards.

Fixed noise sources which are typically of concern include but are not limited to the following:

- Air Compressors
- Amplified Music and Voice
- Blowers
- Chippers
- Conveyor Systems
- Cooling Towers/Evaporative Condensers
- Cutting Equipment
- Cutting Equipment
- Drill Rigs
- Fans
- Gas or Diesel Motors
- Generators
- Grinders
- Heavy Equipment
- HVAC Systems
- Lift Stations
- Loading Docks
- Outdoor Speakers
- Pile Drivers
- Pump Stations
- Steam Turbines
- Steam Valves
- Transformers
- Welders

The types of uses which may typically produce the noise sources described above include, but are not limited to: wood processing facilities, pump stations, industrial/agricultural facilities, trucking operations, tire shops, auto maintenance shops, metal fabricating shops, shopping centers, drive-up windows, car washes, loading docks, public works projects, batch plants, bottling and canning plants, recycling centers, electric generating stations, race tracks, landfills, sand and gravel operations, and special events such as concerts and athletic fields. Typical noise levels associated with various types of stationary noise sources are shown in **Table 3.12-5**.

TABLE 3.12-5: TYPICAL STATIONARY NOISE LEVELS

USE	NOISE LEVEL AT 100 FEET, Leq[1]	DISTANCE TO NOISE CONTOURS, FEET

Vendor Deliveries	58 dBA	251	446	141	251

Notes:
1. Analysis assumes a source-receiver distance of approximately 100 feet, no shielding, and flat topography. Actual noise levels will vary depending on site conditions and intensity of the use. This information is intended as a general rule only, and is not suitable for final site-specific noise studies.

SOURCE: SAXELBY ACOUSTICS, 2024. ENVIRONMENTAL NOISE ASSESSMENT TOWN OF SAN ANSELMO GENERAL PLAN 2045.

Community Noise Survey

A community noise survey was conducted to document ambient noise levels at various locations throughout the town. Short-term noise measurements were conducted at seven locations throughout the town on October 1, 2024. In addition, five continuous 24-hour noise monitoring sites were also visited to record day-night statistical noise level trends on October 1, 2024. The data collected included the hourly average (Leq), median (L50), and maximum level (Lmax) during the measurement period. Noise monitoring sites and the measured noise levels at each site are summarized in **Table 3.12-6** and **Table 3.12-7**. **Figure 3.12-2** shows the locations of the noise monitoring sites.

ST-4	Redwood Rd.	1:17 p.m.	40	32	59	Primary noise source is vehicle traffic on Redwood Rd. Secondary noise source is natural noises such as birds.
ST-5	Butterfield Rd.	3:55 p.m.	58	54	76	Primary noise source is traffic on Butterfield Rd. Secondary noise source is from traffic activity from San Domenico School.
ST-6	Tomahawk Dr.	2:20 p.m.	46	44	58	Primary noise source is traffic on Tomahawk Dr. Secondary noise source is from natural noise.
ST-7	Intersection of San Anselmo Ave. and Sir Francis Drake Blvd.	2:08 p.m.	65	63	80	Primary noise source is traffic on Sir Francis Drake Blvd. Secondary noise source is from traffic on San Anselmo Ave.

Notes:
1. All Community Noise Measurement Sites have test durations of 10:00 minutes.
SOURCE: SAXELBY ACOUSTICS, 2024. ENVIRONMENTAL NOISE ASSESSMENT TOWN OF SAN ANSELMO GENERAL PLAN 2045.

Community noise monitoring equipment included Larson Davis Laboratories (LDL) Model 812, 820, and 831 precision integrating sound level meters equipped with LDL half-inch microphones. The measurement systems were calibrated using an LDL Model CAL200 acoustical calibrator before and after testing. The measurement equipment meets all of the pertinent requirements of the American National Standards Institute (ANSI) for Type 1 (precision) sound level meters.

The results of the community noise survey, presented in Tables 3.12-6 and 3.12-7, indicate that existing transportation noise sources were the primary contributors to noise observed during daytime hours, particularly during vehicle passages.

3.12.2. REGULATORY SETTING

FEDERAL

Federal Highway Administration (FHWA)

The FHWA has developed noise abatement criteria that are used for federally funded roadway projects or projects that require federal review. These criteria are discussed in detail in Title 23 Part 772 of the Federal Code of Regulations (23CFR772).

Environmental Protection Agency (EPA)

The EPA has identified the relationship between noise levels and human response. The EPA has determined that over a 24-hour period, a Leq of 70 dBA will result in some hearing loss. Interference with activity and annoyance will not occur if exterior levels are maintained at an Leq of 55 dBA and interior levels at or below 45 dBA. Although these levels are relevant for planning and design and useful for informational purposes, they are not land use planning criteria because they do not consider economic cost, technical feasibility, or the needs of the community.

The EPA has set 55 dBA Ldn as the basic goal for residential environments. However, other federal agencies, in consideration of their own program requirements and goals, as well as difficulty of actually achieving a goal of 55 dBA Ldn, have generally agreed on the 65 dBA Ldn level as being appropriate for residential uses. At 65 dBA Ldn, activity interference is kept to a minimum, and annoyance levels are still low. It is also a level that can realistically be achieved.

Department of Housing and Urban Development (HUD)

The Department of Housing and Urban Development (HUD) was established in response to the Urban Development Act of 1965 (Public Law 90-448). HUD was tasked by the Housing and Urban Development Act of 1965 (Public Law 89-117) "to determine feasible methods of reducing the economic loss and hardships suffered by homeowners as a result of the depreciation in the value of their properties following the construction of airports in the vicinity of their homes."

HUD first issued formal requirements related specifically to noise in 1971 (HUD Circular 1390.2). These requirements contained standards for exterior noise levels along with policies for approving HUD-supported or assisted housing projects in high noise areas. In general, these requirements established the following three zones:

- 65 dBA Ldn or less - an acceptable zone where all projects could be approved.
- Exceeding 65 dBA Ldn but not exceeding 75 dBA Ldn - a normally unacceptable zone where mitigation measures would be required, and each project would have to be individually evaluated for approval or denial. These measures must provide 5 dBA of attenuation above the attenuation provided by standard construction required in a 65 to 70 dBA Ldn area and 10 dBA of attenuation in a 70 to 75 dBA Ldn area.
- Exceeding 75 dBA Ldn - an unacceptable zone in which projects would not, as a rule, be approved.

HUD's regulations do not include interior noise standards. Rather a goal of 45 dBA Ldn is set forth and attenuation requirements are geared towards achieving that goal. HUD assumes that using standard construction techniques, any building will provide sufficient attenuation so that if the exterior level is 65 dBA Ldn or less, the interior level will be 45 dBA Ldn or less. Thus, structural attenuation is assumed at 20 dBA. However, HUD regulations were promulgated solely for residential development requiring government funding and are not related to the operation of schools or churches.

The federal government regulates occupational noise exposure common in the workplace through the Occupational Health and Safety Administration (OSHA) under the EPA. Noise exposure of this type is dependent on work conditions and is addressed through a facility's or construction contractor's health and safety plan. With the exception of construction workers involved in facility construction, occupational noise is irrelevant to this study and is not addressed further in this document.

STATE

California Department of Transportation (Caltrans)

Caltrans has adopted policy and guidelines relating to traffic noise as outlined in the Traffic Noise Analysis Protocol (Caltrans 2011). The noise abatement criteria specified in the protocol are the same as those specified by FHWA.

Governor's Office of Planning and Research (OPR)

OPR has developed guidelines for the preparation of general plans (Office of Planning and Research, 2017). The guidelines include land use compatibility guidelines for noise exposure.

LOCAL

Existing Town of San Anselmo General Plan (2019)

The Town of San Anselmo General Plan establishes goals and policies, as well as criteria for evaluating the compatibility of individual land uses with respect to noise exposure.

NOISE ELEMENT

A. Noise Goals

> Reduce noise level throughout the community in general with special efforts aimed at our major circulation arteries.[1]

[1] The objective of the Town should be to reduce the noise levels approximately 5 or 6 decibels in the next few years, based on the contours of present noise levels which have been mapped in quantitative, numerical terms by Roger Maineri and the Town Public Works staff.

B. Implementation

1. Promulgate information to all residents of the need for and methods of obtaining reduced noise levels.

2. Adopt, budget for, and enforce an effective noise ordinance and other ordinances relating to noise reduction.

3. The Town shall cooperate in the establishment of a countywide program of noise abatement when it has been developed.

4. The Town will work actively with the California Highway Patrol to police noise levels on moving vehicles.

CONSERVATION ELEMENT

Policy B-1: Air, water, and noise pollution shall be prevented or minimized.

Town of San Anselmo Zoning Code

Chapter 7, Loud Noises, of the Town's zoning code addresses noise levels, noise sources, construction noise, and sensitive receptors.

4-7.104 - General maximum noise levels.

(a) In the Single-Family Residential District (R-l), Two-Family Residential District (R-2), and Neighborhood Apartment District (R-3) on or before September 13, 1975, and in all commercial districts (C-1, C-2, C-3, and CM) on or before March 13, 1976, unless otherwise provided, it shall be unlawful for any person to operate any machinery or equipment, pump, fan, air-conditioning apparatus, or similar mechanical device or any radio receiving set, musical instrument, phonograph, television set, or other similar device in any manner so as to create any noise which would cause the noise level at the property plane of the property from which the noise is emitted to exceed the following values:
Table 1

ZONE	TIME	SOUND LEVEL - DBA
R1 and R2	10 p.m. - 7 a.m.	45
R1 and R2	7 p.m. - 10 p.m.	50
R1 and R2	7 a.m. - 7 p.m.	55
R3	10 p.m. - 7 a.m.	50
R3	7 a.m. - 10 p.m.	55
C	10 p.m. - 7 a.m.	55
C	7 a.m. – 10 p.m.	60

(b) For the purposes of this section, "noise level" shall mean measured sound level with the following values, dBA, added as corrections for the time duration and character of the noise:

	CONDITION	VALUE CORRECTION [DBA]
(1)	Steady audible tone, such as hum, whine, or screech	-5

	CONDITION	VALUE CORRECTION [DBA]	
(2)	Continuous impulsive noise, such as hammering or riveting	-5	
(3)	Noise occurring more than 5 but less than 15 minutes per hour	7 a.m. - 10 p.m. +5	10 p.m. - 7 a.m. 0
(4)	Noise occurring more than one but less than 5 minutes per hour	7 a.m. - 10 p.m. +10	10 p.m. - 7 a.m. +5
(5)	Noise occurring less than one minute per hour	7 a.m. - 10 p.m. +20	10 p.m. - 7 a.m. +10

(c) When noise is emitted from property bordering any other zoning district, the lesser allowable noise level shall be applicable.

(d) The provisions of subsection (a) of this section shall not apply to any burglar alarm or other emergency signaling device; nor to any standby machinery or equipment necessarily operated in emergency situations; provided, however, such standby machinery or equipment shall not at any time emit noise exceeding a level of seventy (70) dBA as measured at the property plane of the property from which the noise is being emitted.

4-7.202 - Schools, hospitals, and churches.

It shall be unlawful for any person to create any noise (whether amplified or not) on any street, sidewalk, or public place adjacent to any school, institution of learning, or church or adjacent to any hospital, which noise unreasonably interferes with the workings of such institution or which disturbs or unduly annoys patients in the hospital.

4-7.203 - Construction and demolition.

(e) Except as otherwise provided in subsections (b), (c), and (d) of this section, for a period of two (2) years after March 13, 1975, it shall be unlawful to operate any powered equipment if the operation of such equipment emits a noise level of eighty-five (85) dBA when measured at the loudest point fifty (50') feet away from the equipment. On and after March 13, 1977, the permissible noise level shall be reduced to eighty (80) dBA.

(f) Impact tools and equipment shall be excluded from the provisions of subsection (a) of this section; provided, however, on or after September 13, 1975, such impact tools and equipment shall have intake and exhaust mufflers recommended by the manufacturers thereof; and provided, further, pavement breakers and jackhammers shall also be equipped with acoustically attenuating shields or shrouds recommended by the manufacturers thereof. In lieu of or in the absence of manufacturers' recommendations, the Director of Public Works shall have the authority to prescribe such means of accomplishing maximum noise attenuation as he deems to be in the public interest, considering the available technology and economic feasibility.

(g) Construction or demolition work may be performed during the following times: Mondays through Fridays from 7:00 a.m. to 7:00 p.m.; Saturdays from 9:00 a.m. to 5:00 p.m.; and Sundays from 12:00 p.m. to 5:00 p.m.; provided, however, such hours shall be extended until 8:00 p.m. for work performed by homeowners or residents upon their own property.

Construction or demolition work shall be allowed at any time provided the noise level does not exceed five (5) dBA above the ambient at the nearest property plane with allowance for correction factors as set forth in subsection (b) of Section 4-7.104 of Article I of this chapter.

(h) The provisions of this section shall not apply to emergency work as defined in subsection (e) of Section 4-7.102 of Article 1 of this chapter.

4-7.205 - Motor-driven vehicles.

(a) Operation. It shall be unlawful for any person to operate any motor-driven vehicle within the Town in such a manner that a person of normal sensitiveness residing or working in the area is caused discomfort or annoyance or whose peace is disturbed; provided, however, any motor-driven vehicle which may be lawfully operated upon any public highway, street, or right-of-way shall be excluded from the provisions of this section while being operated on any public highway, street, or right-of-way, except as provided in subsection (b) of this section.

(b) Motor vehicle horns. It shall be unlawful for any person within the Town to sound a vehicular horn within any residential zone, including the blowing of horns as an announcing signal around curves, except as a warning signal in the case of imminent danger as provided in Section 27001 of the Vehicle Code of the State.

(c) Exceptions. The provisions of this section shall not apply to emergency work as defined in subsection (e) of Section 4-7.102 of this article.

(d) Vehicle or other nonstationary noise sources. It shall be unlawful for any person within any residential area of the Town to repair, rebuild, or test any motor-driven vehicle or other nonstationary source of noise in such a manner that any person of normal sensitiveness working or residing in the area is caused discomfort or annoyance or whose peace is disturbed.

(e) Powered models. It shall be unlawful for any person to operate any powered model in such a manner that a person of normal sensitiveness residing or working in the area is caused discomfort.

4-7.206 - Miscellaneous noise sources.

(a) Miscellaneous nonstationary noise sources, such as electric or gasoline-driven lawn mowers, power saws, chain saws, concrete mixers, edge trimmers, hedge trimmers, and other similar movable noise sources shall be operated during the following times: Mondays through Fridays from 7:00 a.m. to 9:00 p.m.; Saturdays from 9:00 a.m. to 9:00 p.m.; and Sundays from 10:00 a.m. to 9:00 p.m.; provided, however, such hours shall be extended until 10:00 p.m. for work performed by homeowners or residents upon their own property. Additionally, such noise sources may be operated at any time provided the noise level does not exceed five (5) dBA above the ambient at the nearest property plane with allowance for correction factors as set forth in subsection (b) of Section 4-7.104 of Article 1 of this chapter. The Director of Public Works may, in his discretion, impose additional or different noise level standards for such devices in lieu of those set forth in Section 4-7.104 of Article 1 of this chapter considering available technology and economic feasibility.

(b) The provisions of this section shall not apply to emergency work as defined in subsection (e) of Section 4-7.102 of Article 1 of this chapter.

3.12.3. IMPACTS AND MITIGATION MEASURES

METHODOLOGY

This section considers existing stationary and mobile noise sources and levels and evaluates how development under the General Plan 2045 may affect those levels. Potential effects on humans are discussed. The potential effects of construction-related vibration on historic structures is also discussed.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to noise.

NOISE ELEMENT

Goal N-A Protect and preserve the peace and quiet of San Anselmo by minimizing exposure to excessive noise and vibration for residents and businesses.

Policy N-A.1: Compatibility of New Land Uses. Use the Noise and Land Use Compatibility Guidelines in Figure N-3 to establish and maintain acceptable noise levels for different land uses, consistent with state and federal guidelines, to protect the health and wellbeing of residents and occupants. Require acoustical analysis and feasible noise attenuation methods for new development and/or land uses that may be exposed to or generate noise exceeding applicable standards.

Action N-A.1.a: Acoustical Study Requirements. Require acoustical studies for development projects subject to discretionary review that may be exposed to or create noise levels exceeding the Noise and Land Use Compatibility Guidelines in Figure N-3. Identified noise control measures shall ensure compliance with applicable standards, including maintaining interior noise levels of 45 dBA Ldn or lower for new residential uses to ensure a comfortable and healthy living environment.

Action N-A.1.b: Landscaping Equipment Noise. Advance and implement regulations to limit noise from landscaping equipment, such as quiet hours, and continue enforcing the Town's ban on gas-powered landscape equipment to reduce impacts on nearby residents, workers, and sensitive receptors.

Action N-A.1.c: Noise Ordinance and Objective Noise Standards. Review and update the Town's Noise Ordinance within five years of General Plan adoption to establish clear, objective noise limits for residential, commercial, and mixed-use areas, including temporary construction noise. Apply these standards through the development review and permitting process by incorporating appropriate conditions of approval for noise-generating activities and equipment, and enforce the standards once projects become operational.

Policy N-A.2: Significant Noise Increases. Protect noise-sensitive receptors, such as residents, schools, and care facilities, from adverse noise exposure by requiring feasible mitigation for discretionary projects that would permanently increase ambient noise by:

- > 5 dBA where baseline is < 60 dBA
- > 3 dBA where baseline is 60–65 dBA
- > 1.5 dBA where baseline is > 65 dBA

Where no noise-sensitive receptors are present, the Town may determine that no significant noise impact exists.

Policy N-A.3: Construction Noise. Minimize noise impacts from construction by enforcing limits on construction hours, requiring feasible noise-reducing measures, and applying best management practices to protect nearby residents, schools, and other sensitive populations.

Action N-A.3.a: Construction Noise Limits and Mitigation Measures. Enforce limitations on construction hours and require feasible noise-reduction measures, such as sound barriers, muffled and properly maintained equipment, and other appropriate technologies, through the development review process. For CEQA analyses, use a 12 dBA increase as the temporary construction noise threshold of significance.

Action N-A.3.b: Construction Notification and Noise Management Plans. Require project applicants to provide advance notice of construction to nearby residents and businesses, including timelines, allowable construction hours, and contact information, using clear and accessible communication. Develop guidelines for notice content and distribution. Require major projects to prepare Construction Noise Management Plans detailing monitoring and noise-reduction strategies**.**

Policy N-A.4: Traffic Noise. Minimize residents' exposure to traffic noise across the community through land use planning, enforcement, street design, and landscaping.

Action N-A.4.a: Vehicle Code Noise Enforcement. Enforce the California Vehicle Code provisions related to excessively loud vehicles operating on Town streets.

Action N-A.4.b: Pavement and Street Design. Evaluate the use of roadway surfacing materials or other treatments that reduce traffic noise along arterial and collector streets.

Action N-A.4.c: Sound Barriers and Alternatives. Discourage sound walls where alternative measures, such as berms, landscaping, or building placement, can effectively reduce noise. Where sound walls are necessary, require aesthetically compatible design, appropriate screening, regular maintenance, and measures to minimize sound reflection that supports neighborhood character and quality of life.

Policy N-A.5: Vibration Impacts. Require evaluation and mitigation of vibration during demolition and construction projects to avoid potential impacts on nearby residents and structures.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the project will have a significant impact related to noise if it will:

a. Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;

b. Generate excessive ground borne vibration or ground borne noise levels; or

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

Generally, a project may have a significant effect on the environment if it will substantially increase the ambient noise levels for adjoining areas or expose people to severe noise levels. In practice, more specific professional standards have been developed. These standards state that a noise impact may be considered significant if it would generate noise that would conflict with local project criteria or ordinances, or substantially increase noise levels at noise sensitive land uses. The potential increase in traffic noise from the project is a factor in determining significance. Research into the human perception of changes in sound level indicates the following:

- A 3-dBA change is barely perceptible,
- A 5-dBA change is clearly perceptible, and
- A 10-dBA change is perceived as being twice or half as loud.

A limitation of using a single noise level increase value to evaluate noise impacts is that it fails to account for pre-project-noise conditions.

ITEMS NOT DISCUSSED FURTHER

There are no private or public airports within two miles of the Town of Anselmo. Therefore, this issue is not discussed further in this study.

TRANSPORTATION NOISE INCREASE CRITERIA

Table 3.12-8 is based upon recommendations made by the Federal Interagency Committee on Noise (FICON) to provide guidance in the assessment of changes in ambient noise levels resulting from aircraft operations. The recommendations are based upon studies that relate aircraft noise levels to the percentage of persons highly annoyed by the noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, it has been accepted that they are applicable to all sources of noise described in terms of cumulative noise exposure metrics such as the Ldn.

TABLE 3.12-8: SIGNIFICANCE OF CHANGES IN NOISE EXPOSURE

AMBIENT NOISE LEVEL WITHOUT PROJECT, Ldn	*INCREASE REQUIRED FOR SIGNIFICANT IMPACT*
<60 dBA	+5.0 dBA or more
60-65 dBA	+3.0 dBA or more
>65 dBA	+1.5 dBA or more

SOURCE: FEDERAL INTERAGENCY COMMITTEE ON NOISE (FICON)

Based on Table 3.12-8 data, an increase in the traffic noise level of 1.5 dBA or more would be significant where the pre-project noise level exceeds 65 dBA Ldn. Extending this concept to higher noise levels, an increase in the traffic noise level of 1.5 dBA or more may be significant where the pre-project traffic noise level exceeds 75 dBA Ldn. The rationale for the Table 3.12-8 criteria is that, as ambient noise levels increase, a smaller increase in noise resulting from a project is sufficient to cause annoyance.

NON-TRANSPORTATION NOISE INCREASE CRITERIA

Stationary and Non-Transportation Noise Sources - A significant impact will occur if the project results in an exceedance of the noise level standards contained in Table N-1 of the Zoning Code, as shown above, or the project will result in an increase in ambient noise levels by more than 3 dBA, whichever is greater.

Vibration Standards

Vibration is like noise in that it involves a source, a transmission path, and a receiver. While vibration is related to noise, it differs in that in that noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of amplitude and frequency. A person's perception to the vibration will depend on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration can be measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration measures in terms of peak particle velocities in inches per second. Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of peak particle velocities.

The Town does not have specific policies pertaining to vibration levels. However, vibration levels associated with construction activities and railroad operations are addressed as potential noise impacts associated with project implementation.

Human and structural response to different vibration levels is influenced by several factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. **Table 3.12-9** indicates that the threshold for damage to structures ranges from 0.2 to 0.6 peak particle velocity in inches per second (in/sec p.p.v.).

TABLE 3.12-9: EFFECTS OF VIBRATION ON PEOPLE AND BUILDINGS

PEAK PARTICLE VELOCITY		HUMAN REACTION	EFFECT ON BUILDINGS
MM/SEC.	IN./SEC.		
0.15-0.30	0.006-0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected

PEAK PARTICLE VELOCITY		HUMAN REACTION	EFFECT ON BUILDINGS
MM/SEC.	IN./SEC.		
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10-15	0.4-0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic but would cause "architectural" damage and possibly minor structural damage.

SOURCE: CALTRANS. TRANSPORTATION RELATED EARTHBORN VIBRATIONS. TAV-02-01-R9601 FEBRUARY 20, 2002.

Construction activities may generate perceptible vibration when heavy equipment or impact tools (e.g., jackhammers, hoe rams, pile drivers) are used. Construction activities often include demolition of existing structures, excavation, site preparation work, foundation work, and new building framing and finishing.

For structural damage, the California Department of Transportation uses a vibration limit of 0.5 inches/second, peak particle velocity (in/sec, PPV) for buildings structurally sound and designed to modern engineering standards.

Table 3.12-10 presents typical vibration levels that could be expected from construction equipment at a distance of 25-100 feet. The highest levels of vibration typically occur from pile driving operations. Pile driving vibrations are typically below 0.5 in/sec, PPV at distances of 50 feet or more.

TABLE 3.12-10: VIBRATION LEVELS FOR VARYING CONSTRUCTION EQUIPMENT

TYPE OF EQUIPMENT	P.P.V. @ 25 FEET (INCHES/SECOND)	P.P.V. @ 50 FEET (INCHES/SECOND)	P.P.V. @ 75 FEET (INCHES/SECOND)	P.P.V. @ 100 FEET (INCHES/SECOND)
Pile Drive (Impact)	0.644	0.226	0.124	0.080
Pile Drive (Sonic)	0.170	0.060	0.033	0.021
Large Bulldozer	0.089	0.031	0.017	0.011
Loaded Trucks	0.076	0.027	0.015	0.010
Small Bulldozer	0.003	0.001	0.000	0.000
Auger/Drill Rigs	0.089	0.031	0.017	0.011
Jackhammer	0.035	0.012	0.006	0.004
Vibratory Hammer	0.070	0.025	0.0135	0.009
Vibratory Compactor/Roller	0.210	0.074	0.040	0.026

IMPACTS AND MITIGATION MEASURES

Impact 3.12-1: General Plan implementation could result in exposure to significant traffic noise sources (Less-Than-Significant)

The FHWA Highway Traffic Noise Prediction Model (FHWA-RD 77-108) was used to develop Ldn (24-hour average) noise contours for all highways and major roadways in the General Plan study area. The model is based upon the CALVENO noise emission factors for automobiles, medium trucks, and heavy trucks, with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the site. The FHWA Model predicts hourly Leq values for free-flowing traffic conditions and is generally considered to be accurate within 1.5 dBA. To predict Ldn values, it is necessary to determine the hourly distribution of traffic for a typical 24-hour period.

Existing (2024) and Proposed 2045 General Plan Buildout volumes were obtained from the traffic modeling performed for the General Plan study area. Day/night traffic distributions were based upon continuous hourly noise measurement data and Saxelby Acoustics file data for similar roadways. Using these data sources and the FHWA traffic noise prediction methodology, traffic noise levels were calculated for existing conditions.

Traffic noise levels are predicted at the sensitive receptors located at the closest typical setback distance along each project-area roadway segment. In some locations sensitive receptors may be located at distances which vary from the assumed calculation distance and may experience shielding from intervening barriers or sound walls. However, the traffic noise analysis is representative of the majority of sensitive receptors located closest to the project-area roadway segments analyzed in this report.

The actual distances to noise level contours may vary from the distances predicted by the FHWA model due to roadway curvature, grade, shielding from local topography or structures, elevated roadways, or elevated receivers.

Table 3.12-11 shows the future noise levels and the increase in noise levels associated with traffic on the local roadway network under the proposed General Plan, versus the existing (Baseline 2024) conditions. Noise contours are shown on **Figure 3.12-3**.

TABLE 3-12-11: EXISTING (2024) VS. PROPOSED 2045 GENERAL PLAN

ROADWAY	SEGMENT	NOISE LEVELS (LDN, DBA) AT NEAREST SENSITIVE RECEPTORS				
		BASELINE (2024)	PROPOSED GP	CHANGE	CRITERIA[1]	SIGNIFICANT?
Sir Francis Drake Blvd	Between Mountain View Ave and Cordone Dr	56.7	57.9	1.2	+5.0 dBA	No
Center Blvd	Between San Anselmo and Saunders Blvd	62.2	63.5	1.3	+3.0 dBA	No
Butterfield Rd	North of Sir Francis Drake Blvd	52.1	52.9	0.8	+5.0 dBA	No

TABLE 3-12-11: EXISTING (2024) VS. PROPOSED 2045 GENERAL PLAN

ROADWAY	SEGMENT	NOISE LEVELS (LDN, DBA) AT NEAREST SENSITIVE RECEPTORS				
		BASELINE (2024)	PROPOSED GP	CHANGE	CRITERIA[1]	SIGNIFICANT?
San Francisco Blvd	North of Sir Francis Drake Blvd	47.8	49.1	1.3	+5.0 dBA	No
Greenfield Ave	Between the Hub and Spring Grove Ave	43.4	46.2	2.8	+5.0 dBA	No
San Anselmo Ave	Between Tunstead Ave and Magnolia Ave	63.3	64.2	0.9	+3.0 dBA	No

Note 1: Where existing noise levels are less than 60 dBA an increase of 5 dBA would be a significant increase. Where existing noise levels exceed 60 dBA but are less than 65 dBA, an increase of 3 dBA or more would be significant. Additionally, any increase causing noise levels to exceed the Town's Normally Acceptable 60 dBA Ldn noise level standard at an existing outdoor activity area of a residential use would also be significant. Where existing noise levels exceed 65 dBA, an increase of 1.5 dBA or more would be significant.

SOURCE: FHWA-RD-77-108 WITH INPUTS FROM PARAMETRIX, CALTRANS, AND SAXELBY ACOUSTICS 2024

Buildout of the General Plan may contribute to transportation noise at existing sensitive receptors. As indicated by Table 3.12-11, the related traffic noise level increases with a circulation system buildout of the proposed 2045 General Plan are predicted to increase between 0.8 to 2.8 dBA versus the existing (2024) conditions.

General Plan Policies N-A.1, N-A.2, and N-A.4 are intended to minimize exposure to excessive noise, including noise associated with traffic. Specifically, Policy N-A.1 supports noise-compatible land uses in the vicinity of traffic noise sources and require that new development and infrastructure projects be reviewed for consistency with the noise standards established in Figure N-3. Policy N-A.2 is intended to regular increases noise for discretionary projects that would permanently increase ambient noise and N-A.4 would establish policies for townwide traffic noise reduction.

As shown in Table 3.12-11, the traffic noise increases associated with the proposed General Plan comply with the applicable test of significance. Therefore, the proposed General Plan would have a **less-than-significant** impact relative to traffic noise on existing noise-sensitive uses in the town.

Impact 3.12-2: Implementation of the General Plan could result in the generation of excessive stationary noise sources (Less than Significant)

Implementation of the General Plan could result in the future development of land uses that generate noise levels in excess of applicable Town noise standards for non-transportation noise sources. Such land uses may include commercial area loading docks, industrial uses, HVAC equipment, car washes, daycare facilities, auto repair, and recreational uses. While the General Plan does not specifically propose any new noise generating uses, the Land Use Map includes industrial land use designations, which may result in new noise sources. Specific land uses that would be located in the town are not known at this time. Additionally, noise from existing stationary sources, as identified in the background section of this chapter, will continue to impact noise-sensitive land uses in the vicinity. New projects which may include stationary noise sources such as automotive and truck repair facilities, tire installation centers, car washes, loading docks, corporation yards, parks, and play fields may create noise levels in excess of the Town's standards.

While no specific projects are proposed under the General Plan 2045, changes in land use may allow for more intensive noise-generating uses in closer proximity to noise-sensitive uses. Where this occurs, detailed noise studies would be required to ensure that noise control measures are implemented into the project design. Such measures could include facing loading docks of industrial buildings away from sensitive uses, construction of sound walls or berms between loading docks and sensitive uses, using buildings to create additional buffer distance and screening, or other site design measures to ensure that non-transportation (stationary receptors) noise sources do not cause exterior noise levels to exceed allowable standards at sensitive receptors.

For example, a typical busy loading dock for a warehouse might generate noise levels of approximately 66 dBA Leq at a distance of 100 feet, as shown in Table 3.12-3. This would exceed the Town's Zoning Code noise standards of 55 dBA Leq (daytime) and 45 dBA Leq (nighttime). Construction of a 12-foot-tall sound wall would reduce loading dock noise levels to approximately 53 dBA Leq (Appendix D). For a daytime use loading dock, this would be sufficient to meet the Town's 55 dBA Leq daytime noise standard. For a loading dock which requires nighttime operation, a sound wall would not be sufficient to achieve the 45 dBA Leq nighttime noise standard. To achieve the nighttime noise standard, the distance from the loading dock would need to be increased to 250 feet for the 12-foot-tall wall to achieve the 45 dBA Leq nighttime standard (Appendix D-2). Alternatively, the loading docks could face internal to the project site and the industrial building could be used to screen loading dock noise. In this case the loading dock could be located 150 feet from a sensitive receptor, assuming it was screened by a 20-foot-tall building (Appendix D-3). This would achieve the Town's 45 dBA Leq nighttime noise standard. While this is just a theoretical scenario, it illustrates that use of site design measures, screening walls, etc. can be sufficient to achieve compliance with the Town's stationary noise standards, even when more intensive uses are proposed in closer proximity to sensitive receptors.

The General Plan includes policies and actions that are intended to reduce noise associated with stationary sources. Specifically, Policies N-A.1 and N-A.2 would reduce noise associated with stationary sources. Implementation of the proposed policies and actions of the General Plan will reduce noise impacts from stationary noise sources to a **less than significant** level.

Impact 3.12-3: General Plan implementation may result in an increase in construction noise sources (Less than Significant)

New development, maintenance of roadways, and installation of public utilities and infrastructure generally require construction activities. These activities include the use of heavy equipment and impact tools. **Table 3.12-12** provides a list of the types of equipment which may be associated with construction activities, and their associated noise levels.

TABLE 3.12-12: CONSTRUCTION EQUIPMENT NOISE

TYPE OF EQUIPMENT	PREDICTED NOISE LEVELS, LMAX DBA				DISTANCES TO NOISE CONTOURS (FEET)	
	NOISE LEVEL AT 50'	NOISE LEVEL AT 100'	NOISE LEVEL AT 200'	NOISE LEVEL AT 400'	70 DBA LMAX CONTOUR	65 DBA LMAX CONTOUR
Backhoe	78	72	66	60	126	223
Compactor	83	77	71	65	223	397

TYPE OF EQUIPMENT	PREDICTED NOISE LEVELS, LMAX DBA				DISTANCES TO NOISE CONTOURS (FEET)	
	NOISE LEVEL AT 50'	NOISE LEVEL AT 100'	NOISE LEVEL AT 200'	NOISE LEVEL AT 400'	70 DBA LMAX CONTOUR	65 DBA LMAX CONTOUR

SOURCE: ROADWAY CONSTRUCTION NOISE MODEL USER'S GUIDE. FEDERAL HIGHWAY ADMINISTRATION. FHWA-HEP-05-054. JANUARY 2006. SAXELBY ACOUSTICS, LLC 2019.

Activities involved in construction would typically generate maximum noise levels ranging from 85 to 90 dBA at a distance of 50 feet. Construction could result in periods of significant ambient noise level increases and the potential for annoyance, and may exceed established noise thresholds. However, the proposed General Plan includes policies and actions that are intended to reduce noise associated with construction noise. Specifically, Policy N-A.3 would reduce noise associated with construction noise. Action N-A.3.a would require the Town to enforce limitations on construction hours and require feasible noise-reduction measures, such as sound barriers, muffled and properly maintained equipment, and other appropriate technologies, through the development review process. Action N-A.3.a also establishes that a 12 dBA increase over ambient conditions would be the temporary construction noise threshold of significance for the purposes of CEQA, which would result in a potentially significant impact if exceeded. Action N-A.3.b would require project applicants to provide advance notice of construction to nearby residents and businesses. Major projects would be required to prepare Construction Noise Management Plans detailing monitoring and noise-reduction strategies. Implementation of the proposed policies and actions of the General Plan will ensure noise impacts from construction are **less than significant**.

Impact 3.12-4: General Plan implementation may result in construction vibration (Less than Significant)

Construction activities facilitated by the proposed General Plan may include demolition of existing structures, site preparation work, excavation of below grade levels, foundation work, pile driving, and new building erection. Demolition for an individual site may last several weeks and at times may produce substantial vibration. Excavation for underground levels may also occur on some project sites and vibratory pile driving could be used to stabilize the walls of the excavated area. Piles or drilled caissons may also be used to support building foundations.

While typical construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors located further than 25-feet, should pile driving be required within 50 feet of an existing structure, these impacts may be considered significant. Implementation of Policy N-A.5 would ensure that construction-related vibrations do not cause damage to any adjacent structures, and thus, the proposed project would result in a **less than significant** impact relative to this environmental topic.

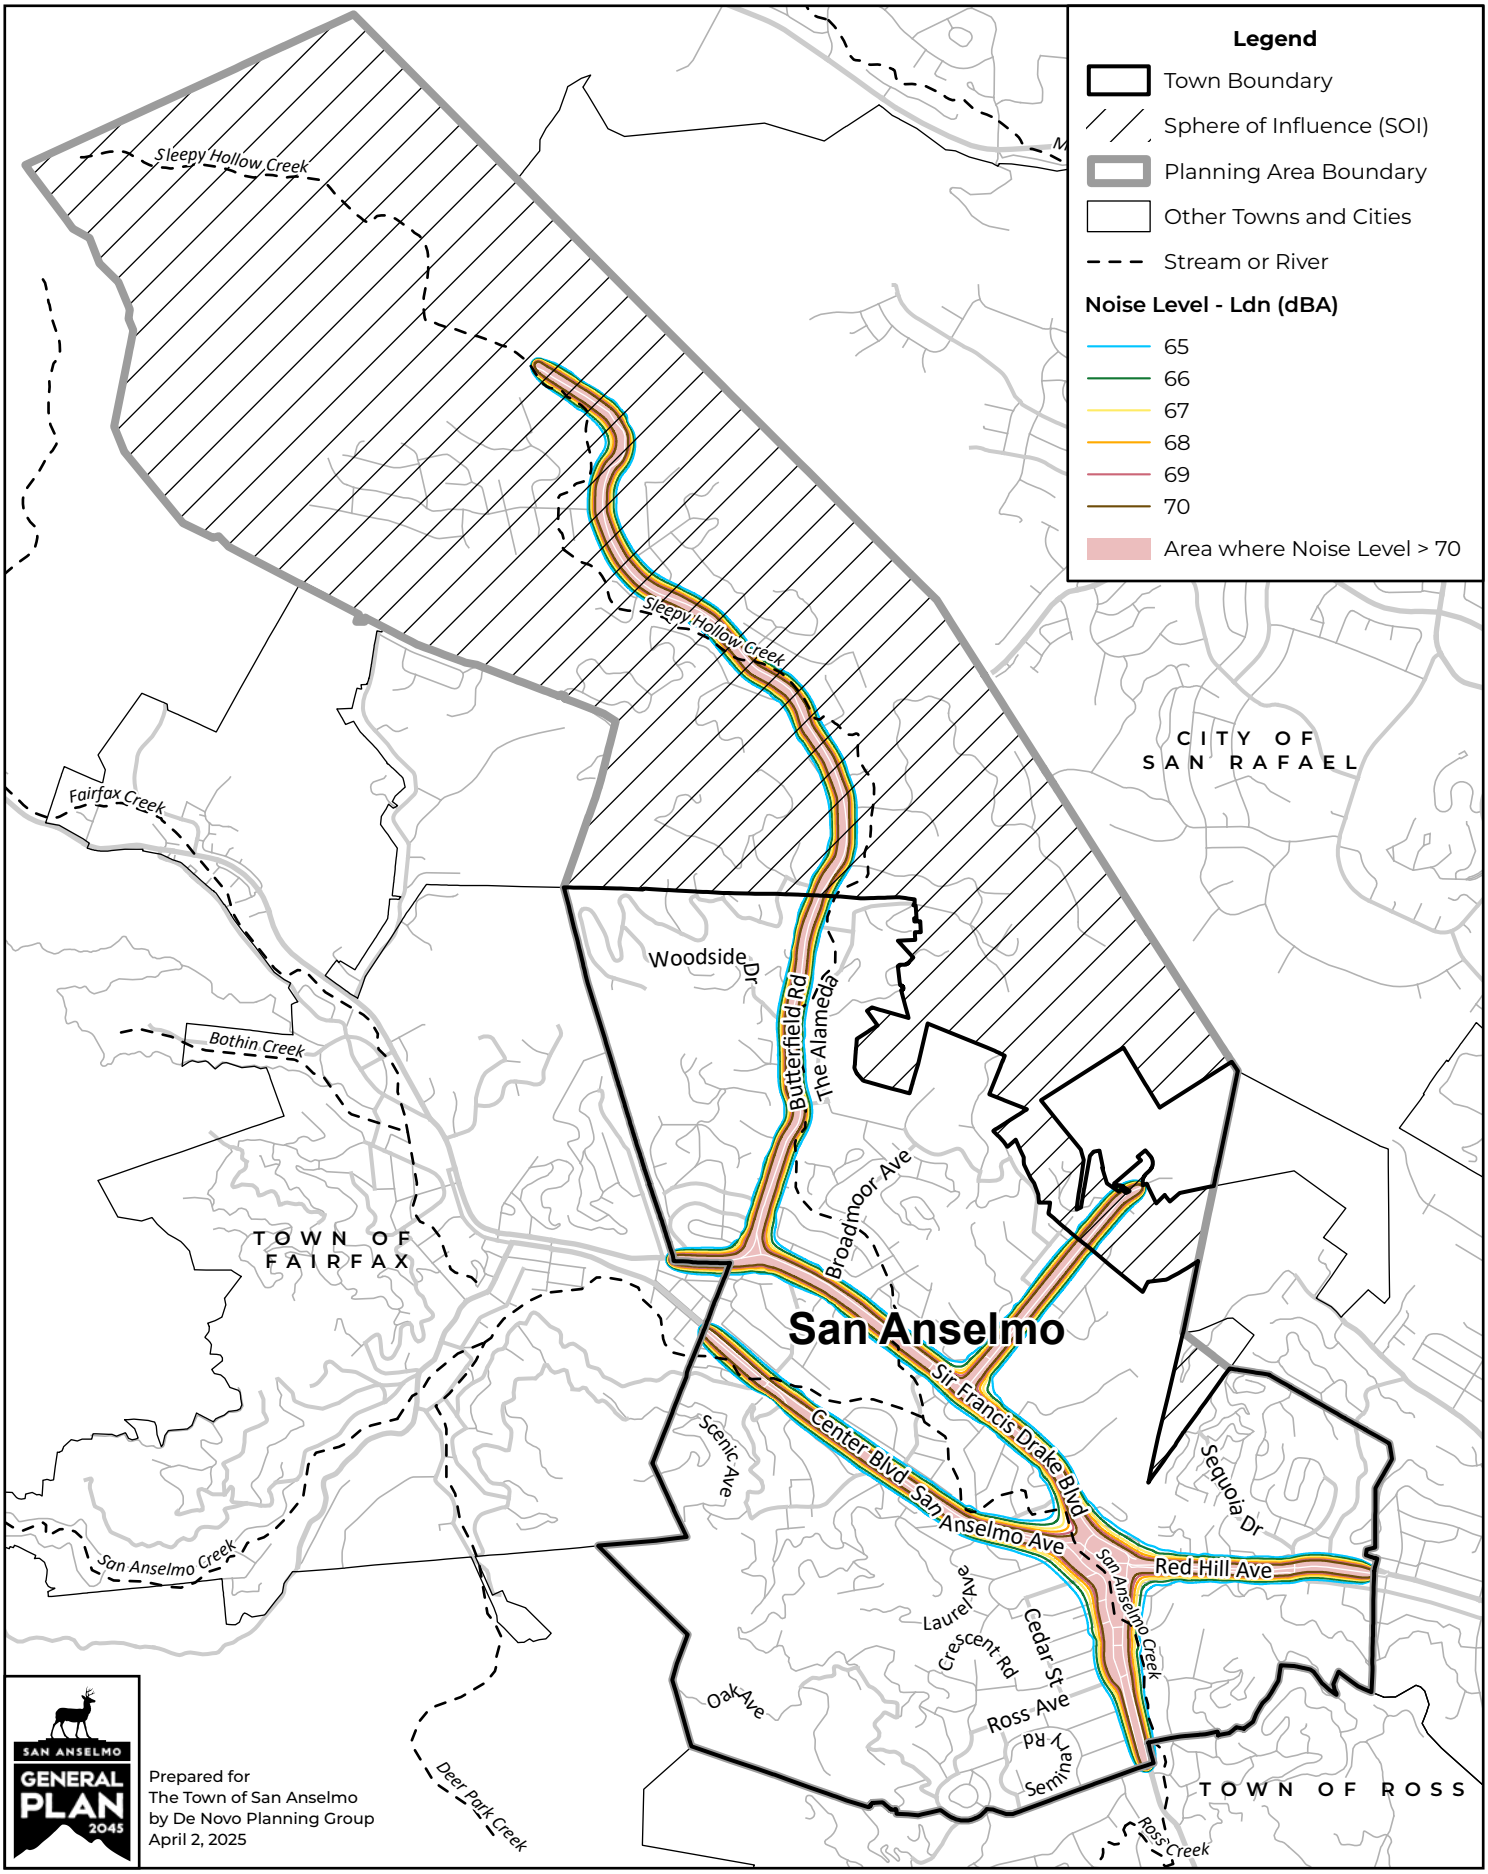

Impact 3.12-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts related to noise. (Less than Significant)

The cumulative context for the noise analysis is the Town of San Anselmo as noise tends to be a somewhat localized impact.

Cumulative noise impacts would occur primarily as a result of increased traffic on local roadways and on-site activities resulting from the development of urban land uses throughout the town.

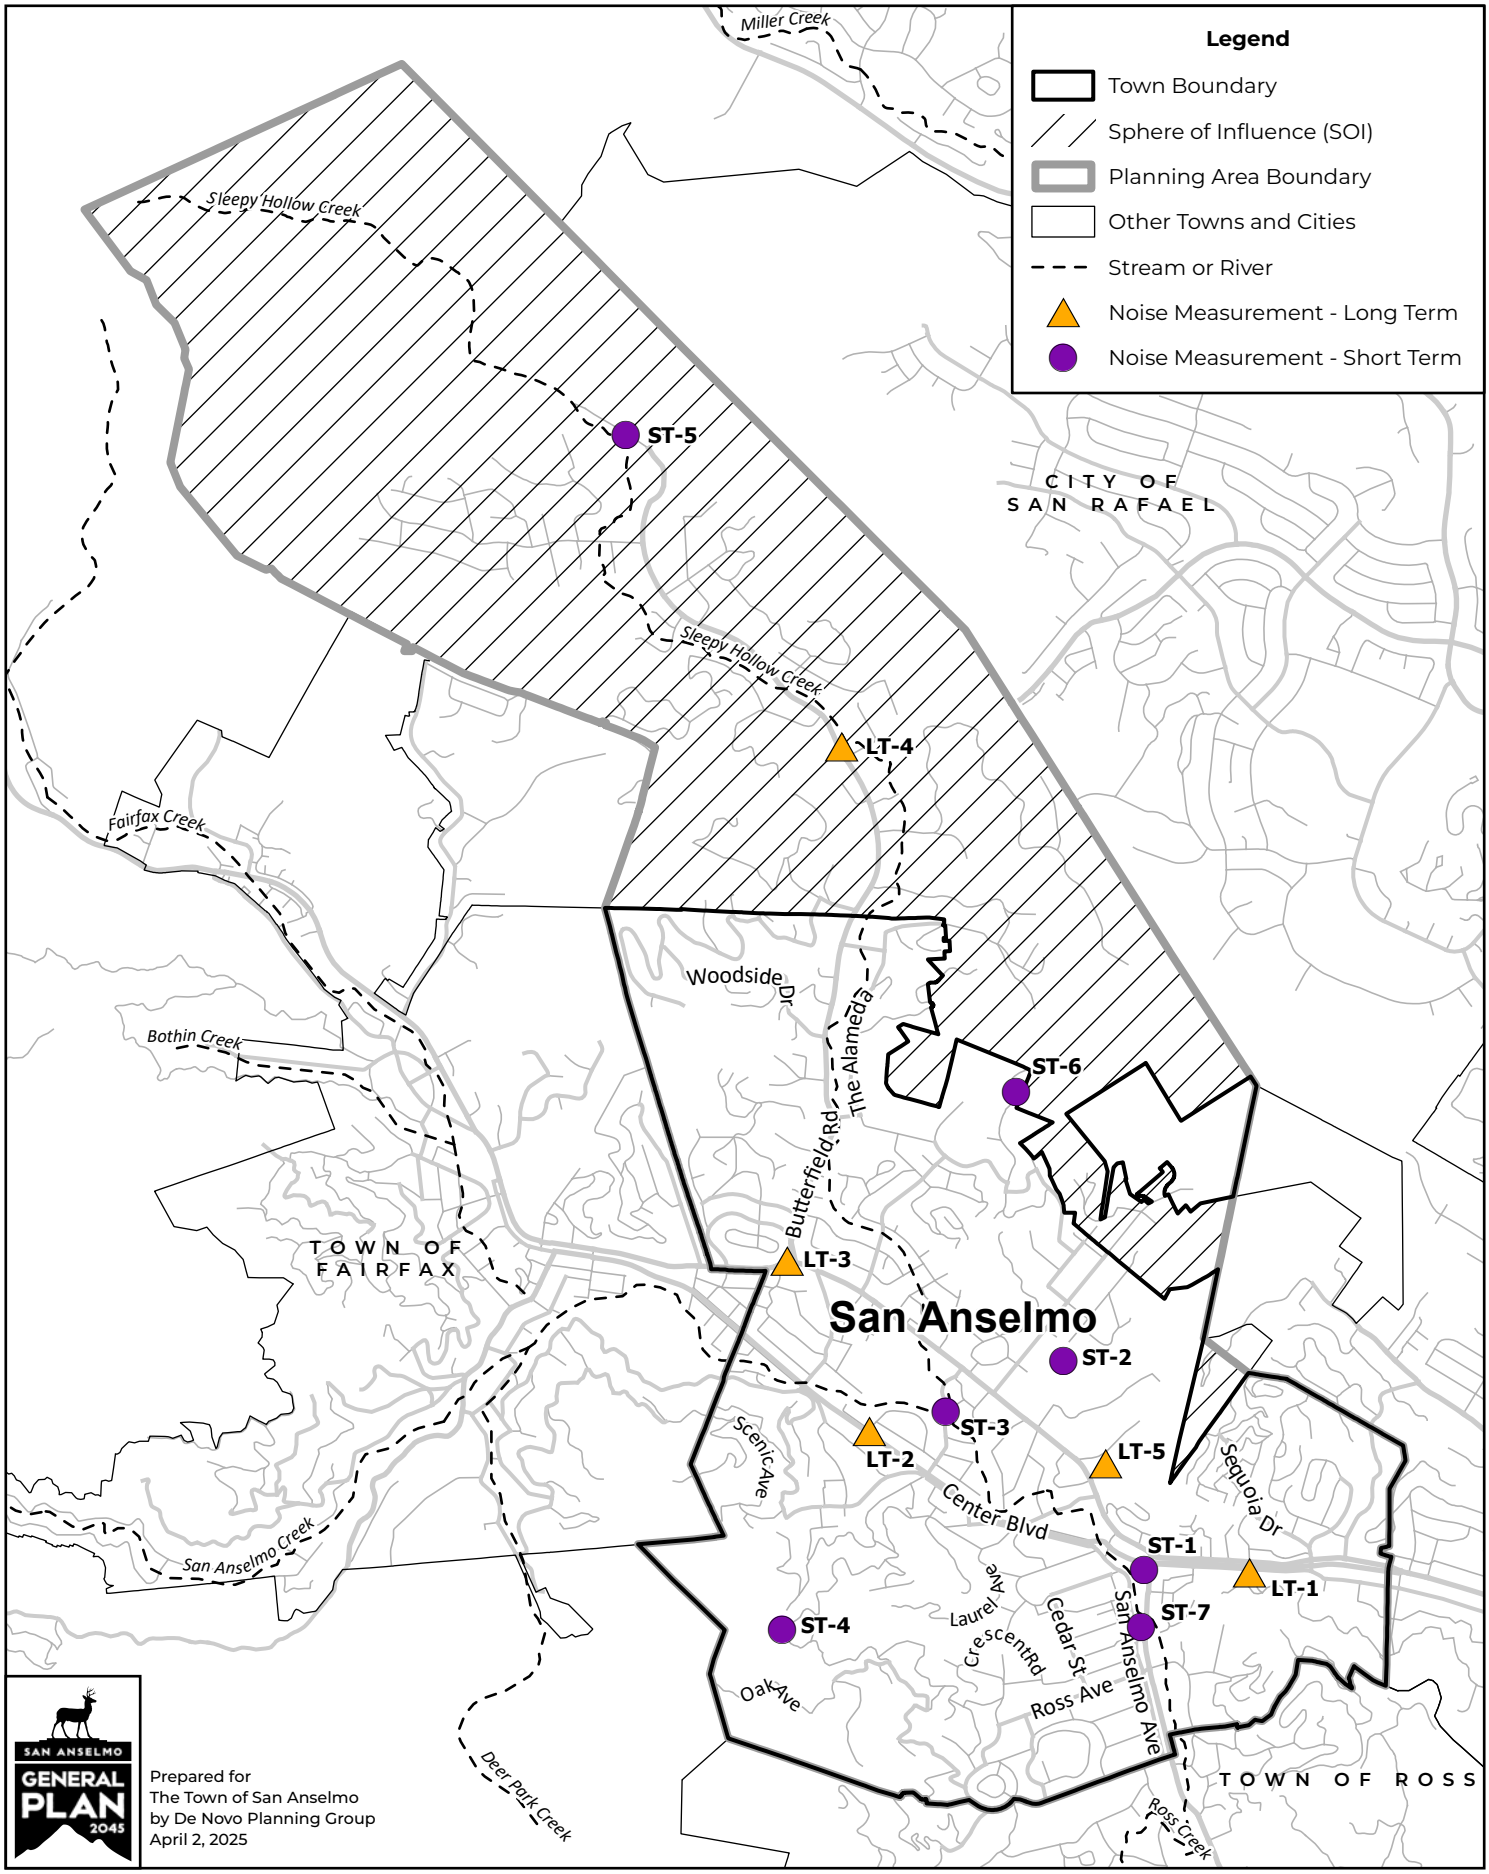

Although construction activities are temporary in nature and would occur during normal daytime working hours, construction-related noise could result in sleep interference at existing noise-sensitive land uses in the vicinity of the construction if construction activities were to occur outside the normal daytime hours. The cumulative noise would be fairly small and would not be substantial in a future noise environment.

The proposed Project, when considered alongside all past, present, and probable future projects, would not be expected to cause any significant cumulative construction noise impacts. The proposed Project would not have cumulatively considerable impacts associated with construction noise. Cumulative traffic noise levels would not be expected to cause significant traffic noise impacts. Therefore, the cumulative impact of noise on sensitive receptors would be **less than significant**.

FUTURE TRANSPORTATION NOISE CONTOURS

Public services such as fire and police protection are vital to maintaining a safe and healthy community. Educational services serve as a foundation for providing citizens with the skills and resources to excel today and in the future. There are many other public services that are important to a community, such as parks and recreational opportunities, libraries, museums, hospitals, and other healthcare facilities.

This section provides a background discussion and analysis of fire protection services, police services, schools, parks and recreational facilities, libraries, and other public facilities and services. This section is organized with an existing setting, regulatory setting, and impact analysis.

Utilities services, including water, sewer, and solid waste disposal are addressed in Chapter 3.15 (Utilities and Service Systems) of this Draft EIR.

No comments on this environmental topic were received during the NOP comment period.

3.13.1 EXISTING CONDITIONS

FIRE PROTECTION SERVICES

Fire protection and emergency medical services in San Anselmo are provided by the Ross Valley Fire Department (RVFD). As shown on **Figure 3.13-1**, there are two RVFD stations within the Planning Area.

Fire Station 19 is located at 777 San Anselmo Avenue. Fire Station 19 is the administrative headquarters for RVFD. As such, it houses the offices of the Fire Chief, Administrative Assistant, and Fire Inspector. The daily on-duty emergency response personnel consist of a Battalion Chief, a Captain, and an Engineer/Firefighter. The station houses one first due Type 1 Fire Engine (structural firefighting), staffed by the Captain and the Firefighter, one command vehicle used by the Battalion Chief, and one reserve Type 1 Fire Engine which can be staffed by off-duty and volunteer personnel as needed.[1]

Fire Station 20 is located at 150 Butterfield Road in San Anselmo. Fire Station 20 is staffed daily by on-duty emergency response personnel consisting of a Captain and an Engineer/Firefighter, one of which may be a paramedic. The station houses one first due Type 1 Fire Engine (structural firefighting) and an additional Type 1 Fire Engine supplied by the State of California Emergency Management Agency (EMA).

Ross Valley Fire Department

RVFD is a consolidated department with the mission of protecting lives, property, and the environments of Ross, San Anselmo, Sleepy Hollow, and Fairfax. RVFD is an all-risk, full-time professional fire department staffed with four engine companies staffed by firefighter emergency medical technicians and/or paramedics 24 hours per day, 365 days per year. RVFD responds to all

[1] Ross Valley Fire Department. Fire Stations. Available at: https://rossvalleyfire.org/about/fire-stations

requests for assistance, emergency and non-emergency, within their jurisdiction, in neighboring areas of Marin, and statewide or nationwide on an automatic or mutual-aid basis.

The RVFD provides a full range of services to the San Anselmo, including:

- Fire suppression;
- Emergency medical services;
- Fire prevention and inspections;
- Community education;
- Hazardous materials spills and leaks;
- Vehicle accidents-rescue and extraction; and
- Disaster response.

The Insurance Service Office (ISO), an advisory organization, classifies fire service in communities from 1 to 10 on the Public Protection Classification (PPC) scale, indicating the general adequacy of coverage. Communities with the best systems for water distribution, fire department facilities, equipment and personnel, and fire alarms and communications receive a rating of 1. RVFD achieved an improved Class 2 ISO PPC in 2016, which has since been maintained.[2]

Fire Concerns

Wildland fire hazards exist in varying degrees throughout Marin County and probably pose the greatest threat to public safety and property of all other potential hazards. The fire season generally lasts from five to six months but has been elongated due to climate change. Urban fires can be a serious risk for older buildings in the Planning Area. Additionally, the southern half of San Anselmo is located within either a "Wildland-Urban Interface" or "Wildland-Urban Intermix", which are considered areas to be at greater risk of wildfires.[3] Additional information related to local wildfire threats is included in the *Safety and Noise Existing Conditions Report*.

POLICE PROTECTION SERVICES

Central Marin Police Authority

The Central Marin Police Authority (Authority) is responsible for providing law enforcement services for Corte Madera, Larkspur, and San Anselmo. The Authority has an office located at San Anselmo Town Hall; their main station is located at 250 Doherty Drive in Larkspur. The operational function of the Authority is assigned to the Chief of Police. The Authority is comprised of three divisions: Administration, Field Operations, and Support Services. The Authority has 50 full-time employees (42 sworn).[4]

[2] Ross Valley Fire Department. ISO Public Protection Classification. Available at: https://rossvalleyfire.org/about/iso-public-protection-classification-ppc

[4] Central Marin Police Authority. About. Available at: https://www.centralmarinpolice.org/27/About

The Administration Division consists of the Chief of Police, two Captains, and two Lieutenants.[5] Their roles include, but are not limited to, oversight, policy enforcement, and resource management.

The Support Services Division includes the Investigation Division, which investigates felony and misdemeanor crimes, identifies and apprehends offenders, recovers stolen property and contraband, and prepares cases for criminal prosecution.[6]The Field Operations Division provides law enforcement services, responds to calls for service, and initiates most investigations. The patrol is conducted 24 hours a day and seven days a week. Patrol officers operate in marked police vehicles, on mountain bicycles, and on foot. The Traffic Division and Directed Patrol Unit are also included in Field Operations.[7] **Table 3.13-1** identifies the total number of parking tickets, traffic violations, and calls for service from 2021 to 2023.

TABLE 3.13-1: TOTAL CALLS FOR SERVICE – CENTRAL MARIN POLICE AUTHORITY

	2021	*2022*	*2023*
Parking Tickets	2,889	2,394	3,021
Traffic Violations/Stops	723	772	366
Calls for Service	11,445	10,487	10,093

SOURCE: CENTRAL MARIN POLICE AUTHORITY CRIME AND TRAFFIC STATISTICS REPORT 2021, 2022, 2023

The Authority is responsible for ensuring the safety of the community, including users of local roadways by enforcing both the California Vehicle Code (CVC) and the Town Code. **Table 3.13-2** identifies the traffic collision/accident statistics in the Authority service area for 2022 and 2023 (most recent reporting years).

TABLE 3.13-2: SAN ANSELMO POLICE DEPARTMENT TRAFFIC UNIT STATISTICS

TRAFFIC COLLISION STATISTICS	*2022*	*2023*	*% CHANGE*
Accident: Major Injury	5	3	-40%
Accident: Minor Injury	26	29	+11.5%
Accident: No Injury	98	121	+23.5%
Accident: Private Property / No Injury	3	7	+133.3%
Hit and Run – Felony	3	3	0%
Hit & Run: Property Damage Only	59	43	-27.1%

FBI Crime Statistics

The Department of Justice's Federal Bureau of Investigation (FBI) Uniformed Crime Reporting (UCR) Program encompasses approximately 16,100 of 18,930 participating law enforcement agencies in the country in 2022. Participating agencies voluntarily provide crime data to the Department of Justice to generate a standardized and reliable set of crime statistics. **Table 3.13-3** displays statistics

PARKS AND RECREATIONAL FACILITIES

Parks

TOWN OF SAN ANSELMO PUBLIC PARKS

The Recreation Department manages and maintains various recreational facilities and parks within San Anselmo and organizes and coordinates a variety of recreational programs and activities. The Streets & Park Division of the Public Works Department is responsible for maintaining the Town's parks and community gathering areas and for the maintenance and upkeep of the landscaped areas surrounding Town Hall and the Isabel Cook Community Center. As shown in Table PROS-2, the Town currently manages approximately 18 acres of park lands.

Park facilities generally include developed recreational uses and amenities that promote active recreation. Park facilities within the Planning Area are shown on **Figure 3.13-2**. **Table 3.13-4** summarizes the park facilities within the Planning Area by acreage. A brief description of each park/area is provided below, followed by a summary of parks and recreation improvement projects that the Town is undertaking.

TABLE 3.13-4: LOCAL PARK FACILITIES IN THE PLANNING AREA

PARK NAME	*ACREAGE*
Creek Park	1.2
Hilldale Park	0.03
Imagination Park	0.2
Lansdale Park	0.6
Memorial Park	12.2
Tamalpais Union High School District (TUHSD) Field and Red Hill Dog Park	5.0
Robson-Harrington Park	2.6
Total	**17.8**

NOTE: TUHSD FIELD AND RED DOG PARK IS OWNED BY TUHSD AND MANAGED BY THE TOWN IN PARTNERSHIP WITH TUHSD.
SOURCES: MARIN COUNTY GIS; MARIN COUNTY LAFCO; TOWN OF SAN ANSELMO; DE NOVO PLANNING GROUP., 2024.

Creek Park

Creek Park, located at 634 San Anselmo Avenue, is a center of activity for the community. Creek Park is the site of many local events, such as the Town-produced Live on the Avenue concert event series throughout the summer and Beatles Music in the Park, sponsored by the San Anselmo Arts Commission.[8] Creek Park's amenities include picnic tables, grassy areas, benches, creek access, restrooms, and parking. In 2019, the Town embarked on a project to reimagine the one-acre Creek Park, as described below (see Reimagine Creek Park Project).

Hilldale Park

Hilldale Park, located at the intersection of Hilldale Drive and Jordan Avenue, is the newest addition to the San Anselmo's public parks. This neighborhood pocket park was created in 2023.[9] Hilldale Park amenities include picnic tables, a walking path, and drought resistant plantings.

Imagination Park

Imagination Park is located at 541 San Anselmo Avenue. The park and its statues were donated to the community in 2013 by George Lucas.[10] The park amenities include benches and a fountain. It serves as a center for many local events.

Lansdale Park

Lansdale Park, located at the corner of Center Boulevard and Lansdale Avenue, was a former stop on the railroad's way to West Marin and is adjacent the former railroad tracks. This park is a pocket-sized park with a playground and picnic tables.[11]

Memorial Park

Memorial Park, including the Millennium Playground, Skate Park, Elders' Garden and Red Hill Dog Park, is located at 1000 Sir Francis Drake Boulevard. Memorial Park is the Town's most developed park with several sports fields, grassy areas, sports courts, a children's playground, a dog park, a

[11] Town of San Anselmo. Lansdale Park. Available at: https://www.sananselmo.gov/1976/Lansdale-Park

skate park, and a community garden.[12] Bathroom facilities, water, and picnic tables are provided in Memorial Park.

Millennium Playground was designed by the children of San Anselmo and built in May 2000. The playground incorporates San Anselmo themes, such as a train depot, seminary tower, and Town Hall tower. The Millennium Playground Community Advisory Committee was created in 2021 to oversee the volunteer efforts for the restoration and enhancement of the playground. The Elders' Garden is located adjacent to Millennium Playground and provides a seating area and facilities for playing chess, checkers, and horseshoes. Memorial Skate Park was built in 2017, providing a popular gathering spot for skaters.

TUHSD Field and Red Hill Dog Park

TUHSD Field and Red Hill Dog Park are owned by Tamalpais Union High School District (TUHSD) and located on Shaw Drive behind the Red Hill Shopping Center. In 2003, the Town entered into an agreement with the TUHSD to lease and improve the field. Managed by the Town in partnership with TUHSD, it is the home field to Archie Williams High School soccer and lacrosse teams and San Anselmo and Ross Valley community youth soccer and lacrosse leagues.

Adjacent to the TUHSD Field, the Red Hill Dog Park is also managed by the Town and owned by TUHSD. The Red Hill Dog Park is a fenced dog park with water and trash facilities. The Red Hill Dog Park Steering Committee, a volunteer body comprised of seven community members, serves in an advisory capacity to the Town regarding ongoing operation of the Red Hill Dog Park.

Robson-Harrington Park

Robson-Harrington Park and House are located at 237 Crescent Road, two blocks from the downtown area. The property was purchased in 1923 from the Wood estate by Geraldine and Kernan Robson. In 1968, the Town accepted the Robson's bequest of the property. The property includes event facilities, benches, picnic areas, and gardens.[13]

The park includes the Robson House, a turn-of-the-20th century mansion that is available to rent as an indoor facility for events and meetings. Office spaces on the second floor of the home are also available to lease on a longer-term basis. The Recreation Department operates multiple programs out of the Robson House including an after school program and youth summer camps.

The Robson House grounds are also home to the Town's community garden. Approximately 30 small garden plots are worked by members of the community. The Robson-Harrington Community Garden Steering Committee supports the Recreation Department through policy development and activity coordination to ensure the garden is well-maintained with appropriate practices.

[13] Town of San Anselmo. Robson Harrington Park. Available at: https://www.sananselmo.gov/1978/Robson-Harrington-Park

Parklets

Parklets have become part of the town landscape since they were first allowed temporarily during Summer 2020. With San Anselmo's mild climate, the parklets provide outside seating for residents and visitors to enjoy nearly year-round. On September 27, 2022, the Town Council approved an amendment (Ordinance #1166 - Parklet Ordinance) to the Town Code to allow for permanent parklet installations, including adopting a Parklet Program and Parklet Guidelines. The San Anselmo Parklet Program goals include:

- Activating and enlivening the downtown area.
- Enriching the downtown streetscape and providing for increased public use.
- Encouraging pedestrian and community activity.
- Supporting local businesses.
- Encouraging non-motorized and multi-modal transportation.

PARK IMPROVEMENT PROJECTS

Reimagine Creek Park Project

San Anselmo's Creek Park is currently undergoing a significant transformation initiated by Marin County's San Anselmo Flood Risk Reduction Project (SAFRR) in 2010. The primary objective of SAFRR is to address barriers causing San Anselmo Creek to overflow, leading to downtown flooding. This has involved the purchase and demolition of structures obstructing the creek's flow, which increased visibility of Creek Park from San Anselmo Avenue and led to the Reimagine Creek Park Project.[14]

The Reimagine Creek Park Project is a comprehensive initiative aimed at revitalizing and transforming Creek Park to better serve the community of San Anselmo. Key aspects of the project include:

- Community Engagement: The project emphasizes extensive community involvement through surveys, workshops, and public meetings to gather input and ideas from residents regarding their vision for Creek Park's future.
- Park Design and Renovation: The initiative focuses on redesigning and renovating Creek Park to enhance its usability, aesthetics, and functionality. This includes improvements to pathways, landscaping, play areas, and amenities to better meet the needs of diverse park users.
- Environmental Sustainability: Incorporating sustainable design practices and green infrastructure to improve water quality, manage stormwater runoff, and promote biodiversity within the park.
- Accessibility: Ensuring that the redesigned Creek Park is accessible to all residents, including those with disabilities, through the incorporation of ADA-compliant pathways, facilities, and inclusive play areas.

[14] Town of San Anselmo. Reimagine Creek Park Project. Available at: https://www.sananselmo.gov/1556/Reimagine-Creek-Park-Project

- Implementation Plan: The project includes a phased implementation plan that outlines specific timelines, funding strategies, and responsibilities for carrying out the proposed improvements and enhancements.

Community engagement has been central to this process, including a design competition facilitated by the Reimagine Creek Park Community Advisory Committee (CAC), which attracted renowned landscape architecture practices. The Town Council selected a design concept by the Mill Valley-based firm RHAA in June 2019, envisioning a transformative vision for the park. Based on community feedback at numerous public meetings, the Town along with RHAA, have revised the design and layout of the park. On September 11, 2023, the CAC reviewed the 60 percent design for the project and recommended that the project move ahead. The recommended design, shown as **Figure 3.13-3**, includes six areas:

1. Creek Plaza
2. Wood Bridge/Crossing
3. Multi-level Wood Deck Area
4. Wood Deck Stage and Lawn Area
5. Kids Play Area and Pollinator Garden
6. New Public Restrooms

While most of Creek Park is located on Town-owned parcels or within the public right-of-way (ROW), a portion of the park is owned by the Marin County Flood Control and Water Conservation District (Marin Flood District). The Town worked with the Marin Flood District during the COVID pandemic in 2020 to lease the foundation of Building Bridge 2 (BB2). The Town established a temporary Creek Plaza at BB2, which is located at the northwestern portion of Creek Park. The Creek Plaza was proposed to include seating areas on permeable paving along the creek. The Town's lease was terminated by the Marin Flood District in 2022 due to safety concerns regarding BB2 structural deficiencies, resulting in closure of the temporary Creek Plaza. The termination of the lease and closure of the plaza highlight ongoing challenges in the project's execution.

During the SAFRR project, the Town has kept Creek Park open and created a parklet along San Anselmo Avenue in front of the closed Creek Plaza to provide public seating and information on the status of the Reimagine Creek Park Project.

The Reimagine Creek Park Project remains a dynamic process, with ongoing community engagement, workshops, and concept development activities. Current projections suggest restoration and reimagining construction is anticipated to commence in fall 2024, following the completion of the County's SAFRR flood mitigation work.

Memorial Park Master Plan Review

Memorial Park is a community hub for social gatherings, family activities, sports leagues, and many other activities. Memorial Park was initially developed as a baseball facility. Over the years, components were added including the Log Cabin, the picnic areas, the tennis courts, the playground, the Elder's Garden, and the basketball and skate plaza. In 2024, the Town undertook the Memorial

Park Master Plan (adopted in 2018) amendment process to provide the community the opportunity to develop a long-term vision for the south side of park. The Memorial Park Master Plan update (2024 MP Master Plan) was approved by the Town Council in June of 2024. The 2024 MP Master Plan identifies improvement efforts focusing on the following:

- Design elements and new grading and drainage improvements.
- Addition of a drop-off/pick-up zone off Sunny Hills Drive.
- Addition of restrooms located on the south side of the park.
- Addition of a multi-use sports court.
- Renovation of the tennis courts and addition of pickle ball courts.
- Renovation and expansion of picnic areas.
- Relocation of the skate park adjacent to the drop-off/pick-up zone.
- Addition of a quiet zone and outdoor fitness area(s).

STAIRS, LANES, AND TRAILS PROGRAM

In 2023, the Town approved the Stairs, Lanes, and Trails (SLTs) program to establish an inventory of stairs, lanes, and trails in the town and develop a plan to improve and mark the SLTs to encourage use of these routes. The OSC identified 37 routes which could feasibly be improved, marked with signage, and mapped as SLTs to facilitate and encourage usage. The routes, all located on Town-owned land, are listed in **Table 3.13-5,** and shown on Figure 3.14-4 in Section 3.14, Transportation. Currently, some of these routes are completely constructed, with signage installed, while others are planned to undergo substantial improvements to be safe and accessible to most.

TABLE 3.13-5: TOWN OF SAN ANSELMO STAIRS, LANES, TRAILS (SLT) PROGRAM INVENTORY

#	*NAME*	*LOCATION*	*LENGTH (FT)*
1	Fern Lane	End of Fern Lane to Archie Williams High School	80
2	Stone Walk #1	9-10 Stone Court to 17-34 Ridge Road	290
3	Morton	104 Morton Lane to End of Foothill Road to 194-208 Scenic Avenue	342
4	Creek Park Bridge	North of 572 San Anselmo Avenue	85
5	Town Hall Bridge	526-528 San Anselmo Avenue	100
6	Magnolia Ave Bridge	546-559 San Anselmo Avenue	125
7	Lincoln Park Bridge	Lincoln Ct to 160 Sir Francis Drake	75
8	Patterson Footbridge	Karl Avenue to Sais Avenue	200
9	Stone Walk #2	27-35 to 95-97 Ridge Road	216

SOURCE: TOWN OF SAN ANSELMO STAIRS, LANES, TRAILS (SLT) INVENTORY.

In addition to maintaining the existing SLTs, the Public Works Department is in the process of working with the OSC to establish two new trails:

Red Hill Trail: The Red Hill Trail would follow the existing road cuts on one of the Town parcels to reach the summit of Red Hill. This summit holds historical significance as a corner point of the Mexican land grants from the early 1800s.

Memorial Ridge Trail: The Memorial Ridge Trail aims to link Memorial Park to Sorich Park and the Marin County trail network. This connection would be established along the ridge line and through an easement across the Tamalpais Cemetery.

Recreation

The Town of San Anselmo Recreation Department operates a variety of recreation facilities and programs that serve the community, including community-oriented events, youth programs, and adult activities.

COMMUNITY EVENTS

Events available to the entire community are offered throughout the year, including:

- Annual Holiday Lighting
- BOOtacular

- Breakfast with Santa
- Egg Hunts
- Live on the Avenue Music Series
- Teen Battle of the Bands

YOUTH PROGRAMS

The Recreation Department offers many youth programs, including:

- After-School Enrichment Program
- Robson After Care Childcare Program
- Parkside Preschool
- Summer Camp
- Specialty Camps and Classes

YOUTH SPORTS PROGRAMS

The Recreation Department provides opportunities for the youth in the community to develop their physical, mental and social abilities. Developmental programs include

- Soccer, Basketball, Swim, Baseball, Flag Football, and Skate Camps and Teams
- Multi-Sport Athletic Camps
- Tumbling & Gymnastics
- Youth Tennis Lessons

ADULT PROGRAMS

The Recreation Department offers a variety of activities for adults. Classes include:

- Hiking and Walking in Marin Groups
- Painting Classes
- French Language Lessons
- Ukulele Lessons
- Yoga and Tai Chi Classes
- Intramural Sports Teams and Tennis Classes
- Mah Jongg Classes and Practice
- Spanish Language Lessons

RECREATIONAL FACILITIES

Robson-Harrington Park and House

Robson-Harrington Park and House, located at 237 Crescent Road in San Anselmo, serves as a community hub offering a mix of natural and recreational amenities. The property includes three areas, as described:[15]

- Upper Robson: The park on the upper area of the property features a lawn area, picnic areas, and benches. In addition, this area includes the historic Robson-Harrington House and surrounding landscaped grounds, which provide a picturesque setting and reflect the park's

[15] Town of San Anselmo. Robson-Harrington Park and House. Available at: https://www.sananselmo.gov/1978/Robson-Harrington-Park

early 20th-century origins. The Recreation Department offers daily recreation programming at Robson-Harrington House, and some rooms are rented as offices and event spaces.

- Community Garden: Located on the slope between Upper Robson and Lower Robson, the community garden is used by residents to cultivate their own plots. A steering committee of local volunteers oversees the management of the garden.
- Lower Robson: The park on the lower area of the property features a lawn and picnic area and historic barbeque structure. Dogs are welcome in this area, provided visitors follow the park's leash regulations.

The park and house are well-suited for passive recreation and community events, with its facilities, including rentable spaces, managed by the Town's Recreation Department to encourage both individual and group engagement.

Isabel Cook Community Center

The Isabel Cook Community Center is located adjacent to Memorial Park at 1000 Sir Francis Drake Boulevard and features two buildings that provide a dedicated gymnasium, a multi-use room, a Town-operated preschool, Recreation Department offices, and rentable office and studio spaces. The community center supports active and engaging community programs for both physical activities and social gatherings. The center also offers supervised use of both the gym and a party room for two-hour sessions.

REGIONAL PARK AND RECREATION RESOURCES

Throughout the Marin area, there are a variety of regional park and recreation facilities that serve the San Anselmo community as well as other local communities. Facilities in the vicinity of San Anselmo but outside the Planning Area include parks owned by neighboring cities and towns, as summarized below.

Nearby City and Town Park Facilities

Peri Park: Peri Park is owned by the Town of Fairfax and is situated at 9 Park Road in downtown Fairfax, surrounded by shops, restaurants, and residential neighborhoods. Peri Park is approximately 2 to 3 miles from San Anselmo and features a playground, picnic area, creek, and redwood groves.

Gerstle Park: Gerstle Park, owned by the City of San Rafael, is situated at 950 San Anselmo Avenue in the Gerstle Park neighborhood of San Rafael, near downtown. Gerstle Park is located approximately 3 to 4 miles southeast of San Anselmo, and includes amenities such as picnic areas, sports courts, and a playground.

Sun Valley Park: Sun Valley Park is owned by the City of San Rafael and is situated at 100 Sun Valley Drive in the Sun Valley neighborhood of San Rafael, which is adjacent to the Terra Linda neighborhood. Sun Valley Park is approximately 3 to 4 miles from San Anselmo, and includes a playground, basketball court, benches, and an open field.

Open Space

Open space areas of various types and sizes are located throughout the Planning Area. Open space areas in the Planning Area focus on preservation of natural resources and outdoor recreation opportunities, with some areas also providing protection of Native American resources and sites and public health and safety benefits.

Open space areas may include passive recreation parks as well as open space preserves. However, open space areas typically have fewer improvements to preserve the natural setting. Larger open space areas in and adjacent to the Planning Area are generally developed in association with Marin County Parks and other regional open space entities.

The California Protected Areas Database (CPAD) identifies lands that are owned and protected for open space purposes by over 1,000 public agencies or non-profit organizations. CPAD data is based on land ownership or legal easements that restrict how lands can be used. The ownership focus of the database is intended to assist in the planning, management, and long-term care of lands owned by government agencies and nonprofits for open space purposes.

According to CPAD, there are 13 parcels of protected parks and open space located within San Anselmo, as listed below in the **Table 3.13-6** and shown on **Figure 3.13-4**. These lands include most of the town's park and open space areas as well as two open space preserves owned by Marin County Open Space District. An additional nine Town-owned parcels and ROWs are not identified in CPAD but have parks or open space land use designations to preserve the unique natural characteristics of the parcels. Those parks and open space areas are also listed in the table below and identified in Figure 3.13-4.

TABLE 3.13-6: PROTECTED PARKS AND OPEN SPACE – PLANNING AREA

SOURCE: CALIFORNIA PROTECTED AREAS DATABASE (CPAD); DE NOVO PLANNING GROUP, 2024.

TOWN OF SAN ANSELMO OPEN SPACE AREAS

There are nine Town-owned open space areas, in addition to the parks described previously. These open space areas are described below.

Bald Hill-Adjacent Parcels

While the Bald Hill Preserve is owned and managed by Marin County Parks, the Town has acquired two additional parcels contiguous or near the preserve and within the Town Limits in an effort to further extend the open space area. Acquired in 1974 and 1975, these parcels (APNs 007-092-38 and 007-093-04) were approved by the Town Council for transfer to Marin County Parks in 1994 as open space, but Marin County Parks would not accept the parcels due to an existing encroachment by a neighboring property that said property owner refused to remedy. The parcels are characterized by steep slopes and wooded predominantly with bay and oak trees and are zoned for open space uses. The parcels have no developed facilities and serve as open space for natural resources, aesthetic, and health and safety (steep slopes, wildland urban interface) purposes.

Frederick Faude Park

Frederick Faude Park (Faude Park) is located on a 13.5-acre rock outcropping at the top of Broadmoor Avenue between Indian Rock Road and Tomahawk Drive. It offers hiking trails and picnicking in a relatively untouched natural setting. Most of the parkland was donated to the Town of San Anselmo in 1974 by C. Frederick Faude "for use as a park or open space." A portion of the park located in the northern area was gifted to the Town in 1974 by Ronald and Alice Hill, which includes a pedestrian ROW between Berkeley Avenue and Tomahawk Drive. Faude Park has no developed facilities and serves as a passive park as well as open space for recreation, natural resources, aesthetic, and health and safety (steep slopes) purposes.

Halperin Park

Halperin Park is a 3.9-acre open space area with hiking trails. It was gifted to the Town by Edward Halperin in 1975. Halperin Park provides open space for recreation, natural resource conservation, and health and safety (steep slopes, wildland urban interface) purposes.

Hawthorne Hills Open Space

The Town purchased the Hawthorne Hills Open Space lots (3 parcels totaling 32.9 acres) from 1975 through 2002; neighbors in the surrounding vicinity raised a large share of the purchase price, and the Town contributed significant resources. Hawthorne Hills Open Space has limited trail improvements. A portion of the area was the site of a landslide in 1998. Hawthorne Hills Open Space provides open space for recreation, natural resource conservation, and health and safety (steep slopes, landslide history, wildland urban interface, drainage issues) purposes. In February 2024, Upper Hawthorne Canyon was acquired by the Town of San Anselmo for open space purposes.

Kite Hill

Kite Hill is a 0.5-acre open space area at the northwest corner of the Town Limits. Purchased from Marin Water in 1982, Kite Hill was the OSC's first successful land acquisition for public open space purposes. Kite Hill has no developed facilities and serves as a passive park and open space for recreation, natural resources, aesthetic, and health and safety (wildland urban interface, landslide) purposes.

Oak Park

The Town acquired Oak Park, a 0.9-acre site, in 1937 through a tax sale. Oak Park provides open space for passive recreation, natural resource conservation, and health and safety (steep slopes) purposes.

Red Hill Open Space

Red Hill Open Space is a 10.7-acre area that was offered to the Town as a gift by A.H. Tucker Company in 1977; a small portion of the site was accepted by Town from Tunstead Co., but there is no list of the specific lots gifted or date of the acquisition. Red Hill Open Space includes trail improvements and parking. Red Hill Open Space provides open space for recreation, natural resource conservation, and health and safety (steep slopes, landslide, wildland urban interface) purposes.

Sir Francis Drake Boulevard – Butterfield Road Landscape

The Sir Francis Drake Boulevard – Butterfield Road Landscape area is located in the intersection of Sir Francis Drake Boulevard, Butterfield Road, and Suffield Avenue. This open space area totals 0.2 acres and provides landscaped open space, bike racks, and parking. While the parcels that comprise this open space are designated and zoned to permit single-family residential development, the parcels are owned by the Town and maintained as natural lands.

Sorich Ranch Park

The Sorich Ranch Park is relatively undeveloped, focusing on access to open space and community hiking trails. The park has limited facilities, including picnic benches and tables. In 1965, the Town acquired the approximately 60-acre Sorich Dairy. In the 1990s, the OSC organized work parties and received over $30,000 in grants to improve the park. The OSC worked with the Marin County Open Space District to install a trail connecting San Anselmo to the fire roads leading to Mt. Tamalpais Cemetery and the Terra Linda Divide. This trail is found east of the parking lot and is a gradual climb

to the ridge top overlooking San Rafael, the bay, and San Francisco. Currently, the Town is exploring the opportunity to partner with the Marin County Open Space District to create bike access through this park, connecting San Anselmo to bike paths within the Marin County Open Space District and the City of San Rafael.

MARIN COUNTY PARKS OPEN SPACE AREAS

Marin County Parks manages an extensive park system of 190 miles of unpaved public trails and 19,300 acres of parkland, including regional and community parks, neighborhood parks, and 34 open space preserves. There are two regional open space preserves maintained and managed directly by Marin County Parks specifically within the San Anselmo Planning Area, the Terra Linda/Sleepy Hollow Divide Open Space Preserve and Bald Hill Open Space Preserve. These preserves provide regional recreational facilities such as hiking trails, designated picnic areas, and scenic overlooks. Additional open space preserves managed by Marin County Parks in the vicinity of the town but outside the Planning Area are also described in the list below.

Bald Hill Preserve

Bald Hill Preserve includes lands within the Town as well as lands located southeast of the town that include the Bald Hill summit (nicknamed Mount Baldy). This 107-acre preserve features a network of hiking trails, including Mount Baldy Trail, Sky Ranch Trail, and Cistern Trail, that traverse through oak woodlands, grasslands, and chaparral habitats. Some parts of Bald Hill Preserve are designated for equestrian use, allowing horseback riders to explore the natural beauty of the area. Additionally, certain trails in the preserve are open for mountain biking. The preserve is home to a variety of wildlife species, making it a destination for wildlife enthusiasts and photographers. Occasionally, educational programs and guided hikes are offered to help visitors learn more about the natural history and conservation efforts of the area. The Bald Hill Preserve provides open space for recreation, natural resource conservation, aesthetics (ridgeline and summit preservation), and health and safety (steep slopes, landslide history, wildland urban interface, drainage issues).

Baltimore Canyon Open Space Preserve

Baltimore Canyon Open Space Preserve is situated outside the Planning Area in the hills west of Larkspur and adjacent to the Baltimore Canyon Watershed. It is located approximately three miles south of San Anselmo. This 193-acre preserve is easily accessible from nearby communities in Marin County, including San Anselmo. Baltimore Canyon Open Space Preserve offers a network of trails that wind through wooded canyons and grassy hillsides. Due to its diverse ecosystems, Baltimore Canyon Open Space Preserve is home to a variety of wildlife species. It's a popular spot for birdwatching and observing native flora and fauna. There are designated picnic areas within the preserve.

Loma Alta Open Space Preserve

Loma Alta Open Space Preserve is located outside and west of the northern portion of the Planning Area. Loma Alta Open Space Preserve includes hiking, mountain biking, and equestrian trails, and cattle graze on the land. This 509-acre preserve includes a link in the Bay Area Ridge Trail.

Roy's Redwoods Preserve

Roy's Redwoods Preserve is situated in the hills west of San Anselmo and outside the Planning Area, covering approximately 293 acres of protected land. It is located over three miles west of San Anselmo. The preserve is named after Roy Stolte, who donated the land to Marin County in the 1970s to protect its majestic redwood trees. It features a beautiful grove of coast redwoods, along with mixed evergreen forests and riparian habitats. This preserve offers several trails, including School Trail, Top Flight Trail, Moon Hill Trail, Thorner Ridge Trail, Roy's Redwoods Loop Trail, David Hansen Trail, Meadow Trail, Roy's Redwoods Loop Trail, and Spirit Rock Trail.

Terra Linda/Sleepy Hollow Preserve

The Terra Linda/Sleepy Hollow Preserve is partially located in San Anselmo's Planning Area in the northern portion of the Town's Sphere of Influence. This 1,172-acre preserve surrounds several San Rafael residential neighborhoods. It features oak woodlands, grassy meadows, and seasonal creeks, providing habitat for a variety of wildlife species. This preserve offers many trails, including Crestwood Trail, Dan Abraham Trail, Sorich Park Trail, Memorial Trail, Fox Lane Trail, Montecillo Trail, Wintergreen Trail, and Wilder Trail.

MARIN WATER

Marin Water manages natural resources within their jurisdictional boundaries in order to provide their customers with high-quality water. As described further below, land managed by Marin Water is outside the Planning Area but within the vicinity of San Anselmo.

Mt. Tamalpais Watershed

The Marin Water Municipal Watershed – Mt. Tamalpais Area (MWMW) is a 22,000-acre area owned and managed by Marin Water. The MWMW open space area, located outside the Planning Area, adjoins the southwest area of the town and is accessible through Bald Mountain Preserve trails as well as other points throughout the region. This area contains five reservoirs and is intended to conserve the watershed as a primary source of domestic water for Marin Water customers. The MWMW is held in trust as a natural wildland of great biological diversity, as scenic open space, and as an area of passive outdoor recreation. MWMW improvements are minimal and intended to support passive recreation; these improvements include surface streets, fire roads, trails, trailheads, parking areas, picnic areas, and restrooms. The MWMW has an extensive network of roads and trails, with 150 miles of maintained trails and roads providing recreational opportunities for hikers, cyclists, nature enthusiasts, anglers, equestrians, and runners. MWMW facilities adjacent to San Anselmo include the Deer Park Picnic Area, Deer Park Trail, Yolanda Trail, Canyon Trail, Elliot Trail, and Taylor Trail.

STATE PARKS

Open space areas in the vicinity of San Anselmo but outside the Planning Area include three parks owned and managed by the State, as summarized below.

Mount Tamalpais State Park

Located five to seven miles southwest of San Anselmo, Mount Tamalpais State Park offers stunning views of the San Francisco Bay Area, hiking trails, picnic areas, and camping facilities. The primary feature of the park is Mount Tamalpais, which peaks at 2,571 feet above sea level. The park contains mostly redwood and oak forests. The mountain itself covers approximately 25,000 acres. The park contains about 60 miles of hiking trails, which are connected to a larger, 200-mile network of trails in neighboring public lands.

Samuel P. Taylor State Park

This park is located approximately 10 to 12 miles west of San Anselmo and features redwood groves, hiking and biking trails, a campground, and picnicking areas along Lagunitas Creek. The park contains about 600 acres of old-growth forest, some of which can be seen along the Pioneer Tree Trail.

China Camp State Park

China Camp State Park, located approximately 10 to 12 miles east of San Anselmo, spans 1,514 acres and offers hiking, biking, and kayaking. The park is known for its historic Chinese American shrimp-fishing village and scenic views. Established in 1976, it includes a 75-acre historic district, recognized for its cultural and archeological significance, which was added to the National Register of Historic Places in 1979. The park is part of the San Francisco Bay National Estuarine Research Reserve.

NATIONAL PARKS

Golden Gate National Recreation Area (GGNRA)

The Golden Gate National Recreation Area extends north of the Golden Gate Bridge to Tomales Bay in Marin County and south to Half Moon Bay in San Mateo County, and includes 91 miles of shoreline. Marin County is in the North Sector of GGNRA, which includes a 90,000-acre portion north of the Golden Gate Bridge. GGNRA has an abundance of scenic, natural, open space, historical, cultural, and recreational resources. GGNRA has educational stations regarding the Native American, Spanish, Mexican Republic, and United States presence in the area. GGNRA includes many significant sites, including Alcatraz, Fort Point National Historic Site, Golden Gate Bridge Pavilion, Land's End, Marin Headlands, Muir Woods National Monument, and Presidio. Visitor-oriented recreational amenities include trails, picnic areas, horse facilities, and campgrounds. GGNRA is rich in natural resources, with 19 types of ecosystems in numerous distinct watersheds and is home to over 1,200 known plant and animal species.

Muir Woods National Monument

Muir Woods National Monument is located in southwestern Marin County. Established in 1908, the 558-acre Muir Woods National Monument preserves the character and ecological integrity of one of the last remaining old-growth redwood forests in the Bay Area. Muir Woods National Monument is managed as a distinct park unit within GGNRA. Information regarding natural, cultural, and historic resources, and recreational opportunities, including hiking trails and visitor facilities, is available at the Muir Woods Visitor Center.

Point Reyes National Seashore

The Point Reyes National Seashore, located in western Marin County, was established in 1962 to save and preserve, for the purposes of public recreation, benefit, and inspiration, a portion of the diminishing seashore of the U. S. that remains undeveloped. The Point Reyes National Seashore provides recreational, educational, historic preservation, and scientific research opportunities in support of the protection, restoration, and preservation of the natural environment. Three visitor centers provide information regarding recreational opportunities and have educational displays regarding the history of the area, marine life and environment, and maritime history.

SCHOOLS

The Town of San Anselmo is served by the Ross Valley School District and TUHSD. **Figure 3.13-5** displays the public schools and their facilities serving the Planning Area.

Ross Valley School District

As previously stated, all residents of Fairfax and San Anselmo are within the boundaries of the Ross Valley School District. The Ross Valley School District Student Services Department provides a range of services to support and assess all aspects of student education, from academics to physical fitness to social interactions. The District also support students with learning differences and other special needs through programs such as Special Education and English Language Learners.

There are three Ross Valley School District school sites within the Planning Area, including Brookside Elementary, Hidden Valley Elementary School, and Wade Thomas Elementary. All three schools serve students from kindergarten through fifth grade. The nearest middle school is White Hill Middle School, located outside of the Planning Area at 101 Glen Drive #1338 in Fairfax California. **Table 3.13-7** shows the student enrollment at the District schools during the 2021-2022 through 2023-2024 school years and Figure 3.13-5 shows the locations of the Ross Valley School District schools.

TABLE 3.13-7: ROSS VALLEY SCHOOL DISTRICT STUDENT ENROLLMENT

Brookside Elementary	288	281	293
Hidden Valley Elementary	241	279	283
Wade Thomas Elementary	321	303	293

SOURCES: CALIFORNIA DEPARTMENT OF EDUCATION, DATA QUEST.

In November 2010, the communities of San Anselmo and Fairfax voted yes on a $41 million bond measure for the construction of new classrooms and facilities to meet the District's expanding student enrollment. Since that time, facility improvements at all three elementary schools in the Planning Area have expanded school capacity or improved existing facilities. After school, on the weekends, and over summer, facilities at the elementary schools are used for community activities and recreational programs, often in partnership with the Town of San Anselmo Recreation Department.

Tamalpais Union High School District

TUHSD provides ninth through twelfth grade education to 19 different communities in southern Marin County, including San Anselmo, at three high schools and two alternative programs. Archie Williams High School, which is located at 1327 Sir Francis Drake Boulevard, serves San Anselmo residents.

ARCHIE WILLIAMS HIGH SCHOOL

Archie Williams High School opened with the name Sir Francis Drake High School in 1951 as the second high school in TUHSD. The 21-acre campus was once known as Cordone Gardens, a prosperous San Anselmo farm. In 2021, the TUHSD Board of Trustees voted to change the name of Sir Francis Drake High School to Archie Williams High School. Archie Williams High School has 62 classrooms, a library, a performing arts center, an administration building, a swimming pool, and athletic fields and courts. The school's vision statement declares that Archie Williams High School "ensures an inclusive, supportive and safe environment so all students, especially those from marginalized groups, achieve at high levels socially and academically." **Table 3.13-8** provides the student enrollment information for Archie Williams High School.

TABLE 3.13-8: ARCHIE WILLIAMS HIGH SCHOOL STUDENT ENROLLMENT

SOURCES: CALIFORNIA DEPARTMENT OF EDUCATION, DATA QUEST.

In 2022, TUHSD prepared a Long-Range Facilities Master Plan, which identifies infrastructure improvements to support the District's educational programs and student services. The Plan highlights a projected decline in student enrollment over the next decade and proposes upgrades to modernize Archie Williams High School's existing facilities without increasing capacity. Planned projects include accessibility upgrades, the installation of photovoltaic panels and electric vehicle charging stations, improvements to athletic fields, and the addition of gender-neutral restrooms. [16] These upgrades would be funded by Measure B, a facilities bond measure on the Marin County ballot in November 2024, pending voter approval. Measure B was previously placed on the March 2024 ballot but did not garner the required votes for passage.[17]

OTHER PUBLIC FACILITIES

Town Hall

The San Anselmo Town Hall serves as the central hub for the Town's government services, housing the Administration & Finance, Planning, Public Works, and Building Departments, as well as the Town Council Chambers. Town Hall staff manage key services, including posting public announcements and hearing notices, processing business license applications, and handling Planning and Public Works permits.

The Town Council Chambers host regular meetings for the Town Council, which convenes on the second and fourth Tuesdays of each month, as well as sessions for various boards, committees, and commissions held monthly or quarterly.

Additionally, a police office affiliated with the Central Marin Police Authority is located on the first floor of Town Hall, though the main police station is in Larkspur.

Figure 3.13-6 displays the Town facilities within the Planning Area.

Library Services

The San Anselmo Library is designated as a historic Carnegie Library, established in 1915.[18] The public library is located at 110 Tunstead Avenue. The library offers a variety of programming for all ages, particularly children, teens, and senior citizens. Programs range from children's story time to author interviews for adults. Additionally, the library houses adult and children's Spanish language materials. The library contains items in a variety of formats, including books, e-books, large print books, audiobooks, DVDs, blue-ray discs, video cassettes, streaming videos, magazines and journals, newspapers, and music CDs. The library provides free home delivery and pick-up to patrons unable to come to the library due to mobility, health, or disability barriers. Access to the internet is also available.

The library offers a variety of enrichment resources for its members. Free daily passes to local museums and California State Parks are available, along with access to unique items through the Library of Things program, including memory kits, crafts, musical instruments, and more. Additionally, the Seed Library provides seeds for planting to support gardening and sustainability efforts.

San Anselmo Historical Museum

The San Anselmo Historical Museum is located at 110 Tunstead Avenue. The museum is currently open on Saturdays from 10 a.m. until 2 p.m. The museum operates under the auspices of the San Anselmo Historical Commission and the Town of San Anselmo and collects, preserves, interprets, and presents the history of San Anselmo.[19] The Museum uses its photographic, object, and archival

[18] Town of San Anselmo. About Us. Available at: https://www.townofsananselmo.org/134/About-Us
[19] San Anselmo Historical Museum. Mission. Available at: https://sananselmohistory.org/

collections in public displays that foster an understanding and appreciation of the history of San Anselmo and its place in the history of Marin County and California.

3.13.2 REGULATORY SETTING

FEDERAL

There are no Federal regulations applicable to the environmental topics of public services and recreation.

STATE

California Occupational Safety and Health Administration

In accordance with California Code of Regulations Title 8 Sections 1270 "Fire Prevention" and 6773 "Fire Protection and Fire Equipment" the California Occupational Safety and Health Administration (Cal/OSHA) has established minimum standards for fire suppression and emergency medical services. The standards include, but are not limited to, guidelines on the handling of highly combustible materials, fire hose sizing requirements, restrictions on the use of compressed air, access roads, and the testing, maintenance, and use of all firefighting and emergency medical equipment.

The State passed legislation authorizing the Office of Emergency Services (OES) to prepare a Standard Emergency Management System (SEMS) program, which sets forth measures by which a jurisdiction should handle emergency disasters. Non-compliance with SEMS could result in the State withholding disaster relief from the non-complying jurisdiction in the event of an emergency disaster.

California Fire Protection Code

The California Fire Code contains regulations relating to construction and maintenance of buildings and the use of premises. Topics addressed in the California Fire Code include fire department access, fire hydrants, automatic sprinkler systems, fire alarm systems, fire and explosion hazards safety, hazardous materials storage and use, provisions to protect and assist first responders, industrial processes, and many other general and specialized fire safety requirements for new existing buildings and premises.

The California Fire Code contains regulations consistent with nationally recognized and accepted practices for safeguarding life and property from the hazards of:

- Fire and explosion.
- Dangerous conditions arising from the storage, handling, and use of hazardous materials and devices.
- Hazardous conditions in the use or occupancy of buildings or premises.

The California Fire Code also contains provisions to assist emergency response personnel. These fire-safety-related building standards are referenced in other parts of Title 24. The California Fire Code is a fully integrated code based on the 2021 International Fire Code. Topics addressed in the California Fire Code include fire department access, fire hydrants, automatic sprinkler systems, fire alarm systems, fire and explosion hazards safety, hazardous materials storage and use, provisions intended to protect and assist fire responders, industrial processes, and many other general and specialized fire-safety requirements for new and existing buildings and the surrounding premises. The California Fire Code contains specialized technical regulations related to fire and life safety.

California Health and Safety Code

State fire regulations are set forth in Sections 13000 et seq. of the California Health and Safety Code. This includes regulations for building standards (as also set forth in the California Building Code), fire protection and notification systems, fire protection devices such as extinguishers and smoke alarms, high-rise building and childcare facility standards, and fire suppression training.

National Fire Protection Association (NFPA) 1710

The NFPA 1710 Standards are applicable to urban areas and where staffing is comprised of career firefighters. According to these guidelines, a career fire department needs to respond within six minutes, 90 percent of the time with a response time measured from the 911 call to the time of arrival of the first responder.

The standards are divided as follows:

- Dispatch time of one minute or less for at least 90 percent of the alarms
- Turnout time of one minute or less for EMS calls (80 seconds for fire and special operations response)
- Fire response travel time of four minutes or less for the arrival of the first arriving engine company at a fire incident and eight minutes or less travel time for the deployment of an initial full alarm assignment at a fire incident
- Eight minutes or less travel time for the arrival of an advanced life support (ALS) (4 minutes or less if provided by the fire department

California Code of Regulations

The California Code of Regulations (CCR) Chapter 4.9, Payment of Fees, Charges, Dedications, or Other Requirements Against a Development Project*, Section 65995-65998 (h)* provides that the payment or satisfaction of a fee, charge, or other requirement levied or imposed pursuant to Section 17620 of the Education Code in the amount specified in Section 65995 and, if applicable, any amounts specified in Section 65995.5 or 65995.7 are hereby deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization as defined in Section 56021 or 56073, on the provision of adequate school facilities.

Quimby Act

The Quimby Act (California Government Code Section 66477) states that "the legislative body of a city or county may, by ordinance, require the dedication of land or impose a requirement of the payment of fees in lieu thereof, or a combination of both, for park or recreational purposes as a condition to the approval of a tentative or parcel map." Requirements of the Quimby Act apply only to the acquisition of new parkland and do not apply to the physical development of new park facilities or associated operations and maintenance costs. The Quimby Act seeks to preserve open space needed to develop parkland and recreational facilities; however, the actual development of parks and other recreational facilities is subject to discretionary approval and is evaluated on a case-by-case basis with new residential development.

California Department of Education

The California Department of Education (CDE) School Facilities Planning Division (SFPD) prepared a School Site Selection and Approval Guide that provides criteria for locating appropriate school sites in the state. School site and size recommendations were changed by the CDE in 2000 to reflect various changes in educational conditions, such as lowering of class sizes and use of advanced technology. The expanded use of school buildings and grounds for community and agency joint use and concern for the safety of the students and staff members also influenced the modification of the CDE recommendations.

Specific recommendations for school size are provided in the School Site Analysis and Development Guide. This document suggests a ratio of 1:2 between buildings and land. CDE is aware that in a number of cases, primarily in urban settings, smaller sites cannot accommodate this ratio. In such cases, the SFPD may approve an amount of acreage less than the recommended gross site size and building-to-ground ratio.

Certain health and safety requirements for school site selection are governed by State regulations and the policies of the SFPD relating to:

- Proximity to airports, high-voltage power transmission lines, railroads, and major roadways;
- Presence of toxic and hazardous substances;
- Hazardous facilities and hazardous air emissions within one-quarter mile;
- Proximity to high-pressure natural gas lines, propane storage facilities, gasoline lines, pressurized sewer lines, or high-pressure water pipelines;
- Noise;
- Results of geological studies or soil analyses; and
- Traffic and school bus safety issues.

The Kindergarten-University Public Education Facilities Bond Act of 2002 (Proposition 47)

Proposition 47 was approved by California voters in November 2002 and provides for a bond issue of $13.05 billion to fund necessary education facilities to relieve overcrowding and to repair older schools. Funds would be targeted at areas of greatest need and must be spent according to strict

accountability measures. Funds will also be used to upgrade and build new classrooms in the California Community Colleges, the California State University, and the University of California, in order to provide adequate higher education facilities to accommodate growing student enrollment.

California Government Code Section 65996

As a matter of law, California Government Code Section 65996 identifies the payment of school impact fees as providing full and complete mitigation of a project's potential impact on school facilities. School facilities means any school-related consideration relating to a school district's ability to accommodate enrollment. As such, a project cannot be denied on the basis that existing school facilities are inadequate.

Leroy F. Greene School Facilities Act of 1998 (SB 50)

The "Leroy F. Greene School Facilities Act of 1998," also known as Senate Bill (SB) 50 (Chapter 407, Statutes of 1998), governs a school district's authority to levy school impact fees. This comprehensive legislation, together with the $9.2 billion education bond act approved by the voters in November 1998 known as "Proposition 1A," reformed methods of school construction financing in California. SB 50 instituted a new school facility program by which school districts can apply for State construction and modernization funds. It imposed limitations on the power of cities and counties to require mitigation of school facilities impacts as a condition of approving new development and provided the authority for school districts to levy fees at three different levels:

- Level I fees are the current statutory fees allowed under Education Code 17620. This code section provides the basic authority for school districts to levy a fee against residential and commercial construction for the purpose of funding school construction or reconstruction of facilities. These fees vary by district for residential construction and commercial construction and are increased biannually.
- Level II fees are outlined in Government Code Section 65995.5, allowing school districts to impose a higher fee on residential construction if certain conditions are met. These conditions include having a substantial percentage of students on multi-track year-round scheduling, having an assumed debt equal to 15 to 30 percent of the district's bonding capacity (percentage is based on revenue sources for repayment), having at least 20 percent of the district's teaching stations housed in relocatable classrooms, and having placed a local bond on the ballot in the past four years which received at least 50 percent plus one of the votes cast. A Facility Needs Assessment must demonstrate the need for new school facilities for unhoused pupils is attributable to projected enrollment growth from the construction of new residential units over the next five years.
- Level III fees are outlined in Government Code Section 65995.7. If State funding becomes unavailable, this code section authorizes a school district that has been approved to collect Level II fees to collect a higher fee on residential construction. This fee is equal to twice the amount of Level II fees. However, if a district eventually receives State funding, this excess fee may be reimbursed to the developers or subtracted from the amount of State funding.

LOCAL

San Anselmo Open Space Committee (OSC)

The Open Space Committee was established in 1981. The OSC acts as an advisory body to the Town Council and Town staff for the long-term planning of open space in and near San Anselmo and generates community support and fundraises for open space. The OSC consists of twelve members appointed by the Town Council, including one youth commissioner.

Existing Town of San Anselmo General Plan

The following goals, objectives, policies, and recommendations are applicable to public services, public facilities, and recreation.

LAND USE ELEMENT

Objective 1: To manage future growth to ensure the orderly development of the community, the logical extension of urban services, preservation of the area's natural and cultural resources, and protection of the area's environmental setting.

> **Policy 1.2.** Future growth will be managed based on the ability to provide needed public services, the constraints associated with development of the site, the costs and revenues associated with new development, and the effects of growth on local traffic conditions.

Objective 7: To protect and preserve those areas of unique natural and visual resources within the planning area (see Map 3). (Also see Open Space Element Policies 2.1-2.8.)

> **Policy 7.3.** To preserve as open space land of aesthetic or recreational value.
>
> **Policy 7.4.** Encourage open space corridors along easements and streams and provide public access where appropriate for bicycling, walking, and equestrians. (See Objective 4 of Open Space Element.)
>
> **Policy 7.6.** Continue to preserve open space and provide for the conservation of resources through innovative implementation including zoning, development controls (including grading, public and private acquisition, and incentives for private improvements which enhance the environment).

Objective 12: To maintain the current level of public services to the citizens of the Town and to continue to support improvements to public utilities as needed.

> **Policy 12.1.** To work with the special districts that provide water, sewer, and fire protection services in order to maintain and improve upon the present level of service.
>
> **Policy 12.2.** To require all new development within the Town to be served by the public fire protection system and, where feasible, the public water and sewer system.

Objective 13: To ensure that existing and future development in hillside and ridge areas has a continuous supply of domestic water, adequate water to protect structures from domestic and wildfires.

Policy 13.1. To encourage the Fire District to require sprinkler systems in new residential buildings which the Water District cannot supply with the ISO recommended fire flow.

TOWN PARKS, RECREATION, AND PUBLIC FACILITIES ELEMENT

Goal P: Provide Recreational Areas for the Residents.

Parks and Recreation Recommendations

Recommendation Q.1. Isabel Cook School multi-purpose building should be refurbished and used as a community center in order to provide a meeting place for many of the local groups who do not have an adequate facility at present.

Recommendation Q.2. Park and Recreation offices should be located at the Isabel Cook School or moved into quarters vacated by other civic functions, depending on the Town Hall site alternatives finally chosen. Memorial Park would still require an office, but Isabel Cook School's multi-purpose building would provide more space.

Recommendation Q.3. The community's needs for a swimming pool, tennis courts, and adjacent play fields could be met at Sorich Ranch provided these facilities could be made compatible with the open space amenities of the rest of the area. Other possibilities which should be explored in providing for these needs are the possible acquisition of the entire Isabel Cook School site or acquisition of the Fairfax Town and Country Club by the County with maintenance and management jointly provided by the Towns of Fairfax and San Anselmo.

Recommendation Q.4. Neighborhood mini-parks and playgrounds should be acquired for the Hawthorn Hills, Sequoia Park, and Hilldale areas of the Town.

Recommendation Q.5. Public art of a durable kind should be an addition to the Town park system.

Recommendation Q.16. The Log Cabin site adjacent to Memorial Park should be incorporated into the park, when surplus to the needs of the present owner.

Recommendation Q.7. Resting spaces along trails and street approaches to trails and bikeways should be part of the recreational facilities provided in support of public non-auto use of open spaces. This would be even further facilitated by trailhead and bikeway terminal amenities.

Public Facilities

Recommendation R.1. Town administration, public works, and public safety functions are presently conducted in inadequate or rented space. Recommendations** for alleviating this condition are:

a. Relocate the present Fire Department headquarters and Firehouse No. 1 to the corner of San Rafael Avenue and San Anselmo Avenue. Firehouse No. 2 on Butterfield will remain at its present location.
b. The present Town Hall site should be expanded by the acquisition of 15 Magnolia Avenue, plus perhaps the five parcels between City Hall Avenue, Library Place, and Tunstead Avenue.
c. A further acquisition of the business properties between the present Town Hall site, Magnolia and San Anselmo avenues should be explored for future acquisition to square off the Town's government center, particularly if other public functions are to be accommodated in the Town.
d. City Hall Avenue adjacent to the Civic Center site should be closed and made a part of the Center.
e. Library Place should be extended as appropriate to serve the public facilities area.
f. The present corporation yard and municipal shop should be made visually compatible with the Sarich Ranch Park setting by use of fencing, landscaping, and the demolition of obsolete and visually disturbing buildings. One possibility which should be explored further in capital improvement programming would be to leave the site as a corporation yard only and farm out auto maintenance.

OPEN SPACE ELEMENT

Objective 1: To protect from development those open space parcels which contribute directly to the Town's identity, its sense of separate place in relation to other communities, and the quality of life in the community. The properties which meet this criteria are listed in Appendix A.

Policy 1.1. The Town will determine the relative importance of the properties listed in Appendix A in terms of their open space value.

Policy 1.2. The Town, in conjunction with one or more of the following agencies: the County of Marin, Fairfax, Ross, San Rafael, and the Marin County Open Space District, will establish a program for acquisition and preservation of priority open space properties.

Policy 1.3. The Town may sponsor community and areawide meetings, exhibits, and events to raise community awareness with regard to open space needs in San Anselmo and the surrounding area.

Policy 1.4. Any landowner or developer who intends to submit a land division or other development proposal for all or a portion of property listed in Appendix A will be required to meet with the San Anselmo Open Space Committee prior to submitting any development application.

The Committee must meet with the applicant within thirty (30) days of notification to discuss the Town's open space objectives and options for development. The applicant will be required to submit a written report of the findings of this meeting with the development application.

Policy 1.5. The Town's hillside and ridge protection policies and development densities will be used to protect the open space values of the properties listed in Appendix A if efforts to purchase open space have failed. Such efforts will include the establishment of lands designated as private open space.

Policy 1.6. To examine current management/maintenance arrangements and needs for existing open space lands and explore alternatives for meeting management goals.

Objective 4: To provide and maintain a system of trails which will provide nonintrusive access from residential areas to open space and park lands.

Policy 4.5. Subdivision and development proposals for properties adjacent to or abutting existing or planned public open space shall include provisions for providing public access over a trail system. Trails should be provided separate from roadways and sidewalks.

Policy 4.7. All public open space access easements shall be offered for dedication to the Town, the Marin County Open Space District, or other appropriate public agency.

Town of San Anselmo Municipal Code

Section 10-2.206, Parks and public areas, of the San Anselmo Municipal Code (Town Code) assures that the Planning Commission may require adequate provisions for suitable areas for parks, playgrounds, schools, and other public building sites, as well as such measures to preserve and enhance the scenic values of the town and to establish conditions for excellent residential, commercial, and industrial developments. Such provisions shall not be construed as an obligation of the Town for the maintenance of such areas as parks or playgrounds.

Title 11, Parks and Recreation, establishes the authority and requirements for compliance with rules for use of parks and open space (Chapter 1) and establishes and identifies the duties of the Parks and Recreation Commission (Chapter 2). The Parks and Recreation Commission powers and duties include serving in an advisory capacity to the Town's decision-makers, Town Administrator, and department heads regarding parks and recreation; making recommendations regarding the budget for recreation and parks maintenance; assisting in planning the Town's recreation program and promoting the program; and making an annual report on its activities to the Council.

Town Code Title 3, Chapter 5, Article 2 Traffic Administration. This article establishes the Police Department as the traffic division under control of a police officer appointed by and directly responsible to the Police Chief. This article also establishes a Traffic Safety Committee, comprised of the Chief Administrative Officer, Chief of Police, and Traffic Engineer, to review requests for traffic control devices from Town staff and members of the public.

Town Code Section 3-5.301, Authority of Police and Fire Department Officials. This section states the duty of the officers of the Police Department is to enforce all street traffic laws of the Town and all of the State vehicle laws applicable to street traffic in the Town. Fire Department officers, when

at the scene of a fire or, when in the course of their duties they are protecting the personnel or equipment of the Fire Department, may direct or assist police officers in directing traffic.

Town Code Section 3-5.303, Obedience to Police and Fire Department officials. This section indicates that no person shall willfully fail or refuse to comply with any lawful order of a police officer or Fire Department official when such officer is directing traffic.

Town Code Section 3-3.801, California Fire Code. This section adopts the 2022 California Fire Code, International Fire Code (published by the International Fire Code Council, Inc., 2021 Edition), and Appendix A of the 2021 edition of the International Wildland-Urban Interface Code.

Town Code Section 3-3.802, Establishment and duties of the Fire Prevention Bureau. This section indicates that the Fire Prevention Bureau of the Fire Department shall enforce the 2022 California Fire Code, which consists of certain portions of the 2021 edition of the International Fire Code as amended by the California Building Standards Commission, and the 2021 edition of the International Fire Code, and Appendix A of the 2021 edition of the International Wildland-Urban Interface Code.

Town Code Section 10-2.301, Improvements required. This section of the Town Code lists required improvements for subdivisions. Improvements must provide water storage and distribution facilities needed for fire protection including, but not limited to, fire hydrants. Fire hydrants must be installed in accordance with Fire Department standards, the Uniform Fire Code, and NFPA Title 22 standards.

Ross Valley School District Developer Fee Schedule

The Ross Valley School District levies developer fees at $2.44 per square foot for residential development and $0.39 per square foot for commercial development.[20] The Ross Valley School District shares territorial jurisdiction with the Tamalpais Union High School District (TUHSD). The Developer Fee Revenue Allocation Agreement between the two districts, approved in 2017, allocates 70 percent of Level I fees to the Ross Valley School District and allocates the remaining 30 percent of Level I fees to TUHSD.[21]

Tamalpais Union High School District Developer Fee Schedule

According to the TUHSD 2024 Developer Fee Justification Study, a fee of $1.55 per square foot for residential construction and a fee of $0.25 per square foot for commercial/industrial construction is assessed on applicable permits pulled in the District.

[21] Ross Valley School District, 2017. Board of Trustees Regula Meeting, Recommended Approval of Developer Fee Sharing with the Tamalpais Union High School District. Available at: https://go.boarddocs.com/ca/rova/Board.nsf/goto?open&id=AFJF9X3E1963

2023 Parks and Recreation Commission Action Plan

The 2023 Parks and Recreation Commission Action Plan of San Anselmo outlines a strategic framework and set of actions aimed at enhancing and enriching the town's recreational offerings and public parks. Actions identified in the Action Plan include:

- Continually improve the condition of parks, in order to create a high quality, safe, diverse and enjoyable experience for all San Anselmo residents.
- Continue to build a strong connection between Parks & Recreation and the San Anselmo community.
- Work with local law enforcement and the Town Council to address issues related to the public safety and quality of the San Anselmo parks experience.

Sorich Ranch Park Master Plan

The Master Plan is a management plan and site design for Sorich Ranch Park. The Plan is based on community goals and professional park design principles. The primary goals of the project are:

- Protect the intrinsic values of Sorich Ranch Park as a quiet neighborhood park and open space that invites passive recreation, exploration, and relaxation.
- Emphasize the concept of a quiet gateway park and explorable, wild open space that captures, for all townspeople, the benefits of the rural past and natural environment of wooded hills, grasslands, hidden canyons and creeks close to the heart of San Anselmo. A refuge and resource for passive recreation at the head of the valley.

Community Facilities Master Plan

The San Anselmo Community Facilities Master Plan, published in 2015, identifies infrastructure improvements and expanded program options at Isabel Cook Community Center and Robson-Harrington Park and House to serve the existing and future recreational needs of San Anselmo residents. Created through extensive community engagement, the Plan identifies a design vision, site improvement strategies, parking solutions, and programming for both facilities. The Plan visualizes a newly constructed Isabel Cook Community Center and preserved Robson-Harrington Park and House, while vehicular parking issues onsite and along adjacent residential streets are mitigated. The Plan envisions flexible Town recreation and park facilities that adapt to changing needs of the residents while simultaneously embodying the distinctive character of San Anselmo. Lastly, the document plans for the long-term growth and development of the San Anselmo Recreation Department within the new community center, Robson-Harrington Park and House, and San Anselmo-at-large.

Capital Improvement Program – Parks and Open Space Projects

The 2024/2025 Draft Capital Improvement Plan (CIP) has identified a project list for parks capital expenditures throughout San Anselmo. Parks and open space projects are listed below in **Table 3.13-9**.

TABLE 3.13-9: DRAFT CAPITAL IMPROVEMENT PROGRAM – PARKS PROJECTS

FISCAL YEAR	*PROJECT/LOCATION*	*FUND*
FY 25/26	Creekside Commons Park Design	Creekside Commons Fund
FY 26/27	Creekside Commons Park Construction	Grants Fund
FY 26/27	Building Bridge 2 Removal	Measure J Fund
FY 24/25	Memorial Park Renovations	Measure J Fund
FY 24/25	Millennium Playground Improvements	Measure J Fund
FY 24/25	Memorial Park Restroom Update	Measure J Fund
FY 25/26	Hilldale Pocket Park - Phase 2 playground	Measure J Fund
FY 25/26	Sorich Park Parking Lot	Measure J Fund
FY 26/27	Sorich Park Trail Project	Active Transportation Fund
FY25/26 - FY 28/29	Stairs, Lanes, and Trails (SLTs) Program	Staff time

SOURCE: SAN ANSELMO - PROPOSED 5-YEAR CAPITAL IMPROVEMENT PROGRAM - FY 24/25 THROUGH FY 28/29.

2023 Open Space Committee Action Plan

The OSC Action Plan was approved by the Open Space Committee on October 25, 2023. The OSC Action Plan has not been reviewed by the Town Council. The plan aims to ensure the long-term preservation of open space while also facilitating public access, fundraising efforts, and coordination with relevant authorities and organizations. The action steps outlined in the Action Plan include:

1. Acquire and/or Protect Specific Priority Open Space Parcels in Accordance with The Town's General Plan: For each unprotected priority parcel, develop an action step and strategies for its protection, whether through acquisition or other type of long-term protection, such as a conservation easement, lease, or other means.
2. Revitalize Sorich Ranch Park Staging and Parking Area: Plan and implement tree and vegetation planting in the old staging area based on our vision; and landscape and restore the current parking area to permanently eliminate ongoing erosion.
3. Stairs, Lanes, and Trails Project: Identify and classify the Town's stairs, lanes, and trails (SLTs); as applicable, facilitate their construction or repair to improve access, safety, and to establish the Town's ownership for the benefit of pedestrians and bicycles, where appropriate.
4. Open Space Management Plan: Develop goals, objectives, standards, and guidelines for protection and restoration of San Anselmo Open Space; include process provisions with public notice, comment, and involvement for projects.
5. Update the Open Space Element of the San Anselmo General Plan: The San Anselmo General Plan's Open Space Element should be updated and refined with current goals and objectives for conservation of biological diversity and preservation of wildlife habitat based on updated scientific knowledge and should be reflected in our zoning code. Update and add to the priority open space parcels list to reflect recent successes and produce new maps for planning.
6. Fundraising: Continue raising funds for open space acquisition.
7. Communication and Outreach: Engage and inform the citizens of San Anselmo about their open space, the need for its protection, expansion, maintenance and restoration.

8. Create and Staff a New Environment and Natural Resources Department: In partnership with the Town's Climate Action Commission, Parks and Recreation Commission, and maybe even in collaboration with the Town of Fairfax, create an "Environment and Natural Resources Department," whose staff oversee and implement the Town's Climate Action Plan, sustainability plans, open space plans, and protect and restore the natural resources in our parks, open space, and other natural features in the town.

3.13.3 IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

The General Plan 2045 (available online at: https://sananselmogp2045.org/) is the primary document used as the basis for the environmental setting and the analysis in this section. Specifically, the Park, Recreation and Public Facilities Element, Circulation Element, and Safety Element address public services and recreation. Impacts related to public services and recreation were evaluated using the thresholds of significance listed below. Future development under the General Plan 2045 was reviewed to determine potential impacts to fire protection, police protection, schools, parks, and recreational facilities. The provision of recreational facilities and ability to fund their installation and maintenance is provided for at a statewide level under the Quimby Act, a regulation allowing cities to require dedication of land or payment of fees for parks and recreation as a condition of tentative or parcel map approval.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to public services and recreation.

PARK, RECREATION AND PUBLIC FACILITIES ELEMENT

Goal PR-A: Upgrade, maintain, and improve parks and recreational facilities to ensure safe, inclusive, sustainable, and accessible spaces for all ages, abilities, and user groups. Integrate climate-resilient design, native landscaping, and universal accessibility while supporting diverse recreational needs, including children, teens, older adults, people with disabilities, and dog owners.

Policy PR-A.1: Park and Facility Improvements. Regularly upgrade and replace aging or deficient Town facilities and parks to meet the community's recreational needs and enhance accessibility. Effectively balance the needs of various groups, including the aging community, children, teenagers, people with disabilities, and dog owners.

> **Action PR-A.1.a: Park Needs Assessment and Funding Strategy.** Every five years, conduct a community-informed assessment of park and facility needs using inclusive outreach methods to reach a broad cross-section of the community, and establish funding strategies to support ongoing improvements and long-term maintenance.

Action PR-A.1.b: Park and Recreation Master Plans. Prepare or update master plans, develop cost estimates, and identify funding sources to improve neighborhood and community parks and recreation facilities, including the following:

- All Parks: Identify and implement accessibility improvements to ensure all parks, playgrounds, and facilities are usable by children, older adults, and people with all abilities. Incorporate landscaping improvements that support biological diversity and climate resilience through the increased use of California native plants, prioritizing locally native plant species where they best meet site needs and functions.
- Robson-Harrington House and Park: Identify and prioritize needed maintenance, structural repairs, accessibility upgrades, and supporting infrastructure improvements, such as a public restroom facility, to enhance public use of the mansion, improve the surrounding landscape, and restore and preserve of historic features.
- Sorich Park: Update the park master plan, including consideration of possible relocation of the Town's corporation yard and/or visual enhancements that would improve the interface with the adjacent public uses.
- Isabel Cook Community Center: Identify improvements or potential redevelopment options, including the feasibility or a new or substantially modernized community center, to support programs that evolve with community needs, consistent with the 2015 Community Facilities Master Plan. Develop cost estimates and identify possible funding sources.
- Memorial Park: Continue the phased implementation of the adopted master plan. If the opportunity arises, consider minor updates to the plan.
- Creek Park: Implement the planned improvements to Creek Park.

Action PR-A.1.c: Parkland Expansion Strategy. Evaluate opportunities to expand the Town's park system, including new pocket parks, and amend the Municipal Code to establish a parkland dedication and in-lieu fee ordinance consistent with the Quimby Act, ensuring new subdivisions contribute to meeting community park needs. Assess the feasibility of exemptions for deed-restricted affordable units and regularly update in-lieu fees to reflect current and anticipated land and facility costs.

Goal PR-C: Provide high-quality public facilities and infrastructure that meet the needs of current and future residents, businesses, and visitors in the most efficient and cost-effective ways possible.

Policy PR-C.1: Ongoing Maintenance. Proactively maintain public facilities and infrastructure through ongoing preventative care, and ensure the timely repair, replacement, and upgrading of Town facilities, infrastructure, and equipment.

Action PR-C.1.a: Capital Improvement and Agency Coordination Program. Maintain and update a multi-year Capital Improvement Plan for Town infrastructure and facilities,

and coordinate with partner agencies to align projects, maximize resources, achieve economies of scale, and reduce construction impacts.

Action PR-C.1.b: Asset Management Program. Develop a proactive Asset Management Program to identify needed facility and infrastructure maintenance, upgrade, and replacement timing and costs. Seek additional funding opportunities and strategies to avoid increased costs of deferred maintenance.

CIRCULATION ELEMENT

Goal C-B: Continue improving the roadway network to ensure mobility, accessibility, and a high quality of life for all community members.

Policy C-B.4: Hillside Roadways. Allow limited improvements to existing roadways serving hillside properties on a case-by-case basis for restricted efforts such as spot widening and access/egress improvements. Efforts should be made to balance mobility and safety needs with the desire to maintain the residential identity.

SAFETY ELEMENT

Goal S-A: Promote a culture of resilience and preparedness within San Anselmo where all community members and businesses are informed, equipped, and prepared for natural and human-caused emergencies.

Policy S-A.17: Emergency Response Capability. Maintain a high level of emergency response capability to serve all members of the community effectively.

Action S-A.17.a: Budget for Emergency Services. Account for current and future emergency service needs during annual budgeting cycles.

Action S-A.17.b: Emergency Service Priorities. Regularly review and update the Town's priorities for future emergency service needs to reflect changing conditions and community needs.

Action S-A.17.c: Development Review. Consult Fire and Police staff in the development review process to ensure development adequately addresses service levels, security concerns, and safety.

Goal S-E: Prepare and ready the community to respond to fire hazards.

Policy S-E.4: Safety Standards in Fire Hazard Areas. Regularly re-evaluate specific fire hazard areas and adopt reasonable safety standards covering such elements as fuel modification around homes, adequacy of existing and future water supplies, fire flow tests, fire hydrants, routes or throughways for fire equipment access, clarity of addresses and street signs, and long-term maintenance.

Policy S-E.5: Code Consistency. Maintain consistency with the California Building and Fire Codes and Ross Valley Fire Department Standards and best practices.

Policy S-E.6: Public Facilities in High and Very High Fire Severity Zones. Prohibit new public/critical facilities (schools, hospitals, fire stations, etc.) from being located in High and Very High Fire Hazard Severity Zones to the greatest extent feasible. If located in these areas, require adequate fire response and evacuation capabilities.

Action S-E.7.a: Property Maintenance for Fire Control. Implement and enforce fire safety and vegetation management requirements on private property, including taking necessary fire prevention actions on undeveloped or hazardous sites and recovering associated costs from property owners. Provide comprehensive public education for residents and businesses on defensible space, vegetation management, landscaping practices, and fire hazard reduction strategies, using multiple communication channels.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact on public services and recreation if it would result in:

- Substantial adverse physical impacts associated with the provision of new or physically altered public facilities, need for new or physically altered public facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:
    - Fire Protection;
    - Police Protection;
    - Schools;
    - Parks; and
    - Other public facilities.
- An increase in the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or
- If it includes recreational facilities or requires the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

IMPACTS AND MITIGATION MEASURES

Impact 3.13-1: General Plan implementation could result in adverse physical impacts on the environment associated with the need for new fire protection facilities or the need for new or physically altered fire protection facilities, the construction of which could cause significant

environmental impacts and the provision of public services (Less than Significant)

Development and growth accommodated by the General Plan 2045 would result in increased demand for public services, including fire protection. The General Plan includes policies and actions to ensure that public services are provided at acceptable levels and that the Town will maintain and implement public facility master plans, in collaboration with appropriate outside service providers and other agencies, to ensure compliance with appropriate regional, State, and federal laws and to provide efficient public facilities and services to San Anselmo.

As the demand for services increases, there will likely be a need to address acceptable service ratios, response times, and other performance standards. New or expanded fire protection service structures will be needed to provide for adequate staffing, equipment, and appropriate facilities to serve growth in the Town.

Existing facilities may be expanded at their current location. New facilities may also be constructed. The Public Facilities land use designation would accommodate the majority of new fire protection facilities necessary to provide fire protection services. There would likely be environmental impacts associated with the construction or expansion of the facilities needed to provide this public service.

The General Plan 2045 does not propose or approve actual development projects, or the physical expansion of public facilities. As future development and infrastructure projects (including new fire protection facilities) are considered by the Town, each project will be evaluated for conformance with the General Plan 2045, Municipal Code, and other applicable regulations. Such development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Any future expansion of public facilities required by growth in the Town would be required to be reviewed for site-specific impacts.

As previously stated, new fire protection facilities will be needed to serve growth contemplated in the General Plan 2045. The environmental effect of providing public services, including fire protection, is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan does not propose or authorize development nor does it designate specific sites for new or expanded public facilities. However, the fire protection facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the public facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan. For example, operational and construction noise would increase as fire protection facilities are expanded. Additionally, water demands would increase as fire protection to serve new development is warranted. Further, development of fire protection facilities could result in removal of habitat for special-status species and/or disturbance of cultural resources sites. The impacts are described in the relevant chapters of this EIR. Any future development under the General Plan 2045 would be required to comply with regulations, policies, and standards included in the General Plan 2045, and would be subject to CEQA review as appropriate.

The General Plan 2045 includes a range of policies and actions to ensure that public services are provided in a timely fashion, are adequately funded, are coordinated between the Town and appropriate service agency, and that new development funds its fair share of services. Therefore, impacts related to the provisions and need for fire protection facilities are **less than significant**.

Impact 3.13-2: General Plan implementation could result in adverse physical impacts on the environment associated with the need for new police protection facilities or the need for new or physically altered police protection facilities, the construction of which could cause significant environmental impacts and the provision of public services (Less than Significant)

Development and growth accommodated by the General Plan 2045 would result in increased demand for public services, including law enforcement. The General Plan includes policies and actions to ensure that public services are provided at acceptable levels and that the Town will maintain and implement public facility master plans, in collaboration with appropriate outside service providers and other agencies, to ensure compliance with appropriate regional, State, and federal laws and to provide efficient public facilities and services to San Anselmo.

As the demand for services increases, there will likely be a need to address acceptable service ratios, response times, and other performance standards. New or expanded police protection service structures will be needed to provide for adequate staffing, equipment, and appropriate facilities to serve growth in the Town.

Existing facilities may be expanded at their current location. New facilities may also be constructed. The Public Facilities land use designation would accommodate the majority of new police protection facilities necessary to provide police protection services. There would likely be environmental impacts associated with the construction or expansion of the facilities needed to provide this public service.

The General Plan 2045 does not propose or approve actual development projects, or the physical expansion of public facilities. As future development and infrastructure projects (including new police protection facilities) are considered by the Town, each project will be evaluated for conformance with the General Plan 2045, Municipal Code, and other applicable regulations. Such development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Any future expansion of public facilities required by growth in the Town would be required to be reviewed for site-specific impacts.

As previously stated, new police protection facilities will be needed to serve growth contemplated in the General Plan 2045. The environmental effect of providing public services, including police protection, is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan 2045 does not propose or authorize development nor does it designate specific sites for new or expanded public facilities. However, the police protection facilities would be primarily

provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the public facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan. For example, operational and construction noise would increase as police protection facilities are expanded. Additionally, development of police protection facilities could result in removal of habitat for special-status species and/or disturbance of cultural resources sites. The impacts are described in the relevant chapters (Chapters 3.1 through 3.16, and 4.0) of this EIR. Any future development under the General Plan 2045 would be required to comply with regulations, policies, and standards included in the General Plan, and would be subject to CEQA review as appropriate.

The General Plan 2045 includes a range of policies and actions to ensure that public services are provided in a timely fashion, are adequately funded, are coordinated between the Town and appropriate service agency, and that new development funds its fair share of services. Therefore, impacts related to the provisions and need for police protection facilities are **less than significant**.

Impact 3.13-3: General Plan implementation could result in adverse physical impacts on the environment associated with the need for new school facilities or the need for new or physically altered school facilities, the construction of which could cause significant environmental impacts and the provision of public services (Less than Significant)

Development and growth accommodated by the General Plan 2045 would result in increased demand for public services, including schools. The General Plan includes policies and actions to ensure that public services are provided at acceptable levels and that the Town will maintain and implement public facility master plans, in collaboration with appropriate outside service providers and other agencies, to ensure compliance with appropriate regional, State, and federal laws and to provide efficient public facilities and services to San Anselmo.

As the demand for services increases, there will likely be a need to address acceptable service ratios, class sizes, and other performance standards. New or expanded school structures will be needed to provide for adequate staffing, equipment, and appropriate facilities to serve growth in the Town.

Existing school facilities could be expanded at their current location. New facilities may also be constructed. The Public Facilities land use designation would accommodate the majority of new school facilities necessary to provide school services. There would likely be environmental impacts associated with the construction or expansion of the facilities needed to provide this public service. However, State law (California Government Code Section 65996) identifies the payment of school impact fees as providing full and complete mitigation of a project's potential impact on school facilities. As such, a project cannot be denied on the basis that existing school facilities are inadequate. Each school district is responsible for implementing specific methods for mitigating school impacts under California Government Code Section 65996. Therefore, each subsequent developer would be required to comply with California Government Code Section 65996, through payment of developer impact fees, and potential impacts to school facilities would be deemed fully mitigated.

The General Plan 2045 does not propose or approve actual development projects, or the physical expansion of public facilities. As future development and infrastructure projects (including new school facilities) are considered by the Town, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Such development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Any future expansion of public facilities required by growth in the Town would be required to be reviewed for site-specific impacts.

As previously stated, new school facilities may be needed to serve growth contemplated in the General Plan 2045. The environmental effect of providing public services, including school services, is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan does not propose or authorize development, nor does it designate specific sites for new or expanded public facilities. However, the school facilities would be primarily provided on sites with land use designations that allow such uses or are intended for urbanization and the environmental impacts of constructing and operating the public facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan 2045. For example, operational and construction noise would increase as school facilities are expanded. Additionally, water demands, wastewater generation, and solid waste generation would increase as school facilities are developed to serve new development. Further, development of school facilities could result in removal of habitat for special-status species and/or disturbance of cultural resources sites. These impacts are described in the relevant chapters (Chapters 3.1 through 3.16, and 4.0) of this EIR. Any future development under the General Plan 2045 would be required to comply with regulations, policies, and standards included in the General Plan, and would be subject to CEQA review as appropriate. Furthermore, payment of developer impact fees as required by State law would fully mitigate impacts related school facilities resulting from the development of future projects accommodated by the General Plan 2045.

Under the provisions of SB 50, a project's impacts on school facilities are fully mitigated via the payment of the requisite new school construction fees established pursuant to Government Code Section 65995. Through payment by a development applicant or of special assessments by property owners and payment of any applicable impact fees would ensure that the proposed project's impact to school services are **less than significant.**

Impact 3.13-4: General Plan implementation could result in adverse physical impacts on the environment associated with the need for new park facilities or the need for new or physically altered park facilities, the construction of which could cause significant environmental impacts and the provision of public services (Less than Significant)

Development and growth accommodated by the General Plan 2045 would result in increased demand for public services, including parks. The General Plan 2045 includes policies and actions to ensure that public services are provided at acceptable levels and that the Town will maintain and implement public facility master plans, in collaboration with appropriate outside service providers

and other agencies, to ensure compliance with appropriate regional, State, and federal laws and to provide efficient public facilities and services to San Anselmo.

As the demand for services increases, there will likely be a need to address acceptable service ratios, response times, and other performance standards. New or expanded park and recreation structures (e.g., park maintenance buildings, parks, trails, etc.) will be needed to provide for adequate staffing, equipment, and appropriate facilities to serve growth in the Town.

Existing facilities may be expanded at their current location. New facilities may also be constructed. The Parks land use designation would accommodate the new park and recreational facilities necessary to provide recreational services. Passive recreational facilities are also allowed in the Open Space land use designations. There would likely be environmental impacts associated with the construction or expansion of the facilities needed to provide this public service.

The General Plan 2045 does not propose or approve actual development projects, or the physical expansion of public facilities. As future development and infrastructure projects (including new park and recreational facilities) are considered by the Town, each project will be evaluated for conformance with the General Plan 2045, Municipal Code, and other applicable regulations. Such development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Any future expansion of public facilities required by growth in the Town would be required to be reviewed for site-specific impacts.

As previously stated, new park and recreational facilities will be needed to serve growth contemplated in the General Plan. The environmental effect of providing public services, including park and recreational facilities, is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan 2045 does not propose or authorize development nor does it designate specific sites for new or expanded public facilities. However, the park and recreational facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the public facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan 2045. For example, operational and construction noise would increase as park facilities are expanded. Additionally, water demands, wastewater generation, and solid waste generation would increase as park facilities are developed to serve new development. Further, development of park facilities could result in removal of habitat for special-status species and/or disturbance of cultural resources sites. These impacts are described in the relevant chapters (Chapters 3.1 through 3.16, and 4.0) of this EIR. Any future development under the General Plan 2045 would be required to comply with regulations, policies, and standards included in the General Plan, and would be subject to CEQA review as appropriate.

The General Plan 2045 includes a range of policies and actions to ensure that public services are provided in a timely fashion, are adequately funded, are coordinated between the Town and appropriate service agency, and that new development funds its fair share of services. Therefore, impacts related to the provision and need for park and recreational facilities would be **less than significant**.

Impact 3.13-5: General Plan implementation could result in adverse physical impacts on the environment associated with the need for other public facilities or the need for new or physically facilities, the construction of which could cause significant environmental impacts and the provision of public services (Less than Significant)

Development and growth accommodated by the General Plan 2045 would result in increased demand for public services, including other public facilities. Other public facilities in the Planning Area include the San Anselmo Town Hall, San Anselmo Library, and San Anselmo Historical Museum. The General Plan includes policies and actions to ensure that public services are provided at acceptable levels and that the Town will maintain and implement public facility master plans, in collaboration with appropriate outside service providers and other agencies, to ensure compliance with appropriate regional, State, and federal laws and to provide efficient public facilities and services to San Anselmo.

As the demand for services increases, there will likely be a need to address acceptable service ratios, response times, and other performance standards. New or expanded public facilities and structures will be needed to provide adequate staffing, equipment, and appropriate facilities to serve growth in the Town.

Existing facilities may be expanded at their current location. New facilities may also be constructed. The Public Facilities and Parks land use designations would accommodate the new public facilities necessary to provide public services. There would likely be environmental impacts associated with the construction or expansion of the facilities needed to provide this public service.

The General Plan 2045 does not propose or approve actual development projects, or the physical expansion of public facilities. As future development and infrastructure projects (including new and/or expansion of existing public facilities) are considered by the Town, each project will be evaluated for conformance with the General Plan 2045, Municipal Code, and other applicable regulations. Such development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. Any future expansion of public facilities required by growth in the Town would be required to be reviewed for site-specific impacts.

As previously stated, new and/or expanded public facilities will be needed to serve growth contemplated in the General Plan 2045. The environmental effect of providing public services, including public facilities, is associated with the physical impacts of providing new and expanded facilities. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan 2045 does not propose or authorize development, nor does it designate specific sites for new or expanded public facilities. However, the public facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the public facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan 2045. For example, operational and construction noise would increase as other public facilities are expanded. Additionally, water demands would increase as other public facilities to serve new development is

warranted. Further, development of other public facilities could result in removal of habitat for special-status species and/or disturbance of cultural resources sites. These impacts are described in the relevant chapters (Chapters 3.1 through 3.16, and 4.0) of this EIR. Any future development under the General Plan 2045 would be required to comply with regulations, policies, and standards included in the General Plan, and would be subject to CEQA review as appropriate.

The General Plan includes a range of policies and actions to ensure that public services are provided in a timely fashion, are adequately funded, are coordinated between the Town and appropriate service agency, and that new development funds its fair share of services. Therefore, impacts related to the provisions and need for public facilities are **less than significant**.

Impact 3.13-6: General Plan implementation may result in adverse physical impacts associated with the deterioration of existing parks and recreation facilities or the construction of new parks and recreation facilities (Less than Significant)

Growth accommodated under the General Plan would include a range of uses that could increase the population of the Town and also attract additional workers and tourists to the Town. Such growth would result in increased demand for parks and recreation facilities. It is anticipated that over the life of the General Plan 2045, use of parks, trails, and recreation facilities would increase, due to new residents and businesses. The additional demand on existing parks and recreational facilities would increase the need for maintenance and improvements. These improvements could have environmental impacts, although the exact impacts cannot be determined since the potential improvements are unknown.

The Town does not currently have an ordinance that establishes a minimum park acreage to be provided per resident. However, General Plan 2045 Action PR-A.1.c would require the Town to evaluate opportunities to expand the Town's park system, including new pocket parks, and amend the Municipal Code to establish a parkland dedication and in-lieu fee ordinance consistent with the Quimby Act.

The Town recognizes the need to provide parks and recreation facilities and proposes Action PR-A.1.a would require the Town to conduct a community-informed assessment of park and facility needs every five years and establish funding strategies to support ongoing improvements and long-term maintenance. To further assess the town's needs, General Plan 2045 Action PR-A.1.b requires the Town to prepare or update master plans, develop cost estimates, and identify possible funding sources to improve neighborhood and community parks and recreation facilities. The provision of new parks and recreation facilities would reduce the potential for adverse impacts and physical deterioration of existing parks and recreation facilities, by providing additional facilities to accommodate the demand for parks and recreation facilities. These new facilities would be provided at a pace and in locations appropriate to serve new development, as required pursuant to the Quimby Act.

As noted previously, the provision of recreational facilities and ability to fund their installation and maintenance is provided for at a statewide level under the Quimby Act, a regulation allowing cities

to require dedication of land or payment of fees for parks and recreation as a condition of tentative or parcel map approval. Future development would be required to dedicate land for park uses or fund its fair share for required parkland, resulting in new parkland and recreation facilities to accommodate the demand associated with new development.

Any new parks or recreational facilities that may be constructed in the future would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the parks and recreational facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan. These impacts are described in the relevant chapters (Chapters 3.1 through 3.16, and 4.0) of this EIR. Any future development under the General Plan would be required to comply with regulations, policies, and standards included in the General Plan, and would be subject to CEQA review as appropriate. Therefore, impacts related to the provisions and need for park and recreational facilities are **less than significant**.

Impact 3.13-7: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to public services and recreation. (Less than Significant)

The cumulative setting for public services and facilities would include all areas covered in the service areas of the Ross Valley Fire Department (RVFD), Central Marin Police Authority (Authority), the Town of San Anselmo Recreation Department and Marin County Open Space District, the Ross Valley School District, and the Tamalpais Union High School District (TUHSD).

The RVFD provides fire protection services to the communities of Ross, San Anselmo, Fairfax, and Sleepy Hollow. The Authority provides police protection services to the communities of Larkspur, Corte Madera, San Anselmo, and portions of Greenbrae. Cumulative growth in these areas will result in increased demand for public services, including fire protection and police protection. As the demand for fire protection service and police protection service increases, there will likely be a need to address acceptable service ratios, response times, and other performance standards. New or expanded service structures (e.g., offices, maintenance and administrative buildings, fire facilities, police facilities, etc.) will be needed to provide for adequate staffing, equipment, and appropriate facilities to serve growth within the RVFP and Authority service areas. The increased demand for fire protection services and police protection services, including the potential for new or expanded facilities which could have a physical effect on the environment, could result in a potentially significant cumulative impact.

Development and growth facilitated by the General Plan 2045 would result in increased demand for fire protection and law enforcement services. The General Plan 2045 includes a range of policies and actions that would ensure that public services are provided in a timely fashion, are adequately funded, are coordinated between the Town and appropriate service agency, and that new development funds its fair share of services. The General Plan 2045 includes policies to ensure that fire protection and law enforcement services keep pace with new development. Implementation of the General Plan 2045 policies would ensure that the Town maintains acceptable service ratios and

the proposed project's contribution to the cumulative impact would not be considerable, and the cumulative impact on fire and police protection services would be **less than significant.**

The San Anselmo Recreation Department provides recreational services and facilities primarily to the residents of San Anselmo. Some recreational amenities, such as open space trails, may provide recreational opportunities to a wider geographic service area, although use of Town facilities by out-of-town users is negligible. As the San Anselmo Recreation Department's service area does not expand beyond the town boundaries, the cumulative impact on park and recreation facilities would be the same as the project-specific impact. As described in Impact 3.13-4 and Impact 3.13-6, the General Plan 2045 includes a range of policies and actions to ensure that public services are provided in a timely fashion, are adequately funded, are coordinated between the Town and appropriate service agency, and that new development funds its fair share of services.

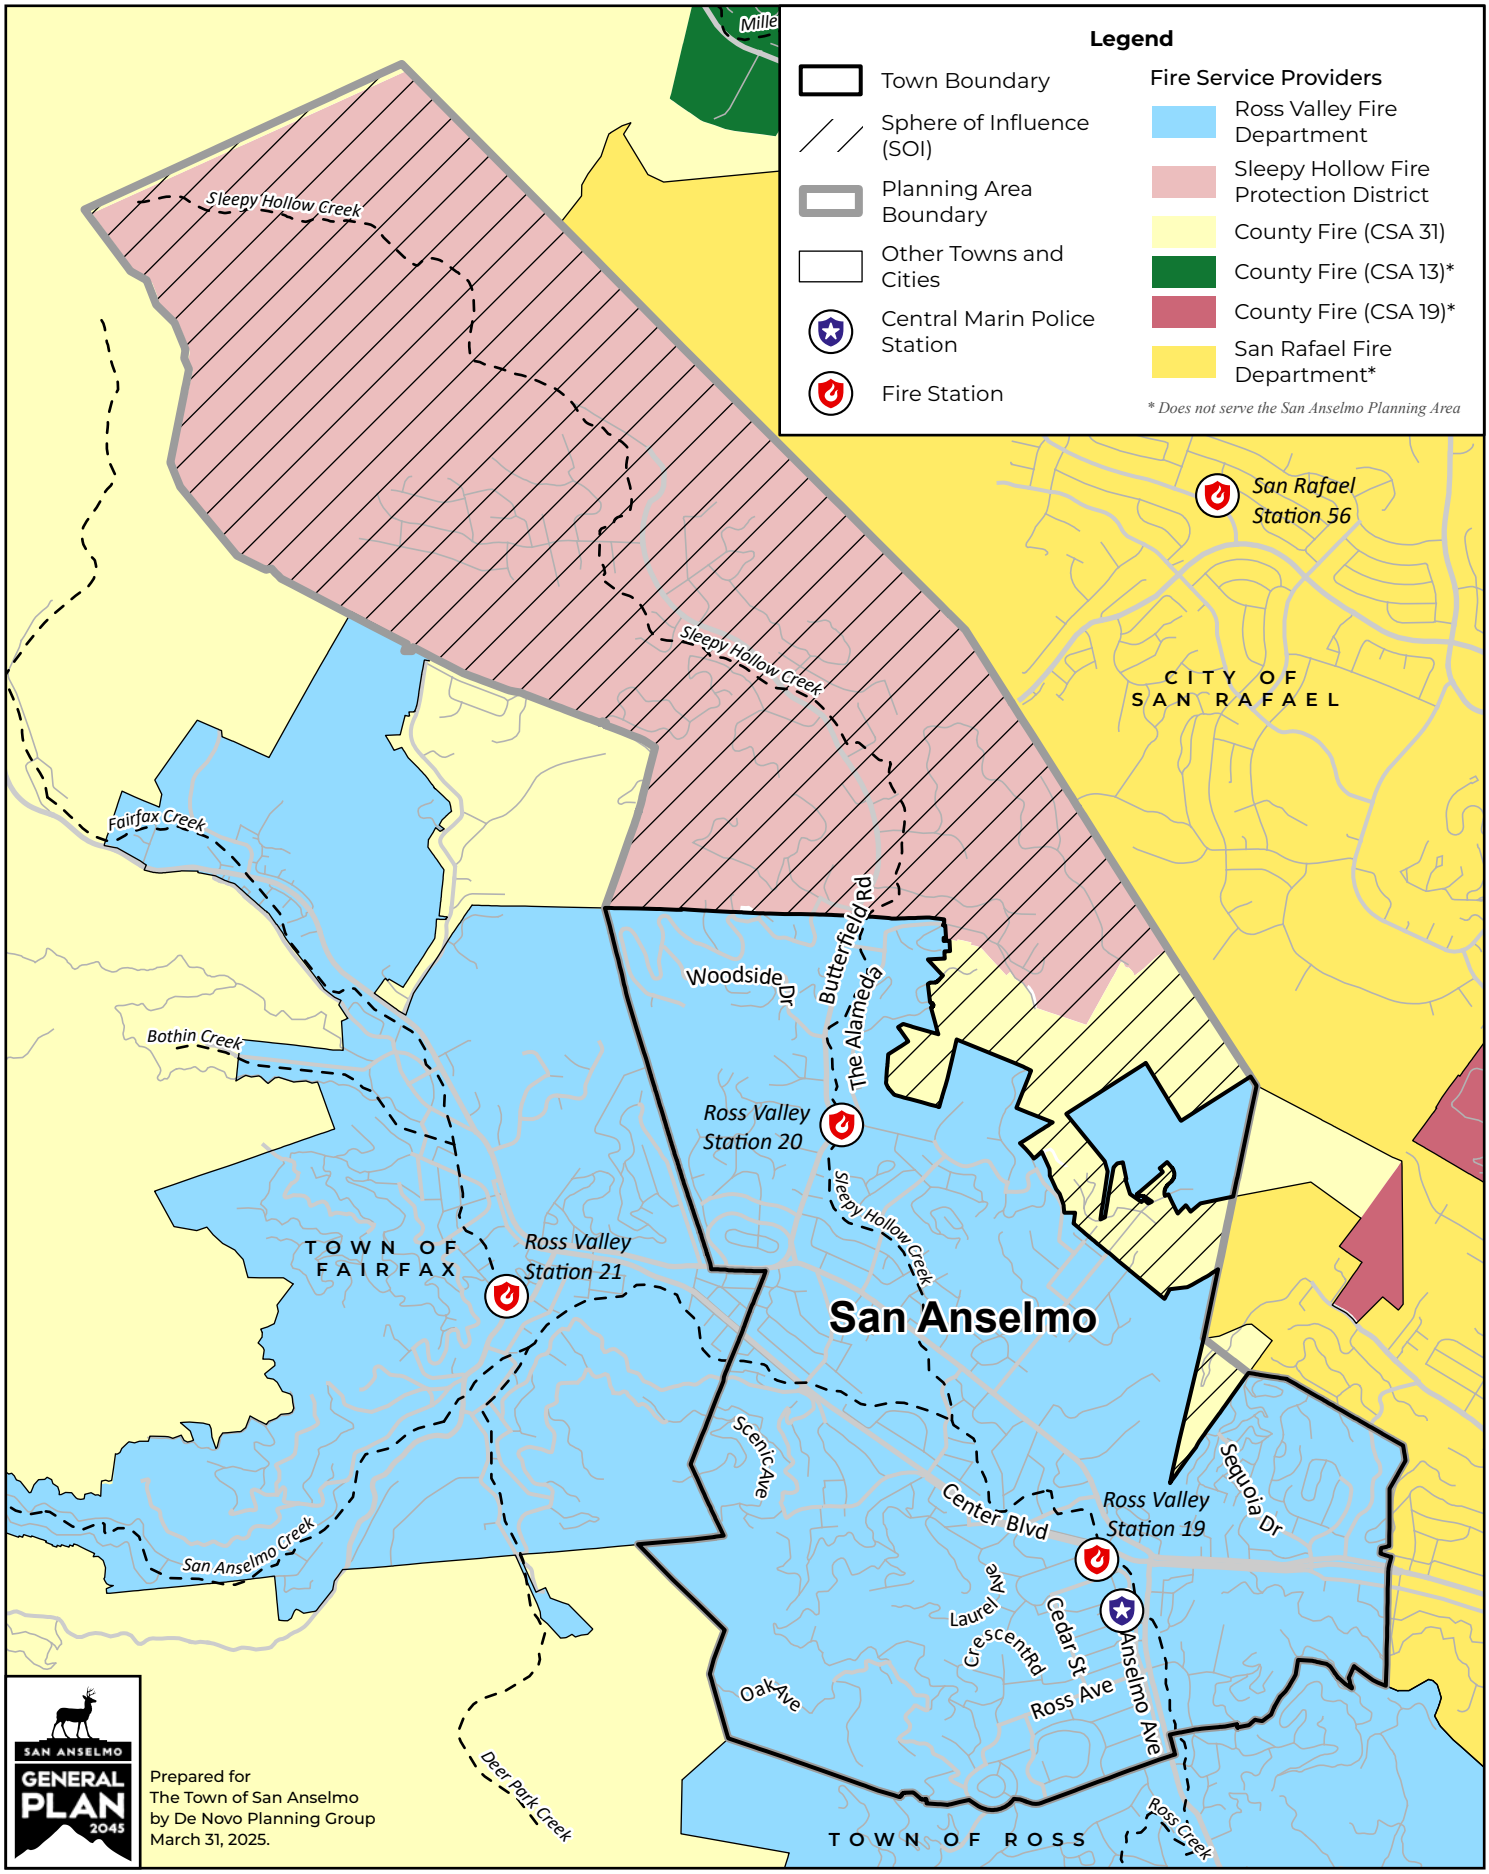

The Marin County Open Space District could experience increased recreational demand as growth in the county continues. The District manages approximately 18,500 acres of parks and open space including preserves, pathways, parks, bike and skate parks, a public pool, boat launch, and other public recreational facilities. In June 2022, Marin County voters approved re-implementation of Parks Measure A, a quarter-cent sales tax to support parks and open space, sustainable agriculture, and recreation in cities and towns, in effect until 2031. Ongoing maintenance and acquisition of additional lands would keep up with regional growth. Therefore, cumulative impacts related to the provision and need for park and recreational facilities would be **less than significant**.

The Ross Valley School District provides educational services to elementary and middle school students in San Anselmo and Fairfax. In June 2026, Marin County voters passed Ross Valley Elementary School District Measure H which would, "…continue local funding that preserves excellent education for Ross Valley School District students, including: maintaining core academic programs in science, technology, engineering, math, reading and writing; maintaining manageable class sizes; and attracting/retaining highly qualified teachers; by renewing the expiring current $742 parcel tax, while adding $540 per parcel, providing $8,600,000 annually for 10 years, with senior exemptions, 3% annual adjustments, independent oversight, no funds for administrators, and all funds staying local…" This parcel tax would provide funding for school facilities and services within the RVSD. The RVSD does not have plans to expand its existing school facilities or construct new facilities. The combination of Measure H funds and SB 50 fees collected at the time of proposed development would ensure that student growth within the RVSD would be fully mitigated, and the cumulative impact would be **less than significant**.

The TUHSD provides high school services to the communities of Sausalito, Marin City, Mill Valley, Corte Madera, Larkspur, Tiburon, Belvedere, Bolinas, Stinson Beach, Kentfield, Greenbrae, Ross, Ross Valley, San Anselmo, Fairfax, San Geronimo, Nicasio, Lagunitas, Woodacre, and various unincorporated county areas. In November 2024, Marin County voters passed Tamalpais Union High School District Measure B, "To complete high priority repairs and upgrades at local high schools, including replacing classrooms/ science labs/ technology; repairing/ replacing leaky roofs and inefficient heating/ cooling/ electrical/ plumbing systems; updating art/ music classrooms/ facilities;

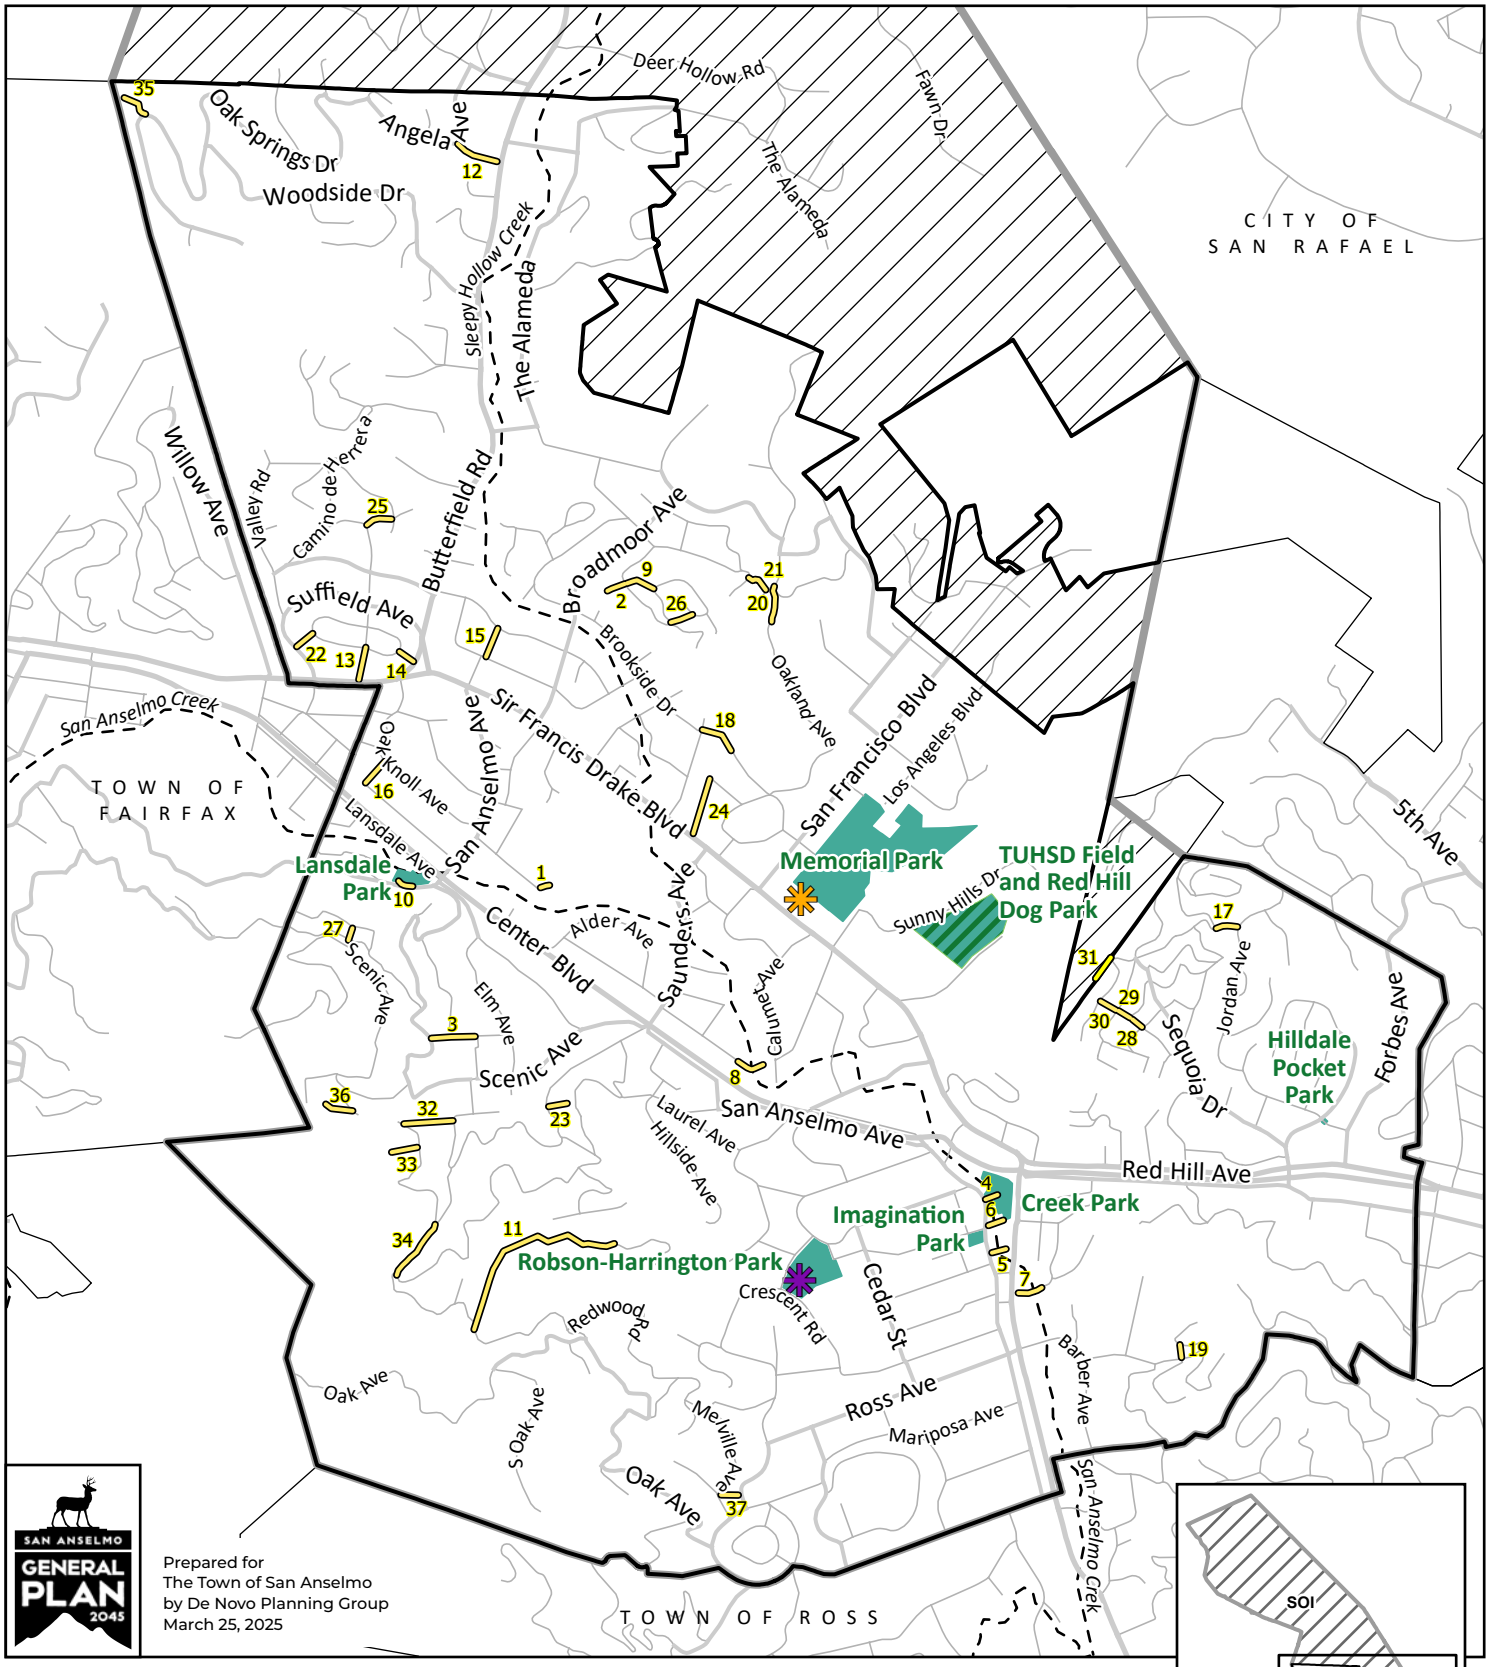

and replacing outdated portable classrooms, shall Tamalpais Union High School District's measure be adopted authorizing $289,000,000 in bonds at legal rates, levying $18 per $100,000 assessed value while bonds are outstanding ($20,700,000 annually) with independent oversight, audits, no funds for administrators and all funds locally controlled." This bond would provide funding for school facilities and services within the TUHSD. The TUHSD would implement facility improvements and expansions in accordance with the TUHSD Long Range Facility Master Plan (2022).[22] Improvements or expansions associated with TUHSD facilities would be subject to their own environmental review. However, SB 50 fees collected at the time of proposed development would ensure that student growth within the TUHSD would be fully mitigated, and the cumulative impact would be **less than significant**.

TOWN FACILITIES MAP

This chapter describes the potential impacts to the roadway, transit, bicycle, and pedestrian components of the Town's transportation system as well as roadway safety. The transportation analysis has been prepared to satisfy CEQA requirements by Parametrix in support of the General Plan 2045. To provide context for the impact analysis, this chapter begins with a discussion of the environmental setting, which is a description of the existing physical and operational conditions for the transportation system. The chapter then presents the regulatory framework influencing the transportation system and providing the basis for impact significance thresholds used in the impact analysis. The chapter concludes with the impact analysis findings and recommended mitigation measures.

In compliance with the California Environmental Quality Act (CEQA) Guidelines and Senate Bill 743 (SB 743), the analysis of each transportation mode is based on applicable technical guidance and Town of San Anselmo decisions regarding methodology, impact significance criteria, and feasible mitigation. Vehicle-related impacts are evaluated based on changes in vehicle miles traveled (VMT), which represents the total distance traveled by vehicles associated with trips that begin or end in San Anselmo. For transit, bicycle, and pedestrian system components, impacts are evaluated based on whether the plan would disrupt existing facilities or services or interfere with planned improvements. Safety impacts are evaluated by assessing whether proposed transportation network changes would be consistent with applicable design standards, which are intended to provide consistent user expectations and reduce conflicts among travel modes that could result in collisions.

3.14.1. ENVIRONMENTAL SETTING

San Anselmo is located in central Marin County, north of San Francisco. The town is bounded by the Town of Ross to the south, the Town of Fairfax to the west, the City of San Rafael to the east, and unincorporated Marin County to the north. San Anselmo is situated within the Ross Valley, characterized by a mix of residential neighborhoods, commercial areas, and open space. Sir Francis Drake Boulevard, Center Boulevard, and Red Hill Avenue are major arterial roadways that traverse the Town and function as primary east–west routes through central Marin County, providing regional connections between the Ross Valley communities and U.S. 101 in San Rafael, which serves as the primary north–south transportation corridor in Marin County, connecting major population centers to destinations to the south, including San Francisco, and to northern Marin County and Sonoma County.

Although commute trips generally comprise approximately 20 percent of all trips on the circulation network, commute data provide insight into travel patterns that influence peak-period operating conditions. The U.S. Census Bureau's American Community Survey (ACS) provides commute mode split estimates for San Anselmo using five-year pooled data to improve statistical reliability; the most recent available dataset spans 2018–2022. Although this period includes the COVID-19 pandemic, the data in **Table 3.14-1** provides context for how San Anselmo residents travel to work compared to Marin County, California, and the nation.

San Anselmo workers commute by single occupancy vehicle and carpool at higher rates than Marin County overall, but at lower rates than California and the nation. Approximately five percent of San Anselmo workers walk to work, which is relatively high compared to countywide (2.9 percent) and statewide (2.4 percent) averages. Bicycle commute rates in San Anselmo (1.5 percent) also exceed countywide, statewide, and national averages. In addition, nearly one-quarter of San Anselmo workers report working from home, consistent with broader Marin County trends and indicative of changing commute patterns following the COVID-19 pandemic.

TABLE 3.14-1: WORK COMMUTE MODE SPLITS

TRAVEL MODE	*NATION*	*STATE*	*MARIN COUNTY*	*SAN ANSELMO*
Drive Alone	71.7%	68.4%	55.6%	60.2%
Carpool	8.5%	9.5%	7.5%	3.5%
Public Transit	3.8%	3.6%	5.9%	4.4%
Bicycle	0.5%	0.7%	1.0%	1.5%
Walk	2.4%	2.4%	2.9%	5.0%
Other	1.4%	1.7%	1.0%	1.0%
Work At Home	11.7%	13.6%	25.9%	24.4%

ROADWAY SYSTEM

San Anselmo's roadway network consists of arterial and collector streets that serve local and regional traffic. The major roadways are summarized below and shown in **Figure 3.14-1**.

Arterial Streets

Sir Francis Drake Boulevard is a four-lane arterial that extends between Fairfax and Ross. North of the Hub, the posted speed limit is 30 mph. South of the Hub, the roadway includes a median separating directions of travel and has a 35-mph posted speed limit.

Center Boulevard is a two-lane arterial spanning between Fairfax and the Hub. The speed limit is 30 mph. The roadway does not include bicycle facilities, and sidewalks are discontinuous.

Red Hill Avenue is a four-lane divided arterial that connects the Hub with San Rafael and has a speed limit of 35 mph. The roadway does not include bicycle facilities, and a sidewalk exists along the north side of the westbound travel lanes. Mixed commercial uses occur along the corridor, including several sites in the segment between Hilldale Drive and the Town's eastern boundary.

Butterfield Road is a two-lane arterial linking Sleepy Hollow with Sir Francis Drake Boulevard. The posted speed limit is 25 mph. Sidewalks are discontinuous (primarily on the east side), and the roadway includes on-street bicycle lanes.

Collector Streets

San Anselmo Avenue is a collector street that connects neighborhoods and serves as the main street of the downtown area. The posted speed limit is 25 mph, and the street provides access to local

shops, restaurants, and community services. San Anselmo Avenue is a Class III bicycle route, and sidewalks are discontinuous.

Other residential collector streets include San Francisco Boulevard, Broadmoor Avenue, Forbes Avenue, Ross Avenue, Bolinas Avenue, Greenfield Avenue, Sequoia Drive, Hilldale Avenue, Barber Avenue, and Saunders Drive. All remaining streets in San Anselmo are classified as local residential streets.

Vehicle Miles Traveled

Vehicle miles traveled (VMT) is a measurement of miles traveled by vehicles for a specified time period and refers to the amount and distance of automobile travel. VMT is calculated based on the sum of individual vehicle trips generated and their associated trip lengths. The use of VMT as a performance measure allows for the evaluation of fuel consumption by motor vehicles for distances traveled and impacts associated with greenhouse gas (GHG) emissions. Increases in VMT for gasoline-powered vehicles would cause an increase in the GHG emissions from vehicles making these trips.

The Transportation Authority of Marin (TAM) has developed an activity-based travel demand model that represents a detailed reflection of the circulation network and land use patterns in Marin County. The model utilizes socioeconomic inputs aggregated into geographic areas called transportation analysis zones (TAZ) to estimate per capita VMT and forecast future travel patterns.

Table 3.14-2 summarizes VMT outputs from the TAM travel demand model, comparing San Anselmo with Marin County and the broader Bay Area region. The model forecasts a decrease in home-based VMT for San Anselmo residents between 2022 and 2050, reflecting projected demographic trends, changing travel behavior, and local jobs-housing relationships within the town. Similar reductions are projected countywide and regionally, consistent with broader planning efforts to reduce automobile dependence through improved land use patterns, expanded transportation options, and increased opportunities for walking, bicycling, transit use, and remote work.

TABLE 3.14-2: VEHICLE MILES TRAVELED ESTIMATES FOR SAN ANSELMO, MARIN COUNTY, AND BAY AREA

JURISDICTION	*VMT PER RESIDENT (RESIDENCE IS IN JURISDICTION)*		*VMT PER WORKER (JOB IS IN JURISDICTION)*	
	2022	*2050*	*2022*	*2050*
San Anselmo	11.8	11.3	15.6	14.4
Marin County	14.9	13.5	17.2	14.4
Bay Area	11.9	10.7	13.0	10.4

SOURCE: TRANSPORTATION AUTHORITY OF MARIN, 2026.

PUBLIC TRANSPORTATION SYSTEM

San Anselmo's public transit services are provided by Marin Transit and Golden Gate Transit. Marin Transit operates local bus routes connecting San Anselmo to nearby communities such as Fairfax and San Rafael, while Golden Gate Transit provides regional service to San Francisco and other Bay Area destinations. Access to transit stops is supported by the local pedestrian network and, where

available, bicycle facilities that connect residents and visitors to bus corridors and the downtown area.

The San Anselmo Hub functions as the Town's central transit transfer location and serves as a key stop for routes operated by Marin Transit and Golden Gate Transit, as shown in **Figure 3.14-2**. The Hub is one of the most heavily utilized transit centers in Marin County. Four bus routes operate along the Red Hill corridor; three of these routes provide headways of 30 minutes or less during peak periods, representing one of the highest service levels in the county outside the U.S. 101 corridor. Longer-term regional planning efforts continue to evaluate future transit needs and service provision along the Red Hill Avenue and Sir Francis Drake Boulevard corridors.

Golden Gate Transit

Golden Gate Transit operates bus service between Marin County and regional destinations, including San Francisco and the East Bay. Route 132 provides service between San Anselmo and San Francisco with 30-minute headways during the morning and afternoon peak periods.

Marin Transit

Marin Transit operates local bus and community-based transit services within Marin County. In San Anselmo, key routes include 22, 23, 68, and 228, with service levels that are generally comparable to pre-pandemic conditions. Route 23 is among Marin Transit's highest ridership routes. Route 625 is a school-focused route that operates one weekday afternoon trip from White Hill Middle School (Fairfax) south along Sir Francis Drake Boulevard, passing Archie Williams High School, to the Hub. Marin Transit also provides additional mobility services countywide, including yellow school bus service for local schools, paratransit, and dial-a-ride programs.

Marin Access Paratransit

Marin Access Paratransit provides reservation-based transportation for persons with disabilities who are unable to use fixed-route Marin Transit or Golden Gate Transit service. Service is generally available within ¾ mile of fixed-route Marin Transit service areas and operates during regular service hours consistent with program requirements.

BICYCLE AND PEDESTRIAN SYSTEM

This section describes the bicycle and pedestrian network in San Anselmo.

Bicycle Facilities

In addition to facilitating bicycle travel on all roadways, some routes are designated as specific bicycle facilities in accordance with the California Department of Transportation's Highway Design Manual and by specific local design aspects that achieve connectivity to important destinations. Existing bikeways in San Anselmo are displayed in **Figure 3.14-3**, and are comprised of the following facility types:

- **Class I Shared Use Paths** provide a completely separated right-of-way for the exclusive use of bicycles, pedestrians, and other non-motorized modes. There are currently no designated

Class I paths in San Anselmo, though some paths in recreational areas may be classified as such.

- **Class II Bikeway -** Often referred to as a "bike lane," a Class Il bikeway provides a striped lane for one-way travel on a street or highway. Currently, there are bicycle lanes on Butterfield Road and at the Hub Intersection

- **Class III Bikeway -** Generally referred to as a "bike route," a Class Ill bikeway provides for shared use with motor vehicle traffic and is identified by signing and shared roadway bicycle pavement markings, also known as "sharrows." Class III Bikeways serve bicycles on streets which serve as routes connecting to other bicycle facilities or where bicycle lanes or paths are not feasible. Currently there are bikeways on Greenfield Avenue, San Anselmo Avenue and San Francisco Boulevard.

- **Class IIIS Bikeway** - Similar to bike routes, Class IIIS bikeways feature a green-backed sharrow in the vehicular travel lane. The Town of San Anselmo has been routinely upgrading the older Class III bikeways to Class IIIS when possible. Currently there are Class IIIS bikeways on Bolinas Avenue, section of San Anselmo Avenue and a few other local streets. Much of these Class IIIS bikeways comprise the Town's Bike Spine project, which is a system of bikeways that are specially designated and signed as a "School Route". These routes were identified as primary bicycling routes for schoolchildren to use. Special "School Route" signage is placed along the route to both alert drivers and assist in keeping the routes clearly identified. The town shares this unique bike routing system for schoolchildren with Fairfax

- **Class IV Separated Bikeways** on-street bicycle facilities that include physical protection from vehicle traffic. This separation might include a curb, on-street parking, flexible bollards, or concrete planters. Class IV bikeways may provide for one-way or two-way travel on each side of the roadway. There are currently no Class IV bikeways in San Anselmo.

Parts of the Marin County countywide bicycle network traverse through San Anselmo. County Bicycle Routes 20 (connecting West Marin to San Quentin) and 24 (connecting San Anselmo to Point San Pedro via San Rafael) cross at the Hub.

Pedestrian Facilities

San Anselmo has sidewalks along major roads such as Sir Francis Drake Boulevard and the north side of Red Hill Avenue, ensuring pedestrian access along the major corridors through town. The downtown area experiences high levels of pedestrian activity, where sidewalks provide individuals with access to important destinations such as schools, retail services, the post office, and the library. Students, pedestrians of all abilities, dog walkers, and other residents and visitors regularly utilize the sidewalk network.

Certain roadways, particularly in residential areas, have segments of sidewalks in poor condition. Many hillside neighborhoods, due to narrow roadway widths and topographical conditions, have discontinuous sidewalks or do not have a designated pedestrian walkway along the street. Sidewalk construction in these areas presents an engineering challenge due to narrow public rights-of-way

and steep hillsides fronting the roadside. Lack of contiguous sidewalks can present safety concerns for pedestrians, especially the most vulnerable users.

STAIRS, LANES AND TRAILS

San Anselmo also boasts a network of stairs, lanes, and trails that enrich its pedestrian infrastructure, as shown in **Figure 3.14-4**. The stairways, historically constructed as shortcuts from hillside neighborhoods to lower-lying areas where transportation hubs like train terminals were located, continue to serve as vital pedestrian pathways.

SAFETY

The San Anselmo Local Road Safety Plan analyzed crash data for the five most recent finalized years of data (between 2017-2021) from the University of California, Berkeley's SafeTREC Transportation Injury Mapping System to determine existing roadway crash trends. As shown in **Table 3.14-3**, there were a total of 126 reported crashes in San Anselmo during this time period, including two fatal crashes, one of which involved a pedestrian, as shown in **Figure 3.14-5**. Other conclusions include:

- Unsafe speeds account for almost 32 percent of injury crashes, higher than the county's rate of 26 percent.
- The number of crashes resulting in injury decreased by 11 percent from the prior five-year reporting period.
- Approximately 25 percent of crashes involved bicyclists, compared to 19 percent of crashes countywide. These crashes tended to be concentrated in the downtown area.
- 10 percent of crashes involved pedestrians, and 46 percent of pedestrians involved in crashes were crossing in a crosswalk at the time of the crash.
- Youths and older adults were involved in a higher percentage of injury crashes in San Anselmo compared to countywide rates.
- Right-of-way violations, improper turning, and traveling under the influence caused 14 percent, 13 percent, and 10 percent of collisions, respectively

The segment of San Anselmo Avenue running through the downtown area has seen over 330 crashes per 100 million vehicle miles traveled, which ranks among the highest crash rate roadways in Marin County. From 2017 to 2021, 32 of the 126 crashes in San Anselmo involved a bicyclist; of these, 15 occurred on San Anselmo Avenue between Hazel Avenue to Bolinas Avenue.

TABLE 3.14-3: REPORTED CRASHES BY CRASH SEVERITY, 2017-2021

CRASH SEVERITY	*TOTAL CRASHES*
Fatal	2
Severe Injury	8
Visible Injury	86
Complaint of Pain	30
Total	**126**

SOURCE: TRANSPORTATION AUTHORITY OF MARIN, 2024.

3.14.2. REGULATORY SETTING

The General Plan, along with a variety of city, regional, state, and federal plans, legislation, and policy directives provide guidelines for the safe operation of streets and transportation facilities in San Anselmo. While the Town has primary responsibility for the maintenance and operation of local transportation facilities in its jurisdiction, San Anselmo staff works on a continual basis with responsible agencies such as the Transportation Authority of Marin to maintain, improve, and balance the competing transportation needs of the community and the region. Federal, state, regional, and local laws or regulations applicable to analyzing transportation impacts of the general plan are described below.

FEDERAL

Federal Highway Administration

The Federal Highway Administration (FHWA) is the agency of the U.S. Department of Transportation responsible for the federally funded roadway system, including the interstate highway network and portions of the primary State highway network. FHWA funding is provided through the Fixing America's Surface Transportation Act. Federal funds can be used to fund eligible local transportation improvements such as projects to improve the efficiency of existing roadways, traffic signal coordination, bikeways, pedestrian facilities, and transit system upgrades.

Americans With Disabilities Act

The Americans with Disabilities Act (ADA) of 1990 provides comprehensive rights and protections to individuals with disabilities. The goal of the ADA is to assure equality of opportunity, full participation, independent living, and economic self-sufficiency. To implement this goal, the United States Access Board has created accessibility guidelines for public rights-of-way. The guidelines address various issues, including roadway design practices, slope and terrain issues, pedestrian access to streets, sidewalks, curb ramps, street furnishings, pedestrian signals, parking, and other components of public rights-of-way.

STATE

Senate Bill 743

SB 743, passed in 2013, resulted in several statewide CEQA changes. It required the California Governor's Office of Planning and Research (OPR) to establish new metrics for determining the significance of transportation impacts of projects within transit priority areas (TPAs) and allows OPR to extend use of the metrics beyond TPAs. OPR selected VMT as the preferred transportation impact metric and applied their discretion to require its use statewide. This legislation also established that aesthetic and parking effects of a residential, mixed use residential, or employment center projects on an infill site within a TPA are not significant impacts on the environment. The revised CEQA Guidelines that implement this legislation became effective in December 2018, and state that vehicle LOS and similar measures related to delay shall not be used as the sole basis for determining the significance of transportation impacts for land use projects and have applied statewide since 2020. The OPR *Technical Advisory on Evaluating Transportation Impacts in CEQA* (2018) includes

specifications for VMT methodology and recommendations for significance thresholds, screening of projects that may be presumed to have less than significant impacts, and mitigation. Other key guidance includes:

- OPR recommends tour- and trip-based travel models to estimate VMT, but ultimately defers to local agencies to determine the appropriate tools.
- Lead agencies ultimately have the discretion to set or apply their own significance thresholds, provided they are based on significant evidence.

Cities and counties can still use measures of delay such as LOS for other plans, studies, or network monitoring. However, according to CEQA section 15064.3, Determining the Significance of Transportation Impacts, "effect on automobile delay shall not constitute a significant environmental impact." VMT is used to identify the proposed project's potentially significant transportation impacts for the purposes of this EIR.

OPR General Plan Guidelines

The California Governor's Office of Planning and Research (OPR) publishes General Plan Guidelines for cities and counties developing their general plans. OPR released its updated guidelines in 2017 (last amended in 2020), which include legislative changes, new guidance, policy recommendations, external links to resource documents, and additional resources. For each general plan element, the guidelines discuss statutory requirements in detail, provide recommended policy language, and include examples of city and county general plans that have adopted similar policies.

Assembly Bill 32, Senate Bill 32, and Senate Bill 375

Assembly Bill (AB) 32, also known as the Global Warming Solutions Act of 2006, committed California to reducing greenhouse gas (GHG) emissions to 1990 levels by 2020. In 2016, Senate Bill (SB) 32 added a new target: reducing statewide emissions to 40 percent below 1990 levels by 2030.

SB 375 provides guidance for curbing emissions from cars and light trucks to help California comply with AB 32. There are five major components to SB 375:

- ARB will guide the adoption of GHG emission targets to be met by each Metropolitan Planning Organization (MPO) in the state. The MPO for San Anselmo is MTC.
- MPOs are required to create a Sustainable Communities Strategy (SCS) that provides a plan for meeting these regional targets. The SCS must be consistent with the Regional Transportation Plan (RTP).
- Regional housing elements and transportation plans must be synchronized on eight-year schedules. Also, the SCS and Regional Housing Needs Assessment (RHNA) must be consistent with each other.
- The California Environmental Quality Act (CEQA) is streamlined for preferred development types such as mixed use projects and transit-oriented developments (TODs) if they meet specific requirements.
- MPOs must use transportation and air emission modeling methodologies consistent with California Transportation Commission (CTC) guidelines.

California Air Resources Board Plans and Progress Reports

2019 SCOPING PLAN-IDENTIFIED VMT REDUCTIONS AND RELATIONSHIP TO STATE CLIMATE GOALS

The California Air Resources Board (CARB) provides specific guidance for VMT thresholds in "Scoping Plan-Identified VMT Reductions and Relationship to State Climate Goals" (2019). This document provides recommendations for VMT reduction thresholds that would be necessary to achieve the state's GHG reduction goals and acknowledges that the sustainable community strategy (SCS) targets alone are not sufficient to meet climate goals. ARB concluded that a 14.3% reduction in total VMT per capita and a 16.8% reduction in light-duty VMT per capita (over conditions in 2015-2018) was needed to meet these goals. The OPR *Technical Advisory* cites this document as support for a 15% reduction threshold.

FINAL 2022 SCOPING PLAN FOR ACHIEVING CARBON NEUTRALITY

The 2022 Scoping Plan[1] lays out a path to achieve targets for carbon neutrality and reduce anthropogenic greenhouse gas (GHG) emissions by 85% below 1990 levels no later than 2045, as directed by Assembly Bill 1279. The plan includes a number of noteworthy passages including:

- VMT reductions will play an indispensable role in reducing overall transportation energy demand and achieving the state's climate, air quality, and equity goals.
- Achieve a per capita VMT reduction of at least 25% percent below 2019 levels by 2030 and 30% below 2019 levels by 2045.
- While CARB has included VMT reduction targets and strategies in the Scoping Plan and appendices, these targets are not regulatory requirements, but inform future planning processes. CARB is not setting regulatory limits on VMT in the 2022 Scoping Plan; the authority to reduce VMT largely lies with state, regional, and local transportation, land use, and housing agencies, along with the Legislature and its budgeting choices.

California Department of Transportation

The Caltrans *"Vehicle Miles Traveled-Focused Transportation Impact Study Guide"* (TISG), dated May 20, 2020, was prepared to guide Caltrans districts, lead agencies, tribal governments, developers, and consultants regarding Caltrans' review of VMT impact analysis for land use projects and land use plans. Caltrans seeks to reduce single occupancy vehicle trips, provide a safe transportation system, reduce per capita VMT, increase accessibility to destinations via cycling, walking, carpooling, and transit, and reduce greenhouse gas (GHG) emissions. The TISG notes that, for land use projects and plans, automobile delay is no longer considered a significant impact on the environment under CEQA. Caltrans' primary review focus for a land use project's transportation impacts is now VMT. The TISG generally endorses the OPR "*Technical Advisory*," including the thresholds in that document.

[1] California Air Resources Board (CARB), 2022. 2022 Scoping Plan for Achieving Carbon Neutrality. November.

The *Interim LDIGR Safety Review Practitioners Guidance*[2] was developed to provide immediate direction about the safety review of the state highway system while final guidance is being developed. This interim guidance does not establish thresholds of significance for determining safety impacts under CEQA. The guidance notes that the significance of impacts should be determined with careful judgment on the part of a public agency and based, to the greatest extent possible, on scientific and factual data consistent with Caltrans' CEQA guidance contained in Caltrans' Standard Environmental Reference. The guidance notes that Caltrans District traffic safety staff will use available data to determine if the proposed project may influence or contribute to locations identified by traffic safety Investigations generated by network screening or initiated by the district.

Assembly Bill 1358: State of California Complete Streets Act

Assembly Bill (AB) 1358, the California Complete Streets Act of 2008, was signed into law in 2018. AB 1358 requires any substantive revision of the circulation element of a city or county's general plan to identify how they will safely accommodate the circulation of all users of the roadway including pedestrians, bicyclists, children, seniors, individuals with disabilities, and transit riders, as well as motorists.

REGIONAL

Plan Bay Area / Regional Transportation Plan

In 2026, the Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG) adopted Plan Bay Area 2050+ as the official regional long-range transportation and land use plan for the Bay Area. Strategies in this plan include:

- Transportation. Operating and maintaining the existing system, creating healthy and safe streets, and expanding and enhancing transit services, frequency, capability, and reliability.
- Housing. Producing, preserving, and protecting housing at all price points, especially affordable housing.
- Economy. Creating economic mobility for all residents and improving job locations.
- Environment. Mitigating hazards, creating more parks and open spaces, and reducing climate emissions.

The plan's focus on multifamily housing sites with transit access, affordability, and overall housing unit share in existing low-VMT areas helps to achieve the emission reduction objectives of Plan Bay Area 2050+.

Transportation Authority of Marin (TAM)

TAM is designated as the congestion management agency for Marin County. TAM is responsible for managing a variety of transportation projects and programs in Marin County, receiving federal, State, regional, and local funds, and working closely with all eleven cities and towns as well as the

[2] California Department of Transportation (Caltrans), 2020. Interim Land Development and Intergovernmental Review (LDIGR) Safety Review Practitioners Guidance. December 18.

County. Historically, TAM was responsible for administering a countywide Congestion Management Program, which included congestion-based level of service performance requirements for designated roadways in the County. Within and near San Anselmo, these included Sir Francis Drake Boulevard and Red Hill Avenue.

In April 2022, the TAM Board of Commissioners directed TAM staff to initiate opting out of the CMP and focus future efforts on the development of a Comprehensive Transportation Plan. In August 2022, TAM notified the MTC that it had received sufficient support from Marin County jurisdictions to formally opt out of the CMP. With this change, CMP requirements pertaining to analysis of consistency with LOS-based metrics no longer apply. One of the reasons cited by TAM for this change is to address inconsistencies with CEQA, which no longer considers traffic congestion (as measured by LOS) to constitute a significant environmental impact, instead requiring assessment of VMT.

Marin County Unincorporated Bicycle and Pedestrian Master Plan

The Marin County Unincorporated Bicycle and Pedestrian Master Plan of 2018 is a comprehensive framework aimed at enhancing the development of bicycle and pedestrian networks in the unincorporated areas of Marin County. The plan includes major projects like widening popular recreational routes and enhancing signage and bicycle parking. The plan also identifies proposed alignments of the East-West Bikeway, a bicycle route which runs through San Anselmo connecting to Fairfax and San Rafael and destinations beyond.

LOCAL

Existing Town of San Anselmo General Plan

The following goals, policies, and actions are applicable to transportation and circulation.

CIRCULATION ELEMENT

Objective 1: To maintain and enhance the residential quality and character of all streets in San Anselmo, with the exception of Red Hill Avenue and portions of Sir Francis Drake Boulevard, Greenfield Avenue, and San Anselmo Avenue.

> **Policy 1.1.** To protect the quality of life on residential streets by not allowing these streets to become traffic dominated.
>
> **Policy 1.2.** To limit the intensity of developments which may have the potential to make a residential street traffic dominated.
>
> **Policy 1.3.** To promote traffic safety by channelizing through traffic away from residential streets.

Objective 2: To separate local through and visitor traffic to the maximum extent possible.

> **Policy 2.1.** Sir Francis Drake, Center, and Red Hill will continue to be the primary traffic carriers for visitor and through traffic.

Policy 2.2. San Anselmo Avenue may be designed to provide for visitor traffic, but not through traffic.

Objective 3: To maintain all arterial and collector roadway intersections within the Town at a level of service 'D' or better during peak am and pm hours.

Policy 3.1. The level of service will be maintained primarily by regulating the intensity of development throughout the community.

Policy 3.2. All new major developments or subdivisions will be required to submit information to the Town as to their effect on the level of service at impacted intersections.

Policy 3.3. The Town will not allow the level of service to drop below 'D' unless it is judged to be in the public interest and consistent with other objectives and policies contained in the General Plan.

Policy 3.4. The Town will not approve major roadway improvements, such as additional travel lanes, to local, collector, or arterial streets. Improvements to intersections, such as signalization and channeling of traffic, are not considered major roadway improvements.

Objective 4: To discourage through traffic on residential streets and preserve their quiet rural charm.

Policy 4.1. To direct through traffic away from residential areas of the Town by using such techniques as landscaping and traffic islands, and possibly limited street closures and one-way traffic controls if such limitations do not pose a problem to public safety.

Policy 4.2. The roadway network for new developments or subdivisions should only show, if possible, street connections to identified residential connector streets or arterials.

Policy 4.3. The traffic generated and distributed by all new projects must be within the traffic limits implied by San Anselmo's street classification system.

Policy 4.4. All roadway improvements must be designed to preserve and enhance the rural character of San Anselmo streets.

Objective 5: San Anselmo will continue to improve and expand its bikeway system.

Policy 5.1. To maximize the use of local streets for regional bicycle traffic.

Policy 5.2. To ensure that all development is consistent with San Anselmo's bikeway objectives, and Objective 5 of the Open Space Element.

Objective 6: San Anselmo will continue to maintain and expand its pedestrian way system.

Policy 6.1. San Anselmo's pedestrian way system is intended to link residential areas with local community destination points (i.e., parks, schools, town hall, and commercial areas).

Policy 6.2. Sidewalks and walkways will be considered in new residential projects but may not be mandatory.

Objective 7: To maintain and improve local and regional bus service.

Policy 7.1. San Anselmo will continue to support efforts to maintain regional intercity and town bus service provided by the Golden Gate Bridge District.

Policy 7.2. The Town will continue to support all efforts to improve local bus service within Marin County.

Objective 8: To improve upon existing traffic circulation in the central commercial area, and along Center and Sir Francis Drake Boulevard. (Also see Land Use Element Policies 5.1 and 5.2.)

Policy 8.1. To improve traffic circulation along Sir Francis Drake Boulevard by authorizing limited improvements such as bus turnout lanes at transit stops, improvements at existing intersections, additional traffic signals, and improvement in the operation of the existing traffic signals where appropriate.

Policy 8.2. The Town may consider limited intersection improvements and the provision of turn lanes at intersections along Center Boulevard to improve traffic circulation.

Policy 8.3. The Town may consider the provision of automobile signs in the commercial core to direct visitor traffic into the Town's central commercial area.

Policy 8.4. An additional left-turn lane may be provided on arterials, collectors, and some local streets at Sir Francis Drake Boulevard to reduce existing delays and traffic queues.

Objective 9: To improve existing and future traffic circulation, safety, and parking in the central commercial area and along Greenfield Avenue. (Also see Land Use Element Policies 5.1 and 5.2.

Policy 9.1. To undertake a study of traffic circulation and parking in these two commercial areas, and to adopt a long-term improvement plan for the areas.

Objective 10: To allow limited improvements to the existing narrow and circuitous roadways which provide access to ridge and hillside properties while maintaining their existing rural character. (Also see Land Use Element Policies 10.1-10.5.)

Policy 10.1. The only improvements the Town will allow on existing roads which serve ridge and hillside properties are those necessary to improve safety and drainage. The types of improvements which will be allowed include: resurfacing of existing paved areas, cross slope correction, small automobile turnouts, isolated widening, straightening of roads to correct safety hazards, placement of mirrors at blind curves, improved roadway drainage, and repair of existing slides along the roadway, or improvements similar in nature to those described herein.

Policy 10.2. The Town will not allow widespread widening of existing roads which serve hillside, ridge, and open space parcels.

Policy 10.3. Roadway extensions required to serve ridge and hillside properties shall be similar in character to the existing road which is being extended.

Policy 10.4. Prior to acting on any application for development or land division on any hillside and ridge parcel, which is served by an existing roadway, the Town will prepare, and the applicant will pay for, a study of the existing road conditions. The study will include recommendations for improvements which are consistent with policies 10.1 through 10.3.

Policy 10.5. Landowners who wish to improve or subdivide their property may be required to submit fees or make improvements recommended in the roadway studies. The Town will adopt criteria for funding said improvements desired on each roadway serving hillside and ridge properties.

Policy 10.6. Future development on hillside and ridge parcels will be required to provide guest parking onsite if the existing public or private roadway serving the property is too narrow to accommodate on street parking.

Objective 11: To limit the type, size, weight, and number of construction equipment and vehicles used to improve or maintain hillside and ridge properties.

Policy 11.1. The Town will require the submission and approval of a method of construction plan prior to the issuance of any grading or building permits for any improvements on hillside and ridge properties.

Policy 11.2. The Construction Plan required by policy 11.1 shall set forth the types, size, weight, and number of pieces of construction equipment and vehicles a property owner or contractor intends to use in improving a hillside or ridge parcel. The Plan must also specify the route to be used to deliver equipment to the site, number of workers, and parking provisions for workers' vehicles, how and where equipment vehicles will be stored onsite, and the anticipated length of time needed to complete improvements.

Policy 11.3. The Town shall have the right to modify a submitted construction plan to ensure compliance with other policies contained in the General Plan.

Objective 12: To review and update the Town's parking ordinance to reflect current trends in automobile size and use.

Policy 12.1. The Town may consider alternatives to requiring each business to provide its required parking onsite within some commercial areas. However, each site will be required to provide the parking stipulated in the Zoning Code at some location in the area. The implementation of this concept will require the cooperation of all property owners and business people in the area.

Policy 12.2. To identify the specific locations of parking space need areas and increase the number of parking spaces available for automobiles at transit stops.

Policy 12.3. To develop additional off street parking spaces on residential roads to accommodate on street parking without disrupting the travel lane.

Policy 12.4. To develop a program to provide parking bays.

Objective 13: To screen off street parking from public view.

Policy 13.1. All parking lots will be required to be landscaped and set back from the right-of-way.

Policy 13.2. Trees should be used in parking lots to provide shade and break up the visual size of the lot.

Policy 13.3. Efforts should be made to minimize the size of parking areas. For example, two parking areas separated by landscaping and connected by a driveway are preferred to one larger lot.

Objective 14: To strongly oppose the extension of any road from the Sleepy Hollow area to San Rafael or other communities in unincorporated Marin County.

Policy 14.1. The Town will prohibit the extension of any road north of Sir Francis Drake Boulevard or Red Hill Road into the City of San Rafael. The Town will oppose the extension of any through road north of Sir Francis Drake Boulevard or Red Hill Road to the City of San Rafael if said road is outside the Town's jurisdiction.

Objective 15: To ensure that roadway improvements needed to serve new commercial and residential developments conform to the Town's street classification system and roadway improvement policies.

Policy 15.1. To limit the intensity of a proposed commercial development and the density of a proposed residential development if the traffic generated by such development exceeds the capacity of the street, and the roadway improvements needed to accommodate the new traffic are not consistent with the Town's roadway improvement policies.

Policy 15.2. To limit the intensity or density of commercial and residential development if traffic generated by such development causes an existing street classified as local residential to function as a collector or arterial street. (Refer to the Roadway Network and Classification section of the Circulation Element.)

Objective 16: To promote a balanced, multi-modal transportation network that meets the evolving needs of all users of the streets, roads, and highways for safe and convenient travel in the Town.

Policy 16.1. Complete Streets. Provide “Complete Streets” that are safe, comfortable, and convenient routes for walking, bicycling, and public transportation to increase use of these modes of transportation, enable active travel as part of daily activities, reduce pollution, and meet the needs of all users of the streets for safe and convenient travel, including bicyclists, children, persons with disabilities, pedestrians, users of public transportation, seniors, youth, and families, motorists and movers of commercial goods, consistent with the other goals, objectives, and policies of this plan.

Policy 16.2. Incorporate “Complete Streets” Design Features. The Town shall approach every transportation project and program as an opportunity to improve the transportation network for all users, and shall work in coordination with other departments, agencies, and jurisdictions to achieve “Complete Streets”. As feasible, the Town shall incorporate “Complete Streets”

design features, such as accessible curb ramps, crosswalks, sidewalks, bicycle lanes, and paved shoulders, into existing streets to improve the safety and convenience for all users.

Objective 17: To work toward more widespread use of electric vehicles to lower greenhouse gas emissions from transportation.

Policy: 17.1. Zero Emission Vehicle readiness. Provide a foundation for electric vehicle implementation efforts, including investments in electric vehicle infrastructure and guidance for ongoing Town initiatives, by preparing an Electric Vehicle Strategy. The strategy should establish a framework for near-term actions that support longer-term mobility goals and initiatives, including, but not limited to, Town policy on costs and fees for Town charging stations, regulations for residential and workplace electric vehicle readiness, and policies for conversion of the Town vehicle fleet.

San Anselmo Local Road Safety Plan (2024)

The San Anselmo Local Road Safety Plan (LRSP), prepared as part of a countywide study in 2024, provides an in-depth analysis of recent crashes involving all modes of travel in San Anselmo. The report identifies primary factors that lead to crashes and includes suggestions to improve safety outcomes for all roadway users in San Anselmo.

The report defines the town's High Collision Network (HCN) as roadway segments and intersections with the highest rate of crashes per vehicle miles traveled. In San Anselmo, the HCN includes five roadway segments located on various sections of San Anselmo Avenue, Sir Francis Drake Boulevard, Butterfield Road, and Red Hill Avenue and three intersections located at San Anselmo Avenue and Madrone Avenue, Sir Francis Drake Boulevard and Saunders Avenue, and Sir Francis Drake Boulevard and San Anselmo Avenue.

Vehicle Miles Traveled (VMT) Policy (SB 743 Compliance)

The Town of San Anselmo, as a lead agency under CEQA with discretion in selecting an appropriate methodology and significance threshold for determining VMT impacts, adopted a VMT policy in March 2023. The policy establishes land use–specific VMT thresholds of significance to determine whether a land use project would result in a significant transportation impact under CEQA and SB 743. Consistent with the adopted policy, the thresholds are defined relative to Marin County averages and are summarized as follows: (1) residential projects may result in a significant impact if project-generated home-based VMT per resident exceeds a level 15 percent below the existing Marin County average; (2) office projects may result in a significant impact if project-generated home-based work VMT per employee exceeds a level 15 percent below the existing Marin County average; and (3) other land use types (e.g., retail, education, recreational) may result in a significant impact if the project would cause a net increase in daily VMT, evaluated on a case-by-case basis. This policy supports evaluation of fuel consumption and greenhouse gas emissions associated with vehicle travel, while accounting for the Town's local geography, land use patterns, and circulation network context.

The Hub Transportation Study (2023)

This 2023 study considered multimodal operational and safety issues at the Hub, San Anselmo's busiest intersection at the confluence of Sir Francis Drake Boulevard, Red Hill Avenue, and Center Boulevard. The study evaluated short, medium, and long-term solutions and their impacts on traffic, safety, and right-of-way. The study identifies with short- and long-term recommendations, including updating traffic signals with adaptive signal control, widening southbound Sir Francis Drake Boulevard, installing a flyover lane for eastbound traffic, and more. Recommendations for active transportation improvements include upgrading pedestrian safety infrastructure, a bicycle bypass route, and a circular pedestrian and bicycle flyover path.

San Anselmo Downtown Parking Study (2023)

The Downtown Parking Study evaluated existing parking supply, parking management policies, and user behavior. Parking occupancy counts conducted in 2019, 2020, and 2021 identified that, in general, on-street parking along San Anselmo Avenue is fully occupied for most of the day, while sufficient parking is generally available within a short walk of San Anselmo Avenue, even during peak midday and afternoon hours. The report recommends strategies, approved by the Town Council in 2023, that facilitate increased parking turnover along San Anselmo Avenue and increase nearby parking availability throughout the day by shifting static merchant parking areas to locations further from the downtown area.

Bicycle and Pedestrian Master Plan Update (2016)

The Town of San Anselmo's Bicycle and Pedestrian Master Plan is the blueprint for active transportation planning and construction. The plan's goals are to improve bicycle and pedestrian connections, encourage active transportation and active recreation, and improve safety for people using active modes. The plan development process sought input from Town staff, the Bicycle and Pedestrian Advisory Committee, and the public. The plan identifies key priorities and projects to increase bicycle and pedestrian mode share. Proposed improvements include multi-use paths from the downtown area to the Ross, San Rafael, and Fairfax borders along Sir Francis Drake Boulevard, Red Hill Avenue, and Center Boulevard, marked bikeway routes, as well as various pedestrian and bicycle intersection crossing improvements.

Complete Streets Policy (2013)

The San Anselmo Town Council passed Resolution No. 4020 adopting a Complete Streets Policy that recognizes the importance of the circulation network to serve a variety of users, particularly those that travel by modes other than vehicles. The policy directs staff to consider Complete Streets elements such as surrounding land use and livability context, street network connectivity, and mobility for walking, bicycling and transit use in all capital projects and development projects. The policy also instructs that the next update of the General Plan Circulation Element shall incorporate Complete Streets principles; the Circulation Element incorporated Complete Streets objectives and policies in 2015.

3.14.3. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

The transportation impact analysis assesses how the Planning Area's transportation system would operate with the implementation of the proposed General Plan 2045. The transportation impact analysis methodology includes a combination of quantitative and qualitative evaluations of the roadway, bicycle, pedestrian, and transit components of the transportation system. All analysis presumes that future background travel options and behaviors remain similar to current conditions and do not explicitly account for potential changes associated with disruptive trends, emerging technologies, and changes in travel choices, which were discussed in the Environmental Setting section.

Vehicle Miles Traveled

By definition, one VMT occurs when one vehicle (regardless of number of occupants) is driven on a roadway for one mile. For the purposes of this EIR, VMT is estimated for an average weekday. Many factors affect VMT, including the average distance residents commute to work, school, and shopping, as well as the proportion of trips that are made by non-automobile modes. Areas that have a diverse land use mix and ample facilities for non-automobile travel, including transit, tend to generate lower VMT than auto-oriented rural areas where residents travel long distances to/from work, school, and other amenities.

VMT is used to measure performance of the transportation network and to evaluate potential transportation impacts. VMT can be reported and analyzed as an absolute amount using a metric like total weekday VMT or an efficiency metric (also called a generation rate) such as VMT per capita or worker. Efficiency metrics allow the VMT performance of different-sized projects or plans to be compared. Such metrics provide a measure of travel efficiency and help depict whether different planning scenarios require more or less vehicle travel.

TAM developed the Transportation Authority of Marin Demand Model (TAMDM) that produces VMT estimates for counties within the Bay Area region as well as cities within Marin County, including Town of San Anselmo. The TAMDM presents the following VMT metrics:

- **VMT per resident** represents automobile VMT generated by household residents for home-based trips, limited to trips with one trip end at the household.
- **VMT per worker** represents automobile VMT generated by employees for work-related trips, limited to trips with one trip end at the work location.
- **Total VMT** for retail land uses represents the overall vehicle travel associated with retail activity, expressed as total VMT rather than a per-capita or per-worker efficiency metric.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to Transportation and Circulation.

CIRCULATION ELEMENT

SAFE SUSTAINABLE, AND ACTIVE TRANSPORTATION

Goal C-A: Promote a safe multimodal transportation network that helps reduce greenhouse gas emissions and offers strong transit, pedestrian, and bikeway alternatives to the automobile.

Policy C-A.1: Complete Streets. Provide Complete Streets that ensure safe, comfortable, and convenient multimodal access to essential community destinations, increase the use of alternative modes of transportation, encourage active travel as part of daily activities, reduce pollution, and meet the evolving needs of all roadway users.

> **Action C-A.1.a: Complete Streets and Human-Scale Enhancements**. Approach every transportation project and program as opportunities to improve safety, accessibility, and mobility for users of all ages, abilities, and transportation needs. Work with relevant departments, agencies, and jurisdictions to incorporate Complete Streets design features, such as accessible curb ramps, crosswalks, transit facilities, sidewalks, and bicycle infrastructure, into existing streets. Where feasible, integrate human-scale amenities including street trees, landscaping, benches, and pedestrian-scale lighting to enhance comfort, visual quality, and encourage walking, bicycling, and transit use.
>
> **Action C-A.1.b: Standards for Infrastructure Improvements**. Develop Public Improvement Engineering Standards or other objective standards for property subdivision or development projects to specify required off-site infrastructure improvements, such as sidewalks, that would accommodate or mitigate estimated project traffic impacts.

Policy C-A.2: Existing Infrastructure. Prioritize the maintenance and continued improvement of existing multimodal transportation infrastructure within current rights-of-way as opposed to roadway widening or extensions.

Policy C-A.3: Reduction of Vehicle Miles Traveled (VMT). Support infill, context-sensitive development, walkable neighborhoods, and infrastructure improvements that reduce the demand for single-occupancy vehicle travel while recognizing that many families and people with mobility limitations or limited access to alternative transportation options will continue to depend on cars.

> **Action C-A.3.a: VMT and Land Use**. Encourage residential housing development in areas with low levels of home-based VMT, such as those near transit and retail services to support access to daily needs for residents of varying incomes and transportation options that offer greater potential for alternatives to driving and shorter trips to daily destinations.
>
> **Action C-A.3.b: VMT and Transportation Improvements**. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT.

Policy C-A.4: VMT in Transportation Impact Evaluations. Evaluate land use projects for potential transportation impacts by considering the effect on VMT.

> **Action C-A.4.a: VMT Policy and Regional Coordination**. Continue to apply San Anselmo's VMT Screening Criteria and Thresholds of Significance for evaluation of VMT associated with discretionary land use projects and update these thresholds as appropriate to reflect new data, standards, or local conditions. Coordinate with the Transportation Authority of Marin to reduce VMT and enhance multimodal transportation by applying guidance from the VMT Reduction / Mobility Enhancement Toolkit.

> **Action C-A.4.b: VMT Mitigation**. Develop and implement VMT mitigation measures and an in-lieu fee structure that can be applied to applicable projects to reduce potential VMT impacts to less-than-significant levels.

Policy C-A.5: Emerging Transportation Technologies. Explore and support implementation of emerging transportation technologies and strategies to reduce greenhouse gas emissions and VMT, enhance social equity by improving access and affordability across the community, and support economic vibrancy.

> **Action C-A.5.a: Effective and Equitable Emerging Transportation Strategies**. Establish evaluation criteria to assess alignment of emerging transportation solutions, prioritizing emerging mobility strategies that are affordable and accessible to residents with limited incomes, older adults, and persons with disabilities.

ROADWAY NETWORK

Goal C-B: Continue improving the roadway network to ensure mobility, accessibility, and a high quality of life for all community members.

Policy C-B.1: Local Neighborhood Streets. Protect the quality of life and safety of residents, particularly pedestrians, children, older adults, and people with disabilities, on local neighborhood streets from the effects of speeding vehicles and cut-through traffic. Use traffic calming measures that slow vehicle speeds and direct pass-through traffic to arterial streets designed to accommodate higher vehicle speeds and volumes.

> **Action C-B.1.a: Traffic Calming Implementation and Community Engagement**. Implement appropriate traffic calming treatments on residential streets to enhance safety, reduce vehicle speeds, and support comfortable walking and biking conditions. Support resident-driven traffic calming efforts by providing technical resources and assistance to help community members identify, prioritize, and implement feasible measures, and evaluate the effectiveness of installed improvements to ensure they achieve desired traffic-volume and speed reductions.

Policy C-B.2: Roadway Traffic Circulation. Maintain adequate traffic circulation while balancing the needs of all system users along Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, Butterfield Road, and in downtown.

Action C-B.2.a: Progress Evolution of The Hub. Develop designs and secure funding for near-term improvements to the Hub as identified in The Hub Transportation Study. This includes incorporation of traffic, transit, pedestrian, and bicycle enhancements.

Action C-B.2.b: Major Thoroughfare Roadway Improvements. Improve Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, and intersections along these roadways by investing in transportation infrastructure to improve safety and accessibility for pedestrians and other non-vehicle roadway users while maintaining adequate circulation for regional through traffic.

Policy C-B.3: Circulation in Commercial Hubs. Ensure efficient and distinguishable access to and within the town's downtown and commercial hub along Greenfield Avenue through targeted multimodal improvements.

Action C-B.3.a: Circulation Monitoring. Continue to monitor and study traffic circulation, safety, and parking within the town's commercial hubs and implement improvements as recommended.

Policy C-B.4: Hillside Roadways. Allow limited improvements to existing roadways serving hillside properties on a case-by-case basis for restricted efforts such as spot widening and access/egress improvements. Efforts should be made to balance mobility and safety needs with the desire to maintain the residential identity.

Action C-B.4.a: Hillside Roadways and Emergency Access. Evaluate and implement limited improvements to existing hillside roadways, such as spot widening and access/egress enhancements, on a case-by-case basis to support mobility and safety while maintaining the area's residential character. As part of this effort, study and identify hillside roadways where temporary on-street parking restrictions may be necessary during elevated fire-risk days to ensure adequate access for fire response vehicles.

Action C-B.4.b: Limited Construction Impact on Hillside Roadways. Require the submission and approval of a Construction Management Plan prior to the issuance of any grading or building permits for any improvements on hillside properties.

Policy C-B.5: Roadway Extensions to Adjoining Communities. Prioritize protection of existing neighborhoods by discouraging new vehicular roadway extensions north of Sir Francis Drake Boulevard or Red Hill Avenue, while retaining flexibility to review potential connections should future studies identify significant mobility or safety benefits.

Policy C-B.6: Traffic Level of Service. Maintain a traffic Level of Service (LOS) standard of "E" for signalized intersection operations during peak hours to ensure an efficient roadway network and allow for consistent evaluation of development project impact on local roadway traffic.

Action C-B.6.a: Traffic Impact Studies. Require that discretionary development projects be evaluated for level of service impacts in accordance with the Town of San Anselmo's Vehicle Miles Traveled (VMT) Screening Criteria and Thresholds of Significance. Projects that exceed the level of service threshold for signalized intersections shall provide feasible mitigation measures to reduce level of service impacts to levels consistent with Town policy.

ALTERNATIVE TRANSPORTATION

Goal C-C: Promote a universally accessible transportation network which offers strong transit, pedestrian, and bikeway alternatives to the automobile for all ages and abilities.

Policy C-C.1: Bicycle and Pedestrian Master Plan. Regularly review, update, and implement the Town's Bicycle and Pedestrian Master Plan to maintain eligibility for grant funding and to advance a safe, accessible, and connected active transportation network for users of all ages and abilities.

Action C-C.1.a: Maintenance of Pedestrian and Bicycle Facilities. Develop a program to prioritize and fund the construction and maintenance of pedestrian and bicycle facilities based on safety, connectivity, removal of access barriers for people with disabilities, older adults, and others with mobility challenges, and the relationship to existing and planned land uses, along with other adopted evaluation criteria.

Action C-C.1.b: Pedestrian-Oriented Improvements in Commercial Hubs. Implement sidewalk, pedestrian crossing, and other pedestrian-oriented improvements identified in the Town's Bicycle and Pedestrian Master Plan—including those along Sir Francis Drake Boulevard, San Anselmo Avenue, Red Hill Avenue, and Greenfield Avenue, and evaluate and implement feasible recommendations from the Downtown Active Transportation & Circulation Study to enhance walkability and safety in Downtown and key commercial hubs.

Policy C-C.2: Pedestrian Safety and Access. Provide a safe and accessible walking environment along San Anselmo's pedestrian network, linking residential areas to schools, shopping, work, recreation areas, essential services, and other important community destinations for residents of all ages, abilities, and incomes.

Action C-C.2.a: Accessibility Improvements. Continue to construct improvements that provide access for all individuals along the Town's pedestrian network, including reconstruction of facilities in compliance with federal and State accessibility requirements.

Action C-C.2.b: Downtown Pedestrian Infrastructure. Implement sidewalk and pedestrian crossing improvement recommendations as included in the Pedestrian and Bicycle Master Plan. Evaluate and implement the recommendations in the Downtown Active Transportation & Circulation Study, where feasible.

Policy C-C.3: Bicycle Network. Continue to expand San Anselmo's bicycle network to safely and comfortably connect residents to schools, shopping, work, recreation, and other daily destinations, with a focus on improved paths and crossings at larger and high vehicle volume roadways and traffic calming installations and signage on local streets.

Action C-C.3.a: Bicycle Infrastructure. Implement bicycle infrastructure recommendations, such as multi-use paths, bicycle priority routes, bike racks, and lockers in areas with high demand, and traffic calming installations, as included in the Pedestrian and Bicycle Master Plan.

Policy C-C.4: Bicycle Parking. Seek opportunities to install bicycle parking facilities at public destinations, including at transit stops, parks, schools, shopping locations, and other essential public facilities, and require bicycle parking facilities in new development.

Action C-C.4.a: Bicycle Parking Requirements. Require short-term and long-term bicycle parking facilities for commercial and multifamily developments in accordance with or more stringent than the California Green Building Standards Code.

Policy C-C.5: Safe Routes to School. Coordinate with the Transportation Authority of Marin to identify locations for improvements that provide safe walking and bicycling routes for students of all backgrounds, including those who rely on walking, biking, or transit to travel to and from school.

Policy C-C.6: Transit Service. Continue to support the improvement and expansion of local and regional transit and paratransit service to improve access for residents who rely on transit, including older adults, youth, lower-income households, and people with disabilities.

Action C-C.6.a: Transit Agency Partnerships. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends.

Action C-C.6.b: **Transit-dependent Population**. Actively encourage local and regional transit agencies, providers, and local initiatives to expand reliable and accessible paratransit, shuttles, and other alternative transportation options for non-driving adults, persons with disabilities, and others without access to a private vehicle in San Anselmo.

Policy C-C.7: Transit Stop Access and Provisions. Collaborate with local and regional transit operators to provide transit stops that are safe, accessible, and comfortable for people of all ages and abilities.

Action C-C.7.a: Transit Stop Accessibility, Amenities and Connections. Partner with local and regional transit operators to ensure transit stop amenities, such as benches, shelters, lighting, signage, and trash receptacles, and locate or align transit stops to connect seamlessly with bicycle and pedestrian routes. For development projects within 200 feet of a transit stop, require ADA-compliant infrastructure improvements that provide fully accessible and comfortable access to the stop.

Action C-C.7.b: Mobility Hub Access and Multimodal Connections. Improve transit vehicle access and circulation at the Hub by implementing recommendations from the Hub Transportation Study. Work with the Transportation Authority of Marin to evaluate participation in the Metropolitan Transportation Commission's Bay Area Mobility Hub Program, supporting first- and last-mile travel options at major transit locations. In coordination with transit and regional agencies, identify locations near major corridors suitable for ridesharing, carpool pick-ups, and park-and-ride facilities.

THRESHOLDS OF SIGNIFICANCE

For the purposes of this EIR, the proposed project would result in significant impacts under CEQA, if the General Plan 2045 would:

- Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b);
- Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities;
- Substantially increase hazards due to geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or
- Result in inadequate emergency access.

Vehicle Miles Traveled

Significance criteria are used to establish what constitutes an impact by a project. In addition to the CEQA Guidelines Appendix G significance thresholds above, the following criteria were used to evaluate impacts related to transportation from the proposed General Plan 2045.

Based on Appendix G of the CEQA Guidelines, the General Plan 2045 would result in a significant transportation impact if it would conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)(1), which states for land use projects, "*Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact.*" CEQA Guidelines Section 15064.3, subdivision (b)(4) states, "*A lead agency has the discretion to choose the most appropriate methodology to evaluate a project's vehicle miles traveled, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may use models to estimate a project's vehicle miles traveled and may revise those estimates to reflect professional judgment based on substantial evidence.*"

The General Plan 2045 is a program-level policy document and is not itself a development project. However, General Plan 2045 buildout represents the combined effect of future land uses that would accommodate residential and employment growth in San Anselmo. For CEQA purposes and to maintain a consistent and defensible approach, this EIR applies the Town's adopted SB 743 VMT thresholds to the General Plan 2045 buildout by evaluating VMT efficiency for the land use components that drive VMT: (1) residential growth using home-based VMT per resident, and (2) non-residential employment growth using work-related VMT per employee. This approach is consistent with CEQA Guidelines Section 15064.3, which allows a lead agency discretion to select an appropriate VMT methodology and threshold of significance, provided the assumptions and evidence used are documented.

The Town of San Anselmo has an adopted VMT policy memorandum (dated January 10, 2023, and updated March 3, 2023) that establishes recommended CEQA significance thresholds for land use projects based on land use type. Under the Town's approach, VMT significance is evaluated using the following thresholds:

- Residential projects: A transportation impact may be significant if the project's project-generated home-based VMT per resident exceeds a level that is 15 percent below the existing Marin County average home-based VMT per resident.

- Office projects: A transportation impact may be significant if the project's project-generated work-based VMT per employee exceeds a level that is 15 percent below the existing Marin County average work-based VMT per employee.
- Other projects (e.g., retail, institutional, education, recreational, religious): A transportation impact may be significant if the project results in a net increase in daily VMT, evaluated on a case-by-case basis considering whether trips are primarily local-serving or region-serving.

Transit, Bicycles, and Pedestrians

Appendix G of the CEQA Guidelines indicates that impacts may be significant if a project conflicts with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. The General Plan 2045 would have a significant impact on transit, bicycles, or pedestrians if it would conflict with adopted policies, plans, or programs regarding these systems, or create or exacerbate disruptions to the performance or safety of these systems.

Hazards

Appendix G of the CEQA Guidelines indicates that transportation impacts may be significant if a project would substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment). Under this EIR, the General Plan 2045 would have a significant transportation impact if it would increase hazards due to a design feature or incompatible uses.

Emergency Access

Appendix G of the CEQA Guidelines also indicates that transportation impacts may be significant if a project would result in inadequate emergency access. Under this EIR, the General Plan 2045 would have a significant transportation impact if it would result in inadequate emergency access.

IMPACTS AND MITIGATION MEASURES

Impact 3.14-1: General Plan 2045 implementation would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b) (Less than Significant).

To provide a quantitative VMT evaluation, Parametrix prepared a sketch-model assessment using the most recent version of the TAMDM with horizon-year 2040 travel conditions. The analysis used the General Plan 2045 land use assumptions at the Micro-Analysis Zones (MAZ) level and translated those assumptions into VMT. Because the General Plan 2045 land use program includes both residential development (single family, multi-family, and accessory dwelling units) and non-residential development, the analysis evaluated VMT per resident and VMT per employee as the primary efficiency metrics.

The sketch-model approach estimated VMT by first calculating the net new trips associated with the General Plan 2045 land uses on vacant and underutilized sites in each MAZ. Trips generated by residential and non-residential land uses were then multiplied by the average trip lengths associated with residents and employees in the corresponding MAZs to estimate resident VMT and employee

VMT. This approach reflects the amount of travel generated by the proposed project and the geographic context of where growth would occur within the Town (i.e., areas with shorter or longer average trip lengths). Existing and projected future VMT metrics are summarized in **Table 3.14-4**.

TABLE 3.14-4: VMT DATA COMPARISON BETWEEN EXISTING CONDITION AND VMT THRESHOLD

UNITS	*EXISTING 2022 COUNTY OF MARIN VMT*	*VMT THRESHOLD (15% BELOW THE EXISTING COUNTY-WIDE AVERAGE)*	*PROPOSED PROJECT (GENERAL PLAN 2045) VMT*	*DOES GENERAL PLAN 2045 EXCEED VMT THRESHOLD?*
VMT per Resident	14.9	12.7	10.9	**No**
VMT per Employee	17.2	14.6	13.0	**No**

SOURCE: PARAMETRIX, 2026.

As shown in **Table 3.14-4**, development under the General Plan 2045 would generate approximately 10.9 VMT per resident and 13.0 VMT per employee. These rates are approximately 27 percent (resident) and 24 percent (employee) lower than the baseline countywide average rates. Under the Town's VMT policy, significance is evaluated relative to thresholds set at 15 percent below the Marin County average for VMT per resident and VMT per employee. Because the General Plan 2045 buildout VMT efficiency metrics are below those thresholds, implementation of the General Plan 2045 would result in a less-than-significant VMT impact.

In addition to the quantitative results indicating that General Plan 2045 buildout VMT is below the Town's adopted thresholds, the General Plan 2045 also includes multimodal and demand-management policies and actions that would reinforce VMT reduction over time. These measures support compact, walkable development patterns; encourage residential development near transit and daily services; and expand safe and accessible walking, bicycling, and transit infrastructure to reduce reliance on single-occupancy vehicle travel and encourage shorter trips. For example, Policies C-A.1 and C-A.3, along with Actions C-A.1.a and C-A.3.a, advance Complete Streets improvements, active transportation infrastructure, and residential development near transit and daily services, helping reduce reliance on single-occupancy vehicle travel and encouraging shorter trips by walking, bicycling, and transit.

Additional measures, including Policy C-A.4 and Actions C-A.4.a and C-A.4.b, require evaluation and mitigation of VMT impacts associated with discretionary development projects, while Policy C-A.5 and Action C-A.5.a encourage emerging mobility strategies and transportation technologies that can further reduce greenhouse gas emissions and automobile travel demand.

Collectively, these policies and actions support a transportation system that expands travel choices and reduces dependency on single-occupancy vehicle travel, consistent with SB 743's intent to reduce environmental effects associated with vehicle travel. Therefore, the General Plan 2045 implementation would result in a ***less-than-significant impact*** on VMT pursuant to CEQA Guidelines Section 15064.3, subdivision (b).

Impact 3.14-2: General Plan 2045 implementation would not conflict with a program, plan, policy, or ordinance addressing the circulation system, including transit, bicycle, and pedestrian facilities (Less than Significant)

The General Plan 2045 will function as the Town's primary policy framework guiding future development, and its transportation and mobility policies will establish the overarching direction for multimodal access, circulation, and safety. The General Plan 2045 has been prepared within the context of regional and State transportation planning frameworks that influence circulation and mobility goals in the Bay Area, including the MTC/ABAG regional transportation plan, Plan Bay Area 2050+, which emphasizes increased non-automobile travel and improved transportation system performance and state of good repair and improved access to housing and jobs. In this context, the General Plan 2045's mobility approach is designed to maintain consistency with applicable transportation planning direction while continuing and strengthening the Town's circulation-related standards and programs.

Implementation of the General Plan 2045 would not conflict with adopted programs, plans, policies, ordinances, or standards addressing the circulation system, including transit, bicycle, and pedestrian facilities. The General Plan 2045 establishes the Town's transportation framework, supports regional and State transportation planning objectives, and includes implementing policies and actions that would continue and strengthen multimodal circulation provisions applicable to future development and public improvements.

These policies and actions advance Complete Streets improvements; expansion and maintenance of pedestrian, bicycle, and transit infrastructure; improved access to transit stops and mobility hubs; and implementation of safer and more connected routes for people walking, bicycling, and using transit. For example, Policy C-A.1 and Action C-A.1.a promote implementation of Complete Streets principles and human-scale transportation improvements, while Policies C-C.1 through C-C.7 and their associated actions guide continued expansion of pedestrian, bicycle, and transit infrastructure, implementation of the Town's Bicycle and Pedestrian Master Plan, improved access to transit stops and mobility hubs, and safer routes for people of all ages, abilities, and incomes. The General Plan 2045 also supports continued implementation of the Town's Local Road Safety Plan, recommendations from local transportation and parking studies, coordination with regional transit providers, and transportation strategies intended to reduce VMT and greenhouse gas emissions consistent with State and regional planning objectives.

Collectively, these policies and actions promote consistency with adopted circulation plans and applicable regional and State transportation policies and standards, and the impact would be ***less than significant***.

Impact 3.14-3: General Plan 2045 implementation would not increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment) (Less than Significant)

Development anticipated under the General Plan 2045 would result in an incremental increase in new residential and non-residential uses. The General Plan 2045 would retain the Town's existing roadway patterns and would not include new major roadways or other circulation features that

would be expected to substantially increase hazards or introduce incompatible uses. In addition, anticipated development would generally occur on developed and/or underutilized sites and in areas near existing residential and non-residential uses, where the surrounding land use context is already established.

Most development facilitated by the General Plan 2045 is expected to occur in areas where existing infrastructure, including arterials and local roadways, is already in place. While some incremental infrastructure improvements (e.g., local access streets or internal circulation improvements) could be required to serve new development, such improvements would be limited in extent and intended to provide access to planned development areas, rather than create new regional roadway connections. Any development activities and associated circulation improvements would also be subject to review for compliance with applicable State and local design requirements, including those related to sight distance, access design, and operational safety.

While growth associated with the General Plan 2045 could result in incremental changes to the transportation network, the General Plan 2045 includes policies and actions that support safe roadway and access design and would reduce the potential for hazards associated with geometric design features. For example, Policy C-A.1 and Action C-A.1.a direct the Town to apply Complete Streets principles and multimodal design features to roadway projects, including sidewalks, bicycle infrastructure, transit facilities, accessible crossings, and human-scale improvements that improve safety and visibility for all roadway users. Policies C-B.2 and C-B.3, together with Actions C-B.2.a, C-B.2.b, and C-B.3.a, guide circulation improvements along major corridors, downtown, and commercial hubs while balancing the mobility needs of pedestrians, bicyclists, transit users, and motorists and maintaining appropriate operating conditions. In addition, Policy C-B.1 and Action C-B.1.a promote implementation of traffic calming measures on neighborhood streets to reduce vehicle speeds, discourage cut-through traffic, and improve safety and comfort for pedestrians and bicyclists.

The General Plan 2045 also addresses constrained hillside roadway conditions through Policy C-B.4 and related actions, which allow limited, case-by-case improvements such as spot widening and access/egress enhancements that can improve sight distance and operational safety while maintaining neighborhood character. Policies C-C.2, C-C.3, and C-C.7, along with associated actions, further emphasize safe and accessible pedestrian, bicycle, and transit infrastructure, including accessible transit stop locations and multimodal connections, which can reduce conflicts at curbside areas and improve predictability for all roadway users.

Because the General Plan 2045 does not propose substantial changes to land use patterns or the roadway network that would introduce new major roadways or geometric conditions associated with increased hazards, and because future development and related roadway improvements would be reviewed for compliance with applicable design and safety standards, implementation of the General Plan 2045 would not substantially increase hazards due to a geometric design feature or incompatible uses. Therefore, impacts related to hazards would be ***less than significant***.

Impact 3.14-4: General Plan 2045 implementation would not result in inadequate emergency access. (Less than Significant).

Development anticipated under the General Plan 2045 could result in an incremental increase in residential and non-residential uses and associated changes to local travel demand and circulation conditions. However, General Plan 2045 implementation would retain the Town's existing roadway patterns and does not propose new major roadways, roadway realignments, or other physical changes that would be expected to create inadequate emergency access. Anticipated development would generally occur on developed and/or underutilized sites served by existing public streets and infrastructure and, as such, is not expected to inhibit emergency access at the communitywide level.

Some development or circulation improvements could require limited, localized infrastructure modifications (e.g., access/egress adjustments, spot widening, frontage improvements, or minor roadway changes to serve new development). Any such improvements would be designed and reviewed through the Town's discretionary and permitting processes to maintain adequate emergency access and ensure compatibility with applicable codes, standards, and agency requirements for emergency response operations. In addition, the General Plan 2045 includes policies and actions that emphasize maintaining adequate traffic circulation on key corridors, directing pass-through traffic to arterials, and allowing targeted safety and access improvements on constrained hillside roadways—each of which supports maintaining reliable access for emergency vehicles during day-to-day conditions and as growth occurs.

Implementation of the General Plan 2045 would not result in inadequate emergency access. The General Plan 2045 does not propose substantial changes to land use patterns or the roadway network that would create barriers to emergency response (e.g., roadway closures, reduced clear widths, new major roadway segments with constrained geometry, or other network changes that would impede emergency vehicle movement). Future development and any related, localized circulation improvements would be subject to Town review and would be required to comply with applicable emergency access requirements, including maintaining adequate access/egress and operational clearances for emergency vehicles.

In addition, the General Plan 2045 includes policies and actions that promote reliable roadway circulation and targeted safety improvements that would help maintain emergency access as growth occurs. For example, Policy C-B.2 and related actions guide circulation improvements along key corridors while balancing the mobility needs of all roadway users and maintaining adequate regional circulation. Policy C-B.4 and Actions C-B.4.a and C-B.4.b address constrained hillside roadway conditions by allowing limited spot widening and access/egress improvements, identifying locations where temporary parking restrictions may be needed to maintain emergency vehicle access during elevated fire-risk conditions, and requiring construction management planning for hillside development. Policy C-B.1 and Action C-B.1.a also encourage context-sensitive traffic calming measures intended to improve roadway safety while directing higher traffic volumes to arterial roadways designed to accommodate them. Collectively, these policies and actions would help maintain safe and reliable emergency response access throughout the Town. Therefore, impacts related to emergency access would be ***less than significant***.

Impact 3.14-5: General Plan 2045 implementation, in combination with other cumulative development, would not have an adverse impact on transportation and circulation (Less than Significant)

The context for analysis of cumulative transportation impacts would be Marin County. Existing County of Marin VMT is 14.9 per resident and 17.2 per employee. Fifteen percent below that countywide average would be 12.7 VMT per resident and 14.6 VMT per employee.

Plan Bay Area 2050+ and Marin County's local CTP 2050 are intended to lower VMT by directing land-use patterns toward reduced auto-dependency. Rather than dispersed suburban development, which requires longer vehicle trips for work and daily needs, these plans direct new housing and employment toward compact Priority Development Areas (PDAs) and existing urban cores. This concentration is intended to place daily services within walking or biking distance of residents. Where grocery stores, schools, and workplaces are within walking or biking distance, daily vehicle trips may be reduced or eliminated. Higher-density infill development within these nodes is intended to keep the distance between destinations relatively short, which could reduce reliance on vehicle travel for local trips.

These land-use changes are paired with substantial changes to regional transportation infrastructure intended to make non-auto travel modes more viable. Under the Transit 2050+ framework, Marin County is expected to see increased service frequencies, expanded capacity, and improved connections across Golden Gate Transit, local bus service, and the SMART rail network. To the extent these changes improve service consistency, they may encourage some drivers to shift modes for daily commutes, which could reduce single-occupancy vehicle trips. Local investments in continuous active transportation infrastructure, such as protected bike lanes and pedestrian corridors, are intended to provide alternatives to short local vehicle trips.

The coordinated framework also includes economic and behavioral measures intended to reduce single-occupancy vehicle travel. Regional demand-management policies under consideration, such as per-mile tolling on congested freeway corridors like US 101, would create a cost associated with non-essential driving. Toll revenues would be reinvested in transit service, which may increase the relative attractiveness of transit and carpooling as alternatives. At the employer level, regional toolkits support measures such as commuter benefits, micromobility hubs, and subsidized transit passes, which are intended to reduce solo vehicle commuting by providing alternative options.

These VMT-reduction strategies are consistent with applicable local transit, bicycle, and pedestrian plans. Because Plan Bay Area 2050+ and Marin County's local policies share similar multimodal objectives, they are not anticipated to conflict with existing traffic regulations. Directing growth into urban centers is consistent with local "complete streets" policies, which call for roadway design that accommodates multiple types of users. These regional strategies are intended to support funding and planning coordination for local bicycle and pedestrian infrastructure.

These strategies are evaluated as supporting, rather than degrading, circulation system performance. Planned upgrades to bus and rail service are consistent with local transit-first policies, and planned bike infrastructure is intended to provide additional travel options. To the extent single-occupancy vehicle trips are reduced, these programs could reduce congestion at high-volume

intersections without requiring roadway widening. Employer commuter programs and demand-management measures are intended to operate alongside local traffic-management policies. These plans share similar objectives for a multimodal transportation network and are not anticipated to conflict with local transportation regulations.

Implementation of these strategies is not anticipated to impede emergency vehicle access in Marin County. Local complete streets policies, transit-first design standards, and regional infrastructure guidelines require that roadway modifications accommodate the safe and timely movement of police, fire, and medical responders. Active transportation projects typically incorporate design features such as mountable curbs, emergency-vehicle-rated pavement, or lane widths that allow emergency vehicles to maneuver around or bypass traffic. To the extent that shifting trips to transit, bus, and bicycle travel reduces vehicle volumes on major thoroughfares and congested corridors such as US 101, this reduction could support emergency vehicle mobility on local streets.

Therefore, cumulative impacts to the transportation system, including VMT, alternative forms of transportation, and emergency vehicle access would be ***less than significant***.

Utilities are critical to providing safe drinking water, disposal and treatment of wastewater, stormwater drainage, and solid waste disposal. This section provides a discussion of the utility systems in San Anselmo including water supplies, wastewater, storm drainage, and solid waste. This section is organized with an existing setting, regulatory setting, and impact analysis.

There were no NOP comments received on this topic. Full comments are included in Appendix A.

3.15.1. WATER SUPPLIES

KEY TERMS

AF: An acre-foot is the volume of one acre of water to a depth of one foot. Each acre-foot of water is equal to approximately 325,851.4 gallons.

AFY: Acre-feet per year.

BGS: Below ground surface.

GPD: Gallons per day.

GPM: Gallons per minute.

Groundwater: Water that is underground and below the water table, as opposed to surface water, which flows across the ground surface. Water beneath the earth's surface fills the spaces in soil, gravel, or rock formations. Pockets of groundwater are often called "aquifers" and are the source of drinking water for a large percentage of the population in the United States. Groundwater is often extracted using wells which pump the water out of the ground and up to the surface. Groundwater is naturally replenished by surface water from precipitation, streams, and rivers when this recharge reaches the water table.

MG: Million gallons

MGD: Million gallons per day

Surface water: Water collected on the ground or from a stream, river, lake, wetland, or ocean. Surface water is replenished naturally through precipitation but is lost naturally through evaporation and seepage into soil.

3.15.2. ENVIRONMENTAL SETTING

POTABLE WATER SYSTEM

Chartered on April 25, 1912, the Marin Municipal Water District (Marin Water) is the first municipal water district in California and currently provides potable water service to ten incorporated cities and towns, including San Rafael, Mill Valley, Fairfax, San Anselmo, Ross, Larkspur, Corte Madera, Tiburon, Belvedere, and Sausalito. The Marin Water service area covers approximately 147 square

miles and serves a population of approximately 192,961 customers.[1] Marin Water averages 22.4 MGD of water use with a maximum daily water design capacity of 71 MGD.[2]

About 75 percent of Marin Water's water supply originates from rainfall on 22,000 acres in the protected Mt. Tamalpais watershed and in the hills of west Marin County. Rainfall from the watershed flows into Marin Water's seven reservoirs. The reservoir water is treated at Marin Water's treatment plants and then travels through a portion of their extensive distribution system, which includes 908 miles of pipes, 130 storage tanks, and 97 pump stations.[3] **Figure 3.15-1** illustrates the Marin Water facilities that serve the Planning Area.

Replacing aging infrastructure is one of the most critical needs of Marin Water. From 2015 through 2020, Marin Water surveyed 503 miles of pipeline. As a result, Marin Water detected 791 customer service leaks and 214 service leaks. In addition, Marin Water has an ongoing program (as part of its Capital Improvement Program) to replace aging distribution pipeline; on average, Marin Water replaced four miles of pipeline per year over the last five years. Including fire flow improvements, Marin Water replaced approximately eight miles annually over the last five years.[4]

WATER SUPPLIES

The Town of San Anselmo receives potable water from Marin Water. Marin Water's water supplies presently come from a combination of water imported from Sonoma County Water Agency (SCWA), local surface water, and recycled water. Groundwater is not currently or planned to be used as a municipal water supply source by the district, though private groundwater wells are used in Marin Water's service area. **Table 3.15-1** summarizes, by source, the total amount of actual water supplied in 2020.

TABLE 3.15-1: MARIN WATER'S WATER SUPPLIES – ACTUAL ACRE-FEET PER YEAR (AFY)

WATER SUPPLY	*ADDITIONAL WATER SUPPLY DETAIL*	*2020*

SOURCE: MARIN WATER UPDATED 2020 URBAN WATER MANAGEMENT PLAN. TABLE 6-10 (JANUARY 2024)

PURCHASED/IMPORTED WATER SUPPLY

Since 1975, Marin Water has contracted with SCWA for a supplemental supply of water, primarily from Lake Sonoma via the Russian River. Marin Water's present contract with SCWA is based on two antecedent documents: the 1975 Off-Peak Water Supply Agreement (Off-Peak Agreement) and its amendments, and the 1991 Agreement for the Sale of Water between SCWA and the district. In 1996, these two contracts were combined into a single new agreement, the Supplemental Water Supply Agreement (Agreement).

The Agreement combined the two prior agreements such that the district can now take deliveries of up to 14,300 AFY from SCWA. All of these deliveries are also now classified as "firm" water. In addition to the annual delivery limit, the Agreement also places seasonal limitations on water delivery rates to the district. Deliveries are limited to 23.1 MGD from December to March and 12.8 MGD from May to September. In April and November, deliveries cannot exceed 20.1 MGD, and in October, deliveries are limited to 17.1 MGD. The Agreement will remain in force through June 30, 2025, and includes a renewal provision that will extend the Agreement through June 30, 2040.[5]

In addition to contractual delivery limits, Russian River water deliveries to Marin Water are subject to available pipeline capacity in facilities owned by SCWA and Novato Municipal Water District (NMWD). Russian River water is diverted by SCWA at a series of sub-surface Ranney collectors near Wohler Bridge in Sonoma County. Water destined for Marin Water flows through SCWA pipelines to Petaluma. From Petaluma, the water flows southward in NMWD's aqueduct for eight miles to the northern end of Marin Water's pipeline facilities in Novato. The Interconnection Agreement of 2014 describes Marin Water's rights to use the excess capacity in NMWD's facilities. The Interconnection

[5] Marin Water. 2024. 2020 Urban Water Management Plan. [page 52]

Agreement runs contiguous with the SCWA Restructured Agreement for Water Supply, which will expire on June 30, 2040, and has renewal options.[6]

Water imported from SCWA is naturally filtered in the deep sand and gravel below the riverbed and requires no further clarification. This water enters Marin Water's system at the Ignacio Water Quality and Pumping Station, where water quality is monitored continually and adjusted as needed. Marin Water's water use projections for imported water from SCWA are shown in **Table 3.15-3**, which have been coordinated with the demands and methodology in the SCWA's 2020 UWMP. It is noted that Marin Water's current contract allows the purchase of up to 14,300 AFY from SCWA; however, Marin Water's ability to accept this water is limited by infrastructure constraints.

TABLE 3.15-3: WHOLESALE WATER SUPPLIES – EXISTING AND PLANNED SOURCES OF WATER (AFY)

WHOLESALE SOURCE – SCWA	*2025*	*2030*	*2035*	*2040*	*2045*

SOURCE: MARIN WATER 2020 URBAN WATER MANAGEMENT PLAN. TABLE 7-3 (JANUARY 2024)

SURFACE WATER SUPPLY

Marin Water's primary water supply is local surface water. Until 1976, Marin Water's supply was obtained solely from rainfall collected from the Mount Tamalpais watershed, including approximately 28 square miles of Marin Water-owned lands, and 36 square miles not owned by Marin Water. Presently, total reservoir storage operated by Marin Water is 25.9 billion gallons (79,566 AF). Annual runoff received into the reservoirs ranges widely from a low of 4,000 AF in 1977 to over 212,000 AF in 2017. On average, the region has an average annual runoff of 83,000 AF (10-year average).[7] **Table 3.15-4** provides a chronology of Marin Water's water rights and development of its reservoir system.

[6] Marin Water. 2024. 2020 Urban Water Management Plan. [page 52]
[7] Marin Water. 2024. 2020 Urban Water Management Plan. [page 57]

TABLE 3.15-4: MARIN WATER'S SURFACE WATER RESERVOIR SYSTEM (AF)

RESERVOIR NAME	*YEAR CONSTRUCTED*	*STORAGE CAPACITY (AF)*	*WATER RIGHTS*
Lake Lagunitas	1873	350	Pre-1914
Phoenix Lake	1905	411	Pre-1914
Bon Tempe Reservoir	1948	4,017	Appropriative Permit No. 05633
Alpine Lake	1918 1924 1941	3,069 4,600 8,891	Pre-1914 Appropriative Permit No. 05633
Kent Lake	1953 1982	16,050 32,895	Appropriative Permit Nos. 05633, 09390, 18546
Nicasio Reservoir	1960	29,0001	Appropriative Permit No. 12800
Soulajule Reservoir	1980	10,572	Appropriative License 12807 and Permit No. 16892
Total Existing Reservoir Storage		79,566	

NOTE: 1) UNDER THE WATER RIGHT FOR STORAGE, 6,570 AF OF WATER FROM NICASIO CREEK CAN BE TRANSFERRED FROM NICASIO RESERVOIR TO KENT LAKE TO FILL KENT LAKE. THIS WOULD FREE UP CAPACITY IN NICASIO RESERVOIR FOR ADDITIONAL STORAGE UP TO THE TOTAL OF 29,000 AF (22,430 AF STORED IN NICASIO RESERVOIR PLUS 6,750 TRANSFERRED AND STORED IN KENT LAKE).

SOURCE: MARIN WATER 2020 URBAN WATER MANAGEMENT PLAN. TABLE 6-2. (JANUARY 2024)

In managing its surface water supply, Marin Water defines the operational yield of its water supply system as the volume of water that can be provided to its customers in most years without depleting its reservoir storage to the point where stored water would be insufficient to meet a reduced water demand during a repeat of the most severe historical drought period. Marin Water's operational yield is based on 115 years of estimated monthly hydrologic data. The operational yield was determined using the Marin WaterSim model developed to simulate Marin Water's water supply system, as described in the Marin WaterSim Model Technical Memorandum of the Marin Water's Water Resources Plan 2040. The analysis was limited to Marin Water's local watershed supplies, meaning it excluded the water imported from the SCWA and locally produced recycled water. According to the Marin Water Resources Plan 2040, Marin Water currently estimates the "operational yield" of its surface water sources to be about 29,020 AFY if 25 percent of usable storage is reserved for emergency supply and imported water is excluded from the analysis.[8]

RECYCLED WATER

Recycled water is highly treated wastewater that is safe for many purposes. Wastewater is treated at the Recycled Water Facility, a state-of-the-art membrane treatment plant located at, and operated by, the Las Gallinas Valley Sanitary District. Once treated, recycled water travels through separate pipelines to district customers. Marin Water's recycled water system consists of nearly 25 miles of pipeline. In 2020, the recycled water system served about 748 AFY, or about 2 percent of

[8] Marin Municipal Water District. March 2017. Marin Municipal Water District Water Resources Plan 2040. Available at: https://www.marinwater.org/WaterResources2040

the total demand, through 333 service connections. **Table 3.15-5** indicates the existing and projected future recycled water uses.

TABLE 3.15-5: CURRENT AND PROJECTED RECYCLED WATER USES (AFY)

BENEFICIAL USE TYPE	*2020 ACTUAL USE*	*2025*	*2030*	*2035*	*2040*	*2045*

GROUNDWATER SUPPLY

According to the DWR's Bulletin 118 Groundwater Basin Lookup, there are three groundwater basins identified within the Marin Water's service area, including the Ross Valley Groundwater Basin, San Rafael Valley Groundwater Basin, and portions of the Novato Groundwater Basin. All three basins are categorized by the California Statewide Groundwater Elevation Monitoring (CASGEM) program as very low priority basins.

As previously stated, groundwater use within Marin Water's service area is limited to small, domestic use through private groundwater pumping wells. Marin Water has studied the potential for municipal groundwater use.; however, several studies have determined the potential for municipal groundwater use within the boundaries of Marin Water's service area is very limited due to limited production capabilities, water quality constraints, and potential water rights issues. As a result of these studies, groundwater is not currently or planned to be used as a municipal water supply source by the district.[9]

Marin Water UWMP Projected Growth

Table 3.15-6 provides the current and projected population for the District's service area through the year 2045. Population projections were updated from those included in the original 2020 UMWP to account for housing allocations determined by the Association of Bay Area Governments (ABAG) 2023-2031 Final Regional Housing Needs Allocation (RHNA) Plan, which incorporates increases in population due to planned housing developments within the District's service area.[10]

Current and Projected Water Demands and Supplies

According to Marin Water's most recent 2020 UWMP, the 2020 actual water demands of the district were 40,149 AFY. Water demand projections were developed through 2045 using Marin Water's Demand Side Management Least Cost Planning Decision Support System (DSS) model. **Table 3.15-7** compares projected water supplies available in a normal year to projected demand totals, with the difference showing a projected surplus during the planning horizon of the UWMP.

TABLE 3.15-7: NORMAL YEAR SUPPLY AND DEMAND COMPARISON (AFY)

	2025	*2030*	*2035*	*2040*	*2045*
Supply totals	84,761	85,018	84,751	84,784	84,852
Demand totals	38,632	40,211	40,369	40,434	40,608
Difference	46,129	44,806	44,381	44,350	44,244

SOURCE: MARIN WATER 2020 URBAN WATER MANAGEMENT PLAN. TABLE 7-8. (JANUARY 2024)

Table 3.15-9 compares total supply available in multiple dry years to projected demand totals, with the difference in multiple dry years showing a projected surplus during the planning horizon of the UWMP. Based on this comparison, Marin Water will have sufficient supplies to meet the demands during normal and dry water years. This is attributed to the measures already implemented by the district to increase storage and SCWA supply, as well as the district's aggressive conservation measures and Dry Year Water Use Reduction Program.

TABLE 3.15-9: MULTIPLE DRY YEARS SUPPLY AND DEMAND COMPARISON (AFY)

		2025	*2030*	*2035*	*2040*	*2045*

SOURCE: MARIN WATER 2020 URBAN WATER MANAGEMENT PLAN. TABLE 7-9. (JANUARY 2024)

Water Shortage Contingency Plan

As the water purveyor, Marin Water must provide the minimum health and safety water needs of the communities it serves at all times. As part of urban water management planning, water suppliers are required to provide a Water Shortage Contingency Plan (WSCP) outlining how the supplier will prepare for and respond to water shortages.

Table 3.15-10 shows the seven stages of the WSCP and their associated shortage range and shortage response actions.

TABLE 3.15-10: WATER SHORTAGE CONTINGENCY PLAN LEVELS

STAGE	PERCENT SHORTAGE RANGE	SHORTAGE RESPONSE ACTIONS
0	0 percent	Includes water waste prohibitions effective at all times.
1	Up to 10 percent	Total reservoir storage is at or is projected to be, or is, in the vicinity of 70,000 acre-feet on April 1st. Includes implementation of mandatory restrictions on end uses (see Table 8-2) as well as agency actions (see Table 8-3).
2	Up to 20 percent	Total reservoir storage is at or is projected to be, or is, in the vicinity of 65,000 acre-feet on April 1st. Includes implementation of mandatory restrictions on end uses (see Table 8-2) as well as agency actions (see Table 8-3).
3	Up to 30 percent	Total reservoir storage is at or is projected to be, or is, in the vicinity of 55,000 acre-feet on April 1st. Includes implementation of mandatory restrictions on end uses (see Table 8-2) as well as agency actions (see Table 8-3).
4	Up to 40 percent-	Total reservoir storage is at or is projected to be, or is, in the vicinity of 45,000 acre-feet on April 1st. Includes implementation of mandatory restrictions on end uses (see Table 8-2) as well as agency actions (see Table 8-3).
5	Up to 50 percent-	Total reservoir storage is at or is projected to be, or is, in the vicinity of 35,000 acre-feet on April 1st. Includes implementation of mandatory restrictions on end uses (see Table 8-2) as well as agency actions (see Table 8-3).

STAGE	*PERCENT SHORTAGE RANGE*	*SHORTAGE RESPONSE ACTIONS*
6	>50 percent	Total reservoir storage is at or is projected to be, or is, in the vicinity of 25,000 acre-feet on April 1st. Includes implementation of mandatory restrictions on end uses (see Table 8-2) as well as agency actions (see Table 8-3).

NOTE: 1) TOTAL RESERVOIR STORAGE INCLUDES EMERGENCY STORAGE AND DEAD STORAGE. 2) TABLE 8-2 AND 8-3 REFERENCES ARE FOR TABLES MENTIONED IN THE UPDATED MARIN WATER 2020 URBAN WATER MANAGEMENT PLAN.

SOURCE: MARIN WATER 2020 URBAN WATER MANAGEMENT PLAN. TABLE 8-1. (JANUARY 2024)

Water System Quality

According to Marin Water's 2023 Annual Water Quality Report, Marin Water conducts approximately 115,000 water quality and process control tests yearly from watershed to faucet, to ensure the potable water supply is safe to drink. This includes ongoing process control testing at the treatment plants as well as laboratory testing of the district's water samples. Many of these samples undergo chemical, bacteriological and physical analyses in the district's water quality laboratory, which is certified by the California State Water Resources Control Board's Environmental Laboratory Accreditation Program. Additionally, Marin Water sends other samples to specialty labs for testing. Marin Water's 2023 Annual Water Quality Report indicates that all water supplied to customers during 2023 met or exceeded all State and federal regulatory standards.

PFAS Testing

Per- and polyfluoroalkyl substances (PFAS) are a large group of chemicals used since the 1940s in common household and commercial products, such as fast food boxes, non-stick cookware, fire-fighting foams, and other purposes. PFAS are slow to break down in the environment and therefore are often referred to as "forever chemicals." The manufacturing and use of products with PFAS introduce these chemicals into the environment, where they may eventually end up in drinking water supplies. Marin Water's Reservoir is not susceptible to PFAS contamination. PFAS is most commonly found in water sources downstream of potential industrial contamination, groundwater, or areas where major fires have occurred. Marin Water's primary supply is sourced from the pristine Mt. Tam watershed and Nicasio Reservoir, which do not have any industrial outfalls. Protection of water quality on the watersheds has been a top priority of Marin Water, which has taken measures to protect their watershed by confirming PFAS chemicals are not used for firefighting measures near its watersheds. PFOA and PFOS (firefighting chemicals) have been phased out of use already.[11]

[11] Marin Water. 2023. 2023 Annual Water Quality Report. [pages 4-5]

3.15.3. REGULATORY SETTING – WATER SUPPLIES

STATE

California Department of Health Services

The Department of Health Services, Division of Drinking Water and Environmental Management, oversees the Drinking Water Program. The Drinking Water Program regulates public water systems and certifies drinking water treatment and distribution operators. It provides support for small water systems and for improving their technical, managerial, and financial capacity. It provides subsidized funding for water system improvements under the State Revolving Fund (SRF) and Proposition 50 programs. The Drinking Water Program also oversees water recycling projects, permits water treatment devices, supports and promotes water system security, and oversees the Drinking Water Treatment and Research Fund for methyl tertiary butyl ether (MTBE) and other oxygenates.

State Water Resources Control Board

The State Water Resources Control Board (SWRCB) and the nine Regional Water Quality Control Boards (Regional Water Boards), collectively known as the California Water Boards (Water Boards), are dedicated to a single vision: abundant clean water for human uses and environmental protection to sustain California's future. Under the federal Clean Water Act (CWA) and the state's pioneering Porter-Cologne Water Quality Control Act, the State and Regional Water Boards have regulatory responsibility for protecting the water quality of nearly 1.6 million acres of lakes, 1.3 million acres of bays and estuaries, 211,000 miles of rivers and streams, and about 1,100 miles of exquisite California coastline.

Consumer Confidence Report Requirements

CCR Title 22, Chapter 15, Article 20 requires all public water systems to prepare a Consumer Confidence Report for distribution to its customers and to the SWRCB. The Consumer Confidence Report provides information regarding the quality of potable water provided by the water system. It includes information on the sources of the water, any detected contaminants in the water, the maximum contaminant levels set by regulation, violations and actions taken to correct them, and opportunities for public participation in decisions that may affect the quality of the water provided.

Urban Water Management Planning Act

The Urban Water Management Planning Act has as its objectives the management of urban water demands and the efficient use of urban water. Under its provisions, every urban water supplier is required to prepare and adopt an UWMP. An “urban water supplier” is a public or private water supplier that provides water for municipal purposes either directly or indirectly to more than 3,000 customers or supplying more than 3,000 acre-feet of water annually. The UWMP must identify and quantify the existing and planned sources of water available to the supplier, quantify the projected water use for a period of 20 years, and describe the supplier’s water demand management measures. The urban water supplier should make every effort to ensure the appropriate level of

reliability in its water service sufficient to meet the needs of its various categories of customers during normal, dry, and multiple dry years. DWR must receive a copy of an adopted UWMP.

Senate Bill (SB) 610 and Assembly Bill (AB) 901

The State Legislature passed SB 610 and AB 901 in 2001. Both measures modified the Urban Water Management Planning Act.

SB 610 requires additional information in an UWMP if groundwater is identified as a source of water available to an urban water supplier. It also requires that the UWMP include a description of all water supply projects and programs that may be undertaken to meet total projected water use. SB 610 requires a city or county that determines a project is subject to CEQA to identify any public water system that may supply water to the project and to request identified public water systems to prepare a specified water supply assessment. The assessment must include, among other information, an identification of existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and water received in prior years pursuant to these entitlements, rights, and contracts. AB 901 requires an UWMP to include information, to the extent practicable, relating to the quality of existing sources of water available to an urban water supplier over given time periods. AB 901 also requires information on the manner in which water quality affects water management strategies and supply reliability. AB 901 requires a plan to describe plans to supplement a water source that may not be available at a consistent level of use, to the extent practicable. Additional findings and declarations relating to water quality are required.

Senate Bill (SB) 221

SB 221 adds Government Code Section 66455.3, requiring that the local water agency be sent a copy of any proposed residential subdivision of more than 500 dwelling units within five days of the subdivision application being accepted as complete for processing by a city or county. It also adds Government Code Section 66473.7, establishing detailed requirements for establishing whether a "sufficient water supply" exists to support any proposed residential subdivisions of more than 500 dwellings, including any such subdivision involving a development agreement. When approving a qualifying subdivision tentative map, a city or county must include a condition requiring availability of a sufficient water supply. The applicable public water system must provide proof of availability. If there is no public water system, a city or county must undertake the analysis described in Government Code Section 66473.7. The analysis must include consideration of effects on other users of water and groundwater.

LOCAL

Existing San Anselmo General Plan

The following goals, policies, and actions are relevant to water supply and water quality.

LAND USE ELEMENT

Objective 13: To ensure that existing and future development in hillside and ridge areas has a continuous supply of domestic water, adequate water to protect structures from domestic and wildfires.

> **Policy 13.1:** To encourage the Fire District to require sprinkler systems in new residential buildings which the Water District cannot supply with the ISO recommended fire flow.
>
> **Policy 13.2:** New homes shall hook into MMWD's system where feasible. If a water moratorium exists or public water cannot be provided, owners may construct potable water wells for new homes in accordance with the San Anselmo Municipal Code but shall connect to MMWD for their sole potable water supply as soon as water supplied by MMWD is available.

CONSERVATION ELEMENT

Guideline 1. Air, water, and noise pollution shall be prevented or minimized.

Guideline 3. Activities causing damage to hydrological and biological processes shall be discouraged.

Guideline 4. Streams shall be maintained in or restored to their natural state. A flood channel maintaining the natural settings on San Anselmo Creek and Sleepy Hollow Creek shall be of adequate width and properly maintained to allow passage of flood waters and preservation of riparian vegetation and habitat. Removal of vegetation on the hillsides should be closely controlled in order to minimize erosion, siltation of watercourses, and runoff.

Guideline 10. Projects shall not overburden the water supply, fire protection, waste disposal, schools, traffic and circulation, or other services and facilities, or adversely affect the financial or social environment of the community.

Guideline 11. Water supply, flood control, waste water and solid waste disposal, soil conservation, and open space preservation shall be coordinated to create the greatest public benefit and the least degree of environmental damage.

2020 Urban Water Management Plan for Marin Municipal Water District

The 2020 Urban Water Management Plan (UWMP) is a foundational document for Marin Municipal Water District (Marin Water) and is a source of information about Marin Water's historical and projected water demands, water supplies, supply reliability and potential vulnerabilities, water shortage contingency planning, and demand management programs. Marin Water prepared the UWMP to remain in compliance with the Urban Water Management Planning Act (California Water Code Section 10610 et seq.). This document also describes the actions Marin Water is taking to promote water conservation, both by Marin Water and by its customers (referred to as "demand

management measures") and includes a plan to address potential water supply shortages such as drought or other impacts to supply availability (the "Water Shortage Contingency Plan"). The UWMP is updated every five years in accordance with state requirements under the Urban Water Management Planning Act (UWMP Act) and amendments (Division 6 Part 2.6 of the California Water Code Sections 10610 – 10656). The 2020 Updated UWMP was adopted by the Board of Directors on January 9, 2024.

Marin Municipal Water District Water Resources Plan 2040

Marin Water prepared the Water Resources Plan 2040 to evaluate resiliency in the face of a variety of threats to water resources in its service area and to identify options to enhance resiliency for its customers. The Water Resources Plan 2040 provides information to enable the district to make informed water supply planning decisions in the face of a variety of potential reliability threats, including an updated Water Shortage Contingency Plan that allows the district to become more flexible in addressing dry periods early. As part of the Water Resources Plan 2040, Marin Water updated the baseline operational yield, which is defined as the maximum annual demand that can be met by the district's local water supply system during the hydrologic record, assuming 25 percent of supply capacity (beyond unusable storage) is reserved for emergency purposes. To better understand potential changes in future supply availability under various future conditions, the Water Resources Plan 2040 addresses simulated reliability threats or "events" and the "futures" that would result from those events that could impact baseline supply conditions, including earthquakes, drought, climate change, wildfire, landslides, and water quality issues. Based on the results of the simulated reliability threats, the Water Resources Plan 2040 recommends actions that Marin Water should take to increase the water supply resiliency, including increased water conservation, investing in watershed management, and exploring groundwater partnering opportunities.

Marin Municipal Water District Strategic Water Supply Roadmap

The Water Supply Roadmap (Roadmap), approved on February 28, 2023, combines a mix of short-term water supply strategies with pre-design work to support medium- and longer-term options to address water supply needs. The Roadmap contains the following five main elements:[12]

Water Conservation and Flexible Drought Measures: In the near-term, Marin Water will build on its conservation program and pursue specified activities to incentivize further water use efficiency. This element includes ongoing work to implement the 2024 Five-year Water Efficiency Master Plan. The Water Shortage Contingency Plan will be implemented as warranted by water supply conditions.

Improve Operability and Flexibility of Storage Facilities: This element includes near-term strategies, such as electrifying Lake Soulajule to operate the lake more frequently, installing the Phoenix Lake-Bon Tempe Reservoir connection to increase Marin Water's control over water flows, and improving forecasting capabilities and stream release automation.

[12] Marin Municipal Water District, n.d. Water Supply Resiliency. Available at: https://www.marinwater.org/WaterSupplyResiliency

Maximize Use of Sonoma Water Supplies: Near-term strategies for this element include developing operational rules to guide the timing and quantity of water purchased from Sonoma County Water Agency to maximize take of supplemental water in dry years while minimizing risk of reservoirs spills. In the medium term, a dedicated conveyance project, with three potential alternatives, is proposed to be developed in two phases.

Increase Storage: In the long-term, two strategies would be implemented: 1) additional storage would be developed via movable spillway gates or raising of dams at Kent, Nicasio, or Soulajule reservoirs, and 2) existing groundwater would be pumped from the Santa Rosa Plain aquifer for consumption, which could create the necessary capacity to store winter water from Sonoma County.

Develop New Local Supplies: This component includes two near-term strategies, the Petaluma Brackish Desalination project, which includes a feasibility analysis for brackish desalination which could conceptually yield 5,000 acre-feet per year, and pursuing grant opportunities for recycled water projects to reduce costs.

Marin Municipal Water District Code

Title 11 Water Service Rules and Regulations, this title outlines the rules and regulations that are adopted to establish uniform practices governing water service and to define the obligations of Marin Water to consumers and of consumers to Marin Water. Topics in this title include applications for water service, installation of new service connections, cross-connections, meter reading, billing and rendering of bills, payment of bills, termination of water service, water main extensions, charges for main extensions, installation of services, charges for service installations and connection fees, and fire flow fees.

Chapter 13.02 Water Conservation and Dry Year Water Use Reduction Program, this chapter provides a water conservation plan to minimize the effect of a water shortage on consumers and to adopt provisions that will significantly reduce the consumption of water during an extended dry weather period (drought). This chapter establishes prohibitions on nonessential activities and requirements for water services, and it identifies programs to reach 10 percent and 25 percent reduction goals in dry periods.

Chapter 13.03 Water Budgets and Related Conservation Measures, this chapter specifies the terms and conditions under which water budgets will be required and when consumers will be required to retrofit water using fixtures with low flow or ultra-low flow fixtures to reduce the per capita consumption of water. Implementation of the provisions of this chapter reduces the hardship on consumers resulting from over subscription of the Marin Water's water supplies, which has increased the susceptibility to shortfalls in dry years.

TOWN OF SAN ANSELMO MUNICIPAL CODE

The Town addresses water conservation in San Anselmo Municipal Code (Town Code) Title 9, Chapter 22, Water Efficient Landscape. In this chapter, the Town adopts by reference the Marin Water efficient landscape requirements. In particular, the Town references Marin Water Code Title 13 "Water Service Conditions and Water Conservation Measures", Chapter 13.02 "Water Conservation and Dry Year Water Use Reduction Program", and Section 13.02.021 "Water

Conservation: Normal Year Water Conservation" Subsections (2) "Definitions" and (5) "Water Efficient Landscaping".

The Town addresses water supply in Town Code Title 7, Chapter 13, Water Wells, which is intended to protect groundwater, watercourses, and surface water by regulating the construction, placement, reconstruction, and remodeling of water wells, water supply sources, test holes, and existing watercourses within the Town.

Section 10-2.301(f) of Town Code Title 10, Chapter 2, addresses potable water supply requirements for subdivisions, which can be addressed by connection to the Marin Water system or through approval of a water well permit.

3.15.4. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

This section evaluates the potential impacts of implementing the Town of San Anselmo General Plan 2045 on existing and planned utility systems, including water supply and treatment, wastewater collection and treatment. The analysis relies on data from the Community Services and Facilities Existing Conditions Report (2025), the Marin Water 2020 Urban Water Management Plan (UWMP), and the Town of San Anselmo Capital Improvement Program (CIP). The assessment assumes buildout consistent with General Plan land use designations (DEIR Chapter 2.0 Table 2.0-2) and evaluates General Plan Policy guidance, service provider capacity, infrastructure, and regulatory compliance under normal, dry, and multiple-dry-year conditions.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to water supplies and distribution.

PARKS RECREATION AND PUBLIC FACILITIES ELEMENT

Goal PR-C Provide high-quality public facilities and infrastructure that meet the needs of current and future residents, businesses, and visitors in the most efficient and cost-effective ways possible.

Policy PR-C.1: Ongoing Maintenance. Proactively maintain public facilities and infrastructure through ongoing preventative care, and ensure the timely repair, replacement, and upgrading of Town facilities, infrastructure, and equipment.

> **Action PR-C.1.a: Capital Improvement and Agency Coordination Program.** Maintain and update a multi-year Capital Improvement Plan for Town infrastructure and facilities, and coordinate with partner agencies to align projects, maximize resources, achieve economies of scale, and reduce construction impacts.
>
> **Action PR-C.1.b: Asset Management Program.** Develop a proactive Asset Management Program to identify needed facility and infrastructure maintenance, upgrade, and replacement timing

and costs. Seek additional funding opportunities and strategies to avoid increased costs of deferred maintenance.

Policy PR-C.2: Sustainable Design and Operations. Design and operate public facilities and infrastructure to minimize non-renewable energy and resource consumption, improve environmental quality, and reduce greenhouse gas emissions.

Policy PR-C.7: Storm Drainage. Continue to monitor and pursue improvements to the storm drainage system, including programs to reduce flooding, improve water quality, remove debris, and respond to climate-related changes. Evaluate the potential for restoration of the natural hydrologic function of creeks and drainageways where possible.

Policy PR-C.8: Potable Water. Work with the Marin Municipal Water District (Marin Water) to meet projected water demand, encourage water conservation, and ensure the reliability and safety of the water supply and distribution system.

Action PR-A.3.b: Sustainable Park Operations and Design. Incorporate sustainability principles such as reduced water and energy, use of recycled and non-toxic materials, stormwater capture, and carbon sequestration in the design of park facilities. Parks should be maintained and managed to enhance their value as biological resources and natural habitat.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the project will have a significant impact on the environment associated with Utilities if it will:

- Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas or telecommunication facilities, the construction or relocation of which could cause significant environmental effects; and/or
- Have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years.

IMPACTS AND MITIGATION MEASURES

Impact 3.15-1: General Plan implementation would not result in insufficient water supplies available to serve the Town and reasonably foreseeable future development during normal, dry, and multiple-dry years. (Less than Significant)

Implementation of the General Plan 2045 would increase population and employment, thereby increasing potable water demand. Water service to San Anselmo is provided by Marin Municipal Water District (Marin Water), which serves approximately 193,000 residents across ten municipalities. Marin Water sources 75 percent of supply from local rainfall captured on the Mt.

Tamalpais and West Marin watersheds and supplements with imported water from the Sonoma County Water Agency Russian River system.

Marin Water's 2020 UWMP (Updated 2024) projects adequate supplies through 2045 under normal, single-dry, and multiple-dry-year conditions, assuming implementation of demand management, recycled water, and drought contingency measures. Future Population Growth included within Marin Water's UWMP (Table 3-1) provides current and projected population for the District's service area through the year 2045. Population projections were updated from those included in the original 2020 UMWP to account for housing allocations determined by the Association of Bay Area Governments (ABAG) 2023-2031 Final Regional Housing Needs Allocation (RHNA) Plan, which incorporates increases in population due to planned housing developments within the District's service area. As shown in the UWMP the population of the service area is anticipated to grow from 191,269 in 2020 to 230,996 in 2045.

Projected General Plan growth—approximately 2,279 additional units and 5,356 new residents—represents a minor proportional increase in total district demand and would encompass the UWMP's regional demand projections. As described previously, based on Marin Water's projections through 2045, Marin Water will have sufficient supplies to meet the demands during normal and dry water years and would run a substantial surplus under all scenarios.

General Plan policies ensure continued coordination and conservation. *Policy PR-C.8* requires coordination with Marin Water to meet projected demand and ensure system reliability; *Policy PR-C.2* promotes sustainable facility design minimizing non-renewable resource use.

If larger development projects occur within the Planning Area, such development would be subject to SB 610 and SB 221, which require preparation of a WSA to confirm whether current and projected water supplies could accommodate the development as proposed. Additionality, although the development capacity under the General Plan 2045 reflects the Town's long-term buildout potential, this growth would occur gradually over decades as individual projects are proposed, reviewed, and approved. Implementation of new housing units, nonresidential development, and supporting infrastructure will depend on market conditions, available funding, and local and regional planning priorities. As such, utility demand and infrastructure needs will evolve incrementally rather than all at once. The Town and its service providers will continue to periodically update their master plans, the Urban Water Management Plan, and Capital Improvement Programs to reflect actual development trends and regulatory requirements.

Given the UWMP's documented surplus and ongoing implementation of Town and District policies, San Anselmo would be anticipated to have adequate water supply under normal and dry year conditions through 2045. As such this impact is considered **less than significant**.

Impact 3.15-2: General Plan implementation may require or result in the construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant)

As future development and infrastructure projects are considered, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA.

The General Plan includes of Policy PR-C.8 which requires coordination with Marin Water to meet projected demand and ensure system reliability and ensures that water providers serving the town are consulted with to ensure that future supply levels meet demands.

As described under Impact 3.15-1, the projected 2045 water supplies are projected to be adequate to meet demand that would be generated through 2045 within surplus under all scenarios. No new water treatment plants or major transmission facilities are anticipated beyond those projects and improvements identified in Marin Water's UWMP and Capital Improvement Program. Additionality, although the development capacity under the General Plan 2045 reflects the Town's long-term buildout potential, this growth would occur gradually over decades as individual projects are proposed, reviewed, and approved. Implementation of new housing units, nonresidential development, and supporting infrastructure will depend on market conditions, available funding, and local and regional planning priorities. As such, utility demand and infrastructure needs will evolve incrementally rather than all at once. The Town and its service providers will continue to periodically update their master plans, the Urban Water Management Plan, and Capital Improvement Programs to reflect actual development trends and regulatory requirements.

It is anticipated that water supply infrastructure will need to be extended to serve future development. Future development in the Planning Area would be required to connect to existing water distribution infrastructure in the vicinity of each site, pay the applicable water system connection fees, and pay the applicable water usage rates. Future projects may be required to implement site specific and limited off-site improvements to the water distribution system in order to connect new project sites to the existing water infrastructure network.

As future development and infrastructure projects are considered by the Town, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. The specific impacts of providing new and expanded water distribution infrastructure cannot be determined at this time, as the General Plan 2045 does not propose or authorize any specific development projects. However, extension of water supply lines would be required to serve areas where these facilities do not currently exist. The water supply lines currently located in roadways and developed areas would be extended to serve development projects. In some cases, construction of new water supply lines in previously undeveloped areas would be required. Future improvements to the existing water distribution infrastructure would be primarily provided on sites with land use designations that allow

for urbanized land uses, and the environmental impacts of constructing and operating the new water distribution infrastructure are anticipated to be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan, as discussed in Sections 3.1 through 3.15, and 4.0 of this Draft EIR.

The Town's General Plan policies (PR-C.8) ensures coordination with Marin Water and promotion of efficient infrastructure design. Project-specific environmental review includes required future CEQA reviews as individual projects, or capital improvement projects are proposed would address site specific and potential short-term/construction impacts such as ground disturbance, noise, and traffic disruption. Therefore, this impact is considered **less than significant**.

3.15.5. WASTEWATER

KEY TERMS

Effluent: Effluent is an outflowing of water from a natural body of water, or from a man-made structure. Effluent in the man-made sense is generally considered to be water pollution, such as the outflow from a sewage treatment facility or the wastewater discharge from industrial facilities. In the context of wastewater treatment plants, effluent that has been treated is sometimes called secondary effluent, or treated effluent.

NPDES: Water pollution degrades surface waters making them unsafe for drinking, fishing, swimming, and other activities. As authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. Point sources are discrete conveyances such as pipes or man-made ditches. Individual homes that are connected to a municipal system, use a septic system, or do not have a surface discharge do not need an NPDES permit; however, industrial, municipal, and other facilities must obtain permits if their discharges go directly to surface waters.

WWTP: Wastewater treatment plant. Treatment of wastewater may include the following processes: screening to remove large waste items; grit removal to allow sand, gravel, and sediment to settle out; primary sedimentation where sludge can settle out of the wastewater; secondary treatment to substantially degrade the biological content of the sewage; tertiary treatment to raise the quality of the effluent before it is discharged; and, discharge.

3.15.6. ENVIRONMENTAL SETTING

Wastewater service in the Planning Area is provided by RVSD. Below is an overview of the agency, including the existing wastewater system and current wastewater flows. **Figure 3.15-2** shows the wastewater service provider within the Planning Area.

ROSS VALLEY SANITARY DISTRICT

RVSD was established in 1899 and is California's oldest sanitary district. RVSD's service area is bounded on the east by the San Francisco Bay and on the west by the coastal hills. Numerous seasonal and perennial waterways traverse the service area and terminate in Corte Madera Creek, which is the main drainage from the District's service area to the San Francisco Bay.

RVSD maintains approximately 196 miles of mainline and trunk line sewers and 7.9 miles of force main pipe. RVSD owns and operates five major pump stations and 14 minor pump stations and lift stations. The major pump stations collect and pump flow from the minor stations and trunk lines to the CMSA treatment plant. Both lower and upper laterals are owned and maintained by the individual private property owners (RVSD, May 2023). **Figure 3.15-3** shows the wastewater infrastructure and facilities within the Planning Area.

RVSD provides sewer collection and conveyance services for over 15,900 residential and business accounts with a service population of nearly 45,000 located within Larkspur, Ross, San Anselmo, and Fairfax, and the unincorporated areas of Greenbrae, Bon Air, Kentfield, and Sleepy Hollow (collectively known as Ross Valley). RVSD has historically conveyed an average of approximately 4.0 MGD to the regional wastewater treatment plant (WWTP) operated by CMSA.

Table 3.15-11 provides a list of properties with septic tanks in the Planning Area organized by their assessor's parcel number (APN) and zoning.

SOURCES: ROSS VALLEY SANITARY DISTRICT, GIS. MARIN MAP GIS.

RVSD Infrastructure Asset Management Plan

The District's capital and operations and maintenance (O&M) programs are both guided by its Infrastructure Asset Management Plan (IAMP). The capital projects discussed in the Year-End Capital Program Report are among the last projects completed under the previous 2013 IAMP. The 2021 IAMP update provides a prioritized plan for infrastructure replacement that is based on a comprehensive risk model of the system and represents a financially and institutionally sustainable path forward.[13] In the 2021 IAMP Update, each asset in the system is assigned a risk-based score which assists in prioritizing pipe segments and manholes for grouping into gravity sewer improvement projects going forward.

Central Marin Sanitation Agency (CMSA) Wastewater Treatment Plant

CMSA provides wastewater treatment, disposal, and related environmental services to protect public health and enhance environmental quality within the central Marin County service area. The RVSD flows are ultimately conveyed to the CMSA WWTP, which is located at 1301 Anderson Drive in San Rafael. The total volume of wastewater treated in the Fiscal Year 2023 was estimated to be 4.869 billion gallons. The average dry weather influent flow between July through September 2019 was 8.3 MGD. As described in the NPDES Permit, the average dry weather effluent flow in excess of 10 MGD is prohibited.[14] The average wastewater treated is 13.3 MGD.[15] When flows exceed this capacity during peak wet weather events, the WWTP is permitted to blend primary and secondary

[14] CA RWQCB Order R2-2023-0006 NPDES Permit CA0038628 Available at: https://www.cmsa.us/assets/documents/permits/NPDES.pdf

[15] Central Marin Sanitation Agency, 2023. Popular Annual Financial Report for the Fiscal Year Ended July 1, 2022-June 30, 2023. Available at: https://www.cmsa.us/FY23%20PAFR%20Publication%20Final.pdf

treated effluent prior to discharge. Blended wastewater is biologically treated wastewater blended with wastewater diverted around biological treatment units or advanced treatment units. Such discharges are approved under the bypass conditions when (1) CMSA's peak wet weather influent flow exceeds the capacity of the biological treatment units of 30 MGD, and (2) the discharge complies with the effluent and receiving water limitations contained in the NPDES Order.

3.15.7. REGULATORY SETTING - WASTEWATER

FEDERAL

Clean Water Act (CWA) / national Pollutant Discharge Elimination System (NPDES) Permits

The CWA is the cornerstone of water quality protection in the United States. The statute employs a variety of regulatory and non-regulatory tools to sharply reduce direct pollutant discharges into waterways, finance municipal wastewater treatment facilities, and manage polluted runoff. These tools are employed to achieve the broader goal of restoring and maintaining the chemical, physical, and biological integrity of the nation's waters so that they can support "the protection and propagation of fish, shellfish, and wildlife and recreation in and on the water."

The CWA regulates discharges from "non-point source" and traditional "point source" facilities, such as municipal sewage plants and industrial facilities. Section 402 of the Act creates the NPDES regulatory program which makes it illegal to discharge pollutants from a point source to the waters of the United States without a permit. Point sources must obtain a discharge permit from the proper authority (usually a state, sometimes EPA, a tribe, or a territory). NPDES permits cover industrial and municipal discharges, discharges from storm sewer systems in larger cities, storm water associated with numerous kinds of industrial activity, runoff from construction sites disturbing more than one acre, mining operations, and animal feedlots and aquaculture facilities above certain thresholds.

Permit requirements for treatment are expressed as end-of-pipe conditions. This set of numbers reflects levels of three key parameters: (1) biochemical oxygen demand (BOD), (2) total suspended solids (TSS), and (3) pH acid/base balance. These levels can be achieved by well-operated sewage plants employing "secondary" treatment. Primary treatment involves screening and settling, while secondary treatment uses biological treatment in the form of "activated sludge."

All so-called "indirect" dischargers are not required to obtain NPDES permits. An indirect discharger is one that sends its wastewater into a municipal sewer system, so it eventually goes to a sewage treatment plant. Although not regulated under NPDES, "indirect" discharges are covered by another CWA program called pretreatment. "Indirect" dischargers send their wastewater into a municipal sewer system, which carries it to the municipal sewage treatment plant, through which it passes before entering surface water.

STATE

State Water Resources Control Board/Regional Water Quality Control Board

In California, all wastewater treatment and disposal systems fall under the overall regulatory authority of the WRCB and the nine California Regional Water Quality Control Boards (RWQCBs), who are charged with the responsibility of protecting beneficial uses of state waters (ground and surface) from a variety of waste discharges, including wastewater from individual and municipal systems. The Town of San Anselmo is within the jurisdiction of the San Francisco Bay RWQCB.

The RWQCB's regulatory role often involves the formation and implementation of basic water protection policies. These are reflected in the individual RWQCB's Basin Plan, generally in the form of guidelines, criteria and/or prohibitions related to the siting, design, construction, and maintenance of on-site sewage disposal systems. The SWRCB's role has historically been one of providing overall policy direction, organizational and technical assistance, and a communications link to the State legislature.

The RWQCBs may waive or delegate regulatory authority for on-site sewage disposal systems to counties, cities or special districts. Although not mandatory, it is commonly done and has proven to be administratively efficient. In some cases, this is accomplished through a Memorandum of Understanding (MOU), whereby the local agency commits to enforcing the Basin Plan requirements or other specified standards that may be more restrictive. The RWQCBs generally elect to retain permitting authority over large and/or commercial or industrial on-site sewage disposal systems, depending on the volume and character of the wastewater.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act is California's statutory authority for the protection of water quality. Under the Porter-Cologne Act, the State is required to adopt policies, plans, and objectives that will protect the State's waters for the use by and enjoyment of Californians. In California, the SWRCB has the authority and responsibility for establishing policy related to the State's water quality. Regional authority is delegated by the SWRCB to a RWQCB. The Porter-Cologne Act authorizes the SWRCB and RWQCB to issue NPDES permits.

Under the RWQCB NPDES permit system, all existing and future municipal and industrial discharges to surface water within the city would be subject to regulation. NPDES permits are required for operators of municipal separate storm sewer systems, construction projects, and industrial facilities. These permits contain limits on the amount of pollutants that can be contained in each facility's discharge.

LOCAL

Existing San Anselmo General Plan

The following goals, policies, and guidelines pertain to wastewater.

LAND USE ELEMENT

Policy 3.2: Single-family residential development is most appropriate within and adjacent to existing single-family areas, and in areas easily served with water and sewer lines. Such areas should also serve as transition zones between mixed density and very low-density areas.

Objective 12: To maintain the current level of public services to the citizens of the Town and to continue to support improvements to public utilities as needed.

Policy 12.1: To work with the special districts that provide water, sewer, and fire protection services in order to maintain and improve upon the present level of service.

Policy 12.2: To require all new development within the Town to be served by the public fire protection system and, where feasible, the public water and sewer system.

Objective 15: To ensure that onsite sewage treatment systems do not create a potential health problem or contribute to a potential unstable slope condition.

Policy 15.1: The Town will require all new development, where feasible, to be served by the Public Sanitation District.

Policy 15.2: Where it is not feasible to hook into the Sanitation District collection system, the builder must supply a copy of a sanitation engineer's report to the Town stating that disposal is feasible on the site from a health standpoint. Further, a professional geotechnical report by a professional engineer shall be supplied to the Town stating that the proposed wastewater disposal field will not result in contribute to any landslide or other adverse geologic condition.

TOWN PARKS, RECREATION, AND PUBLIC SERVICES ELEMENT

Recommendation 2. Sanitary Service The present collection system is operating near capacity. Population growth should not exceed the progress made in bringing the sanitary sewer system up to regional standards and expanding its capacity for collection and treatment of wastes.

Ross Valley Sanitary District

The Ross Valley Sanitary District (RVSD) is a special enterprise district organized under the California Health and Safety Code and the Sanitary Acts of 1891 and 1923. RVSD operates and maintains approximately 200 miles of collection sewer lines and 19 pumping stations which collect, pump, and transport approximately four million gallons of wastewater per day to the Central Marin Sanitation

Agency for treatment. The RVSD service area includes Fairfax, San Anselmo, Ross, Larkspur, Bon Air, Sleepy Hollow, Kentfield, Kent Woodlands, Oak Manor, and Greenbrae.[16]

RVSD SEWER SYSTEM MANAGEMENT PLAN

The RVSD Sewer System Management Plan (SSMP) was updated in May 2023 to comply with the requirements of Water Board Order No. 2006-0003-DWQ and Amended Monitoring and Reporting Program, Order No. WQ 2013-0058-Exec. The objective of the RVSD SSMP is to establish goals that align the sewer collection system operation, management, and capacity assurance activities in a manner that achieves the following:

- Properly manage, operate, and maintain the wastewater collection system to minimize sanitary sewer overflows (SSOs) and mitigate their impacts if any occur;
- Uphold the District's construction standards and specifications for the installation of new, and repair and rehabilitation of existing, collection system infrastructure;
- Identify, prioritize, continuously renew, and replace sewer system facilities to maintain reliability and reduce inflow and infiltration;
- Provide capacity for peak wastewater flows from the design storm event, as defined in the District's Infrastructure Asset Management Plan (IAMP);
- Implement regular, proactive maintenance of the system to remove roots, debris, fats, oils, and grease in areas prone to blockages that may cause sewer backups or SSOs; and
- Be available and responsive to the needs of the public and work cooperatively with local, state, and federal agencies to reduce, mitigate impacts of, and properly report SSOs.

The RVSD SSMP references the RVSD Sanitary Code and service agreements to demonstrate that the district has legal authority to prevent illicit discharges into its wastewater collection system; require sewers and connections be properly designed and constructed; ensure access for maintenance, inspection, or repairs for portions of the laterals owned or maintained by the district; and enforce the provision of its Sanitary Code.

RVSD SANITARY CODE

The Sanitary Code, first adopted in July 1959 and most recently amended in August 2013, includes several provisions that establish the RVSD's legal authority to control discharges and maintain their sanitary sewer system. Article I, Section 121 and Article IV, Section 407 establish the property owners as the responsible party for ownership and maintenance of both the upper and lower laterals. Article VI, Section 601 prohibits drainage to the RVSD's sanitary sewers. Article IV (Specifications for Side Sewers, Building Sewers, Lateral Sewers and Connections) and Article V (Public Sewer Construction) outlines RVSD's authority regarding proper design and construction of sewers and connections. Sanitary Code Article II, Section 210 details RVSD's authority to enter buildings for the purpose of protecting the public sewer system and enforcing provisions of the Sanitary Code. Article VII, superseded by Ordinance 64, Section 18, provides RVSD with the authority to inspect all sewer construction work prior to connection to the public sewer. Article VI, Section

[16] Ross Valley Sanitary District. About, Available at: https://www.rvsd.org/27/About

602, Item B – Types of Wastes Prohibited, details the regulation for the discharge of fats, oils, and grease. Article VIII, Section 802, details the District's ability to enforce provisions of the Sanitary Code. Article VIII, Section 805, enables RVSD to terminate discharges.[17]

Central Marin Sanitation Agency

In October 1979, four of the local agencies that provided wastewater services in central Marin County entered into a Joint Powers Agreement: RVSD, San Rafael Sanitation District, Sanitary District No. 2 of Marin County, and the City of Larkspur. This agreement created a separate governmental entity, the Central Marin Sanitation Agency, to oversee the construction and operation of a regional wastewater facility. CMSA became operational in January 1985. The purpose of CMSA is to plan, acquire, construct, maintain, and operate facilities for the collection, treatment, reclamation, and disposal of wastewater, and to capture and utilize renewable resources derived from the wastewater treatment process, including but not limited to biogas, recycled water, and biosolids. The CMSA goals include the following:[18]

- CMSA will effectively operate and maintain its treatment facilities in compliance with changing regulations.
- CMSA will continually improve financial management practices to ensure transparency, financial sustainability, and sound fiscal principles.
- CMSA will further develop resource recovery opportunities to achieve community, environmental, and economic benefits.
- CMSA will be a leader and/or an active participant in collaborative efforts to address industry and community challenges and opportunities.
- CMSA will attract and retain high quality employees by engaging staff, fostering professional development, valuing diversity, and promoting a culture of safety.
- CMSA will expand its use of technology to improve communication and processes, and strengthen system integrity.

CENTRAL MARIN SANITATION AGENCY ORDINANCES

Ordinance No. 2007-1 minimizes sanitary sewer overflows (SSOs) in the CMSA service area through controlling the discharge of fats, oils, and greases (FOG) to the sanitary sewer from commercial food service establishments by establishing requirements for food service establishments to install and maintain grease traps and interceptors. Ordinance No. 2019-1 outlines the fees to be paid for each new sewer connection based on land use or plumbing fixtures. Fees are also assessed for septic and chemical toilet waste haulers, FOG haulers, and industrial waste discharges. Ordinance No. 2009-2 is aimed at reducing the mercury load to the sanitary sewer system by regulating the discharge of amalgam wastes from dental offices.

3.15.8. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

This section evaluates the potential impacts of implementing the San Anselmo General Plan 2045 on existing and planned utility systems, including water supply and treatment, wastewater collection and treatment, stormwater management, solid waste, and energy and telecommunications. The analysis relies on data from the Community Services and Facilities Existing Conditions Report (2025), the Marin Water 2020 Urban Water Management Plan (UWMP), the Ross Valley Sanitary District (RVSD) Sewer System Management Plan (2023), and the Town of San Anselmo Capital Improvement Program (CIP). The assessment assumes buildout consistent with General Plan land use designations (DEIR Chapter 2.0 Table 2.0-2) and evaluates service provider capacity, infrastructure adequacy, and regulatory compliance under normal, dry, and multiple-dry-year conditions

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to wastewater.

PARKS, RECREATION AND PUBLIC FACILITIES ELEMENT

Goal PR-C Provide high-quality public facilities and infrastructure that meet the needs of current and future residents, businesses, and visitors in the most efficient and cost-effective ways possible.

Policy PR-C.1: Ongoing Maintenance. Proactively maintain public facilities and infrastructure through ongoing preventative care, and ensure the timely repair, replacement, and upgrading of Town facilities, infrastructure, and equipment.

> **Action PR-C.1.a: Capital Improvement and Agency Coordination Program.** Maintain and update a multi-year Capital Improvement Plan for Town infrastructure and facilities, and coordinate with partner agencies to align projects, maximize resources, achieve economies of scale, and reduce construction impacts.
>
> **Action PR-C.1.b: Asset Management Program.** Develop a proactive Asset Management Program to identify needed facility and infrastructure maintenance, upgrade, and replacement timing and costs. Seek additional funding opportunities and strategies to avoid increased costs of deferred maintenance.

Policy PR-C.11: Wastewater. Support efforts by the Ross Valley Sanitary District to maintain high quality wastewater collection and treatment facilities and implement sustainability programs.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact on the environment associated with Utilities if it would:

- Require or result in the relocation or construction of new or expanded wastewater facilities, the construction or relocation of which could cause significant environmental effects; and/or
- Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the projects projected demand in addition to the providers existing commitments.

IMPACTS AND MITIGATION MEASURES

Impact 3.15-3: General Plan implementation has the potential to result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments (Less than Significant)

As described previously, Ross Valley Sanitary District (RVSD) provides sewer collection and conveyance services for over 15,900 residential and business accounts with a service population of nearly 45,000 located within Larkspur, Ross, San Anselmo, and Fairfax, and the unincorporated areas of Greenbrae, Bon Air, Kentfield, and Sleepy Hollow (collectively known as Ross Valley). RVSD has historically conveyed an average of approximately 4.0 MGD to the regional wastewater treatment plant (WWTP) operated by CMSA.

The RVSD's capital and operations and maintenance (O&M) programs are both guided by its Infrastructure Asset Management Plan (IAMP). The 2021 IAMP update provides a prioritized plan for infrastructure replacement that is based on a comprehensive risk model of the system and represents a financially and institutionally sustainable path forward. In the 2021 IAMP Update, each asset in the system is assigned a risk-based score which assists in prioritizing pipe segments and manholes for grouping into gravity sewer improvement projects going forward. The results will enable the District to more efficiently meet its collection system regulatory requirements, anticipate and avoid structural-, hydraulic-, and operations-related failures that may not be recognized under the past program, and reduce wet weather flows to Central Marin Sanitation Agency (CMSA) through I&I reduction to meet NPDES requirements.

Central Marin Sanitation Agency (CMSA) provides wastewater treatment, disposal, and related environmental services to protect public health and enhance environmental quality within the central Marin County service area. The RVSD flows are ultimately conveyed to the CMSA WWTP. The total volume of wastewater treated in the Fiscal Year 2023 was estimated to be 4.869 billion gallons. The average dry weather influent flow between July through September 2019 was 8.3 MGD. As described in the NPDES Permit, the average dry weather effluent flow in excess of 10 MGD is prohibited. The average wastewater treated is 13.3 MGD. When flows exceed this capacity during

peak wet weather events, the WWTP is permitted to blend primary and secondary treated effluent prior to discharge. Blended wastewater is biologically treated wastewater blended with wastewater diverted around biological treatment units or advanced treatment units. Such discharges are approved under the bypass conditions when (1) CMSA's peak wet weather influent flow exceeds the capacity of the biological treatment units of 30 MGD, and (2) the discharge complies with the effluent and receiving water limitations contained in the NPDES Order.

New development would connect to the existing RVSD network. Localized extensions of collection lines or pump stations may be needed to serve infill or redevelopment areas. These improvements would generally occur within developed rights-of-way and urbanized corridors consistent with land use designations shown in Chapter 2.0 Figure 2-3 (Land Use Map).

Although the development capacity under the General Plan 2045 buildout reflects the Town's long-term buildout potential, this growth would occur gradually over decades as individual projects are proposed, reviewed, and approved. Implementation of new housing units, nonresidential development, and supporting infrastructure will depend on market conditions, available funding, and local and regional planning priorities. As such, utility demand and infrastructure needs will evolve incrementally rather than all at once. The Town and its service providers—Ross Valley Sanitary District, and Central Marin Sanitation Agency, would need to continue to periodically update their master plans, and Capital Improvement Programs to reflect actual development trends and regulatory requirements.

Future projects would undergo CEQA review and be required to comply with Town standards, the RVSD Sewer Use Ordinance, and Regional Water Quality Control Board requirements. Potential construction-period impacts (such as trenching and ground disturbance) would be temporary and addressed at the project level.

As development occurs in San Anselmo and the surrounding areas being served by conveyance and treatment infrastructure by RVSD and CMSA there will be an increased need for water treatment and wastewater services. To ensure capacity impacts are not considered significant and to ensure the ability to maintain and handle peak discharge flow while meeting State Regional Water Quality Control Board Standards as established in the current NPDES Permit, the timing of infrastructure and improvements would need to coincide with development levels and capacity needs. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan does not propose or approve development nor does it designate specific sites for new or expanded public facilities. RVSD's Sewer System Management Plan (2023) and CMSA's Ten-Year Capital Improvement Program include system upgrades and reduction blending projects to maintain capacity and treatment efficiency. General plan Policy PR-C.11 directs continued coordination with RVSD to maintain high-quality wastewater facilities, and Policy PR-C.1 calls for proactive facility maintenance through the Town's CIP.

As described above, the Town must coordinate with service providers and must also periodically review and update their applicable master plans, and as growth continues to occur within the Planning Area. The General Plan 2045 does not approve development projects and does not propose capacity improvement projects. However, projected wastewater generation volumes associated

with General Plan 2045 buildout is not anticipated to exceed the capacity of the wastewater treatment provider. Therefore, the impact would be **less than significant**.

Impact 3.15-4: General Plan implementation may require or result in the relocation or construction of new or expanded wastewater facilities, the construction or relocation of which could cause significant environmental effects (Less than Significant)

Development contemplated under the General Plan would result in increased wastewater flows, resulting in the need for additional or expanded wastewater treatment facilities and conveyance infrastructure, as described above. The infrastructure and facilities necessary to serve new growth would involve development of some facilities on new development sites, some facilities off-site, such as at existing wastewater treatment facilities, on appropriately designated land, and may also involve improvements to other existing facilities and disturbance of existing rights-of-way. The specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan does not propose or approve development nor does it designate specific sites for new or expanded public facilities. Although the development capacity under the General Plan 2045 reflects the Town's long-term buildout potential, this growth would occur gradually over decades as individual projects are proposed, reviewed, and approved. As such, utility demand and infrastructure needs will evolve incrementally rather than all at once. The Town and its service providers—Ross Valley Sanitary District, and Central Marin Sanitation Agency, will continue to periodically update their master plans, and Capital Improvement Programs to reflect actual development trends and regulatory requirements. Each future development project will undergo site-specific review under CEQA and local permitting processes to verify the adequacy of utility and service systems at the time of project approval.

Wastewater treatment and conveyance facilities would be evaluated at the project-level in association with subsequent development projects. However, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects under the General Plan. For example, trenching and wastewater line placement would be required to serve future development associated with the General Plan. Extension of wastewater lines would be required to serve areas where these facilities do not currently exist as projects are proposed. The wastewater lines currently located in roadways and developed areas would be extended to serve development projects. In some cases, construction of new wastewater lines in previously undeveloped areas may be required. As future development and infrastructure projects are considered by the Town, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. As such, this impact would be **less than significant**.

3.15.9. STORMWATER DRAINAGE

The information in this section focuses on the potential for the General Plan to result in the demand for new or expanded stormwater drainage facilities. Section 3.10 (Hydrology) includes an expanded analysis of water quality, flooding, and other stormwater related issues.

3.15.10. ENVIRONMENTAL SETTING

WATERSHED SETTING

The Planning Area resides within the Corte Madera Creek-Frontal San Francisco Bay Estuaries Watershed. The Corte Madera Creek watershed is located in the eastern urbanized corridor of Marin County and reaches from San Francisco Bay into the foothills of Mount Tamalpais, in the Coast Range. It is bounded on the west by a steep, forested ridge running northwest from the East Peak of Mt. Tamalpais (elevation 2,571 feet) to Pine Mountain and then north-northeast to White's Hill (elevation 1,430 feet). For more information regarding the hydrology profile of the Planning Area, including watershed maps and descriptions, see the *Conservation Existing Conditions Report*.

FLOOD CONTROL AGENCY

The Marin County Public Works Department manages the Flood Control and Water Conservation District. The Ross Valley/Corte Madera Creek watershed is within Flood District Zone 9.[19] Flood Zone 9 is overseen by an Advisory Board, but all major actions require authorization by the Board of Supervisors of the Flood Control and Water Conservation District. Flood District Zone 9 provides the following services:

- The cleaning and maintenance of creeks.
- Development of a capital improvement plan guiding flood mitigation activities.
- The construction, operation, and maintenance of levees, pumping stations, culverts, and drainage ways.
- Applying for and matching grant funding for replacement of bridges and buildings contributing to flooding.

On March 5th, 2024, San Anselmo residents voted on Measure F, to withdraw the Town of San Anselmo, including all parcels of land in Town, from the Marin County Flood Control and Water Conservation District Zone 9. The measure passed with 60 percent of the vote.[20] Currently, the Town is withdrawn from the Marin County Flood Control and Water Conservation District Zone 9. San Anselmo residents are still required to pay the flood control fee until its expiration on June 30, 2027.[21]

[19] Town of San Anselmo. Flood Zone 9. Available at: https://www.townofsananselmo.org/987/Flood-Zone-9

Town Attorney's Impartial Analysis. Available at:
https://www.townofsananselmo.org/DocumentCenter/View/31003/Impartial-Analysis-FZ9-signed-12142023?bidId=

FLOOD ZONES

The National Flood Insurance Act (1968) established the National Flood Insurance Program, which is based on the minimal requirements for flood plain management and is designed to minimize flood damage within Special Flood Hazard Areas (SFHA). The Federal Emergency Management Agency (FEMA) is the agency that administers the National Flood Insurance Program. Special Flood Hazard Areas are defined as areas that have a one percent chance of flooding within a given year, also referred to as the 100-year flood. Flood Insurance Rate Maps (FIRMs) were developed to identify areas of flood hazards within a community.

According to the Flood Zone determination, there are Flood Zones labeled A, AE, and X in the southern half of the Planning Area.[22] More information on flooding and flooding potential can be found in the *Safety and Noise Existing Conditions Report*.

EXISTING DRAINAGE FACILITIES

Stormwater drainage facilities such as open channels, catch basins, and storm drains are managed by the cities, towns, and the county in unincorporated areas and are coordinated through MCSTOPPP. Additionally, the Marin County Flood Control and Water Conservation District maintains some larger drainage infrastructure where zones have been designated. The District and some cities/towns such as San Rafael, Corte Madera, and Novato operate stormwater pump stations.[23]

Flood Control Projects

The Town of San Anselmo along with Marin County Flood Control and Water Conservation District has been actively working on flood control projects within the town and Ross Valley.[24] The current flood control projects are detailed below.

BRIDGES

The Town has approximately 20 bridges, some of which are nearly 100 years old. The Town has obtained funding to replace five bridges in San Anselmo between 2024 and 2029, including the Nokomis Avenue, Madrone Avenue, Bridge Street, Saunders Avenue, and Center Boulevard Bridges. All five bridges have been identified as constriction points causing flooding in the town. In addition, the Town has obtained funding to repair the Peterson Bridge, a pedestrian bridge which connects Sais Avenue to Karl Avenue, by 2029.

SAN ANSELMO FLOOD RISK REDUCTION (SAFRR) PROJECT

The San Anselmo Flood Risk Reduction (SAFRR) Project consists of three main components: (1) creation of the Sunnyside Nursery Flood Diversion and Storage Basin at 3000 Sir Francis Drake Boulevard; (2) removal of the building at 634 San Anselmo Avenue and creek bank stabilization at

[22] County of Marin. MarinMap Flood Map View. Available at: https://www.marinmap.org/Html5Viewer/Index.html?configBase=http://www.marinmap.org/Geocortex/Essentials/MMREST/REST/sites/FEMA_LOMC/viewers/FEMA_LOMC_H5/virtualdirectory/Resources/Config/Default

[23] Town of San Anselmo, 2018. Local Hazard Mitigation Plan

[24] Town of San Anselmo. Current Flood Projects. Available at: https://www.townofsananselmo.org/1203/Current-Flood-Projects

the site; and (3) implementation of flood mitigation measures on downstream private properties that may see impacts from the project. The project has an overall goal to substantially reduce the frequency and severity of flooding throughout the upper Ross Valley watershed in an economically viable manner while providing multiple benefits and minimizing environmental impacts.

THE SAN ANSELMO CREEK RESTORATION PROJECT

San Anselmo Creek runs through Creek Park, a Town-owned park east of San Anselmo Avenue in the Downtown area. Since 2011, multiple flood mitigation projects in Creek Park have been identified in the Town's Capital Improvement Plan to maximize flood flow capacity and reduce flooding in Creek Park, the surrounding areas, and downstream.

In 2018, the Marin County Flood Control and Water Conservation District purchased a property adjacent to Creek Park at 632-636 San Anselmo Avenue to implement flood mitigation measures as part of the SAFRR Project. The property included a building and a supporting concrete platform (i.e., Building Bridge 2), and the foundation of Building Bridge 2 constricted the creek and contributed to flooding during major storm events. In 2020, the building was demolished through a joint Town and District effort as the first step to restore the creek and reduce flood risk to hundreds of structures in town and downstream.

During the COVID-19 pandemic, the Town leased the deck of Building Bridge 2 from the District and used it as a community gathering space, connecting Creek Park to San Anselmo Avenue. The plaza became an informal extension to Creek Park. In 2022, the District terminated the Town's lease of Building Bridge 2 due to engineering reports of structural safety concerns. Since that time, the District has continued to plan for flood mitigation at the project site, including potential removal of Building Bridge 2. Project implementation has not occurred, and current District projections call for the project to occur in 2025.

Following the District flood mitigation project, the Town plans to renovate Creek Park through implementation of the Reimagine Creek Park project. Reimagine Creek Park plans for six redesigned areas of the park: the Creek Park Plaza, a wooden bridge crossing San Anselmo Creek, a multi-level area, a wood deck stage and law area, a kids play area, and public restrooms.

STORMWATER QUALITY

303(d) Impaired Water Bodies: Section 303(d) of the Federal Clean Water Act requires states to identify waters that do not meet water quality standards or objectives and, thus, are considered "impaired." Once listed, Section 303(d) mandates prioritization and development of a Total Maximum Daily Load (TMDL). The TMDL is a tool that establishes allowable loadings or other quantifiable parameters for a waterbody and thereby serves as the basis for states to establish water quality-based controls. The purpose of TMDLs is to ensure that beneficial uses are restored and that water quality objectives are achieved. There is one water body within the Planning Area listed by the State Water Resources Control Board (SWRCB) as a 303(d) impaired Water Body: Corte Madera Creek (Water Body ID: CAR2032001119990218112526).

Corte Madera Creek is categorized as a "River & Stream", and contains the following pollutants: Bifenthrin (ID#94854); Chlorpyrifos (ID#94760); Cyfluthrin (ID#94819); Cyhalothrin, Lambda (ID#94820); Cypermethrin (ID#94821); Chlordane (ID#94759); Lindane/gamma Hexachlorocyclohexane (gamma-HCH) (ID#94239); Fenpropathrin (ID#94246); Fipronil (ID#94247); Fipronil Sulfide (94248); DDD (Dichlorodiphenyldichloroethane) (ID#94238); Fipronil Sulfone (ID#94306); Permethrin (ID#94308); DDE (Dichlorodiphenyldichloroethylene) (ID#94625); Deltamethrin (ID#94683); Dieldrin (ID#94684); DDT (Dichlorodiphenyltrichloroethane) (ID#94682); Endrin (ID#94736); Esfenvalerate/Fenvalerate (ID#94737); and Toxicity (ID#94367).[25]

3.15.11. REGULATORY SETTING - STORMWATER DRAINAGE

FEDERAL

Clean Water Act (CWA)

The Clean Water Act (CWA) regulates the water quality of all discharges into waters of the United States including wetlands, perennial and intermittent stream channels. Section 401, Title 33, Section 1341 of the CWA sets forth water quality certification requirements for "any applicant applying for a federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into the navigable waters." Section 404, Title 33, Section 1344 of the CWA in part authorizes the U.S. Army Corps of Engineers to:

- Set requirements and standards pertaining to such discharges: subparagraph (e); Issue permits "for the discharge of dredged or fill material into the navigable waters at specified disposal sites": subparagraph (a);
- Specify the disposal sites for such permits: subparagraph (b);
- Deny or restrict the use of specified disposal sites if "the discharge of such materials into such area will have an unacceptable adverse effect on municipal water supplies and fishery areas": subparagraph (c);
- Specify type of and conditions for non-prohibited discharges: subparagraph (f);
- Provide for individual State or interstate compact administration of general permit programs: subparagraphs (g), (h), and (j);
- Withdraw approval of such State or interstate permit programs: subparagraph (i);
- Ensure public availability of permits and permit applications: subparagraph (o);
- Exempt certain Federal or State projects from regulation under this Section: subparagraph (r); and,
- Determine conditions and penalties for violation of permit conditions or limitations: subparagraph (s).
- Section 401 certification is required prior to final issuance of Section 404 permits from the U.S. Army Corps of Engineers.

The California SWRCB and RWQCBs enforce State of California statutes that are equivalent to or more stringent than the federal statutes. RWQCBs are responsible for establishing water quality

[25] State Water Resources Control Board, 2018. California 2018 Integrated Report. Available at: https://gispublic.waterboards.ca.gov/portal/apps/webappviewer/index.html?id=e2def63ccef54eedbee4ad726ab1552c

standards and objectives that protect the beneficial uses of various waters. The cities of Clayton, Concord, El Cerrito, Hercules, Lafayette, Martinez, Orinda, Pinole, Pittsburg, Pleasant Hill, Richmond, San Pablo, San Ramon, and Walnut Creek, the towns of Danville and Moraga, Contra Costa County, and the Contra Costa County Flood Control and Water Conservation District (the Contra Costa Permittees) have joined together to form the Contra Costa Clean Water Program. The Contra Costa Permittees are currently subject to National Pollutant Discharge Elimination System (NPDES) Permit No. CAS612008, issued by Order No. R2-2009-0074 on October 14, 2009, which pertains to stormwater runoff discharge from storm drains and watercourses within their jurisdictions.

Federal Emergency Management Agency

The Town is a participant in the National Flood Insurance Program (NFIP), a federal program administered by the Federal Emergency Management Agency (FEMA). Participants in the NFIP must satisfy certain mandated floodplain management criteria. The National Flood Insurance Act of 1968 has adopted as a desired level of protection, an expectation that developments should be protected from floodwater damage of the Intermediate Regional Flood (IRF). The IRF is defined as a flood that has an average frequency of occurrence on the order of once in 100 years, although such a flood may occur in any given year. Communities are occasionally audited by the Department of Water Resources to insure the proper implementation of FEMA floodplain management regulations. The Town adopted the Model Floodplain Management Ordinance within the town in order to maintain eligibility within the National Flood Insurance Program.

National Pollutant Discharge Elimination System (NPDES)

NPDES permits are required for discharges of pollutants to navigable waters of the United States, which includes any discharge to surface waters, including lakes, rivers, streams, bays, the ocean, dry stream beds, wetlands, and storm sewers that are tributary to any surface water body. NPDES permits are issued under the CWA, Title IV, Permits and Licenses, Section 402 (33 USC 466 et seq.)

The RWQCB issues these permits in lieu of direct issuance by the United States Environmental Protection Agency (USEPA), subject to review and approval by the USEPA Regional Administrator. The terms of these NPDES permits implement pertinent provisions of the CWA and its implementing regulations, including pre-treatment, sludge management, effluent limitations for specific industries, and anti- degradation. In general, the discharge of pollutants is to be eliminated or reduced as much as practicable so as to achieve the CWA's goal of "fishable and swimmable" navigable (surface) waters. Technically, all NPDES permits issued by the RWQCB are also Waste Discharge Requirements issued under the authority of the CWA.

These NPDES permits regulate discharges from publicly owned treatment works, industrial discharges, stormwater runoff, dewatering operations, and groundwater cleanup discharges. NPDES permits are issued for five years or less, and are therefore to be updated regularly. The rapid and dramatic population and urban growth in the Central Valley Region has caused a significant increase in NPDES permit applications for new waste discharges. To expedite the permit issuance process, the SWRCB has adopted several general NPDES permits, each of which regulates numerous discharges of similar types of wastes. The SWRCB has issued general permits for stormwater runoff from industrial and construction sites statewide. Stormwater discharges from industrial and

construction activities in the Central Valley Region can be covered under these general permits, which are administered jointly by the SWRCB and RWQCB.

STATE

California Water Code

California's primary statute governing water quality and water pollution issues with respect to both surface waters and groundwater is the Porter-Cologne Water Quality Control Act of 1970 (Division 7 of the California Water Code) (Porter-Cologne Act). The Porter-Cologne Act grants the SWRCB and each of the RWQCBs power to protect water quality, and is the primary vehicle for implementation of California's responsibilities under the Federal Clean Water Act. The Porter-Cologne Act grants the SWRCB and the RWQCBs authority and responsibility to adopt plans and policies, to regulate discharges to surface and groundwater, to regulate waste disposal sites and to require cleanup of discharges of hazardous materials and other pollutants. The Porter-Cologne Act also establishes reporting requirements for unintended discharges of any hazardous substance, sewage, or oil or petroleum product.

Each RWQCB must formulate and adopt a water quality control plan (Basin Plan) for its region the regional plans are to conform to the policies set forth in the Porter-Cologne Act and established by the SWRCB in its state water policy. The Porter-Cologne Act also provides that a RWQCB may include within its regional plan water discharge prohibitions applicable to particular conditions, areas, or types of waste.

The Water Code Section 13260 requires all dischargers of waste that may affect water quality in waters of the state to prepare and provide a water quality discharge report to the RWQCB. Section 13260a-c is as follows:

> (a) Each of the following persons shall file with the appropriate regional board a report of the discharge, containing the information that may be required by the regional board:
>
> > (1) A person discharging waste, or proposing to discharge waste, within any region that could affect the quality of the waters of the state, other than into a community sewer system.
> >
> > (2) A person who is a citizen, domiciliary, or political agency or entity of this state discharging waste, or proposing to discharge waste, outside the boundaries of the state in a manner that could affect the quality of the waters of the state within any region.
> >
> > (3) A person operating, or proposing to construct, an injection well.
>
> (b) No report of waste discharge need be filed pursuant to subdivision (a) if the requirement is waived pursuant to Section 13269.

(c) Each person subject to subdivision (a) shall file with the appropriate regional board a report of waste discharge relative to any material change or proposed change in the character, location, or volume of the discharge.

Department of Water Resources

The Department of Water Resources' (DWR) major responsibilities include preparing and updating the California Water Plan to guide development and management of the State's water resources, planning, designing, constructing, operating, and maintaining the State Water Resources Development System, protecting and restoring the Sacramento-San Joaquin Delta, regulating dams, providing flood protection, assisting in emergency management to safeguard life and property, educating the public, and serving local water needs by providing technical assistance. In addition, the DWR cooperates with local agencies on water resources investigations; supports watershed and river restoration programs; encourages water conservation; explores conjunctive use of ground and surface water; facilitates voluntary water transfers; and, when needed, operates a State drought water bank.

Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary

The watershed of the Bay-Delta Estuary provides drinking water to two-thirds of the State's population and water for a multitude of other urban uses, and it supplies some of the State's most productive agricultural areas, both inside and outside of the Estuary. The Bay-Delta Estuary itself is one of the largest ecosystems for fish and wildlife habitat and production in the United States.

The Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary (Basin Plan) includes a summary of beneficial water uses, water quality objectives needed to protect the identified beneficial uses, and actions. The Basin Plan establishes water quality standards for all the ground and surface waters of the region. The term "water quality standards," as used in the Federal Clean Water Act, includes both the beneficial uses of specific water bodies and the levels of quality that must be met and maintained to protect those uses. The Basin Plan includes an implementation plan describing the actions by the RWQCB and others that are necessary to achieve and maintain the water quality standards.

The RWQCB regulates waste discharges to minimize and control their effects on the quality of the region's ground and surface water. Permits are issued under a number of programs and authorities. The terms and conditions of these discharge permits are enforced through a variety of technical, administrative, and legal means. Water quality problems in the region are listed in the Basin Plan, along with the causes, where they are known. For water bodies with quality below the levels necessary to allow all the beneficial uses of the water to be met, plans for improving water quality are included. The Basin Plan reflects, incorporates, and implements applicable portions of a number of national and statewide water quality plans and policies, including the California Water Code and the Clean Water Act.

State Water Resource Control Board Storm Water Strategy

The Storm Water Strategy is founded on the results of the Storm Water Strategic Initiative, which served to direct the SWRCB's role in storm water resources management. The Storm Water Strategy developed guiding principles to serve as the foundation of the storm water program; identified issues that support or inhibit the program from aligning with the guiding principles; and proposed

and prioritized projects that the Water Boards could implement to address those issues. The SWRCB staff created a strategy-based document called the Strategy to Optimize Management of Storm Water (STORMS). STORMS includes a program vision, missions, goals, objectives, projects, timelines, and consideration of the most effective integration of project outcomes into the SWRCB's Storm Water Program.

LOCAL

Existing San Anselmo General Plan

The following goals, policies, and recommendations pertain to stormwater management and flood control.

LAND USE ELEMENT

Objective 16: To protect the community from danger to life and property caused by flooding.

> **Policy 16.4:** To repair and improve the Town's storm drainage system to handle existing and projected runoff.

CONSERVATION ELEMENT

Goal 3. Establish policies and practical guidelines for the prevention of erosion, the stabilization of soils, and the protection of the watershed necessary to minimize excessive water runoff.

Guideline 4. Streams shall be maintained in or restored to their natural state. A flood channel maintaining the natural settings on San Anselmo Creek and Sleepy Hollow Creek shall be of adequate width and properly maintained to allow passage of flood waters and preservation of riparian vegetation and habitat. Removal of vegetation on the hillsides should be closely controlled in order to minimize erosion, siltation of watercourses, and runoff.

TOWN PARKS, RECREATION, AND PUBLIC FACILITIES ELEMENT

Recommendation 3. Storm Drainage and Flood Control The natural appearance and runoff capacity of stream channels should be protected, preserved, and enhanced by the development of small improvements (e.g., small earth-fill dams for storm water retention) and landscaping rather than a major flood-control project such as the concrete channel in lower Corte Madera Creek. The channel lines on both sides of San Anselmo Creek should be protected from encroachment by development.

San Francisco Bay Conservation and Development Commission (BCDC) San Francisco Bay Plan (Bay Plan)

The San Francisco Bay Conservation and Development Commission (BCDC) is a state planning and regulatory agency with regional authority over the San Francisco Bay (Bay), the Bay's shoreline band, and the Suisun Marsh. BCDC was created in 1965 and is the nation's oldest coastal zone agency.

BCDC's mission is to protect and enhance San Francisco Bay and to encourage the Bay's responsible and productive use for current and future generations. State law requires sponsors of projects that propose to fill or extract materials from the Bay to apply for a BCDC permit. In addition to minimizing

any fill required for an appropriate project and ensuring that the project is compatible with the conservation of Bay resources, BCDC is tasked with requiring maximum feasible public access within the Bay's 100-foot shoreline band. In addition, BCDC leads the San Francisco Bay Area's ongoing multi-agency regional effort to address the impacts of rising sea level on shoreline communities and assets.

The San Francisco Bay Plan (Bay Plan) was completed and adopted by the BCDC in 1968 and has been updated regularly with the most recent revisions approved by BCDC in 2019. Essential parts of the Bay Plan include policies to guide future uses of the Bay and Bay shoreline, and the maps that apply these policies to the present Bay and Bay shoreline. The Bay Plan addresses the following matters as specifically required by law:

1. The results of the Commission's detailed study of the Bay;
2. The comprehensive plan adopted by the Commission for the conservation of the water of San Francisco Bay and the development of its shoreline;
3. The Commission's recommendation of the appropriate agency to maintain and carry out the Bay Plan;
4. The Commission's estimate of the approximate amount of money that would be required to maintain and carry out the provisions of the Bay Area Plan;
5. Other information and recommendations the Commission deemed desirable.

The Bay Area Plan includes findings and policies related to hydrology/ water quality. The hydrology/ water quality section of the Bay Area Plan includes policies associated with the implementation of programs for controlling pollution, including stormwater management plans; Total Maximum Daily Load implementation plans; construction site stormwater runoff and erosion; sediment controls; establishing best management practices, such as site planning or structural controls; new technologies; project siting criteria; and operating methods.

Marin County Stormwater Pollution Prevention Program

The Marin County Stormwater Pollution Prevention Program (MCSTOPPP) is a joint effort of Marin's cities, towns, and unincorporated areas to prevent stormwater pollution, protect and enhance water quality in creeks and wetlands, preserve beneficial uses of local waterways, and comply with state and federal regulations. Each MCSTOPPP member agency implements a local stormwater pollution prevention program and funds the countywide MCSTOPPP, which provides for the coordination and consistency of approaches between the local stormwater programs. Each MCSTOPPP member documents their efforts in annual reports. The annual reports include information on illegal discharge detection and elimination, street and storm drain cleaning, municipal and creek maintenance, stormwater and creek protection controls for development projects, business inspections, and public outreach, education, and participation. While MCSTOPPP provides guidance for compliance with NPDES permitting, permit compliance is administered by the specific municipality in which the project is proposed.

Bay Area Stormwater Management Agencies Post Construction Manual

MCSTOPPP has approved the most recent version of the Bay Area Stormwater Management Agencies (BASMAA) Post Construction Manual as the applicable California Storm Water Quality Association Best Management Practices Handbook for projects within MCSTOPPP. The BASMAA Post Construction Manual helps development applicants prepare submittals that demonstrate how their project complies with the NPDES permit requirements. This manual is designed to facilitate the review of applications and promote integrated Low Impact Development (LID) designs. LID design aims to mimic pre-project site hydrology as well as protect water quality. Runoff from roofs and impervious paved areas is dispersed to landscaped areas or routed to bioretention facilities distributed throughout the site. Bioretention facilities infiltrate some runoff and feature underdrains to convey treated stormwater to storm drains.

Town of San Anselmo Municipal Code

Town Code Title 5, Chapter 8 Urban Runoff Pollution Prevention. The purpose of this chapter is to ensure the future health, safety and general welfare of the citizens of the Town of San Anselmo and to protect and enhance watercourses, fish and wildlife habitat by:

a) Minimizing discharges other than storm runoff to storm drains or watercourses;

b) Responding to the discharge of spills, preventing and controlling the discharge of spills to storm drains or watercourses, and prohibiting dumping or disposal of materials other than stormwater;

c) Reducing pollutants in stormwater discharges to the maximum extent practicable;

d) Requiring operators of construction sites, new or redeveloped land, and industrial and commercial facilities to install, implement, and maintain appropriate BMPs; and

e) Requiring development projects to maintain or reduce the volume, velocity, peak flow rate, and duration of runoff as compared to the pre-development stormwater runoff rates; and preventing stormwater pollution whenever possible, through stormwater management controls and ensuring that these management controls are properly maintained.

Town Code Title 7, Chapter 11 Protection of Flood Hazard Areas. This chapter promotes public health, safety, and general welfare and intends to minimize public and private losses due to flood conditions in specific areas by legally enforceable regulations applied uniformly throughout the community to all publicly and privately owned land within flood prone, mudslide (i.e. mudflow) or flood related erosion areas. These regulations are designed to:

a) Protect human life and health;

b) Minimize expenditure of public money for costly flood control projects;

c) Minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;

d) Minimize prolonged business interruptions;

e) Minimize damage to public facilities and utilities such as water and gas mains; electric, telephone and sewer lines; and streets and bridges located in areas of special flood hazard;

f) Help maintain a stable tax base by providing for the sound use and development of areas of special flood hazard so as to minimize future blighted areas caused by flood damage;

g) Ensure that potential buyers are notified that property is in an area of special flood hazard; and

h) Ensure that those who occupy the areas of special flood hazard assume responsibility for their actions.

Town Code Title 7, Chapter 12 Watercourses. This chapter establishes additional standards and regulations related to zoning, parks and recreation and the obstruction, diverting, etc., of watercourses within San Anselmo.

Town Code Title 7, Chapter 13 Water Wells. This purpose of this chapter is to protect groundwater, watercourses, and surface water by regulating the construction, placement, reconstruction and remodeling of water wells, water supply sources, test holes, and existing watercourses within San Anselmo. In particular, Section 7-13-17 declares it a nuisance and unlawful to emit anything into a public reservoir, storm drain pipe, or other watercourse which will pollute the purity and wholesomeness of any water or watercourse.

Town Code Title 9, Chapter 22 Water Efficient Landscape. The purpose of this chapter is to adopt by reference the Marin Water's water efficient landscape requirements. In particular, the Town references Marin Water Code Title 13 "Water Service Conditions and Water Conservation Measures", Chapter 13.02 "Water Conservation and Dry Year Water Use Reduction Program", and Section 13.02.021 "Water Conservation: Normal Year Water Conservation" Subsections (2) "Definitions" and (5) "Water Efficient Landscaping".

Town Code Section 10-2.205, Watercourses. This section requires the provision of storm drainage in subdivisions. In particular, the subdivider is required to dedicate a right-of-way for storm drainage purposes conforming with the lines of a natural watercourse which traverses the subdivision. With the approval of the Town Engineer, the subdivider may dedicate sufficient easements, or construct storm drainage, or both, to dispose of such surface and storm waters. The subdivider is also required to install culverts as needed.

3.15.12. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

This program-level analysis evaluates the potential impacts of implementing the San Anselmo General Plan 2045 on existing and planned utility systems, including stormwater management. The analysis relies on data from the Community Services and Facilities Existing Conditions Report (2025), the Marin County Stormwater Pollution Prevention Program (MCSTOPPP), and the Town of San Anselmo Capital Improvement Program (CIP). The assessment assumes buildout consistent with

General Plan land use designations (DEIR Chapter 2.0 Table 2.0-2) and evaluates policy direction, service infrastructure, and regulatory compliance.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to stormwater.

PARKS, RECREATION AND PUBLIC FACILITIES ELEMENT

Goal PR-C Provide high-quality public facilities and infrastructure that meet the needs of current and future residents, businesses, and visitors in the most efficient and cost-effective ways possible.

Policy PR-C.1: Ongoing Maintenance. Proactively maintain public facilities and infrastructure through ongoing preventative care, and ensure the timely repair, replacement, and upgrading of Town facilities, infrastructure, and equipment.

> **Action PR-C.1.a: Capital Improvement and Agency Coordination Program.** Maintain and update a multi-year Capital Improvement Plan for Town infrastructure and facilities, and coordinate with partner agencies to align projects, maximize resources, achieve economies of scale, and reduce construction impacts.
>
> **Action PR-C.1.b: Asset Management Program.** Develop a proactive Asset Management Program to identify needed facility and infrastructure maintenance, upgrade, and replacement timing and costs. Seek additional funding opportunities and strategies to avoid increased costs of deferred maintenance.

Policy PR-C.2: Sustainable Design and Operations. Design and operate public facilities and infrastructure to minimize non-renewable energy and resource consumption, improve environmental quality, and reduce greenhouse gas emissions.

Policy PR-C.7: Storm Drainage. Continue to monitor and pursue improvements to the storm drainage system, including programs to reduce flooding, improve water quality, remove debris, and respond to climate-related changes. Evaluate the potential for restoration of the natural hydrologic function of creeks and drainageways where possible.

Policy PR-C.11: Wastewater. Support efforts by the Ross Valley Sanitary District to maintain high quality wastewater collection and treatment facilities and implement sustainability programs.

SAFETY ELEMENT

Goal S-D Minimize the effects of natural flooding and potential inundation from dam failure.

Policy S-D.1: Development within Floodplains. Limit development within floodplains to minimize risks to life and property and satisfy Federal Emergency Management Agency requirements for residents and businesses.

Action S-D.1.a: Flood Insurance. Continue to participate in the National Flood Insurance Program and the Community Rating System to reduce flood risk and improve flood insurance affordability.

Action S-D.1.b: Floodplain Regulations, Enforcement, and Updates. Continue to enforce and update floodplain, drainage, and development regulations to maintain consistency with State and federal requirements.

Action S-D.1.c: Stream Bank Protection. Develop an approach and identify locations for bank protection strategies that should not be limited to:

- An assessment of banks to inventory areas that appear prone to failure;
- Bank stabilization, including installation of rip rap or whatever regulatory agencies allow;
- Stream bed depth management using dredging; and
- Removal of out-of-date coffer dams in rivers and tributary streams.

Policy S-D.2: Drainage Infrastructure. Support modifications and updates to public infrastructure to reduce flooding.

Action S-D.2.a: Flood Infrastructure Evaluation, Funding, and Implementation Program. Evaluate and map waterways and existing flood protection infrastructure to identify, prioritize, and design needed flood control and storm drainage improvements, and pursue funding to construct projects that reduce flood risks and protect vulnerable properties and reduce impacts on affected residents and businesses.

Action S-D.2.b: Flood Management. Identify flood management solutions (i.e., property acquisitions, detention and retention basins, channel widening, acquisitions, relocations, and environmental mitigations) to reduce flood impacts within the town.

Action S-D.2.c: Nature-based Solutions. Promote nature-based methods and best management practices (e.g., bioswales, natural ground cover) through the Town's urban pollution runoff stormwater program.

Policy S-D.3: Best Stormwater Management Practices. Consider best practices regarding natural waterways and constructed stormwater conveyance structures when reviewing development applications, plans, and programs.

Action S-D.3.a: Hydrologic Analysis. Continue to improve existing hydrologic analysis of runoff and drainage systems to predict areas of insufficient capacity in the storm drain and natural creek system.

Action S-D.3.b: Impervious Surfaces. Update existing guidelines and regulations that limit the use of impervious surfaces and/or require the use of permeable surfaces, implement

other regulations to effectively channel and minimize site runoff, and allow water to percolate, increasing groundwater recharge.

Action S-D.3.c: Hydraulic Models. Update hydraulic models as needed in response to major developments in the watershed or major changes to land uses within cities or counties.

Action S-D.3.d: Flood Insurance Map Updates. As new flood-control projects are completed, request revisions to flood-insurance rate maps to reflect flood risks as accurately as possible.

Policy S-D.4: Coordination on Flood Management and Mitigation. Coordinate with neighboring jurisdictions, stakeholders, and resource agencies on flood mitigation and management projects.

Action S-D.4.a: Interagency Flood Mitigation Coordination Program. Collaborate annually with flood control districts, utilities, and neighboring jurisdictions to assess mitigation projects, infrastructure needs, and capital planning.

Action S-D.4.b: Water Efficient Landscape and Impervious Surface Management Program. Promote drought-tolerant and water-efficient landscape design, incorporate xeriscape practices and permeable surfaces in Town projects where feasible, and adopt updates to the Marin Municipal Water District's Water Efficient Landscape Ordinance to reduce water demand, enhance conservation, and support groundwater recharge.

Policy S-D.5: Preparation for Potential Dam Inundation. Ensure Town staff and residents are informed and prepared for potential dam inundation events through accessible communication methods.

Action S-D.5.a: Inundation Map Updates. Encourage Marin Municipal Water District to update inundation mapping with depth information.

Action S-D.5.b: Flood Evacuation Preparedness. Review the updated mapped inundation areas and coordinate with Marin Municipal Water District on procedures for emergency evacuations.

Action S-D.5.c: Property Owner Information. Provide dam inundation information to potentially affected property owners whenever new or updated information becomes available in clear and accessible formats.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact on the environment associated with Utilities if it would:

- Require or result in the relocation or construction of new or expanded storm water drainage facilities, the construction or relocation of which could cause significant environmental effects.

IMPACTS AND MITIGATION MEASURES

Impact 3.15-5: General Plan implementation may require or result in the relocation or construction of new or expanded storm water drainage facilities, the construction or relocation of which could cause significant environmental effects (Less than Significant)

The Town of San Anselmo is located within the Ross Valley watershed, where San Anselmo Creek and its tributaries convey stormwater flows through a mix of natural channels and underground infrastructure. The Town's storm drain network consists of culverts, inlets, and conveyance pipes owned and maintained by the Public Works Department. Flooding periodically occurs along the valley floor where limited channel capacity and steep upstream terrain combine to concentrate runoff.

The Town participates in the Marin County Stormwater Pollution Prevention Program (MCSTOPPP), which implements the Municipal Regional Stormwater Permit (Order R2-2022-0018) under the Clean Water Act and the California Porter-Cologne Water Quality Control Act. MCSTOPPP establishes requirements for Low Impact Development (LID), green infrastructure, and pollutant reduction, ensuring that new development controls peak runoff and treats stormwater before discharge.

The Town's Storm Drain Capital Improvement Program (CIP) includes planned replacement and enlargement of aging culverts, storm drain mains, and debris basins to increase system capacity and flood protection. These programs are coordinated with the Marin County Flood Control and Water Conservation District and MCSTOPPP watershed management initiatives.

Buildout of the General Plan would modestly increase impervious surfaces, resulting in additional runoff requiring conveyance and treatment. Consistent with Goal S-D (Minimize the effects of natural flooding and potential inundation from dam failure), the Town maintains a robust framework of flood management and stormwater policies that guide development review, facility design, and inter-agency coordination. Floodplain Management Policy S-D.1 limits development within floodplains to protect life and property, and Actions S-D.1.a–c require continued NFIP participation and maintenance of floodplain regulations consistent with State and federal standards. Action S-D.1.c supports stream-bank stabilization, dredging, and removal of obsolete structures to restore conveyance.

Drainage Infrastructure: Policy S-D.2 and related actions promote mapping of waterways, securing funding for drainage projects (S-D.2.b), and identifying property-level flood management solutions (S-D.2.c). Best Management Practices included under Policy S-D.3 calls for integrating hydrologic and hydraulic analysis into development review (S-D.3.a–c), limiting impervious surfaces (S-D.3.b), and promoting permeable materials and LID techniques consistent with MCSTOPPP requirements.

Policy S-D.4 and Actions S-D.4.a–d ensure collaboration with neighboring jurisdictions and flood control agencies on mitigation projects and watershed-scale improvements.

Together with Policy PR-C.7 (storm drainage monitoring and improvements) and Action PR-C.1.a (CIP maintenance planning), these policies establish a comprehensive adaptive management framework that minimizes flood risk, enhances system capacity.

Implementation of the General Plan, in conjunction with the above policies, actions, and regulatory programs, would ensure that stormwater drainage improvements are designed to reduce flood hazards, protect water quality, and avoid significant environmental effects.

No development or improvements are proposed or would be approved by the General Plan's adoption. Future drainage improvements—such as culvert replacements, new storm drain segments, or creek bank stabilization—would occur largely within existing public rights-of-way or previously disturbed corridors. Potential short-term impacts (construction noise, ground disturbance, and sedimentation) would be temporary and addressed through project-level CEQA review and compliance with Town grading and erosion-control ordinances, and stormwater requirements. All new development would be required to incorporate LID features, pervious surfaces, and on-site detention to maintain post-development runoff rates at or below pre-project levels, consistent with the Municipal Regional NPDES and stormwater requirements listed under Policy S-D.3 actions Action S-D.3.a through d.

The specific impacts of providing new and expanded drainage facilities cannot be determined at this time, as the General Plan does not propose or approve any specific development project nor does it designate specific sites for new or expanded public facilities. Stormwater drainage and conveyance facilities would be evaluated at the project-level in association with subsequent development projects. However, the facilities would be primarily provided on sites with land use designations that allow such uses and the environmental impacts of constructing and operating the facilities would likely be similar to those associated with new development, redevelopment, and infrastructure projects allowed under the General Plan.

As future development and infrastructure projects are considered by the Town, each project will be evaluated for conformance with the General Plan, Municipal Code, and other applicable regulations. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA. As such, this is a **less-than-significant** impact.

3.15.13. SOLID WASTE

KEY TERMS

Class I landfill: A landfill that accepts for disposal 20 tons or more of municipal solid waste daily (based on an annual average); or one that does not qualify as a Class II or Class III municipal solid waste landfill.

Class II landfill: A landfill that (1) accepts less than 20 tons daily of municipal solid waste (based on an annual average); (2) is located on a site where there is no evidence of groundwater pollution caused or contributed by the landfill; (3) is not connected by road to a Class I municipal solid waste landfill, or, if connected by road, is located more than 50 miles from a Class I municipal solid waste landfill; and (4) serves a community that experiences (for at least three months each year) an interruption in access to surface transportation, preventing access to a Class I landfill, or a community with no practicable waste management alternative.

Class III landfill: A landfill that is not connected by road to a Class I landfill or a landfill that is located at least 50 miles from a Class I landfill. Class III landfills can accept no more than an average of one ton daily of ash from incinerated municipal solid waste or less than five tons daily of municipal solid waste.

Transfer station: A facility for the temporary deposition of some wastes. Transfer stations are often used as places where local waste collection vehicles will deposit their waste cargo prior to loading into larger vehicles. These larger vehicles will transport the waste to the end point of disposal or treatment.

Waste Management Plan: A Waste Management Plan (WMP) is a completed WMP form, approved by the City for the purpose of compliance with Chapter 8.40 of the Brentwood Municipal Code, submitted by the applicant for any covered project. Prior to project start, the WMP shall identify the types of construction and demolition (C&D) debris materials that will be generated for disposal and recycling. A completed WMP contains actual weight or volume of the material disposed recycled receipts.

3.15.14. ENVIRONMENTAL SETTING

The Town of San Anselmo is a member agency of Zero Waste Marin. As the regional agency, Zero Waste Marin reports diversion progress to CalRecycle on a countywide basis.

WASTE COLLECTION SERVICES

San Anselmo is served by the Marin Sanitary Service which provides residential and commercial garbage, recycling, and yard waste collection services under a Town franchise agreement. Marin Sanitary Service provides weekly garbage, recycling, and compostables (food scrap, yard waste, and food-soiled paper) collection for residential customers (defined as households of less than four units) in San Anselmo, San Rafael, Ross, Kentfield, Kent Woodlands, Fairfax, Greenbrae, Larkspur, and other unincorporated areas of Central Marin County. Marin Sanitary Service currently provides

service to more than 30,000 residential accounts, almost one third of the population of Marin County.[26]

MARIN HAZARDOUS AND SOLID WASTE JOINT POWERS AUTHORITY (JPA)

Zero Waste Marin is the informal name for the Marin Hazardous and Solid Waste Joint Powers Authority (JPA), which is comprised of representatives from Marin's 11 cities and towns and the County of Marin. Their mission is to protect natural resources by promoting source reduction of waste through reuse, repair, and more mindful purchasing. Zero Waste Marin reduces disposal in landfills and promotes recycling and the proper handling of household hazardous wastes. Zero Waste Marin hauls waste but does not own or operate any waste facilities. The Marin County Department of Public Works Waste Management Division administers Zero Waste Marin.

WASTE DISPOSAL FACILITIES

The CalRecycle Solid Waste Information System (SWIS) lists the following active solid waste disposal and transfer facilities in Marin County:

- Redwood Landfill (solid waste landfill);
- Marin Sanitary Service Transfer Station (large volume transfer/processing facility);
- Marin Sanitary Service (inert debris processing operation);
- Redwood Recycling Center (large volume transfer/processing facility);
- Bolinas-Stinson Resource Recovery Project (green material composting operation);
- West Marin Compost (agricultural material composting operation);
- Central Marin Sanitation Agency (limited volume transfer operation);
- West Marin Compost Project (green material composting operation); and
- WM Earthcare of Marin (composting facility).

In 2023, Zero Waste Marin disposed of 223,271 tons of solid waste to 21 different waste disposal facilities all over California.[27] Currently, the Redwood Landfill in Marin County and the Potrero Hills Landfill in Solano County accept the most solid waste generated from the Zero Waste Marin area. The following provides an overview of the Redwood Landfill and Potrero Hills Landfill, as well as a breakdown of the amount of solid waste disposed at the other landfills in California from Zero Waste Marin communities in 2023.

[26] Marin Sanitary Service. *Residential Waste Management Services*. https://marinsanitaryservice.com/residential/, Accessed August 13, 2024.

[27] Cal Recycle Jurisdiction Disposal Tons by Facility. Available At: https://www2.calrecycle.ca.gov/RecyclingDisposalReporting/

Redwood Landfill

In 2023, the Redwood Landfill accepted approximately 53 percent (or 118,196 tons) of the solid waste generated in the Zero Waste Marin service area. The landfill is operated by Waste Management and is located on a 420-acre site at 8950 Redwood Highway north of Novato and east of US-101. Approximately 220 acres are dedicated to landfill operations, and the remaining 200 acres support composting, recycling, and reuse services as well as open space and a freshwater lagoon for migratory waterfowl. Operated since 1958, the plant received its first Solid Waste Facility Permit from the State upon creation of the CIWMB in 1978. A renewable energy plant was constructed in 2017 that converts landfill gas to clean, renewable electricity for use by Marin Clean Energy customers. Waste Management also operates the largest composting facility in Marin County and offers recycled compost and mulch as WM EarthCare products. The landfill is licensed as a Class III nonhazardous disposal facility. It has a maximum permitted throughput of 2,300 tons/day and a remaining capacity of 26 million tons. The Redwood Landfill is designed to continue accepting waste until maximum permitted topographic elevations are achieved, with the site projected to remain open until 2036 based on its most recent Status Impact Report. Any change in the projected closure date will be addressed in future amendments to the joint technical document addressing facility operations and closure.[28]

Potrero Hills Landfill

In 2019, the Potrero Hills Landfill accepted approximately 42 percent (or 93,172 tons) of the solid waste generated in the Zero Waste Marin service area. The landfill is operated by Waste Connections Company and is located on a 526-acre site at 3675 Potrero Hills Lane, a few miles south of Suisun City in the hills of Suisun Marsh in Solano County. A compost facility and a landfill-gas-to-energy plant is also operated at this site. The landfill has a maximum permitted throughput of 4,330 tons/day and a remaining capacity of 13,872,000 tons. The Potrero Hills Landfill is designed to continue accepting waste until maximum permitted topographic elevations are achieved, with the site projected to remain open until 2047 based on its most recent Status Impact Report.[29] Any change in the projected closure date will be addressed in future amendments to the joint technical document addressing facility operations and closure.

Other Landfills

Table 3-15-12 identifies the landfills in California that accepted waste from the Zero Waste Marin service area in 2023 (latest year in CalRecycle records), in decreasing tonnage amounts.

HAZARDOUS WASTE DISPOSAL

The Marin Household Hazardous Waste Facility located at 565 Jacoby Street in San Rafael is open Tuesday to Saturday for residential drop-off and Tuesday and Wednesday by appointment only for commercial drop-off. The facility is available to residents of Marin County communities except for residents of the City of Novato, which has its own facility. Proof of residency is required to use this facility. **Table 3.15-13** lists examples of hazardous waste accepted. Approximately 61 percent of the hazardous waste material collected is recycled, 26 percent is fuel incinerated, eight percent is treated through "other" methods, three percent is reused, and two percent is landfilled.[30]

SOURCE: MARIN HOUSEHOLD HAZARDOUS WASTE FACILITY RESIDENTIAL AND COMMERCIAL CUSTOMER GUIDELINES

The following materials are not accepted at the Marin Household Hazardous Waste Facility:

- Appliances (e.g., toasters, blenders, air conditioners, refrigerators, etc.);
- Business equipment (e.g., large printers, x-ray machines);
- Marine flares;
- Medication;
- Hair products (e.g., hair dryers, flat irons, etc.);
- Tapes and CDs;
- Explosives or Ammunition;
- E-cigarettes;
- Toys of any kind; and
- Sharps (i.e., needles and syringes) from businesses.

SOLID WASTE GENERATION RATES AND VOLUMES

CalRecycle tracks and monitors solid waste generation rates on a per capita basis. Per capita solid waste generation rates and total annual solid waste disposal volumes for Zero Waste Marin between 2018 and 2022 are shown in **Table 3.15-14**.

TABLE 3.15-14: ZERO WASTE MARIN SOLID WASTE GENERATION RATES

YEAR	POPULATION		EMPLOYMENT		TOTAL DISPOSAL TONNAGE (TONS/YEAR)
	WASTE GENERATION RATE (LBS/PERSON/DAY)	REPORTING YEAR POPULATION	WASTE GENERATION RATE (LBS/EMPLOYEE/DAY)	REPORTING YEAR EMPLOYMENT	
2018	5.20	262,803	11.80	115,777	249,162.04
2019	5.00	262,879	11.40	115,700	241,275.81
2020	4.80	260,388	11.30	111,502	229,946.28
2021	4.80	259,512	12.10	103,202	226,986.07
2022	4.80	255,470	11.30	107,916	221,796.46

SOURCE: CAL RECYCLE. ACCESSED: AUGUST 2024

From 2018 to 2022, the per capita waste generation rate and per employee waste generation rate both decreased from 5.2 to 4.8 lbs/person/day and 11.8 to 11.3 lbs/employee/day, respectively. The total annual disposal tonnage in the Zero Waste Marin service area decreased by 27,365.58 tons over the 2018 to 2022 time span. Additionally, the total annual disposal tonnage in the Zero Waste Marin service area decreased by 5,190.0 tons in 2022. With the passage of SB 1016, the per capita disposal rate is used to determine the diversion progress of a jurisdiction and not the jurisdictional diversion rates. Therefore, a population increase resulting in the generation of more overall waste does not affect the jurisdiction's ability to meet its waste goals. The Zero Waste Marin's waste disposal rate targets are shown in **Table 3.15-15**.

TABLE 3.15-15: ZERO WASTE MARIN WASTE DISPOSAL RATE TARGETS (POUNDS/DAY)

YEAR	POPULATION		EMPLOYMENT	
	TARGET	ACTUAL	TARGET	ACTUAL
2018	7.6	5.2	17.3	11.8
2019	7.6	5.0	17.3	11.4
2020	7.6	4.8	17.3	11.3
2021	7.6	4.8	17.3	12.1
2022	7.6	4.7	17.3	11.2

SOURCE: CAL RECYCLE. ACCESSED: AUGUST 2024

In accordance with AB 939, which required municipalities to aggressively pursue municipal solid waste source reduction and recycling, Zero Waste Marin continues to meet and exceed all AB 939 goals. However as described in the regulatory setting, the laws that succeeded AB 939 have added additional diversion goals and mandates on local agencies.

In 2022, Zero Waste Marin achieved 4.7 PPD for population and 11.2 for employment. Zero Waste Marin provides grants to its member agencies to develop and implement programs that work toward the zero-waste goal. The various solid waste management actions adopted by Zero Waste Marin include, but are not limited to, recycling and yard waste programs for residents and businesses, public education and public outreach awareness events, and school recycling and composting.

In 2009, Zero Waste Marin considered a goal to increase the diversion of materials from the landfill to meet an 8 percent diversion goal by 2012 and 94 percent diversion by 2025, which would greatly reduce the need for landfill disposal. The disposal reduction associated with implementing the strategies described in the plan was estimated at 180,000 tons, and the theoretical achievement of 94 percent diversion. As described in Zero Waste's most recent feasibility study (July 2021), Zero Waste Marin did not meet its 80 percent diversion by 2012 goal and will not meet its 2025 goal of 94 percent diversion. Zero Waste Marin's diversion is approximately 67 percent, which compares favorably to other agencies throughout the state.

3.15.15. REGULATORY SETTING – SOLID WASTE

FEDERAL

Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA) was enacted in 1976 to address the huge volumes of municipal and industrial solid waste generated nationwide. After several amendments, the current Act governs the management of solid and hazardous waste and underground storage tanks (USTs). RCRA was an amendment to the Solid Waste Disposal Act of 1965. RCRA has been amended several times, most significantly by the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA is a combination of the first solid waste statutes and all subsequent amendments. RCRA authorizes the Environmental Protection Agency (EPA) to regulate waste management activities. RCRA authorizes states to develop and enforce their own waste management programs, in lieu of the federal program, if a state's waste management program is substantially equivalent to, consistent with, and no less stringent than the federal program.

STATE

California Integrated Waste Management Act (AB 939 and SB 1322)

The California Integrated Waste Management Act of 1989 (AB 939 and SB 1322) requires every city and county in the state to prepare a Source Reduction and Recycling Element to its Solid Waste Management Plan that identifies how each jurisdiction will meet the mandatory state waste diversion goals of 25% by 1995 and 50% by 2000. The purpose of AB 939 and SB 1322 is to "reduce, recycle, and re-use solid waste generated in the state to the maximum extent feasible." The term "integrated waste management" refers to the use of a variety of waste management practices to safely and effectively handle the municipal solid waste stream with the least adverse impact on human health and the environment. The Act has established a waste management hierarchy, as follows: Source Reduction; Recycling; Composting; Transformation; and Disposal.

AB 341 (75 Percent Solid Waste Diversion)

AB 341 requires CalRecycle to issue a report to the Legislature that includes strategies and recommendations that would enable the state to divert 75 percent of the solid waste generated in the state from disposal by January 1, 2020, requires businesses that meet specified thresholds in the

bill to arrange for recycling services by January 1, 2012, and also streamlines various regulatory processes.

SB 1374 (Construction and Demolition Waste Materials Diversion)

Senate Bill 1374 (SB 1374), Construction and Demolition Waste Materials Diversion Requirements, requires that jurisdictions summarize their progress realized in diverting construction and demolition waste from the waste stream in their annual AB 939 reports. SB 1374 required the CIWMB to adopt a model construction and demolition ordinance for voluntary implementation by local jurisdictions.

AB 2176 (Montanez, Chapter 879, Statues of 2004)

This law requires the largest venue facilities and events (as defined) in each city and county to plan and implement solid waste diversion programs, and annually report the progress of those upon the request of their local government. In turn, local jurisdictions must report to the CIWMB waste diversion information for the top 10 percent of venues and events by waste generation.

A large event is defined as:

1. *Serves an average of more than 2,000 individuals per day of operation (both people attending the event and those working at it—including volunteers—are included in this number); and*
2. *Charges an admission price or is run by a local agency.*

The bill specifically includes public, nonprofit, or privately owned parks, parking lots, golf courses, street systems, or other open space when being used for an event, including, but not limited to, a sporting event or a flea market in addition to events that meet both of the above.

A large venue is defined as:

> *A permanent facility that annually seats or serves an average of more than 2,000 individuals within the grounds of the facility per day of operation (both people attending the event and those working at it—including volunteers too—are included in this number).*

Venues include, but are not limited to airports, amphitheaters, amusement parks, aquariums, arenas, conference or civic centers, fairgrounds, museums, halls, horse tracks, performing arts centers, racetracks, stadiums, theaters, zoos, and other public attraction facilities.

California Integrated Waste Management Board Model Ordinance

Subsequent to the Integrated Waste Management Act, additional legislation was passed to assist local jurisdictions in accomplishing the goals of AB 939. The California Solid Waste Re-use and Recycling Access Act of 1991 (§42900-42911 of the Public Resources Code) directs the California Integrated Waste Management Board (CIWMB) to draft a "model ordinance" relating to adequate areas for collecting and loading recyclable materials in development projects. The model ordinance requires that any new development project, for which an application is submitted on or after September 1, 1994, include "adequate, accessible, and convenient areas for collecting and loading

recyclable materials." For subdivisions of single family detached homes, recycling areas are required to serve only the needs of the homes within that subdivision.

California Green Building Standards Code (CALGreen)

CALGreen requires the diversion of at least 50 percent of the construction waste generated during most new construction projects (CALGreen Sections 4.408 and 5.408) and some additions and alterations to nonresidential building projects.

CALGreen became mandatory on January 1, 2011. The 2012 Supplement became effective on July 1, 2012, the 2013 CALGreen became effective on January 1, 2014, and the 2016 CALGreen became effective on January 1, 2017.

As of January 1, 2017, in all jurisdictions including those without a construction and debris ordinance requiring the diversion of 65 percent of construction waste, the owners/builder of construction projects within the covered occupancies are required to divert 65 percent of the construction waste materials generated during the project. Additionally, CALGreen allows a disposal reduction option that can be met when the project's disposal rate is less than 2.0 pounds per square foot for non-residential and high rise residential, or less than 3.4 pounds per square foot for low-rise residential.

Assembly Bill 1826 Mandatory Commercial Organics Recycling

In October 2014 Governor Brown signed AB 1826, requiring businesses to recycle their organic waste on and after April 1, 2016, depending on the amount of waste they generate per week. This law also requires that on and after January 1, 2016, local jurisdictions across the state implement an organic waste recycling program to divert organic waste generated by businesses, including multifamily residential dwellings that consist of five or more units (please note, however, that multi-family dwellings are not required to have a food waste diversion program). Organic waste (also referred to as organics) means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste. This law phases in the mandatory recycling of commercial organics over time, while also offering an exemption process for rural counties. In particular, the minimum threshold of organic waste generation by businesses decreases over time, which means an increasingly greater proportion of the commercial sector will be required to comply.

Starting on January 1, 2019, businesses that generate 4 cubic yards or more of commercial solid waste per week shall arrange for organic waste recycling services. By Summer/Fall 2021, if CalRecycle determines that the statewide disposal of organic waste in 2020 has not been reduced by 50 percent of the level of disposal during 2014, the organic recycling requirements on businesses will expand to cover businesses that generate 2 cubic yards or more of commercial solid waste per week. Additionally, certain exemptions may no longer be available if this target is not met.

California Mandatory Commercial Recycling Law (AB 341)

Assembly Bill (AB) 341 directed CalRecycle to develop and adopt regulations for mandatory commercial recycling. CalRecycle initiated formal rulemaking with a 45-day comment period beginning Oct. 28, 2011. The final regulation was approved by the Office of Administrative Law on

May 7, 2012. The purpose of AB 341 is to reduce GHG emissions by diverting commercial solid waste to recycling efforts and to expand the opportunity for additional recycling services and recycling manufacturing facilities in California.

Beginning on July 1, 2012, businesses have been required to recycle, and each jurisdiction has implemented programs that include education, outreach, and monitoring. Jurisdictions were required to start reporting on their 2012 Electronic Annual Report (due August 1, 2013) on their initial education, outreach, and monitoring efforts, and, if applicable, on any enforcement activities or exemptions implemented by the jurisdiction.

In addition to Mandatory Commercial Recycling, AB 341 sets a statewide goal for 75 percent disposal reduction by the year 2020. This is not written as a 75 percent diversion mandate for each jurisdiction. The 50 percent disposal reduction mandate still stands for cities, counties, and state agencies (including community colleges) under AB 939. CalRecycle continues to evaluate program implementation as it has in the past through the Annual Report review process for entities subject to either AB 939.

Senate Bill 1383 Short-Lived Climate Pollutants: Organic Waste Methane Emissions Reductions

In September 2016, Governor Brown signed SB 1383, establishing methane emissions reduction targets in a statewide effort to reduce emissions of short-lived climate pollutants (SLCP) in various sectors of California's economy. The bill codifies the California Air Resources Board's Short-Lived Climate Pollutant Reduction Strategy, established pursuant to SB 605, in order to achieve reductions in the statewide emissions of short-lived climate pollutants. Actions to reduce short-lived climate pollutants are essential to address the many impacts of climate change on human health, especially in California's most at-risk communities, and on the environment.

As it pertains to solid waste, SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. The law grants CalRecycle the regulatory authority required to achieve the organic waste disposal reduction targets and establishes an additional target that not less than 20 percent of currently disposed edible food is recovered for human consumption by 2025.

LOCAL

Existing San Anselmo General Plan

The following goals, policies, and recommendations pertain to solid waste management.

CONSERVATION ELEMENT

Recommendation 10. Projects shall not overburden the water supply, fire protection, waste disposal, schools, traffic and circulation, or other services and facilities, or adversely affect the financial or social environment of the community.

Recommendation 11. Water supply, flood control, waste water and solid waste disposal, soil conservation, and open space preservation shall be coordinated to create the greatest public benefit and the least degree of environmental damage.

Marin Hazardous and Solid Waste Joint Powers Authority (Zero Waste Marin)

In response to the California Integrated Waste Management Act, Marin County's public agencies formed the Marin Hazardous and Solid Waste Joint Powers Authority, also known as Zero Waste Marin. Zero Waste Marin was formed in 1996 and is comprised of the cities and towns of Belvedere, Corte Madera, Fairfax, Larkspur, Mill Valley, Novato, Ross, Tiburon, San Rafael, Sausalito, and San Anselmo, and the County of Marin. The goal of Zero Waste Marin is to help residents and businesses in Marin County meet the County's goal of 94 percent diversion from landfills by 2025 by reducing and recycling their solid waste and safely disposing of hazardous wastes. Zero Waste Marin ensures the County's compliance with State recycling mandates and provides information on household hazardous waste collection, recycling, composting, and waste disposal. The Marin County Department of Public Works/Waste Management administers Zero Waste Marin, and the AB 939 Local Task Force provides citizen and industry review.

Zero Waste Marin Solid Waste Reduction Programs

There are diverse range of Zero Waste Marin programs that are aimed at reducing solid waste within the Planning Area. The Residential Household Hazardous Waste Program provides instructions and educational information for proper household hazardous waste disposal. The Business Hazardous Waste Program provides instructions and hazardous waste drop-off locations for businesses within the Marin County area. The Zero Waste School Program provides zero waste training, indoor and outdoor recycling and compost containers, custodial carts, stickers and signage, and Green Team incentives, all at no charge to the school enrolled in their program.

Marin Countywide Integrated Waste Management Plan

AB 935 requires each county to prepare and adopt a Countywide Integrated Waste Management Plan (CIWMP). In April 1998, Zero Waste Marin, private waste haulers, and facility operators developed the Marin CIWMP, which implements recycling programs necessary to meet the State's 25 percent and 50 percent recycling mandates. Waste reduction and disposal facilities in the county that require solid waste facility permits must conform to policies and siting criteria in the CIWMP. The Marin CIWMP includes, by reference, source reduction and recycling elements, household hazardous waste elements, and non-disposal facility elements as well as a plan that describes countywide diversion programs and landfill disposal needs. The elements must be reviewed every five years and revised if necessary. The latest five-year review report for the Marin CIWMP was submitted by Zero Waste Marin in March 2018.

In addition, each city, county, or regional agency must prepare an annual report for submittal to CalRecycle that summarizes its progress in reducing solid waste as required by Public Resources Code Section 41821. Once every two or four years (depending on the compliance schedule),

CalRecycle conducts its own jurisdictional review of the annual reports to determine if the jurisdiction has met the goals of AB 935.

Town of San Anselmo Municipal Code

Town Code Title 5, Chapter 3 Solid Waste. This chapter establishes protocols for the proper collection and disposal of solid waste.

Town Code Title 5, Chapter 10 Reusable Foodware Regulations. This chapter establishes local requirements for reusable foodware with the purpose of maximizing the operating life of landfills, reducing litter, and lessening the economic and environmental costs of managing waste. The regulations specify that all Food Vendors, as defined in the Town Code, must provide separate receptables for solid waste, recyclables, and organics.

Town Code Title 9, Chapter 20 Construction and Demolition Materials Recovery. This chapter regulates the collection, recycling, and disposal of waste generated from construction, demolition, and renovation projects in San Anselmo in accordance with AB 939 and SB 1016.

Town Code Title 10, Chapter 8 Collecting and Loading Recyclable Materials in Development Projects. This chapter requires cities and counties to divert 50 percent of all solid waste by January 1, 2000 through source reduction, recycling, and composting activities. This diversion requires the participation of the residential, commercial, industrial, and public sectors.

3.15.16. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

This program-level analysis evaluates the adequacy of existing and planned solid-waste infrastructure to accommodate growth anticipated under the General Plan 2045. The evaluation considers regional and local planning documents, and State-mandated infrastructure assessments to determine whether the projected increase in population, employment, and development intensity could exceed available capacity or require new facilities that may cause significant environmental impacts.

The analysis relies on data and projections contained in the most recent planning and technical documents prepared by relevant service providers and guidelines, and the Zero Waste Marin Countywide Integrated Waste Management Plan. For solid waste, the analysis considers projected increases in population and development at General Plan buildout (see Table 2.0-4) and applies generation rates for residential and nonresidential uses consistent with CalRecycle's Estimated Solid Waste Generation Rates (2023) and local franchise data from Marin Sanitary Service. The evaluation accounts for the Town's participation in Zero Waste Marin, compliance with State diversion mandates under AB 939, AB 341, AB 1826, and SB 1383, and the operational capacity and permitted life of the Redwood Landfill, which serves the Town and surrounding jurisdictions.

The Town's adopted and General Plan 2045 policies and actions related to utilities and resource conservation were reviewed to determine how they support ongoing compliance with State and regional service standards and minimize the need for new infrastructure. Because this is a program-

level EIR, the analysis is generally qualitative and based on known capacity thresholds, planning assumptions. Subsequent project-level CEQA reviews will provide quantitative analysis and mitigation for individual developments, as appropriate.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to solid waste.

SUSTAINABILITY, CLIMATE CHANGE, AND RESILIENCY ELEMENT

Goal SU-B: Create a sustainable community that ensures residents may meet their own needs without compromising the needs of future generations.

Policy SU-B.1: Waste Diversion Targets. Strive to meet or exceed waste diversion and food recovery targets set by the State.

> **Action SU-B.1.a: Waste Reduction Programs.** Partner with Marin Sanitary Services and Zero Waste Marin to support implementation of commercial and organic waste diversion programs to meet SB 1383 requirements. Provide technical assistance and educational resources to business owners to help them understand and comply with State waste diversion and food recovery mandates.
>
> **Action SU-B.1.b: Business Waste Management Plans**. Require that businesses prepare and implement waste management plans to maximize recycling and food recovery and minimize disposal of organic waste where appropriate as a condition of approval of use permits.

Policy SU-B.2: Plastic Waste Reduction. Seek to reduce plastic waste pollution through legislation, education, and promoting alternatives.

> **Action SU-B.2.a: Single-Use Plastic Reduction.** Prohibit the sale of single-use plastic beverage bottles and explore opportunities to phase out use of all single-use plastics in Town buildings and at Town events. Provide more water refill stations in public places.
>
> **Action SU-B.2.b: Extended Producer Responsibility Legislation.** Support legislation that puts significant responsibility on manufacturers for the end-of-life management of their products and packaging to encourage design of more sustainable packaging and repairable or reusable products.

Policy SU-B.3: Municipal Waste Reduction. Maximize recycling, composting, reuse, waste reduction, and food recovery within municipal operations and at public parks and facilities.

> **Action SU-B.3.a: Recycling Facilities.** Provide sufficient recycling and composting bins for public and staff use. In public projects, design facilities and refuse storage areas to facilitate recycling.

Action SU-B.3.b: Environmentally Preferable Purchasing. Continue to give preference to purchasing products that are reusable, recyclable, made from recycled materials, and minimize packaging. Explore opportunities to expand the Town's purchasing policy to include consideration of lifecycle emissions and low carbon alternatives.

Policy SU-B.4: Local Food System. Support efforts to reduce greenhouse gas emissions from food production, transportation, and waste, and encourage practices that strengthen the sustainability and resilience of the local food system.

Action SU-B.4.a: Local Sourcing. Encourage businesses to source their products from local farms to reduce carbon emissions generated from food and material production and transportation.

Action SU-B.4.b: Regional Agriculture. Advocate for and support regional efforts to promote regenerative and climate-smart agricultural practices that enhance soil health, sequester carbon, and contribute to a sustainable local food system.

Policy SU-B.5: Sustainable Land Uses. Promote environmental sustainability and resilience through thoughtful land use planning and development review that addresses climate change, reduces carbon footprints, and manages resources responsibly.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project will have a significant impact on the environment associated with Utilities if it would:

- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; and/or
- Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

IMPACTS AND MITIGATION MEASURES

Impact 3.15-6: General Plan implementation would comply with federal, state, and local management and reduction statutes and regulations related to solid waste, and would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals (Less than Significant)

Solid-waste collection, recycling, and composting services in San Anselmo are provided by Marin Sanitary Service (MSS) under an exclusive franchise agreement with the Town. MSS collects refuse, recyclables, and organics, and transports materials to the Redwood Landfill in Novato, a Class III

facility owned and operated by Waste Management, Inc. The landfill has an estimated remaining capacity of approximately 20–26 million cubic yards and a permitted closure date beyond 2036.

The Town participates in Zero Waste Marin, a countywide joint-powers agency responsible for implementing the Integrated Waste Management Act of 1989 (AB 939), which first established the statewide 50 percent diversion goal. More recent State laws—AB 341 (Mandatory Commercial Recycling), AB 1826 (Mandatory Organics Recycling), and SB 1383 (Short-Lived Climate Pollutants: Organic Waste Methane Emissions Reductions)—require local jurisdictions to reduce landfill disposal of recyclables and organic materials and to recover edible food for human consumption. In addition, AB 1276 (2021) restricts single-use plastics and disposable food ware, and the CALGreen Building Code (Part 11, Title 24 CCR) mandates construction-and-demolition waste diversion of at least 65 percent.

At General Plan buildout (see Table 2.0-4), approximately 5,356 additional residents and 752,133 square feet of non-residential space would be accommodated. Assuming an average generation rate of six pounds of solid waste per resident per day, the Town's growth would result in roughly 16 tons per day (about 5,800 tons per year) of new waste—well within existing and permitted landfill capacity of the Redwood Landfill's permitted daily throughput (3,500 tons per day). However with a potential closure date prior to the buildout of the General Plan (2045). In 2019, the Potrero Hills Landfill accepted approximately 42 percent (or 93,172 tons) of the solid waste generated in the Zero Waste Marin service area. The landfill is operated by Waste Connections Company and is located on a 526-acre site at 3675 Potrero Hills Lane, a few miles south of Suisun City in the hills of Suisun Marsh in Solano County. A compost facility and a landfill-gas-to-energy plant is also operated at this site. The landfill has a maximum permitted throughput of 4,330 tons/day and a remaining capacity of 13,872,000 tons. The Potrero Hills Landfill is designed to continue accepting waste until maximum permitted topographic elevations are achieved, with the site projected to remain open until 2047 based on its most recent Status Impact Report. Any change in the projected closure date will be addressed in future amendments to the joint technical document addressing facility operations and closure. Additionally, as shown preciously in Table 3.15-12 many other area landfills also currently accepted waste from the Zero Waste Marin's service area.

The General Plan 2045 strengthens solid-waste management through a comprehensive suite of new sustainability policies that reduce waste generation at the source, and expand diversion. Under Policy SU-B.1 (Waste Diversion Targets), the Town will strive to meet or exceed State waste-diversion and food-recovery goals. Action SU-B.1.a directs the Town to partner with Marin Sanitary Service and Zero Waste Marin to implement commercial and organic-waste diversion programs that satisfy SB 1383 mandates. Through this action, the Town will also provide educational outreach and technical assistance to help business owners understand and comply with State food-recovery and waste-reduction requirements. In addition, Action SU-B.1.b requires that businesses prepare and implement waste-management plans that maximize recycling and food recovery as a condition of approval for new or expanded uses. These actions directly reduce the amount of solid waste generated within the community and ensure that commercial activities contribute to meeting statewide diversion targets. Policy SU-B.2 (Plastic Waste Reduction) commits the Town to reducing plastic pollution through both legislative initiatives and public education. To advance this goal,

Action SU-B.2.a prohibits the sale of single-use plastic beverage bottles, encourages the installation of water refill stations in public places, and explores opportunities to phase out single-use plastics in Town buildings and at public events. Furthermore, Action SU-B.2.b supports extended-producer-responsibility legislation that shifts end-of-life product management costs to manufacturers, encouraging the design of repairable, reusable, or recyclable products and packaging. These actions minimize upstream waste generation and reduce the long-term volume of non-biodegradable materials entering the waste stream.

The General Plan also addresses waste reduction in municipal operations. Policy SU-B.3 (Municipal Waste Reduction) directs the Town to maximize recycling, composting, reuse, and food recovery at Town facilities and parks. Action SU-B.3.a requires that all public projects include sufficient recycling and composting bins for both public and staff use, and that refuse-storage areas be designed to facilitate waste separation. Action SU-B.3.b continues and expands the Town's environmentally preferable purchasing policy, prioritizing products that are reusable, recyclable, and made from recycled materials while minimizing packaging and considering lifecycle greenhouse-gas emissions. Implementation of these measures will reduce waste generation associated with public operations and construction.

Finally, Policy SU-B.4 (Local Food System) links waste reduction to climate action by encouraging sustainable food production and distribution. Action SU-B.4.a directs the Town to encourage businesses to source food and materials locally to reduce emissions from transportation and minimize packaging waste. Action SU-B.4.b supports regional efforts promoting regenerative and climate-smart agricultural practices that enhance soil health, sequester carbon, and reduce organic waste generation.

These solid-waste policies operate in conjunction with *Policy PR-C.2* (Sustainable Design and Operations) and *Policy PR-A.3.b* (Sustainable Park Operations and Design), which require the Town to integrate waste-reduction principles and recycling infrastructure into the design and operation of all public facilities. Together, they ensure that both municipal and private development projects contribute to regional zero-waste objectives and State regulatory compliance.

Future improvements to local waste-handling infrastructure—such as upgrades to recycling facilities or installation of additional public collection bins—would occur within developed areas. Any temporary effects from construction (noise, air emissions, or traffic) would be minor and evaluated through project-level CEQA review. No new landfill or major disposal facility expansion are proposed at this time or would be anticipated.

Implementation of the San Anselmo General Plan 2045 would continue to comply with State and local solid-waste regulations, including SB 1383 organics-diversion and food-recovery mandates, and would not exceed available landfill capacity. Through proactive implementation of Policies SU-B.1 through SU-B.4, the Town will expand recycling, composting, and source-reduction programs. These measures substantially reduce solid-waste generation and ensure long-term consistency with Marin County's Zero Waste goals. Therefore, this impact would be **less than significant**.

Impact 3.15-7: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to utilities and service systems. (Less than Significant)

Cumulative development across Marin County—including the cities and towns of Fairfax, Larkspur, Corte Madera, San Rafael, Ross, and unincorporated areas—will incrementally increase demand for water supply, wastewater treatment, stormwater management, and solid waste disposal services through 2045. Growth projections used in regional infrastructure planning documents, including Plan Bay Area 2050+ and the Marin Countywide Plan (2020), encompass the modest level of additional population and employment growth expected within San Anselmo under the General Plan 2045. The cumulative analysis therefore considers the incremental contribution of San Anselmo's General Plan to regional utility systems and infrastructure networks.

CUMULATIVE WATER SUPPLY

Marin Water's 2020 Urban Water Management Plan (UWMP, updated 2024) includes demand projections for all ten municipalities within its service area based on ABAG's regional growth forecasts. The UWMP demonstrates that even under single-dry and multiple-dry-year conditions, water supplies remain sufficient to meet regional demand through 2045, accounting for local climate variability, drought contingency planning, and conservation measures.

The Town's *Policy PR-C.8* requires continued coordination with Marin Water to ensure reliability and conservation, while *Policy PR-C.2* and *Action PR-C.9.a* promote energy-efficient and renewable backup systems at critical water facilities. Because cumulative water-supply planning accounts for projected future growth and these documents are periodically updated to include future population and growth and drought contingency strategies, San Anselmo's contribution to cumulative water-supply impacts would not be cumulatively considerable. Cumulative water supply impacts would be **less than significant**.

CUMULATIVE WASTEWATER

The Ross Valley Sanitary District (RVSD) and Central Marin Sanitation Agency (CMSA) operate an integrated wastewater collection and treatment system serving San Anselmo, Fairfax, Larkspur, and portions of unincorporated Marin County. CMSA's *Ten-Year Capital Improvement Plan (2022)* identifies ongoing plant rehabilitation and capacity projects designed to maintain treatment efficiency and accommodate projected regional growth.

As development occurs in San Anselmo and the surrounding areas being served by conveyance and treatment infrastructure by RVSD and CMSA there will be an increased need for water treatment and wastewater services. To ensure capacity impacts are not considered cumulative significant and to ensure the ability to maintain and handle peak discharge flow while meeting State Regional Water Quality Control Board Standards as established in the current NPDES Permit, the timing of infrastructure and improvements would need to coincide with development levels and capacity needs. As described previously, the specific impacts of providing new and expanded facilities cannot be determined at this time, as the General Plan does not propose or approve development nor does it designate specific sites for new or expanded public facilities. RVSD's Sewer System Management Plan (2023) and CMSA's Ten-Year Capital Improvement Program include system upgrades and

reduction blending projects to maintain capacity and treatment efficiency. General plan Policy PR-C.11 directs continued coordination with RVSD to maintain high-quality wastewater facilities, and Policy PR-C.1 calls for proactive facility maintenance through the Town's CIP. As described above, the Town must coordinate with service providers and must also periodically review and update their applicable master plans, and as growth continues to occur within the Planning Area. Given that the General Plan 2045 does not approve development projects and does not propose capacity improvement projects the general plan is projected wastewater generation volumes associated with General Plan buildout in conjunction with other regional development is not anticipated to exceed the capacity of the wastewater treatment provider. these impacts are considered less than cumulatively considerable, and cumulative wastewater impacts would be **less than significant**.

CUMULATIVE STORMWATER AND FLOOD CONTROL

Cumulative development throughout Marin County will increase impervious surfaces and the need for improved drainage, particularly in the Ross Valley watershed, which includes San Anselmo, Fairfax, and unincorporated areas. Regional flood management planning is coordinated through the Marin County Flood Control and Water Conservation District (Zone 9), which implements projects such as the San Anselmo Flood Risk Reduction Project and creek restoration efforts designed to reduce flooding and enhance habitat.

San Anselmo's contribution to regional runoff is limited due to its small geographic area and predominantly built-out character. The Town's Safety Element Goal S-D and associated policies—*S-D.1 through S-D.5*—commit to minimizing flood risks through floodplain development limits, maintenance of participation in the National Flood Insurance Program (NFIP), and the use of nature-based and hydrologic solutions to manage runoff (*Actions S-D.2.d and S-D.3.b*). In addition, *Policy PR-C.7* directs the Town to monitor and pursue improvements to the storm drainage system, while *Action PR-C.1.a* ensures ongoing maintenance and prioritization of drainage projects in the Town's Capital Improvement Plan.

Because the Town's development is primarily infill and would be required to incorporate Low Impact Development (LID) practices under the Marin County Stormwater Pollution Prevention Program (MCSTOPPP), its incremental contribution to cumulative hydrologic impacts would not be considerable. Moreover, regional coordination through *Policies S-D.4.a through S-D.4.d* ensures collaborative flood management across jurisdictions. As such these Cumulative Stormwater Impact would be **less than significant.**

CUMULATIVE SOLID WASTE

Countywide, solid-waste management is coordinated through Zero Waste Marin, which has established diversion programs and landfill capacity planning for all participating jurisdictions. The Redwood Landfill in Novato, which serves all of Marin County, has sufficient capacity to at least 2036 and operates under a Solid Waste Facility Permit issued by CalRecycle and the Regional Water Quality Control Board. With a potential closure date prior to the buildout of the General Plan (2045). The Potrero Hills Landfill also accepts solid waste generated in the Zero Waste Marin service area. The Potrero Hills Landfill is designed to continue accepting waste until maximum permitted topographic elevations are achieved, with the site projected to remain open until 2047 based on its

most recent Status Impact Report. Any change in the projected closure date will be addressed in future amendments to the joint technical document addressing facility operations and closure. Additionally, as shown preciously in Table 3.15-12 other area landfills also currently accepted waste from the Zero Waste Marin service area.

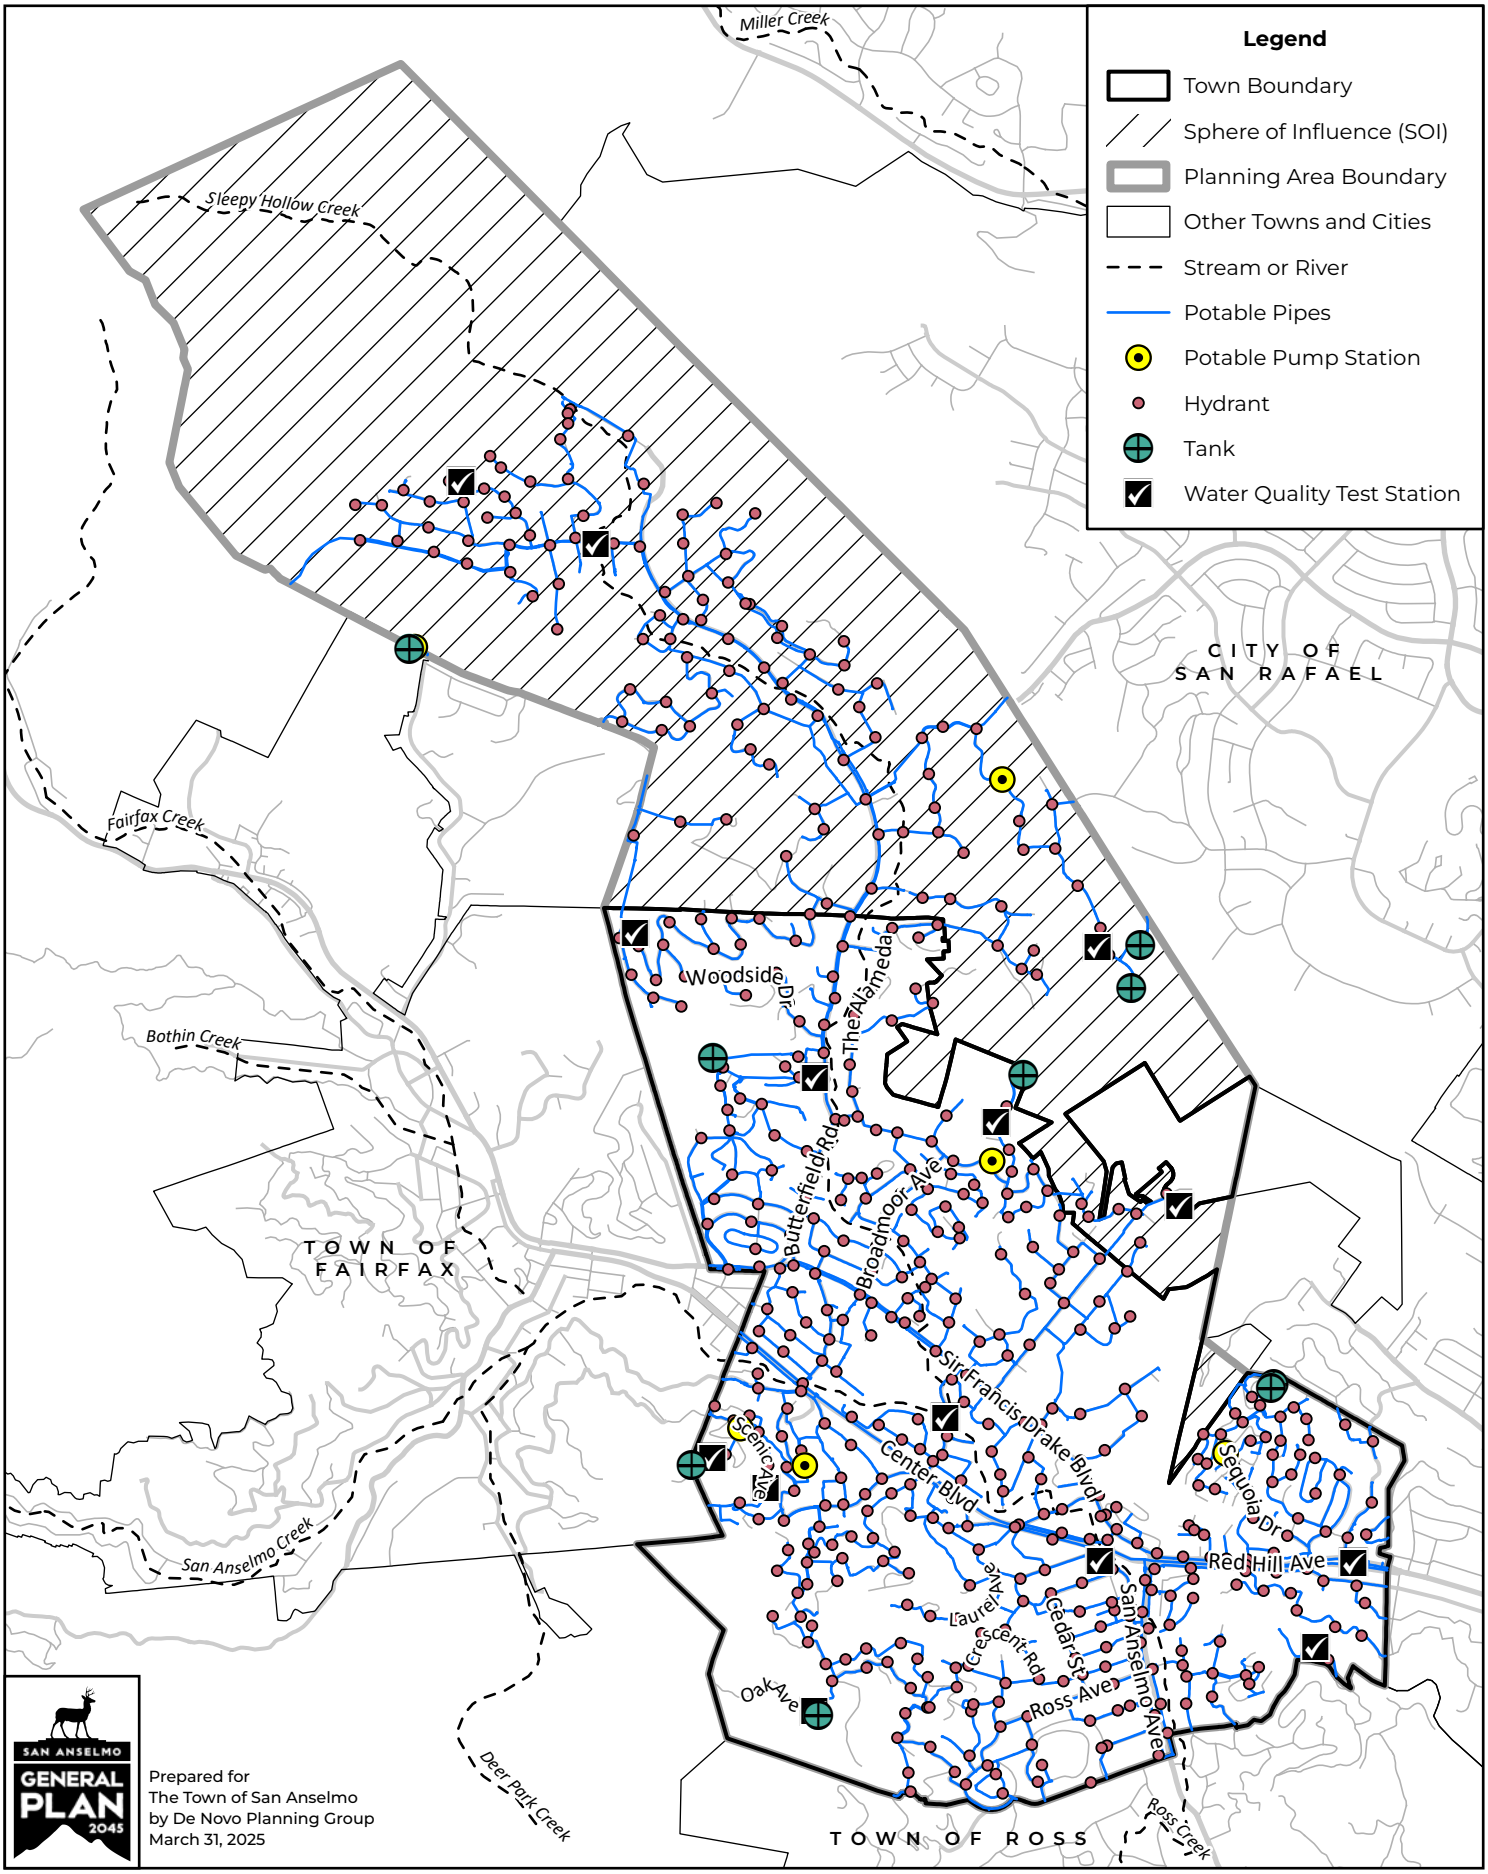

San Anselmo's modest population increase would generate only a small fraction of countywide waste volumes and would not, by itself, necessitate new landfill facilities. The Town's General Plan includes robust waste-reduction measures that extend well beyond state minimums. For instance, *Policy SU-B.1 (Waste Diversion Targets)* requires the Town to meet or exceed state waste-diversion and food-recovery goals, while *Action SU-B.1.a* directs partnership with MSS and Zero Waste Marin to implement commercial and organic waste diversion programs in compliance with SB 1383. Additionally, *Action SU-B.1.b* requires business waste-management plans to ensure recycling and food recovery are integral to commercial operations.

Collectively, these measures ensure that San Anselmo's contribution to regional waste generation remains minimal and consistent with Zero Waste Marin's diversion targets. as such Cumulative Impact related to solid waste would be less than cumulatively considerable and are considered **less than significant.**

CUMULATIVE CONCLUSION

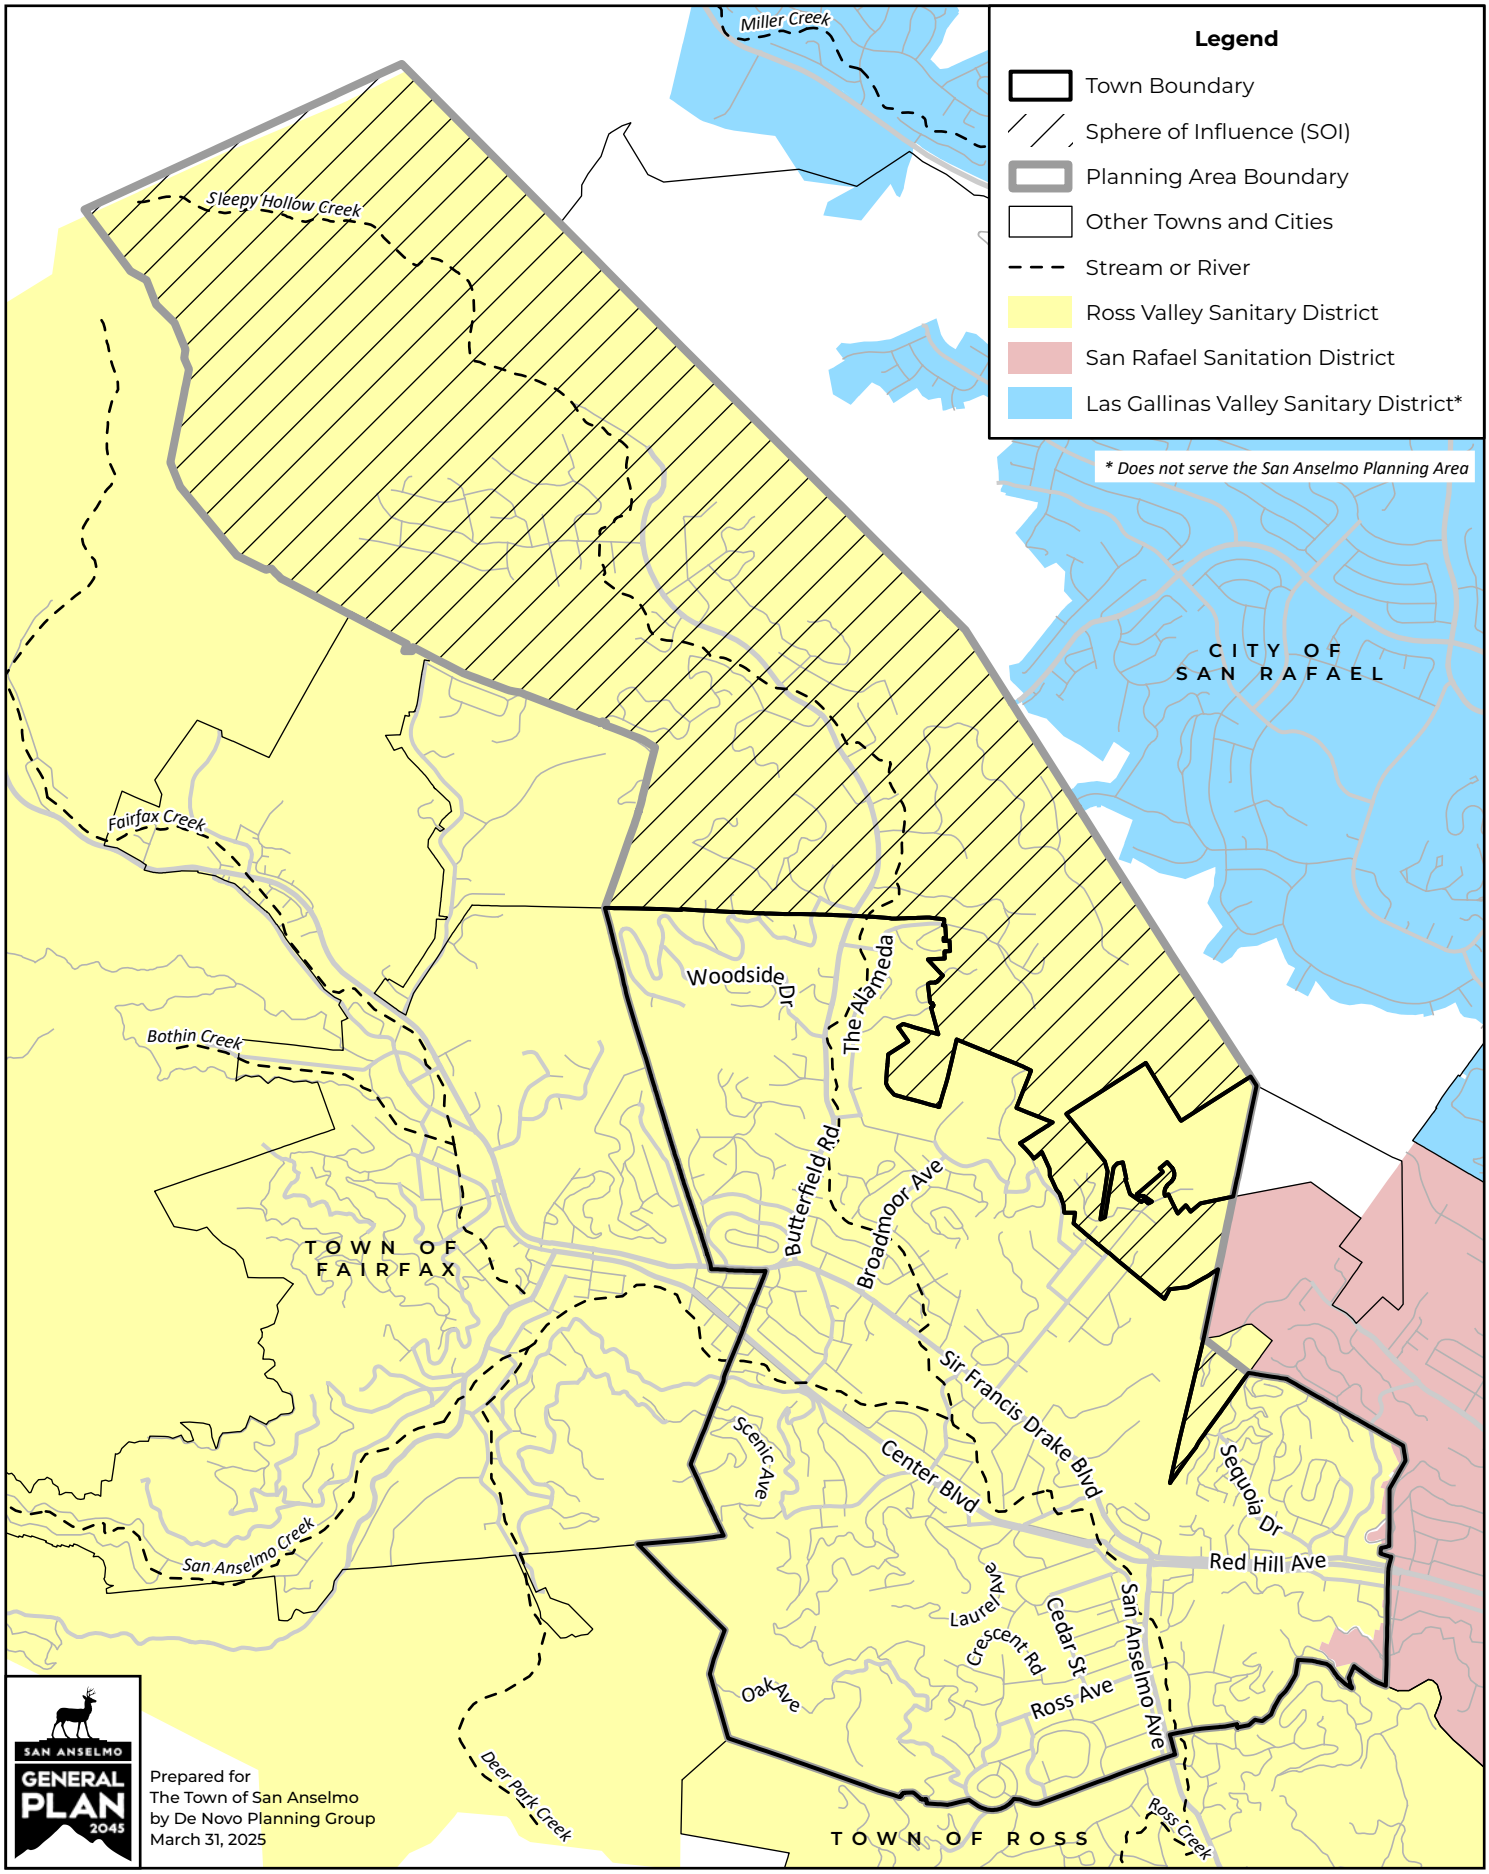

As described through this chapter, regional service providers responsible for water, wastewater, stormwater, solid waste, have incorporated growth for their respective service areas through their long range planning documents such as Master Plans and improvement plans. Although the development capacity under the General Plan 2045 buildout reflects the Town's long-term buildout potential, this growth would occur gradually over several decades as individual projects are proposed, reviewed, and approved. Implementation of new housing units, nonresidential development, and supporting infrastructure will depend on market conditions, available funding, and local and regional planning priorities. As such, utility demand and infrastructure needs will evolve incrementally rather than all at once. The Town and its service providers—Marin Water, Ross Valley Sanitary District, Central Marin Sanitation Agency, and Marin Sanitary Service—will continue to periodically update their master plans, Urban Water Management Plans, and Capital Improvement Programs to reflect actual development trends and regulatory requirements. Each future development project will undergo site-specific review under CEQA and local permitting processes to verify the adequacy of utility and service systems at the time of project approval. Implementation of the San Anselmo General Plan 2045 would not result in substantial new demands beyond these forecasts, nor would it induce regional population growth inconsistent with adopted land-use plans.

The Town's policies described throughout this chapter ensure that public infrastructure and private development projects maintain coordination with service providers, integrate sustainability practices, and comply with state and federal regulations. Through these policies, the Town contributes to region-wide resource efficiency, climate resilience, and waste objectives. Therefore, cumulative impacts to utilities and service systems would be **less than significant**.

WASTEWATER INFRASTRUCTURE AND FACILITIES

This section provides a background discussion of the hazards associated with wildfires in the Town of San Anselmo. The discussion of fire suppression resources is located within Section 3.13, Public Services and Recreation, of this report.

No comments were received during the NOP comment period regarding this environmental topic (Appendix A).

3.16.1. ENVIRONMENTAL SETTING

FIRE HAZARD SEVERITY ZONES

The state has charged the California Department of Forestry and Fire Protection (CAL FIRE) with the identification of Fire Hazard Severity Zones (FHSZ) within State Responsibility Areas (SRAs). In addition, CAL FIRE must classify Very High Fire Hazard Severity Zones (VHFHSZs) identified within any Local Responsibility Areas (LRAs). The FHSZ maps are used by the State Fire Marshall as a basis for the adoption of applicable building code standards. **Figure 3.16-1** illustrates the FHSZs and Responsibility Areas.

As shown in Figure 3.16-1, all lands within the San Anselmo Town Boundary are located within a Local Responsibility Area and have Low and Moderate hazard areas mapped by CAL FIRE. The Sphere of Influence (included within the county of Marin) is located in an SRA and includes small areas of high fire hazard areas, although all areas adjacent to the Town Limits include only areas of Moderate Fire Hazard Severity Zones mapped by CAL FIRE SRA maps.

FIRE THREAT AREAS

CAL FIRE's Fire Threat Model identifies fire threats using fuel rank, which is a ranking system developed by CAL FIRE to identify areas in the California Fire Plan where large catastrophic fires are most likely. Fuel rank incorporates multiple wildfire factors: surface rank, ladder index, and crown index. These factors are described below:

- **Surface Rank:** The surface ranking system, developed by CAL FIRE, reflects the quantity and burn characteristics of the fuels and the topography in a given area. Surface rank is organized into three categories and created through a combination of fuel models and slope data, as described below:
    - **Fuel Model**: A fuel model categorizes fuels based on burn characteristics. The U.S. Forest Service has developed a series of fuel models to help predict fire behavior.
    - **Slope**: Slope is an important contributor to fire hazard levels. Slopes are categorized into six ranges: 0-10 percent, 11-25 percent, 26-40 percent, 41-55 percent, 56-75 percent, and >75 percent.
- **Ladder Index**: The ladder index is the distance from the ground to the lowest leafy vegetation for tree and plant species.
- **Crown Index**: The crown index reflects the quantity of leafy vegetation present within individual specimens of a given species.

The combination of surface rank, ladder index, and crown index generate a comprehensive fuel rank that characterizes fire probability and behaviors. This fuel rank is categorized as medium, high, or

very high. The fuel rank data is used to delineate fire threat, which is divided into five classes ranging from low to extreme in the Fire Threat Model. As a result, the Fire Threat Model displays discrete regions, which reflect fire probability and predicted fire behavior.

As shown in **Figure 3.16-2**, the Planning Area primarily contains areas with "moderate" and "high" fire threats. The "low" fire threat level and two highest fire threat levels, "very high" and "extreme", are not mapped within or adjacent to the Planning Area. "High" fire threats are located in the northern and eastern portions of the Planning Area, where there tends to be a greater amount of combustible vegetation and steeper slopes. "Moderate" fire threats are located in the hillside areas of the Planning Area.

3.16.2. REGULATORY SETTING

FEDERAL

FY 2001 Appropriations Act

Title IV of the Appropriations Act required the identification of "Urban Wildland Interface Communities in the Vicinity of Federal Lands that are at High Risk from Wildfire" by the U.S. Departments of the Interior and Agriculture.

Disaster Mitigation Act (2000)

Section 104 of the Disaster Mitigation Act of 2000 (Public Law 106-390) enacted Section 322, Mitigation Planning of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, which created incentives for state and local entities to coordinate hazard mitigation planning and implementation efforts and is an important source of funding for fuels mitigation efforts through hazard mitigation grants.

National Incident Management System (NIMS)

NIMS is administered through the Marin Operational Area Emergency Operations Plan provides a systematic, proactive approach to guide government agencies, nongovernmental organizations, and the private sector to work together to prevent, respond to, recover from, and mitigate the effects of incidents, regardless of cause, size, location, or complexity, in order to reduce the loss of life and property and harm to the environment. NIMS improves the ability to prepare for and respond to potential incidents and hazard scenarios.

National Fire Plan (NFP) 2000

The summer of 2000 marked a historic milestone in wildland fire records for the United States. Dry conditions across the western United States led to destructive wildfire events on an estimated 7.2 million acres, nearly double the 10-year average. Costs in damages including fire suppression activities were approximately 2.1 billion dollars. Congressional direction called for substantial new appropriations for wildland fire management. This resulted in action plans, interagency strategies, and the Western Governor's Association's "A Collaborative Approach for Reducing Wildland Fire Risks to Communities and the Environment – A 10-Year Comprehensive Strategy - Implementation

Plan", which collectively became known as the National Fire Plan. This plan places a priority on collaborative work within communities to reduce their risk from large-scale wildfires.

Healthy Forest Initiative 2002/Healthy Forest Restoration Act 2003

In August 2002, the Healthy Forests Initiative (HFI) was launched with the intent to reduce the severe wildfires risks that threaten people, communities, and the environment. Congress then passed the Healthy Forests Restoration Act (HFRA) on December 3, 2003, to provide the additional administrative tools needed to implement the HFI. The HFRA strengthened efforts to restore healthy forest conditions near communities by authorizing measures such as expedited environmental assessments for hazardous fuels projects on federal land. This HFRA emphasized the need for federal agencies to work collaboratively with communities in developing hazardous fuel reduction projects and places priority on fuel treatments identified by communities themselves in their Community Wildfire Protection Plans.

Department of the Interior Department Manual Part 620

Wildland Fire Management, Part 620 of the Department of the Interior Departmental Manual, pertains to wildland fire management policies, with the goal of providing an integrated approach to wildland fire management. The guiding principles of the plan emphasize the need for public health and safety considerations, risk management protocols, inter-agency collaboration, and economic feasibility of wildfire management practices, as well as the ecological role of wildfires.

STATE

California Strategic Fire Plan

This statewide plan is a strategic document, which guides fire policy for much of California. The plan is aimed at reducing wildfire risk through pre-fire mitigation efforts tailored to local areas through assessments of fuels, hazards, and risks.

California State Multi-Hazard Mitigation Plan

The purpose of the State Multi-Hazard Mitigation Plan (SHMP) is to significantly reduce deaths, injuries, and other losses attributed to natural- and human-caused hazards in California. The SHMP provides guidance for hazard mitigation activities emphasizing partnerships among local, state, and federal agencies as well as the private sector.

California Government Code Section 65302

This section, which establishes standards for developing and updating General Plans, includes fire hazard assessment and Safety Element content requirements. This section describes that a Safety Element shall include protection of the community from any unreasonable risks associated with the effects of seismically induced surface rupture, ground shaking, ground failure, tsunami, seiche, and dam failure; slope instability leading to mudslides and landslides; subsidence; liquefaction; and other seismic hazards, identified pursuant to Chapter 7.8 (commencing with Section 2690) of Division 2 of the Public Resources Code, and other geologic hazards known to the legislative body;

flooding; and wildland and urban fires. The Safety Element shall include mapping of known seismic and other geologic hazards. It shall also address evacuation routes, military installations, peakload water supply requirements, and minimum road widths and clearances around structures, as those items relate to identified fire and geologic hazards.

The Safety Element is also required to:

- Identify information regarding flood hazards;
- Establish a set of comprehensive goals, policies, and objectives for the protection of the community from the unreasonable risks of flooding;
- Establish a set of feasible implementation measures designed to carry out the applicable goals, policies, and objectives;
- Be reviewed and updated as necessary to address the risk of fire for land classified as state responsibility areas and land classified as very high fire hazard severity zones;

Be reviewed and updated as necessary to address climate adaptation and resiliency strategies applicable to the city or county.

California Public Resource Code

The State's Fire Safe Regulations are set forth in Public Resources Code Section 4290, which include the establishment of SRAs. An SRA is the area where the State of California is financially responsible for the prevention and suppression of wildfires. An SRA does not include lands within Town boundaries or in federal ownership. Areas in federal ownership are under Federal Responsibility Areas (FRA), and areas within city/town boundaries are included in LRAs.

Public Resources Code Section 4291 sets forth defensible space requirements, which are applicable to anyone that …owns, leases, controls, operates, or maintains a building or structure in, upon, or adjoining a mountainous area, forest-covered lands, brush-covered lands, grass-covered lands, or land that is covered with flammable material (Section 4291(a)). These requirements include:

- Maintenance of defensible space of 100 feet from each side and from the front and rear of the structure, not beyond the property line except as required by state law, local ordinance, rule, or regulation;
- An insurance company that insures an occupied dwelling or occupied structure may require a greater distance than that required under paragraph (1) if a fire expert, designated by the director, provides findings that the clearing is necessary to significantly reduce the risk of transmission of flame or heat sufficient to ignite the structure, and there is no other feasible mitigation measure possible to reduce the risk of ignition or spread of wildfire to the structure.
- Removal of the portion of a tree that extends within 10 feet of the outlet of a chimney or stovepipe;
- Maintenance of a tree, shrub, or other plant adjacent to or overhanging a building free of dead or dying wood;
- Maintenance of the roof of a structure free of leaves, needles, or other vegetative materials;

- Prior to constructing a new building or structure or rebuilding a building or structure damaged by a fire in an area subject to this section, the construction or rebuilding of which requires a building permit, the owner shall obtain a certification from the local building official that the dwelling or structure, as proposed to be built, complies with all applicable state and local building standards.

Assembly Bill 337

Per AB 337 (1992), local fire prevention authorities and the California Department of Forestry and Fire Protection (CALFIRE) are required to identify "Very High Fire Hazard Severity Zones (VHFHSZ) in Local Responsibility Areas (LRA). Standards related to brush clearance and the use of fire-resistant materials in fire hazard severity zones are also established.

Assembly Bill 38

AB 38 (2021) mandates that sellers of residential real property located in high or very high fire hazard severity zones provide explicit disclosures to buyers regarding the property's compliance with local and state defensible space laws. To facilitate this consumer transparency, the statute requires sellers to provide documentation—such as a recent inspection report from a local fire agency or CAL FIRE—proving that the property meets vegetation clearance standards. If a property is not in compliance at the time of the sale, the law permits the buyer and seller to enter into a formal agreement stating that the buyer will accept responsibility for curing the defensible space deficiencies within a specified timeframe after closing escrow.

Assembly Bill 3074

AB 3074 (2020) expands California's existing 100-foot defensible space framework by establishing a strict, new "Ember-Resistant Zone" (Zone 0) that encompasses the first 5 feet of ground immediately surrounding any structure. This regulation requires the total removal of organic materials, bark mulch, wood piles, and combustible vegetation within this critical perimeter to prevent wind-blown firebrands from igniting the building's exterior. This requirement applies to all properties located within High and Very High Fire Hazard Severity Zones, making it directly relevant to wildland-urban interface (WUI) development and property management in hillside neighborhoods like San Anselmo.

Assembly Bill 2238

AB 2238 (2022) strengthens municipal land-use planning by requiring local jurisdictions to update the Safety Elements of their General Plans to incorporate advanced fire hazard assessments. Municipalities must utilize the most up-to-date CAL FIRE Fire Hazard Severity Zone maps, localized risk assessment metrics, and historical wildfire data to guide their future housing and infrastructure approvals. This statute directly influences the legal adequacy of the Town of San Anselmo's local Safety Element analysis, forcing local planners to align zoning and development maps with modern climate and wildfire projections.

Senate Bill 63

SB 63 (2021) expands California's wildland fire prevention infrastructure by directing CAL FIRE to develop and implement a comprehensive, five-year statewide strategy focused on forest health and large-scale fuel reduction programs. The statute enhances regional fire safety by identifying priority areas for clearing hazardous vegetation, expanding the state's prescribed burn programs, and easing regulatory hurdles for community fire-break projects. Additionally, the law provides financial backing for local agencies to expand their wildfire prevention workforces and increases technical support for property owners striving to meet state clearing mandates.

California Fire Code

The California Fire Code establishes standards related to the design, construction, and maintenance of buildings. The standards set forth in the California Fire Code range from designing for access by firefighters and equipment and minimum requirements for automatic sprinklers and fire hydrants to the appropriate storage and use of combustible materials.

California Building Code Chapter 7A

Chapter 7A of the CBC establishes strict, mandatory construction standards for new buildings, major additions, and alterations located within designated Wildland-Urban Interface (WUI) areas. This regulatory framework mitigates structural vulnerability by requiring the use of ignition-resistant and noncombustible materials for high-risk exterior components, including walls, roofs, decks, and eaves. Furthermore, Chapter 7A enforces specialized design specifications for attic and under-floor vents, mandating ember-resistant mesh screens to prevent wind-driven firebrands from penetrating the building envelope and destroying the home from the inside out.

California Code of Regulations Title 8

In accordance with California Code of Regulations Title 8, Sections 1270 and 6773 (*Fire Prevention* and *Fire Protection and Fire Equipment*), the Occupational Safety and Health Administration (Cal OSHA) establishes fire suppression service standards. The standards range from fire hose size requirements to the design of emergency access roads.

California Code of Regulations Title 14 (Natural Resources)

Division 1.5 (Department of Forestry and Fire Protection), Title 14 of the CCR establishes a variety of wildfire preparedness, prevention, and response regulations.

California Code of Regulations Title 19 (Public Safety)

Title 19 of the CCR establishes a variety of emergency fire response, fire prevention, and construction and construction materials standards.

California Code of Regulations Title 24 (CA Building Standards Code)

The California Fire Code is set forth in Part 9 of the Building Standards Code. The California Fire Code, which is pre-assembled with the International Fire Code by the International Code Council, contains fire-safety building standards referenced in other parts of Title 24.

California Health and Safety Code and UBC Section 13000 et seq.

State fire regulations are set forth in Section 13000 et seq. of the California Health and Safety Code, which is divided into "Fires and Fire Protection" and "Buildings Used by the Public." The regulations provide for the enforcement of the California Fire Code and mandate the abatement of fire hazards. The Health and Safety Code establishes broadly applicable regulations, such as standards for buildings and fire protection devices, in addition to regulations for specific land uses, like as childcare facilities and high-rise structures.

California Public Utilities Code Section 8367 et seq.

State regulations relating to wildfire mitigation are set forth in Section 8387 of the California Public Utilities Code. The regulations provide that each local publicly owned electric utility and electrical cooperative shall construct, maintain, and operate its electrical lines and equipment in a manner that will minimize the risk of wildfire posed by those electrical lines and equipment. The local publicly owned electric utility or electrical cooperative is also required to prepare a wildfire mitigation plan.

LOCAL

Marin County Community Wildfire Protection Plan (CWPP)

The Marin County Community Wildfire Protection Plan (CWPP) serves as a comprehensive, data-driven framework that utilizes granular geographic information system (GIS) mapping and fire behavior modeling to systematically address wildfire risk across the county's wildland-urban interface (WUI). Developed collaboratively by the Marin Wildfire Prevention Authority (MWPA), local fire departments, and land management agencies, the plan establishes clear countywide priorities for vegetation management, public evacuation routing, structural home hardening, and emergency alerting. Rather than treating wildfire risk uniformly, the CWPP breaks the county down into distinct neighborhood-level evacuation zones. This structural approach allows regional stakeholders to dynamically track mitigation progress and strategically deploy tax funding where it will most effectively lower structural ignitability and protect civilian lives.

For the Town of San Anselmo, the CWPP directly dictates specialized, actionable hazard reduction strategies tailored to its local geography:

- **The San Rafael-San Anselmo Fuel Reduction Zone**: The CWPP heavily prioritizes a massive, multi-agency initiative known as the San Rafael-San Anselmo Fuel Reduction Zone Project (formerly the Ridgewood Shaded Fuel Break). This joint effort involves the Ross Valley Fire Department, the Town of San Anselmo, and Marin County Parks to actively thin out dense stands of highly volatile, non-native invasive eucalyptus trees. By removing these hazardous fuels along the critical ridgeline dividing San Anselmo from San Rafael, the project creates a strategic fuel break designed to drop intense canopy fires back down to the ground before they can advance into central Marin communities.

- **Sorich Ranch and San Francisco Boulevard WUI Initiatives**: Because the steep, densely vegetated hills of the Sorich Ranch and San Francisco Boulevard neighborhoods present high ember-ignition risks, they are designated as priority assessment zones under the plan's umbrella. Local fire departments use the CWPP's framework to conduct targeted, street-by-street parcel evaluations. These inspections provide property owners with detailed wildfire risk reports outlining mandatory vegetation clearing and home-hardening actions necessary to prevent home-to-home fire transmission.

- **Evacuation Routes and Defensible Space Enforcements**: The CWPP's neighborhood-level mapping guides the Ross Valley Fire Department in optimizing the narrow, winding escape routes leading down from San Anselmo's hillsides. By combining these evacuation safety metrics with strict local defensible space ordinances, the plan ensures that roadside brush is heavily cleared, maintaining visible and passable corridors for both fleeing residents and arriving emergency apparatuses during a crisis.

Existing Town of San Anselmo General Plan

The current Town of San Anselmo General Plan identifies the following goals, policies, and actions related to fire:

Conservation Element

Policy 7: Construction shall be located and designed to avoid or minimize the hazards from earthquake, erosion, landslides, floods, fire, and accidents.

Policy 10: Projects shall not overburden the water supply, fire protection, waste disposal, schools, traffic and circulation, or other services and facilities, or adversely affect the financial or social environment of the community.

Policy N1: Fire Hazard: In areas which lack sufficient water pressure, and/or access for fire-fighting equipment, or areas which have a concentration of inflammable materials the development review process should require proper remedial measures as a condition of approval.

Land Use Element

Policy 13.1: To encourage the Fire District to require sprinkler systems in new residential buildings which the Water District cannot supply with the ISO recommended fire flow.

Policy 14.1: To prohibit on street parking on public and private roadways which, due to their width or circuitous routing, create problems for fire equipment access.

Policy 14.2: To prohibit the use of combustible roofing materials in residential areas that have a high wildfire potential (e.g., hillside and ridge areas).

Open Space Element

Policy 4.9: Access to fire roads will be provided to bicycles under conditions similar to those imposed by Marin Municipal Water District.

Public Facilities Element

Policy 12.1: To work with the special districts that provide water, sewer, and fire protection services in order to maintain and improve upon the present level of service.

Policy 12.2: To require all new development within the Town to be served by the public fire protection system and, where feasible, the public water and sewer system.

Policy 13.1: To encourage the Fire District to require sprinkler systems in new residential buildings which the Water District cannot supply with the ISO recommended fire flow.

Policy 14.1: To prohibit on street parking on public and private roadways which, due to their width or circuitous routing, create problems for fire equipment access.

Policy 14.2: To prohibit the use of combustible roofing materials in residential areas that have a high wildfire potential (e.g., hillside and ridge areas).

Safety Element

Goal S-5: Prepare and ready the community to respond to fire hazards.

Policy S-5.1: Ensure fuel modification activities and vegetation management techniques along creeks and steep slopes do not contribute to landslide and erosion hazards.

> **Action S-5.1a:** Require that vegetation management in fire-sensitive areas include thinning or replanting of vegetation with less flammable materials.
>
> **Action S-5.1b:** Prioritize the removal of non-native species.
>
> **Action S-5.1c:** Identify structural mitigations rather than vegetation management in the most sensitive areas.
>
> **Action S-5.1d:** Prepare a Biodiversity, Fire, and Fuels Integrated Plan (BFFIP) that describes actions necessary to minimize fire hazards and maximize ecological health in Town open space areas in compliance with the Marin County Community Wildfire Protection Plan.

Policy S-5.2: Encourage the formation of a community- and neighborhood-based approach to wildfire education and action through local Fire Safe Councils and the Fire Wise Program.

> **Action S-5.2a:** Engage with homeowners in the Wildland Urban Interface to prepare a wildfire action plan.

Policy S-5.3: Encourage the Fire Department to increase local patrolling during periods of high fire weather.

Policy S-5.4: Regularly re-evaluate specific fire hazard areas and adopt reasonable safety standards covering such elements as fuel modification around homes, adequacy of existing and future water supplies, fire flow tests, fire hydrants, routes or throughways for fire equipment access, clarity of addresses and street signs, and long-term maintenance.

Policy S-5.5: Enforce and update Town regulations, as needed, to maintain consistency with the California Building and Fire Codes and Ross Valley Fire Department Standards and best practices.

Action S-5.5a: Enforce and update Town regulations, as needed, to maintain consistency with the California Building Code and Ross Valley Fire Department requirements and best practices.

Action S-5.5b: Prior to the approval of any subdivision of lands in an area of high fire risk, the Town should review and approve the results of a study that includes at least the following topics:

- A description of the risk and the factors contributing to the risk.
- Actions should be taken to reduce the risk to an acceptable level.
- The costs and means of providing fire protection to the subdivision.
- An indication of who pays for the costs involved and who receives the benefits.

Action S-5.5c: Establish mitigations for properties in fire hazard areas with restricted and single points of access, including parking restrictions, and investigate the feasibility of establishing special assessment districts to improve road capacity and adequate water supply.

Policy S-5.6: Prohibit new public/critical facilities (schools, hospitals, fire stations, etc.) from being located in High and Very High Fire Hazard Severity Zones to the greatest extent feasible. If located in these areas, require adequate fire response and evacuation capabilities.

Policy S-5.7: Support fire prevention, public education, early detection programs, and property inspections to identify and avoid fire hazards.

Action S-5.7a: Implement fire control maintenance measures as needed on undeveloped private property, provide the necessary fire prevention improvements on properties that pose a significant public safety threat, and pass along incurred costs to property owners.

Action S-5.7b: Educate residents and businesses on the Town's vegetation management practices, including fire safety, landscaping installation and maintenance, and fire hazard reduction strategies.

Policy S-5.8: Require vegetation clearance and maintenance for all public and private roads and properties in the fire hazard areas.

Policy S-5.9: Allocate adequate funding for fuel breaks and other fire defense improvements on public property and require similar measures for private property in compliance with fire safe regulations.

Action S-5.9a: Continue to consider grazing in open space for grass/light fuel maintenance.

Policy S-5.10: Coordinate with owners of private water sources, such as swimming pools, in or adjacent to high fire risk areas for on-site fire protection use.

Policy S-5.11: Prioritize development in areas with sufficient water supply infrastructure and roadway capacity to provide adequate evacuation and emergency equipment access.

Policy S-5.12: Coordinate with Marin Municipal Water District to ensure adequate water supply and infrastructure for existing and future daily demands and firefighting suppression requirements.

Marin Wildfire Prevention Authority

The Marin Wildfire Prevention Authority (MWPA) is a collaborative agency formed to enhance wildfire preparedness and resilience across most of Marin County, including the Planning Area. Established by a Joint Powers Agreement in 2019, the MWPA's mission is to reduce wildfire risks through community engagement, resource management, and strategic planning. MWPA is funded by Measure C, a 10-year parcel tax approved by most Marin County voters in 2020 to fund proactive state-of-the-art wildfire prevention and preparedness efforts. Key programs include wildfire fuel reduction projects, public education initiatives, and emergency preparedness training. The MWPA operates under a governance structure that includes representatives from various Marin municipalities, fire agencies, and the Marin County Board of Supervisors, creating a comprehensive approach to wildfire mitigation that integrates local needs and regional resources. Through its efforts, the MWPA aims to foster a safer environment for residents while promoting sustainable land management practices.

Fire Safe Marin

Fire Safe Marin is a non-profit organization dedicated to creating a safe, fire-adapted community in Marin County, California. Fire Safe Marin is MWPA's key outreach and education partner and serves as MWPA's primary source of wildfire preparedness and risk reduction public education efforts. They offer a wide range of programs and resources, which promote wildfire safety preparedness, reduce fuel loads and fire hazards, build community cooperation, and encourage environmentally sound fire mitigation practices. Fire Safe Marin works in partnership with local and regional governments in Marin County, community groups/organizations, businesses, residents, and utility companies.[1]

3.16.3. IMPACTS AND MITIGATION MEASURES

METHODS OF ANALYSIS

The analysis of wildfire impacts in the Planning Area is based on a review of the San Anselmo General Plan 2045, relevant state and federal regulations, and technical data regarding fire hazard severity zones, fuel models, fire threat levels, and wildfire risk. Mapping and spatial analysis of CAL FIRE Fire Hazard Severity Zones, and local geography, geology, and topography were used to assess areas of potential exposure and exacerbation of wildfire. The evaluation also considered current development patterns, local drainage and slope characteristics, and emergency response capabilities. Policies were reviewed and evaluated for effectiveness by examining the General Plan's wildfire-specific goals, policies, and actions, including vegetation management, defensible space requirements, fire-resistant construction standards, and emergency preparedness and response measures. All conclusions are drawn in the context of compliance with the California Environmental

[1] Fire Safe Marin. About. Available: https://firesafemarin.org/about/. Accessed: May 26, 2026.

Quality Act (CEQA) significance criteria for wildfire hazards, and is consistent with state and local standards to reduce risk at the program level.

GENERAL PLAN 2045 GOALS AND POLICIES

The following draft goals and policies from the General Plan 2045 are relevant to Wildfire.

SAFETY ELEMENT

HAZARD MITIGATION, EMERGENCY PREPAREDNESS, RESPONSE, AND RECOVERY

Goal S-A Promote a culture of resilience and preparedness within San Anselmo where community members and businesses are informed, equipped, and prepared for natural and human-caused emergencies.

Policy S-A.1: Structural Hazards. Support efforts to reduce the number of structures subject to natural hazards.

> **Action S-A.1.a: Building Code Updates.** Regularly update building codes and regulations to address changing hazard conditions and requirements.

Policy S-A.2: Hazard Education. Increase education, outreach, and awareness of hazards and hazard mitigation, especially for vulnerable populations, including older adults, people with disabilities, lower-income households, and others who may face barriers to accessing information.

Policy S-A.3: Hazards in New Development. Encourage new development in locations that avoid or reduce exposure to hazards for future residents and users.

> **Action S-A.3.a: Essential Public Facilities.** Locate, when feasible, new essential public facilities outside of identified hazard areas, including hospitals and health care facilities, emergency shelters, fire stations, emergency command centers, and emergency communications facilities.

> **Action S-A.3.b: Public Facilities in Hazard Areas.** Identify appropriate construction methods to minimize damage to public facilities located within an identified hazard area.

Policy S-A.4: Resilient Utilities and Public Safety Services. Work with public utilities and special districts that provide water, sewer, fire protection, and public safety services in order to maintain and improve upon the present level of service and resiliency to natural hazards.

Policy S-A.5: Resilient Town Buildings. Require that Town-owned buildings are maintained to support their resilience in the face of natural disasters.

> **Action S-A.5.a: Resilient Public Facilities.** Maintain the structural and operational integrity of essential public facilities during hazard events.

Policy S-A.6: Agency Coordination. Increase cooperation and coordination among private entities, local agencies, special districts, State and federal agencies, and tribal organizations to improve service delivery and communication to the community.

Policy S-A.7: Staff Training. Ensure Town staff are adequately trained to implement State and local regulations designed to avoid loss of life, injury, and property damage from natural disasters.

> **Action S-A.7.a: Hazard Mitigation Program Review and Integration.** Conduct an annual review of hazard mitigation goals and strategies and integrate the findings into the annual budget, staffing allocations, and updates to the Capital Improvement Plan.

Policy S-A.8: Pedestrian Evacuation Routes. Support the development of pedestrian rights-of-way as temporary pathways to serve as additional evacuation routes for residents without access to private vehicles or with mobility limitations.

Policy S-A.9: Emergency Response and Evacuation Plans. Support the preparation, implementation, and regular update of local preparedness and evacuation plans, ensuring plans are accessible and responsive to the needs of diverse abilities, and promote multi-jurisdictional cooperation and communication for emergency situations.

Action S-A.9.a: Emergency Planning, Coordination and Training Program. Maintain and update the Town's Emergency Operations Plan (EOP) to ensure a clear chain of command and strong coordination with the Marin County Operational Area, and participate in regional emergency planning efforts, including updates to the Marin County Multi-Jurisdictional Hazard Mitigation Plan (MJHMP). Adopt each updated MJHMP to remain eligible for FEMA hazard mitigation funding and ensure the plan includes analysis of climate-related risks, identification of vulnerable assets and populations, and strategies to address their specific needs and strengthen community resilience.

Policy S-A.10: Post Disaster Recovery. Expand and enhance post disaster recovery strategies, prioritizing community resilience, sustainability, and equitable recovery for all residents.

> **Action S-A.10.a: Post Disaster Recovery Framework.** Develop an all-hazards Post Disaster Recovery Framework for use after a major incident or event that considers the needs of different segments of the community.

Policy S-A.11: Community Education. Educate community residents and businesses on emergency preparedness, response, evacuation procedures and mitigation strategies using accessible formats and inclusive communication methods.

> **Action S-A.11.a: Public Outreach.** Provide community outreach and education programs on a regular basis to keep residents informed about emergency procedures, shelters, safe refuge areas, and evacuation routes using multiple communication channels and accessible formats.

Policy S-A.12: Circulation System for Evacuations. Continue to study the Town's circulation network and emergency response capabilities to provide effective evacuations during an emergency for all residents, including those with limited mobility and transportation options.

Policy S-A.13: Property Identification. Identify properties through clear street naming and numbering systems for emergency response vehicles.

Policy S-A.14: Access Routes for New Development. Require all new developments and redevelopments to provide a minimum of two points of access by means of public roads that can be used for emergency vehicle response and evacuation purposes for residents and emergency responders.

Action S-A.14.a: Emergency Access Improvements and Roadway Standards. Evaluate and implement feasible emergency access improvements for existing and new development, including roadway widening, parking restrictions, vehicle pullouts, roadside clearance, and new or improved access routes, and require necessary upgrades during discretionary review when a nexus exists. For areas that do not meet minimum emergency access standards, assess targeted solutions such as hillside pullouts, limited on-street parking, enhanced clearance, or supplemental access routes, with improvements limited to property frontage where appropriate.

Policy S-A.15: Private Road Design. Ensure all private roads are designed and maintained to allow unrestricted emergency equipment and personnel access.

Policy S-A.16: Updated Evacuation Routes. Ensure all Town and Marin County transportation plans reflect updated evacuation routes, strategies, and data.

Policy S-A.17: Emergency Response Capability. Maintain a high level of emergency response capability to serve all members of the community effectively.

> **Action S-A.17.a: Budget for Emergency Services.** Account for current and future emergency service needs during annual budgeting cycles.
>
> **Action S-A.17.b: Emergency Service Priorities.** Periodically update the Town's priorities for future emergency service needs to reflect changing conditions and community needs.
>
> **Action S-A.17.c: Development Review.** Involve Fire and Police staff in the development review process to ensure development adequately addresses service levels, security concerns, and safety.

WILDLAND AND URBAN FIRES

Goal S-E Prepare and ready the community to respond to fire hazards.

Policy S-E.1: Vegetation Management along Creeks and Steep Slopes. Ensure fuel modification activities and vegetation management techniques along creeks and steep slopes do not contribute to landslide and erosion hazards.

Action S-E.1.a: Vegetation Management in Fire-Sensitive Areas. Require that vegetation management in fire-sensitive areas include thinning of high fuel vegetation or replanting vegetation with fire resistant plant materials.

Action S-E.1.b: Non-native Species. Prioritize the removal of non-native species.

Action S-E.1.c: Structural Mitigations. Identify structural mitigations rather than vegetation management in the most fire-sensitive areas (i.e., areas within the WUI), when feasible.

Action S-E.1.d: Biodiversity, Fire, and Fuels Integrated Plan. Prepare a Biodiversity, Fire, and Fuels Integrated Plan (BFFIP) that describes actions necessary to minimize fire hazards and maximize ecological health in Town open space areas in compliance with the Marin County Community Wildfire Protection Plan.

Policy S-E.2: Community- and Neighborhood-Based Approach. Encourage a community- and neighborhood-based approach to wildfire education and action through local Fire Safe Councils and the Fire Wise Program, supporting participation from a broad range of residents.

Action S-E.2.a: Wildfire Actions Plans. Engage with property owners and residents in the Wildland Urban Interface to prepare a wildfire action plan.

Policy S-E.3: Fire Patrolling. Encourage the Fire Department to increase local patrolling during periods of high fire weather.

Policy S-E.4: Safety Standards in Fire Hazard Areas. Regularly re-evaluate specific fire hazard areas and adopt reasonable safety standards covering such elements as fuel modification around homes, adequacy of existing and future water supplies, fire flow tests, fire hydrants, routes or throughways for fire equipment access, clarity of addresses and street signs, and long-term maintenance.

Policy S-E.5: Code Consistency. Maintain consistency with the California Building and Fire Codes and Ross Valley Fire Department Standards and best practices.

Action S-E.5.a: Fire Code Consistency and Development Review Requirements. Maintain and enforce Town regulations to remain consistent with the California Building Code and Ross Valley Fire Department requirements and require fire risk analysis and appropriate mitigation measures for subdivisions and development in high fire hazard areas. Prior to approving any subdivision in these areas, review and approve a fire risk study that identifies contributing risk factors, recommended mitigation actions, the costs and means of providing fire protection, and the parties responsible for funding and benefiting from these measures.

Action S-E.5.b: Properties with Limited Access. Establish mitigations for properties in fire hazard areas with restricted and single points of access, including parking restrictions, and investigate the feasibility of establishing special assessment districts to improve road capacity and adequate water supply.

Policy S-E.6: Public Facilities in High and Very High Fire Severity Zones. Prohibit new public/critical facilities (schools, hospitals, fire stations, etc.) from being located in High and Very High Fire Hazard Severity Zones to the greatest extent feasible. If located in these areas, require adequate fire response and evacuation capabilities.

Policy S-E.7: Fire Prevention Programs. Support fire prevention, public education, early detection programs, and property inspections to identify and reduce fire hazards, using accessible formats and community methods.

> **Action S-E.7.a: Property Maintenance for Fire Control.** Implement and enforce fire safety and vegetation management requirements on private property, including taking necessary fire prevention actions on undeveloped or hazardous sites and recovering associated costs from property owners. Provide comprehensive public education for residents and businesses on defensible space, vegetation management, landscaping practices, and fire hazard reduction strategies, using multiple communication channels.

Policy S-E.8: Vegetation Clearance. Require vegetation clearance and maintenance for all public and private roads and properties in the fire hazard areas.

Policy S-E.9: Fire Defense Improvements. Allocate adequate funding for fuel breaks and other fire defense improvements on public property and require similar measures for private property in compliance with fire safe regulations.

> **Action S-E.9.a: Grazing for Fuel Management.** Continue to consider grazing in open space for grass/light fuel maintenance.

Policy S-E.10: Private Water Sources. Coordinate with owners of private water sources, such as swimming pools, in or adjacent to high fire risk areas for on-site fire protection use.

Policy S-E.11: Prioritization of New Development. Prioritize development in areas with sufficient water supply infrastructure and roadway capacity to provide adequate evacuation and emergency equipment access for future residents and users.

Policy S-E.12: Adequate Water Supply. Coordinate with Marin Municipal Water District to ensure adequate water supply and infrastructure for existing and future daily demands and firefighting suppression requirements.

THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the proposed project would have a significant impact related to wildfire, if located in or near state responsibility areas or lands classified as very high fire hazard severity zones, if it would:

- Substantially impair an adopted emergency response plan or emergency evacuation plan;
- Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire;

- Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment; or
- Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

It is noted that there are no areas identified as High or VHFHSZs in the Town Boundary. Additionally, there are no VHFHSZs within the Planning Area Boundary or Sphere of Influence. However, some areas within the SOI are within SRAs and include areas of high and moderate risk. Consistent with Appendix G of the CEQA Guidelines, the following impact discussion focuses on the impacts related to the areas in the Town Limits and Town's SOI which include areas within a SRA. However, it should be noted that the General Plan 2045 only anticipates development within the Town Limits; the General Plan 2045 does not propose any development outside of the Town Limits but within the SOI. Therefore, no development would occur within an SRA.

IMPACTS AND MITIGATION MEASURES

Impact 3.16-1: Implementation of the General Plan 2045 would not substantially impair an adopted emergency response plan or emergency evacuation plan. (Less than Significant)

As shown in Figure 3.16-1, all lands within the Town of San Anselmo are located within an LRA, with the majority of lands mapped as Moderate FHSZs by CAL FIRE. Surrounding unincorporated areas within the Town's SOI are primarily within an SRA, containing areas classified as High and Moderate FHSZs. These designations reflect areas with varying degrees of fire susceptibility based on vegetation, slope, and climatic conditions.

The General Plan 2045 accommodates future development within the Town limits, including residential, commercial, mixed use, and public service uses. Such development would increase population and employment within the Town, resulting in additional vehicle trips and potential localized congestion that could influence emergency response and evacuation operations. However, future development would occur in accordance with existing and future roadway capacity improvements identified in the Circulation Element, and would be required to comply with state and local standards regarding emergency access, fire protection, and evacuation safety.

Future development projects implementing the General Plan 2045 would be subject to discretionary review, including evaluation under CEQA, and must demonstrate consistency with applicable emergency response and evacuation plans. These include the Marin County Multi-Jurisdictional Hazard Mitigation Plan (MJHMP), the Town of San Anselmo Emergency Operations Plans (EOP), and the California Fire Code. As such, site-specific design, circulation improvements, and access points would be reviewed to ensure they do not interfere with established emergency routes or reduce overall evacuation capacity.

The Town and local emergency services agencies operate under the National Incident Management System (NIMS), which provides a coordinated, multi-jurisdictional framework for emergency

management and response. The Town also participates in regional coordination with CAL FIRE, Marin County Fire Department, and other regional partners to maintain and update fire prevention and evacuation procedures consistent with the California Government Code Section 65302(g) and Public Resources Code Sections 4290–4291 (Fire Safe Regulations).

The General Plan 2045 also incorporates multiple policies and actions that ensure the maintenance and enhancement of emergency response capabilities and evacuation procedures. Policies under Goal S-A promote resilience and preparedness across the community by requiring that new development and redevelopment projects maintain adequate emergency access and evacuation routes. Policy S-A.9 supports the preparation, implementation, and regular update of local emergency and evacuation plans, while Policy S-A.14 requires all new developments to provide at least two points of access for emergency response and evacuation purposes. Action S-A.14.a further directs the Town to identify and construct additional emergency access improvements for existing and new developments, while also considering targeted geographic-specific solutions in hillside areas with limited road capacity.

Additional General Plan 2045 policies, including Policies S-E.4, S-E.5, and S-E.8, ensure that fire hazard areas are managed through regular vegetation clearance, adoption of consistent fire safety standards, and provision of adequate water supply for firefighting. Collectively, these policies align with and implement state requirements under the California Fire Code, California Building Code, and CAL FIRE Fire Safe Regulations, thereby maintaining consistency with existing regional and local emergency management frameworks.

Importantly, the General Plan is a policy-level document and does not authorize site-specific projects or physical development. Therefore, implementation of the General Plan would not directly alter or obstruct existing emergency response or evacuation routes. Rather, it provides a framework for coordinating emergency access, wildfire management, and hazard mitigation in a manner consistent with federal, state, and local emergency planning requirements.

Any subsequent development project that could affect evacuation or response operations would undergo further review by the Ross Valley Fire Department for compliance with standards and best practices and fire safe regulations, and ensuring consistency with the Town's EOP and regional hazard mitigation strategies.

Given the Town's existing regulatory framework, regional coordination with emergency service providers, the inclusion of robust General Plan 2045 policies and actions to maintain and enhance emergency access, implementation of the General Plan 2045 would not substantially impair or conflict with an adopted emergency response or evacuation plan. Therefore, this impact would be **less than significant.**

Impact 3.16-2: General Plan implementation would not, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. (Less than Significant)

Wildfires generally ignite structures through burning embers, direct flame contact, and radiant heat from nearby fires.[2] Embers are the most significant cause of home ignition, capable of entering through attic vents, igniting flammable materials adjacent to structures, or finding their way under roofing materials.

As shown in Figure 3.16-1, all lands within the San Anselmo Town Boundary are located within a Local Responsibility Area and have low and Moderate hazard areas mapped by CAL FIRE. The area outside of the Town limits but within the Planning Area is located in an SRA and includes small areas of high fire hazard areas, although all areas adjacent to the Town Limits include only areas of Moderate Fire Hazard Severity Zones mapped by CAL FIRE maps.

As shown in **Figure 3.16-3**, the Town of San Anselmo includes areas of Wildland-Urban Interface (WUI), where human developments intermingle with flammable vegetation. Development in these areas can exacerbate wildfire risks by increasing human-caused ignitions, complicating firefighting efforts, diverting resources to protect structures, preventing natural fires from reducing fuel loads, and replacing native vegetation with highly flammable grasslands. Wildfire smoke also presents health risks due to fine particulate matter, which can penetrate deep into the lungs and aggravate respiratory and cardiovascular conditions, particularly among sensitive populations such as children, the elderly, pregnant women, and people with chronic health conditions.[3]

The majority of San Anselmo is located within either a “Wildland-Urban Interface,” “Wildland-Urban Intermix,” or “Wildland-Urban Influence” fire hazard zone. A WUI zone is an area where human made structures and infrastructure (e.g., cell towers, schools, water supply facilities, etc.) are in or adjacent to areas prone to wildfire. Approximately 60,000 acres in Marin County fall within the WUI zone, where residences are intermixed with open space and wildland vegetation. Due to surrounding vegetation and proximity to wildlands, these areas are considered to be at greater risk of wildfires. The WUI zone for San Anselmo is shown in Figure 3.16-3. New development within WUI zones would comply with Chapter 7A of the California Building Code, including ignition-resistant wall, roof, eave, vent, and deck requirements, and also incorporate a 5-foot ember-resistant Zone 0 as required by Public Resources Code Section 4291.1 (AB 3074).

The rate of wildfire spread is influenced by slope, prevailing winds, and vegetation type, with steeper slopes and strong winds accelerating fire progression. CAL FIRE data for the Planning Area identify areas with “moderate” and “high” fire threats. The “low” fire threat level and two highest fire threat

[2] Insurance Institute for Business & Home Safety (IBHS), 2020. IBHS Primer Series on Wildfire. Part 2: The Built Environment. July. Available: https://ibhs.org/wp-content/uploads/member_docs/wildfire-primer-series-part-2_environment.pdf. Accessed: May 26, 2026.

[3] Rizzo, Luciana V., Maria Candid F.V. Rizzo. 2024. Jornal de Pediatria as catalogued in the National Library of Medicine. National Center for Biotechnology Information. *Wildfire smoke and health impacts: a narrative review*. December 13. Available: https://pmc.ncbi.nlm.nih.gov/articles/PMC11962561/. Accessed: May 26, 2026.

levels, “very high” and “extreme”, are not mapped within or adjacent to the Planning Area. “High” fire threats are located in the northern and eastern portions of the Planning Area, where there tends to be a greater amount of combustible vegetation and steeper slopes. “Moderate” fire threats are located in the hillside areas of the Planning Area.

Climate change is expected to increase wildfire frequency, intensity, and duration throughout California. However, implementation of the General Plan 2045 would occur subject to evolving state building standards, defensible space requirements, wildfire planning requirements, and General Plan 2045 policies that support hazard mitigation and emergency preparedness.

Development under the General Plan 2045 would be subject to a comprehensive regulatory framework to reduce wildfire risk and exposure to wildfire pollutants. All new development would comply with California Public Resources Code Sections 4290 and 4291, which establish defensible space, fire-resistant construction standards, and vegetation management requirements. Additionally, General Plan 2045 Policy S-E.5 requires Town development to maintain consistency with the California Building and Fire Codes and Ross Valley Fire Department Standards and best practices. Action S-E.5.a requires the Town to review and approve a fire risk study prior to approving any subdivision in high fire hazard areas.

Future projects would also be subject to Ross Valley Fire Department review to ensure emergency access, water supply, and defensible space are sufficient.

The General Plan is a policy-level document and does not authorize site-specific projects or physical development. Additional development over the life of the general plan is anticipated consistent with the development identified in Chapter 2.0 of this EIR, and would generally be in the form of infill development and within the existing Town Limits and implementation of the General Plan 2045 would not result in any changes in land use outside of the Town boundary.

Additionally, the General Plan does not authorize actions that would substantially alter slope, prevailing winds, or vegetation patterns, as such, it would not exacerbate wildfire spread or increase exposure to wildfire smoke beyond current conditions. Combined with the regulatory requirements identified previously, compliance with General Plan policies, and ongoing project-level reviews, future development would maintain compliance with fire safety standards, defensible space requirements, and emergency access measures. Therefore, implementation of the General Plan 2045 would not increase the risk of wildfire exposure or pollutant concentrations to occupants.

Implementation of the General Plan 2045 would not substantially increase wildfire risk or exposure to pollutant concentrations. All future development would be required to adhere to applicable state and local fire regulations, building codes, and General Plan policies. Because these protections are in place, and there are no site-specific actions in the General Plan would exacerbate wildfire hazards, the impact is considered **less than significant**.

Impact 3.16-3: General Plan implementation would not require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment. (Less than Significant)

Development in or near FHSZs in San Anselmo may require the installation or maintenance of infrastructure such as roads, emergency water sources, fuel breaks, and utility lines to support fire protection and emergency access for future development. As shown in Figure 3.16-1, all lands within the Town are within LRAs and are mapped by CAL FIRE as Low and Moderate hazard areas, while surrounding areas in the Sphere of Influence include some high fire hazard lands.

The proposed General Plan directs new development to provide adequate emergency access and evacuation routes consistent with Policy S-A.14, including a minimum of two points of access for emergency vehicles and upgrades to substandard road widths when feasible (Action S-A.14.a). Private roads are also required to be designed to accommodate unrestricted emergency vehicle access (Policy S-A.15). In addition, the General Plan 2045 emphasizes coordination with utilities and public safety services to maintain and improve resiliency to hazards (Policy S-A.4) and to ensure Town-owned buildings can continue to function during emergency events (Policy S-A.5 and Action S-A.5.a).

Vegetation management is integrated into infrastructure planning to minimize fire risks. The General Plan 2045 requires thinning or replanting vegetation with fire resistant plant materials along fire-sensitive areas such as roads, creeks, and steep slopes (Action S-E.1.a), prioritizes removal of non-native species (Action S-E.1.b), and supports structural mitigations in highly fire-sensitive areas where feasible (Action S-E.1.c). Fuel breaks and other fire defense improvements on public property would be funded and maintained (Policy S-E.9 and Action S-E.9.a), and private properties are required to comply with vegetation clearance and defensible space standards (Policy S-E.8). Coordination with private water sources and the Marin Municipal Water District ensures that emergency water supply is available to support firefighting efforts (Policy S-E.10 and Policy S-E.12). These measures collectively reduce the potential for infrastructure to exacerbate wildfire hazards.

Infrastructure construction and maintenance would also comply with applicable state and local regulations, including the California Fire Code, Public Resources Code Sections 4290 and 4291, Ross Valley Fire Department standards, and CPUC General Orders for utility lines. CPUC General Order (GO) 95 regulates all aspects of design, construction, and operation and maintenance of overhead electrical power lines and fire safety hazards for utilities subject to its jurisdiction. GO 165 imposes inspection requirements for transmission and distribution lines, and GO 166 requires emergency response procedures to respond to electric system failures, major outages, or hazards posed by damage to electric utility facilities. Rule 11 enables electric utilities to suspend customer service when minimum vegetation clearance requirements are not met.

In addition to updating various GO 95 requirements and ordering further study, the decision called for creation by the CPUC of a High Fire-Threat District (HFTD) map identifying zones of high hazard,

elevated risk and extreme risk for destructive utility-associated wildfires. As described in the CPUC's HFTD maps the Town of San Anselmo is within Tier 2 – Elevated, and Tier 3 – Extreme risk for destructive utility-associated wildfires.

As described previously, the General Plan is a long-range policy document that does not include site specific designs or proposals, and does not, in and of itself, propose or approve any entitlements for development, and does not include any proposed utility improvements. Additionally, the majority of all future development would be expected to occur within existing areas of the Town within or near existing developed areas. Future development projects under the General Plan 2045 are anticipated to connect to existing infrastructure.

The potential for future projects to impact environmental resources to meet compliance with fire development standards such as (utility improvements, fuel breaks and clearance requirements) would require project-specific environmental review to identify any site-specific impacts. Implementation of the various policies and actions contained in the General Plan would ensure potential impacts associated with the construction and expansion of infrastructure would be addressed. Implementation of the General Plan 2045 policies and actions listed previously, combined with local and state requirements, would ensure that wildland fire hazards would not be exacerbated by the development or extension of local infrastructure, and this impact would be **less than significant**.

Impact 3.16-4: General Plan implementation would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. (Less than Significant)

Post-fire debris flows and slope instability can create hazardous conditions in San Anselmo, particularly in areas with steep topography and susceptible soils along the town periphery. Debris flows are fast-moving, highly destructive flows composed of water, soil, and larger debris, often triggered by high-intensity rainfall events in burned areas. Wildfires exacerbate these risks by removing vegetation that normally stabilizes slopes and increasing runoff from hardened soils. While many portions of the town are lower in elevation and generally flatter and less prone to landslides, peripheral hillside areas and creek sides are more vulnerable due to steeper slopes, making these areas sensitive to post-fire slope failures, and debris flows.

San Anselmo is periodically affected by flooding from the San Anselmo and Sleepy Hollow creeks. Low-lying areas can experience ponding and overflow during large storm events, sometimes exceeding the capacity of the existing drainage network, even during relatively small storm events. Localized flooding can occur inside or outside FEMA-identified floodplains and is often exacerbated by insufficient stormwater infrastructure. Historical flooding along these creeks underscores the need for coordinated hazard mitigation, emergency preparedness, and resilient infrastructure.

The development that may occur over the life of the General Plan 2045 would generally include improvement projects that would involve some land clearing, grading, and other ground-disturbing activities that could temporarily increase soil erosion rates during and shortly after project

construction. The majority of intensified development would occur in areas of the town that are currently developed with urban uses and are generally not subject to severe flooding or erosion. Additionally, as required by the Clean Water Act, each subsequent development project or improvement project of certain size requirements will require an approved Storm Water Pollution Prevention Plan (SWPPP) that includes best management practices for grading and preservation of topsoil. SWPPPs are designed to control storm water quality degradation to the extent practicable using best management practices during and after construction.

As future development and infrastructure projects are considered by the Town, each project will be evaluated for conformance with the CBC, Zoning Ordinance, and other regulations. In addition to compliance with Town standards and policies, the RWQCB will require a project specific SWPPP to be prepared for each project that disturbs an area of one acre or larger. The SWPPPs will include project specific best management measures that are designed to control drainage and erosion, including on properties that may be subject to steep slopes or may have been scarred by fire. Subsequent development and infrastructure projects would also be analyzed for potential environmental impacts, consistent with the requirements of CEQA.

The General Plan addresses these hazards through a combination of planning, regulatory, and infrastructure strategies. Goal S-A promotes a culture of resilience and preparedness within San Anselmo where residents and businesses are prepared, informed, and equipped for natural and human-caused emergencies. Policy S-A.1 supports efforts to reduce structural hazards, and Action S-A.1.a ensures building codes are regularly updated to address changing hazard conditions. Policy S-A.3 encourages new development to avoid hazard-prone areas, thereby protecting future residents and users. Action S-A.3.a specifies locating essential public facilities outside of identified hazard zones and Action S-A.3.b identifies construction methods to minimize damage if such facilities must be in hazard areas. Policy S-A.4 coordinates resilient utilities and public safety services, and Policy S-A.5, along with Action S-A.5.a, ensures that Town-owned buildings are maintained to withstand hazard events.

Emergency planning is addressed under Policy S-A.9, which supports preparation and updating of local preparedness and evacuation plans, ensuring that such plans are responsive to the needs of diverse abilities and changing conditions. Action S-A.9.a ensures participation in regional planning efforts including coordination with the Marin County Operational Area and participation in regional emergency planning efforts such as the Marin County Multi-Jurisdictional Hazard Mitigation Plan. Policy S-A.10 and Action S-A.10.a provide for post-disaster recovery through the development of an all-hazards Post Disaster Recovery Framework, which would consider the needs of different segments of the community and prioritizes resilience, sustainability, and equitable recovery. Policy S-A.11 and Action S-A.11.a promote regular public education and outreach regarding emergency preparedness, shelter locations, safe refuge areas, and evacuation routes. Policies S-A.12 through S-A.17, along with associated actions, ensure adequate circulation for evacuations, clear property identification, emergency access for new development, and sufficient emergency response capabilities, including involvement of Fire and Police staff in development review.

In the event that a significant wildfire were to burn in the hillsides south of the Town limits, within the watershed area that drains into and through San Anselmo, portions of the town may be exposed

to potential risks associated with landslides and flooding in the weeks, months, and years following the fire as a result in changes to the vegetative cover of the land and the rain absorption capacity of the soil. It is important to note that the areas within the town at risk of exposure to these potential flooding and landslide impacts are largely urbanized, developed, and/or entitled already. Adoption of the General Plan 2045 would not increase or exacerbate these risks; however, areas of the town would still remain at risk in the event of a significant wildfire up-slope from the town's developed areas.

While peripheral hillsides and creek corridors remain susceptible to post-fire slope instability, debris flows, and flooding, the combination of site-specific development standards, proactive hazard mitigation, emergency preparedness, infrastructure improvements, and post-disaster recovery planning ensures that implementation of the General Plan 2045 does not exacerbate these risks. Compliance with state and federal regulations and the integration of specific policies and actions from the General Plan 2045 would ensure impacts from potential flooding, landslides, or post-fire slope hazards would be **less than significant**.

Impact 3.16-5: General Plan implementation, in combination with other cumulative development, would not result in adverse impacts to wildfire. (Less than Significant)

Due to the regional nature of natural disasters, emergency preparedness, and emergency response, the context for this cumulative analysis is Marin County. Wildfire can be triggered by manmade actions, such as improperly extinguishing a campfire or electrical fires. Other fires may be caused by lightning strikes. In Marin County, "Diablo Winds" can exacerbate hot, dry conditions and create fast-moving wildfires. For example, the Mount Vision Fire was a wildfire that burned 12,354 acres of land on the Point Reyes National Seashore peninsula during October 1995. The fire, which was started by an incompletely extinguished campfire, destroyed 45 homes in Inverness Park. Ignited by a rare summer lightning complex in August 2020, the Woodward Fire burned approximately 4,700 to 4,900 acres in rugged, dense brush terrain within the Point Reyes National Seashore.

Wildfire preparation in Marin County is driven by a highly integrated, data-backed approach designed to build community resiliency within the WUI. Rather than operating in isolated silos, local agencies combine capital resources, public education, and unified operational guidelines to proactively mitigate fire risks. The central blueprint for countywide safety is the Community Wildfire Protection Plan (CWPP). Updated with a comprehensive interactive digital map, the CWPP synthesizes granular GIS data to track fire behavior, parcel-level vulnerabilities, and vegetation hazards across specific neighborhood evacuation zones. It acts as a shared multi-agency roadmap prioritizing where funding and mitigation projects will yield the greatest life-safety impacts. This overarching strategy is reinforced by the Strategic Fire Plan, authored annually by county fire leadership, which evaluates seasonal weather anomalies, tracks evolving local fuel and vegetation severity ratings, and outlines specific asset-protection programs.

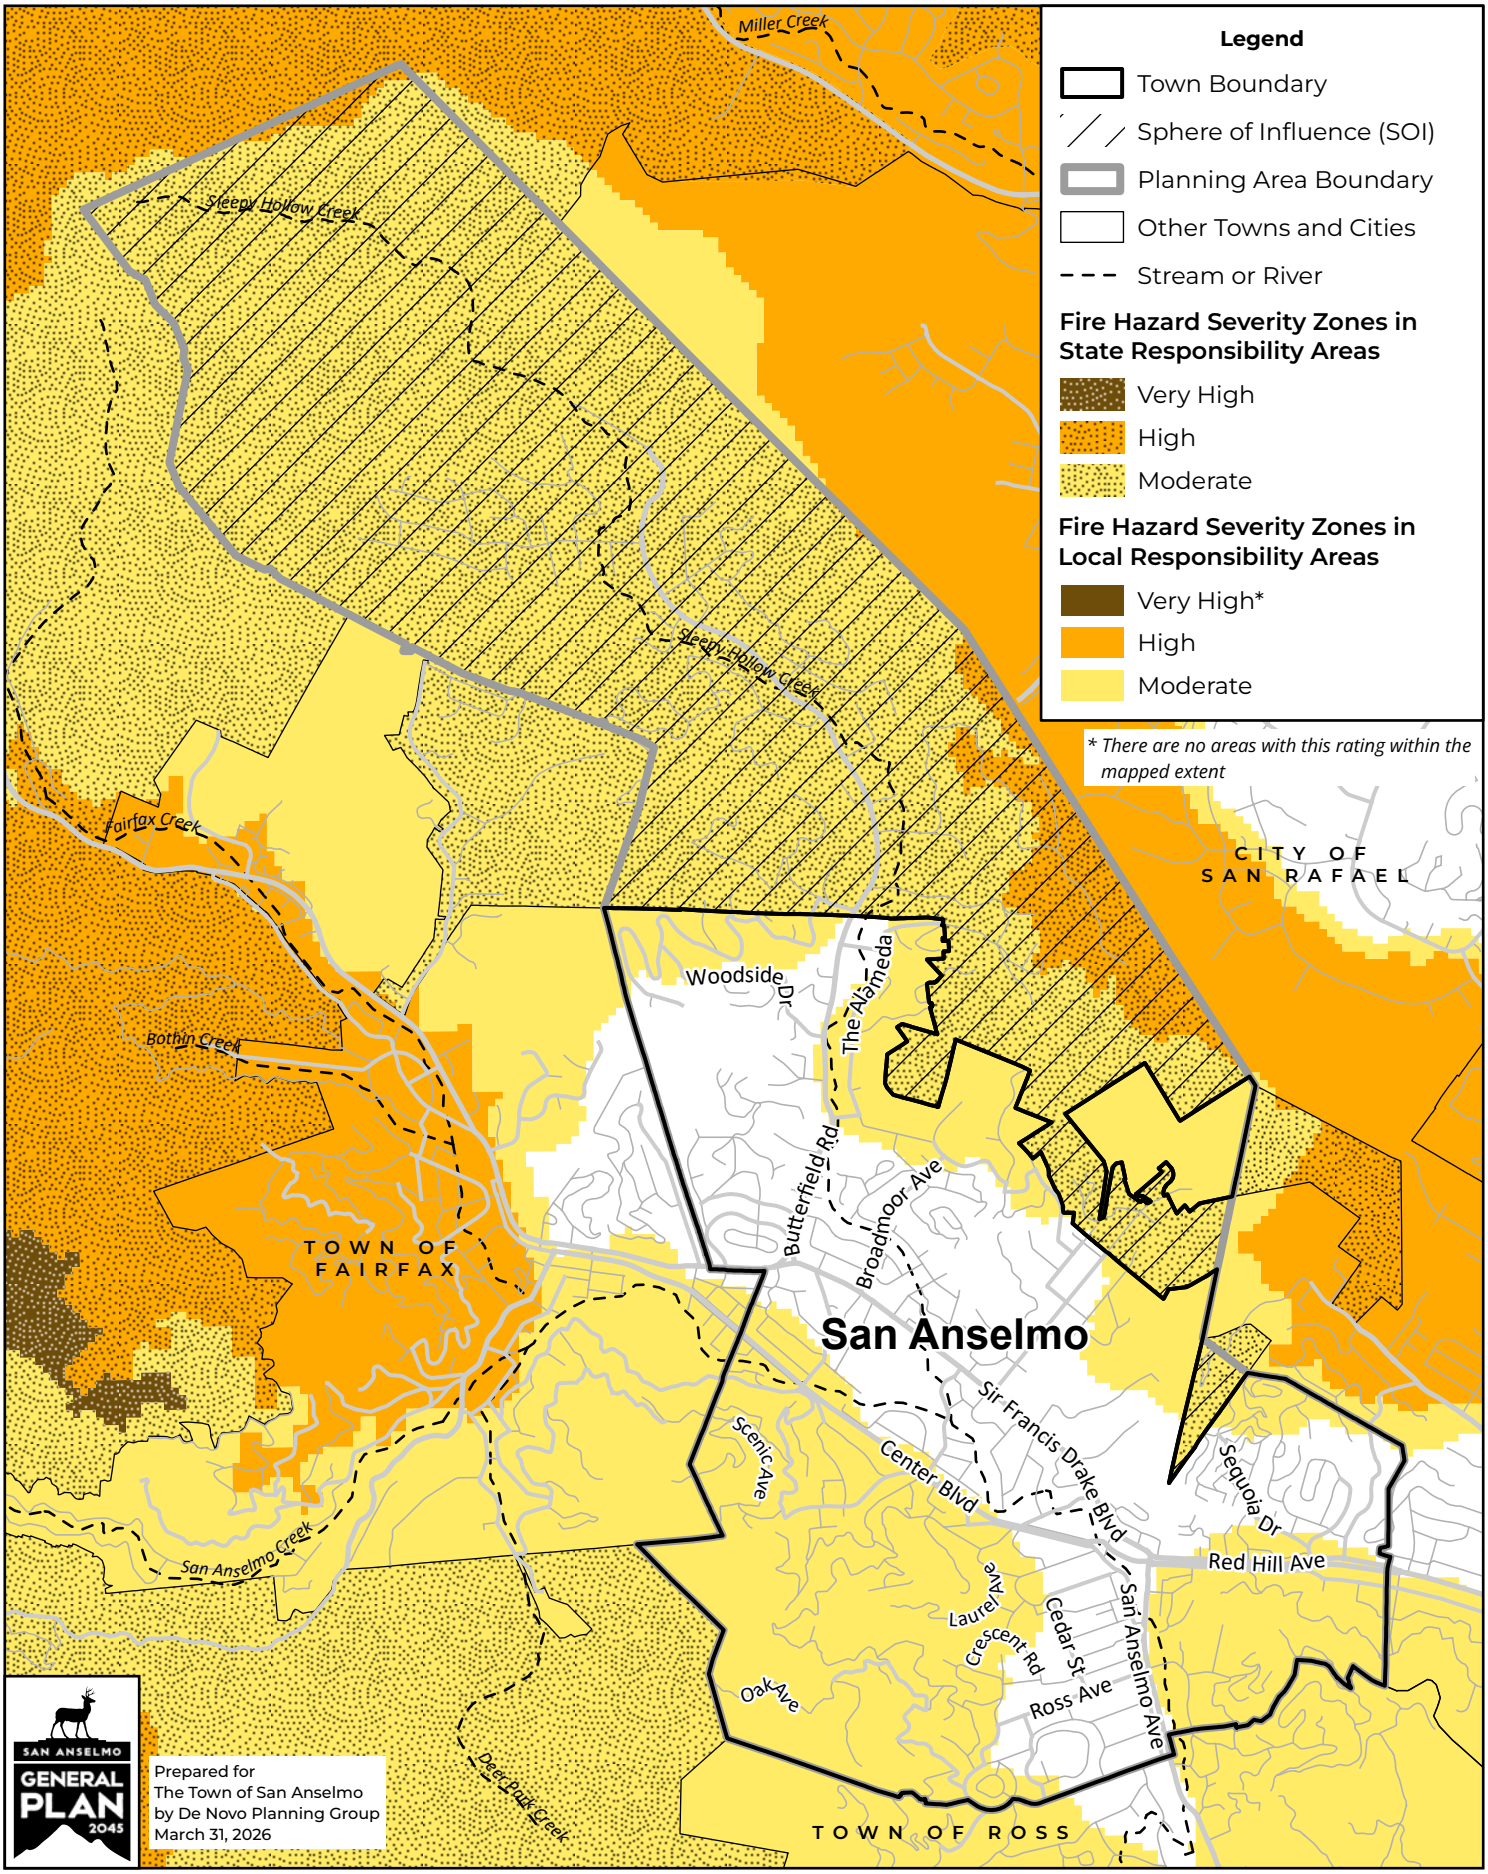

To eliminate operational redundancies, multiple specialized agencies coordinate wildfire defense across the region. Established by voters under Measure C, the MWPA serves as a single joint-powers authority that coordinates tax-funded wildfire preparation across 17 member jurisdictions, including

towns, cities, and fire districts. The MWPA works directly alongside the Marin County Fire Department, which provides primary fire suppression and tactical leadership for unincorporated areas, and the Marin County OEM, which manages regional alert services and disaster logistics. Large-scale public safety education and neighborhood outreach are managed by Fire Safe Marin, a non-profit organization that helps coordinate local "Firewise" communities and administers technical home-hardening programs.

The synchronized deployment of these specific plans and agencies directly curtails the destructive potential of wildland blazes through three main mechanisms. First, using the hazard profiles mapped in the CWPP, the MWPA funds large-scale vegetation clearing, roadside clearance, and fire breaks between public wildlands and residential zones. This targeted brush reduction starves advancing fires of volatile fuel, dropping intense canopy blazes back down to the ground where local fire departments can safely suppress them before they enter crowded canyons.

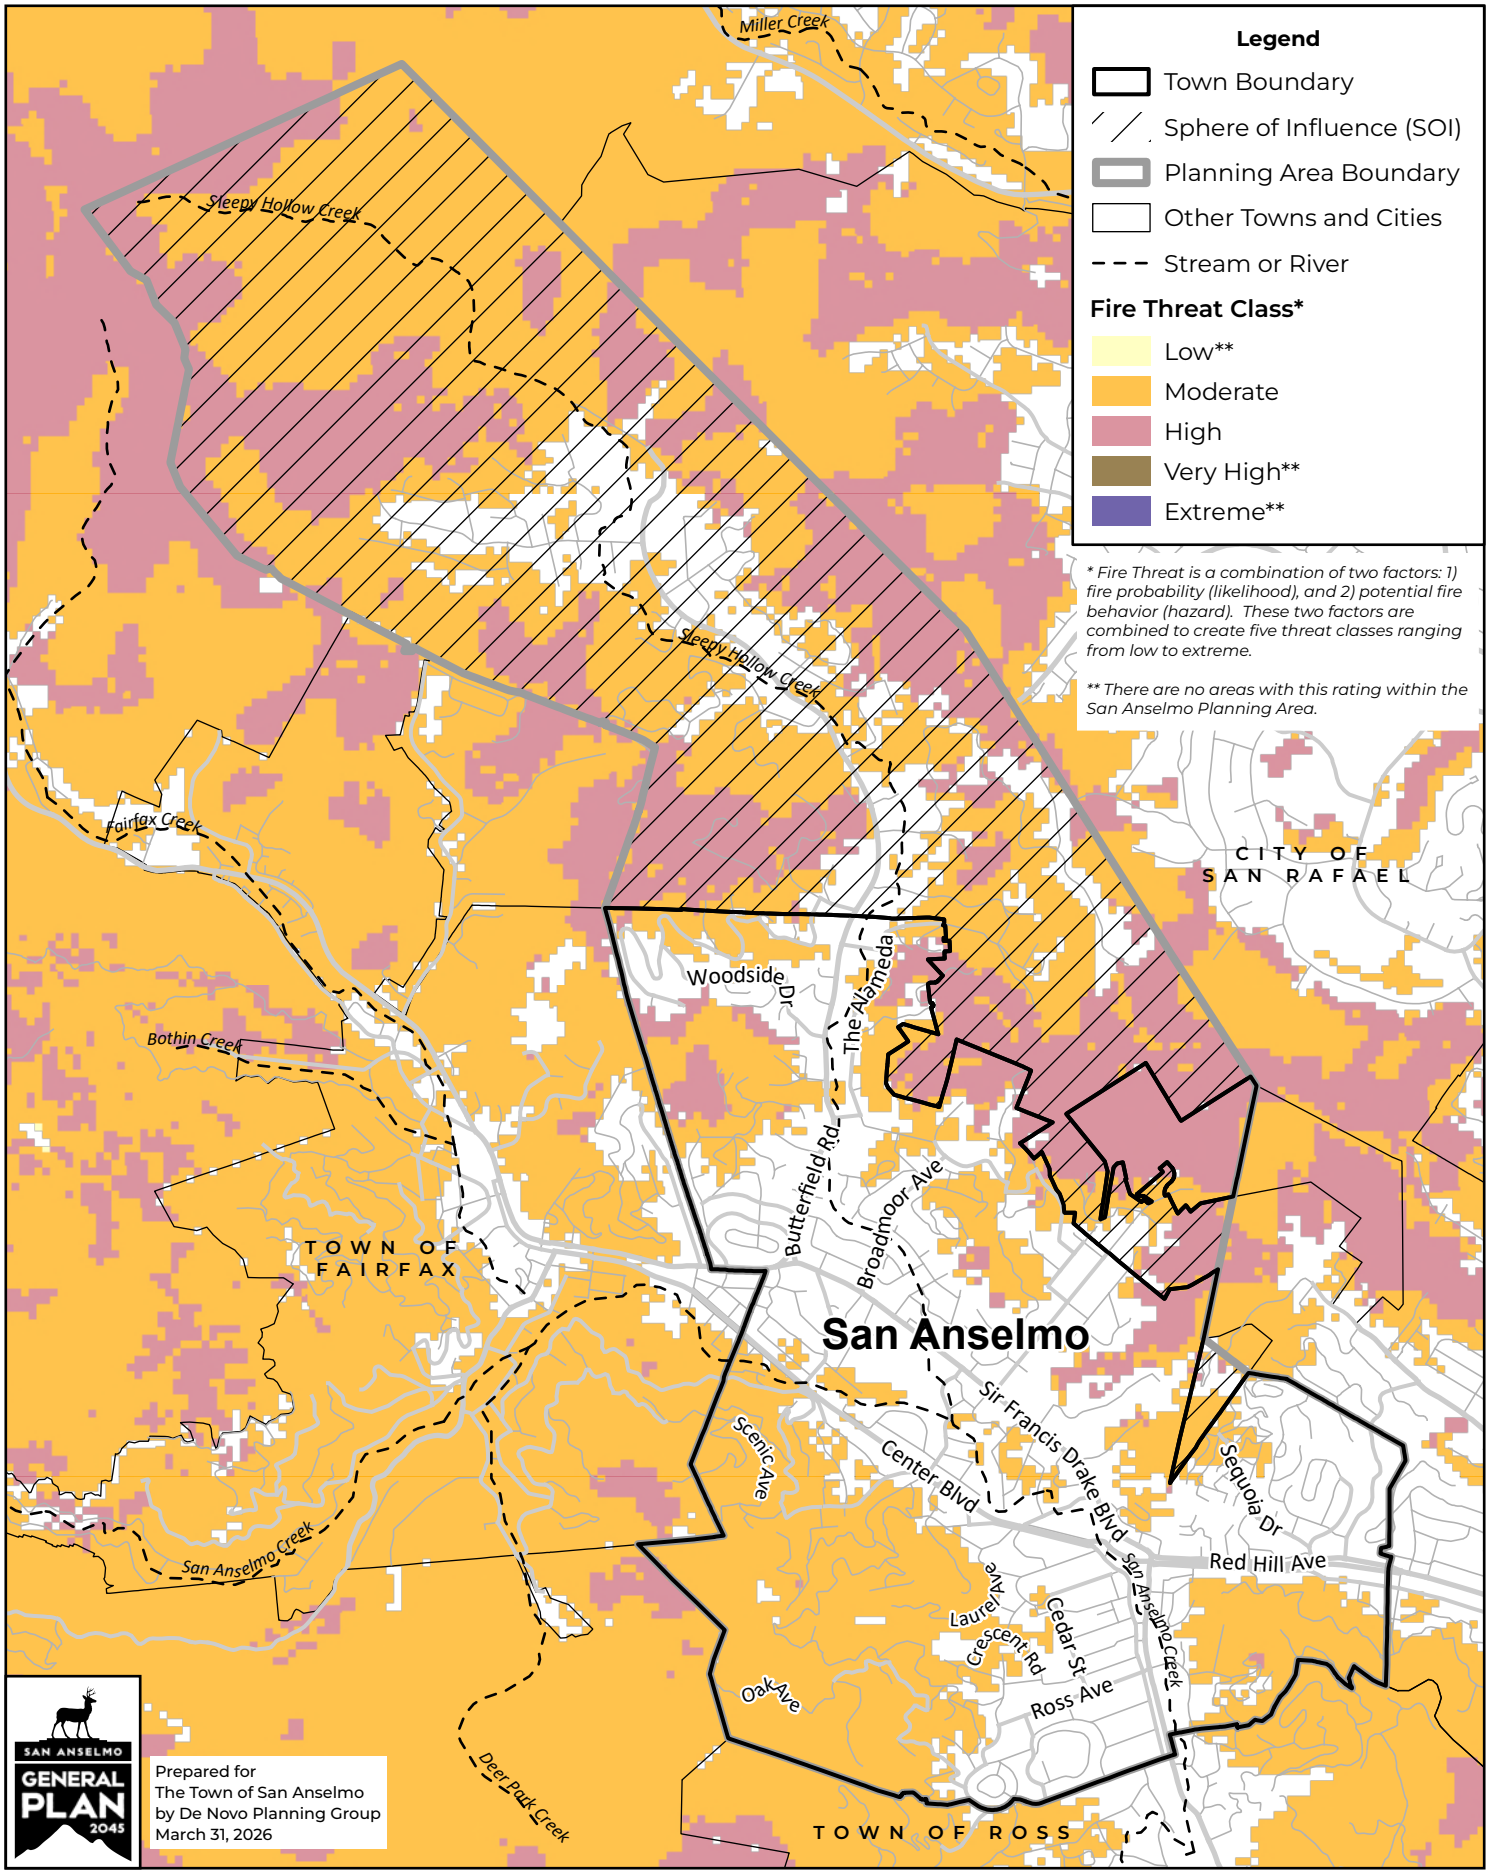

Through programs unified by Fire Safe Marin and enforced by regional fire districts, home inspectors assess individual parcels for ember vulnerabilities. By using synchronized standards, agencies ensure that neighborhoods collectively eliminate structural fuels, significantly lowering the risk of house-to-house fire transmission during high-wind events. Finally, the Office of Emergency Management and the MWPA utilize evacuation zone analytics embedded directly in the CWPP to eliminate traffic bottlenecks. Rather than clogging arterial roads, agencies fund roadside vegetation clearing along designated escape corridors to keep routes passable and deploy unified communication through AlertMarin, reducing chaotic civilian delays during critical evacuation windows.

Through these specific emergency preparation and response plans, and implementation of coordinated agency responses, cumulative impacts related to wildfire would be **less than significant**.

The California Environmental Quality Act (CEQA) requires that an Environmental Impact Report (EIR) evaluate a project's effects in relationship to broader changes occurring, or that are foreseeable to occur, in the surrounding environment. Accordingly, this chapter presents a discussion of CEQA-mandated analysis for significant irreversible effects and significant and unavoidable impacts associated with the proposed project.

4.0.1 INTRODUCTION

CEQA Guidelines Section 15126 requires that all phases of a project—planning, acquisition, development, and operation—be considered when evaluating the project's impact on the environment. Further, CEQA Guidelines Section 15126.2(a) requires that the evaluation of significant impacts consider direct and reasonably foreseeable indirect effects of the proposed project over the short term and long term. Section 15126 of the CEQA Guidelines also requires an EIR to identify all of the following:

- Significant environmental effects of the proposed project.
- Potentially feasible mitigation measures proposed to avoid or substantially lessen significant effects.
- Significant environmental effects that cannot be avoided if the proposed project is implemented.
- Significant irreversible environmental changes that would result from implementation of the proposed project.
- Growth-inducing impacts of the proposed project.
- Alternatives to the proposed project.[1]

The Executive Summary and Chapter 3, Environmental Impact Analysis, of this Draft EIR provide a comprehensive presentation of the proposed project's environmental effects, potentially feasible mitigation measures, and conclusions regarding the level of significance of each impact both before and after mitigation. Chapter 5.0, Alternatives, presents a comparative analysis of alternatives to the San Anselmo General Plan 2045 Update (General Plan 2045 or proposed project). The other CEQA-required analyses described above are presented below.

4.0.2 SIGNIFICANT UNAVOIDABLE IMPACTS

LEGAL CONSIDERATIONS

Section 15126.2(b) of the CEQA Guidelines requires that an EIR describe any significant impacts that cannot be avoided, even with the implementation of feasible mitigation measures. The environmental effects of the proposed project on various aspects of the environment are discussed in detail in Chapter 3, Environmental Impact Analysis. Project-specific and cumulative impacts that cannot be avoided if the project is approved as proposed are identified below.

[1] CEQA Guidelines Sections 15126.2(a), 15126.2(c), 15126.2(d), 15126.2(e), 15126.4, and 15126.6.

As described in Chapter 3, all identified impacts would be reduced to a less-than-significant level through compliance with applicable regulations and implementation of General Plan 2045 policies. There are no significant and unavoidable project-specific or cumulative impacts.

4.0.3 SIGNIFICANT IRREVERSIBLE EFFECTS

LEGAL CONSIDERATIONS

Under CEQA, an EIR must analyze the extent to which a project's primary and secondary effects would generally commit future generations to the allocation of nonrenewable resources and to irreversible environmental damage (CEQA Guidelines Sections 15126.2(d) and 15127). Section 15126.2(d) states:

> Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible, since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project.

CEQA Guidelines Section 15126.2(c) and Public Resources Code Sections 21100(b)(2) and 21100.1(a), require that the EIR include a discussion of significant irreversible environmental changes which would be involved in the proposed action, should it be implemented. Irreversible environmental effects are described as:

- The project would involve a large commitment of nonrenewable resources;
- The primary and secondary impacts of a project would generally commit future generations to similar uses (e.g., a highway provides access to previously remote area);
- The project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project; or
- The phasing of the proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Determining whether the proposed project would result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed such that there would be little possibility of restoring them. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

LONG-TERM COMMITMENT OF RESOURCES

The San Anselmo General Plan 2045 is a policy document that guides development and land use decisions in the Town of San Anselmo through the year 2045. The General Plan 2045 contemplates accommodation of up to 2,279 new residential units (including 319 Accessory Dwelling Units) and approximately 752,133 square feet of new nonresidential uses at theoretical full buildout over a 20-year planning horizon.

Construction would include use of building materials such as petroleum-based products and metals that cannot reasonably be recreated. Construction also would involve significant consumption of energy, usually petroleum-based fuels that deplete supplies of nonrenewable resources. Construction of structures and infrastructure would consume energy and water. Construction debris recycling practices would be expected to allow for recovery and reuse of building materials such as concrete, lumber, and steel, and would limit disposal of these materials, some of which are non-renewable. Additionally, construction equipment would have to meet Bay Area Air Quality Management District (BAAD) standards as described in Section 3.3, Air Quality. Section 3.6, Energy, addresses appropriate consumption of energy for development construction.

As development permitted under the General Plan 2045 is constructed over the 20-year planning horizon, land uses associated with buildout would use some nonrenewable fuels to heat and light structures and would consume water. New development would be required to be built and adhere to the latest adopted edition of the California Green Building Standards Code, which would reduce energy demand, water consumption, and wastewater and solid waste generation that would collectively reduce demand for resources. This would lessen emissions and generation of pollution and effluent, and so the severity of corresponding environmental effects.

As discussed in Section 3.4, Biological Resources, implementation of the General Plan 2045 would not result in significant impacts to biological resources, or such impacts would be reduced to a less-than-significant level through implementation of applicable mitigation measures and General Plan 2045 policies. As a result, implementation of the General Plan 2045 would minimize the potential for impacts to biological resources and water resources to the greatest extent feasible. More detailed and focused discussions of potential impacts to these natural resources are contained throughout this Draft EIR.

The Town of San Anselmo is a fully urbanized community within Marin County, and the General Plan Planning Area does not contain Prime Farmland, Unique Farmland, or Farmland of Statewide Importance as mapped by the California Department of Conservation. The General Plan 2045 would not result in the conversion of agricultural land to non-agricultural uses. The Town's General Plan includes a variety of policies that seek to conserve and protect natural resources, including biological resources, hillside open space lands, and streams and riparian corridors within the planning area. More detailed and focused discussions of potential impacts to these natural resources are contained throughout this Draft EIR.

COMMITMENT OF THE PROJECT SITE FOR FUTURE GENERATIONS

Development allowed under the General Plan 2045 would guide the allocation of land within the Town of San Anselmo to a range of urban land uses through the year 2045, establishing the overall pattern of development for the foreseeable future. The Town of San Anselmo is already largely developed and urbanized, and the General Plan would primarily accommodate infill and incremental growth consistent with the Town's existing land use patterns. The most notable impacts would be increased generation of pollutants from vehicle travel and stationary operations, and the short-term commitment of nonrenewable and/or slowly renewable natural and energy resources, such as water

resources, during construction activities. Operations associated with future uses would also consume natural gas and electrical energy. The unavoidable consequences of the proposed project are described in the appropriate sections of Chapter 3, Environmental Setting, Impacts, and Mitigation Measures.

IRREVERSIBLE ENVIRONMENTAL DAMAGE

Implementation of the General Plan 2045 would result in irretrievable commitments through the introduction of new development and the intensification of existing land uses within the Town of San Anselmo. As a primarily urbanized community, buildout under the General Plan would occur predominantly in areas already developed or designated for urban uses. Development of the General Plan 2045 may result in the disturbance or loss of biological resources, trees, open space lands, and riparian habitats that support sensitive species, and would commit those areas to urban uses for the foreseeable future. However, impacts to biological resources would be reduced to a less-than-significant level with compliance of federal, State, and local regulations and implementation of General Plan 2045 policies.

A variety of resources, including land, energy, water, construction materials, and human resources would be irretrievably committed for development and infrastructure installation associated with development and operation of land uses permitted under the General Plan 2045. Buildout under the General Plan 2045 would require the commitment of a variety of other non-renewable or slowly renewable natural resources such as lumber and other forest products, sand and gravel, asphalt, petrochemicals, and metals.

Additionally, a variety of resources would be committed to the ongoing operation of land uses permitted under the General Plan 2045. The introduction and intensification of residential, commercial, and other land uses would result in increased energy demand associated with building operations, vehicle travel, equipment operation, and other activities. Fossil fuels are a principal source of energy and the General Plan would increase consumption of available supplies, including gasoline and diesel fuel. These energy resource demands relate to initial construction, operation, maintenance, and the transport of people and goods to and from development sites throughout the Town of San Anselmo.

Development permitted under the General Plan 2045 would also physically change the environment in terms of aesthetics, air emissions, noise, traffic, open space, and natural resources. These physical changes are largely irreversible once development occurs.

Implementation of the General Plan 2045 may have the potential to cause significant environmental accidents through hazardous material releases into the environment during construction activities, or through operation of new commercial, industrial, or mixed use land uses. However, compliance with State law and implementation of a Stormwater Pollution Prevention Plan (SWPPP) during construction activities would ensure that future development would not create a significant hazard to the public or environment through reasonably foreseeable upset and accident conditions involving release of hazardous materials (see Section 3.9, Hazards and Hazardous Materials).

Over the past decade, the understanding of global climate change and the role that communities can play in addressing it has grown tremendously. There is a scientific consensus that recent increases in global temperatures are associated with corresponding increases of greenhouse gases (GHGs). This temperature increase is beginning to affect regional climates and is expected to result in impacts on the Bay Area region and the world. Climate change has profound implications for the availability of the natural resources on which economic prosperity and human development depend.

As discussed in detail in Section 3.8, Greenhouse Gas Emissions, GHG emissions are known to have long-term effects on atmospheric conditions that affect the global climate, with resultant changes in sea level and hydrologic conditions in rivers, heat island effects, and a range of other conditions. These changes are not considered irreversible, but they could last for generations. As described further in Section 3.8, the General Plan 2045 could result in short-term and long-term increases in GHG emissions. However, compliance with the Town's General Plan policies and programs, adherence to the development standards in the San Anselmo Municipal Code, as well as consistency with the 2022 California Building Standards and the latest version of the CALGreen Code would ensure that potential new development associated with implementation of the General Plan would not directly or indirectly generate GHG emissions that may have a significant impact on the environment.

UNJUSTIFIED CONSUMPTION OF RESOURCES

Resources that would be permanently and continually consumed by implementation of the General Plan 2045 include water, electricity, natural gas, and fossil fuels; however, the amount and rate of consumption of these resources would not result in the unnecessary, inefficient, or wasteful use of resources (see Section 3.6, Energy, and Section 3.15, Utilities and Service Systems). New development's operational activities would comply with all applicable building codes, including the 2022 Title 24 Energy Efficiency Standards as well as General Plan policies and standard conservation features. Such compliance would ensure that natural resources are conserved to the maximum extent required under existing regulations.

It is possible that, over time, new technologies or systems will emerge, or will become more cost-effective or user-friendly, to further reduce reliance on nonrenewable natural resources. Nonetheless, construction activities for future development permitted under the General Plan 2045 Update would result in the irretrievable commitment of nonrenewable energy resources, primarily in the form of fossil fuels (including fuel oil), natural gas, and gasoline for automobiles and construction equipment.

4.0.4 MANDATORY FINDINGS OF SIGNIFICANCE

CEQA Guidelines Section 15065 states that a lead agency shall find that a project may have a significant effect on the environment where there is substantial evidence that the project has potential environmental effects that are individually limited, but cumulatively considerable. As defined in CEQA Guidelines Section 15065(a)(3), cumulatively considerable means "that the incremental effects of an individual project are significant when viewed in connection with the

effects of past projects, the effects of other current projects, and the effects of probable future projects." Cumulative impacts are addressed in each technical section of this EIR.

CEQA Guidelines Section 15065(a)(1) states that a lead agency shall find that a project may have a significant effect on the environment where there is substantial evidence that the project has the potential to (1) substantially reduce the habitat of a fish or wildlife species; (2) cause a fish or wildlife population to drop below self-sustaining levels; or (3) substantially reduce the number or restrict the range of an endangered, rare, or threatened species. These impacts are discussed below.

Additionally, as required by CEQA Guidelines Section 15065(a)(4), a lead agency shall find that a project may have a significant effect on the environment where there is substantial evidence that the project has the potential to cause substantial adverse effects on human beings, either directly or indirectly. These impacts are discussed below.

SUBSTANTIAL ADVERSE EFFECTS ON FISH, WILDLIFE, AND PLANT SPECIES

Section 3.4 (Biological Resources) of this Draft EIR fully addresses any impacts that might relate to the reduction of fish or wildlife habitat, the reduction of fish or wildlife populations, and the reduction or restriction of the range of special-status species as a result of General Plan 2045 buildout. As described throughout the analysis in this Draft EIR, implementation of the General Plan 2045 would not result in any significant impacts that would substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal to the environment. As described in greater detail in Section 3.4 (Biological Resources), any potentially significant impacts related to plant and animal species would be reduced to a less-than-significant level through implementation of goals, policies, and implementation measures provided in the Town's General Plan 2045 and through adherence to applicable State and federal regulations. Therefore, this is considered a less-than-significant impact.

4.0.5 GROWTH-INDUCING IMPACTS

There are two types of growth-inducing impacts: direct and indirect. To assess potential for growth-inducing impacts, General Plan elements that may encourage and facilitate activities that individually or cumulatively may affect the environment must be evaluated (CEQA Guidelines Section 15126.2(e)). CEQA Guidelines, as interpreted by the Town, state that a significant growth-inducing impact may result if implementation of the General Plan 2045 would:

- Induce substantial population growth in an area (for example, by proposing new homes and commercial or industrial businesses beyond the land use density/intensity envisioned in the general plan);
- Substantially alter the planned location, distribution, density, or growth rate of the population of an area; or

- Include extensions of roads or other infrastructure not assumed in the general plan or adopted capital improvements project list, when such infrastructure exceeds the needs of the project and could accommodate future developments.

Direct growth-inducing impacts occur when development imposes new burdens on a community by directly inducing population growth, or by leading to construction of additional developments in the same area. Secondary impacts can include the removal of physical obstacles to population growth (such as a new road into an undeveloped area or a wastewater treatment plant with excess capacity that could allow additional development in the service area). Construction of these types of infrastructure cannot be considered isolated from the development they facilitate and serve. Physically removing obstacles to growth, or indirectly inducing growth may provide a catalyst for future unrelated development in an area, such as a new residential community that requires additional commercial uses to support residents.

Implementing the General Plan 2045 would continue the planned population growth in the Town in a manner consistent with the land use designations established by the General Plan 2045 and the Town's adopted 2023-2031 Housing Element; the environmental effects associated with that growth are evaluated throughout Chapter 3. The California Department of Finance estimated the total population of the Town of San Anselmo to be approximately 12,700 as of January 1, 2025. The General Plan 2045 would accommodate up to 2,279 new residential dwelling units, including 319 Accessory Dwelling Units. Using an average household size of 2.35 persons per household, the General Plan 2045 would result in the addition of approximately 5,356 new residents to the Town. While direct population growth as a result of the General Plan 2045 would occur, that growth is planned for and accommodated by the General Plan 2045. Therefore, the direct impacts of the General Plan 2045 would be less than significant. The potential environmental impacts resulting from this direct population growth are analyzed in Sections 3.1 through 3.16 of this EIR.

The General Plan 2045 would also not significantly or adversely affect the permanent jobs/housing balance. Implementation of the General Plan 2045 would allow for creation of approximately 752,133 square feet of nonresidential uses across commercial, mixed use, and public facilities land use designations. Development associated with the General Plan 2045 would provide employment opportunities, particularly during construction phases, as well as permanent employment in new and expanded commercial and civic establishments. Additionally, the General Plan 2045 accommodates significant new housing to serve a broad range of income levels, helping to provide workforce housing in closer proximity to employment centers in the broader Marin County and Bay Area region. Therefore, implementing the General Plan 2045 would help the Town achieve a more even jobs/housing balance by providing much-needed housing.

Implementing the General Plan 2045 would not require extensions of electrical, natural gas, or water utility infrastructure beyond the needs of the individual development projects that would occur under the General Plan 2045, but would require connections to existing infrastructure on and adjacent to each future development site. The General Plan would not extend urban infrastructure outside the Town's planning boundaries, and thus would not induce growth in areas outside the Town limits. The General Plan does not designate lands within the Sphere of Influence for

development, and therefore would not oversize or extend infrastructure to lands outside the Town's boundaries. Development permitted under the General Plan would not induce growth beyond that anticipated under the Town's General Plan or Plan Bay Area 2050+.

Furthermore, the General Plan 2045 would be compatible with existing residential and commercial land uses in the Town and would not pressure adjacent communities to redevelop with new or different land uses. The Town of San Anselmo is bordered by the incorporated cities of San Rafael and Ross, the Town of Fairfax, and unincorporated Marin County. These adjacent jurisdictions maintain their own general plans and planning frameworks and would not be pressured by the San Anselmo General Plan 2045 to alter their existing land use patterns. As a result, it is not anticipated that nearby residents in adjacent communities would relocate as a result of the General Plan. Therefore, the General Plan 2045 would not remove a barrier to growth nor create an indirect population increase.

Infrastructure and services would be expanded as necessary to serve Town growth, without significant excess capacity, and thus would not encourage additional growth beyond that already planned for in the General Plan 2045. As a result, the General Plan 2045 would create minimal to no indirect growth, and the planned buildout would be consistent with Town projections and Plan Bay Area 2050+ regional growth forecasts.

Since the General Plan 2045 would not result in indirect growth, negatively alter the existing jobs/housing balance, or be inconsistent with State housing law and regional growth projections, growth-inducing impacts would be less than significant.

5.0.1 CEQA REQUIREMENTS

CEQA requires that an EIR analyze a reasonable range of feasible alternatives that meet most or all of the project objectives while potentially reducing or avoiding one or more environmental effects of the project. The range of alternatives required in an EIR is governed by a "rule of reason" that requires an EIR to set forth only those alternatives necessary to permit a reasoned choice (CEQA Guidelines Section 15126.6[f]). Where a potential alternative was examined but not chosen as one of the range of alternatives, the CEQA Guidelines require that the EIR briefly discuss the reasons the alternative was dismissed.

Alternatives that are evaluated in the EIR must be potentially feasible alternatives. However, not all possible alternatives need to be analyzed. An EIR must "set forth only those alternatives necessary to permit a reasoned choice." (CEQA Guidelines Section 15126.6(f).) The CEQA Guidelines provide a definition for a "range of reasonable alternatives" and, thus limit the number and type of alternatives that need to be evaluated in an EIR. An EIR need not include any action alternatives inconsistent with the lead agency's fundamental underlying purpose in proposing a project. (*In re Bay-Delta Programmatic Environmental Impact Report Coordinated Proceedings* (2008) 43 Cal.4th 1143, 1166.)

First and foremost, alternatives in an EIR must be potentially feasible. In the context of CEQA, "feasible" is defined as:

> *… capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors.* (CEQA Guidelines section 15364)

5.0.2 FACTORS GUIDING SELECTION OF ALTERNATIVES

PROJECT OBJECTIVES

The alternatives to the San Anselmo General Plan 2045 Update (General Plan 2045 or proposed project) selected for analysis in the EIR were developed to minimize significant environmental impacts while fulfilling the basic objectives of the project, addressing issues of concern identified through the visioning and community outreach efforts, and addressing public and elected officials' input with respect to potential land use and growth scenarios that may be appropriate for consideration as part of the General Plan 2045. Significant impacts are summarized in Chapter 4.0 and described in greater detail in Sections 3.1 through 3.16. As described in Chapter 2.0 (Project Description), the following objectives have been identified for the proposed project:

1. Maintain and enhance San Anselmo's character by preserving its scenic beauty, open space, and natural resources while ensuring new development complements the historic qualities of the built environment.
2. Foster a sense of community and belonging for town residents by providing equitable access to public services, recreation opportunities, and social engagement.

3. Enhance the town's economic vitality by fostering a variety of businesses, encouraging sustainable economic practices, and ensuring that economic growth is inclusive, responsive to the changing needs of the community, and in alignment with the Town's environmental and social goals.
4. Manage the location, type, and amount of growth to ensure the safety and well-being of all residents through high-quality public services, resilient infrastructure, improved safety and noise regulation, and robust emergency preparedness and response plans.
5. Prioritize multi-modal transportation options and improvements that eliminate greenhouse gas emissions, such as zero-emission vehicles, public transit, cycling, and pedestrian-friendly infrastructure, while improving vehicular circulation, promoting safety, ensuring accessibility, and improving traffic flow.
6. Promote a wide range of housing options that are affordable at all income levels, accessible, sustainable, meet the needs of existing residents, and welcomes a diverse spectrum of future residents.
7. Ensure consistency with State, regional, and local regulatory requirements, including housing, climate, and environmental mandates.
8. Improve community resilience to climate change and natural hazards, including wildfire, flooding, and extreme weather.
9. Protect and enhance environmental resources, including air and water quality, biological resources, and urban forest.
10. Promote efficient land use and infill development patterns that support sustainability and reduce greenhouse gas emissions.

NOP COMMENTS

A Notice of Preparation was circulated to the public to solicit recommendations for a reasonable range of alternatives to the proposed project. Additionally, a public scoping meeting was held during the public review period to solicit recommendations for a reasonable range of alternatives to the proposed project. No specific alternatives were recommended by commenting agencies or the general public during the NOP public review and comment period.

SIGNIFICANT AND UNAVOIDABLE IMPACTS

The General Plan 2045 would not result in any project-specific or cumulative significant and unavoidable impacts. Please see Sections 3.1 through 3.16 and Chapter 4.0 for detailed impact analyses.

5.0.3 ALTERNATIVES CONSIDERED BUT DISMISSED FROM FURTHER EVALUATION

Hillside Downzoning/Corridor Upzoning. This alternative would have downzoned the Town's hillside areas and upzoned the corridor areas. It was rejected from further evaluation because the majority of hillside areas are already developed, and changing their land use designation would not substantially affect overall growth potential.

5.0.4 ALTERNATIVES ANALYZED IN THIS EIR

Three alternatives to the General Plan 2045 were considered based on the analysis performed to identify the environmental effects of the proposed project. Since the General Plan 2045 was prepared with the intent to be a self-mitigating document, project alternatives focused on amending land uses to potentially address impacts. The alternatives analyzed in this EIR include the following:

- **Alternative 1: No Project**. Under Alternative A, the Town would not adopt the General Plan 2045. The existing Town of San Anselmo General Plan would continue to be implemented and no changes to the General Plan, including the Land Use Map, Circulation Diagram, goals, policies, or actions would occur. Changes to address land use, housing, mobility, sustainability and climate resilience, open space and conservation, safety, economic vitality, recreation, public facilities, and diversity, equity, inclusion, and belonging would not be implemented. Subsequent projects, such as amending the Municipal Code (including the zoning map), would not occur.

- **Alternative 2: Reserve Overlay Intensification**. Alternative 2 would increase density in Reserve Areas along major transportation corridors in San Anselmo where future increases in residential density and additional development incentives could be considered to encourage new housing. Reserve Areas provide a framework for accommodating growth in a planned and orderly manner while ensuring that infrastructure, public services, and community design standards are maintained. This Alternative would also further the purpose of General Plan 2045 Policy LU-A.6: Reserve Areas: Consider increases in density and modified development standards or incentives in areas designated as Reserve Areas … to address future housing needs and help meet the Town's future Regional Housing Needs Allocations, if necessary. The land uses are based on the Reserve Areas designated in General Plan 2045 Figure LU-2 (Reserve Areas).

- **Alternative 3: Reserve Overlay Housing Element**. Alternative 3 would apply a Reserve Overlay calibrated to the Town's adopted Housing Element, directing modest additional housing capacity to areas already served by infrastructure and services while preserving open space, hillsides, and environmentally sensitive areas. Like Alternative 2, this alternative would further the purpose of General Plan 2045 Policy LU-A.6 by accommodating growth in a planned and orderly manner.

Table 5.0-1 compares the acreage differences between the alternatives, and **Table 5.0-2** compares the development potential of each alternative.

TABLE 5.0-1: ALTERNATIVES COMPARISON OF LAND USE DESIGNATIONS BY ACREAGE

LAND USE DESIGNATION	*GENERAL PLAN 2045*	*ALTERNATIVE 1 NO PROJECT*	*ALTERNATIVE 2 RESERVE OVERLAY INTENSIFICATION*	*ALTERNATIVE 3 RESERVE OVERLAY HOUSING ELEMENT*

5.0.5 ENVIRONMENTAL ANALYSIS

The alternatives analysis provides a summary of the relative level of significance of the environmental impacts associated with each alternative for each of the environmental issue areas analyzed in this EIR. Following the analysis of each alternative, a summary of the comparative effects of each alternative relative to the General Plan 2045 is provided.

The primary difference among the alternatives is the amount, type, and distribution of land use within the same Planning Area as the General Plan 2045. The development standards, design review requirements, and environmental protection policies of the General Plan 2045 would also apply

[1] The resident population figures in Table 5.0-3 are approximate values developed for travel modeling purposes (Parametrix, 2026) and are not identical to the buildout population presented in Tables 5.0-2 and 5.0-6, which are derived by applying the average household size (2.35 persons per household) to the dwelling unit capacity of each land use designation. For Alternative 3, the approximately 5,424 residents used for VMT purposes include the residential population associated with the Public Facilities designation (approximately 477 residents), consistent with the treatment of that designation under the General Plan 2045 and Alternative 2; that population was not carried into the Alternative 3 subtotal shown in Tables 5.0-2 and 5.0-6, which identify approximately 4,947 residents. For Alternative 2, the approximately 6,564 residents used for VMT purposes differ from the approximately 6,714 residents shown in Table 5.0-2 due to the approximate population inputs and rounding applied in the travel demand model.

under Alternatives 2 and 3. None of the alternatives would introduce new urban land uses or extend the urban footprint beyond that of the General Plan 2045.

The Town Council, Planning Commission, and General Plan Advisory Committee directed the preparation of self-mitigating goals and policies that meet the objectives of the Town of San Anselmo. As described in Sections 3.1 through 3.16 and Chapter 4.0, the General Plan 2045 would not result in any project-specific or cumulative significant and unavoidable impacts; all impacts would be reduced to a less-than-significant level either directly or through compliance with existing regulations.

As demonstrated in the discussion below, Alternative 3 (Reserve Overlay Housing Element) is the environmentally superior alternative, as discussed further in Section 5.6.

ALTERNATIVE 1 – NO PROJECT

Description

Under Alternative 1, the Town would not adopt the General Plan 2045. The existing Town of San Anselmo General Plan would continue to be implemented and no changes to the General Plan, including the Land Use Map, Circulation Diagram, goals, policies, or actions would occur. Changes to address land use, including infill and mixed use development, housing, mobility, sustainability and climate resilience, including policies and actions to increase resilience, open space and conservation, including policies and actions to address conservation of open space, wildlife habitat and corridors, and creeks, safety, economic vitality, including priorities for key corridor improvements and incentives to support local businesses, recreation, public facilities, and diversity, equity, inclusion, and belonging would not be implemented. Subsequent projects, such as amending the Municipal Code (including the zoning map), would not occur.

Changes to the Land Use Map to designate existing public facilities, such as Archie Williams High School, Irene M. Hunt School, Wade Thomas Elementary School, Ross Valley School District offices, Red Hill Community Park, and Red Hill Dog Park, as Public Facilities rather than residential uses would not occur. Changes to the Land Use Map to address inconsistencies with the use of the Single Family – Conservation (SF-C) and Very Low Density Residential (VLDR) designations by applying the Single Family Residential designation to parcels designated SF-C and VLDR parcels that do not meet the minimum parcel size would not occur.

Alternative 1, showing the existing General Plan Land Use Map, is provided as Figure 5.0-1. As shown in **Table 5.0-4**, Alternative 1 would retain the existing General Plan Land Use Map and the same Planning Area acreage as the General Plan 2045. Compared to the General Plan 2045, Alternative 1 would retain a larger share of land designated for very low density residential and single-family/conservation uses and would not reclassify existing public facilities to a Public Facilities designation.

TABLE 5.0-4: ALTERNATIVE 1: NO PROJECT

LAND USE DESIGNATION	*ACRES*	*DWELLING UNITS*	*POPULATION*	*NON-RESIDENTIAL SQUARE FEET*
RESIDENTIAL DESIGNATIONS				
Very Low Density Residential	244	48	113	0
Single-Family Residential-Conservation	349	295	693	0
Single-Family Residential	509	265	623	0
Medium Density Residential	23	41	96	0
High Density Residential	50	231	543	0
Downtown Mixed Residential	50	333	783	0
MIXED USE, COMMERCIAL, AND OFFICE DESIGNATIONS				
Central Commercial	8	36	85	77,435
General Commercial	35	488	1,147	634,566
Limited Commercial	5	82	193	17,536
Neighborhood Commercial	2	7	17	9,928
PUBLIC, QUASI-PUBLIC, RECREATION, AND OTHER DESIGNATIONS				
Parks	18	0	0	0
Open Space	156	0	0	0
Public Facilities	9	11	26	0

Subtotal	***3,211***	***1,837***	***4,317***	***750,171***
Accessory Dwelling Units (Townwide)	0	319	750	0
TOTAL	**3,211**	**2,156**	**5,067**	**750,171**

SOURCE: DE NOVO PLANNING GROUP, 2026.

Under Alternative 1, buildout would result in approximately 2,156 dwelling units, a population of approximately 5,067 residents, and approximately 750,171 square feet of nonresidential development. This represents approximately 123 fewer dwelling units, 289 fewer residents, and

1,962 fewer square feet of nonresidential development than the General Plan 2045. Alternative 1 would retain the existing adopted policy framework.

Because the Town would not adopt the General Plan 2045, Alternative 1 would not include the updated housing, greenhouse gas reduction, climate resilience, and complete streets policies of the General Plan 2045, and would not implement the environmental protection policies developed consistent with CEQA.

Comparative Analysis of Environmental Effects

IMPACTS IDENTIFIED AS BEING THE SAME AS OR SIMILAR TO THOSE OF THE PROPOSED PROJECT

Because Alternative 1 would have the same size Planning Area as the General Plan 2045, future development facilitated by Alternative 1 would occupy the same total area as the General Plan 2045. As such, impacts determined by the development footprint of future projects would be governed by the same federal, State, and local regulations and would be substantially the same as or similar to those of the General Plan 2045

For the following environmental issue areas, impacts under Alternative 1 would be substantially the same as or similar to those of the General Plan 2045 and would remain less than significant: aesthetics (Impacts 3.1-1 through 3.1-4); agricultural and forestry resources (Impacts 3.2-1 through 3.2-4); biological resources (Impacts 3.4-1 through 3.4-7); cultural and tribal cultural resources (Impacts 3.5-1 through 3.5-5); energy (Section 3.6); geology, soils, and paleontological resources (Impacts 3.7-1 through 3.7-7); hazards and hazardous materials (Impacts 3.9-1 through 3.9-7); hydrology and water quality (Impacts 3.10-1 through 3.10-5); noise (Section 3.12); public services and recreation (Impacts 3.13-1 through 3.13-6); utilities and service systems (Impacts 3.15-1 through 3.15-7); and wildfire (Impacts 3.16-1 through 3.16-5).

IMPACTS IDENTIFIED AS BEING LESS SEVERE THAN THOSE OF THE PROPOSED PROJECT

Because Alternative 1 would accommodate slightly less growth than the General Plan 2045, per-capita travel would be marginally lower. As shown in Table 5.0-3, vehicle miles traveled (VMT) per resident would be approximately 10.8 under Alternative 1 compared to 10.9 under the General Plan 2045, and VMT per employee would be approximately 12.8 compared to 13.0. As a result, impacts related to transportation (Impact 3.14-1), air quality (Impacts 3.3-1 through 3.3-6), and greenhouse gas emissions (Impacts 3.8-1 and 3.8-2) would be slightly less severe than those of the General Plan 2045. All such impacts would remain less than significant. This is consistent with the growth-inducing impact analysis in Chapter 4.0. Because Alternative 1 would accommodate less population growth than the General Plan 2045, the direct population growth and associated environmental consequences identified in that analysis would be incrementally reduced under Alternative 1. However, because Alternative 1 would not accommodate the Town's Regional Housing Needs Allocation or the housing capacity provided by the General Plan 2045, this reduction would reflect a deferral or redistribution of regional housing demand rather than an overall avoidance of growth.

IMPACTS IDENTIFIED AS BEING MORE SEVERE THAN THOSE OF THE PROPOSED PROJECT

Because the Town would not adopt the updated Land Use Map and policy framework, Alternative 1 would be less consistent with regional and State land use, housing (Regional Housing Needs

Allocation), and climate requirements than the General Plan 2045. As a result, impacts related to land use and planning and population and housing (Impacts 3.11-1 through 3.11-5) would be slightly more severe than those of the General Plan 2045.

Relationship to Significant and Unavoidable Impacts

The General Plan 2045 would not result in any significant and unavoidable impacts. Alternative 1 (No Project) likewise would not result in any significant and unavoidable impacts. Accordingly, there are no significant and unavoidable impacts to avoid, reduce, or intensify under Alternative 1.

Relationship to Project Objectives

Because the General Plan 2045 would not be adopted, Alternative 1 would fail to meet most of the basic project objectives, including accommodating the Town's Regional Housing Needs Allocation and establishing an updated housing framework, managing growth through multimodal circulation and greenhouse gas reduction, advancing climate resilience and environmental protection, and promoting infill development.

While existing scenic, open space, and safety policies would remain in effect, Alternative 1 would not satisfy the underlying purpose of the project, which is to adopt a comprehensive, updated General Plan that meets current State requirements.

ALTERNATIVE 2 – RESERVE OVERLAY INTENSIFICATION

Description

Alternative 2 would place greater emphasis on additional housing and commercial development within Reserve Areas located along major transportation corridors. This alternative would further the purpose of General Plan 2045 Policy LU-A.6.

Under Alternative 2, land use designations would be modified as shown in Figure 5.0-2 and **Table 5.0-5**. The goals, policies, and programs of the General Plan 2045 would continue to apply and would be self-mitigating.

Under Alternative 2, buildout would result in approximately 2,857 dwelling units and a population of approximately 6,714 residents, an increase of approximately 578 dwelling units and 1,358 residents compared to the General Plan 2045. This additional growth would be accommodated through General Commercial, Limited Commercial, and Neighborhood Commercial designations along major corridors, as shown in Table 5.0-5.

Because Alternative 2 would increase development intensity rather than expand the development footprint, it would occupy the same Planning Area and urban footprint as the General Plan 2045, as shown in Figure 5.0-2 and Table 5.0-5.

TABLE 5.0-5: ALTERNATIVE 2: RESERVE OVERLAY INTENSIFICATION

LAND USE DESIGNATION	*ACRES*	*DWELLING UNITS*	*POPULATION*	*NON-RESIDENTIAL SQUARE FEET*

SOURCE: DE NOVO PLANNING GROUP, 2026.

Comparative Analysis of Environmental Effects

IMPACTS IDENTIFIED AS BEING THE SAME AS OR SIMILAR TO THOSE OF THE PROPOSED PROJECT

Because Alternative 2 would have the same size Planning Area as the General Plan 2045, future development facilitated by Alternative 2 would occupy the same total area as the General Plan 2045,

and the goals and policies of the General Plan 2045 would continue to apply. As such, impacts determined by the development footprint of future projects would be substantially the same as or similar to those of the General Plan 2045.

For the following environmental issue areas, impacts under Alternative 2 would be substantially the same as or similar to those of the General Plan 2045 and would remain less than significant: agricultural and forestry resources (Impacts 3.2-1 through 3.2-4); biological resources (Impacts 3.4-1 through 3.4-7); cultural and tribal cultural resources (Impacts 3.5-1 through 3.5-5); energy (Section 3.6); geology, soils, and paleontological resources (Impacts 3.7-1 through 3.7-7); hazards and hazardous materials (Impacts 3.9-1 through 3.9-7); hydrology and water quality (Impacts 3.10-1 through 3.10-5); land use and planning and population and housing (Impacts 3.11-1 through 3.11-5); public services and recreation (Impacts 3.13-1 through 3.13-6); utilities and service systems (Impacts 3.15-1 through 3.15-7); and wildfire (Impacts 3.16-1 through 3.16-5).

IMPACTS IDENTIFIED AS BEING LESS SEVERE THAN THOSE OF THE PROPOSED PROJECT

Alternative 2 would concentrate additional housing and commercial development in transit-proximate Reserve Areas along major corridors. As shown in Table 5.0-3, VMT per resident would be approximately 10.7 under Alternative 2 — the lowest of the alternatives — compared to 10.9 under the General Plan 2045, while VMT per employee would be approximately 13.0, the same as the General Plan 2045. This reflects the most efficient per-capita travel pattern of the alternatives.

As a result, impacts related to transportation (Impact 3.14-1), air quality (Impacts 3.3-1 through 3.3-6), greenhouse gas emissions (Impacts 3.8-1 and 3.8-2), and transportation noise (Section 3.12) would be slightly less severe than those of the General Plan 2045. All such impacts would remain less than significant.

IMPACTS IDENTIFIED AS BEING MORE SEVERE THAN THOSE OF THE PROPOSED PROJECT

Because Alternative 2 would allow increased height, massing, and lot coverage along commercial corridors, impacts related to aesthetics (Impacts 3.1-1 through 3.1-4) would be slightly more severe than those of the General Plan 2045. These impacts would nonetheless remain less than significant through application of the General Plan 2045 design, community character, and scenic resource policies.

Relationship to Significant and Unavoidable Impacts

The General Plan 2045 would not result in any significant and unavoidable impacts. Alternative 2 likewise would not result in any significant and unavoidable impacts. Accordingly, there are no significant and unavoidable impacts to avoid, reduce, or intensify under Alternative 2.

Relationship to Project Objectives

Alternative 2 would meet most of the basic project objectives, including accommodating the Town's Regional Housing Needs Allocation and housing needs, supporting economic vitality, promoting multimodal circulation and reduced per-capita greenhouse gas emissions, and providing services, climate resilience, and resource protection.

However, by allowing greater height, massing, and intensity along corridors, Alternative 2 would create greater tension with the Town's community character, scenic resource, and small-town scale objectives than the General Plan 2045.

On balance, Alternative 2 would meet most of the basic objectives of the General Plan 2045.

ALTERNATIVE 3 – RESERVE OVERLAY HOUSING ELEMENT

Description

Alternative 3 would apply a Reserve Overlay calibrated to the Town's adopted Housing Element, directing modest additional housing capacity to areas already served by infrastructure and services while preserving open space, hillsides, and environmentally sensitive areas. Alternative 3 would occupy the same Planning Area as the General Plan 2045, and the goals and policies of the General Plan 2045 would continue to apply.

Under Alternative 3, buildout would result in approximately 2,308 dwelling units (**Table 5.0-6**), an increase of approximately 29 dwelling units compared to the General Plan 2045 and substantially fewer than under Alternative 2. The corresponding buildout population would be approximately 4,947 residents (Table 5.0-6). This additional housing capacity would be directed primarily to High Density Residential, General Commercial, and Neighborhood Commercial designations.

Because Alternative 3 would accommodate additional housing through the Reserve Overlay rather than through expansion of the Planning Area, it would occupy the same overall urban footprint as the General Plan 2045, as shown in Tables 5.0-2 and 5.0-6.

TABLE 5.0-6: ALTERNATIVE 3: RESERVE OVERLAY HOUSING ELEMENT

SOURCE: DE NOVO PLANNING GROUP, 2026.

Comparative Analysis of Environmental Effects

IMPACTS IDENTIFIED AS BEING THE SAME AS OR SIMILAR TO THOSE OF THE PROPOSED PROJECT

Because Alternative 3 would have the same size Planning Area as the General Plan 2045, future development facilitated by Alternative 3 would occupy the same total area as the General Plan 2045, and the goals and policies of the General Plan 2045 would continue to apply. As such, impacts determined by the development footprint of future projects would be substantially the same as or similar to those of the General Plan 2045.

For the following environmental issue areas, impacts under Alternative 3 would be substantially the same as or similar to those of the General Plan 2045 and would remain less than significant: agricultural and forestry resources (Impacts 3.2-1 through 3.2-4); cultural and tribal cultural resources (Impacts 3.5-1 through 3.5-5); energy (Section 3.6); geology, soils, and paleontological resources (Impacts 3.7-1 through 3.7-7); hazards and hazardous materials (Impacts 3.9-1 through 3.9-7); land use and planning and population and housing (Impacts 3.11-1 through 3.11-5); public services and recreation (Impacts 3.13-1 through 3.13-6); utilities and service systems (Impacts 3.15-1 through 3.15-7); and wildfire (Impacts 3.16-1 through 3.16-5).

IMPACTS IDENTIFIED AS BEING LESS SEVERE THAN THOSE OF THE PROPOSED PROJECT

Because Alternative 3 would direct additional housing capacity to areas already served by infrastructure and services, and because the Reserve Overlay would preserve hillsides, ridgelines,

and open space, impacts related to aesthetics (Impacts 3.1-1 through 3.1-4) would be slightly less severe than those of the General Plan 2045.

By directing development away from creeks, riparian corridors, and sensitive habitat, Alternative 3 would result in slightly less severe impacts related to biological resources (Impacts 3.4-1 through 3.4-7) and hydrology and water quality (Impacts 3.10-1 through 3.10-5) than the General Plan 2045.

Alternative 3 would accommodate growth comparable to the General Plan 2045 while improving the jobs-housing balance in areas that are already served by infrastructure and transit.

As shown in Table 5.0-3, VMT per resident (approximately 10.9) and VMT per employee (approximately 13.0) under Alternative 3 would be comparable to the General Plan 2045. As a result, impacts related to transportation (Impact 3.14-1), air quality (Impacts 3.3-1 through 3.3-6), greenhouse gas emissions (Impacts 3.8-1 and 3.8-2), and transportation noise (Section 3.12) would be comparable to or slightly less severe than those of the General Plan 2045.

On balance, the impacts of Alternative 3 would be slightly less severe than those of the General Plan 2045, and no impacts would be more severe. All such impacts would remain less than significant.

IMPACTS IDENTIFIED AS BEING MORE SEVERE THAN THOSE OF THE PROPOSED PROJECT

There are no impacts associated with the implementation of Alternative 3 that would be more severe than those of the General Plan 2045.

Relationship to Significant and Unavoidable Impacts

The General Plan 2045 would not result in any significant and unavoidable impacts. Alternative 3 likewise would not result in any significant and unavoidable impacts. Alternative 3 would further reduce the severity of several impacts that are already less than significant under the General Plan 2045.

Relationship to Project Objectives

Alternative 3 would meet all of the basic project objectives, including protecting community character and scenic and open space resources; accommodating the Town's Regional Housing Needs Allocation and housing needs; supporting economic vitality; managing growth and providing services and resilient infrastructure; promoting multimodal circulation and reduced per-capita greenhouse gas emissions; advancing climate resilience; protecting resources including the urban forest, biological resources, and water quality; and promoting infill development. As discussed in Section 5.6, Alternative 3 is the environmentally superior alternative.

5.0.6 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA requires that an environmentally superior alternative be identified among the alternatives that are analyzed in the EIR. If the No Project Alternative is the environmentally superior alternative, an EIR must also identify an environmentally superior alternative among the other alternatives (CEQA Guidelines Section 15126.6(e)(2)). The environmentally superior alternative is that

alternative with the least adverse environmental impacts when compared to the proposed General Plan.

The comparative analysis presented in **Table 5.0-7** evaluates each alternative relative to the General Plan 2045 across each environmental issue area. The relative scores indicate whether each alternative would result in effects that are the same as, slightly better than, or slightly worse than the General Plan 2045; a lower total score indicates fewer overall environmental effects.

The comparative scores in Table 5.0-7 were assigned using a uniform five-point scale applied to each environmental issue area relative to the General Plan 2045: a score of 1 indicates that the alternative would result in significantly fewer or less severe impacts (Significantly Better),a score of 2 indicates that the alternative would result in slightly fewer or less severe impacts (Slightly Better), a score of 3 indicates that impacts would be substantially the same (Same), a score of 4 indicates slightly greater or more severe impacts (Slightly Worse), and a score of 5 indicates significantly greater or more severe impacts (Significantly Worse). Each environmental issue area was weighted equally, and the scores were summed across all issue areas to produce the total comparative score shown in the summary row. Because each topic is weighted equally, a lower total score indicates an alternative that would, on balance, result in fewer overall environmental effects relative to the General Plan 2045. The scores reflect a qualitative comparison of the relative magnitude of impacts and are not intended to represent a quantitative or weighted significance determination. No alternatives' impact areas were determined to be significantly better or significantly worse than the General Plan 2045 impact conclusions.

As summarized in Table 5.0-7, the total comparative scores are 51 for the General Plan 2045, 49 for Alternative 1, 48 for Alternative 2, and 48 for Alternative 3. Although Alternative 1 (No Project) would result in slightly fewer overall environmental effects than the General Plan 2045, it would result in slightly worse land use and population and housing effects, would not include the self-mitigating policy framework of the General Plan 2045, and would fail to meet most of the project objectives. For these reasons, Alternative 1 is not the environmentally superior alternative.

Accordingly, Alternative 3 (Reserve Overlay Housing Element) is the environmentally superior alternative. Although it received the same total comparative score as Alternative 2, there would be no technical topics where Alternative 3 would perform worse than the General Plan 2045. Therefore, Alternative 3 would be the most effective at reducing environmental effects, and would meet all of the basic project objectives.

As shown in Table 5.0-7, Alternative 2 and Alternative 3 each received a total comparative score of 48. However, Alternative 2 would result in slightly greater aesthetic impacts than the General Plan 2045 (a score of 4 – Slightly Worse for Aesthetics), reflecting the increased height, massing, and intensity of development along commercial corridors, whereas Alternative 3 would not result in greater impacts than the General Plan 2045 in any environmental issue area.

Alternative 3 would result in slightly fewer impacts than the General Plan 2045 with respect to aesthetics, biological resources, and hydrology and water quality by directing modest additional housing capacity to areas already served by infrastructure while preserving open space, hillsides,

ridgelines, and environmentally sensitive areas. Because Alternative 3 would reduce impacts in these resource areas without increasing impacts in any other issue area, and because it would accommodate the Town's Regional Housing Needs Allocation and meet all of the basic project objectives, Alternative 3 is identified as the environmentally superior alternative.

TABLE 5.0-7: COMPARISON OF ALTERNATIVES TO THE PROPOSED PROJECT

ENVIRONMENTAL ISSUE	*GENERAL PLAN 2045*	*ALTERNATIVE 1 NO PROJECT*	*ALTERNATIVE 2 RESERVE OVERLAY INTENSIFICATION*	*ALTERNATIVE 3 RESERVE OVERLAY HOUSING ELEMENT*
Aesthetics	3 – Same	3 – Same	4 – Slightly Worse	2 – Slightly Better
Agricultural Resources	3 – Same	3 – Same	3 – Same	3 - Same

1.1 PURPOSE OF THIS DOCUMENT

This document includes all agency and public comments received on the Draft Environmental Impact Report (Draft EIR, SCH # 2025100912) for the San Anselmo General Plan 2045 Update ("General Plan 2045" or "project"). Written comments were received by the Town of San Anselmo during the public comment period from July 24, 2026 to September 8, 2026. This document includes written responses to each comment received on the Draft EIR. The responses correct, clarify, and amplify text in the Draft EIR, as appropriate. These changes do not alter the conclusions of the Draft EIR, nor do they result in significant new information.

This Final EIR document has been prepared in accordance with the California Environmental Quality Act (CEQA) and together with the Draft EIR (and Appendices) constitutes the EIR for the General Plan 2045 that will be used by the decision-makers during project hearings.

1.2 SUMMARY OF THE PROPOSED PROJECT

The Town of San Anselmo is an incorporated municipality in Marin County, California. The town is bordered by San Rafael to the east, Fairfax and unincorporated Marin County to the west, Ross to the south, and unincorporated Marin County to the north. San Anselmo is located approximately 20 miles north of San Francisco.

State law requires every California city and county – including incorporated towns such as the Town of San Anselmo – to adopt a comprehensive, long-term General Plan to guide the physical development of its planning area. As outlined in Government Code Section 65302, a General Plan must address the required elements: land use, circulation, housing, conservation, open space, noise, and safety, as well as environmental justice and climate adaptation, to the extent that these issues are applicable within San Anselmo's planning area. The Town may also include additional elements that relate to its physical development and community priorities. The level of detail and specificity within each General Plan element is determined by local conditions, community character, and the unique circumstances of the Town of San Anselmo.

Upon adoption, the General Plan 2045 will replace the Town's existing General Plan. The Town of San Anselmo last comprehensively adopted its General Plan in 1975, with more recent targeted updates to the Land Use, Circulation, and Open Space Elements in 1988. Since that time, the Town and the Bay Area have grown and changed. New social and environmental issues have emerged, new laws affecting General Plans have been passed, and new planning strategies and practices have been developed. This General Plan Update looks ahead to the future, addressing current issues and emerging trends and setting the community vision for the next 20 years. The General Plan Update also brings the General Plan into compliance with new laws related to climate change, complete streets, fire hazards, and more.

The Town updated its Housing Element in 2023, which addresses the Town's Regional Housing Needs Allocation and the 2023-2031 planning period, in a process separate from the General Plan Update. The Safety Element was also revised in 2023 to address regulatory requirements.

The Town will implement the General Plan by requiring development, infrastructure improvements, and other projects to be consistent with its policies and by implementing the actions included in the General Plan, including subsequent project-level environmental review, as required under CEQA.

The EIR evaluates the theoretical development that could occur within the Planning Area at the densities and intensities allowable under the proposed General Plan. While no specific development projects are proposed as part of the General Plan Update, the General Plan would provide the policy framework under which future growth could occur, including the development of new businesses, expansion of existing businesses, and new residential uses consistent with the Land Use Designations and Draft Land Use Map. Theoretical full buildout conditions under the General Plan would be anticipated to result in 2,279 new residential units accommodating an additional 5,356 residents and an addition of approximately 752,133 square feet of non-residential uses. The theoretical buildout assumes development of vacant and underutilized parcels at the maximum density or intensity permitted under the General Plan, including realistic development of residentially-designated sites identified in the existing Housing Element. Residential development on sites identified in the Housing Element is limited to the realistic capacity specified in the Housing Element.[1]

PROJECT ACTIONS

The General Plan 2045 project includes the following proposed entitlement applications to the Town, requiring Planning Commission review with final action by the Town Council:

- Certification of the General Plan 2045 EIR;
- Adoption of required CEQA Findings;
- Adoption of a Mitigation Monitoring and Reporting Program; and
- Approval of the General Plan 2045.

As the Lead Agency and as appropriate under CEQA, the Town also intends the EIR to serve as the CEQA-required environmental documentation for consideration of the project by other Responsible Agencies and Trustee Agencies which may have discretionary approval authority over the project. Under the CEQA Guidelines, the term “Responsible Agency” includes all public agencies, other than the Lead Agency, which have discretionary approval power over aspects of the project for which the Lead Agency has prepared an EIR (CEQA Guidelines Section 15381); and the term “Trustee Agency” means a state agency having jurisdiction by law over natural resources affected by the project which are held in trust by the people of California (CEQA Guidelines Section 15386). While no Responsible Agencies and Trustee Agencies have been identified with approval actions associated with adoption of the project, agencies may use the EIR when considering actions necessary for development of the General Plan 2045. These agencies may include:

- California Department of Fish and Wildlife (CDFW);
- Bay Area Air Quality Management District (BAAD);
- California Department of Transportation (Caltrans);
- California Department of Toxic Substances Control (DTSC);

[1] Town of San Anselmo, 2023. 2023-2031 Housing Element, December 12, 2023. Pp. 141-152.

- Regional Water Quality Control Board (RWQCB);
- U.S. Army Corps of Engineers (USACE);
- U.S. Environmental Protection Agency (USEPA);
- U.S. Fish and Wildlife Service (USFWS);
- Metropolitan Transportation Commission (MTC);
- California Department of Resources, Recycling, and Recovery (Cal Recycle);
- California Office of Historic Preservation (OHP);
- California Department of Conservation (DOC);
- Marin Water; and
- Ross Valley Sanitary District.
- San Joaquin Valley Air Pollution Control District (SJVAPCD)

1.3 ORGANIZATION OF THE FINAL EIR

The Final EIR is organized as follows:

Chapter 1 – Introduction and List of Commenters: This chapter summarizes the project under consideration and describes the contents of the Final EIR. This chapter also contains a list of all of the agencies or persons who submitted comments on the Draft EIR during the public review period, presented in order by agency, organization, individual and date received.

Chapter 2 – Revisions to the Draft EIR: This chapter summarizes text changes made to the Draft EIR in response to comments made on the Draft EIR and/or staff-initiated text changes. Changes to the text of the Draft EIR are shown by either a line through the text that has been deleted or double underlined where new text has been inserted. The revisions contain clarification, amplification, and corrections that have been identified since publication of the Draft EIR. The text revisions do not change the analysis and conclusions presented in the Draft EIR.

Chapter 3 – Comments and Responses: This chapter contains the comment letters received on the Draft EIR followed by responses to individual comments. Each comment letter is presented with brackets indicating how the letter has been divided into individual comments. Each comment is given a binomial with the letter number appearing first, followed by the comment number. For example, comments in Letter A1 are numbered A1-1, A1-2, A1-3, and so on. Immediately following the letter are responses, each with binomials that correspond to the bracketed comments.

If the subject matter of one letter overlaps that of another letter, the reader may be referred to more than one group of comments and responses to review all information on a given subject. Where this occurs, cross-references to other comments are provided.

Some comments that were submitted to the Town do not pertain to CEQA environmental issues nor address the adequacy of the analysis contained in the Draft EIR. Responses to such comments, though not required, are included to provide additional information. When a comment does not directly pertain to environmental issues analyzed in the Draft EIR, does not ask a question about the adequacy of the analysis contained in the Draft EIR, expresses an opinion related to the merits of the project, or does not question an element of or conclusion of the Draft EIR, the response notes the comment and may provide additional information where appropriate. The intent is to recognize the

comment. Many comments express opinions about the merits or specific aspects of the proposed project and these are included in the Final EIR for consideration by the decision-makers.

1.4 PUBLIC PARTICIPATION AND REVIEW

The Town of San Anselmo has complied with all noticing and public review requirements of CEQA. This compliance included notification of all responsible and trustee agencies and interested groups, organizations, and individuals that the Draft EIR was available for review. The following list of actions took place during the preparation, distribution, and review of the Draft EIR:

- A Notice of Preparation (NOP) for the EIR was filed with the State Clearinghouse on October 20, 2025. The 30-day public review comment period for the NOP ended on November 19, 2025. The NOP was distributed in particular to governmental agencies, organizations, and persons interested in the proposed project. The Town sent the NOP to agencies with statutory responsibilities in connection with the proposed project with the request for their input on the scope and content of the environmental information that should be addressed in the EIR. The NOP was also published on the Town's website and filed at the County Clerk's office.
- A public scoping meeting for the EIR was held online on November 13, 2025.
- A Notice of Completion (NOC) and copies of the Draft EIR were filed with the State Clearinghouse on July 24, 2026. An official 45-day public review period for the Draft EIR was established by the State Clearinghouse, ending on September 8, 2026. A Notice of Availability (NOA) for the Draft EIR was published in the Marin Independent Journal on July 24, 2026, and emailed to an interested parties email list. The Draft EIR was also published on the Town's general plan webpage at: https://sananselmogp2045.org/.
- Printed copies of the Draft EIR were available for review during the public review period at Town of San Anselmo, Planning Department, 525 San Anselmo Avenue, San Anselmo, CA 94960.

1.5 LIST OF COMMENTERS

The Town of San Anselmo received six (6) comment letters during the full comment period on the Draft EIR for the project between July 24, 2026 and September 8, 2026. **Table 1-1** below indicates the numerical designation for each comment letter, the author of the comment letter, and the date of the comment letter.

TABLE 1-1: COMMENT LETTERS REGARDING THE DRAFT EIR

LETTER #	*ENTITY*	*AUTHOR(S) OF COMMENT LETTER / EMAIL*	*LETTER DATE*
Agencies – Federal, State, Local			
A1	California Governor's Office of Emergency Services (Cal OES)	William Graulty, Office Technician	August 10, 2026
A2	California Department of Fish and Wildlife (CDFW)	Erin Chappell, Regional Manager Bay Delta Region	August 31, 2026
A3	California Department of Transportation (Caltrans)	Yunsheng Luo, Branch Chief, Local Development Review, Office of Regional and Community Planning	September 8, 2026
A4	Transportation Authority of Marin (TAM)	Anne Richman, Executive Director	September 8, 2026
Organizations and Individuals			
B1	Marin Conservation League (MCL)	Rebecca Schwartz Lesberg, Executive Director, and Paul A Jensen, Co-chair, Land Use, Transportation & Water Committee	September 3, 2026
B2	Jonathan Braun		September 7, 2026

2.1 INTRODUCTION

This chapter describes text changes made to the Draft EIR either in response to a comment letter or initiated by Town staff or in response to a modification to the Project.

Under CEQA, an EIR can require recirculation if significant new information is added after public review and prior to certification. According to CEQA Guidelines section 15088.5(a), new information is not considered significant "unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement." More specifically, the Guidelines define significant new information as including:

- A new significant environmental impact resulting from the project or from a new mitigation measure;
- A substantial increase in the severity of an environmental impact that would not be reduced to insignificance by adopted mitigation measures;
- A feasible project alternative or mitigation measure considerably different from those analyzed in the Draft EIR that would clearly lessen the environmental impacts of the project and which the project proponents decline to adopt; and
- A Draft EIR that is so fundamentally and basically inadequate and conclusory that meaningful public review and comment were precluded.

The text changes to the Draft EIR text as described below, clarify, update, refine, amplify, and correct the information and analyses presented in the Draft EIR. No new significant information is added to the Draft EIR. There are no new significant environmental impacts, and no new information is provided that would result in a substantial increase in the severity of an environmental impact that would not be mitigated by measures identified in the Draft EIR to levels of insignificance. In addition, there are no new project alternatives or mitigation measures that are considerably different from others that have been previously analyzed. Finally, there are no changes or set of changes that would reflect fundamental inadequacies in the Draft EIR. Recirculation of any part of the EIR therefore is not required.

2.2 TEXT CHANGES TO THE DRAFT EIR

This section summarizes text changes made to the Draft EIR either in response to a comment letter or initiated by Town staff or in response to a modification to the proposed Project. New text is indicated in double underline and text to be deleted is reflected by a strike through. Text changes are presented in the page order in which they appear in the Draft EIR.

The text revisions provide clarification, amplification, and corrections that have been identified since publication of the Draft EIR. No new significant information has been added. The text changes do not result in a change in the analysis or conclusions of the Draft EIR.

3.3 AIR QUALITY

Page 3.3-22, General Plan 2045 Action C-A.1.a is revised to read:

> **Action C-A.1.a: Complete Streets and Human-Scale Enhancements**. Approach every transportation project and program as ~~opportunities~~ an opportunity to improve safety, accessibility, and mobility for users of all ages, abilities, and transportation needs. Work with relevant departments, agencies, and jurisdictions to incorporate Complete Streets design features, such as accessible curb ramps, crosswalks, transit facilities, sidewalks, and bicycle infrastructure, into existing streets. Where feasible, integrate human-scale amenities including street trees, landscaping, benches, and pedestrian-scale lighting to enhance comfort, visual quality, and encourage walking, bicycling, and transit use.

Page 3.3-22, General Plan 2045 Action C-A.1.b is added, Action C-A.1.b from the Draft EIR is renumbered to Action C-A.1.c, and Action C-A.1.d is added:

> **Action C-A.1.b: Safe System Approach.** Incorporate a Safe System approach into the planning, design, operation, and maintenance of the transportation network. Design and manage transportation infrastructure to anticipate human error, encourage safe speeds, reduce conflicts, and provide multiple layers of protection so that crashes do not result in fatalities or serious injuries. Coordinate implementation with TAM's countywide Local Road Safety Plan and subsequent local and regional safety planning efforts.
>
> **Action C-A.1.c~~b~~: Standards for Infrastructure Improvements**. Develop Public Improvement Engineering Standards or other objective standards for property subdivision or development projects to specify required off-site infrastructure improvements, such as sidewalks, that would accommodate or mitigate estimated project traffic impacts.
>
> **Action C-A.1.d: Multimodal Transportation Performance Monitoring.** Monitor and evaluate multimodal transportation performance using available indicators such as fatal and serious-injury crashes, completion of pedestrian and bicycle network improvements, transit accessibility and reliability, mode share, VMT per capita, pavement condition, and travel conditions along key corridors. Apply the results to assess progress toward General Plan goals, identify emerging needs, support grant applications, and prioritize transportation investments.

Page 3.3-23, General Plan 2045 Action C-A.3.b is revised to read:

> **Action C-A.3.b: VMT and Transportation Improvements**. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT and evaluate opportunities to reduce automobile travel through land use planning, transportation demand management, active transportation, transit, shared mobility, and parking strategies.

Page 3.3-23, General Plan 2045 Policy C-B.2 is revised to read:

> **Policy C-B.2: ~~Roadway Traffic Circulation~~ Multimodal Corridor Planning**. ~~Maintain adequate traffic circulation while balancing the needs of all system users along~~ Plan for and manage

Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, Butterfield Road, the Hub, and ~~in~~ downtown as integrated multimodal corridors that balance local and regional mobility with the needs of all transportation system users.

Page 3.3-23, General Plan 2045 Action C-B.2.b and Policy C-C.1 are revised to read:

Action C-B.2.b: Major Thoroughfare Roadway Improvements. Improve Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, and intersections along these roadways by investing in transportation infrastructure that addresses safety, traffic operations, pedestrian and bicycle access, transit reliability, emergency response, and regional travel as interconnected objectives.~~to improve safety and accessibility for pedestrians and other non-vehicle roadway users while maintaining adequate circulation for regional through traffic.~~

…

Policy C-C.1: Bicycle and Pedestrian Master Plan. Regularly review, update, and implement the Town's Bicycle and Pedestrian Master Plan to maintain eligibility for grant funding and to advance a safe, accessible, and connected active transportation network for users of all ages and abilities. Future updates should comprehensively address walking, conventional bicycles, e-bikes and other emerging micromobility, accessibility, Safe Routes to School, intersection safety, and first- and last-mile connections to transit.

Page 3.3-25, General Plan 2045 Policy C-C.3 and Action C-C.6.a are revised to read:

Policy C-C.3: Bicycle Network. Continue to expand San Anselmo's bicycle network to safely and comfortably connect residents to schools, shopping, work, recreation, the Cross-Marin Bikeway, and other local and regional ~~daily~~ destinations, with a focus on improved paths and crossings at larger and high vehicle volume roadways and traffic calming installations and signage on local streets.

…

Action C-C.6.a: Transit Agency Partnerships. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends. In coordination with TAM and transit operators, identify and support feasible transit-priority improvements that increase transit travel speeds and reliability along local roadways identified in TAM's Countywide Transportation Plan Transit Priority Network.

3.4 BIOLOGICAL RESOURCES

Page 3.4-12, the first paragraph under the heading "Special Status Animals" is revised to read:

Special Status Animals

The search revealed documented occurrences of 16 special status animal species within two miles of the Planning Area. The search revealed documented occurrences of 76 special status animal species within the 11-quadrangle search area of the Planning Area. In addition to the species identified through the CNDDB search, northern spotted owl (Strix occidentalis caurina), which is listed as threatened under CESA, has been documented within the

Planning Area (Northern Spotted Owl Occurrence ID 201686), and nesting has been documented within 900 feet of the Planning Area (MASTEROWL MRN0134 and MRN0073). Portions of the Planning Area are directly adjacent to critical habitat designated for northern spotted owl by the USFWS. Northern spotted owl is included in Table 3.4-4 and Table 3.4-5.

Beginning on page 3.4-13, Table 3.4-4 adds the northern spotted owl to the table and adds a source citation. The table is revised to read:

TABLE 3.4-4: SPECIAL STATUS ANIMALS PRESENT OR POTENTIALLY PRESENT (2 MILE)

ANIMAL SPECIES	*COMMON NAME*	*FEDERAL STATUS*	*STATE STATUS*	*CDFW STATUS**	*STATE RANK***	*GLOBAL RANK***

*Source: CDFW CNDDB 2024. *FP = Fully Protected; SSC = Species of Special Concern. Northern spotted owl records from CDFW MASTEROWL database (Occurrence ID 201686; MRN0134 and MRN0073), as identified in CDFW correspondence dated August 31, 2026*

***Global Rank is a reflection of the overall condition and imperilment of an element throughout its global range.*

- *GX Presumed Extinct (species) — Not located despite intensive searches and virtually no likelihood of rediscovery. Extinct (ecological communities and systems) — Eliminated throughout its range, with no restoration potential due to extinction of dominant or characteristic taxa and/or elimination of the sites and ecological processes on which the type depends.*
- *GH Possibly Extinct — Known from only historical occurrences but still some hope of rediscovery. There is evidence that the species may be extinct or the ecosystem may be eliminated throughout its range, but not enough to state this with certainty. Examples of such evidence include 1) that a species has not been documented in approximately 20–40 years despite some searching or some evidence of significant habitat loss or degradation; 2) that a species or ecosystem has been searched for unsuccessfully, but not thoroughly enough to presume that it is extinct or eliminated throughout its range.*
- *G1 Critically Imperiled — At very high risk of extinction due to extreme rarity (often 5 or fewer populations), very steep declines, or other factors.*
- *G2 Imperiled — At high risk of extinction due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors.*
- *G3 Vulnerable — At moderate risk of extinction or elimination due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors.*
- *G4 Apparently Secure — Uncommon but not rare; some cause for long-term concern due to declines or other factors.*
- *G5 Secure — Common; widespread and abundant.*
- *GNR Unranked — Global rank not yet assessed.*
- *GU Unrankable — Currently unrankable due to a lack of information or due to substantially conflicting information about status or trends.*
- *G#G# Range Rank — A numeric range rank (e.g., G2G3) is used to indicate the range of uncertainty about the exact status of a taxon or community.*

G#T# INFRASPECIFIC TAXON — THE STATUS OF INFRASPECIFIC TAXA (SUBSPECIES OR VARIETIES) ARE INDICATED BY A "T-RANK" FOLLOWING THE SPECIES' GLOBAL RANK. RULES FOR ASSIGNING T-RANKS FOLLOW THE SAME PRINCIPLES AS THOSE FOR GLOBAL RANKS. HOWEVER, A T-RANK CANNOT IMPLY THE SUBSPECIES OR VARIETY IS MORE ABUNDANT THAN THE SPECIES. WITH THE SUBSPECIES, THE G-RANK REFLECTS THE CONDITION OF THE ENTIRE SPECIES, WHEREAS THE T-RANK REFLECTS THE GLOBAL SITUATION OF JUST THE SUBSPECIES OR VARIETY.

Q QUALIFIER: QUESTIONABLE TAXONOMY — THE DISTINCTIVENESS OF THIS ENTITY AS A TAXON OR COMMUNITY AT THE CURRENT LEVEL IS QUESTIONABLE; RESOLUTION OF THIS UNCERTAINTY MAY RESULT IN CHANGE FROM A SPECIES TO A SUBSPECIES OR HYBRID, OR INCLUSION OF THIS TAXON OR TYPE IN ANOTHER TAXON OR TYPE, WITH THE RESULTING TAXON HAVING A LOWER-PRIORITY (NUMERICALLY HIGHER) CONSERVATION STATUS RANK.

C QUALIFIER: CAPTIVE OR CULTIVATED ONLY — THE TAXON OR COMMUNITY AT PRESENT IS PRESUMED OR POSSIBLY EXTINCT OR ELIMINATED IN THE WILD ACROSS ITS ENTIRE NATIVE RANGE BUT IS EXTANT IN CULTIVATION, IN CAPTIVITY, AS A NATURALIZED POPULATION (OR POPULATIONS) OUTSIDE ITS NATIVE RANGE, OR AS A REINTRODUCED POPULATION OR ECOSYSTEM RESTORATION, NOT YET ESTABLISHED.

***STATE RANK IS A REFLECTION OF THE CONDITION AND IMPERILMENT OF AN ELEMENT THROUGHOUT ITS RANGE WITHIN THE STATE.*

SX PRESUMED EXTIRPATED — SPECIES OR COMMUNITY IS BELIEVED TO BE EXTIRPATED FROM THE STATE. NOT LOCATED DESPITE INTENSIVE SEARCHES OF HISTORICAL SITES AND OTHER APPROPRIATE HABITAT, AND VIRTUALLY NO LIKELIHOOD THAT IT WILL BE REDISCOVERED.

SH POSSIBLY EXTIRPATED (HISTORICAL) — SPECIES OR COMMUNITY OCCURRED HISTORICALLY IN THE STATE, AND THERE IS SOME POSSIBILITY THAT IT MAY BE REDISCOVERED. ALL SITES ARE HISTORICAL; THE ELEMENT HAS NOT BEEN SEEN FOR AT LEAST 20 YEARS, BUT SUITABLE HABITAT STILL EXISTS.

S1 CRITICALLY IMPERILED — CRITICALLY IMPERILED IN THE STATE BECAUSE OF EXTREME RARITY (OFTEN 5 OR FEWER OCCURRENCES) OR BECAUSE OF SOME FACTOR(S) SUCH AS VERY STEEP DECLINES MAKING IT ESPECIALLY VULNERABLE TO EXTIRPATION FROM THE STATE.

S2 IMPERILED — IMPERILED IN THE STATE BECAUSE OF RARITY DUE TO VERY RESTRICTED RANGE, VERY FEW POPULATIONS (OFTEN 20 OR FEWER), STEEP DECLINES, OR OTHER FACTORS MAKING IT VERY VULNERABLE TO EXTIRPATION FROM THE NATION OR STATE.

S3 VULNERABLE — VULNERABLE IN THE STATE DUE TO A RESTRICTED RANGE, RELATIVELY FEW POPULATIONS (OFTEN 80 OR FEWER), RECENT AND WIDESPREAD DECLINES, OR OTHER FACTORS MAKING IT VULNERABLE TO EXTIRPATION.

S4 APPARENTLY SECURE — UNCOMMON BUT NOT RARE; SOME CAUSE FOR LONG-TERM CONCERN DUE TO DECLINES OR OTHER FACTORS.

S5 SECURE — COMMON, WIDESPREAD, AND ABUNDANT IN THE STATE.

SNR UNRANKED — STATE CONSERVATION STATUS NOT YET ASSESSED.

SU UNRANKABLE — CURRENTLY UNRANKABLE DUE TO A LACK OF INFORMATION OR DUE TO SUBSTANTIALLY CONFLICTING INFORMATION ABOUT STATUS OR TRENDS.

S#S# RANGE RANK — A NUMERIC RANGE RANK (E.G., S2S3) IS USED TO INDICATE ANY RANGE OF UNCERTAINTY ABOUT THE STATUS OF THE SPECIES OR COMMUNITY.

Beginning on page 3.4-15, Table 3.4-5 is revised to amend the state status of the burrowing owl, add northern spotted owl, and add a source citation. The table is revised to read:

TABLE 3.4-5: SPECIAL STATUS ANIMALS PRESENT OR POTENTIALLY PRESENT (11-QUADRANGLE SEARCH AREA)

ANIMAL SPECIES	*COMMON NAME*	*FEDERAL STATUS*	*STATE STATUS*	*CDFW STATUS**	*STATE RANK***	*GLOBAL RANK***
			AMPHIBIANS			
Ambystoma californiense pop. 3	California tiger salamander - Sonoma County DPS	Endangered	Threatened	WL	S2	G2G3T2

*Source: CDFW CNDDB 2024. *FP = Fully Protected; SSC = Species of Special Concern. Northern spotted owl records from CDFW MASTEROWL database (Occurrence ID 201686; MRN0134 and MRN0073), as identified in CDFW correspondence dated August 31, 2026*

***Global Rank is a reflection of the overall condition and imperilment of an element throughout its global range.*

GX Presumed Extinct (species) — Not located despite intensive searches and virtually no likelihood of rediscovery. Extinct (ecological communities and systems) — Eliminated throughout its range, with no restoration potential due to extinction of dominant or characteristic taxa and/or elimination of the sites and ecological processes on which the type depends.

GH Possibly Extinct — Known from only historical occurrences but still some hope of rediscovery. There is evidence that the species may be extinct or the ecosystem may be eliminated throughout its range, but not

ENOUGH TO STATE THIS WITH CERTAINTY. EXAMPLES OF SUCH EVIDENCE INCLUDE 1) THAT A SPECIES HAS NOT BEEN DOCUMENTED IN APPROXIMATELY 20–40 YEARS DESPITE SOME SEARCHING OR SOME EVIDENCE OF SIGNIFICANT HABITAT LOSS OR DEGRADATION; 2) THAT A SPECIES OR ECOSYSTEM HAS BEEN SEARCHED FOR UNSUCCESSFULLY, BUT NOT THOROUGHLY ENOUGH TO PRESUME THAT IT IS EXTINCT OR ELIMINATED THROUGHOUT ITS RANGE.

- *G1 CRITICALLY IMPERILED — AT VERY HIGH RISK OF EXTINCTION DUE TO EXTREME RARITY (OFTEN 5 OR FEWER POPULATIONS), VERY STEEP DECLINES, OR OTHER FACTORS.*
- *G2 IMPERILED — AT HIGH RISK OF EXTINCTION DUE TO VERY RESTRICTED RANGE, VERY FEW POPULATIONS (OFTEN 20 OR FEWER), STEEP DECLINES, OR OTHER FACTORS.*
- *G3 VULNERABLE — AT MODERATE RISK OF EXTINCTION OR ELIMINATION DUE TO A RESTRICTED RANGE, RELATIVELY FEW POPULATIONS (OFTEN 80 OR FEWER), RECENT AND WIDESPREAD DECLINES, OR OTHER FACTORS.*
- *G4 APPARENTLY SECURE — UNCOMMON BUT NOT RARE; SOME CAUSE FOR LONG-TERM CONCERN DUE TO DECLINES OR OTHER FACTORS.*
- *G5 SECURE — COMMON; WIDESPREAD AND ABUNDANT.*
- *GNR UNRANKED — GLOBAL RANK NOT YET ASSESSED.*
- *GU UNRANKABLE — CURRENTLY UNRANKABLE DUE TO A LACK OF INFORMATION OR DUE TO SUBSTANTIALLY CONFLICTING INFORMATION ABOUT STATUS OR TRENDS.*
- *G#G# RANGE RANK — A NUMERIC RANGE RANK (E.G., G2G3) IS USED TO INDICATE THE RANGE OF UNCERTAINTY ABOUT THE EXACT STATUS OF A TAXON OR COMMUNITY.*
- *G#T# INFRASPECIFIC TAXON — THE STATUS OF INFRASPECIFIC TAXA (SUBSPECIES OR VARIETIES) ARE INDICATED BY A "T-RANK" FOLLOWING THE SPECIES' GLOBAL RANK. RULES FOR ASSIGNING T-RANKS FOLLOW THE SAME PRINCIPLES AS THOSE FOR GLOBAL RANKS. HOWEVER, A T-RANK CANNOT IMPLY THE SUBSPECIES OR VARIETY IS MORE ABUNDANT THAN THE SPECIES. WITH THE SUBSPECIES, THE G-RANK REFLECTS THE CONDITION OF THE ENTIRE SPECIES, WHEREAS THE T-RANK REFLECTS THE GLOBAL SITUATION OF JUST THE SUBSPECIES OR VARIETY.*
- *Q QUALIFIER: QUESTIONABLE TAXONOMY — THE DISTINCTIVENESS OF THIS ENTITY AS A TAXON OR COMMUNITY AT THE CURRENT LEVEL IS QUESTIONABLE; RESOLUTION OF THIS UNCERTAINTY MAY RESULT IN CHANGE FROM A SPECIES TO A SUBSPECIES OR HYBRID, OR INCLUSION OF THIS TAXON OR TYPE IN ANOTHER TAXON OR TYPE, WITH THE RESULTING TAXON HAVING A LOWER-PRIORITY (NUMERICALLY HIGHER) CONSERVATION STATUS RANK.*
- *C QUALIFIER: CAPTIVE OR CULTIVATED ONLY — THE TAXON OR COMMUNITY AT PRESENT IS PRESUMED OR POSSIBLY EXTINCT OR ELIMINATED IN THE WILD ACROSS ITS ENTIRE NATIVE RANGE BUT IS EXTANT IN CULTIVATION, IN CAPTIVITY, AS A NATURALIZED POPULATION (OR POPULATIONS) OUTSIDE ITS NATIVE RANGE, OR AS A REINTRODUCED POPULATION OR ECOSYSTEM RESTORATION, NOT YET ESTABLISHED.*

***STATE RANK IS A REFLECTION OF THE CONDITION AND IMPERILMENT OF AN ELEMENT THROUGHOUT ITS RANGE WITHIN THE STATE.*

- *SX PRESUMED EXTIRPATED — SPECIES OR COMMUNITY IS BELIEVED TO BE EXTIRPATED FROM THE STATE. NOT LOCATED DESPITE INTENSIVE SEARCHES OF HISTORICAL SITES AND OTHER APPROPRIATE HABITAT, AND VIRTUALLY NO LIKELIHOOD THAT IT WILL BE REDISCOVERED.*

S#S# RANGE RANK — A NUMERIC RANGE RANK (E.G., S2S3) IS USED TO INDICATE ANY RANGE OF UNCERTAINTY ABOUT THE STATUS OF THE SPECIES OR COMMUNITY.

Page 3.4-21, the discussion under the "Fish and Game Code §2050-2097 - California Endangered Species Act" heading is revised to read:

Fish and Game Code §2050-2097 - California Endangered Species Act

The California Endangered Species Act (CESA) protects certain plant and animal species when they are of special ecological, educational, historical, recreational, aesthetic, economic, and scientific value to the people of the State. CESA established that it is State policy to conserve, protect, restore, and enhance endangered species and their habitats.

CESA was expanded upon the original Native Plant Protection Act and enhanced legal protection for plants. To be consistent with federal regulations, CESA created the categories of "threatened" and "endangered" species. It converted all "rare" animals into CESA as threatened species, but did not do so for rare plants. Thus, there are three listing categories for plants in California: rare, threatened, and endangered. Under State law, plant and animal species may be formally designated through official listing by the California Fish and Game Commission. A species that has been accepted as a candidate for listing receives the full protection of CESA during the candidacy period, and take of a candidate species requires an incidental take permit from the CDFW.

Page 3.4-22, the discussion under the "Fish and Game Code §1601-1603 – Streambed Alteration" heading is revised to read:

Fish and Game Code §1601-1603 – Streambed Alteration

Under the California Fish and Game Code, CDFW has jurisdiction over any proposed activities that would divert or obstruct the natural flow or change the bed, channel, or bank of any lake or stream. Notification requirements extend to work within ephemeral and intermittent streams, watercourses with subsurface flow, and floodplains, and to associated riparian and wetland resources. Private landowners or project proponents must obtain a "Streambed Alteration Agreement" from CDFW prior to any alteration of a lakebed, stream channel, or their banks. Through this agreement, the CDFW may impose conditions to limit and fully mitigate impacts on fish and wildlife resources. These agreements are usually initiated through the local CDFW warden and will specify timing and construction conditions, including any mitigation necessary to protect fish and wildlife from impacts of the work. Watercourses in and adjacent to the Planning Area that may be subject to notification include San Anselmo Creek, Sleepy Hollow Creek, Ross Creek, and Corte Madera Creek.

Page 3.4-26, General Plan 2045 Action OSC-B.2.b and Action OSC-B.3.a are revised to read:

Action OSC-B.2.b: Rewilding Campaign. Explore the feasibility of a "Rewild San Anselmo" campaign to encourage ecological restoration and biological diversity on private and public lands. This effort may include developing accessible public resources, such as planting guides and design templates, organizing volunteer habitat restoration days open to a broad range of participants, and partnering with schools and community organizations to expand engagement and awareness.

…

Action OSC-B.3.a: Biological Surveys. Require surveys of sites, including buffer areas potentially affected by proposed projects, with potentially suitable habitat for special status species, including creek corridors, to determine the presence or absence of special status species, critical habitat, and riparian habitat~~,~~. Surveys are to be prepared by a qualified biologist prior to development and other management approvals. Require projects to implement measures to avoid or minimize harm to special status species, critical habitat, ~~and~~ riparian habitat, and other sensitive biological resources to a less than significant level. Consult with resource agencies as required by federal and State regulations. Document compliance with these requirements through the Town's General Plan implementation checklist or other applicable review procedure. Qualified biologists conducting surveys pursuant to this Action shall submit qualifying observations of special-status species and sensitive natural communities to the California Natural Diversity Database (CNDDB) and/or Spotted Owl Observations Database (SPOWDB), as applicable, consistent with applicable reporting protocols.

Page 3.4-27, General Plan 2045 Action OSC-B.6.a is revised to read:

Action OSC-B.6.a: Watershed Management. Ensure that new development complies with the requirements of the federal and ~~state~~ State Clean Water Acts, National Pollutant Discharge Elimination System (NPDES), and the Town's Urban Runoff Pollution Prevention regulations.

Page 3.4-30, the first paragraph under the "Special Status Animal Species" heading is revised to read:

SPECIAL STATUS ANIMAL SPECIES

The search revealed documented occurrences of 16 special status animal species within two miles of the Planning Area. The search revealed documented occurrences of 76 special status animal species within the 11-quadrangle search area of the Planning Area. Northern spotted owl, which is listed as threatened under CESA, has also been documented within the Planning Area and nesting has been documented within 900 feet of the Planning Area, and portions of the Planning Area are directly adjacent to USFWS-designated critical habitat for the species. Tables 3.4-4 and 3.4-5 provide a list of the special status animal species that are documented within two miles and 11 quads of the Planning Area, and current status. Figure 3.4-3 illustrates the location of documented occurrences within 11 quads of the Planning Area.

Page 3.4-32, the second full paragraph is revised to read:

Adoption and implementation of the General Plan 2045 policies and actions, combined with federal and State laws protecting biological resources would ~~ensure that adverse~~ avoid or reduce adverse effects on significant biological resources ~~are avoided~~ to a less-than-significant level. Therefore, the impact would be **less than significant**.

Page 3.4-33, the second full paragraph is revised to read:

> Adoption and implementation of the General Plan 2045 policies and actions, combined with federal and State laws protecting biological resources would ~~ensure that adverse~~ avoid or reduce adverse effects on significant riparian and other sensitive habitat ~~are avoided~~ to a less-than-significant level. Therefore, the impact would be **less than significant**.

Page 3.4-33, the second paragraph under Impact 3.4-3 is revised to read:

> San Anselmo contains aquatic and riparian habitats that qualify as State or federally protected wetlands and jurisdictional waters. The following aquatic resources are found in the Planning Area: Sleepy Hollow Creek and San Anselmo Creek. As noted in Impact 3.4-2, of the ~~two~~ four sensitive natural communities documented within the 11-quadrangle search area for San Anselmo, ~~neither~~ none of the sensitive natural communities identified within the 11-quadrangle search area have been identified within the Planning Area.

3.5 CULTURAL RESOURCES

Page 3.5-36, General Plan 2045 Action OSC-C.1.d is revised to read:

> **Action OSC-C.1.d: Discovery of Human Remains.** If an inadvertent discovery of human remains is made at any time during project-related construction activities or project planning, the following performance standards shall be met before implementing or continuing actions such as construction that may result in damage to or destruction of human remains. In accordance with the California Health and Safety Code (HSC), if human remains are encountered during ground-disturbing activities, the Town shall immediately halt potentially damaging excavation in the area of the remains and notify the Marin County Coroner and a qualified archeologist (meeting the Secretary of the Interior's Professional Qualifications Standards for Archeology) to determine the nature of the remains. The coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or ~~state~~ State lands (HSC Section 7050.5[b]).
>
> If the human remains are of historic age and are determined by the Marin County Coroner to be not of Native American origin, the Town will follow the provisions of HSC Section 7000 et seq. regarding the disinterment and removal of non–Native American human remains.
>
> If the coroner determines that the remains are those of a Native American, the coroner must contact the Native American Heritage Commission (NAHC) by phone within 24 hours of making that determination (HSC Section 7050[c]). After the coroner's findings have been made, the archaeologist and the NAHC-designated Most Likely Descendant, in consultation with the landowner, shall determine the ultimate treatment and disposition of the remains. The responsibilities of the Town for acting upon notification of a discovery of Native American human remains are identified in Public Resources Code Section 5097.9 et seq.

3.11 LAND USE, PLANNING, AND POPULATION/HOUSING

Page 3.11-12, the "Town of San Anselmo Municipal Code" heading inadvertently omitted text below it to summarize the relevant Town Code sections applicable to land use, planning, or population and housing. Therefore, the following text is added to the Regulatory Setting section:

Town of San Anselmo Municipal Code

Town Code Title 10, Chapter 3, Zoning. Section 10-3.101 of the San Anselmo Municipal Code (Town Code) adopts the Town's zoning ordinance based on the adopted General Plan and codifies it as Chapter 3 of Title 10.

Section 10-3.102, Purpose and intent, states that the zoning ordinance refines and further defines the General Plan's goals, objectives, policies, standards, and maps as they relate to preserving, enhancing, and developing the Town. The ordinance identifies which land uses are permitted or conditionally permitted, based on the General Plan and applicable federal and State law. It also sets the minimum development standards needed to protect public health, safety, and general welfare.

Town Code Section 10-3.103, Conflicts between the General Plan and zoning ordinance. This section states that where the General Plan and the zoning ordinance conflict, the General Plan's goals, objectives, policies, standards, and maps prevail.

Town Code Section 10-3.105, Applicability of the ordinance. This section applies the zoning ordinance to all private, public, quasi-public, institutional, and public utility properties, and to all lands, buildings, structures, and improvements within the Town limits. Any use of land contrary to the zoning ordinance is unlawful.

Town Code Section 10-3.201, Purpose and intent. This section divides the Town into zoning districts based on the intent of the General Plan. Each district corresponds to a General Plan land use designation. The section describes each district's purpose and general location, and for the residential and commercial districts it sets allowable residential densities and maximum population densities. It also establishes the Affordable Housing Overlay (AHO) District, an overlay to the R-3 and C-3 districts. The AHO allows higher densities and more flexible development standards when at least 40 percent of a project's units are deed-restricted for low-income households. Applicants using the AHO may choose either the Town's Objective Design and Development Standards (Title 10, Chapter 20) or the standard entitlement process.

Town Code Sections 10-3.301 and 10-3.302, Land Use Regulations. These sections establish permitted, conditionally permitted, and prohibited uses for each zoning district through the Land Use Regulations Table (Table 3A). Uses not listed in Table 3A are prohibited unless the Community Development Director, or designee, determines that the use is similar to a use that is permitted or conditionally permitted in that district.

Town Code Section 10-3.805, Required finding for a zoning ordinance amendment. This section states that a zoning ordinance amendment may be approved only upon a finding

that the amendment, in its entirety, complies with all provisions of the San Anselmo General Plan.

Town Code Title 10, Chapter 3, Article 9, Planned Development. This article provides a flexible way to develop lots that cannot appropriately be developed under rigid zoning standards because of their size, hillside location, unusual topography, natural resources, or aesthetic value. Planned developments are approved through a conditional use permit. They may adjust development standards and, in limited circumstances, allow uses not otherwise permitted in the underlying district, while supporting logical and orderly development consistent with the General Plan.

Town Code Title 10, Chapter 2, Subdivisions. This chapter, known as the San Anselmo Subdivision Law, regulates the division of land in accordance with the State Subdivision Map Act. It designates the Planning Commission as the Advisory Agency, with authority to approve, conditionally approve, or disapprove tentative and final maps. Where the chapter does not address a matter, the Subdivision Map Act applies.

Town Code Title 10, Chapter 3, Article 21, Demolition Permit. This article requires Planning Commission approval of a demolition permit before any commercial, professional, or residential structure in the Town is demolished. Section 10-3.2101 states that the Town seeks to maintain housing units to further the goals of the General Plan Housing Element. Section 10-3.2104 requires, among other findings, that the demolition be consistent with the General Plan. Section 10-3.2105 discourages projects that reduce the number of housing units in the Town, whether by demolishing a unit without replacing it or by replacing multiple units with fewer units.

Town Code Title 10, Chapter 21, Affordable Housing. This chapter requires new residential and non-residential development projects to contribute to affordable housing for households at a range of income levels. It implements the Housing Element by helping the Town meet its Regional Housing Needs Allocation, funding affordable housing development, and affirmatively furthering fair housing. Residential projects must provide affordable units and/or pay a housing in-lieu fee. Non-residential projects pay a commercial linkage fee. Fees are deposited into the Town's Affordable Housing Fund.

Town Code Title 10, Chapter 11, Density Bonus. This chapter implements the State Density Bonus Law (Government Code Sections 65915 through 65918). It sets the standards and procedures for granting density bonuses, incentives, and concessions to qualifying housing developments. Where the density allowed by a zoning district is inconsistent with the Housing Element land use designation, the Housing Element density prevails.

Town Code Title 10, Chapter 4, Urban Lot Splits and Two-Unit Development in Single-Family Zones. This chapter implements Government Code Sections 65852.21 and 66411.7 (Senate Bill 9). It regulates urban lot splits and two-unit developments on parcels in the R-1, R-1-H, and R-1-C zoning districts.

Town Code Title 10, Chapter 6, Accessory Dwelling Units. This chapter provides for the creation and regulation of accessory dwelling units (ADUs) and junior accessory dwelling

units (JADUs) consistent with State law. Section 10-6.401 states the Town's intent to preserve ADUs and discourage converting them for use by the primary dwelling.

Town Code Title 10, Chapter 12, Emergency Shelter. This chapter is intended to help the Town accommodate homeless shelters by designating zones where emergency shelters can be located without discretionary approval. Emergency shelters are a permitted use in the Limited Commercial, General Commercial, and Public Facility zones when the site is within one-quarter mile of a transit stop, subject to on-site management, security, and lighting standards.

Page 3.11-12, the second paragraph under the "Regional Transportation Plan and Sustainable Communities Strategy" heading is revised to read:

Key housing and land use initiatives include concentrating growth in Growth Geographies, Priority Development Areas, and ~~Tansit~~ Transit-Rich Areas to align housing supply with transit access. Strategies emphasize expanding the supply of affordable housing, allowing greater mix of densities and housing types, and repurposing underutilized commercial spaces like aging malls and office parks into mixed income neighborhoods. The plan also prioritizes preserving existing affordable housing and implementing renter protections to mitigate displacement and ensure that low income households gain improved access to opportunity and reduce cost-of-living burdens.

Page 3.11-18, General Plan 2045 Policy LU-A.5 is revised to read:

Policy LU-A.5: Reserve Areas. Consider increases in density and modified development standards or incentives in areas designated as Reserve Areas (see Glossary) on Figure LU-2 to address ~~future~~ housing needs in future Housing Element updates to ~~and~~ help meet the Town's future Regional Housing Needs Allocations, if necessary.

Page 3.11-18, General Plan 2045 Policy LU-B.3 is revised to read:

Policy LU-B.3: ~~Mixed~~ Mixed-Use Development. Encourage ~~mixed~~ mixed-use development in downtown and along the Sir Francis Drake Boulevard and Red Hill Avenue/Greenfield Avenue corridors as a means of increasing the customer base for local businesses while creating new ~~mixed~~ mixed-use and housing opportunities for residents in close proximity to services and transit.

3.6 ENERGY

Page 3.6-11, General Plan Action SU-A.1.b is revised to read:

Action SU-A.1.b: Community Education, Engagement, and Waste Reduction and Alternative Transportation Initiatives. Engage, educate, and support the community in adopting sustainable lifestyle choices, reducing waste, and shifting travel behavior to support greenhouse gas reduction and public health. Collaborate with the Climate Action Commission and regional partners to:

- Climate Education & Engagement: Provide information and engagement opportunities on climate vulnerabilities, health connections, greenhouse gas reduction strategies, and community resilience.
- Sustainable Practices Outreach: Promote actions that reduce natural resource consumption, increase community awareness of sustainable behaviors, and support achievement of Town sustainability goals.
- Low-Carbon Footprint Diet: Promote the environmental, ecological, and health benefits of low-carbon dietary choices through education, outreach, and partnerships with local organizations.
- Plastic Waste Reduction: Conduct public outreach on the impacts of plastic pollution, encourage waste reduction strategies, and support compliance with the Town's Single-Use Plastics Ordinance.

- Public Transit Education: Partner with transit agencies to publicize available transit options and improve first-mile/last-mile connections to transit stops.
- Active Transportation Promotion: Encourage walking and bicycling among residents and employees as a strategy to reduce greenhouse gas emissions and improve public health. Publicize bicycle routes at schools, parks, and transit facilities, and support bicycle ~~awareness~~ and safety campaigns.

Page 3.6-12, General Plan 2045 Action SU-A.1.c is removed:

> ~~**Action SU-A.1.c: Plastic Waste Education and Compliance.** Conduct outreach and education to reduce plastic pollution and support compliance with the Town's Single-Use Plastics Ordinance, in coordination with waste management partners.~~

Page 3.6-13, General Plan 2045 Action C-A.3.b is revised to read:

> **Action C-A.3.b: VMT and Transportation Improvements**. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT and evaluate opportunities to reduce automobile travel through land use planning, transportation demand management, active transportation, transit, shared mobility, and parking strategies.

3.7 GEOLOGY, SOILS, AND SEISMICITY

Page 3.7-19, General Plan 2045 Policy S-A.10 and Action S-A.10a are revised to read:

> **Policy S-A.10: Post-Disaster Recovery.** Expand and enhance post disaster recovery strategies, prioritizing community resilience, sustainability, and equitable recovery for all residents.
>
> **Action S-A.10.a: Post-Disaster Recovery Framework.** Develop an all-hazards Post-Disaster Recovery Framework for use after a major incident or event that considers the needs of different segments of the community.

Page 3.7-21, General Plan 2045 Policy S-B.1 is revised to read:

> **Policy S-B.1: Seismic Codes.** Require that new development and redevelopment meet the most up-to-date seismic codes and ~~/~~regulations and use methods of construction to withstand stress caused by an earthquake.

3.8 GREENHOUSE GASES AND CLIMATE CHANGE

Page 3.8-23, General Plan 2045 Action C-A.1.a is revised, Action C-A.1.b is added, Action C-A.1.b from the Draft EIR is renumbered to Action C-A.1.c, Action C-A.1.d is added, and Action C-A.3.b is revised to read:

> **Action C-A.1.a: Complete Streets and Human-Scale Enhancements**. Approach every transportation project and program as ~~opportunities~~ an opportunity to improve safety, accessibility, and mobility for users of all ages, abilities, and transportation needs. Work with relevant departments, agencies, and jurisdictions to incorporate Complete Streets design features, such as accessible curb ramps, crosswalks, transit facilities, sidewalks, and bicycle infrastructure, into existing streets. Where feasible, integrate human-scale amenities including street trees, landscaping, benches, and pedestrian-scale lighting to enhance comfort, visual quality, and encourage walking, bicycling, and transit use.
>
> **Action C-A.1.b: Safe System Approach.** Incorporate a Safe System approach into the planning, design, operation, and maintenance of the transportation network. Design and manage transportation infrastructure to anticipate human error, encourage safe speeds, reduce conflicts, and provide multiple layers of protection so that crashes do not result in fatalities or serious injuries. Coordinate implementation with TAM's countywide Local Road Safety Plan and subsequent local and regional safety planning efforts.
>
> **Action C-A.1.c~~b~~: Standards for Infrastructure Improvements**. Develop Public Improvement Engineering Standards or other objective standards for property subdivision or development projects to specify required off-site infrastructure improvements, such as sidewalks, that would accommodate or mitigate estimated project traffic impacts.
>
> **Action C-A.1.d: Multimodal Transportation Performance Monitoring.** Monitor and evaluate multimodal transportation performance using available indicators such as fatal and serious-injury crashes, completion of pedestrian and bicycle network improvements, transit accessibility and reliability, mode share, VMT per capita, pavement condition, and travel conditions along key corridors. Apply the results to assess progress toward General Plan goals, identify emerging needs, support grant applications, and prioritize transportation investments.
>
> ...
>
> **Action C-A.3.b: VMT and Transportation Improvements**. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT and evaluate opportunities to reduce automobile travel through land use planning, transportation demand management, active transportation, transit, shared mobility, and parking strategies.

Page 3.8-24, General Plan 2045 Policy C-B.2 and Action C-B.2.b are revised to read:

> **Policy C-B.2: ~~Roadway Traffic Circulation~~ Multimodal Corridor Planning**. ~~Maintain adequate traffic circulation while balancing the needs of all system users along~~ Plan for and manage Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, Butterfield Road, the Hub, and ~~in~~ downtown as integrated multimodal corridors that balance local and regional mobility with the needs of all transportation system users.
>
> **Action C-B.2.b: Major Thoroughfare Roadway Improvements**. Improve Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, and intersections along these roadways by investing in transportation infrastructure that addresses safety, traffic operations, pedestrian and bicycle access, transit reliability, emergency response, and regional travel as interconnected objectives.~~to improve safety and accessibility for pedestrians and other non-vehicle roadway users while maintaining adequate circulation for regional through traffic.~~

Page 3.8-25, General Plan 2045 Policy C-C.1 and Policy C-C.3 are revised to read:

> **Policy C-C.1: Bicycle and Pedestrian Master Plan**. Regularly review, update, and implement the Town's Bicycle and Pedestrian Master Plan to maintain eligibility for grant funding and to advance a safe, accessible, and connected active transportation network for users of all ages and abilities. Future updates should comprehensively address walking, conventional bicycles, e-bikes and other emerging micromobility, accessibility, Safe Routes to School, intersection safety, and first- and last-mile connections to transit.
>
> **Policy C-C.3: Bicycle Network**. Continue to expand San Anselmo's bicycle network to safely and comfortably connect residents to schools, shopping, work, recreation, the Cross-Marin Bikeway, and other local and regional ~~daily~~ destinations, with a focus on improved paths and crossings at larger and high vehicle volume roadways and traffic calming installations and signage on local streets.

Page 3.8-26, General Plan 2045 Action C-C.6.a is revised to read:

> **Action C-C.6.a: Transit Agency Partnerships**. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends. In coordination with TAM and transit operators, identify and support feasible transit-priority improvements that increase transit travel speeds and reliability along local roadways identified in TAM's Countywide Transportation Plan Transit Priority Network.

3.9 HAZARDS AND HAZARDOUS MATERIALS

Page 3.9-18, General Plan 2045 Policy S-A.10 and Action S-A.10.a are revised to read:

> **Policy S-A.10: Post-~~–~~Disaster Recovery.** Expand and enhance post disaster recovery strategies, prioritizing community resilience, sustainability, and equitable recovery for all residents.

Action S-A.10.a: Post-Disaster Recovery Framework. Develop an all-hazards Post-Disaster Recovery Framework for use after a major incident or event that considers the needs of different segments of the community.

Page 3.9-19, General Plan 2045 Action S-E.1.d is revised to read:

Action S-E.1.d: Biodiversity, Fire, and Fuels Integrated Plan. Prepare a Biodiversity, Fire, and Fuels Integrated Plan (BFFIP) in conjunction with Ross Valley Fire Department, the Marin Wildfire Prevention Authority and environmental stakeholders, including the California Native Plant Society, that describes actions necessary to minimize fire hazards and maximize ecological health in Town open space areas in compliance with the Marin County Community Wildfire Protection Plan and principles of the Ecologically Sound Practices Partnership.

3.10 HYDROLOGY AND WATER QUALITY

Page 3.10-19, General Plan 2045 Action OSC-B.6.a is revised to read:

Action OSC-B.6.a: Watershed Management. Ensure that new development complies with the requirements of the federal and ~~state~~ State Clean Water Acts, National Pollutant Discharge Elimination System (NPDES), and the Town's Urban Runoff Pollution Prevention regulations.

3.11 LAND USE, PLANNING, AND POPULATION/HOUSING

Page 3.11-18, General Plan 2045 Policy LU-A.5 and Policy LU-B.3 are revised to read:

Policy LU-A.5: Reserve Areas. Consider increases in density and modified development standards or incentives in areas designated as Reserve Areas (see Glossary) on Figure LU-2 to address ~~future~~ housing needs in future Housing Element updates to ~~and~~ help meet the Town's future Regional Housing Needs Allocations, if necessary.

…

Policy LU-B.3: ~~Mixed~~ Mixed-Use Development. Encourage ~~mixed~~ mixed-use development in downtown and along the Sir Francis Drake Boulevard and Red Hill Avenue/Greenfield Avenue corridors as a means of increasing the customer base for local businesses while creating new ~~mixed~~ mixed-use and housing opportunities for residents in close proximity to services and transit.

3.12 NOISE

Page 3.12-15, General Plan 2045 Policy N-A.1 is revised to read:

Policy N-A.1: Compatibility of New Land Uses. Use the Noise and Land Use Compatibility Guidelines in Figure N-3 to establish and maintain acceptable noise levels for different land uses, consistent with S~~s~~tate and federal guidelines, to protect the health and wellbeing of residents and occupants. Require acoustical analysis and feasible noise attenuation methods for new development and/or land uses that may be exposed to or generate noise exceeding applicable standards.

3.14 TRANSPORTATION

Page 3.14-9, text is added to the bottom of the page, following the paragraph under the heading "California Department of Transportation":

The Caltrans "*District 4 Pedestrian Plan for the Bay Area*" (2021) covers the nine Bay Area counties. It was prepared to identify and prioritize locations on the State Highway System where pedestrian improvements would do the most for people walking and advance the state's active transportation goals. Consistent with *Toward an Active California* (Caltrans' statewide bicycle and pedestrian plan, adopted in 2017), the Plan seeks to improve mobility by shifting trips from driving to walking, bicycling, and transit. It also aims to improve safety for all users in support of Toward Zero Deaths, advance equity for disadvantaged communities, and keep existing facilities in good repair. The Plan notes that walking is prohibited along a large share of the District's highway miles and that many Main Street segments lack continuous sidewalks on both sides. It also recognizes that past freeway construction divided many established communities, particularly communities of color. Drawing on local plans, public surveys and webmaps, walk audits, and analysis of State Highway System data, the Plan identifies thousands of needs for pedestrians walking along and crossing state highways. These include sidewalk gaps and poor-condition sidewalks, high-speed corridors, stressful intersections, infrequent freeway crossings, and gaps at interchanges. Needs are ranked into three priority tiers using demand, crash history, equity, and facility condition. To implement the Plan, Caltrans will build pedestrian improvements into planned highway projects, set Complete Streets performance targets, and pursue funding through the State Highway Operation and Protection Program (SHOPP), the Active Transportation Program, and SB 1. Local and regional agencies are encouraged to include the identified needs in their general and specific plans, seek planning grants, and partner with Caltrans during project development.

The Caltrans "*Bay Area Bike Plan Update*" (2025) covers the nine Bay Area counties and updates the 2018 Caltrans District 4 Bike Plan. It was prepared to identify and prioritize bicycling needs on and across the State Highway System so that people of all ages, abilities, and incomes can bike safely and conveniently. Consistent with *Toward an Active California* and Caltrans Director's Policy 37 on Complete Streets, the Plan's goals are to eliminate fatal and severe bicycle-involved collisions and to increase biking through comfortable, convenient, and connected bikeways. It also seeks to remove barriers so that everyone has access to high-quality bikeways, regardless of race, income, identity, or where they live. The Plan notes that most of the District's highway system is too high-stress for most bicyclists, and that bicycle collisions tend to concentrate at intersections, at interchanges, and along a small number of high-speed routes. Drawing on public surveys, local bike plans, collision data, and level-of-traffic-stress analysis, the Plan identifies hundreds of new needs. These include corridor bikeways, safer intersection and interchange crossings, new overcrossings and undercrossings, and removal of barriers along high-stress routes. Needs are ranked into three priority tiers using equally weighted safety, mobility, and equity metrics. To implement the Plan, Caltrans will coordinate with local agencies from project scoping through design, and leverage partner funding. It will also rely primarily on the

SHOPP, initiate standalone bicycle projects, and track Complete Streets performance targets. The Plan also acknowledges ongoing challenges, including restrictive design standards, delays and costs for locally sponsored oversight projects, local agencies' limited capacity to maintain facilities, the piecemeal nature of SHOPP delivery, and reduced Active Transportation Program (ATP) funding.

Caltrans Director's Policy 37 (DP-37), "Complete Streets," dated December 7, 2021, supersedes the prior Deputy Directive 64-R2 (2014). It sets Caltrans' department-wide policy for serving people walking, biking, and taking transit on the State Highway System. DP-37 states that "all transportation projects funded or overseen by Caltrans will provide comfortable, convenient, and connected complete streets facilities for people walking, biking, and taking transit or passenger rail unless an exception is documented and approved." The earlier directive called more broadly for Caltrans to provide for the needs of travelers of all ages and abilities. DP-37 makes complete streets facilities the default and requires the District Director to approve any decision to leave them out of a capital or maintenance project. Projects document those decisions through the Complete Streets Decision Document (CSDD) process. DP-37 also ties complete streets directly to the state's climate, health, equity, and environmental goals. It gives priority to underserved communities historically harmed and divided by the transportation network, and it commits Caltrans to removing unnecessary barriers for locally sponsored projects. To implement the policy, Caltrans will develop guidance by place type, provide design flexibility training, update its tracking processes, and prepare a biennial Complete Streets Action Plan.

Page 3.14-19, General Plan 2045 Action C-A.1.a is revised, Action C-A.1.b is added, Action C-A.1.b from the Draft EIR is renumbered to Action C-A.1.c, and Action C-A.1.d is added Action C-A.3.b and are revised to read:

Action C-A.1.a: Complete Streets and Human-Scale Enhancements. Approach every transportation project and program as ~~opportunities~~ an opportunity to improve safety, accessibility, and mobility for users of all ages, abilities, and transportation needs. Work with relevant departments, agencies, and jurisdictions to incorporate Complete Streets design features, such as accessible curb ramps, crosswalks, transit facilities, sidewalks, and bicycle infrastructure, into existing streets. Where feasible, integrate human-scale amenities including street trees, landscaping, benches, and pedestrian-scale lighting to enhance comfort, visual quality, and encourage walking, bicycling, and transit use.

Action C-A.1.b: Safe System Approach. Incorporate a Safe System approach into the planning, design, operation, and maintenance of the transportation network. Design and manage transportation infrastructure to anticipate human error, encourage safe speeds, reduce conflicts, and provide multiple layers of protection so that crashes do not result in fatalities or serious injuries. Coordinate implementation with TAM's countywide Local Road Safety Plan and subsequent local and regional safety planning efforts.

Action C-A.1.c~~b~~: Standards for Infrastructure Improvements. Develop Public Improvement Engineering Standards or other objective standards for property subdivision or development

projects to specify required off-site infrastructure improvements, such as sidewalks, that would accommodate or mitigate estimated project traffic impacts.

Action C-A.1.d: Multimodal Transportation Performance Monitoring. Monitor and evaluate multimodal transportation performance using available indicators such as fatal and serious-injury crashes, completion of pedestrian and bicycle network improvements, transit accessibility and reliability, mode share, VMT per capita, pavement condition, and travel conditions along key corridors. Apply the results to assess progress toward General Plan goals, identify emerging needs, support grant applications, and prioritize transportation investments.

…

Action C-A.3.b: VMT and Transportation Improvements. When planning and prioritizing upcoming capital improvements, account for the potential of projects to reduce VMT and evaluate opportunities to reduce automobile travel through land use planning, transportation demand management, active transportation, transit, shared mobility, and parking strategies.

Page 3.14-20, General Plan 2045 Policy C-B.2 is revised to read:

Policy C-B.2: ~~Roadway Traffic Circulation~~ Multimodal Corridor Planning. ~~Maintain adequate traffic circulation while balancing the needs of all system users along~~ Plan for and manage Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, Butterfield Road, the Hub, and ~~in~~ downtown as integrated multimodal corridors that balance local and regional mobility with the needs of all transportation system users.

Page 3.14-21, General Plan 2045 Action C-B.2.b is revised to read:

Action C-B.2.b: Major Thoroughfare Roadway Improvements. Improve Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, and intersections along these roadways by investing in transportation infrastructure that addresses safety, traffic operations, pedestrian and bicycle access, transit reliability, emergency response, and regional travel as interconnected objectives.~~to improve safety and accessibility for pedestrians and other non-vehicle roadway users while maintaining adequate circulation for regional through traffic.~~

Page 3.14-22, General Plan 2045 Policy C-C.1 and Policy C-C.3 are revised to read:

Policy C-C.1: Bicycle and Pedestrian Master Plan. Regularly review, update, and implement the Town's Bicycle and Pedestrian Master Plan to maintain eligibility for grant funding and to advance a safe, accessible, and connected active transportation network for users of all ages and abilities. Future updates should comprehensively address walking, conventional bicycles, e-bikes and other emerging micromobility, accessibility, Safe Routes to School, intersection safety, and first- and last-mile connections to transit.

…

Policy C-C.3: Bicycle Network. Continue to expand San Anselmo's bicycle network to safely and comfortably connect residents to schools, shopping, work, recreation, the Cross-Marin

Bikeway, and other local and regional ~~daily~~ destinations, with a focus on improved paths and crossings at larger and high vehicle volume roadways and traffic calming installations and signage on local streets.

San Anselmo Roadway Crash Locations (2017-20

3.1 INTRODUCTION

This section contains the comment letters that were received on the Draft EIR. Following each comment letter is a response by the Town intended to supplement, clarify, or amend information provided in the Draft EIR and/or refer the reader to the appropriate place in the document where the requested information can be found. Comments that are not directly related to environmental issues may be discussed or noted for the record, although CEQA does not require any response to comments that do not raise significant environmental issues. Where text changes in the Draft EIR are warranted based upon comments on the Draft EIR, those changes are generally included following the response to comment. However, in some cases when the text change is extensive, the reader is instead referred to Chapter 2, Revisions to the Draft EIR, where all the text changes can be found.

A response to a comment may provide a cross-reference to another response to comment. To avoid repetition and an unnecessarily lengthy document, this occurs when the same, or very similar, comment was made or question asked, and an appropriate response was included elsewhere.

CAUTION: External Sender

Hello,

The California Governor's Office of Emergency Services (Cal OES) Local Hazard Mitigation Planning Team has taken the time to review the proposed updates/changes to your General Plan. Government Code 65302(g)(8) states "before preparing or revising its Safety Element, each city and county shall consult…. the Office of Emergency Services for the purpose of including information known by and available to the department."

The Cal OES Local Hazard Mitigation Planning Team reviews and compares your current Safety Element hazards against those listed in the most recent Federal Emergency Management Agency (FEMA) approved Marin County Multi-Jurisdictional Local Hazard Mitigation Plan. A1-1

Our office has reviewed your proposed Safety Element and found no substantive changes to your hazard profiles when compared against the most recent FEMA-approved Marin County Multi-Jurisdictional Local Hazard Mitigation Plan.

Please reach out to our office at mitigationplanning@caloes.ca.gov if you have any further questions or need additional assistance, including AB 2140 compliance.

Kind regards,

William Graulty
Office Technician
Hazard Mitigation Planning Division
California Governor's Office of Emergency Services
Cal OES
GOVERNOR'S OFFICE
OF EMERGENCY SERVICES
Office: (916) 328-7874

William.Graulty@CalOES.ca.gov

Letter A1 **William Graulty, Office Technician, Hazard Mitigation Planning Division, California Governor's Office of Emergency Services (Cal OES)**
Response August 10, 2026

A1-1 The comment identifies that the Town's Safety Element does not substantially differ from the Federal Emergency Management Agency (FEMA) approved Marin County Multi-Jurisdictional Local Hazard Mitigation Plan. The comment does not provide remarks on the Draft EIR, and no further response is required.

Subject: San Anselmo General Plan 2045 Update, Programmatic Environmental Impact Report, SCH No. 2025100912, Town of San Anselmo, Marin County

Dear Heidi Scoble:

The California Department of Fish and Wildlife (CDFW) received a Notice of Intent to Adopt a Programmatic Environmental Impact Report (EIR) from the Town of San Anselmo (Town) for the San Anselmo General Plan 2045 Update (project) pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines. CDFW previously submitted a letter dated November 13, 2025, in response to the EIR Notice of Preparation (NOP) for the project.

CDFW is submitting comments on the EIR to inform the Town, as the Lead Agency, of our concerns regarding potentially significant impacts to biological resources associated with the project.

CDFW ROLE

A2-1

CDFW is a **Trustee Agency** with responsibility under CEQA (Pub. Resources Code, § 21000 et seq.) pursuant to CEQA Guidelines section 15386 for commenting on projects that could impact fish, plant, and wildlife resources. CDFW is also considered a **Responsible Agency** if a project would require discretionary approval, such as permits issued under the California Endangered Species Act (CESA), Lake and Streambed Alteration (LSA) Program, or other provisions of the Fish and Game Code that afford protection to the state's fish and wildlife trust resources.

PROJECT DESCRIPTION SUMMARY

Proponent: Town of San Anselmo

Objective: Upon adoption, the project will accommodate future growth in the Town of San Anselmo, including new businesses, expansion of existing businesses, and new residential uses

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

consistent with the Land Use Designations and Draft Land Use Map. The project's full buildout conditions are expected to result in 2,279 new residential units accommodating an additional 5,356 residents and an addition of approximately 752,133 square feet of non-residential uses. The project also establishes the land use designations, including the allowed uses, intensities, and densities of development, established by the Land Use Map. The project covers a wide range of social, economic, infrastructure, and natural resource issues.

The project would replace the Town's existing General Plan, which was adopted in 1988 and occasionally amended, with the most recent amendments adopted in 2024. In addition, in 2023, the Town updated the Housing Element, which addresses the 2023 to 2031 planning period and the Town's Regional Housing Needs Allocation of 833 units. The Town would implement the project by requiring development, infrastructure improvements, and other projects to be consistent with its policies and implementing the actions included in the project, including subsequent project-level environmental review, as required by CEQA

A2-1 con't

Location: The project area, which covers the Town of San Anselmo and its Sphere of Influence, is in southeastern Marin County and bordered by the City of San Rafael to the east, the Town of Fairfax and unincorporated Marin County to the west, the Town of Ross to the south, and unincorporated Marin County to the north. The project is centered at approximately 37.982385° N, 122.568986° W.

REGULATORY REQUIREMENTS

California Endangered Species Act

Please be advised that a CESA Incidental Take Permit (ITP) must be obtained if the project has the potential to result in "take" of plants or animals listed or candidates under CESA, either during construction or over the life of the project. **The project has the potential to result in take of Santa Cruz tarplant (*Holocarpha macradenia*), which CESA listed as endangered; northern spotted owl (*Strix occidentalis caurina*) and North Coast semaphore grass (*Pleuropogon hooverianus*), which are CESA listed as threatened species; and burrowing owl (*Athene cunicularia*), which is a CESA candidate species, as further described below.** Issuance of a CESA ITP is subject to CEQA documentation; the CEQA document must specify impacts, mitigation measures, and a mitigation monitoring and reporting program. If the project will impact CESA listed species, early consultation is encouraged, as significant modification to the project and mitigation measures may be required in order to obtain a CESA ITP.

A2-2

CEQA requires a Mandatory Finding of Significance if a project is likely to substantially restrict the range or reduce the population of a threatened or endangered species. (Pub. Resources Code, §§ 21001, subd. (c) & 21083; CEQA Guidelines, §§ 15380, 15064, & 15065.). Impacts must be avoided or mitigated to less-than-significant levels unless the CEQA Lead

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

Agency makes and supports Findings of Overriding Consideration (FOC). The CEQA Lead Agency's FOC does not eliminate the project proponent's obligation to comply with CESA.

Lake and Streambed Alteration

An LSA Notification, pursuant to Fish and Game Code section 1600 et seq., is required for project activities affecting lakes or streams and associated riparian habitat. Notification is required for any activity that may substantially divert or obstruct the natural flow; change or use material from the bed, channel, or bank including associated riparian or wetland resources; or deposit or dispose of material where it may pass into a river, lake, or stream. Work within ephemeral streams, washes, watercourses with a subsurface flow, and floodplains are subject to LSA Notification requirements. **Project activities may impact San Anselmo Creek, Sleepy Hollow Creek, Ross Creek, Corte Madera Creek, and other streams, therefore, an LSA Notification may be warranted, as further described below.** CDFW would consider the CEQA document for the project and may issue an LSA Agreement. CDFW may not execute the final LSA Agreement until it has complied with CEQA as a Responsible Agency.

A2-2 con't

Raptors and Other Nesting Birds

CDFW has jurisdiction over actions that may result in the disturbance or destruction of active nest sites or the unauthorized take of birds. Fish and Game Code sections protecting birds, their eggs, and nests include sections 3503 (regarding unlawful take, possession or needless destruction of the nests or eggs of any bird), 3503.5 (regarding the take, possession or destruction of any birds-of-prey or their nests or eggs), and 3513 (regarding unlawful take of any migratory nongame bird). Migratory birds are also protected under the federal Migratory Bird Treaty Act.

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist the Town in adequately identifying and/or mitigating the project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources. **Attachment 1** includes an example of CDFW's recommended mitigation measures in a Draft Mitigation Monitoring and Reporting Program.

A2-3

I. Adequate CEQA Review of Project-Level Impacts

COMMENT 1: Program EIR Subsequent Project Review

Issue: The EIR is a Program EIR but does not include a checklist for subsequent project review. As described in CDFW's letter response to the NOP, while Program EIRs have a necessarily

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

broad scope, CDFW recommends providing as much information related to anticipated future activities as possible. CDFW recognizes that, pursuant to CEQA Guidelines section 15152, subdivision (c), if a Lead Agency is using the tiering process in connection with an EIR or large-scale planning approval, the development of detailed, site-specific information may not be feasible and can be deferred, in many instances, until such time as the Lead Agency prepares a future environmental document. This future environmental document would cover a project of a more limited geographical scale and is appropriate if the deferred information does not prevent adequate identification of significant effects of the planning approval at hand. The CEQA Guidelines section 15168, subdivision (c)(4) states, "Where the later activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were within the scope of the program EIR." Based on CEQA Guidelines section 15183.3 and associated Appendix N Checklist, and consistent with other program EIRs (e.g., California Vegetation Treatment Program Environmental Impact Report and associated checklist in Appendix PD-3 - Project-Specific Analysis at: https://bof.fire.ca.gov/projects-and-programs/calvtp-homepage-and%20storymap/#:~:text=The%20CalVTP%20Program%20Environmental%20Impact,with%20the%20CalVTP%20Program%20EIR), CDFW recommends creating a procedure or checklist for evaluating subsequent project impacts on biological resources to determine if they are within the scope of the Program EIR or if an additional environmental document is warranted. This checklist should be included as an attachment to the EIR. Future analysis should include all special-status species and sensitive habitat including, but not limited to, species considered rare, threatened, or endangered species pursuant to CEQA Guidelines, section 15380. A2-3 con't

When used appropriately, the checklist should be accompanied by enough relevant information and reasonable inferences to support a "within the scope" of the EIR conclusion. For subsequent project activities that may affect sensitive biological resources, a site-specific analysis should be prepared by a Qualified Biologist to provide the necessary supporting information. In addition, the checklist should cite the specific portions of the EIR, including page and section references, containing the analysis of the subsequent project activities' significant effects and indicate whether it incorporates all applicable mitigation measures from the EIR.

II. Mandatory Findings of Significance: Does the project have the potential to substantially reduce the number or restrict the range of a rare or endangered plant or animal?

And,

Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status A2-4

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

species in local or regional plans, policies, or regulations, or by CDFW or United States Fish and Wildlife Service (USFWS)?

Comment 2: Deferred Mitigation

Issue, specific impacts, why they may occur and be potentially significant: If the project may result in physical changes in the environment, such as facilitating development, then the project could: 1) reduce the number or restrict the range of an endangered, rare, or threatened species, or 2) have a substantial adverse effect, either directly or through habitat modifications, on candidate, sensitive, or special-status species. The EIR documents 93 special-status plant species and 76 special-status animal species either within or in the vicinity of the Town of San Anselmo. The project area has potential to support special-status species including, but not limited to, northern spotted owl and North Coast semaphore grass, CESA listed as threatened species, and burrowing owl, a CESA candidate species and California Species of Special Concern, in addition to the other species mentioned above, however, the EIR does not include adequate mitigation measures for impacts to CESA-listed species as further described below.

A2-4 con't

Northern spotted owl (Northern Spotted Owl Occurrence ID 201686) have been documented within the project area and nesting within 900 feet of the project area (MASTEROWL MRN0134 and MRN0073). Portions of the project are directly adjacent to critical habitat for northern spotted owl, as designated by the USFWS (available here: https://fws.maps.arcgis.com/home/webmap/viewer.html?webmap=9d8de5e265ad4fe09893cf75b8dbfb77).

The EIR indicates that grasslands and wetlands may be present within project sites. Grasslands in the Town may support Santa Cruz tarplant and wetlands in the Town may support North Coast semaphore grass, and loss of grassland or wetland habitat may result in in mortality of individuals or indirect impacts from degradation of habitat adjacent to ground disturbance due to altering hydrological conditions or other factors may occur.

The project could result in burrowing owl injury or mortality of adults, and permanent wintering (i.e., non-nesting) habitat loss. Additionally, the project may result in a permanent reduction of burrowing owl foraging habitat in Marin County. Burrowing owl is a special-status species and was approved as a candidate species under CESA because the species' population viability and survival are adversely affected by risk factors such as precipitous declines from habitat loss, fragmentation, and degradation; evictions from wintering sites without habitat mitigation; and human disturbance (Shuford and Gardali 2008; Department of Fish and Game Staff Report on Burrowing Owl Mitigation (2012); personal communication, CDFW Statewide Burrowing Owl Coordinator Esther Burkett, May 13, 2022, CDFW Petition for Western burrowing owl (*Athene cunicularia hypugaea*), 2024). Based on the foregoing, if

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

burrowing owl are wintering on or within 500 meters (1,640 feet) of the project site, or if burrowing owl foraging habitat is removed, project impacts to burrowing owl would be potentially significant.

The EIR states that impacts to biological resources would be less-than-significant in part because "Implementation of the General Plan 2045 policies and actions listed previously would reduce the potential for impacts related to this topic. Subsequent development projects will be required to comply with the General Plan and applicable federal site-specific biological resources assessment as required by CEQA for development located in or adjacent to potential habitat or ecologically sensitive areas. If any special-status species or sensitive habitats are identified, contact the appropriate resource agencies and establish appropriate management strategies to reduce impacts on sensitive habitat and special status species" (see EIR page 3.4-31). In addition, the EIR states Action OSC-B.3a "require(s) surveys of sites, including buffer areas potentially affected by proposed projects, with potentially suitable habitat for special-status species, including creek corridors, to determine the presence or absence of special-status species, critical habitat, and riparian habitat to be prepared by a qualified biologist prior to development and other management approvals. Require projects to implement measures to avoid or minimize harm to special-status species, critical habitat, and riparian to a less-than-significant level. Consult with resource agencies as required by federal and State regulations." However, the proposed biological resource assessments and Action OSC-B.3.a: 1) may not adequately establish the site-specific environmental setting as they may not appropriately identify special-status species that may be impacted, and 2) inappropriately defer formulating mitigation measures reducing potentially significant impacts to less-than-significant. Further, the proposed biological resource assessments would not be subject to public review under CEQA, thereby circumventing key purposes of CEQA including informing the public and governmental decision makers about the potential, significant environmental effects of a proposed project and identifying ways that environmental damage can be avoided or significantly reduced (CEQA Guidelines, § 15002). CEQA Guidelines section 15126.4, subdivision (b) states: "Formulation of mitigation measures shall not be deferred until some future time. The specific details of a mitigation measure, however, may be developed after project approval when it is impractical or infeasible to include those details during the project's environmental review provided that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard and that will considered, analyzed, and potentially incorporated in the mitigation measure. Compliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards."

A2-4 con't

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

No specific mitigation measures relating to take of CESA-listed species are included in the biological resources section of the EIR. The lead agency (the Town) has therefore not committed itself to mitigation, nor does the EIR adopt specific performance standards for mitigation goals, nor does it identify types of actions that could meet these standards.

A2-4 con't

It is conceivable based on the lack of mitigation measures that the above species would not be appropriately evaluated in subsequent biological surveys, or that future environmental review pursuant to CEQA would not require appropriate mitigation measures to reduce impacts to less-than-significant.

Therefore, if special-status species occur on or adjacent to project sites, impacts to special-status species would be potentially significant, and impacts may substantially reduce the number or restrict the range of threatened, endangered, or rare species which would be considered a mandatory finding of significance (CEQA Guidelines, §§ 15065 & 15380).

Recommended Mitigation Measures: To reduce potential impacts to listed and other special-status species to less-than-significant and comply with CESA, **CDFW recommends including mitigation measures in the EIR which evaluate such foreseeable potentially significant impacts**. Where future site-specific impacts may not be presently foreseeable based on the project's broad scope, the checklist discussed in Comment 1 above should be used to determine if a future CEQA environmental document is required. CDFW would appreciate the opportunity to review a revised EIR and may have further comments once more specific species information is provided.

For example, CDFW recommends including the mitigation measures below in this EIR. **Note that some mitigation measures may be tailored based on geographical area or other factors and those listed below do not encompass all project-level foreseeable feasible mitigation measures.** A2-5

> **MM-BIO-1.** Northern Spotted Owl. A qualified biologist shall provide an assessment of potential northern spotted owl nesting and roosting habitat within the project area and an appropriate area around the project area and obtain CDFW's written acceptance of the assessment. Alternatively, the project may assume that northern spotted owl nesting and roosting habitat occurs in these areas. The project shall consult with CDFW to determine the appropriate habitat assessment and survey areas, which may include up to 0.70 miles around the project site for projects that may remove northern spotted owl nesting habitat and 0.25 miles around the project site for projects that will not remove northern spotted owl nesting habitat.
>
> If the assessment concludes that northern spotted owl nesting habitat is present or habitat presence is assumed, then the following measures shall be implemented:

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

- If the project will remove northern spotted owl nesting habitat, a qualified biologist shall conduct 2 years of surveys on the project site and within the appropriate radius around the project site with 6 complete visits per year following the USFWS *Protocol for Surveying Proposed Management Activities That May Impact Northern Spotted Owls*, dated (revised) January 9, 2012 and the associated Attachment A: Take Avoidance Analysis - Coast Redwood Region, dated November 1, 2019, to determine the presence or absence of northern spotted owl.

  Following the 2 years of surveys described above, a qualified biologist shall conduct Spot Check Surveys for northern spotted owl on the project site and within a 0.25-mile radius around the project site during northern spotted owl nesting season (February 1 to July 31) each year until project construction is completed, pursuant to the above survey protocol, unless otherwise approved in writing by CDFW.

- If the project will not remove northern spotted owl nesting habitat, a qualified biologist shall conduct surveys on the project site and within a 0.25-mile radius around the project site during northern spotted owl nesting season each year until project construction is completed in accordance with Section 9 of the above survey protocol, Surveys for Disturbance-Only Projects, unless otherwise approved in writing by CDFW.

A2-5 con't

The project shall obtain CDFW's written acceptance of the qualified biologist and survey report(s) prior to project construction occurring during northern spotted owl nesting season.

If nesting northern spotted owl are detected during surveys, the qualified biologist shall consult with CDFW to determine an appropriate avoidance buffer which will generally be 0.25-mile or more and obtain CDFW's written approval of the avoidance buffer, and the CDFW-approved no-disturbance buffer zone shall be implemented around the nest until the end of the breeding season, or a qualified biologist determines that the nest is no longer active, unless otherwise approved in writing by CDFW. Alternate buffer zones may be proposed to CDFW after conducting an auditory and visual disturbance analysis following the USFWS guidance, *Estimating the Effects of Auditory and Visual Disturbance to Northern Spotted Owls* and *Marbled Murrelets in Northwestern California*, dated October 1, 2020. Alternative buffers must be approved in writing by CDFW.

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

If take of northern spotted owl cannot be avoided, the project shall consult with: 1) CDFW pursuant to CESA and obtain an ITP, and 2) USFWS pursuant to the federal Endangered Species Act (ESA).

MM-BIO-2. Northern Spotted Owl Nesting or Roosting Compensatory Mitigation. If the project will result in the removal of northern spotted owl nesting or roosting habitat, the project shall prepare an northern spotted owl mitigation plan including mitigating northern spotted owl nesting or roosting habitat removal at a minimum 3:1 mitigation to impact ratio. Habitat mitigation shall include permanent preservation of high-quality nesting/roosting habitat through a conservation easement and implementing and funding a long-term management plan in perpetuity, to be finalized before project construction, unless otherwise approved in writing by CDFW. The northern spotted owl mitigation plan shall be submitted to CDFW for approval before project construction and include a review of suitability of mitigation lands for northern spotted owl as confirmed by a qualified biologist. The project shall obtain CDFW's written approval of the northern spotted owl mitigation plan. A2-5 con't

MM-BIO-3. North Coast Semaphore Grass, Santa Cruz Tarplant, and Other Special-Status Plants. Prior to ground disturbance, the project shall submit a habitat assessment for Santa Cruz tarplant and North Coast semaphore grass and an evaluation of potential direct and indirect impacts to any on-site or adjacent off-site grassland and/or wetland habitat, such as modification of hydrological conditions or construction related sedimentation into occupied wetland habitat, to CDFW for review and obtain CDFW's written acceptance of the assessment and evaluation.

If direct or indirect impacts to potentially suitable habitat for Santa Cruz tarplant, North Coast semaphore grass, or other special-status plants may occur, the project shall submit to CDFW completed botanical survey results and obtain CDFW's written approval of the results prior to project construction. The botanical survey results should follow CDFW's 2018 Protocols for *Surveying and Evaluating Impacts to Special-Status Native Plant Populations and Sensitive Natural Communities* (https://wildlife.ca.gov/Conservation/Survey-Protocols#377281280-plants). If CDFW is unable to accept the survey results, the project shall conduct additional surveys prior to initiation of project activities or may assume presence of North Coast semaphore grass and other special-status plants. Please be advised that for CDFW to accept the results, they should be completed in conformance with the above survey protocols and guidelines, including, but not limited to, conducting surveys during appropriate conditions, utilizing appropriate reference sites, and evaluating all direct and indirect impacts such as altering off-site hydrological conditions where the above species may be present. Surveys should include the **entire** extent of any directly or indirectly impacted suitable habitat, including portions of wetland on adjacent parcels or not A2-6

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

directly impacted, as impacts to part of a wetland often affects the entire wetland. Evaluation of indirect impacts may necessitate a thorough hydrological assessment that fully analyzes existing and post-project conditions to seasonal wetland or grassland habitat. Surveys conducted during drought conditions may not be acceptable. If the botanical surveys result in the detection of the above CESA listed plants that may be impacted by the project, or the presence of these species is assumed, the project shall obtain a CESA ITP from CDFW prior to construction and comply with all requirements of the ITP including, but not limited to, providing habitat compensation.

A2-6 con't

In addition, the project shall consult with USFWS for any impacts to suitable habitat for plants listed under the federal ESA and provide compensatory habitat mitigation as required.

If impacts to other special-status plants may occur as determined by a qualified biologist, the project shall prepare an avoidance plan including flagging plant locations for avoidance and appropriate buffer zones, and the project shall implement the avoidance plan. If impacts cannot be avoided, the qualified biologist shall prepare a mitigation plan appropriate to the impacted species including, but not limited to, transplanting, seed collection and dispersal to suitable habitat, or habitat compensation, and the project obtain CDFW's written approval of the mitigation plan. The mitigation plan shall be implemented prior to project construction.

MM-BIO-3. Burrowing Owl. If the project occurs during the burrowing owl wintering season from September 1 to October 15 (or any extended work period), prior to project activities a qualified biologist shall conduct a burrowing owl habitat assessment within 1,640 feet of the project area pursuant to the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation (CDFW 2012 Staff Report, available here: https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds), unless otherwise approved in writing by CDFW. The qualified biologist shall have a minimum of 2 years of experience implementing the CDFW 2012 Staff Report survey methodology. The habitat assessment shall focus on searching the California Natural Diversity Database (CNDDB) and potentially other sources for any burrowing owl records on or within 1 mile of the project area, vegetation type and height, suitable burrows (with an opening greater than 11 centimeters [cm] in diameter and a depth greater than150 cm), burrow surrogates (culverts, piles of concrete rubble, piles of soil, burrows created along soft banks of ditches and canals, pipes, and similar structures), and presence of burrowing owl sign (tracks, molted feathers, cast pellets, prey remains, egg shell fragments, owl white wash, and nest burrow decoration material), and the presence of burrowing owl individuals or pairs. If the habitat assessment does not identify suitable habitat and

A2-7

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

surveys are not conducted as described below, an additional habitat assessment shall be conducted within 14 days prior to construction and if new potentially suitable burrowing owl refugia are present surveys shall be conducted as described below, unless otherwise approved in writing by CDFW. The results of the habitat assessment shall be emailed to CDFW and the project shall obtain CDFW's written approval of the habitat assessment prior to starting project activities.

If suitable burrowing owl habitat is observed, four surveys shall be conducted to detect the presence of burrowing owl pursuant to the CDFW 2012 Staff Report and shall begin on August 1. The site visits shall be spread evenly throughout August and the non-breeding season, unless otherwise approved in writing by CDFW. The survey results shall be emailed to CDFW and the project shall obtain CDFW's written approval of the survey results prior to starting project activities. In addition, a survey shall be completed within 14 days prior to the start of construction, as described in the CDFW 2012 Staff Report. Time lapses of more than 14 days between project activities may trigger subsequent surveys including, but not limited to, a final survey conducted within 24 hours prior to ground disturbance.

A2-7 con't

If burrowing owl is detected, the project shall immediately notify CDFW. The project shall avoid impacts to the burrowing owl and implement a 1,640-foot buffer area around the owl site in which no project activities shall occur, unless otherwise approved in writing by CDFW. A qualified biologist or biological monitor shall monitor any detected owl to ensure it is not disturbed.

If the surveys result in the detection of the burrowing owl that may be impacted by the project, or the presence of this species and impacts to it are assumed, the project shall obtain and comply with an ITP from CDFW.

Habitat compensation for impacts to occupied wintering burrowing owl habitat (habitat known to have been occupied by wintering burrowing owl within the last three years) shall also be provided at a minimum 3:1 mitigation to impact ratio prior to project construction, unless otherwise approved by CDFW. Habitat mitigation shall include permanent preservation of high-quality burrowing owl wintering habitat through a conservation easement and implementing and funding a long-term management plan in perpetuity, to be finalized before project construction, unless otherwise approved in writing by CDFW. The burrowing owl mitigation plan shall be submitted to CDFW for approval before project construction and include a review of suitability of mitigation lands for burrowing owl as confirmed by a qualified biologist. The project shall obtain CDFW's written approval of the burrowing owl mitigation plan.

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

III. Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by CDFW or USFWS?

COMMENT 3: Riparian Habitat, Wetlands, Sensitive Natural Communities, and LSA Notification – Environmental Setting and Related Impact Shortcoming

Issue, specific impacts, why they may occur and be potentially significant: The project may result in potentially significant impacts to riparian habitat, wetlands, or other sensitive natural communities (https://wildlife.ca.gov/Data/VegCAMP/Natural-Communities#sensitive). Stream habitat, including connected wetlands, is of critical importance to protecting and conserving the biotic and abiotic integrity of an entire watershed. When stream habitat is substantially altered, riparian functions become impaired, thereby potentially substantially adversely impacting aquatic and terrestrial species. Removing connected wetland habitat may also result in the degradation of stream habitat. Therefore, if the above impacts to stream habitat occur, or loss of sensitive natural communities occur, project impacts to such habitats would be potentially significant.

A2-8

Recommended Mitigation Measure: If impacts to riparian habitat, wetlands, or other sensitive natural communities may occur, to reduce potential impacts to less-than-significant and comply with Fish and Game Code section 1600 et seq., CDFW recommends including the mitigation measure below.

> **MM-BIO-4:** Lake and Stream Alteration. A qualified biologist shall evaluate each project site for potential impacts to streams, lakes, and associated riparian habitat. For project activities that may substantially alter the bed, bank, or channel of any streams (including ephemeral or intermittent streams) or lakes, an LSA Notification shall be submitted to CDFW pursuant to Fish and Game Code section 1602 prior to project construction. If CDFW determines that an LSA Agreement is warranted, the project shall comply with all required measures in the LSA Agreement, including, but not limited to, requirements to mitigate impacts to the streams and riparian habitat. Permanent impacts to the stream and associated riparian habitat shall be mitigated by restoration of riparian habitat at a minimum 3:1 mitigation to impact ratio based on acreage and linear distance as close to the project area as possible and within the same watershed and year as the impact, unless otherwise approved in writing by CDFW. Temporary impacts shall be restored on-site in the same year as the impact. The project shall also consult with the Regional Water Quality Control Board (RWQCB)and U.S. Army Corps of Engineers (USACE) to impacts to waters such as streams, lakes, and wetlands, and obtain permits if necessary pursuant to the Clean Water Act and Porter Cologne Water Quality Control Act.

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

MM-BIO-5: Sensitive Natural Communities. A qualified biologist shall evaluate each project site for potential impacts to sensitive natural communities. The project shall implement restoration on-site or off-site to mitigate temporary or permanent impacts to sensitive natural communities at a minimum 1:1 (restore on-site temporary impacts) or 3:1 (permanent impacts) mitigation to impact ratio for acres of impacts, and trees, if applicable, shall be replaced at an appropriate ratio based on size and species, and temporal habitat loss, or provide habitat compensation including permanent protection of habitat at the same ratio through a conservation easement and preparing and funding implementation of a long-term management plan, unless otherwise approved in writing by CDFW. A2-9

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special-status species and natural communities detected during project surveys to CNDDB. The CNDDB field survey form can be filled out and submitted online at the following link: https://wildlife.ca.gov/Data/CNDDB/Submitting-Data. The types of information reported to CNDDB can be found at the following link: https://www.wildlife.ca.gov/Data/CNDDB/Plants-and-Animals. A2-10

FILING FEES

The project, as proposed, would have an impact on fish and/or wildlife, and assessment of environmental document filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the environmental document filing fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.) A2-11

CONCLUSION

CDFW appreciates the opportunity to comment on the EIR to assist the Town in identifying and mitigating project impacts on biological resources.

Questions regarding this letter or further coordination should be directed to Nick Wagner, Senior Environmental Scientist (Specialist), at (707) 428-2075 or Nicholas.Wagner@wildlife.ca.gov; or Melanie Day, Senior Environmental Scientist (Supervisory), at (707) 210-4415 or Melanie.Day@wildlife.ca.gov. ATTACHMENT 1

Draft Mitigation and Monitoring Reporting Plan

Biological Resources (BIO)			
Mitigation Measure (MM)	**Description**	**Timing**	**Responsible Party**
MM-BIO-1	Northern Spotted Owl. A qualified biologist shall provide an assessment of potential northern spotted owl nesting and roosting habitat within the project area and an appropriate area around the project area and obtain CDFW's written acceptance of the assessment. Alternatively, the project may assume that northern spotted owl nesting and roosting habitat occurs in these areas. The project shall consult with CDFW to determine the appropriate habitat assessment and survey areas, which may include up to 0.70 miles around the project site for projects that may remove northern spotted owl nesting habitat and 0.25 miles around the project site for projects that will not remove northern spotted owl nesting habitat. If the assessment concludes that northern spotted owl nesting habitat is present or habitat presence is assumed, then the following measures shall be implemented: • If the project will remove northern spotted owl nesting habitat, a qualified biologist shall conduct 2 years of surveys on the project site and within the appropriate radius around the project site with 6 complete visits per year following the USFWS *Protocol for Surveying Proposed Management Activities That May Impact Northern Spotted Owls*, dated (revised) January 9, 2012 and the associated Attachment A: Take Avoidance Analysis - Coast Redwood Region, dated November 1, 2019, to determine the presence or absence of northern spotted owl. Following the 2 years of surveys described above, a qualified biologist shall conduct Spot Check Surveys for northern spotted owl on the project site and within a 0.25-mile radius around the project site during northern spotted owl nesting season (February 1 to July 31) each year until project construction is completed, pursuant to the above survey protocol, unless otherwise approved in writing by CDFW.	Prior to Ground Disturbance and for Duration of Construction	Project Applicant

A2-13

Docusign Envelope ID: 1D980BD6-486D-8F7D-80E6-05F10789FD48

	• If the project will not remove northern spotted owl nesting habitat, a qualified biologist shall conduct surveys on the project site and within a 0.25-mile radius around the project site during northern spotted owl nesting season each year until project construction is completed in accordance with Section 9 of the above survey protocol, Surveys for Disturbance-Only Projects, unless otherwise approved in writing by CDFW. The project shall obtain CDFW's written acceptance of the qualified biologist and survey report(s) prior to project construction occurring during northern spotted owl nesting season. If nesting northern spotted owl are detected during surveys, the qualified biologist shall consult with CDFW to determine an appropriate avoidance buffer which will generally be 0.25-mile or more and obtain CDFW's written approval of the avoidance buffer, and the CDFW-approved no-disturbance buffer zone shall be implemented around the nest until the end of the breeding season, or a qualified biologist determines that the nest is no longer active, unless otherwise approved in writing by CDFW. Alternate buffer zones may be proposed to CDFW after conducting an auditory and visual disturbance analysis following the USFWS guidance, *Estimating the Effects of Auditory and Visual Disturbance to Northern Spotted Owls* and *Marbled Murrelets in Northwestern California*, dated October 1, 2020. Alternative buffers must be approved in writing by CDFW. If take of northern spotted owl cannot be avoided, the project shall consult with: 1) CDFW pursuant to CESA and obtain an ITP, and 2) USFWS pursuant to the federal ESA.		
MM-BIO-2	<u>Northern Spotted Owl Nesting or Roosting Compensatory Mitigation.</u> If the project will result in the removal of northern spotted owl nesting or roosting habitat, the project shall prepare an northern spotted owl mitigation plan including mitigating northern spotted owl nesting or roosting habitat removal at a minimum 3:1 mitigation to impact ratio. Habitat mitigation shall include permanent preservation of high-quality nesting/roosting habitat through a conservation easement and implementing and funding a long-term management plan in perpetuity, to be finalized before project construction, unless otherwise approved in writing by CDFW. The northern spotted owl mitigation plan shall be submitted to CDFW for approval before project construction and include a review of suitability of mitigation lands for northern spotted owl as confirmed by a qualified	Prior to Ground Disturbance	Project Applicant

	biologist. The project shall obtain CDFW's written approval of the northern spotted owl mitigation plan.		
MM-BIO-3	Burrowing Owl. If the project occurs during the burrowing owl wintering season from September 1 to October 15 (or any extended work period), prior to project activities a qualified biologist shall conduct a burrowing owl habitat assessment within 1,640 feet of the project area pursuant to the California Department of Fish and Game (now CDFW) 2012 Staff Report on Burrowing Owl Mitigation (CDFW 2012 Staff Report, available here: https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds), unless otherwise approved in writing by CDFW. The qualified biologist shall have a minimum of two years of experience implementing the CDFW 2012 Staff Report survey methodology. The habitat assessment shall focus on searching the CNDDB and potentially other sources for any burrowing owl records on or within one mile of the project area, vegetation type and height, suitable burrows (with an opening of >11 cm in diameter and a depth of >150 cm), burrow surrogates (culverts, piles of concrete rubble, piles of soil, burrows created along soft banks of ditches and canals, pipes, and similar structures), and presence of burrowing owl sign (tracks, molted feathers, cast pellets, prey remains, egg shell fragments, owl white wash, and nest burrow decoration material), and the presence of burrowing owl individuals or pairs. If the habitat assessment does not identify suitable habitat and surveys are not conducted as described below, an additional habitat assessment shall be conducted within 14 days prior to construction and if new potentially suitable burrowing owl refugia are present surveys shall be conducted as described below, unless otherwise approved in writing by CDFW. The results of the habitat assessment shall be emailed to CDFW and the project shall obtain CDFW's written approval of the habitat assessment prior to starting project activities. If suitable burrowing owl habitat is observed, four surveys shall be conducted to detect the presence of burrowing owl pursuant to the CDFW 2012 Staff Report, and shall begin on August 1. The site visits shall be spread evenly throughout August and the non-breeding season, unless otherwise approved in writing by CDFW. The survey results shall be emailed to CDFW and the project shall obtain CDFW's written approval of the survey results prior to starting project activities. In addition, a survey shall be completed within 14 days prior to the start of construction, as described in the CDFW 2012 Staff Report. Time lapses of more than 14 days	Prior to Ground Disturbance and for Duration of Construction	Project Applicant

	between project activities may trigger subsequent surveys including, but not limited to, a final survey conducted within 24 hours prior to ground disturbance. If burrowing owl is detected, the project shall immediately notify CDFW. The project shall avoid impacts to the burrowing owl and implement a 1,640-foot buffer area around the owl site in which no project activities shall occur, unless otherwise approved in writing by CDFW. A qualified biologist or biological monitor shall monitor any detected owl to ensure it is not disturbed. If the surveys result in the detection of the burrowing owl that may be impacted by the project, or the presence of this species and impacts to it are assumed, the project shall obtain and comply with an ITP from CDFW. Habitat compensation for impacts to occupied wintering burrowing owl habitat (habitat known to have been occupied by wintering burrowing owl within the last 3 years) shall also be provided at a minimum 3:1 mitigation to impact ratio prior to project construction, unless otherwise approved by CDFW. Habitat mitigation shall include permanent preservation of high-quality burrowing owl wintering habitat through a conservation easement and implementing and funding a long-term management plan in perpetuity, to be finalized before project construction, unless otherwise approved in writing by CDFW. The burrowing owl mitigation plan shall be submitted to CDFW for approval before project construction and include a review of suitability of mitigation lands for burrowing owl as confirmed by a qualified biologist. The project shall obtain CDFW's written approval of the burrowing owl mitigation plan.		
MM-BIO-4	Lake and Stream Alteration. A qualified biologist shall evaluate each project site for potential impacts to streams, lakes, and associated riparian habitat. For project activities that may substantially alter the bed, bank, or channel of any streams (including ephemeral or intermittent streams) or lakes, an LSA Notification shall be submitted to CDFW pursuant to Fish and Game Code section 1602 prior to project construction. If CDFW determines that an LSA Agreement is warranted, the project shall comply with all required measures in the LSA Agreement, including, but not limited to, requirements to mitigate impacts to the streams and riparian habitat. Permanent impacts to the stream and associated riparian habitat shall be mitigated by restoration of riparian habitat at a minimum 3:1 mitigation to impact ratio based on acreage and linear distance as close to the	Prior to Ground Disturbance and for Duration of Construction	Project Applicant

	project area as possible and within the same watershed and year as the impact, unless otherwise approved in writing by CDFW. Temporary impacts shall be restored onsite in the same year as the impact. The project shall also consult with the Regional Water Quality Control Board and Army Corps of Engineers to impacts to waters such as streams, lakes, and wetlands, and obtain permits if necessary pursuant to the Clean Water Act and Porter Cologne Water Quality Control Act.		
MM-BIO-5	Sensitive Natural Communities. A qualified biologist shall evaluate each project site for potential impacts to sensitive natural communities. The project shall implement restoration onsite or off-site to mitigate temporary or permanent impacts to sensitive natural communities at a minimum 1:1 (restore onsite temporary impacts) or 3:1 (permanent impacts) mitigation to impact ratio for acres of impacts, and trees, if applicable, shall be replaced at an appropriate ratio based on size and species, and temporal habitat loss, or provide habitat compensation including permanent protection of habitat at the same ratio through a conservation easement and preparing and funding implementation of a long-term management plan, unless otherwise approved in writing by CDFW. A2-13 con't

Letter A2 Response **Erin Chappell, Regional Manager, Bay Delta Region, California Department of Fish and Wildlife (CDFW)**
August 31, 2026

A2-1 The comment describes CDFW's role as a Trustee Agency (CEQA Guidelines section 15386) and potential Responsible Agency and summarizes the project. No revision is required, and no further response is necessary.

A2-2 The comment summarizes regulatory requirements administered by CDFW, including the requirement to obtain an incidental take permit (ITP) under the California Endangered Species Act (CESA) (Fish & Game Code section 2050 et seq.) for take of species that are listed or are candidates for listing; the requirement to submit a Lake and Streambed Alteration (LSA) Notification pursuant to Fish and Game Code section 1600 et seq. for activities that may substantially divert or obstruct the natural flow or change the bed, channel, or bank of any river, stream, or lake, including ephemeral and intermittent watercourses and associated riparian resources; and the protections afforded raptors, nesting birds, and migratory birds under Fish and Game Code sections 3503, 3503.5, and 3513 and the federal Migratory Bird Treaty Act. The comment further identifies Santa Cruz tarplant (Holocarpha macradenia), northern spotted owl (Strix occidentalis caurina), North Coast semaphore grass (Pleuropogon hooverianus), and burrowing owl (Athene cunicularia) as species for which take could occur, and identifies San Anselmo Creek, Sleepy Hollow Creek, Ross Creek, and Corte Madera Creek as watercourses that may be subject to LSA Notification.

The Town acknowledges these requirements, which are described in the Regulatory Setting at Draft EIR pages 3.4-19 through 3.4-24. As the comment correctly states, these obligations arise directly under State and federal law. They apply of their own force to every project within the Planning Area, public or private; they are not discretionary with the Town; and they are administered and enforced by CDFW and the U.S. Fish and Wildlife Service (USFWS) as the agencies with jurisdiction. They are therefore uniformly applied regulatory standards of the kind expressly contemplated by CEQA Guidelines section 15126.4(a)(1)(B), which provides that compliance with a regulatory permit or other similar process may be relied upon where compliance would result in implementation of measures reasonably expected, based on substantial evidence in the record, to reduce the significant impact to a specified performance standard. The manner in which these statutory standards operate together with the General Plan 2045 policies and actions is addressed in Response to Comment A2-4.

In response to this comment, and to more fully describe the environmental setting and regulatory framework, the following clarifying revisions have been made to the Draft EIR and are set forth in Chapter 2, Revisions to the Draft EIR: (1) Table 3.4-4 and Table 3.4-5 have been revised to include northern spotted owl, and the accompanying text has been revised to reference the California Natural Diversity Database (CNDDB) occurrence and MASTEROWL records identified by the comment and the proximity of USFWS-designated critical habitat; (2) Table 3.4-5 has been revised to identify burrowing owl as

a candidate species under CESA, and the Regulatory Setting has been revised to state that candidate species receive the full protection of CESA during the candidacy period; and (3) the Regulatory Setting discussion of Fish and Game Code section 1600 et seq. has been revised to state that LSA Notification requirements extend to ephemeral and intermittent watercourses, watercourses with subsurface flow, and floodplains, and to identify Ross Creek and Corte Madera Creek in addition to San Anselmo Creek and Sleepy Hollow Creek. These revisions clarify and amplify information in the Draft EIR. They do not identify a new significant environmental effect, a substantial increase in the severity of a previously identified effect, or a feasible mitigation measure or alternative that the Town declines to adopt, and therefore do not constitute significant new information requiring recirculation under CEQA Guidelines section 15088.5.

A2-3 The comment states that the Draft EIR is a Program EIR that does not include a checklist for subsequent project review, and recommends that the Town prepare a separate procedure or checklist, consistent with CEQA Guidelines section 15168(c)(4), and the Appendix N checklist associated with CEQA Guidelines section 15183.3, for evaluating whether subsequent project impacts on biological resources are within the scope of the Program EIR or whether an additional environmental document is warranted, and that the checklist be attached to the EIR.

The Town appreciates the recommendation and agrees that a written implementation checklist or similar procedure will provide a useful mechanism for documenting compliance with applicable General Plan policies and actions and identifying when additional site-specific analysis or environmental review may be necessary. Accordingly, following adoption of General Plan 2045, the Town will develop and use a General Plan implementation checklist for review of applicable future development proposals. The checklist will identify applicable General Plan policies and actions, including biological-resource requirements, and document how those requirements have been addressed prior to applicable project approval.

CEQA Guidelines section 15168(c)(4) provides that, where later activities involve site-specific operations, the agency should use "a written checklist or similar device" to document the evaluation of the site and the activity. For subsequent projects subject to CEQA review, the Town will determine, consistent with applicable CEQA requirements, including CEQA Guidelines sections 15162 through 15164 and 15168, whether the project's environmental effects are within the scope of the Program EIR or whether additional environmental review is required. The General Plan implementation checklist will supplement, rather than replace, any project-specific CEQA review required by law.

The Town's review of subsequent development proposals will include evaluation of consistency with applicable General Plan policies and actions. Consistency is a mandatory finding for the Town's discretionary land use approvals under Government Code sections 65860 and 66473.5, and Appendix G of the CEQA Guidelines independently requires evaluation of whether a project would conflict with any plan or policy adopted for the purpose of avoiding or mitigating an environmental effect. The General Plan 2045 is the source of that consistency review. As stated in Section 1.10 of

the General Plan, Administering the Plan, the General Plan's policies "set out the standards that will be used by Town staff, the Planning Commission, and the Town Council in its review of land development projects, resource protection activities, infrastructure improvements, and other Town actions," and such policies "are ongoing and require no specific action on behalf of the Town."

For biological resources, a General Plan implementation checklist will be developed to identify the applicability of Policy OSC-B.3, Action OSC-B.3.a, and other applicable General Plan policies and actions and will document, as appropriate: (1) whether the project site or potentially affected buffer areas contain or may contain suitable habitat for special status species or sensitive natural communities; (2) whether survey or assessment by a qualified biologist is required; (3) whether special status species, critical habitat, riparian habitat, wetlands, or other sensitive biological resources are present or potentially affected; (4) applicable avoidance and minimization requirements; (5) whether consultation, notification, permits, or other authorization from CDFW, USFWS, or another resource agency is required; and (6) whether additional project-specific environmental review is warranted.

The site-specific information necessary to implement these requirements is supplied by Action OSC-B.3.a, which requires surveys of sites, including buffer areas potentially affected by proposed projects, with potentially suitable habitat for special status species, including creek corridors, to determine the presence or absence of special status species, critical habitat, and riparian habitat, to be prepared by a qualified biologist prior to development and other management approvals. Where that survey identifies special status species, critical habitat, or riparian habitat, Action OSC-B.3.a further requires the project to implement measures to avoid or minimize harm to a less-than-significant level and to consult with resource agencies as required by federal and State regulations.

The General Plan implementation checklist will document completion of these requirements and will assist the Town in determining whether the environmental effects of a subsequent project are within the scope of this Program EIR or whether additional CEQA review is required. Where a biological survey or assessment is required, the resulting biological information will inform both the Town's General Plan consistency determination and, where applicable, its determination regarding the appropriate level of subsequent CEQA review. This procedure addresses the substance of CDFW's recommendation by providing a documented mechanism for applying the General Plan's biological-resource protections to subsequent development proposals.

A2-4 The comment states that the Draft EIR does not include adequate mitigation measures for impacts to CESA-listed and other special status species; that Action OSC-B.3.a may not adequately establish the site-specific environmental setting and inappropriately defers the formulation of mitigation; that the biological resource assessments contemplated by that action would not be subject to public review; and that, as a result, impacts to special status species would be potentially significant and would warrant a mandatory finding of significance under CEQA Guidelines sections 15065 and 15380. The comment identifies northern spotted owl occurrence and nesting records within and

near the Planning Area, the potential for grassland and wetland habitat to support Santa Cruz tarplant and North Coast semaphore grass, and the potential for impacts to wintering and foraging burrowing owl.

The Town respectfully disagrees that the Draft EIR improperly defers the formulation of mitigation, and offers the following explanation of the analytical approach reflected in Section 3.4.

The project analyzed in this EIR is the General Plan 2045 itself. The goals, policies, and actions of the Open Space and Conservation Element are not measures proposed to be formulated at some future time; they are components of the project before the decision-making body, they were circulated for public review as part of the project, and upon adoption they become the regulatory standard governing applicable subsequent discretionary approvals in the Planning Area. The Town has prepared the General Plan 2045 as a self-mitigating plan. Policies and implementing actions were drafted specifically to avoid or reduce identified environmental effects, and they operate prospectively and uniformly rather than on a project-by-project basis. This approach is well established under CEQA. Courts have repeatedly upheld significance determinations resting on adopted plan policies and generally applicable regulatory standards where the record supports the conclusion that implementation of those standards will reduce the effect below the threshold of significance. (See, e.g., *Tracy First v. City of Tracy* (2009) 177 Cal.App.4th 912; *Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200; *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884; *North Coast Rivers Alliance v. Marin Municipal Water Dist.* (2013) 216 Cal.App.4th 614.)

The policies and actions relied upon are mandatory and enforceable in operation, and the General Plan says so on its face. Section 1.10 of the General Plan, Administering the Plan, provides that Town staff use the General Plan to ensure that projects, capital improvements, programs, and budgeting are consistent with the General Plan land use designations and applicable goals, policies, and actions; that the General Plan's policies "set out the standards that will be used by Town staff, the Planning Commission, and the Town Council in its review of land development projects, resource protection activities, infrastructure improvements, and other Town actions"; that policies "are ongoing and require no specific action on behalf of the Town"; and that the words "must" and "shall" denote requirements the Town is required to follow. Policy LU-H.9 and Action LU-H.9.a require the Town to maintain consistent and effective implementation of the General Plan and to conform the Zoning Map, Zoning Ordinance, and other land use regulations to its goals, policies, densities, intensities, and land use designations. Action LU-A.1.a requires the Town to approve new development projects consistent with the Land Use Element.

To further ensure consistent implementation of these requirements at the project level, the Town will develop and use a General Plan implementation checklist, as described in Response to Comment A2-3. The checklist will provide a documented administrative mechanism for determining which General Plan policies and actions apply to a

subsequent development proposal and whether their requirements have been satisfied prior to applicable project approval. The checklist will supplement, and will not replace, any project-specific CEQA review or State or federal regulatory authorization required by law.

For biological resources, the checklist will identify the applicability of Policy OSC-B.3, Action OSC-B.3.a, and other applicable General Plan policies and actions and will document, as appropriate: (1) whether the project site or potentially affected buffer areas contain or may contain suitable habitat for special status species or sensitive natural communities; (2) whether survey or assessment by a qualified biologist is required; (3) whether special status species, critical habitat, riparian habitat, wetlands, or other sensitive biological resources are present or potentially affected; (4) applicable avoidance and minimization requirements; (5) whether consultation, notification, permits, or other authorization from CDFW, USFWS, or another resource agency is required; and (6) whether additional project-specific environmental review is warranted. Where a biological survey or assessment is required pursuant to Action OSC-B.3.a, the resulting information will inform both the Town's General Plan consistency determination and, where applicable, its determination regarding the appropriate level of subsequent CEQA review.

The standards relied upon by the Draft EIR consist of two complementary categories. The first consists of the mandatory policies and actions of the General Plan 2045, including Policy OSC-B.2 and its implementing actions (Actions OSC-B.2.a, OSC-B.2.b, and OSC-B.2.c [wildlife corridor analysis, rewilding, and wildlife fencing]), Policy OSC-B.3 and Actions OSC-B.3.a and OSC-B.3.b [special status species, biological surveys, avoidance and minimization measures, and nesting birds], Policy OSC-B.4 and Actions OSC-B.4.a and OSC-B.4.b [creek protection, agency consultation, and creek setbacks], Policy OSC-B.5 [creek enhancement], Policy OSC-B.6 and Actions OSC-B.6.a and OSC-B.6.b [(water quality and low-impact design], and Policy OSC-B.8 [tree protection]), together with the Town's Watercourse regulations and Municipal Code Chapter 9. The second consists of the independent statutory and regulatory obligations described in Response to Comment A2-2 and at Draft EIR pages 3.4-19 through 3.4-24, including CESA and the federal Endangered Species Act, Fish and Game Code sections 1600 et seq., 1900 et seq., 3503, 3503.5, and 3513, the Migratory Bird Treaty Act, Clean Water Act sections 401 and 404, and the Porter-Cologne Water Quality Control Act. Neither category is optional.

Applied together, these standards satisfy each element identified in CEQA Guidelines section 15126.4(a)(1)(B). First, the Town commits itself. Policy OSC-B.3 establishes avoidance, accompanied by habitat restoration, as the preferred approach to conservation, and Action OSC-B.3.a requires, in mandatory terms, that surveys be prepared by a qualified biologist prior to development and other management approvals and that projects implement measures to avoid or minimize harm to special status species, critical habitat, and riparian habitat.

Second, performance standards are specified: harm to special status species, critical habitat, and riparian habitat must be avoided or minimized to a less-than-significant level under Action OSC-B.3.a; disturbance of active native bird nests must be avoided under Action OSC-B.3.b and Fish and Game Code sections 3503, 3503.5, and 3513; take of a species listed or that is a candidate for listing under CESA or the federal Endangered Species Act is prohibited except as authorized by an ITP or federal authorization issued by the agency with jurisdiction; and substantial alteration of the bed, bank, or channel of a watercourse is prohibited except in compliance with an executed LSA Agreement.

Third, the types of actions that can feasibly achieve those standards are identified and are described at Draft EIR pages 3.4-26 through 3.4-28 and 3.4-31 through 3.4-34, and include habitat assessment and protocol-level survey by a qualified biologist; project redesign and footprint reduction; seasonal restrictions on vegetation clearing and construction, including the February 1 through August 31 nesting season restriction in Action OSC-B.3.b; no-disturbance buffers, including fenced buffer areas and staged tree removal periods, established by a qualified biologist; creek setbacks under the Town's Watercourse regulations; agency consultation under Action OSC-B.4.a; habitat restoration under Policies OSC-B.3 and OSC-B.5; and acquisition of and compliance with an ITP, LSA Agreement, or federal authorization. These are the same general categories of action identified in CDFW's recommended measures.

The Town's General Plan implementation checklist will provide an additional mechanism for documenting that these mandatory requirements have been considered and implemented for applicable subsequent projects.

Action OSC-B.3.a will also be revised to require qualified biologists conducting surveys pursuant to the Action to submit qualifying observations of special status species and sensitive natural communities to the CNDDB and/or Spotted Owl Observations Database (SPOWDB), as applicable, consistent with applicable reporting protocols. This requirement will be incorporated into the General Plan implementation checklist to facilitate consistent implementation.

The Town therefore does not rely solely on future formulation of unspecified mitigation. The General Plan establishes the applicable performance standard (avoidance or minimization of harm to special-status species, critical habitat, and riparian habitat to a less-than-significant level) and identifies the types of measures available to achieve that standard. Site-specific information, such as the presence or location of a particular species, the extent of suitable habitat, and the appropriate size or configuration of an avoidance buffer, may necessarily be determined when a subsequent development proposal and its site-specific effects are known. The implementation checklist will document when such site-specific biological review is triggered and whether the resulting requirements have been addressed.

Where the checklist or other project review identifies potentially suitable habitat, Action OSC-B.3.a requires the necessary survey or assessment by a qualified biologist prior to applicable development or management approval. Where special status species or

sensitive biological resources are identified, applicable avoidance and minimization measures must be established and implemented to meet the Action's less-than-significant performance standard, and consultation or authorization from the appropriate resource agency must occur where required by State or federal law. If the information developed for a subsequent project identifies environmental effects that are not within the scope of the Program EIR or otherwise requires additional environmental review under CEQA, the Town will conduct such review as required by applicable CEQA provisions.

Accordingly, the implementation checklist would not defer environmental analysis or substitute an administrative procedure for CEQA review. Rather, it provides a mechanism to ensure that the General Plan's mandatory biological-resource requirements are consistently identified, documented, and implemented and to identify when additional project-specific environmental review is required.

With respect to CDFW's concern that future biological assessments may not be subject to public review, the level and form of public review applicable to a subsequent project will be determined by CEQA and other applicable law. Where a subsequent project requires preparation and circulation of a CEQA document, biological studies supporting that analysis will be incorporated into the environmental review record as appropriate. Nothing in the General Plan or the implementation checklist limits the Town's obligation to conduct additional CEQA review where required.

The additional northern spotted owl occurrence, nesting, and critical-habitat information provided by CDFW will also be incorporated into the environmental setting as described in Response to Comment A2-2. Likewise, the status of burrowing owl as a candidate species under CESA and the additional information concerning applicable LSA Notification requirements will be reflected in the Final EIR. These revisions improve the information available to the Town and future applicants when implementing the biological-resource policies and actions and the implementation checklist.

Finally, for clarity, the concluding paragraphs of Impacts 3.4-1 and 3.4-2 have been revised as set forth in Chapter 2, Revisions to the Draft EIR, to state that adoption and implementation of the General Plan 2045 policies and actions, together with compliance with applicable federal and State law, would avoid or reduce adverse effects on biological resources to a less-than-significant level, in place of the statement that such effects would be avoided. The General Plan implementation checklist described above will provide a documented mechanism for implementing and verifying the applicability of those policies and actions to subsequent development proposals. This revision conforms the conclusion to the analysis and to the performance standards described above. It clarifies and amplifies an adequate Draft EIR, discloses no new or more severe significant effect, and does not constitute significant new information within the meaning of CEQA Guidelines section 15088.5(a). The significance conclusions in Section 3.4 remain unchanged.

A2-5 The comment recommends that the EIR include MM-BIO-1, requiring a northern spotted owl habitat assessment with CDFW's written acceptance or an assumption of habitat presence; consultation with CDFW to establish assessment and survey areas of up to 0.70 mile where nesting habitat may be removed and 0.25 mile where it would not; two years of protocol surveys with six complete visits per year under the *USFWS Protocol for Surveying Proposed Management Activities That May Impact Northern Spotted Owls* (rev. Jan. 9, 2012) and Attachment A: Take Avoidance Analysis - Coast Redwood Region (Nov. 1, 2019), followed by annual spot check surveys; surveys under Section 9 of the protocol for disturbance-only projects; CDFW written acceptance of the qualified biologist and survey reports; a CDFW-approved no-disturbance buffer generally of 0.25 mile or more; and consultation with CDFW and USFWS and acquisition of an ITP where take cannot be avoided. The comment also recommends MM-BIO-2, requiring compensatory mitigation for removal of nesting or roosting habitat at a minimum 3:1 ratio through conservation easement and a funded long-term management plan, subject to CDFW approval.

The Town appreciates the detail provided. As described in Response to Comment A2-2, northern spotted owl will be added to Tables 3.4-4 and 3.4-5 and to the accompanying discussion so that the species is expressly identified in the environmental setting and the EIR reflects the documented occurrence within the Planning Area, nearby nesting records, and proximity to USFWS-designated critical habitat.

The substance of the recommended measures is addressed through the standards already applicable to subsequent projects. Action OSC-B.3.a requires a qualified biologist to survey any site with potentially suitable habitat for special status species, including buffer areas potentially affected by the project, prior to development and other management approvals, and to determine the presence or absence of special status species and critical habitat. For a project located in or adjacent to Coastal Oak Woodland, Montane Hardwood, Montane Hardwood-Conifer, or Redwood cover types as mapped on Figure 3.4-2, or in the vicinity of documented occurrences or USFWS-designated critical habitat, that survey requirement encompasses northern spotted owl, and a qualified biologist would determine the appropriate habitat assessment and survey requirements based on the project's location, proposed activities, potentially affected habitat, current species information, and applicable professional survey protocols and agency guidance, including applicable USFWS northern spotted owl survey and take-avoidance guidance.

As described in Response to Comment A2-3, the Town will develop and use a General Plan implementation checklist to provide a documented mechanism for applying these requirements to applicable subsequent development proposals. For biological resources, the checklist will document whether the project site or potentially affected buffer area contains or may contain suitable habitat for northern spotted owl or other special status species; whether assessment or surveys by a qualified biologist are required; whether special status species, critical habitat, or other sensitive biological resources are present or potentially affected; applicable avoidance and minimization

requirements; whether consultation, notification, permits, or other authorization from CDFW, USFWS, or another resource agency is required; and whether additional project-specific environmental review is warranted.

Action OSC-B.3.a further requires the project to implement measures to avoid or minimize harm to special status species and critical habitat to a less-than-significant level, which for this species includes establishment of a no-disturbance buffer by a qualified biologist, informed where appropriate by the USFWS auditory and visual disturbance guidance cited in the comment, and requires consultation with resource agencies as required by federal and State regulations. Depending on site-specific circumstances identified by the qualified biologist, additional measures may include modification of the development footprint, retention of suitable habitat, seasonal restrictions on vegetation removal or construction, construction monitoring, or other measures necessary to meet the performance standard established by Action OSC-B.3.a. The size and configuration of any required no-disturbance buffer would be determined by a qualified biologist based on site-specific conditions, the nature and intensity of the proposed disturbance, current applicable agency guidance, and applicable State and federal requirements.

Policy OSC-B.3 establishes avoidance, accompanied by habitat restoration, as the preferred approach, and requires that mitigation strategies be considered where avoidance is not possible.

Qualified biologists conducting surveys pursuant to Action OSC-B.3.a will also be required to submit qualifying northern spotted owl observations to the CNDDB and/or SPOWDB, as applicable, consistent with applicable reporting protocols. This requirement will be incorporated into the General Plan implementation checklist to facilitate consistent implementation.

Independent of the General Plan, take of northern spotted owl requires an ITP from CDFW under CESA and authorization from USFWS under the federal Endangered Species Act; nothing in the General Plan 2045 or this EIR alters those requirements or CDFW's authority to impose permit conditions, including compensatory habitat requirements, through the ITP process. Where such authorization is required, the applicant must comply with applicable avoidance, minimization, monitoring, reporting, compensatory mitigation, and other requirements imposed by the agency with jurisdiction.

The Town has not incorporated the recommended measures verbatim, for two reasons, and requests CDFW's consideration of the following. First, several provisions condition the Town's exercise of its own land use authority on CDFW's prior written approval or acceptance of an assessment, a consultant's qualifications, a survey report, a buffer, or a mitigation plan. CDFW's authority with respect to this project arises as a trustee agency under CEQA Guidelines section 15386 and, where an ITP or LSA Agreement is required, as a responsible agency. Outside those permitting contexts, conditioning a Town approval on CDFW's written concurrence is not a standard the Town can independently enforce or administer, and would introduce indeterminate timelines for applicants.

Under Action OSC-B.3.a, survey results are prepared by a qualified biologist and resource agency consultation occurs as required by federal and State regulations, and the Town gives full effect to the terms of any ITP CDFW issues. The General Plan implementation checklist described in Responses to Comments A2-3 and A2-4 will provide a documented mechanism for confirming that these requirements have been considered and addressed prior to applicable project approval.

Second, a fixed 3:1 compensation ratio applied uniformly across the Planning Area is not supported by substantial evidence in this record and would foreclose calibration to site-specific conditions. Where compensatory habitat mitigation is warranted, the applicable standard under Policy OSC-B.3 is habitat restoration sufficient to conserve and protect the species and its associated habitat, with the ratio and other terms required by any ITP CDFW issues governing where a permit is required. This approach allows project-specific requirements to account for the nature, quality, function, and location of the affected habitat and the particular effects of the proposed activity while maintaining the General Plan's mandatory conservation and less-than-significant performance standards. Where an ITP or other wildlife agency authorization is required, the applicant must also comply with any habitat compensation, conservation easement, long-term management, monitoring, or other conditions imposed by the agency through that authorization.

Accordingly, the Town concludes that Policy OSC-B.3 and Action OSC-B.3.a, implementation through the General Plan implementation checklist, assessment and surveys by a qualified biologist where triggered, applicable avoidance and minimization measures, project-specific CEQA review where required, and compliance with CESA, the federal Endangered Species Act, and applicable agency authorizations provide an enforceable framework for identifying and avoiding or reducing potentially significant impacts to northern spotted owl and its habitat. The Town therefore does not propose to incorporate MM-BIO-1 or MM-BIO-2 verbatim, and the less-than-significant conclusion in Section 3.4 remains unchanged.

A2-6 The comment recommends that the EIR include a measure addressing North Coast semaphore grass, Santa Cruz tarplant, and other special status plants, requiring a habitat assessment and evaluation of direct and indirect impacts to on-site and adjacent off-site grassland and wetland habitat submitted for CDFW review and written acceptance; botanical surveys conducted in accordance with CDFW's *2018 Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities*, including surveys of the entire extent of directly and indirectly affected suitable habitat and, where warranted, hydrological assessment of existing and post-project conditions; acquisition of a CESA ITP where listed plants are detected or presumed present; consultation with USFWS for federally listed plants; and, for other special status plants, an avoidance plan or, where avoidance is infeasible, a mitigation plan approved by CDFW.

The substance of this recommendation is addressed through the standards already applicable to subsequent projects. Policy OSC-B.3 expressly extends to special status

plants, including those listed by the State or federal agencies as threatened or endangered, those considered candidates for listing, and those assigned special status by the California Native Plant Society and the California Fish and Game Code, and establishes avoidance accompanied by habitat restoration as the preferred approach to conservation. Action OSC-B.3.a requires a qualified biologist to survey any site with potentially suitable habitat, including buffer areas potentially affected by the project, prior to development and other management approvals.

For a project located in or adjacent to Annual Grassland or Perennial Grassland cover types as mapped on Figure 3.4-2, or in or adjacent to wetland, seasonal wetland, or seep features, that requirement encompasses Santa Cruz tarplant, North Coast semaphore grass, and other special status plants, and a qualified biologist would determine the appropriate habitat assessment and botanical survey requirements based on the potentially affected habitat, site conditions, current species information, and applicable professional survey protocols and agency guidance, including CDFW's *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities*. As appropriate to the site and species potentially affected, such review would include floristic surveys during an appropriate identification period, use of appropriate reference sites, and evaluation of the extent of habitat that may be directly or indirectly affected.

Where a project could modify surface or subsurface flows supporting seasonal wetland or grassland habitat, evaluation of those indirect effects falls within the survey and impact evaluation required by Action OSC-B.3.a and within the water quality and hydrologic protections of Policy OSC-B.6 and Actions OSC-B.6.a and OSC-B.6.b. Where necessary to evaluate such indirect effects, the qualified biologist or other appropriately qualified professional would evaluate existing and post-project hydrologic conditions and other factors that could affect potentially suitable or occupied habitat.

As described in Response to Comment A2-3, the Town will develop and use a General Plan implementation checklist to provide a documented mechanism for applying these requirements to applicable subsequent development proposals. For projects containing or potentially affecting grassland, wetland, seasonal wetland, seep, or other habitat potentially supporting special status plants, the checklist will document whether assessment or botanical surveys by a qualified biologist are required; whether special status plants, sensitive natural communities, or potentially suitable habitat are present or potentially affected; whether direct or indirect effects, including potential changes to hydrologic conditions, require further evaluation; applicable avoidance and minimization requirements; whether consultation, permits, or other authorization from CDFW, USFWS, or another resource agency is required; and whether additional project-specific environmental review is warranted.

Where special status plants or sensitive natural communities are identified, Action OSC-B.3.a requires implementation of measures necessary to avoid or minimize harm to a less-than-significant level. Depending on the species, habitat, and site-specific circumstances identified by the qualified biologist, such measures may include

avoidance of occupied habitat, modification of the development footprint, establishment of appropriate buffers, protection of supporting hydrologic conditions, timing or construction restrictions, restoration, or other measures necessary to meet the performance standard established by Action OSC-B.3.a. Where avoidance is not feasible, Policy OSC-B.3 requires consideration of mitigation strategies, including habitat restoration sufficient to conserve and protect the affected species and associated habitat.

Qualified biologists conducting surveys pursuant to Action OSC-B.3.a will also be required to submit qualifying observations of special status plants and sensitive natural communities to the CNDDB, as applicable, consistent with applicable reporting protocols. This requirement will be incorporated into the General Plan implementation checklist to facilitate consistent implementation.

Independent of the General Plan, take of a CESA-listed plant requires an ITP from CDFW, and impacts to plants listed under the federal Endangered Species Act require consultation with USFWS. Where such authorization is required, the applicant must comply with applicable avoidance, minimization, compensatory mitigation, monitoring, reporting, and other requirements imposed by the agency with jurisdiction.

For the reason stated in Response to Comment A2-5, the Town has not incorporated the provisions requiring CDFW's prior written approval or acceptance as a condition of Town action. Resource agency consultation occurs under Action OSC-B.3.a as required by federal and State regulations, and the Town gives full effect to the terms of any ITP CDFW issues. The General Plan implementation checklist described in Responses to Comments A2-3 and A2-4 will provide a documented mechanism for confirming that the applicable biological-resource requirements have been identified and addressed prior to applicable project approval. The checklist will not replace any project-specific CEQA review or State or federal regulatory authorization required by law.

Accordingly, the Town concludes that Policy OSC-B.3, Action OSC-B.3.a, Policy OSC-B.6 and Actions OSC-B.6.a and OSC-B.6.b, implementation through the General Plan implementation checklist, assessment and surveys by a qualified biologist where triggered, applicable avoidance and minimization measures, project-specific CEQA review where required, and compliance with CESA, the federal Endangered Species Act, and applicable agency authorizations provide an enforceable framework for identifying and avoiding or reducing potentially significant impacts to North Coast semaphore grass, Santa Cruz tarplant, other special status plants, and their habitat. The Town therefore does not propose to incorporate CDFW's recommended measure verbatim, and the less-than-significant conclusion in Section 3.4 remains unchanged.

A2-7 The comment recommends that the EIR include a measure addressing burrowing owl, requiring a habitat assessment within 1,640 feet of the project area in accordance with the *2012 Staff Report on Burrowing Owl Mitigation* where project activities occur during the wintering season; four detection surveys beginning August 1 where suitable habitat is observed; an additional habitat assessment and survey within 14 days prior to

construction; immediate notification of CDFW upon detection; a 1,640-foot no-activity buffer around a detected owl; monitoring by a qualified biologist; acquisition of an ITP where the species may be impacted; and habitat compensation for occupied wintering habitat at a minimum 3:1 ratio through conservation easement and a funded long-term management plan, subject to CDFW approval.

The Town acknowledges that burrowing owl is a candidate species under CESA and receives the full protection of that statute during the candidacy period, and that Table 3.4-5 will be corrected accordingly as described in Response to Comment A2-2. Policy OSC-B.3 expressly extends to species considered candidates for listing, and Action OSC-B.3.a requires a qualified biologist to survey any site with potentially suitable habitat prior to development and other management approvals. For a project that would disturb grassland, ruderal, or other open, low-stature vegetation, or that contains suitable burrows or burrow surrogates as those features are described in the 2012 Staff Report, that requirement encompasses burrowing owl, and a qualified biologist would determine the appropriate habitat assessment and survey requirements based on the project's location, proposed activities, potentially affected habitat, current species information, and applicable professional survey protocols and agency guidance, including the 2012 Staff Report and current CDFW guidance. As appropriate to the site and proposed activity, such review would include evaluation of suitable habitat and burrows or burrow surrogates, review of available occurrence information, detection surveys where suitable habitat is present, and appropriate pre-construction surveys.

Action OSC-B.3.a further requires implementation of measures to avoid or minimize harm to a less-than-significant level and consultation with resource agencies as required by federal and State regulations. Where burrowing owl or suitable habitat is identified, applicable measures may include modification of the development footprint, avoidance of occupied habitat, establishment of an appropriate no-disturbance buffer, seasonal restrictions, pre-construction surveys, biological monitoring, or other measures necessary to meet the performance standard established by Action OSC-B.3.a and applicable State law.

As described in Response to Comment A2-3, the Town will develop and use a General Plan implementation checklist to provide a documented mechanism for applying these requirements to applicable subsequent development proposals. For burrowing owl, the checklist will document whether the project site or potentially affected area contains or may contain suitable habitat, including grassland, ruderal, or other open, low-stature vegetation and suitable burrows or burrow surrogates; whether habitat assessment or surveys by a qualified biologist are required; whether burrowing owl is present or potentially affected; applicable avoidance and minimization requirements; whether consultation, notification, an ITP, or other authorization from CDFW is required; and whether additional project-specific environmental review is warranted.

Qualified biologists conducting surveys pursuant to Action OSC-B.3.a will also be required to submit qualifying burrowing owl observations to the CNDDB, as applicable, consistent with applicable reporting protocols. This requirement will also be

incorporated into the General Plan implementation checklist to facilitate consistent implementation.

Independent of the General Plan, take of burrowing owl during the candidacy period requires an ITP from CDFW. Where an ITP or other CDFW authorization is required, the applicant must comply with applicable avoidance, minimization, monitoring, reporting, compensatory mitigation, and other requirements imposed by CDFW.

The Town requests CDFW's consideration of the specific parameters recommended, which the Town understands to be drawn from the 2012 Staff Report. The Staff Report establishes avoidance buffers that vary with the level of disturbance and the time of year, extending to 500 meters (1,640 feet) for the highest levels of disturbance during the nesting season, and provides that the general buffer guidelines should be adjusted to address site-specific conditions. Applying the maximum recommended buffer uniformly, without regard to season, the nature and duration of the disturbance, or site conditions, would in many cases extend the no-activity area beyond the boundaries of the project site and onto property outside the applicant's control, and would not be a standard the Town could impose as a condition of project approval.

A buffer established by a qualified biologist based on site-specific conditions and applicable professional survey protocols and current CDFW guidance, sized to the season, the nature and duration of the disturbance, and site conditions, and adequate to avoid take, is both feasible and consistent with the avoidance and minimization standard in Action OSC-B.3.a. The Town would likewise apply applicable seasonal periods and survey requirements identified by current CDFW guidance rather than establishing a fixed date range in the General Plan, so that the applicable standard remains current as CDFW guidance is updated following the species' listing determination.

The General Plan implementation checklist will document the applicable survey, buffer, seasonal restriction, monitoring, and regulatory requirements identified through this process and whether those requirements have been addressed prior to applicable project approval. The checklist will not substitute for biological surveys, an ITP or other CDFW authorization, or project-specific CEQA review where required.

With respect to compensatory mitigation, see Response to Comment A2-5. As discussed therein, the Town has not incorporated a uniform 3:1 compensatory mitigation ratio applicable to all future projects. Where compensatory habitat mitigation is warranted, Policy OSC-B.3 requires habitat restoration sufficient to conserve and protect the species and its associated habitat, and where an ITP or other CDFW authorization is required, the applicant must comply with any compensatory mitigation ratio, conservation easement, long-term management, monitoring, or other requirements imposed through that authorization.

Accordingly, the Town concludes that Policy OSC-B.3 and Action OSC-B.3.a, implementation through the General Plan implementation checklist, assessment and surveys by a qualified biologist where triggered, applicable avoidance and minimization

measures, project-specific CEQA review where required, and compliance with CESA and applicable CDFW authorization requirements provide an enforceable framework for identifying and avoiding or reducing potentially significant impacts to burrowing owl and its habitat. The Town therefore does not propose to incorporate CDFW's recommended measure verbatim, and the less-than-significant conclusion in Section 3.4 remains unchanged.

A2-8 The comment states that the project may result in potentially significant impacts to riparian habitat, wetlands, and other sensitive natural communities, and recommends MM-BIO-4, requiring evaluation of each project site by a qualified biologist; submittal of an LSA Notification pursuant to Fish and Game Code section 1602 for activities that may substantially alter the bed, bank, or channel of any stream, including ephemeral or intermittent streams, or lake; compliance with all measures required by any resulting LSA Agreement; mitigation of permanent impacts to streams and associated riparian habitat by restoration at a minimum 3:1 ratio based on acreage and linear distance, within the same watershed and year as the impact; on-site restoration of temporary impacts in the same year; and consultation with the Regional Water Quality Control Board and the U.S. Army Corps of Engineers and acquisition of permits under the Clean Water Act and the Porter-Cologne Water Quality Control Act.

The substance of this recommendation is addressed through the standards already applicable to subsequent projects, as analyzed in Impacts 3.4-2 and 3.4-3. The requirement to submit an LSA Notification arises directly under Fish and Game Code section 1602 and applies to every project meeting the statutory trigger, independent of the General Plan; CDFW's authority to require mitigation through the terms of an executed LSA Agreement is likewise unaffected by the General Plan 2045 or this EIR.

Within the General Plan, Action OSC-B.3.a expressly extends the required survey to creek corridors and to buffer areas potentially affected by a proposed project, and requires measures to avoid or minimize harm to riparian habitat to a less-than-significant level. Action OSC-B.4.a requires that proposals for grading, filling, or construction that would alter a watercourse shown on General Plan Figure OSC-3 be referred to CDFW, the U.S. Army Corps of Engineers, the San Francisco Bay Regional Water Quality Control Board, the Marin County Flood Control District, and other regulatory agencies for consultation. Action OSC-B.4.b requires development to comply with the creek setback standards in the Town's Watercourse regulations, which are codified, measurable standards enforced through the Town's permit process and applied uniformly to all development. Policy OSC-B.5 requires creek enhancement and riparian habitat restoration for construction projects adjacent to creeks and drainageways. Policy OSC-B.6 and Actions OSC-B.6.a and OSC-B.6.b address water quality, stormwater, and low-impact design requirements.

As described in Response to Comment A2-3, the Town will develop and use a General Plan implementation checklist to provide a documented mechanism for applying these requirements to applicable subsequent development proposals. For biological resources, the checklist will document whether a project site or potentially affected area

contains or may affect a stream, creek, lake, riparian habitat, wetland, or other sensitive biological resource; whether evaluation by a qualified biologist or other qualified professional is required; whether the proposed activity may substantially alter the bed, bank, or channel of a watercourse or otherwise trigger LSA Notification requirements; whether consultation, notification, permits, or other authorization from CDFW, the Regional Water Quality Control Board, the U.S. Army Corps of Engineers, or another regulatory agency is required; applicable avoidance, minimization, restoration, or other requirements; and whether additional project-specific environmental review is warranted.

Where a qualified biological assessment is required pursuant to Action OSC-B.3.a, the assessment will consider potentially affected creek corridors, riparian habitat, wetlands, and other sensitive biological resources, including potentially affected buffer areas. Where such resources are identified, applicable General Plan policies and actions require avoidance or minimization of impacts to a less-than-significant level and, where applicable, restoration. The implementation checklist will document completion of these requirements prior to applicable project approval.

Qualified biologists conducting surveys pursuant to Action OSC-B.3.a will also be required to submit qualifying observations of sensitive natural communities to the CNDDB, as applicable, consistent with applicable reporting protocols.

For the reason stated in Response to Comment A2-5, the Town has not adopted a fixed 3:1 restoration ratio. Where permanent impacts to a stream or associated riparian habitat would occur, the applicable standards are the avoidance and minimization requirement of Action OSC-B.3.a, the restoration requirement of Policy OSC-B.5, and the terms of any executed LSA Agreement, which govern the ratio, location, and timing of required restoration where an agreement is required. Similarly, where permits or other authorizations from the Regional Water Quality Control Board, U.S. Army Corps of Engineers, or another agency are required, the applicant must comply with the avoidance, minimization, restoration, compensatory mitigation, monitoring, and other requirements imposed through those authorizations.

Accordingly, the Town concludes that the General Plan policies and actions described above, implementation through the General Plan implementation checklist, site-specific biological evaluation where triggered, the Town's Watercourse regulations, project-specific CEQA review where required, and compliance with Fish and Game Code section 1600 et seq., the Clean Water Act, the Porter-Cologne Water Quality Control Act, and applicable agency authorizations provide an enforceable framework for identifying and avoiding or reducing potentially significant impacts to streams, riparian habitat, wetlands, and related biological resources. The Town therefore does not propose to incorporate MM-BIO-4 verbatim, and the less-than-significant conclusions in Section 3.4 remain unchanged.

A2-9 The comment recommends MM-BIO-5, requiring evaluation of each project site by a qualified biologist for potential impacts to sensitive natural communities, and restoration on site or off site at a minimum 1:1 ratio for temporary impacts and 3:1 for permanent impacts, replacement of trees at an appropriate ratio based on size and species and accounting for temporal habitat loss, or habitat compensation including permanent protection through conservation easement and a funded long-term management plan.

As described at Draft EIR pages 3.4-19 and 3.4-32, the CNDDB search identified four sensitive natural communities within the 11-quadrangle search area, none of which has been identified within the Planning Area. The Town notes that the second paragraph of Impact 3.4-3 refers to two such communities; this is a typographical error, and the text will be corrected to refer to four communities as set forth in Chapter 2, Revisions to the Draft EIR.

The substance of the recommendation is addressed through the standards already applicable to subsequent projects. Action OSC-B.3.a requires a qualified biologist to survey sites with potentially suitable habitat and to determine the presence of riparian and other sensitive habitat prior to development and other management approvals, and requires measures to avoid or minimize harm to a less-than-significant level. Policy OSC-B.1 requires preservation and enhancement of wildlife and plant communities in open spaces, riparian corridors, and other biologically sensitive areas. Policy OSC-B.3 establishes avoidance accompanied by habitat restoration as the preferred approach to conservation. Trees are separately protected by Policy OSC-B.8 and Municipal Code Chapter 9.

As described in Response to Comment A2-3, the Town will develop and use a General Plan implementation checklist to provide a documented mechanism for applying these requirements to applicable subsequent development proposals. For sensitive natural communities, the checklist will document whether the project site or potentially affected area contains or may contain a sensitive natural community or other sensitive biological resource; whether assessment or survey by a qualified biologist is required; whether a sensitive natural community is present or potentially affected; applicable avoidance, minimization, restoration, or compensatory mitigation requirements; whether consultation, notification, permits, or other authorization from CDFW or another resource agency is required; and whether additional project-specific environmental review is warranted.

The absence of a sensitive natural community from the CNDDB records identified for the Planning Area does not eliminate the project-level review required by Action OSC-B.3.a where potentially suitable or sensitive habitat is present. Where the General Plan implementation checklist or other project review identifies the potential for a sensitive natural community to occur, a qualified biologist will evaluate the site and potentially affected areas prior to applicable development or management approval.

Where a sensitive natural community is identified, applicable General Plan policies and actions require avoidance or minimization of harm to a less-than-significant level, with habitat restoration where appropriate. Depending on the resource and site-specific circumstances, measures may include project redesign or footprint reduction, avoidance of the affected community, establishment of appropriate buffers, restoration of temporarily disturbed habitat, restoration or preservation of replacement habitat, tree replacement where applicable, or other measures necessary to meet the applicable General Plan performance standards and regulatory requirements.

Qualified biologists conducting surveys pursuant to Action OSC-B.3.a will also be required to submit qualifying observations of sensitive natural communities to the CNDDB, as applicable, consistent with applicable reporting protocols. This requirement will also be incorporated into the General Plan implementation checklist to facilitate consistent implementation.

For the reason stated in Response to Comment A2-5, the Town has not adopted fixed compensation ratios. Where a sensitive natural community would be affected, the required outcome is avoidance or minimization of harm to a less-than-significant level accompanied by habitat restoration, as applicable. The appropriate project-specific measures will be determined based on the nature, extent, quality, and function of the affected resource and the measures necessary to achieve the applicable General Plan performance standard. Where an ITP, LSA Agreement, or other regulatory authorization is required, the applicant must also comply with any habitat compensation, restoration, conservation, monitoring, or other requirements imposed through that authorization.

Accordingly, the Town concludes that Policy OSC-B.1, Policy OSC-B.3 and Action OSC-B.3.a, Policy OSC-B.8, Municipal Code Chapter 9, implementation through the General Plan implementation checklist, site-specific biological assessment where triggered, applicable restoration and compensatory mitigation requirements, and project-specific CEQA review where required provide an enforceable framework for identifying and avoiding or reducing potentially significant impacts to sensitive natural communities. The Town therefore does not propose to incorporate MM-BIO-5 verbatim, and the less-than-significant conclusion in Section 3.4 remains unchanged.

A2-10 The comment requests that special status species and natural communities detected during project surveys be reported to the CNDDB, consistent with Public Resources Code section 21003(e).

The Town agrees that reporting qualifying observations obtained through biological surveys required by Action OSC-B.3.a will improve the information available for future biological-resource review. Accordingly, Action OSC-B.3.a has been revised to require qualified biologists conducting surveys pursuant to that Action to submit qualifying observations of special status species and sensitive natural communities to the CNDDB and/or SPOWDB, as applicable, consistent with applicable database reporting protocols.

This reporting requirement will be incorporated into the General Plan implementation checklist described in Response to Comment A2-3. Where biological surveys are

required pursuant to Action OSC-B.3.a, the checklist will document, as applicable, whether qualifying observations of special status species or sensitive natural communities were identified and whether the applicable CNDDB and/or SPOWDB reporting requirement has been completed.

This revision establishes a documented mechanism for implementing CDFW's recommendation and will improve the biological information available to the Town, CDFW, qualified biologists, and other agencies for review of subsequent projects. The revision does not change the impact analysis or significance conclusions in Section 3.4 of the Draft EIR.

> **Action OSC-B.3.a: Biological Surveys.** Require surveys of sites, including buffer areas potentially affected by proposed projects, with potentially suitable habitat for special status species, including creek corridors, to determine the presence or absence of special status species, critical habitat, riparian habitat~~,~~. Surveys are to be prepared by a qualified biologist prior to development and other management approvals. Require projects to implement measures to avoid or minimize harm to special status species, critical habitat, ~~and~~ riparian habitat, and other sensitive biological resources to a less-than-significant level. Consult with resource agencies as required by federal and State regulations. Document compliance with these requirements through the Town's General Plan implementation checklist or other applicable review procedure. Qualified biologists conducting surveys pursuant to this Action shall submit qualifying observations of special status-species and sensitive natural communities to the California Natural Diversity Database (CNDDB) and/or Spotted Owl Observations Database (SPOWDB), as applicable, consistent with applicable reporting protocols.

A2-11 The comment states that the project would have an impact on fish and wildlife and that assessment of environmental document filing fees is necessary, and that payment is required for the underlying project approval to be operative, vested, and final.

The Town acknowledges that the project is subject to environmental document filing fees under Fish and Game Code section 711.4 and that payment of the fee is required for the project approval to be operative, vested, and final. The Town will pay the applicable fee when it files the Notice of Determination with the Marin County Clerk and the State Clearinghouse. The comment does not address the adequacy of the Draft EIR, and no further response is necessary.

A2-12 The comment provides CDFW's concluding remarks and identifies staff contacts for questions and further coordination. The Town appreciates CDFW's review of the Draft EIR and the detail provided in the comment letter. Town staff and the Town's consulting biologist are available to coordinate with CDFW regarding the General Plan policies and actions and the performance standards described in Responses to Comments A2-3 through A2-9 prior to consideration of the Final EIR by the decision-making body. The comment does not raise a significant environmental issue with respect to the adequacy of the Draft EIR, and no further response is required.

A2-13 Attachment 1 to the comment letter presents CDFW's recommended mitigation measures MM-BIO-1 through MM-BIO-5 in the format of a draft mitigation monitoring and reporting program, identifying the timing of each measure as prior to ground disturbance and, for certain measures, for the duration of construction, and identifying the project applicant as the responsible party. The substance of each recommended measure is addressed in Responses to Comments A2-5 through A2-9. The Town notes that the attachment assigns the designation MM-BIO-3 to two different measures, addressing special status plants and burrowing owl respectively.

The timing and responsibility conventions reflected in the attachment are consistent with the framework described in Response to Comment A2-4. Under Action OSC-B.3.a, the required biological survey is prepared by a qualified biologist retained by the applicant prior to development and other management approvals, and the resulting avoidance and minimization measures are implemented by the applicant prior to and during ground-disturbing activity. Compliance will be verified by the Town through the General Plan implementation checklist, applicable General Plan consistency review, project-specific CEQA review where required, applicable conditions of approval, and the Town's permit and inspection processes, as appropriate, as described in Responses to Comments A2-3 and A2-4. The General Plan implementation checklist will document, as applicable, whether biological-resource requirements are triggered; whether required biological surveys or assessments have been completed; applicable avoidance and minimization measures; required agency consultation, notification, permits, or other authorization; and whether additional environmental review is required. Qualified biologists conducting surveys pursuant to Action OSC-B.3.a will submit qualifying observations of special status species and sensitive natural communities to CNDDB and/or SPOWDB, as applicable, consistent with applicable reporting protocols. Where an ITP or LSA Agreement is required, CDFW retains independent authority to establish the timing, monitoring, and reporting obligations applicable to that permit or agreement. Nothing in the Town's General Plan implementation checklist replaces or limits those independent regulatory requirements or additional project-specific CEQA review required by law.

Heidi Scoble, Community Development Director
Town of San Anselmo
525 San Anselmo Ave
San Anselmo, CA 94960

Re: San Anselmo General Plan 2045 Update— Draft Environmental Impact Report (DEIR)

Dear Heidi Scoble:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the San Anselmo General Plan 2045 Update. The Local Development Review (LDR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities. The following comments are based on our review of the July 2026 DEIR.

Please note this correspondence does not indicate an official position or approval by Caltrans on this project and is for informational purposes only. A3-1

Project Understanding
The proposed plan is a General Plan 2045 Update for San Anselmo that will replace the existing General Plan, which was adopted in 1988 and amended from time to time with the most recent amendments adopted in 2024. In addition, the Town recently updated the Housing Element, which addresses the 2023-2031 planning period and the Town's Regional Housing Needs Allocation of 833 units, in 2023.

Multimodal Transportation Planning
Please review and include reference to the *Caltrans District 4 Pedestrian Plan* (2021) and the *Caltrans Bay Area Bike Plan Update* (2025) in the DEIR. These two plans studied existing conditions for walking and biking along and across the State Transportation Network (STN) in the nine-county Bay Area and developed a list of location-based and prioritized needs. A3-2

Please note that any Complete Streets reference should be updated to reflect Caltrans Director's Policy 37 (*link*) that highlights the importance of addressing the needs of non-motorists and prioritizing space-efficient forms of mobility, while also A3-3

facilitating goods movement in a manner with the least environmental and social impacts. This supersedes Deputy Directive 64-R1 and further builds upon its goals of focusing on the movement of people and goods.

A3-3 con't

Lead Agency

As the Lead Agency, the Town is responsible for all project mitigation, including any needed improvements to the State Transportation Network (STN). The project's fair share contribution, financing, scheduling, implementation responsibilities and lead agency monitoring should be fully discussed for all proposed mitigation measures.

A3-4

Equitable Access

If any Caltrans facilities are impacted by the project, those facilities must meet Americans with Disabilities Act (ADA) Standards after project completion. As well, the project must maintain bicycle and pedestrian access during construction. These access considerations support Caltrans' equity mission to provide a safe, sustainable, and equitable transportation network for all users.

A3-5

Equity and Public Engagement

We will achieve equity when everyone has access to what they need to thrive no matter their race, socioeconomic status, identity, where they live, or how they travel. Caltrans is committed to advancing equity and livability in all communities. We look forward to collaborating with the Town to prioritize projects that are equitable and provide meaningful benefits to historically underserved communities.

Caltrans encourages the Town to foster meaningful, equitable and ongoing public engagement in the General Plan development process to ensure future transportation decisions and investments reflect community interests and values. The public engagement process should include community-sensitive and equity-focused approaches seeking out the needs of individuals from underserved, Tribal, and low-income communities, the elderly, and individuals with disabilities.

A3-6

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Marley Mathews, Associate Transportation Planner, via LDR-D4@dot.ca.gov. For future early coordination opportunities or project referrals, please visit Caltrans LDR website (*link*) or contact LDR-D4@dot.ca.gov.

A3-7

Sincerely,

YUNSHENG LUO
Branch Chief, Local Development Review
Office of Regional and Community Planning

c: State Clearinghouse

Letter A3 Response **Yunsheng Luo, Branch Chief, Local Development Review, Office of Regional and Community Planning, California Department of Transportation (Caltrans)**
September 8, 2026

A3-1 The comment provides an introduction to the comment letter and correctly summarizes the project. The comment is noted and no further response is required.

A3-2 The comment recommends that the Draft EIR reference the Caltrans District 4 Pedestrian Plan (2021) and the Caltrans Bay Area Bike Plan Update (2025). Information about the Caltrans District 4 Pedestrian Plan (2021) and the Caltrans Bay Area Bike Plan Update (2025) has been added to the Regulatory Setting in Section 3.16, Transportation, of the Draft EIR. Please see Chapter 2, Revisions to the Draft EIR, for the text change.

A3-3 The comment recommends that the Draft EIR reference Caltrans Director's Policy 37 (2021). Information about the Caltrans Director's Policy 37 (2021) has been added to the Regulatory Setting in Section 3.16, Transportation, of the Draft EIR. Please see Chapter 2, Revisions to the Draft EIR, for the text change.

A3-4 The comment notes that the Town is the Lead Agency and responsible for implementing any project mitigation. The Draft EIR does not include any mitigation measures. However, the San Anselmo General Plan 2045 outlines goals, policies, and implementing actions for the Town to enforce as new projects come forward, including projects that address improvements on the State Transportation Network (STN).

A3-5 The comment states that work affecting State facilities must meet Americans with Disabilities Act (ADA) standards and maintain bicycle and pedestrian access during construction. If projects implemented through the General Plan 2045 would affect Caltrans facilities, those projects would be required to comply with ADA standards and to maintain bicycle and pedestrian access during construction activities.

A3-6 The comment reiterates Caltrans' commitment to equity and public engagement. The General Plan 2045 includes policies and actions designed to increase diversity, equity, inclusion, and belonging. Those policies and actions appear across all General Plan 2045 elements and will be implemented with explicit attention to who benefits, who may be underserved, and whether outcomes are improving to enhance belonging for all residents. Progress will be reviewed annually as part of the Town's existing implementation reporting.

A3-7 The comment provides a conclusion to the comment letter and provides Caltrans contact information. The comment is noted and no further response is required.

Heidi Scoble, Community Development Director
Town of San Anselmo
525 San Anselmo Ave.
San Anselmo, CA 94960

Re: San Anselmo Draft General Plan

Dear Ms. Scoble,

TAM appreciates the opportunity to review and comment on the Town of San Anselmo's Draft General Plan 2045. TAM supports the Draft General Plan's emphasis on creating a safe, sustainable, multimodal transportation system and appreciates the Town's recognition of the important relationships among land use, transportation, vehicle miles traveled (VMT), safety, transit, and bicycle and pedestrian mobility. We also appreciate the time and effort your team took in coordinating with TAM on the development of the transportation analysis for the plan and have no comments on the associated Draft Environmental Impact Report. A4-1

TAM offers the following comments for the Town's consideration as it finalizes the General Plan. These recommendations are intended to strengthen coordination between the Town and countywide transportation planning efforts and support successful implementation of the General Plan over its planning horizon.

Continued Coordination with TAM and Regional Transportation Partners. TAM supports the Draft General Plan's emphasis on regional coordination and recommends expanding this language to specifically recognize coordination with TAM and other appropriate regional transportation partners on the following areas including Traffic safety, travel on Sir Francis Drake Boulevard, transit priority and coordination, VMT reduction, active transportation, emergency mobility, and emerging transportation technologies. A4-2

Incorporate a Safe System Approach. TAM supports the General Plan's policies related to traffic calming, pedestrian and bicycle safety, Safe Routes to School, and roadway improvements. TAM recommends further strengthening these policies by incorporating a **Safe System approach**, which recognizes that transportation systems should be designed to reduce the likelihood that inevitable human mistakes result in fatal or serious-injury crashes. The general plan should also consider explicitly connecting General Plan implementation with TAM's countywide Local Road Safety Plan. A4-3

Establish Transportation Performance Monitoring. TAM recommends expanding the Draft General Plan's transportation monitoring provisions beyond automobile traffic conditions to establish a broader multimodal transportation performance framework. Periodic monitoring would help the Town assess progress toward General Plan goals, identify emerging transportation needs, support grant applications, and prioritize transportation investments. A4-4

Potential indicators could include fatal and serious-injury collisions, pedestrian and bicycle network completion, transit accessibility, mode share, VMT per capita, pavement condition, and travel conditions on key corridors. A4-4 con't

Address Sir Francis Drake Boulevard, Red Hill Avenue and the Hub as a Multimodal Corridor. TAM supports the Draft General Plan's focus on improving circulation and safety at the Hub and along Sir Francis Drake Boulevard, Red Hill Avenue and Center Boulevard. Given the importance of this corridor to both San Anselmo and the broader Ross Valley, TAM recommends considering corridor performance from a **multimodal and regional perspective**, rather than focusing primarily on individual intersection congestion. A4-5

Future planning should consider safety, transit reliability, traffic operations, pedestrian and bicycle access, emergency response, regional travel, and opportunities to improve traffic-signal operations as interconnected objectives.

Strengthen VMT Reduction and Transportation Demand Management. TAM supports the Draft General Plan's policies addressing VMT reduction and mitigation. TAM recommends supplementing these policies with an implementation action that periodically evaluates and identifies opportunities to reduce automobile travel through land-use planning, transportation demand management (TDM), active transportation, transit, shared mobility, and parking strategies. A4-6

Broaden Bicycle and Pedestrian Planning into Active Transportation Planning. TAM supports the Draft General Plan's commitment to improving bicycle and pedestrian facilities. TAM recommends considering a broader **Active Transportation Plan** framework for future updates that could comprehensively address walking, conventional bicycles, e-bikes, emerging micromobility, accessibility, Safe Routes to School, low-stress bicycle networks, intersection safety, and first/last-mile connections to transit. A4-7

Strengthen Transit and First/Last-Mile Connections. TAM supports the Draft General Plan's policies related to transit partnerships, accessible transit stops, mobility hubs, and commuter connections. However with additional local automobile trips anticipated over time, transit reliability and travel time are expected to degrade unless steps are taken to address transit priority on local roads. TAM recommends explicitly identifying **transit priority** as an objective to increase transit speeds and reliability along TAM's Countywide Transportation Plan Transit Priority Network. A4-8

TAM appreciates San Anselmo's efforts to develop a forward-looking General Plan that recognizes the importance of multimodal mobility, safety, sustainability, and regional coordination. TAM looks forward to continuing to work with the Town on implementation of the General Plan and on transportation initiatives that benefit San Anselmo and the broader Marin County transportation system. A4-9

Sincerely,

Anne Richman
Executive Director

Letter A4	**Anne Richman, Executive Director, Transportation Authority of Marin (TAM)**
Response	September 8, 2026

A4-1 The comment acknowledges the Town's recognition of the important relationships among land use, transportation, vehicle miles traveled (VMT), safety, transit, and bicycle and pedestrian mobility. The comment notes that TAM has no comments on the Draft EIR, and instead provides comments on the Draft General Plan 2045. No further response is required.

A4-2 The comment notes the General Plan 2045's emphasis on regional coordination and recommends additional language to be added to the General Plan 2045 to address coordination with transportation partners. This is not a comment on the adequacy of the Draft EIR, and no further response is required.

A4-3 The comment requests that the Town consider strengthening General Plan 2045 policies on traffic calming, pedestrian and bicycle safety, and other roadway elements to reduce injuries and fatalities. The comment also suggests explicitly linking General Plan implementation to TAM's countywide Local Road Safety Plan. This is not a comment on the adequacy of the Draft EIR, and no further response is required.

A4-4 The comment recommends that the General Plan 2045 expand transportation monitoring provisions to include evaluation of the Town's multimodal transportation system, and suggests potential indicators for periodic evaluation. This is not a comment on the adequacy of the Draft EIR, and no further response is required.

A4-5 The comment recognizes the General Plan 2045's focus on improving circulation and safety at the Hub and along Sir Francis Drake Boulevard, Red Hill Avenue and Center Boulevard. The comment requests expansion of future corridor performance evaluations to consider safety, transit reliability, traffic operations, pedestrian and bicycle access, emergency response, regional travel, and opportunities to improve traffic-signal operations as interconnected objectives. This is not a comment on the adequacy of the Draft EIR, and no further response is required.

A4-6 The comment requests that the General Plan 2045 supplement its VMT policies with an implementation action that periodically evaluates and identifies opportunities to reduce automobile travel through land use planning, transportation demand management (TDM), active transportation, transit, shared mobility, and parking strategies. This is not a comment on the adequacy of the Draft EIR, and no further response is required.

A4-7 The comment suggests that, in future General Plan updates, the Town consider a broader, interdisciplinary Active Transportation Plan. The plan may address walking, bicycling (including e-bikes and emerging micromobility), accessibility, Safe Routes to School, low-stress bicycle networks, intersection safety, and first/last-mile connections

to transit. This is not a comment on the adequacy of the Draft EIR, and no further response is required.

A4-8 The comment recommends explicitly identifying transit priority as an objective to increase transit speeds and reliability along TAM's Countywide Transportation Plan Transit Priority Network. This is not a comment on the adequacy of the Draft EIR, and no further response is required.

A4-9 The comment provides a conclusion to the comment letter and expresses appreciation for the Town's consideration of multimodal mobility, safety, sustainability, and regional coordination. The comment is noted and no further response is required.

MARIN CONSERVATION LEAGUE

Protecting Marin Since 1934

September 3, 2026

Subject: Comments on Draft San Anselmo General Plan 2045 and Draft Environmental Impact Report

Dear Ms. Scoble:

Thank you for the opportunity to review and submit comments on the Town of San Anselmo Draft General Plan 2045 (Draft GP 2045) and supportive Draft Environmental Impact Report (DEIR). While Marin Conservation League (MCL) has not been actively tracking the GP 2045 progress, it closely tracked the Housing and Safety Elements during their public review process (2022-2023). MCL acknowledges that these two critical elements were adopted in 2023 and are being carried over into Draft GP 2045. These adopted elements are crucial in addressing housing needs and community growth, as well as planning for climate change, wildfire prevention and flood protection. Given their importance in community planning, they serve a prominent role in the scope of Draft GP 2045, its guiding principles, and its other elements.

B1-1

MCL is an environmental organization, so the release of the DEIR has prompted review of both the Draft GP 2045 and supportive DEIR. MCL has reviewed these draft documents for alignment with MCL's longstanding mission, which is, *"To preserve, protect and enhance the natural assets of Marin in a changing environment."* Further, MCL has reviewed these documents for alignment with its adopted policy positions on, among others, housing, transportation, flooding/sea level rise, greenhouse gas emissions, biodiversity, and wildfire management. MCL is taking this opportunity to comment.

MCL respectfully submits the following comments on Draft GP 2045:

1. Land Use and Community Design Element
    a. MCL supports draft policies LU-A.1 (Sustainable Growth), LU-A.2 (Infill Development), and LU-A-3 (Public Infrastructure and Service Capacity for new development). Further, MCL supports draft Policies LU-B.4 and LU-B-6, which invite reuse of existing developed sites and private school/church sites for housing.
    b. MCL applauds the Town for directly addressing critical environmental considerations and resources in careful planning for new development through draft policies LU-C.2, LU-C.3, LU-C.4, LU-D.1, and action LU-C.3.b. These policies/action specifically address the need to consider hillside protection, open

FAX: 415.485.6259
EMAIL: mcl@marinconservationleague.org
WEB: marinconservationleague.org
ADDRESS: 175 N. Redwood Dr., Ste. 135
San Rafael, CA 94903-1977

space and natural resources, ridgeline zone protection, habitat continuity and biodiversity, and community character.

c. Draft action LU-A.5 recommends considering "reserve areas" to plan for housing needs that may arise under future cycles of the State Regional Housing Needs Allocation (RHNA). Two reserve areas have been identified in GP 2045 Figure LU-1. The reserve areas would be considered for increased density and development incentives. MCL generally supports this wise approach for planning ahead. In the event a reserve area is planned for increased development potential, a public process will be required. Therefore, it is suggested that the policy language includes a clear planning process (e.g., Specific/Precise Plan, overlay zone) for future reserve area planning.

d. At present, the Town addresses evening light pollution on a case-by-case basis through measures such as installing shields on streetlight standards. MCL recommends that the GP 2045 include a "dark skies" policy that would encourage the management of artificial lighting to reduce evening light and glare.

2. Open Space and Conservation Element
   a. This element is well-written and addresses many topics and issues that align with MCL's mission. Specifically, MCL calls for support of policy OSC-A.1 (Open Space Land Use Plan) acknowledging the purpose of open space in promoting environmental protection, resource management, providing passive recreation, and addressing climate resilience. MCL also supports policy OSC-A.2 which ensures that new development in hillside areas protect natural resources and ridgelines (mirrors land use policies).
   b. MCL supports policy OSC-A.3, which calls for expanding the open space network and action OSC-A.3.a, which recommends prioritizing lands for open space protection.
   c. The policies and actions recommended under Goal OSC-B (Conservation) broadly and adequately cover many conservation topics and issues such as habitat, wildlife corridors, creek protection, and water quality. It is recommended that this section include a policy that ensures that biodiversity is considered and addressed in open space land management and new development.

3. Sustainability, Climate Change and Resiliency Element
   a. MCL's Climate Action Working Group works diligently to advocate for reducing greenhouse gas emissions and promoting renewable energy through measures such as endorsing full electrification. For this reason, MCL fully supports policies and actions SU-A.1, SU-A.2, SU-C.1, SU-C.1.b, SU-C.3, SU-C.2.d, and SU-C.4.

4. Circulation Element
   a. MCL supports policy C-A.1 (Complete Streets), action C-A.1.a (Complete Streets and Human Scale Enhancements) and policy C-C.1 (Bicycle and Pedestrian Master Plan) as they address multimodal transportation needs while recognizing the small scale of the San Anselmo community.
   b. MCL supports policy C-B.6, which maintains traffic level of service as a tool for managing the local, signalized street network.

5. Safety Element
   a. While the Safety Element was recently updated by the Town, MCL would like to express continued support for its policies and actions. Most notable are policy S-A, which supports the preparation and implementation of emergency response

Marin Conservation League was founded in 1934 to preserve, protect and enhance the natural assets of Marin County.

and evacuation plans; and policy S-D.2.c, which recommends promoting nature-based solutions to manage water flow/runoff and minimize water quality impacts.

b. Vegetation management and wildfire risk reduction are of particular concern. MCL supports Action S-1.d, which calls for preparation of a Biodiversity, Fire and Fuels Integrated Plan. The plan should be developed in coordination with Ross Valley Fire, the Marin Wildfire Prevention Authority and environmental stakeholders, including the California Native Plant Society–Marin Chapter. It should incorporate the principles and practices advanced through the Ecologically Sound Practices Partnership so that wildfire resilience, biodiversity, habitat protection, soil health and water quality are addressed together. The plan should also establish clear implementation standards, responsibilities and adaptive-management measures for ongoing vegetation management and emergency response.

B1-1 con't

MCL has no comments on the DEIR. The document is well written, and as a Program EIR, it relies on future site-specific studies for review of future development and policy actions that are deemed consistent with GP 2045.

B1-2

Thank you for this opportunity to comment.

Yours truly,

Rebecca Schwartz Lesberg

Letter B1 Response

Rebecca Schwartz Lesberg, Executive Director, and Paul A. Jensen, Co-chair, Land Use, Transportation & Water Committee, Marin Conservation League (MCL)
September 3, 2026

B1-1 The comment states that the Marin Conservation League (MCL) tracked the Housing and Safety Elements during their public review and acknowledges that both elements, adopted in 2023, are being carried into the Draft General Plan 2045. The comment explains that MCL has reviewed the Draft General Plan 2045 and the Draft EIR for consistency with its mission and adopted environmental policy positions.

The comment goes on to provide feedback on specific General Plan 2045 policies and actions. This is not a comment on the adequacy of the Draft EIR, and no further response is required.

B1-2 The comment notes that MCL has no comments on the Draft EIR. The comment is noted and no further response is required.

[You don't often get email from kiln479@hotmail.com. Learn why this is important at https://aka.ms/LearnAboutSenderIdentification]

CAUTION: External Sender

I would like to submit the following comments on the Draft General Plan EIR.

The analysis in the Hydrology chapter concludes there will be no significant impacts from build out of the project, 2,279 units and 752,133 square feet of non residential uses. However, this build out will result in tens of thousands of square feet of impervious surface. Predictions for climate change indicate there will be increased precipitation in the future as well as sea level rise. Combined with run off from planned upstream development, it is hard to imagine this will not produce increased flooding in San Anselmo Creek. The EIR should focus on probable increased flooding and realistic mitigation measures and how they will be funded. B2-1

The Draft EIR finds no significant impact on traffic despite the existing real world congestion impacts that exist. In 2025 the Hub intersection had 40,000 vehicle per day. Long queues form multiple times per day. Center Blvd can back up many stop signs back from the Hub. The State has imposed RHNA development for this cycle through 2031 that requires 1,776 units built on the Sir Francis Drake Blvd. corridor including San Anselmo, Fairfax and West Marin. This will result in many thousands of additional vehicles using Sir Francis Drake Blvd and its parallel streets, potentially creating gridlock. The EIR should not deem this outcome as not significant and provide a realistic assessment of inevitable long term traffic disfunction that will result from the build out envisioned by this EIR along with meaningful mitigations. B2-2

Jonathan Braun

Letter B2 **Jonathan Braun**
Response September 7, 2026

B2-1 The comment expresses concern that new impervious surfaces would increase stormwater runoff and could contribute to localized flooding. The comment also raises concerns regarding increased precipitation associated with climate change, sea level rise, runoff associated with development outside the Planning Area, and the need for measures to address potential flooding.

As described on page 2.0-14 of the Draft EIR, "The EIR evaluates the theoretical development that could occur within the Planning Area at the densities and intensities allowable under the proposed General Plan. While no specific development projects are proposed as part of the General Plan Update, the General Plan would provide the policy framework under which future growth could occur, including the development of new businesses, expansion of existing businesses, and new residential uses …"

The development assumptions evaluated in the Draft EIR represent a theoretical buildout scenario for purposes of evaluating the potential environmental effects of the General Plan. They do not represent a specific development proposal or assume that all future development would occur on presently undeveloped land. San Anselmo is a largely developed community with limited vacant land, and future growth is anticipated to occur substantially through infill, redevelopment, and intensification of already developed or underutilized properties.

Approximately 77 percent of the 2,279-unit theoretical residential development capacity is located on parcels that are currently developed or underutilized, rather than vacant. Approximately 75 percent of the 752,133 square feet of theoretical nonresidential development capacity is located on parcels that are currently developed or underutilized, rather than vacant.

Accordingly, the amount of theoretical development capacity evaluated in the EIR should not be equated directly with an equivalent amount of new impervious surface. Development on an already developed or underutilized parcel may replace or modify existing buildings, parking areas, driveways, and other impervious surfaces. The net change in impervious surface and associated stormwater runoff will depend on the existing and proposed conditions of each development site.

As future projects are proposed, the Town will review development applications and evaluate each project's consistency with the General Plan 2045 land uses, policies, and implementing actions. This review will include consideration of site-specific conditions and constraints, including existing and proposed impervious surfaces, drainage patterns, stormwater runoff, proximity to waterways and flood-prone areas, and other conditions relevant to the proposed project, as applicable.

The General Plan also includes policies and actions addressing water quality, stormwater management, flooding, and climate resilience. Among these, Policy OSC-B.6 and Actions

OSC-B.6.a and OSC-B.6.b address water quality, stormwater management, and low-impact design requirements. These provisions operate together with applicable Town development standards and regional, State, and federal stormwater and water-quality requirements to address runoff associated with subsequent development.

To provide a documented mechanism for implementing applicable General Plan requirements, the Town will develop and use a General Plan implementation checklist or other applicable review procedure for future development proposals. For projects with potential hydrology, drainage, stormwater, or flooding effects, the checklist will document, as applicable, existing and proposed site conditions; applicable stormwater, drainage, flood-protection, water-quality, and low-impact design requirements; whether additional site-specific technical analysis is required; whether consultation or permits from other agencies are required; and whether additional project-specific environmental review is warranted.

For subsequent projects subject to CEQA review, the Town will determine, consistent with applicable CEQA requirements, whether the project's environmental effects are within the scope of the Program EIR or whether additional environmental review is required. The General Plan implementation checklist will supplement, rather than replace, any project-specific CEQA review required by law.

B2-2 The comment identifies traffic volume and delay issues in the town, particularly at the Hub intersection. The comment also expresses concern that future residential development in San Anselmo and neighboring communities along the Sir Francis Drake Boulevard corridor could increase traffic volumes, congestion, and delay on Sir Francis Drake Boulevard and parallel streets.

Under Senate Bill (SB) 743 (Steinberg, 2013), the California Legislature changed how transportation impacts are evaluated under CEQA. Public Resources Code section 21099(b)(2) provides that automobile delay, as described solely by level of service (LOS) or similar measures of vehicular capacity or traffic congestion, shall not be considered a significant impact on the environment. To implement SB 743, CEQA Guidelines section 15064.3 establishes vehicle miles traveled (VMT) as the most appropriate measure of transportation impacts. Section 15064.3(a) states that, except for roadway capacity projects, "a project's effect on automobile delay shall not constitute a significant environmental impact." These requirements have applied statewide since July 1, 2020. Consistent with these requirements, the Draft EIR evaluates transportation impacts using VMT, following the guidance in the Governor's Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018). Traffic congestion and vehicle delay therefore cannot be used as a basis for determining the significance of transportation impacts in the EIR.

The comment's concerns regarding traffic generated by development outside the town do not change the CEQA significance metric applicable to the General Plan. The Draft EIR evaluates the transportation effects of the General Plan using VMT, including the applicable cumulative analysis, rather than intersection delay or roadway congestion. A

description of how VMT is measured is presented on page 3.14-18 of the Draft EIR, while page 3.14-24 identifies the Town's VMT significance thresholds. Impact 3.14-5 beginning on page 3.14-30 of the Draft EIR addresses cumulative transportation and circulation impacts, including VMT.

The cumulative analysis considers implementation of regional planning documents such as Plan Bay Area 2050+ and the Marin Countywide Transportation Plan (CTP) 2050, both of which are intended to lower VMT by directing land use patterns toward reduced auto-dependency. These plans account for anticipated growth in jurisdictions surrounding San Anselmo, and therefore address land use changes, transportation improvements, and VMT from a regional perspective. These plans direct new housing and employment toward compact Priority Development Areas (PDAs) and existing urban cores, placing daily services within walking or biking distance of residents. Where grocery stores, schools, and workplaces are within walking or biking distance, daily vehicle trips may be reduced or eliminated. Higher-density infill development within these nodes is intended to keep the distance between destinations relatively short, which could reduce reliance on vehicle travel for local trips. These land use changes are paired with substantial changes to regional transportation infrastructure intended to make non-auto travel modes more viable and reduce regional VMT. Infill, redevelopment, and intensification of already developed or underutilized properties can support circulation system performance. To the extent walking, biking, and transit programs reduce single-occupancy vehicle trips, they could also reduce congestion at high-volume intersections.

The Town may still consider traffic operations and LOS outside of CEQA, such as for consistency with General Plan circulation policies or when planning roadway improvements. Thus, while automobile delay and congestion are not CEQA significance criteria, they remain relevant to the Town's transportation planning, capital improvements, and review of future development under the General Plan. For example, the following General Plan 2045 policies and actions, as amended in Chapter 2, Revisions to the Draft EIR, of this Final EIR, are focused on transportation operations:

> **Policy C-B.2: ~~Roadway Traffic Circulation~~ Multimodal Corridor Planning**. ~~Maintain adequate traffic circulation while balancing the needs of all system users along~~ Plan for and manage Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, Butterfield Road, the Hub, and ~~in~~ downtown as integrated multimodal corridors that balance local and regional mobility with the needs of all transportation system users.
>
> **Action C-B.2.a: Progress Evolution of The Hub**. Develop designs and secure funding for near-term improvements to the Hub as identified in The Hub Transportation Study. This includes incorporation of traffic, transit, pedestrian, and bicycle enhancements.
>
> **Action C-B.2.b: Major Thoroughfare Roadway Improvements**. Improve Sir Francis Drake Boulevard, Center Boulevard, Red Hill Avenue, and intersections along these roadways by investing in transportation infrastructure that addresses safety, traffic

operations, pedestrian and bicycle access, transit reliability, emergency response, and regional travel as interconnected objectives.~~to improve safety and accessibility for pedestrians and other non-vehicle roadway users while maintaining adequate circulation for regional through traffic.~~

Policy C-B.3: Circulation in Commercial Hubs. Ensure efficient and distinguishable access to and within the town's downtown and commercial hub along Greenfield Avenue through targeted multimodal improvements.

Action C-B.3.a: Circulation Monitoring. Continue to monitor and study traffic circulation, safety, and parking within the town's commercial hubs and implement improvements as recommended.

Policy C-B.6: Traffic Level of Service. Maintain a traffic Level of Service (LOS) standard of "E" for signalized intersection operations during peak hours to ensure an efficient roadway network and allow for consistent evaluation of development project impact on local roadway traffic.

Action C-B.6.a: Traffic Impact Studies. Require that discretionary development projects be evaluated for level of service impacts in accordance with the Town of San Anselmo's Vehicle Miles Traveled (VMT) Screening Criteria and Thresholds of Significance. Projects that exceed the level of service threshold for signalized intersections shall provide feasible mitigation measures to reduce level of service impacts to levels consistent with Town policy.

In addition, as described in Response to Comment B2-1, the Town will develop and use a General Plan implementation checklist or other applicable review procedure for future development proposals. For applicable projects, the checklist will identify relevant General Plan circulation and transportation policies and actions and document how those requirements have been addressed. This may include, as applicable, requirements related to VMT, traffic operations, circulation, multimodal access, and transportation improvements. Where additional project-specific environmental review is required under CEQA, it will follow applicable requirements. The implementation checklist will supplement, rather than replace, any transportation analysis or environmental review required for a subsequent project.

The comment does not identify a deficiency in the Draft EIR's VMT analysis or provide information demonstrating that the Draft EIR's transportation significance conclusions should be changed. The Town will continue to address traffic operations and congestion through implementation of the General Plan's circulation policies and actions, including monitoring, project-level review, and transportation improvements, as applicable.

STAFF REPORT
TOWN OF SAN ANSELMO

Item #: 5.B

MEETING DATE: November 2, 2026

AGENDA TITLE: Public Hearing: Consideration of the Final Draft General Plan 2045 and Final Program Environmental Impact Report (EIR), and Recommendation to the Town Council. A Program EIR has been prepared for the project pursuant to the California Environmental Quality Act (CEQA).

FROM: Heidi Scoble, Community Development Director

RECOMMENDATION:

Staff recommends that the Planning Commission conduct a duly noticed public hearing, receive and consider public testimony, and adopt the attached resolution recommending that the Town Council:

1. Review and consider the Final Program Environmental Impact Report (EIR) for General Plan 2045, determine that it has been completed in compliance with the California Environmental Quality Act (CEQA), make the required CEQA findings, and certify the Final EIR.

2. Adopt General Plan 2045, including the Land Use Map and Implementation Matrix, subject to any specific modifications recommended by the Planning Commission and considered by the Town Council.

The Planning Commission's role is to review the merits of the proposed General Plan and Final EIR and provide a recommendation to the Town Council. The Town Council is responsible for the final certification of the EIR and adoption of the General Plan.

EXECUTIVE SUMMARY

The Town of San Anselmo is nearing completion of its first comprehensive General Plan Update in approximately 50 years. The proposed General Plan 2045 establishes a comprehensive, community-informed policy framework for future land use, conservation, mobility, economic vitality, climate resilience, safety, and public facilities. Once adopted, General Plan 2045 will guide future Town decisions involving development, infrastructure, environmental protection, public services, and community priorities, with individual projects and implementation actions subject to applicable review and approval processes.

The accompanying Final Program EIR evaluates the potential environmental effects of implementing the General Plan, considers alternatives, and incorporates responses to comments received during public review. The Final EIR concludes that implementation of General Plan 2045

would not result in significant unavoidable environmental impacts and that no mitigation measures are required.

The Planning Commission is asked to evaluate whether the Final Draft General Plan 2045 establishes an appropriate long-range policy framework for San Anselmo, consider the findings of the Final EIR, and determine whether to recommend adoption of the General Plan and certification of the EIR to the Town Council.

The Plan reflects extensive community engagement and repeated review by the General Plan Advisory Committee (GPAC), Planning Commission, and Town Council. It generally retains the Town's established land use framework while incorporating targeted map and policy refinements and establishes an implementation and reporting framework to guide future Town priorities.

The Commission may recommend specific modifications or clarifications for Town Council consideration.

BACKGROUND

Initiation and Organization of the General Plan Update (2023–2024)

San Anselmo's General Plan was last comprehensively updated in the mid-1970s and substantially amended in 1988. Although individual elements have been updated periodically to address evolving State requirements and community needs, including the Housing Element, which is updated every eight years as required by State law, the Town had not undertaken a comprehensive General Plan Update in several decades. Most recently, the Housing and Safety Elements were updated in 2023.

Recognizing the need for an updated long-range planning framework, the Town Council initiated the comprehensive General Plan Update in 2023. Key milestones included:

- **November 14, 2023 – Town Council Initiation:** The Town Council authorized the solicitation of consultant proposals, provided direction on optional General Plan elements, and established an ad hoc working group of two Councilmembers and two Planning Commissioners to assist with consultant selection and development of a community advisory framework.
- **December 4, 2023 – Planning Commission Introduction:** The Planning Commission received an introductory presentation outlining the General Plan Update process.
- **April 23, 2024 – Consultant Selection:** The Town Council selected O'Rourke & Associates and authorized a professional services agreement to prepare the General Plan Update and associated environmental review under the California Environmental Quality Act (CEQA).
- **June 2024 – General Plan Advisory Committee Formation:** The Town finalized appointments to the 15-member General Plan Advisory Committee (GPAC), representing the Town Council, Planning Commission, other Town advisory bodies, youth, and at-large community members.

The GPAC served as an advisory body throughout the process, providing community input and recommendations on the General Plan's vision, policy framework, and implementation actions.

Community Visioning and Guiding Principles (2024)
The first phase of the General Plan Update focused on understanding existing conditions, identifying community values and priorities, and establishing a shared vision for San Anselmo's future.
Initial engagement included stakeholder and local business interviews, meetings with Town committees and commissions, community pop-up events, and a community survey that received 642 responses.

This input informed development of the Vision Statement and Guiding Principles, which were reviewed through the following process:

- **2024:** GPAC review and refinement of the draft Vision Statement and Guiding Principles.
- **October 7, 2024:** Planning Commission review.
- **October 14, 2024:** Consultation with the Federated Indians of Graton Rancheria.
- **October 22, 2024:** Town Council consideration.

The resulting Vision Statement and Guiding Principles established the foundation for the General Plan's land use framework, goals, policies, and implementation actions.

Land Use Framework and Policy Development (2024–2025)
Building on the community's vision, the project team evaluated existing Town plans, land use and zoning patterns, commercial activity, transportation, natural resources, wildfire and flood hazards, and applicable State and regional requirements.

Throughout 2025, the GPAC, Planning Commission, and Town Council reviewed and refined the proposed Land Use Map and draft General Plan goals, policies, and actions through a series of public meetings.

Key milestones included:

- **May 2025:** Planning Commission review of Land Use and Community Design policies.
- **August 2025:** Planning Commission review of the proposed Land Use Map.
- **September 2025:** Town Council consideration of the proposed Land Use Map.
- **October 2025:** Planning Commission review of policies addressing land use, open space, and climate resilience.
- **November 2025:** Planning Commission review of Economic Vitality, Circulation, Parks, Recreation and Public Facilities, and Noise policies, followed by Town Council consideration of draft policies.

The proposed Land Use Map largely retains existing land use designations, with targeted refinements intended to improve consistency in hillside residential land use mapping, designate certain Town-owned properties as Open Space, accurately identify school properties as Public Facilities, and identify reserve areas for potential consideration of future housing needs.

Through this iterative process, the General Plan's goals, policies, and actions were refined to address community character, historic preservation, economic vitality, mobility, environmental protection, climate resilience, emergency preparedness, housing, and long-term implementation.

Complete Draft General Plan and Additional Review (2026)
Following development of the General Plan's vision, land use framework, and policy direction, the project team prepared a consolidated Draft General Plan for review in early 2026.

Key review milestones included:

- **January 8, 2026 – GPAC Review:** The GPAC reviewed the consolidated Draft General Plan, focusing on policy direction, clarity, consistency, and implementation.
- **February 2, 2026 – Planning Commission Review:** The Planning Commission considered the Draft General Plan and provided additional feedback.
- **March 10, 2026 – Town Council Review:** The Town Council reviewed the Draft General Plan and directed an independent diversity, equity, inclusion, and belonging (DEIB) assessment to further evaluate the Plan's policies and overall framework.
- **June 2026 – GPAC Update:** The GPAC received an update on the General Plan, including refinements resulting from the additional review.

The DEIB assessment informed revisions to the General Plan's goals, policies, actions, and introductory language, integrating these considerations throughout the document.

Community Engagement Throughout the General Plan Update
Community engagement has been a central component of the General Plan Update, informing the Town's vision, land use framework, goals, policies, and implementation actions. Throughout the process, residents, community organizations, businesses, and other interested parties were provided numerous opportunities to participate through public meetings, workshops, surveys, stakeholder interviews, and community events. The graphic to the right illustrates the breadth of public engagement opportunities provided throughout the General Plan Update.

Additional engagement included stakeholder interviews, community pop-up events, and meetings with Town boards and commissions. Together, these activities informed the General Plan's vision, policy framework, and implementation actions.

Environmental Review and Final Revisions (July–October 2026)
Following the development and refinement of the Draft General Plan, the Town released the Public Draft General Plan 2045 and Draft Program Environmental Impact Report (EIR) for public review. The environmental review process provided an additional opportunity for public agencies, organizations, and community members to evaluate the potential environmental effects of implementing the General Plan.

Key milestones included:

- **July 24, 2026 – Public Draft Release:** The Town released the Public Draft General Plan and Draft Program EIR for public review.
- **September 8, 2026 – Close of Public Comment Period:** The 45-day Draft EIR public review period concluded.
- **September 10, 2026 – GPAC Briefing:** The GPAC received an update on the General Plan and environmental review process.
- **October 2026 – Final EIR:** The project team completed its evaluation of public and agency comments, prepared written responses, and incorporated revisions and clarifications into the Final EIR and General Plan, as appropriate.

Comments received during the environmental review process addressed several topics, including biological resources, transportation, and environmental protection.

In response, the project team evaluated the comments and prepared responses, resulting in targeted refinements to General Plan policies and implementation actions, as summarized in **Attachment 6**.

The Final EIR includes the Draft EIR, comments received, responses to comments, and revisions to the environmental analysis. As documented in Chapter 2, the revisions do not result in new significant environmental impacts or otherwise require recirculation of the Draft EIR under CEQA Guidelines Section 15088.5.

DISCUSSION/ANALYSIS
Overview of the Final Draft General Plan 2045
The Final Draft General Plan 2045 establishes the Town's long-range policy framework for guiding land use, development, environmental protection, public facilities, and community priorities through 2045. Building on the community's Vision Statement and Guiding Principles, the Plan establishes goals that define desired outcomes, policies that guide future decisions, and implementation actions that identify how those outcomes may be achieved.

The General Plan includes the following elements:

- Land Use and Community Design
- Open Space and Conservation
- Sustainability, Climate Change and Resiliency
- Economic Vitality
- Housing
- Circulation
- Parks, Recreation and Public Facilities
- Safety
- Noise

The 2023–2031 Housing Element was adopted separately in 2023 and is incorporated into the General Plan framework. The Plan also includes supporting materials and an Implementation Matrix.

Collectively, the General Plan's goals, policies, and actions seek to preserve San Anselmo's distinctive community character while accommodating housing needs, protecting natural and historic resources, supporting economic vitality, improving transportation safety and mobility, strengthening climate and disaster resilience, and maintaining accessible public services and community spaces.

Revisions to the Draft General Plan Following Public Review

Public review of the Draft Program EIR resulted in targeted refinements to several General Plan policies and implementation actions. These amendments primarily address transportation and circulation, biological resource protection, sustainability, disaster preparedness, land use, cultural resources, and noise.

Notable revisions include:

- **Transportation and Circulation:** Incorporation of a Safe System approach to roadway safety, multimodal transportation performance monitoring, and enhanced coordination regarding bicycle, pedestrian, and transit improvements.
- **Biological Resources:** Strengthened biological survey requirements and measures to avoid or minimize potential impacts to sensitive biological resources. These revisions provide additional direction for identifying and evaluating potential impacts to sensitive biological resources during subsequent project-level environmental review.
- **Sustainability and Safety:** Clarification of community education initiatives, post-disaster recovery priorities, and coordination on wildfire risk reduction and environmental protection.
- **Land Use and Other Elements:** Refinements to improve policy clarity, consistency, and implementation.

The revisions strengthen environmental resource protections, improve policy clarity, and provide additional direction for future implementation, without changing the General Plan's overall vision, land use framework, or anticipated development capacity.

Attachment 6 consolidates the proposed General Plan policy and implementation action amendments, including a summary of each revision, the corresponding Final EIR reference, and detailed redline language identifying the specific changes.

The Planning Commission is encouraged to consider whether the amendments appropriately reflect the Town's policy direction and whether any additional clarification or modification should be recommended to the Town Council.

General Plan Implementation and Accountability

Adoption of General Plan 2045 represents the beginning of an ongoing implementation process. To translate the Plan's long-term vision into measurable progress, the General Plan includes an Implementation Matrix that organizes actions into two timeframes: near-term priorities for the first five years following adoption and longer-term actions anticipated during years five through twenty.

The Implementation Matrix will serve as a framework for integrating General Plan priorities into the Town's ongoing operations, decision-making, and resource allocation. Implementation will include:

- **Town Operations and Decision-Making:** Staff will use the General Plan to guide development review, regulatory updates, departmental work plans, capital improvements, budget recommendations, and coordination across Town departments.
- **Boards, Committees, and Commissions:** Staff will work with the Town's advisory bodies to identify relevant General Plan actions, establish annual priorities, evaluate implementation opportunities, and develop recommendations to the Town Council.
- **Annual Priorities and Progress Reporting:** Staff will incorporate near-term actions into annual and biennial work plans and budget processes and provide annual public updates identifying accomplishments, ongoing activities, implementation challenges, and upcoming priorities.
- **Five-Year Town Council Review:** Approximately every five years, the Town Council will review implementation progress, evaluate priorities, and provide direction for the next phase of General Plan implementation.

Implementation will be guided by Town Council priorities, legal requirements, available funding, staff capacity, and opportunities for partnerships. Individual actions may require additional analysis, public review, regulatory amendments, or future budget authorization before implementation.

Through this implementation and reporting framework, General Plan 2045 will serve as an active planning and decision-making tool, allowing the Town to monitor progress, adjust priorities, and respond to evolving community needs.

Final Program EIR and CEQA Considerations

The Program EIR evaluates the reasonably foreseeable environmental effects of implementing General Plan 2045 and considers alternatives to the proposed Plan. As a program-level environmental document, it provides information to support informed decision-making and establishes a framework for evaluating future projects, which may be subject to additional environmental review as appropriate.

The Final EIR includes responses to comments received during the public review period and revisions to the environmental analysis. As documented in Chapter 2, the Final EIR concludes that these revisions do not introduce significant new information requiring recirculation under CEQA Guidelines Section 15088.5.

As part of its review, the Planning Commission is asked to consider the Final EIR, including the environmental analysis, alternatives, and responses to comments, in evaluating the merits of the proposed General Plan. The Commission may identify any issues or clarifications it believes would be helpful for the Town Council to consider.

The Town Council is responsible for independently reviewing and considering the Final EIR, determining whether it has been completed in compliance with CEQA, making the required findings, and deciding whether to certify the Final EIR and adopt General Plan 2045.

Planning Commission Considerations and Recommendation

The Final Draft General Plan 2045 and Final EIR represent the culmination of an extensive community engagement, policy development, and environmental review process. The General Plan's land use framework, goals, policies, and implementation actions have been reviewed and refined through numerous public meetings involving the GPAC, Planning Commission, and Town Council.

At this stage, the Planning Commission is asked to consider the Final Draft General Plan and accompanying environmental analysis as a whole, receive public testimony, and provide a recommendation to the Town Council. The Commission may identify specific modifications or clarifications it believes warrant further consideration.

In evaluating the Final Draft General Plan 2045 and Final EIR, the Planning Commission is encouraged to consider the following questions to inform its recommendation to the Town Council:

1. **Community Vision and Policy Direction:** Does the Final Draft General Plan appropriately reflect the community's Vision Statement, Guiding Principles, and long-term priorities?

2. **Implementation and Accountability:** Does the Implementation Matrix establish a reasonable framework for prioritizing actions, coordinating Town resources, and monitoring progress toward the General Plan's goals?

3. **Environmental Review:** Does the Final EIR provide sufficient information regarding the potential environmental effects of implementing the General Plan to support an informed recommendation to the Town Council?

The Commission may recommend adoption of the General Plan as presented or identify specific modifications for Town Council consideration. Any proposed substantive changes will be reviewed by staff and the environmental consultant, as appropriate, to determine whether additional environmental analysis is necessary.

Conclusion

General Plan 2045 reflects an extensive community planning process and establishes a comprehensive policy and implementation framework to guide San Anselmo through 2045. Based on the public engagement, review by the GPAC, Planning Commission, and Town Council, and completion of the environmental review process, staff recommends that the Planning Commission adopt the proposed resolution recommending certification of the Final Program EIR and adoption of General Plan 2045, including the Land Use Map and Implementation Matrix, subject to any specific modifications recommended by the Commission.

FISCAL IMPACT

On April 23, 2024, the Town Council authorized a professional services agreement with O'Rourke & Associates in an amount not to exceed $1,022,805 for preparation of General Plan 2045 and the associated environmental review. The Town Council subsequently authorized additional project-related expenditures, including approximately $30,000 for document accessibility improvements and up to $17,000 for an independent diversity, equity, inclusion, and belonging (DEIB) assessment.

Funding for the General Plan Update has been provided through Town Council-approved budget appropriations over multiple fiscal years, including General Fund allocations and collected General Plan Maintenance Fees. The expenditures described above do not include Town staff time associated with managing and coordinating the project.

Adoption of General Plan 2045 will establish a framework for future implementation activities but will not, by itself, authorize expenditures for individual implementation actions. Future activities will be evaluated through the Town's annual budget and work planning processes, subject to available funding, staff capacity, and Town Council priorities.

GENERAL PLAN CONSISTENCY

General Plan 2045 represents a comprehensive update to the Town's existing General Plan and will establish the governing policy framework for future land use, development, conservation, infrastructure, and public investment decisions. The update integrates the Town's previously adopted Housing and Safety Elements and coordinates the goals, policies, and actions across the General Plan elements to promote internal consistency.

Staff finds that the Final Draft General Plan 2045 establishes a comprehensive and internally consistent policy framework that reflects the community's Vision Statement and Guiding Principles. Upon adoption, General Plan 2045 will supersede the applicable provisions of the existing General Plan and serve as the basis for evaluating future land use and policy decisions.

CEQA AND CLIMATE ACTION PLAN CONSISTENCY

CEQA Analysis

The General Plan 2045 Update constitutes a project subject to the California Environmental Quality Act (CEQA). A Program EIR has been prepared to evaluate the reasonably foreseeable environmental effects of implementing the General Plan and alternatives to the proposed Plan.

The Final EIR incorporates the Draft EIR, public and agency comments, responses to comments, and revisions to the environmental analysis. As documented in the Final EIR, implementation of General Plan 2045 would not result in significant unavoidable environmental impacts, and the revisions made following public review do not require recirculation under CEQA Guidelines Section 15088.5.

The Planning Commission has been provided with the proposed CEQA Findings of Fact (**Attachment 2**), which document the environmental conclusions and findings supporting certification of the Final EIR. The Planning Commission is requested to consider the Final EIR and the proposed Findings of Fact and recommend that the Town Council independently review and consider the Final EIR, adopt the required CEQA findings, and certify the Final EIR before adopting General Plan 2045.

Climate Action Plan Consistency

The Final Draft General Plan 2045 supports and complements the Town's adopted Climate Action Plan 2030 (CAP), which establishes goals for reducing greenhouse gas emissions, promoting sustainability, and strengthening community resilience. The CAP calls for a 54 percent reduction in greenhouse gas emissions below 2005 levels by 2030 and carbon neutrality no later than 2045.

General Plan 2045 advances these objectives through goals, policies, and actions addressing climate change, energy efficiency, sustainable land use, multimodal transportation, natural resource conservation, and adaptation to climate-related hazards. In particular, the Sustainability, Climate Change and Resiliency Element provides a long-range policy framework that complements the CAP's more focused greenhouse gas reduction strategies.

The Town is also undertaking an update to the Climate Action Plan. Following adoption of General Plan 2045, staff will coordinate implementation of the two plans, working with the Climate Action Commission and other Town departments and advisory bodies to align priorities, identify opportunities for collaboration, and incorporate climate-related actions into annual work plans and budget recommendations.

Together, the General Plan and Climate Action Plan provide complementary frameworks for advancing the Town's sustainability, emissions reduction, and climate resilience objectives.

Memorandum

date November 4, 2026
to Heidi Scoble, Community Development Director, Town of San Anselmo
from Christina Erwin, De Novo Planning Group
subject San Anselmo General Plan 2045 EIR Errata

The Draft and Final Environmental Impact Reports (collectively, the EIR) for the San Anselmo General Plan 2045 project included the goals, policies, and actions proposed by the General Plan 2045. The goals, policies, and actions were cited in the Draft EIR as they were proposed in the Draft General Plan 2045. During preparation of the Final EIR, the text of some of the goals, policies, and actions was revised, either in response to a comment received on the Draft EIR or as a refinement directed by Town staff. Those refinements were shown in the Final EIR in ~~strikeout~~ for deleted text and double underline for added text. Policy S-B.1 and Action C-C.6.a are shown below using the same convention. The strikeout and double underline text shows all changes made to the Draft EIR text, including both the Final EIR revisions and the Planning Commission revisions described below.

At its November 2, 2026, public hearing, the Planning Commission recommended further revisions to Policy S-B.1 and Action C-C.6.a of the General Plan 2045, both of which had previously been revised in the Final EIR.

Policy S-B.1 is revised to rely on the seismic standards in applicable building codes, rather than a separate requirement that construction methods withstand stress caused by an earthquake. The revised policy reads as follows:

> **Policy S-B.1: Seismic Codes.** Require that new development and redevelopment meet the most up-to-date seismic codes and ~~/~~regulations as set forth in applicable building codes ~~and use methods of construction to withstand stress caused by an earthquake~~.

Action C-C.6.a is revised so that the Town would consider supporting, rather than commit to supporting, feasible transit-priority improvements identified in the Transportation Authority of Marin's (TAM) Countywide Transportation Plan Transit Priority Network. The revised action reads as follows:

> **Action C-C.6.a: Transit Agency Partnerships**. Partner with Marin Transit and the Golden Gate Bridge Highway and Transportation District to survey transit needs and to improve transit routes, service frequency, and overall service in response to evolving trends. In coordination with TAM and transit operators, identify and ~~support~~ consider supporting feasible transit-priority improvements that increase transit travel speeds and reliability along local roadways identified in TAM's Countywide Transportation Plan Transit Priority Network.

The modifications to Policy S-B.1 and Action C-C.6.a do not raise any new environmental issues. All potential environmental effects resulting from implementation of the General Plan 2045 were evaluated in the EIR. The revised policy and action would not result in any environmental effects beyond those described in the EIR, and no further analysis is required. The revisions do not constitute significant new information under CEQA Guidelines Section 15088.5 because they would not result in a new significant environmental impact or a substantial increase in the severity of an environmental impact identified in the EIR. Therefore, recirculation of the EIR is not required.

Outlook

General Plan 2045 hearing comment from a new neighbor

CAUTION: External Sender

Mayor Burdo and Council Members,

I'm Luis Galvez. My family and I just moved to San Anselmo two weeks ago, after almost six years in Spain, and honestly we're in love with this town. It's a wonderful place for young families. We see it every day.

I read through the General Plan and it got me wondering about a few things. I'm still new and probably missing context, so take these as ideas, nothing more. If I had to pick one, it'd be #10, because it makes #4, #5 and #11 easier.

I wonder what it would be like if:

1. Summer nights on the Avenue happened all year. In Spain the whole town was out at night, kids and all, every week. I think people here would love it. A first test: keep one car-free night a week through October, or one a month in winter, even without bands.

2. Empty spaces got used, even for a few weeks. A pop-up shop or a class, with a quick, easy permit.

3**. Kids had a real spot to play downtown.** Towns in Spain do this well. Here, the lawn by Sugarfoot is already where parents hang out. Add something for the kids there.

4**. Every new neighbor got a welcome.** Around 190 homes sell here every year. Someone could knock and say hi, and the Town could ask people why they moved here, and why they left. My son and I jumped in to volunteer at the Red Hill Dog Park.

5**. The Town heard from everyone, including people who can't come to meetings.** Something like an online group where people share ideas and vote, done within the

public meeting rules. And give the kids a voice too.

6**. More young families could live here.** People in their 20s and early 30s are the smallest group in town right now. A first step: help owners of big homes turn part of the house into a second home. State law already allows it, and the plan counts on 160 new ADUs to meet its housing goal. The Town could make it fast and easy.

7**. Neighbors taught each other the stuff schools don't and AI won't replace.** Things like:

- How to use AI, and how to spot scams
- Financial literacy
- Building an app or a business with AI
- Robots, coding and cooking for kids
- Screens and AI, for parents
- Phone and smart home help for seniors
- What to do when the power goes out
- Making your home safer from fire and floods, and saving on insurance
- Adding a small home in your house or backyard
- Building tools the Town needs
- Spanish and English
- How to fix a bike

8**. Town staff had tools to take the boring stuff off their plate.** The same tools could read every comment people send in and show what matters most. I'm working on this kind of tool now in my own AI work.

9**. Simple permits took a day.** Marin County already approves some small permits instantly online. Los Angeles is testing AI plan checks for homes lost in the fires.

10. Everything about the Town was in one place. One website and app, one calendar, text alerts. And a touch screen next to the paper board at Town Hall, where anyone walking by could see what's happening, sign up, vote on ideas or tell the Town what's broken. A good first way to learn could be one shared calendar, or one screen for 60 days. I led this kind of work at my last job.

11. The Town knew how busy downtown is, and when. Simple counts with basic tech, without cameras. Retail stores already do this.

12. Every idea started as a small test, with a simple way to learn what works. The plan already has pilot projects for public spaces (LU-D.3.c), but schedules them 5 to 20 years out. Could they start in year one? Small tests are what I did for years at Target and IKEA.

Now I'm building an AI-supported app about human connection, so my schedule is flexible. I've been here two weeks, so I don't have the answers. But I do know how hard change is when a lot of people and partners are involved. That was a big part of my work in the past. So if any of this might be useful, I'm happy to help where I can. Would a 20-minute coffee with someone on staff help?

Luis Galvez
