# City of South Lake Tahoe

**Agenda Item Executive Summary**

Joe Irvin, City Manager

**Meeting Date:** June 18, 2024
**Agenda Item #:**17

**Agenda Item:** Agreement with Ensight Technologies, LLC for Bellamy Parking Garage Equipment Procurement

**Executive Summary:** On April 5, 2022, the South Tahoe Joint Powers Parking Financing Authority (STJPPFA) entered into an agreement with Walker Consultants to evaluate the City Parking Garage and provide recommendations to upgrade the parking structure, circulation, Parking Revenue, and Access Control System (PARCS), 7 dual port Electric Vehicle (EV) charging stations and Advance Parking Guidance System (APGS). Subsequently, the project was divided into two phases to allow early payout of the Garage Bonds. Phase 1 will include structural and circulation upgrades, which have been completed. Phase 2 of the project consists of the Parking Access and Revenue Control System (PARCS), Advanced Parking Guidance System (APGS), and installation of the EV charging stations.Â The City issued a Request for Bids for the PARCS and APGS equipment on April 19, 2024. The City received five (5) responses, and Ensight Technologies, LLC was the highest-ranked proposer based on the selection criteria.Â  The STJPPFA will procure the EV stations separately and will issue a Construction Bid by mid-June to install the equipment by September 2024.

**Requested Action / Suggested Motions:** Acting as the South Tahoe Joint Powers Parking Financing Authority, Pass a Motion authorizing and directing the Chair to execute a two year contract, with an option to extend for years 3-7, with Ensight Technologies, LLC for $286,117.31, plus a 5% contingency for $14,305, for the Bellamy Parking Garage Upgrade Project.

**Responsible Staff Member:** Jeff Roberson, Support Lieutenant

**Reviewed and Approved By:** Susan Blankenship, City Clerk Olga Tikhomirova, Director of Finance Heather Stroud, City Attorney

**Attachments:**

# City of South Lake Tahoe
Report to
# South Tahoe Joint Powers Parking Financing Authority

## Meeting Date: June 18, 2024

**Title: Agreement with Ensight Technologies, LLC for Bellamy Parking Garage Equipment Procurement and Maintenance Services**

**Location:** 1 Bellamy Court, South Lake Tahoe, CA

**Responsible Staff Member:** Jeff Roberson, Support Lieutenant (530) 542-6521

**Background:** On April 5, 2022, the South Tahoe Joint Powers Parking Financing Authority, recognizing the importance of the City Parking Garage, entered into an agreement with Walker Consultants. The aim was to evaluate the parking structure and provide recommendations for its upgrade, including adding 7 dual port Electric Vehicle (EV) charging stations and an Advanced Parking Guidance System (APGS). This project is crucial for the City's infrastructure and commitment to sustainable transportation.

On November 1, 2022, the City Council amended Walker's Consultant contract to divide the project into two phases. Phase 1, which included structural and circulation upgrades, was successfully completed in October 2023. Phase 2, which consists of the Parking Access and Revenue Control System (PARCS), Advanced Parking Guidance System (APGS), and installation of the EV charging stations, is now underway.

**Issue and Discussion:** On April 19, 2024, the Public Works Department advertised the PARCS and APGS equipment procurement for the Parking Garage Upgrade Project on the City Planet Bids website. 986 vendors were notified. Fourteen bidders downloaded the bid documents. The Project bidding period closed on May 17, 2024.

The scope of services includes furnishing PARCS and APGS equipment, assisting with testing, commissioning, and accepting the new equipment, and providing annual maintenance and support services for seven years. The EV equipment will be procured separately, and an installation contractor will be selected based on low-bid public works contracting for installation. The RFP allowed the vendor to propose equipment for both PARCS and APGS or either component.

Public Works received five proposals from the interested bidder. The selection panel, which included police, finance, and public works staff, evaluated the proposals. Two vendors were selected for interviews, which were conducted on May 23, 2024.

The evaluation team ranked all vendors based on the criteria listed below.

1. Executive Summary: 5 Points
2. Company/Team History: 25 points
3. Project Manager/Project Team: 15 points
4. Scope of Work/Implementation: 30 points
5. Project Budget: 20 points
6. Recent Projects/References: 5 points

Proposal ranking results are shown in the table below, with the full pricing proposal:

| Rank | Name of Vendor | Location | Two-Year Total (Including Complete Base System, Add Alternates, and Two Years of Maintenance) | Seven-Year Total (Including Add-Alternate Items and Seven Years of Maintenance) |
|---|---|---|---|---|
| 1 | Ensight Technologies, LLC | El Cajon, CA | $305,317.31 | $483,597.31 |
| 2 | Premium Parking, LLC | New Orleans, LA | $314,198.56 | $395,028.56 |
| 3 | ParksolUSA | Scottsdale, AR | $331,961.87 | $366,061.87 |
| 4 | Parking Guidance System, LLC **(Only APGS System)** | San Diego, CA | $186,077.89 **(Only APGS System)** | $228,457.89 **(Only APGS System)** |
| 5 | Skidata, Inc. | Phoenix, AZ | $348,258.32 | $554,008.60 |

**Financial Implications:**
Staff has decided not to award Add Alternate Item 3 (Full-Color Matrix). Therefore, the recommended two-year contract value for Ensight Technologies, LLC (Ensight) is $286,391.06. Staff also recommends a 5% contingency of $14,320. There is currently $450,000 in the Parking Garage Account 52005320-46110, Machinery and Equipment, which would be sufficient to award this contract.

The seven-year value without the Add Alternate 3 is $464,671.06. The annual maintenance for the additional five years will be budgeted annually after the second year, with the annual budget approval process, and will be paid from the garage revenues. The following are the five-year total maintenance costs after Year 2 (Years 3-7):

- Extended 5-year Hardware Warranty for PARCS, LPR and Citation Management: $69,085
- Extended 5-Year APGS System Warranty: $50,445
- Extended Hardware Maintenance and Software Support for Handheld Citation System and APGS SD-3 sign: $58,750

The City will remain the Merchant of the Record, and all revenues will be collected by the City. In addition, the City will retain Parker Technologies for video assistance and will pay their fees directly.

In addition, Ensight will bill the city the following additional costs:

1. Parking Validation Text Message: $0.36 per text message
2. Citation Payment via the Portal: $3.95 per ticket
3. DMV Lookup Fee: $1.75 per lookup
4. Citation Notices: $1.25 per ticket
5. Pollution Insurance: $1,750 per year, as an optional, depending on City's choice.

**Environmental Considerations:** This project is considered maintenance and is exempt from Tahoe Regional Planning Agency (TRPA) permits and the California Environmental Quality Act (CEQA) under CEQA Guidelines section 15301(c) (Existing Facilities). All applicable best management practices will be utilized to protect air and water quality during construction.

**Policy Implications:**
This project advances the City Council's Strategic Priorities and Goals, specifically:

- Action Item 1.5 (Carbon Neutrality) to implement various projects to reach the City's 100% renewable energy and Climate Action Plan goals, including building robust EV charging infrastructure by 2025.
- Action Item 5.3 (Infrastructure and Maintenance) actively seeking funding to develop sustainable infrastructure projects based on the prioritized capital improvement project list.
- Implementation of the new equipment will also reduce or eliminate the revenue leakage caused by the old equipment currently in place.

The project also upgrades the parking garage with needed structural upgrades to maintain public safety.

Equipment installation is expected to commence around September 3, 2024, with anticipated completion by mid-November 2024. City staff will coordinate with PADMA to construct the project, and appropriate public notices and notifications will be provided to minimize impacts on users and businesses.

# South Tahoe Joint Powers Parking Financing Authority (STJPPFA)

## AGREEMENT

## FOR

## PARKING ACCESS AND REVENUE CONTROL AND PARKING GUIDANCE SYSTEMS (PARCS AND PGS)

THIS AGREEMENT is made and entered into this **18th day of June, 2024**, by and between the South Tahoe Joint Powers Parking Financing Authority (STJPPFA), a political subdivision of the State of California, herein designated "STJPPFA, and **Ensight Technologies, LLC.,** herein designated as "Contractor."

WITNESSETH, that the STJPPFA and the Contractor, in consideration of the mutual covenants hereafter set forth, agree as follows:

### ARTICLE 1 — THE WORK

Contractor agrees to furnish all labor, tools, equipment, facilities, materials, transportation and services necessary to perform and complete, in a good and workmanlike manner, **GATELESS PARCS AND APGS EQUIPMENT AND SOFTWARE AND ON-GOING MAINTENANCE AND SUPPORT,** including but not limited to, furnishing and delivery of equipment, coordinating with Installation Contractor, Testing, Commissioning and Acceptance of Equipment, Warranty and Maintenance, as required pursuant to the Contract Documents.

### ARTICLE 2 — COMMENCEMENT AND COMPLETION

The Work to be performed under this Agreement shall commence at the time as specified in the Notice to Proceed, and the Contractor shall diligently undertake the performance of the obligations as set forth in the Contract Documents on or before December 8, 2024, and all milestones as identified in **Exhibit E** (the "Contract Time").

***No grading or excavation or other land disturbance will be allowed between October 15th and May 1st; all Work shall be performed after the issuance of the Notice to Proceed, and Final Completion achieved within the Contract Time as set forth in the Contract Documents.***

STJPPFA and Contractor recognize that time is of the essence of this Agreement and that the STJPPFA will suffer financial loss if the Work is not completed within the time specified herein,

plus any extensions thereof allowed in accordance with the Contract Documents. STJPPFA and Contractor also recognize the delays, expense, and difficulties involved in proving the actual loss suffered by the STJPPFA if the Work is not completed within the Contract Time. Accordingly, instead of requiring any such proof, and pursuant to the Contract Documents, STJPPFA and the Contractor agree that as liquidated damages (but not as a penalty), the Contractor shall pay STJPPFA the sum of $150 for each calendar day per **Exhibit E** and continuing until Contractor achieves final acceptance of the Work by the STJPPFA.

## ARTICLE 3 — CONTRACT PRICE

The STJPPFA agrees to pay, and the Contractor agrees to accept, in current funds for the performance of the Work pursuant to the Contract Documents, the Contract Sum for the completion of the Work in accordance with the Contract Documents as Shown in **Exhibits H, F and J,** with a total not to exceed Contract Sum of **$286,391.06** for the Base Year Contract for PARCS and APGS, plus Add Alternates 1 and 2, and Two Years of Warranty and Maintenance (Add Alternative #3 is deleted).

In case of conflicts between **Exhibits H, F and J,** the strictest requirements shall apply.

For the Total Contract Sum of **Two Hundred Eight Six Thousand Three Hundred Ninety One** dollars and **Six** cents.

This sum includes all allowances, if any, provided for in the Contract.

The following will be the term of payment, as outlined in Cost Proposal **Exhibit J.**

1. 35% at Notice to Proceed
2. 35% upon successful delivery of all equipment to the Installation Contractor
3. 30% upon successful testing, commissioning and acceptance

The Contractor shall invoice STJPPFA for each milestone.

The Annual Maintenance for Years 3 to 7 is not included in this Agreement, but shall be billed annually to STJPPFA, if STJPPFA elects to continue such service. Other allowable on-going costs as shown in Exhibit J shall be billed monthly to the STJPPFA as operating costs.

## ARTICLE 4 — PREVAILING WAGES

Pursuant to the provisions of California Labor Code, Sections 1770 to 1780, inclusive thereof, the Contractor, and any subcontractor, of any tier, shall pay not less than the prevailing

rate of per diem wages as determined by the Director of the California Department of Industrial Relations.

In compliance with Senate Bill 854 and the California Labor Code, this project is subject to compliance monitoring and enforcement by the Department of Industrial Relations. Contractors must submit their certified payroll records directly to the Division of Labor Standards Enforcement Compliance Monitoring Unit through the electronic certified payroll reporting (eCPR) system, as well as to the STJPPFA.

Pursuant to the provisions of California Labor Code Section 1773.2, the Contractor is hereby advised that copies of the prevailing rate of per diem wages and a general prevailing rate for holidays, Saturdays and Sundays and overtime work in the locality in which the Work is to be performed for each craft, classification, or type of worker required to execute the Contract, are on file in the STJPPFA's office. The Contractor agrees that not less than said prevailing rates shall be paid to workers employed on this public works contract as required by Labor Code Section 1774. These rate determinations are found on the State of California Department of Industrial Relations' website at: http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm.

## ARTICLE 5 — CONTRACT DOCUMENTS

**The Agreement includes and incorporates by reference the Contract Documents for the Project, which consists of the following documents, in addition to this Agreement:**

(a) Contractor's Proposal
(b) Listing of Subcontractors
(c) Non-Lobbying Forms
(d) Suspension and Debarment Form
(e) Payment Bond Form;
(f) Performance Bond Form;
(g) Project Requirements;
(h) The Standard Specifications of the State of California, Department of Transportation, dated 2023; the Standard Plans of the State of California, Department of Transportation, dated 2023, and the South Lake Tahoe Public Improvement and Engineering Standards;
(i) Permits from other agencies as may be required by law; and
(j) Insurance Certificates and Endorsements

## ARTICLE 6 — WORKERS' COMPENSATION

Contractor shall take out and maintain during the life of the Agreement, adequate and sufficient workers' compensation insurance for all Contractor's employees employed at the site of improvements, and, if any Work is sublet, Contractor shall require each subcontractor similarly to provide workers' compensation insurance for all of the latter's employees, unless such employees

are covered by the protection afforded by Contractor, all in accordance with the Contract Documents. If any class of employees engaged in Work under this contract at the site of the Project is not protected under workers' compensation law, Contractor shall provide, and shall cause each subcontractor to provide, adequate insurance for the protection of employees not otherwise protected. Contractor shall indemnify the STJPPFA for any damage resulting to it from failure of either Contractor or any subcontractor to take out or maintain such insurance.

By its signature upon this Agreement, Contractor certifies that it has carefully reviewed and is aware of the provisions of Section 3700 of the Labor Code which requires every employer to be insured against liability for worker's compensation, or to undertake self-insurance in accordance with the provisions of the labor Code. Contractor, as a condition precedent to the commencement of its Work pursuant to the Agreement, shall comply with such provisions.

## ARTICLE 7 — INDEMNITY AND INSURANCE

To the fullest extent permitted by law, including, without limitation, Civil Code section 2782, *et seq*., and in strict accordance with the Contract Documents, Contractor shall defend, indemnify, and hold harmless the STJPPFA, its officials, officers, Board members, employees, agent, the Project Manager, the Architect/Engineer, the Project consultants, and their respective principals, officers and employees, and each of them, of and from any and all claims, demands, suits, causes of action, damages, costs, expenses, attorneys' fees, losses, or liability, in law or in equity, of every kind and nature whatsoever related to, arising out of, or in connection with, Contractor's operations to be performed under this Agreement, and as otherwise set forth in Contract Documents. The obligations of defense and indemnity set forth in this Article, and in the Contract Documents, shall not be limited by any insurance requirements or obligations pursuant to the Contract Documents, and shall not extend to the sole negligence or willful misconduct of the STJPPFA, or the active negligence of STJPPFA. The obligations arising from this Article shall not be construed to negate, abridge, or reduce other rights or obligations of indemnity (including all duties to defend), which would otherwise exist as to a party, or person described elsewhere in the Contract Documents.

Contractor shall maintain the insurance coverage described in **Exhibit D** of the Standard Specifications, throughout the performance of the Agreement, including any maintenance, warranty and/or guarantee periods. This Agreement shall not be operative until evidence of such insurance has been provided to, and approved by, the STJPPFA as to form, amount, and carrier. Contractor shall not allow any subcontractor to commence Work at the Project until subcontractor provides evidence to Contractor and STJPPFA that subcontractor has obtained insurance acceptable to the STJPPFA.

## ARTICLE 8 — NOTICES

Whenever any provision of the Contract Documents requires the giving of written notice, it shall be deemed to have been validly given if delivered in person to the individual for whom it

is intended, or if delivered at or sent by registered or certified mail, postage prepaid, to the address listed below:

**Notices required to be given to STJPPFA:**

_____

## ARTICLE 9 — MISCELLANEOUS

**9.1 Terms.** Terms used in this Agreement will have the meanings indicated in the Contract Documents.

**9.2 Assignment.** No assignment by a party hereto of any rights under or interests in the Agreement will be binding on another party hereto without the written consent of the party sought to be bound; and, specifically but without limitation, moneys that may become due and moneys that are due may not be assigned without such consent (except to the extent that the effect of this restriction may be limited by law), and unless specifically stated to the contrary in any written consent to an assignment, no assignment will release or discharge the assignor from any duty or responsibility under the Contract Documents.

**9.3 Successors and Assigns.** STJPPFA and Contractor each binds itself, its partners, successors, assign, and legal representatives to the other party hereto, its partners, successors, assigns, and legal representatives in respect to all covenants, agreements, and obligations contained in the Contract Documents.

**9.4 Severability.** Any provision or part of the Contract Documents held to be void or unenforceable under any law or regulation shall be deemed stricken, and all remaining provisions shall continue to be valid and binding upon STJPPFA and Contractor, who agree that the Contract Documents shall be reformed to replace such stricken provision or part thereof with a valid and enforceable provision that comes as close as possible to expressing the intention of the stricken provision.

**9.5 South Lake Tahoe City Code.** Contractor acknowledges that all pertinent provisions within the South Lake Tahoe City Code are incorporated by reference as though set forth in full herein, and, further, the failure of Contractor or any subcontractor, of any tier, to comply with any of its/their obligations under the Contract Documents, or the requirements of the South Lake Tahoe City Code, or any other applicable law, code, statute, or regulation, shall be deemed a material breach of the Agreement.

**9.6 Third Party Beneficiary.** Contractor expressly acknowledges the STJPPFA's status as a third party beneficiary solely with respect to the performance to be rendered under each subcontract, of any tier, upon the Project, and, as a result, Contractor acknowledges that STJPPFA possesses, *inter alia*, the rights enumerated within the South Lake Tahoe City Code as to the enforcement of obligations under subcontracts of any tier.

**9.7 Regulatory Requirements.** Contractor acknowledges that the Project is subject to requirements and regulations issued on behalf of various governmental and/or regulatory bodies, including, without limitation, the Lahontan Regional Water Quality Control Board and the Tahoe Regional Planning Agency, among others. Contractor agrees to fully and promptly comply with any and all requirements and regulations issued on behalf of such entities.

**9.8 Governing Law.** This Agreement and the Contract Documents shall be deemed to have been entered into in the County of El Dorado, State of California, and governed by California law. By entering into this Agreement, the Contractor consents and submits to the jurisdiction of Courts of the State of California, County of El Dorado, over any action of law, suit in equity, and/or other proceeding that may arise out of the Contract Documents.

IN WITNESS HEREOF, the said STJPPFA, State of California, has caused this Agreement to be executed by its Chair in its behalf, and the said Contractor has signed this Agreement the day and year first above written.

**EXHIBIT B**

**South Tahoe Joint Powers Parking Financing Authority**

**PAYMENT BOND FORM**

---

**WHEREAS**, the South Tahoe Joint Powers Parking Financing Authority, State of California, and

_____

hereinafter designated as "Principal" have entered into an Agreement for the furnishing of all materials, labor, services and equipment necessary, convenient and proper to:

_____

_____

pursuant to the said Agreement dated _____, 20__, and all of the documents attached thereto and incorporated by reference, becoming a part of said Agreement, are hereby referred to and made a part hereof; and,

**WHEREAS**, said Principal is required by California law, including, without limitation, Part 6 (commencing at §8000), Division 4 of the California Civil Code, to furnish a Bond in connection with said Agreement.

**NOW THEREFORE**, we, the Principal and _____ as Surety, are held and firmly bound unto the South Tahoe Joint Powers Parking Financing Authority in the penal sum of: _____._ Dollars ($ _____), lawful money of the United States of America, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators and successors, and assigns, jointly and severally, firmly by these presents.

**THE CONDITION OF THIS OBLIGATION IS SUCH THAT** if said Principal, its subcontractors, heirs, executors, administrators, successors or assigns shall fail to pay any of the persons named in §9100 of the California Civil Code, any amounts due under the Unemployment Insurance Code with respect to work or labor performed by any such claimant, any prevailing wages due and penalties incurred pursuant to Sections 1774, 1775, 1813 and 1815 of the California Labor Code or any other operative sections of the California Labor Code as may be applicable, any amounts required to be deducted or withheld from the wages of employees of the Principal and its subcontractors for payment to the United States Government and/or to the State Franchise Tax Board with respect to such work and labor, the Surety will pay for the same, in an amount not exceeding the total sum herein above specified, and also, in case suit is brought upon this Bond, a reasonable attorney's fee to be fixed by the court. This Bond shall inure to the benefit of any of the persons named in Section 9100 of the California Civil Code, so as to give the right of action to such persons or their assigns in any suit brought upon this Bond.

It is further stipulated and agreed that the Surety on this Bond shall not be exonerated or released from the obligation of this Bond by any change, extension of time for performance, addition, deletion, alteration, or modification in, to, or any contract, plans, specifications, or agreement pertaining or relating to any scheme or work of improvement herein above described or pertaining to or relating to the furnishing of labor, materials, or equipment therefore, nor by any change or modification of any terms of payment or extension of the time for any payment pertaining or relating to any scheme or work of improvement herein above described, nor by any rescission or attempted rescission of the contract, agreement, or Bond, nor by any conditions precedent or subsequent in the Bond attempting to limit the right of recovery of claimants otherwise entitled to recover under any such contract or agreement or under the Bond, nor by any fraud practiced by any person other than the claimant seeking to recover on the Bond, and that this Bond be construed most strongly against the Surety and in favor of all persons for whose benefit such Bond is given, and under no circumstances shall the Surety be released from its obligations hereunder by reason of any breach of contract between South Tahoe Joint Powers Parking Financing Authority and said Principal or on the part of any obligee named in such Bond, but the sole conditions of recovery shall be that claimant is a person described in Section 9100 of the California Civil Code and has not been paid the full amount of its claim, and that Surety does hereby waive notice of any such change, extension of time, addition, deletion, alteration, or modification herein mentioned.

The Surety, by the execution of this Bond, represents and warrants that this Bond has also been duly executed by the Principal with proper authority, and the Surety hereby waives any defense which it might have by reason of any failure by the Principal to execute or properly execute this Bond.

**IN WITNESS WHEREOF** two identical counterparts of this instrument each of which shall for all purposes be deemed an original thereof, have been duly executed by the Principal and Surety above named on the ____day of _____, 20__.

**WHEREAS**, said Principal is required according to the terms of said Agreement and applicable California State law, to furnish a Bond for the faithful Performance of said Agreement.

**NOW, THEREFORE**, we, the Principal and _____ as Surety, are held and firmly bound unto South Tahoe Joint Powers Parking Financing Authority in the penal sum of: _____Dollars ($_____), lawful money of the United States of America, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

**THE CONDITION OF THIS OBLIGATION IS SUCH,** that if the above bounden Principal, Principal's heirs, executors, administrators, successors or assigns, shall in all things stand to and abide by, and well and truly keep and faithfully perform the covenants, conditions and agreements in the said Agreement and any alterations made as therein provided, on the Principal's part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless the South Tahoe Joint Powers Parking Financing Authority, its employees, board members and agents, as therein stipulated, then this obligation shall be null and void; otherwise it shall be and remain in full force and effect.

If the South Tahoe Joint Powers Parking Financing Authority shall provide notice that it considers the Principal to be in default, Surety, upon receipt of such written notice, shall, within thirty (30) days, conduct any and all investigations that it deems necessary and appropriate to perform. Surety agrees to do so in order to be in a position to respond timely and efficiently, with the best interests of the overall completion of the Project as the primary goal, and without detriment to the Project or the South Tahoe Joint Powers Parking Financing Authority should the South Tahoe Joint Powers Parking Financing Authority Tahoe elect to exercise its right to terminate the Principal's

right to proceed due to default.

If the South Tahoe Joint Powers Parking Financing Authority issues a written notice of termination for default, Surety shall, within fifteen (15) calendar days, tender a written program to South Tahoe Joint Powers Parking Financing Authority which comprehensively details Surety's proposed completing contractor, its personnel and the manner in which the Surety will immediately honor its performance bond obligations. The time for completion of the Project shall not be extended as a result of the notice to the Surety, the election by South Tahoe Joint Powers Parking Financing Authority to terminate Principal's right to proceed for default, and/or the time it takes Surety to act as required hereunder.

Surety agrees that in responding to any such notice of default of its Principal, Surety shall not be entitled to tender as its completion contractor the Principal or any entity owned, controlled or affiliated with Principal. The response by Surety to South Tahoe Joint Powers Parking Financing Authority shall include whether the Surety intends to use the key project personnel of Principal as part of the staff of the Completing Contractor, and the consent by South Tahoe Joint Powers Parking Financing Authority of the right to use some, any or all of those proposed individuals shall be at the sole and absolute discretion of the South Tahoe Joint Powers Parking Financing Authority. No claim shall be made arising from the good faith exercise by South Tahoe Joint Powers Parking Financing Authority of the discretion denying any such request.

As a condition precedent to the satisfactory completion of the said Agreement, the above obligation shall hold good for the maximum period of time allowed by applicable law (including all statutes of limitation or repose) and commensurate with the obligations owed by the Principal to the South Tahoe Joint Powers Parking Financing Authority , during which time, if the Principal, Principal's heirs, executors, administrators, successors or assigns shall fail to make full, complete and satisfactory repair and replacements or totally protect the South Tahoe Joint Powers Parking Financing Authority from loss or damage made evident during said period, the above obligation shall be and remain in full force and effect.

The terms and conditions of the Agreement between the Principal and the South Tahoe Joint Powers Parking Financing Authority are expressly incorporated into this Performance Bond as though set forth in full.

And the said Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration, addition or deletion to the terms of the said Agreement, or to the Work to be performed thereunder, shall in any way affect its obligations on this Bond, and the Surety hereby waives notice of any such change, extension of time, alteration, addition or deletion to the terms of the said Agreement or to the Work. And the said Surety, for value received, hereby stipulates and agrees to waive the benefits of California Civil Code Sections 2819 and 2845.

In the event suit is brought upon this Bond by the South Tahoe Joint Powers Parking Financing Authority and judgment is recovered, Surety shall pay all costs incurred by the South Tahoe Joint Powers Parking Financing Authority in such suit, including a reasonable attorney's fee to be fixed by the court in accordance with applicable statutory law.

The Surety, by the execution of this Bond, represents and warrants that this Bond has also been duly executed by the Principal with proper authority, and the Surety hereby waives any defense which it might have by reason of any failure by the Principal to execute or properly execute this Bond.

**IN WITNESS WHEREOF** two identical counterparts of this instrument, each of which shall for all purposes be deemed an original thereof, have been duly executed by the Principal and Surety above named on the _____day of _____, 20__.

## SECTION 7.12 - INSURANCE COVERAGES AND AMOUNTS

(A) Insurances, as described in this Special Provision section and other related sections of the Standard Specifications, Special Provisions and the Contract Documents, shall be maintained by the Contractor for the full life of the contract including the maintenance and warranty period for any and all portions of this contract. The company or companies providing such insurance shall have no recourse against the STJPPFA, the and their members, directors and employees, or any of them, for payment of any premiums or assessments under such insurance.

**Workers Compensation:**

Contractor shall take out and maintain during the life of the Agreement, workers' compensation insurance for all Contractor's employees employed at the site of improvements and if any work is sublet, Contractor shall require subcontractor similarly to provide workers' compensation insurance for all of the latter employees, unless such employees are covered by the protection afforded by Contractor. If any class of employees engaged in work under this contract at the site of the project is not protected under workers' compensation law, Contractor shall provide, and shall cause each subcontractor to provide adequate insurance for the protection of employees not otherwise protected. Contractor shall indemnify the STJPPFA, the for any damage resulting to it from failure of either Contractor or subcontractor to take out or maintain such insurance.

If such insurance is underwritten by any agency other than State Compensation Fund, such agency shall be a company authorized to do business in the State of California.

Worker's Compensation Insurance shall be provided as required by any applicable law or regulation. Employer's liability insurance shall be provided in amounts not less than ONE MILLION DOLLARS (1,000,000) each accident for bodily injury by accident, ONE MILLION DOLLARS (1,000,000) policy limit for bodily injury by disease, and ONE MILLION DOLLARS (1,000,000) each employee for bodily injury by disease.

If there is an exposure of injury to Contractor's employees under the U.S. Longshoremen's and Harbor Worker's Compensation Act, the Jones Act, or under laws, regulations, or statutes applicable to maritime employees, coverage shall be included for such injuries or claims.

Each Workers' Compensation policy shall be endorsed with the following language:

Cancellation Notice – Contractor shall provide immediate written notice if (1) any of the required insurance policies is terminated; (2) the limits of any of the required polices are reduced; (3) or the deductible or self insured retention is increased.

Contractor and its insurer(s) shall waive any right of subrogation against STJPPFA and its officials, officers, employees, agents and representatives.

Contractor shall require all subcontractors, of any tier, to maintain adequate Workers' Compensation insurance. Certificates of Workers' Compensation shall be submitted pursuant to the Contract Documents.

**Commercial General Liability:**
In addition to all other insurance requirements as set forth in the Contract Documents, Contractor shall procure and maintain during the life of this Agreement such liability and property damage insurance and shall protect the STJPPFA, the STJPPFA Board, and all elective and appointive boards, officers, agents and employees and contractors from any claims for damages for personal injury, including death, as well as from claims for property damages which may arise from Contractor's ongoing and completed operations under this Agreement, whether such operation be by the Contractor or by any subcontractor, or by anyone directly or indirectly employed by either Contractor or any subcontractor, and the type and amounts of such insurance shall be as follows:

Contractor shall maintain Commercial General Liability (Occurrence) insurance no less broad than ISO form CG 00 01 covering all operations by or on behalf of Contractor, and all Work under the Contract Documents, and providing insurance for bodily injury liability and property damage liability for the limits of liability indicated herein and including coverage for contractual liability insuring the obligations assumed by Contractor in this Agreement.

The limits of liability for any Commercial General Liability (Occurrence) policy shall be in amounts not less than:

- TWO MILLION DOLLARS ($2,000,000) each occurrence (combined single limit for bodily injury and property damage)
- TWO MILLION DOLLARS ($2,000,000) Personal Injury Liability
- TWO MILLION DOLLARS ($2,000,000) for Products-Completed Operations
- TWO MILLION DOLLARS ($2,000,000) General Aggregate

If the policy does not have an endorsement providing that the General Aggregate Limit applies separately, or if defense costs are included in the aggregate limits, then the required aggregate limits shall be THREE MILLION DOLLARS ($3,000,000).

**Contractor's Pollution Liability Insurance:** Contractor shall maintain Contractor's Pollutions Liability (Occurrence) insurance in an amount no less than ONE MILLION DOLLARS ($1,000,000) per pollution incident and TWO MILLION DOLLARS ($2,000,000) aggregate. Coverage must apply to pollution incidents at or from any location at which the Contractor is performing under this Agreement. Prior written consent of the STJPPFA is required if the insurance has a deductible or self-insured retention in excess of $25,000.

**Umbrella or Excess Liability Insurance :** In addition to the insurance requirement above, Contractor shall provide Umbrella or Excess Liability Insurance in an amount no less than FIVE MILLION DOLLARS ($5,000,000) based on the Commercial Liability Insurance. The umbrella or excess policy shall provide that the policy takes effect (drops down) in the event the primary limits are impaired or exhausted.

**Additional Liability Insurance:** Contractor shall maintain automobile liability insurance covering bodily injury and property damage in an amount not less than TWO MILLION DOLLARS ($2,000,000) combined single limit for each accident.
Covered vehicles shall include owned, non-owned, and hired automobiles and trucks. Such insurance is a condition precedent of the STJPPFA entering into the Agreement.

**Cyber Liability Insurance (CLI):** Cyber Liability Insurance with limits not less than one million dollars ($1,000,000) per claim, two million dollars ($2,000,000) aggregate. Coverage shall be sufficiently broad to respond to the duties and obligations as is undertaken by Contractor in this agreement and shall include, but not limited to, claims involving security breach; system failure; data recovery; business interruption; cyber extortion; social engineering; infringement of intellectual property, including but not limited to infringement of copyright, trademark, trade dress, invasion of privacy violations, information theft, damage to or destruction of electronic information, release of private information, and alteration of electronic information. The policy shall provide coverage for breach response costs as well as regulatory fines and penalties, and credit monitoring expenses with limits sufficient to respond to these obligations. Contractor's policy shall be primary and shall not seek contribution from the City's coverage, shall contain a waiver of subrogation in favor of the STJPPFA, and shall be endorsed to provide that STJPPFA and its officers, officials, employees, agents, and volunteers are additional insureds. Any failure to comply with the reporting provisions of the policy by Contractor shall not affect coverage provided to the STJPPFA. If Contractor maintains broader coverage and/or higher limits than the minimums listed above, STJPPFA requires and shall be entitled to the broader coverage and/or higher limits maintained by the Vendor. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to STJPPFA.

**Conformity of Coverage:**
If more than one policy is used to meet the required coverage, such as a separate umbrella policy, such policies shall be consistent with all other applicable policies used to meet these minimum requirements. For example, all polices shall be Occurrence Liability policies or all shall be Claims Made Liability policies, if approved as noted above. In no cases shall the types of policies be different.

**Endorsements:**
Each Commercial General Liability policy shall be endorsed with the following specific language (or, alternatively, separate endorsements for each separate entity identified below):

1. "STJPPFA, the, their respective officers, agents, employees, and volunteers are to be covered as insured for all liability arising out of the operations by or on behalf of the named insured in the performance of this Agreement."; and "The insurance provided by the Contractor, including any excess liability or umbrella form coverage, is primary coverage with respect to any insurance or self-insurance programs maintained by Ensight, Technologies, LLC. and no insurance held or owned by the STJPPFA, shall be called upon to contribute to a Contractor loss. Contractor shall provide immediate written notice if (1) any of the required insurance policies is terminated; (2) the limits of any of the required polices are reduced; (3) or the deductible or self-insured retention is increased."

2. The policies shall stipulate that the insurance afforded the additional insured applies as primary insurance. Any other insurance or self-insurance maintained by the STJPPFA is excess only and shall not be called upon to contribute with this insurance.

(C) The following additional conditions apply to the insurance requirements the following shall apply to this Project:

1. Within ten (10) calendar days after the Contractor has received notice from the STJPPFA that the Agreement has been awarded to the Contractor and before the Work commences, Contractor shall satisfy all conditions precedent as set forth in the Contract Documents, including, without limitation, that Contractor shall submit to the City acceptable Certificates of Insurance and with original policy endorsements which specifically state the following:

(a) The existence of the required amounts of coverage.

(b) The effective and expiration dates of the policy.

(c) The types of coverage provided by the policy.

2. Written statement from the agent or broker issuing the policy confirming that the required insurance(s) is an Occurrence policy.

3. The City reserves the right to review the original policy, if deemed necessary by the City to resolve any questions of coverage or exception.

4. The City may expressly allow deductive clause, which it does not consider excessive, overly broad, or harmful to the interests of the City. Regardless of the allowance of exclusion or deductions by the City, the Contractor is responsible for any deductible amount and shall warrant that the coverage provided to the City is in accordance with this Section.

5. Certificates of insurance shall be signed by a person authorized by the insurer to bind coverage on its behalf.

6. List job name on certificate of insurance under "Description of Operations."

In the event the policy is canceled prior to the completion of the project and the Contractor does not furnish a new policy endorsement prior to cancellation, the City may obtain the required insurance and deduct the premium(s) from contract monies due the Contractor.

(D) No later than the time the Notice to Proceed is issued, or at any other time as may be directed in writing by the South Tahoe Joint Powers Parking Financing Authority, the Contractor shall provide written evidence of insurance coverages, in a form acceptable to the City (*i.e.*, insurance certificates appropriately issued), for each supplier, subcontractor and sub-subcontractor whose initial subcontract and/or purchase order price is equal to or in excess of 5% of the Contract Sum. The insurance coverages (both as to types and amounts) to be procured by each supplier, subcontractor or sub-subcontractor performing work having a value equal to or in excess of 5% of the Contract Sum, shall meet or exceed the minimum insurance coverages as set forth in the Contract Documents, unless South Tahoe Joint Powers Parking Financing Authority agrees, in writing, that compliance with this requirement is waived. It shall be the obligation of the Contractor to promptly provide acceptable written evidence to the South Tahoe Joint Powers Parking Financing Authority demonstrating that each supplier, subcontractor or sub-subcontractor that will perform work having a value equal to or in excess of 5% of the Contract Sum has obtained and possesses all insurance coverages in accordance with the requirements of the Contract Documents.

## EXHIBIT E

### Liquidated Damages

The South Tahoe Joint Powers Parking Financing Authority and the Contractor recognize that time is of the essence of this Agreement and that the South Tahoe Joint Powers Parking Financing Authority will suffer financial loss if the Work is not completed within the time specified herein, plus any extensions thereof allowed in accordance with the Contract Documents. The South Tahoe Joint Powers Parking Financing Authority and Contractor also recognize the delays, expense, and difficulties involved in proving the actual loss suffered by the STJPPFA if the Work is not completed within the Contract Time. Accordingly, instead of requiring any such proof, and pursuant to the Contract Documents, the South Tahoe Joint Powers Parking Financing Authority and the Contractor agree that as liquidated damages (but not as a penalty), the Contractor shall pay the South Tahoe Joint Powers Parking Financing Authority the following sums:

a) $150 per calendar day beyond 45 days after date of Notice to Proceed (NTP) continuing until Contractor achieves completion of Milestone #1, “Deliver complete and approved Request for Proposals – PARCS and APGS Systems equipment submittals” (per Specification 011100, Section 1.3.B) for both the PARCS and APGS portions of the project.

b) $150 for each calendar day beyond November 24, 2024 through December 8, 2024 and continuing until Bidder achieves Milestone #5, “Go Live of New PARCS System” (per Specification 011100, Section 1.3.B).

c) After December 8, 2024 and until Milestone #5 is achieved, the Contractor shall pay $150 for each calendar day beyond December 8th.

d) Starting on the 30th calendar day after achievement of Milestone #5, the Contractor shall pay the City the sum of $150 for each calendar day beyond that date until Contractor achieves completion of Milestone #6, “Final Completion of New PARCS System” (per Specification 011100, Section 1.3.B).

Only item 9(a) applies to both the PARCS and APGS portions of the project scope. Items 9(b) through 9(d) apply only to the PARCS portion of the project scope.

Liquidated Damages to the Contractor for the Scope of Work described in this PARCS/APGS RFP shall not apply to delays related solely to installation work performed by the separate Installer under the separate Installation Contract, as described elsewhere in this RFP.

Maximum amount of Liquidated Damages shall be $75,000.

## EXHIBIT F

## ANTI-LOBBYING CERTIFICATION

**Vendor shall submit to South Tahoe Joint Powers Parking Financing Authority this certification prior to or at the time of the execution of this Agreement.**

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by Section 1352, Title 31, U. S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and no more than $100,000 for such failure.

The undersigned certifies, to the best of his or her knowledge or belief, that:

1. No federal appropriated funds have been paid or will be paid, by or on behalf of it, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement; and

2. If any funds other than federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal Contract, grant, loan, cooperative Agreement, it will complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instruction.

## DEBARMENT AND SUSPENSION CERTIFICATION

**DOCUMENT 00430 – Debarment and Suspension Certification**

The undersigned (authorized official signing for the Bidder) hereby declares under penalty of perjury the following:

**1.** In accordance with section 6109 of the Public Contract Code, the bidder declares that bidder will not enter into any contract with a subcontractor who/which has been debarred pursuant to section 1771.1 or section 1777.7 of the Labor Code. No public monies shall be paid to a debarred subcontractor, and any contract entered into for public work between a prime contractor and debarred subcontractor shall be considered void as a matter of law. Any payments made to a debarred subcontractor shall be returned to Owner. The prime contractor shall be solely responsible for all payments to a debarred subcontractor. In no case shall any public money be used to pay a debarred subcontractor.

**2.** In accordance with section 10162 of the Public Contract Code, has the Bidder, any officer of the Bidder, or any employee of the Bidder who has a proprietary interest in the Bidder, ever been disqualified, removed, or otherwise prevented from bidding on, or completing a federal, state, or local government project because of a violation of law or a safety regulation?

Yes _____ No x

If the answer is yes, explain the circumstances in the following space (use additional sheets if necessary).

**3.** In accordance with section 10232 of the Public Contract Code, has more than one final, unappealable finding of contempt of a court by a federal court has been issued against the Bidder within the immediately preceding two-year period because of the Bidder's failure to comply with an order of a federal court which orders the Bidder to comply with an order of the National Labor Relations Board? For the purposes of this section, a finding of contempt does not include any finding which has been vacated, dismissed, or otherwise removed by the court because the contractor has complied with the order which was the basis for the finding.

Yes _____ No x

If the answer is yes, explain the circumstances in the following space (use additional sheets if necessary).

**4.** In accordance with section 10285.1 of the Public Contract Code, the Bidder declares that neither the Bidder nor any subcontractor to be engaged by the Bidder has been convicted of any of the offenses referred to in this section within the preceding three (3) years.

These offenses include if that Bidder or any subcontractor to be engaged by the Bidder, or any partner, member, officer, director, responsible managing officer, or responsible managing employee thereof, has been convicted by a court of competent jurisdiction of any charge of fraud, bribery, collusion, conspiracy, or any other act in violation of any state or federal antitrust law in connection with the bidding upon, award of, or performance of, any public works contract, as defined in Section 1101, with any public entity, as defined in Section 1100, including, for the purposes of this certification, The City of South Lake Tahoe.

**5. Certification Regarding Debarment and Suspension**

The undersigned (authorized official signing for EnSight Technologies) certifies to the best of his or her knowledge and belief, that the EnSight Technologies, defined as the primary participant in accordance with 45 C.F.R. Part 76, and its principals:

A. are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal Department or agency;

B. have not within a three-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State, or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;

C. are not presently indicted or otherwise criminally or civilly charged by a governmental entity (Federal, State, or local) with commission of any of the offenses enumerated in paragraph (2) of this certification; and

D. have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State, or local) terminated for cause or default.

**By my signature which is placed below on behalf of the named Bidder, I certify, under penalty of perjury under the laws of the State of California, that I am an officer, principal or owner of the Bidder, and that the foregoing questionnaire, and all certifications and statements therein, are accurate, true and correct.**

Date: June 7, 2024 Bidder's Signature: _____

## PROJECT REQUIREMENTS – SPECIFICATIONS AND DRAWINGS

The subsequent pages contain these detailed Specifications and Design Drawings for the project:

- 011100 Summary of Work
- 111224.14 Pay-by-Plate Multi-Space Meters and Associated Gateless PARCS Software
- 111234 Parking Citation Management System
- 111240.20 Level Counting APGS Specification
- 111248.10 Fixed LPR Specification
- PARCS/APGS Design Drawings

# SECTION 01 11 00 - SUMMARY OF WORK

## PART 1 - GENERAL

### 1.1 RELATED DOCUMENTS

A. Drawings Q-001, QD-101 through -401, Q-101 through -502, and general provisions of Contract, including General and Supplementary Conditions, apply to this Section.

B. Division 111224.14 Pay-by-Plate Multi-Space Parking Meter (MSM) System and Associated Gateless PARCS Software

C. Division 111234 Parking Citation Management System

D. Division 111240.20 Level Count Automated Parking Guidance System (APGS)

E. Division 111248.10 Fixed License Plate Recognition (LPR) Enforcement System

### 1.2 PROJECT DESCRIPTION

A. Project is for a new gateless Parking Access and Revenue Control System (PARCS), Automated Parking Guidance System (APGS), and specified additional digital wayfinding and traffic control signage for the Bellamy Court Garage of the STJPPFA ("Owner") located at 1 Bellamy Court, South Lake Tahoe, CA.

B. As noted earlier in this RFP, being aware that some Vendors and System Integrators may offer only PARCS or only APGS but not both, while others may be able to provide both systems as a combined offering, Owner is allowing bidders to selectively bid:
   1. Only the PARCS.
   2. Only the APGS and associated signage.
   3. Both PARCS and APGS as a combined offering, with one primary bidder offering the combined solution along with secondary teaming partners.
   4. Preference in terms of evaluation points will be given to bidders who offer both PARCS and APGS as a combined offering. Bidders' responses to the RFP are to include the required information and pricing on their offering according to the selected approach.

C. Work consists of a Prime Contractor ("Contractor"), along with additional subcontractors and product vendors as needed, furnishing, coordinating installation with a separate Installation Contractor ("Installer"), activating, configuring, calibrating and testing the following systems, as well as providing ongoing operational support and service of the systems. Installer will be separately contracted by Owner, but Contractor will be required to provide all necessary equipment, coordination, documentation, and support to allow Installer to properly complete installation of Contractor's equipment. Owner will retain a separate Installation Contractor ("Installer") to install the equipment through a separate public bidding process. The selected PARCS/APGS vendor or

©2024, Walker Consultants. All rights reserved.

systems integrator shall coordinate with the Installer to install the system fully functionally including installation of any required software, system commissioning and configuration, system calibration, system acceptance testing, migration of user data from the current PARCS to the new PARCS, acceptance testing, and go-live support. The successful vendor or systems integrator shall also provide ongoing maintenance and support for the equipment and software.

The following are the elements of work for the Contractor:

1. Specify and coordinate with Installer the required demolition and preparatory work, including but not limited to: Demolition and removal as required of existing OmniQ PARCS/LPR equipment, including lane equipment, payment kiosks, headend equipment, and appropriate abandoned conduit/wiring, as well as removal or Owner-designated existing static signs, as specified in Drawings. Repair and sealing of unused mounting holes and cutting/capping of unused conduit stubs is also required. The existing OmniQ/HTS LPR cameras are not to be utilized and must be removed. Any new conduit, wiring, mounting assemblies, and wire terminations are also to be performed by Installer according to specifications and instructions provided by Contractor.

2. Furnish a new gateless, ticketless PARCS system including fixed License Plate Recognition (LPR) cameras at the entry and exit lanes to record arrival and departure of parkers and to determine whether payment was made upon arrival (and additional payment made for overstays) or that a parker is on a list of authorized monthly/contract parkers. This system must also support parking validations from nearby retail merchants. The system is not to require any driver interaction with PARCS equipment in the entry and exit lanes. The LPR cameras may be located overhead on the existing PARCS center islands. Contractor is to determine if existing pavement-embedded magnetic loops can be utilized and, if not, cut and install new loops.

3. Furnish four (4) new Pay-on-Foot (POF) kiosks which can accept payment by credit card or by scanned pre-payment or validation code, located as shown in Drawings, and equipped with features as described in the relevant Specification.

4. Furnish new static signage providing direction on how to use the PARCS system and how to make payment; location, content, color, font, and format of signs to be coordinated with Owner.

5. Furnish and install a new Citation Management System (CMS), per the relevant Specification, and integrate the PARCS system with this sub-system. Contractor is to provide all installation support for the CMS since it is primarily a software system.

6. Integrate the PARCS with the Owner’s selected Pay-by-Cell Phone Payment System as a payment option. (Procurement of the Pay-by-Cell provider(s) is not a part of this project.)

7. PARCS vendor is to coordinate with theSTJPPFA and credit card clearing company on provisioning of Merchant ID and Terminal IDs associated with all payment methods

©2024, Walker Consultants. All rights reserved.

and credit card terminals in the MSM machines and in the permit payment feature of the MSM's Meter Management System (MMS). STJPPFA will be the Merchant of Record (MOR) for all such transactions.

8. Furnish a Level Counting APGS that can determine the occupancy of Level 1, the occupancy of Levels 2-4 combined, and the occupancy of the entire garage. Furnish two (2) digital signs, as described in the Specifications and Drawings, to which the occupancy information is pushed via wired or wireless communications, with wired being the Owner's preference.

9. Furnish one (1) "No Right Turn" illuminated sign, as described in the Specifications and Drawings, which can be activated by remote control via wired or wireless communications, with wired being the Owner's preference.

10. Contractor is to coordinate with and provide necessary documentation and submittals to the separate Installer for any electrical and civil construction work required to demolish/remove existing systems, prepare the site for the new systems, and install the new systems as specified above. Contractor is to prepare all necessary engineered and shop drawings required for Owner and Installer review.

## 1.3 WORK SEQUENCE

A. General Requirements and Objectives: Work will be conducted in multiple phases to provide the least possible disruption to the activities of Owner's personnel and to the parking operation and parking fee collection of the Bellamy Court Garage. Contractor is responsible for proposing and obtaining Owner approval on a work phasing plan that meets the following objectives:
   1. Work can commence upon official Notice to Proceed (NTP) being provided to the Contractor by the Owner.
   2. All work inside the garage is to be scheduled to occur during dates which are low occupancy periods for the garage. These date periods are weather-dependent and are generally defined as the period between the end of ski season and Memorial Day weekend, and between Labor Day weekend and the weekend before Thanksgiving.
   3. To minimize labor expense, work should be scheduled to occur during normal working hours Monday-Friday, unless pre-approved for overtime or weekend work by Owner for specific reasons.
   4. Minimize or eliminate any period during which the entry/exit lanes and any garage parking areas are blocked or cannot be utilized.
   5. Minimize or eliminate the period during which parking fees cannot be collected either by the existing OmniQ system and/or the new PARCS system.
   6. Time is of the essence in the implementation of the new PARCS system (with Fixed LPR Cameras, Pay-by-Plate POFs, static signage, and Pay-by-Cell integration) and the associated Citation Management System. This work needs to be completed as quickly as feasible after NTP is provided.
   7. Implementation of the APGS and the No Right Turn sign is to be phased after completion and "Go Live" of the PARCS.
   8. All work by PARCS/APGS Contractor is to be closely cross-coordinated with physical equipment installation and civil/electrical work to be performed by the

©2024, Walker Consultants. All rights reserved.

separate Installer, so that a unified schedule is followed which provides efficient progress of the overall project and meets the Owner's schedule goals.

B. Specific Milestones for the PARCS/APGS Work: The following specific Milestones are established for the PARCS and APGS Contractor(s) and assume that Owner issues Notice to Proceed by 6/19/2024.

1. Deliver complete and Owner-approved equipment submittals for the PARCS and APGS systems by **8/5/2024**. These submittals are intended to provide complete and comprehensive information to Owner about the proposed systems and will also be used by the separate Installer to enable them to prepare the site and successfully complete installation of all equipment and to install and terminate the associated required power and data pathways, wiring, conduit and connections. The specific required equipment submittals are further detailed in the relevant Specifications listed in Section 1.1 above.
2. Complete the Factory Acceptance Test (FAT) and provide a certified copy of the FAT to the Owner and Installer **by 8/29/2024**.
3. Deliver to the site ready for installation by separate Installer all PARCS equipment including Fixed LPR Cameras, loops and associated loop controllers, Pay-by-Plate MSMs, and any other servers, network equipment or mounting accessories required to support these items, and static signage by **9/9/2024**. The vendor shall be present to receive the products from the delivery company and ensure there is no damage to the equipment as a result of delivery.
4. Deliver to the site ready for installation by separate Installer all APGS equipment including counting sensors, control cabinets, digital/illuminated signage, and any other servers, network equipment or mounting accessories required to support these items, and static signage by **10/7/2024.**
5. "Go Live" of new PARCS System with functionality to collect parking fee payment and perform enforcement for non-payment or under-payment, including Fixed LPR Cameras, Pay-by-Plate POFs, static signage, Pay-by-Cell integration, the associated Citation Management System, setup and activation of Merchant ID and Terminal IDs, and successful completion of Lane Acceptance Testing (LAT) by **11/24/2024.**
6. Final completion of new PARCS System, including successful completion of Operational Demonstration Testing (ODT), closure of all punch list items, and completion of Owner Training by **30 calendar days following completion of Milestone #4**.
7. "Go Live" of new APGS with specified functionality and performance and successful completion of Device Acceptance Testing (DAT), all per Specifications, by **12/15/2024.**
8. Final Completion of New APGS System, including successful completion of Operational Demonstration Testing (ODT), closure of all punch list items, and completion of Owner Training by **30 calendar days following completion of Milestone #6**.

## 1.4 CONTRACTOR USE OF PREMISES

A. General: Limit use of premises to construction activities in areas indicated; allow for Owner occupancy and use by public parkers and minimize disruption as described in Section 1.3 above.

©2024, Walker Consultants. All rights reserved.

1. Confine operations to areas within Contract limits indicated. Portions of the site beyond areas in which construction operations are indicated are not to be disturbed.
2. Keep driveways, sidewalks, and pedestrian entrances serving the premises clear and available to the Owner, Owner's employees, and the public at all times. Do not use these areas for parking or storage of materials.
3. Minimize entry/exit lane disruption as described in Section 1.3 above. If lanes are closed for specific, Owner-approved construction periods, there must always be at least one open entry lane and one open exit lane at any given time.
4. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on site.
5. Any on-site laydown or storage areas are to be minimized and will only be allocated with Owner's prior review and express permission.
6. Risk of loss from all areas of Contractor's supplies and any special equipment or tools required for Contractor's work is the responsibility of the Contractor.
7. Contractor personnel may use public restrooms located in the passageway between the garage and Heavenly Village.
8. Contractor work vehicles may only be parked in appropriately sized spaces in the garage or on the adjacent street. Contractor will register the license plates of all work vehicles with the Owner's parking enforcement department so that these vehicles may park for free during approved working hours. Failure to register vehicles may result in a parking citation which is the responsibility of the Contractor.

## 1.5 OWNER-FURNISHED ITEMS

A. Owner will provide the following items:
1. Owner's current DataTicket handheld enforcement devices for usage with the new Citation Management System (CMS), unless Owner agrees to replace these devices with new ones provided by the CMS vendor. Refer to Specification 111234, Parking Citation Management System, section 2.1.A.15 for further details on this topic.
2. Data on current permit parkers who need to be registered into the new system.

## PART 2 - PRODUCTS

2.1 Refer to the "Products" sections of the Specification documents listed in Section 1.1 above.

## PART 3 - EXECUTION

3.1 Owner requires Contractor to act as prime contractor for the entire scope of work defined in this RFP and the attached Specifications. Contractor may team with other companies or subcontractors to furnish, coordinate installation by separate Installer, support, and service the required solution, but must serve as prime contractor and the entity

©2024, Walker Consultants. All rights reserved.

responsible for the overall PARCS and APGS equipment, system functionality and performance, and ongoing service, repair, and support.

3.2 Contractor is to appoint a Project Manager who will be the primary interface to Owner and who will coordinate the activities of all of Contractor's teaming partners and subcontractors.

3.3 Refer to the "Execution" sections of the Specification documents listed in Section 1.1 above for further details.

## 1.3 SUMMARY

A. This section includes provision of all material, labor, equipment, documentation, services, and training necessary to furnish, coordinate installation with a separate Installation Contractor (“Installer”), support, and maintain a new, fully integrated, online, real-time, multi-space parking meter system functioning as described herein for the Bellamy Court Garage of STJPPFA (“Owner”) located at 1 Bellamy Court, South Lake Tahoe, CA.

B. Work consists of a prime contractor (“Contractor”), along with additional subcontractors as needed, providing:
   1. Provide any necessary information and support to Installer to enable them to demolish and remove the current payment kiosk system, as defined in Drawings.
   2. Provide any necessary information and support to Installer to enable them to prepare the site as needed for new MSM installation, as defined in Drawings.
   3. Furnish all required equipment and software for the new MSM system, and coordinate equipment installation with a separate Installation Contractor (“Installer”) including providing all information, documentation and support required for Installer to complete the MSM installation work.
   4. Install all MSM device/system Software as required, and provision, activate, configure, integrate, test, and turnover for production the entire MSM system.
   5. Provide ongoing operational support and service of the new system, including both hardware repair and software support.

C. System Description

   1. The system includes:

      a. Four (4) credit card only MSMs, located as shown on Drawings
      b. MMS
      c. Validation management feature as part of MMS
      d. Permit Parker management feature as part of MMS
      e. Standard payment mode is to be pre-payment for parking for a selected duration of time either prior to arrival (via mobile app) or upon arrival within a defined grace period.
      f. Signage, as defined below and on Drawings.
      g. Fixed LPR System integration as further defined below and in the related Fixed LPR Specification.
      h. PbC System integration, including both app-based payment and text-to-pay payment.
      i. Citation Management System (CMS) integration.
      j. All necessary components and materials for a complete and functioning turnkey MSM system as identified in this specification.

## 1.4 DESIGN CRITERIA

A. Accuracy: Provide the following minimum accuracy levels. Calculate accuracy by dividing the accurate counts/calculations by all counts/calculation.

   1. Fee calculation: 100%

©2024, Walker Consultants. All rights reserved.

2. Revenue amounts: 100%
3. Data received and accepted by computer system as valid: 100%
4. Data transmission: Less than one message re-transmission per hour.

B. Equipment Construction: Design and construct all components and equipment with the following:

1. Durable vandal and weather resistant cabinets, which maintain finish, look, integrity and functionality in the environment in which installed for a period of ten years.

    a. Mounting holes accessible only from inside of cabinets.
    b. Hinged cabinet doors that swing clear of bollards, walls, columns, and any other obstructions.
    c. Modular internal components, to extent practical, for easy maintenance and replacement.
    d. Able to be relocated without damaging aesthetics or performance of equipment.

2. Control logic and communication capability as necessary and required herein.
3. Compatible communication ports for all communications and connections.
4. Crystal controlled time clock/calendar that is updated at least once daily by MMS and accurate to one minute per ninety days for all primary components.

C. User Interface: Design and construct the user interface with the following:

1. Ergonomically designed devices and user interface for ease of use by patrons.
2. Meet the latest ADA requirements, and any local accessibility requirements, including but not limited to reach ranges, visibility of display screens, clear floor or ground space, and operable parts.

D. Communication:

1. All applicable components are microprocessor controlled, in on-line, virtual real-time communication with MMS.
2. All transaction data sent to MMS immediately, with communications hierarchy appropriate to need for action or response from another component, feature or subsystem.
3. All transaction data is available to MMS workstations within 30 seconds of completing transaction at any device. Delays or functional degradation resulting from data communication between devices over MMS network is not acceptable.
4. Integrate with LPR system and Citation Management System for enforcement purposes.
5. Integrate with Pay-by-Cell system to accept payments made on mobile devices or websites.

E. Future System Expansion:

1. Add or remove MSMs to system.
2. Change payment mode to either PbS or PbP. (Owner intends to operate only in PbP mode but would like the option to switch to PbS in the future if desired.)

©2024, Walker Consultants. All rights reserved.

F. Fully operational regardless of extreme weather such as heat, sun, rain, ice, snow, freezing rain, etc.

G. Operating temperature range of -22 F to +120 F and to 99% RH non-condensing.

## 1.5 PRICE REQUIREMENTS:

A. Price includes the provision of all material, labor, equipment, and services necessary to furnish, coordinate installation with a separate Installer, activate, configure, test, turnover, support and maintain a fully integrated MSM system as outlined herein.

1. Examine site

a. Identify in writing any constraints or conflicts regarding MSM installation.
b. Include cost, in writing, of rectifying such constraints or conflicts in Price Proposal.

B. Add-Alternates:

1. Provide annual pricing for Maintenance, Service, and Parts Contract after two-year warranty:

a. A separate contract awarded for Maintenance, Service and parts that would commence with expiration of two-year warranty period.
b. Provide annual pricing for five (5) years after initial two-year warranty period.

## 1.6 SIGNAGE

A. Provide sign poles and MSM signage for separate Installer to install which to advise customers to pay at the meter or by phone, and to locate the meters. Final sign content, quantity, color, and design to be coordinated with and approved by Owner.

B. Provide sign poles and PbC signs provided by PbC vendor, for separate Installer to install.

C. Utilize rust-resistant 8-foot U-channel signposts.

D. Utilize 18” by 24” reflective, rigid aluminum signs.

E. Provide all documentation and support required for Installer to complete the above signage installation work.

## 1.7 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Distribute to the Installer within 45 days after award of contract all installation diagrams, installation instructions, details, shop drawings, riser diagrams, and templates required to provide Installer the necessary information for installing,

©2024, Walker Consultants. All rights reserved.

setting, anchoring and/or mounting, and connecting all MSMs including but not limited to any required servers, network switches, etc.
2. Provide support remotely and on-site as needed to the Installer during the installation period to ensure they properly install the MSM equipment.
3. Coordinate interfaces with any other systems by others, including but not limited to Local Area Network, PbC vendor, etc.

B. Pre-Installation Meeting: Conduct meeting at project site fourteen (14) days in advance of time scheduled for work to proceed to review requirements and conditions that could interfere with successful performance. All parties concerned with installation, including communications, electrical and concrete work, or others who are required to coordinate work are required to attend. Include Owner or Owner's Representative. At a minimum, cover:

1. Concrete work, as needed.

2. Electrical work, as needed.
3. Review schedule.
4. Review testing and acceptance procedures.

C. Coordinate data communication, internet connectivity, and network requirements with Owner or Owner's IT Representative.

D. Coordinate PCI/P2PE compliant installation of system with Owner or Owner's designated representative for PCI Compliance.

F. Substantial Completion: A certificate of substantial completion will be provided when the following requirements have been satisfied:
1. All systems, features, and communications have passed the final acceptance testing per Section 3.2 of this document.
2. Certification of PCI compliance.
3. All spare parts, stock material and manuals are on site and have been approved.
4. All test checklists, documentation and training has been completed.

G. Final Acceptance: Final acceptance will occur upon satisfactory completion of all work, tests, demonstrations, and training specified herein as well as successful completion of thirty-day operational test per Section 3.2 of this document.

## 1.8 PROPOSAL SUBMITTALS - TO BE INCLUDED WITH RESPONSE

A. Price Form:

1. Total system cost and per unit cost of each component.
2. Include a separate cost sheet to identify the recommended spare parts to be kept on-site.

B. Product Data:

1. Product description for each component including the following:

©2024, Walker Consultants. All rights reserved.

a. Detail of user interface, including description of display screen.
b. Operating temperature and humidity ranges.
c. Housing material and access panel location.
d. Installation and mounting requirements.
e. List of modular components that may be replaced by hand.
f. List of components that require tools for replacement, and identify which tools are required.
g. Details of server infrastructure solution and components, including an on premise or cloud-based solution. Description of any offsite or cloud-based components of the system and the methods by which the on-site equipment and software communicates with the offsite/cloud-based components. This must include a description of the communications and networking methods required to integrate the onsite and offsite components, who provides the associated communications network (Owner, Contractor, or a combination), and any costs associated with this communications network.

2. Description of the MMS software, including the following:

a. Configuration diagram.
b. Software platforms and programming language.
c. Communication protocol, polling procedures, and transaction message flow from peripheral devices to and through MMS.
d. Communication failure/error identification and recovery.
e. Fault tolerance.
f. Back-up procedures.
g. Data storage and retrieval procedures.

3. Sample Screenshots and Reports:

a. Screenshots of dashboards.
b. Screenshots of payment process.
c. Sample revenue and transaction reports.
d. Sample maintenance reports.

C. Spare Parts

1. List all spare parts, and a separate list of recommended spare parts and quantities to be provided, including:

a. Part name.
b. Part number.
c. Unit price.

D. Exceptions and Substitutions:

1. Complete and submit an all-inclusive Specification Compliance List (including substitutions), identifying any substantive non-compliance with specification requirements.
2. Substitutions: It is recognized that there are variations in equipment between manufacturers. Where functional performance, features or quality of system varies materially from that specified, submit a Request for Substitution identifying

©2024, Walker Consultants. All rights reserved.

substitution being proposed. This submittal may be accompanied by catalog sheets, brochures, and technical specifications of the proposed system.

E. Project Schedule: Detailed schedule of project requirements including milestones for fabrication, delivery, installation, training, and testing.

F. List manufacturer of each primary component of system.

G. Contractor Information

1. Provide the following information:

a. Name of company.
b. Brief company overview including a description of the company structure, and a statement on whether the company is a private or public entity.
c. Years in business.
d. Number of employees.
e. Annual sales volume.
f. List of key accounts.
g. Name and contact information (address, email, and phone number) of Principals and/or Local Contacts.

2. Provide a list of any subcontractors, their business address, and a summary of their role in the project.
3. Description of the Contractor's presence in the United States and in the state of California, and the location of the nearest service center to Owner's location for maintenance and repairs.

H. Manufacturer's Qualifications: Provide documentation:

1. In continuous operations for previous five (5) years.
2. Similar systems and system integration installed in three (3) or more garages of similar size and complexity. Provide the following for each installation:

a. Name of project.
b. Location.
c. Contact name, telephone number and email address.
d. Date of installation.
e. Description of equipment and quantities.

I. Service Provider Qualifications: If different than Manufacturer, provide documentation:

1. Proven ability to provide service and support after installation, meeting minimum requirements as specified herein.
2. Continuously worked with equipment manufacturer, including providing installations and/or service, for minimum of three (3) years.
3. Approved in writing by manufacturer.
4. Documentation of manufacturer's service training within previous two (2) years.
5. Similar systems installed and/or maintained in three (3) or more garages of similar size and complexity. Provide the following for each installation:

©2024, Walker Consultants. All rights reserved.

a. Name of project.
b. Location.
c. Contact name, telephone number and email address.
d. Date of installation.
e. Description of equipment, quantities, and vendor responsibility.

6. Manufacturer approved service center located within four hour's drive of installation.

J. List of sub-contractors, identifying nature of work performed.

K. Warranty:

1. Submit copy of warranty (per Section 1.12 of this document) and explanation of any instances which may impact warranty coverage.
2. Submit RMA procedures.
3. Submit regular service hours and hourly rates, as well as other hours of availability and corresponding rates.
4. Submit maximum remote and on-site service response times from time of service request.

## 1.9 POST-AWARD INFORMATIONAL AND CLOSEOUT SUBMITTALS

A. All submittal approvals, comments and rejections will be returned to the Contractor by the Owner's designated representative with requests for resubmittal as appropriate. Resubmit as required until submittal is approved by the Owner's designated representative.

B. Distribute to the Owner and Installer within 45 days after award of contract submittals containing all installation diagrams, installation instructions, details, shop drawings, riser diagrams, and templates required to provide Installer the necessary information for installing, setting, anchoring and/or mounting, and connecting all MSMs including but not limited to any required servers, network switches, etc.

C. Equipment Manuals to be submitted 14 days prior to commencement of testing, per section 3.3.

D. Samples: Submit samples of reports, receipts, and other items to be selected by Owner within 30 days of contract.

## 1.10 MAINTENANCE MATERIAL SUBMITTALS

A. Stock: Furnish the following operating stock items prior to commencement of operational testing.

1. Ten rolls of receipt paper per MSM. Owner must approve color and artwork of receipts.

B. Lock and Key Requirements:

©2024, Walker Consultants. All rights reserved.

1. Identical locks and keys for all like equipment but unique to this project so that keys from other projects will not provide access.
2. Provide Owner with three (3) sets of maintenance keys.
3. If a special tool is required to perform any function or maintenance, provide three (3) of these tools.

## 1.11 QUALITY ASSURANCE

A. All components and installation to comply with all laws, ordinances, codes, rules, and regulations of public authorities having jurisdiction over this part of the work. It is the responsibility of the Contractor to meet these and all other current technical, performance, and safety standards that are applicable to all components and to the entire system, even when not specifically referenced.

B. Open-architecture system where all interfaces (hardware and software) conform to national and International Organization for Standardization (ISO) standards.

C. All materials and equipment listed, labeled, or certified by a nationally recognized testing laboratory to meet Underwriters Laboratories, Inc. (UL) standards, where test standards have been established.

1. Equipment and materials which are not covered by UL Standards may be considered, provided equipment and material is listed, labeled, certified or otherwise determined to meet safety requirements of a nationally recognized testing laboratory.
2. Equipment of a class for which no nationally recognized testing laboratory accepts, certifies, lists, labels, or determines to be safe, will be considered if inspected or tested in accordance with national industrial standards, such as NEMA, IP, or ANSI. Evidence of compliance includes certified test reports and definitive product data.

D. Equipment housings, conduits, and junction boxes exposed to weather (any location not in a conditioned environment) will meet or exceed NEMA 3SX or IP54 standards to be moisture-proof and provide sufficient protection so that the components continue to function without moisture, dust, particle, heat, or cold-related interruption. Components that do not meet NEMA 3SX or IP54 standards or better may be considered if implemented with supplemental environmental controls to sufficiently protect equipment.

## 1.12 DELIVERY, STORAGE AND HANDLING REQUIREMENTS

A. Prior to shipment of any equipment, a Factory Acceptance Test process must be completed and documented by Contractor, and the certificates of FAT completion reviewed and approved by Owner and Installer, in accordance with the description in Section 2.3 below.

B. Contractor is responsible for insuring all shipped items. Any items damaged during shipping are to be replaced and shipped to the project site, by expedited means if requested, at no additional cost to the Owner.

©2024, Walker Consultants. All rights reserved.

C. Owner, at their sole discretion, may agree to provide a designated storage/staging area of no more than 100 square feet of floor space for equipment that has not been installed. Location to be determined after contract award. Contractor should assume in their proposal that no storage area will be provided. If a storage area is provided, Installer is responsible for securing that storage area with a suitable lock.

D. Deliver equipment to Installer or project site in manufacturer's original containers to prevent damage and marked for easy identification.

E. Once equipment has been delivered either to the Installer or to the project site, it is the Installer's responsibility to protect the equipment from theft and damage until final acceptance and to insure the stored equipment against risk of loss and damage. Installer is to replace any lost or damaged equipment at no additional cost to the Owner.

F. Installer is to receive all equipment at deliver site or project site. Owner is not to receive, unload, or otherwise participate in delivery of equipment.

## 1.13 WARRANTY

A. General: Equipment and installation (100% parts and labor) for two (2) years from date of final acceptance by Owner or Owner's Representative. System maintained and serviced against all malfunctions due to manufacturing or installation defects at no cost to Owner during warranty period, including preventive maintenance per manufacturer's recommendations or as necessary to keep equipment in good working order. Software support provided during warranty period to include all software upgrades at no additional cost to Owner.

1. Warranty period commences after Contractor has demonstrated satisfactory performance of a functioning MSM system and after the 30-day Operational Test.
2. Maintain a log of all maintenance, preventive maintenance and repair work performed under warranty and provide to Owner or Owner's Representative at end of warranty period.

B. Warranty response period:

1. Monday through Friday, 8:00 am to 5:00 pm Pacific Time excluding holidays.
2. Response time from initiation of trouble call, to on-site response by qualified service technician

    a. Immediate telephone support available from 8:00 am – 5:00 pm Pacific Time Monday-Friday.
    b. Next-day on-site technical support no-later than 12 noon Pacific Time the following weekday.

C. If Contractor is not available for above response, Owner or Owner's Representative may affect repairs with no impact on warranty. Pre-qualify appropriate Owner or Owner's Representative to perform repairs and identify types of repair each trained individual is qualified to perform after training of Owner personnel.

©2024, Walker Consultants. All rights reserved.

D. Replace items taken from spare parts inventory during warranty period at no additional cost to Owner.

E. Preventative Maintenance Service during the Warranty Period:

1. Provide preventative maintenance services for all systems throughout the warranty period. Preventative maintenance procedures and frequencies are defined within the Manufacturer's recommended maintenance procedures manual.
2. Preventative maintenance services include but are not limited to inspection, testing, necessary adjustment, lubrication, calibration, parts cleaning, communication system maintenance, server administration and database administration of the hardware provided as part of this project by the Contractor.
3. Perform all preventative maintenance at non-peak periods during regular business hours.

F. Software Support during the Warranty Period:

1. Make available to the Owner normal software improvement releases (updates) as they become available at no additional cost to the Owner.
2. Provide all software patches and updates free of charge during the warranty period; however, the Owner has right of refusal.
3. Seven (7) calendar days prior to all software modifications, patches, updates, and upgrades, provide accurate and complete documentation that describes:

    a. Patch/update release designation.
    b. Proposed date and time of implementation.
    c. Detailed description of what the patch/update accomplishes.
    d. Test plan that shows the change has been successfully tested and has passed internal unit, end-to-end testing.
    e. Full disaster recovery procedures that return the system to its pre-patch/update condition

4. Provide operating system support and database administration services including adherence to the recommended operating system patches and updates as they are made commercially available by the operating system developer.
5. Coordinate the testing and implementation of all patches and updates with the Owner.
6. Support upgrades to the application based on operating system patch and upgrade requirements. For example, if run on a Microsoft operating system, the software can be patched according to the Microsoft patch and upgrade schedule without breaking any application. If Microsoft decommissions an operating system, the Contractor must be capable of releasing code compatible with next operating system upgrade prior to Microsoft ending support for current operating system.
7. If at any time the Contractor ceases to do business or ceases to make the software product commercially available, the Owner will assume full ownership of the software. Thirty days prior to ceasing to do business, the Contractor will provide the most current version of the software source code to the Owner.
8. Provide corrective patches and upgrades in the event security vulnerability or system availability issues are discovered.

©2024, Walker Consultants. All rights reserved.

**PART 2 - PRODUCTS**

## 2.1 METER MANAGEMENT SYSTEM

A. Microprocessor controlled, in on-line, virtual real-time communication.

1. MSM wirelessly communicates complete transaction log to MMS. In event of communication failure, MSMs continue to operate in off-line mode and store a minimum of 1,000 transactions, or have sufficient system redundancy, to insure availability of transaction data upon restoration of MMS. In event of failure during communication, an error-checking and recovery routine is employed to prevent corruption of data.
2. Describe the minimum, maximum, and average amount of time in seconds the meter will take to transmit transactions to the MMS, including what parameters or conditions will affect transmission times.

B. Hosted or cloud-based system, capable of operating with proper user ID and password, to all authorized users.

1. Provide continual software updates at no additional fees for the life of the contract.
2. Provide field programmable functions of each meter from MMS (password protected), including rate structures (from MMS only), with all programming changes reported in daily log.
3. Maintain a secure connection while active, and automatically log-off after programmable period of inactivity.
4. Remote access to MMS over standard TCP/IP connection (may use web browser-based applications).
5. Browser-based user-interface modules utilize client/server technology or equivalent. The following general requirements apply to all components or modules:

    a. Windows-based graphical user interface.
    b. Allow for both standard and custom report formats.
    c. Adequate security to allow for different classifications of users.

6. System back-up in less than three hours.
7. Provide all updates to the MMS, to ensure full compatibility with the meters and the system, at no additional cost to the Owner for the life of any contract relating to the meters.
8. Integrate with Fixed LPR system and Citation Management System to obtain LPN’s of entering and exiting vehicles and associate this information with payments made before arrival, upon arrival within grace period, and upon arrival but after grace period and calculate the appropriate rate.
9. Integrate with Owner’s PbC provider for combined payment and financial reporting.
10. If any of the software is cloud-based and provided on a Software as a Service (SaaS) basis, Contractor is to document in the Proposal their SaaS licensing terms and conditions, and the options and costs for a multi-year license for terms ranging from 2 (two) up to 10 (ten) years in length. Furthermore, if any component of the system is cloud-based and provided on a SaaS basis, Contractor is to describe in

©2024, Walker Consultants. All rights reserved.

their Proposal what occurs in terms of system and feature functionality if Owner chooses not to renew SaaS-based licensing.

C. Security

1. Utilize protocols and passwords that prevent unauthorized access to software and hardware and manipulation of data and reports, including individual transactions.
2. Include multiple levels of access authorization to all operational, administrative and reporting functions and provide the following security features:

    a. Define individual user and group-based security.
    b. Ability to assign a unique user ID and password for each person authorized to use system.
    c. Ability to establish an expiration period for passwords and periodically change that password for each authorized user ID.
    d. Ability to disable a user ID following successive log-on failures exceeding a specific limit.
    e. Ability to view and report user and group level security rights and create user-defined fields.
    f. Ability to de-activate codes for former users and internal and external customers.

3. Provide Owner with a complete list of initial installation administrator usernames and passwords for all authorized users.
4. Password protected MSM subsystems to restrict access to individual functions of each subsystem:

    a. Revenue Monitoring, Control, and Reporting.
    b. Maintenance Monitoring, Control, and Reporting.

5. Utilize credit and debit card acceptance hardware, software, and other system components that are PCI P2PE and EMV compliant.

6. All MSM and MMS data is considered to be the sole intellectual property of the Owner. Usage of this data by Contractor or by the MSM/MMS vendor for any purpose other than to support, test or repair Owner's system requires prior written authorization from Owner. If such data is stored offsite or in the cloud under a term-based SaaS mechanism and Owner decides not to renew the SaaS agreement, Contractor is to send all MSM/MMS data gathered over the lifetime of the system (i.e. from system activation date through the SaaS agreement termination date) to the Owner in an Excel format and is to subsequently delete such data from any offsite servers or cloud instances

D. MSM Equipment Monitoring.

1. Capable of performing and wirelessly reporting the results of a self-diagnostic routine at programmable times or intervals. Self-diagnostic routines verify that MSM functions are working properly. Functions to be checked include accuracy of fee calculation, clock, and card acceptance. MSM will require database communications machine to machine.

©2024, Walker Consultants. All rights reserved.

2. Warning alarms tracked, displayed, and communicated in real time to workstations and cell phones for the following conditions:

    a. Machine failure.
    b. Low battery.
    c. Dead battery.
    d. Component trouble and/or failure.
    e. Receipt jam.
    f. Card jam.
    g. Tampering.
    h. Door Open.
    i. Receipt paper low.
    j. Receipt paper empty.
    k. No transactions for a defined period.

3. Monitor electrical circuits and frequency of operational errors in components to identify maintenance actions to prevent failure of a component.
4. Monitor the transmission of repeated messages that may indicate possible problems with the system.
5. Display abnormal status conditions as a visual alarm on the workstation screen, accompanied by an audible alarm.

    a. The display continues to flash until the abnormal condition is corrected. The audible alarm continues until turned off by operator.
    b. Record the abnormal status condition and the acknowledgement of the alarm, including time, workstation, and operator.

6. Record and store all meter alarms and repair activity.

E. PbP Enforcement Integration:

1. During enforcement sessions, all transaction data is available to MMS workstations and mobile enforcement devices within thirty seconds of completing transaction at any device. Delays or functional degradation resulting from data communication between devices over MMS network is not acceptable.
2. Provide web-based, viewable and printable reports of all meter and mobile payments for enforcement purposes, including time purchased, purchase amount and time of expiration.
3. Ability to integrate MSM data with mobile and/or handheld units for enforcement purposes, providing street or lot #, machine #, plate #, time purchased, purchase amount and time of expiration.

F. Permit Parking Support: Owner requires the ability to issue monthly or annual parking permits to authorized parkers such as staff of nearby businesses. Owner also requires the ability to create temporary, short-term (e.g., daily, weekly) permits for STJPPFA employees, visitors, vendors, or contractor/service personnel good for a specified number of days or weeks. The MMS must support creation and management of LPR-based virtual permits with the following capabilities:
1. Create LPR-based virtual parking permits with a validity period ranging from a minimum of 4 hours to a maximum of 1 year or set to have no expiration date (meaning the permit remains valid until removed or modified.)

©2024, Walker Consultants. All rights reserved.

2. Assign rate classes for permits – up to 16 preset rates plus the ability to enter a custom rate.
3. Associate from 1 to 4 License Plate Numbers with a single permit.
4. Accept payment by credit card for new and renewal permits via both of these options:
   a. Direct contact with STJPPFA parking operations personnel (e.g., phone, email, parking office visit, etc.).
   b. A customer-facing, web-based permit request portal that allows permit applications to be completed online by a parker and sent via workflow to STJPPFA parking operations personnel for review and approval.
5. Declare specific permits expired or invalid at City's discretion.
6. Provide management reports of the current and historical list of all valid and expired permits by permit class, duration, or rate, and provide a summary report of the current and historical total value of all permits subtotaled by permit class and totaled for all permits.
7. Provide email and/or text notification to the permit holder prior to the expiration of their permit including a link to the permit system which can be used to submit a request to renew the permit. The notification period is to be settable from a period of 1 to 30 days.
8. Provide integration with the Citation Management System so that the status of all permits can be checked by LPN, and with the Fixed License Plate Recognition System so that permit status is checked upon entry and permit parking session durations are determined upon exit. Create time-stamped logs of all permit entry/exit transactions and provide reports that can be run by LPN, by date/time range, or by permit type.
9. The LPR system integration must also report via alarm messages detection of a vehicle with an expired permit entering the garage.

G. Validation Support: Owner offers partial and full validation for a defined number of hours from local, nearby retail and entertainment establishments. The MMS must provide the following capabilities regarding such validations:
   1. Provide the ability to do validation using pre-issued coupon codes (e.g., purchased online along with a movie ticket) which are presented on paper or the screen of a mobile device.
   2. Provide the ability for the payee to initially pay at the MSM as a non-validated transaction, but then to later use scan the QR/bar code of their paper or electronic payment receipt at a nearby authorized retail or entertainment business, which causes the payee to receive a credit for a pre-determined validation value.

H. MSM Reports: Provide the following ASCII file reports which can be displayed on a monitor or printed on a printer:

   1. Daily Event Log - A listing of any changes to the system and users who made the changes, system alarms and system log on/log offs.
   2. Meter alarms and repair activity sortable by time, date, meter, operator, and/or type of alarm.
   3. Maintenance history report of each meter.
   4. Transaction Report - A listing of each transaction processed by the MSM, including and sortable by:

      a. Time/date/day of week.

©2024, Walker Consultants. All rights reserved.

b. Duration.
c. Payment amount.
d. Payment amount adjustments due to usage of validations.
e. Card type.
f. Plate number.

5. Daily Summary Report - A daily summary of all MSM activity, including daily grand totals of Transaction Report data.
6. Monthly Summary Report – A monthly summary of all MSM activity, including monthly grand totals of Transaction Report data.
7. Parking Value/Type Report - Stratification based upon the value of transactions processed by payment type, provided for each rate structure. This report is used for revenue analysis, rate analysis, management planning, and statistical information.
8. Revenue Report – Total revenue for a selected timeframe, including and field sortable by:

   a. Time of day.
   b. Plate number.
   c. Card type.
   d. Duration.

9. MSM Usage Reports sortable by:

   a. Time of day.
   b. MSM
   c. Plate number.
   d. Card type.
   e. Duration of time.

10. Add-time report – Provide a list of transactions conducted by same customer, to add time at the meter, using ID code.
11. Pre-payment report – Provide a list of transactions conducted in advance of the session start time.
12. Validations report – Provide a list of all transactions conducted using a validation for partial or full payment, and the value of each validation.
13. Rejected credit cards per meter, broken out by reason for rejection.
14. Number of meters and % of inventory out-of-order over a specified time period.
15. Either periodically or on demand, MMS downloads and sends electronically, revenue reports for integration into Owner's financial department via TCP/IP connection to designated computer network in Microsoft Excel or approved equivalent.

I. Rate Structure:

1. Remote programming of MSM parking rates, with rate tables in a windows format and easily changed by the Owner.
2. Day, evening, night, and weekend rates.
3. Daily, weekly, monthly and annual permit parking rates.
4. Grace periods (i.e., 15 minutes free)

©2024, Walker Consultants. All rights reserved.

5. Support the ability to allow advance payment (before arrival) as an Owner-selectable option and with settable limits on how many such advance payments are allowed and how far in advance.
6. Validation values (full and partial)
7. Flat rates for events.
8. Holiday rates.
9. Residential permit rates.
10. Allow for initial payment and/or adding time at any MSM in system.
11. Provide a unique ID code to enable customers to add time to their transaction.
12. Programmable time slots as small as ten minutes.
13. User defined maximums (2-hour, 4-hour, 12-hour, 24-hour, etc.)
14. Submit the minimum number of programmable time slots per day and per week.
15. Ability to program any subset of meters using any combination of standard and user-defined filters and an effective date.
16. Automatic adjustment for Daylight Savings Time and leap year in fee calculations.

## 2.2 MULTI-SPACE METER (MSM)

A. Operational Modes: PbP with ability to convert to PbS or P&D modes if so desired at a future date.

1. PbP sample operating sequence:

a. MSM prompts customer to enter plate number.
b. MSM prompts customer to make payment.
c. MSM processes payment and offers receipt.

B. Housing

1. Cabinets and component brackets fabricated from 100% high grade stainless or cold rolled steel.
2. Durable, vandal, graffiti, corrosion, and weather resistant, and able to maintain finish, look, integrity and functionality in the environment in which installed for a period of ten years.
3. Mounting holes are only accessible from the inside of the cabinet.
4. Internal door hinges.
5. External lighting to assist patrons at night.

C. Internal Components

1. Modular in nature and easily removed/replaced by hand.
2. Corrosion resistant connections and connection boxes with unique installations so that a component or connector cannot be connected incorrectly.
3. Provide heating source for extreme cold temperature.

D. Informational/Instructional Displays

1. Liquid Crystal Display (LCD) Color Display Screen

a. Display current time of day (HH:MM).

©2024, Walker Consultants. All rights reserved.

b. Acknowledgement of payment, buttons, numbers, letters, and/or symbols pressed by customer.
c. Easily readable alpha-numeric display to communicate messages to user.
d. Instructional prompts guide customer through payment process such as: “Please enter plate number”, “Please enter desired time to park”, “Please insert credit card”, “Authorizing” and “Thank you”.
e. Capable of recognizing user errors and providing corrective guidance.
f. Remotely programmable via the MMS.
g. Backlit, automatically adjusting to external light conditions, with the contrast adjustable by the Owner.
h. UV resistant (non-yellowing) Lexan-like material to protect the LCD.
i. Display (scroll) rates and regulations for every time slot programmed for the day.
j. Ability to display logos and graphics.
k. Provide on-screen menu or display for technicians to analyze problems on-site, and provide, at minimum, the following information regarding the meter’s current operating status:

1) View the current assigned meter configuration and software version.
2) View the battery level.
3) Test the operating condition of the card reader.
4) Test the integrated wireless communications.

2. Fixed graphics containing customer instructions for user-friendly operation.

a. Operating procedure progresses from left to right and top to bottom.
b. Numbered corresponding instructions are pictorially illustrated.
c. Customizable by Owner.

3. User Interface

a. Weatherproof keypad or and/or user buttons unaffected by temperature, sun, rain, ice, snow, freezing rain, etc.
b. Capable of operating in at least three different languages at the push of a button. Support for English, Spanish, and Mandarin Chinese at minimum is required.

E. Card Reader

1. Accept the following cards:

a. VISA
b. Master Card
c. American Express
d. Discover
e. Bank Debit Cards with Credit Card Logo

2. Credit Card Approval System:

a. PARCS vendor is to coordinate with the STJPPFA and credit card clearing company on provisioning of Merchant ID and Terminal IDs associated with

©2024, Walker Consultants. All rights reserved.

all payment methods and credit card terminals in the MSM machines and in the permit payment feature of the MSM's Meter Management System (MMS). STJPPFA will be the Merchant of Record (MOR) for all such transactions.

b. Credit card readers wirelessly connected to a server dedicated to credit card approval and payment processing system.
c. Configure system such that information from each credit card transaction is wirelessly transmitted to a server in direct communication with authorizing clearinghouse via secure connection to provide on-line real time approvals for each transaction.
d. Contact chip card read and mag stripe reader, and contactless NFC reader capable of accepting at a minimum Apple Pay and Google Pay.
e. Credit Card gateway to be part of PCI P2PE as listed on the PCI-SSC web site and VISA Level-1 Service Provider as listed on the VISA web site.
f. Encryption is performed at the card reader and utilizes P2PE.
g. Credit card authorization in real time.
h. Maximum average authorization time for credit card transactions: Ten (10) seconds.
i. Provide "store and forward" feature only when the communication network is down, or not available and credit card payments cannot be authorized in on-line mode.
j. Confirm and provide record formats required by Owner's financial institution.
k. Identify all required additional services necessary for processing and the associated costs.

3. Provide the user the ability to confirm purchase prior to processing card.

F. Scanner

1. Provide a 2D scanner which can read QR and bar codes presented on paper or on a mobile device screen.

2. Such QR/bar codes may be used for proof of online pre-payment or for partial/full parking validations obtained in advance of arrival from authorized nearby retail and entertainment establishments.

G. Audio/Video Intercom

1. Provide an audio/video intercom system supporting two-way audio and two-way video communications from each MSM to an assistance call center.

2. It is preferred that the intercom system be integrated into the body of the MSM using a built-in "push for assistance" button, embedded camera, microphone, and speaker and displaying the assistance call center's agent image on the screen of the MSM.

3. It is acceptable but not preferred that the intercom system can be mounted outboard of the MSM via an add-on video screen and audio system.

©2024, Walker Consultants. All rights reserved.

4. Intercom system is to support high quality audio and video, with adjustable volume levels on audio and adjustable contrast ratio and focus on video.

5. Contractor is to include the monthly cost of the call assistance center to support the intercom system in their price proposal.

H. Power Supply

1. Standard power input of 120 Volts AC.

2. Backup battery with battery life of at least 36 months and capable of maintaining pay station operation for a period of up to 8 hours without AC power.
3. Commercially available battery without voiding warranty.
4. Ability to replace battery in less than two minutes with no tools required.
5. Programmable low battery alerts.
6. Separate backup battery to sustain clock, calendar, audit information and RAM in the event of a system failure or during battery replacement.

I. Communication

1. Offeror must perform independent site evaluation to determine optimal communications mode(s).
2. It is the responsibility of the vendor to test and confirm reliable power and communication from all MSM locations.
3. Standard communications mode to be hard-wired TCP/IP-Ethernet over CAT6.
4. Optional cellular data connection at LTE speeds or higher.

J. Receipt Printer and Electronic Receipts

1. Capable of printing standard and variable length receipts and reports.
2. Receipt offered and issued upon completion of transaction, if selected by payee.
3. Option for payee to select printed or electronic receipt. For the latter, ability for payee to enter a phone number to which e-receipt will be texted.
4. Minimum information provided on receipt:

   a. Amount of transaction.
   b. Unique identification number for adding time, adjudication, and audit control.
   c. Plate number.
   d. Time and date purchased.
   e. Expiration time and date.
   f. Meter number.
   g. A QR/bar code which contains the essential transaction information (for potential later usage at validation stations).

5. Ability to replace receipt paper roll in less than one minute with no tools.

## 2.3 SOURCE QUALITY CONTROL

A. Factory Acceptance Test (FAT)

©2024, Walker Consultants. All rights reserved.

1. Due to the separation of the “furnish equipment and software” and “provide installation” portions of the scope for this project, it is required that adequate documentation of the proper functioning of the equipment in its complete, originally manufactured state be conducted by the Contractor prior to delivery of equipment to the project site. Such testing, known as a Factory Acceptance Test (FAT), is meant to ensure that all equipment is known and demonstrated to be working correctly via a documented FAT procedure and a certificate of completion of FAT is provided to the Owner and Installer prior to handoff of the equipment to the Installer.
2. All equipment is to have successfully passed formal manufacturing FATs and quality assurance inspections to validate compliance with these functional specifications prior to shipment to the project site.
3. Records for formal internal Contractor FAT and inspection for performance, materials quality and/or workmanship are to be produced by the Contractor and sent as formal project submittals to Owner and Installer for review **prior** to shipment of equipment to the project site. Equipment is not to be released for shipment until Owner and Installer have approved the FAT submittals.
4. Contractor is also to have readily available proof of product reliability analysis and testing should reliability become a problem at any time from the beginning of installation testing through the final operational test period.

## PART 3 - EXECUTION

### 3.1 INSTALLATION AND COORDINATION

A. Coordinate installation of MSM System with Installer in accordance with manufacturer's recommendations.

B. Installation and Start-Up: Contractor is to coordinate installation of all Contractor supplied equipment and its interfacing and interconnection with Owner supplied equipment with Installer. Installer is to perform all physical equipment installation and associated electrical or civil work, with support from Contractor as needed.

C. Contractor is responsible for all software and communications by all computers and peripheral devices.

D. Owner or Owner’s Representative may observe installation process and stop the work at any time throughout the process.

E. Provide dust and noise protection in strict accordance with equipment manufacturer's recommendations.

F. All equipment components installed near drive aisles shall be protected from damage by vehicular movements by protective bollards.

### 3.2 FIELD QUALITY CONTROL

A. Provide an Acceptance Testing Plan to demonstrate the functionality of the system.

©2024, Walker Consultants. All rights reserved.

1. Include demonstrations of compliance with all specifications, contractual compliance, definitions of all test objectives, participant responsibilities, documentation of tests and procedures for dealing with failures during test.
2. Detail tests for every functional requirement of the MSM system, including PbC integration.

    a. Include checklist for specified supplies, spare parts, training operation and training manuals.
    b. Provide space for acceptance by Contractor and Owner or Owner's representative.

3. Confirm that all specified features are provided and fully operational before Acceptance Testing.
4. Notify Owner or Owner's Representative in writing at least one week prior to each official test session. If a test is not successful, correct noted deficiencies and advise Owner or Owner's Representative, at least two days in advance, that test session is ready to resume.
5. Owner or Owner's Representative may witness tests.

B. Passing Acceptance testing, even if performed in the presence of the Owner or Owner's Representative, does not relieve the Contractor of the responsibility to provide a system in accordance with the Specifications.

C. Promptly correct all problems encountered at no cost to the Owner.

D. Thirty (30) Day Operational Test and Final Acceptance

1. After go-live date, the Owner will conduct an operational test for thirty (30) days.
2. Performance Standards:

    a. System is fully operational without downtime or programming problems for the complete monthly reporting cycle. For each down-time period of between one hour and eight hours, or programming problems that delay the report cycle, two days will be added to the test duration.
    b. All reports correlate 100% with credit card reconciliation.

3. Maintain detailed records and a logbook of all tests, events, and issues to be provided to the Owner upon completion of the tests.

## 3.3 INSTRUCTION AND TRAINING

A. Fully instruct the Owner's designated personnel in the operation, adjustment, and maintenance of all MSM products, equipment, and systems.

B. Coordinate scheduling of on-site and in-person instructional classes with Owner's designated personnel to avoid conflicts and peak-period personnel demands.

C. Submit a proposed instruction schedule prior to equipment installation. Owner will tentatively approve or suggest changes to the training schedule.

©2024, Walker Consultants. All rights reserved.

D. Ample time should be allotted within each session for the instructor to fully describe and demonstrate all aspects of the MSM system and allow Owner personnel to have hands-on experience with the MSMs.

E. All instruction courses will consist of classroom instruction and actual “hands-on” experience. Classes will be set up in a room designated by the Owner.

F. Provide experienced instructors that speak fluent English in a clear precise manner.

G. Provide all documentation required for instructing Owner personnel. The Owner retains the right to copy training materials as frequently as required for ongoing internal use only.

H. Provide an instructional notebook or user’s manual to accompany every instruction course. Submit a hard copy and electronic version of all manuals (operation and maintenance) written in common English with appropriate photos, diagrams, and schematics to supplement the text.

I. Training categories:

1. Maintenance.
2. Enforcement.
3. Finance/Administration

J. Provide hard copies and electronic operation and maintenance manuals for all components.

### 1.3 SUMMARY

A. Work consists of a prime contractor (“Contractor”), along with additional subcontractors as needed, furnishing and installing on a turnkey basis a fully integrated on-line, real-time, parking Citation Management System (CMS) functioning in the manner described herein. Contractor is also to provide ongoing operational support and service of this system.

B. System will be used for the Bellamy Court Garage of STJPPFA (“Owner”) located at 1 Bellamy Court, South Lake Tahoe, CA and will replace the current enforcement system.

©2024, Walker Consultants. All rights reserved.

C. References in this section to “Contractor” include the Prime Contractor and any Subcontractor performing work.

D. Identify using the provided Specification Compliance Form any clarifications, deficiencies, exceptions or errors in the Specifications or Contract Documents in response. Deviancies or discrepancies in the Specifications or Contract Documents do not relieve the Contractor of the responsibility to provide a fully functional, reliable system as intended by the design. Clarifications and exceptions to the design must be clearly stated in the response and are subject to Owner approval.

## 1.4 SYSTEM DESIGN CHARACTERISTICS

A. Integrate with Owner’s MSM, PbC, and LPR systems (as specified in related documents) for enforcement, appeals, and financial reporting.

B. Provide a public payment portal for parking citations via a secure website that is linked from the City’s parking website.

C. Future System Expansion:

1. Readily expandable to accommodate additional Owner parking facilities, features and configurations.
2. Add booting payments, scheduling, reporting, adjudication.

## 1.5 PRICE REQUIREMENTS

A. Price includes the provision of all material, labor, equipment, and services necessary to furnish, install and support a fully integrated MSM system as outlined herein

B. Constraints

1. Identify in writing any constraints or conflicts regarding system implementation.
2. Include cost, in writing, of rectifying such constraints or conflicts in response.

## 1.6 PROPOSAL SUBMITTALS

A. Price Form: Total system cost and unit cost of each component, as well as explanation of all recurring costs.

B. List manufacturer of each primary component of system.

C. Contractor Information

1. Provide the following information:

a. Name of company.
b. Brief company overview including a description of the company structure, and a statement on whether the company is a private or public entity

©2024, Walker Consultants. All rights reserved.

c. Years in business.
d. Number of employees.
e. Annual sales volume.
f. Description of the Contractor's presence in the United States and in California, including the location of the nearest service center for maintenance and repairs
g. Name and contact information (address, email and phone number) of Principals and/or Local Contacts.

2. Provide a list of any subcontractors, their business address, and a summary of their role in the project.

D. Contractor's Qualifications: Provide documentation:

1. In continuous operations for previous five years.
2. Five client references:

a. Name of municipality.
b. Address.
c. Contact name, telephone number and email address.
d. Date of implementation.
e. Description of system and services.
f. # of citations annually.

E. Project Approach – Submit the following:

1. Executive summary including any unique features and functionalities that will enhance customer service and facilitate greater operational efficiencies.
2. Description of the Contractor's approach for client customer service.
3. Detailed project plan and schedule based on the anticipated project milestones. Detail the plan for design, implementation, phasing and migration from current system, training, and testing.

F. Product Data - Submit the following:

1. Software application and version(s).
2. Standard report samples including screenshots.
3. Contractor's workstation requirements for Owner provided workstations.

G. Exceptions and Substitutions:

1. Exceptions: Provide an all-inclusive list of all exceptions taken to any part or parts of these specifications or the contract documents, including substitutions, using the provided Specification Compliance Form.
2. Substitutions: It is recognized that there are variations between vendors. Where functional performance features or quality of system varies materially from that specified, identify substitution being proposed. Include catalog sheets, brochures, and/or technical specifications of the proposed substitution.

**PART 2 - PRODUCTS**

©2024, Walker Consultants. All rights reserved.

## 2.1 CITATION MANAGEMENT SYSTEM

A. Administrative

1. Integrate with Owner's MSM, PbC, and LPR systems for Fixed LPR data feeds, citation management, and financial reporting.
2. Hosted or cloud-based environment must have an off-site secure backup location. If cloud-based, must comply with the same submittal and technical requirements as noted in Specification Division 111224.14 Sections 1.8.B.1.g, 2.1.B.10, and 2.1.C.6. Any cloud instances used must be hosted in US-based cloud centers. **A fully cloud-based CMS application architecture with no on-site server required is strongly preferred by STJPPFA.**
3. Log and track all user activity within the system and generate audit reports on user activity.
4. Owner will have complete ability to add to delete from or revise the passwords that are established by the network administrator. The password system to include the provision of logging the event and user's name each time a password is used to gain access to or within the system.
5. Security functions provided by the system to include but is not limited to:

    a. All changes/updates to the server system require prior authorization from Owner.
    b. Where the change and/or update is authorized, an audit trail and report are created including the following:

        1) Date/time of change.
        2) Record of change made.
        3) Username of individual making the change.
        4) Record of data modified or changed (prior to change).
        5) File identities and record count.

6. Ability to determine from Fixed LPR entry/exit records and from MSM payment data whether a vehicle:
    a. Has left without paying the parking fee due.
    b. Has overstayed their purchased parking time.
    c. Is a monthly permit parker whose permit has expired.
    d. Is a scofflaw vehicle on a "disallowed" list for various reasons such as repeated non-payment of past parking fees.
    e. Is on a law enforcement BOLO list.

7. Ability to send Owner-programmable real-time email or text alerts to PEOs and other Owner parking operations personnel for any of the cases listed in Section 6 immediately above, including an image of captured LPR and vehicle image.
8. Ability to query database by name, vehicle, license plate, citation number, appeal number, facility, or event.
9. Ability to show the license plate and vehicle image on query results.
10. DMV Interface for Registered Owner Information and Holds

    a. Contractor must have ability to retrieve registered owner data from the DMV of at least California, Oregon, and Nevada. Support for additional states is highly desirable but not mandatory.

©2024, Walker Consultants. All rights reserved.

b. Review DMV “No Hit" list to confirm vehicle make and registered owner information.

11. Allow for automatic scheduling of tasks (e.g., updating customer information from data imports).
12. Allow for customizable screen views for different user’s job tasks.
13. Email management

    a. Ability to schedule auto-generated emails.
    b. Ability to monitor and audit outgoing email batches, bounce backs, etc.
    c. HTML and TEXT email capabilities, with unlimited characters within body of email.
    d. Ability to incorporate graphics or images within email body.
    e. Ability to attach PDF to email, or another file type.
    f. Ability to send email directly from customer account page.

14. Letter and statement management

    a. Custom letters and statements that can be mailed emailed or uploaded to customers.
    b. Citation and hearing letters with responsible customer, fee, citation and hearing information.
    c. Auto-generate/pre-schedule outstanding citation letters and transfers to California DMV.
    d. Auto-generate letters based on pre-programmed rules (i.e., number of days for outstanding citation, number of citations, amount owed, etc.).
    e. Ability to suppress generation of specific letters or citations at the discretion of Owner’s parking enforcement personnel.

15. **Owner’s preferred approach to issuance of formal, DMV-aware citations is an API-based integration with Owner’s current DataTicket system. If this is not possible with the Contractor’s offering, explain the alternative(s) you propose which meet all Specifications in this section.**
16. Ability to create and issue citations via handheld device.
17. Ability to create unique citation types with violation description.
18. Ability to set and adjust citation violation fines.
19. Ability to create custom fields on citation, including dropdown menu for public comments, private comments, etc.
20. Ability to attach a license plate and vehicle image to the citation.
21. Citation images must be available for the customer to view when logged into their account.
22. Issued citations automatically stored in sortable, searchable database.
23. Ability to transfer unpaid citations to a third party (i.e., collections agency).
24. Ability for customers to appeal citations online or via email:

    a. Ability to attach up to three supporting documents (jpeg, pdf, etc.).
    b. Throughout the adjudication process the citation can be upheld, fine reduced, overturned, or reduced to a warning.

25. Ability to save, edit, download and schedule queries
26. Reports:

©2024, Walker Consultants. All rights reserved.

a. Available online and on demand for Owner personnel who have proper password access.
b. Viewable, printable, and exportable from the GUI.
c. Ability to pre-program reports to run, print, and be emailed to desired recipients.
d. Data compiled in an ODBC compliant database with the ability to prepare custom reports using the PARCS data including Microsoft Excel, at a minimum, via a comma-separated-value file format.
e. Sortable by all fields.
f. Provide the Contractor's standard reports including report descriptions, selectable data fields, and report layouts for all standard reports.
g. Coordinate with the Owner as required during the system design to address specific reporting needs of the Owner. At a minimum, reports provided shall include:

1) Citations by date, time, location, issuer, violation type, license plate,
2) Paid and unpaid citations.
3) Citation status.
4) Cash drawer activity.
5) Transaction reports by cashier.
6) Cashier reconciliation reports.
7) Credit card transactions.
8) Accounts receivable.

h. Transition existing custom reports to new system as defined by Owner requirements. Owner and Contractor to coordinate report design and finalize custom reports prior to the expiration of the warranty period.

27. Customer Accounts:

a. Unique account number per customer.
b. Unlimited number of user-defined fields.
c. Ability for customer to prioritize data (multiple addresses, vehicles, phone numbers, etc.).
d. Ability to flag customer accounts or fields (VIP, no checks, contact supervisor, etc.).
e. Ability to archive inactive customers.
f. Ability to merge customer accounts when duplications occur.
g. Ability to create group accounts.
h. Ability to identify and monitor scofflaw or BOLO accounts.

28. Credit Card Processing:

a. All applications and software that provide the ability to process Card Not Present transactions as defined by the PCI Council must be listed on the Visa Level-1 Service Provider Registry.
b. Real-time payment processing.
c. Ability to identify all CC payments by type of CC.
d. Accept the following cards:

©2024, Walker Consultants. All rights reserved.

1) Visa
2) MasterCard
3) American Express
4) Discover
5) Bank-Issued Debit Cards with any of the above card brand affiliations, accepted as a credit card.
6) Ability to create and print receipts.

B. Support:

1. Support tickets can be submitted by phone, email, or web portal.
2. Same-day response required on weekdays if submitted by 3:00 pm EST.
3. Next-weekday response no later than 10:00 am EST if submitted after 3:00 pm EST or on weekend/holiday.

## 2.2 ENFORCEMENT HANDHELD TICKET WRITING DEVICES

A. **Owner's preferred approach to handheld ticket writing devices is to use Owner's current DataTicket handhelds. If this is not possible with the Contractor's offering, explain the alternative(s) you propose which meet the following specifications.**

B. Electronic ticket writing devices.

C. Digital photographs for proof of violation, reduced adjudication and improved compliance.

D. Application shall provide for easy back up and restoration of data based on user-defined parameters.

E. Citation design and language to be approved by STJPPFA.

1. Ticket numbers print in an OCR-A readable and landscape format.
2. Accommodate preprinted and free form printing.

F. Minimal Fields:

1. Unique ticket number (automatic entry)
2. Issue date (automatic entry)
3. Issue time (automatic entry)
4. Vehicle information:

a. Registration number and/or VIN#
b. Vehicle Make
c. Vehicle Color
d. Vehicle Type
e. Plate number
f. City
g. State
h. Location
i. Zone

©2024, Walker Consultants. All rights reserved.

j. Time Limit
k. Parking meter number
l. Route
m. Issuing PEO Name
n. Issuing PEO Badge Number
o. Violation Identification Code
p. Fine Amount
q. PEO Notes
r. Public and private comments

G. Clearly readable screen in direct sunlight and after exposure to direct sunlight.

H. Display and/or display keys must have adjustable lighting to facilitate use after dark or whenever low lighting conditions exist.

I. Provide date and time stamps for all operational functions.

J. Internal clock synchronizes on a daily basis with the host software.

K. Daylight savings / standard time changes shall be automatically reflected.

L. Provide group mode function for automated repetition of data for multiple violations in the same location or for the same violation – to hasten the issuance process.

M. Accommodate incident and trouble reporting in the field, such as broken parking meters, missing signs, etc.

N. Provide printable End of Shift summary.

## PART 3 - EXECUTION

### 3.1 IMPLEMENTATION, PHASING AND MIGRATION PLAN

A. Sixty days prior to go-live date, meet with Owner to review implementation, phasing, and migration plan.

B. Provide close coordination with implementation schedules of all related systems that are part of this project (MSM, PbC, Fixed LPR).

C. Provide a “soft launch” period of one month in duration during which both the old and new CMS are in place.

### 3.2 TRAINING

A. Develop and implement a comprehensive training program for authorized personnel.

B. Design the curriculum so that each group is trained in the full repertoire of system commands that they may have to use in course of performing designated functions.

©2024, Walker Consultants. All rights reserved.

C. Schedule training no more than two weeks prior to use of equipment.

D. Include lectures, visual presentations, hands-on operation of equipment and any materials necessary to perform job. Provide each trainee with a complete set of training materials and operating manuals during training session, to be kept for use on job at completion of training.

## 3.3 TESTING

A. Provide a formal submittal for Owner review and approval of Owner-specific System Acceptance Testing (SAT) and Operational Demonstration Testing (ODT) plans at least 60 days prior to the commencement of the SAT.

B. SAT plan is to test all system functions, features and reports using actual data from the Bellamy Court garage. This test occurs before the system is put into operational usage.

C. Based on any deviations or untested items noted in the SAT results, Owner will decide at their sole discretion if the SAT is considered passed, passed with deviations, or failed.

D. If SAT has failed, Contractor will correct all failures and repeat the SAT within no more than two (2) weeks after the failed SAT.

E. If SAT has passed with deviations, Contractor will develop and manage to Owner-acceptable resolution a punchlist of all deviations. Resolution of all punchlist items is required before proceeding to ODT.

F. Upon successful completion of SAT and resolution of all punchlist items, the system will be considered conditionally accepted and ODT will commence. The ODT plan is intended to test the system once it is in an initial production state, to verify that functions, features and reports using actual data from the Bellamy Court garage are correctly and reliably operating as a full, complete system.

G. The duration of the ODT period is to be thirty (30) days of continuous operation free from any complete system failures or significant individual feature or function errors. The categorization of an error as “significant” is at the discretion of the Owner. If a complete system failure or a significant error occurs, the 30-day ODT period will restart from the beginning once the system failure or significant error is corrected.

H. Upon successful completion of ODT, the system will be considered to have achieved final acceptance.

**END OF SECTION 11 12 34**

# SECTION 111240.20 – LEVEL-COUNT AUTOMATED PARKING GUIDANCE SYSTEM (APGS)

## PART 1 - GENERAL

### 1.1 RELATED DOCUMENTS

A. APGS Design Drawings (“Drawings”) – see Q-001, Q-101, Q-403, Q-501, and Q-502.

B. Price Proposal Form

C. Specification Compliance Form

D. General Conditions of the Contract for Construction apply to this Section.

E. Codes and Regulations: Comply with State and Local codes as applicable.

### 1.2 DEFINITIONS

A. List of abbreviations:

| | | |
|---|---|---|
| 1. | ANSI | American National Standards Institute |
| 2. | APGS | Automated Parking Guidance System |
| 3. | API | Application Programming Interface |
| 4. | BI | Business Intelligence |
| 5. | DAT | Device Acceptance Test |
| 6. | DMS | Digital Messaging Sign |
| 7. | GUI | Graphical User Interface |
| 8. | IP | Intrusion Protection |
| 9. | ISO | International Organization for Standardization |
| 10. | IDF | Intermediate Distribution Frame |
| 11. | LED | Light Emitting Diode |
| 12. | LPR | License Plate Recognition |
| 13. | NEMA | National Electrical Manufacturers Association |
| 14. | NEC | National Electric Code |
| 15. | NTP | Notice to Proceed |
| 16. | ODBC | Open Database Connectivity |
| 17. | ODT | Operational Demonstration Test |
| 18. | PARCS | Parking Access and Revenue Control System |
| 19. | POLP | Principle of Least Privilege |
| 20. | QA/QC | Quality Assurance/Quality Control |
| 21. | SaaS | Software as a Service |
| 22. | SDD | System Design Documents |
| 23. | SDR | System Design Review |
| 24. | TCP/IP | Transmission Control Protocol/Internet Protocol |
| 25. | UL | Underwriters Laboratories, Inc. |
| 26. | UPS | Uninterruptible Power Supply |

©2024, Walker Consultants. All rights reserved.

## 1.3 SUMMARY

A. This section includes provision of all material, labor, equipment, documentation, services, and training necessary to furnish, coordinate installation with a separate Installation Contractor ("Installer"), support, and maintain a new, on-line, real-time Level-Count Automated Parking Guidance System (APGS) functioning in the manner described herein for the parking facility described as the Bellamy Court Garage, located at 1 Bellamy Court, South Lake Tahoe, CA.

B. System to be provided for STJPPFA, hereafter referred to as "Owner", in South Lake Tahoe, CA for an existing, cast in place, post-tensioned, 4-level, above ground parking structure. This structure features two 2-lane entry/exit plazas on the Ground Level and a two-way, parked ramp between each level. The top deck is uncovered and currently has no solar canopy. The system is to provide a level count APGS for this structure and is to drive external Digital Messaging Signs (DMS), as described further below and as shown in Drawings. The level count is to be provided for two zones only – Level 1 and the combined total of Levels 2-4.

C. Work consists of a prime contractor ("Contractor"), along with additional subcontractors as needed, providing:
   1. Provide any necessary information and support to Installer to enable them to prepare the site as needed for new APGS installation, as defined in Drawings.
   2. Furnish all required equipment and software for the new APGS system, and coordinate equipment installation with a separate Installation Contractor ("Installer") including providing all information, documentation and support required for Installer to complete the APGS installation work.
   3. Install all APGS device/server Software as required, and provision, activate, configure, integrate, test, and turnover for production the entire APGS system.
   4. Provide ongoing operational support and service of the new system, including both hardware repair and software support.

D. References in this section to "Contractor" include the Prime Contractor and any Subcontractor performing Work related to the APGS.

E. Identify any clarifications, deficiencies, exceptions or errors in the Specifications or Contract Documents in Contractor proposal. Deficiencies or discrepancies in the Specifications or Contract Documents do not relieve the Contractor of the responsibility to provide a fully functional, reliable APGS as intended by the design. Clarifications and exceptions to the design taken by the Contractor must be clearly stated in the proposal and are subject to Owner approval.

F. System Design Characteristics

   1. Monitor and communicate parking availability as described herein.
   2. Utilize overhead sensors for monitoring occupancy and space availability of the parking levels. **Allowable overhead sensor types include camera-based, ultrasonic, and LIDAR only.**
   3. Embedded magnetic loop sensors are not acceptable and may only be allowed in exceptional circumstances where no other type of overhead sensor can be utilized, with Owner's prior approval.

©2024, Walker Consultants. All rights reserved.

4. Furnish, and coordinate with separate Installer the installation of, a real-time parking availability digital sign showing “OPEN”, “FULL”, “CLOSED” (or “CLSD”) or the number of available spaces in the facility as a whole, via a monument DMS designated “DS-1” located near the corner of Heavenly Village Way and Bellamy Court, as shown on Drawings, with communications to this sign via wireless cellular data or hard-wired serial data link.
5. Furnish, and coordinate with separate Installer the installation of, a DMS designated “DS-2” and provide an Owner-controllable feature in the APGS for activating or deactivating a “No Right Turn” illuminated sign to be located at the corner of Heavenly Village Way and Bellamy Court, as shown on Drawings, with communications to this sign via wireless cellular data or hard-wired serial data link.
6. As an Add-Alternate, furnish and coordinate with separate Installer the installation of a monument DMS designated “DS-3” located adjacent to the southern entry lane driveway of the garage, as shown in Drawings. The APGS is to activate this sign when the occupancy of Level 1 of the garage reaches an Owner-configurable percentage (for example, 90% or greater) and deactivate the sign when the occupancy of Level 1 is below that level. Communications to this sign are to be via wireless cellular data or hard-wired serial data link.
7. Provide system intelligence and central control to facilitate management of spaces, real-time reporting and information capabilities to provide:

    a. Occupancy and availability by level.
    b. Occupancy and availability by entire facility.

8. Provide a mobile application for dissemination of parking availability data, and/or provide integration with an Owner-developed mobile app or web page.
9. Provide open APIs for dissemination to third party websites and applications. Such API’s must be open, documented and non-proprietary using industry-standard approaches such as REST or Websocket. Data access via the API is to be available to Owner at no additional charge.
10. Provide all necessary APGS software and hardware required to support and process detection and counting data from sensors and provide real-time APGS information to signage and to other applications listed herein.
11. Provide local and/or cloud-based computer servers with related data storage to provide data reporting, data analytics, historical data storage, user and administrator interfaces, system configuration, and system maintenance.
12. APGS is to operate seamlessly as a complete system. All equipment components are to function in coordination with other components.
13. Coordinate APGS component installation with the geometric circumstances of the specific location where they are installed, i.e. garage clearance, drive aisle widths, line of sight, etc.

G. Future System Expansion

1. Provide an APGS that is readily expandable and upgradeable to accommodate additional parking facilities, nested parking areas, features and configurations. Installed APGS capable of expansions/enhancements listed below:

    a. Add additional sensors, individual space sensors, indicator lights, or DMSs.
    b. Add additional parking facilities.

©2024, Walker Consultants. All rights reserved.

c. Interface with additional third-party systems such as mobile applications and external websites that are not already called out in this specification.
d. Additional functionalities (e.g. parking reservations, loyalty programs, dynamic pricing based on location, etc.).

## 1.4 PRICE REQUIREMENTS

A. Price includes the provision of all material, labor, equipment, and services necessary to furnish, coordinate installation with a separate Installer, support, and maintain a fully integrated APGS system as outlined herein.

1. Examine site

a. Identify in writing any constraints or conflicts regarding installation.
b. Include cost, in writing, of rectifying such constraints or conflicts in Price Proposal.

B. Add-Alternates:

1. Provide pricing for Maintenance, Service and Parts Contract after two-year warranty:

a. A separate contract awarded for Maintenance, Service and parts that would commence with expiration of warranty period.
b. Provide detailed descriptions, inclusions and exclusions
c. Provide annual pricing for five (5) years after initial two-year warranty period.

2. As an optional Add-Alternate, Contractor is to propose full matrix, full color LED panel signs or embeddable modules instead of fixed format digit sign modules. See further specifications for this option in Section 2.4.F.
3. As an optional Add-Alternate, Contractor is to provide pricing to furnish and install the “Level 1 Full” sign DS-3 adjacent to the southern entry lane driveway, as per Drawings.

C. Substantial Completion: A certificate of substantial completion is to be provided when the following requirements have been satisfied:

1. All systems, features and communications, have passed the DAT and ODT per Section 3.2 of this document.
2. All spare parts, stock material and manuals are on site and have been approved.
3. All test checklists, documentation and training has been completed.

D. Final Acceptance: Final Acceptance will occur upon substantial and successful completion of all acceptance tests, and upon verification of substantial and successful resolution of all outstanding items on the Punch List.

## 1.5 ADMINISTRATIVE REQUIREMENTS

©2024, Walker Consultants. All rights reserved.

A. System Design Review: Conduct SDR meeting within twenty-one (21) days of contract award to review System Design Documents (SDDs) with the Owner's design team and coordinate the infrastructure design. SDDs include the following Proposal Submittals and Informational Submittals:

1. Product Data Submittals.
2. Project Schedule.
3. Training Plan.
4. Testing Plan.

B. Pre-Installation Meeting: Conduct meeting at project site fourteen (14) days in advance of time scheduled for equipment installation to proceed to review requirements and conditions that could interfere with successful APGS implementation. All parties concerned with APGS installation including electrical, communications, or others who are required to coordinate work should attend. Include the Owner or their respective representatives. At a minimum, cover:

1. Required preparatory work.
2. Review installation and implementation schedule.
3. Review testing and acceptance procedures.

## 1.6 PROPOSAL SUBMITTALS

A. Price Proposal Form: Total system cost and per unit cost of each component. Include the cost and type of recommended spare parts to be kept on-site. Contractor must utilize the Price Proposal Form provided by Owner to submit pricing.

B. List manufacturer of each primary component of system.

C. Contractor Information - Provide the following information:
1. Name of company.
2. Brief company overview including a description of the company structure, and a statement on whether the company is a private or public entity
3. Years in business.
4. Number of employees.
5. Annual sales volume.
6. List of key accounts.
7. Name and contact information (address, email and phone number) of Principals and/or Local Contacts.

D. Provide a list of any subcontractors, their business address, and a brief summary of their role in the project.

E. Description of the Contractor's presence in the United States and in the South Lake Tahoe, CA area, including the location of the nearest service center for maintenance and repairs.

F. Manufacturer's Qualifications: Provide documentation:

©2024, Walker Consultants. All rights reserved.

1. Company must have been in continuous operations for previous five (5) years, and proposed APGS product must be released in general availability for at least two (2) years prior to the date of this procurement.
2. Similar system and system integration installed in three (3) or more garages of similar size and complexity to Owner's garage. The reference clients must utilize the same model and version of system that is being proposed for Owner. Provide the following for each installation:

    a. Name of project.
    b. Location.
    c. Contact name, telephone number and email address.
    d. Dates of installation and system activation.
    e. Description of equipment and quantities.

G. Service Provider Qualifications: If different than Manufacturer, Provide documentation:

1. Proven ability to provide installation and/or service and support after installation, meeting minimum requirements as specified herein.
2. Continuously worked with equipment manufacturer, including providing installations and/or service, for minimum of three (3) years.
3. Approved in writing by manufacturer.
4. Documentation of manufacturer's installation and/or service training within previous two (2) years.
5. Similar system and system integration installed in three (3) or more garages of similar size and complexity to Owner's garage. The reference clients must utilize the same model and version of system that is being proposed for Owner. Provide the following for each installation:

    a. Name of project.
    b. Location.
    c. Contact name, telephone number and email address.
    d. Dates of installation and system activation.
    e. Description of equipment and quantities.

6. Manufacturer approved service center located within four (4) hour's drive of installation.

H. List of sub-contractors, identifying nature of work performed.

I. Warranty:

1. Submit copy of warranty (per Section 1.13 of this document) and explanation of any instances which may impact warranty coverage.
2. Submit RMA procedures.

J. Project Approach – Submit the following:

1. Executive summary of proposed APGS system, as described in the RFP documents, including any unique APGS features and functionalities that enhance customer service and facilitate greater operational efficiencies.

©2024, Walker Consultants. All rights reserved.

2. A specific system design and layout diagram, super-imposed on top of the provided Drawings, showing the locations, layout and interconnection mechanism of all vendor hardware components.

3. Description of the Contractor's approach for post-installation client customer service.

4. Project schedule based on the anticipated project milestones. Detail the Contractor's plan for design, installation, implementation, training, and testing including the following:

    a. Milestone dates clearly identified.
    b. Task and subtask start and completion dates.
    c. Narrative description of phasing for each area of work including installation of field devices and performance of acceptance testing.
    d. Training schedule relative to system activation.

K. Product Data Submittals – submit the following:

1. Sample photos, sketches, diagrams, or other graphics that are representative of the products that are to be provided for the APGS.
2. Cut sheets including equipment dimensions; power and load requirements; communication requirements; operating temperature range; and any NEMA or IP rating for the following APGS equipment:

    a. Vehicle Detectors/Sensors
    b. APGS power/control cabinets
    c. APGS Headend Server(s) and associated workstations or display screens
    d. DMS's
    e. UPS's

3. Software application and version(s).
4. Standard report samples including screenshots.
5. APGS GUI screenshots.
6. Sample screenshots or other graphics that are representative of the mobile application that is provided for the APGS, and/or a description of the method of integration of the APGS with an Owner-supplied mobile app.
7. Schematic diagram showing communication between head end equipment, APGS components, and interconnection with Owner network.
8. Description of any offsite or cloud-based components of the system and the methods by which the on-site equipment and software communicates with the offsite/cloud-based components. This must include a description of the communications and networking methods required to integrate the onsite and offsite components, who provides the associated communications network (Owner, Contractor, or a combination), and any costs associated with this communications network.

L. Price proposal with total APGS cost and unit cost of each component along with add/alternate items, using Price Form provided by Owner.

M. List of manufacturer-recommended spare parts specific to this installation, including:

©2024, Walker Consultants. All rights reserved.

1. Part name.
2. Part number.
3. Unit price.
4. Proposed quantity.
5. Total Cost.

N. Exceptions and Substitutions:

1. Exceptions: Provide an all-inclusive list of any and all exceptions taken to any part or parts of these Specifications or the Contract Documents, including substitutions.
2. Substitutions: It is recognized that there are variations in equipment between manufacturers. Where functional performance features or quality of system varies materially from that specified, identify substitution being proposed. Include catalog sheets, brochures, and/or technical specifications of the proposed substitution.
3. **Utilize only the provided Specification Compliance Form to describe any exceptions or substitutions**.

## 1.7 INFORMATIONAL AND CLOSEOUT SUBMITTALS

A. All submittal approvals, comments and rejections are to be returned to the Contractor by the Owner's designated representative with requests for resubmittal as appropriate. Resubmit as required until submittal is approved by the Owner's designated representative.

B. Submittals include:

1. Shop Drawings to be submitted within 21 calendar days of contract award:

    a. Dimensioned Construction Drawings showing plans, elevations, sections and details indicating coordination and relationships with other construction.
    b. DMS Design/Shop drawings and technical specifications, including power and network specifications, weight, intrusion protection (IP) rating, encasement design and color, LED display area design and colors, method of varying LED intensity based on ambient light, and details on the proposed mounting approach including legs/pedestals, other mounting assemblies, and required concrete footings.
        1) Encasement color of DMS is to be coordinated with Owner; a custom color to match other Owner signs will be required as specified in Drawings
    c. Mounting details for Vehicle Detectors/Sensors.
    d. Wiring diagrams detailing wiring requirements for power, communication, and control systems.
    e. Proposed locations for electrical and communications connection points and pathways including riser diagram, network access points, and head end server location(s).
    f. Specific pictorial and graphic descriptions of any connections required to an external network or cloud, and who provide each associated networking component or network service.

2. Testing Plan to be submitted as part of the SDR meeting, per Section 3.2.

©2024, Walker Consultants. All rights reserved.

3. Phasing Plan: Incorporate Owner comments to the Transition Plan, Training Plan, and Testing Plan received during the SDR and submit a detailed Phasing Plan 30 days prior to installation to include:

    a. Revised schedule with milestone dates clearly identified, task start and completion dates, lane-by-lane installation dates, training dates, and testing dates.
    b. Description of phasing to install field devices and perform DAT.

4. APGS Manuals to be submitted 14 days prior to commencement of testing, per section 3.3.
5. As-Built Documentation: Submit as-built documentation of all systems and components installed as part of the APGS. As-built documents include updated Construction Drawings depicting the actual installed conditions of all equipment and cabling components. In addition, as-built documentation includes configuration settings of each system upon the completion of any acceptance test. Update the most recent as-built documentation submitted as further changes occur in the field or as a result of a patch or upgrade to an installed system throughout installation warranty, and post-warranty maintenance periods.
6. Provide a list of all TCP/IP devices with each device's IP address and installation location. Indicate if TCP/IP addresses need to be statically or dynamically assigned. Specify if the networking aspects of the APGS system require one of the following, or if the APGS can support multiple of these options: (a) a dedicated, isolated non-TCP/IP network, (b) a dedicated, isolated TCP/IP network (non-VLAN), (c) an Owner-provided TCP/IP Virtual LAN (VLAN), (c) can run on a public TCP/IP LAN.
7. If the APGS system requires a connection to the public internet and for the required wireless connection to the DMS's via a cellular connection, specify the details of this connection, who provides each component, and what the associated costs are. If a cellular modem is required, specify the cellular provider the Contractor plans to use, what level of cellular data service is to be used (4G, LTE, 5G), and provide a signal survey to ensure adequate cellular signal strength is available to the APGS. Contractor is expected to do all required cellular signal strength measurements and determine ideal modem and/or antenna placement. Owner has no responsibility to ensure adequate cellular signal strength. **Contractor is to include the cost of all cellular data components and ongoing monthly/annual cellular data service in their price quotation.**

## 1.8 MAINTENANCE MATERIAL SUBMITTALS

A. Spare Parts: Deliver spare parts per the approved spare parts list, complete and ready to use, prior to commencement of testing and maintain inventory of spare components at this level as components are used during warranty period.

1. The proposed spare parts list is subject to the approval of the Owner, and the Owner reserves the right to modify the spare parts inventory throughout the term of the Contract.
2. Owner is to provide a storage location of the spare parts, exact location to be identified by the Owner. Contractor to have access to the spare parts inventory

©2024, Walker Consultants. All rights reserved.

and is responsible for ordering replacement components or parts during the implementation and warranty period as components or parts are used.

3. All equipment and parts to be newly manufactured and never installed in any other operational system other than for factory test purposes.
4. Provide an itemized list of manufacturer's part numbers, model numbers, pricing, supplier's address, supplier's telephone numbers, and any single source components when delivered to the project site.
5. Provide a monitoring tool for tracking the inventory and usage of spare parts.

B. Equipment Keys and other Special Tools

1. Provide two (2) sets of keys for each unit of equipment with locks plus two (2) sets of universal keys.
2. If any special tool or accessory (for example, a remote control) is required to perform any function on the APGS during the normal course of business and/or maintenance, provide three of these tools.

## 1.9 QUALITY ASSURANCE

A. All APGS components and installation to comply with all laws, ordinances, codes, rules, and regulations of public authorities having jurisdiction over this part of the work. It is the responsibility of the Contractor to meet these and all other current technical, performance, and safety standards that are applicable to all components and to the entire system, even when not specifically referenced.

B. Open-architecture system where all interfaces (hardware and software) conform to national and International Organization for Standardization (ISO) standards.

C. All materials and equipment listed, labeled or certified by a nationally recognized testing laboratory to meet Underwriters Laboratories, Inc. (UL) standards, where test standards have been established.

1. Equipment and materials which are not covered by UL Standards may be considered provided equipment and material is listed, labeled, certified or otherwise determined to meet safety requirements of a nationally recognized testing laboratory.
2. Equipment of a class for which no nationally recognized testing laboratory accepts, certifies, lists, labels, or determines to be safe, can be considered if inspected or tested in accordance with national industrial standards, such as NEMA, or ANSI. Evidence of compliance includes certified test reports and definitive product data.

D. Equipment housings, conduits, and junction boxes exposed to weather (i.e. any location not in a conditioned environment) is to meet or exceed NEMA 4X or IP65 standards to be moisture-proof and provide sufficient protection so that the components continue to function without moisture, dust, particle, heat, or cold-related interruption. Components that do not meet NEMA 4X or IP65 standards or better may be considered if implemented with supplemental environmental controls to sufficiently protect equipment.

## 1.10 DELIVERY, STORAGE AND HANDLING

©2024, Walker Consultants. All rights reserved.

A. Prior to shipment of any equipment, a Factory Acceptance Test process must be completed and documented by Contractor, and the certificates of FAT completion reviewed and approved by Owner and Installer, in accordance with the description in Section 2.6 below.

B. Contractor is responsible for insuring all shipped items. Any items damaged during shipping are to be replaced and shipped to the project site, by expedited means if requested, at no additional cost to the Owner.

C. Owner, at their sole discretion, may agree to provide a designated storage/staging area of no more than 100 square feet of floor space for equipment that has not been installed. Location to be determined after contract award. Contractor should assume in their proposal that no storage area will be provided. If a storage area is provided, Installer is responsible for securing that storage area with a suitable lock.

D. Deliver equipment to Installer or project site in manufacturer's original containers to prevent damage and marked for easy identification.

E. Once equipment has been delivered either to the Installer or to the project site, it is the Installer's responsibility to protect the equipment from theft and damage until final acceptance and to insure the stored equipment against risk of loss and damage. Installer is to replace any lost or damaged equipment at no additional cost to the Owner.

F. Installer is to receive all equipment at deliver site or project site. Owner is not to receive, unload, or otherwise participate in delivery of equipment.

## 1.11 PROJECT/SITE CONDITIONS

A. Provide a system that is not affected by temperature, rain, snow, wind, or other weather conditions typical to the South Lake Tahoe, CA area. An operating temperature range of -22F to +120F is to be supported by all hardware components that are not in a climate-controlled environment.

B. Provide a system such that environmental conditions inside the APGS equipment enclosures do not cause failure of the installed electronics.

C. Provide a system such that electrostatic and electromagnetic forces within the environment, e.g., non-direct lightning strikes, or other types of power interference have no effect upon the integrity or operation of the APGS.

1. Provide solution for preventing power interference for Owner approval prior to implementation.
2. Provide lightning protection through surge arrestors or earthen ground rods or a combination thereof for the APGS. Determine, based upon the APGS manufacturer's system requirements, the appropriate lightning protection method to use for the location where the equipment is installed.
3. Provide equipment that is UL-approved for use as part of an overall labeled lightning protection system and marked in accordance with UL procedures.

©2024, Walker Consultants. All rights reserved.

## 1.12 PROJECT SEQUENCING

A. Propose sequencing in the Project Schedule that achieves full implementation and acceptance of the APGS in accordance with the Owner provided milestone dates and Contract Documents.

## 1.13 WARRANTY

A. General: Equipment and installation (100% parts and labor) for two (2) years from date of final acceptance by Owner or Owner's Representative. System maintained and serviced against any and all malfunctions due to manufacturing or installation defects at no cost to Owner during warranty period, including preventive maintenance per manufacturer's recommendations or as necessary to keep equipment in good working order. Software support provided during warranty period to include all software upgrades at no additional cost to Owner.

1. Warranty period commences after Contractor has demonstrated satisfactory performance as specified in the Acceptance Testing Plan.
2. Maintain a log of all maintenance, preventive maintenance and repair work performed under warranty and provide to Owner or Owner's Representative at end of warranty period.

B. Warranty response period:

1. Monday through Friday, 8:00 am to 5:00 pm Pacific Time excluding holidays.
2. Response time from initiation of trouble call to on-site response by qualified service technician

    a. Immediate telephone support available from 8:00 am – 5:00 pm Monday-Friday Pacific Time.
    b. Same-day on-site technical support if requested by 10:00 AM Monday-Friday.
    c. Next-day on-site technical support no-later than 10:00 AM the following day if requested between 10:00 AM and 3:00 pm Monday-Thursday.
    d. Next-day on-site technical support no later than 12 noon if requested after 3:00 pm Monday-Thursday.
    e. Monday technical support no-later than 10:00 am if requested on Friday after 3:00 pm.
    f. Monday technical support no-later than 12:00 noon if requested on Saturday or Sunday.

C. If Contractor is not available for above response, Owner or Owner's Representative may affect repairs with no impact on warranty. Pre-qualify appropriate Owner or Owner's Representative to perform repairs and identify types of repair each trained individual is qualified to perform after training of Owner personnel.

D. Replace items taken from spare parts inventory during warranty period at no additional cost to Owner.

E. Preventative Maintenance Service during the Warranty Period:

©2024, Walker Consultants. All rights reserved.

1. Provide preventative maintenance services for all systems throughout the warranty period. Preventative maintenance procedures and frequencies are defined within the Manufacturer's recommended maintenance procedures manual submitted with the APGS Proposal as modified and accepted by the Owner.
2. Preventative maintenance services include but are not limited to inspection, testing, necessary adjustment, alignments, calibration, parts cleaning, camera lens cleaning, communication system maintenance, server administration and database administration of the APGS hardware and software provided as part of this project by the Contractor.
3. Perform all preventative maintenance at non-peak periods during regular business hours.

F. Emergency Maintenance Service during the Warranty Period:

1. Emergency Maintenance Service includes both on-site service and remote service support.
2. Provide three (3) methods of notification to be used for emergency contact information (ex: telephone, email, SMS text message). Acknowledge receipt of any emergency service request within 30 minutes of notification by the Owner.
3. During normal business hours (9:00 am to 5:00 pm Pacific Time Monday through Friday), Contractor to begin remote (or on-site) emergency repair service within four (4) hours of the initial emergency service request by the Owner. If request is made after normal retail business hours the emergency repair to begin by 10:00 am Pacific Time the following weekday. When remote service is insufficient to resolve the issue and on-site service is needed, up to 24-hours is permitted to begin on-site repairs.
4. Resolution of the situation within three (3) business days after notification is required in all situations. A temporary solution is acceptable in the event replacement parts are not available in inventory.
5. Factors beyond the control of the Contractor, such as unexpected delays in parts, accidents, severe weather, to be thoroughly documented and reported to the Owner the next business day.

G. Software Support during the Warranty Period:

1. Make available to the Owner normal software improvement releases (updates) as they become available at no additional cost to the Owner. This includes both system software components and any firmware in system components such as sensors, cameras, routers, etc.
2. Provide all software/firmware patches and updates free of charge during the warranty period; however, the Owner has right of refusal.
3. Seven (7) calendar days prior to all software modifications, patches, updates, and upgrades, provide accurate and complete documentation that describes:

    a. Patch/update release designation.
    b. Proposed date and time of implementation.
    c. Detailed description of what the patch/update accomplishes.
    d. Test plan that shows the change has been successfully tested and has passed internal unit, end-to-end testing.
    e. Full disaster recovery procedures that return the system to its pre-patch/update condition

©2024, Walker Consultants. All rights reserved.

4. Provide operating system support and database administration services including adherence to the recommended operating system patches and updates as they are made commercially available by the operating system developer. This requirement applies whether the OS and database are hosted on-site or off-site (cloud).
5. Coordinate the testing and implementation of all patches and updates with the Owner.
6. Support upgrades to the APGS application based on operating system patch and upgrade requirements. For example, if the APGS runs on a Microsoft operating system, the software can be patched according to the Microsoft patch and upgrade schedule without breaking any application. If Microsoft decommissions an operating system, the Contractor must be capable of releasing code compatible with next operating system upgrade prior to Microsoft ending support for current operating system. This requirement applies whether the OS and database are hosted on-site or off-site (cloud).
7. If at any time the Contractor ceases to do business or ceases to make their APGS software product commercially available, the Owner assumes full ownership of the APGS software. Thirty days prior to ceasing to do business, the Contractor is to provide the most current version of the APGS software source code to the Owner.
8. Provide corrective patches and upgrades within 30 days in the event security vulnerability or system availability issues are discovered.

## PART 2 - PRODUCTS

### 2.1 SOFTWARE

A. Provide all software and software licensing required by the system. To the greatest extent possible, use proven, off-the-shelf software (i.e. software already manufactured and available for delivery).

B. Deliver original CD-ROMs, DVDs, or other form of software e-delivery and software documentation to the Owner prior to system acceptance testing.

C. Provide any necessary perpetual licenses and/or authorization for all software used by the Owner.

D. If any of the software is cloud-based and provided on a Software as a Service (SaaS) basis, Contractor is to document in the Proposal their SaaS licensing terms and conditions, and the options and costs for a multi-year license for terms ranging from 2 (two) up to 10 (ten) years in length. Furthermore, if any component of the system is cloud-based and provided on a SaaS basis, Contractor is to describe in their Proposal what occurs in terms of system and feature functionality if Owner chooses not to renew SaaS-based licensing. If SaaS licensing is not renewed, the system must at minimum continue to operate, accurately count vehicles locally, and display availability counts on DMS signs.

E. Provide a site license to the Owner, meaning usage of the license is unrestricted, regardless of the physical locations where the software may be used as part of this contract.

©2024, Walker Consultants. All rights reserved.

F. Operating System Platform

1. Operating system software consisting of software to support system setup, system operation, routine hard drive backups, diagnostics, and other maintenance routines.
2. Upgrade the APGS application to operate on the most current operating system upon commercial release of a new operating system version. Upon completion of successful Contractor testing, recommend implementation of the patch. Implementation subject to the Owner's approval.

G. APGS Application Software

1. Provide an APGS solution with configurable groups and roles that govern individual access to the system. The assignment of a group/role controls access to the various modules of the APGS, and if the access is update or view only.
2. Install and configure all application software and firmware required by the APGS with all software licenses registered to the Owner.
3. Provide application software with the following features and functionalities:

    a. Ability to collect, display and report all APGS-related data as outlined in this Specification.
    b. Browser-based – Provide APGS software that is browser-based and web-browser enabled, i.e. the APGS software is accessible by an authorized user through an internet browser of any web-enabled computer or mobile device. Users should not need a client version of the software installed on their workstation or mobile device to access the application.
    c. APGS application software to utilize a Graphical User Interface (GUI) that is intuitive and user friendly. Provide a GUI with the following features, at a minimum:

        1) Display of the parking facility with real-time occupancy and availability, including floor maps and occupancy graphically indicated.
        2) Access for authorized users to modify system configurations including:

            a) Manual adjustments to counts and capacities based on Owner defined areas within the parking facilities.
            b) Manual override of signs.

        3) Access to view, print, and export all reports (Microsoft Excel and Adobe PDF, at a minimum).

    d. Provide role-based access control using POLP for all system functions including system administration and security administration.
    e. Access rights to the system for Owner personnel and others are to be defined during implementation.
    f. Automatically detect and report fault conditions – The system performs a self-check on a routine basis and provides notification for fault conditions and equipment failure. Fault conditions are categorized by severity and the system displays alarm notification on the system GUI as well as provides automatic notification to designated Owner personnel via email and or text

©2024, Walker Consultants. All rights reserved.

message for any individual fault condition, category of fault, or Owner-selected group of faults.

g. Provide reporting as outlined in the Reports section.

h. Utilize industry standard Application Programming Interface (API) to allow simple interface with other third-party applications. Such API's must be open, documented and non-proprietary using industry-standard approaches such as REST or Websocket. Data access via the API by Owner is to be available at no additional charge.

i. Provide remote monitoring of all field devices, e.g., Vehicle Detectors/Sensors, DMS, etc.

4. Identify in the proposal the version of APGS software that is used.

H. APGS Mobile Application

1. Develop, implement, and support a customized, public-facing mobile application for disseminating APGS-related data and information, or integrate with an Owner-provided app.
2. Coordinate with Owner during development of graphics and messages.
3. At a minimum the mobile application to include the following features:

a. Indicate real-time parking availability for the entire facility.

b. Indicate real-time parking availability for each level (Level 1 and combined Levels 2-4).

I. Reports

1. Monitor and record parking activity and generate activity reports.
2. All reports are available online and on demand for Owner personnel who have proper password access.
3. Compile the APGS stream of data in an ODBC-compliant database. Provide the Owner the ability to prepare custom, exportable reports using the APGS data including Microsoft Excel™, at a minimum, via a comma-separated-value file format.
4. Provide the Contractor's APGS standard reports including report descriptions, selectable data fields, and report layouts for all standard reports. Contractor to submit standard reports for Owner review.
5. Coordinate with the Owner as required during the system design to address the specific reporting needs of the Owner. At a minimum, reports provided to include:

a. Statistical utilization reports by garage as a whole and by level and zone:

1) Hourly.
2) Daily.
3) Weekly.
4) Monthly.
5) Annually.
6) Life-to-Date since original system activation.

b. Exception Reports

©2024, Walker Consultants. All rights reserved.

1) Vehicle Detector failures.
2) Loss of communication, either to on-site components or to offsite systems/cloud.

6. Prepare up to five (5) custom reports as defined by Owner requirements. Owner and Contractor to coordinate report design and finalize custom reports prior to the expiration of the warranty period.

J. Third Party Software

1. Identify all third-party software packages in the Contractor's proposal.
2. Provide the latest available version, at the time of implementation, of all third-party software provided.
3. Purchase software maintenance for all third-party software naming the Owner as the software owner and contact. All third-party software maintenance agreements are to remain valid throughout the duration of the warranty period and are to be extended on an annual basis during post-warranty maintenance period, if post-warranty maintenance is selected by the Owner.

## 2.2 POWER

A. Power conduit and cabling necessary to support the APGS equipment and signage will be provided by Installer, as shown on the Drawings. Contractor is to coordinate with the Installer to ensure proper power is provided to the locations for all APGS equipment and signage. Alert Owner, Engineer of Record, and Installer of any different or additional requirements required by the APGS.
1. DMS may utilize either 120VAC or 12-24VDC for power. Contractor is to recommend the most appropriate approach in their design based on signage power requirements and distance from the garage.
2. Provide APGS components that are powered via hardwired connections. Solar power or batteries are not desirable as primary power sources and will only be considered if no reasonable alternative can be found for hard-wired power.

B. Specify to the Installer any power conditioning that is required for the proper operation of the system.

C. Configure all field component power connectivity design such that no single point of failure of a device causes an operational failure of surrounding devices.

## 2.3 COMMUNICATION

A. Communication conduit and pull cords necessary to support the APGS will be provided by Installer, as shown in Drawings. Owner is to provide network demarcation point to allow APGS to connect to Owner's enterprise network and to/from the public internet. If Owner is unable provide network demarcation points for connection to Owner's enterprise network, Contractor is to propose, furnish and install a cellular wireless gateway and required monthly cellular data service installed at a location mutually agreed between Owner and Contractor.

©2024, Walker Consultants. All rights reserved.

B. Contractor to provide necessary ports or serial connection to send data and/or control signals to all Digital Messaging Signs (DMS). All DMS's in this system are located remotely from the garage, and contractor is to determine and state in their proposal whether data/control signals will be sent over hard wires or via cellular data connection. Owner prefers hard-wired connections both for reliability and in order to avoid recurring cellular data charges.

C. Design all field component communications such that no single point of failure of a device causes an operational failure of surrounding devices.

D. Cable certification tests in accordance with IEEE/ANSI standards are to be specified and described by Contractor and instructions for such tests to be provided to Installer. All APGS cabling must be verified to "pass" on all Installer-installed communications cables after installation and termination with suitable connectors, using suitable cable testing equipment that is capable of verifying cable length, correct termination, continuity, and signal quality (loss, jitter, etc.). Electronic versions of these test results are to be made available to Owner upon completion of testing.

## 2.4 EQUIPMENT AND SUBSYSTEMS

A. General

1. Provide newly manufactured equipment and associated materials utilized in the APGS. Installation of used or refurbished equipment is prohibited.
2. Provide fully interchangeable components without the requirement for physical modification for all equipment performing a like function and of the same part number.
3. Provide APGS configuration with device autonomy such that no single point of failure of a device causes an operational failure of surrounding devices. Equipment at a single location that fails causing a shutdown of that device should not affect the operational status or functionality of any other device.

B. Application and Data Servers

1. Provide and install APGS server(s) in locations specified on the Drawings; or identify alternate proposed locations, which are to be reviewed and approved by Owner; or specify if certain portions of the APGS run offsite hosted or in the cloud.
2. Utilize TCP/IP for APGS data communication both within the system and externally.
3. Provide stand-alone operations (distributed system with intelligent devices) as well as centralized management of the APGS.
4. The APGS servers to contain all APGS database software that is associated with occupancy statistics and designated reports.
5. Fully install and configure the application software on the servers with all required system software licenses registered to the Owner.
6. If the APGS servers reside inside or on the Owner's network, the APGS servers are to have secured access. The Owner's network administrator based upon a "need to know" decision is to establish an appropriate user-level password system. The Owner is to have complete ability to add to, delete from, or revise the passwords that are established by the network administrator. The password

©2024, Walker Consultants. All rights reserved.

system to include the provision of logging the event and user's name each time a password is used to gain access to or within the APGS.

7. If some or all of the APGS servers reside outside the Owner's network, Contractor is to identify, document, and gain Owner's approval on a mechanism to ensure that Owner has secure, complete, unrestricted access to the servers in the same manner as specified in item 2.4.B.6 above for on-site servers. In such a configuration, there are to be no restrictions on Owner's capability to establish or change passwords, access levels, etc. as specified above.
8. Provide an appropriate mechanism to limit access to the servers and the accompanying data. The security functions provided by the system to include but is not limited to:

    a. All changes/updates to the server system require prior authorization from the Owner.
    b. Where the change and/or update is authorized, an audit trail and report are created including the following:

        1) Date/time of change.
        2) Record of change made.
        3) Username of individual making the change.
        4) Record of data modified or changed (prior to change).
        5) File identities and record count.

9. Sufficiently configure the Database Servers such that the following features and functionalities are attainable:

    a. Maintain at least five (5) years of on-line data of all APGS data. Data is readily accessible without any delay in processing and at no additional cost.
    b. Long Term Storage Media – Ability to archive all summary data in accordance with Owner's data retention policy with simple retrieval capability, and at no additional cost.

10. All APGS occupancy data is considered to be the sole intellectual property of the Owner. Usage of this data by Contractor or by the APGS vendor for any purpose other than to support, test or repair Owner's system requires prior written authorization from Owner. If such data is stored offsite or in the cloud under a term-based SaaS mechanism and Owner decides not to renew the SaaS agreement, Contractor is to send all APGS data gathered over the lifetime of the system (i.e. from system activation date through the SaaS agreement termination date) to the Owner in an Excel format and is to subsequently delete such data from any offsite servers or cloud instances.

C. APGS Workstations and Mobile Devices

1. Ability for any web-enabled workstation or mobile device to access the APGS based on access rights of the user.

D. Level Detection Sensors

©2024, Walker Consultants. All rights reserved.

1. Isolate and count the occupancy and availability of each of the parking areas (Level 1 and combined total of Levels 2-4) as well as the total structure, at locations identified in the Drawings.
2. A critical element of the APGS is accurate detection of vehicles. **Overhead camera detection, overhead ultrasonic detection, or overhead LIDAR detection are acceptable, if they meet the accuracy definitions in this Specification. No other sensor/detector types are permissible.**
3. Contractor is to identify and document in their Proposal the form and cost of any delineation or other vehicle route control required to achieve the accuracy goals stated below. This documentation also must indicate if any (and, if so, how many) parking spaces are lost due to delineation or similar approaches by indicating this on a marked-up striping plan.
4. For overhead mounted sensors:

    a. Mount the detection devices overhead to cover the counting points as shown on the Drawings.
    b. Maintain a minimum clearance 2” greater than the minimum clearance of the parking structure.

5. Include directional logic to identify the travel direction of a vehicle and correctly count the vehicles.
6. Sensor calibration:

    a. Automatically initiate self-calibration upon power up or reboot
    b. Manually initiated self-calibration via push button on the sensor
    c. Manually initiated self-calibration via remote connection from a web-enabled workstation or mobile device. Workstation or mobile device are to be capable of initiating an individual sensor, elected group of sensors, or all networked sensors to recalibrate via the FMS.

7. Sensor detection unaffected by:

    a. Vehicles parked in adjacent spaces.

    b. Detection signals of adjacent sensors.
    c. Changes in ambient lighting conditions including direct sunlight as well as complete darkness.
    d. Vehicle color.
    e. Surface color variations such as oil stains, painted surfaces, etc.
    f. Vehicle speeds up to 25 miles per hour.
    g. Blowing rain, snow, hail or other weather conditions.

8. Detect vehicles in the intended manner with 99% accuracy, as defined in section 2.5B below.
9. Continue to operate when the sensor goes into an offline condition. All activity occurring while the sensor is offline is to be locally stored and uploaded to the APGS server up restoration of communication.
10. Powered via a hardwired connection utilizing readily available, commercially common, wire and cable. Preferably, sensors are to be powered on the same conductors as the data.

©2024, Walker Consultants. All rights reserved.

11. For camera-based APGS systems: Contractor is to describe in their Proposal how video captured for counting purposes is processed and stored, whether and where this counting video is retained and available for viewing by Owner, and whether there is any additional charge for access to this video. For clarity, Owner does not necessarily plan to access this video but needs to know if it is being retained and available if desired.

E. Uninterruptible Power Supplies

1. Provide conditioned/emergency power through UPS units for the APGS server and the vehicle detectors/sensors to protect these devices from loss of power, power spikes, and power sags and to enable the system to keep counting during a temporary power outage. UPS coverage of the DMS's is not required.
2. UPS battery back-up sized to run APGS server and vehicle detectors/sensors without degradation in performance for a minimum of 30 minutes.
3. Provide an on-line, solid-state UPS for both backup power and transient surge protection.
4. The Owner to review and approve the UPS units to be provided by the Contractor.
5. Properly size the UPS with 50% spare capacity and facilitate 30% expanded load with an 80% continuous load factor.
6. Test all UPS system components during the DATs.
7. Submit the manufacturer's recommended UPS battery refresh cycle.

F. Digital Messaging Signs (DMS)

1. Furnish and coordinate with Installer the installation of a monument DMS known as DS-1 near the corner of Heavenly Village Way and Bellamy Court, as shown on Drawings. This DMS is to display real-time parking availability as "OPEN", "FULL", "CLOSED" (or "CLSD") or the number of available spaces in the facility as a whole with communications to this sign via hard-wired connection or wireless cellular data.
2. Provide and coordinate with Installer the installation of a DMS known as DS-2 which provides an Owner-controllable feature in the APGS for activating or deactivating this "No Right Turn" illuminated sign, DS-2 is to be located at the corner of Heavenly Village Way and Bellamy Court, as shown on Drawings, with communications to this sign via hard-wired connection or wireless cellular data.
3. As an Add-Alternate, provide, coordinate with Installer the installation of, and control a monument DMS known as DS-3 located adjacent to the entry lane of the southern entry/exit plaza of the garage, as shown in Drawings. The APGS is to activate this sign when the occupancy of Level 1 of the garage reaches an Owner-configurable percentage (for example, 90% or greater) and deactivate the sign when the occupancy of Level 1 is below that level. Communications to this sign are to be via hard-wired connection only. The messaging on the sign should be via illuminated LEDs but will have fixed message content and only red/green colors. This sign will either display the fixed message or be off (dark).
4. Include all necessary sign housings with static graphics, mounting hardware, and communication equipment.
5. Enclosures for the new DMS's specified in this section are to be provided by the Contractor and all design elements including but not limited to static text, graphics, and colors are to be coordinated with the Owner.
6. Utilize red/green LED sign modules in all DMS which can create at least 7" character height on the Facility Count DMS. The Add-Alternate "Level 1 Full" DMS

©2024, Walker Consultants. All rights reserved.

must have a minimum character height of 5” but can be in a single color, color to chosen by Owner

7. As an optional Add-Alternate, Contractor may propose full matrix, full color LED panel signs instead of drop-in/embeddable sign modules. In such case, the full matrix, full color LED panel signs must meet all other Specifications in this document and in the Drawings and must have a LED pitch of 8mm or less.
8. Propose proper sign matrix size to fit within the geometric circumstances of each installation location.
9. Provide user configurable settings to display total available spaces on the DS-1 DMS in normally green numbers, “OPEN” in normally green letters, and “FULL” or “CLOSED” (or “CLSd”) in normally red letters.
10. Provide functionality for APGS software to control the message that is displayed on DS-1 and automatically update the respective number of available spaces displayed or “OPEN”/”FULL”/”CLOSED” (or “CLSd”) status based on user configurable thresholds.
11. Provide functionality for authorized users to override the automated messages through the APGS GUI including the status displayed and to change the predetermined occupancy number that triggers a change from one status to another displayed status.
12. Provide a built-in light sensor for DS-1 and DS-3 that automatically adjusts the LED brightness in changing lighting conditions to ensure DMS is legible in all ambient lighting conditions ranging from direct sunlight to complete darkness.
13. Signs must reflect changes in actual vehicle count within 3 (three) seconds maximum of the time of occurrence of each event which changes the count of any level, zone, or facility.
14. In the event of a loss of communication, sign displays are to go blank or display dashes or another symbol indicating that the sign is out of order. Signs are not to continue to display inaccurate counts while offline. Upon re-establishment of communication, signs are to automatically update and display the current occupancy.

## 2.5 EQUIPMENT AND SUBSYSTEM PERFORMANCE STANDARDS

A. The system is to perform accurate summation of available and occupied parking spaces:

1. By level.
2. By facility.

B. APGS Performance

1. The count signals are to be received within one second from the event.
2. The FMS GUI display and dynamic signage displays are to be updated by the APGS every three seconds by default. This frequency is to be user configurable to be lower or higher than three seconds.
3. The APGS is to count vehicles that pass through the vehicle detectors in a valid vehicle movement with 99% or greater accuracy. “Vehicles” in this context are defined as autos, trucks, and motorcycles of any size or type. Invalid counts include vehicles or other objects that enter detection zones in a manner that defeats the intent of the system. For example, invalid counts can be generated by

©2024, Walker Consultants. All rights reserved.

pedestrians, carts, bicycles and various other foreign objects that enter the detection zones, or by vehicles that skirt the defined detection zones.

4. If the proposed camera-based, ultrasonic, or LIDAR counting system offers the ability to separately detect and eliminate counting of extraneous objects such as pedestrians and bicycles, Contractor is to explain this functionality and demonstrate during the testing phases its effectiveness in increasing accuracy.
5. During acceptance testing, each detection zone is to count vehicle movements with 99% or greater accuracy over the testing period. The minimum number of vehicle counts to establish passing test criteria during a single Device Acceptance Test is to be determined prior to system testing with approval from the Owner.
6. The entire APGS, including the available spaces displayed to the patrons on APGS signage, is to maintain 99% accuracy over a 24-hour period for each zone, level and facility as a whole regardless of traffic volume over a 24-hour period. All accuracy tests are to be conducted during 24-hour periods that include typical and peak parking demand during normal business hours of Owner's parking facility. The accuracy is to be calculated by taking the difference between a real-time physical inventory and the occupancy reported by the APGS and dividing it by the capacity for the respective zone, level and facility.
7. The APGS accuracy for all zones, levels and facility is also to be assessed over the 30-day ODT period. From the beginning to the end of the 30-day ODT period, the APGS system are to retain an accuracy of 85% or greater without any system count manual resets or adjustments being performed.
8. Record count signals in the APGS database within two seconds from the count event.
9. Update the APGS GUI display and DMS every three seconds. This frequency is to be user configurable to less or more than three seconds.
10. At any given point in time, no variance is allowed between the counts shown on DMS, the counts shown in the APGS GUI, and the counts recorded in the APGS database.
11. A feature to allow automatic occupancy count resets to zero (i.e. allowing the system to assume that there is an empty facility, level or zone) at a preset daily time (e.g. middle of the night) is permissible to offer. However, it is not to be activated by default, is to only be activated with Owner's permission, and is never to be activated during accuracy testing.

## 2.6 SOURCE QUALITY CONTROL

A. Factory Acceptance Test (FAT)

1. Due to the separation of the "furnish equipment and software" and "provide installation" portions of the scope for this project, it is required that adequate documentation of the proper functioning of the equipment in its complete, originally manufactured state be conducted by the Contractor prior to delivery of equipment to the project site. Such testing, known as a Factory Acceptance Test (FAT), is meant to ensure that all equipment is known and demonstrated to be working correctly via a documented FAT procedure and a certificate of completion of FAT is provided to the Owner and Installer prior to handoff of the equipment to the Installer.

©2024, Walker Consultants. All rights reserved.

2. All equipment is to have successfully passed formal manufacturing FATs and quality assurance inspections to validate compliance with these functional specifications prior to shipment to the project site.
3. Records for formal internal Contractor FAT and inspection for performance, materials quality and/or workmanship are to be produced by the Contractor and sent as formal project submittals to Owner and Installer for review **prior** to shipment of equipment to the project site. Equipment is not to be released for shipment until Owner and Installer have approved the FAT submittals.
4. Contractor is also to have readily available proof of product reliability analysis and testing should reliability become a problem at any time from the beginning of installation testing through the final operational test period.

## PART 3 - EXECUTION

### 3.1 INSTALLATION AND COORDINATION

A. Review contract documents and specifications to be certain that all functional requirements can be achieved with equipment to be supplied.

B. Coordinate with the Owner's design team on the design of infrastructure modifications necessary for the APGS and on the design and installation of all pre-embedded conduit, junction boxes, etc. as specified earlier in this document.

C. Attend construction meetings, provide schedules as requested, and schedule fieldwork to be coordinated with facility operations.

D. Distribute to the Installer within 30 days after award of contract all installation diagrams, installation instructions, details, shop drawings, riser diagrams, and templates required to provide Installer the necessary information for installing, setting, anchoring and/or mounting, and connecting all APGS equipment including but not limited to any required sensors, field control cabinets, digital signs, signage controllers or communication devices, servers, network switches, etc.

E. Provide support remotely and on-site as needed to the Installer during the installation period to ensure they properly install the MSM equipment.

F. Run all initial diagnostics and system testing programs necessary to provide a complete working system.

G. Any patch, upgrade, update, or modification to the software during the installation period requires appropriate documentation and Owner approval before the modification is made.

H. Verify that the installation location is prepared and ready to have the installation completed. Notify the Owner, in writing, if the Contractor finds that the installation location is not prepared for installation due to unfinished work outside of the Contractor's scope of work. The written notification to provide detail of the elements that need modification in order to prepare the location for equipment installation.

©2024, Walker Consultants. All rights reserved.

I. Coordinate with responsible entity to correct unsatisfactory conditions.

J. Coordinate with the sign housing provider, if different than the Contractor, to ensure proper fit and function of DMS.

K. Coordinate with other subcontractors responsible for providing power and communication that is not in the scope of the Contractor to ensure proper power and communication is provided for all APGS components.

L. Coordinate and confirm final and precise layout of signs, conduits, mounting rails, stubs, sensors, anchor bolts, etc. with Owner prior to installation.

M. Comply with all applicable Federal, State and Local laws, ordinances, rules and regulations pertaining to the performance of the work specified herein and compliant with the contract documents.

N. Obtain all permits, licenses and certificates, or any such approvals of plans or specifications as may be required by Federal, State and local laws, ordinances, rules and regulations, and compliant with the contract documents for the proper execution of the work specified herein.

O. All equipment components installed near drive aisles are to be protected from damage by vehicular movements by protective bollards.

## 3.2 FIELD QUALITY CONTROL

A. Device Acceptance Test (DAT)

1. Conduct DATs as a demonstration to the Owner or its representatives that the installed equipment complies with the Contract, the Contractor's product data, and to other documentation, such as user manuals.
2. When a device installation has been completed, the Contractor conducts its internal testing of the installed equipment. Internal testing is to follow the identical DAT test procedures that are used during DATs observed by the Owner (or its representative).
3. Upon successful completion of the Contractor's test, the Contractor and the Owner (or its representative) perform the DAT to verify performance. The DAT is only to be observed after a fully completed and signed test script verifying successful completion of the Contractor's internal testing is submitted. Signed internal test scripts to be submitted at least one calendar day prior to the scheduled test with the Owner.
4. Conduct DATs for all vehicle detectors, occupancy indicators, and DMS. APGS is not to be activated for service until all DATs have been successfully completed, and the Owner has notified the Contractor that it is ready to put the equipment into operation.
5. Provide test procedure documents for DATs in accordance with the submittal guidelines.
6. Provide DAT Test Procedures Documents for each device type and test procedures to include the following sections:

©2024, Walker Consultants. All rights reserved.

a. Narrative describing the general procedures to be followed.
b. Definition of all minor and major deviation types.
c. Checklist of all items necessary to conduct the test.
d. Checklist for the components of each device to be tested.
e. Signature page for all DAT participants' signatures.
f. Step by step instructions for testing each functionality.
g. Tests for verifying the reporting requirements.
h. Area within each test section to denote "pass" or "fail".
i. Section for listing and describing test deviations.

7. Provide all ancillary items necessary to complete the DATs for testing purposes. In addition, make available sufficient Contractor personnel to perform the DAT in an efficient and timely manner.
8. Successful completion of a DAT occurs when all components have passed their respective test procedures and all test documents have been signed by the Owner and Contractor. Minor deviations resulting in the creation of punch list items are not to be considered grounds for failure of the overall DAT. Major deviations found during the DAT are to result in the retest of the device. The Contractor agrees to credit the Owner from its total contract value for any travel and/or labor costs incurred by the Owner or its representatives as a result of additional effort required to retest failed devices.
9. Successful completion of all DATs constitutes Substantial Completion.

B. Operational Demonstration Test

1. The ODT is comprised of all equipment, systems, and subsystems performing under actual conditions, e.g., patron use, normal activity recording, and reporting procedures. The ODT demonstrates, over a period of 30 consecutive calendar days, the successful performance of all aspects of the APGS.
2. During the ODT only routine maintenance procedures, as defined by the preventative maintenance manual and according to industry standards, are permitted. All other maintenance procedures must be approved in writing by the Owner before they are performed; otherwise, they constitute a failure of the ODT and a mandatory restart. This requirement includes manual resets of zone, level or facility counts to match physical counts; such resets are not to be performed during ODT without the express permission of Owner.
3. The Owner reserves the right to be present for all maintenance services during the ODT.
4. For purposes of the ODT, a subsystem is defined to be any one of the following:

a. APGS Server(s) and control cabinet(s).
b. Data Communication System.
c. APGS Application and User Interface.
d. APGS Mobile Application.
e. APGS Website Interface.
f. DMS.
g. Vehicle Detectors.

5. The ODT begins after successful completion of all DATs on a date mutually selected and agreed to in writing by the Owner and the Contractor at a time

©2024, Walker Consultants. All rights reserved.

designated by the Owner. The ODT monitors system performance of the entire system operating as a single unit.

6. Submit an ODT Procedures Document in accordance with the submittal requirements. ODT Procedures Documents are intended to outline procedures for monitoring the overall performance of the APGS and should not include test procedures for individual components. The ODT Procedures Document includes:

    a. Narrative describing the general procedures to be followed.
    b. Methodology for calculation of downtime for the various APGS components.
    c. Methodology for calculating accuracy of the APGS.
    d. Electronic tracking document to be used during the ODT period for documenting failures and downtime.

7. The ODT continues for 30 days (consecutive 24-hour periods) during which all the performance criteria, stated below, have been met. If during the 30-day period the system fails to meet any one of the following specified performance criteria, the test begins anew on a day agreed upon by the Owner and the Contractor. The Contractor agrees to credit the Owner from its total contract value for any travel and/or labor costs incurred by the Owner as a result of retesting the system.
8. The performance criteria for successful completion of the ODT includes:

    a. No individual subsystem is operationally unavailable for four or more hours cumulative during the 30-day test period.
    b. No individual subsystem is operationally unavailable for more than two consecutive hours.
    c. If any single component fails more than once during the 30-day period for the same reason, it is to be replaced upon the second failure with a newly manufactured component of the same type and the test continues.
    d. No component of a given type (e.g., vehicle detection sensor, DMS, etc.) can fail more than three times during the 30-day test period for the same reason. Upon the fourth failure all components of that type are to be replaced or modified to correct the common deficiency, and the test is to be restarted from the beginning.
    e. The APGS accuracy for all zones, levels and facility is to also be assessed over the 30-day ODT period. From the beginning to the end of the 30-day ODT period, the APGS system is to retain an accuracy of 85% or greater without any system count manual resets or adjustments being performed.

9. In addition to the system reports generated during the ODT, provide the Owner a one-page summary report that clearly provides the percentage of system accuracy, overall percentage of downtime, and causes of that down time.
10. Provide the Owner a corrective action report that provides a detailed description of each failure that occurs during the ODT. The corrective action report to include the type of failure, why the failure occurred, what was done to remedy the failure, and whether or not the failure resulted in a restart of the ODT.
11. All reports require 100% accuracy and can be reconciled against one another over the 30-day testing period, otherwise the test is to be deemed a failure, problems are to be corrected and the test restarted.
12. A subsystem is considered unavailable if any major component of the subsystem is not functioning. As an example, the major components include but are not limited to:

©2024, Walker Consultants. All rights reserved.

a. APGS Application and User Interface.
b. APGS Website Interface and/or cloud connection.
c. APGS Server(s) and control cabinet(s).
d. DMS.
e. Vehicle Detectors
f. Data communication.
g. Power supply.

13. An inoperative subsystem is not to be deemed unavailable if it has become inoperative because of:

    a. Outage of line power beyond UPS requirement.
    b. Malicious damage or vandalism to a component(s) by employees, patrons or others.
    c. Network connectivity issues beyond the scope of the APGS.
    d. APGS failures due to Owner-provided equipment issues and/or failures.
    e. Failures caused by a 3rd party.
    f. Act of God.

14. Should a failure occur in the system that is caused by normal hardware failure, it is to be repaired and the test resumed with downtime accrued. Where the failure causes inadequate test data to be collected or a loss of test data, then the test is to be restarted from a point where it can be successfully completed with data to verify compliance with the Contract and the test procedures document.
15. If the system “crashes” during a test, then the test is to be stopped. “Crash” is defined as a failure in which the APGS cannot properly process vehicle detection counts and display space availability. The Contractor is to analyze the cause of the system “crash,” document the cause in a system problem report, responsively repair the flaw, and document the repair in a corrective action report.
16. Where corrective action impacts delivered documentation, the documentation is to be corrected prior to Final System Acceptance.
17. Upon formal written approval of the corrective action report by the Owner, testing may continue if a problem has been encountered as long as the Contractor can clearly demonstrate that the failure is associated only with one function of the system, corrective action has been taken to remedy the failure, and the corrective action does not impact other areas of the system.
18. Where the system does not perform a function or incorrectly performs the function, but the system does not crash, testing may continue, if the function is corrected, and all of the following conditions are met:

    a. The functionality of the Vehicle Detectors, DMS, APGS application, user interface and data archiving work properly and in compliance with the Contract.
    b. No personnel, vehicle or driver safety issues exist.
    c. Failure does not cause loss or contamination of data.

19. Where the above criteria are not met, the test is to be stopped and corrective action taken and verified prior to testing restart.
20. During the test, the continued availability of the system is to be demonstrated. Where a failure occurs that causes data loss, system instability (crash), and/or contamination of the data and the database, the Contractor is to immediately

©2024, Walker Consultants. All rights reserved.

correct the problem. Testing continues until a consecutive 30-day period of stable operation is achieved. Stability is defined as the proper functioning of the APGS with a failure having no impact on the continued system operation or on the integrity of data.

C. Punch List

1. Starting with the beginning of installation through Final System Acceptance, submit a document on a weekly basis showing the status of all outstanding system issues, regardless of severity, including the plan for resolution and estimated completion date.
2. All deviations noted during acceptance testing are to be recorded on the Punch List.

D. Final System Acceptance

1. Final System Acceptance is provided upon successful completion of all acceptance tests, and upon verification of complete resolution of all outstanding items on the Punch List.

## 3.3 INSTRUCTION AND TRAINING

A. Fully instruct the Owner's designated personnel in the operation, adjustment, and maintenance of all APGS products, equipment, and systems.

B. Coordinate scheduling of on-site and in-person instructional classes with Owner or Owner's designated personnel to avoid conflicts and peak-period personnel demands.

C. Submit a proposed instruction schedule prior to equipment installation. Owner is to tentatively approve or suggest changes to the training schedule.

D. Ample time should be allotted within each session for the instructor to fully describe and demonstrate all aspects of the APGS and allow Owner personnel to have hands-on experience with the APGS.

E. All instruction courses are to consist of classroom instruction and actual "hands-on" experience. Classes are to be set up in a room designated by the Owner.

F. Provide experienced instructors that speak fluent English in a clear precise manner.

G. Provide all documentation required for instructing Owner personnel. The Owner retains the right to copy training materials as frequently as required for ongoing internal use only.

H. Provide an instructional notebook or user's manual to accompany every instruction course. Submit a hard copy and electronic version of all manuals (operation and maintenance) written in common English with appropriate photos, diagrams, and schematics to supplement the text.

# SECTION 11 12 48.10 – FIXED LICENSE PLATE RECOGNITION ENFORCEMENT SYSTEM

## PART 1 - GENERAL

### 1.1 RELATED DOCUMENTS

A. Price Proposal Form

B. Specification Compliance Form

C. Drawings Q-001, QD-101, QD-401, Q-101, and Q-400.

### 1.2 REFERENCES

A. List of Abbreviations:

1. AKA Also Known As
2. BOLO Be on the Lookout
3. CMS Citation Management System
4. ID Identification
5. OCR Optical Character Recognition
6. MSM Multi-Space Meter
7. LMS LPR Management System
8. LPN License Plate Number
9. LPR License Plate Recognition
10. PC Personal Computer
11. PEO Parking Enforcement Officer
12. RH Relative Humidity
13. RAM Random Access Memory
14. RMA Return Merchandise Authorization

### 1.3 SUMMARY

A. Provide all material, labor, equipment, documentation, services, and training necessary to furnish, coordinate installation with a separate Installation Contractor (“Installer”), support, and service a fully integrated on-line, real-time fixed License Plate Recognition (LPR) system functioning as described herein.

B. System Description

1. The LPR system includes:

a. Fixed LPR Cameras
b. Pay-by-Plate (PbP) Multi-Space Parking Meter (MSM) System integration
c. Citation Management System Integration

©2024, Walker Consultants. All rights reserved.

d. All necessary components and materials for a complete and functioning turnkey LPR system as identified in this RFP.

C. System to be provided for STJPPFA, hereafter referred to as “Owner”, at the Bellamy Court Garage, 1 Bellamy Court, South Lake Tahoe, CA. Camera locations are to cover entrance and exit lanes to the facility as indicated on Drawings.

D. System is to note and record all vehicles entering and exiting the facility and provide:
1. Notification to the Pay-by-Plate (PbP) Multi-Space Parking Meter (MSM) System of vehicle entry and exit with LPN, date and time of LPN capture, vehicle/LPN image capture, and any other data elements specified below or required to integrate with the Pay-by-Plate (PbP) Multi-Space Parking Meter (MSM) System and the Citation Management System.
2. Real time and statistical reporting.

## 1.4 DESIGN CRITERIA

A. LPR System Performance

1. Acquire an image of a vehicle’s entire license plate at a 99.5 percent (99.5%) or higher rate for all non-exception vehicles as defined within this section. The intent of the 99.5% capture rate is to have a visual record of 99.5% of all non-exception license plates entering the facility.
2. Achieve an N Factor rating of 94% meaning specifically that the LPR Subsystem is to read all license plate characters, exclusive of stacked characters, correctly ninety-four percent (94%) of the time for all non-exception vehicles as defined within this section. Missing, misread, or additional characters as determined by the LPR Subsystem is to be counted against the read accuracy. (i.e., if a license plate contains six standard characters “ABC123”, then N=6. Therefore, in order for the system to achieve an N read, the system must return the LPN “ABC123” exactly.) Additional characters added before or after the license plate characters are to count against the read rate. (i.e., “1ABC123” would not constitute an N read.)
3. Achieve an N-1 Factor rating of 98% meaning specifically that the LPR Subsystem is to read all but one LPN characters, exclusive of stacked characters, correctly ninety-eight percent (98%) of the time for all non-exception vehicles as defined within this section. Missing, misread, or additional characters as determined by the LPR Subsystem are to be counted against the read accuracy. (i.e., if a license plate contains six standard characters “ABC123”, then N=6. Therefore, in order for the system to achieve an N-1 read, the system must return the LPN “xBC123”, “ABC12x”, etc.) Additional characters added before or after the license plate count against the read rate.
4. Exception vehicles will not count against the accuracy of the LPR Subsystem. For the purposes of the LPR performance requirements an exception vehicle is defined as:

    a. Any vehicle whose license plate is obstructed, obscured, or encroached upon by a foreign object.
    b. Oversized vehicles that have a total distance between the center of the drivers’ side window and the end of the rear bumper greater than 15 feet.

©2024, Walker Consultants. All rights reserved.

c. Vehicles that contain excessive graphics and advertising such that it is impossible for the LPR system to determine which graphics belong to the license plate and which graphics do not.
d. Vehicles with no license plate or relocated to a window and not in the OEM location.
e. Vehicles with temporary cardboard “Dealer Plates.”
f. Damaged plates.
g. Plates from locations other than the U.S., Canada, and Mexico.
h. Motorcycles.

5. Ambient lighting conditions are to have no effect on the accuracy of the LPR system regardless of the time of the day and night. Contractor to provide any necessary shading or lighting elements required to mitigate the effect of the ambient lighting conditions on the LPR system performance.
6. Provide a means, subject to approval by the Owner, to remotely score the LPR Subsystem to ensure it meets the performance requirements. Assist the Owner in transferring images from each lane to a storage format such as CD-ROM, DVD, memory stick, or uploaded to an FTP site that can then be viewed and scored on a standalone PC by the Owner or their designated representative. Owner is to be able to select any images stored on the LPR database for scoring purposes. The Contractor to provide all software needed to test the LPR Subsystem’s performance. The software is to be able to be downloadable to a standalone PC used for testing.

B. Fully operational regardless of extreme weather such as heat, sun, rain, ice, snow, freezing rain, etc.

C. Operating temperature range of -30 to +55 Celsius and to 95% RH.

## 1.5 PRICE REQUIREMENTS:

A. Price includes the provision of all material, labor, equipment, and services necessary to furnish, coordinate installation with a separate Installation Contractor (“Installer”), support, and service a fully integrated LPR system as outlined herein.

B. Add-Alternate: Provide pricing for Maintenance, Service, and Parts Contract after two-year warranty:

1. A separate contract awarded for Maintenance, Service and parts that would commence with expiration of two-year warranty period.
2. Provide annual pricing for five (5) years after initial two-year warranty period.

C. Substantial Completion: A certificate of substantial completion will be provided when the following requirements have been satisfied:

1. All systems, features and communications, have passed the SAT per Section 3.2 of this document.
2. All spare parts, stock material and manuals are on site and have been approved.
3. All test checklists, documentation and training has been completed.

©2024, Walker Consultants. All rights reserved.

D. Final Acceptance: Final acceptance will occur upon satisfactory completion of all work, tests, demonstrations and training specified herein as well as successful completion of thirty-day operational test per Section 3.2 of this document.

## 1.6 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Distribute to the Installer within 45 days after award of contract all installation diagrams, installation instructions, details, shop drawings, riser diagrams, and templates required to provide Installer the necessary information for installing, setting, anchoring and/or mounting, and connecting all LPR cameras and associated LPR system equipment including but not limited to any required servers, network switches, camera mounting cabinets, etc.
2. Provide support remotely and on-site as needed to the Installer during the installation period to ensure they properly install the LPR equipment.
3. Coordinate interfaces with any other systems by others, including but not limited to Local Area Network, MSM/SSM/PbC vendors, etc.

## 1.7 PROPOSAL SUBMITTALS - TO BE INCLUDED WITH RESPONSE

A. Price Form:

1. Total system cost (design, manufacture, shipping, installation coordination, training, commissioning, etc.).
2. Include per unit cost of each component.
3. Include any and all recurring fees including any annual SaaS/subscription fees.
4. Include recommended spare parts to be kept on-site.

B. Product Data:

1. Product description for each component including the following:

    a. Detail of user interface.
    b. Operating temperature and humidity ranges.
    c. Camera housing materials.
    d. Photos of installed system, including and identifying base products and options.
    e. Installation and mounting requirements.
    f. List of modular components that may be replaced by hand.
    g. List of components that require tools for replacement, and identify which tools are required.
    h. Contractor will identify and document in their Proposal the form, location and cost of any LPR trigger loops required to assure accurate counting and LPN capture.

2. RMA process and procedures.
3. Description of the LMS software, including the following:

©2024, Walker Consultants. All rights reserved.

a. Configuration diagram.
b. Software platforms.
c. Communication protocol, polling procedures and transaction message flow from peripheral devices to and through LMS.
d. Describe how data and license plate images are transferred in real time.
e. Describe the minimum, maximum, and average amount of time in seconds the system will take to transmit and receive images and data, including what parameters or conditions will affect transmission times and what percentage of each type of transmission can be expected to be transmitted within the average transmission time.
f. Describe any file limitations in downloading, sending and storing license plate images.
g. Communication failure/error identification and recovery.
h. Fault tolerance.
i. Back-up procedures.
j. Data storage and retrieval procedures.

4. Sample screenshots, databases and reports:

a. Screenshots of dashboards.
b. License plate images.
c. Databases.
d. Enforcement reports.
e. Statistical reports.

C. Spare Parts

1. Provide a list of recommended spare parts and associated pricing.
2. Provide a list of all spare parts including:

a. Part name.
b. Part number.
c. Unit price.
d. RMA process and procedures.

D. Exceptions and Substitutions:
1. Complete and submit an all-inclusive Specification Exception list (including substitutions) using the Specification Compliance Form provided in this RFP, identifying any substantive non-compliance with specification requirements.
2. Substitutions: It is recognized that there are variations in equipment between manufacturers. Where functional performance, features or quality of system varies materially from that specified, submit a Request for Substitution identifying substitution being proposed. This submittal may be accompanied by catalog sheets, brochures, and technical specifications of the proposed system.

E. Project Schedule: Detailed schedule of project requirements including milestones for delivery, installation coordination, training, and testing. Milestones include special project requirements related to coordination with work by others and phasing.

F. List manufacturer of each primary component of system.

©2024, Walker Consultants. All rights reserved.

G. Contractor Information

1. Provide the following information:

    a. Name of company.
    b. Brief company overview including a description of the company structure, and a statement on whether the company is a private or public entity
    c. Years in business.
    d. Number of employees.
    e. Annual sales volume.
    f. Name and contact information (address, email, and phone number) of Principals and/or Local Contacts.

2. Provide a list of any subcontractors, their business address, and a brief summary of their role in the project.
3. Provide the name, location, and contact information of the nearest authorized service center for maintenance and repairs.
4. Proven ability to provide installation support to others and service/support after installation, meeting minimum requirements as specified herein.
5. Continuously worked with equipment manufacturer, including providing installations and/or service, for minimum of three (3) years.
6. Approved in writing by manufacturer.
7. Documentation of manufacturer's installation and/or service training within previous two (2) years.
8. Similar system installed in three (3) or more customers of similar size and complexity, at least one of which must be located within 4 hours driving time from Owner's location. Provide the following for each installation:

    a. Name of project.
    b. Location.
    c. Contact name, telephone number and email address.
    d. Date of installation.
    e. Description of equipment and quantities.

H. Manufacturer's Qualifications (if not the Contractor): Provide documentation:

1. In continuous operations for previous five (5) years.
2. Description of the manufacturer's presence in the region.
3. Similar systems and system integration installed in three (3) or more customers of similar size and complexity, at least one of which must be located within 4 hours driving time from Owner's location. Provide the following for each installation:

    a. Name of project.
    b. Location.
    c. Contact name, telephone number and email address.
    d. Date of installation.
    e. Description of equipment and quantities.

I. Warranty:

©2024, Walker Consultants. All rights reserved.

1. Submit copy of warranty (per Section 1.10 of this document) and explanation of any instances which may impact warranty coverage. Note that a two-year warranty is required.
2. Submit RMA procedures.

## 1.8 INFORMATIONAL AND CLOSEOUT SUBMITTALS

A. All submittal approvals, comments and rejections will be returned to the Contractor by the Owner's designated representative with requests for resubmittal as appropriate. Resubmit as required until submittal is approved by the Owner's designated representative.

B. Operating Documentation: Prior to initiation of field test and training, deliver two hard copies and one electronic copy of operations manuals, maintenance, and administration manuals.

C. Copies of all licenses, registrations, documentation, disks and other media as may have been included with those commercially available software packages provided with system. In addition, ensure that all licenses, registrations and warranties have been transferred to Owner prior to final software turnover.

D. At least 30 days prior to scheduled training sessions, deliver a Training Plan. Include at a minimum, a description of all training courses including identification of instructional outcome, duration of course, and type of presentations.

E. Testing Plan and Documentation: Provide a test plan for review and approval by Owner or Owner's authorized representative 30 days prior to start of first test. Include demonstrations of compliance with specifications, contractual compliance, disaster recovery testing and documentation, definitions of all test objectives, participant responsibilities, documentation for tests, and procedures for dealing with failures during test.

F. Contractor is responsible for all licenses and compliance with all codes and regulations.

## 1.9 QUALITY ASSURANCE

A. All components and installation to comply with all laws, ordinances, codes, rules, and regulations of public authorities having jurisdiction over this part of the work. It is the responsibility of the Contractor to meet these and all other current technical, performance, and safety standards that are applicable to all components and to the entire system, even when not specifically referenced.

B. Open-architecture system where all interfaces (hardware and software) conform to national and International Organization for Standardization (ISO) standards.

C. All materials and equipment listed, labeled, or certified by a nationally recognized testing laboratory to meet Underwriters Laboratories, Inc. (UL) standards, where test standards have been established.

©2024, Walker Consultants. All rights reserved.

1. Equipment and materials which are not covered by UL Standards may be considered, provided equipment and material is listed, labeled, certified, or otherwise determined to meet safety requirements of a nationally recognized testing laboratory.
2. Equipment of a class for which no nationally recognized testing laboratory accepts, certifies, lists, labels, or determines to be safe, will be considered if inspected or tested in accordance with national industrial standards, such as NEMA, or ANSI. Evidence of compliance includes certified test reports and definitive product data.

D. Equipment housings, conduits, and junction boxes exposed to weather (any location not in a conditioned environment) will meet or exceed NEMA 4X or IP65 standards to be moisture-proof and provide sufficient protection so that the components continue to function without moisture, dust, particle, heat, or cold-related interruption. Components that do not meet NEMA 4X or IP65 standards or better may be considered if implemented with supplemental environmental controls to sufficiently protect equipment.

## 1.10 WARRANTY

A. General: Equipment warranty (100% parts and labor) for two (2) years from date of final acceptance by Owner or Owner's Representative. System maintained and serviced against any and all malfunctions due to manufacturing or installation defects at no cost to Owner during warranty period, including preventive maintenance per manufacturer's recommendations or as necessary to keep equipment in good working order. Software support provided during warranty period to include all software upgrades at no additional cost to Owner.

1. Warranty period commences after Contractor has demonstrated satisfactory performance of system as specified in the Acceptance Testing Plan.
2. Maintain a log of all maintenance, preventive maintenance and repair work performed under warranty and provide to Owner or Owner's Representative at end of warranty period.

B. Warranty response period:

1. Immediate telephone support available from 8:00 am – 5:00 pm, local time, Monday-Friday.
2. On-site response by qualified service technician within 48 hours, excluding weekends and holidays.

C. If Contractor is not available for above response, Owner or Owner's Representative may affect repairs with no impact on warranty. Pre-qualify appropriate Owner or Owner's Representative to perform repairs and identify types of repair each trained individual is qualified to perform after training of Owner personnel.

D. Replace items taken from spare parts inventory during warranty period at no additional cost to Owner.

E. Preventative Maintenance Service during the Warranty Period:

©2024, Walker Consultants. All rights reserved.

1. Provide preventative maintenance services for all systems throughout the warranty period. Preventative maintenance procedures and frequencies are defined within the Manufacturer's recommended maintenance procedures manual.
2. Preventative maintenance services include but are not limited to inspection, testing, necessary adjustment, alignments, calibration, parts cleaning, communication system maintenance, server administration and database administration of the hardware provided as part of this project by the Contractor.
3. Perform all preventative maintenance at non-peak periods during regular business hours.

F. Software Support during the Warranty Period:

1. Make available to the Owner normal software improvement releases (updates) as they become available at no additional cost to the Owner.
2. Provide all software patches and updates free of charge during the warranty period; however, the Owner has right of refusal.
3. Seven (7) calendar days prior to all software modifications, patches, updates, and upgrades, provide accurate and complete documentation that describes:

    a. Patch/update release designation.
    b. Proposed date and time of implementation.
    c. Detailed description of what the patch/update accomplishes.
    d. Test plan that shows the change has been successfully tested and has passed internal unit, end-to-end testing.
    e. Full disaster recovery procedures that return the system to its pre-patch/update condition

4. Provide operating system support and database administration services including adherence to the recommended operating system patches and updates as they are made commercially available by the operating system developer.
5. Coordinate the testing and implementation of all patches and updates with the Owner.
6. Support upgrades to the application based on operating system patch and upgrade requirements. For example, if run on a Microsoft operating system, the software can be patched according to the Microsoft patch and upgrade schedule without breaking any application. If Microsoft decommissions an operating system, the Contractor must be capable of releasing code compatible with next operating system upgrade prior to Microsoft ending support for current operating system.
7. If at any time the Contractor ceases to do business or ceases to make the software product commercially available, the Owner will assume full ownership of the software. Thirty days prior to ceasing to do business, the Contractor will provide the most current version of the software source code to the Owner.
8. Provide corrective patches and upgrades in the event security vulnerability or system availability issues are discovered.

## 1.11 DELIVERY, STORAGE, AND HANDLING REQUIREMENTS

A. Prior to shipment of any equipment, a Factory Acceptance Test process must be completed and documented by Contractor, and the certificates of FAT completion

©2024, Walker Consultants. All rights reserved.

reviewed and approved by Owner and Installer, in accordance with the description in Section 2.3 below.

B. Contractor is responsible for insuring all shipped items. Any items damaged during shipping are to be replaced and shipped to the project site, by expedited means if requested, at no additional cost to the Owner.

C. Owner, at their sole discretion, may agree to provide a designated storage/staging area of no more than 100 square feet of floor space for equipment that has not been installed. Location to be determined after contract award. Contractor should assume in their proposal that no storage area will be provided. If a storage area is provided, Installer is responsible for securing that storage area with a suitable lock.

D. Deliver equipment to Installer or project site in manufacturer's original containers to prevent damage and marked for easy identification.

E. Once equipment has been delivered either to the Installer or to the project site, it is the Installer's responsibility to protect the equipment from theft and damage until final acceptance and to insure the stored equipment against risk of loss and damage. Installer is to replace any lost or damaged equipment at no additional cost to the Owner.

F. Installer is to receive all equipment at deliver site or project site. Owner is not to receive, unload, or otherwise participate in delivery of equipment.

## PART 2 - PRODUCTS

### 2.1 LPR MANAGEMENT SYSTEM (LMS)

A. Microprocessor controlled, in on-line, virtual real-time communication. In event of failure during communication, an error-checking and recovery routine is employed to prevent corruption of data.

B. Hosted system, capable of operating with proper user ID and password, to all authorized users.

1. Provide continual software updates at no additional fees for the life of the contract.
2. Maintain a secure connection while active, and automatically log-off after programmable period of inactivity.
3. Remote access to LMS over standard TCP/IP connection (may use web browser-based applications).
4. Browser-based user-interface modules utilize client/server technology or equivalent. The following general requirements apply to all components or modules:

    a. Graphical user interface.
    b. Allow for both standard and custom report formats.
    c. Adequate security to allow for different classifications of users.

5. System back-up in less than three hours.

©2024, Walker Consultants. All rights reserved.

6. Provide any and all updates to the LMS at no additional cost to the Owner for the life of any contract.

C. Accurately enforce/match scanned vehicle license plates via an integration to the Pay-by-Plate (PbP) Multi-Space Parking Meter (MSM) System and Citation Management System (CMS) such as by:

1. Hourly/Daily Parkers
2. Monthly/Contract Parkers
3. Tow, boot or seizure eligible registrations
4. City, state, and federal stolen vehicle license plates
5. Previously scanned vehicles for time limit violations
6. Authorized “allowed list” vehicle license plates
7. BOLO vehicle license plates

D. Ability to provide security features so that a vehicle identified as a scofflaw cannot be bypassed without corrective action or supervisory authorization.

E. Capable of duration of stay and turnover analysis.

F. Ability to schedule updates (i.e., hot lists).

G. Provide mapping functions with zones for location identification and rules.

H. Display license plates scanned

I. Audible and visual alerts of license plates which are in violation or otherwise identified as scofflaws.

J. Provide the capability for supervisors to perform field audits.

K. Provide remote access to the management features of the system from designated workstations for authorized supervisors.

L. Storage

1. Ability to store and catalogue images for up to sixty (60) days and recall them on demand by field-sortable search.

M. Automatically capture, interpret, process, display and store license plate images

N. Incorporate fuzzy logic for identifying misreads.

O. Provide real-time displays of:

1. License plate image.
2. License plate.
3. Image of vehicle.
4. Date and time.
5. GPS coordinates.

©2024, Walker Consultants. All rights reserved.

P. Manual Features

1. Ability to manually identify misread plates.
2. Ability to add notes to images.

Q. Queries:

1. Ability to manually enter plates for querying purposes.
2. Ability to cross-link, query and input data from external sources.
3. Ability to audit all queries by date, time and user password.
4. Ability to save frequent query requests.

R. Data format in either .csv or text file.

S. Ability to export and print all data.

T. Data download by flash drive or wireless.

U. Include updatable mapping system and license.

V. Security

1. Utilize protocols and passwords that prevent unauthorized access to software and hardware and manipulation of data and reports, including individual transactions.
2. Include multiple levels of access authorization to all operational, administrative and reporting functions and provide the following security features:

    a. Define individual user and group-based security.
    b. Ability to assign a unique user ID and password for each person authorized to use system.
    c. Ability to establish an expiration period for passwords and periodically change that password for each authorized user ID.
    d. Ability to disable a user ID following successive log-on failures exceeding a specific limit.
    e. Ability to view and report user and group level security rights and create user-defined fields.
    f. Ability to de-activate codes for former users and internal and external customers.

3. Provide Owner with a complete list of initial installation administrator usernames and passwords for all authorized users.
4. Monitor the transmission of repeated messages that may indicate possible problems with the system.
5. Display abnormal status conditions as a visual alarm on the workstation screen, accompanied by an audible alarm.

    a. The display continues to flash until the abnormal condition is corrected. The audible alarm continues until turned off by operator.
    b. Record the abnormal status condition and the acknowledgement of the alarm, including time, workstation and operator.

©2024, Walker Consultants. All rights reserved.

## 2.2 CAMERAS

**A. All cameras must be new, factory original equipment. The existing HTS LPR cameras at the Owner's site are not to be reused.**

B. Ability to read reflective and non-reflective license plates.

C. Ability to take still pictures.

D. Ambient lighting conditions have no effect on the accuracy of the LPR system regardless of the time of the day and night. Provide any necessary shading or lighting elements required to mitigate the effect of the ambient lighting conditions on the LPR system performance.

E. Perform all optical character recognition.

F. RF shielded camera cables.

G. Internal heating elements.

H. Rated at 30 frames per second.

I. Anti-theft mounting /removal brackets.

J. Equipped with IR lens for license plate and color image for verification.

K. Capable of multiple images with multiple flash and shutter settings.

L. Pulsed LED illumination.

## 2.3 SOURCE QUALITY CONTROL

A. Factory Acceptance Test (FAT)
   1. Due to the separation of the "furnish equipment and software" and "provide installation" portions of the scope for this project, it is required that adequate documentation of the proper functioning of the equipment in its complete, originally manufactured state be conducted by the Contractor prior to delivery of equipment to the project site. Such testing, known as a Factory Acceptance Test (FAT), is meant to ensure that all equipment is known and demonstrated to be working correctly via a documented FAT procedure and a certificate of completion of FAT is provided to the Owner and Installer prior to handoff of the equipment to the Installer.
   2. All equipment is to have successfully passed formal manufacturing FATs and quality assurance inspections to validate compliance with these functional specifications prior to shipment to the project site.
   3. Records for formal internal Contractor FAT and inspection for performance, materials quality and/or workmanship are to be produced by the Contractor and sent as formal project submittals to Owner and Installer for review **prior** to shipment of equipment to the project site. Equipment is not to be released for shipment until Owner and Installer have approved the FAT submittals.

©2024, Walker Consultants. All rights reserved.

4. Contractor is also to have readily available proof of product reliability analysis and testing should reliability become a problem at any time from the beginning of installation testing through the final operational test period

## PART 3 - EXECUTION

### 3.1 INSTALLATION

A. Coordinate installation of LPR System with Installer in accordance with manufacturer's recommendations.

B. Installation and Start-Up: Contractor is to coordinate installation of all Contractor supplied equipment and its interfacing and interconnection with Owner supplied equipment with Installer. Installer is to perform all physical equipment installation and associated electrical or civil work, with support from Contractor as needed.

C. Contractor is responsible for all software and communications by all computers and peripheral devices.

D. Owner or Owner’s Representative may observe installation process and stop the work at any time throughout the process.

### 3.2 FIELD QUALITY CONTROL

A. Provide an Acceptance Testing Plan to demonstrate the functionality of the system.

1. Include demonstrations of compliance with all specifications, contractual compliance, definitions of all test objectives, participant responsibilities, documentation of tests and procedures for dealing with failures during test.
2. Detail tests for every functional requirement of the system, including PbC integration.

    a. Include checklist for specified supplies, spare parts, training operation and training manuals.
    b. Provide space for acceptance by Contractor and Owner or Owner’s representative.

3. Confirm that all specified features are provided and fully operational before scheduling Acceptance Testing with Owner and/or Owner’s Agent.
4. Notify Owner or Owner’s Representative in writing at least one week prior to test session. If a test is not successful, correct noted deficiencies and advise Owner or Owner’s Representative, at least two days in advance, that test session is ready to resume.
5. Owner or Owner’s Representative may witness tests.

B. Passing Acceptance testing, even if performed in the presence of the Owner or Owner’s Representative, does not relieve the Contractor of the responsibility to provide a system in accordance with the Specifications.

©2024, Walker Consultants. All rights reserved.

C. Promptly correct all problems encountered at no cost to the Owner.

D. Thirty-Day Operational Test and Final Acceptance

1. After go-live date, the Owner will conduct an operational test for thirty (30) days.
2. Performance Standards:

a. System is fully operational without downtime or programming problems for the complete monthly reporting cycle. For each down time period of between one hour and eight hours, or programming problems that delay the report cycle, two days will be added to the test duration.
b. All reports correlate 100% with data from the Pay-by-Plate (PbP) Multi-Space Parking Meter (MSM) System and the monthly permit system.

3. Maintain detailed records and a logbook of all tests, events and issues to be provided to the Owner upon completion of the tests.

## 3.3 INSTRUCTION AND TRAINING

A. Fully instruct the Owner's designated personnel in the operation, adjustment, and maintenance of all products, equipment, and systems.

B. Coordinate scheduling of on-site and in-person instructional classes with Owner's designated personnel to avoid conflicts and peak-period personnel demands.

C. Submit a proposed instruction schedule prior to equipment installation. Owner will tentatively approve or suggest changes to the training schedule.

D. Ample time should be allotted within each session for the instructor to fully describe and demonstrate all aspects of the system and allow Owner personnel to have hands-on experience with the meters.

E. All instruction courses will consist of classroom instruction and actual "hands-on" experience. Classes will be set up in a room designated by the Owner.

F. Provide experienced instructors that speak fluent English in a clear precise manner.

G. Provide all documentation required for instructing Owner personnel. The Owner retains the right to copy training materials as frequently as required for ongoing internal use only.

H. Provide an instructional notebook or user's manual to accompany every instruction course. Submit a hard copy and electronic version of all manuals (operation and maintenance) written in common English with appropriate photos, diagrams, and schematics to supplement the text.

I. Training categories:

1. Maintenance.
2. Enforcement.
3. Administration.

©2024, Walker Consultants. All rights reserved.

J. Provide hard copies and electronic operation and maintenance manuals for all components.

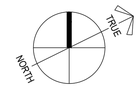
COORDINATE DEMOLITION SCHEDULE WITH SEPARATE INSTALLER AND PROVIDE TECHNICAL INFORMATION AND INSTRUCTIONS AS NECESSARY TO INSTALLER TO SUPPORT THE FOLLOWING SCOPE OF WORK:

REMOVE AND DISPOSE OF 2 (TWO) EXISTING PAY-ON-FOOT KIOSKS AND ATTACHED VIDEO INTERCOM UNITS AT THIS LOCATION. REMOVE AND RETAIN STATIC PAYMENT INFORMATION SIGNS ADJACENT TO PAY-ON-FOOT KIOSKS.

CAP EXISTING POWER AND DATA CONDUITS, AND ASSESS WHETHER THEY CAN BE REUSED OR WILL REQUIRE REPLACEMENT FOR NEW PARCS EQUIPMENT. SEAL ALL PAVEMENT MOUNTING HOLES

COORDINATE DEMOLITION SCHEDULE WITH SEPARATE INSTALLER AND PROVIDE TECHNICAL INFORMATION AND INSTRUCTIONS AS NECESSARY TO INSTALLER TO SUPPORT THE FOLLOWING SCOPE OF WORK:

REMOVE AND DISPOSE OF PARCS HEADEND EQUIPMENT IN THIS PARKING OFFICE AS REQUIRED TO MAKE READY FOR NEW PARCS HEADEND EQUIPMENT.



COORDINATE REMOVAL WITH STJPPFA PERSONNEL TO ENSURE THAT ONLY PARCS-RELATED ITEMS ARE REMOVED.

COORDINATE DEMOLITION SCHEDULE WITH SEPARATE INSTALLER AND PROVIDE TECHNICAL INFORMATION AND INSTRUCTIONS AS NECESSARY TO INSTALLER TO SUPPORT THE FOLLOWING SCOPE OF WORK:

REMOVE AND DISPOSE OF EXISTING PARCS EQUIPMENT AND STATIC SIGNAGE IN THESE TWO ENTRY/EXIT LANE AREAS, PER DETAILS PROVIDED ON QD-401.

# B. Executive Summary

EnSight Technologies is proud to submit our response to South Lake's recent RFP for a Gateless PARCS and Automatic Parking Guidance System (APGS) for the South Lake Tahoe parking garage.

EnSIght is furnishing this proposal to outline our solution for the APGS technology offering and the option to contract the Gateless PARCS under a single organization. As a California-based technology company and contractor, EnSight is collaborating with Flowbird to offer a best-of-breed solution for both the APGS and the Gateless PARCS.

Our market-leading, in-motion, vision-based parking occupancy management system has the native software capabilities to layer on License Plate Recognition technology via our EnSight plates module.  If the City selects our team to cover both scopes, our car counting cameras will simply be upgraded to our dual lens camera to count cars and scan license plates, limiting infrastructure and unifying the vision technology.

On the Gateless side, Flowbird provides clients with innovative, flexible, and reliable parking management and payment solutions. They will supply industry-leading smart parking kiosks that integrate with your preferred enforcement vendors, fulfilling South Lake's vision for a fully integrated parking ecosystem.

Locally, EnSight solutions are utilized in Redwood City and the City of Stockton. Beyond these California city references; we have deployed systems in over 20 additional California locations and systems in 17 states nationwide.

Flowbird's global footprint extends throughout California in cities such as Paso Robles, Oceanside, Port of San Diego, Artesia, Pomona, LA Parks and Rec, and the City of Los Angeles.

After reviewing the RFP, we are confident our technology stands above the competition for the APGS. With the offering from our Flowbird, the collective technologies will also meet the goals and objective for the gateless PARCS.

Please feel free to reach out to us if you have any questions on our proposal. We are excited about this new project, and we look forward to working with your team.

Sincerely,

Chris Scheppmann
Managing Member
chris@ensight-technologies.com

# C. Company History, Background, and Experience

## EnSight Technologies

Address: 1955 Cordell Court Suite 104, San Diego, Ca 92020
Federal Tax ID: 83-1624416

EnSight Technologies, LLC was formally launched in 2018 and headquartered in San Diego, California. Our founding members built (est. 2002) and sold a company called APS Technology Group in 2012 that developed and delivered Optical Character and License Plate Recognition Systems to track, scan, and identify containerized cargo and trucks globally for 12 years. Upon sale, our technology was in 14 countries worldwide. Our founding members took our collective experience developing and building optical vision systems to the parking market in 2018.

At EnSight we are a team built of technology and parking professionals. The team consists of 13 team members to cover our sales, engineering, project implementation and customer success team. Future, we are backed by our sister company that has 40 employees with expertise in system integrations.

Our mission at EnSight is simple: to provide the smart, simple, and scalable parking occupancy management systems that work for every parking provider. We are a software solutions company that has developed our proprietary AI-based object detection and tracking software that integrates with off-the-shelf cameras and hardware. We believe in smart simplicity to provide the most accurate counting system in the parking market.

At the end of the day, we're committed to making parking smart, simple, and scalable. All while keeping it affordable for the everyday parking providers.

Our solution delivers instant occupancy counts, an integrated LPR module, customizable dynamic signage, and an open API infrastructure, all within a smart, economical, and flexible parking occupancy management system. Working across many industries with clients big and small, we're giving parking providers a solution that's made for them, while enhancing the parking experience for all.

The key differentiators of the EnSight Parking Technology EcoSystem include:

1. Experience
    - Our background is in Machine Vision technology. Our Principles have been developing installing and servicing Machine Vision systems globally for over 17 years.
2. Guaranteed Accuracy
    - The EnSight System guarantees the count accuracy will be 99% or greater at each counting node. Unlike loop-based systems, our solution guarantees accuracy and will get smarter and more accurate over time, with scheduled system enhancements and upgrades through our software and support services agreement.
    - Unlike loops, our camera-based system allows us to visualize the accuracy and performance of the system to enable troubleshooting or enhancements to be made for specific use cases.
3. Software-Driven, Not Mechanical
    - EnSight unlike its direct competitors uses its own, proprietary counting software. We do not rely on camera providers to build our counting algorithm, which allows us to constantly improve our system to ensure the highest possible accuracy levels and system support.
    - The EnSight system is driven by advanced software using neural networks and deep learning which eliminates the need for unsightly counting technology and allows for continuous system improvement.
    - EnSight has the ability to leverage existing cameras for counting.
4. Proactive Remote Support and Troubleshooting
    - Once commissioned, the system is easy to adjust/troubleshoot remotely. EnSight monitors all hardware and software devices through our EnSightful Cloud Portal. If there is a hardware or software device that goes offline or

malfunctions, an automated alert is sent immediately to our support team.

5. Easily Scalable
    - If the client wants to scale the system, additional cameras or sensors can be added down the road.
6. Remotely Accessible From Anywhere, Anytime, Any Device.
    - The front-end portal is cloud-based and does not require clunky remote desktop applications.
    - The Cloud portal allows you to see live and historical metrics to allow you to make key parking management decisions.

## Flowbird

Flowbird is one of the world's largest providers of parking and mobility solutions. In January 2018, Parkeon and Cale merged together to change the urban mobility landscape and reinforce its position as a Global Worldwide Leader in Urban Intelligence and Mobility. We have more than 100 combined years of experience in the parking industry with systems in more than 70 countries. With more than 1,300 employees around the globe, the company has an annual revenue of over $300 million. Company expansion is not necessary to perform this project, and our team can stay within the promised deadlines.

Managing that change with our clients has always been our strength. We solve Smart City challenges going well beyond the concept of parking. We design and build complete ecosystems with strong Business to Business and Business to Consumer components covering a wide variety of services like:

- Managing technology convergence: On-Street, Off-Street Parking, Electric Vehicle Charging, and Transit
- Simplifying mobility to citizens by helping drivers to find a space using real-time occupancy analytics
- Collecting and sharing mobility data in real-time through our Open Data Analytics platform
- Global and Digital approaches in managing user rights and digital permits, including data correlations for optimum dynamic pricing strategies
- License Plate Recognition PARCS Systems for Off-Street Garages
- Reinforced communication: Pushing local information to residents and visitors
- Invigorating downtown commerce through hyper-local advertising and couponing campaigns

Complex projects have kept us on the leading edge of the industry and, as a result, we remain the forerunner in the delivery of highly advanced parking and transit control systems. Most importantly, our systems are designed for the long run with strong local support in the U.S. and Canada to enable your team and operations to benefit the most from our technology and know-how. Our systems are flexible, scalable, and future-proof.

# D. Project Manager and Project Team

## EnSight Team

Ehren Kellogg, Project Manager

Ehren will be responsible for overall project management, drawings, network diagrams, and subcontractor coordination on installation and infrastructure tasks. With over 20 years in the Parking industry of an IT background and 8 years of project management experience, Ehren has worn many 'hats' along the way. Getting his start as a parking Installation Technician, he's also held the roles of Product Specialist, IT Manager, Sales Engineer and applies his skills as our Project Manager.

Steven Oakes, Sales Manager, Western Territories

Steven manages sales and solution development for EnSight Technologies. Once a project is sold, he remains in connected as the account manager to ensure the project is delivered based upon the solutions specification sold and committed to our clients. He is responsible for ensuring our proposed solutions meet the needs of your parking assets. Steven has a background in low voltage solution design and camera and digital sign implementations. Outside of work you will find Steven surfing, snowboarding or hiking with his golden retriever, Midas.

Phil Bedford, Sr. System Sustainability Engineer

Phil spearheads our implementation and customer success team and is responsible for ensuring systems are implemented properly and that the sustainability, accuracy, and uptime is achieved, always.

Phil has a computer networking and IT background in building and maintaining server and database networks. When Phil isn't working you will find him building and racing his Pontiac GTO.

Chris Scheppmann, President & CEO

Executive sponsor and oversight of project delivery team. As the Managing Member of EnSight, Chris is in the business of making parking simple. With a Business Degree and MBA, Chris has spent 10 years in the software and technology space. Having gotten his start in transportation, marine ports, and railroads, he led global sales for APS Technology Group to deliver vision-based systems to track and scan containerized cargo. After this company was sold, Chris took over as President and owner of Access Professional Systems ("APS"). With his experience with vision systems and running APS, Chris teamed up with Mike Bedford and Russ Scheppmann to launch EnSight Technologies. Outside of the office, you'll find him surfing, competing in triathlons, traveling the globe, and hunting down the latest food spots.

Mike Bedford, VP of Technology

Mike will lead the software and engineering team from EnSight to deliver the APGS, LPR and liaise with our technology partners to ensure end to end integrations are delivered. Mike will be responsible for leading the product team on system delivery and configuration.

As the Vice President of Technology, Mike draws on years of experience in the software industry, along with a love for all things technical. Holding a Bachelor of Science Degree in Electrical Engineering, Mike has built a notable career in the industry, from working as an avionics technician in the US Navy to leading product development as the hardware and software engineer for APS Technology Group. Teaming up with Chris and Russ to launch EnSight Technologies, Mike combines his expertise in hardware and software engineering to oversee product engineering and R&D. Outside of work, Mike enjoys restoring old cars, playing baseball, and camping with his family.

Sunil Rawal, Lead Software Technologist

Sunil Rawal is a full-stack software engineer with over 20 years of experience in software development.
He is deeply versed in server-side technologies, mobile and web platforms, expert systems and AI, blockchain technologies, and image processing. He holds a Ph.D. in high-energy particle physics and a Masters in natural sciences from Cambridge University in England.
Sunil will lead all software deployment and be responsible for any additional integrations that may be layered on the base system deployment.

## Flowbird Team

Each member of our management team has been in the parking industry for more than a decade. Our team has gained extensive knowledge of our clients' operations and how our technology can enhance parking in downtowns across the country.

**Benoit Reliquet – President**
Benoit leads the North American region for Flowbird, ensuring that our operations in Parking and Transit are successful. Prior to becoming President of Flowbird in February 2015, Benoit was the Research and Development Manager responsible for equipment design and delivery including mechanical, electronic and software development as well as pre-sales support. Leading up to that role, Benoit held positions within the company focused on new product development and engineering, software development, and project management.

Benoit joined Parkeon/Flowbird in 1999 and has an educational background in Electrical Engineering and Computer Science.

**Andreas Jansson – Senior Vice President of Sales**
Andreas manages all activities related to Parking Sales at Flowbird. Prior to the merger of Cale with Parkeon, Andreas oversaw the US operations for Cale, including daily management of the finance, sales, marketing, production, and support teams, serving on the Cale Group Management Team since 2007.

During his ten years of experience in the parking industry, Andreas has focused on improving operational efficiency, system integrations, and the implementation of new technologies. Andreas has held several positions within the Flowbird/Cale Group, primarily focusing on IT, customer support, customer solutions, and product management. Prior to accepting the position as Managing Director of Cale America, Andreas served as Director of Product Management and Operations for the Cale Group, overseeing the product roadmap and product maintenance for the company's full product and services offering.
Andreas's expertise stretches across several fields including international relations, customer relations, product life cycle management, organizational skills, web-based systems, M2M-systems, business communications, and parking optimization.

**Lionel Deperrois – Chief Operations Officer**
Lionel oversees Customer Service, Project Delivery, R&D, Technical Support, and Parkfolio Support Departments for the Flowbird system in North America. His team supports an installed base of over 20,000 pay stations for over 300 client locations along with numerous mobile parking payment app deployments.

Lionel started at Parkeon/Flowbird 15 years ago in our Research & Development department and was on the team that developed contactless smart card for the SNCF rail project which includes 1,500 Ticket Vending Machines throughout France. Lionel then moved onto to manage large projects such as our deployment of 240 Ticket Vending Machines in Toronto. He has worked on various international projects in countries such as France, Morocco, Poland, Canada, and the United States.

# E. Scope of Work/Implementation

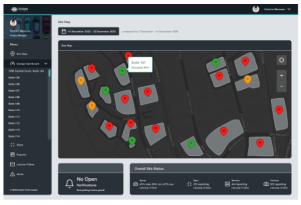
In this section EnSight is going to provide an overview of the technology systems for the APGS and Gateless PARCS. Following the technology overviews there is a section on the project implementation approach and general timeline.

## EnSight APGS

The EnSight Ecosystem is designed with simplicity and flexibility at heart. By utilizing the power of deep learning and neuralnetwork technology, we've built a new parking occupancy management solution to bring your parking into the future. Based on asmaller hardware footprint, we've cut out complexity and replaced it with intelligent technology. The result? A better, simplerparking experience.

Below is an overview of the complete EnSight Ecosystem. The included Modules in the APGS scope include: EnSIght eyes, EnSight, Signage, and the EnSight connect. If we are selected for both the APGS and Gateless, EnSight will add the EnSight plates and Revenue Modules to integrte with Flowbird. Optional modules of Surveillance and Spaces can be added on at a later date outside of the project.

At the center of the ecosystem is our intelligent software that communicates to the local site to pull data from all of your hardwareand API integrations. This data is compiled into a centralized, online cloud management portal called EnSightful.



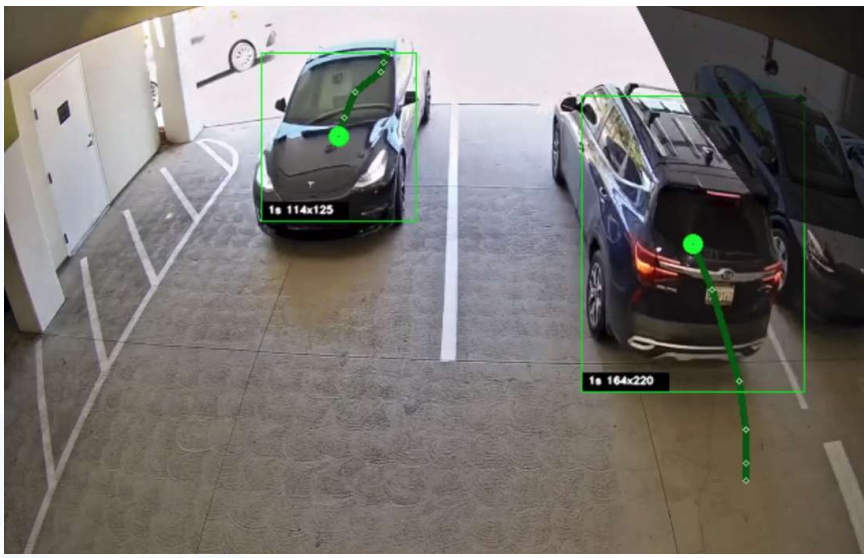
The EnSight Ecosystem starts with our headend server located in the garage that runs the EnSight Parking Intelligence Controller ("EPIC") software to connect to all hardware devices on-site: cameras and signs. The EPIC runs the video feed(s) for the configured cameras through EnSight's Fluid Learning Intelligence ("FLI") engine and EnSight Plates ("EP"), if selected. FLI will do all processing needed to detect and count cars and moving objects that enter or exit through the defined field of view. EP will scan license plates. EPIC detects applicable counts and EP reads from the cameras, logs the event and images, then adjusts the counts on all configured LED signs. The data is stored, and results are pushed to the EnSightful Portal ran on the AWS.

EnSightful will receive data from the server located on-site via a network connection with simple internet access. EnSightful utilizes user accounts and profiles so that access to the data that can be viewed or edited can be controlled for each location. Finally, the EnSightful Portal will also receive and display operational information, as well as alerts (if configured) via email if there is an issue with the hardware or software services. EnSight will monitor and receive alerts when hardware issues are detected as part of the Software and Support Services Agreement (SSSA).

EnSightful Portal Main Dashboard Showing Occupancy, EV Availability and Traffic (Dark Mode)

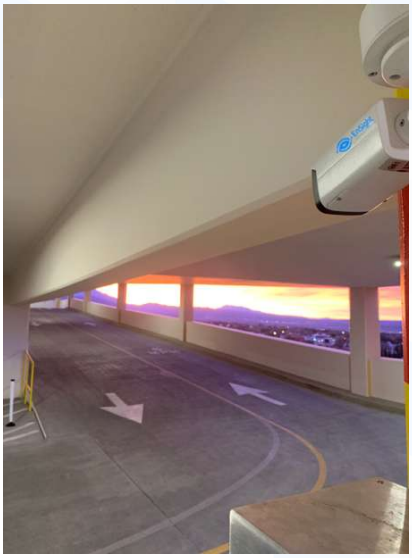
Suite Occupied (Dark Mode)

Ramp Sign Screen (Dark Mode)

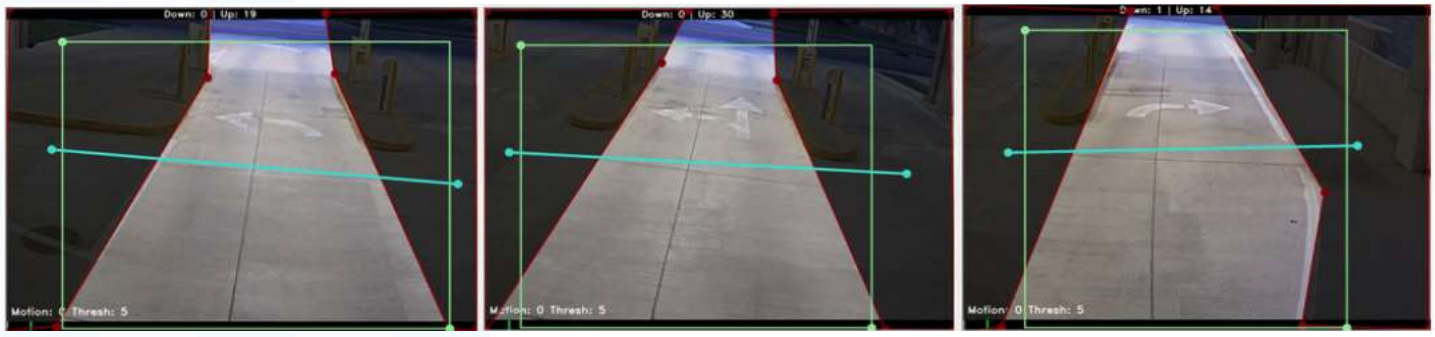


## EnSight Eyes

High- Accuracy Camera-based Vehicle Counting



**Rethinking the way you count parking occupancy.**

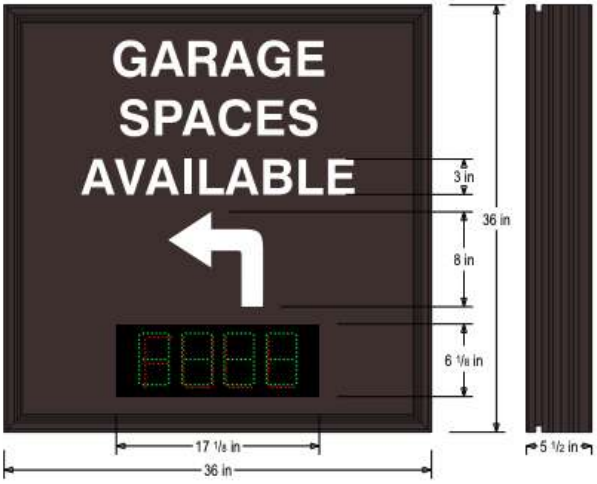


Occupancy Counting with Intelligent Cameras Powered by EnSight's Fluid Learning Intelligence (FLI). We use the power of our neural network-based engine FLI, which enables our cameras to accurately track, scan and count vehicles to provide the industry's most accurate parking occupancy counts.

FLI Counting Car Software Visualization

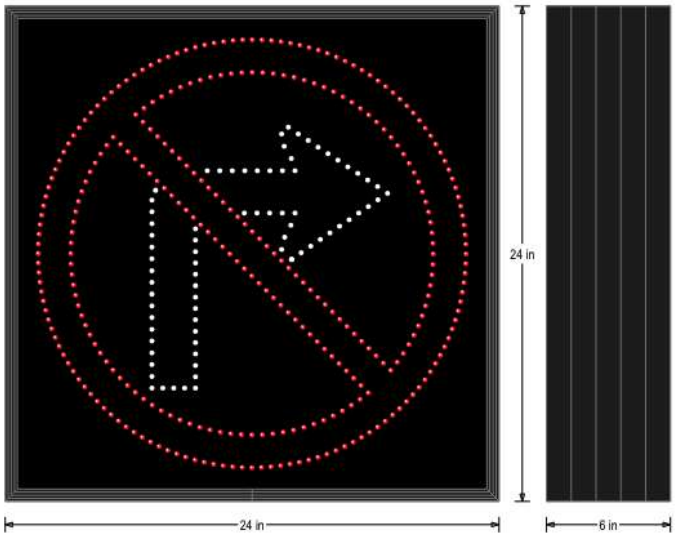
Ramp Camera

FLI Software View Showing virtual count lines and exclusionary zones



## Accuracy

EnSight boasts the highest count accuracy in the market. EnSight will guarantee each camera node reads at least 99% or greater. The accuracy metrics of the system is not only monitored daily by EnSight, but is accessible and visible to the client from the EnSightful Portal's Truthing Report.



## EnSight Signage

Dynamic digital wayfinding signage to guide parkers to their destination

Guide your drivers towards a better parking experience. Driver-friendly parking count displays show accurate occupancy in an instant.For this project EnSight is providing the signage as required in the RFP with the upgrade options for VMS displays for DS1 and DS3.

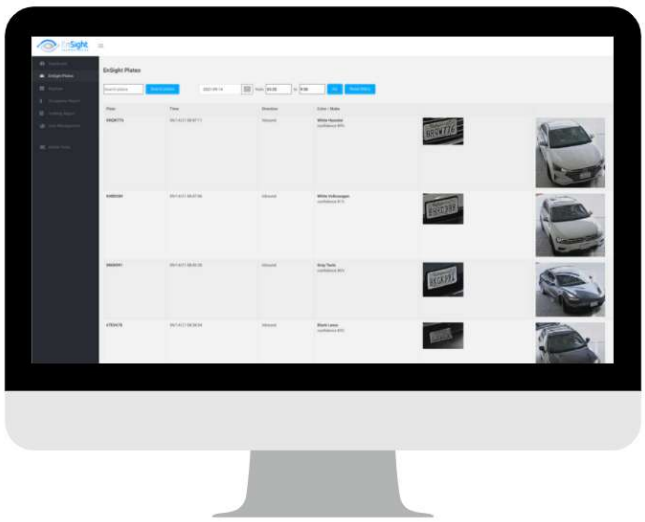
DS1

DS2

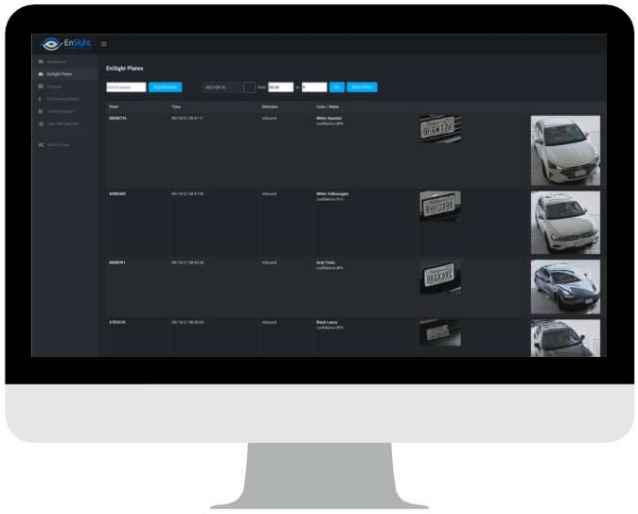
DS3

## EnSight Connect

The EnSight Connect module is our Open API that is included with out system. This is what we will use to enabe the city to display the parking counts on their city website or an application.



This API will also be utlized for EnSight Plates integration into the gateless system, is selected.



## EnSight Plates

EnSight plates is the upgrade module that will be includes the city wants ensight to intgrate our LPR with the Gateless PARCS. The EnSight Plates software is a machine learning based LPR software that produce some of the highestest LPR accuracies in the market.

### Know how many and who is parking with the License Plate Recognition module

EnSight Plates is an expansion software module that enables your EnSightful Ecosystem the ability to incorporate automated License Plate Recognition (LPR). Adding these data elements to your Ecosystem enables parking operators access to additional data layers and increased business intelligence that pairs well with parking guidance and parking occupancy management. As an additional layer to EnSight Eyes, as parkers enter transaction zones the EnSight FLI Software will begin tracking the vehicle as they enter. Once the Vehicle enters the capture zone, EnSight Plates will scan and process the license plate image to record the license plate "LP" ID. The LP will then be logged and sorted into a transaction location on the EnSightful Portal.

### LPR Inventory and Last Location

EnSight Plates adds a database of license plate details for paid parking integration, security and safety purposes while noting each vehicle's last known location.

### API Calls with Payment Databases

Match LPR data against paid parker databases to quickly and easily flag parking violators and allow smooth egress for paid plates.

### Enable Hotlists to Flag Unauthorized Parkers

With EnSight Plates you no longer have to wonder if unauthorized parkers are using valuable inventory. Pairing data generated by EnSight's FLI Cameras and your database of known unauthorized parkers, the EnSightful Ecosystem can easily alert you to violators.

### Additional Data Layers

EnSight Plates offers deeper reporting to your Ecosystem by adding analytics on current inventory, average dwell time, and capture rates.

## System Sustainability: Software and Support Service Agreement "SSSA"

In order to provide the highest level of service to clients, the EnSight Client Service Center (CSC) is available to clients during working hours and our support team is on call for emergency requests. The CSC combines people, tools, and processes to ensure deployed systems maintain the highest availability possible. The CSC is closely aligned with the network of local support partners who provide preventative and emergency services to systems installed at a facility. Our local support team is prepared to provide boots-on-the-ground service when needed, as well as perform Quarterly Preventative Maintenance (PMs). PMs will be a two-day process per Quarter.

**Key service & support functions include:**

- Proactive monitoring and validation of system events and alert conditions
- System software upgrades
- Incident tracking and reporting tools
- Client training and access to EnSight Digital Training Library
- Emergency remote and local response service calls- Billed on T&M

The core of the system is our skilled team of system maintenance technicians, backed up by highly automated monitoring, alerting, reporting, and tracking systems. Using these systems, our client support team monitors, measures, adjusts, upgrades, and repairs installation sites nationally.

### System Software Upgrades and Updates

All System upgrades and updates are included with the Annual SSSA. As updated versions of EnSight software become available, the Alert System is used to complete the updates automatically. Any upgrades are rolled out on schedule from the CSC and must be pre-approved prior to release.

### Monthly System Reports

Monthly reports are generated from the Ticketing System and emailed to clients for their review. These reports summarize all the system and service activity in the last month for their site.

Below is our System Sustainability Checklist.

| Frequency | Description | Responsibility |
|---|---|---|
| Daily | Validate Network Status and computer/IP device availability | EnSight |
| Daily | Review Operation/Activity Reports<br>1. Note Changes in Performance or system outages<br>2. Respond to abnormal or deteriorating conditions | EnSight |
| Daily | Respond to non-critical Client e-mail/phone messages | EnSight |
| Quarterly | Physical Review of Equipment<br>1. Note, report, and/or repair damaged equipment on approval | Local Suport Partner |
| As Needed | Send report to project stakeholders noting outages (as needed) | EnSight |
| Quarterly | Computer Maintenance<br>1. Check for abnormal or changed application settings<br>2. Review general computer usage sets<br>3. Perform scheduled file archives<br>4. Check for operating system related updates and perform as required<br>5. Check for application updates and perform as required | EnSight |
| Quarterly | Equipment Cleaning<br>1. Check and clean cameras<br>2. Check and clean equipment in NEMA enclosures<br>3. Clean lighting illuminators<br>4. Check lighting illuminators for moisture and condensation | Local Suport Partner |
| Quarterly | Equipment Adjustments<br>1. Check camera alignment and adjust as requested<br>2. Check sensor alignment and adjust as requested<br>3. Check enclosure integrity plus AC<br>4. Check Cabling and adjust as required | Local Suport Partner |

### Cloud License for EnSightful Portal

EnSight will provide access to the EnSightful cloud Portal. From here users will be able to visualize a live dashboard of counts, run historical reports, and monitor system health.

### EnSight Eyes Fluid Learning Intelligence (FLI) Camera Licenses

Software license to run EnSight's FLI software. The License includes all new releases of the EnSight Eyes module to enhance counting logic and predictive analytics.

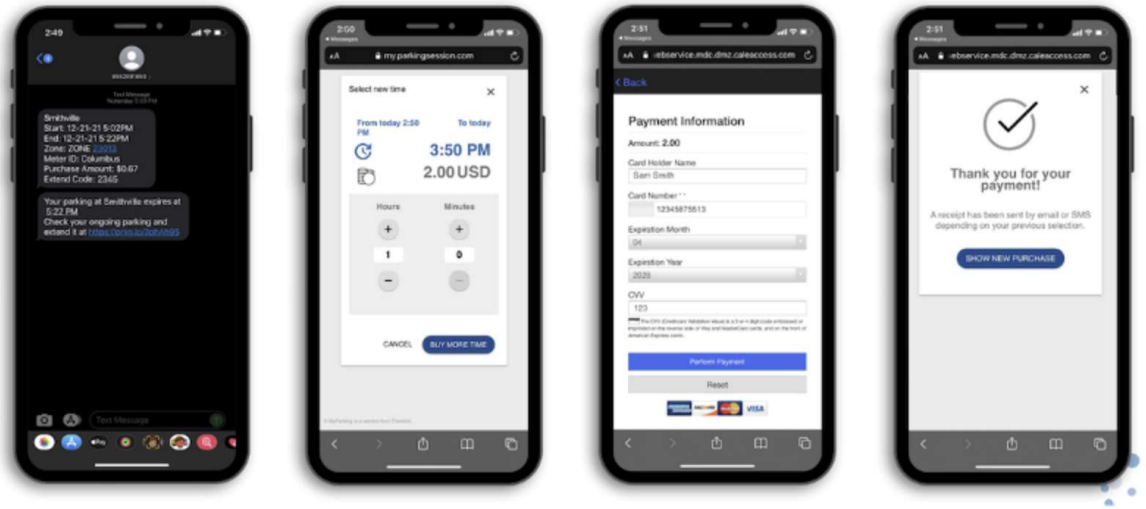
# Gateless PARCS

## Technology Overview

Flowbird has reviewed the RFP documentation and has a very strong understanding of how to meet and exceed the City's stated goals (summarized below). Our proposal that follows briefly explains our vast experience along with a description of each component of our proposed integrated solution.

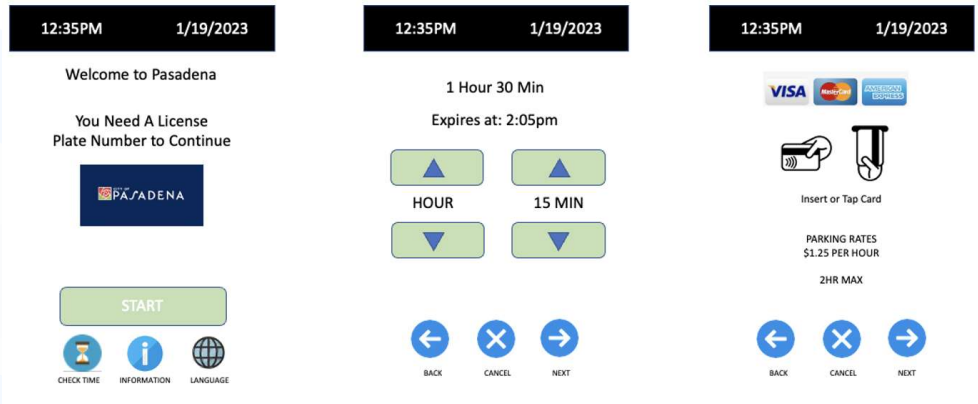
Flowbird's CWT Pay Station is proven around the world to be a dynamic, robust pay station built to work in unattended environments with the harshest climates. Our recommendation is to choose the 9.7" full color touch display option which provides the industry's best user interface, providing a user experience similar of that to a smart phone. The CWT with touch screen display is installed across the United States from Los Angeles, CA to Portland, OR to Chicago, IL, to Philadelphia, PA, to Key West, FL.

**Hardware Features**



- Long life batteries on solar power
- 9.7" touch display screen option for advanced screen customization and friendly customer service
- Secure, PCI Level 1 card processing

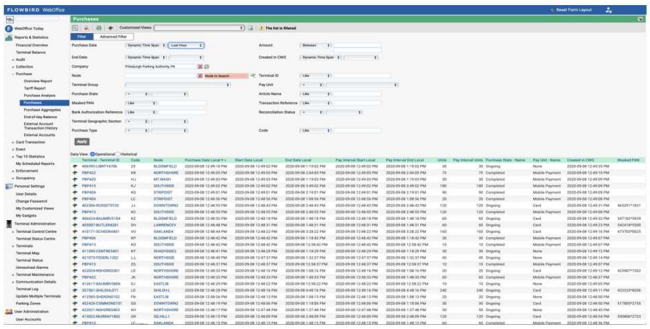
**Key Software Features**

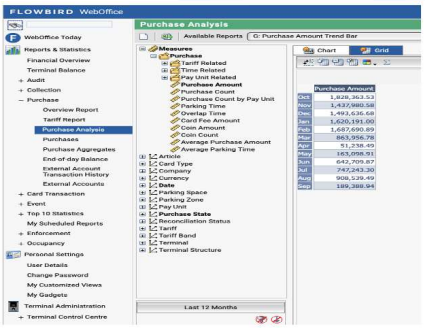


- Complex rate structures
- Strong parking rights management
- Progressive pricing
- Forced rotation
- Special rates per plate
- Free time
- Remote software downloads

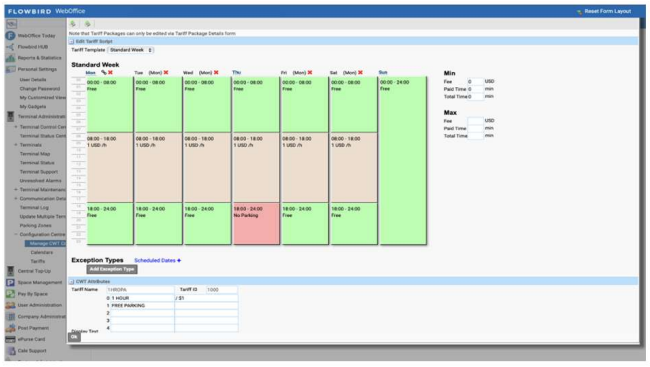
**Key Requirements:**

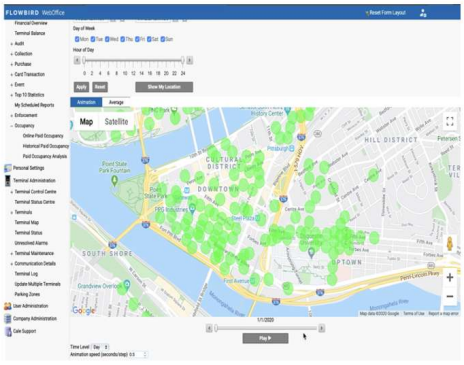
- Payment options: Flowbird meters accepts cash, coin, major credit cards such as Visa, Mastercard, American Express and mobile payment integrations. NFC payments are supported and available if the city decided to accept this form of payment.
- Flowbird can program meters to allow patrons to pay for parking at any pay station.
- The CWT pay station allows for the extension of time, either at the pay station or via our Extend by Text system. Time extension will follow city parking guidelines.
- The system can accommodate various rate structures propose by the city.
- CWT offers a 9.7" touchscreen display that is customizable to the city's preference.
- Flowbird supports pre-payment in advance, and this is configured in the tariff structure of the meter.
- If the user inputs their phone number into the pay station at the end of their transaction, they can receive an expiration notification and extend their time by text up to the max time limit.





- The CWT Pay Station is widely deployed across the country and simple to use. We customize the screen flow for you with a step-by-step transaction process.
- The CWT Pay Station is installed around the world in many different climates. Clients love the reliability, security, and modular design that makes it easy to maintain.
- The pay station display can display the rates, days/times of operation, and guides the user step by step through the transaction.





- Flowbird provides 24/7 support with local technicians available for response within 48 hours.
- The CWT pay station is ADA compliant. All necessary buttons are below 48” from the ground.
- Flowbird will ensure to provide all new equipment to the city.
- The CWT pay station is built with modular design, making it easy to maintain and support.
- CWT is built for outdoor use. It has been deployed from cold weather cities like Chicago, wet cities like Portland, and extreme hot weather locations like Death Valley National Park.
- The CWT pay station cabinet is made with 304 stainless steel. This particular stainless steel adds protection against corrosion to many chemical corrodents, industrial atmospheres and marine environments. A graffiti-resistant powder coating is applied to the inside and outside of the cabinet. This provides additional protection against the elements, including human (vandalism) and environmental (weather). The powder coating makes it easier to remove unwanted paint, marker tags and adhesive materials. All Locks, Hinges are internal and mounting holes are internal. All parts are modular and plug and play in design. Most parts are easily replaced with the use of a screwdriver in under 2 minutes.

- The CWT has a color touchscreen technology option. The CWT screens are readable under all daytime and nighttime lighting conditions. This includes direct sunlight, fog and various angles, (e.g., a taller person views the screen at a different angle than a shorter person.) The CWT outer display Lexan glass has an anti-glare coating to reduce glare and heat build-up on the display.
- The CWT offers an optional motion activated light bar, which fully illuminates the patron interface of the meter and provides a light source for evening payments, allowing the patron to use the light source to find their source of payment in a wallet, or in a purse. In addition, when the top maintenance door is opened, the light bar acts as the source of bright light shining into the pay station, allowing the technician great visibility, without having to hold a flashlight.
- The pay stations will be equipped with a 4G LTE modem to communicate all relevant data to Flowbird's hosted back-office.
- Flowbird's back-office parking management system provides all the required functionality including remote changes, reports on pay station activity, and maintenance work order tickets.

- Flowbird's back-office parking management system has the capability to receive and report on trouble tickets and work order requests.
- Flowbird's back-office parking management system is easy to use with customizable tariff naming and the ability to download rates onto customizable, user-defined groups of pay stations.
- The proposed CWT Pay Station operates within the required temperatures ranges and environmental conditions. The CWT functioned to specification during extreme temperatures of -30F in Chicago 2019 and 136F in Death Valley 2020.

## Block Face with Different Policies

The proposed pay station can display different rates and policies. Flowbird can provide the patron with different zones for payment, "Loading Zone" or "Regular Parking" prior to beginning their session. Once they select the correct rate type, their session will begin and be charged accordingly.

1. The proposed pay stations will be equipped with a 4G LTE modem and antenna to communicate wirelessly with Flowbird's back-office system.
2. Flowbird can provide as an option for our obsolescence protection program which will provide one upgraded modem and one upgraded card reader during the life of the contract (after year 2). During the recent cellular migration from 2G/3G to 4G LTE, Flowbird was able to anticipate the supply chain demand and proactively engaged our customers to upgrade. *Not a single customer had any disruption in service.*
3. Flowbird pay stations communicate via cellular (4G) or Ethernet technology. When utilizing cellular communication, each device is equipped with a cellular modem and SIM card. Flowbird utilizes AT&T and T-Mobile as our primary cellular carriers, and offers Verizon as a cost option. Communication with the server is two way and occurs in real-time. If the pay stations have issues communicating data, the devices can accept transactions in off-line mode in most configurations.
4. Flowbird provides all hosting of pay stations and mobile payment data in our secure data centers. This means that clients do not have to procure or maintain servers. We monitor our data centers 24/7 to ensure high availability.
5. Flowbird is PCI-DSS Level 1 certified. Flowbird follows the guidelines from the PCI-DSS standard and have regular penetration tests performed by external companies. These penetration tests are conducted both by systems and humans. Flowbird's back office management solution is reviewed by an external security audit every year and is under scheduled scans on a regular basis to detect any vulnerability. To ensure security of the wireless information, Flowbird uses high levels of encryption at the pay station and server levels on any sensitive customer data.
6. Before or during the installation the Flowbird technician will measure the signal strength with a Squid-device to determine the best communication provider. The Flowbird terminal is certified to use AT&T, T-Mobile or Verizon. Currently we are using AT&T on all meters at Pasadena with good performance. We intend to continue with AT&T for his bid.
7. Flowbird does not recommend the use of Wi-Fi due to security concerns and drain on the pay station batteries. As an alternative to cellular, we can propose an Ethernet connection if it is available.
8. If the pay stations are experiencing connectivity issues, the City should contact Flowbird support. We can troubleshoot the issue with you to determine the root cause (e.g. software, modem version, carrier issue, etc). Once we troubleshoot the issue, we provide our recommendation/solution.
9. As mentioned in #2 of this section. We will provide a cost for our obsolescence protection program which will assure the city of new communication equipment if there are changes in the communication environment.
10. All transactions occur in real-time and are made available to the enforcement system right away.
11. Flowbird can support Hold and Send transactions but only in non-EMV mode. EMV guidelines do not allow for Hold and Send transactions.

## Pay Station Display

1. Flowbird will customize the display with the ideal color contrast to help make the screen as visible as possible. The display screen is set back to help protect it from sunlight and reduce glare.
2. The CWT Display is one of the largest in the industry at 9.7" and backlit graphics is standard. Screens are off during inactivity to consume power and it can be activated by the power button.
3. The display utilizes a scratch and impact resistant material.
4. Rates can be displayed on the monitor, and they can be remotely programmed via Flowbird back-office software.
5. Flowbird will provide training to city staff to make remote rate changes.
6. The CWT pay station will allow patrons to select rate options, parking durations, and display final charges before accepting final payment.
7. Many Flowbird customers create a rate schedule screen that shows the full rate schedule for the parking lot or zone and the current rates and hours will be displayed on the screen in the purchase flow. Rates and screens can be remotely downloaded from the back-office. These rate schedules can be shared with third parties for integration.
8. Flowbird will train City staff to make remote graphics changes. We recommend considering our advanced data package to accommodate frequent graphic changes.
9. The Flowbird pay stations can accommodate special messaging such as holidays and special events.
10. Flowbird complies with these requirements completely.
11. Typically, we recommend keeping as much information on the display screen as possible. However, we can work with the city to determine if it is necessary to add any decals to the front of the pay stations to help users.
12. Spanish is a language we already support. We can also support other languages as needed.

## Pay Station Display

1. The CWT keypad is displayed on the touchscreen. This feature will eliminate some of the common issues with physical keypads such as wear and tear, corrosion, vandalism, and loose contact.
2. Since our keypad is displayed onto the touchscreen, it can be customized. QWERTY format is one of our standard settings. The city can change this feature later if needed.
3. When a user presses a button, there is instant feedback on the display monitor of their action. The keypad is displayed on the monitor, so it's visible during nighttime. The screen is setback into the housing to reduce glare during daytime.

## Payment and PCI Compliance

- The CWT can be configured to accept cash, coin, credit/debit cards (mag stripe and EMV are options), and contactless payments. People who overpay with cash can receive an overpayment receipt which they can bring to the city for a refund.
- All transactions are authorized or denied in real time.
- The components on the CWT are designed to resist jamming.
- CWT is equipped with a secured vault.
- Money collection can easily be reconciled with Flowbird back office reporting.
- Clearing a jam from the bill acceptor is simple and does not necessitate the need to access the collection vault.
- The system utilizes the license plate of the vehicle combined with the zone number to determine the appropriate rate. Patrons can pay at any pay station as long as they can provide their license plate and zone number.
- Time extension is available through Flowbird's *Extent by Text* feature. Fees for this service will be listed in the pricing proposal.

- Patrons can obtain a receipt either by a printed receipt or *Receipt by Text*. Fees for Receipt by Text is listed in the pricing proposal.
- Flowbird's credit card processing solution has earned Level 1 PCI certification, which is the highest rank available from the major credit card providers (VISA, MasterCard, AMEX). Level 1 is only given to those third-party providers who handle thousands of credit card transactions monthly and who meet their stringent – and audited – credit card transaction security protocols to protect your customers' personal transaction data. Level 1 requires an external audit for approval, which is more rigorous than the self-audit that some vendors may do.
    - Our system provides for high security encryption protocols when the credit card is read at the card reader. The encrypted card information is then transmitted through our PCI compliant gateway to your transaction service provider/clearing house.

- All credit card transactions made at the CWT are performed in real-time. Flowbird offers payment gateway services for card present transactions (chip & pin, magnetic stripe) only. The information flow is organized as follows:

a. The payment card is introduced into the card reader. The card reader reads the magnetic stripe or starts communicating with the chip of the card depending on the readers and scheme configuration.
b. The card reader module is connected to the Internet via a 4G network. The card reader opens a connection with the payment server (Tender Retail) over one defined UDP port. Symmetric AES session keys are exchanged via RSA key exchange over this connection. AES keys are at least 128 bit, RSA keys at least 1024 bit long. The authorization and instant clearing request is sent to the payment server over this encrypted channel.
c. The Flowbird Tender Retail payment server processes the request and translates it to the format used by the upstream processor.
d. The authorization and instant clearing request are passed on to the upstream processor over an encrypted HTTPS channel. Sensitive authentication data, i.e. Track 2 data, is kept in memory of the server until the transaction has been confirmed by the upstream processor.
e. Once the transaction has been confirmed by the upstream processor, transaction data is cleared from the memory transaction log containing truncated and encrypted PANs are stored in the database.

The Garage will be integrated with your preferred payment processor/acquirer. Reconciliation is performed using the FWO web interface which provides details on all card transactions including the status (completed, not completed, in progress) and type (Visa, MasterCard, American Express, Discover). Refunds can be made through the FWO system as well.

1. Flowbird's credit card processing solution has earned Level 1 PCI certification, which is the highest rank available from the major credit card providers (VISA, MasterCard, AMEX). Level 1 is only given to those third-party providers who handle thousands of credit card transactions monthly and who meet their stringent – and audited – credit card transaction security protocols to protect your customers' personal transaction data. Level 1 requires an external audit for approval, which is more rigorous than the self-audit that some vendors may do.

Our system provides for high security encryption protocols when the credit card is read at the card reader. The encrypted card information is then transmitted through our PCI compliant gateway to your transaction service provider/clearing house

**PCI DSS v3.2 Certified**

All the data is hosted in our Data Center facilities. **Flowbird is PCI DSS V3.2 LEVEL 1 certified** and offers the best data security level available in the industry.

In addition, Flowbird has taken very specific measures to make sure the level of risk remains as low as it can be for our customers. We significantly reinforced our security policies and control processes by performing the following actions:

**Vulnerability scans**

As part of our security policy, we perform external vulnerability scans on all public IP addresses and interfaces where Flowbird Banking Services are available. Those scans are typically performed every month. This scan is done using Trustwave “Scan on Demand” solution:
https://www.trustwave.com/Services/SpiderLabs-Services/Vulnerability-Management/

The results are then carefully reviewed by our Data Center security experts.

**Bi-Weekly Security Review Process**

A bi-weekly Flowbird Data Center security review has been created. The reviewing committee is composed of:

- Flowbird IT Systems manager
- Flowbird Electronic Payment Solutions, Security expert
- A Flowbird Networks Administrator
- A IT Systems expert

Their review includes logs and events related to all our equipment identified as critical such as:

- Firewalls
- Hardware Security Modules: https://www.thales-esecurity.com/products-and-services/products-and-services/hardware-security-modules/general-purpose-hsms/nshield-connect,
- Oracle Databases
- File Integrity Monitoring: An Agent for all systems along with a centralized reporting server that checks any changes done on critical files, asks for acknowledgment and reports suspect behavior. The tool we use is OSSEC (http://www.ossec.net).

- Flowbird is PCI compliant with SOC 2 Report
- Flowbird will be compliant to all applicable PCI standards for the duration of the pay station warranty.
- The CWT pay station is EMV ready.
- Flowbird offers various payment methods such as NFC, Text to Park, Extend your parking session via text, QR Code Payments and Mobile payments. Flowbird’s proposed pay station offers NFC payments and it has already been proven in the field (the City of Minneapolis deployed hundreds NFC enabled pay stations within the last year). Your motorists will be able to utilize payment options such as Apple Pay and Google Pay at the pay station. (See Additional Pricing)

## Clock

- The CWT pay station clock syncs up with the server to ensure proper time keeping.
- The clock on the pay stations is automatically adjusted for daylight savings time.
- The CWT clock complies with all requirements per specification of the RFP.

## Pay Station Power

- The CWT is powered by a rechargeable solar-powered battery.
- Batteries in the CWT pay station can be changed out under 2 minutes without the need for specialized tools by technician with access to the inside of the meter.
- Batteries can be recharged elsewhere with a battery trickle charger connected to 120V outlet.
- Flowbird utilizes a lead acid battery to ensure the best performance.
- The CWT is powered by the battery. The battery can be recharged by solar or “onsite” power.
- The system sends low battery warnings to your team to provide advance notice of any pending issues.
- The battery connection is designed to resist corrosion and sustain a minimum of five years of service.
- Battery health statistics are available in the Flowbird back-office software.
- The pay station maintains the data even if the battery is not performing.
- The components on the CWT pay station are specifically designed to draw as little power as possible and extend battery life. Additionally, the software is developed to accommodate low power use and the pay station is programmed to go into sleep mode when not in use.
- We recommend bi-annual preventive maintenance checks of all major components, including the battery and cables, to ensure proper operations.

## Security and Maintenance

- The currency vault is in a separate cabinet from the maintenance cabinet and requires a separate key for access.
- The currency vault is protected by heavy gauge stainless steel.
- The CWT parking meter has a 4-Point locking solution ensuring maintenance and collections teams have access to the appropriate cabinet section. The upper section, lower section, collection door and vault are keyed differently. The upper and lower compartment doors have 4 locking hooks that connect the door to the compartment. Manual and electronic locks are supported. Credit card reader is recessed, prohibiting skimming devices from being attached.
    - Door hinges and seams are internal and tight to prevent the CWT from being pried open. Locks and bolts are out of public sight.

    When the cabinet door is opened and/or coin box is removed the meter will send a notification to all valid recipients via text message or email. The coin box can only be opened with a collection key and is closed to the collector.

    Vibration and shock sensors are offered as an option. If the sensor is triggered, an SMS/email is generated notifying the sensor has been triggered.

    The pay stations are equipped with a secure cash vault locking system. The cash vault system is located behind the outer door of the bottom cabinet which is secured with reinforced steel. The vault door is made of armored steel. The lock is an advanced, four-point locking point system. Flowbird offers an electronic lock option giving clients more control in the collection process. When the coin or bill box is removed, the pay station will send a notification to all valid recipients via text message or email. The coin and bill boxes can only be opened with a collection key and is closed to the collector. No maintenance or safety requirements are needed for the vault locking system.

    The CWT Compact terminals also have an optional electronic lock system with online central administration and authorization via Cale WebOffice. This solution replaces the expensive and tedious handling and administration of keys because all persons that need access to a CWT Compact use the same type and version of door key that is more to be seen as a door opening tool.

## Warranty and Support

1. Warranty info will be found under additional information.
2. Flowbird provides multi-channel end-user support via phone, webform, email and live chat 7 days per week, plus technical support, troubleshooting and parts support. Also, we have multiple Southern-California based field technicians to oversee all installation services and ongoing scheduled service and preventative maintenance. Response times are based on severity and urgency. Flowbird will train City staff to perform day to day maintenance operations. If the City cannot fix an issue, your staff should contact the Flowbird help desk. If the problem cannot be resolved through help desk intervention, Flowbird will dispatch technician. A quote can be provided prior to dispatch. We can also propose a service agreement.
3. All calls and support requests are logged in real-time and assigned for dispatch for field service. The live database is fully accessible via web or mobile app with customizable notification options. List-view detail reports and the analytics reports in the Explore reporting tools are fully configurable and exportable.
4. Flowbird will provide the city with a toll-free number to reach our support team during normal business hours and an additional phone number for emergency purposes. We can customize a support package that meets your needs.
5. Flowbird's back-office will provide the city with remote access to monitor all your pay stations in the field. Software upgrades can be performed remotely.
6. Our online Help Center at us.support.flowbird.group includes technical support articles, bulletins and procedures with community-based input. Our local technicians participate in weekly team meetings to review installation and upgrade projects throughout the country and can provide feedback and guidance to the local maintenance staff. Flowbird account manager/service manager will host quarterly calls with city staff to provide updates and review past performance of the system.
7. Extended warranty pricing will be listed in the pricing proposal.
8. Flowbird account manager respond to city's quotation request within the specified timeline.
9. Flowbird will comply with the city's RMA specifications.

## Training

**Hardware Training**

I. Introduction
II. Multi-Space Meter Concept
III. Hardware Overview
IV. Installation Procedure
V. Theory of Operation
VI. Troubleshooting
VII. Preventative Maintenance
VIII. Meter Application Software (On-site Programming)
IX. Receipts & Enforcement Procedures
X. Collections Procedures
XI. Software Modification and/or Upgrade
XII. Meters and Parts Ordering Procedures (Inventory)
XIII. Peripheral Support Systems
XIV. Wrap-up & Final Question & Answer Period

**Software Training**

I. Terms
II. Workspaces
Opening, Settings, Refresh, Closing

- Maintenance
- Financial
- Maintenance Workspace
- Collection Management Workspace
- Transaction Workspace
- Supervision
- Pay By Space Workspace
- Flowbird can host remote and onsite training sessions with city staff as needed.
- Flowbird will comply with annual onsite 2-hour refresher training with city staff.
- Flowbird will cover all travel cost of training sessions.
- Updates to the back-office system occur automatically. If we release a major update, we will inform City staff by email and setup appropriate training.

## Data/ Integration

- Flowbird has existing integrations with the leading solutions providers in the industry. We will integrate with your preferred providers. If an existing integration does not exist, we will provide our standard API to the appropriate resource.
- Flowbird has existing integration with DataTicket, Vigilant and Axia.
- Flowbird is happy to interface with your various suppliers to ensure your reporting needs are met. Our team will review any requested interfaces and provide feedback in an expeditious manner.

## Other Services

Flowbird will provide the city with various tools to help you market the system. This includes flyer design, standard How To video, FAQ creation, and various images.

## Integrated 2 Way Video Intercom by Parker Technologies

Included in our solution is integrated 2 way video with Parker technologies and Flowbird. The Flowbird devices would integrate the customer support intercom and video feature from the Flowbird screen. Flowbird and Parker are actively working on this integration and are prepared to deliver it for South Lake.

In the pricing proposal the Parker fees will be billed direct by parker to the city. If EnSIght has to flow through the fees on the intercom calls, we would have to mark them up. So in the spirit of saving the city money this the suggested approach.

With two way video intercoms and for the solution in general, we recommend all meter devices to be on a wired network with LTE as fail over.

# Project Approach

## APGS Scope

### Preparation and Submittals

After contract signature, EnSight and the client will agree finalize the design drawings and submittal information for all of the equipment.  Typically this is a 2-4 week process following the signed agreement.

Once the submittal and functional specification is agreed to and the project deposit is received, EnSight will order all the equipment for the project. The Equipment arrives at the EnSight Office where it is programmed and undergoes factory acceptance testing. Equipment lead time is roughly 4-6 weeks from the order date. Signage is the longest lead time item.

### Infrastructure and installation

The City's contractor will perform all infrastructure and installation of the equipment. EnSight will provide oversight and guidance to ensure the solution is installed correctly. Infrastructure and installation for a project this size should take roughly 3-4 weeks.

### Commissioning

Once all of the equipment is installed and connected to network, the commissioning process begins. Commissioning consists of setting the fields of view for all cameras, installing the FLI Software module for counting, confirming all cameras are generally counting, and pushing the data to the EnSightful portal.

### Fine Tuning and ODT

Once the system is commissioned, fine-tuning begins. During Fine Tuning (2 weeks) our team tests and audits the system results. Once accuracy rates are optimized, EnSight will enter ODT with the client and schedule a go-live date.

| | |
|---|---|
| **Project Initiation**<br>- Kickoff meeting scheduled<br>- Software configuration confirmed<br>- Fee structure and enforcement rules defined<br>- Pay Station/Meter locations determined<br>- Timeline confirmed<br>- Marketing Plan defined<br>- Schedule roll out and training with identified key operational team members | **One week after Notice to Proceed (NTP)**<br>Flowbird staff will host weekly calls remote/in person to make sure key milestones are met and actions items are assigned/completed. |
| **Software build and internal testing**<br>- Pay Station software<br>- Banking setup<br>- Integration and Back-Office Reporting Setup | **NTP + 6 weeks**<br>We will communicate with the city's accounting department to ensure all software and banking information is correct. |
| **Pre-Installation Marketing Plan Executed**<br>- Flyers designed by Flowbird<br>- FAQ provided by Flowbird for City website<br>- Standard in-house produced video (note that custom video will need to be quoted) | **NTP + 4 to 6 weeks**<br><br>Flowbird marketing team will work with city staff for design approval and marketing approach. |
| Final testing and shipping from Flowbird warehouse<br><br>LPR cameras will be delivered by EnSight with the APGS shipment. | NTP + 6 to 8 weeks<br>Flowbird will handle majority of final testing from our warehouse. Minimum involvement with city staff. |
| Delivery of equipment to customer site, installation, customer training | Flowbird and EnSight will work with city engineering department and parking department with the deployment of the meters. |
| Testing and implementation | 2-3 full weeks following completed installation of the devices from the client's installer |

# F. Project Budget

**See the Submitted Attachment D form for Pricing proposal.**

The Pricing for has both the APGS and Gateless pricing. EnSight is proposing this 2 ways: EnSight to be selected for only the APGS or EnSight to prime both the APGS and Gateless scope.

## Proposal and Pricing Assumptions

Below are the base proposal assumptions and exclusions.

**Assumptions:**

- Client will help coordinate garage access and safe working conditions for The client's electrician/installer.
- Client will facilitate network infrastructure installation for the EnSight System.
- The Client's project electrician will install all conduit and cat 6 cable to all cameras, signs and server locations.
- The client's electrician/installer will install the technology equipment and complete final terminations.
- Client to bring and land 120v to each sign from the source.
- Client to provide adequate internet connection and speed per EnSight Specification but no less than 20Mbps up and 20Mbps down.
- EnSight System to be segmented off the client's main network and on the vendor network
- Data cabling should be cat-6(exact specifications should be requested from an EnSight Engineer).
- Signage power should be 120V, 240V is also suitable.
- This proposal does not account for any rework or remobilization caused by 3rd party delays. Such events will be billed at T&M.
- Annual Software and Support Services Contract required to ensure Integrity, accuracy rates, and upkeep of the camera counting system
- Pricing is valid for 60 days from the date the first revision of this document is sent.
- 2 year warranty on hardware unless otherwise stated on a specific item in the pricing table.
- Includes EnSight's standard insurance limits.
- These products are designed to be connected to and communicate app data via a network interface. It is Client's sole responsibility to provide and continuously ensure a secure connection between the product and Client network or any other network. Client shall establish and maintain any appropriate measures (such as but not limited to the installation of firewalls, application of authentication measures, encryption of data, installation of antivirus programs, ect) to protect the product, network, system and interface against any kind of security breach, unauthorized access, ransomware, interference, intrusion, leakage and/or theft of data or information.

**Exclusions:**

- Excludes Union Labor and any prevailing wage rates.
- Lifting equipment
- Scanning or X-Raying.
- permits, certifications, engineered drawings, foundation design, etc.

## Proposed Project Payment Terms

The Contract Price will be determined by the City's selection of Scope from EnSight. The proposed payment terms of the initial project value are:

1. Upon this contract execution and receipt of ENSIGHT invoice, Client shall pay ENSIGHT fifty (50%) of the project Price.
2. Upon shipment of configured equipment to Client location and Client has received the ENSIGHT invoice, Client shall pay ENSIGHT forty (20%) of the Project Price.
3. Upon completion of ODT and Client has received the ENSIGHT invoice, Client shall pay ENSIGHT forty (20%) of the Project Price.
4. Upon Substantial Completion of the Work (i.e. beneficial use) and Client has received the ENSIGHT invoice, Client shall pay all amounts remaining to be paid.

Ongoing software and support services following following the initial 2 year term will be covered in a services agreement between EnSight and the City of South Lake Tahoe.

## EnSight Warranty Information

- ENSIGHT Hardware Warranty. ENSIGHT hereby warrants that the Hardware provided and installed by ENSIGHT will materially conform to the applicable SOW. The Warranty Remedy Period for Hardware shall be twenty-four (24) months from delivery of equipment to the site.
- Professional Services Warranty. ENSIGHT hereby warrants that all Professional Services will be performed in a professional and workmanlike manner and will materially conform to the applicable Statement of Work. The Warranty Remedy Period for Professional Services shall end ninety (90) days after the date of completion of Professional Services by Phase
- Software Warranty. Software is under warranty for the duration of the software and support services agreement which will be covered under SSSA that will be signed in addition to this project proposal document.
- Hardware and Services Remedy. If a nonconformity to the foregoing warranty is discovered in the Hardware or Professional Services during the applicable Warranty Remedy Period, as specified above, under normal and proper use and provided the Hardware has been properly stored, installed, operated and maintained and written notice of such nonconformity is provided to ENSIGHT promptly after such discovery and within the applicable Warranty Remedy Period, ENSIGHT shall, at its option, either (i) repair or replace the nonconforming portion of the Hardware or re-perform the non-conforming Professional Services or (ii) refund the portion of the price applicable to the nonconforming portion of Hardware or Professional Services. If any portion of the Hardware or Professional Services so repaired, replaced or re-performed fails to conform to the foregoing warranty, and written notice of such nonconformity is provided to ENSIGHT promptly after discovery and within the original Warranty Remedy Period applicable to such Hardware or Professional Services or 30 days from completion of such repair, replacement or re-performance, whichever is later, ENSIGHT will repair or replace such nonconforming Hardware or re-perform the non-conforming Professional Services. The original Warranty Remedy Period shall not otherwise be extended.

  Exceptions. ENSIGHT shall have no obligation hereunder with respect to any Hardware which (i) has been improperly stored, repaired, or altered; (ii) has been subjected to misuse, negligence, or accident; (iii) has been used in a manner contrary to ENSIGHT's instructions; or (iv) is comprised of materials provided by or a design specified by client. Hardware supplied by ENSIGHT but manufactured by others is warranted only to the extent of the manufacturer’s warranty, and only the remedies, if any, provided by the manufacturer will be allowed.

  THE FOREGOING WARRANTIES ARE EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES OF QUALITY AND PERFORMANCE, WHETHER WRITTEN, ORAL, OR IMPLIED, AND ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, NON-INFRINGEMENT, OR USAGE OF TRADE ARE HEREBY DISCLAIMED. THE REMEDIES STATED HEREIN CONSTITUTE CLIENT’S EXCLUSIVE REMEDIES AND ENSIGHT’S ENTIRE LIABILITY FOR ANY BREACH OF WARRANTY. WITHOUT LIMITING THE GENERALITY OF THE FOREGOING, ENSIGHT SPECIFICALLY DOES NOT WARRANT THAT THE SOFTWARE OR THE MANAGED SERVICES WILL PERFORM WITHOUT INTERRUPTION OR ERROR. EXCEPT AS OTHERWISE SET FORTH IN THIS AGREEMENT, ENSIGHT WILL NOT BE LIABLE FOR ANY DAMAGES THE CLIENT MAY SUFFER ARISING OUT OF USE, OR INABILITY TO USE THE SOFTWARE, HARDWARE, OR MANAGED SERVICES PROVIDED HEREUNDER. ENSIGHT SHALL IN NO EVENT BE LIABLE FOR FAILURE OF THE SOFTWARE OR HARDWARE BECAUSE OF WEATHER, LABOR STRIKES, CORROSION, INTERNET FAILURE, OR TELECOMMUNICATIONS ERRORS

1. PRODUCT WARRANTIES. During the General Warranty Period (as defined in the RFP), Cale shall replace, at no additional cost to Customer, except as otherwise provided under the Order, any part, accessory or modular component of any Products purchased directly from Cale and determined to be defective in material or workmanship under normal use and service (the "General Warranty"). Customer shall cooperate with Cale in any effort to pursue a claim with the manufacturer of a defective part. The "General Warranty Period" for (i) each pay station shall extend for (a) twelve (12) months following the date of installation of the pay station or (b) thirteen (13) months following the date of delivery of the pay station to Customer, whichever date occurs first; and (ii) each part or accessory purchased hereunder for one hundred eighty (180) days following its delivery to Customer. To the extent that any Products contain Programs, Cale warrants that the Programs will conform to Cale's specifications in effect on the date of delivery to Customer. Cale shall make reasonable efforts to maintain the Programs and provide error corrections as necessary so that the Programs conform to Cale's specifications, but Cale shall not be required to provide new features or new versions of the Programs. In no event shall Cale have any responsibility to correct any database errors or any errors or damage caused by or arising out of hardware defects or input errors or resulting from changes to or modifications of the Programs made by the Customer or any other user. Customer shall be responsible for the operation and maintenance of the Products purchased hereunder and shall promptly notify Cale of any Program bugs, defects or other malfunctions, not easily correctable by Customer, that affect the transmission of data to or from the Products or that otherwise inhibit a key function of the Products. EXCEPT AS EXPRESSLY SET FORTH IN THIS SECTION 1, CALE MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, AS TO THE VALUE, DESIGN, CONDITION, TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OF THE PRODUCTS OR THE PROGRAMS. NO ADDITIONAL WARRANTIES MAY BE INFERRED FROM A COURSE OF DEALING OR USAGE OF TRADE. CALE'S SOLE RESPONSIBILITY AND LIABILITY UNDER THESE TERMS & CONDITIONS SHALL BE TO REPAIR OR REPLACE, AT CALE'S OPTION, A DEFECTIVE PRODUCT.

2. WARRANTY LIMITATIONS. THE GENERAL WARRANTY FOR (i) THE PRINTER COMPONENT OF ANY PAY STATION SHALL BE IMMEDIATELY VOIDED IF CUSTOMER USES RECEIPT PAPER THAT DOES NOT MEET SPECIFICATIONS PROVIDED BY CALE, AND (ii) THE PAY STATION BATTERY SHALL BE ONE (1) YEAR FROM INSTALLATION OF THE PAY STATION. CALE SHALL NOT PROVIDE WARRANTY COVERAGE FOR DAMAGE TO ANY PRODUCT DUE TO ACCIDENT, NEGLECT, MISUSE, ABUSE OR NATURAL DISASTERS. THE GENERAL WARRANTY DOES NOT INCLUDE LABOR OR REPAIR COSTS. THE GENERAL WARRANTY SHALL BE VOIDED BY (i) USE OF NON-CALE REPLACEMENT PARTS; (ii) UNAUTHORIZED ADDITIONS TO THE PRODUCTS; (iii) UNAUTHORIZED ALTERATIONS TO THE PRODUCTS; (iv) SERVICE TO THE PAY STATIONS PERFORMED BY PERSONNEL WHO ARE NOT CERTIFIED BY CALE TO PERFORM SUCH SERVICE; OR (v) FAILURE TO MAINTAIN THE PRODUCTS IN ACCORDANCE WITH THE MAINTENANCE REQUIREMENTS.

1. Parts Exchange. The Parts Exchange Program (the "PEP") involves Cale's provision of certain replacement parts for the Covered Meters and parts exchange services with respect to the same.

2. Program Enrollment. Customer shall enroll all of its Cale parking meters in the PEP (the "Covered Meters"). In the event that Customer has Cale parking meters that are still under original warranty, such meters shall be enrolled in the PEP and become Covered Meters upon the expiration of the original warranty without further action by the Customer.

3. Term. Meter enrollment in the PEP shall remain in effect for a minimum of one (1) year from the Effective Date ("Initial Term"). Following the Initial Term, all Covered Meters shall remain enrolled in the PEP on a month-to-month basis.

4. Return of Parts. The Customer is responsible for delivering to Cale, at Customer's sole cost and expense, all parts being tendered for exchange under the PEP. Customer shall ship such parts with reputable shipping companies and/or delivery services, and shall bear the risk of loss and damage of such parts until such parts are delivered to Cale.

5. DISCLAIMER OF ADDITIONAL WARRANTIES. EXCEPT AS EXPRESSLY SET FORTH IN THIS SECTION, CALE MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, AS TO THE VALUE, DESIGN, CONDITION, TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OF ANY REPLACEMENT PART PROVIDED HEREUNDER. IN ADDITION, EXCEPT AS EXPRESSLY SET FORTH IN THIS SECTION, NO ADDITIONAL WARRANTIES MAY BE INFERRED FROM A COURSE OF DEALING OR USAGE OF TRADE. CALE'S SOLE RESPONSIBILITY AND LIABILITY UNDER THIS AGREEMENT SHALL BE TO REPAIR OR REPLACE, AT CALE'S OPTION, A DEFECTIVE PRODUCT.

6. Removal and Installation of Replacement Parts. The Customer is responsible for removing any parts requiring replacements from a Covered Meter, packing and delivering such part to CALE without further damage, and re-installing the replacement part furnished by CALE pursuant to the PEP. The Customer shall perform such removal and re-installation of parts in a good and workmanlike manner, and in a manner that adheres with any technical documentation or instructions with respect to such tasks that may be provided by CALE from time to time.

7. Exclusions. The PEP is intended to provide replacement parts for Covered Meters that are subject to parts failure (whether due to design defect or ordinary wear and tear) connected with the ordinary and intended use of the Covered Meters. The PEP is not intended to replace parts that become damaged by extraordinary events which, in many cases, would or could be covered by commercial insurance policies. The follow items, services, parts and conditions are not covered under the PEP, unless noted:
a) Labor
b) Travel expenses
c) Expedited shipping costs
d) Batteries – Covered under the first-year warranty, but not the PEP
e) Shipping costs of return parts to Flowbird
f) Any damaged, vandalized or incomplete part
g) Any improperly maintained part
h) Any malfunction caused by weather or acts of God
i) Any malfunction caused by intentional or negligent acts of the Customer, its staff, service providers or any third party other than Flowbird and its affiliates
j) Any part that cannot be disassembled and therefore cannot be repaired or refurbished including coin canisters, bill cassettes, and display assemblies
k) Printer assemblies without printheads

1. Shipping. The Customer shall bear all shipping and freight charges for parts being returned to Cale for replacement. Cale shall bear all shipping and freight charges for replacement parts being sent by Cale to the Customer utilizing normal ground shipping.

2. Services. The following services are included in the PEP:

a. Unlimited technical support through our Help Desk by phone seven (7) days a week at 877 620-2253, email at us-support@flowbird.group or online at us.support.flowbird.group
b. Replacement of any component in a Covered Meter, except parts or conditions listed in Section 10 immediately below. CALE may, in its sole discretion, choose whether to utilize new or refurbished/reconditioned parts in providing replacement parts to the Customer under the PEP
c. Guaranteed shipment within three (3) business days of all covered replacement parts if they are in stock.

10. Return of Faulty Parts.

a. A service request order (SRO) is required for all parts that are being returned to CALE for replacement. SROs can be requested by contacting the CALE Help Desk at 877-620-2253, by email at us-support@flowbird.group or online at us.support.flowbird.group. When you call or email the Help Desk for a SRO, include the following information about all returned parts:

i. What is wrong with the part(s) being returned.

ii. Meter ID for the meter the part came out of, if known.

iii. Part serial number from the sticker on the part, if there is a sticker.

iv. Indicate that you are requesting a replacement part under the PEP.

Include a copy of your SRO form in the box with the returned part. The shipping address for the CALE parts warehouse is included at the top of the SRO form. Parts being tendered to CALE for exchange must be returned within fourteen (14) days a. of the SRO issue date. If a qualifying exchange part is not received within fourteen (14) days, the Customer account will be billed for the non-exchange part price.

b. Special Instructions

i. Coin Selectors: If you are returning a coin selector, please let us know if the selector is programmed to take tokens.

ii. Card Readers: When returning card readers, please remove the bezel and rain guards prior to shipping. These parts will not be returned with the replacement reader. Please specify the model of card reader you are returning.

iii. Printers: Printer assemblies must be returned with the printhead, and ribbon cable attached. Printer assemblies without printheads may not be exchanged.

# G. Description of Recent Projects/References

## EnSight References

### Redwood City, California

EnSight deployed it's parking guidance technology to connect Redwood City's municipal parking structures with several private parking garages into a single easy-to-use and manage parking guidance system. EnSight installed its intelligent camera-based occupancy management system at three city garages: Jefferson, 889, and Marshall. The addition of these garages plus two private garage brings EnSight's technology to five total garages totaling 1,400 parking spaces in Downtown Redwood City. EnSight also provided license plate recognition at the transition point between two connected garages as a change order.

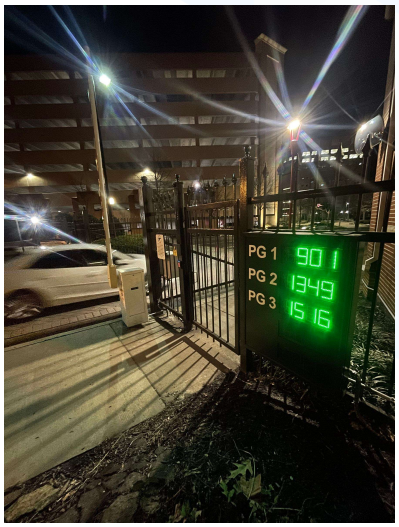
Garage Locations:

- Jefferson Garage
- 889 Garage
- 750 Marshall
- 601 Marshall
- 2075 Broadway

**Project Contact Name:** Christian Hammack
**Title:** Parking and Transportation Demand Manager
**Phone:** (650) 780-7378
**Email:** chammack@redwoodcity.org

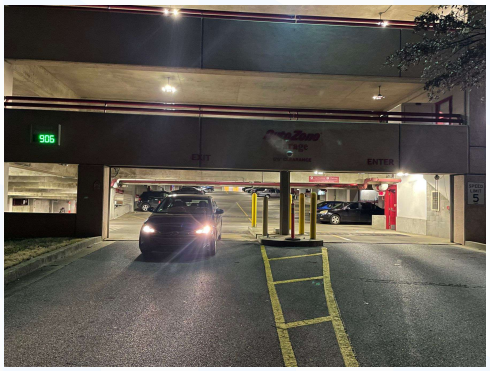
## EnSight References

### St Jude Memphis Hospital



St Jude Memphis Hospital campus comprises 66 acres with more than 5-million-square-feet of building space, over half of which is dedicated to research. To serve patients and employees, the campus has three  parking garages with total parking capacity of 4,039 parking spaces. In 2022, St Jude Deployed the EnSight Occupancy Management system to provide visitors and employees with parking availability information via EnSight's API integration to display parking availability on the employee mobile app and to digital signage at the 4 main entry points of the campus. As parkers come to their garage of choice they are greeted by additional signage advising on spaces available within the garage.

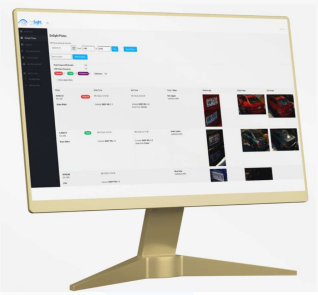
EnSight's Parking Occupancy Management System (POMS) enables hospital stakeholder to manage parking capacity in real time, and leverage the historical data to plan for parking improvements as well as overflow parking strategies.

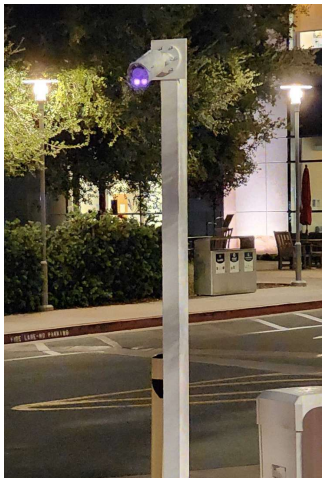


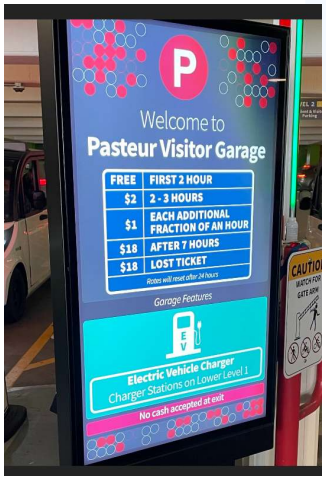
Garage Locations:

- Garage 1- 969 Parking Spaces
- Garage 2- 1483 Parking Spaces
- Garage 3-1587 Parking Spaces
- Family Housing Garage- 98 Spaces
- Gene Logan Lot- 162 Spaces

Project Contact: Joe Luther
Email: Joseph.Luther@stjude.org







## Stanford Health Care

Stanford Medicine is an ecosystem comprising the School of Medicine and the pediatric and adult health care delivery systems. The Stanford network of care includes more than 65 locations across Northern California and more than 85 locations in the U.S. Western region. In the Bay Area Stanford locations are supported by 11 surface lots and 9 garages. EnSight is deploying their solution across the medical campus to deliver real time occupancy and real-time parker validation and LPR enforcement using our EnSight Eyes and EnSight Plates modules. The solution is being used to monitor parking availability  across their parking assets and validate permitted parkers and visitors.

**Project Contact Name:** Chris McGougan

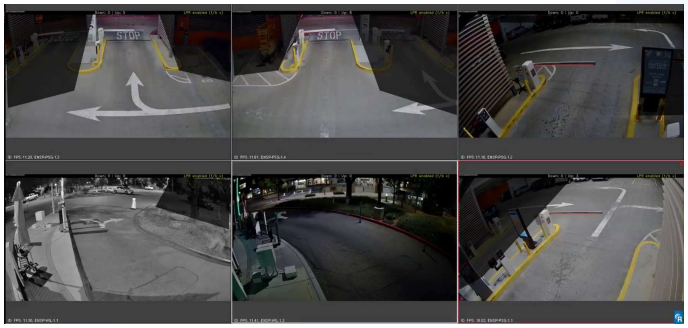
**Email:** cmcgougan@stanfordhealthcare.org



## Arizona State University - Novus Garage

ASU is one of the largest public universities by enrollment in the U.S. With one of the largest enrollments requires the management one of the largest university parking operations in the nation.

EnSight delivered their first Parking Occupancy Management Systems for their new 7 level Novus Garage. The Novus Place Parking Structure provides 1,801 parking stalls on seven levels for surrounding Novus Innovation Corridor developments as well as ASU buildings and events. The ground-floor height of 14’ allows for expansion of up to 10,000 square feet of retail development.

EnSight's intelligent camera-based solution counts vehicles entering and exiting each level of each garage and transmits that occupancy information to signs located at garage entrances and the entrance of each parking level. Altogether, there are 17 cameras located throughout the garage on each entry exit lane and each level interchange. The parking availability is displayed on 2 monument signs on the exterior of the garage and 10 interior way-finding signs will provide real-time information about how many parking spaces are available on each floor. The parking guidance technology will monitor parking availability across the 1,200 parking spaces.

**Contact Name:** Melinda Alonzo, Parking Director
**Email:** melinda.alonzo@asu.edu

## 2nd and PCH – Long Beach, California

2nd and PCH developed and managed by CenterCal properties sits at the gateway between Orange County and Long Beach, one of the most highly desirable areas in Southern California. With tremendous visibility on the corner of the iconic Pacific Coast Highway and 2nd Street there are more than 100,000 car trips passing the intersection daily. This Whole Foods anchored center has become the social hub and community gathering place with its spectacular views and enviable setting directly across from Alamitos Bay and the Long Beach Marina.

EnSight Technology's intelligent camera-based solution counts vehicles entering and exiting each level of each garage and transmits that occupancy information to signs located at garage entrances and the entrance of each parking level. Altogether, 31 strategically located dynamic LED Display signs will provide real-time information about how many parking spaces are available on each floor. The parking guidance technology will monitor all 1,100 parking spaces in the complex's three garages.

The Class A open air Lifestyle Center has two 3-level garages at opposite ends of the property connected via additional rooftop parking with the EnSight Parking Guidance EcoSystem for Level count wayfinding and specialty parking management.

# Flowbird References

## Pittsburgh Parking Authority

Contact – David Onorato, Executive Director
232 Blvd. of the Allies
Pittsburgh, PA 15222
Tel: 412-560-2511
Email: donorato@pittsburghparking.com

In 2005, Flowbird installed 54 MPC XL Pay and Display multi-space meters for the Pittsburgh Parking Authority. Those meters featured coin, bill, and credit card acceptance. Most of those initial meters were solar charged.

In 2012, the City awarded Flowbird the largest multi-space meter contract of the year after a comprehensive RFP process. Flowbird provided the best total solution; pay stations and back-office software, mobile license plate recognition, citation solution, and communications/marketing. Five hundred CWT Pay by Plate meters were installed throughout the City, replacing the MPC meters and single space coin only meters. At that point, Pittsburgh became the first city in the US to commit fully to Pay by Plate parking. An additional 340 pay stations were added in 2013. Today, the Authority has over 1,000 pay stations, which are now being upgraded to touch screen technology. The system is integrated with the City's citation management system for Pay by Plate enforcement.

In 2015, the Authority was awarded IPI's Parking Organization of the Year for their incorporation of technology to improve efficiency, customer service and sustainability as models for others in the industry.

## City of Detroit

Keith Hutchings, Director of Parking
1600 W. Lafayette, Detroit, MI 48216
Phone: 313-221-2596
Email: Hutchingsk@detroitmi.gov

Flowbird has been providing parking technology solutions to the City of Detroit since 2015. Flowbird's contract provides for mobile parking payments, over 700 parking pay stations, mobile license plate recognition, integrated reporting system, and marketing services.

Detroit is undergoing tremendous revitalization, and mobility is a key part of the transformation. In 2021, the city released an RFP for a new mobile payment application, one that not only offered standard on-street payments but encapsulated the City's vision for a mobility app. Flowbird was awarded the project and launched the new ParkDetroit app in December 2021, replacing the City's original app provider.

The new ParkDetroit app gives users the tools to make educated travel decisions prior to leaving their homes. The prices of on and off-street parking locations are shown on the app, parking availability is provided to help people select where to park, and the app is integrated with guidance systems to navigate the user to their desired parking destination.

Taking things to another level, Flowbird's ParkDetroit app provides local events listings and venue information to encourage people to spend more time downtown. The next phases of the project will include transit payments for the City's People Mover as well loading zone management.

City of Monterey

Cristie Steffy, Parking Superintendent
735 Pacific Street, Monterey CA 93940
Phone: 831-646-3953
Email: steffy@monterey.org

The City of Monterey selected Flowbird CWT touch screen technology to replace their outdated meters in 2021. Flowbird provided the city with touch screen meters with coin, bill, contactless credit card readers and receipt by text feature.

The City of Monterey currently has 28 Flowbird meters with another 10 meters to be delivered in quarter two of 2023. They are one of the first municipality to substitute printed receipt with Flowbird's *Text by Receipt* feature. With this new feature, the city was able to reduce paper trash on their streets, eliminate maintenance of printers, and most importantly saved over 2,000,000 feet of printer paper since its inception.

# Supplemental Clarifications and Scope Modifications Based on Interview

**Interview Questions for EnSight and Flowbird Team**

1) Do you have any gateless reference sites where Ensight and Flowbird have jointly installed and integrated your offerings? Or sites where you have integrated with any vendor's MSM in a gateless/LPR environment? If so, where are they, and are they in production?
**Response:** Ensight is Flowbird's distributor for MSM meters. Though this site is our first endeavor in the gateless arena, Ensight has worked with Flowbird with on several projects. Also, Flowbird offers a gateless solution with five sites in the US and over fifty active sites in Scandinavia.

   EnSight and Flowbird have ongoing conversations regarding integration and are prepared to deliver. Further EnSight will send our LPR data to Flowbird in the format they expect LPR data from all other vendors.

2) How long has Ensight's LPR offering been on the market? How many sites are using it in production? Do you have data from those sites and from Ensight LPR tools that demonstrate it will meet the functionality and performance/accuracy parameters as described in the Specification?

   **Response:** EnSight is a technology company that specializes in machine learning and vision software. The first LPR deployment was in 2020. We have 13 locations with LPR, over 40 lanes.

   Deployments of LPR with Stanford medical campus, which has 9 of the project's 22 locations live.

   - Stanford chose EnSight over Genetec.
   - EnSight integrated LPR with AVPM. Stanford has quercas with AVMP, but tested both side by side and ours was selected as the superior technology.
   - We have data from our sites that will show and prove our accuracy.

   LA Clippers selected EnSight over Genetec for the frictionless event parking LPR system. The total project will have 27 lanes of LPR and LPR on each level of their three parking garages.

   What exact model of Flowbird MSM are you proposing to provide?
   **Response:** The Flowbird Touchscreen CWT 5. With what feature set and what options?
   **Response:** Touchscreen (Differentiator) , QR Reader, Contactless/NFC payments: Digital Wallets such as Apple Pay, Google Pay, Samsung Pay , Ability to extend payments by text, Validation codes acceptance, Secure PCI-DSS payment platform EMV insert chip reader, and NFC TapnGo reader. Flowbird has a built-in wireless modem. Flowbird recommends ethernet for this project due to the EMV Credit Card transactions and the Parker two-way intercom service.

   What sort of screen size , colors, front panel devices, etc.?

**Response:** Dynamic 9.7" tablet-sized color touch screen reinforced with a 6mm- thick tempered guard glass. Displays videos, animated pictures, text, and menus to guide the user in real time. The font and screen color are 100% configurable. Also, Flowbird offers fully customizable partial and full decal wraps which are fabricated in-house in Clearwater.

3) Please provide a detailed data sheet on the proposed Flowbird product. Please ensure that the proposed MSM: See attached.
   a. Only supports credit cards (no bills or coins). Credit Card Only Unit.
   b. Supports NFC reading for tap cards, Apple Pay, and Google Pay. Yes.
   c. Does not have solar power but uses only 120V mains power. Yes.
   d. We need to discuss and clarify the 4G vs. hard-wired Ethernet connection option. We can discuss this.
      **Response:** We can use both but sometimes the 4G signal is not as strong in a parking garage. Plus, EMV credit card transactions are faster with ethernet. The Parker integration requires an ethernet connection in the machine.
   e. We need to discuss and clarify the battery that is provided.
      **Response:** We included the 75 AMP Battery, which provides 3 days of battery backup in the case of a power loss. The 75 AMP Batteries are provided with the MSM units.

4) The proposal lists Flowbird's executive team members, but it does not indicate who will be the working-level project manager and technical personnel from Flowbird and from your other technology partner Parker Technology who will provide on-site and off-site support to the project and will coordinate all the required integrations. Please provide a list and resumes of those Flowbird personnel.
   **Response:** Flowbird is the sub to Ensight on this project, but we have a full team that will support Ensight behind the scenes. Here is a list and resumes of the Flowbird employees that will be involved in the project.

***William Johannsen – Director, Project Management and Solutions Delivery***
William has been with Flowbird since 2007, working with some of the largest parking organizations in the US. William has managed parks implementations for Flowbird in the State of Colorado and the State of Minnesota as well as large scale parking projects in cities such as Las Vegas, Memphis, Philadelphia, St. Louis, Ventura, and Washington DC.

***Joe Mollish – VP of Business Development - Off Street and Gateless Solutions***
Joe graduated from West Virginia University, receiving a master's degree and his bachelor's from Marshall University. Joe brings 30 years of off-street parking experience to Flowbird. He started his career in operations with Central Parking System, where he progressed to the corporate office as the Operational Excellence Director. In 2012, Joe moved to the Parking Access and Control System industry and held senior-level positions with Amano McGann and TIBA before joining Flowbird in early 2022. He is the main contact for ASC and oversees Flowbird's rollout of the Off-Street and Gateless product lines.

Before joining Flowbird, Joe worked directly with large notable accounts such as Portland SmartPark, Houston Airports Authority, Kansas City International Airport, Mitchell

Milwaukee Airport, City of Norfolk, Virginia, City of Pasadena, and Broward County Port Everglades.

***William Duson – Field Service Manager***

William has over twenty years of field service experience, spending 11 years with Sunoco Corporation before coming to Flowbird in 2010. His work at Sunoco included servicing every aspect of service station maintenance, from back-office systems to pump maintenance, as well as electrical, mechanical, and hydraulic work. William was also the primary resource for training new technicians.

William supervises and dispatches Flowbird field technicians in his current position, including selecting the right technician for project implementations. Before this management position, which he assumed in 2019, William was a lead field technician in charge of installing Flowbird equipment, on-site project management, on-site maintenance and service, system upgrades, and training.

William has worked directly with key Flowbird clients around the US, including Boston, MA; Cleveland, OH; and Savannah, GA.

***Jeff Nethery – Global Products Support Director***

Jeff, a University of Washington in Seattle graduate, joined Flowbird in 2008 and leads the Flowbird customer support team. He has served in multiple roles in the US and internationally with Flowbird, including Customer Service Director and Global Product Director. Jeff has 30+ years of experience in parking operations, management, consulting, and project management, focused on improving operational efficiency, system integrations, and implementation of new technologies.

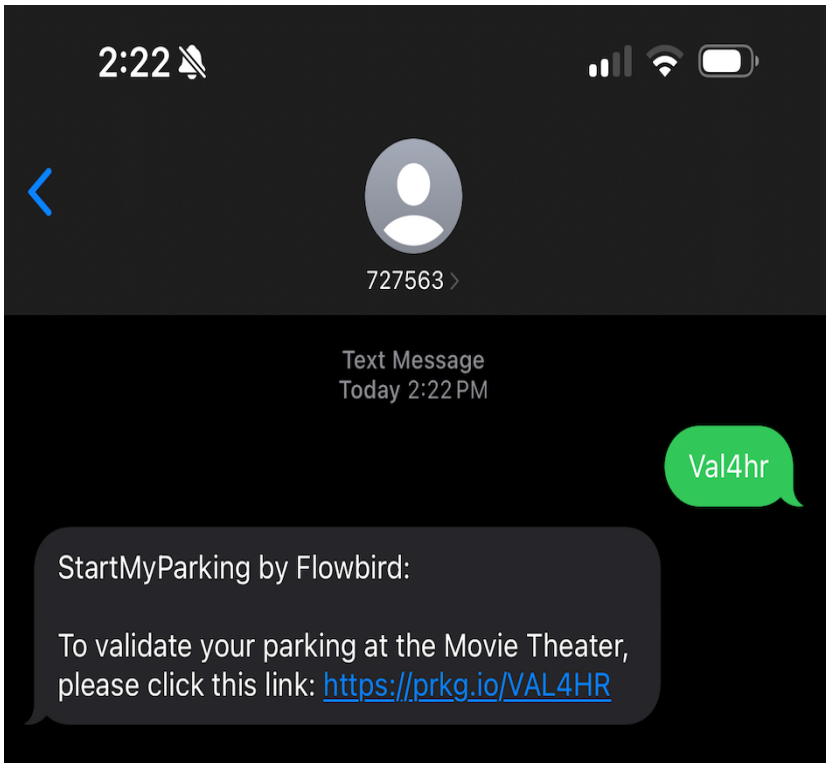
Jeff's background includes developing customer service programs, public outreach and education programs, consulting and planning, contract negotiations and compliance, project team coordination, customer relations, and business and partnership development.

***Patrice Yackel – Software Customization Manager***

Patrice has worked with Flowbird for over 15 years in various capacities. Her broad experience in accounting, customer service, Help Desk, and service department management has made her a true partner to our customers. She has ensured timely installations to hundreds of satisfied customers.

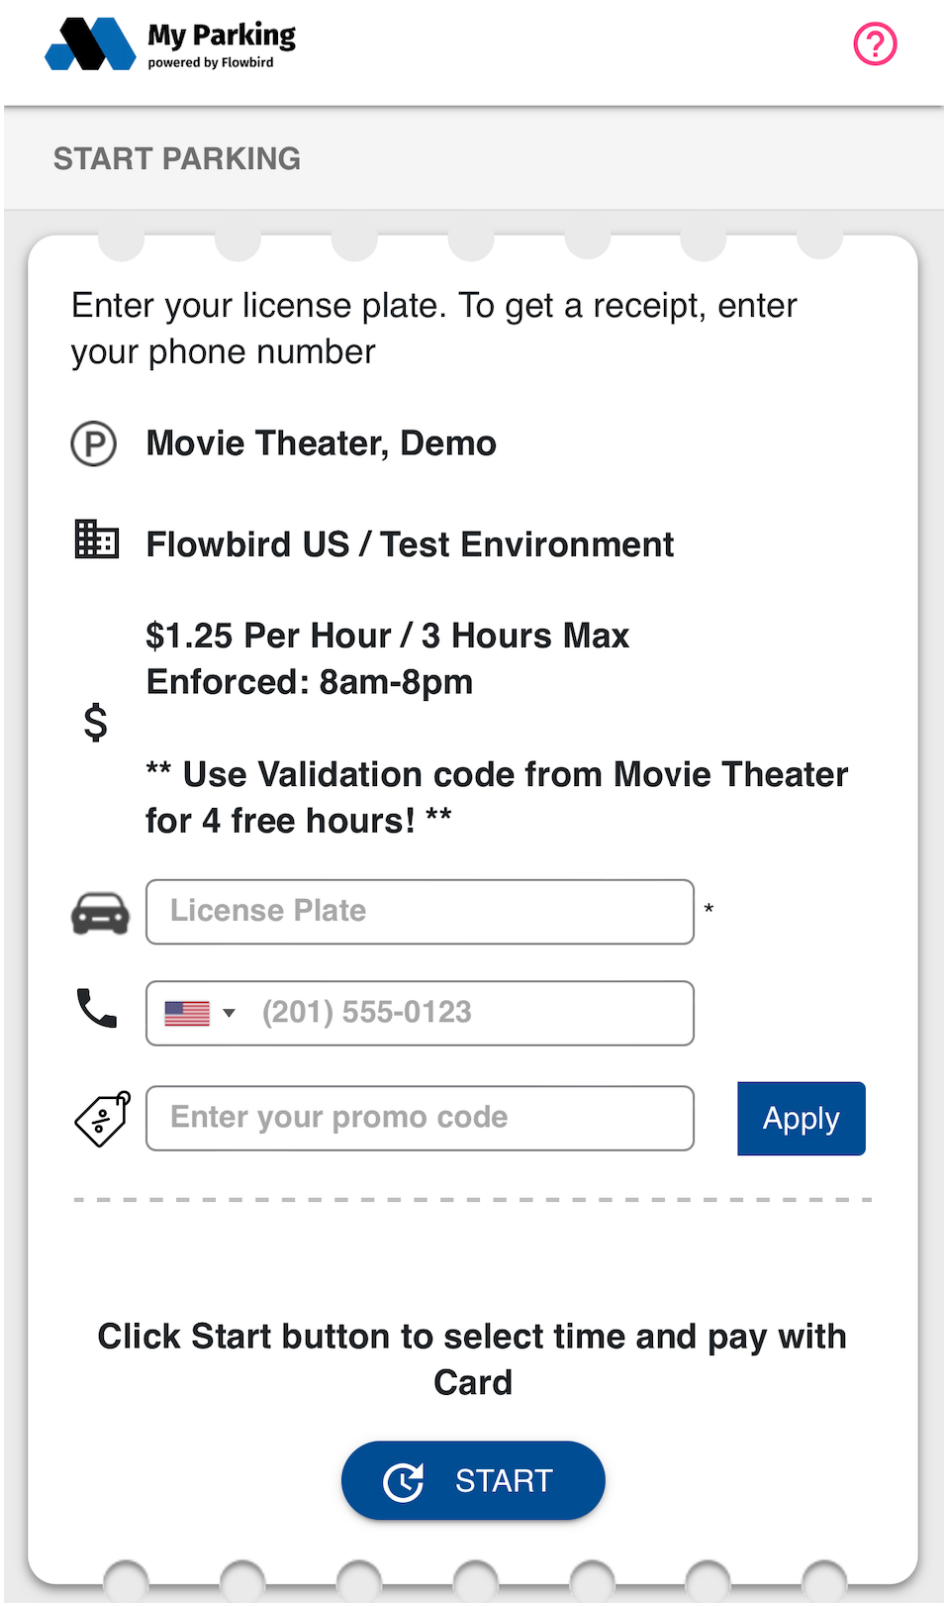
Patrice's role at Flowbird is to oversee our software customization team, ensuring that testing processes are followed and that customers are satisfied with the transaction flow seen by the end users. Patrice will work closely with our software customization staff and project manager to ensure that all rates, policies, and messages are accurate and meet ASC's standards.

Patrice's team has customized software for over 900 clients across the United States, including the Philadelphia Parking Authority, Washington State Parks, and the cities of Vancouver (WA) and Syracuse (NY).



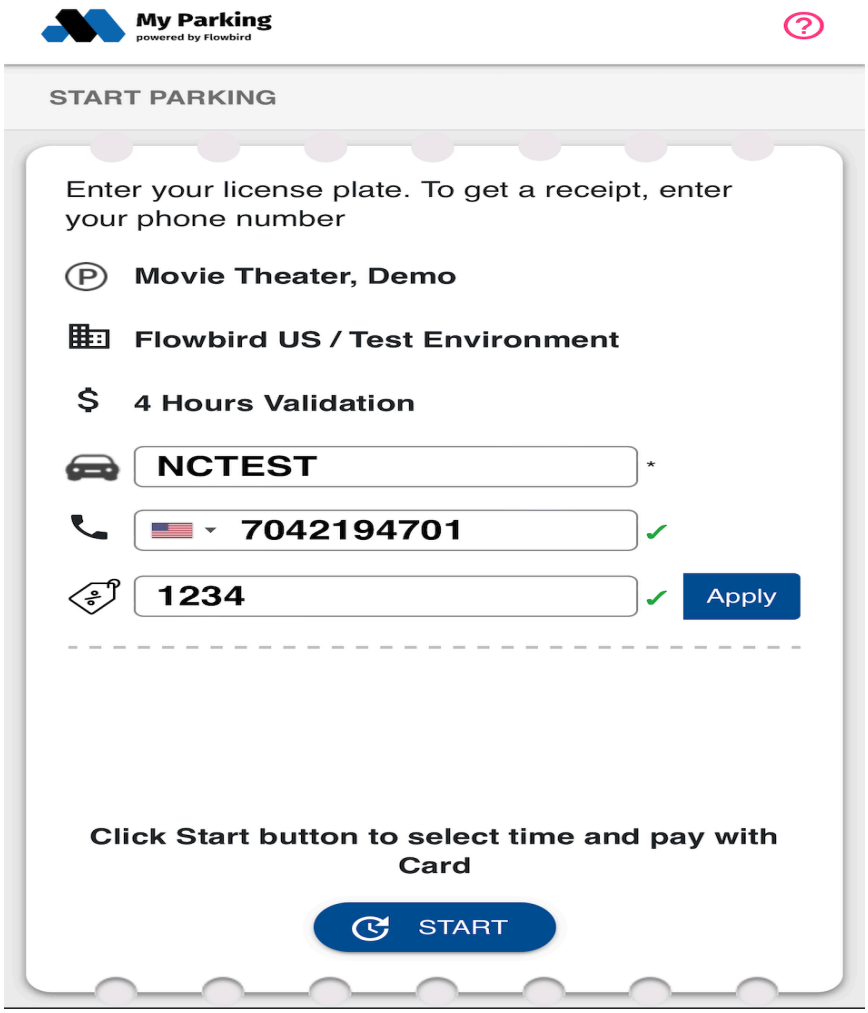
***Anthony Brown – Back-Office Manager***

Anthony joined Flowbird in 2011 and attended Georgia Southern University and Savannah State University. He has 20 years of experience in back-office system configuration and customer service. In his current role, Anthony is responsible for the initial setup of client systems, including configuring the back office, integrating with third-party systems, and setting up credit card accounts.

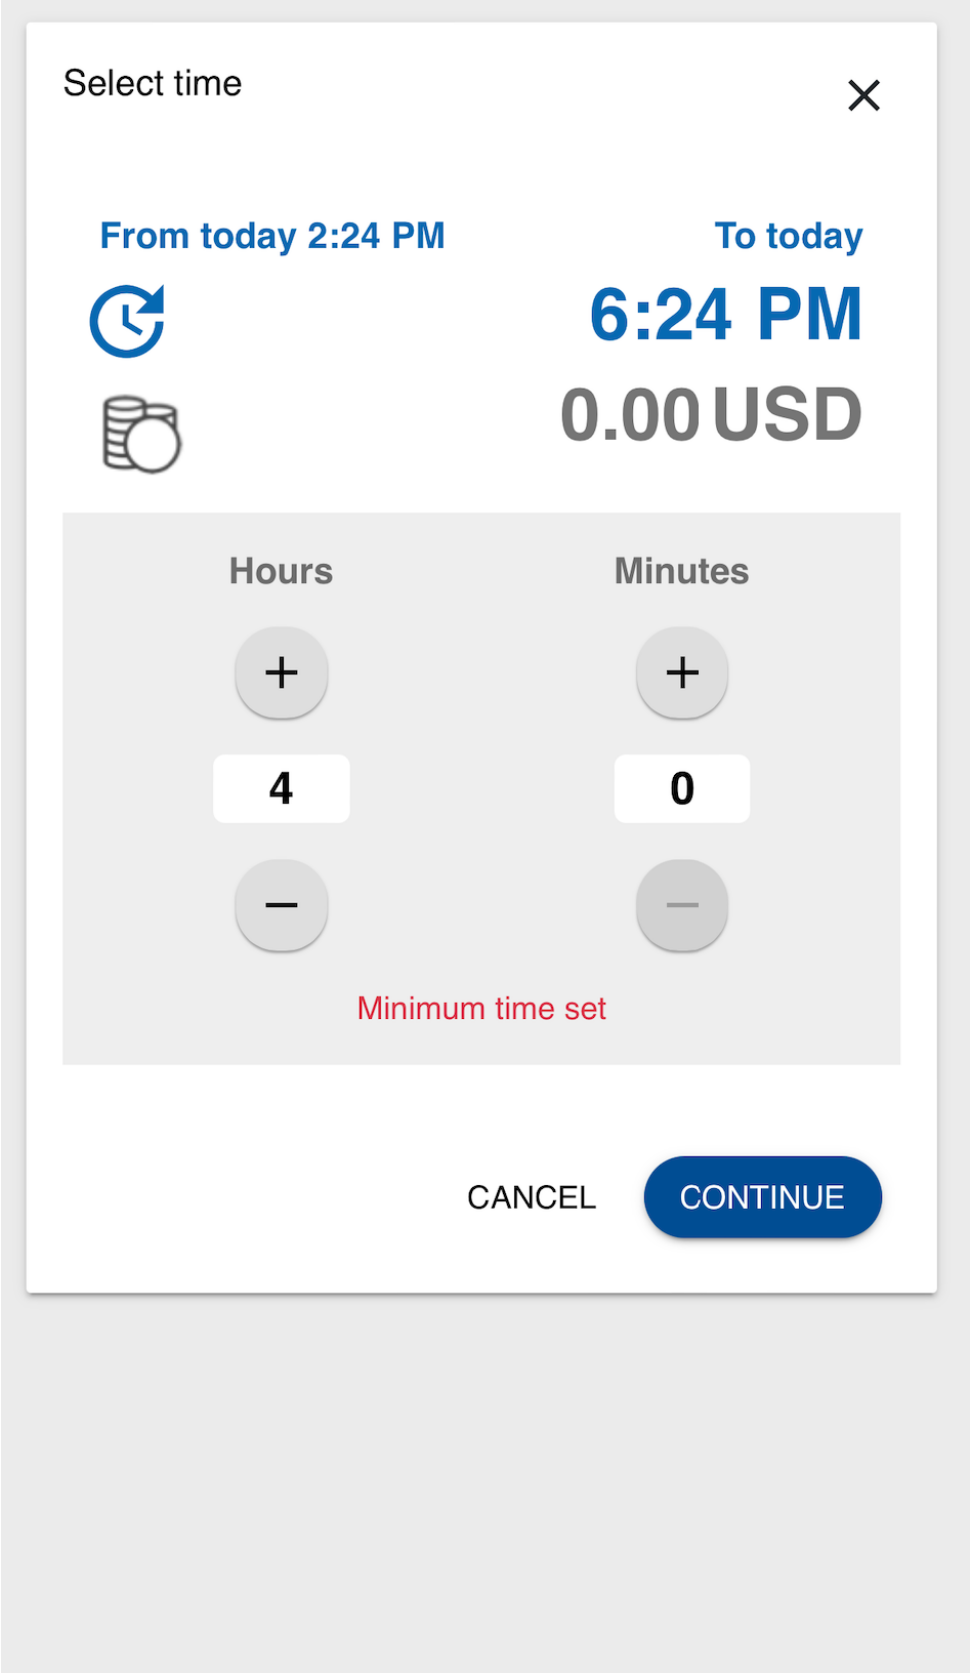


Anthony works with Flowbird clients of all sizes (over 400), providing training and guidance on all aspects of the Flowbird back-office system, including running specific reports and managing online parking validation programs. For this project, Anthony will work directly with ASC staff to configure the back-office to simplify reporting and ensure your team members are trained on all back-office functions.

5) Please explain in detail how you intend to implement validations as requested in the RFP, especially for the theater?
**Response:** Flowbird offers Numeric code merchant discount validations. The customer can use the APP or the MSM Kiosk to key in the discount when paying for parking. Theatre patrons will receive a code at the event or prior to arriving. Once they key their license plate then have the opportunity to apply the validation code. However, Flowbird and Ensight believes that the best solution for the Theater Validation is to utilize Flowbird's Text to Pay solution.



Flowbird set up a quick demo to test this out, you can either text Val4HR to our short code text number 727563 and you should receive the following response. Below the instructions in each screen.



Then, once you click on the link, you should see the following.

6) Please explain in detail what you plan to provide for a Citation Management System and how you intend to implement the integration with the City's DataTicket handhelds, as requested in the RFP and described in the Specifications.
**Response:** Flowbird does not integrate with DataTicket handhelds, but it works with other partners nationwide. We are suggesting Park Loyalty as the Citation enforcement component of our proposal. You can find more information about Park Loyalty in the attached brochure, and the pricing for the Park Loyalty Solution is provided in the pricing spreadsheet.

7) Please explain how your proposed solution will support permit parkers using license plate based virtual permits.
**Response:** Flowbird is offering its customer-facing Permit Portal for parkers to register and input their license plates. Through the integration, Ensight will receive the database of permit parkers. When the plate is read, the software will scan the vehicle's license plate and notify Flowbird that the permit is in the garage. The software will then update its plate inventory listing, confirming that the permit is in the garage and the license plate is valid.

8) Please explain the details and availability schedule of the Parker Technology intercom being integrated right into the Flowbird MSM and confirm if you included or did not include the Parker monthly and per call fees into your proposal pricing.
**Response:** Flowbird plans to integrate with Parker for this project and includes integration costs. During discussions with Parker for the bid response, they mentioned that they are currently under contract with the City of South Tahoe and would transfer the service to our hardware. The monthly Parker fees and integration costs are included in the pricing.

9) Please explain how you plan to integrate with a City-selected pay-by-cell provider such as ParkMobile or PaybyPhone.
**Response:** Flowbird already has integrations with Parkmobile and PaybyPhone. We receive the plate numbers paid, so they are removed from the Flowbird software back-office license plate non-payment report.

10) What are the credit card transaction clearing fees and any other transaction-related fees, assuming that the City of South Lake Tahoe is the Merchant of Record? For Flowbird to be
**Response:** If Flowbird is **not** the merchant on record, unlimited credit card fees are $6.00 a month on top of the quoted Back-office connectivity fee. The City of South Tahoe requested pricing per transaction for Flowbird to be the Merchant on Record (MOR) for the city. The cost per credit card transaction would be **3.15% plus a $0.30**. This would be deducted as a line item from the credit card revenue and sent to the City of Tahoe on a customized schedule based on the city's need.

11) You included an "allowance" for static informational signs into your proposal. How do you plan to develop the content for these and get them made?

**Response:** Content to be coordinated with the City regarding design, style and verbiage. Working with Flow Bird, who has thousands of deployments, between them and the city, the signage will be designed.

EnSight has Signage partners that can print the static signage once it is approved. We use two sign companies that are less than two miles from our office.

12) Why are you requiring 120V sign power? 12-24VDC may be more desirable in this use case.
**Response:** The base signs can be low voltage. The optional VMS displays must be 120v.

13) Why are Item #16 and Item #20 set to $0 in the Price Proposal Form? Why is there an extra "optional" charge on Line #30 for the Flowbird Permit Portal Permit parker support? Permit parker support is a base requirement of the RFP.
**Response:** Item #16 is included as part Flowbird's back-office software and is included in the monthly SaaS fee in line item #28.
**Response:** Item #20 – Flowbird included an integration cost for the enforcement units. With Flowbird now using its own solution, we have revised the proposal to include integration cost for the Park Loyalty handhelds and citation enforcement solution.
**Response:** This was meant for internal discussion if there was another one that was preferred by Ensight. Our intention is to provide our Permit Portal and the cost provided for set up and the additional monthly fee would apply.

14) Please provide more details on your project schedule – preferably in GANTT Chart form – and also include critical items such as preparation of detailed submittals to support the Installer, information on lead times of digital signs with custom paint color, etc.

**Response:** Estimated project schedule attached.

15) Please explain in detail the scope, approach, and staffing of your service and support offerings during warranty and post-warranty. The proposal wording seems to exclude on-site support/service and labor costs for service/support.
    a. Do you provide **on-site** service with the response times and service levels specified in the RFP, including all labor, materials, and repair parts?

    **Response:** Pricing updated to include labor and materials. Pricing does not include replacement of parts damaged by third parties or vandalism.

    b. Which company(ies) will the on-site service people come from?
    **Response:** Both Flowbird and Ensight. Ensight will take the lead on handling the service call process.
    c. Does your remote help desk provide 24x7 access to technical professionals who can assist with troubleshooting and problem determination remotely? Does this help desk available by both phone and web/email?
    **Response:** Flowbird's support desk is available 24/7 via phone(877-362-6330), email (us.support@flowbird.group) and web (Flowbird.group).
    d. Does Ensight coordinate all service/support work as the central party regardless of which underlying product vendor(s) a specific issue is with?
    **Response:** EnSight will be the main POC for system-related issues. We, too, have a 24/7 help desk. We are working with Flowbird on a way to streamline communication on issues through a central request for service. So, if the issue is related to the flow bird technology, EnSight would have visibility, but the requests by

the client will get directed to the appropriate support group for troubleshooting to avoid the telephone game.

e. Do you have a support ticketing system and how does it work?
**Response:** Flowbird offers a 24/7 365 support ticketing system for the City of South Tahoe.

16) Discussion is needed on your Exception to the City's Insurance Requirements and what the cost would be if the City does not accept your umbrella policy and requires additional coverages.

**Response:** Per our discussions, the city is reducing the umbrella requirement to 5mil. The pollution insurance is required per the city. EnSight is getting an estimate on these changes to the policy and will send over once received.

17) Discussion is needed on your Exception to the City's LD requirements. The City cannot waive the LDs. Also, please note the following comments, which may address some of your stated concerns.
   a. The City is very unlikely to postpone the NTP date.
   b. The City has a history of prompt payment.
   c. Ensight is not penalized for delays caused solely by the Installer.

- **Response:** EnSight has reviewed this with our bid team and our board. EnSight is open to LDs under the following revision:
  - LDs are capped at 25% of the initial project price.
  - Daily LD limit of $150/day.

# Enforcement and Ticket Management Proposal

May 2024

Park Loyalty, Inc.

This document contains private and protected information, ideas, know-how, and processes that are the sole property of Park Loyalty, Inc. and its affiliates and shall not be duplicated, used, or disclosed – in whole or in part—for any purpose other than to evaluate this proposal.

# Executive Summary

Park Loyalty is a highly qualified firm and has experience serving the needs of parking management operations across the country. Most importantly, we understand the significance of having a program that is flexible and works for the benefit of City.

Our ability to take proven, currently deployed applications and modify them to this program's requirements greatly reduces the risk associated with program delivery. The platform needs to manage the customer interaction, customer journey, and empower City teams to manage the business rules of the platform with ease, while providing detailed program management metrics that allow operators to proactively management operations. On top of that, the platform must integrate with a multitude of ecosystem providers to harness its true value. Park Loyalty's SaaS solution is this system.

Park Loyalty's understanding of on-street parking enforcement, enforcement technology, ticket processing system, and digital permitting and best practices will help shape the design, implementation and management of the Violation Management Program Platform. Because of our extensive industry experience and partnerships, Park Loyalty helps private and municipal programs develop enforcement and ticket processing programs that align proven solutions, new technologies, and industry best practices.

The rich features of our handheld enforcement system are demonstrated by cities that use it to enforce parking regulations on a citywide basis. Most notably, the Philadelphia Parking Authority (one of the three largest US parking programs) implemented over 350 handhelds running our platform, with real-time permit and payment integrations, workforce allocations, GIS tracking and real-time analytics. The City issues nearly 2 million tickets annually and the handheld devices scan over 50,000 vehicle license plates each day.

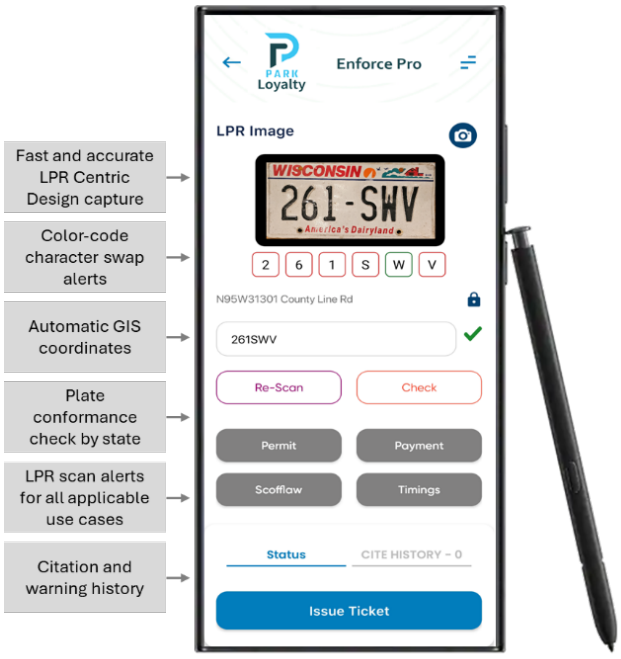
Our proposal includes the following technology and services:

- **Enforcement Platform:** Our enforcement platform focuses on offering solutions that improve the traditional model. We believe that enforcement solutions shouldn't be complicated, come with high upfront fees, or be difficult to manage. We focus on artificial intelligence, machine learning AI/ML tools and management software that provide metrics to manage enforcement, demand, and price fluctuation. Our turnkey enforcement solution takes a proven, deployed application and modifies it to your program's requirements which, greatly reduces the risk and costs associated with program delivery.
- **Ticket Processing Platform:** The back-office system is designed to handle reports and process tickets. The platform has a built-in rules engine, ticket escalation module and notification module to help manage the tickets. Powered by its multiple dashboards, the platform allows for stakeholders to efficiently manage the issuance, processing and motorist's notices and appeals.
- **Mobile-Compatible Payment Site**: A customer website that is optimized so customers can easily make payments on various mobile devices like smartphones and tablets.

Our technologies and deep experience will bring the City a violation Platform with national experience and the resources to deliver an innovative program. Some of the customers we have served in recent years include:

| | | |
|---|---|---|
| **Philadelphia, Pennsylvania, USA** | **Contract Term** | Current Contract – 2022 - ongoing (Subcontractor) |
| | **Current Contract Value** | $2.3 million |
| | **Software Used** | Enforcement Platform |
| **Parking Management Program Overview** | In 2022, the Philadelphia Parking Authority implemented the parking enforcement software on 350 handheld devices to support the City's Parking Management Program. Nearly 2,000,000 tickets are issued in Philadelphia each year.<br><br>Tickets and all associated photos are communicated from handheld software to the backend ticket processing system in real-time. The handhelds are integrated with pay-by-plate paystations, the city's ParkMobile mobile payment, numerous plate-based permit files, and the towing system for automated dispatch & tracking.<br><br>The Philadelphia Parking Authority is an Accredited Parking Organization™ as determined by the International Parking and Mobility Institute for organizations that have achieved a comprehensive standard of excellence by deploying best practices in responsible parking management and operations, customer service, professional development, safety & security. | |

| | | |
|---|---|---|
| **City of Folly Beach, SC** | **Contract Term** | Current Contract –ongoing (Subcontractor) |
| | **Current Contract Value** | $300,000 |
| | **Software Used** | Enforcement Platform, Processing Platform, Payment platform and Appeals |
| **Parking Management Program Overview** | The City of Folly Beach implemented the parking enforcement software support the City's parking management program. The City of Vallejo issues 25,000 tickets each year.<br><br>We designed the program to issue tickets, enforce regulations, adjudicate tickets and fees, accept payments, manage customers, generate reports, and a customer facing mobile and portal. | |



| | | |
|---|---|---|
| **Chattanooga, TN**   | **Contract Term** | Current Contract – 2023 - ongoing (Subcontractor) |
| | **Current Contract Value** | $180,000.00 |
| | **Software Used** | Enforcement Platform |
| **Parking Management Program Overview** | In 2023, the City of Chattanooga, TN is implementing the parking enforcement software on 12 handheld devices to support the City's parking management program. On average, 80,000 tickets are issued in Chattanooga each year. | |

# Enforce Pro: Enforcement Platform

Our turnkey implementation for enforcement, for Smart Parking Program, takes a proven, deployed application and modifies it to your program's requirements which greatly reduces the risk and costs associated with program delivery.

Our unique solution removes the complexity of integration with various systems via an API first approach. Our microservices based solution architecture and its ability to integrate with various systems ensures the data integrity during the enforcement process. Through this architecture, we have eliminated the cost associated with 3rd party integration and we pass these benefits to our customers. There are no costs associated with any of the 3rd party integrations.

Our proposal includes the following technology and services enhancements:

- Mobile LPR Scan Engine: PEOs can simply scan a license plate and evaluate the visual cues in the App to enforce. The engine does all the heavy lifting behind the scenes to generate the visual ques' by checking with payment, permits, exempt list, scofflaw list, stolen, warning, historical tickets and timing/mark records.
- Mobile Ticket Issuance App: The smart ticket form and issuance engine, minimizes fat fingering issues and ensures data integrity via just in time checks with all integrated systems. The vehicles can easily be cited or marked/timed ("chalked"). The issuance App ensures the address is auto populated by GPS in all forms, the scanned images are automatically attached to each ticket and uploaded, and the make, model and color are automatically loaded when available in the system.
- Rules Based Engine to Administer Enforcement App and System Easily
    - Configuration Engine: Build your enforcement ticket layout quickly using our intuitive drag and drop mechanism.
    - Data management layout to quickly and efficiently update rules for enforcement.
- Integration Engine
    - Time Limit Marking Engine: Complete sharing of "digital chalks" across all vehicles (like Vigilant) and manual marks by officers.
    - A built-in engine to integrate with multiple Pay by cell systems, meter payment system, LPR vehicles, permit system and processing systems.
    - Automatic Boot and Tow notifications based on LPR scan hit

- Automatic API or file-based exports to processing and collection system.

- Dashboard and Reporting system
  - Multiple dashboards to view productivity, operations, officer activity, revenues, utilization and integrations
  - Officer summary and productivity reports
  - Ticket reports to manages operations
  - Location base reporting (GIS reports) at the specific address, zone or block level
  - Analytical and Advanced productivity reports
  - Anomaly reporting to detect errors quickly

## Key Components

Our enforcement solution has five major components:

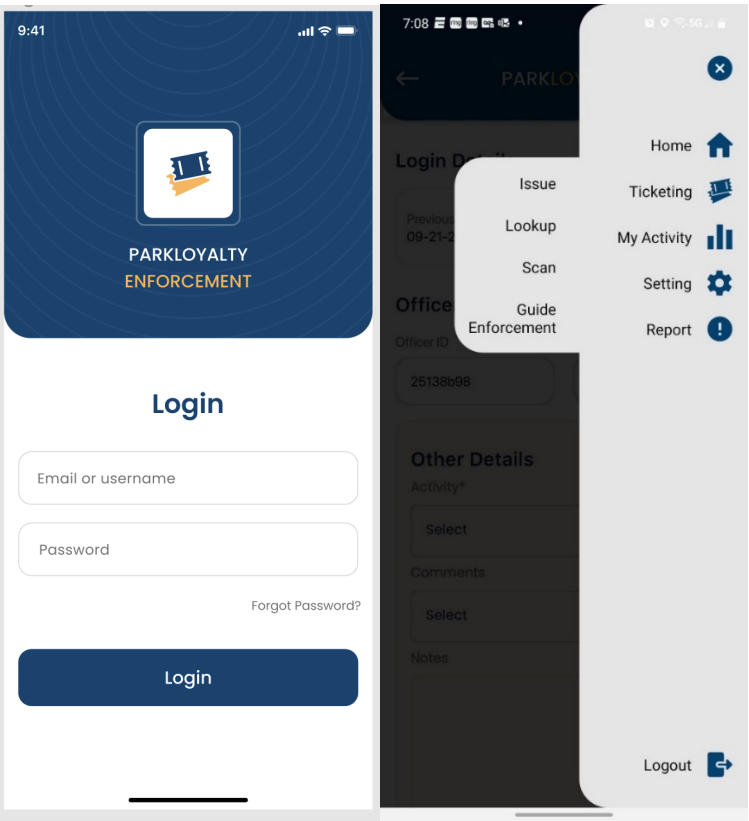
- Enforcement Hardware – Customer's choice of android handheld devices, printers and wireless service.
- Enforcement App – Android based App that transforms an enforcement program into a data driven, AI/ML (Artificial intelligence/ Machine learning) based program, centered on data integrity, productivity, accountability and efficiency.
- Dashboards and Reporting– Management tools and analytics to offer a coherent, data-driven enforcement program.
- System Administration – Complete control over the ticket form layout, data and rules for enforcement.
- Integrations - Brings a wealth of real-time information to the fingertips of PEOs.

## White labeling

As an extension of your operation, the enforcement app is branded based on customer preference. Customer logos, styling, and branding can easily be incorporated for that custom feel.

## Integrations

The enforcement solution comes with a pre-existing integration interface with a host of vendors such as:



- Meters: Flowbird (Parkeon & Cale), and T2
- Mobile Pay: Get my parking, PaybyPhone, Parkmobile, Passport, and Text2Pay, LAZGo, ACE SpACE
- Permits: ParkLync, Duncan Solutions, Flowbird, T2, and Parkmobile
- Court systems: Axiom and BS&A
- LPR: Genetec, Vigilant, Indect, and Risetek

In addition to our existing integration points, we are continually adding ecosystem partner, helping "future proof" in case the City decides to change vendors at any point.

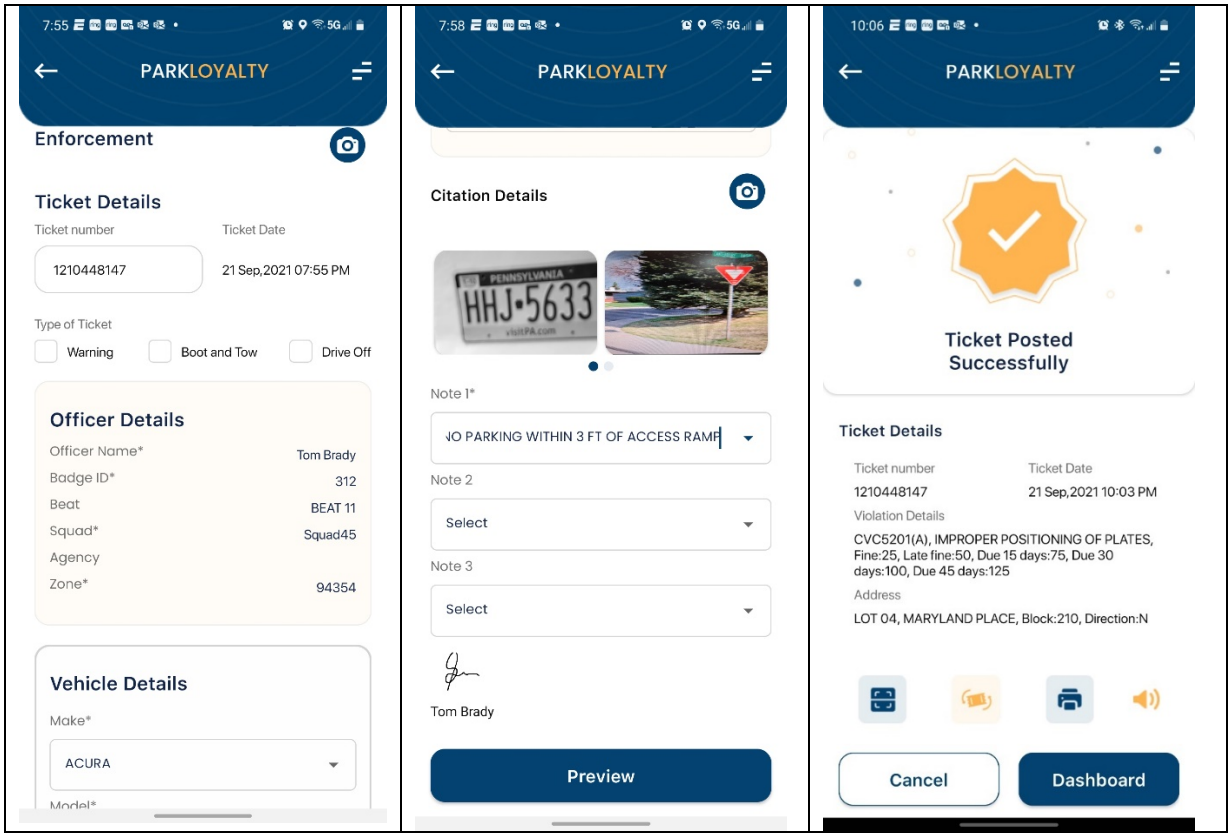
## Integration Partners

## Navigation

The enforcement app is designed using material design concepts introduced by Google. The material design concepts allow for intuitive and easy navigation, dramatically limiting the amount of training required for Parking Enforcement staff to learn the tools. All PEOs have unique credentials to login.

## LPR Engine

Holding efficiency and automation paramount, we have taken an LPR centric approach to enforcement. PEOs simply scan all plates via a manual mode or directed enforcement mode and follow visual cues in the app to enforce. Once a plate is scanned, our powerful LPR engine captures the image and reads the plate number in a fraction of a second and automatically compares it against payment data, permit data, timing records, stolen list, scofflaw list, and exempt list, which drives a color-coded parking enforcement officer experience. Red implies enforce, grey implies no records in the system, and green implies ignore. These visual clues are immediately intuitive for users (PEOs) of all technical skill levels. The below image outlines a typical LPR scan view.

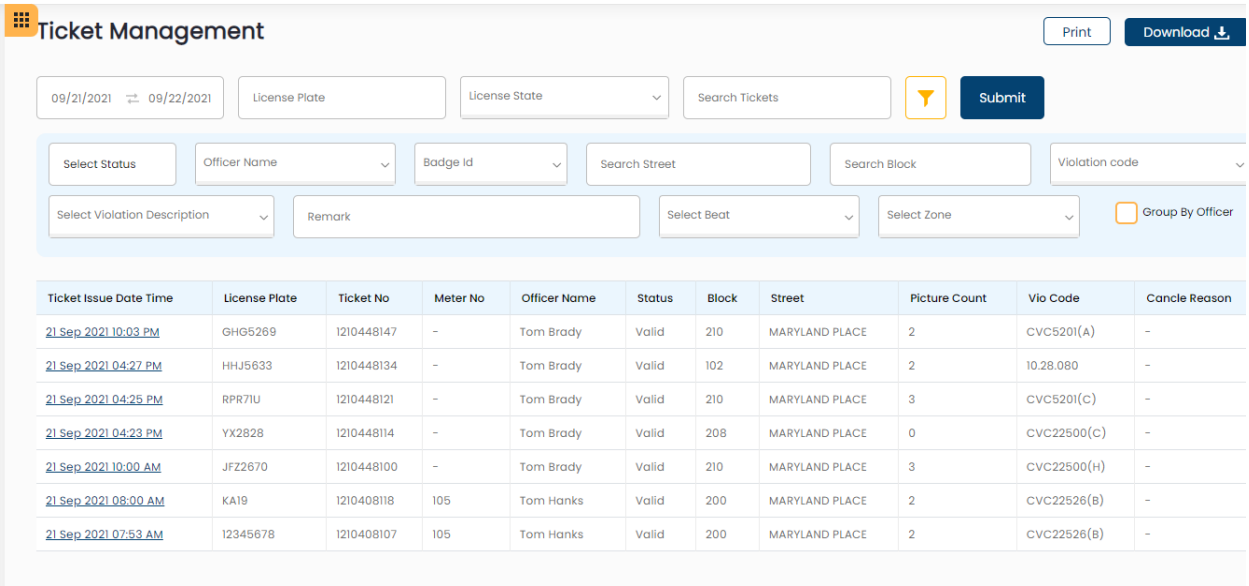


The LPR Scan view also

- Captures the GIS coordinates of scan location, reverse geo codes the coordinates to auto populate and capture the address/location information.
- Matches the pattern of the plate number against the typical pattern of the state license plate numbers.
- Provides options to rescan the plate or edit and check the plate again.
- User AI/ML to load make, model and color of the license plate.
- Optionally, look at the warning and ticket history.

## Ticket/Ticketing Smart Form

Once issued, tickets, and photos are instantly uploaded and viewable via web browser within seconds. Photos, notes, and remarks are all stored as part of the record.



## Just in Time Check

If a payment button is not lit up in green and once PEOs completed filling out the ticket details and attempt to issue the ticket, a just in time check is done against the source databases for payment and permits to see if a payment came in. If a valid payment is found, the officer is prevented from issuing a ticket. PEOs can cancel, reprint and reissue a ticket as needed once the ticket is printed. Reissue will allow officers to retain all the ticket data from the previous ticket except for violations. PEOs can simply select the violation and issue more tickets via the reissue process.

# Process Pro: Violation Processing Platform

The Ticket Management Report provides a list of all tickets issued during a user specified time period, and can be filtered by several parameters including, officer, zones, address, violation code, license plate, and remarks.

| Ticket Issue Date Time | License Plate | Ticket No | Meter No | Officer Name | Status | Block | Street | Picture Count | Vio Code | Cancle Reason |
|---|---|---|---|---|---|---|---|---|---|---|
| 21 Sep 2021 10:03 PM | GHG5269 | 1210448147 | - | Tom Brady | Valid | 210 | MARYLAND PLACE | 2 | CVC5201(A) | - |

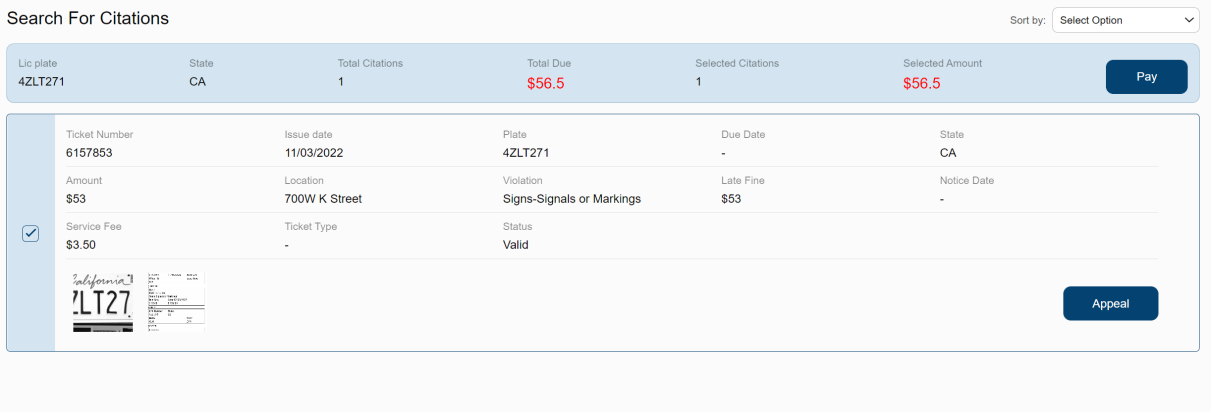
## Customer Account Website



If awarded, Park Loyalty will implement a customer account management function that can be accessed by logging into our secure site. Customers that want to establish an account simply provide an email address, phone number, vehicle license plate number and other user information. We then create and maintain an account that lists the customer's current ticket status.

Motorists can inquire and pay using a payment portal. A custom branded portal will be provided to the City and configured to its business rules and motorist will have the option to inquire about all tickets related to a license plate using a ticket number or license plate and state. The payment portal allows for payments using various card types. Users can pay tickets with credit cards or debit cards securely from the site. If the system accepts the payment, it provides an authorization number, and allows the user to print the confirmation page for their records. If the customer provides an email address, the confirmation can be sent by email, as well. All online payments and adjustments or corrections are processed, applied, recorded, and managed.

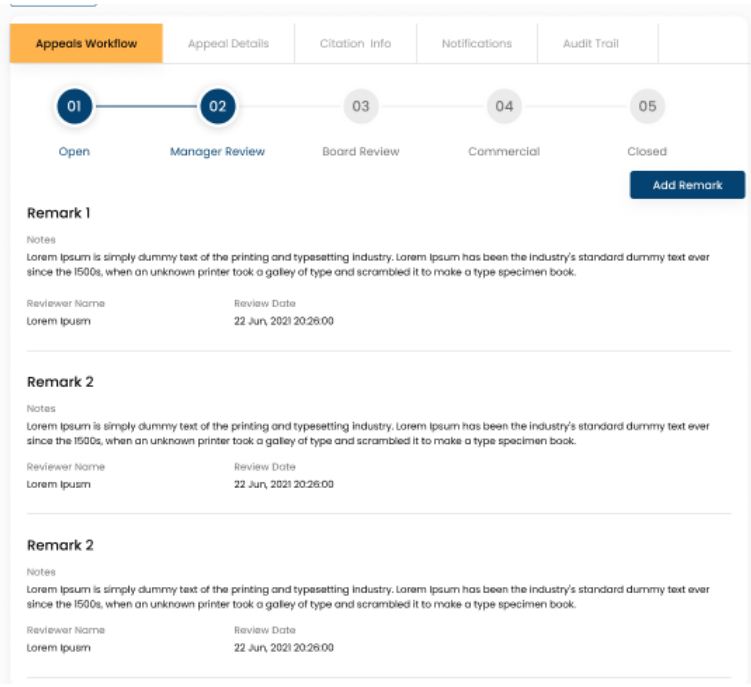
The payment is completed using a few easy steps where the user is navigated through the process.

***Search, select, and pay***

## File an Appeal

Motorists can search for the ticket on the web portal and once a ticket is found, and is eligible for appeal, they click on the appeal button. If the ticket is not eligible for appeal, a text outlining why it is not eligible for the appeal is outlined.

The motorist fills out the reason for appeal, personal information and uploads the required documents. (option needs to be provided in the UI), signs the appeal and submits.



Once submitted, a confirmation receipt is emails to the motorist along with a mail notice appeal is sent to user. Once a notice is created all changes to the appeal are logged in an audit trail which will allow City administrators to review the actions.

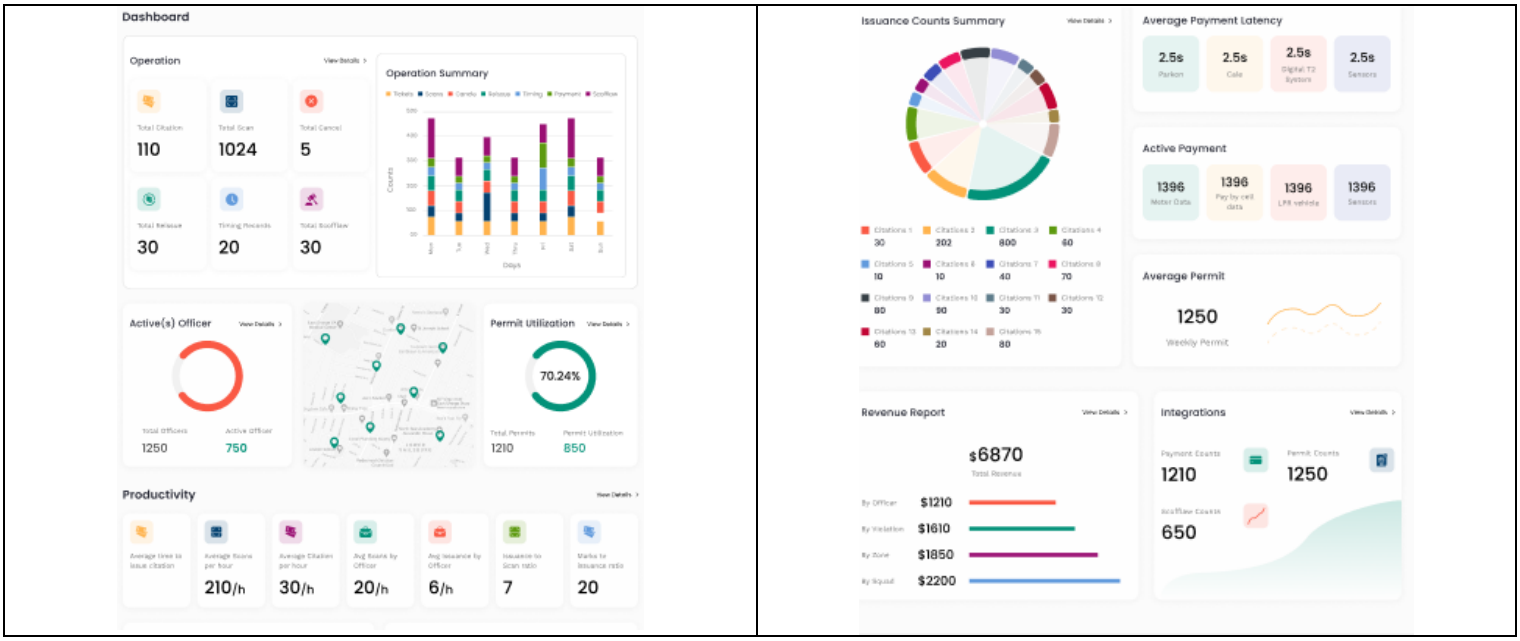
## Managing an Appeal

The ticket management portal provides option for managing appeals through a formal review and appeal process is an essential function of an effective municipal parking program.

The web portal includes an integrated appeal review and hearings schedule module. The ticket processing portal is designed to capture and record the required information for each level in the appeals process at each level. The Appeal workflow is dynamic and is defined based on customer business rules. The appeal processing is transited from one state to another based on the review.

The ticket is automatically suspending the ticket from processing pending completion of the appeal review, administrative hearing, and/or decisions and outcomes.

Once an appeal is filed all support required to handle appeal review and hearing requests is provided by the ticket management portal. The portal has built in support for indexing of the scanned contestation document images to the appropriate tickets.



The portal allows for documenting all mail-in appeals and hearing requests and correspondence into the portal to kick off the workflow. The appeals portal is supported by a comprehensive daily, weekly, monthly and on-demand reporting.

## Dashboards and Reporting

Our parking enforcement solution provides a wide variety of dashboards and reports design to track, monitor, and manage the enforcement operations efficiently. These reports ensure PEOs, supervisors, and administrators have up-to-the-minute program information at their fingertips. We designed our enforcement handhelds to capture various data points to create multiple dashboard and reports. This includes aggregating data around ticket issuance rates, license plate scans, office activity, officer routes, images, timing records, permit utilization rate, and scofflaw hit rate among others.

Each of these activities are easy to analyze through either our management dashboards or web-based reporting suite. The backend system provides the following dashboards: Summary dashboard, Operations dashboard, Productivity dashboard, Utilization dashboard, Revenue dashboard, Integration's dashboard

Summary Dashboard (*example*)

FLOWBIRD
Urban
Intelligence

# CWT Multi-Use Kiosk

## INCREASE CUSTOMER SATISFACTION AND IMPROVE YOUR UPTIME

- Perfect for **unattended payment acceptance** at the curb, off-street, or in a parks setting
- Large **touch screen display** guides users step by step through the transaction
- So **many ways to pay** – cash, credit/debit cards (mag stripe, EMV, contactless/NFC), digital wallets (Apple Pay, Google Pay, Samsung Pay)
- Keep your customers in compliance with text receipt and **Extend by Text**
- Manage the curb with **remote rate and message changes**
- Accessible design meeting **ADA requirements**

# CWT Touch Multi-Use Kiosk

**Power:**
Solar (with optional 4-way rotating solar panel) or AC Power

**Communications:**
4G LTE, Ethernet, or Satellite

**Touch Screen Interface:**
9.7" tablet-sized color touch screen reinforced with a 6mm-thick tempered guard glass. Displays videos, animated pictures, text, maps and dynamic menus to guide the user in real time.

**Payment Options:**

- Motorized coin selector: 14 different coins or tokens
- 4 way bill acceptance
- Credit/debit card acceptance: EMV, PA-DSS, P2PE certified card reader
- Contactless/NFC payments: Digital Wallets such as Apple Pay, Google Pay, Samsung Pay
- Extend payments by text
- Validation codes acceptance
- Secure PCI-DSS payment platform

**Graphical thermal printer** - Paper or self-adhesive tickets

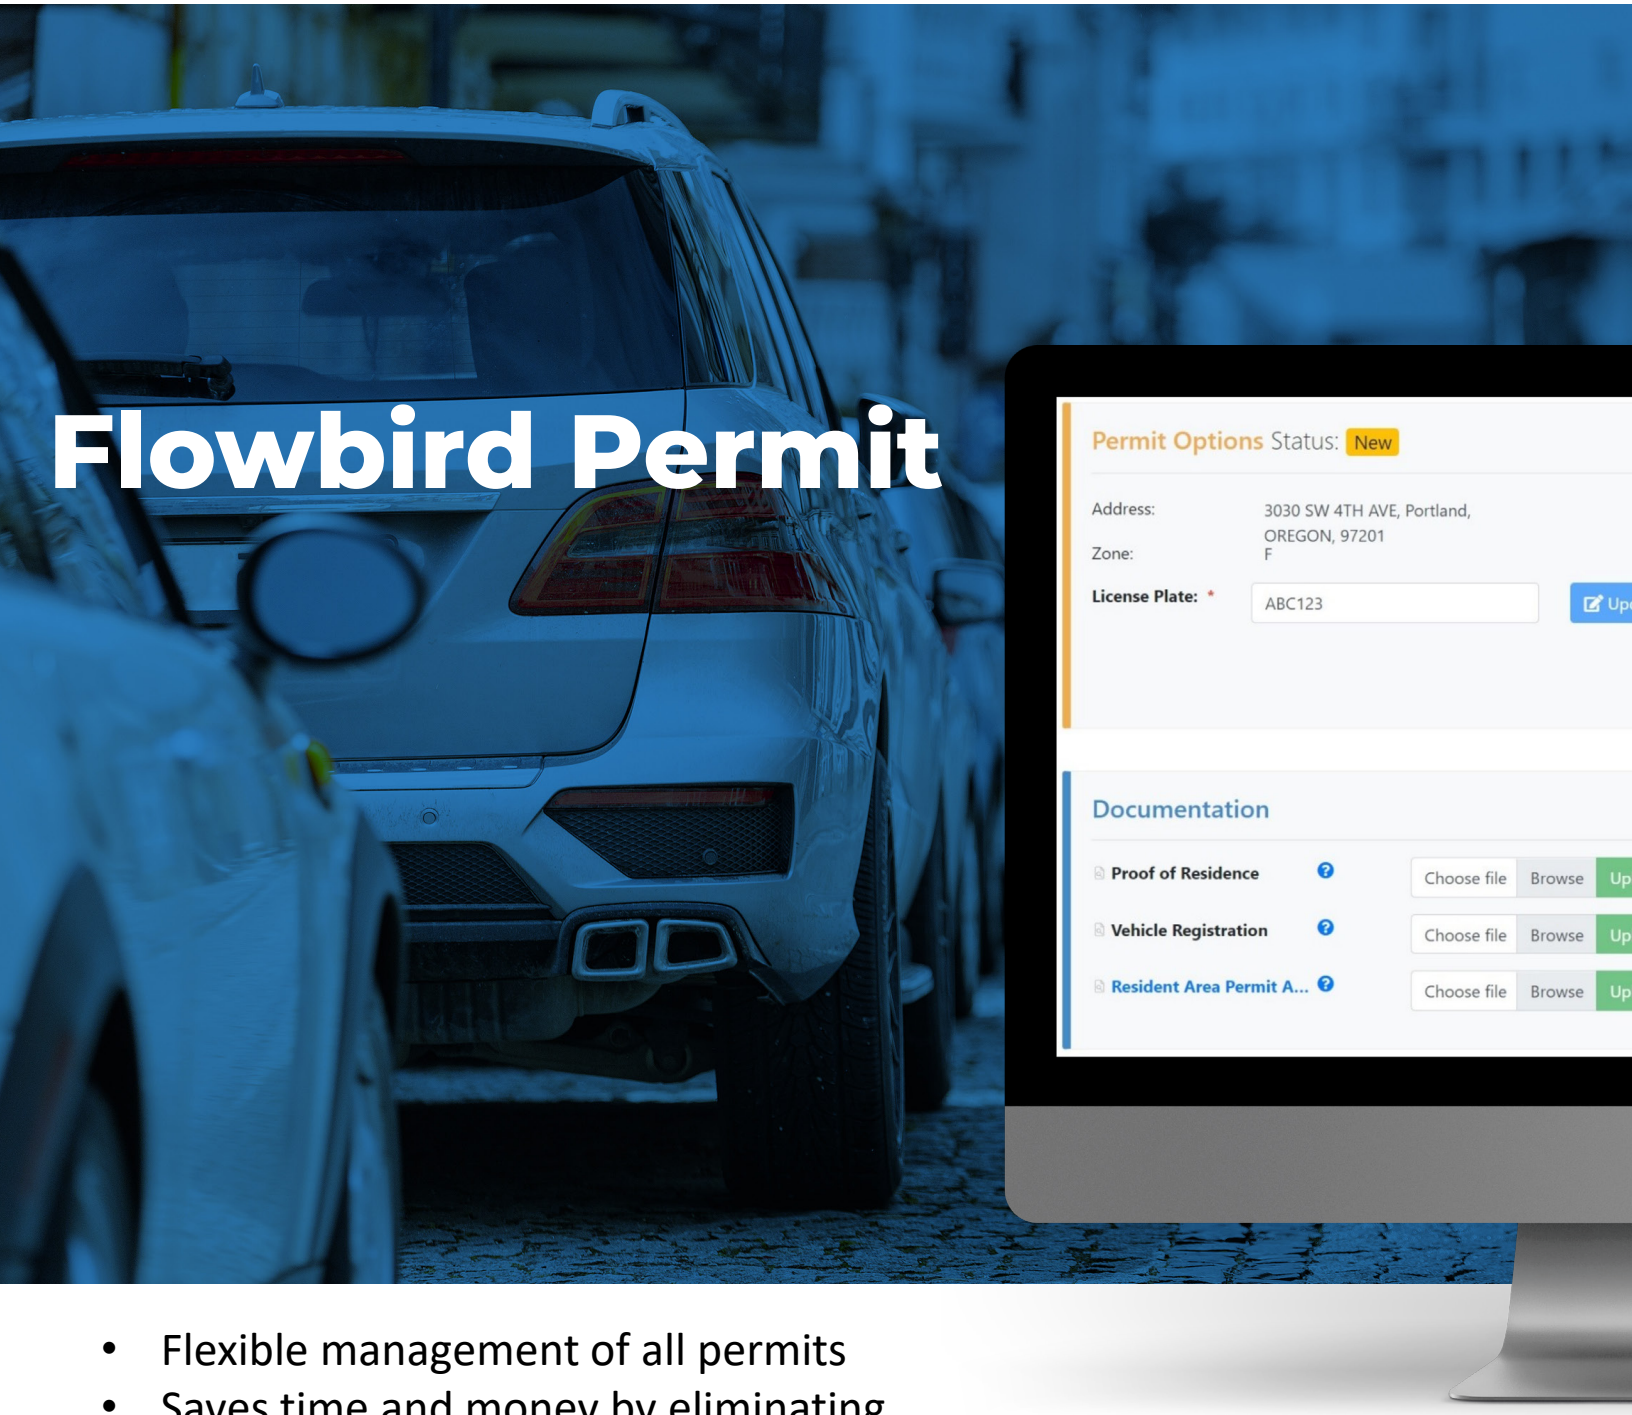
- Without BNA option: 6,500 tickets capacity
- With BNA option: 4,500 tickets capacity
- Text receipt option (touch screen model only)

**Secure collection vault**

- Mobile cash box collection
- Mechanical or electronic locks
- Vault capacity
    - Non BNA option: 3,000 quarters
    - BNA option: 3,000 quarters, 1,000 bank notes

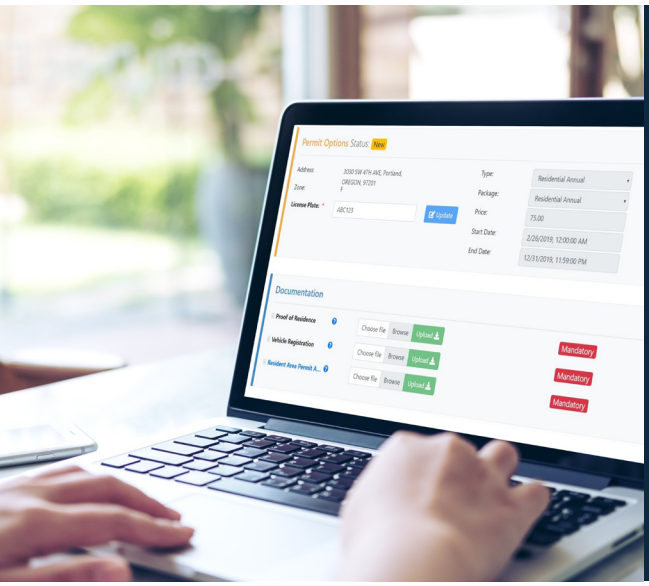
**Other Attributes:**

**Material:** Anti-corrosive stainless steel



**Dimensions:** 58" x 16" x 13.5 (w/antenna)"

**Temperature/Humidity:** -22 degrees F° to 131 degrees F° up to 95% relative humidity at 131 degrees F°



**Cabinet Colors:** Full custom color options

FLOWBIRD

# Flowbird Permit

- Flexible management of all permits
- Saves time and money by eliminating stickers and hang tags
- Online portal branded for your agency
- Real-time updates

Flowbird Permit is a web based parking solution that simplifies the management of all types of parking permits. Our fast, flexible, and customizable solution has a wide range of applications with full control over revenue and statistics.

## A Wide Range of Permits

| | | | |
|---|---|---|---|
| Daily | Annual | Resident | Employees |
| Monthly | Student | Visitors | More! |

## Benefits for your agency

- No more stickers or hang tags to manage
- Web based reporting of all permit sales
- System allows for geo-fencing of permit holders & permits
- Verify permit holder documents online

## Benefits for your customers

- No delay in purchasing a permit - real time activation is available
- Payments can be made online
- Permit expiration notifications are sent by email
- Multiple plates can be added to an account
- Chat directly with the agency through the web portal

Flowbird Permit offers an agency branded web portal incorporating your logo and color scheme.

## Flowbird Permit can be accessed from several different devices including phones, desktops, tablets, etc.

# Pay-by-Text

## PARK AND PAY WITH JUST A TEXT!

The easy to use web-based solution that lets customers park their vehicles and conveniently pay via mobile phone.

- No account or app set-up required
- Generates additional revenues for your operation
- Compatible with both Pay-by-Plate and Pay-by-Space

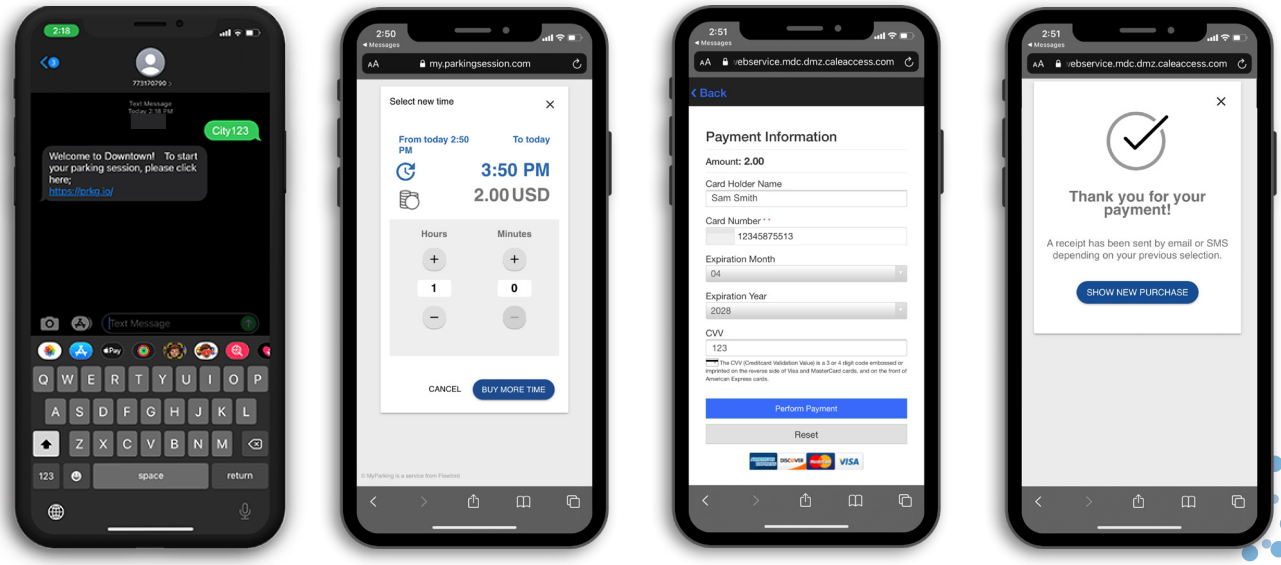
FLOWBIRD
Urban Intelligence

## WHAT IS PAY-BY-TEXT?

Pay-by-text is a fast and contactless parking solution for drivers to keep payment simple. With Pay-by-Text, you start by texting a code that directs you to a secure web page. Then, enter your plate and payment information, and you are on your way. No app download or kiosk required.

## BENEFITS FOR PARKING OPERATORS

- Stand alone service or offered together with your Flowbird meters
- Integrated with your Flowbird back-office and preferred enforcement solution
- Encourages higher rates of compliance
- Increases customer satisfaction
- Secure payment following PCI standards



## BENEFITS FOR END USERS

- Quick, convenient cashless parking
- Effortless parking transactions without downloading an app
- Provides an additional payment option to make parking simpler
- Text notification is provided prior to time expiration to help stay in compliance
- Allows customers to choose their preferred payment method

## HOW DOES IT WORK?

1. Text a code to the number provided on the sign or sticker displayed at the parking location
2. You will receive a text reply immediately. Follow the secure link to input your plate or parking space number.
3. Choose your length of stay.
4. Enter your payment information.
5. Your parking session is now started!

## Add-Alternate Items, PARCS and/or APGS

| ITEM # | | QUANTITY | UNIT PRICE | TOTAL PRICE | Optional Vendor Notes to Pricing |
|---|---|---|---|---|---|
| 77 | **[PARCS] Add-Alternate #1:** If City's existing DataTicket handhelds cannot be integrated, provide replacement units per Specification Section 2.1.A.15. State the complete cost including hardware, software, labor, materials, travel costs, delivery/shipping, configuration, commissioning, LAT/ODT testing, and sales tax. Include 2-year warranty and support in cost. | 3 | $13,900.00 | **$41,700.00** | This price is reflected in line 20. It includes the three hardware devices. Add this to project will have an increase in the sales tax at 8.75% |
| 78 | **[APGS] Add-Alternate #2:** Furnish and coordinate installation with separate Installer the DS-3 "Level 1 Full" Sign as described in APGS Specifications and Drawings. State the complete cost including ready to mount sign, mounting legs or other mounting assemblies, installation labor, materials, travel costs, coordination, commissioning, and LAT/ODT testing. Include 2-year warranty, freight, and applicable sales tax in cost. | 1 | $7,750.00 | **$7,750.00** | |
| 79 | **[APGS} Add-Alternate #3:** Upgrade signs DS-1 and DS-3 to full-color, full-matrix LED signs, per Specification. State the complete cost including hardware, software, delivery/shipping, labor, materials, travel costs, configuration, commissioning, LAT/ODT testing, and sales tax. Include 2-year warranty and support in cost. | 1 | $0.00 | **$0.00** | Option declined |
| 80 | **[PARCS and/or APGS] Add-Alternate #4:** If available, offer alternate pricing for an optional "Hardware-as-a-Service" (HaaS) offering under which Owner does not purchase the PARCS/APGS hardware but rather pays for the right the use the hardware on an annual fee basis. The pricing of this option is to explain clearly how the HaaS offering changes the pricing approach. **Do not include the pricing in the cells at right.** Instead, submit a complete explanation on the Vendor Use sheet of the pricing approach and how it will change the first 2 years' and subsequent years' pricing. | 1 | | | **[Insert detailed explanation on Vendor Use Sheet.)** |
| 81 | **TOTAL Add-Alternate Items** | | | **$49,450.00** | |
| **82** | **TWO-YEAR TOTAL, ALL ITEMS, INCLUDING ADD-ALTERNATE ITEMS** | | | **$286,391.06** | |

**Extended Hardware Maintenance and Software Support Contract, for Add-Alternate Items only, for Years 3-7.**

# City of South Lake Tahoe

**Agenda Item Executive Summary**

Joe Irvin, City Manager

**Meeting Date:** June 18, 2024
**Agenda Item #:**18

**Agenda Item:** Tourist Core Area Plan/Specific Plan Amendments and Adoption of Initial Study/Negative Declaration

**Executive Summary:** The Tourist Core Area Plan (TCAP) is one of the Cityâ€™s two area plans and was originally adopted in 2013. Although the TCAP has been amended previously, it is due for an update to bring the plan in line with the Cityâ€™s current strategic goals, new state laws, TRPA Regional Plan goals, and to provide an opportunity to increase housing options in the area plan. These amendments are an opportunity to achieve goals in three main categories, which staff has identified as needing improvement: increasing housing opportunities, activating town centers, and increasing transportation and circulation opportunities.

**Requested Action / Suggested Motions:** Pass a Resolution (1) Adopting the Tourist Core Area Plan/Specific Plan Amendments and the Initial Study/Negative Declaration, and (2) making additional findings.

**Responsible Staff Member:** John Hitchcock, Planning Manager

**Reviewed and Approved By:** Zachary Thomas, Director of Development Services Susan Blankenship, City Clerk Olga Tikhomirova, Director of Finance Heather Stroud, City Attorney Joseph D. Irvin, City Manager

**Attachments:**

# City of South Lake Tahoe
Report to **City Council**

**Meeting Date:** June 18, 2024

**Title:** Tourist Core Area Plan/Specific Plan Amendments Adoption

**Location:** Citywide

**Responsible Staff Member:** John Hitchcock, Planning Manager

**Background:** The Tourist Core Area Plan (TCAP) is one of the City's two area plans and was originally adopted in 2013. Although the TCAP has been amended previously, it is due for an update to bring the plan in line with the City's current strategic goals, new state laws, TRPA Regional Plan goals and provide an opportunity to increase housing options in the area plan.

Located adjacent to the Nevada and California Stateline, the Tourist Core area is the center of tourist services and recreation access and has traditionally been the area with the highest concentration of commercial and tourist services and active pedestrian streetscapes. The area has seen numerous improvements as a result of redevelopment activities (e.g., Zalanta, Desolation Hotel) and continues to be a priority area for improving and upgrading the built environment.

The Tourist Core Area Plan, adopted by City Council on October 15, 2013, established a policy framework and provides land guidance that focuses on achieving redevelopment and re-investment opportunities in the plan area. The plan aims to enhance the built environment with high-quality development, improve transportation options and the circulation network, increase access to recreation opportunities, and promote a mix of land uses.

These amendments are an opportunity to achieve goals in three main categories which staff has identified as needing improvement: increasing housing opportunities, activating town centers, and increasing transportation and circulation opportunities.

The amendment process began January 2023 when the City notified TRPA of the intent to amend the area plan. Public outreach began in February 2023 with a stakeholder workshop with business owners, property owners, design professionals, and regional agency representatives in attendance. Later that month staff presented high level amendment concepts and goals to Planning Commission, receiving feedback from commissioners and the public. In May a similar presentation was brought to City Council. Throughout this process staff has coordinated with the City Housing Division on an inclusionary housing ordinance that may be applied to developments in the Tourist Core.

Likewise, City staff participated in the Tahoe Living Working Group to provide input on upcoming TRPA code amendments surrounding coverage, height, and density for housing developments.

**Issue and Discussion:** The City Council will be presented with the final amendments to the Tourist Core Aera Plan/Specific Plan and the associated environmental analysis conducted pursuant to the California Environmental Quality Act (CEAQ) and TRPA. Below are summaries of the major changes to the plan. The drafts contain original text with underlines and struckthrough changes based on input form the public and direction from City Council and Planning Commission.

*No Net Loss of Housing*

Recently there has been a trend of duplex and triplex properties being converted to single-family dwellings, then obtaining vacation home rental (VHR) permits, resulting in a loss of housing in the Town Center. Mitigation measures have been proposed to prohibit a reduction in housing density with redevelopment projects and any resulting single-family dwelling (including condominiums) would be restricted from obtaining a VHR permit so that long term housing is maintained. In addition, any units not rebuilt one site would be required to be developed elsewhere within the area plan boundary so that there is no net loss of housing.

*Height*

In support of increasing housing opportunities, the maximum height in the Tourist Center Mixed-Use District is increased to 65 feet from 56 feet. The increase in height will facilitate the development of high-density housing.

*Density*

Feedback regarding implementing a minimum density has been overwhelmingly positive. Initially proposed as 8 units per acre, this standard is now proposed to be 12 units per acre. Certain mixed-use projects have been exempted from the minimum density standard so as to not interfere with their feasibility and create a barrier to development and property investment.

The maximum density has been increased to 65 in the Town Center. Recent TRPA Code of Ordinance changes have been included, allowing 100% deed restricted housing to exceed this maximum.

The amendments also clarify that the density for a mixed-use project is the maximum allowed by use type regardless of the mix of uses.

*Commercial Parking*

Flexibility has been given to commercial users to reduce their parking by right when located within a half-mile of a transit stop, with further reductions should the project incorporate alternative transportation measures.

In recognition of uses' unique demands and seasonality, options have been included for additional parking when specific findings are met.

*Residential Parking*

One parking space shall be permitted per residential unit, with the option for a 20 percent reduction if a deed restriction is placed on the property, making the property owner responsible for parking management.

*Connectivity/Mobility*

Policy T-4.5 has been added to promote the development of enhanced or additional mobility hub facilities to complement any future mobility hub in the Tourist Core area. In addition to several other new policies promoting connectivity and increased mobility options, Policy LU-1.12 has been included to enhance the pedestrian connections between the Tourist Core and the Lakeside Marina area.

*Bicycle Parking*

Bicycle parking standards are now based on use rather than number of vehicle parking spaces. Minor modifications have been made to the location standards to allow flexibility for uses adjacent to bike paths or routes.

*Green Building Program*

Additional third-party certification programs have been included, and the program has been simplified. Incentives may be offered at the discretion of the decision-making authority rather than by levels as was the prior program structure. Staff acknowledges that recent updates to the 2022 California Building Code and the pending adoption of the City's Reach Code have weakened the significance of the original Green Building Incentive Program but believes recognition should be given to those who go above and beyond to have a project certified.

*Outdoor Dining*

Staff is proposing exempting the first 20 outdoor dining seats from obtaining CFA. Based on the California Building Code, 20 nonfixed seats require a minimum area of 300 square feet; however, different configurations of outdoor dining may require more than 300 square feet of CFA be exempted to accommodate 20 seats.

**Planning Commission:** On May 16, 2024, the proposed amendments were presented at a duly noticed Planning Commission meeting. The Planning Commission received a presentation from staff, received public comment, and deliberated. The Planning Commission passed Resolution 2024-013 recommending the City Council adopt the Tourist Core Area Plan/Specific Plan Amendments and the Initial Study/Negative Declaration with the following modifications:

1. Modify the outdoor seating/dining standard to allow up to 20 seats or 300 square feet, whichever is less, to be exempt from an allocation of commercial floor area.
2. Modify the bicycle parking standard to be consistent with the TVAP Area Plan standard.
3. Add the option for applicants to provide a parking analysis so that a reduction in parking requirements may be considered.
4. Reduce the residential open space requirement for high-density projects;
5. Expand policy language to amplify efforts around fixed route transportation and other transit alternatives; and
6. Modify the build-to-line standards so that a modification may be waived when a single finding is made.

**Financial Implications:** There are no financial costs associated with the the adoption on the Tourist Core Area Plan Amendments. However, the amendments are intended to enhance the development potential within the area which may result in financial benefits to the City.

**Environmental Considerations:** Pursuant to the California Environmental Quality Act of 1970, Cal. Pub. Res. Code §21000 et seq., potential environmental impacts of the proposed amendments have been evaluated in an Initial Study/Initial Environmental Checklist (IS/IEC). An IS is a preliminary environmental analysis that is used by the lead agency as a basis for determining whether an Environmental Impact Report (EIR), a Mitigated Negative Declaration (MND), or a Negative Declaration is required for a project under California Environmental Quality Act (CEQA) guidelines. This IS is tiered from the City of South Lake Tahoe 2010 General Plan EIR and the 2015 Tahoe Valley Area Plan IS/IEC in accordance with Sections 15152 and 15168 of the CEQA Guidelines and Public Resources Code Section 21094.

This document also serves as an IEC/FONSE prepared pursuant to the requirements of Article VI of the Tahoe Regional Planning Agency (TRPA) Rules of Procedure and Chapter 3 of TRPA's Code of Ordinances. TRPA serves as lead agency pursuant to its own regulations.

The IS determined that there are no impacts, or all impacts are less than significant. The plan and amendments are designed to self-mitigate through standards such as building design to maintain aesthetic appeal and limitations on construction activity to prevent offensive noise.

Staff will continue to independently evaluate each project that is proposed in the Tourist Core plan area for potentially significant environmental impacts.

The IS/IES was circulated from April 11, 2024, until May 10, 2024. As of the writing of this staff report, no comments have been received on the environmental analysis.

**Policy Implications:**

*General Plan*

Updating the City's area plans is consistent with General Plan Goal LU-2, to focus future commercial, multi-family residential, tourist, civic, and social gathering space development in community plan areas in order to maximize incentives and create transit, bicycle, and pedestrian-oriented places that serve the needs of both residents and visitors. Policies under this General Plan goal that are specific to the TCAP include:

Policy LU-2.2: The City shall periodically update and implement the four Community Plans as a way to focus development commodities and revitalization efforts.

Policy LU-2.4: The City shall reinforce the Stateline/Ski Run Community Plan area s the primary visitor and tourist district in South Lake Tahoe.

Policy LU-2.9: The City shall define two Nodes, one at the Tahoe Valley Y Intersection and the other at Stateline and make them a focus of future development and revitalization efforts in the City. To this end, the City shall work with the Tahoe Regional Planning Agency to encourage allocations of development commodities (e.g., Commercial Floor Area, Residential Units of Use) to these areas.

Policy LU-2.10: The City, in coordination with the Tahoe Regional Planning Agency, shall encourage compact, mixed-use, transit-oriented, and higher-density development within the Stateline Node and Tahoe Valley Gateway District by providing the maximum incentives for these types of projects. Incentives should include an increase in allowed coverage, increased commercial floor area allocations, financing opportunities available through Redevelopment Plans, and exemptions from coverage limitations for affordable and moderate-income housing.

Policy LU-2.12: The City shall ensure that the Stateline Node will be an area in the city for tourist-serving commercial uses, Tourist Accommodation Units, workforce housing (e.g, housing affordable to local workers in all industries), and affordable housing. The City should work with property owners to transform the Node into a pedestrian center served by transit that connects community resources, visitor facilities, recreation, and Lake Tahoe.

Policy LU-2.13: The City shall create active and inviting social and economic centers in the two Nodes that include a variety of housing types, mixed-use development,

recreational or social gathering spaces, cultural uses, civic uses and facilities, and commercial services.

The amendments are also consistent with Land Use Policy LU-1.2 to create walkable, mixed-use centers that provide a range of housing opportunities and choices.

*Tourist Core Area Plan*

Amending the area plan is consistent with adopted goals and policies of the TCAP, including Land Use Policies LU-1.2, which promotes a mixed-use land use pattern that combines tourist accommodation, residential, commercial and public facilities, and LU-2.2 which promotes animated streets by allowing for outdoor dining and seating oriented towards the sidewalk.

Policy LU-2.12 –Stateline Node Purpose: The City shall ensure that the Stateline Node will be an area in the city for tourist serving commercial uses, Tourist Accommodation Units, workforce housing (e.g., housing affordable to local workers in all industries), and affordable housing. The City should work with property owners to transform the Node into a pedestrian center served by transit that connects community resources, visitor facilities, recreation, and Lake Tahoe.

# Resolution 2024-XXX

## Adopted by the City of South Lake Tahoe City Council

**June 18, 2024**

## Adopting the Tourist Core Area Plan/Specific Plan Amendments and the Initial Study/Negative Declaration

### BACKGROUND

A. Sections 65450-65457 of the California Government Code of the State of California allow cities to prepare specific plans (area plans) for systematic implementation of the general plan; and

B. Chapter 13 of the Tahoe Regional Planning Agency (TRPA) Code of Ordinances allows local jurisdictions to adopt area plans; and

C. The Tourist Core Area Plan/Specific Plan was adopted by the City Council of South Lake Tahoe on October 15, 2013, by Ordinance No. 1060, followed by adoption by TRPA on November 20, 2013; and

D. On January 11, 2023, the City of South Lake Tahoe issued a notice of intent to TRPA to amend the Tourist Core Area Plan/Specific Plan; and

E. The City solicited public input on the Tourist Core Area Plan/Specific Plan at four (4) public hearings and from stakeholder groups on two (2) occasions.

F. The adoption of amendments is consistent with City's General Plan, Housing Element, and TRPA's Regional Plan; and

G. Pursuant to the provisions of the California Environmental Quality Act, Public Resources Code Sections 21000 et seq. (''CEQA''), the State' s CEQA Guidelines, and California Code of Regulations, Title 14, Section 15000 et seq., the City of South Lake Tahoe determined that there is no substantial evidence that the adoption these amendments to the Tourist Core Area Plan/Specific Plan would result in a significant adverse effect on the environment. Accordingly, the Initial Study/ Negative Declaration prepared in conjunction with the adoption of the Tourist Core Area Plan.

H. A notice of the hearing was published in the Tahoe Daily Tribune on June 7, 2024.

I. The City of South Lake Tahoe Planning Commission conducted a public hearing, received public comments, considered evidence in the record, and deliberated.

J. The Planning Commission has reviewed the proposed amendments and directed the following changes:

1. Modify the outdoor seating/dining standard to allow up to 20 seats or 300 square feet, whichever is less, to be exempt from an allocation of commercial floor area.
2. Modify the bicycle parking standard to be consistent with the TVAP Area Plan standard.
3. Add the option for applicants to provide a parking analysis so that a reduction in parking requirements may be considered.
4. Reduce the residential open space requirement for high-density projects;
5. Expand policy language to amplify efforts around fixed route transportation and other transit alternatives.
6. Modify the build-to-line standards so that a modification may be waived when a single finding is made.

K. The Planning Commission has reviewed the proposed amendments and the Initial Study/ Negative Declaration and found the project, with directed changes, to be consistent with the City General Plan, and passed Resolution 2024-013, recommending the City Council adopt the Tourist Core Area Plan/Specific Plan Amendments and the Initial Study/Negative Declaration.

**BASED ON THE FACTS SET FORTH IN THE BACKGROUND, BE IT RESOLVED,** that the City Council of the City of South Lake Tahoe:

1. Finds that the Initial Study/ Negative Declaration reflects the City's independent judgment and analysis.
2. Finds that there is no substantial evidence that the proposed Tourist Core Area Plan/Specific Plan Amendments will have a significant effect on the environment.
3. Finds the foregoing recitals are true and correct and made part of this resolution.
4. Finds that the purpose of this resolution is to align the Tourist Core Area Plan with City intentions, TRPA Code, and recently adopted California law.
5. Passes a resolution adopting the Initial Study/ Negative Declaration and the Tahoe Valley Area Plan/Specific Plan Amendments as attached to this resolution as Exhibits 1, 2, and 3.

Adopted by the City of South Lake Tahoe Planning Commission on June 18, 2024, by the following vote:

Yes:
No:
Absent:
Abstain:

_____ Date:_____
Cody Bass, Mayor

Attest:

_____
Sue Blankenship, City Clerk

The presence of an electronic signature certifies that the foregoing is a true and correct copy as approved by the South Lake Tahoe City Council.

# 1.0 INTRODUCTION

## 1.1 INITIAL STUDY/INITIAL ENVIRONMENTAL CHECKLIST

This Initial Study/Initial Environmental Checklist (IS/EIC) has been prepared to address the potential environmental effects of amendments to the Tourist Core Area Plan in South Lake Tahoe, California. The proposed project is an update to the Tourist Core Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. The proposed amendments would expand the Area Plan boundary to incorporate two parcels (APNs 029-352-010 and 029-371-016) that front Pioneer Trail, both developed with existing tourist accommodation uses. The addition of these parcels as is intended to increase opportunity for redeveloping the sites (previously located in PAS 092). In addition to the boundary amendments, other changes to permissible land use, density, etc. are proposed as documented in Chapter 2.

An IS is a preliminary environmental analysis that is used by the lead agency as a basis for determining whether an EIR, a Mitigated Negative Declaration, or a Negative Declaration is required for a project under CEQA guidelines. An IEC is a preliminary environmental analysis that is used for determining whether an EIS, a Mitigated Finding of No Significant Effect, or a Finding of Significant Effect is required for a project under TRPA guidelines. The IS and the IEC contain a project description, description of environmental setting, identification of environmental effects by checklist or other similar form, explanation of environmental effects, discussion of mitigation for significant environmental effects, evaluation of the project's consistency with existing, applicable land use controls, and the name of persons who prepared the study.

This IS/ND has been prepared pursuant to the California Environmental Quality Act (CEQA) of 1970, Cal. Pub. Res. Code §2100 et seq. The CEQA lead agency for this project is the City of South Lake Tahoe.

This document also serves as an IEC/FONSE prepared pursuant to the requirements of Article VI of the TRPA Rules of Procedures and Chapter 3 of TRPA's Code of Ordinances. TRPA serves as lead agency pursuant to its own regulations.

The Tourist Core Area Plan was adopted in 2013 by the City of South Lake pursuant to Chapter 13 of the Tahoe Regional Planning Agency (TRPA) Code of Ordinances, which allows local governments to adopt conforming Area Plans that contain policies and development ordinances that are consistent with and further the goals and policies of the TRPA Regional Plan. Chapter 13 established a conformity process that:

- Allows local governments to adopt an Area Plan that supersedes TRPA plans and ordinances if the plan is found to be in conformance with the Regional Plan;
- Defines required content in an Area Plan that includes but is not limited to applicable policies, maps, ordinances and development and design standards; and
- Defines which development activities will not have a substantial effect on the natural resources in the Region and allows TRPA to transfer limited development permitting authority to local governments.

## 1.2 TIERING PROCESS

**CEQA**

The CEQA concept of "tiering" refers to the evaluation of general environmental matters in a broad program-level EIR, with subsequent focused environmental documents for individual projects that implement the program. This environmental document is specific to the 2023 updates of the Tourist Core Area Plan. This environmental document incorporates by reference the discussions in the 2010 General Plan EIR (the Program EIR) and and the 2013 Tourist Core Area Plan IS/IEC which was created for the area plan's initial adoption. CEQA and the CEQA Guidelines encourage the use of tiered environmental documents to reduce delays and excessive paperwork in the environmental review process. This is accomplished in tiered documents by eliminating repetitive analyses of issues that were adequately addressed in the Program EIR and by incorporating those analyses by reference.

Section 15168(d) of the State CEQA Guidelines provides for simplifying the preparation of environmental documents on individual parts of the program by incorporating by reference analyses and discussions that apply to the program as a whole. Where an EIR has been prepared or certified for a program or plan, the environmental review for a later activity consistent with the program or plan should be limited to effects that were not analyzed as significant in the prior EIR or that are susceptible to substantial reduction or avoidance (CEQA Guidelines Section 15152[d]).

This Initial Study is tiered from the City of South Lake Tahoe 2010 General Plan EIR and the 2013 Tourist Core Area Plan IS/IEC in accordance with Sections 15152 and 15168 of the CEQA Guidelines and Public Resources Code Section 21094. The 2010 General Plan EIR is a Program EIR that was prepared pursuant to Section 15168 of the CEQA Guidelines. The 2011 General Plan is a comprehensive land use plan that guides physical development within the City of South Lake Tahoe through 2030. The 2010 General Plan EIR analyzes full implementation of uses and physical development proposed under the 2011 General Plan, and it identifies measures to mitigate the significant adverse program-level and cumulative impacts associated with that growth. The Tourist Core Area Plan is an element of change that was anticipated in the 2011 General Plan and evaluated in the 2010 General Plan EIR. By tiering from the 2010 General Plan EIR, this Initial Study will rely on the 2010 General Plan EIR for the following aspects that have remained consistent through these amendments:

- a discussion of general background and setting information for environmental topic areas;
- overall growth-related issues;
- issues that were evaluated in sufficient detail in the 2010 General Plan EIR for which there is no significant new information or change in circumstances that would require further analysis; and
- assessment of cumulative impacts.

This Initial Study will evaluate the potential environmental impacts of the proposed changes to the Tourist Core Area Plan with respect to the 2010 General Plan EIR and 2013 Tourist Core Area Plan IS/IEC to determine what level of additional environmental review, if any, is appropriate. As shown in the Determination in Section 5.2 of this document, and based on the analysis contained in this Initial Study, it has been determined that the proposed amendments to the Tourist Core Area Plan would not have significant effects on the environment that were not adequately addressed in the 2010 General Plan EIR, 2013 Tourist Core Area Plan IS/IEC or cannot be mitigated to a level of insignificance; therefore, a Negative Declaration will be prepared.

This Initial Study concludes that that many potentially significant impacts are addressed by the measures that have been adopted as part of the approval of the 2011 General Plan and subsequent approval of the 2013 Tourist Core Area Plan. Therefore, those 2010 General Plan EIR mitigation measures and Area Plan IS/IEC mitigation measures will reduce the impacts to a less than significant level. Since these mitigation measures are already being carried out as part of implementation of the 2011 General Plan and 2013 Area Plan, they will not be readopted. The impact analysis herein assumes implementation of the 2011 General Plan and 2013 Area Plan for purposes of determining the significance of any impact. The benefits of these mitigation measures will be achieved independently of considering them as specific mitigation measures of this Tourist Core Area Plan. Nothing in this Initial Study in any way alters the obligations of the City to implement the General Plan mitigation measures. Additional environmental review may be necessary as specific development projects and improvements are proposed for construction if potentially significant impacts associated with the construction of those projects have not been adequately addressed in this document.

**TRPA**

The TRPA concept of "tiering" refers to the coverage of general matters in broader EISs (Program EIS) and subsequent narrow environmental documents incorporating by reference the general discussions and concentrating solely on the issues specific to the document subsequently prepared. Therefore, when an EIS has been certified for a project or matter, TRPA should limit the analysis on a later related or consistent project or matter to effects which were not examined as significant effects in the prior EIS or which are susceptible to substantial reduction or avoidance by revisions in the project or matter through conditions of approval or mitigation. Tiering is limited to situations where a later project or matter is consistent with a program, plan, policy or ordinance for which an EIS was prepared, is consistent with applicable TRPA plans, and a supplemental EIS is not required.This Initial Environmental Checklist is tiered from the TRPA 2012 Regional Plan Update ("RPU") Environmental Impact Statement ("EIS") and 2020 Linking Tahoe: Regional Transportation Plan and Sustainable Communities Strategy Initial Environmental Checklist and Mitigated Finding of No Significant Effect in accordance with Section 6.12 of the TRPA Rules of Procedure. The 2012 RPU EIS is a Program EIS that was prepared pursuant to Article VI of TRPA Rules of Procedure and Chapter 3 of the TRPA Code of Ordinances. The Regional Transportation Plan identifies a broad range of projects, programs, and strategies needed to comprehensively improve Tahoe's transportation system over the next 25 years. The 2012 RPU is a comprehensive land use plan that guides physical development within the Lake Tahoe Region through 2035. The 2012 RPU EIS analyzes full implementation of uses and physical development proposed under the 2012 RPU, and it identifies measures to mitigate the significant adverse program-level and cumulative impacts associated with that growth. The proposed project is an element of the growth that was anticipated in the 2012 RPU and evaluated in the 2012 RPU EIS. By tiering from the 2012 RPU EIS, this Initial Environmental Checklist will rely on the 2012 RPU EIS for the following:

- a discussion of general background and setting information for environmental topic areas;
- overall growth-related issues;
- issues that were evaluated in sufficient detail in the 2012 RPU EIS for which there is no significant new information or change in circumstances that would require further analysis; and
- assessment of cumulative impacts.

This Initial Environmental Checklist will evaluate the potential environmental impacts of the proposed project with respect to the 2012 RPU EIS to determine what level of additional environmental review, if any, is appropriate. As shown in the Determination in Section 5.3 of this document, and based on the analysis contained in this Initial Environmental Checklist, it has been determined that the proposed project

would not have a significant effects on the environment that were not previously addressed or adequately addressed in the 2012 RPU EIS, therefore, a Finding of Significant Effect will be prepared.

This Initial Environmental Checklist concludes that that many potentially significant project impacts are addressed by the measures that have been adopted as part of the approval of the 2012 RPU. Therefore, those 2012 RPU EIS mitigation measures that are related to, and may reduce the impacts of, this project will be identified in this Initial Environmental Checklist. Since these mitigation measures are already being carried out as part of implementation of the 2012 RPU, they will not be readopted, but rather are incorporated as part of the project and the impact analysis assumes implementation for purposes of determining the significance of any project impact. The benefits of these mitigation measures will be achieved independently of considering them as specific mitigation measures of this project. Nothing in this Initial Environmental Checklist in any way alters the obligations of the City to implement the RPU mitigation measures.

## 1.3 BACKGROUND

All of the land within the Lake Tahoe Basin falls under the jurisdiction of the Tahoe Regional Planning Agency. This includes land under the local jurisdiction of the City. In order to be responsive to the unique needs and opportunities of the Region and local communities, the TRPA Regional Plan encourages and authorizes local jurisdictions to develop and adopt individual Area Plans that provide more specific development objectives and standards that are adapted to the needs of the specified area. Local jurisdictions are permitted to develop, adopt, and implement regulations so long as they are consistent with TRPA' Regional Plan. The 2030 South Lake Tahoe General Plan is the City's primary policy document guiding land use, transportation, infrastructure, community design, environmental, and other decisions in a manner consistent with the planning statues for the State of California. The adopted Tourist Core Area Plan is designed to supplement the City's General Plan by designating zoning districts and providing specific guidance for the area included within the Area Plan boundaries. The development standards and the specific policies referenced in this Area Plan are the land use standards intended to administer and regulate the land use for the Tourist Core.

The 2013 Tourist Core Area Plan defines a vision for the future of the area of the City that has previously been guided by the Stateline/Ski Run Community Plan which was adopted in March 1994 by the City and the TRPA. This is an area of special attention in the Tahoe Basin for a number of reasons; it is the center of tourist services and recreation access, spanning the Nevada and California Stateline and has traditionally been the area with the highest concentration of services and density.

This Area Plan provides more detailed direction than the City of South Lake Tahoe's General Plan and TRPA's Regional Plan. It addresses land use regulations, development and design standards and environmental improvements for the area. It encourages general improvement and enhancement for the built environment. This Area Plan anticipates a framework that will allow the area to be re-cast, to change the existing conditions into opportunities for redevelopment with a focus on achieving on the ground environmental improvements consistent with the City's General Plan and environmental thresholds goals of the 2012 Regional Plan.

The Tourist Core is a tourist area land use plan that works to implement features of the TRPA's Regional Plan and the City's General Plan. It would provide management direction for all projects proposed within its boundaries. It is an integrated land use plan addressing physical design, redevelopment, commercial and tourist accommodation growth, traffic circulation, the environment and restoration, and public service. Th2 adopted 2013 plan established goals, policies and implementation strategies and programs. Elements of the Area Plan address land use, transportation, recreation, cultural and natural resources, public and quasi-

public facilities, and implementation. The Tourist Core is also designated by TRPA as a Town Center, a Regional Center and a receiving area for the transfer of development rights and existing units of use.

The process of amending the Tourist Core Area Plan was initiated in 2023 with City staff identifying areas out of date and in need of general improvements to reflect the City and State's evolving goals and new laws. The City provided TRPA with an Intent to Amend notice and a general project description on January 17, 2023. At this time staff had not yet begun to draft amendments, as stakeholder, Planning Commission, and City Council input were needed to inform the changes. Stakeholders representing a variety of interest groups in the Tourist Core were invited to a workshop on February 1, 2023, to discuss the potential list of updates. During the months of February 2023 through May 2023, hearings were held to receive input on the proposed updates before the Planning Commission (February 23, 2023), City Council (May 16, 2023), and TRPA Regional Plan Implementation Committee (May 24, 2023). Throughout this process, City and TRPA staff met bimonthly to discuss the potential area plan amendments as well as concurrent changes to TRPA Code of Ordinances that may affect the final list of necessary updates.

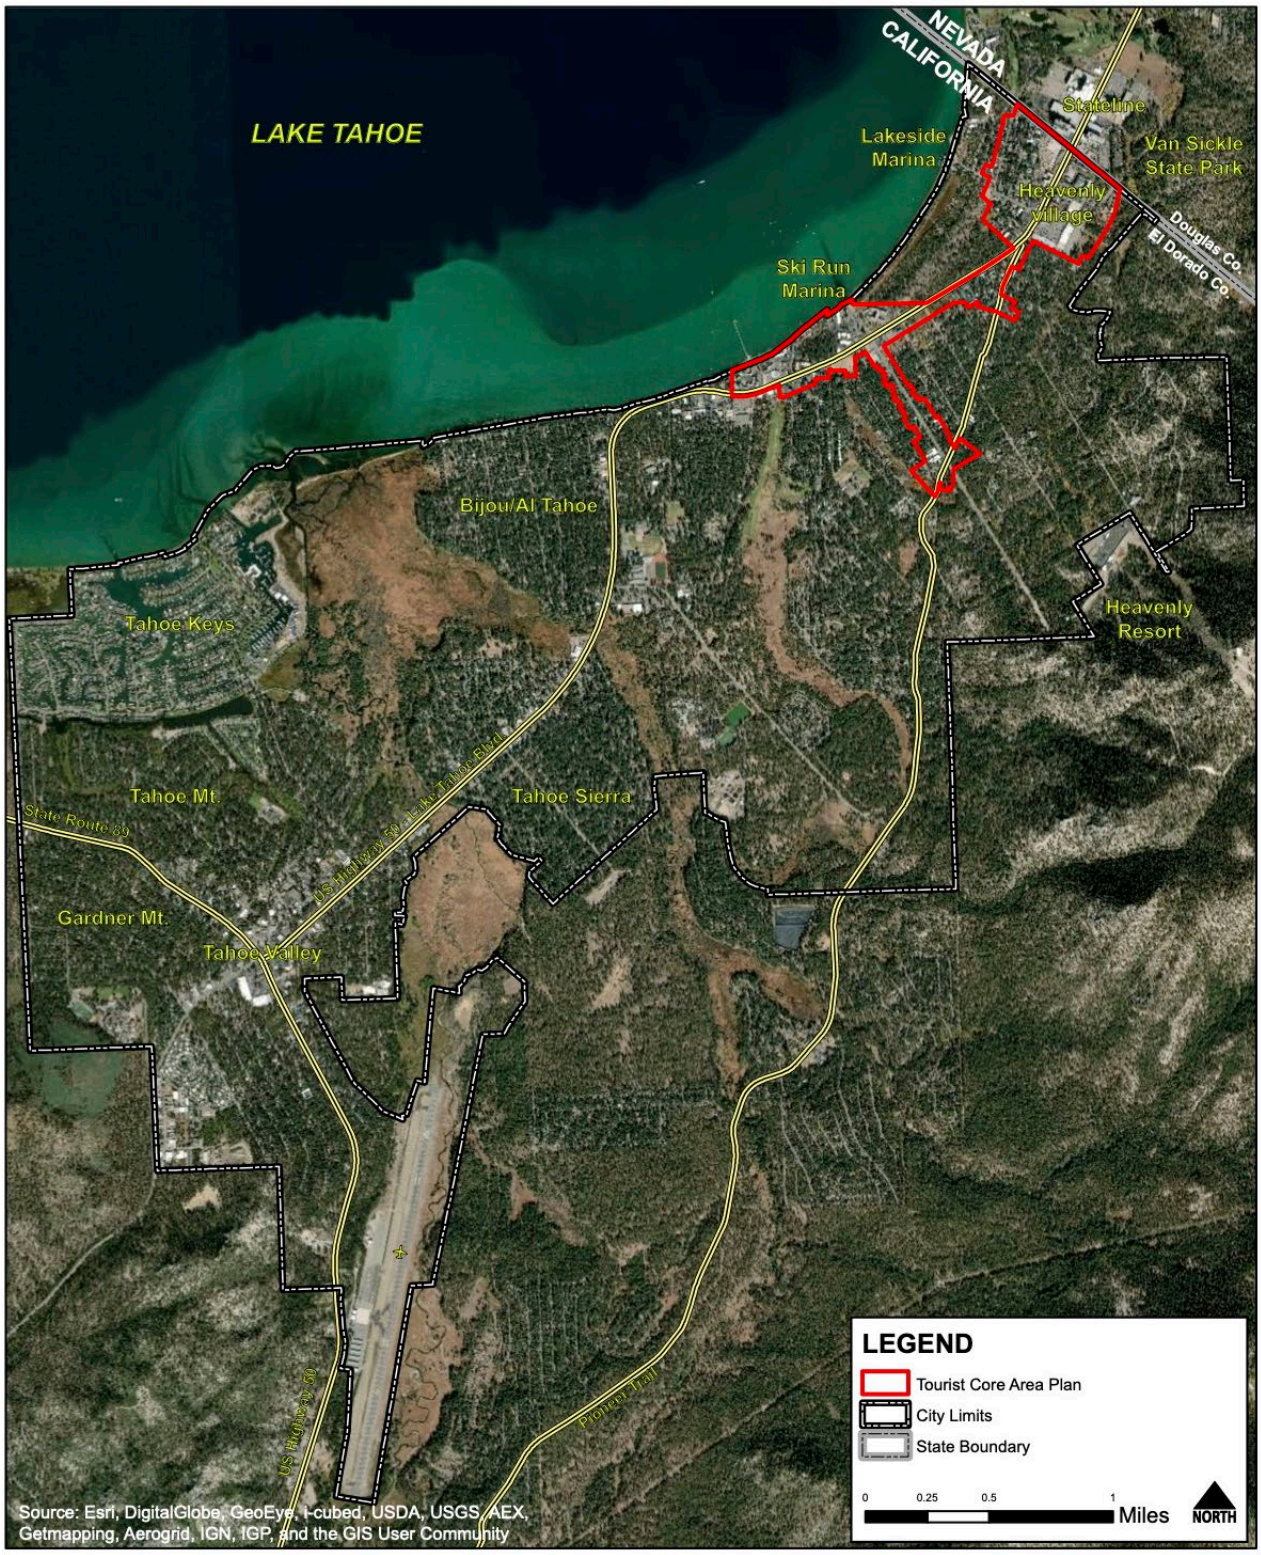
## 1.4 PROJECT LOCATION, SETTING AND SURROUNDING LAND USES

The Tourist Core is located within the City of South Lake Tahoe and is centered on US Highway 50 and Ski Run Boulevard from Fairway Avenue to the California and Nevada Stateline (see **Figure 1**). The Area Plan is approximately two miles along US Highway 50 extending from Fairway Drive to the California and Nevada Stateline and includes Ski Run Boulevard from US Highway 50 to Pioneer Trail. This area functions as the primary visitor and tourist district in the south shore of Lake Tahoe and provides direct access to recreation opportunities such as Heavenly Ski Resort, Edgewood Gold Course, Ski Run Marina, Lakeside Marina and Van Sickle Bi-State Park. The Area Plan is approximately 305 acres in size and the land use pattern varies, although the predominant theme of the land uses are tourist related, with a large number of motels, hotels, restaurants, and retail shops. The Area Plan Boundary shall be expanded to include two parcels fronting Pioneer Trail (APNs 029-352-010 and 029-371-016) located immediately south of its intersection with Moss Road (previously residential zoned PAS 092) (see **Figure 3**).

The Tourist Core has two major commercial/tourist centers: the area centered on Heavenly Village/Crescent V Shopping Center adjacent to the State line and the area centered on the intersection of US 50 and Ski Run Boulevard running from Ski Run Marina to Pioneer Trail. The Heavenly Village area is a mixed-use development that provides tourist accommodation, retail and restaurants set in a pedestrian and walkable environment. The Ski Run Boulevard area provides a more traditional commercial/tourist land use setting running the length of Ski Run Boulevard (see **Figure 2**).

These uses occupy structures ranging in height, age and physical conditions, from units built in the 50s and 60s to some of the newest buildings in the south shore and from single story structures to 6 to 8-story tourist accommodation facilities. Many of the newer structures are the result of the City of South Lake Tahoe Redevelopment Agency's partnership with private developers to implement the City's Redevelopment Plan. Redevelopment in the area include the construction of tourist, commercial and retail facilities, pedestrian and transit facilities, and water quality improvement in the late 1990's and early 2000s. Projects constructed include the Embassy Suites (now known as the Margaritaville Resort Lake Tahoe), Lake Tahoe Resorts, Heavenly Village, Heavenly Gondola, Stateline Transit Center, Crescent V Shopping Center and the Wildwood Basin Water Quality Improvement Project. In addition, the area has also experience private redevelopment efforts that include the redevelopment of the Ski Run Center, Valero Gas Station, Ski Run Marina Shops, Holiday Inn Express and Applebee's Restaurant.

**Figure 1 – Tourist Core Area Plan Location Map**



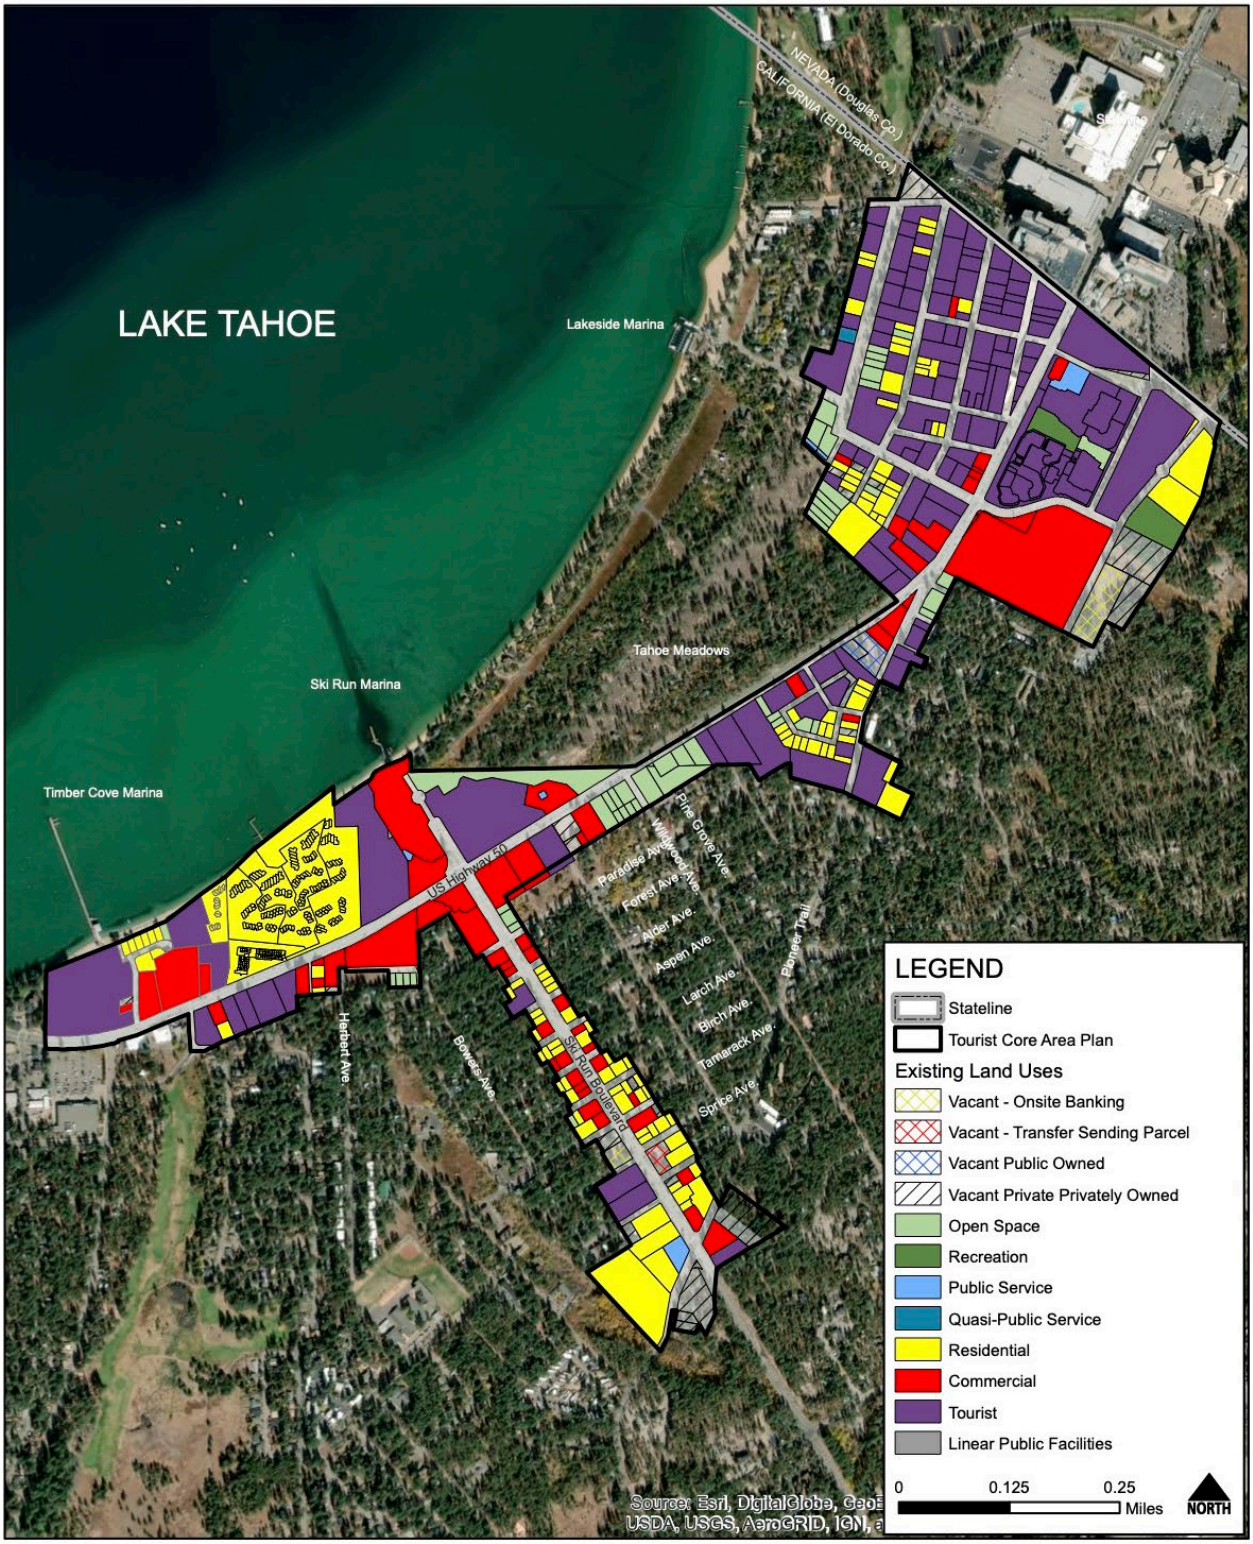


**Figure 2 – Tourist Core Area Plan Location Map**

Excluding the transportation routes, 66.1% of the parcels are developed, 9.8% remain vacant and the remaining 4.8% are dedicated to open space. Of the remaining 13 vacant parcels in the Tourist Core, 11 parcels are held in private ownership, 2 are publicly owned by the City of South Lake Tahoe.

The Tourist Core is bordered on the north by the Lake Tahoe, Ski Run Marina which provides a popular access point to beach recreation and boating opportunities and single family residential land uses. One notable residential area directly adjacent to the Tourist Core is Tahoe Meadows which is listed as a Historic District by TRPA and is listed on the National Registry of Historic Places. To the south the Tourist Core is bordered by a mixed multi-family and single family residential area and the Van Sickle Bi-State Park which provides access to mountain bike, hiking and horseback riding trails. Directly to the west of the Tourist Core is the Bijou/Al Tahoe commercial district and to the east of the Tourist Core is the Stateline Casino Core which includes the major gaming establishments in the south shore.

## 1.5 PROJECT OBJECTIVES/PURPOSE AND NEED

As identified above, the purpose of the proposed Tourist Core Area Plan is to facilitate implementation of a tourist/commercial land use plan to further the goals and policies of the Regional Plan of the Lake Tahoe Basin and the City of South Lake Tahoe General Plan. This plan is intended to create area-wide change within the land use parameters of the land use planning and development regulations of the City and TRPA. The adopted Tourist Core Area Plan is intended to provide for improved mixed use land use pattern (commercial, tourist and high density residential development) and concentrated development conditions through revitalization to provide improved recreation access, tourist accommodation facilities and diverse commercial retail needs to visitors and local residences in a setting that is transit-, bicycle-, and pedestrian-oriented setting. The area is envisioned as a central destination that provides full services for visitors and permanent residents and offers unique experiences related to the many outdoor recreation possibilities that surround the core area. The revitalization of the South Shore will catalyze the transformation from a failing and vestigial gaming economy into a sustainable outdoor tourism recreational destination by incorporating active streetscapes featuring strolling, shopping, entertainment and outdoor dining opportunities. In addition, transit and alternative travel will provide an essential part of the envisioned destination resort experience resulting in significant environmental gain and improved scenic quality.

The plan is being amended to keep pace with changes that have been made to California law, TRPA Regional Plan and Code of Ordinances, the City's General Plan Housing Element, the City strategic goals, and to implement and incentivize transporation connectivity. At the forefront of these changes is the goal of activating the town center, and increasing housing opportunities with an emphasis on affordable housing. The Area Plan's existing density limits (25 units per acre) are a large barrier for affordable housing developments as they cannot be competitive for grants or financing at the current density; meanwhile, the lack of a minimum density prevents parcels central to transportation and amenities from being utilized to their highest potential. In accordance with California law, workforce and co-living housing opportunities shall be expanded through modifications to use definitions and zoning designations.

The following project objectives are identified for the Tourist Core Area Plan updates:

- Expand the boundary of the Area Plan to add two developed parcels that will benefit from greater density, height and land coverage and help promote residential and tourist development near services and transit facilities;
- Improve the effectiveness of Housing Element policies and achievement of Housing Element goals;
- Update residential design standards to allow ministerial approval of purely residential developments, including ADUs.

- Modify permissible use definitions to create better compatibility between uses and zoning districts.
- Create objective design standards for commercial and mixed-use developments that complement the natural environment, promote the mountain theme architecture, and create walkable and bikeable streetscapes.
- Transition to a less auto-centric town center by creating opportunities for reduced parking and project contribution to alternative transportation methods.
- Implement zoning, boundary, and district changes where appropriate to better integrate existing development and incentivize key redevelopment opportunities.
- Respond to the unique circumstances and needs of local communities in the Tahoe Region;
- Provide incentives to encourage transfers, concentration, rehabilitation and redevelopment of aging tourist and commercial uses within the Tourist Core;

## 1.6 DOCUMENT ORGANIZATION

This IS/ND/IEC follows the standard content for environmental documents under CEQA and TRPA Code of Ordinances and Rules of Procedures. An EIR/EIS was determined to be unnecessary, as there are not potentially significant environmental effects associated with adoption of this Area Plan. This IS/IEC is a full disclosure document, describing the plan and its environmental effects in sufficient detail to aid decision-making.

Chapter 5 contains a summary of the environmental effects and necessary mitigation measures if applicable.

## 1.7 PUBLIC INVOLVEMENT

Opportunities for public participation in the environmental document review process are provided in order to promote open communication and better decision-making. All persons and organizations having a potential interest in the proposed Area Plan are invited to provide comments during the thirty-day comment period for the IS/IEC.

Pursuant to the requirements of CEQA, this IS/IEC will be sent, along with a Notice of Completion, to the California State Clearinghouse. In addition, copies of this document will be distributed to other Lake Tahoe Basin reviewing agencies and interested individuals and entities for review. After closure of the public review period, City staff will respond to all comments. City staff will then prepare an agenda item for the City's Planning Commission's recommendation and City Council action that include the IS/IEC, the comments, and responses to the comments. If the Council determines that the proposed Area Plan would not have significant adverse impacts, the City Council would adopt the plan and certify the environmental document. Following Council approval, the Notice of Determination would be filed with the county recorder-clerk.

Pursuant to the TRPA's Rules of Procedures and Chapter 3 of the TRPA Code of Ordinances, this IS/IEC will be made available for public review to those people who request copies. TRPA staff will prepare an agenda item for the Advisory Planning Commission's recommendation and Governing Board action. If it is determined that significant adverse impacts would not result from the proposed project, the Governing Board would issue a Finding of No Significant Effect, adopt the Area Plan and certify the environmental document.

The proposed amendments to the Area Plan was prepared by the City and is developed on feedback provided by the public and the City Council direction. The process of amending the Tourist Core Area Plan was initiated in October of 2022 with City staff identifying areas out of date and in need of general improvements to reflect the City and State's evolving goals and new laws. The City provided TRPA with

an Intent to Amend notice and a general project description on January 11, 2023. Stakeholders representing a variety of interest groups were invited to a workshop on February 1, 2023, to discuss the updates. The Planning Commission heard this feedback on February 23, 2023 and had no major changes to the direction of the amendments and again on October 23, 2023. On May 24, 2023 the TRPA Regional Plan Implementation Committee received the presentation and provided feedback. City Council was given a similar presentation on June 6, 2023, and provided staff with feedback. Throughout this process City and TRPA staff met bimonthly to discuss the area plan amendments as well as changes to TRPA Code of Ordinances that may affect them.

## 1.8 RELATIONSHIP TO LAND USE PLANS, POLICIES AND REGULATIONS

The Tourist Core Area Plan falls under the direct jurisdiction of both the City of South Lake Tahoe and the Tahoe Regional Planning Agency. In addition, Federal and State agencies exercise varying levels of control concerning speci fic parcels or resources. This section identifies each agency's responsibility relative to the proposed Area Plan; it also identified the plans and policies to which the Area Plan must show compliance.

Federal: The US Environmental Protection Agency (EPA) has designated Lake Tahoe an Outstanding National Resource Water (ONRW). ONRWs are provided the highest level of protection under EPA's Anti-degradation Policy, stipulating that states may allow some limited activities that result in temporary and short-term changes to water quality, but that such changes should not adversely affect existing uses or alter the essential character or special uses for which the water was designated on ONRW. Although the Area Plan does not require approval from the EPA the incentives related to coverage is dependent upon EPA certifying TRPA's updated Water Quality Management Plan for the Tahoe Region (208 Plan).

Regional: The TRPA is a bi-state planning agency with authority to regulate growth and development within the Lake Tahoe Region. TRPA implements that authority through its Regional Plan. The Regional Plan Goals and Policies establish an overall framework for development and environmental conservation in the Lake Tahoe Region.

In December 2012, the TRPA Governing Board adopted an updated Regional Plan. Priorities of the updated Regional Plan that apply to this Area Plan include:

- Accelerating water quality restoration and other threshold gains by supporting environmental redevelopment opportunities, restoration of disturbed lands and Environmental Improvement Program (EIP) investments.
- Transitioning to more permitting by local governments to create one-stop-shopping for homeowner improvements in order to return TRPA to the more regional role the Compact originally intended.
- Creating walkable communities and increasing alternative transportation options.

Important policies addressed in the Regional Plan include:

- Retaining the established regional growth control system. Under this system, rampant overdevelopment was stopped and open spaces preserved. Most of the policies from the 1987 Regional Plan stayed in place.
- Creating a more efficient planning system that integrates TRPA requirements into the plans and permits of other government agencies.

- Encouraging property owners to transfer development rights from sensitive or outlying areas to Town Centers with the goal of restoring these lands.
- Eliminating regulatory barriers to the environmental redevelopment of rundown buildings.
- Simplifying burdensome regulations for homeowners while achieving threshold gain.
- Integrating with the Regional Transportation Plan to support sidewalk and bike trail projects that reduce automobile dependency and increase walkability and safety.
- Continuing to deliver restoration projects under the EIP that achieve erosion control on roadways and restore forests and wetlands.

The updated TRPA Code of Ordinance allows for the development of Area Plans to refine and implement the Regional Plan policies appropriate to specific areas. Chapter 13, *Area Plans*, include new provisions that allow for local, state, and federal agencies, in coordination with TRPA staff, to prepare coordinated Area Plans for the implementation of land use goals, policies, and ordinances. The Area Plans, which must include implementing ordinances and zoning, are required to be consistent with the Regional Plan. Once an Area Plan has been found in conformance with the Regional Plan, local, state, or federal agencies may assume development review authority by Memorandum of Understanding (MOU) with TRPA. In 2014 a MOU was created that expanded permitting authority of the City within the Tourist Core Area Plan.

State of California: Several State agencies may play a role in development decisions within the Tahoe Region. As such, these State agencies must grant permits or other forms of permission prior to physical development. Affected agency staff will review the proposed Area Plan for consistency with adopted plans and policies. The Area Plan does not require State agency approval..

State agencies that may have a responsible agency role in projects that may be implemented in the Area Plan include:

*California Tahoe Conservancy:* The mission of the California Tahoe Conservancy (CTC) is to protect and restore the natural environment of Lake Tahoe, including the lake's exceptional clarity and diversity of wildlife habitat in the basin. The CTC implements a comprehensive set of programs to affirmatively address resource needs in the Tahoe Basin, including the protection and restoration of the natural environment, especially water quality; enhancement of wildlife habitat; provision of public access and recreation opportunities; and management of acquired public land at Lake Tahoe.

The CTC has developed and initiated implementation of a number of programs involving acquisitions, site improvements, and land management activities, and involving direct activities as well as grants, which require capital funding. Program areas include:

- Water Quality and Watersheds
- Forest Habitat Enhancement
- Recreation and Public Access
- Land Management and Acquisition
- Coverage and Marketable Rights
- Climate Change and Sustainability

Within the Tourist Core the CTC has ownership of 4 parcels. One parcel was acquired through the CTC's Land Coverage Program to either meet excess coverage mitigation requirements, for bicycle trail or other public service projects, or to sell on the open market to private parties. Another parcel was purchased for

recreation access purposes and provides access to Van Sickle Bi-State Park and the remaining two parcels were purchased under their Sensitive Lands Acquisition Program. Adjacent to and south of the Tourist Core, the CTC has acquired the former Caltrans US Highway 50 right-of-way for the South Tahoe Greenway Share Use Trail.

The CTC also manages a Land Bank Program that is designed to facilitate a number of natural resource objectives, assist the needs of the general public and environmental projects, and provide funding benefits. An MOU signed with the Tahoe Regional Planning Agency (TRPA) in early 1988, enables the Conservancy to sell rights from the Land Bank on the open market.

The retirement of the development potential on properties can generate a wide range of development rights or credits, depending on what existed or was credited to the property at the time of acquisition (either land coverage or other marketable rights). The Conservancy periodically acquires these other rights, including those for tourist accommodations, sewer connections, residential units, and commercial floor area. Such rights are usually sold to parties building or remodeling a commercial site or a multi-family unit(s). The rights are recognized by the various regulatory agencies within the Basin and can therefore be sold or transferred under the proper circumstances. The use of these rights is reserved for projects in the areas where the rights originated in order to maintain the economic base of those communities.

*Lahontan Regional Water Quality Control Board:* Lahontan has water quality responsibilities including the California-side of the Lake Tahoe Basin. This agency establishes water quality standards, subject to the approval of the State Water Quality Control Board, and has broader enforcement power than TRPA. By issuing waste discharge permits and requiring monitoring to show compliance, among other activities, Lahontan actively enforces attainment of standards.

Any party responsible for construction activity over one acre must obtain a National Pollution Discharge Elimination System Permit (NPDES Permit) form Lahontan to eliminate or reduce pollutants in storm water discharged to surface waters, which include riparian zones, from area of construction activity.

Lahontan is also responsible for incorporating the the Lake Tahoe Daily Maximum (TMDL) pollutant load reduction targets into the NPDES permit for California municipalities in the Tahoe Basin. This permit regulates stormwater discharge form the City's stormwater management infrastructure and Federal rules requires the City to implement programs to control pollutant runoff.

The NPDES permit issued to the City stipulates a September 30, 2016 deadline to reduce estimated 2004 baseline jurisdictional pollutant loads of fine sediment particles by 10%, total nitrogen by 8% and total phosphorus by 7%. Lahontan is expected to update the NPDES permit every five years to include additional load reduction targets. Upcoming targets are anticipated for 2026. Attainment of the 2026 target, termed the Clarity Challenge, is estimated to return Lake Tahoe to an average annual transparency of 80 feet (Lahontan 2010).

The City completed development of a Pollutant Load Reduction Plan (PLRP) to define a path to compliance with the requirements to reduce pollutant loading to Lake Tahoe from urban stormwater runoff. The goal of the Load Reduction Report was to identify feasible and cost-effective actions to meet anticipated targets. In September 2021, the City Council received a draft of the 2021 City of South Lake Tahoe PLRP which documents the City's proposed approach and timeline for meeting the 2026 load reduction targets set forth in the City's NPDES permit, which was then submitted to Lahontan in October, 2021. Proposed strategies outlined in the Load Reduction Plan for meeting the load reduction targets are incorporated in the Area Plan and are discussed in detail in Section 10, Natural and Cultural Resources.

The PLRP estimates the City's pollutant load reduction from water quality projects and enhanced operations and maintenance activities by using the same Pollutant Load Reduction Model (PLRM) which was used in establishing the City's 2004 baseline pollutant load. Estimated load reductions for specific projects and operational improvements are shown in the PLRP. Pollutant load reductions will be credited to the City as catchments (subwatersheds) with projects and/or operational improvements registered with Lahontan pursuant to the Lake Clarity Crediting Program.

*California Department of Transportation (Caltrans):* Caltrans is responsible for planning, designing, constructing, and maintaining all state highways. The jurisdictional interest of Caltrans extends to improvements to roadways on the state highway system (including roadways designated as U.S. highways). Any federally funded transportation improvements would be subject to review by Caltrans staff and the California Transportation Commission, either on or off of the state highway system.

California Trustee Agencies: State agencies with trustee responsibility in the Tourist Core include: California Division of Forestry (tree removal and forest resource concerns), State Historic Preservation Officer (cultural resources), California Department of Fish and Game (wildlife resources), and State Lands Commission with regard to state-owned "sovereign" lands such as Lake Tahoe.

City of South Lake Tahoe: The City of South Lake Tahoe is the only incorporated city within the Lake Tahoe Region. The City implements its regulatory authority through its General Plan and City code. The City's 1999 General Plan adopted TRPA's Plan Area Statements (PASs) to replace its previous local zoning. In the City's 2011 General Plan update, the City adopted new land use designations for PASs located within the City's jurisdiction but retained the PASs and Community Plans as its zoning system. The PASs will remain in effect until superseded by an Area Plan.

# 2.0 PROJECT DESCRIPTION

## 2.1 AREA PLAN OVERVIEW AND DESCRIPTION OF CHANGES

The proposed project is an update to the Tourist Core Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. The updated Tourist Core Area Plan proposes to incorporate two parcels fronting Pioneer Trail, currently located in residential Plan Area Statement 092, into the Tourist Center Neighborhood Mixed-Use (TSC-NMX) District. Both parcels (APNs 029-352-010 and 029-371-016) are developed with existing tourist accommodation uses. The addition of these parcels, totaling approximately 36,000 square feet (0.83 acres) is intended to increase opportunity for redeveloping the sites. Permissible uses consistent with the previous PAS for this area are supplemented with additional residential land uses. ; As part of these amendments, a minimum density standard is also adopted to encourage the development of high-density housing. Modifications to existing design standards and parking standards are also proposed to promote walkability.

The Area Plan includes changes necessary to opt in to the TRPA Phase 2 Housing Code Amendments adopted in December 2023 for the areas within and outside of the Town Center/Regional Center Overlay – these amendments are included in the proposed changes to density, height and land coverage limits applicable to deed restricted affordable housing as documented in Tourist Core Area Plan Appendix C.

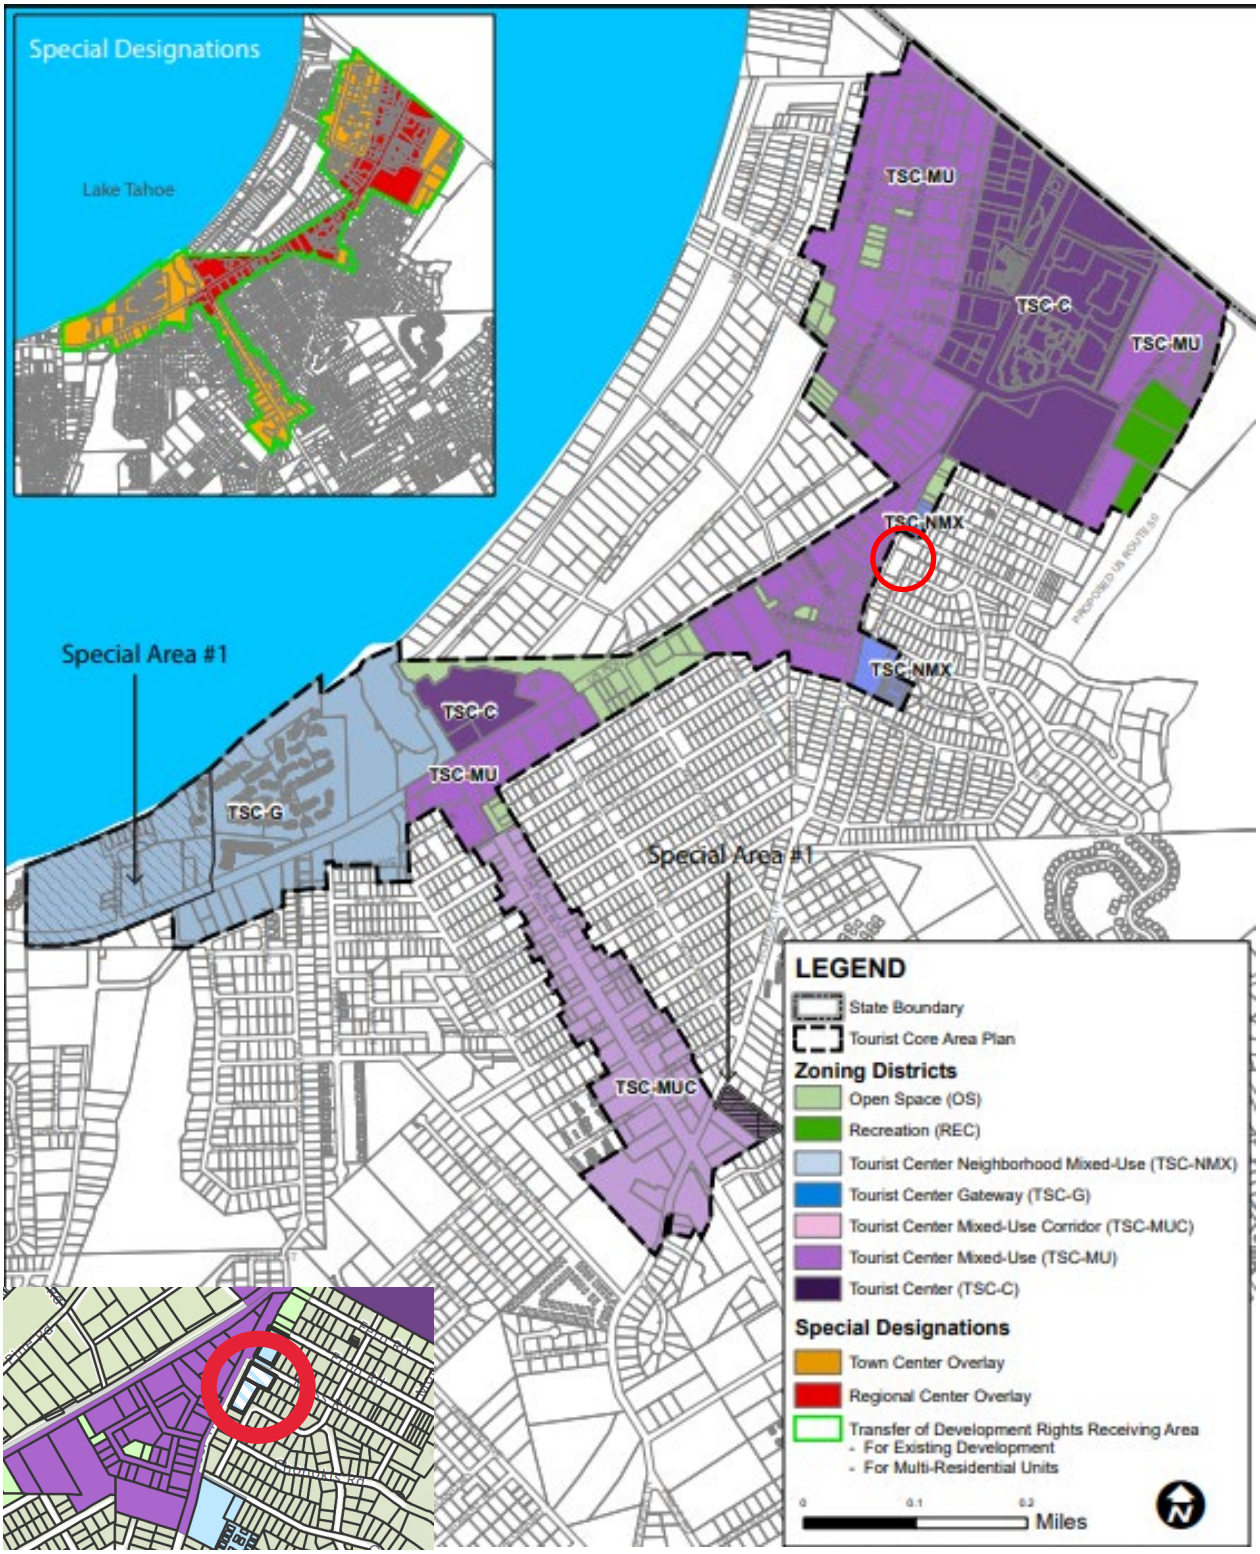

**Table 1** provides an overview of the existing plans, maps, and ordinances that are relevant to the Tourist Core Area Plan, a synopsis of the proposed changes, and a brief description of those changes.

**Table 1 Elements of Tourist Core Area Plan**

| Tourist Core Area Plan Element | Proposed Change from Existing Plans, Maps, and Ordinances | Summary Description |
|---|---|---|
| Vision and Guiding Principles | Adds a new housing policy | ▪ Includes new policy to preserve existing residential uses and increase multi-family options. |
| Land Use Element, and Land Use Map | Amends and adds new land use policies and amends zoning map to incorporate two parcels | ▪ Includes new policy to create a pedestrian oriented "Lake District" adjacent to the Tourist Core Area Plan<br>▪ Includes new policies encouraging the development of workforce housing in the Tourist Core Area Plan.<br>▪ Includes a new policy to establish minimum density standards for multi-family development.<br>▪ Amend Land Use Map to incorporate APNs 029-352-010 and 029-371-016 into the TSC-NMX District (see Figure 3 below). |
| Transportation Element | Adds new transportation policies | ▪ Includes new policy to coordinate with transportation agencies to expand alternatives modes of transportation.<br>▪ Includes new policies to promote shared parking and enhanced mobility hub. |

| Table 1 Elements of Tourist Core Area Plan | | |
|---|---|---|
| Tourist Core Area Plan Element | Proposed Change from Existing Plans, Maps, and Ordinances | Summary Description |
| Implementation Element | Update status of projects | ▪ Updated implementation status of various improvement projects.<br>▪ Updated Development Rights incentives provided by the City.<br>▪ Updated the number of residential bonus units available in the Tourist Core Area Plan.<br>▪ Added new incentives for residential/tourist conversion and density incentives adopted by the TRPA.<br>▪ The City incentive of RUUs at no cost for ADUs and multi-family developments has been included.<br>▪ Alternate Traffic and Air Quality Fee Program was deleted. New projects are subject to TRPA's Mobility Mitigation Fee requirements of Chapter 65 of the TRPA Code of Ordinances<br>▪ The Change in Use section was removed as it is no longer contained in the South Lake Tahoe City Code or TRPA Code of Ordinances.<br>▪ The Conversion of Use section was updated to reflect the current Chapter 51 of TRPA Code of Ordinances.<br>▪ Density incentives adopted by TRPA are added. |
| Appendix B | Replaced with Commercial Design Guidelines | ▪ TRPA height findings were removed from this appendix. The findings are applicable through reference to TRPA Code of Ordinances.<br>▪ The South Lake Tahoe Commercial Design Guidelines have been included as Appendix B to provide visual representations of the intent of design standards in Appendix C. |
| Appendix C, Development and Design Standards | Modify existing use matrix for clarity and consistency.<br><br>Modification of existing standards for clarity. | ▪ Permissible use matrix and definitions have been modified for consistency and simplification.<br>▪ All items previously included in in Substitute Design Standards have been relocated to the main standards section.<br>▪ The maximum building height for the TSC-MU district is increased from 56 feet to 65 feet. |
| Appendix D, CSLT Green Building Program | Include more recent sustainable building certification programs. | ▪ Additional green building certifications are being added to the Green Building Program to make projects eligible for development incentives. Development incentives are no longer tiered and shall be based on the discretion of the decision-making authority. |

**Figure 3 – Proposed Tourist Core Area Plan Expansion**

As part of the TCAP, the City of South Lake Tahoe will comply with all mitigation measures from the Regional Plan Update EIS certified by the TRPA Governing Board on December 12, 2012. The adoption of these measures includes compliance with measures that have already been incorporated into the TRPA Code, adopted on December 12, 2012 and effective on Februray 9, 2013.

Also part of the Tahoe Valley Area Plan is the City of South Lake Tahoe's continued compliance with all mitigation measures from the General Plan EIR certified by the City on May 17, 2011.

Table 2 provides a summary of the proposed development standard and land use updates to TCAP zoning districts. The full text of the proposed amendments is provided in revisions to TCAP Appendix C, available for review on the City's webpage: https://cityofslt.us/2290/Area-Plan-Proposals-and-Updates.

**Table 2**
**Development Standards for the Tourist Core Area Plan**

| Development Standard | | Tourist Center (TSC-C) District |
|---|---|---|
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | Single Family Dwelling | Only condominiums allowed at 12-65 units/acre |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Healthcare Services | Allowed by right but can't front on Lake Tahoe Boulevard. |
| | Professional Offices | Allowed by right throughout district. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | This standard was removed. |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |

| Development Standard | | Tourist Center Gateway (TSC-G) District |
|---|---|---|
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Tourist Center Mixed-Use (TSC-MU) District** |
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |

| | | |
|---|---|---|
| | Eating and Drinking Places | Changed to Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Tourist Center Mixed-Use Corridor (TSC-MUC) District and TSC-MUC Special Area #1 District** |
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single Family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |

| | | |
|---|---|---|
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Tourist Center Neighborhood Mixed-Use (TSC-NMX) District** |
| Maximum Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Recreation (REC) District** |
| Density | Multiple Family Dwelling | ~~n/a~~ 12-25 units/acre (Employee Housing Only) |
| | Multi-Person Dwelling | Add 65 persons/acre, no minimum (Employee Housing Only) |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Add as an Allowed by right |
| | Multi-Person Dwelling | Add as an Allowed by right |

| | | |
|---|---|---|
| | Privately Owned Assembly and Entertainment | Deleted and incorporated into Amusement, Recreation, & Entertainment Facilities. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Tourist Center Gateway (TSC-G) Special Area #1 District** |
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |

| Table 3<br>Development Standards for the Tourist Core Area Plan Boundary Expansion | | | |
|---|---|---|---|
| **Development Standard** | | **PAS 092** | **Tourist Center Neighborhood Mixed-Use (TSC-NMX) District** |
| Density | Multiple Family Dwelling | 15 units/acre | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | 25 persons/acre | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Not permitted | Add 65 persons/acre, no minimum |
| | Residential Care | Not permitted | Add 65 persons/acre, no minimum |
| | Single Family Dwelling | 1 unit per parcel | Only condominiums allowed at 12-65 units/acre |
| | Employee Housing | Not permitted | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Nursing and Personal Care | Not permitted | Added Allowed by right |
| | Residential Care | Not permitted | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (Not permitted)<br>Privately Owned Assembly & Entertainment (Not permitted)<br>Public Owned Assembly & Entertainment (Not permitted) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Healthcare Services | Not permitted | Allowed by right but can't front on Lake Tahoe Boulevard. |
| | Professional Offices | Special Use | Allowed by right throughout district. |
| | Local Public Assembly Facilities | Local Assembly & Entertainment (Not permitted) | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | Not applicable | This standard was removed. |
| | Building Height Maximum (stories) | Not applicable | This standard was removed. |
| | Roof Slope | TRPA Code Chapter 37.3.4 | Minimum roof slope changed from 5:12 to 3:12 |

## Permissible Use List

The Tourist Core Area Plan updates propose modifications to the existing permissible use list to consolidate multiple similar uses under one category, to create more succinct criteria, and to increase compatibility within categories. "Employee Housing" has been eliminated as an independent use and shall be included in other residential uses. Health and athletic clubs, day spas, and funeral parlors are now included under General Retail and Personal Service as they are consistent with the existing criteria of the category in that they are "non-medical services involving the care of persons." Categories in which there was overlap of criteria have been consolidated into one use encompassing amusement, recreation, assembly, and entertainment.

## Design and Development Standards

The Tahoe Valley Area Plan includes development and design standards that are specific to the Plan Area and replace the City of South Lake Tahoe City Code Chapters 6.10 and 6.55 development standards, and portions of the TRPA Code of Ordinances Chapter 30, land coverage, Chapter 31 regarding density, Chapter 36 regarding design standards, and Chapter 37 regarding height standards. Standards for the Area Plan are contained in Appendix C of the Tourist Core Area Plan. Further design and development standards are housed in the South Lake Tahoe Design Guidelines (2016). This document has historically been used as a supplemental document to Appendix C. As part of the updates to the plan, this document shall be included as Appendix B and shall be used in conjunction with Appendix C to provide examples of the standards. Specific standards that have been changed through this process include:

- Allowing roof pitches of 3:12 to 12:12 (previously the minimum roof pitch was 5:12) and the removal of the roof height requirement.
- Shifting to more objective building modulation and articulation standards.
- Increased flexibility in corner build and build to line requirements.
- Increased bicycle parking requirements
- Reducing residential parking requirements by right
- Allowing for a reduction in commercial parking spaces.

Significant changes were made to the organization of Appendix C by incorporating design standards previously designated as "substitute" into the primary standards. Purely residential projects in certain districts may now follow the residential design standards contained in the City of South Lake Tahoe City Code Chapter 6.85.

## Building Height and Design

The maximum building height for the TSC-MU district is increased from 56' to 65'. In order to increase the efficiency and feasibility of large buildings, a minimum roof pitch of 3:12 is being proposed (previously 5:12) as well as elimination of the requirement that a building's roof be 40% of the building height. Further, the amendments would eliminate the building height maximum (stories) standard that limited the number of stories in addition to a buildings total height (feet).Numerous other changes are being made for clarity and consistency, most notably the creation of objective design standards to achieve desired levels of building articulation.

## Density

New density maximums and a minimum density standard are being proposed. For the first time the City is proposing a minimum density of 12 units per acre for multiple family dwellings in all districts except for recreation district. Mixed-use projects meeting certain criteria may be exempt from the minimum density. The maximum density for multiple family dwellings in the TSC-C, TSC-MU, TSC-MUC, and TSC-G is increased from 25 to 65 units per acre. The Tourist Core Area Plan will incorporate the City's accessory dwelling unit (ADU) ordinance; however, these units are not counted towards density. To maintain consistency with the 2011 City of South Lake Tahoe General Plan, Table LU-2 (Development Intensity Standards) must be amended to permit up to 65 residential units per acre in the Town Center and Tourist Center land use designations.

# 3.0 BASELINE

As specified in Section 13.3.1 of the TRPA Code, all plans, policies, and regulations in the Regional Plan and the TRPA Code shall remain in effect unless superseded by the provisions of an area plan. Thus, existing baseline conditions for the purposes of this IS/IEC reflect current 2023 environmental conditions (the time of writing of this IEC) with the updated Regional Plan, TRPA Code, City General Plan and Code in effect, and the existing plans (PAS 092), maps, and ordinances also in effect. The Tourist Core Area Plan has an approximate 20-year planning horizon.

The proposed project evaluated in this IS/IEC are the proposed amendments to the Tourist Core Area Plan, which was originally adopted on November 11, 2013 and amended numerous times since then.

# 4.0 METHODOLOGY AND ASSUMPTIONS

This IS/IEC was prepared to evaluate the potential environmental effects of the Tourist Core Area Plan Amendments using as a tool the CEQA and TRPA checklist questions, responses, and supporting narrative. The analysis tiers and incorporates by reference specific analyses contained in the following environmental review documents, as appropriate:

- TRPA, *Regional Plan Update EIS,* certified by the TRPA Governing Board on December 12, 2012 (RPU EIS)
- TRPA/Rincon Consultants, Inc., 2020 Linking Tahoe: Regional Transportation Plan & Sustainable Communities Strategy IS/ND/IEC/FONSE, April 2021)
- CSLT, *General Plan Update EIR*, certified by the City Council on May 17, 2011 (CSLT EIR)
- City of South Lake Tahoe, Tourist Core Area Plan IS/MND/IEC/FONSE, certified by the City Council on October 15, 2013 and adopted by the TRPA on November 11, 2013.

These program-level environmental documents include a regional scale analysis and a framework of mitigation measures that provide a foundation for subsequent environmental review at an area plan level. These documents serve as first-tier documents for the TRPA review of the proposed Tourist Core Area Plan Amendments. To the extent that the Tourist Core Area Plan Amendments are consistent with the Regional Plan and the RTP, for which the program EISs were prepared, the Tourist Core Area Plan Amendments could be found to be "within the scope" of the program EISs.

This Tourist Core Area Plan Amendments IS/IEC is also a program-level environmental document. No specific development projects are proposed at this time or analyzed herein. All future projects within the Tourist Core would be subject to project-level environmental review and permitting by City and/or TRPA, with the permitting agency determined based on the size, nature and location of the project (Section 13.7.3 of the TRPA Code). Project-level environmental documents would require identification of, and mitigation for any potentially significant environmental impacts.

TRPA has prepared an Area Plan Environmental Analysis Guidelines flowchart intended to assist local jurisdictions in considering environmental review requirements associated with the land uses proposed in area plans. The guidance poses the following questions:

- Does a land use district in the area plan allow a use that has a greater potential impact than the corresponding land use in the Regional Plan? This includes any community plans and/or PASs that would be wholly or partially, replaced by the area plan.
- Does a zoning district in the area plan allow a use that has a greater potential impact than the corresponding land use district in the PAS?
- Does the project have a greater potential impact than the use allowed by the zoning district in the area plan/PAS?

These questions contemplate whether land use changes resulting from adoption of the proposed amendments would result in new uses that could result in potential environmental impacts not previously contemplated by the community plans, PASs, and Regional Plan.

To address these questions, the proposed amendments to the Tourist Core Area Plan Land Use Map and Zoning Map were carefully reviewed. The adopted 2013 land use and zoning map as amended to date, are consistent with the TRPA conceptual land use map adopted as part of the 2012 Regional Plan and the City General Plan which was adopted in 2011. Proposed additions to the town center overlay boundary (Town Center Mixed-Use District) in these amendments would expand town center areas envisioned in TRPA's Regional Plan Conceptual Land Use Map which classifies the Tourist Core as tourist. As a result, amendments to expand the Town Center and the TRPA regional plan maps will need to comply with TRPA Code Section 13.5.3.G (Modification to Centers) and be adopted by the TRPA Governing Board following City adoption of the Area Plan amendments.

The tables included in Chapter 2 of this IS/IEC compares the existing permissible uses allowed within PAS 092 (for two to be added to the TCAP) and existing zoning districts with those uses that would be allowed with the Tahoe Valley Area Plan amendments, as specified in the Development and Design Standards (Appendix C) of the Tahoe Valley Area Plan. Generally, the types of land uses that would be permissible in the TSC-G, TSC-C, TSC-MUC, TSC-MU, and TSC-NMX zoning districts are consistent with the mix of uses (tourist accommodation, commercial, public service, office, and residential) envisioned for community centers in the Regional Plan (TRPA 2012a, p. 2-33) and the General Plan (CSLT 2011, pp. LU-3 and LU-10); the uses that would be permissible within these zoning districts reflect the mix of uses envisioned for recreation areas in the Regional Plan (TRPA 2012a, p. 2-19); and the uses within the OS zoning district would be limited to passive recreation uses, storm water facilities, and restoration activities.

Because the permissible use list would be consistent with the uses envisioned in the Regional Plan, the analysis herein focuses on the unique characteristics of the allowed uses and potential environmental impacts associated with their implementation (e.g., land use compatibility, water quality, scenic resources, and traffic). The checklist responses include cross-referencing to other checklist items to reduce redundancy, where appropriate.

# 5.0 ENVIRONMENTAL CHECKLIST AND IMPACT ANALYSIS

1. Project title: Tourist Core Area Plan

2. Lead agency name and address:

   The City of South Lake Tahoe is the California Environmental Quality Act (CEQA) lead agency responsible for preparing an Initial Study/Negative Declaration (IS/ND) and the Tahoe Regional Planning Agency (TRPA) will serve as the lead agency for the Initial Environmental Checklist (IEC) under the Tahoe Regional Planning Compact.

   City of South Lake Tahoe
   1052 Tata Lane
   South Lake Tahoe, California 96150

   Tahoe Regional Planning Agency
   P.O. Box 5310
   Stateline, Nevada 89449

3. Contact person and phone number

   City of South Lake Tahoe: John Hitchcock, Planning Manager, (530) 542-7472

   Tahoe Regional Planning Agency: Alyssa Bettinger, Senior Planner, (775) 589-5301

4. Project location:

   The Tourist Core is located within the City of South Lake Tahoe and covers 305-acre area, centered on centered on US Highway 50 and Ski Run Boulevard from Fairway Avenue on the west to the California and Nevada Stateline on the east. The Area Plan also includes all of Ski Run Boulevard beginning at the shoreline of Lake Tahoe in the north to the intersection of Pioneer Trail in the south. The amendments expand the plan area to add two parcels fronting Pioneer Trail in one location just south of Moss Road.

5. Project sponsor's name and address

   City of South Lake Tahoe
   1052 Tata Lane
   South Lake Tahoe, California 96150

6. General Plan designation:

   The City's General Plan designates the Tourist Core as Tourist Center and TRPA's Conceptual Land Use Map designates it as Tourist.

7. Zoning

   The Tourist Core Area Plan contains multiple zoning designations within the 305-acre area

8. Description of project:

   The proposed project is an update to the Tourist Core Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. Chapter 2 provides a detailed summary of the proposed amendments. The exact language of the proposed amendments is provided on the City's website (https://cityofslt.us/2290/Area-Plan-Proposals-and-Updates). The proposed project is an update to the Tourist Core Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. The proposed amendments would expand the Area Plan boundary to incorporate two parcels (APNs 029-352-010 and 029-371-016) that front Pioneer Trail, both developed with existing tourist accommodation uses. The addition of these parcels as is intended to increase opportunity for redeveloping the sites (previously located in PAS 092). In addition to the boundary amendments, other changes to permissible land use, density, etc. are proposed as documented in Chapter 2..

9. Surrounding land uses and setting: Briefly describe the project's surroundings:

   The Tourist Core is bordered on the north by Lake Tahoe, and Ski Run Marina which provides a popular access point to beach recreation and boating opportunities and the Tahoe Meadows Historic District Tahoe Meadows is a residential district located along the shoreline of Lake Tahoe and is listed as a Historic District by TRPA and is also listed on the National Registry of Historic Places. To the south the Tourist Core is border by a mixed multi-family and single family residential area, dating from the 1960s to the 1990s and Van Sickle Bi-State Park which provides access to mountain bike, hiking and horseback riding trails. Directly to the west of the Tourist Core is the Bijou/Al Tahoe commercial district and to the east of the Tourist Core is the Stateline Casino Core which includes the major gaming establishments in the south shore.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

    Adoption of the Tourist Core Area Plan Amendments is only required by the City of South Lake Tahoe City Council and the TRPA Governing Board. However, any projects that may move forward as a result of the implementation of this Area Plan may also require approval by the California Department of Fish and Game, the California Regional Water Quality Control Board, State Water Resources Board, El Dorado County Air Pollution Control District, California State Lands Commission, and/or the California Department of Transportation (Caltrans).

## 5.1 ENVIRONMENTAL FACTORS POTENTIALL AFFECTED

If environmental factors are checked below in Table 4, there would be at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

Table 4: Environmental Factors with Potentially Significant Impacts

| | | |
|---|---|---|
| ☐ Aesthetics | ☐ Agriculture Resources | ☐ Air Quality |
| ☐ Biological Resources | ☐ Cultural Resources | ☐ Geology Resources |
| ☐ Greenhouse Gas Emissions | ☐ Hazards & Hazardous Materials | ☐ Hydrology/Water Quality |
| ☐ Land Use/Planning | ☐ Mineral Resources | ☐ Noise |
| ☐ Population/Housing | ☐ Public Services | ☐ Recreation |
| ☐ Transportation/Traffic | ☐ Utilities/Service Systems | ☐ Mandatory Findings of Significance |

## 5.2 CEQA ENVIROMENTAL DETERMINATION

On the basis of this Initial Study:

☒ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

## 5.3 TRPA ENVIRONMENTAL DETERMINATION (TO BE COMPELTED BY TRPA)

On the basis of this TRPA Initial Environmental Checklist:

| | | | | |
|---|---|---|---|---|
| a. | The proposed project could not have a significant effect on the environment and a finding of no significant effect shall be prepared on accordance with TRPA's Rules of Procedures | ☒ | Yes | ☐ No |
| b. | The proposed project could have a significant effect on the environment, but due to the listed mitigation measures which have been added to the project, could have no significant effect on the environment and a mitigated finding of no significant effect shall be prepared in accordance with TRPA's Rules of Procedures. | ☐ | Yes | ☒ No |
| c. | The proposed project may have a significant effect on the environment and an environmental impact statement shall be prepared in accordance with this chapter and TRPA's Rules of Procedures. | ☐ | Yes | ☒ No |

Signature of Evaluator

Title of Evaluator

# 5.4 EVALUATION OF ENVIRONMENTAL IMPACTS

The following environmental analysis has been prepared using the CEQA Guidelines Appendix G: Environmental Checklist Form to complete an Initial Study (IS). This checklist also includes analysis of environmental impacts required in the TRPA Initial Environmental Checklist (IEC) found at: http://www.trpa.org/documents/currentapps/Initial_Environmental_Checklist_Web.pdf.

## 5.4.1 CEQA

CEQA requires a brief explanation for answers to the Appendix G: Environmental Checklist except "No Impact" responses that are adequately supported by noted information sources. Answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

**Table 5: CEQA Defined Levels of Impact Significance**

| Impact Severity | Definition |
|---|---|
| No Impact | A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis). |
| Less than Significant Impact | “Less than Significant Impact” applies where the Project’s impact creates no significant impacts based on the criterion or criteria that sets the level of impact to a resource and require no mitigation to avoid or reduce impacts. |
| Less than Significant Impact after Mitigation | “Less than Significant Impact after Mitigation" applies where the incorporation of mitigation measures has reduced an effect from potentially "Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level. |
| Significant Impact | "Significant Impact" is appropriate if there is substantial evidence that an effect is potentially significant, as based on the criterion or criteria that sets the level of impact to a resource. If there are one of more “Potentially Significant Impact” entries when the determination is made, an EIR is required. |

## 5.4.2 TRPA

Article VI of the TRPA Rules of Procedures presents the rules governing the preparation and processing of environmental documents pursuant to Article VII of the Compact and Chapter 3 of the Revised TRPA Code of Ordinance.

TRPA uses an IEC, in conjunction with other available information, to determine whether an EIS will be prepared for a project or other matter. This could include preparation of an Environmental Assessment, in accordance with Section 3.4 of the TRPA revised Code, when TRPA determines that an IEC will not provide sufficient information to make the necessary findings for a project.

The IEC includes a series of questions categorized by and pertaining to resources regulated by TRPA. Each checklist item requires a checked response of “Yes,” “No,” “No, with Mitigation,” or “Data Insufficient.” A checked response of “Data Insufficient” or a determination that a project may have a significant effect

on the environment (Section 3.3.2 of the TRPA Code) indicates that additional environmental review in the form of an Environmental Assessment (EA) or Environmental Impact Statement (EIS) would be required. The IEC form indicates that all "Yes" and "No, with Mitigation" responses require written explanations. This IEC provides supporting narrative for all responses. Where a checked response may not be intuitive or easily understood by the reader, that response has been marked with an asterisk (*) and a brief clarifying statement supporting the rationale for the checked response is included.Based on an initial review of the Project, City staff determined that an IEC would provide sufficient information regarding the Project to make one of the findings below. As set forth in Code Subsection 3.3.1, based on the information submitted in the IEC, and other information known to TRPA, TRPA shall make one of the following findings and take the identified action:

1. The proposed project could not have a significant effect on the environment and a finding of no significant effect shall be prepared in accordance with TRPA's Rules of Procedure.

2. The proposed project could have a significant effect on the environment, but due to the listed mitigation measures which have been added to the project, could have no significant effect on the environment and a mitigated finding of no significant effect shall be prepared in accordance with TRPA's Rules of Procedure.

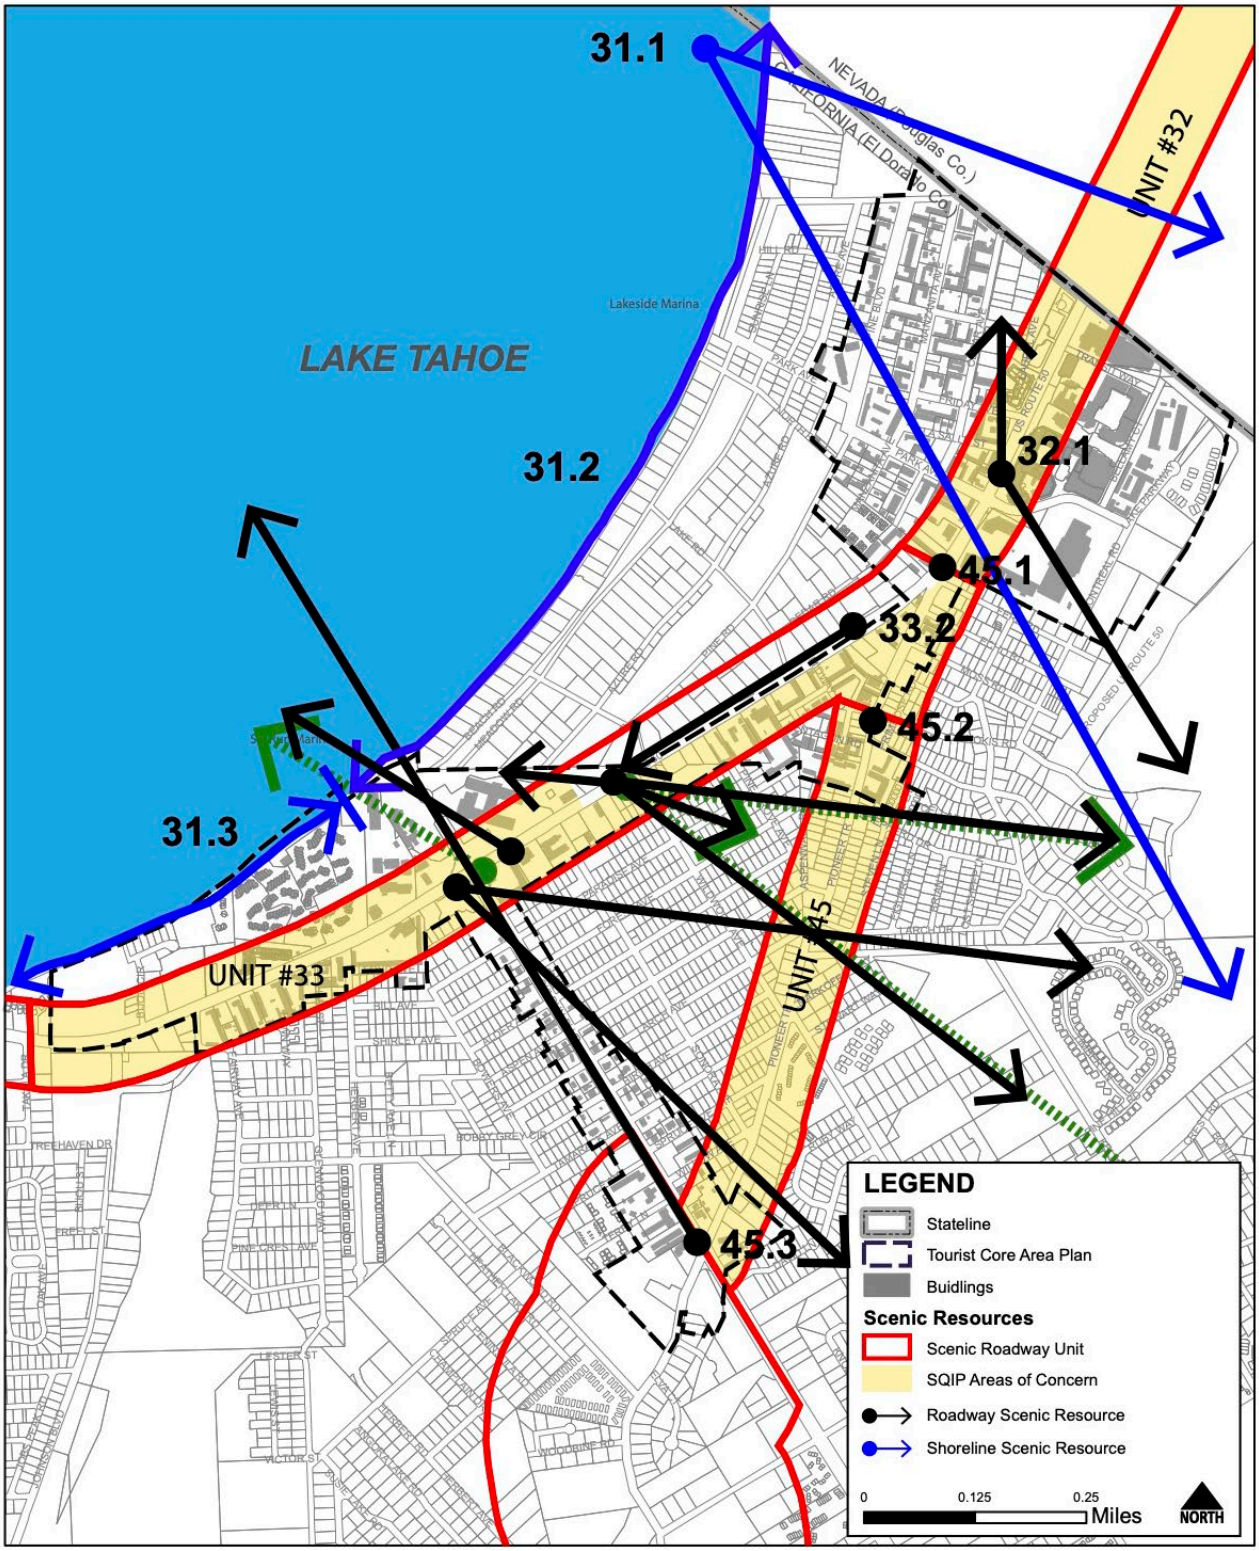
3. The proposed project may have a significant effect on the environment and an environmental impact statement shall be prepared in accordance with this Chapter and TRPA's Rules of Procedure.

When completed, TRPA reviews the IEC to determine the adequacy and objectivity of the responses. When appropriate, TRPA consults informally with federal, state, or local agencies with jurisdiction over the project or with special expertise on applicable environmental impacts.

### 5.4.3 Aesthetics (CEQA), Scenic Resources/Community Design and Light and Glare (TRPA)

This section presents the analyses for potential impacts to aesthetics, scenic resources/community design and light and glare. Table 6 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 6: Aesthetics, Scenic Resources/Community Design and Light and Glare**



| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 1. Have a substantial adverse effect on a scenic vista? (CEQA Ia) | | | **X** | |
| 2. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, within a state scenic highway? (CEQA Ib) | | | | **X** |
| 3. Substantially degrade the existing visual character or quality of the site and its surroundings? (CEQA Ic) | | | **X** | |
| 4. Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area? (CEQA Id) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 5. Be visible from any state or federal highway, Pioneer Trail or from Lake Tahoe? (TRPA item 18a) | **X, LTS** | | | |
| 6. Be visible from any public recreation area or TRPA designated bicycle trail? (TRPA item 18b) | **X, LTS** | | | |
| 7. Block or modify an existing view of Lake Tahoe or other scenic vista seen from a public road or other public area? (TRPA item 18c) | **X, LTS** | | | |
| 8. Be inconsistent with the height and design standards required by the applicable ordinance or Community Plan? (TRPA item 18d) | **X, LTS** | | | |

| | | | | |
|---|---|---|---|---|
| 9. Be inconsistent with the TRPA Scenic Quality Improvement Program (SQIP) or Design Review Guidelines? (TRPA item 18e) | | | | **X** |
| 10. Include new or modified sources of exterior lighting? (TRPA item 7a) | **X, LTS** | | | |
| 11. Create new illumination which is more substantial than other lighting, if any, within the surrounding area? (TRPA item 7b) | **X, LTS** | | | |
| 12. Cause light from exterior sources to be cast off-site or onto public lands? (TRPA item 7c) | | | | **X** |
| 13. Create new sources of glare through the siting of the improvements or through the use of reflective materials? (TRPA item 7d) | | | | **X** |

**1. Would the Project have a substantial adverse effect on a scenic vista? (CEQA Ia)**

As documented in Figure 4, the project area contains six scenic vistas visible from public roadways (within Roadway Units 32 – Casino Area, 33 – The Strip and 45 – Pioneer Trail North) and four scenic vistas from the lake (within Shoreline Unit 31 – Bijou). While the Area Plan amendments may increase the amount, distribution, and type of development in the future, such changes are likely to be positive by improving the visual quality of the built environment consistent with the general recommendations for site planning found in the SQIP, the TRPA Code of Ordinances and the standards of the Tourist Core Area Plan. As noted in TRPA's 2011 Threshold Evaluation, the Scenic Roadway Travel Unit within the urbanized areas of the Region (i.e., community plan areas) have seen significant improvements in the scenic quality as a result of improved architectural quality of the built environment and the removal of dilapidated structures for the creation of riparian areas, storm water retention basins and passive neighborhood parks. Moreover, Chapter 66 of the TRPA Code of Ordinances requires any project within the Tourist Core that is visible from the identified scenic resource shall demonstrate that the numerical ratings assigned to each individual resource is not decreased as recorded in the 1982 Scenic Resource Inventory. As of 2015 or 2019 (the year they were last evaluated), each of the shoreline scenic resources described above are meeting the adopted threshold standard. However, the roadway scenic resources are still in non-attainment, but showing improvements from redevelopment efforts completed to date.

**Figure 1 – Tourist Core Area Plan Location Map**

The potential scenic impact associated with additional height that is available within the TCAP was analyzed in the RPU EIS (Impact 3.9-1) and was found to be potentially significant, requiring mitigation measures which were codified in Sections 37.7.16 and 37.7.17 of the TRPA Code and incorporated in the Tourist Core Area Plan Development and Design Standards. The Tourist Core Area Plan requires any buildings that consist of three or more stories to not project above the forest canopy, ridge lines or otherwise detract from the viewshed. In addition, the Area Plan requires that the TRPA Findings 1, 3, 5 and 9 as described in Section 37.7.16 of the TRPA Code be made. The findings are as follows:

- When viewed from major arterials, scenic turnouts, public recreation areas, or the waters of Lake Tahoe, from a distance of 300 feet, the additional height will not cause a building to extend above the forest canopy, when present, or a ridgeline. For height greater than that set forth in Table 37.4.1-1 for a 5:12 roof pitch, the additional height shall not increase the visual magnitude beyond that permitted for structures in the shoreland as set forth in subsection 66.3.7, Additional Visual Magnitude, or Appendix H, Visual Assessment Tool, of the Design Review Guidelines.

- With respect to that portion of the building that is permitted the additional height, the building has been designed to minimize interference with existing views within the area to the extent practicable.

- The portion of the building that is permitted additional building height is adequately screened, as seen from major arterials, the waters of lakes, and other public areas from which the building is frequently viewed. In determining the adequacy of screening, consideration shall be given to the degree to which a combination of the following features causes the building to blend or merge with the background.

    - The horizontal distance from which the building is viewed;

    - The extent of screening; and

    - Proposed exterior colors and building materials.

- When viewed from a TRPA scenic threshold travel route, the additional building height granted a building or structure shall not result in the net loss of views to a scenic resource identified in the 1982 Lake Tahoe Basin Scenic Resource Inventory. TRPA shall specify the method used to evaluate potential view loss.

These requirements would also apply to the proposed height amendment for the TSC-MU District (Regional Center Overlay where height up to 95 feet may be considered per TRPA Code Section 13.5.3.A) to increase the current limit from 56 feet to 65 feet. The TSC-MU District is located along US Highway 50 near Ski Run Boulevard, between US Highway 50 and Pioneer Trail west of their intersection and to the north and south of the TSC-C District near the stateline core. This evaluation concludes that the Area Plan's development and design standards, and the required scenic quality findings of the TRPA Code of Ordinances, avoid and minimize potential impacts to scenic vistas by prohibiting buildings to protrude above the forest canopy or ridgeline, and by requiring site-specific design features that minimize ground disturbance, installation of screening, the use of earth tone colors the use of natural materials, and an architectural style that complements the Tahoe landscape.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**2. Would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? (CEQA Ib)**

No state scenic highways exist within nor are directly visible from the Tourist Core. The area does not contain any trees, rock outcroppings or historic buildings that are unique or contribute to the visual resources of the area. Therefore, the Project has no impact on state designated scenic highways.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**3. Would the Project substantially degrade the existing visual character or quality of the site and its surroundings? (CEQA Ic)**

The Area Plan includes detailed design standards that are intended to ensure that the built environment complements the natural appearing landscape in the Tahoe Region while improving the quality of life and promoting livability, sustainability and walkability. The Area Plan specifically regulates building form, materials and colors and includes the following:

- Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance;
- A unified palette of quality materials shall be used on all sides of buildings;
- Colors shall be used to help delineate windows and other architectural features to increase architectural interest;
- A variety of natural-appearing materials should provide contrast on building facades;
- Colors should be chosen to blend in with the setting and to minimize reflectivity. Bright colors should be used for accent only and should be applied to a maximum of 10 percent of the building façade; and
- Roofs, including mechanical equipment and skylights, shall be constructed of nonglare finishes and earth tone colors that minimize reflectivity.

For buildings that are located adjacent to residential areas where buildings are generally limited to two stories in the setback zone, the Area Plan includes provisions to minimize the potential impact on the visual character and quality of the residential land uses. The Area Plan incorporates a standard that requires buildings to be step backed at a 1:1 ratio from the setback line for any portion of the building that exceeds 25 feet and requires additional measures if necessary that includes landscape buffering, increased side yard or rear yard setbacks, or reduced height to minimize impacts on adjacent residential areas.

The Area Plan promotes a more dense land use pattern to promote pedestrian- and transit-oriented development. Pursuant to TRPA's Code of Ordinances, the Area Plan provides additional height and increased density incentives, to ensure adequate capacity for redevelopment and transfers of development. However, the expected change in amount, distribution and type of development is not expected to have a significant impact on the visual character or quality of the Tourist Core or its surroundings. The character and quality is expected to improve as a result of the proposed design standards discussed above and additional height granted to structures will not impact existing viewsheds as discussed in Question 1 (CEQA Checklist Ia) above. Furthermore, improvements in the visual character and quality of this Area Plan has

been documented in numerous TRPA Threshold Evaluations as projects implemented many of the design standards that are incorporated in this Area Plan.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**4. Would the Project create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area? (CEQA Id)**

Consistent with existing conditions, implementation of the Tourist Core Area Plan would allow for construction of new development and redevelopment projects. These projects would likely include new or modified sources of exterior lighting. However, the lighting standards provide criteria for the range of lighting that is necessary to provide safety and security, as well as provide, in limited areas, the ambient lighting that would allow for an atmosphere that enhances the qualities of an active civic place. The existing design standards for exterior lighting are designed to reduce light pollution, reduce the splay of light on adjoining parcels and adjacent residential uses. The Tourist Core Area plan, includes the following requirements:

- Outdoor lights (including winter seasons display) shall not blink, flash, or change intensity or give the illusion of movement
- Prohibits the commercial operation of searchlights.
- Limits seasonal lighting displays to November 1 through March 1 unless an approval of a minor review is obtained. Displays are limited to 90 days, shall use LED or low voltage (24 volts or less), and are subject to building and fire department inspection.
- Outdoor lighting is used for illumination purposes only and shall not be designed for, or used as, an advertising display.
    - Lighting shall only be directed downwards, up-lighting is not permitted unless overhead shields are used and light sources (bulbs) shall not be visible.
    - No light can spray off site and the use of cutoff shields or other devices are required
    - The maximum height of exterior architectural lighting is limited to 26 feet with the exception of the Stateline tourist node area which allows for lighting of architectural features above 26 feet and landscape lighting provided a visual analysis is prepared.
    - Roof, in part or in total, shall not be illuminated including the prohibition the use of flood lighting, reflective materials, or lighting strips, including neon/fluorescent tubing, and the like.
    - Assembly poles and fixtures shall be painted a dark earthtone color.
    - Lighting levels shall not exceed a maximum of 25 foot-candles, measured within one foot of the base ground level.

- The maximum height for any freestanding light pole shall not exceed 20 feet unless it's a cobra head fixture placed at major intersections of state highways with conform to the state standard.

- Prohibits the use of low sodium lights (monochromatic orange).

The Tourist Core Area Plan includes existing provision to incorporate increased protections against misdirected or excessive lighting, when compared to the existing city-wide design standards. New provisions include limiting light bulb that may be used (i.e., incandescent, high pressure sodium, metal halide, compact florescent, or light-emitting diode [LED]), prohibit the installation of lighting on trees except for seasonal lighting, further limits the use of seasonal lighting in the Stateline node to November 26 through March 1, and includes language to clarify the maximum level of illumination permitted for various applications. New lighting standards provides "foot candle" criteria for exterior lighting, streets, pedestrian zones, and secured areas that are consistent with or more stringent than the Illuminating Engineering Society recommendations (IDSA 1998) or the City's existing standards. Previously, the City's illumination standard allowed up to 25 foot-candles for all lighting sources. Thus, new or modified sources of exterior lighting associated with projects proposed under the Tourist Core Area Plan would be consistent with or more stringent than existing City or TRPA substitute standards.

As previously discussed in Question 3 (CEQA Checklist Ic) and the exterior lighting discussion above the Tourist Core Area Plan requires the use of variety of natural-appearing material and colors that blend in with the natural setting and prohibits the use of flood lighting, reflective materials, or lighting strips, including neon/fluorescent tubing to minimize reflectivity and glare. Therefore no substantial glare or reflectivity of a project proposed under the Tourist Core Area Plan is expected to affect day or nighttime views in the area.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**5. Would the Project be visible from any state or federal highway, Pioneer Trail or from Lake Tahoe? (TRPA 18a)**

The Tourist Core is visible form US Highway 50, Pioneer Trail and from Lake Tahoe.

US Highway 50 is a federal highway and runs through the Tourist Core from its western border to its eastern border at the California/Nevada state line. Pioneer Trail forms the southern border of the Area Plan at the intersection of Ski Run Boulevard and at the intersection of US Highway 50. The most western portion of the Tourist Core from Bijou Commercial Center to Ski Run Marina is visible from Lake Tahoe. Both US Highway 50 and Pioneer Trail are designated by TRPA as an Urban Scenic Corridor. Urban Scenic Corridors are generally urbanized where man-made development is the dominant visual feature but development still blends with the natural environment (TRPA Code Chapter 66).

As shown in Figure 4, the Tourist Core contains a portion of TRPA Scenic Roadway Travel Unit #32 – Casino Core, Scenic Roadway Travel Unit #33 – The Strip, Scenic Roadway Travel Unit #45 – Pioneer Trail (North) and Shoreline Travel Unit #31 – Bijou. Within the scenic travel units, TRPA has identified scenic quality ratings for individual scenic resources that include a view of Lake Tahoe from Ski Run Boulevard and general landscape and built environment views from US Highway 50 and Pioneer Trail. Within the shoreline travel unit TRPA has identified four scenic resources. Three resources constitute views of the shoreline and the fourth resource is a view of the mountain backdrop. The 2019 Threshold Evaluation indicates all the scenic individual scenic resources are in attainment for the scenic threshold with the recent

evaluation noticing an improvement in the visual quality of the built environment as viewed from Lake Tahoe. Shoreline Travel Unit #31 is currently in threshold attainment as noted in the 2019 Threshold Evaluation which noted an improvement in the visual quality of the man-made environment as a result of the redesign and rehabilitation of El Dorado Beach.

Roadway Units #32, #33 and #45 are all presently not in attainment but continue to show improvements in visual quality as a result of redevelopment and application of design standards that complements the natural environment. All 3 units are targeted for scenic restoration in the SQIP and the TCAP includes policies that call for for improving the architectural style of existing and new buildings, using natural appearing building material, using natural colors, consolidating driveway access, locating parking lots in the rear or side yards, incorporating landscaping treatment, sign compliance and the undergrounding of utility line whenever possible.

Since the adoption of the 2013 Tourist Core Area Plan, numerous redevelopment, transportation and water quality projects have been implemented in the Area Plan that have directly contributed towards scenic threshold gains. The 2011 and the 2019 Threshold Evaluation noted that the majority of roadway units with improved threshold scores fall partially or wholly within Community Plan/urbanized areas of the Region. Removal of degraded structures, improvement in architectural quality of new and remodeled structures, increased landscaping, creation of open space and landscape drainage basins, installing curb, gutters and pedestrian sidewalks and consolidating highway curb cuts, and improved signage have all contributed to a transformation in many of these units. This improvement affects both travel route and scenic quality ratings.

As described in Question 3 (CEQA Checklist IC) above, the Tourist Core Area Plan includes detailed design standards that ensure that the built environment complements the natural appearing landscape in the Tahoe Region while improving the quality of life, promoting livability, sustainability and walkability. The Area Plan specifically regulates building form, materials and colors to avoid bulky and "box-like appearance, to promote materials and colors that blend with the natural setting, to reduce glare and reflectivity, and preserve views of the lake, ridgelines and meadows. Application of these standards for redevelopment of dilapidated structures, for the development of news structures, in conjunction with site design standards to protect viewsheds and minimize impact on adjacent residential areas, is expected to improve the visual quality and character of the Tourist Core. This change in visual quality and character is not expected to adversely affect the shoreline scenic unit or the scenic quality ratings for individual resources but would improve scenic conditions resulting in threshold gains in the three non-attainment roadway travel units found in the Tourist Core.

Thus, implementation of specific projects under the Tourist Core Area Plan is not likely to result in adverse impacts on views from any state or federal highway, Pioneer Trail or from Lake Tahoe.

Environmental Analysis: *Yes, Less than Significant Impact.*

Required Mitigation: **None.**

**6. Would the Project be visible from any public recreation area or TRPA designated bicycle trail? (TRPA 18b)**

A review of the 1993 Lake Tahoe Basin Scenic Resource Evaluation indicates that there are no identified recreation areas or designated bicycle trails in the Tourist Core. However, the Tourist Core itself is visible from a number of recreation areas identified in the Scenic Resource Evaluation. These recreation areas are: Baldwin Beach, Taylor Creek, Kiva Beach, Camp Richardson, Pope Beach, Regan Beach, El Dorado Beach and Nevada Beach. In all cases the Area Plan is visible as a distant foreground view of a developed and undeveloped shoreline, a forested middle ground view that is back dropped by distant mountains views.

The Scenic Resource Evaluation noted that the panoramic views of the lake and distant shoreline are elements that contributed to the scenic quality of these recreation areas.

Any proposed projects within the Area Plan is not likely to affect scenic views from these identified recreation areas or contribute to their degradation as a result of protective standards incorporated into the Area Plan to prohibit structures from protruding above the existing forest canopy. Any development visible from the recreation area would likely be structures along the shoreline that are built below the canopy and would blend in with its natural setting.

The Ski Run Marina is a recreation area located within the Tourist Core Area that provides beach recreation and boating access to the lake; however, it is not mapped and identified as a scenic resource in the Scenic Resource Evaluation. Although a proposed project in the Area Plan would likely be visible from this recreation area it is not likely to be impacted because application of design standards and protective measures for view shed protection described and discussed in questions 1 through 5 (CEQA Checklist item 1a through 1d) above and Question 7 below.

Projects resulting from implementation of the Tourist Core Area Plan would involve development and redevelopment consistent with the Area Plan's Development and Design Standards and Chapter 66 of the TRPA Code that would prohibit buildings to protrude above the forest canopy or ridgeline, include site-specific design features that minimize ground disturbance, incorporate screening, use of earth tone colors, materials and architectural style that complements the Tahoe landscape. Thus, implementation of specific projects under the Tourist Core Area Plan is not likely to result in impacts to views from any public recreation area or TRPA designated bicycle trails. All projects would comply with TRPA Code provisions and the Tourist Core Development and Design Standards, which would result in generally improved scenic conditions in the Tourist Core Area Plan.

Environmental Analysis: *Yes, Less than Significant Impact.*

Required Mitigation: **None.**

**7. Would the Project block or modify an existing view of Lake Tahoe or other scenic vista seen from a public road or other public area? (TRPA 18c)**

As discussed above in Questions 1 (CEQA Checklist 1a) and 6 the project area includes scenic vistas from the public roadway and is also visible from offsite public recreation areas. Implementation of the Tourist Core Area Plan would allow for construction of new development and redevelopment projects. These projects would likely include new structures or introduce massing to existing scenic vistas but is not expected to block or modify an existing resource that would result in a significant impact. The Area Plan includes protective measures that prohibit buildings from projecting above the forest canopy, ridge lines, or otherwise detract from the view shed and the scenic quality findings of the TRPA Code of Ordinances must be made for any project granted additional height (see Question 1, CEAQ Checklist 1a discussion). Moreover, as discussed in Question 3, CEQA Checklist Ic, projects are required to implement the Area Plan's design standards to ensure compatibility with the natural environment.

Projects resulting from implementation of the Tourist Core Area Plan would involve development and redevelopment consistent with the Area Plan's Development and Design Standards and Chapter 66 of the TRPA Code that would prohibit buildings to protrude above the forest canopy or ridgeline, include site-specific design features that minimize ground disturbance, incorporate screening, use of earth tone colors, materials and architectural style that complements the Tahoe landscape. Thus, implementation of specific projects under the Tourist Core Area Plan is not likely to result in obstructed views to and from Lake Tahoe, recreation areas, bike trails, and public roadways. All projects would comply with TRPA Code provisions

and the Tourist Core Development and Design Standards, which would result in generally improved scenic conditions in the Tourist Core.

Environmental Analysis: *Yes, Less than Significant Impact.*

Required Mitigation: **None**.

**8. Would the Project be inconsistent with the height and design standards required by the applicable ordinance or Community Plan? (TRPA 18d)**

Consistent with the Regional Plan, the Tourist Core Area Plan would allow for changes in the built environment through use of remaining allocations, use of newly authorized allocations, and implementation of design standards and guidelines and Code provisions that would ultimately affect the form of new development and redevelopment. The Tourist Core Area Plan implements and is consistent with the provisions of the Regional Plan (such as increased density and height in community centers) intended to incentivize redevelopment, while protecting scenic resources. The Tourist Core Area Plan Development and Design standards are intended to guide development that would reflect the character of the area, protect viewsheds, and substantially improve the appearance of redevelopment projects.

While redevelopment is intended to and often results in improvement in the scenic quality of roadway travel routes, changes in the built environment could have undesirable consequences on scenic quality if they adversely affect views or vistas, damage or remove scenic resources, or result in development that is incompatible with the scenic values of the Region. Potential scenic impacts from development and redevelopment activities in the Tahoe Region are currently mitigated through environmental review and compliance with TRPA regulations.

Height: Pursuant to the Chapter 13 of the TRPA Code of Ordinances, the Tourist Core Area Plan incorporates the height standards permitted in Table 13.5.3-1: Minimum Development Standards for Area Plans (TRPA Code, page 13-3). Table 13.5.3-1 permits up to a maximum of 56’ in areas designated as Town Centers and up 95’ in areas designated as a Regional Center. The Tourist Core Area Plan boundary encompasses lands designated both as a Town Center and as a Regional Center on TRPA’s Conceptual Land Use Map (TRPA 2012d). The 2013 Tourist Core Area Plan adopted the height standards permitted by Chapter 13 and incorporated protective measures discussed in Question 1 and Question 3 to protect scenic resources and the visual character and quality of the Tourist Core. The proposed amendments would permit 9 feet of additional height in the TSC-MU District, located in the Regional Center Overlay, for a new maximum height of 65 feet. Even with the additional 9 feet of allowable building height in the TSC-MU District, the approval requirements and existing scenic quality ordinances referenced above would continue to protect views of the natural-appearing landscapes and unique natural features as viewed from adopted scenic corridors and recreation areas, provide a regulatory mechanism to ensure that allowances for increased height would be approved only in conjunction with limitations and design standards consistent with the Regional Plan, and not interfere with attainment of scenic threshold. Thus this evaluation concludes no impact when implementing the updated height standards.

Environmental Analysis: *Yes, Less than Significant Impact.*

Required Mitigation: **None**.

**9. Would the Project be inconsistent with the TRPA Scenic Quality Improvement Program (SQIP) or Design Review Guidelines? (TRPA 18e)**

The SQIP addresses the segment of US Highway 50 and Pioneer Trail that is located within the Tourist Core. Both segments are out of attainment and have been designated as restoration areas by the SQIP. The SQIP promotes restoration of disturbed areas and requires that visual quality ratings be maintained and that non-attainment areas improve. Therefore, development that degrades this rating constitutes a significant impact.

The evaluation presented above for Questions 1 through 7 (CEAQ Checklist 1a through 1d) concludes that while implementation the Tourist Core Area Plan would allow for construction of new development and redevelopment projects and result in increased visibility of man-made features, the change would not rise to a level of significance when the design standards and protective measures of the Area Plan are implemented. Furthermore, the roadway segments located within the Area Plan are designated by TRPA as an Urban Scenic Corridor whichh recognizes that man-made development can be the dominant visual features provided that the development complements the natural environment.

Due to the fact that the two roadway segments are in non-attainment and identified in the SQIP, the planning recommendations for improving the scenic quality in the roadway segments are required as appropriate during project review by the TRPA Code of Ordinances (Section 36.4). Recommendations include improved landscaping of parking lots, screening of utilities, and where appropriate placing overhead utility lines underground.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**10. Would the Project include new or modified sources of exterior lighting? (TRPA 7a)**

See discussion and analysis for Question 4, which concludes the level of impact is less than significant.

Environmental Analysis: *Yes, Less than Significant Impact*.

Required Mitigation: **None**.

**11. Would the Project create new illumination, which is more substantial than other lighting, if any, within the surrounding area? (TRPA 7b)**

See discussions and analyses and for Question 4and Question 8 above, which concludes the level of impact is less than significant.

Environmental Analysis: *Yes, Less than Significant Impact*.

Required Mitigation: **None**.

**12. Would the Project cause light from exterior sources to be cast off-site or onto public lands? (TRPA 7c)**

See discussions and analyses for Question 4 and Question 8, which concludes the level of impact is less than significant.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**13. Would the Project create new sources of glare through the siting of the improvements or through the use of reflective materials? (TRPA 7d)**

See discussion and analysis for Question 4, which concludes the level of impact is less than significant.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

### 5.4.4 Agriculture and Forestry Resources

This section presents the analyses for potential impacts to agriculture and forestry resources. Some TRPA checklist items concern impacts to vegetation, which are addressed in Section 5.4.6, Biological Resources. Table 7 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 7: Agriculture and Forestry Resources**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 14. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the CA Resources Agency, to a non-agricultural use? (CEQA IIa) | | | | **X** |
| 15. Conflict with existing zoning for agricultural use, or a Williamson Act contract? (CEQA IIb) | | | | **X** |
| 16. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resource Code section 12220(g), timberland (as defined by Public Resource Code section 4526) or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? (CEQA IIc) | | | | **X** |
| 17. Result in the loss of forest land or conversion of forest land to non-forest use? (CEQA IId) | | | | **X** |
| 18. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? (CEQA IIe) | | | | **X** |

**14. Would the Project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to a non-agricultural use? (CEQA IIa)**

The Tourist Core Area Plan primarily consist of already developed land and is not located in an area identified as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, and therefore poses no impact to such lands.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**15. Would the Project conflict with existing zoning for agricultural use, or a Williamson Act contract? (CEQA IIb)**

The Tourist Core Area Plan creates no conflicts with zoning for agricultural use or a Williamson Act contract because no contracts exist within the project area.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**16. Would the Project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resource Code section 12220(g), timberland (as defined by Public Resource Code section 4526) or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? (CEQA IIc)**

The Tourist Core Area Plan conflicts with no zoning of and causes no rezoning of forest land, timberland or timberland zoned Timberland Production.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**17. Would the Project result in the loss of forest land or conversion of forest land to non-forest use? (CEQA IId)**

The loss of substantial forest land, defined above for Question 16, or conversion of forest land to non-forest use creates a significant if appropriate permits are not obtained.

See discussion and analysis for Question 16 which concludes no impacts to forest land are anticipated with implementation of the Tourist Core Area Plan.

Environmental Analysis: *No Impact*

Required Mitigation: **None**.

**18. Would the Project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? (CEQA IIe)**

See discussions and analyses for Questions 15, 16 and 17, which conclude no impacts to farmland and less than significant impacts to forest land after mitigation.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

### 5.4.5 Air Quality

This section presents the analyses for potential impacts to air quality. Table 8 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 8: Air Quality**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 19. Conflict with or obstruct implementation of the applicable air quality plan? (CEQA IIIa) | | | | **X** |
| 20. Violate any air quality standards or contribute substantially to an existing or projected air quality violation? (CEQA IIIb) | | | **X** | |
| 21. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors? (CEQA IIIc) | | | **X** | |
| 22. Expose sensitive receptors to substantial pollutant concentrations? (CEQA IIId) | | | **X** | |
| 23. Create objectionable odors affecting a substantial number of people? (CEQA IIIe) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 24. Substantial air pollutant emissions? (TRPA 2a) | | | | **X** |
| 25. Deterioration of ambient (existing) air quality? (TRPA 2b) | | | | **X** |
| 26. Creation of objectionable odors? (TRPA 2c) | | | | **X** |

| | | | | |
|---|---|---|---|---|
| 27. Alteration of air movement, moisture or temperature, or any change in climate, either locally or regionally? (TRPA 2d) | **X** | | | |
| 28. Increased use of diesel fuel? (TRPA 2e) | **X, LTS** | | | |

**19. Would the Project conflict with or obstruct implementation of the applicable air quality plan? (CEQA IIIa)**

The Tourist Core Area Plan would not alter, revise, conflict or obstruct the regulations pertaining to air quality. Consistent with existing conditions, subsequent projects that could occur under the Tourist Core Area Plan would be subject to subsequent environmental review and permitting, and would be required to comply with Chapter 65 of the TRPA Code. Chapter 65 includes provisions that apply to direct sources of air pollution in the Tahoe region, including certain motor vehicles registered in the region, combustion heaters installed in the region, open burning, stationary sources of air pollution, and idling combustion engines.

TRPA's 2020 Linking Tahoe: Regional Transportation Plan & Sustainable Communities Strategy (RTP) includes an analysis of its conformity with the California State Implementation Plan in to ensure that the RTP remains consistent with State and local air quality planning efforts to achieve and/or maintain the NAAQS.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**20. Would the Project violate any air quality standards or contribute substantially to an existing or projected air quality violation? (CEQA IIIb)**

The Tourist Core Area Plan would not alter or revise the regulations pertaining to air quality. Consistent with existing conditions, subsequent projects that could occur under the Tourist Core Area Plan would be subject to subsequent environmental review and permitting, and would be required to comply with Chapter 65 of the TRPA Code. Chapter 65 includes provisions that apply to direct sources of air pollution in the Tahoe region, including certain motor vehicles registered in the region, combustion heaters installed in the region, open burning, stationary sources of air pollution, and idling combustion engines.

The Lake Tahoe Air Basin is in attainment or designated unclassified for all national ambient air quality standards (NAAQS) and is designated a nonattainment area for the ozone and PM10 California ambient air quality standards (CAAQS). Implementation of subsequent projects under the Tourist Core Area Plan has the potential to produce substantial air pollutant emissions during project construction and operation, as discussed below.

<u>Short-Term Construction Emissions</u>

Subsequent development and redevelopment projects that could occur under the Tourist Core Area Plan would involve construction and construction emissions. Construction emissions are described as short-term or temporary in duration. ROG and NOx (ozone precursors) emissions are primarily associated with gas and diesel equipment exhaust and the application of architectural coatings. Fugitive dust emissions (PM10

and PM2.5) are primarily associated with site preparation and vary as a function of such parameters as soil silt content, soil moisture, wind speed, acreage or disturbance area, and vehicle travel by construction vehicles on- and off-site.

Although the details of projects are not know at this time, implementation of subsequent projects under the Tourist Core Area Plan would involve construction that would result in the temporary generation of ozone precursor and fugitive dust emissions from site preparation; off-road equipment, material import/export, worker commute exhaust emissions; paving; and other miscellaneous activities. Typical construction equipment associated with development and redevelopment projects includes dozers, graders, excavators, loaders, and trucks. Construction emissions associated with subsequent projects under the Tourist Core Area Plan have the potential to be substantial such that they could violate or contribute substantially to an existing or projected air quality violation, and/or expose sensitive receptors to substantial pollutant concentrations.

As part of mitigation from the City General Plan EIR (CSLT 2010, page 4.5-33), the City adopted Policy NCR-5.10 in the General Plan (CSLT 2011b, page NCR-9) to address short-term construction emissions. Furthermore, the Area Plan also incorporated Policy NCR-5.1 to address short-term construction emissions (TCAP 2013, page 7-3), which include incorporating measures to reduce construction-generated emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District.
- Prohibit open burning of debris from site clearing unless involved with fuels reduction project;
- Restriction of idling of construction equipment and vehicles;
- Apply water to control dust as needed to prevent dust impacts offsite;
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.

Long-Term Operational Emissions

Subsequent development and redevelopment projects that could occur under the Tourist Core Area Plan could affect regional air quality and could create localized exposure to carbon monoxide (CO) emissions.

Consistent with the Regional Plan and the General Plan, the Area Plan seeks to accommodate the expected growth in in a way that improves traffic flow and mobility of residents and visitors to the Area Plan, and reduces localized traffic congestion and related CO concentrations. Based on the traffic analysis in the Regional Plan (TRPA 2012a, pages 3.4-22 through 3.4-26) and the General Plan (CSLT 2010, pages 4.5-42 through 4.5-43), estimated mobile-source CO emissions associated with the Regional Plan and the General would not conflict with or obstruct regional CO maintenance efforts. Similarly, because the Tourist Core Area Plan expected growth and estimated mobile-source CO emission falls within that estimated for the General Plan and the Regional Plan, , it too would not impede CO maintenance efforts.

With respect to localized CO impacts, the Transportation Project-Level Carbon Monoxide Protocol (Garza et al. 1997) states that signalized intersections that operate at an unacceptable level of service (LOS) represent a potential for a CO violation, also known as a “hot spot.” Thus, an analysis of CO concentrations is typically recommended for receptors located near signalized intersections that are projected to operate at LOS E or F. According to the traffic analysis prepared for the RPU EIS, signalized intersections in the

Basin under the Regional Plan, including those within the Tourist Core Area Plan, measured in 2035 would operate at an acceptable LOS (i.e., LOS D or better) (TRPA 2012a, page 3.4-37). According to the traffic analysis prepared for the GP EIR, signalized intersections within the City limits under the General Plan, including those within the Tourist Core measured in 2030 would operate at an acceptable LOS of D or better. One intersection (US Highway 50/Pioneer Trail) was found to have a forecast LOS of E; however, detailed evaluation of the change in traffic activity by hour indicates that LOS E conditions would not exceed 4 hours per day and thus the LOS standard would be achieved (CSLT 2010, page 4.4-31 through 4.4-32).

Because the Tourist Core Area Plan seeks to implement and is within the scope of what was envisioned in the General Plan and the Regional Plan, it too would not cause signalized intersections to operate at unacceptable levels. Therefore, traffic volumes would not be heavy enough to result in a CO "hot spot". For this reason, and based on the fact that CO emission factors would be reduced substantially (due to increasingly cleaner fuels and vehicles) over the planning period, the Tourist Core Area Plan would not result in congestion at intersections that would result in a violation of a CO air quality standard, contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations.

With respect to other regional criteria air pollutants (ozone precursors, $PM_{10}$, and $PM_{2.5}$), consistent with the Regional Plan, subsequent projects that may occur under the Tourist Core Area Plan may include development and redevelopment projects that could generate long-term operational emissions, including mobile and area source emissions.

Based on the results of the emissions modeling conducted in support of the RPU EIS and RTP EIR/EIS and subsequent 2020 IS/IEC, emissions of ozone precursors and CO would be expected to decrease substantially by 2035. This can be explained by the fact that vehicle emissions standards would be improved substantially over the next 20 years, and limited development could occur within the Tahoe Basin. Any additional population growth and associated increase in operational ozone precursor emissions in the Basin would be more than offset by more stringent vehicle emissions standards, fuel economy standards, and truck and bus emission rules, over the planning period (TRPA 2012a, page 3.4-33).

Emissions of $PM_{10}$ and $PM_{2.5}$ were projected to increase slightly by 2035 (approximately 4 tons per year (TPY) or 21 lb/day and 3 TPY or 14 lb/day, respectively). However, Section 65.1.4 of the TRPA Code requires that only wood stoves that meet EPA emissions standards would be installed and would allow air quality mitigation fees to be used for regional projects, which could include incentives to remove non-conforming stoves. These proposed changes would be expected to continue the existing trend of decreasing PM emissions in the Region over the planning period.

Because the Tourist Core Area Plan buildout is required to be consistent with the Regional Plan, implementation of the Tourist Core Area Plan would also be expected to result in a substantial long-term reduction in emissions of ozone precursors and CO. Because the increase in emissions of PM associated with build-out of the entire Regional Plan would be below the project-level increment considered significant by TRPA (82 lb/day), the Tourist Core Area Plan would not be anticipated to lead to nonattainment of national standards.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**21. Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under applicable federal or state ambient air quality**

**standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)? (CEQA IIIc)**

The Region is in attainment for ozone and non-attainment for and $PM_{10}$, as presented in Table 9. A significant cumulative impact results if the Project causes an increase in $PM_{10}$ and Ozone.

| Table 9: Federal and State Attainment Status for the Lake Tahoe Air Basin | | |
|---|---|---|
| **Pollutant** | **State Status** | **Federal Status** |
| 8-Hour Ozone | Nonattainment | Unclassified/Attainment |
| $PM_{10}$ | Nonattainment | Unclassified |
| $PM_{2.5}$ | Attainment | Unclassified/Attainment |
| CO | Attainment | Unclassified/Attainment |
| Source: EPA 2024; CARB 2024 | | |

In the Lake Tahoe Region, these pollutants relate to automobile use and potential impacts measured with VMT calculations. No single project is sufficient in size to, by itself; result in nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts.

With respect to ozone precursors and PM10, consistent with the Regional Plan, subsequent projects that may occur under the Tourist Core Area Plan may include development and redevelopment projects that could generate long-term operational emissions, including mobile and area source emissions.

Based on the results of the emissions modeling conducted in support of the RPU EIS and RTP EIR/EIS and subsequent 2020 IS/IEC, emissions of ozone precursors in the Basin would be expected to decrease substantially by 2035. This can be explained by the fact that vehicle emissions standards would be improved substantially over the next 20 years, and limited development could occur within the Tahoe Basin. Any additional population growth and associated increase in operational ozone precursor emissions in the Basin would be more than offset by more stringent vehicle emissions standards, fuel economy standards, and truck and bus emission rules, over the planning period (TRPA 2012a, page 3.4-33 and TMPO 2012, page 3.4-331 ).

Emissions of $PM_{10}$ and $PM_{2.5}$ was projected to increase slightly by 2035 (approximately 4 tons per year (TPY) or 21 lb/day). However, Section 65.1.4 of the TRPA Code requires that only wood stoves that meet EPA emissions standards would be installed and would allow air quality mitigation fees to be used for regional projects, which could include incentives to remove non-conforming stoves. Furthermore, the City General Plan Policy NCR-5.11 requires that all feasible El Dorado County Air Quality Municipal District (EDCAQMD) recommended measures to reduce operational emissions of criteria pollutants be incorporated into project design and that all projects demonstrate compliance with TRPA's air quality mitigation program at the time of project consideration. These proposed changes would be expected to continue the existing trend of decreasing PM emissions in the Region over the planning period.

Because the Tourist Core Area Plan is required to be consistent with the Regional Plan, implementation of the Tourist Core Area Plan would also be expected to result in a substantial long-term reduction in emissions of ozone precursors. Because the increase in emissions of PM associated with build-out of the entire Tourist Core would be below the project-level increment considered significant by TRPA (82 lb/day), the Tourist Core Area Plan would not be anticipated to lead to nonattainment of national standards.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**22. Would the Project expose sensitive receptors to substantial pollutant concentrations? (CEQA IIId)**

Typical sensitive receptors include residences, hospitals, and schools. Although no schools or hospitals are located within the Tourist Core Area Plan it is surrounded on the south and the north by residential neighborhoods.

Short-Term Construction Emissions

Subsequent development and redevelopment projects that could occur under the Tourist Core Area Plan would involve construction and construction emissions. Construction emissions are described as short-term or temporary in duration. ROG and NOx (ozone precursors) emissions are primarily associated with gas and diesel equipment exhaust and the application of architectural coatings. Fugitive dust emissions (PM10 and PM2.5) are primarily associated with site preparation and vary as a function of such parameters as soil silt content, soil moisture, wind speed, acreage or disturbance area, and vehicle travel by construction vehicles on- and off-site.

Although the details of projects are not know at this time, implementation of subsequent projects under the Tourist Core Area Plan would involve construction that would result in the temporary generation of ozone precursor and fugitive dust emissions from site preparation; off-road equipment, material import/export, worker commute exhaust emissions; paving; and other miscellaneous activities. Typical construction equipment associated with development and redevelopment projects includes dozers, graders, excavators, loaders, and trucks. Construction emissions associated with subsequent projects under the Tourist Core Area Plan have the potential to be substantial such that they could violate or contribute substantially to an existing or projected air quality violation, and expose sensitive receptors to substantial pollutant concentrations.

As part of mitigation from the City General Plan EIR (CSLT 2010, page 4.5-33), the City adopted Policy NCR-5.10 in the General Plan (CSLT 2011b, page NCR-9) to address short-term construction emissions. Furthermore, the Area Plan also incorporated Policy NCR-5.1to address short-term construction emissions (TCAP 2013, page 7-3), which include incorporating measures to reduce construction-generated emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District.
- Prohibit open burning of debris from site clearing unless involved with fuels reduction project;
- Restriction of idling of construction equipment and vehicles;
- Apply water to control dust as needed to prevent dust impacts offsite;
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.

Long-Term Operational Emissions

Subsequent development and redevelopment projects that could occur under the Tourist Core Area Plan could affect regional air quality and could create localized exposure to carbon monoxide (CO) emissions.

Consistent with the Regional Plan and the General Plan, the Area Plan seeks to accommodate the expected growth in a way that improves traffic flow and mobility of residents and visitors to the Tourist Core, and reduces regional and localized traffic congestion and related CO concentrations. Based on the analysis in the Regional Plan (TRPA 2012a, pages 3.4-22 through 3.4-26) and the General Plan EIR (CSLT 2010, pages 4.5-42 through 4.5-43), estimated mobile-source CO emissions associated with the Regional Plan would not conflict with or obstruct regional CO maintenance efforts. Similarly, because the Tourist Core Area Plan expected growth and estimated mobile-source CO emissions falls within that estimated for the General Plan and the Regional Plan, it too would not impede CO maintenance efforts.

With respect to localized CO impacts, the Transportation Project-Level Carbon Monoxide Protocol (Garza et al. 1997) states that signalized intersections that operate at an unacceptable level of service (LOS) represent a potential for a CO violation, also known as a "hot spot." Thus, an analysis of CO concentrations is typically recommended for receptors located near signalized intersections that are projected to operate at LOS E or F. According to the traffic analysis prepared for the RPU EIS, signalized intersections in the Basin under the Regional Plan, including those within the Tourist Core Area Plan, measured in 2035 would operate at an acceptable LOS (i.e., LOS D or better) (TRPA 2012a, page 3.4-37). According to the traffic analysis prepared for the GP EIR, signalized intersections within the City limits under the General Plan, including those within the Tourist Core Area Plan, would operate at an acceptable LOS of D or better in 2030. One intersection (US Highway 50/Pioneer Trail) was found to have a forecast LOS of E; however, detailed evaluation of the change in traffic activity by hour indicates that LOS E conditions would not exceed 4 hours per day and thus the LOS standard would be achieved (CSLT 2010, page 4.4-31 through 4.4-32). Because the Tourist Core Area Plan seeks to implement and is within the scope of what was envisioned in the General Plan and the Regional Plan, it too would not cause signalized intersections to operate at unacceptable levels. Therefore, traffic volumes would not be heavy enough to result in a CO "hot spot". For this reason, and based on the fact that CO emission factors would be reduced substantially (due to increasingly cleaner fuels and vehicles) over the planning period, the Tourist Core Area Plan would not result in congestion at intersections that would result in a violation of a CO air quality standard, contribute substantially to an existing or projected air quality violation, and expose sensitive receptors to substantial pollutant concentrations.

With respect to other regional criteria air pollutants (ozone precursors, PM10, and PM2.5), consistent with the Regional Plan, subsequent projects that may occur under the Tourist Core Area Plan may include development and redevelopment projects that could generate long-term operational emissions, including mobile and area source emissions.

Based on the results of the emissions modeling conducted in support of the RPU EIS and the RTP EIR/EIS, emissions of ozone precursors, and CO in the Basin would be expected to decrease substantially by 2035. This can be explained by the fact that vehicle emissions standards would be improved substantially over the next 20 years, and limited development could occur within the Tahoe Basin. Any additional population growth and associated increase in operational ozone precursor emissions in the Basin would be more than offset by more stringent vehicle emissions standards, fuel economy standards, and truck and bus emission rules, over the planning period (TRPA 2012a, page 3.4-33 and TMPO 2012, page 3.4-331).

Emissions of PM10 and PM2.5were projected to increase slightly by 2035 (approximately 4 tons per year (TPY) or 21 lb/day and 3 TPY or 14 lb/day, respectively). However, Section 65.1.4 of the TRPA Code requires that only wood stoves that meet EPA emissions standards would be installed and would allow air quality mitigation fees to be used for regional projects, which could include incentives to remove non-conforming stoves. Furthermore, the City General Plan Policy NCR-5.11 requires that all feasible El

Dorado County Air Quality Municipal District (EDCAQMD) recommended measures to reduce operational emissions of criteria pollutants be incorporated into project design and that all projects demonstrate compliance with TRPA's air quality mitigation program at the time of project consideration. These proposed changes would be expected to continue the existing trend of decreasing PM emissions in the Region over the planning period.

Because the adopted 2013 Tourist Core Area Plan, as proposed in the amendments is required to and will implement and is consistent with the Regional Plan, implementation of the Tourist Core Area Plan would also be expected to result in a substantial long-term reduction in emissions of ozone precursors and CO. Because the increase in emissions of PM associated with build-out of the entire Tourist Core Area Plan would be below the project-level increment considered significant by TRPA (82 lb/day), the Tourist Core Area Plan is not anticipated to expose sensitive receptors to substantial pollutant concentrations.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**23. Would the Project create objectionable odors affecting a substantial number of people? (CEQA IIIe)**

The occurrence and severity of odor effects depend on the nature, frequency, and intensity of the odor source, wind speed and direction, and the presence of sensitive receptors. Offensive odors rarely cause physical harm, but odors can be unpleasant and generate citizen complaints to regulatory agencies and local governments. Typical sensitive receptors include residences, hospitals, and schools. There are no hospitals or schools located within the Tourist Core; however, residences can be found within the boundary of the Area Plan and located in adjacent neighborhoods.

As a general matter, the types of land use development that pose potential odor problems include wastewater treatment plants, refineries, landfills, composting facilities and transfer stations. No such uses occupy the project area. The proposed uses in the Area Plan as listed in Appendix C of the Tourist Core Area Plan, are not characteristic of the types of uses that would result in the development of a major source of objectionable odor..

In the short-term, odor impacts occur from the use of diesel engines and asphalt concrete paving during construction. As stated in the discussion of short-term impacts to sensitive receptors under Question 22 above, these odors are both temporary and localized, affecting only the area immediately adjacent to the active construction area. Diesel exhaust emissions and asphalt concrete paving odors dissipate rapidly away from the source and cease upon completion of construction activities and would be addressed by the Chapter 65 of the TRPA Code idling restrictions and General Plan Policy NCR-5.10 and Tourist Core Area Plan Policy NCR-5. Thus, the implementation of the Tourist Core Area Plan does not result in substantial direct or indirect exposure of sensitive receptors to offensive odors.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**24. Would the Project result in substantial air pollutant emissions? (TRPA 2a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and consistent with the RPU EIS. The Tourist Core Area Plan would not alter or revise the regulations pertaining to air quality. Consistent with existing conditions, subsequent projects that

could occur under the Tourist Core Area Plan would be subject to subsequent environmental review and permitting, and would be required to comply with Chapter 65 of the TRPA Code. Chapter 65 includes provisions that apply to direct sources of air pollution in the Tahoe region, including certain motor vehicles registered in the region, combustion heaters installed in the region, open burning, stationary sources of air pollution, and idling combustion engines.

The Lake Tahoe Air Basin is in attainment or designated unclassified for all national ambient air quality standards (NAAQS) and is designated a nonattainment area for the ozone and PM10 California ambient air quality standards (CAAQS). Because the Tourist Core Area Plan incorporates measures similar to TRPA's Mitigation Measure 3.4-2 to reduce emissions to the extent feasible, subsequent projects under the Tourist Core Area Plan would not result in substantial air pollutant emissions during project construction and operation, as discussed below.

See also analyses for Questions 20 through 22 which concludes a less than significant impact.

Environmental Analysis: *Less than Significant Impact*

Required Mitigation: **None.**

**25. Would the Project result in deterioration of ambient (existing) air quality? (TRPA 2b)**

See analyses for Questions 20 and 21 which concludes a less than significant impact and Questions 24, which concludes no impact to ambient air quality.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**26. Would the Project result in creation of objectionable odors? (TRPA 2c)**

See discussion and analysis for Question 23, which addresses the creation of objectionable odors and concludes a less than significant odor impact to short-term and long-term effects to sensitive receptors.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**27. Would the Project result in alteration of air movement, moisture or temperature, or any change in climate, either locally or regionally? (TRPA 2d)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and consistent with the RPU EIS. During review of the adopted 2012 RPU and 2013 Tourist Core Area Plan buildout assumptions for increased development, redevelopment, and construction activity that would result in an increase in overall greenhouse gas (GHG) emissions, TRPA concluded that this impact was cumulatively significant, mitigated to the extent feasible, and otherwise unavoidable. Changes proposed in the current Tourist Core Area Plan Amendments would increase available residential densities and maximum building heights in the TSC-MU District to encourage residential redevelopment but would not result in any changes to the existing TRPA growth management system that caps total development under the RPU.

Implementation of the Tourist Core Area Plan Amendments would result in some level of development and population growth anticipated during the plan horizon and would contribute some level of greenhouse gas emissions (GHG) to the regional output. Given that many of the sustainability- and conservation-oriented land use and transportation policies and strategies of the Regional Plan, General Plan and the Tourist Core Area Plan would reduce VMT, increase transit and non-motor vehicle travel, and allow or encourage redevelopment of older buildings that would improve energy efficiency, the combined influence of development and population growth planned for within and during the planning horizon of the Tourist Core Area Plan alone may only result in a less-than-significant increase in overall GHG emissions. However, when considered in combination with basin-wide GHG emission resulting from overall Regional Plan implementation this would be a cumulatively considerable contribution to global climate change as identified in the 2012 RPU EIS and described below (TRPA 2012a, page 3.5-15).

Construction-related emissions would primarily be associated with heavy-duty construction equipment and truck and vehicle exhaust associated with subsequent project development. Long-term operational sources of GHG emissions associated with subsequent projects under the Tourist Core Area Plan would include area sources (e.g., landscaping equipment, snow removal equipment, wood-burning appliances), mobile sources (e.g., vehicle exhaust), energy consumption (e.g., electricity and natural gas), solid waste (e.g., emissions that would occur at a landfill associated with solid waste decomposition), and water consumption (e.g., electricity used to deliver and treat water to serve the Region).

Based on the comparison of GHG emissions estimates conducted for the Regional Plan under existing and build-out conditions, the Regional Plan would increase overall GHG emissions in the Basin. The net increase in GHG emissions associated with Regional Plan implementation was considered substantial, and the resultant substantial long-term increase in GHG emissions was determined to make a cumulatively considerable contribution to global climate change in the RPU EIS. Because the Tourist Core Area Plan will implement and is consistent with the Regional Plan, it too would contribute cumulatively to climate change.

As required under RPU EIS mitigation, TRPA's *GHG Emissions Reduction Policy* will require implementation of measures for the reduction of GHG emissions generated by demolition and construction activity in the Region and by ongoing building and property operations. Such measures include, but are not limited to, the following:

For construction-related GHG emissions:

- Limit equipment idling time to a maximum of five minutes;
- Recycle or reuse construction waste and demolition material to the maximum extent feasible;
- Use electrified or alternative-fueled construction equipment to the maximum extent feasible; and
- Use local and sustainable building materials to the extent possible.

For operation-related GHG emissions:

- Use on-site renewable energy, such as photovoltaic systems;
- Exceed building code standards for energy efficiency;
- Install energy efficient appliances and equipment in new buildings;
- Retrofit existing buildings to exceed energy efficiency building code standards;
- Construct new development to allow for electric lawn maintenance and snow removal equipment compatibility;
- Require minimum passive solar design standards in new buildings;
- Expand recycling opportunities and increase recycling infrastructure, including food waste diversion into a composting process; and

- Implement water conservation standards in new development.

In addition to the measures described above in the RPU EIS, the Area Plan incorporates General Plan Policy NCR-5.10 (CSLT 2011b, page NCR-9) in Policy NCR-5.1 of the Area Plan to address short-term construction emissions (TCAP 2013, page 7-3), which include incorporating measures to reduce construction-related GHG emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District.
- Prohibit open burning of debris from site clearing unless involved with fuels reduction project;
- Restriction of idling of construction equipment and vehicles;
- Apply water to control dust as needed to prevent dust impacts offsite;
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.

For operational-related GHG emission the implementation of relevant policies form the General Plan are also anticipated to reduce GHG emission. These policies include:

- Decreasing reliance on non-renewable energy source
- Developing a comprehensive strategy to reduce GHG emission
- Provide credits and incentives for "Green Buildings"
- Use emission-reduction technology in building components and design
- Use of photovoltaic systems
- Promote rehabilitation of the housing stock to achieve greater energy efficiency
- Use "EPA Energy Star" certified appliance for new private and public facilities

In October 2020, the City adopted a Climate Action Plan (CAP) to both reduce GHG emissions from activities within the City and help the community to adapt to climate change and improve its resilience over the long term. In addition to reducing emissions, the CAP will provide numerous co-benefits and improve the livability of the City. The CAP Executive Summary (Table ES-1) summarizes numerous actions that will implement many of the recommendations from the RPU mitigation programs and City General Plan policy. Through the implementation of the 2020 CAP, along with participation from public agencies, businesses, and individuals, the City will be able to make significant progress towards its 2030 and 2040 GHG reduction targets, increase the City's resilience to impacts of climate change, and, in the process, help reduce the impact of RPU and the Tourist Core Area Plan buildout.

The Tourist Core Area Plan Amendments will help implement measures outlined above to replace old inefficient buildings with modern energy efficient and greener development, encourage higher density residential development closer to services and transit to reduce vehicle trips, and reduce the reliance on the private automobile to reduce average annual VMT per capita.

Environmental Analysis: *Because implementation of the Regional Plan (i.e., cumulative condition) will result in significant and unavoidable impacts to GHG emissions and TRPA has already found that other social, environmental an economic factors overrode those impact, no further analysis is required for the Tourist Core Area Plan since its impacts are consistent with those identified in the RPU EIS.*

Required Mitigation: **No Further Mitigation is Required.**

**28. Would the Project result in increased use of diesel fuel? (TRPA 2e)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis is tiered from and consistent with the RPU EIS.

Construction associated with subsequent projects under the Tourist Core Area Plan would require the use of diesel fuel for the operation of construction equipment. Certain specific projects that involve on-going truck deliveries or motorized vehicle use (such as snowmobile courses) as part of their operations could also increase gasoline and diesel fuel consumption relative to existing conditions.

From an air quality perspective, one of the primary concerns related to diesel fuel consumption is the resultant exposure of sensitive receptors to emissions of toxic air contaminants (TACs) that can occur during both the construction and operational phases of a project.

The construction of subsequent projects under the Tourist Core Area Plan could result in short-term diesel exhaust emissions, including diesel particulate matter (PM), from the use of off-road diesel equipment required for site grading and excavation, paving, and other construction activities. Diesel PM was identified as a TAC in 1998. The potential cancer risk from the inhalation of diesel PM is a more serious risk than the potential non-cancer health impacts (TRPA 2012a, page 3.4-39). Consistent with the findings in the RPU EIS, the proximity of heavy-duty diesel-fueled construction equipment to existing sensitive receptors within or adjacent to the Tourist Core Area Plan during construction activities resulting from implementation of the Tourist Core Area may result in exposure of sensitive receptors to TACs.

As part of mitigation from the RPU EIS, TRPA commited to implementing *Best Construction Practices Policy for TAC Emissions During Construction*, which includes measures to reduce exposure to construction-related TAC emissions to the extent feasible. Such measures may include, but are not limited to, the following:

- Limit diesel-equipment idling time to five minutes maximum;
- Equip heavy-duty construction equipment with diesel particulate traps; and
- Locate construction staging areas as far away as possible from on- and off-site receptors.

In addition to the measures described above in the RPU EIS, the Area Plan incorporates General Plan Policy NCR-5.10 (CSLT 2011b, page NCR-9) in Policy NCR-5.1 of the Area Plan to address short-term construction emissions (TCAP 2013, page 7-3), which includes measures to reduce construction-related GHG emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District.
- Prohibit open burning of debris from site clearing unless involved with fuels reduction project;
- Restriction of idling of construction equipment and vehicles;
- Apply water to control dust as needed to prevent dust impacts offsite;
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.

As part of a Mitigation Measure 4.5.5 from the GP EIR (CSLT 2010, page 4.5-47) the City also adopted Land Use Policy LU-8.18 (CSLT 2011b, page LU-19) to reduce exposure of TACs by requiring that all new or relocated discretionary development that would be a source of TACs near residences or sensitive receptors to either provide an adequate buffer, or filters, or other equipment, or incorporate mitigation measures to reduce potential exposure to acceptable levels.

Therefore, because measured identified in the RPU EIS and GP EIR that would reduce construction-related TAC emission to the extent feasible have been incorporated into the Tourist Core Area Plan, subsequent

projects under the Tourist Core Area Plan involving the use of heavy-duty diesel-fueled construction equipment would not result in the exposure of sensitive receptors to TACs.

Finally, based on a review of the proposed permissible uses in the Tourist Core Area Plan, the Tourist Core Area Plan would not include the construction or operation of any major sources of TAC emissions such as power-generating plants or other heavy industrial uses. The land use strategy of the Tourist Core Area Plan, the City General Plan, as well as the Regional Plan, would include incentivizing development in the town and regional centers, which are located along the Basin's main transportation corridors (US Highway 50). The ARB recommends a minimum setback distance of 500 feet from urban roads with 100,000 vehicles per day or rural roads with 50,000 vehicles per day to minimize the health risk of sensitive receptors to mobile-source TACs (TRPA 2012a, page 3.4-39). US Highway 50 cannot accommodate more than 50,000 vehicles per day (TRPA 2012a, page 3.4-40).

Environmental Analysis: *Yes, Less than Significant Impact*.

Required Mitigation: **None.**

### 5.4.6 Biological Resources (Stream Environment Zones, Wetlands, Wildlife and Vegetation)

This section presents the analyses for potential impacts to biological resources, including impacts to SEZs, wetlands, wildlife and vegetation. Table 10 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 10: Biological Resources**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 29. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? (CEQA IVa) | | | **X** | |
| 30. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service? (CEQA IVb) | | | **X** | |
| 31. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? (CEQA IVc) | | | **X** | |
| 32. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? (CEQA IVd) | | | **X** | |
| 33. Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance? (CEQA IVe) | | | **X** | |
| 34. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? (CEQA IVf) | | | | **X** |

| TRPA Initial Environmental Checklist Item | Yes | No, With Mitigation | Data Insufficient | No |
|---|---|---|---|---|
| 35. Removal of native vegetation in excess of the area utilized for the actual development permitted by the land capability/IPES system? (TRPA 4a) | | | | **X** |
| 36. Removal of riparian vegetation or other vegetation associated with critical wildlife habitat, either through direct removal or indirect lowering of the groundwater table? (TRPA 4b) | | | | **X** |
| 37. Introduction of new vegetation that will require excessive fertilizer or water, or will provide a barrier to the normal replenishment of existing species? (TRPA 4c) | | | | **X** |
| 38. Change in the diversity or distribution of species, or number of any species of plants (including trees, shrubs, grass, crops, micro flora and aquatic plants)? (TRPA 4d) | | | | **X** |
| 39. Reduction of the numbers of any unique, rare or endangered species of plants? (TRPA 4e) | | | | **X** |
| 40. Removal of streambank and/or backshore vegetation, including woody vegetation such as willows? (TRPA 4f) | | | | **X** |
| 41. Removal of any native live, dead or dying trees 30 inches or greater in diameter at breast height (dbh) within TRPA's Conservation or Recreation land use classifications? (TRPA 4g) | | | | **X** |
| 42. A change in the natural functioning of an old growth ecosystem? (TRPA 4h) | | | | **X** |
| 43. Change in the diversity or distribution of species, or numbers of any species of animals (birds, land animals including reptiles, fish and shellfish, benthic organisms, insects, mammals, amphibians or microfauna)? (TRPA 5a) | | | | **X** |
| 44. Reduction of the number of any unique, rare or endangered species of animals? (TRPA 5b) | | | | **X** |
| 45. Introduction of new species of animals into an area, or result in a barrier to the migration or movement of animals? (TRPA 5c) | | | | **X** |
| 46. Deterioration of existing fish or wildlife habitat quantity or quality? (TRPA 5d) | | | | **X** |

**29. Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? (CEQA IVa)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and consistent with the GP EIR. .

The Tourist Core Area Plan Amendments would not alter or revise any regulations that adversely affect any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. Consistent with existing conditions, development or redevelopment projects associated with the Tourist Core Area Plan could affect unique, rare, or endangered species depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations pertaining to the protection of animal species. (Section 62.4 of the TRPA Code). At a project-level, potential effects on animal species would be determined based on the species' distribution and known occurrences relative to the project area, the presence of suitable habitat for the species in or near the project area, and preconstruction surveys. TRPA's existing policies and Code provisions address potential impacts to special-status species through site-specific environmental review, development and implementation of project-specific measures to minimize or avoid impacts through the design process, and compensatory or other mitigation for any adverse effects on special-status species as a condition of project approval (Sections 61.3.6 and 62.4 of the TRPA Code). Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore, implementation of the Tourist Core Area Plan would not result in the reduction in the number of any unique, rare, or endangered species of animals.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**30. Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service? (CEQA IVb)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and consistent with the GP EIR..

The Tourist Core Area Plan Amendents would not alter or revise the regulations pertaining to existing fish or wildlife habitat quantity or quality or pertaining to resource protection measures for Stream Environmental Zones (SEZ) which encompasses riparian habitat. Consistent with existing conditions, development or redevelopment projects associated with the Tourist Core Area Plan could affect riparian habitat or other sensitive natural community depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations pertaining to the protection of riparian areas. Section 61.3.3 of the TRPA Code includes provision for protecting SEZ vegetation, other common vegetation, uncommon vegetation, and sensitive plants species. Chapters 62 and 63 of the TRPA Code include provisions to protect and enhance fisheries and wildlife habitats. Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore, implementation of the Tourist Core Area Plan would not result in the deterioration of riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or US Fish and Wildlife Service

Moreover, previous restorations efforts within the boundaries of the Tourist Core Area Plan have restored 4.7 acres of SEZ. Proposed policies are incorporated in the Tourist Core Area Plan to promote the restoration of disturbed SEZs and the zoning map identified priority areas for coverage reduction and restoration.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**31. Would the Project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? (CEQA IVc)**

The Stream Environment Zones located within the Tourist Core Area Plan do not meet the qualifications of federally protected wetlands. Consistent with existing conditions, development or redevelopment projects associated with the Tourist Core would be required to be in compliance with all provisions of the Resource Management and Protection regulations found in Chapters 60, 61 and 62 of the TRPA Code

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**32. Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? (CEQA IVd)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and consistent with the GP EIR.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to the migration or movement of animals. Consistent with existing conditions, development or redevelopment projects associated with the Tourist Core Area Plan could result in a barrier to the migration or movement of animals depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations in Chapter 62 and 63 of the TRPA Code.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**33. Would the Project conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance? (CEQA IVe)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and consistent with the GP EIR..

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to the protection of biological resources such as tree preservation policy. Consistent with existing conditions, development or redevelopment projects associated with the Tourist Core Area Plan could result in removal of trees and vegetation depending on the type, timing, and specific nature of proposed actions. However,

any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations in Chapter 62 and 63 of the TRPA Code.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**34. Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? (CEQA IVf)**

The Project does not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan because no such plans exist for the project area.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**35. Would the Project result in removal of native vegetation in excess of the area utilized for the actual development permitted by the land capability/IPES system? (TRPA 4a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to native vegetation protection during construction. Consistent with existing conditions, vegetation surrounding the construction site of any project permitted by the Tourist Core Area Plan would be required to comply Section 33.6, Vegetation Protection During Construction, of the TRPA Code. Protective requirements include installation of temporary construction fencing, standards for tree removal and tree protection, standards for soil and vegetation protection, and revegetation of disturbed areas. Additionally, the Citywide design standards and the proposed landscaping standards of the Tourist Core Area Plan requires the use of lawn and landscaping species listed in the TRPA-recommended and approved Native and Adapted Plants for the Tahoe Basin, with the exception of accent plantings.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**36. Would the Project result in removal of riparian vegetation other vegetation associated with critical wildlife habitat, either through direct removal or indirect lowering of the groundwater table? (TRPA 4b)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to vegetation removal and groundwater management. Water supply within the Tourist Core Area Plan is primarily obtained from groundwater sources. Consistent with existing conditions, any project permitted through the Tourist Core Area would be required to meet TRPA requirements for water supply. TRPA regulations

prohibit the approval of any development requiring water unless there is adequate water supply within an existing water right (Section 32.4.1 of the TRPA Code). Additionally, Section 33.3.6 of the TRPA Code prohibits excavation that intercepts or interferes with groundwater except under specific circumstances and with prior approval by TRPA (Section 33.3.6.A.2). For these reasons, consistent with existing conditions, projects approved under the Tourist Core Area Plan would not directly or indirectly lower the groundwater table.

Further, consistent with existing conditions, vegetation removal associated with projects that could occur under the Tourist Core Area Plan with subsequent approval would be required to comply with existing TRPA, federal, and state regulations, permitting requirements, and environmental review procedures that protect habitat that supports riparian vegetation and critical wildlife. Specifically, riparian vegetation and wildlife habitat are protected by Sections 61.1.6 (Management Standards for Tree Removal), 61.3.3 (Protection of Stream Environment Zones), and 63.3 (Fish Habitat Protection), and Chapter 62 (Wildlife Resources) of the TRPA Code. For these reasons, development associated with the Tourist Core Area Plan is not expected to result in the removal of riparian or other vegetation associated with critical wildlife habitat.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**37. Would the Project result in introduction of new vegetation that will require excessive fertilizer or water, or will provide a barrier to the normal replenishment of existing species? (TRPA 4c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to new vegetation. Consistent with existing conditions, implementation of new development or redevelopment projects associated with the Tourist Core Area Plan would be required to comply with the TRPA Code provisions (e.g., Section 61.4, Revegetation) and Goals and Policies that prohibit the release of non-native species in the Tahoe Region. Generally, native species require less fertilizer and water than non-native species. In addition, the existing landscaping design standards of the Citywide designs standards require vegetation maintenance plans to provide the appropriate amount of water to support the long-term growth of landscape, using efficient watering methods which are proposed for incorporation in the Tourist Core Area Plan. Provisions for fertilizer management and preparation of fertilizer management plans that address the type, quantity, and frequency of use of fertilizers are included in Section 60.1.8 of the TRPA Code. Projects associated with implementation of the Tourist Core Area Plan would be subject to subsequent project-level environmental review and permitting, and at that time they would be required to demonstrate that any proposed new vegetation would not require excessive fertilizer or water, or provide a barrier to the normal replenishment of existing species.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**38. Would the Project result in change in the diversity or distribution of species, or number of any species of plants (including trees, shrubs, grass, crops, micro flora and aquatic plants)? (TRPA 4d)**

See discussion and analyses in Questions 35 through 37, and 39 through 42.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**39. Would the Project result in reduction of the numbers of any unique, rare or endangered species of plants? (TRPA 4e)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to unique, rare, or endangered species of plants. The natural resource protection provisions of Chapters 61 and 62 of the TRPA Code are still applicable to the Tourist Core Area Plan. Consistent with existing conditions, construction activities associated with implementation of the Tourist Core Area Plan could affect special-status plant species and the presence of suitable habitat, depending on the type, timing, and specific nature of any proposed actions. All projects associated with the Tourist Core Area Plan would be subject to subsequent project-level environmental review and permitting. At a project-level, potential effects on plant species would be determined based on the species' distribution and known occurrences relative to the project area, the presence of suitable habitat for the species in or near the project area, and preconstruction surveys. TRPA's existing policies and Code provisions address potential impacts to special-status species through site-specific environmental review, require development and implementation of project-specific measures to minimize or avoid impacts through the design process, and require compensatory or other mitigation for any adverse effects on special-status species as a condition of project approval (Sections 61.3.6 and 62.4 of the TRPA Code). Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore, implementation of the Tourist Core Area Plan would not result in the reduction in the number of any unique, rare, or endangered species of plants.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**40. Would the Project result in removal of streambank and/or backshore vegetation, including woody vegetation such as willows? (TRPA 4f)**

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to removal of streambank and backshore vegetation. See discussion and analysis for Question 36 above.

Environmental Analysis: *No Impact*.

Required Mitigation: **None.**

**41. Would the Project result in removal of any native live, dead or dying trees 30 inches or greater in diameter at breast height (dbh) within TRPA's Conservation or Recreation land use classifications? (TRPA 4g)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to tree removal. Forested areas within the Tourist Core Area Plan are within the area of the Tahoe Region that is defined as an "westside forest type"(Chapter 90 of the TRPA Code). Section 61.1.4 of the TRPA Code, which includes TRPA's old growth enhancement and protection provisions, prohibits cutting any live dead, or dying tree larger than 30 inches diameter at breast height (dbh) in westside forest types on conservation and recreation lands or within SEZ areas, except under certain defined conditions. There are no lands within the Tourist Core Are Plan that has been classified by TRPA as either conservation or recreation. Tree removal in SEZ areas associated with any project within the Tourist Core Area Plan would also be subject to these limitations. Any projects allowed within the Tourist Core Area Plan would be subject to subsequent project-level environmental review and permitting by TRPA and/or the City. Consistent with existing conditions, permit applicants would be required to demonstrate that tree removal would be conducted in accordance with Chapter 61 of the TRPA Code, including those provisions related to the removal of trees 30 inches dbh or greater set forth to protect the natural function of old growth ecosystems on recreation and SEZ lands.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**42. Would the Project result in a change in the natural functioning of an old growth ecosystem? (TRPA 4h)**

See discussion and analysis for Question 41 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**43. Would the Project result in change in the diversity or distribution of species, or numbers of any species of animals (birds, land animals including reptiles, fish and shellfish, benthic organisms, insects, mammals, amphibians or microfauna)? (TRPA 5a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter the regulations pertaining to the protection of animal species. The resource management provisions contained in Chapters 60 through 68 of the TRPA Code are still applicable to the Tourist Core Area Plan. Any subsequent projects allowed within the Tourist Core Area Plan would be subject to subsequent project-level environmental review and permitting. Consistent with existing conditions, permit applicants would be required to demonstrate that any proposals would occur consistent with TRPA Code provisions related to resource management, including specifically the provisions of Chapters 62 and 63 that address protection of wildlife and fish resources, respectively. For these reasons, adoption of the Tourist Core Area Plan would not result in the change in the diversity or distribution of species, or numbers of any species or animals.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**44. Would the Project result in reduction of the number of any unique, rare or endangered species of animals? (TRPA 5b)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to special-status or listed species of animals. Consistent with existing conditions, development or redevelopment projects associated with the Tourist Core Area Plan could affect unique, rare, or endangered species depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations pertaining to the protection of animal species. The protections for rare and special-status species contained in Sections 61.3.6 and 62.4 of the TRPA Code are still applicable to the Tourist Core Area Plan. At a project-level, potential effects on animal species would be determined based on the species' distribution and known occurrences relative to the project area, the presence of suitable habitat for the species in or near the project area, and preconstruction surveys. TRPA's existing policies and Code provisions address potential impacts to special-status species through site-specific environmental review, require development and implementation of project-specific measures to minimize or avoid impacts through the design process, and require compensatory or other mitigation for any adverse effects on special-status species as a condition of project approval (Sections 61.3.6 and 62.4 of the TRPA Code). Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore, implementation of the Tourist Core Area Plan would not result in the reduction in the number of any unique, rare, or endangered species of animals.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**45. Would the Project result in introduction of new species of animals into an area, or result in a barrier to the migration or movement of animals? (TRPA 5c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to the introduction of new species and barriers to the migration or movement of animals. The types of uses that would be permitted in the Tourist Core Area Plan are not of the nature that would be expected to introduce any new animal species into the area. Consistent with existing conditions, development or redevelopment projects associated with the Tourist Core Area Plan could result in a barrier to the migration or movement of animals depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations pertaining to maintenance of migration routes and movement of animals. The protections for movement and migration corridors contained in Section 62.3.2 of the TRPA Code are applicable to the Tourist Core Area Plan. Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore, implementation of the Tourist Core Area Plan would not result in a barrier to the migration or movement of animals.

Environmental Analysis: *No Impact*.

Required Mitigation: **None**

**46. Would the Project result in deterioration of existing fish or wildlife habitat quantity or quality? (TRPA 5d)**

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to existing fish or wildlife habitat quantity or quality. Consistent with existing conditions, development or redevelopment projects associated with the Tourist Core Area Plan could affect fish and wildlife depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations pertaining to the protection of fish and wildlife contained in Chapters 62 and 63 of the TRPA Code. . Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore, implementation of the Tourist Core Area Plan would not result in the deterioration of existing fish or wildlife habitat quantity. Moreover, the Tourist Core Area Plan specifically identifies priority areas for SEZ restoration that would directly benefit water quality, scenic, recreation and habitat quantity and quality.

Environmental Analysis: *No Impact*.

Required Mitigation: **None**

### 5.4.7 Cultural Resources (CEQA) and Archaeological/Historical (TRPA)

This section presents the analyses for potential impacts to cultural, archaeological and historical resources, discussing the Project impacts on cultural resources related to the disturbance of archaeological, historical, architectural, and Native American/traditional heritage resources. The section also addresses disturbance of unknown archaeological resources, as well as paleontological resources (fossils). Table 11 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 11: Cultural Resources and Archaeological/Historical**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 47. Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5? (CEQA 5a) | | | | **X** |
| 48. Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5? (CEQA 5b) | | | | **X** |
| 49. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? (CEQA 5c) | | | | **X** |
| 50. Disturb any human remains, including those interred outside of formal cemeteries? (CEQA 5d) | | | | **X** |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 51. Will the proposal result in an alteration of or adverse physical or aesthetic effect to a significant archaeological or historical site, structure, object or building? (TRPA 20a) | | | | **X** |
| 52. Is the proposed project located on a property with any known cultural, historical, and/or archaeological resources, including resources on TRPA | **X, LTS** | | | |

| | | | | |
|---|---|---|---|---|
| or other regulatory official maps or records? (TRPA 20b) | | | | |
| 53. Is the property associated with any historically significant events and/or sites or persons? (TRPA 20c) | **X, LTS** | | | |
| 54. Does the proposal have the potential to cause a physical change which would affect unique ethnic cultural values? (TRPA 20d) | | | | **X** |
| 55. Will the proposal restrict historic or pre-historic religious or sacred uses within the potential impact area? (TRPA 20e) | | | | **X** |

**47. Would the Project cause a substantial adverse change in the significance of a historical resource as defined in §15064.5? (CEQA 5a)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and consistent with the GP EIR.

Portions of the area plan boundary have been subject to archaeological survey during the preparation of the Stateline/Ski Run Community Plan, South Shore Redevelopment Plan EIR/EIS, and during review of development projects. The archival review of the State Office of Historic Preservation's California Historical Resources database and field surveys resulted in no evidence of intact, potentially significant prehistoric, archaeological or Washoe cultural sites as defined in §15064.5 within the Tourist Core Area Plan. However, several historic sites of local interest are known to occur in the planning area based on previous studies and information obtained. The Lapham Hotel (later Lakeside House or Lakeside Park) was situated at the present day intersection of Pioneer Trail and US Highway 50 (Koval, 1990). Modern development in the area has in all likelihood destroyed any archaeological evidence that might have remained. The McCombers Station was situated near the intersection of Pioneer Trail and Ski Run Boulevard; however, subsequent surveys during project review for the City of South Lake Tahoe Fire Station #1 and the Aspens at South Lake Affordable Housing project did not turn up any intact archaeological evidence of the site.

The Tourist Core Area Plan Amendments would accommodate development, which could occur on properties that may include historical or archaeological resources; associated with historically significant events or individuals; or result in adverse physical or aesthetic effects to a significant historical or archaeological site, structure, object, or building from California's history and cultural heritage. Additionally, development permitted within the Tourist Core Area Plan could result in physical changes that would affect unique ethnic cultural values or restrict historic or prehistoric religious or sacred uses. However, federal and state regulations, the TRPA Code (Chapter 67) and General Plan Policies (CSLT 2010, pages NCR-6 trough NCR-7) address protection of these resources and provide processes to avoid or minimize impacts to historic and archaeological resources. Because any development associated with the Tourist Core Area Plan would be required to comply with federal and state regulations, TRPA Code and General Plan policies, during project specific review, it would not alter or adversely affect archeological or historical resources.

Environmental Analysis: *No Impact*.

Required Mitigation: **None**

**48. Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5? (CEQA 5b)**

See discussion and analysis for Question 47 above.

Environmental Analysis: *No Impact*.

Required Mitigation: **None**

**49. Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? (CEQA 5c)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and consistent with the GP EIR.

A search of the University of California Museum of Paleontology collections database identified 22 paleontological resource finds in El Dorado County. However, none were identified in the City of South Lake Tahoe (CSLT 2010, page 4.10-8). However, it is possible that significant paleontological resources may be located in the City. To ensure the protection of paleontological resources that may be discovered during site disturbance and subsequent foundation construction, the City adopted General Plan Policy NCR-4.4 requires a paleontological resource evaluation be prepared and measures to mitigate impacts to paleontological resources be identified when fossils are discovered during ground-disturbing activities (CSLT 2011b, page NCR-7).

In addition, federal and state regulations, and TRPA Code (Chapter 67) address protection of paleontological resources and provide processes to avoid or minimize impacts to identified and discovered resources. Because any development associated with the Tourist Core Area Plan would be required to comply with these requirements during project specific review and construction activity, it would not alter or adversely affect paleontological resources.

Environmental Analysis: *No impact.*

Required Mitigation: **None**.

**50. Would the Project disturb any human remains, including those interred outside of formal cemeteries? (CEQA 5d)**

The City has adopted General Plan Policy NCR-4.5 that requires the city to condition projects and other ground disturbance activities to notify the City if human remains are discovered and halt work. The County Coroner will be notified according to Section 5097.98 of the State Public Resource Code and Section 7050.5 of California's Health and Safety Code. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and (e) shall be followed. Because any development associated with the Tourist Core Area Plan would be required to comply with these requirements during ground-disturbance activities, it would not alter or adversely affect or result in the loss of these resources and their associated ethnic and cultural values.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**51. Will the Project result in an alteration of or adverse physical or aesthetic effect to a significant archaeological or historical site, structure, object or building? (TRPA 20a)**

See discussion and analysis for Question 47 above.

Environmental Analysis: *No Impact*.

Required Mitigation: **None**

**52. Is the Project located on a property with any known cultural, historical, and/or archaeological resources, including resources on TRPA or other regulatory official maps or records? (TRPA 20b)**

See discussion in Question 47 above that identified two mapped resources on TRPA's official maps. However the analysis concludes that modern development in the area has in all likelihood destroyed any archaeological evidence that might have remained. Because any development associated with the Tourist Core Area Plan would be required to comply with TRPA regulations (Chapter 67) that prohibits grading, operation of equipment, or other soil disturbance in areas where a designated historic resource is present, except in accordance with a TRPA-approved resource protection plan, it would not alter or adversely affect cultural, historical, and/or archaeological resources identified on TRPA's or other regulatory official maps.

Environmental Analysis: *Yes, Less than Significant Impact.*

Required Mitigation: **None**

**53. Is the Project associated with any historically significant events and/or sites or persons? (TRPA 20c)**

See discussions and analyses discussions for Questions 47 through 52 above.

Environmental Analysis: *Yes, Less than Significant Impact.*

Required Mitigation: **None**

**54. Does the Project have the potential to cause a physical change which would affect unique ethnic cultural values? (TRPA 20d)**

See discussions and analyses for Question 47 and 52 above. Implementation of, federal and state regulations, TRPA Code (Chapter 67) and General Plan policies address protection of historic, cultural, archaeological and paleontological resources and provide processes to avoid or minimize impacts to these resources. Therefore any development associated with the Tourist Core Area Plan would not result in a physical change which would affect unique ethnic cultural values.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**55. Will the Project restrict historic or pre-historic religious or sacred uses within the potential impact area? (TRPA 20e)**

See discussion and analysis for Question 47 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

### 5.4.8 Geology and Soils (CEQA) and Land (TRPA)

This section presents the analyses for potential impacts to geology, soils and land. Table 12 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 12: Geology and Soils and Land**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 56. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:<br>i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42?<br>ii) Strong seismic ground shaking?<br>iii) Seismic-related ground failure, including liquefaction?<br>iv) Landslides? (CEQA VIa) | | | **X** | |
| 57. Result in substantial soil erosion or the loss of topsoil? (CEQA VIb) | | | **X** | |
| 58. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? (CEQA VIc) | | | **X** | |

| | | | | |
|---|---|---|---|---|
| 59. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property? (CEQA VId) | | | X | |
| 60. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water? (CEQA VIe) | | | | X |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 61. Compaction or covering of the soil beyond the limits allowed in the land capability or Individual Parcel Evaluation System (IPES)? (TRPA 1a) | | | | X |
| 62. A change in the topography or ground surface relief features of site inconsistent with the natural surrounding conditions? (TRPA 1b) | | | | X |
| 63. Unstable soil conditions during or after completion of the proposal? (TRPA 1c) | | | | X |
| 64. Changes in the undisturbed soil or native geologic substructures or grading in excess of 5 feet? (TRPA 1d) | | | | X |
| 65. The continuation of or increase in wind or water erosion of soils, either on or off the site? (TRPA 1e) | | | | X |
| 66. Changes in deposition or erosion of beach sand, or changes in siltation, deposition or erosion, including natural littoral processes, which may modify the channel of a river or stream or the bed of a lake? (TRPA 1f) | | | | X |
| 67. Exposure of people or property to geologic hazards such as earthquakes, landslides, backshore erosion, | | | | X |

| | | | | |
|---|---|---|---|---|
| avalanches, mud slides, ground failure, or similar hazards? (TRPA 1g) | | | | |

**56. Would the Project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:**

**56.i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42? (CEQA VIa)**.

This potential effect is the same as those analyzed in the City General Plan EIR and therefore this analysis tiers from the GP EIR.

The intention of the Alquist-Priolo Earthquake Fault Zoning Act (PRC Section 2621-2630) is to reduce the risk to life and property from surface fault rupture during earthquakes by regulating construction in active fault corridors and prohibiting the location of most types of structures intended for human occupancy across the traces of active faults. The act defines criteria for identifying active faults, giving legal support to terms such as active and inactive and establishes a process for reviewing building proposals in Earthquake Fault Zones. As defined by the Alquist-Priolo Earthquake Fault Zoning Act (1972), an active fault is one that has had surface displacement within Holocene time or the last 11,000 years.

The project area is located within the Sierra Nevada-Great Basin seismic belt. Based on the Division of Mines and Geology Special Publication 42 and the Index to Official Maps of Earthquake Fault Zones (Hart and Bryant 1997), the project area is not located in the Alquist-Priolo Earthquake Fault Zone. The closest Alquist-Priolo Earthquake Fault Zone is the Genoa fault located southeast of the City and outside the Tahoe Basin.

There are four known faults that run through the City. One of these is located in the Tourist Core Area Plan in the general vicinity of Ski Run Boulevard. These are approximately located fault traces, some associated with the Tahoe Valley Fault Zone, and are not known to be active. The relatively minor and inactive faults have shown no history of fault ruptures and do not meet the criteria for building restrictions under the Alquist-Priolo Earthquake Fault Zone Act. The risk of fault rapture is considered relatively low (CSLT 2010, pages 4.8-13 and 4.8-28).

According to the California Building Code (CBC), the Tourist Core Area Plan is located in Seismic Zone D, a region of relatively high seismicity, and has the potential to experience strong ground shaking from earthquakes. As such, all structures in the Tourist Core Area Plan must be designed to meet the regulations and standards associated with Zone D hazards as set forth in the CBC. Compliance with these existing regulations would ensure that all new or redeveloped structures in the Tourist Core Area Plan would be capable of withstanding anticipated ground shaking in the Region and would not create significant public safety risks or property damage in the event of an earthquake.

The City Code adopted the CBC in Chapter 8 and therefore all structures associated with development in the Tourist Core Area Plan would be designed and constructed in accordance design requirements of the Seismic Zone D which would minimize risks associated with seismic ground shaking and seismic related ground failure. Therefore the risk of fault rupture and ground shaking is a less than significant impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**56.ii) Strong seismic ground shaking?**

See discussion and analysis for Question 56.i above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**56.iii) Seismic-related ground failure, including liquefaction?**

The potential for seismic-related ground shaking in the Region could also contribute to public safety risks and property damage associated with ground failure including liquefaction, lateral spreading, collapse, and settlement. In addition, portions of the Tourist Core Area Plan have relatively high ground water levels that can contribute to the potential for ground failure, particularly during excavation and construction of below-grade structures (CSLT 2010, page 4.8-29). Hazards associated with seismic-related ground failure are also regulated by the CBC standards which are adopted in Chapter 8 City Code to ensure that structures area properly designed and constructed to withstand anticipated ground failure. Therefore, the risk of injury or property damage from strong ground shaking or resulting ground failure would not be substantially increased from implementing the Tourist Core Area Plan and therefore a less than significant impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**56.iv) Landslides?**

The varied topography within the Lake Tahoe Basin makes many areas susceptible to landslide hazards. The main hazards are associated with alpine granitic terrains in the Basin are rock falls on steep slopes of massive granite and erosion of decomposed granite on both gentle and steep slopes. Consistent with existing conditions, development or redevelopment projects associated with the Tourist Core Area Plan may expose people or structures landslides depending on its location. However, the Land Use Element. Natural Hazards Subelement, Goal 1, Policy 1 of the TRPA Regional Plan restricts construction, reconstruction, or replacement of structures in identified avalanche or mass instability hazard areas unless. Therefore the risk of exposing people or structures to potential landslides in the Tourist Core Area Plan is unlikely and is less than a significant impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**57. Would the Project result in substantial soil erosion or the loss of topsoil? (CEQA VIb)**

See discussions and analyses for Questions 62, 63 and 64 below.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**58. Would the Project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? (CEQA VIc)**

See discussions and analyses for Questions 56i through iv above and Question 59 below.

Environmental Analysis*: Less than Significant Impact*.

Required Mitigation: **None**.

**59. Would the Project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property? (CEQA VId)**

According to the Swelling Clays Map of The Coterminous United State, the Tahoe Basin falls within an area that is underlain with little to no clays with swelling potential (USGS 1989). However, soil units mapped within the Basin contain soils with low to high shrink/well potential (NRCS 2007).

Development and infrastructure projects associated with the Tourist Core Area Plan may be constructed on areas of unstable or expansive soils or geologic units, thereby increasing the risk to people and structures. Through adherence to existing regulation, projects implemented the Tourist Core Area Plan would be required to undergo site-specific environmental review and, as appropriate, geotechnical analysis (TRPA Code Section 33.4 and City Code Section 36-33) to determine the design, grading, and construction practices required to avoid or reduce geologic hazards including those associated with unstable, expansive soils and slope failure. Adherence to existing regulations would ensure impacts would be less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required mitigation: **None**.

**60. Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater? (CEQA VIe)**

Standard of Significance: Development of septic systems or alternative wastewater disposal systems in areas of soils that are inadequate to support such a use results in a significant impact.

The Porter-Cologne Water Quality Act requires all sewage and wastewater to be disposed of outside the Lake Tahoe Basin. Therefore, the use of septic tanks or alternative wastewater disposal are prohibited in the Lake Tahoe Basin.

Environmental Analysis: *No Impact.*

Required mitigation: **None.**

**61. Would the Project result in compaction or covering of the soil beyond the limits allowed in the land capability or Individual Parcel Evaluation System (IPES)? (TRPA 1a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to land capability and IPES. The Tourist Core Area Plan would include the land coverage limitations of the adopted Regional Plan (Chapter 30 of the TRPA Code). These include allowing up to 70 percent within Town Centers and the Regional Center (TSC-C, TSC-MU, TSC-MUC, TSC-NMX) on high capability lands (land capability districts [LCDs] 4 through 7). For parcels located within the TSC-G district and within 300 feet of the high water line of Lake Tahoe the maximum coverage allowed is 50 percent on high capability lands. The potential effects of these changes were analyzed in the RPU EIS (TRPA 2012, page 3.7-40) and were found to be less than significant.

> *"The additional coverage allowed in higher capability lands within Town Centers, the Regional Center, and the High Density Tourist District would be directly offset by coverage transferred from sensitive land or more than offset on an acre-by-acre basis by transfers from higher capability land, resulting in an overall reduction in coverage for the Region and, importantly, reduction in coverage from SEZs…"*

Additionally, the Tourist Core Area Plan does not propose an alternative comprehensive coverage management system as defined in Section 13.5.3B of the TRPA Code. However, proposed policy language (NRC-4.2) in the Natural and Cultural Resources Element directs the City to consider opportunities for coverage reduction in all public and private redevelopment projects within community centers.

Any subsequent projects proposed within the Tourist Core Area Plan would be subject to permitting by the City and/or TRPA. Consistent with existing requirements, permit applicants would be required to demonstrate that proposed compaction and coverage would be within the limits allowed in Chapters 30 and 53 of the TRPA Code.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**62. Will the Project result in a change in the topography or ground surface relief features of site inconsistent with the natural surrounding conditions? (TRPA 1b)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to grading. Consistent with existing requirements, grading and construction activities associated with projects that could occur under the Tourist Core Area Plan with subsequent approval would be required to comply with the provisions of Chapter 33, "Grading and Construction," of the TRPA Code and Chapter 36 of the City Code. Chapter 33 includes specific provisions for timing of grading, winterization of construction sites, specifications for cut and fills areas, protection of vegetation during construction, and preparation of a Slope Stabilization Plan for projects at the request of TRPA.

Additionally, in accordance with Section 36-58 of the City Code, all projects are required to implement temporary best management practices (BMPs) in accordance with the *Handbook of Best Management Practices* and maintained throughout the construction period until winterization and installation of permanent BMPs once construction has been finalized.

Any subsequent projects allowed within the Tourist Core Area Plan would be subject to permitting by the City and/or TRPA. Consistent with existing requirements, permit applicants would be required to demonstrate that any proposed grading would occur consistent with TRPA Code and City Code provisions

that are protective of topography and ground surface relief features and are intended to retain natural conditions.

Environmental Analysis: *No Impact*.

Required mitigation: **None.**

**63. Will the Project result in unstable soil conditions during or after completion of the proposal? (TRPA 1c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to BMPs for soil erosion. Consistent with existing requirements, soil disturbance associated with projects that could occur under the Tourist Core Area Plan with subsequent approval would be required to comply with Chapters 33 and 60 through 68 of the TRPA Code and Chapter 36 of the City Code. See discussion under Question 62 above.

Any subsequent projects allowed within the Tourist Core Area Plan would be subject to permitting by the City and/or TRPA. Consistent with existing requirements, permit applicants would be required to demonstrate that any proposed soil disturbance would occur consistent with TRPA and City Code provisions related to BMPs.

Environmental Analysis: *No Impact*.

Required mitigation: **None.**

**64. Will the Project result in changes in the undisturbed soil or native geologic substructures or grading in excess of 5 feet? (TRPA 1d)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to grading, excavation, and new disturbance. Consistent with existing requirements, projects that could occur under the Tourist Core Area Plan with subsequent approval could result in new soil disturbance, changes to native geologic substructures, and grading in excess of 5 feet. However, all projects would be required to comply with the provisions of Chapter 30 of the TRPA Code and Chapter 36 of the City Code regarding permanent disturbance and Section 33.3.6 of the TRPA Code regarding excavation depths that protect subsurface groundwater.

Environmental Analysis: *No Impact.*

Required mitigation: **None**.

**65. Will the Project result in the continuation of or increase in wind or water erosion of soils, either on or off the site? (TRPA 1e)**

See discussion and analysis for Question 62 above.

Environmental Analysis: *No Impact.*

Required mitigation: **None**.

**66. Will the Project result in changes in deposition or erosion of beach sand, or changes in siltation, deposition or erosion, including natural littoral processes, which may modify the channel of a river or stream or the bed of a lake? (TRPA 1f)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to the deposition of beach sand, or changes in siltation, deposition, or erosion, including natural littoral processes. Only the TSC-G zoning district abuts Lake Tahoe; all others are upland of the Lake. Bijou Creek runs through a portion of the Tourist Core Area Plan. In accordance with Section 13.7.3 of the TRPA Code, TRPA would retain responsibility for enforcing and implementing Shorezone regulations as described in Chapters 80 through 85 of the TRPA Code. Consistent with existing requirements, projects that could occur under the Tourist Core Area Plan with subsequent approval that would alter structures in Lake Tahoe, river or a stream would be subject to the resource management and protection and Shorezone provisions in Chapters 60 through 85 of the TRPA Code.

Environmental Analysis: *No Impact.*

Required mitigation: **None.**

**67. Will the Project result in exposure of people or property to geologic hazards such as earthquakes, landslides, backshore erosion, avalanches, mudslides, ground failure, or similar hazards? (TRPA 1g)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to geologic hazards. Chapter 35, Natural Hazard Standards, of the TRPA Code includes provisions addressing avalanche, floodplains, and wildfire and Chapter 8 of the City Code which addresses CBC and IBC building standards, which includes protections for persons and property from seismic and geologic hazards. In accordance with Section 13.7.3 of the TRPA Code, TRPA would retain responsibility for enforcing and implementing regulations specific to the backshore environment as described in Chapter 85 of the TRPA Code. In addition, consistent with existing conditions, any subsequent project allowed within the Tourist Core Area Plan would be subject to project-level permitting and environmental review by the City and/or TRPA. Such projects would be required to meet all applicable building codes and standards and would be required to undergo site-specific geotechnical analysis as specified by Section 33.4 of the TRPA Code and Section 36-33 of the City Code. Therefore, the Tourist Core Area Plan would not expose people or property to geologic hazards.

Environmental Analysis: *No Impact.*

Required mitigation: **None.**

### 5.4.9 Greenhouse Gas Emissions

This section presents the analyses for potential impacts to greenhouse gas (GHG) emissions. Table 13 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 13: Greenhouse Gas Emissions**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 68. Greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? (CEQA VIIa) | | | X | |
| 69. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases? (CEQA VIIb) | | | X | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| Same as Question 27: Will the Project significantly alter climate, air movement, moisture, or temperature? (TRPA 2d) | X | | | |

Certain gases in the earth's atmosphere, classified as greenhouse gases (GHGs), play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected toward space. This absorbed radiation is then emitted from the earth a low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. The earth has a much lower temperature than the sun; therefore, the earth emits lower frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead trapped, resulting in a warming atmosphere. The phenomenon, knows as the greenhouse effect, is responsible for maintaining a habitable climate on earth.

Prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO2), methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. Human-caused emissions of GHGs in excess of natural ambient concentrations are believed to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the earth's climate, known as global climate change or global warming. It is "extremely likely" that more than half of the observed increase in global average surface temperature from 1951 to 2010 was caused by the anthropogenic increase in GHG concentrations and other anthropogenic forcing (IPCC 2014:3, 5).

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants, which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of any particular GHG molecule is dependent on multiple variables and cannot be pinpointed, it is understood that more CO2 is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, and other forms of sequestration. Of the total annual human-caused CO2 emissions, approximately 55 percent is sequestered through ocean and land uptakes every year, averaged over the last 50 years, whereas the remaining 45 percent of human-caused CO2 emissions remains stored in the atmosphere (IPCC 2013:467). The quantity of GHGs that ultimately result in climate change is not precisely known; but is enormous; no single project alone would measurably contribute to an incremental change in the global average temperature, or to global, local, or microclimates. From the standpoint of CEQA, GHG impacts to global climate change are inherently cumulative.

GHG emissions are attributable in large part to human activities associated with the transportation, industrial/manufacturing, utility, residential, commercial, and agricultural emissions sectors (CARB 2017a).

In California, the transportation sector is the largest emitter of GHGs, followed by electricity generation (CARB 2017a). Emissions of CO2 are byproducts of fossil fuel combustion. Methane, a highly potent GHG, primarily results from off gassing (the release of chemicals from nonmetallic substances under ambient or greater pressure conditions) and is largely associated with agricultural practices and landfills. Nitrous oxide is also largely attributable to agricultural practices and soil management. CO2 sinks, or reservoirs, include vegetation and the ocean, which absorb CO2 through sequestration and dissolution (CO2 dissolving into the water), respectively, two of the most common processes for removing CO2 from the atmosphere.

Assembly Bill 32, the California Global Warming Solutions Act of 2006

In September 2006, the California Global Warming Solutions Act of 2006, Assembly Bill (AB) 32, was signed into law. AB 32 establishes regulatory, reporting, and market mechanisms to achieve quantifiable reductions in GHG emissions and a cap on statewide GHG emissions. AB 32 requires that statewide GHG emissions be reduced to 1990 levels by 2020. AB 32 also requires that (a) the statewide greenhouse gas emissions limit remain in effect unless otherwise amended or repealed, (b) the statewide greenhouse gas emissions limit continue in existence and be used to maintain and continue reductions in emissions of greenhouse gases beyond 2020, and (c) [CARB] shall make recommendations to the Governor and the Legislature on how to continue reductions of greenhouse gas emissions beyond 2020 [California Health and Safety Code, Division 25.5, Part 3, Section 38551]. For the purposes of AB 32 and other legislation in California, GHGs are expressed in carbon-dioxide-equivalent (CO2e). CO2e is a measurement used to account for the fact that different GHGs have different potential to retain infrared radiation in the atmosphere and contribute to the greenhouse effect. This potential, known as the global warming potential of a GHG, is dependent on the lifetime, or persistence, of the gas molecule in the atmosphere.

Executive Order B-30-15

On April 20, 2015, EO B-30-15 established a California GHG reduction target of 40 percent below 1990 levels by 2030. The EO aligns California's GHG reduction targets with those of leading international governments such as the 28-nation European Union, which adopted the same target in October 2014. California is on track to meet or exceed the target of reducing GHG emissions to 1990 levels by 2020, as established in the California Global Warming Solutions Act of 2006 (Assembly Bill 32, discussed above). California's new emission reduction target of 40 percent below 1990 levels by 2030 sets the next interim

step in the State's continuing efforts to pursue the long-term target expressed under Executive Order S-3-05 to reach the ultimate goal of reducing emissions 80 percent below 1990 levels by 2050. This is in line with the scientifically established levels needed in the U.S. to limit global warming below 2 degrees Celsius, the warming threshold at which major climate disruptions are projected, such as super droughts and rising sea levels.

Senate Bill 32 and Assembly Bill 197 of 2016

In August 2016, SB 32 and AB 197 were signed into law, which serve to extend California's GHG reduction programs beyond 2020. SB 32 amended the Health and Safety Code to include Section 38566, which contains language to authorize CARB to achieve a statewide GHG emission reduction of at least 40 percent below 1990 levels by no later than December 31, 2030. SB 32 codified the targets established by EO B-30-15 for 2030, which set the next interim step in the State's continuing efforts to pursue the long-term target expressed in EOs S-3-05 and B-30-15 of 80 percent below 1990 emissions levels by 2050.

Climate Change Scoping Plan and Updates

In December 2008, CARB adopted its first version of its Climate Change Scoping Plan, which contained the main strategies California will implement to achieve the mandate of AB 32 (2006) to reduce statewide GHG emissions to 1990 levels by 2020. In May 2014, CARB released and subsequently adopted the First Update to the Climate Change Scoping Plan to identify the next steps in reaching the goals of AB 32 (2006) and evaluate the progress made between 2000 and 2012 (CARB 2014). After releasing multiple versions of proposed updates in 2017, CARB adopted the next version titled California's 2017 Climate Change Scoping Plan (2017 Scoping Plan) in December of that same year (CARB 2017b). The 2017 Scoping Plan indicates that California is on track to achieve the 2020 statewide GHG target mandated by AB 32 of 2006 (CARB 2017b:9). It also lays out the framework for achieving the mandate of SB 32 of 2016 to reduce statewide GHG emissions to at least 40 percent below 1990 levels by the end of 2030 (CARB 2017b). The 2017 Scoping Plan identifies the GHG reductions needed by each emissions sector.

The 2017 Scoping Plan also identifies how GHGs associated with proposed projects could be evaluated under CEQA (CARB 2017b:101-102). Specifically, it states that achieving "no net increase" in GHG emissions is an appropriate overall objective of projects evaluated under CEQA if conformity with an applicable local GHG reduction plan cannot be demonstrated. CARB recognizes that it may not be appropriate or feasible for every development project to mitigate its GHG emissions to zero and that an increase in GHG emissions because of a project may not necessarily imply a substantial contribution to the cumulatively significant environmental impact of climate change. The latest 2022 Scoping Plan Update aims to assess progress towards achieving the Senate Bill 32 2030 target and lay out a path to achieve carbon neutrality by no later than 2045.

Senate Bill X1-2, the California Renewable Energy Resources Act of 2011 and Senate Bill 350, the Clean Energy and Pollution Reduction Act of 2015

SB X1-2 of 2011 requires all California utilities to generate 33 percent of their electricity from renewables by 2020. SB X1-2 sets a three-stage compliance period requiring all California utilities, including independently owned utilities, energy service providers, and community choice aggregators, to generate 20 percent of their electricity from renewables by December 31, 2013; 25 percent by December 31, 2016; and 33 percent by December 31, 2020. SB X1-2 also requires the renewable electricity standard to be met increasingly with renewable energy that is supplied to the California grid from sources within, or directly proximate to, California. SB X1-2 mandates that renewables from these sources make up at least 50 percent of the total renewable energy for the 2011-2013 compliance period, at least 65 percent for the 2014–2016 compliance period, and at least 75 percent for 2016 and beyond. In October 2015, SB 350 was signed into

law, which requires retail sellers and publicly owned utilities to procure 50 percent of their electricity from renewable resources by 2030.

El Dorado County Air Quality Management District

The El Dorado County Air Quality Management District (EDCAQMD) has not adopted specific thresholds of significance for analyzing GHG emissions under CEQA. At present, the Sacramento Metropolitan Air Quality Management District (SMAQMD) along with a committee of EDCAQMD and other regional air districts (i.e., Placer County Air Pollution Control District [PCAPCD], Feather River Air Quality Management District, and Yolo-Solano Air Quality Management District) use guidance from the California Air Pollution Control Officers Association to develop draft threshold concepts for evaluating project-level GHG emissions. The goal of the thresholds is to capture at least 90 percent of GHG emissions from new stationary sources and land development projects. The nearby PCAPCD has developed thresholds of significance for analyzing climate change impacts in consideration of this strategy. PCACPD has adopted a 10,000 and 1,100 metric tons of carbon dioxide equivalent (MTCO2e) bright-line thresholds of significance for analyzing construction and operational emissions, respectively. In lieu of adopted thresholds of significance developed by EDCAQMD and Tahoe Regional Planning Agency (TRPA), these thresholds of significance are applied to future projects within the Tourist Core Area Plan.

City of South Lake Tahoe Climate Action Plan

In 2017, the City passed Resolution 2017-26, Establishing Renewable Energy and Carbon Emissions Reduction Goals. These goals include achieving 50 percent of municipal energy sources from renewable energy by 2025, 100 percent of municipal energy sources from renewable energy by 2032, and 100 percent of community energy sources from renewable electricity by 2032. The resolution additionally outlines the emissions reduction targets of a 50 percent reduction in community-wide emissions by 2030 and an 80 percent reduction in community-wide emissions by 2040. After establishing these reduction targets, the City completed a community-wide GHG emissions inventory to identify the emissions-generating sources in the community. This inventory was used as the foundation for developing the City's first Climate Action Plan, and City Council adopted it on October 20, 2020. It serves as a long-term plan to reduce GHG emissions from community activities and prepare for the impacts of climate change.

**68. Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? (CEQA VIIa)**

This potential effect is the same as those analyzed in the City General Plan Update EIR. Implementation of the Tourist Core Area Plan Amendments would result in some level of development and population growth anticipated during the plan horizon. Although many of the sustainability- and conservation-oriented land use and transportation policies of the State of California, TRPA Regional Plan and City General Plan would reduce VMT, increase opportunities for transit and non-motor vehicle travel, and allow or encourage redevelopment that would improve energy efficiency, the combined influence of development and population growth occurring during the planning horizon of the City General Plan and the TRPA Regional Plan would result in an increase in overall greenhouse gas (GHG) emissions that would make a cumulative contribution to global climate change.

Increases of GHG emissions attributable to the General Plan and the Tourist Core Area Plan would consist primarily of CO2. To a lesser extent, emissions of CH4 and N2O would also contribute to overall increases in GHG emissions. Mobile-source emissions account for a majority of the increase in GHG emissions, representing roughly 85 percent of the total GHG emissions increase. To a lesser extent, electricity and natural gas consumption and use of wood-burning hearth devices also contribute to increased GHG emissions, accounting for a majority of the remaining GHG emissions. While substantial increases in total

GHG emissions are anticipated from buildout, the General Plan would have substantially reduced GHG emissions per new service population (i.e., total number of new residents and employees in the Planning Area) as compared to development under the existing General Plan and 1987 TRPA Regional Plan (13.54 versus 23.57 MTCO2e per year) (CSLT 2010, pages 4.85-47 through 4.5-56).

Under CEQA, an increase in greenhouse gas emissions would be considered significant if the project would obstruct implementation of any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions. This standard of significance approach for analysis of climate change impacts is generally supported by the California Air Resources Control Board (Preliminary Draft Staff Proposal - Recommended Approaches for Setting Interim Significance Thresholds for Greenhouse Gases under the California Environmental Quality Act, October 2008). As previously discussed, AB 32 requires total statewide GHG emissions to be reduced to 1990 emissions level by year 2020, which represents an approximate 15 percent reduction, in comparison to baseline GHG emissions and includes provisions for maintaining the GHG emissions limits following 2020 to continue reductions in GHGs.

Given that TRPA's transCAD region-wide traffic model is designed to provide VMT data for the entire Tahoe Basin and cannot provide accurate vehicle miles travel (VMT) data for the City of South Lake Tahoe and its Planning Area, the mobile emission analysis used for the adopted 2013 Area Plan was based on a comparison of year 2030 conditions under the 1999 General Plan and 1987 TRPA Regional Plan to the proposed General Plan Update and proposed TRPA Regional Plan Update. Given these same limitations, a baseline GHG emissions inventory specific to the Tourist Core could not be quantified. As a result, the analysis prepared for the 2013 Area Plan was based on quantifiable reductions in GHG emissions associated with General Plan policies and actions, taking into consideration anticipated percentage contributions by source category, as well as, estimated net increases in GHG emissions resulting from implementation of the General Plan. The Area Planwould also be considered to have a significant impact if proposed policies and actions would be inconsistent with GHG reduction measures recommended by the California Attorney General.

In addition, the Area Plan would be considered to have a significant impact from global climate change if it would result in the exposure of residents to hazards associated with climate change.

The General Plan Update contains numerous policies that include specific, enforceable requirements and/or restrictions and corresponding performance standards that would apply in the Tourist Core Area Plan and would reduce VMT and air quality emissions, including construction-related and operational-related GHG emissions. These policies include actions that would promote the use of alternative fuels, alternative means of transportation, energy conservation, integrating land use and transportation strategies to reduce travel demand, and promoting sustainable development (CSLT 2010, pages 4.5-49 through.4.5-55).

The following mitigation measure from the GP EIR are also adopted as policies in the General Plan to reduce GHG emission:

- Support local, TRPA, and statewide efforts to reduce emission of greenhouse gases linked to climate change.
- Develop a citywide greenhouse gas emission inventory and establish regular time frames for updating the inventory.
- Establish a greenhouse gas emission reduction target consistent with AB 32 and SB 375 reduction efforts.

- Analyze and mitigate significant increases in carbon emissions during project review pursuant to the California Environmental Quality Act.

In addition to the measures described above, the Area Plan incorporates General Plan Policy NCR-5.10 (CSLT 2011b, page NCR-9) in Policy NCR-5.1 of the Area Plan to address short-term construction emissions (TCAP 2013, page 7-3), which include incorporating measures to reduce construction-related GHG emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District.
- Prohibit open burning of debris from site clearing unless involved with fuels reduction project;
- Restriction of idling of construction equipment and vehicles;
- Apply water to control dust as needed to prevent dust impacts offsite;
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.

In May 2008, the California Office of the Attorney General issued a paper for use by local agencies in carrying out their duties under CEQA as they relate to global warming, which include the measures adopted in the General Plan Update. In addition, these measures are consistent with the adopted Climate Change Scoping Plan associated with emission reduction measures for energy efficiency, regional transportation-related greenhouse gas targets, and green building strategy (CARB, 2008). It is also important to note that the City has adopted a Sustainability Plan, which includes many of the same measures adopted in the General Plan Update. The City's General Plan Update policies and the City's Sustainability Plan are consistent with efforts by the State of California. Reductions in VMT attributable to the Area Plan policies and action items would account for a reduction in mobile-source GHG emissions. Additional reductions would also occur associated with implementation of proposed policies that would decrease emissions from area sources, such as measures that would promote green building, energy conservation, and sustainable development.

Moreover, the Tourist Core Area Plan Amendments would increase the density to 65 units per acre (with a minimum density of 12 units per acre) for multi-family housing to further incentivize residential development within town centers and multi-family zones, closer to employment and service centers, with better connections to transit, sidewalks, and bicycle trails. On average, there is 11 percent less VMT per capita in these town center and multi-family areas; thus, reducing VMTs and the associated GHG emissions compared to less dense residential development farther from town centers.

Reductions in VMT attributable to the proposed policies and action items would account for an approximate 2 percent reduction in mobile-source GHG emissions. Additional reductions would also occur associated with implementation of proposed policies that would decrease emissions from area sources, such as measures that would promote green building, energy conservation, and sustainable development. The proposed policies are consistent with measures currently proposed by the California Office of the Attorney General as well as efforts by the state under the AB 32 Scoping Plan to reduce GHG emissions.

With implementation of proposed General Plan policies and actions, region-wide VMT would be reduced by approximately 54,500 miles per day. Additional reductions in GHG emissions would result from compliance with RPS electricity standards, the prohibited use of wood-burning fireplaces, and continued implementation of Pavley regulation requirements and low-carbon fuel standards. As depicted in Table 4.5-

11 of the GP EIR (CSLT 2010, page 4,5-48), the combined total net increase in GHG emissions, with mitigation, would be approximately 103,714.25 MTCO2e per year. Based on the modeling conducted for the proposed General Plan Update, implementation of the General Plan policies as well as state programs (e.g., Pavley regulations under AB 1493 for fuel standards) would result in reduced GHG emissions of approximately 33 percent. Reductions in project-generated GHG emissions associated with individual development projects would vary, depending on various factors, such as the type of project proposed, site design and location, and proximity to local pedestrian, bicycle, and transit services.

Implementation of relevant policies from the General Plan, the City's Sustainability Plan (which calls for development of a GHG inventory and reduction target), and associated mitigation measure MM 4.5.6 are anticipated to mitigate GHG emissions in a manner consistent with current state efforts to reduce GHG emissions under AB 32 and SB 375. Specifically implementation of IMP-8.6 (Greenhouse Gas Emission Reduction Strategy in the years 2013-2015) in combination with implementation of Mitigation Measure MM 4.5.6 that would require coordination with TRPA GHG reduction efforts and the establishment of an emission reduction target consistent with AB 32 and SB 375 reduction efforts would ensure that City GHG emissions are mitigated. Thus, this impact is considered less than significant (CSLT 2011a, page 4.0-4 through 4.0-5) under CEQA significance criteria. Because the Tourist Core Area Plan is consistent with and implements the General Plan and is consistent with the GP EIR, development and population growth anticipated during the Tourist Core Area Plan horizon is not expected to make a considerable contribution to global climate change.

Environmental Analysis*: Less than Significant Impact.*

Required Mitigation: **None.**

**69. Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases? (CEQA VIIb)**

The Tourist Core Are Plan is consistent with applicable plan, policies and regulations adopted in the TRPA Regional Plan, Sustainable Communities Strategy, and the City General Plan to reduce emissions of greenhouse gases. As discussed in Question 68 above, the City and/or TRPA would continue to implement existing practices described in Mitigation Measure 3.5-1 of the RPU EIS, General Plan Policy NCR-5.10, and Tourist Core Area Plan Policy NCR-5.1 which includes developing GHG reduction measures on a project-specific basis within the Tourist Core Area Plan. Moreover, the Tourist Core Area Plan would implement policies of the TRPA Regional Plan and the City General Plan which—among others—calls for concentrating development and redevelopment in town centers (e.g., the TSC-MUC, TSC-NMX and TSC-G zoning districts) and the regional center (the TSC-C and TSC-MU zoning districts) in a pedestrian- and transit-oriented environment that focuses on enhancing non-auto modes such as walking, biking, and transit as a strategy to reduce greenhouse gas emissions.

Environmental Analysis*: Less than Significant Impact.*

Required Mitigation: **None.**

**Refer to Question 27. Will the Project significantly alter climate, air movement, moisture, or temperature? (TRPA 2d)**

See discussion and analysis for Question 27 above.

Required Mitigation: **No Further Mitigation Required.**

### 5.4.10 Hazards and Hazardous Materials (CEQA) and Risk of Upset and Human Health (TRPA)

This section presents the analyses for potential impacts to hazards and hazardous materials and risk of upset and human health. Table 14 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 14: Hazards and Hazardous Materials and Risk of Upset and Human Health**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 70. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? (CEQA VIIIa) | | | X | |
| 71. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? (CEQA VIIIb) | | | X | |
| 72. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? (CEQA VIIIc) | | | X | |
| 73. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? (CEQA VIIId) | | | | X |

| | | | | |
|---|---|---|---|---|
| 74. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area? (CEQA VIIIe) | | | | **X** |
| 75. For a Project within the vicinity of a private airstrip, would the Project result in a safety hazard for people residing or working in the project area? (CEQA VIIIf) | | | | **X** |
| 76. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? (CEQA VIIIg) | | | | **X** |
| 77. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands? (CEQA VIIIh) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 78. Involve a risk of an explosion or the release of hazardous substances including, but not limited to, oil, pesticides, chemicals, or radiation in the event of an accident or upset conditions? (TRPA 10a) | | | | **X** |
| 79. Involve possible interference with an emergency evacuation plan? (TRPA 10b) | | | | **X** |
| 80. Creation of any health hazard or potential health hazard (excluding mental health)? (TRPA 17a) | | | | **X** |
| 81. Exposure of people to potential health hazards? (TRPA 17b) | | | | **X** |

**70. Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? (CEQA VIIIa)**

This potential effect is the same as those analyzed in the City General Plan Update, and therefore this analysis tiers from the GP EIR.

Development and redevelopment as a result implementation of the Tourist Core Area Plan could result in the increasing the transport, storage, use and/or disposal of hazardous materials as a result of normal construction and operation of land uses and improvement. However all development would be required to adhere to federal, state, ad local regulations regarding the handling, transportation, and disposal of hazardous materials.

Transportation of hazardous materials on area roadways is regulated by the California Highway Patrol, US Department of Transportation and Caltrans. The Resource Conservation and Recovery Act gives the USEPA the authority to control the generation, transportation, treatment, storage, and disposal of hazardous waste. The El Dorado County Department of Environmental Management is responsible for consolidating, coordinating and making consistent the administration requirements, permits, inspection, and enforcement activities of state standards regarding the transportation, use, and disposal of hazardous materials in the county and the Tourist Core. The City has incorporated specific, enforceable requirements and/or restrictions and corresponding performance standards that address hazardous materials. General Plan Policy HS-6.4 would require private waste collectors to provide household hazardous waste collection programs and Policy HS-6.5 requires private waste collectors to transport hazardous waste during non-peak hours (CSLT 2011b, page HS-7)

All existing and new development in the Tourist Core would be required to comply with federal, state, ad local regulations regarding the handling and transportation, disposal, and cleanup of hazardous materials. Therefore, this impact would be less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**71. Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? (CEQA VIIIb)**

This potential effect is the same as those analyzed in the City General Plan Update, and therefore this analysis tiers from the GP EIR.

The GP EIR (2010) identified that development and redevelopment within the City limits could result in the release of hazardous materials into the environment under reasonably foreseeable upset or accident conditions. Exposure to such materials could occur either through routine use or due to accidental release and concluded that this was a potentially significant impact requiring mitigation (CSLT 2010, pages 4.3-38-39). The GP EIR identified two mitigation measures that were incorporated into the final adopted General Plan (2011). Policy HS-6.1 requires existing and new commercial and industrial uses involving the use, handling, transport, or disposal of hazardous materials within the city to disclose their activities in accordance with El Dorado County guidelines and the requirements of state law. Policy HS-6.2 requires that all construction activity cease if contamination is discovered on construction projects. Remediation is required to the satisfaction of the appropriate responsible agency (i.e., El Dorado County Department of Environmental Management, Lahontan Regional Water Quality Control Board, Department of Toxic Substances Control, or the City of South Lake Tahoe) (CSLT 2011b, page HS-7).

All existing and new development in the Tourist Core is required to and will implement and is consistent with regional, federal, state, ad local regulations regarding the release of hazardous materials into the environment due to reasonably foreseeable upset and accident conditions Therefore, this impact would be less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**72. Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? (CEQA VIIIc)**

This potential effect is the same as those analyzed in the City General Plan Update, and therefore this analysis tiers from the GP EIR.

Locations where existing or past hazardous material leaks may exist in the Tourist Core plan area include the Chevron gas station located at Ski Run Boulevard and US Highway 50 as well as other undiscovered or unregistered locations. Several other sites were indicated in the database search but these other sites have been remediated and closed by the Regional Water Quality Control Board.

Due to the fact that much of the Tourist Core plan area was developed prior to the ban on polychlorinated biphenyls (PCBs), it is conceivable that electrical transformers and industrial products currently located within the area could contain PCBs and other heavy metals. Persistent residential chemicals may also be present in the form of pesticides, herbicides, and fertilizers used in typical landscaping efforts by property owners in the past. Accidental release of these materials could occur as a result of demolition, development, or update of land uses within the Tourist Core plan area, further exposing people to toxic emissions. Sensitive receptors such as children, the elderly, or hospital patients can be significantly affected by these emissions. As schools are located in close proximity along with housing typically utilized by senior citizens within the Tahoe Valley plan area, this is a primary concern.

As discussed under Question 71 above, the transportation of hazardous materials is regulated by the CHP, U.S. Department of Transportation, and Caltrans. Use, storage, and disposal of hazardous materials is regulated by DTSC as well as local, state, and federal regulations. This is true for both demolition/construction and operation of projects. Facilities that use hazardous materials are required to obtain permits and comply with appropriate regulatory agency standards designed to avoid hazardous waste releases.

The Bijou Community Elementary School is located just one-sixth of a mile from the project area. However as discussed in Question 70 (CEQA Checklist item VIIIa) above, the use, storage, and transport of hazardous materials are required to be in compliance with local, state, and federal regulations during project construction and operation. Facilities that use hazardous materials are required to obtain permits and comply with appropriate regulatory agency standards and the discovery of contamination require construction sites to cease operations.

Since all existing and new development in the Tourist Core is required to and will implement and is consistent with regional, federal, state, ad local regulations addressing safety form hazards, including hazardous materials, this impact is anticipated to be less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**73. Would the Project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? (CEQA VIIId)**

No hazardous waste facilities are identified within the Tourist Core.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**74. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard for people residing or working in the project area? (CEQA VIIIe)**

The Project is not located within the City's Airport Comprehensive Land Use Overlay district and therefore has no impact on public safety in the vicinity of a public-use airport or FAA safety regulations.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**75. For a Project within the vicinity of a private airstrip, would the Project result in a safety hazard for people residing or working in the project area? (CEQA VIIIf)**

The Project is not located within the vicinity of a private airstrip and therefore has no impact on public safety in the vicinity of a private airstrip.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**76. Would the Project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? (CEQA VIIIg)**

The City of South is responsible for emergency operations within the city limits. The City has adopted a Natural Hazard Mitigation Plan (adopted July 2008) which has been approved by the Federal Emergency Management Agency (FEMA) and included as a local appendix to the El Dorado County Natural Hazard Mitigation Plan. This plan provided guidance to the City for the development of pre-mitigation and post-mitigation recovery for disasters in all hazard classification.

The Tourist Core Area Plan is expected to result in an increase in dwelling units and CFA within the plan area. Proposed amendments would allow for increased density of multi-family residential development. Increased density has the potential to adversely affect emergency response described in local, regional, and state emergency response and/or evacuation plans, including but not limited to the County Emergency Operations Plan, the City's Emergency Operations Plan, and the SLTFD Fire Planning Process. Increased density can result in greater numbers of residents and employees within an area that would need to be protected and potentially evacuated. Increased square footage of homes and CFA area represent greater resources that require protection and, in the event of an emergency, response from public service providers. As such, the Tourist Core Area Plan Amendments may result in an incremental impact on emergency plans

in plan area. However, existing roadways provide multiple options for evacuation of the area and no roadway closures are expected as a result of the Tourist Core Area Plan Amendments.

Chapter 9 of the City Code provides for the preparation and carrying out of plans for the protection of persons and property within the City in the event of an emergency and the coordination of the emergency functions of the City with all other public agencies, corporations, organizations, and affected private persons. As required by Chapter 9 of the City Code, the City has established a Disaster Council, which is responsible for reviewing and recommending emergency operation plans for adoption by the City Council. The Disaster Council is also responsible for the review and potential amendments to the Emergency Management Plan. Moreover, the City has adopted General Plan policies in the Health and Safety Element: Policy HS-1.1 requires the City to periodically review and update the City's Local Emergency Operations Plan; Policy HS-1.3 requires the City to maintain a reverse 911 system; and HS-1.4 requires the City to identify pre-planned areas for disaster staging and evacuations (CSLT 2011b, page HS-2).

The Tourist Core Area Plan Amendments would not alter or revise the existing regulations or amend the City's Local Emergency Operations Plan or Emergency Management Plan. The Area Plan also would not impair the implementation of or physically interfere with the City Natural Hazard Management Plan or Emergency Management Plan and therefore results in no impact.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**77. Would the Project expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands? (CEQA VIIIh)**

Development and redevelopment in the Tourist Core could expose people and structures to hazards involving wildland fires in wildland-urban interface areas. However, any new development or redevelopment is required to and will implement and is consistent with state, regional, and local regulations designed to reduce the risk of wildfire. All new structures are required to comply with the California Fire Code, which established minimum standards for materials and material assemblies to provide a reasonable level of exterior wildfire exposure protection for buildings in wildland-urban interface areas. Chapter 12 of the City Code which contains fire regulations adopted to safeguard life and property form the hazards of fire and explosion. The City has also adopted General Plan policies the require the use of fire resistant materials, installation and maintenance of defensible space, and meeting fire flow requirements in new and rehabilitated structures.

Implementation of these policies, in conjunction with the existing California Fire code and the City Code requirements would reduce impacts associated with wildland fires to a less than significant level.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**78. Will the Project involve a risk of an explosion or the release of hazardous substances including, but not limited to, oil, pesticides, chemicals, or radiation in the event of an accident or upset conditions? (TRPA 10a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

Construction activities related to development within the Tourist Core could involve the storage, use, and transport of hazardous materials. However, use of hazardous materials would be typical of urban development projects in the Tahoe Region and would occur in compliance with all local, state, and federal regulations. Further, the types of uses that would be permissible within the Tourist are not of the nature that would involve storage, use, and transport of large quantities of hazardous substances that would increase the risk of incident. The types of uses (e.g., commercial and light industrial) are consistent with the types of uses already allowed under existing conditions, such that the Tourist Core Area would not be expected to create a new risk of accident or upset conditions. Therefore, the Tourist Core Area Plan would not result in a risk of explosion or the release of hazardous substances.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**79. Will the Project involve possible interference with an emergency evacuation plan? (TRPA 10b)**

See discussion and analysis for Question 76 above that concludes that implementation of the Tourist Core Area Plan will not impact existing emergency evacuation plans.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**80. Will the Project result in creation of any health hazard or potential health hazard (excluding mental health)? (TRPA 17a)**

See discussions and analyses for Questions 70 through 73 above

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**81. Will the Project result in exposure of people to potential health hazards? (TRPA 17b)**

See discussions and analyses for Questions 70 through 73 above

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

### 5.4.11 Hydrology and Water Quality

This section presents the analyses for potential impacts to hydrology and water quality. Table 15 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 15: Hydrology and Water Quality**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 82. Violate any water quality standards or waste discharge requirements? (CEQA IXa) | | | | **X** |
| 83. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)? (CEQA IXb) | | | **X** | |
| 84. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site? (CEQA IXc) | | | **X** | |
| 85. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site? (CEQA IXd) | | | **X** | |
| 86. Create or contribute runoff water which would exceed | | | **X** | |

| | | | | |
|---|---|---|---|---|
| the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff? (CEQA IXe) | | | | |
| 87. Otherwise substantially degrade water quality? (CEQA IXf) | | | **X** | |
| 88. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map? (CEQA IXg) | | | **X** | |
| 89. Place within a 100-year flood hazard area structures which would impede or redirect flood flows? (CEQA IXh) | | | **X** | |
| 90. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam? (CEQA IXi) | | | **X** | |
| 91. Inundation by seiche, tsunami, or mudflow? (CEQA IXj) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 92. Changes in currents, or the course or direction of water movements? (TRPA 3a) | | | | **X** |
| 93. Changes in absorption rates, drainage patterns, or the rate and amount of surface water runoff so that a 20 yr. 1 hr. storm runoff (approximately 1 inch per hour) cannot be contained on the site? (TRPA 3b) | | | | **X** |
| 94. Alterations to the course or flow of 100-yearflood waters? (TRPA 3c) | | | | **X** |
| 95. Change in the amount of surface water in any water body? (TRPA 3d) | | | | **X** |
| 96. Discharge into surface waters, or in any alteration of surface | | | | **X** |

| | | | | |
|---|---|---|---|---|
| water quality, including but not limited to temperature, dissolved oxygen or turbidity? (TRPA 3e) | | | | |
| 97. Alteration of the direction or rate of flow of ground water? (TRPA 3f) | | | | **X** |
| 98. Change in the quantity of groundwater, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations? (TRPA 3g) | | | | **X** |
| 99. Substantial reduction in the amount of water otherwise available for public water supplies? (TRPA 3h) | | | | **X** |
| 100. Exposure of people or property to water related hazards such as flooding and/or wave action from 100-year storm occurrence or seiches? (TRPA 3i) | | | | **X** |
| 101. The potential discharge of contaminants to the groundwater or any alteration of groundwater quality? (TRPA 3j) | | | | **X** |
| 102. Is the Project located within 600 feet of a drinking water source? (TRPA 3k) | **X, LTS** | | | |

**82. Would the Project violate any water quality standards or waste discharge requirements? (CEQA IXa)**

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to discharge into surface waters and surface water quality. Chapter 60 of the TRPA Code, which includes standards for discharge limits to surface and ground waters and Chapter 35 of the City Code which regulates urban runoff and stormwater quality. Additionally, consistent with existing conditions, all development, redevelopment, and infrastructure improvements within the Tourist Core would be required to meet the discharge standards of the Lahontan Regional Water Control Board and the City's municipal stormwater discharge permit. All projects that would create more than one acre of disturbance are required to prepare a Storm Water Pollution Prevention Plan (SWPPP) in accordance with The City's Stormwater Management Plan (2207).

Because all existing state and local protections for surface water would remain in place, and water quality BMPs (in accordance with Chapter 60 of the TRPA Code Chapter 35 of the City Code) would continue to be required for all properties within the Tourist Core Area Plan, the Tourist Core Area Plan would not result in discharges to surface waters or alteration of surface water quality.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**83. Would the Project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)? (CEQA IXb)**

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to surface water management. Surface water and water rights in California are managed by the California State Water Resources Board. Consistent with existing conditions, projects that could occur under the Tourist Core Area Plan with subsequent approval that would require additional water supply affecting the amount of surface water in Lake Tahoe or another water body would be required to comply with Chapters 32 and 60 of the TRPA Code. These regulations pertain to the provision of basic services to projects and the protection of source water.

The potential impact of development and redevelopment within the Tahoe Region, including development within the Tourist Core area, on the availability of public water supplies was analyzed in the RPU EIS (TRPA 2012a, page 3.13-11) and discussed in detail in Questions below. Because the regional water demand at build-out would be less than the regional surface water allocation, and because TRPA Code Section 32.4 requires demonstration of adequate available water supply within an existing water right prior to permit approval, implementation of the Tourist Core Area Plan would not result in a substantial reduction in the amount of surface water or the water available for public water supplies.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None**.

**84. Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site? (CEQA IXc)**

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to the course or direction of water movements. In accordance with Section 13.7.3 of the TRPA Code, TRPA would retain responsibility for enforcing and implementing Shorezone regulations as described in Chapters 80 through 86 of the TRPA Code. Section 80.4.1 of the TRPA Code includes measures designed to preserve the natural littoral processes driven by currents and wave action within Lake Tahoe. Stream modifications are limited by the provisions of Chapter 63 of the TRPA Code, which requires protection of fish resources, and Sections 61.3.3 and 30.5, which requires protection of SEZ areas, thereby protecting streams as well. Consistent with existing requirements, projects that could occur under the Tourist Core Area Plan that could alter the course or direction of water movements would be subject to subsequent permitting and environmental review, and TRPA Code sections described above as well as all other federal, state, and local regulations pertaining to the course or direction of water movements.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**85. Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site? (CEQA IXd)**

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to surface water runoff. All projects within the Tourist Core must demonstrate compliance with the land capability and coverage provisions of Chapter 30 of the TRPA Code which is incorporated into the Tourist Core Area Plan Development and Design Standards. These provisions include allowing up to up to 70 percent within Town Centers and the Regional Center (TSC-C, TSC-MU, TSC-MUC, TSC-NMX) on high capability lands (land capability districts [LCDs] 4 through 7). For parcels located within the TSC-G district and within 300 feet of the high water line of Lake Tahoe the maximum coverage allowed is 50 percent on high capability lands. The potential effects of these changes related to water quality were analyzed in the RPU EIS (TRPA 2012a, page 3.8-41). Coverage increases on high capability land would be achieved through restoration and transfer of existing land coverage. Additionally, all development within the Tourist Core would be required to meet existing BMP standards to control potential increases in stormwater runoff and pollutant loading from the additional coverage. As specified in Section 60.4.6 of the TRPA Code, except where special conditions exist and are approved by TRPA, infiltration facilities designed to accommodate the volume of runoff generated by a 20-year 1-hour storm are required for approval of all projects within the Tahoe Basin, including the Tourist Core. Therefore, future projects that may occur within the Tourist Core would not inhibit the ability to infiltrate surface water runoff from a 20-year 1-hour storm event.

Also see discussion and analysis for Questions 84 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**86. Would the Project create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff? (CEQA IXe)**

All new development and redevelopment within the Tourist Core would be required to meet existing BMP standards to control potential increases in stormwater runoff and pollutant loading onsite. As specified in Section 60.4.6 of the TRPA Code, except where special conditions exist and are approved by TRPA, infiltration facilities designed to accommodate the volume of runoff generated by a 20-year 1-hour storm are required for approval of all projects within the Tahoe Basin. Therefore, new development within the Tourist Core is not expected to create or contribute additional runoff that would exceed the capacity of existing or planned stormwater drainage system.

In addition, several stormwater management projects have been completed since adoption of the 2013 Tourist Core Area Plan. These projects include the California Department of Transportation upgrades to drainage systems on US Highway 50 and the City Bijou Erosion Control Project. The City project focused on two key elements: (1) replacement of the existing Bijou Creek storm drain system that conveys storm water runoff from the 1,300-acre Bijou Creek watershed to Lake Tahoe; and (2) construction of a comprehensive regional treatment system for runoff generated in the Bijou commercial core which is partially located in the Tourist Core . The requirement to comply with agency regulations along with City and Caltrans stormwater management improvements result in a less than significant impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**87. Would the Project otherwise substantially degrade water quality? (CEQA IXf)**

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to discharge into surface waters and surface water quality. Chapter 60 of the TRPA Code, which includes standards for discharge limits to surface and ground waters and Chapter 35 of the City Code which regulates urban runoff and stormwater quality. Additionally, consistent with existing conditions, all development, redevelopment, and infrastructure improvements within the Tourist Core Area Plan would be required to meet the discharge standards of the Lahontan Regional Water Control Board and the City's municipal stormwater discharge permit. All projects that would create more than one acre of disturbance are required to prepare a Storm Water Pollution Prevention Plan (SWPPP) in accordance with The City's Stormwater Management Plan (2007).

Because all existing state and local protections for surface water would remain in place, and water quality BMPs (in accordance with Chapter 60 of the TRPA Code Chapter 35 of the City Code) would continue to be required for all properties within the Tourist Core, the Tourist Core Area Plan would not result in uncontrolled discharges to surface waters or alteration of surface water quality.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**88. Would the Project place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map? (CEQA IXg)**

The Tourist Core Area would not alter or revise the regulations pertaining to floodplains in Section 35.4 of the TRPA Code or Chapter 34 of the City Code. Portions of the Tourist Core are located within the 100-year floodplain. All future development within the Tourist Core would be required to meet both the requirements of Chapter 35 of the TRPA Code and Chapter 34 of the City Code related to floodplain management. Chapter 35 of the TRPA Code prohibits additional development, grading or filling within the 100-year floodplain except for public outdoor recreation, public service and water quality control facilities, and floodplain crossings. Chapter 35 of the City Code restricts or prohibits uses which are dangerous to health, safety, and property due to water or erosion hazards, or which result in damaging increases in erosion or flood heights or velocities; requires that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction; controls the alteration of natural floodplains, stream channels, and natural protective barriers, which help accommodate or channel flood waters; control filling, grading, dredging, and other development which may increase flood damage; and prevents or regulates the construction of flood barriers which will unnaturally divert flood waters or which may increase flood hazards in other areas. Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**89. Would the Project place within a 100-year flood hazard area structures which would impede or redirect flood flows? (CEQA IXh)**

See discussion and analysis for Question 88 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**90. Would the Project expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam? (CEQA IXi)**

No levees or dams are located within the boundaries of or upstream from the Tourist Core Area Plan therefore no person or structures would be at a significant risk of loss, injury or death involving flood as a result of the dam or levee failure. Therefore this is a less than significant impact.

Flooding of the Tourist Core as a result of wave action from 100-year storm occurrence or seiches is discussed and analyzed in Question 91 below.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**91. Would the Project cause inundation by seiche, tsunami, or mudflow? (CEQA IXj)**

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to water-related hazards. Future development within the Tourist Core would be required to meet the requirements of Chapter 35 of the TRPA Code and Chapter 34 of the City Code related to floodwater management. Consistent with existing conditions, because the TRPA Code prohibits the development, grading, or filling of lands within the 100-year floodplain and in the area of wave run-up (TRPA Goals and Policies, Policy NH-1.2), implementation of the Tourist Core Area Plan would not expose people or property to flooding or wave action from 100-year storm events.

There are active faults in the Lake Tahoe Basin, which could be sources of groundshaking at locations within the Tourist Core Area Plan boundaries during a seismic event. Seismic events could also result in tsunami or seiche within Lake Tahoe, potentially affecting low-lying areas, including portions of the Tourist Core. Structures within the Tourist Core would be designed and constructed in accordance with the current design requirements of the California Building Code and International Building Code Seismic Zone D. Therefore, there would be no substantial increased risk of loss, injury or death or property damage from ground shaking alone.

Ichinose et al. (2000) investigated the potential of local earthquakes to generate tsunamis and seiches within Lake Tahoe. The probability of an earthquake strong enough to cause a seiche in Lake Tahoe is estimated to be 3-4 percent in 50 years (Ichinose et al. 2000). Based on modeled wave simulations for large earthquake (magnitude >7) scenarios for faults within the Lake Tahoe Basin (North Tahoe-Incline Village Fault and the West Tahoe-Dollar Point Fault), a potential exists for tsunami and seiche-related waves between 10 and 30 feet in height to occur along the shore of Lake Tahoe, potentially threatening low-lying lakeside communities. While earthquakes last several seconds, a tsunami wave could take up to 15 minutes to reach Lake Tahoe's shore (Brown 2000). While experts have characterized the risk as far less than the risk of an approaching wildfire in the Tahoe Basin, they have called for the risk of inundation to be factored into emergency plans for the region (Wikipedia 2012; Kaye 2011).

The Tourist Core Area Plan would implement the policies of the Regional Plan (TRPA 2012d) which provides for increased density of development in Town Centers and the Regional Center. Most of the Tourist Core is located in low-lying areas adjacent to Lake Tahoe and could be at risk from inundation from a tsunami or seiche. Increasing the density of development within these areas could place additional people and properties at risk to tsunami and seiche; however no TRPA, federal, state, or local polices prohibit this land use. The City has prepared and adopted a Natural Hazard Mitigation Plan which provides guidance to the City for the development of pre-mitigation and post-mitigation recovery for disasters in all hazard classifications. Emergency procedures in the City are guided by South Lake Tahoe's Emergency

Management Plan (EMP) and the South Lake Tahoe Fire Department's Fire Planning Process. The EMP provides a framework to guide the City's efforts to mitigate and prepare for, respond to, and recover from major emergencies or disasters. Additionally, consistent with existing conditions all projects within the Tourist Core would be required to undergo subsequent project-level permitting and environmental review, which would require the evaluation of hazards related to earthquake-related tsunami and seiche and measures (e.g., site-specific notification and evacuation procedures) may be required as appropriate.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**92. Will the Project result in changes in currents, or the course or direction of water movements? (TRPA 3a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to the course or direction of water movements. In accordance with Section 13.7.3 of the TRPA Code, TRPA would retain responsibility for enforcing and implementing Shorezone regulations as described in Chapters 80 through 86 of the TRPA Code. Section 80.4.1 of the TRPA Code includes measures designed to preserve the natural littoral processes driven by currents and wave action within Lake Tahoe. Stream modifications are limited by the provisions of Chapter 63 of the TRPA Code, which requires protection of fish resources, and Sections 61.3.3 and 30.5, which requires protection of SEZ areas, thereby protecting streams as well. Consistent with existing requirements, projects that could occur under the Tourist Core Area Plan that could alter the course or direction of water movements would be subject to subsequent permitting and environmental review, and TRPA Code sections described above as well as all other federal, state, and local regulations pertaining to the course or direction of water movements.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**93. Will the Project result in changes in absorption rates, drainage patterns, or the rate and amount of surface water runoff so that a 20 yr. 1 hr. storm runoff (approximately 1 inch per hour) cannot be contained on the site? (TRPA 3b)**

See discussion and analysis for Question 85 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**94. Will the Project result in alterations to the course or flow of 100-year floodwaters? (TRPA 3c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to floodplains in Section 35.4 of the TRPA Code or Chapter 34 of the City Code. Portions of the Tourist Core Area Plan

are located within the 100-year floodplain. All future development within the Tourist Core Area Plan would be required to meet both the requirements of Chapter 35 of the TRPA Code and Chapter 34 of the City Code related to floodplain management.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**95. Will the Project result in change in the amount of surface water in any water body? (TRPA 3d)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to surface water management. Surface water and water rights in California are managed by the California State Water Resources Board. Consistent with existing conditions, projects that could occur under the Tourist Core Area Plan with subsequent approval that would require additional water supply affecting the amount of surface water in Lake Tahoe or another water body would be required to comply with Chapters 32 and 60 of the TRPA Code. These regulations pertain to the provision of basic services to projects and the protection of source water.

The potential impact of development and redevelopment within the Tahoe Region, including development within the Tourist Core Area, on the availability of public water supplies was analyzed in the RPU EIS (TRPA 2012a, page 3.13-11) and discussed in detail in Questions 156 and 164 below. Because the regional water demand at build-out would be less than the regional surface water allocation, and because TRPA Code Section 32.4 requires demonstration of adequate available water supply within an existing water right prior to permit approval, implementation of the Tourist Core Area Plan would not result in a substantial reduction in the amount of surface water or the water available for public water supplies.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**96. Will the Project result in discharge into surface waters, or in any alteration of surface water quality, including but not limited to temperature, dissolved oxygen or turbidity? (TRPA 3e)**

See discussion and analysis for Question 87 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**97. Will the Project result in alteration of the direction or rate of flow of ground water? (TRPA 3f)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to excavations that could intercept or otherwise interfere with groundwater. Section 33.3 of the TRPA Code prohibits

excavations, except under certain defined and permitted conditions, that interfere with or intercept the high water table by: altering the direction of groundwater flow; altering the rate of flow of groundwater; intercepting groundwater; adding or withdrawing groundwater; or raising or lowering the groundwater table. Additionally, excavation in excess of 5 feet below ground surface (or less in areas of known high groundwater) is generally prohibited because of the potential to intercept or interfere with groundwater is prohibited. Such excavations may be permitted under certain defined conditions (Section 3.3.6.B of the TRPA), and in such cases it must be demonstrated in a soils/hydrologic report that no interference or interception of groundwater would occur as a result of the excavation. Therefore, consistent with existing conditions, future projects that may occur within the Tourist Core are subject to subsequent environmental review and permitting by the City and/or TRPA, which would require the project applicant to demonstrate compliance with Chapter 33 of the TRPA Code and the protection of groundwater.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**98. Will the Project result in change in the quantity of groundwater, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations? (TRPA 3g)**

See discussions and analyses for Questions 95 through 97 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**99. Will the Project result in substantial reduction in the amount of water otherwise available for public water supplies? (TRPA 3h)**

See discussion and analysis in Question 95 above and analyses in Questions 156 and 164 below which concludes that potential impact of development and redevelopment within the Tahoe Region, including development within the Tourist Core Area, on the availability of public water supplies would not have an impact

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**100. Will the Project result in exposure of people or property to water related hazards such as flooding and/or wave action from 100-year storm occurrence or seiches? (TRPA 3i)**

See discussion and analysis for Question 91 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**101. Will the Project result in potential discharge of contaminants to the groundwater or any alteration of groundwater quality? (TRPA 3j)**

See discussions and analyses for Questions 95 through 97 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**102. Is the Project located within 600 feet of a drinking water source? (TRPA 3k)**

Sources of drinking water are located within 600 feet of the project area, however, the Tourists Core Area Plan Amendments would not alter or revise the regulations pertaining to source water protection and is therefore consistent with the goals of the Regional Plan and the RPU EIS. Chapter 60 of the TRPA Code includes protections for drinking water sources. Specifically, Section 60.3.3.C.1 of the TRPA Code identifies a Source Water Protection Zone that includes a 600-foot radius around wells, lake intakes, and springs assessed by TRPA. Into total, TRPA's Source Water Assessment Map identifies 22 wells located in the boundary of the Tourist Core Area Plan All development within Source Water Protection Zones is subject to the requirements of Section 60.3.3.D, including installation of water quality BMPs and development of a spill control plan. Any subsequent projects allowed within the Tourist Core would be subject to permitting by the City and/or TRPA. Consistent with existing conditions, permit applicants within 600 feet of a drinking water source would be required to demonstrate compliance with the source water protection provisions in Chapter 60 of the TRPA Code.

Environmental Analysis: *Yes, Less than Significant Impact.*

Required Mitigation: **None.**

## 5.4.12 Land Use and Planning

This section presents the analyses for potential impacts to land use and planning. Table 16 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 16: Land Use and Planning**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 103. Physically divide an established community? (CEQA Xa) | | | | **X** |
| 104. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? (CEQA Xb) | | | **X** | |
| 105. Conflict with any applicable habitat conservation plan or natural community conservation plan? (CEQA Xc) | | | | **X** |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 106. Include uses which are not listed as permissible uses in the applicable Plan Area Statement, adopted Community Plan, or Master Plan? (TRPA 8a) | | | | **X** |
| 107. Expand or intensify an existing non-conforming use? (TRPA 8b) | **X, LTS** | | | |

### 103. Would the Project physically divide an established community? (CEQA Xa)

The Tourist Core is an established tourist, commercial, recreation and employment center that caters to visitors and resident alike. The intent of the Tourist Core Area Plan Amendments, including the addition of the two new parcels along Pioneer Trail, continues to promote the exiting land patterns and further enhance

this area of the south shore as a destination and recreation center. Therefore, implementation of the Tourist Core Area Plan is not expected to physically divide the established community

Environmental Analysis: *No Impact*.

Required Mitigation: **None.**

**104. Would the Project conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? (CEQA Xb)**

The Tourist Core Area Plan Amendments include an expansion of the Regional Plan Conceptual land use map and General Plan land use diagram to add two parcels along Pioneer Trail currently located with in Plan Area 092 (Residential) to the Town Center Mixed Use District. The two parcels added to the Town Center would incorporate applicable policies and regulations of both plans to avoid or mitigate any environmental effects.

Pursuant to Chapter 13 of the TRPA Code (Section 13.5.3.G), modifications to a Town Center Overlay boundary to incorporate an undeveloped parcel are permitted if they comply with the following:

1. At least three sides of the parcel to be included are adjacent to developed parcels.

2. Properties included in a Town Center are less than ¼ mile from existing commercial and Public Service uses.

3. Properties included in a Town Center shall encourage and facilitate the use of existing or planned transit stops and transit system.

The two parcels along Pioneer Trail are both developed with existing tourist oriented land uses and are surrounded by development on at least three sides given the predominance of development along the Pioneer Trail corridor. The incorporation of the parcels listed above into the TRPA Town Center Overlay would not conflict with a plan or regulation adopted to avoid or reduce environmental impacts. Thus, this impact would be less than significant.

Environmental Analysis: *Less Than Significant Impact*.

Required Mitigation: **None.**

**105. Would the Project conflict with any applicable habitat conservation plan or natural community conservation plan? (CEQA Xc)**

The Project does not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan because no such plans exist for the project area.

Environmental Analysis: *No Impact*.

Required Mitigation: **None.**

**106. Will the Project include uses which are not listed as permissible uses in the applicable Plan Area Statement, adopted Community Plan, or Master Plan? (TRPA 8a)**

The Tourist Core Area Plan Amendments proposes modifications to the land use mix of the two parcels that will be moved from Plan Area Statement 092 to improve the concentration and the mixing of tourist and residential uses. These adjustments to the permissible use list would result in permitting uses that are currently prohibited in that portion of plan area 092. The amendments also modify the permissible uses and allowable densities in other existing Districts. The modifications are outlined in Tables 2 and 3 in Chapter 2 and are summarized in Table 1. The Tourist Core Area Plan modifies the list of permissible uses consistent with the types of uses envisioned in the Regional Plan and consolidates multiple similar uses under one name for clarity. Generally, the types of land uses that would be permissible in the TSC-C, TSC-MUC, TSC-G, TSC-NMX zoning districts are consistent with the mix of uses (commercial, public service, light industrial, office, tourist accommodation, and residential) envisioned for community centers in the Regional Plan (TRPA 2012a, page 2-33) and the General Plan (CSLT 2011b, pages LU-3 and LU-10); the uses that would be permissible within the REC zoning district reflect the mix of uses envisioned for recreation areas in the Regional Plan (TRPA 2012a, page 2-19); and the uses within the OS zoning district would be limited to passive recreation uses and resource management activities.

Two new uses are proposed to be added to the Tourist Core Permissible Use List. The uses are nursing and personal care and residential care. However, the expansion of the applicability of these uses are not expected to have any significant impact because the proposed uses would be consistent with the uses envisioned in the Regional Plan for tourist and commercial designated community centers.Furthermore, any subsequent projects allowed within the Tourist Core would be subject to permitting by the City and/or TRPA. Consistent with existing conditions, permit applicants would be required to demonstrate that any proposed project would not have a significant effect on the environment including but not limited to traffic, land coverage, scenic resources, air quality, water quality, etc.

Environmental Analysis: *No Impact*.

Required Mitigation: **None**

**107. Will the Project expand or intensify an existing non-conforming use? (TRPA 8b)**

While the Tourist Core Area Plan would potentially intensify a non-conforming use, the proposed land use changes are consistent with the corresponding land use classifications in the Regional Plan, the General Plan and the broader categories of uses (e.g., commercial, tourist, residential) envisioned in the Regional Plan and RPU EIS. Implementation of the Tourist Core Area Plan Amendments would result in changes to permissible uses throughout the Tourist Core consistent with the Regional Plan (see discussion above Question 106). If a current existing non-conforming use becomes a permissible use through the land use changes proposed by the Tourist Core Area Plan, that use could then be expanded or intensified in accordance with the development standards of the TRPA and City Codes. The Tourist Core Area Plan Amendments would allow new uses that are currently prohibited to apply in some areas of the Tourist Core Area Plan and therefore make an existing non-conforming use conforming. However, the new uses are consistent with the types of uses envisioned in the Regional Plan (e.g., commercial, tourist, residential in a mixed-used setting) and analyzed in the RPU EIS or are consistent with typical uses that are generally found in tourist/commercial related land use district throughout the Region. After implementation of the Tourist Core Area Plan, any existing non-conforming uses that remain would be prohibited from expansion or intensification by the provisions of Section 21.2.3 of the TRPA Code and 32-35 of the City Code..

Any subsequent projects allowed within the Tourist Core would be subject to permitting by the City and/or TRPA. Consistent with existing conditions, permit applicants would be required to demonstrate that any proposed project would not have a significant effect on the environment including but not limited to traffic, land coverage, scenic resources, air quality, water quality, etc.

Environmental Analysis: *Yes, Less than Significant Impact*.

Required Mitigation: **None.**

### 5.4.13 Mineral Resources (CEQA) and Natural Resources (TRPA)

This section presents the analyses for potential impacts to mineral resources and natural resources. Table 17 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 17: Mineral Resources and Natural Resources**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 108. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? (CEQA XIa) | | | | **X** |
| 109. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? (CEQA XIb) | | | | **X** |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 110. A substantial increase in the rate of use of any natural resources? (TRPA 9a) | | | | **X** |
| 111. Substantial depletion of any non-renewable natural resource? (TRPA 9b) | | | | **X** |

**108. Would the Project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? (CEQA XIa)**

There are no mapped mineral resources within the Tourist Core, nor does the City General Plan, nor any specific plan or other plan, such as the TRPA Regional Plan and Plan Area Statement, identify any sites within the Tourist Core as an important mineral recovery site.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**109. Would the Project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? (CEQA XIb)**

See discussion and analysis for Question 108 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**110. Will the Project result in a substantial increase in the rate of use of any natural resources? (TRPA 9a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The use of natural resources, such as construction wood or metals, or gasoline would increase incrementally as more commercial, tourist, and residential developments are constructed as envisioned in the Tourist Core Area Plan. The RPU EIS (TRPA 2012a, page 5-3) acknowledged the potential increase in the use of natural resources resulting from increased development and redevelopment within the Tahoe Region, however any project permitted through the Tourist Core Area Plan would be subject to project level environmental review and site-specific mitigation measures if necessary. Therefore, any increase in the rate of use of natural resources would not be substantial and would not be in quantities that would result in a significant effect.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**111. Will the Project result in a substantial depletion of any non-renewable natural resource? (TRPA 9b)**

Non-renewable natural resources such as gasoline and diesel would be consumed during the construction of development projects; however, the potential for new development would be limited through restrictions to TRPA regulated commodities (see project description) such as commercial floor area, residential allocations and tourist accommodation units. Because construction would be limited and would not require quantities of non- renewable resources beyond those of typical residential and commercial construction, projects associated with the Tourist Core Area Plan would not result in substantial depletion of any non-renewable natural resource.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

### 5.4.14 Noise

This section presents the analyses for potential impacts related to noise. Table 18 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 18: Noise**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 112. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? (CEQA XIIa) | | | X | |
| 113. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels? (CEQA XIIb) | | | X | |
| 114. A substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project? (CEQA XIIc) | | | X | |
| 115. A substantial temporary or periodic increase in ambient noise levels in the Project vicinity above levels existing without the Project? (CEQA XIId) | | | X | |
| 116. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the project area to excessive noise levels? (CEQA XIIe) | | | | X |
| 117. For a Project within the vicinity of a private airstrip, would the Project expose people residing or working in the project area to excessive noise levels? (CEQA XIIf) | | | | X |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 118. Increases in existing Community Noise Equivalency Levels (CNEL) beyond those permitted in the | | | | X |

| | | | | |
|---|---|---|---|---|
| applicable Plan Area Statement, Community Plan or Master Plan? (TRPA 6a) | | | | |
| 119. Exposure of people to severe noise levels? (TRPA 6b) | | | | **X** |
| 120. Single event noise levels greater than those set forth in the TRPA Noise Environmental Threshold? (TRPA 6c) | | | | **X** |

**112. Would the Project result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? (CEQA XIIa)**

This potential effect is the same as those analyzed in the General Plan Update, and therefore the analysis is tiered from and consistent with the GP EIR.

The Tourist Core Area Plan includes the CNEL standards set forth in the TRPA Regional Plan. The CNEL standards are:

- 60 CNEL TSC-C, TSC-MU, TSC-MUC, TSC-G, TSC-G Special Area #1, and TSC-NMX districts
- 55 CNEL TSC-G inside the shorezone
- 55 CNEL for OS and REC districts
- 65 CNEL for the US 50 highway corridor

Aside from short-term construction-related noise increases (discussed in Question 119 below), development associated with the Tourist Core Area Plan could result in a long-term increase in existing CNEL levels if it were to result in the introduction of new noise-generating land uses, increased traffic that could increase roadside noise levels, or if it were to create noise/land use compatibility conflicts, as discussed below.

Noise/Land Use Compatibility

The potential for noise conflicts from development, including construction of additional residential, commercial floor area, industrial facilities, recreational facilities, and infrastructure such as roadway improvements, water and sewer lines that is expected to occur under the Tourist Core Area Plan, includes conflicts as a result of adjacent land uses and their operational aspects. While generally the General Plan and the TRPA Regional Plan address these conflicts through the land use designation, zoning identification, and development standard process, the potential exists for some development allowed under current land use designations and zoning to have operational aspects that could create noise impacts on other adjacent land uses. The City's General Plan noise policies are incorporated in the Tourist Core Area Plan and would provide expanded protection for ambient conditions, which are designed toward eliminating land use conflicts with respect to noise. Policy LU7-2 of the Tourist Core Area Plan requires an acoustical analysis as part of the environmental review process when noise-sensitive land uses are proposed in areas exposed to existing or project exterior noise levels exceeding the levels shown in Table HS-1 and HS-2 of the City General Plan, so noise mitigation may be included in the project design. All acoustical analysis shall:

- Be the financial responsibility of the applicant;

- Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics;
- Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions and the predominant noise sources; and
- Estimate existing and projected cumulative (20 year) noise levels in terms of Ldn or CNEL and/or the standards shown in Table HS-1, and compare those levels to the policies in this section;
- Recommend appropriate mitigation to achieve compliance with the adopted policies and standards in this section, giving preference to proper site planning and design over mitigation measures which require the construction of noise barriers or structural modifications to buildings which contain noise-sensitive land uses;
- Estimate noise exposure after the prescribed mitigation measure(s) has been implemented; and
- Describe a post-project assessment program that could be used to evaluate the effectiveness of the proposed mitigation measures.

Further, the City and/or TRPA would only approve projects that can demonstrate compliance with the applicable noise standards. Under the proposed TCAP Amendments, two parcels would be added to the TSC-MU District from Plan Area 092. This change would permit those parcels to develop under the TSC-MU 60 dB CNEL standard rather than the existing 50 dB CNEL standard for Plan Area 092.

Traffic-Related Noise

Subsequent projects under the Tourist Core Area Plan could result in increases in vehicle travel and traffic volumes on roadways. Locations within the Tourist Core are currently in nonattainment with respect to their applicable CNEL noise standards (Table 19), including the highway corridors US 50 (TRPA 2012a: page 3.6-9). As part of the RPU EIS, traffic noise levels were modeled with and without implementation of the Regional Plan and changes in traffic noise levels from existing conditions were also calculated (TRPA 2012a: Appendix G). Table 20 shows the estimated change in noise level for roadways within the Tourist Core. The RPU EIS found that increased vehicle trips on highways in the Region would result in nominal increases in traffic noise levels (i.e., less than 3 dBA). However, increases in traffic noise levels would occur in highway corridors (i.e., within 300 feet of the highway edge), including US 50, that are currently not in attainment with respect to the CNEL standards established by TRPA for highway corridors. In addition, traffic noise levels beyond the highway corridor (i.e., at distances greater than 300 feet from the highway edge) may also exceed CNEL standards established by TRPA for particular land use types, including areas such as the OS and REC zoning districts that have a 55 dB CNEL standard for urban outdoor recreation uses. Because the Tourist Core Area Plan seeks to implement and is consistent with the Regional Plan, implementation of the Tourist Core Area Plan would also result in an increase in CNEL noise levels relative to existing conditions.

**Table 19: Summary of Modeled Existing Traffic Noise Levels Within the Tourist Core Area Plan**

| Roadway Segment | CNEL/$L_{dn}$(dB) at 100 feet from Roadway Centerline | Distance (feet) from Roadway Centerline to CNEL/$L_{dn}$(dB) | | | |
|---|---|---|---|---|---|
| | | 70 | 65 | 60 | 55 |
| US Highway 50 South Stateline (Heavenly Village Way and Park Avenue) | 65.2 | 48 | 104 | 223 | 481 |

Notes: CNEL = Community Noise Equivalent Level; dB = A-weighted decibels

Source: TRPA 2012a, page 3.6-9

**Table 20: Table Summary of Modeled Traffic Noise Level Changes Within the Tourist Core Area Plan**

| Roadway Segment | Existing Conditions | Buildout Conditions | Net Change |
|---|---|---|---|
| US Highway 50 South Stateline (Heavenly Village Way and Park Avenue) | 65.2 | 65.4 | +0.2 |

Notes: CNEL = Community Noise Equivalent Level; dB = A-weighted decibels
Source: TRPA 2012a, page 3.6-12

To ensure that the generation of noise levels in excess of standards established for the Tourist Core Area Plan is not exceeded, the Area Plan incorporates a noise policy which is designed toward reducing traffic-related noise. Policy LU7-1 requires the mitigation of new transportation noise sources to the levels shown in Table HS-2 of the City General Plan (CSLT 2011b, page HS-10) at all outdoor activity areas and interior spaces of existing noise-sensitive land uses. The RPU EIS includes a requirement to implement the *Wide Traffic Noise Mitigation Program* to reduce traffic-generated noise to the extent feasible on a project-specific basis. Such measures include, but are not limited to, the following:

- Construction of barriers, berms, and/or acoustical shielding;
- Replacement of driveways that provide access from highways to individual buildings with a common access way that routes ingress and egress traffic to nearby intersections in order to reduce the number of gaps in barriers and berms;
- Planting of dense vegetation in key locations where noise absorption is needed;
- Use of noise-reducing pavement, including repaving existing roadways with noise-reducing pavement;
- Reduction of speed limits and/or implementation of traffic-calming measures that slow travel speeds, if feasible and practical;
- Establishment of setback requirements for new development in specific areas exposed to highway noise;
- Acquisition of additional right-of-way adjacent to specific roadway segments to remove existing noise-sensitive receptors, including existing residences;
- Establishment of programs to pay for noise reduction such as low-cost loans to owners of noise-affected property or establishment of developer fees;
- Noise-reducing acoustical treatment of existing buildings; and
- Additional measures that would, based on substantial evidence, reduce the number of vehicle trips associated with project operations, such as an employee carpool or van pool program, shuttle bus service for residents or tourists, parking fees, and bicycle amenities.

Further, the City and/or TRPA would continue to evaluate individual projects within the Tourist Core at a project level and would enforce CNEL standards on a project-by-project basis pursuant to the noise limitations in Chapter 68 of the TRPA Code.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**113. Would the Project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels? (CEQA XIIb)**

As is the case under existing conditions, construction activities associated with implementing projects under the Tourist Core Area Plan could potentially expose noise-sensitive receptors to levels that exceed TRPA noise standards and/or expose noise-sensitive receptors to excessive noise levels. Construction activities associated with new development and redevelopment could include site preparation (e.g., demolition, clearing, excavation, grading), foundation work, paving, building construction, utility installation, finishing, and cleanup. These activities typically involve the use of noise-generating equipment such as cranes, excavators, dozers, graders, dump trucks, generators, backhoes, compactors, and loaders. Noise levels associated with these types of equipment are typically between 70 and 85 dBA Lmax at 50 feet. In unique circumstances, specialized construction equipment (such as pile drivers) or techniques (such as blasting) that are inherently louder than typical construction equipment (typically between 94 and 101 dBA Lmax at 50 feet) may be required (TRPA 2012a: pages 3.6-16 and 3.6-17). During construction, nearby residences and other noise-sensitive receptors could be exposed to noise levels that exceed TRPA standards outside of the exempt hours between 8:00 a.m. and 6:30 p.m., and/or expose nearby noise-sensitive receptors to excessive or severe noise levels. Therefore, construction activities could expose people to severe and/or nuisance noise levels unless measures are incorporated on a project-specific basis.

The City's General Plan noise policies are incorporated in the Tourist Core Area Plan and would provide expanded protection from groundborne vibration and groundborne noise levels. Policy LU7-3 requires an analysis of a vibration impact be conducted for all construction activities that include impact equipment and activities such as pile driving, soil compaction, or vibratory hammers that occur within 200 feet of existing structures. The analysis will address the potential for adverse vibration levels based on the criteria contained in Table 4.6-12 of the City General Plan Draft EIR. The City will ensure that construction operations are designed to avoid or mitigate for vibrations above 0.02 inches/second (0.5 mm/second).

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**114. Would the Project result in a substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project? (CEQA XIIc)**

See discussion and analysis for Question 112 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation**: None**

**115. Would the Project result in a substantial temporary or periodic increase in ambient noise levels in the Project vicinity above levels existing without the Project? (CEQA XIId)**

See discussion and analysis for Question 113 above.

Environmental Analysis: *Less than Significant.*

Required Mitigation: **None**

**116. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the project area to excessive noise levels? (CEQA XIIe)**

The project area is not located within two miles of a public airport or public use airport and therefore does not expose people working in the project area to excessive noise levels from aircraft.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**117. For a Project within the vicinity of a private airstrip, would the Project expose people residing or working in the project area to excessive noise levels? (CEQA XIIf)**

The project area is not within the vicinity of a private airstrip and therefore does not expose people working in the project area to excessive noise levels from aircrafts.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**118. Would the Project result in increases in existing Community Noise Equivalency Levels (CNEL) beyond those permitted in the applicable Plan Area Statement, Community Plan or Master Plan? (TRPA 6a)**

See discussion and analysis for in Question 112 (CEQA Checklist item XIIa) above.

Environmental Analysis: *No Impact.*

Required Mitigation**: None**

**119. Would the Project result in exposure of people to severe noise levels? (TRPA 6b)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis tiers from and consistent with the RPU EIS.

Construction activities associated with new development and redevelopment within the Tourist Core could include site preparation (e.g., demolition, clearing, excavation, grading), foundation work, paving, building construction, utility installation, finishing, and cleanup. These activities typically involve the use of noise-generating equipment such as cranes, excavators, dozers, graders, dump trucks, generators, backhoes, compactors, and loaders. Noise levels associated with these types of equipment are typically between 70 and 85 dBA Lmax at 50 feet. In unique circumstances, specialized construction equipment (such as pile drivers) or techniques (such as blasting) that are inherently louder than typical construction equipment (typically between 94 and 101 dBA Lmax at 50 feet) may be required (TRPA 2012a: pages 3.6-16 and 3.6-17). Construction activities that occur between 8:00 a.m. and 6:30 p.m. are exempt from TRPA CNEL standards.

The RPU EIS includes a requirement to implement *Best Construction Practices Policy for the Minimization of Exposure to Construction-Generated Noise and Ground Vibration* to incorporate measures to minimize the potential for exposure of persons to severe noise levels on a project-specific basis. Such measures include, but are not limited to, the following:

- Require that construction equipment be equipped with properly operating mufflers and engine shrouds, in accordance with manufacturers' specifications;
- Require that equipment engine doors be kept closed during equipment operation;
- Limit idling time for construction equipment to five minutes;
- Require that stationary equipment (e.g., power generators) and staging areas for other equipment be located at the maximum distance feasible from nearby noise-sensitive receptors;
- Limit the hours of trucks hauling materials and goods to and from construction sites to active construction hours; and
- Install temporary sound barriers along the boundaries of a construction site or surrounding stationary sources of noise (e.g. pumps or generators) to protect nearby noise-sensitive receptors, where feasible and applicable.

In addition, the Tourist Core Area Plan incorporates a General Plan Mitigation Measure 4.6.6 (CSLT 2010, page 4.6-33) to reduce the impacts of ground borne vibration and noise as a result of construction activity that would provide expanded protection. Policy LU7-3 requires an analysis of a vibration impact be conducted for all construction activities that include impact equipment and activities such as pile driving, soil compaction, or vibratory hammers that occur within 200 feet of existing structures. The analysis will address the potential for adverse vibration levels based on the criteria contained in Table 4.6-12 of the City General Plan Draft EIR. The City will ensure that construction operations are designed to avoid or mitigate for vibrations above 0.02 inches/second (0.5 mm/second).

Therefore, because measures identified in the RPU EIS and the GP EIR that would reduce the potential for exposure of persons to severe noise levels related to construction activities have been incorporated in the Tourist Core Area Plan, subsequent projects under the Tourist Core Area Plan would not expose noise-sensitive receptors to levels that exceed TRPA noise standards and/or expose noise-sensitive receptors to excessive noise levels.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**120. Will the Project result in single event noise levels greater than those set forth in the TRPA Noise Environmental Threshold? (TRPA 6c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

Single-event noise standards are set for in Section 68.3.1 of the TRPA Code for aircraft, water craft, motor vehicles, motorcycles, off-road vehicles, and over-snow vehicles. Development allowed within the existing PASs and community plans, as well as with adoption of the Tourist Core Area, could involve uses that include these types of motorized vehicles. As is the case under existing conditions, new uses involving over-snow vehicles and watercraft (e.g., boat launching facilities, snowmobile courses, downhill ski facilities, and cross-country ski facilities) would be required to meet the TRPA Code provisions pertaining to single-event noise.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

### 5.4.15 Population and Housing

This section presents the analyses for potential impacts to population and housing. Table 21 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 21: Population and Housing**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 121. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)? (CEQA XIIIa) | | | **X** | |
| 122. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere? (CEQA XIIIb) | | | **X** | |
| 123. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere? (CEQA XIIIc) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 124. Alter the location, distribution, density, or growth rate of the human population planned for the Region? (TRPA 11a) | | | | **X** |
| 125. Include or result in the temporary or permanent displacement of residents? (TRPA 11b) | | | | **X** |

| | | | | |
|---|---|---|---|---|
| 126. Affect existing housing, or create a demand for additional housing? To determine if the proposal will affect existing housing or create a demand for additional housing, please answer the following questions: (1) Will the proposal decrease the amount of housing in the Tahoe Region? (2) Will the proposal decrease the amount of housing in the Tahoe Region historically or currently being rented at rates affordable by lower and very-low-income households? (TRPA 12a) | | | | **X** |
| 127. Will the proposal result in the loss of housing for lower-income and very-low-income households? (TRPA 12b) | | | | **X** |

**121. Would the Project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)? (CEQA XIIIa)**

The Tourist Core Area Plan Amendments would continue to implement the mixed-use zoning concepts envisioned by the Regional Plan and the General Plan and analyzed in the RPU EIS (TRPA 2012a) and the GP EIR (CSLT 2010, page 4.2-12). The TRPA Regional Plan and the City General Plan would result in changes to the overall density and distribution of the region's population and gradually increase the density of the population within centers such as the Tourist Core and simultaneously phase out lower-density uses outside these centers. Although this represents a change in the density and distribution of the region's population, such changes are not anticipated to result in environmental degradation. The transition to higher-density, compact, transit-oriented development is anticipated to reduce environmental impacts associated with traffic (vehicle miles traveled), air quality, cumulative land disturbance, infrastructure expansion, and other environmental issue areas and to provide opportunities for stream environment restoration and improved water quality control facilities which would be beneficial. The proposed changes to land use zoning and development patterns associated with the Tourist Core Area Plan Amendments (increased density for residential and additional height for the TSC-MU District) would align with the location, distribution and growth rate of the human population planned for the region consistent with the TRPA Regional Plan and the City General Plan. Growth within the Tourist Core would continue to be constrained to that which is allowed by the growth management system set forth in Chapter 50 of the TRPA Code, thus this impact is considered less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**122. Would the Project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere? (CEQA XIIIb)**

The Project does not displace housing or necessitate the construction of replacement housing elsewhere but rather incentivizes the transfer of existing residential uses located in sensitive land or distant from community centers to transfer to community mixed-use centers. The intent of the plan is promote higher density residential uses within the mixed-use centers to promote walkability and feasibility of alternative transportation options and adhere to statutory requirements of the Sustainable Communities Strategy to reduce passenger vehicle-related greenhouse gas emission in California.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**123. Would the Project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere? (CEQA XIIIc)**

See discussions and analyses for Questions 121 and 122 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**124. Will the Project alter the location, distribution, density, or growth rate of the human population planned for the Region? (TRPA 11a)**

See discussion an analysis for Question 121 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**125. Will the Project include or result in the temporary or permanent displacement of residents? (TRPA 11b)**

See discussion and analysis for Question 121 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**126. Will the Project affect existing housing, or create a demand for additional housing?**

**(1) Will the proposal decrease the amount of housing in the Tahoe Region? (2) Will the proposal decrease the amount of housing in the Tahoe Region historically or currently being rented at rates affordable by lower and very-low-income households? (TRPA 12a)**

(1) The vision for the Tourist Core Area Plan is a central destination that provides full services for tourists and permanent residents. The potential development and redevelopment associated with the Tourist Core Area Plan is anticipated to create an increase in temporary and permanent jobs, which would result in a commensurate increase in the demand for housing.

Existing residences within the Tourist Core Area are primarily multi-family dwellings located in the TSC-MUC district and single family condominiums in the TSC-G district.

The amount and timing of additional housing units within the Region and similarly the Tourist Core is limited by TRPA's existing growth management provisions.

The TRPA Code provides incentives for the development of affordable and moderate-income housing, as discussed below under Item 2. Also, the creation of workforce and affordable housing is a priority of the City of South Lake Tahoe. The Housing Element of the City's General Plan includes several goals and actions related to increasing housing opportunities within the City, including affordable housing units at Lake Tahoe (Goal HE-1 and Goal HE-2, CLST 2011). The City has programs in place to facilitate housing including reserving one-third of its annual allocation for multi- residential projects, collaborating with TRPA to convert illegal mother-in-law units to legal accessory dwelling units, and when funding is available supporting the First-Time Homebuyer and Moderate- Income Homebuyers Programs. The City also collaborates with TRPA and other local jurisdictions on the Living Working Group and implementing policies that are called for in TRPA's Goals and Policies (TRPA, 2012d, p. A5-1). Implementation of the Tourist Core Area Plan would not result in a decrease in the amount of housing available in the Tahoe Region, but would rather result in more housing options available for residents of the Tahoe Basin due to propose changes to require a minimum multi-family density.

(2) This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Regional Housing Needs Assessment (RHNA) is mandated by State Housing Law as part of the periodic process of updating local housing elements of the General Plan. The RHNA quantifies the need for housing within each jurisdiction during specified planning periods. The total RHNA allocation for the projection period from January 1, 2006 to June 30, 2013 was a total of 218 units from very low to above moderate units (CSLT 2011, p. HE-53). The City met its obligation of 291 units for the 2006-2013 projection period. The total RHNA allocation for the June 2014-June 2022 projection period is 336 units. During this cycle, the City provided 408 housing units towards the RHNA obligation. The City recently adopted (June 2022) an updated Housing Element to provide direction on addressing housing issues and the RHNA allocation. The total RHNA allocations from 2022 through 2027 is 289 units. At this time (March 2024), 230 units have been permitted.

Additionally, Regional Plan Policy HS-1.2 requires local governments to assume their "fair share" of the responsibility to provide low and very low income housing. The TRPA Code also provides incentives for the development of affordable and moderate income housing, including increased density (Section 31.4.1 of the TRPA Code), height (Section 37.5.5 of the TRPA Code), and exemption from residential allocation requirements (Section 52.3.4 of the TRPA Code). Finally, in accordance with Regional Plan Goal HS-3 and Policy HS-3.1 (TRPA 2012d), TRPA is required to develop and implement a Regional Housing Needs Program. The Housing Needs Program will evaluate progress towards the adopted housing goals and recommend policy and ordinance changes necessary to achieve those goals. Changes may include, but are not limited to, the conversion of residential allocations to bonus units that would be available only for the construction of affordable and/or moderate-income housing, the creation of new bonus units for affordable housing and modification of development standards to promote housing affordability. For these reasons implementation of the Tourist Core Area Plan and other housing programs implemented on a regional scale is likely to increase the number of affordable units within the Tahoe region.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**127. Will the Project result in the loss of housing for lower-income and very-low-income households? (TRPA 12b)**

See discussion and analysis for Question 126 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

### 5.4.16 Public Services

This section presents the analyses for potential impacts to public services. Table 22 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 22: Public Services**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 128. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: | | | | |
| Fire protection? | | | **X** | |
| Police protection? | | | **X** | |
| Schools? | | | **X** | |
| Parks? | | | **X** | |
| Other public facilities? (CEQA XIVa) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| Will the proposal have an unplanned effect upon, or result in a need for new or altered governmental services in any of the following areas? | | | | |
| 129. Fire protection? (TRPA 14a) | | | | **X** |

| | | | | |
|---|---|---|---|---|
| 130. Police protection? (TRPA 14b) | | | | **X** |
| 131. Schools? (TRPA 14c) | | | | **X** |
| 132. Parks or other recreational facilities? (TRPA 14d) | | | | **X** |
| 133. Maintenance of public facilities, including roads? (TRPA 14e) | | | | **X** |
| 134. Other governmental services? (TRPA 14f) | | | | **X** |

**128. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Fire protection? Police protection? Schools? Parks? Other public facilities? (CEQA XIVa)**

The Tourist Core Area Plan Amendments (increased density, minimum density, building height increase) would better facilitate the compact land use pattern, localized increases in density, redevelopment, and development envisioned by the Regional Plan. These changes could result in localized population increases that create an additional demand within the Area Plan boundary for police, fire protection and emergency services, and schools.

Schools

The Lake Tahoe Unified School District (LTUSD) serves a 10.1 square mile area that includes the entire City of South Lake Tahoe. LTUSD operates eight schools in the City. This includes four elementary schools, one middle school, one high school, and two transitional schools. LTUSD has closed two schools, Meyers Elementary and Al Tahoe Elementary, due to declining enrollment. The Meyers Elementary site was reopened by LTUSD as the Lake Tahoe Environmental Science Magnet School. The Al Tahoe Elementary site is now being used to house supplemental programs, independent learning facilities, special education programs, and preschool facilities.

For the 2022/2023 school year, the LTUSD had an enrollment of 3,648 students (California Department of Education 2024). Enrollment in LTUSD has declined over the last decade, with enrollment decreasing 303 students since the 2016/2017 school year. LTUSD stated that enrollment in grades kindergarten through 7 has been fairly consistent. Given the current facilities and declining enrollment, LTUSD is not experiencing any capacity issues and does not expect any such issue to occur in the future. With the limited growth allowed by the TRPA Regional Plan that results in a projected growth rate of 10.8% for the next twenty years or 0.58% a year (TRPA 2012a, page 3.12-12) the implementation of the Tourist Core Area Plan is not expected to exceed the existing capacity or result in a need for new or physically altered school facilities. Therefore impacts associated with implementation of the Tourist Core Area Plan would be less than significant.

Police Services

Police service in the Torist Core plan area is provided by the City of South Lake Tahoe Police Department. The South Lake Tahoe Police Department has a jurisdictional area of approximately 13 square miles, five

of which include waters of Lake Tahoe. The department is located at 1352 Johnson Boulevard and currently has 42 full-time sworn officers. Supporting the 42 sworn positions are 20 civilian personnel. (Email Comm.; Chief David Stevenson, 2/26/2024)

As of February, 2024, the current staffing level at the South Lake Tahoe Police Department is approximately 1.9 officers per 1,000 residents, based on a Census population of 21,508 (CA Department of Finance, 2023). According to U.S. Bureau of Justice statistics (2008), Municipal and township police departments employed an average of 2.3 full-time officers per 1,000 residents.

Dispatch service is provided by the Operations Division of the police department. The dispatch center logs when a call is made to report a crime, when an officer is dispatched, when the officer arrives at the scene, and when the officer leaves the scene. An analysis of the of the dispatch logs indicates that the average response time for all calls (emergency and non-emergency) is approximately 9 minutes.

The City General Plan public service policies ensure that the City would provide adequate law enforcement services and the necessary funding to ensure adequate law enforcement services and future facilities to meet City demands (CSLT 2011b, page PQP-13).As with other projects developed within the Tourist Core and consistent with existing conditions, environmental review of specific projects would be required to ensure that staffing needs are identified and any physical effect on the environment is properly mitigated. Therefore law enforcement services impacts associated with implementation of the Tourist Core Area Plan would be less than significant.

Fire Protection Services

The City of South Lake Tahoe Fire Department (SLTFD) consists of one Fire Chief, one administrative Executive assistant, three shift commanders Battalion Chiefs, one Battalion Chief/Fire Marshal, one Fire Inspector II, nine captains, nine engineers, and sixteen firefighter paramedics of which fifteen are paramedics, and 13 reserve firefighters (Per Comm. Sallie Ross-Filgo, Administrative Executive Assistant to the Fire Chief, 2/27/2024).

Fire Station 1 is located within the Tourist Core and is located at 1252 Ski Run Boulevard at the intersection of Ski Run and Pioneer Trail. This is the Battalion Headquarters. Fire Station 2 is located at 2951 Lake Tahoe Boulevard.

Fire station 3 is located at 2101 Lake Tahoe Blvd and is located 2 blocks east of the Y intersection within the Tahoe Valley Area Plan boundary. This is the Administration Headquarters and staffed by one Type 1 Engine, one Type 3 Engine, an OES Type 6 Engine for back country rescue, 2 utility vehicles, a mobile air station, and a hazardous materials response trailer. Station 3 staff also operates Marine 17 (Rescue Boat) which is located in the Tahoe Keys.

Stations 1, 2 and 3 are minimum staffed with 1 Captain, 1 Engineer and 1 Firefighter/Paramedic. In addition, the SLTFD maintains mutual aid agreements with other fire and emergency response agencies in the Tahoe Region, including the Tahoe Douglas Fire District, Lake Valley Fire Protection District, and the US Forest Service, providing for area-wide fire response services both in and outside the City limits.

The Tourist Core Area Plan amendments may result in a modest increase in residential dwelling units and CFA previously predicted for buildout within the Tourist Core plan area in 2013, resulting in an increased need for fire and emergency response.

The City General Plan did not propose or identify any new locations for new fire protection or emergency medical facilities. However, the City General Plan did adopt policy provisions for future development to ensure adequate fire protection services (CSLT 2011b, page PQP-9). These provisions include the requirement to install fire resistance materials, incorporate fire safe landscaping and to incorporate defensible space in all remodeled and new construction. Taken together with compliance of the 2007 California Fire code would help prevent and minimize the occurrence of fires, thus reducing the need for

additional fire protection services. Therefore fire protection services impacts associated with implementation of the Tourist Core Area Plan would be less than significant.

See discussion and analysis in Question 132 below for parks and recreation impacts.

With respect to other public facilities, the City has facilities located throughout the City of South Lake Tahoe, which are used for various purposes including social gathering and recreation uses. However, within the Tourist Core, other than the Fire Station #1, the only other facility is the transit center and Explore Tahoe Visitor Center at Heavenly Village.

Implementation of the Tourist Core Area Plan may result in increased demand for community facilities and services as well as a need for new or physically altered governmental facilities. However, the changes in demand to community services and facilities are not expected to result in substantial effects to the physical environment. However, as with other projects developed within the Tourist Core and consistent with existing conditions, environmental review of specific projects would be required to ensure that physical impacts on the environment area fully mitigated.

Given current staffing levels, the proximity of existing police, fire, and emergency service facilities, implementation of City General policies to minimize fire risk and reduce demand, as well as declining school enrollment, it is not anticipated that implementation of the Tourist Core Area Plan Amendments would create a need to construct new facilities that, in turn, could require new or improved facilities, the construction of which could result in adverse effects to the environment. However, as with other projects developed within the Tourist Core and consistent with existing conditions, environmental review of specific projects would be required to ensure that staffing needs are identified and properly mitigated.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**129. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services: fire protection? (TRPA 14a)**

See discussion and analysis for Question 128 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**130. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services: police protection? (TRPA 14b)**

See discussion and analysis for Question 128 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**131. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services: schools? (TRPA 14c)**

See discussion and analysis for Question 128 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**132. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services: parks or other recreational facilities? (TRPA 14d)**

Development associated with the Tourist Core Area Plan could generate additional recreation demand by increasing the concentration of residents and visitors in the area (TRPA 2012a, page 3.11-17). However, existing recreation opportunities are numerous and can meet that potential increase in demand within and in the immediate vicinity of the Tourist Core (i.e.,Ski Run Marina and Beach, Lakeside Marina, Heavenly Resort California Base, Heavenly Gondola at Heavenly Village, Van Sickle Bi-State Park, and on the Nevada side, Kahle Community Park and Community Center, Edgewood Tahoe Golf Course [golf and public beach], the Nevada Stateline-to-Stateline Bikeway at Rabe Meadow, Nevada Beach, Round Hill Pines Beach and other bike paths, hiking and mountain bicycle trails). Furthermore parcels are zoned as open space where passive recreation uses are permitted. It is anticipated that development within the Tourist Core could expand public recreation opportunities within the boundary limits. Therefore, any new demand that is created by development within the Tourist Core is expected to be easily met. In addition, recreation demand would be considered at a project-level during subsequent environmental review and permitting of individual proposed projects.

The Lake Tahoe Unified School District maintains South Tahoe Middle School (located southwest of the Tourist Core Area Plan), which has tennis courts, ball fields, and a gymnasium, and Bijou Elementary School (located south of the Tourist Core Area Plan), which has play areas. Forest lands managed by the U.S. Forest Service located near the Tourist Core Area Plan provide opportunities for active and passive outdoor recreation.

The City of South Lake Tahoe Parks and Recreation Department maintains the following facilities that are near the Tourist Core plan area.

| Parks and Recreation Facilities within City of South Lake Tahoe | | |
|---|---|---|
| **Name** | **Address** | **Facilities** |
| Recreation and Aquatics Center | Rufus Allen Blvd. near its intersection with US Highway 50 | Construction on a new recreation and aquatics center is scheduled for 2024. The new facility includes a pool, lazy river, gym, elevated track, commercial grade kitchen, and meeting rooms. |
| Recreation and Swim Pool Complex | 1180 Rufus Allen Blvd. | Pool, weight room, multi-purpose gym, BBQ, new outdoor playground, sand volleyball court, meeting and party room rentals, adult, youth and teen programs, snack bar, and swim shop. |
| Ice Arena | 1176 Rufus Allen Blvd. | NHL size ice surface with public skating, classes and hockey programs. Café, video arcade, disc sales, party room rentals, and pro shop. |
| Campground by the Lake | 1150 Rufus Allen Blvd. | Open April–October. Cabins, group sites, hook ups. |
| Bijou Municipal Golf Course | 3464 Fairway Ave. & Johnson Blvd. | Open May–October. 9-hole executive golf course with pro shop, practice net, putting green, snack bar and rentals. |

| | | |
|---|---|---|
| South Lake Tahoe Recreation Area, El Dorado Beach, Boat Ramp & Parking | On US 50 at Lakeview Ave. | Concessionaire, picnic and BBQ areas. Boat ramp availability depends on lake level. |
| Conolley Beach | Behind Timber Cove Lodge on US 50 | Public beach. |
| Lakeview Commons and El Dorado Beach | On US 50 across from Campground by the Lake | Public beach. |
| Regan Beach | ½ mile west of El Dorado Beach off Lakeview Avenue at Sacramento Avenue | Public beach, playground, volleyball court, concessions, and restrooms. |
| Bijou Community Park | 1201 Al Tahoe Blvd. | Group picnic shelters, gazebo/bandstand, playground, game court area, sand volleyball courts, horseshoe pits, fitness trail, 27-hole disc golf course, skateboard park (helmets and pads required), and a central concession/restroom building. |
| South Lake Tahoe Community Play Fields | 1300 Al Tahoe Blvd. | 110,000 sq. ft. synthetic turf multi- use play fields with warm-up area, parking, and restrooms. |
| South Lake Tahoe Senior Center | 3050 Lake Tahoe Blvd. | Facility with meeting rooms and programs. |
| Explore Tahoe — An Urban Trailhead | 4114 Lake Tahoe Blvd. | Tahoe Visitor's Center. |
| Ski Run Park | 1195 Ski Run Blvd | Community park currently under construction that include a play field, playground, and adventure play structures. |

The Tourist Core Area Plan supports the development of new recreational opportunities (which constitutes additional recreation capacity) such as the South Shore Greenway shared-use path, the Nevada Stateline-to-Stateline Bikeway and a possible connector shared-use path between Market Street and Van Sickle Bi-State to link the Tourist Core to Douglas County's South Shore Area Plan area. The approval of any project proposing the creation of additional recreational capacity would be subject to subsequent project-level environmental review and permitting and, if applicable, would be subject to the Persons At One Time (PAOT) system of recreation allocations administered by TRPA as described in Section 50.9 of the TRPA Code (Section 20.703.260 of the Douglas County Code). Currently, the only existing uses within the Tourist Core that would require the allocation of PAOTs from TRPA are beach recreation uses and marinas. Expansion of a marina facility would also require the preparation of a Marina Master Plan and a supporting EIS. No additional PAOTs have been assigned to the Tourist Core Area Plan but may be allocated by TRPA to projects on a project-by-project basis.

Environmental Analysis: *No Impact*

Required Mitigation: **None.**

**133. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services in maintenance of public facilities, including roads? (TRPA 14e)**

The Tourist Core Area Plan Amendments would not alter or revise policies and practices pertaining to maintenance of public facilities, including roads. The City General Plan, Public/Quasi-Public Facilities and Services Element, (CSLT 2011b, page PQP-4) lists the following goal and policy:

Goal PQP-1.1: To ensure the timely maintenance, expansion, and upgrades of public facilities and services for the entire community.

Policy PQP-1.5: The City shall require that new development pay it fair share of the cost of providing new public services and/or the costs of expanding/upgrading existing facilities in services impacted by new development.

Policy PQP-1.8: The City shall identify operations and maintenance costs and priorities for existing infrastructure, and identify and develop a fair, equitable, and stable fiscal program to finance the ongoing maintenance of infrastructure

Therefore, subsequent projects under the Tourist Core Area Plan would be required to pay all appropriate fees associated with the maintenance of public facilities. Any subsequent projects proposed within the Tourist Core would be subject to permitting by City and/or TRPA. Consistent with existing requirements, permit applicants would be required to demonstrate how any additional public maintenance requirements would be accomplished.

Environmental Analysis*: No Impact.*

Required Mitigation: **None.**

**134. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services in other governmental services? (TRPA 14f)**

There are no other known governmental services that would be directly affected by development associated with the Tourist Core Area Plan.

Environmental Analysis*: No Impact.*

Required Mitigation: **None.**

### 5.4.17 Recreation

This section presents the analyses for potential impacts to recreation. Table 23 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 23: Recreation**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 135. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? (CEQA XVa) | | | **X** | |
| 136. Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? (CEQA XVa) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 137. Create additional demand for recreation facilities? (TRPA 19a) | | | | **X** |
| 138. Create additional recreation capacity? TRPA 19b) | | | | **X** |
| 139. Have the potential to create conflicts between recreation uses, either existing or proposed? (TRPA 19c) | | | | **X** |
| 140. Result in a decrease or loss of public access to any lake, waterway, or public lands? (TRPA 19d) | | | | **X** |

**135. Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? (CEQA XVa)**

See discussion and analysis in Question 132 above for parks and recreation impacts.

Development associated with the Tourist Core Area Plan could generate additional recreation demand by increasing the concentration of residents and visitors in the area and therefore have an effect on recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. However, existing recreation opportunities are numerous and can meet that potential increase in demand within and in the immediate vicinity of the Tourist Core (i.e,Ski Run Park, Ski Run Marina and Beach, Lakeside Marina, Heavenly Resort California Base, Heavenly Gondola at Heavenly Village, Van Sickle Bi-State Park, Bijou Golf Course, and on the Nevada side, Kahle Community Park and Community Center, Edgewood Tahoe Golf Course [golf and public beach], the Nevada Stateline-to-Stateline Bikeway at Rabe Meadow, Nevada Beach, Round Hill Pines Beach and other bike paths, hiking and mountain bicycle trails). The Tourist Core Area Plan also proposes policies and implementing strategies to enhance public transit, biking and pedestrian linkages to recreation uses within and beyond the boundaries of the Tourist Core Area Plan. By providing access to a wider range of public recreation opportunities within and outside the boundary will limit the disproportional effect on any one recreation site or activity.

Furthermore implementation of adopted City's General Plan policies would ensure that existing city parks and recreation facilities would be improved, expanded, and provided with enhanced access for residents. Currently, the City is constructing the Ski Run Park located within the plan area and the new Recreation Center located in near proximity to the Toruist Core, which is slated to open in 2026. Moreover, Policy ROS-1.5 would develop community pool facilities that can be used year-round, while Policy ROS-1.4 would expand and improve the Bijou Golf Course. Additionally, Policy ROS-1.12 seeks to develop more parkland, which would alleviate the existing need for additional developed parkland in the city as well as the anticipated increase in demand for all parks and recreational facilities that would result from implementation of the General Plan (CSLT 2010, page 4.14-9). As a result of this policy, the Ski Run Neighborhood Park is currently under construction and will serve neighborhoods located adjacent to the TSC-MUC District. Therefore, the potential for increased use of existing neighborhood and regional parks or other recreational facilities as a result of implementing the Tourist Core Area Plan is not expected to result in a substantial physical deterioration of existing or proposed recreation facilities.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**136. Would the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? (CEQA XVb)**

See discussion and analysis in Question 132 above for parks and recreation impacts.

The Tourist Core supports the development of new recreational opportunities within and outside the Tourist Core (which constitutes additional recreation capacity) such as the South Shore Greenway shared-use path, the Nevada Stateline-to-Stateline Bikeway and a possible connector shared-use path between Market Street and Van Sickle Bi-State Park to link the Tourist Core to Douglas County's South Shore Area Plan area. In addition, the Area Plan proposes the construction of Class I bike paths and Class II bike lanes throughout the Tourist Core to connect visitors and residents to recreation opportunities.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**137. Will the Project create additional demand for recreation facilities? (TRPA 19a)**

See discussion and analysis in Question 132 above for parks and recreation impacts.

Environmental Analysis: *No Impact*.

Required Mitigation: **None.**

**138. Will the Project create additional recreation capacity? (TRPA 19b)**

See discussions and analyses in Questions 132, 135 and 136 above that concludes that any potential new recreation demand that is created by development within the Tourist Core is expected to be easily met. Furthermore, the Tourist Core Area Plan also proposes policies and implementing strategies to enhance public transit, biking and pedestrian linkages to recreation uses within and beyond the boundaries of the Tourist Core Area Plan. By providing access to a wider range of public recreation opportunities within and outside the boundary, the disproportional effect on any one recreation site or activity will be reduced.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**139. Will the Project have the potential to create conflicts between recreation uses, either existing or proposed? (TRPA 19c)**

No specific projects are being considered as part of the Tourist Core Area Plan, and any projects permitted through the Tourist Core Area Plan would be subject to subsequent project-level environmental review and permitting. Goal R-5 of the Regional Plan specifically addresses incompatibility of recreational uses and the associated system for regulating PAOTs (Section 50.9 of the TRPA Code), which would preclude any conflicts between existing or proposed recreational uses (TRPA 2012d, pages 5-7 and 5-8). Additionally, the potential for expanded land uses to create conflicts between existing land uses was analyzed in Impact 3.11-2 of the RPU EIS (TRPA 2012a, page 3.11-21) and was found to be less than significant due to the existing protections in the goals and policies of the Regional Plan.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**140. Will the Project result in a decrease or loss of public access to any lake, waterway, or public lands? (TRPA 19d)**

Direct public access to Lake Tahoe and public lands within the Tourist Core is available at the Ski Run Marina and Beach, Lakeside Marina and Van Sickle Bi-State Park. Access is also available to guests of private lakefront tourist accommodation uses that provide access to paying guests. Public access is also now available on lands privately owned by Edgewood Companies just north of the Area Plan boundary. The TRPA-approved Edgewood Lodge and Golf Course Improvement Project included the development of a public beach and a pedestrian path extending from the beach to Lake Parkway, thereby creating additional public access to Lake Tahoe from the Tourist Core Area Plan boundaries.

The Tourist Core Area Plan includes state-owned parcels that provide direct access to the Van Sickle Bi-State Park. Other public lands are limited to land owned by the City used to treat stormwater runoff or for SEZ restoration purposes. Development within the Tourist Core would not result in a decrease or loss of access to these public lands. The Tourist Core Area Plan would specifically implement the following policies related to recreation:

- **Policy R-1.1**
  Develop an interconnected system of open spaces, gathering places, bike and pedestrian trails, and other types of public and private spaces as part of new development and redevelopment of existing sites.

- **Policy R-3.1**
  Develop a bike trail system that links Ski Run Marina, Ski Run Boulevard, the pedestrian/tourist center at Stateline, Lakeside Beach area and Van Sickle Bi-State Park.

- **Policy R-3.2**
  Provide pedestrian and bicycle access from the Tourist Center District to Lake Tahoe and Van Sickle Bi-State Park along Stateline Avenue and Park Avenue.

- **Policy R-4.1**
  Improve transit and trail connections that access beach recreation facilities.

Therefore, implementation of the proposed policies above, creating and preserving additional open space, construction of additional bike trails, and constructing the South Tahoe Greenway are consistent with TRPA policies encouraging the preservation of natural areas. Providing access to public recreation lands will result in a **beneficial impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

### 5.4.18 Transportation and Traffic (CEQA) and Traffic and Circulation (TRPA)

This section presents the analyses for potential impacts to transportation, traffic and circulation. Table 24 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 24: Transportation, Traffic and Circulation**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 141. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? (CEQA XVIa) | | | X | |
| 142. Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways? (CEQA XVIb) | | | X | |
| 143. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks? (CEQA XVIc) | | | | X |
| 144. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? (CEQA XVId) | | | X | |

| | | | | |
|---|---|---|---|---|
| 145. Result in inadequate emergency access? (CEQA XVIe) | | | **X** | |
| 146. Conflict with adopted policies, plans or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? (CEQA XVIf) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 147. Generation of 650 or more new average daily Vehicle Miles Travelled? (TRPA 13a) | **X, LTS** | | | |
| 148. Changes to existing parking facilities, or demand for new parking? (TRPA 13b) | | | | **X** |
| 149. Substantial impact upon existing transportation systems, including highway, transit, bicycle or pedestrian facilities? (TRPA 13c) | | | | **X** |
| 150. Alterations to present patterns of circulation or movement of people and/or goods? (TRPA 13d) | | | | **X** |
| 151. Alterations to waterborne, rail or air traffic? (TRPA 13e) | | | | **X** |
| 152. Increase in traffic hazards to motor vehicles, bicyclists, or pedestrians? (TRPA 13f) | | | | **X** |

**141. Would the Project conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? (CEQA XVIa)**

The Tourist Core Area Plan Amendments would not alter, revise or conflict with applicable plan, ordinance or policy establishing the measures of effectiveness for the performance of the circulation system. Consistent with the Regional Plan, development and redevelopment associated with the Tourist Core Area Plan as a whole, and individual projects therein, that would generate a net increase of 1,300 vehicle miles traveled (VMT) or more would be required to prepare a project-level traffic analyses in accordance with Section 65.2.4.B of the TRPA Code. For any new VMT that are generated, TRPA requires an applicant to offset the potential regional traffic and air quality effects of the new VMT by requiring an applicant to meet the standards of significance listed in Table 65.2.3-1. In accordance with Section 65.2.4.C of the TRPA Code, regional and cumulative mitigation measures may include, but not be limited to transit facility construction; transportation system management measures (such as bicycle and pedestrian facilities and use

of alternative fuels in fleet vehicles); or transfer and retirement of offsite development rights. In order to offset regional and cumulative impacts, additional development, excepting deed-restricted affordable, moderate, and achievable housing development within areas eligible for Residential Bonus Units, shall contribute to the Mobility Mitigation Fund. The amount of contribution is established in Code subparagraph 65.2.4.D. Thus, this impact would be less than significant.

Also see discussion and analysis in Question 19 above which conclude that all signalized intersections are found to attain LOS standards and analysis in Question 142 below which concludes that the 2013 Tourist Core Area Plan is consistent with applicable congestion management programs.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**142. Would the Project conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways? (CEQA XVIb)**

The Tourist Core Area Plan Amendments would not alter, revise or conflict with applicable congestion management program including but not limited to, level of service standards and travel demand measures, or other standards established by the congestion management agency for designated roads or highways. TRPA is the designated Regional Transportation Planning Agency in the Tahoe Basin and has established Level of Service standards for roadways and intersections and Vehicle Miles of Travel (VMT) standards.

The potential effect is the same as those analyzed in the City General Plan Update EIR, which included an evaluation of LOS for a total of nine key roadway segments and eleven intersections. Four roadway segments are partially or wholly located within the Tourist Core (US Highway 50, Ski Run Boulevard and Pioneer Trail). Three intersections are located within the Tourist Core (US Highway 5/Park Avenue, US Highway 50/Pioneer Trail, and US Highway 50/Ski Run Boulevard). At full build out under the General Plan the GP EIR concluded that all roadway segments and all intersections would achieve the LOS standards under year 2030 traffic conditions (CSLT 2010, pages 4.4-30 through 4.4-40). The amount and location of potential development allowed in the Tourist Core is consistent with the City General Plan, thus implementation of the Tourist Core Area Plan impact is less than significant.

The RPU EIS also evaluated roadway LOS in 2035 along US 50 at Stateline and intersection LOS at the US 50/Ski Run Boulevard and 50/Park Avenue intersections. The assumptions regarding future development in the Tourist Core are articulated in Appendix E.7 of the RPU EIS (2012a). These assumptions include an increase in residential, tourist accommodation, and commercial uses in the Tourist Core, consistent with increases that could occur under implementation of the Regional Plan. The amount and location of potential development allowed in the Tourist Core Area Plan is consistent with the Regional Plan and the RPU EIS analysis. Therefore, based on this modeling, roadway and intersection LOS standards along roadway segments in the Tourist Core would be acceptable in 2035 (TRPA 2012a, pages 3.3-42 and 3.3-44). As documented above for question 141, any project implemented under the Tourist Core Area Plan would require mitigation for new VMT at a project level.

The Tourist Core Area Plan is consistent with the Regional Plan and analysis of VMT contained in the Regional Plan EIS. The City of South Lake Tahoe is also subject to the residential allocation procedures established by the TRPA Code that phases the release of land use allocations contingent upon VMT Threshold being maintained. Therefore, this impact is less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**143. Would the Project result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks? (CEQA XVIc)**

The Project provides for bicycle and pedestrian transit changes and does not change air traffic patterns or air traffic.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**144. Would the Project substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? (CEQA XVId)**

Consistent with the TRPA Regional Plan and City General Plan, implementation of the Tourist Core Area Plan is expected to enhance pedestrian and bicycle safety. Figure 6-1 of the Transportation and Circulation Element includes the existing and planned bicycle and pedestrian facilities within the Tourist Core. The proposed facilities include sidewalks along Park Avenue, Stateline Avenue, and Pioneer Trail, and in locations along US 50 where sidewalks do not currently exist; completion of bike lanes on US Highway 50, Park Avenue, Pine Avenue and Lakeshore Boulevard; and a connector shared-use path between Market Street and Van Sickle Bi-State Park. Further, Policy T-2.5 of the Transportation and Circulation Element requires sidewalks for all new and expanded uses. The proposed Tourist Core Area Plan improvements would separate pedestrian and bicycle travel from roadway travel lanes, thus reducing the potential for conflicts between motor vehicles, bicyclists, and pedestrians. Specifically, by virtue of adding sidewalks, dedicated bike paths, enhanced transit, and other amenities, safety conditions would be improved and the potential for conflict would be reduced. Furthermore, all transportation and traffic related facilities proposed in the Tourist Core Area Plan would to conform to the appropriate federal, state and local roadway, sidewalk intersection design standards (e.g., ASHTOO, MUTCD, Caltrans Highway Design Manual and City Roadway Design Standards) for public health and safety reasons.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**146. Would the Project conflict with adopted policies, plans or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? (CEQA XVIf)**

The implementation of the Tourist Core Area Plan would implement policies of the adopted TRPA Regional Plan and City General plan which encourages a land use pattern that promotes the use of alternative modes of transportation. Tourist Core Area Plan policies calls for construction of pedestrian sidewalk, bike paths, bike lanes and expansion of transit routes to recreation sites. It is expected that the adding sidewalks, dedicated paths, and enhanced transit options will improve safety conditions and allow efficient movement of people in the Tourist Core . To the degree that adoption of the Area Plan results in expanded implementation of these strategies, this impact would be beneficial.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**147. Will the Project result in generation of 650 or more new average Daily Vehicle Miles Travelled? (TRPA 13a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis tiers from and consist with the RPU EIS.

While the 2013 Tourist Core Area Plan as amended would permit development which could result in generation of new VMT, this change is consistent with the increase in development envisioned in the Regional Plan and analyzed in the RPU EIS, which projected to result in a 10 percent reduction in VMT region wide. Further, the proposed amendment under consideration is not a single project (to which the standard of 650 or more VMT is applicable), but an Area Plan, the implementation of which would likely result in some level of traffic increase.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to trip generation. Consistent with the Regional Plan, development and redevelopment associated with the Tourist Core Area Plan as a whole, and individual projects therein, is likely to generate 650 or more new average daily VMT. TRPA's updated project assessment process replaces average daily vehicle trip ends with VMT to determine a project's impact to transportation. The updated process screens eventual Area Plan development projects from additional analysis depending on its location: less than 1,300 average daily VMT when a project is within, or within 1⁄2 mile of a town or regional center; less than 715 average daily VMT in all other areas in the Region. Any subsequent project implemented under the Tourist Core Area Plan that would generate a net increase of VMT over these standards would be required to prepare a project-level traffic analyses in accordance with Section 65.2.4.B of the TRPA Code. For any new VMT that are generated by unexempted Area Plan projects, TRPA requires an applicant to offset the potential regional traffic and air quality effects of the new VMT by requiring payment of the calculated Mobility Mitigation Fee. The mobility mitigation fee amount would be assessed in accordance with the current mitigation fee schedule in the TRPA Rules of Procedure. Thus, this impact would be less than significant.

See also response to Question 142 above.

Environmental Analysis: *Yes, Less than Significant Impact.*

Required Mitigation: **None.**

**148. Will the Project result in changes to existing parking facilities, or demand for new parking? (TRPA 13b)**

While the proposed Tourist Core Area Plan Amendments could result in changes to existing parking facilities, the changes would be consistent with the development envisioned in the Regional Plan and analyzed in the Regional Plan Update and the RPU EIS. Therefore, the potential changes to existing parking facilities would comply with the Regional Plan and would occur in compliance with the City and TRPA Codes.

The City Code (Chapter 6.10) and proposed amendments to the Tourist Core Area Plan design standards (Appendix C) require any subsequent development under the Area Plan to meet standards for parking supply and design. The proposed Area Plan amendments include possibilities for reductions to parking supply standards for multi-family residential and commercial projects located within 0.5 mile of transit stops or with contribution to alternative transportation measures. To utilize the reduced parking standards, an applicant must demonstrate that the alternative parking standards would not impact offsite parking

facilities. As this would ensure the adequate design and provision of parking, this impact would be less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**149. Will the Project result in substantial impact upon existing transportation systems, including highway, transit, bicycle or pedestrian facilities? (TRPA 13c)**

See discussions and analyses for Questions 147, 148, 150, 151 and 152.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**150. Will the Project result in alterations to present patterns of circulation or movement of people and/or goods? (TRPA 13d)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tourist Core Area Plan Amendments would not alter or revise the regulations pertaining to roadway and intersection level of service (LOS). The total amount of new development in the Tourist Core is constrained by the growth control system in the Regional Plan and the proposed new permissible uses in the Tourist Core Area Plan would be consistent with the types of uses envisioned in the Regional Plan (see project description of this IS/IEC). As such, the Tourist Core Area Plan is within the envelope of the Regional Plan, and no additional information on potential future projects within the Tourist Core is known. Therefore, there is no need to further analyze roadway and intersection LOS beyond what was contemplated for the Regional Plan.

The RPU EIS evaluated roadway LOS in 2035 along US 50 at Stateline and intersection LOS at the US 50/Ski Run Boulevard and 50/Park Avenue intersections. The assumptions regarding future development in the Tourist Core are articulated in Appendix E.7 of the RPU EIS (2012a). These assumptions include an increase in residential, tourist accommodation, and commercial uses in the Tourist Core, consistent with increases that could occur under implementation of the Tourist Core Area Plan. Based on this modeling, roadway and intersection LOS standards along roadway segments in the Tourist Core would be acceptable in 2035 (TRPA 2012a, pages 3.3-42 and 3.3-44). However, because modeling conducted for the RPU predicted further degradation of roadway LOS along two roadway segments on the north shore that are already operating at unacceptable levels, Sections 50.4.2 and 50.4.3 of the TRPA Code were added to include the phased release of land use allocations followed by monitoring and forecasting of actual roadway LOS. Proposed amendments would add parcels to the Area Plan boundary, but buildout assumptions for residential units and commercial floor area are not substantially increased. Further, any subsequent project implemented under the Tourist Core Area Plan that would generate a net increase of VMT over the standards of significance (Code Section 65.2.3.D.2) would be required to prepare a project-level traffic analyses in accordance with Section 65.2.4.B of the TRPA Code. Any impacts on roadway or intersection LOS would require mitigation at a project level. Thus, this impact would be less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**151. Will the Project result in alterations to waterborne, rail or air traffic? (TRPA 13e)**

The proposed permissible uses in the Tourist Core Area Plan, as listed in Appendix C of the Tourist Core Area Plan, prohibit future development of rail and air traffic within the Tourist Core.

With respect to waterborne traffic, the Tourist Core Area would not alter or revise the regulations pertaining to Shorezone activities. In accordance with Section 13.7.3 of the TRPA Code, TRPA would retain responsibility for enforcing and implementing Shorezone regulations as described in Chapters 80 through 85 of the TRPA Code. The Tourist Core Area Plan identifies waterborne transit stops at the Ski Run Marina and the Lakeside Marina but does nothing in the Tourist Core Area Plan (e.g., use changes) to alter waterborne traffic beyond what is currently allowed under existing conditions and permitted to occur under the TRPA Shorezone Ordinances.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**152. Will the Project result in increase in traffic hazards to motor vehicles, bicyclists, or pedestrians? (TRPA 13f)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

Consistent with the TRPA Regional Plan and City General Plan, implementation of the Tourist Core Area Plan is expected to enhance pedestrian and bicycle safety. Figure 6-1 of the Transportation and Circulation Element includes the existing and planned bicycle and pedestrian facilities within the Tourist Core. The proposed facilities include sidewalks along Park Avenue, Stateline Avenue, and Pioneer Trail, and in locations along US 50 where sidewalks do not currently exist; completion of bike lanes on US Highway 50, Park Avenue, Pine Avenue and Lakeshore Boulevard; and a connector shared-use path between Market Street and Van Sickle Bi-State Park. Further, Policy T-2.5 of the Transportation and Circulation Element requires sidewalks for all new and expanded uses. The Tourist Core Area Plan improvements would separate pedestrian and bicycle travel from roadway travel lanes, thus reducing the potential for conflicts between motor vehicles, bicyclists, and pedestrians. Specifically, by virtue of adding sidewalks, dedicated bike paths, enhanced transit, and other amenities, safety conditions would be improved and the potential for conflict would be reduced.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

### 5.4.19 Tribal Cultural Resources (CEQA)

This section provides analysis regarding the project's potential for substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, as it applies to the following below, identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 43: Tribal Cultural Resources**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: | | | | |
| 153. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k) (CEQA XVIIIa) | | | **X** | |
| 154. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (C) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (C) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe (CEQA XVIIIb). | | | **X** | |

**153. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)? (CEQA XVIIIa)**

The proposed amendment does not alter regulations pertaining to tribal cultural resources.

There is no evidence of intact, potentially significant Washoe cultural sites within the existing Tourist Core plan area. Pursuant to AB 52, the City of South Lake Tahoe sent notification letters to the Ione Band of Miwok Indians, Washoe Tribe of California and Nevada, Shingle Springs Band of Miwok Indians, and the United Auburn Indian Community on March 13, 2023. To date, no response has been received.

Federal and state regulations, the TRPA Code (Chapter 67) and City General Plan policies address protection of tribal cultural resources and provide processes to avoid or minimize impacts to such resources. Included in the existing Codes and policies are measures to identify tribal cultural resources discovered during ground disturbing construction activities, and protect those deemed by the tribes to have unique ethnic values. Project development within the amendment area will be required compliant with federal and state regulations, TRPA Code and General Plan policies during project specific review, and therefore, would not alter or adversely affect tribal cultural resources.

See discussion and analysis for Questions 47 through 50 above. Implementation of federal and state regulations, TRPA Code (Chapter 67), and General Plan policies address protection of historic, cultural, archaeological and paleontological resources and provide processes to avoid or mitigate impacts to these resources. Therefore, any development associated with the proposed amendments would not result in a physical change that would affect unique ethnic cultural values. Thus, this impact is considered to be **less than significant**.

Environmental Analysis: *Less than Significant Impact*

Required Mitigation: **None.**

**154. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision( c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe? (CEQA XVIIIb).**

See discussion and analysis for Question 153 above.

Environmental Analysis: *Less than Significant Impact*

Required Mitigation: **None.**

### 5.4.20 Utilities and Service Systems (CEQA) and Energy and Utilities (TRPA)

This section presents the analysis for potential impacts to utilities, service systems and energy. Table 25 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 25: Utilities, Service Systems and Energy**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 155. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board? (CEQA XVIIa) | | | **X** | |
| 156. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? (CEQA XVIIb) | | | **X** | |
| 157. Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? (CEQA XVIIc) | | | | **X** |
| 158. Have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new or expanded entitlements needed? (CEQA XVIId) | | | **X** | |
| 159. Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments? (CEQA XVIIe) | | | **X** | |

| | | | | |
|---|---|---|---|---|
| 160. Be served by a landfill with sufficient permitted capacity to accommodate the Project's solid waste disposal needs? (CEQA XVIIf) | | | **X** | |
| 161. Comply with federal, state, and local statutes and regulations related to solid waste? (CEQA XVIIg) | | | | **X** |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 162. Use of substantial amounts of fuel or energy? (TRPA 15a) | | | | **X** |
| 163. Substantial increase in demand upon existing sources of energy, or require the development of new sources of energy? (TRPA 15b) | | | | **X** |
| Except for planned improvements, will the proposal result in a need for new systems, or substantial alterations to the following utilities: | | | | |
| 164.Power or natural gas? (TRPA 15a) | | | | **X** |
| 165.Communication systems? (TRPA 15b) | | | | **X** |
| 166. Utilize additional water which amount will exceed the maximum permitted capacity of the service provider? (TRPA 15c) | | | | **X** |
| 167. Utilize additional sewage treatment capacity which amount will exceed the maximum permitted capacity of the sewage treatment provider? (TRPA 15d) | | | | **X** |
| 168. Storm water drainage? (TRPA 15e) | | | | **X** |
| 169. Solid waste and disposal? (TRPA 15f) | | | | **X** |

**155 Would the Project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board? (CEQA XVIIa)**

Implementation of the Tourist Core Are Plan would require some additional wastewater conveyance and treatment capacity. However, in the south shore, existing average wastewater flow rates is little more than half of the total export capacity (Table 26). Because the permitted growth in the Regional Plan would result in very low levels of growth, development under the Tourist Core Area Plan would not double wastewater flow rates, thus, it is reasonable to assume that sufficient capacity would be available to accommodate increased levels of new commercial, tourist and residential units in the Tourist Core.

Furthermore, all development permitted by the Tourist Core Area Plan would be required to comply with Section 32.5 of the TRPA Code, which requires that all projects be served by facilities that provide treatment and export of wastewater from the Tahoe Region. Section 50.4.1(C) of the TRPA Code prohibits distribution of allocations to jurisdictions with insufficient wastewater capacity to support residential development, and Section 13.10.7 of the TRPA Code requires demonstration of adequate sewer capacity prior to occupancy of a transferred unit (TRPA 2012a, page 3.13-16).

Additionally, any project proposing construction, reconstruction, or expansion of a structure would be required to meet the Basic Services and Facilities Standards contained in the TRPA Code. Therefore, implementation of the Tourist Core Area Plan would not cause sewage treatment capacity to exceed the permitted capacity of the service provider.

As the STPUD wastewater treatment plant currently exhibits excess capacity of 3.7 mgd on average dry days, the project is not expected to require additional treatment capacity at the wastewater treatment plant. Moreover, STPUD wastewater demand projections for 2028 were estimated to be 5.8 mgd, which is well within the maximum capacity of 7.7 mgd.

**Table 26 Average Flow Rates and Total Capacity**

| Export District | Average Flow (mgd) | Total Capacity (mgd) | Average Remaining Capacity (mgd) |
|---|---|---|---|
| South Tahoe Public Utility District | 4.0 | 7.7 | 3.7 |

Source: STPUD Sewer System Management Plan, May 2020

As described above, the wastewater generated by potential increases in development within the Tourist Core plan area would not require additional capacity or infrastructure. The proposed amendments would help facilitate development within the Area Plan, but would add little additional development potential at buildout given the existing TRPA growth management restrictions. Therefore, the Toruist Core Area Plan would have a **less than significant** impact on wastewater collection and treatment systems.

Environmental Analysis*: Less than Significant Impact.*

Required Mitigation: **None**.

**156. Would the Project require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? (CEQA XVIIb)**

See discussion and analysis for Question 155 above that concludes adequate wastewater capacity exists and therefore the construction of new water or wastewater treatment facilities or expansion of existing facilities is unlikely.

The existing General Plan and 2013 Tourist Core Area Plan policies would ensure that the City coordinates with STPUD and the other water purveyors in the Tourist Core plan area on the planning and construction of water supply infrastructure required by new development. These policies would also ensure that the City requires new development to pay its fair share of the costs of expanding and upgrading existing facilities and services impacted by the new development as well as to meet minimum fire flow requirements. As such, this impact is considered to be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**157. Would the Project require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? (CEQA XVIIc)**

All development permitted though the Tourist Core Area Plan would be required to meet TRPA BMP standards to reduce runoff and pollutant loading from impervious cover as specified in Section 60.4.6 of the TRPA Code, except where special conditions exist and are approved by TRPA, infiltration facilities designed to accommodate the volume of runoff generated by a 20-year, 1- hour storm are required for approval of all projects. Therefore, there would be no unplanned alterations or improvements to existing stormwater drainage systems associated with the Tourist Core Area Plan.

Environmental Analysis: *No Impact*.

Required Mitigation: **None**.

**158. Would the Project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? (CEQA XVIId)**

Implementation of the Tourist Core Are Plan would result in some increased demand for water supply for new residential units, tourist accommodation units, and commercial and public service facilities. However surface water allocation to the Tahoe Region pursuant to the Truckee River Operating Agreement (TROA) is 34,000 acre feet/year (afy), and projected Region-wide demand is approximately 28,079 afy (TRPA 2012, page 3.13.-11). Additional demand generated by the TRPA Regional Plan is approximately 1,725 afy which, given remaining water supply availability, could be accommodated with existing supplies. Thus, it is reasonable to assume that sufficient capacity would be available to accommodate increased levels of new commercial, tourist and residential units in the Tourist Core.

Furthermore, all development permitted by the Tourist Core Area Plan would be required to comply with Section 32.4 of the TRPA Code, which requires that a project applicant demonstrate the availability of adequate water quantity and quality for both domestic consumption and fire protection prior to project approval. This is demonstrated at a project-level through the acquisition of a Will Serve Letter from the applicable water purveyor.

Additionally, any project proposing construction, reconstruction, or expansion of a structure would be required to meet the Basic Services and Facilities Standards contained in the TRPA Code. Therefore, implementation of the Tourist Core Area Plan would not create water use in excess of the maximum permitted capacity of the service provider. Thus, this impact is **less than significant.**

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**159. Would the Project result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments? (CEQA XVIIe)**

All development permitted by the Tourist Core Area Plan would be required to comply with Section 32.5 of the TRPA Code, which requires that all projects be served by facilities that provide treatment and export of wastewater from the Tahoe Region. Section 50.4.1(C) of the TRPA Code prohibits distribution of allocations to jurisdictions with insufficient wastewater capacity to support residential development, and Section 13.10.7 of the TRPA Code requires demonstration of adequate sewer capacity prior to occupancy of a transferred unit (TRPA 2012a, page 3.13-16). Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**160. Would the Project be served by a landfill with sufficient permitted capacity to accommodate the Project's solid waste disposal needs? (CEQA XVIIf)**

This potential effect is the same as that analyzed in the General Plan Update EIR where up to 1,162 new residential units and up to 386,000 square feet of CFA is expected to be developed during the 20 year buildout period. Based on a per capita residential solid waste generation rate of 0.25 tons per resident per year (CIWMB, 2007b) and a 2009 average of 2.460 persons per household (DOF, 2009), the anticipated residential development would be expected to generate an additional 715 tons of solid waste per year by 2030. Based on an average per employee solid waste generation rate of 1.3 tons per employee per year (CIWMB, 2007c) and an estimated 2,245 new employees in the Planning Area, the anticipated commercial development would be expected to generate an additional approximately 2,919 tons per year. Therefore, full buildout of the proposed General Plan Update would result in the generation of approximately 3,634 additional tons of solid waste per year by 2030 (or about 10 tons per day) with a portion of that attributable to the Tourist Core Area Plan.

As discussed above, South Tahoe Refuse (STR) is under contract with the City to collect solid waste from city households and businesses as well as to process and transfer all solid waste for disposal or recycling. STR's main facility, which consists of a transfer station, materials recovery facility, and the Tahoe Basin Container Service, has a total permitted capacity of 370 tons per day, but currently receives 200 to 250 tons per day. The remaining capacity of 120 to 170 tons per day is sufficient to serve the growth anticipated under the proposed General Plan Update. Any additional staffing or equipment required to increase service to the city would be funded through the additional service rates that would be collected by STR from the new development. Solid waste is expected to be disposed of at the Lockwood Regional Landfill in Sparks, Nevada. This landfill has a total capacity of approximately 43 million tons and is expected to reach capacity by the year 2025. However, multiple large-scale expansions to the facility are expected before this capacity is reached. In addition, the city currently achieves a nearly 50 percent diversion rate (CIWMB, 2008a); therefore, the increase in solid waste requiring disposal at the landfill would be anticipated to be about half that generated by the planned development or approximately 1,817 tons year or 5 tons per day. In addition, implementation of the City's Sustainability Plan includes developing a recycling action plan to achieve a 55 percent diversion rate.

Both the STR main facility and the Lockwood Regional Landfill have sufficient capacity to manage the growth anticipated under the proposed General Plan Update as well as the Tourist Core Area Plan. Therefore, this impact is considered to be less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**161. Would the Project comply with federal, state, and local statutes and regulations related to solid waste? (CEQA XVIIg)**

The Lockwood Regional Landfill will receive solid waste generated within the Tourist Core and have sufficient capacity to serve the needs as discussed in Question 158 above. Existing resource recovery operations provide recycling of various materials, including green waste and construction material, which further reduces the quantity of waste sent to the landfill pursuant to state law. All projects proposed within the Tourist Core would be subject to Chapter 23 of the City Code regulating refuse and garbagTRPA Regional Plan Land Use Element Goal 5, Policy ,1 Public Services Element Goal 3, Policy 2, and the City General Plan Policy PQP-3.3 requiring the transport of solid waste outside the Basin in compliance with California state laws. Thus, the Tourist Core Area Plan complies with federal, state, and local statutes and regulations related to solid waste.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**162. Will the Project result in use of substantial amounts of fuel or energy? (TRPA 15a)**

All development permitted through the Tourist Core Area Plan would occur in accordance with the Regional Plan and City Code. While any new construction would require electric and natural gas service as part of the basic services (Chapter 32 of the TRPA Code) the entire area within the Tourist Core is located within close proximity to existing electric and gas infrastructure. Additionally, projects requiring new or modified connections would be subject the requirements and fees of the applicable utility providers. The utility companies project that based on their forecasting and recent growth trends, the available capacity would far exceed the demand generated at build-out of the Regional Plan (TRPA 2012a, page 3.13-20).

Also see discussion and analysis for Question 110 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**163. Will the Project result in substantial increase in demand upon existing sources of energy, or require the development of new sources of energy? (TRPA 15b)**

See discussion in Question 162 above that concludes that the available capacity would far exceed the demand generated at build-out of the TRPA Regional Plan; therefore, demand create by implementation of the Tourist Core Area Plan would not exceed available capacity, or require the development of new sources of energy. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**164. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to power or natural gas? (TRPA 16a)**

See discussion and analysis for Question 162 above that concludes that the available capacity would far exceed the demand generated at build-out of the TRPA Regional Plan; therefore, demand create by implementation of the Tourist Core Area Plan would not result in a need for new systems, or substantial alterations to power or natural gas. Thus, this impact is less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**165. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to communication systems? (TRPA 16b)**

Communication systems are not listed as a required basic service by TRPA Code or the City Code; however, the City Code requires any communication wires to be installed underground (Section 8-35 SLTCC). Any development or redevelopment permitted through the Tourist Core Area Plan would be located within existing service areas for communication systems providers. Each project would be responsible for any elected connection or subscription to communication systems within the region. Additionally, the increased development and re-development could stimulate investment in improved broadband service, which was identified as a need in the Lake Tahoe Basin Prosperity Plan (WNDD 2010). Thus, this impact is less than significant.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**166. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to utilize additional water which amount will exceed the maximum permitted capacity of the service provider? (TRPA 15c)**

See discussion and analysis for Question 156 above that concludes additional capacity exists in the Tahoe Region and therefore a need for new systems, or substantial alterations to utilize additional water is unlikely. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**167. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to utilize additional sewage treatment capacity which amount will exceed the maximum permitted capacity of the sewage treatment provider? (TRPA 15d)**

See discussions and analyses for Questions 155, 156 and 159 above that concludes additional sewage capacity exists in the Tahoe Region and therefore a need for new systems, or substantial alterations to utilize additional treatment capacity is unlikely. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**168. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to storm water drainage? (TRPA 15e)**

See discussion and analysis for Question 157 above, concluding that this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**169. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to solid waste and disposal? (TRPA 15f)**

Implementation of the Tourist Core Are Plan would result in some new development that would increase the Region's overall solid waste generation. Solid waste generation under the TRPA Regional Plan is anticipated to increase to 115,200 tons per year with some small portion of that attributable to the Tourist Core Area Plan. Given the substantial existing capacity of 22 million tons, and planned expansion that would allow for a total capacity of 204 million tons at the Lockwood Regional Landfill, waste disposal needs for development under the Tourist Core Area Plan could be adequately served in the future. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

### 5.4.21 Mandatory Findings of Significance

This section presents the analyses for mandatory findings of significance. Table 27 identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 27: Mandatory Findings of Significance**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 170. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? (CEQA XVIIIa) | | | X | |
| 171. Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? (CEQA XVIIIb) | | | X | |
| 172. Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? (CEQA XVIIIc) | | | X | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 173. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish | | | | X |

| | | | | |
|---|---|---|---|---|
| population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California or Nevada history or prehistory? (TRPA 21a) | | | | |
| 174. Does the Project have the potential to achieve short-term, to the disadvantage of long-term, environmental goals? (A short-term impact on the environment is one which occurs in a relatively brief, definitive period of time, while long-term impacts will endure well into the future.) (TRPA 21b) | | | | **X** |
| 175. Does the Project have impacts which are individually limited, but cumulatively considerable? (A project may impact on two or more separate resources where the impact on each resource is relatively small, but where the effect of the total of those impacts on the environmental is significant?) (TRPA 21c) | | | | **X** |
| 176. Does the Project have environmental impacts which will cause substantial adverse effects on human being, either directly or indirectly? (TRPA 21d) | | | | **X** |

**170. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? (CEQA XVIIIa)**

Fish and Aquatic Habitat

The Tourist Core Area Plan Amendments would not alter or revise any TRPA Regional Plan policies pertaining to the Shorezone and Lakezone, management of aquatic resources, or permitting of projects affecting these habitats. In accordance with Section 13.7.3 , TRPA retains responsibility for implementing and enforcing all Shorezone regulations (Chapters 80 through 85 of the TRPA Code). The Tourist Core Area Plan would permit development and redevelopment only in accordance with the Regional Plan and General Plan, and any projects proposed within the plan area that could affect aquatic habitats would be subject to TRPA's existing regulations requiring project-specific environmental review and development and implementation of project-specific measures for any significant effects on fish habitat as a condition of project approval. This potential impact was analyzed in the RPU EIS and, with implementation of TRPA's existing policies and code provisions, found to be less than significant (TRPA 2012a, page 3.10-45). Construction activities could result in temporary increases in sedimentation, small amounts of fill placed in aquatic habitats, and the release and exposure of construction-related contaminants. As under existing conditions, these impacts would be minimized and mitigated through construction BMPs and compensatory mitigation requirements as specified in TRPA and City policies and code provisions, and other applicable federal and state regulations.

Rare or Endangered Species and Communities

The Tourist Core Area Plan Amendments would not alter or revise TRPA Regional Plan policies regarding the protection of rare, endangered, or sensitive plant and animal communities. Compliance with all provisions of the Resource Management and Protection regulations found in Chapter 67 of the TRPA Code is still required for all project review delegated to the City. The Tourist Core Area Plan would permit development and redevelopment only in accordance with the TRPA Regional Plan and City General Plan, and any projects proposed within the plan area that could affect sensitive plant or animal communities would be subject to TRPA's existing regulations requiring project-specific environmental review and development and implementation of project-specific measures for any significant effects on fish habitat as a condition of project approval. This potential impact was analyzed in the RPU EIS and, with implementation of TRPA's existing code provisions and requirements, found to be less than significant (TRPA 2012a, page 3.10-50). During project-level environmental review, potential impacts to protected plant or animal communities would be identified and minimized through the design process and/or through compensatory mitigation, as required under TRPA and applicable federal and state regulations. Additionally, any new development and redevelopment with the Tourist Core Area Plan boundary would occur in accordance with TRPA policies that incentivize transfers of land coverage and development rights from sensitive lands, and require restoration and retirement of the sending sites (TRPA 2012a). This policy could result in a benefit to the associated special status species through enhancement and restoration of riparian and wetland habitats.

Cultural, Historical, and Archeological Resources

The Tourist Core Area Plan Amendments would not alter or revise TRPA Regional Plan policies regarding the protection of cultural, historical, or archeological resources. Compliance with all provisions of the Resource Management and Protection regulations found in Chapter 67 of the TRPA Code is still required for all project review delegated to the City. In addition, federal and state regulations address protection of

these resources and provide mechanisms to minimize impacts. The Tourist Core Area Plan would permit development and redevelopment only in accordance with the TRPA Regional Plan and the City General Plan, some of which could occur on properties with known or unknown cultural, historical, or archeological resources. With the Tourist Core Area Plan boundary, known cultural and historic resources of local interest include the former Lapham Hotel and McCombers Station. The potential impacts to cultural resources were analyzed in the RPU EIS and, with implementation of TRPA's existing code provisions, found to be less than significant (TRPA 2012a, beginning on page 3.15-13). During project-level environmental review, cultural, historical, and archeological resources specific to the site would be identified, significance determined, and appropriate mitigation implemented in accordance with federal, state, City, and TRPA regulations.

Because the Tourist Core Area Plan Amendments propose no changes to existing policies regarding aquatic habitats, special status plant or animal communities, or to cultural, historical, and archeological resources, and because federal, state, and TRPA protections are already in place, implementation of the Tourist Core Area Plan would not result in the degradation of these resources.

In addition, the Tourist Core Area Plan, as amended, is consistent with the TRPA Code of Ordinances Chapter 13.5.3.G concerning modification to Town Center boundaries. As analyzed herein, TRPA and the City have determined that implementation of the updated Area Plan, including all elements of the plan, existing environmental protection requirements, and adopted RPU and GP mitigation, would achieve and maintain TRPA's environmental threshold carrying capacities and result in environmental improvement. Therefore, the Tourist Core Area Plan Amendments would not have the potential to degrade the quality of the environment. Thus, these impacts are less than significant.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None**.

**171. Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? (CEQA XVIIIb)**

Like the General Plan itself, the Tourist Core Area Plan is a collection of goals, policies, and measures designed to guide the development of the plan area and support the Region in attaining environmental thresholds and other important objectives. Because these policies are implemented in the Tourist Core Area Plan over the long-term (i.e., 20 years) and are applicable to all programs and projects over this period, they are inherently cumulative in nature.

The cumulative projects contemplated in the GP EIR (TRPA 2012a, pages 4-2 through 4-10) include Environmental Enhancement, Land Management Plans, TTD/TMPO projects and programs, and other development projects. These projects and programs also apply to the Tourist Core Area Plan, their scope and characteristics are not known to have substantially changed, no additional cumulative projects or programs are known at this time.

Because the Tourist Core Area Plan, as amended, will be wholly consistent with the General Plan and because no specific projects are proposed for which contributions to cumulative impacts may be defined and assessed, the cumulative impacts analysis prepared for the Regional Plan is also applicable to the Tourist Core Area Plan.

As discussed in Questions 68, the GP EIR concluded that General Plan implementation could result in increased development, redevelopment, and construction activity resulting in an increase in overall greenhouse gas (GHG) emission that would make a cumulatively considerable contribution to global climate change. Because the Tourist Core Area Plan is consistent with and implements the General Plan and the GP EIR, development and population growth anticipated during the Tourist Core Area Plan horizon could also contribute cumulatively to global climate change. The GP EIR disclosed this significant effect; mitigated it and concluded that with implementation of relevant policies from the General Plan Update, the City's Sustainability Plan (which calls for development of a GHG inventory and reduction target), and associated mitigation measure MM 4.5.6 are anticipated to mitigate GHG emissions in a manner consistent with current state efforts to reduce GHG emissions under AB 32 and SB 375. Specifically implementation of IMP-8.6 (Greenhouse Gas Emission Reduction Strategy in the years 2013-2015) in combination with implementation of Mitigation Measure MM 4.5.6 that would require coordination with future TRPA future GHG reduction efforts and the establishment of an emission reduction target consistent with AB 32 and SB 375 reduction efforts would ensure that City GHG emissions are mitigated. Thus, this impact is considered less than cumulatively considerable (CSLT 2011a, page 4.0-4 through 4.0-5). Because the Tourist Core Area Plan is consistent with and implements the General Plan and is consistent with the GP EIR, development and population growth anticipated during the Tourist Core Area Plan plan horizon is not expected to make a considerable contribution to global climate change. Thus this impact is considered less than significant.

Additional consideration is applied below to those resources that could result in more localized cumulative effects, including noise, geologic hazards, scenic resources, and recreation.

Traffic

The Tourist Core Area Plan potential effect on traffic was discussed under Section 5.4.18. The Tourist Core Area Amendments would not alter, revise or conflict with applicable plan, ordinance or policy establishing the measures of effectiveness for the performance of the circulation system. Consistent with the Regional Plan, development and redevelopment associated with the Tahoe Valley Area Plan as a whole, and individual projects therein, that would generate a net increase of 650 average daily VMT or more would be required to prepare a project-level traffic analyses in accordance with Section 65.2.4.B of the TRPA Code. For any new VMT that are generated, TRPA requires an applicant to offset the potential regional traffic and air quality effects of the new VMT by requiring an applicant to contribute to the Mobility Mitigation Fund. The mobility mitigation fee amount would be assessed in accordance with the current mitigation fee schedule in the TRPA Rules of Procedure. Furthermore, all individual projects would be required to meet all applicable LOS standards for roadways and intersection standards. For these reasons the Tahoe Valley Area Plan, as amended would not contribute to an increase in traffic levels that results in cumulatively adverse impacts. Thus, this impact is less than significant.

Water Quality

The Tourist core Area Plan potential effect on water quality was discussed under Section 5.4.11. All new development and redevelopment within the Tourist Core would be required to meet existing BMP standards to control potential increases in stormwater runoff and pollutant loading onsite. As specified in Section 60.4.6 of the TRPA Code, except where special conditions exist and are approved by TRPA, infiltration facilities designed to accommodate the volume of runoff generated by a 20-year 1-hour storm are required for approval of all projects within the Tahoe Basin. Therefore, new development within the Tourist Core is not expected to cumulatively create or contribute additional runoff that would exceed the capacity of existing or planned stormwater drainage system.

Cultural Resources

The Tourist Core Area Plan potential effect on cultural resources was discussed under Section 5.4.7. Because federal and state regulations, the TRPA Code (Chapter 67) and General Plan Policies (CSLT 2010, pages NCR-6 trough NCR-7) address protection of these resources and provide processes to avoid or minimize impacts to historic and archaeological resources and any development associated with the Tourist Core Area Plan would be required to comply with federal and state regulations, TRPA Code and General Plan policies, during project specific review, it would not contribute to an adverse cumulative effect on archeological or historical resources.

Noise

The Tourist Core Area Plan potential effect on noise levels was discussed under Section 5.4.14. The Tourist Core Area Plan would continue or strengthen the noise standards currently in effect. In addition, the City and/or TRPA would continue to implement the project specific noise reduction measures described in the Regional Plan EIS, General Plan EIR and the Tourist Core Area Plan.For these reasons the Tourist Core Area Plan would not contribute to an adverse cumulative increase in noise levels.

Hazards

The potential for increased exposure to geologic hazards is addressed Section 5.4.8, above. Because existing TRPA and City protections are in place, and because project-specific environmental review would be required for all projects, implementation of the Tourist Core Area Plan would not result in increased exposure of people or property to geologic hazards. As part of the 2012 RPU EIS analysis, TRPA conducted an analysis of wildfire risk and its impact on emergency evacuation analysis, considering the amount of growth forecast for the region. This amendment does not propose additional growth, only amendments to area plan boundary, land uses and design standards intended to encourage buildout of the remaining residential and commercial development within the Tourist Core Area Plan. As such, the amendments do not exacerbate previously identified wildfire risk from the buildout development of new residential housing. The proposed amendments are focused on town centers and areas immediately adjacent to town centers, where wildfire danger is inherently less because these areas are further from the wildland-urban interface, and there is more defensible space and urban development (e.g., pavement). New housing developments and commercial buildings that may be facilitated by the amendments are still subject to local building standards that are written to ensure structures can withstand fire and be used to shelter in place. Thus, the proposed amendments would not contribute to an aderse cumulative effect on hazards.

Scenic Resources

Scenic resources are addressed under Section 5.4.3, above. Because the Tourist Core Area Plan carries forward and strengthens the existing scenic protections, and because all permitted projects would continue to meet the TRPA scenic threshold non-degradation standard, the Tourist Core Area Plan would not contribute to an adverse cumulative effect on scenic resources.

Recreation

The potential effects of the Tourist Core Area Plan on recreation facilities and demand are discussed under Section 5.4.17, above. The Tourist Core Area Plan protects existing recreational resources and provides for the development of increased recreation opportunities through the construction of a bike paths and lanes.

Summary

Implementation of the Tourist Core Area Plan would be consistent with land use changes and policies contemplated and analyzed in the GP EIR, including their potential to contribute to cumulative environmental effects. This discussion of cumulative effects tiers from the cumulative impact discussion included in the GP EIR. Additionally, the GP EIR identified resources with localized cumulative issues such as traffic, water quality, cultural resources, noise, geologic hazards, and scenic impacts, which were further analyzed in this IS/ND/IEC and were not found to have adverse cumulative effects. Therefore,m implementation of the Tourist Core Area Plan and the cumulative projects contemplated in the GP EIR would not result in a considerable contribution to cumulative adverse conditions.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**172. Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? (CEQA XVIIIc)**

As described above, projects permitted through the Tourist Core Area Plan would require project-level environmental review and would be required to comply with all applicable TRPA, federal, state, county, and City regulations, including protections for human health and safety. Therefore, implementation of the Tourist Core Area Plan would not create a substantial direct or indirect adverse effect on human beings.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**173. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California or Nevada history or prehistory? (TRPA 21a)**

See analysis in Question 170 that concludes that the Tourist Core Area Plan proposes no changes to existing policies regarding aquatic habitats, special status plant or animal communities, or to cultural, historical, and archeological resources, and because federal, state, and TRPA protections are already in place, implementation of the Tourist Core Area Plan would not result in the degradation of these resources.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**174. Does the Project have the potential to achieve short-term, to the disadvantage of long-term, environmental goals? (TRPA 21b)**

The TRPA Regional Plan is a broad suite of policies, ordinances, and land use controls designed specifically to achieve long-term environmental goals. The Tourist Core Area Plan would implement the policies of the TRPA Regional Plan and City General Plan, which—among others—call for concentrating development and redevelopment in town centers (e.g., the TSC-MU, TSC-MUC, TSC-NMX and TSC-G) zoning districts) and the regional center (the TSC-C zoning district), combined with transfer of land coverage and

development rights from sensitive lands and lands more distant from community centers, and restoration of those areas (TRPA 2012a).

The Tourist Core Area Plan, like the Regional Plan itself, is a collection of policies and ordinances; no specific projects are proposed or would be approved through approval of the Tourist Core Area Plan. However, as described in Section 5.4 of the RPU EIS, the Regional Plan will be implemented through projects that would have short-term effects, but through which long-term term environmental goals will be achieved.

The potential development permitted through the Tourist Core Area Plan could commit raw land to new development resulting in permanent alterations to soils, habitats, and land uses. Development in accordance with RPU and Tourist Core Area Plan policies and ordinances, however, would result in a refinement of the land use pattern within the Region through redevelopment in urban areas and transfer of development rights from sensitive lands to improve the long-term sustainability of natural resources and to support social and economic health (TRPA 2012a).

Environmental Analysis: *Less than Signficant Impact.*

Required Mitigation: **None**.

**175. Does the Project have impacts which are individually limited, but cumulatively considerable? (A project may impact on two or more separate resources where the impact on each resource is relatively small, but where the effect of the total of those impacts on the environmental is significant?) (TRPA 21c)**

See analysis in Question 171 that concludes implementation of the Tourist Core Area Plan would be consistent with land use changes and policies contemplated and analyzed in the RPU EIS, including their potential to contribute to cumulative environmental effects. This discussion of cumulative effects tiers from the cumulative impact discussion included in the RPU EIS. Additionally, the RPU EIS identified resources with localized cumulative issues such as noise, geologic hazards, scenic impacts, and recreation impacts, which were further analyzed in this IS/ND/IEC and were not found to have adverse cumulative effects. Therefore, but for the cumulative contribution to global climate change discussed above, implementation of the Tourist Core Area Plan and the cumulative projects contemplated in the RPU EIS would not result in a considerable contribution to cumulative adverse conditions.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**176. Does the Project have environmental impacts which will cause substantial adverse effects on human being, either directly or indirectly? (TRPA 21d)**

See discussion and analysis for Question 172 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

## 5.5 CERTIFICATION [TRPA ONLY]

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this initial evaluation to the best of my ability, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Email: jhitchcock@cityofslt.us

## Project Description:

This Initial Study (IS) has been prepared to address the potential environmental effects of the Tourist Core Area Plan (TVAP) Amendments, located in the City of South Lake Tahoe, California. An Initial Study is a preliminary environmental analysis that is used by the California Environmental Quality Act (CEQA) lead agency as a basis for determining whether an EIR, a Mitigated Negative Declaration, or a Negative Declaration is required for a project under CEQA guidelines. The IS has been prepared pursuant to the California Environmental Quality Act (CEQA) of 1970, Cal. Pub. Res. Code §21000 et seq. The City of South Lake Tahoe is the CEQA lead agency for this project. This IS evaluates the potential for the Area Plan Amendment to adversely affect the physical environment, and is an informational document that provides the City, other public agencies, interested parties and the public with an objective assessment of the potential environmental impacts that could result from project implementation.

The proposed project is an update to the Tourist Core Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. The proposed amendments would expand the Area Plan boundary to incorporate two parcels (APNs 029-352-010 and 029-371-016) that front Pioneer Trail, both developed with existing tourist accommodation uses. The addition of these parcels is intended to increase opportunity for redeveloping the sites (previously located in PAS 092). In addition to the boundary amendments, other changes to permissible land use, density, etc. are proposed as documented in IS Chapter 2.

### Finding:

An Initial Study/Negative Declaration (IS/ND) has been prepared to assess the project's potential effects on the environment and the significance of those effects. Based on the IS, it has been determined that the proposed project would not have significant effects on the natural environment. This conclusion is supported by the following findings:

1. The proposed project would have no effects, no impact, or less-than-significant impacts related to aesthetics, biological resources, cultural/archaeological/historical/tribal resources, agricultural and forest resources, mineral and natural resources, energy, air quality, greenhouse gas emissions, hydrology/water quality, hazards/hazardous materials, geology and soils, wildfire, land use and planning, noise, population and housing, public services, recreation, transportation/traffic, utilities/service systems/energy resources and mandatory findings of significance.

2. Compliance with existing local, state, regional and/or federal regulations would reduce potential impacts to less than significant. Mitigation is not required to avoid or reduce potentially significant impacts.

# 2.0 APPROVAL OF THE IS/ND

Certification by Those Responsible for Preparation of this Document. The City of South Lake Tahoe has been responsible for the preparation of this negative declaration and the incorporated initial study. I believe this document meets the requirements of the California Environmental Quality Act, is an accurate description of the proposed project, and that the lead agency has the means and commitment to implement the regulatory compliance measures that will assure the project does not have any significant, adverse effects on the environment. I recommend approval of this document.

May 10, 2024

John Hitchcock, Planning Manager — Date
City of South Lake Tahoe

# 3.0 RESPONSE TO COMMENTS

The Draft IS was circulated for public review and comment between April 11, 2024 and May 10, 2024. A Notice of Intent to adopt a Negative Declaration was sent to state agencies and persons and organizations expressing interest in the project. Copies of the Draft IS and supporting documents were available online on the City of South Lake Tahoe's website.

No comments were received on the Draft IS.

# Section 1
# INTRODUCTION

The Tourist Core Area Plan (Area Plan) defines a vision for the future of the area of the City that has previously been guided by the Stateline/Ski Run Community Plan. This is an area of special attention in the Tahoe Basin for a number of reasons. It is the center of tourist services and recreation access, ~~spanning~~adjacent to the Nevada and California Stateline and has traditionally been the area with the highest concentration of services and density. The Tourist Core is located within the City of South Lake Tahoe and is centered on US Highway 50 and Ski Run Boulevard from Fairway Avenue to the California and Nevada Stateline (Figure 1-1). In order to be responsive to the unique needs and opportunities of the Region and local communities, the Tahoe Regional Planning Agency (TRPA) 2012 Regional Plan encourages and authorizes local jurisdictions to develop and adopt individual Area Plans that provide more specific development objectives and standards that are adapted to the needs of the specified area.

This Area Plan provides more detailed direction than the City of South Lake Tahoe's General Plan and TRPA's 2012 Regional Plan. It addresses land use regulations, development and design standards, transportation, recreation, public services and environmental improvements for the area. It encourages general improvement and enhancement for the built environment. This Area Plan provides a framework that will change the existing conditions into opportunities for redevelopment with a focus on achieving on the ground environmental improvements consistent with the City's General Plan and environmental thresholds goals of the 2012 Regional Plan.

## 1.1 PLAN PREPARATION

This Area Plan was prepared by the City of South Lake Tahoe in collaboration with TRPA to implement the City's General Plan and TRPA's 2012 Regional Plan. The Tourist Core Area Plan is developed on the foundation of the existing adopted Stateline/Ski Run Community Plan and incorporates other planning efforts such as the South Shore Vision Plan.

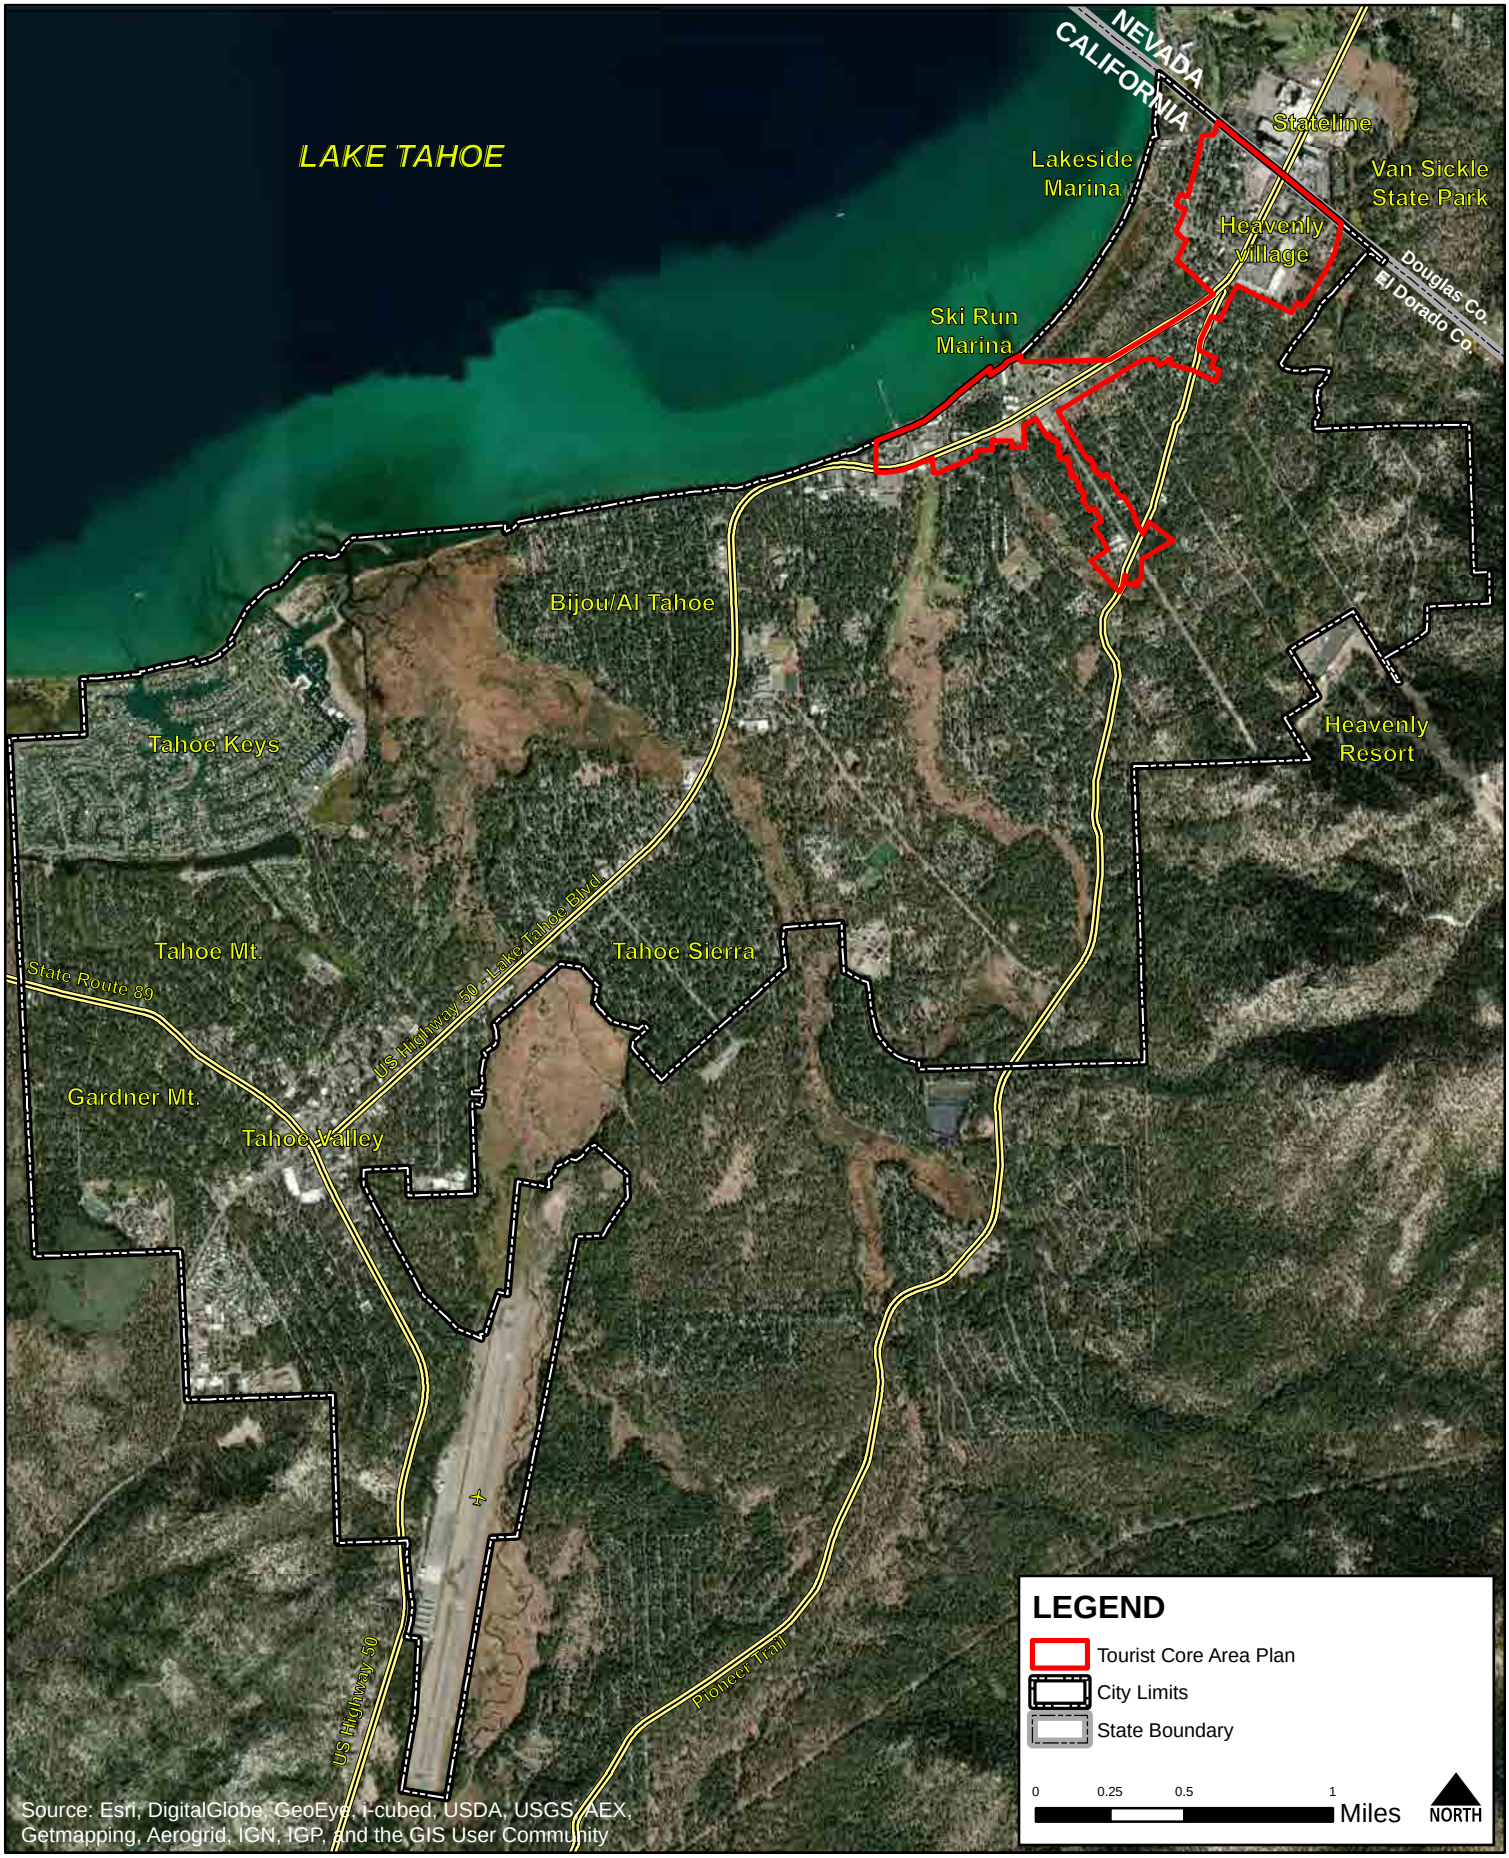
The South Shore Vision Plan was initiated in September, 2011 with the formation of an advisory group to help guide development of a vision plan for the south shore's major tourist destination area. The advisory group included representatives of the South Tahoe Alliance of Resorts (STAR), regional planning agencies, local governments, and property owners along the US Highway 50 corridor. A joint public workshop between the City Council and the Douglas County Commissioners was held on November 4, 2011 to take public comments on the Vision Plan. Advisory group meetings were facilitated by the consulting firm Design Workshop which consolidated all the input provided by the representatives into the South Shore Vision Plan. The Vision Plan identifies a vision for the primary tourist destination area in the region and recommends key strategies to encourage redevelopment to achieve environmental, physical and economic improvements.

## 1.2 ORGANIZATION OF AREA PLAN

All of the land within the Lake Tahoe Basin falls under the jurisdiction of the Tahoe Regional Planning Agency (TRPA). This includes all the land within the local jurisdiction of the City of South Lake Tahoe. Local jurisdictions are permitted to develop, adopt, and implement regulations so long as they are consistent with the TRPA's 2012 Regional Plan. The 2030 South Lake Tahoe General Plan is the City's primary policy document guiding land use, transportation, infrastructure, community design, environmental, and other decisions in a manner consistent with the planning statues for the State of California. The Tourist Core Area Plan is designed to supplement the City's General Plan by designating zoning districts and providing specific guidance for the area. Therefore, this plan supports the goals and policies outlined in the 2030 South Lake Tahoe General Plan as well as the TRPA 2012 Regional Plan.

Policies and regulations in the TRPA Code of Ordinances apply to all development within the Tahoe Region. In some cases, the regulations, such as parking, design, and lighting standards adopted in the Area Plan will supersede the regulations in the TRPA Code of Ordinances. If compliant with this Area Plan, proposed projects will be reviewed and approved by the City of South Lake Tahoe pursuant to the provisions of a Memorandum of Understanding (MOU) with TRPA. However, projects determined to be of regional concern will require TRPA review and approval. Projects meeting any of the following criteria will require approval by the TRPA Governing Board or Hearings Officer:

- Located within the Shorezone of Lake Tahoe
- Located within a Resort Recreation District
- Located within the Conservation District
- Any new building floor area meeting the criteria in the following table:



| THRESHOLDS FOR GOVERNING BOARD REVIEW OF PROJECTS IN CENTERS | | | |
|---|---|---|---|
| | Regional Center | Town Center | Not in Center |
| Residential | ≥100,000 sq. ft | ≥50,000 sq. ft. | ≥25,000 sq. ft. |
| ~~Non-residential~~Other | ≥80,000 sq. ft. | ≥40,000 sq. ft. | ≥12,500 sq. ft. |

All projects permitted by the City of South Lake Tahoe under the MOU are appealable to the TRPA Governing Board. Specifically, the TRPA Code of Ordinances allows final decisions on projects delegated to a lead agency to be appealed to the TRPA by any "aggrieved person". Furthermore, TRPA requires quarterly monitoring and annual review of an approved Area Plan. On at least a quarterly basis, the City is required to submit copies of building permits issued under the MOU to TRPA for review. At a minimum the permits shall contain and make clear the necessary development information that TRPA needs to measure compliance with the terms of the Area Plan, such as additional land coverage, commercial floor area, residential units, or tourist accommodation units. Annual review and recertification of the Area Plan is conducted by TRPA and is based on TRPA review of a sample of development permits issued within the Area Plan boundaries. TRPA must certify that permits are issued in conformance with the Area Plan and implementing ordinances. Based on the annual review, TRPA may take one of the following actions: 1) recertify the Area Plan; 2) recertify the Area Plan with conditions; or, 3) revoke all or part of the MOU for non-compliance.

## 1.3 PLAN ADOPTION

The Tourist Core Area Plan was adopted by the South Lake Tahoe City Council on October 14, 2013 and by the TRPA Governing Board on November 11, 2013. The Area Plan was amended on January 14, 2014 to incorporate amendments requested by the TRPA Governing Board.

~~This Tourist Core Area Plan supersedes the Stateline/Ski Run Community Plan for the purposes of land use regulation for both the agencies and will provide management direction for all projects proposed within the Plan's boundaries.~~

CITY OF SOUTH LAKE TAHOE

April **1107**

# Section 2
# LEGAL AUTHORITY AND REGULATORY SETTING

The City of South Lake Tahoe plans and regulates within the policy and regulatory framework of both the Tahoe Regional Planning Agency (TRPA) and the State of California. This section describes the policy and regulatory framework that pertains to the Tourist Core Area Plan and its relationship to TRPA's 2012 Regional Plan, the City's General Plan and other relevant plans.

The purpose of the Tourist Core Area Plan is to define land use guidelines for planning decisions. The Tourist Core Area Plan presents principles, goals, policies and implementation strategies designed to encourage redevelopment, create a vibrant walkable ~~pedestrian~~ pedestrian-oriented community and provide for environmental improvements. The Area Plan is used by the ~~Community~~ City staff, the City Planning Commission, and the City Council to review specific development proposals in the Tourist Core. The Plan also provides direction to property owners, community groups, and interested individuals in formulating and review of development and redevelopment projects.

The Tourist Core Area Plan~~, once adopted, will~~ is ~~become~~ a part of TRPA's 2012 Regional Plan and the City of South Lake Tahoe General Plan. It ~~will~~ replaced the Stateline/Ski Run Community Plan. ~~which has been adopted by the City of South Lake Tahoe and TRPA and currently provides guidance for land use decisions in the area.~~

## 2.1 TAHOE REGIONAL PLANNING AGENCY

### 2012 TRPA REGIONAL PLAN

In December 2012, the TRPA Governing Board adopted an updated Regional Plan. The TRPA Regional Plan Goals and Policies serve as a guide for all future land use decisions within the Lake Tahoe Region. Priorities of the updated Regional Plan that apply to this Area Plan include:

- Accelerating water quality restoration and other Threshold gains by supporting environmental redevelopment opportunities, restoration of disturbed lands and Environmental Improvement Program (EIP) investments.
- Transitioning to more permitting by local governments to create "one-stop-shopping" for homeowner improvements in order to return TRPA to the more regional role that the Compact originally intended.
- Creating walkable communities and increasing alternative transportation options.

Important policies addressed in the 2012 Regional Plan include:

- Retaining the established regional growth control system. Under this system, rampant overdevelopment was stopped and open spaces preserved. Most of the policies from the 1987 Regional Plan stayed in place with adoption of the 2012 Regional Plan.
- Creating a more efficient planning system that integrates TRPA requirements into the plans and permits of other government agencies.
- Encouraging property owners to transfer development rights from sensitive or outlying areas to Town Centers with the goal of restoring these lands.
- Eliminating regulatory barriers to the environmental redevelopment of rundown buildings.
- Simplifying burdensome regulations for homeowners while achieving threshold gain.
- Integrating with the TRPA Regional Transportation Plan to support sidewalk and bike trail projects that reduce automobile dependency and increase walkability and safety.
- Continuing to deliver restoration projects under the EIP that achieve erosion control on roadways and restore forests and wetlands.

TRPA's Regional Plan Conceptual Land Use Map classifies the Tourist Core as Tourist and designates the area with two Overlay Districts: Town Center and Regional Center. The Tourist Core is also assigned a special designation as a receiving area for the transfer of development rights for existing development and multi-residential units, a scenic restoration area, and a preferred affordable housing area.

TRPA's Regional Conceptual Land Use Map is depicted in Figure 2-1.

The following description identifies the intention and purpose of TRPA's land use classification, overlay districts and special designations:

Tourist: Are urban areas that have the potential to provide intensive tourist accommodations and services or intensive recreation. These lands include areas that are:

- Already developed with high concentrations of visitor services, visitor accommodations, and related uses;
- Of good to moderate land capability (land capability districts 4-7);
- With existing excess land coverage; and,
- Located near commercial services, employment centers, public services and facilities, transit facilities, pedestrian paths, and bicycle connections.

Town Center Overlay Districts: ~~As a~~Areas that contain most of the region's non~~-~~ residential services. Town Centers are targeted for redevelopment in a manner that improves environmental conditions, creates a more sustainable and less auto-dependent development ~~pattern~~pattern, and provides economic opportunities in the region. This district functions as a pedestrian- and transit ~~-~~oriented~~-~~, mixed-use activity center that encourages a mix of uses that promote~~s~~ convenience, economic vitality, and a pleasant quality of life and improved access to a greater range of facilities and services for surrounding residential neighborhoods and visiting tourists.

Regional Center Overlay Districts: Areas that includes a variety of land uses in the core of South Lake Tahoe, including the gondola and base lodge facilities for Heavenly Mountain Resort. Development patterns in the Regional Center have been, and should continue to be, more intensive than Town Centers and less intensive than the High Density Tourist District Overlay District (located in Stateline, NV). The Regional Center is targeted for redevelopment in a manner that improves environmental conditions, creates a more sustainable and less auto-dependent

development pattern and provides economic opportunities in the region. This district functions as a pedestrian- and ~~transit~~ transit-oriented, mixed-use regional tourist and recreation activity center that encourages a mix of uses that promote~~s~~ convenience, economic vitality and improved access to a greater range of facilities and services for tourists and permanent residents.

Transfer of Development Rights Receiving Areas: Indicates areas that are eligible to receive the transfer of existing residential, tourist and commercial uses and potential residential units of use pursuant to Chapter 51 of the TRPA Code of Ordinances. Receiving Areas designated for Existing Development are eligible to receive the transfer of existing uses that are permissible uses in the Tourist Core. Receiving Areas designated for Multi-Residential Units are eligible to receive the transfer of potential residential units of use and parcels within this designation area are eligible to receive one or more development right.

Scenic Restoration Area: Indicates one or more highway units or shoreline units in the Tourist Core that are not in compliance with the Scenic Threshold rating and ~~that this area is~~ therefore subject to the scenic quality provisions of Chapter 66: Scenic Quality of the TRPA Code of Ordinances.

Preferred Affordable Housing Areas: Areas with the preferred affordable housing designation are eligible for subdivision of post-1997 residential projects pursuant to TRPA Code of Ordinances subparagraph 39.2.5.F

## AREA PLANS

The 2012 TRPA Regional Plan and TRPA Code of Ordinances, Chapter 13, *Area Plans*, include ~~new~~ provisions that allow for local, state, and federal agencies, in coordination with TRPA staff, to prepare coordinated Area Plans for the implementation of land use goals, policies, and ordinances. The Area Plans, which must include implementing ordinances and zoning designations, are required to be consistent with the 2012 Regional Plan. Once an Area Plan has been found in conformance with 2012 Regional Plan, local, state, or federal agencies may assume development review authority by Memorandum of Understanding (MOU) with TRPA.

Chapter 13 of the TRPA Code of Ordinances defines the required content of Area Plans and establishes that Area Plans may be approved by TRPA if they contain policies and development standards that are consistent with and further the goals and policies of the 2012 Regional Plan. With an adopted, conforming Area Plan, local governments can opt to take over limited permitting authority from TRPA. Upon adoption, the provisions of the Area Plan supersede the underlying Plan Area Statements or Community Plans. Chapter 13 requires that the Area Plan incorporate minimum development and community design standards consistent with Chapter 13. For TRPA to make a general finding of conformance, the Area Plan shall, at a minimum address, and incorporate the following:

- Identify all zoning designations;
- Be consistent with the Regional Plan growth management system;
- Demonstrate consistency with the Regional Plan Conceptual Land Use Map;
- Recognize and support planned, new or enhanced Environmental Improvement Projects;
- Promote environmentally beneficial redevelopment and revitalization within centers;
- Preserve the character of established residential areas outside off a center;
- Protect and direct development away from Stream Environment Zones;

- Identify facilities and implementation measures to enhance pedestrian, bicycling and transit opportunities; and
- Where applicable TRPA will use the local governments load reduction plans for registered catchments as the default water quality standards.

In addition, for Area Plans that include designated Town Centers or a Regional Center the following provisions must be covered in the Area Plan:

- Include building and site design standards that reflect the unique character off each area;
- Include policies and strategies to promote walking, bicycling, transit use and shared parking;
- Address the form of development that promotes pedestrian activity and transit use.
- Ensure adequate capacity for redevelopment;
- Identify an integrated community strategy for coverage reduction and enhanced storm water management; and
- Provide scenic resource~~for~~ threshold gain.

## 2.2 STATE OF CALIFORNIA

In addition to the TRPA requirements, the Tourist Core Area Plan is designed to meet the California requirements related to specific plans.

California State law requires every city and county in California to prepare a comprehensive, long-term general plan for the physical development of the county or city, and any land outside its boundaries which bears relation to its planning. The general plan acts as a constitution for future development, and expresses the community's development goals and policies relative to the distribution of future land uses, both public and private. Government Code Section 65302 requires that the general plan address, at a minimum, the following seven topics or elements to the extent they are relevant to the community:

- Land Use
- Circulation
- Housing
- Conservation
- Open Space
- Noise
- Safety

Through State law and code, the general plan must be implemented consistently through zoning, subdivision approvals, specific plans, public works projects, ~~redevelopment plans,~~ and many other implementation programs.

Under California State law, cities and counties may adopt specific plans for the "systematic implementation of the general plan" (Government Code Section 65450 et. Seq.). The law requires the following:

- A specific plan shall include ~~a~~ text and ~~a diagram or~~ diagrams ~~which~~ that specify all the following in detail:
  - The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.
  - The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste, disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.
  - Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.
  - A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out the above bullets.
- The specific plan shall include a statement of the relationship of the specific plan to the general plan.

California Government Code Section 65452 provides that the specific plan may address any other subjects which in the judgment of the planning agency are necessary or desirable for the implementation of the general plan.

The Tourist Core Area Plan was prepared to be consistent with the requirements of a specific plan under California State law ~~and~~ and implements development goals and policies by establishing zoning districts, standards and criteria for development and sets the distribution, location and extents of planned land uses consistent with the adopted City General Plan.

## 2.3 CITY OF SOUTH LAKE TAHOE

In 1999, the City of South Lake Tahoe adopted a General Plan under the requirements of California Planning Law. In conjunction with that adoption, the City adopted TRPA's system of Plan Area Statements and Community Plans in lieu of its previous traditional zoning system. The action eliminated inconsistencies between the City's and TRPA's land use plans. Subsequently, the City adopted three of four anticipated community plans including the Stateline/Ski Run Community Plan in March 1994. The Community Plan provides land use and development guidance to the Stateline/Ski Run Area.

In 2011, the City of South Lake Tahoe updated its General Plan and amended its Land Use Element to include a policy that directs the City to periodically update and implement the ~~three~~ four ~~adopted~~ Community Plans (Stateline/Ski Run, Bijou/Al Tahoe, South Y Industrial, and Tahoe Valley) within the City's jurisdiction as a way to focus development commodities and revitalization efforts (see Policy LU-2.2, City of South Lake Tahoe General Plan, May 17, 2011).

The adoption of the Tourist Core Area Plan in 2013 meets the directive of LU-2.2 of the City's General Plan and the requirements of TRPA's Regional Plan The Tourist Core Area Plan replaced the Stateline/Ski Run Community Plan and provide future land use and development guidance.

The City of South Lake's Tahoe General Plan designation for the Tourist Core is Tourist Center (TSC). This designation provides for the most intensive land uses including major

commercial/visitor centers and mixed-use residential. This designation is applied to areas currently developed as major commercial/visitor centers, areas of excess land coverage, and areas that are near commercial, employment, transit, and public services.

The City's General Land Use Diagram is depicted in Figure 2-2.

The overall purpose of the Tourist Center is to:

- Provide for the orderly, well-planned, and balanced growth of the Tourist Center and support the area's role as an important regional commercial, tourist destination, ~~and~~ recreation, and residential center that provides full services and gathering places for visitors and residents.

- Promote the Tourist Center as a pedestrian- and transit-oriented, mixed-use activity center and a gateway ~~to~~ for outdoor tourism and recreational destination and expand its role as an economic center for South Lake Tahoe.

- Encourage a mix of uses that ~~promotes~~ promote convenience, economic vitality, and a pleasant quality of life and improve access to a greater range of facilities and services for visitors and surrounding residential neighborhoods.

- Establish development and design standards that improve the pedestrian- and transit-orientation and visual~~ly~~ quality of developments ~~and~~ to create a unified, distinctive, and attractive character along mixed-use streets.

**Sustainability Plan**

The City of South Lake Tahoe adopted policies for sustainable development and "green" buildings in the Land Use Element of the General Plan. The policies call for creating a sustainable and energy-efficient built environment as a key vision of the City of South Lake Tahoe. The policies provide direction on the use of "green" building technology, energy efficiency, and strategies to achieve sustainable development practices.

The City has implemented specific strategies including providing streamlined permitting to encourage "green" building practices and instituting a plastic bag ban for grocery stores, food vendors, and retail establishments.

**Climate Action Plan**

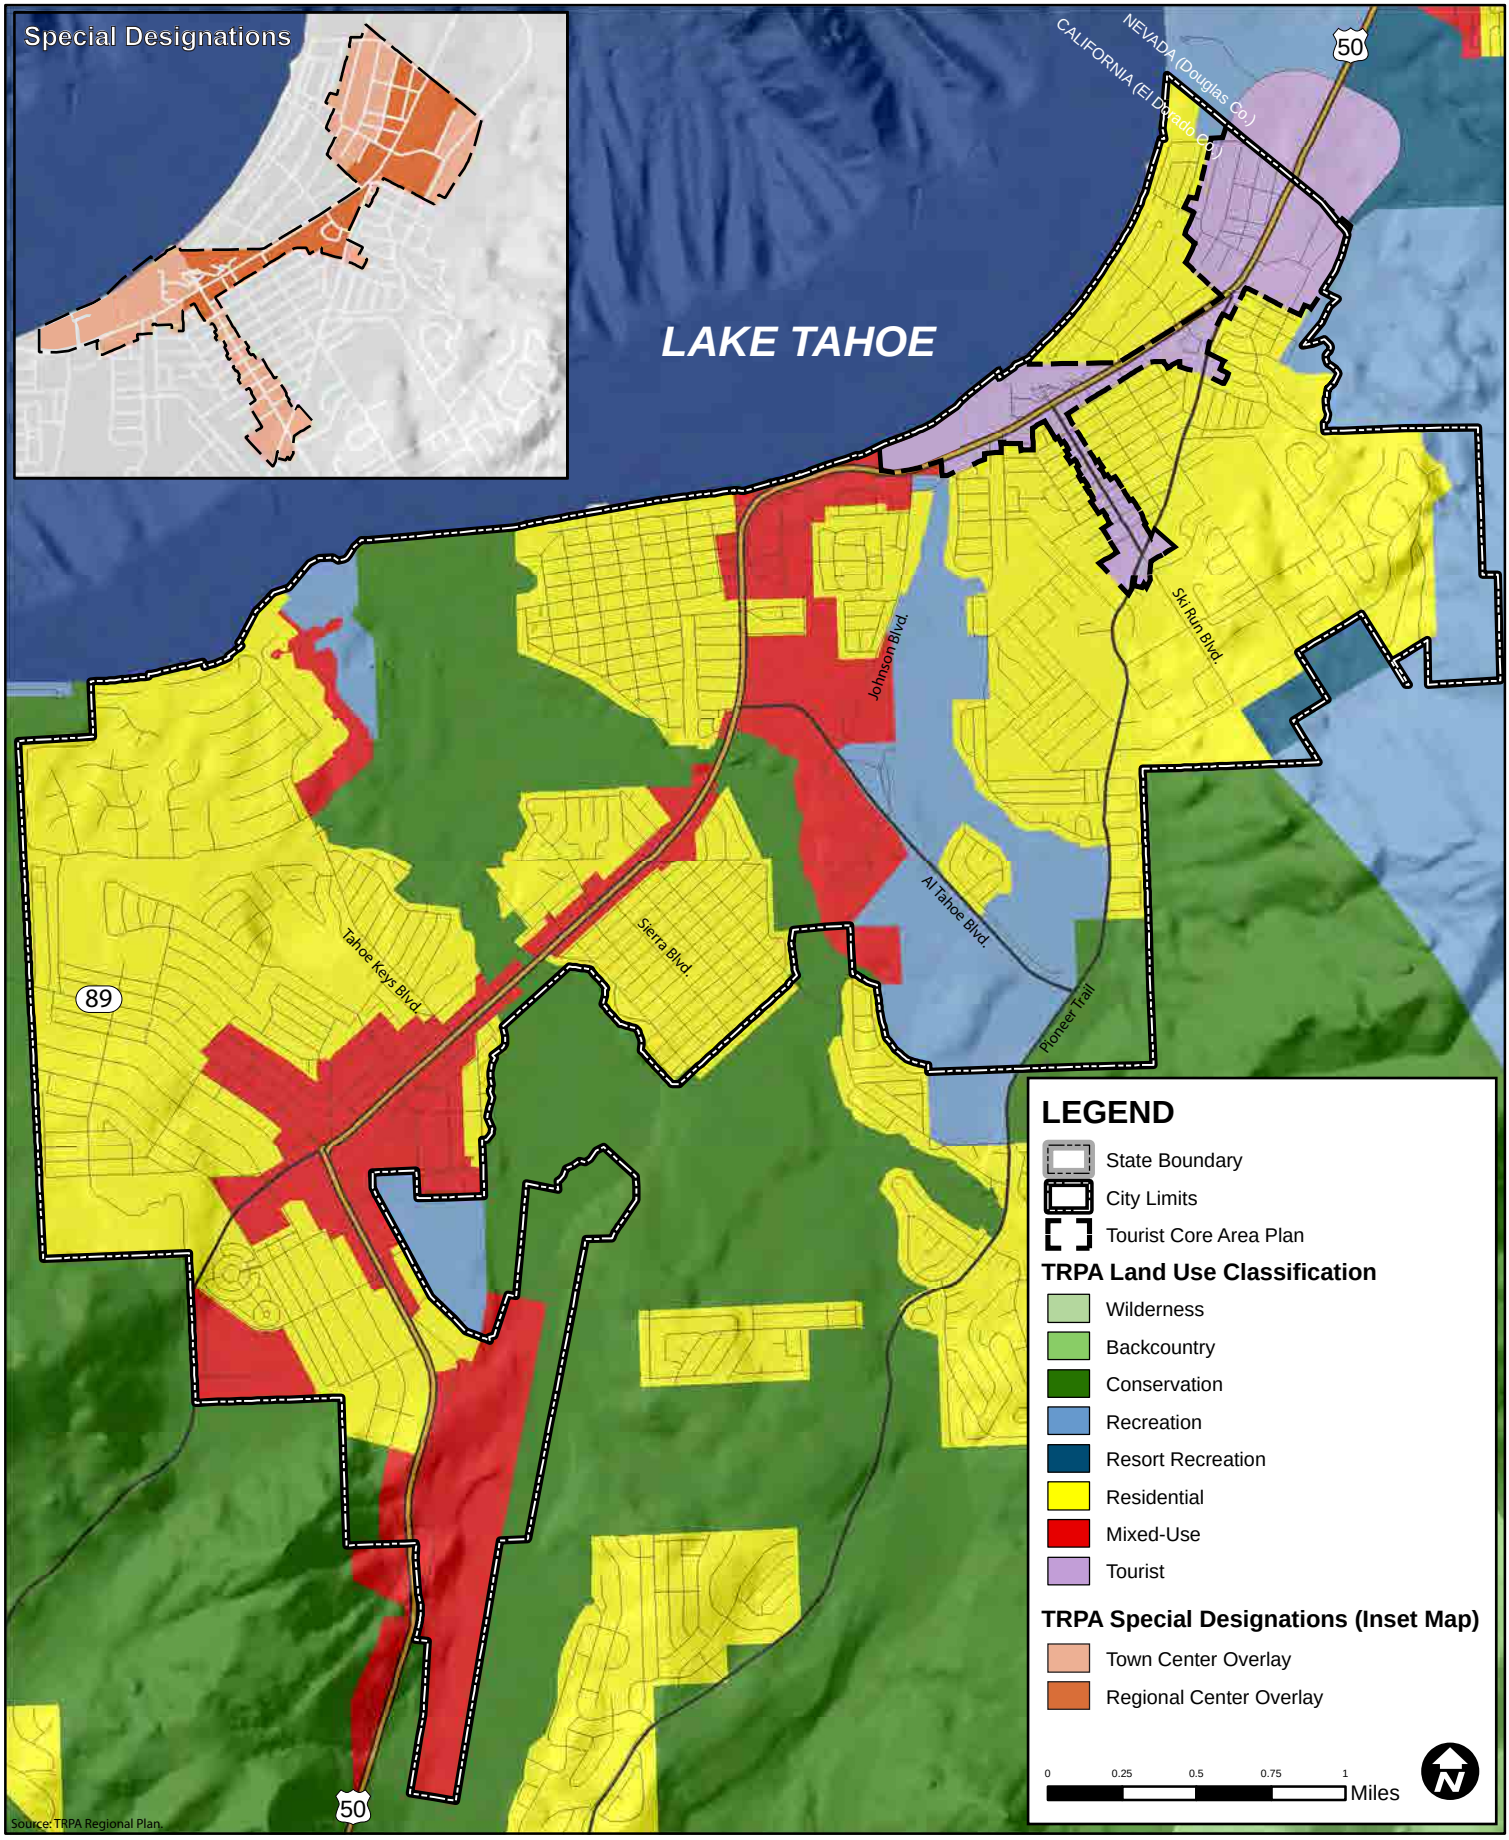
The City adopted a Climate Action Plan (CAP) in 2020, setting carbon pollution goals for 2030 and 2040. 2030 has been identified as a key milestone year to achieve significant carbon pollution reductions to avoid the worst impacts of climate change. On June 21, 2022, the City officially adopted a science-based carbon pollution target, refining the originally estimated target established in Resolution 2017-026. This target establishes a reduction target of 59.2% from the 2018 baseline levels and aligns with the City's commitment to carbon pollution reduction and renewable energy goals. The CAP outlines a framework consisting of five overarching strategies, each encompassing specific actions. These strategies are categorized as follows: transportation, land use, water and solid waste, carbon sequestration and watershed health, and building energy. Under each strategy, a set of actions is identified to guide the City's efforts in addressing climate change and promoting sustainability. The Tahoe Valley Area Plan incorporates policy and land use direction to advance CAP strategies improve public transit, increase the use of electric vehicles, increase walking and biking, encourage high-density mixed-use neighborhoods close to public transit, improve energy efficiency of buildings, reduce wildfire risk, and protect watersheds.

## Plan Area Statements

When Measure T was passed in 2018, the Tourist Core Area Plan became one of the limited areas in South Lake Tahoe where vacation home rentals were are allowed. This exception, however, only applies to single-family residential properties within the Area Plan as of 2017. Any areas added to the plan area through subsequent amendments are not eligible for vacation home rental permits. Additional restrictions to eligibility for a Vacation Home Rental permit are included in Appendix C.

## Standards and Guidelines

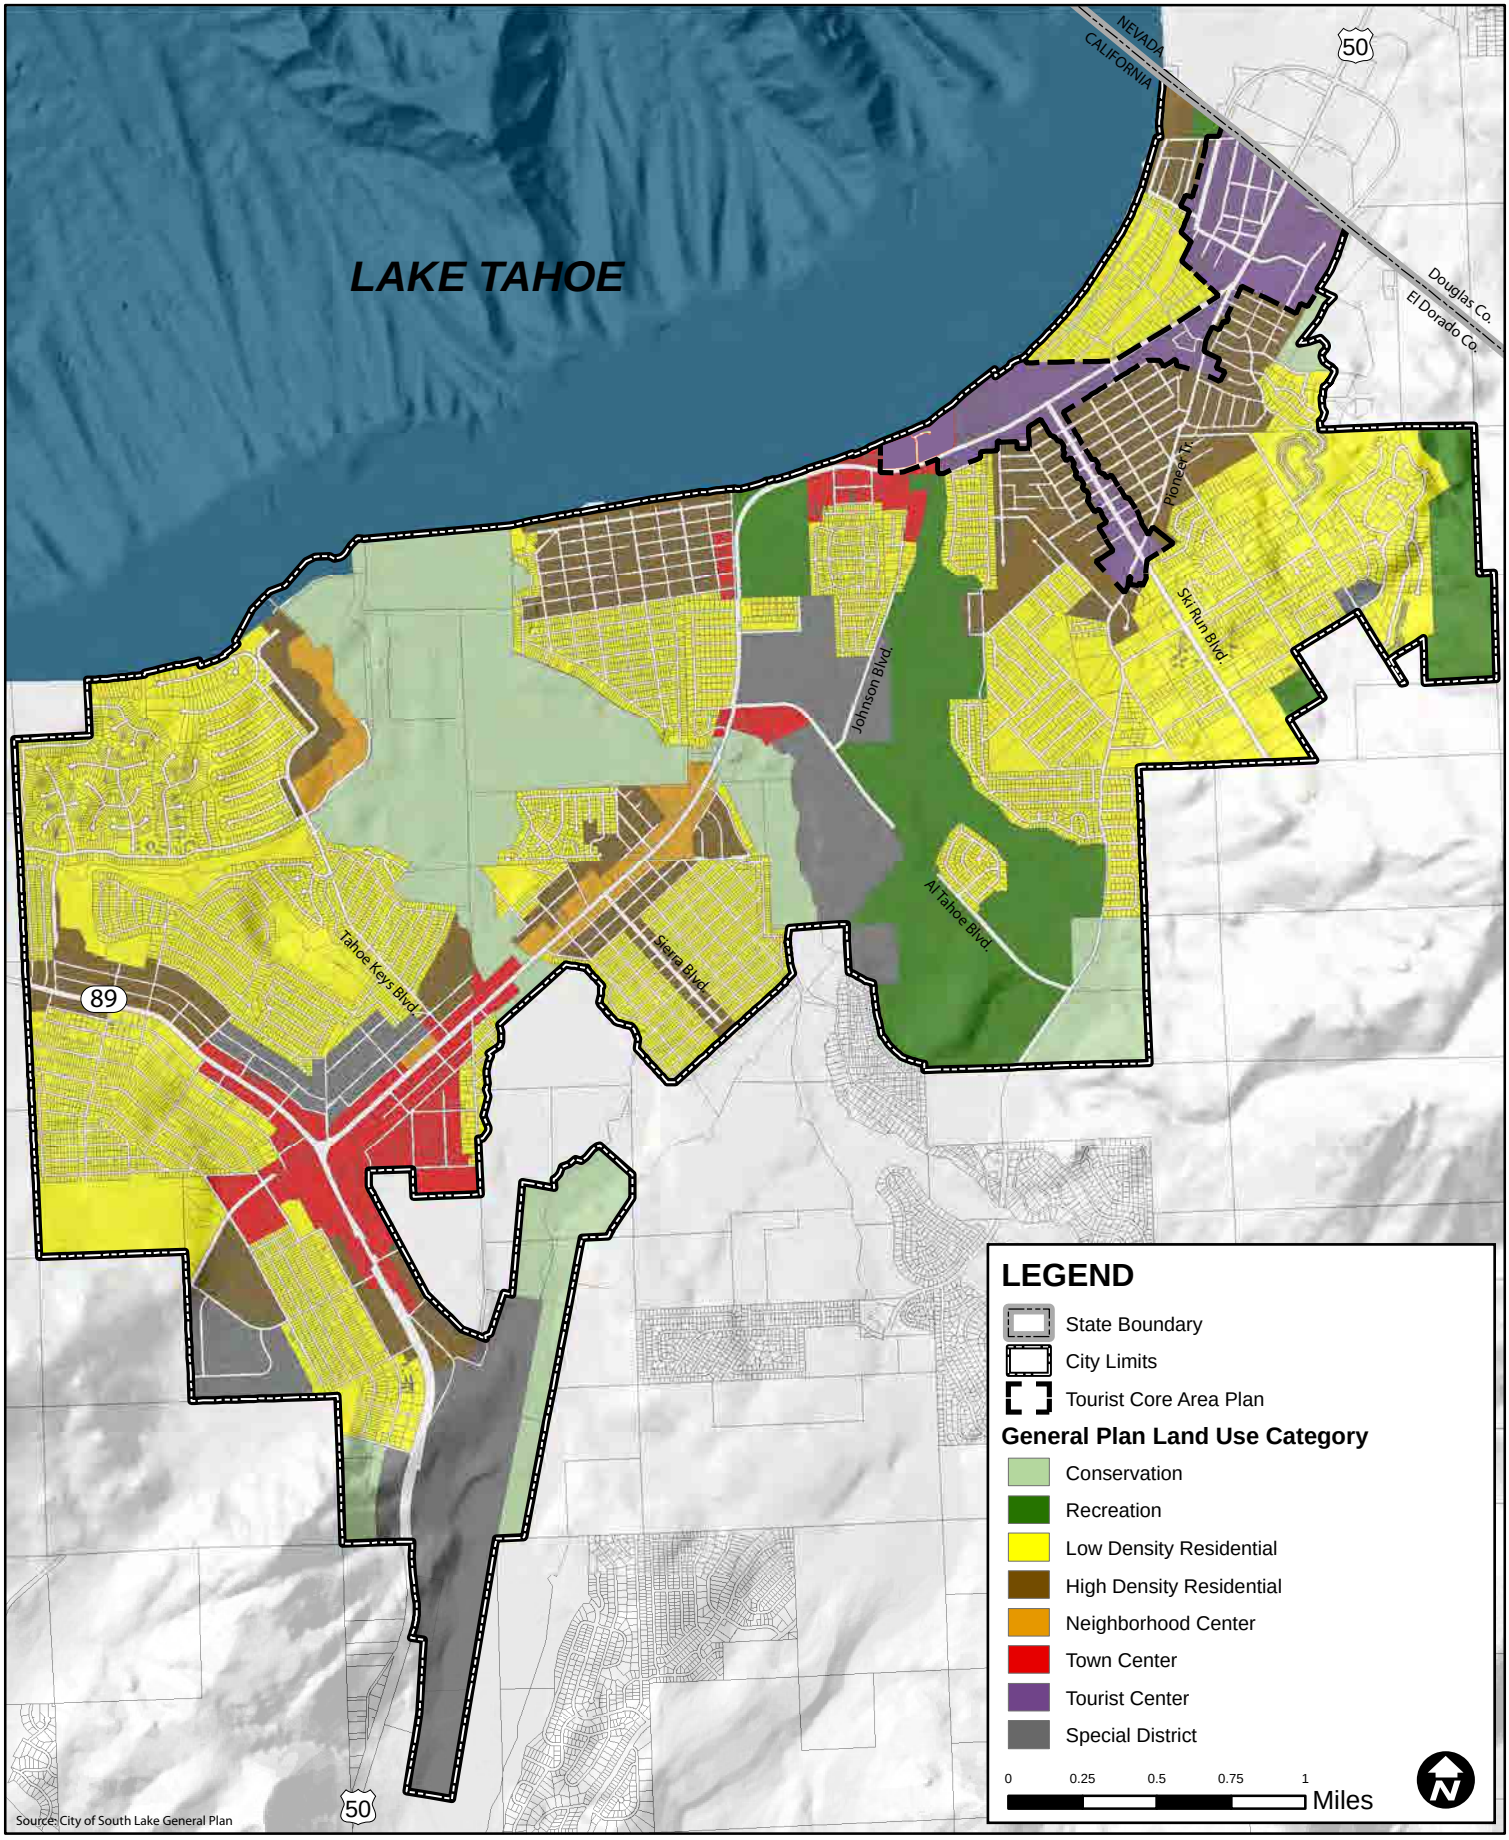
The City of South Lake Tahoe and TRPA have jointly adopted Standards and Guidelines that include citywide design standards, guidelines, and specific design standards for the three previously adopted Community Plans.



The citywide design standards and guidelines, as well as specific design standards tailored towards the Area Plan are incorporated in the Tahoe Valley Area Plan and will provide design guidance for the plan area.

## Smart Growth Principles

In August 2005, the South Lake Tahoe City Council endorsed a set of Smart Growth Principles for possible inclusion in the City General Plan for South Lake Tahoe. These principles are organized under the following headings:



- **Land Use**
- **Transportation**
- **Community Livability**
- **Governance**

The Tahoe Valley Area Plan is designed to implement the City's smart growth principles by encouraging a land use pattern that focuses on walkable, compact mixed-use centers, with access to transportation choices while preserving open spaces and critical environmental areas.

# Section 3
# EXISTING CONDITIONS

This section describes the existing physical conditions within the Tourist Core, both natural and man-made. The conditions summarized in this section act as opportunities or constraints (or sometimes both) to development, redevelopment, and conservation of resources within the Tourist Core.

## 3. 1 CONTEXT AND BACKGROUND

The South Shore Area has long served as the primary destination for visitors to Lake Tahoe. The area's development began to gather momentum beginning in the 1950's and now includes a number of land uses that serve tourists and permanent residents in the region. The area contains the US Highway 50 corridor which is the major access route and the principal entry to many properties and businesses in the Tourist Core. Although this Area Plan specifically focuses on properties within the boundary of the City of South Lake Tahoe, the nature of the Area Plan boundary necessitated a collaborative planning effort involving the active participation of Douglas County, Nevada, the City of South Lake Tahoe, California, Nevada Department of Transportation (NDOT), California Department of Transportation (CalTrans), Tahoe Regional Planning Agency (TRPA), as well as dozens of affected private property owners and business organizations. In Douglas County, the primary structures are the resort casinos that each occupy significant land parcels and house gaming, entertainment and the bulk of the hotel rooms in the area. Historically, these resorts have been the driving economic force for the area. The majority of investments and attractions have been contained within these resorts. In the last decade, redevelopment in the City of South Lake Tahoe has included significant new accommodations and commercial areas, as well as the Heavenly Gondola connecting the ski area to the accommodations base. Redevelopment has included the Lake Tahoe Resort Hotel (~~-~~formerly Embassy Suites), Heavenly Village, Lake Tahoe Vacation Resort and ~~the~~ Ski Run Marina ~~Site~~, all of which have been welcome investments and proof of South Shore's viability as a tourist destination.

## 3. 2 TRENDS AND ISSUES

The Tourist Core Area Plan is influenced by the surrounding context and features that influence land use decisions within the plan area. The adjacent areas are not considered to be isolated, but rather planning for the Tourist Core respects that these influences exist outside the Area Plan boundary. There have been significant, on-going changes that have influenced the attractiveness of this portion of Lake Tahoe. However, there is a widespread feeling that the majority of the facilities are outdated. The physical environment is in need of upgrades to make the area more attractive as a central destination. Shifts in the gaming locations available in California and Nevada have created a downward trend in revenues, employment and opportunities to attract the traditional market to the South Shore. As a result of these shifting travel patterns, deteriorating

economic conditions and community efforts to envision a new future, a new community vision was created in 2012. The ~~South Shore Vision Plan~~Tourist Core Area Plan illustrates the possibilities for redevelopment with a new program of uses and the potential to reconstruct the highway and transportation systems. The Tourist Core Area Plan is premised on the idea that needed redevelopment is possible and that a transformation will result from the new land use and transportation policies established herein.

# 3. 3 EXISTING CONDITIONS

## LAND USE

**Land Use:** The Tourist Core stretches approximately two miles along US Highway 50 extending from Fairway Drive to the California and Nevada state line and along Ski Run Boulevard from Lake Tahoe to Pioneer Trail (see Figure 1-1). This area functions as the primary visitor and tourist district in the ~~south~~ South ~~shore~~ Shore and provides direct access to recreation opportunities such as Heavenly Ski Resort, Edgewood ~~Gold~~ Golf Course, Ski Run Marina, Lakeside Marina and Van Sickle Bi-State Park. The Tourist Core is approximately ~~282~~ 305.2 acres in size (~~232~~ 246.2 acres excluding roadway infrastructure) and the land use pattern varies, although the predominant theme of the land uses are ~~tourist~~ tourist-related, with a large number of motels, hotels, restaurants, and ~~tourist~~ tourist-oriented retail shops (Figure 3-1). Table 3-1 provides a breakdown of land use by land use category.

**TABLE 3-1: EXISTING LAND USES**

| Land Use | Acres | Percent of Acreage |
|---|---|---|
| Vacant Public | 1.5 | 0.5% |
| Vacant Private | ~~26.9~~28.5 | ~~9.5~~9.3% |
| Open Space | ~~14.4~~14.5 | ~~5.1~~4.8% |
| Recreation | 3.2 | ~~1.1~~1.0% |
| Public Service | 1.7 | 0.6% |
| Quasi-Public Service | 0.3 | 0.1% |
| Residential | ~~38.4~~41.4 | 13.6% |
| Commercial | ~~38.6~~42.7 | ~~13.7~~14.0% |
| Tourist | ~~100.5~~112.4 | ~~35.5~~36.8% |
| Transportation Routes | ~~57.3~~59.0 | ~~20.3~~19.3% |
| TOTAL | ~~282.8~~305.2 | 100.0% |

Source: El Dorado County Assessor's Parcel Data, ~~2013~~ 2023 & ~~TRPA~~ City of South Lake Tahoe GIS, ~~2013~~2023

Excluding the transportation routes, ~~64.6~~66.1% of the parcels are developed, ~~10.0~~9.8% remain vacant and the remaining ~~5.1~~4.8% are dedicated to open space. Of the remaining ~~34~~ 13 vacant parcels in the Tourist Core, ~~30~~ 11 parcels are held in private ownership, ~~1 is publicly owned by the City of South Lake Tahoe,~~ and ~~3~~ 2 are owned by the ~~South Lake Tahoe Redevelopment Successor Agency~~City of South Lake Tahoe. The vacant parcels are generally scattered throughout the Tourist Core with a concentration of vacant parcels located adjacent to the Van Sickle Bi-State Park as shown in Figure 3-1.

The Tourist Core has two major commercial/tourist centers: the area centered on Heavenly Village/Crescent V Shopping Center adjacent to Stateline, Nevada and the area centered on the intersection of US Highway 50 and Ski Run Boulevard, running from Ski Run Marina to Pioneer Trail. The Heavenly Village area is a mixed-use development that provides tourist accommodation, retail, entertainment and restaurants set in a pedestrian and walkable environment. The Ski Run Boulevard area provides a more traditional commercial/tourist land use

setting running the length of Ski Run Boulevard that can be accessed via a ~~Class I shared~~ shared-use, Class I bike path.

Existing uses in the Tourist Core occupy structures ranging in height, age and physical conditions, from units built in the 50s and 60s to some of the newest buildings in the ~~south shore~~South Shore and from single story structures to 6 to 8-story tourist accommodation facilities. Many of the newer structures are the result of the former South Lake Tahoe Redevelopment Agency's partnership with private developers to implement the City's Redevelopment Plan. Redevelopment in the area included the construction of tourist, commercial and retail facilities, pedestrian and transit facilities, and water quality improvements in the late 1990's and early 2000s. Projects constructed include the Embassy Suites (now known as Lake Tahoe Resort), Lake Tahoe Vacation Resorts, Heavenly Village, Heavenly Gondola, Stateline Transit Center, Crescent V Shopping Center and the Wildwood Basin Water Quality Improvement Project. In addition, the area has also experienced private redevelopment efforts, that include the redevelopment of the Ski Run Center, Valero Gas Station, Ski Run Marina Shops, Holiday Inn Express and Applebee's Restaurant. All these redevelopment efforts have been identified in TRPA's Threshold Evaluations as positively contributing to scenic, community design and water quality improvements (TRPA, 2011).

**Commercial Floor Area:** Within the Tourist Core, there is approximately ~~424,316~~777,000 square feet of existing commercial floor area. The Stateline/Ski Run Community was allocated 45,000 square feet of additional commercial floor area upon adoption of the community plan. ~~The majority of that~~All of the commercial floor area has been assigned to constructed ~~or permitted~~ projects. ~~Currently, 8,662 square feet remains.~~

## NATURAL RESOURCES AND CONSERVATION

**Soils, Land Capability and Stream Environment Zones (SEZs):** In preparing the 1994 Stateline/Ski Run Community Plan, TRPA staff updated the mapped land capability districts for portions of the community plan and remapped the SEZ boundaries. The TRPA's official land capability map for this area is reflected in Exhibit 7 of the Stateline/Ski Run Community Plan which is depicted in Figure 3-2. Table 3-2 below provides a breakdown by acreage of the mapped land capability districts.

**TABLE 3-2: EXISTING LAND CAPABILITY**

| Capability | Acres | Percent |
|---|---|---|
| 1A | 1.4 | 0.5 |
| 1B (SEZ) | ~~88.8~~105 | ~~31.4~~34.4 |
| 3 | ~~7.4~~6.9 | ~~2.6~~2.3 |
| 4 | ~~6.0~~6.7 | ~~2.1~~2.2 |
| 5 | ~~94.9~~97.1 | ~~33.5~~31.8 |
| 7 | ~~84.3~~88.1 | ~~29.8~~28.9 |
| Total | ~~282.8~~305.2 | 100.0 |

Source: Stateline/Ski Run Community Plan, 1994. TRPA & City GIS, ~~2013~~2023.

Approximately ~~34~~35% of the Tourist Core is located in sensitive lands (~~LC~~ Land Capability 1-3) with the majority of lands classified as SEZ (~~31. 4~~34.4%). SEZ lands are located throughout the Tourist Core and are mostly covered by existing development except for areas that have been restored. The remainder of the Tourist Core is classified primarily as Land Capability Class 5 and 7 with some pockets of Class 4 lands.

As noted above in Table 3-~~3~~2, SEZs account for ~~31.4~~34.4 percent (~~88.8~~ 105 acres) of land within the Tourist Core. The Stateline/Ski Run Community Plan noted the extensive disturbance of SEZs in the Tourist Core and identified SEZ restoration opportunities. The following water quality improvement projects have been implemented and resulted in approximately 4.7 acres of SEZ restored in the Tourist Core:

- Ski Run Erosion Control Project: Constructed a 3.3 acre artificial wetlands on the north side of US Highway 50 across from the Wildwood Basins.
- Osgood SEZ Restoration: Adjacent to the Osgood Basins, existing structures and hard coverage was removed and 1.2 acres of SEZ was restored.

Figure 3-5 depicts locations of SEZ restoration projects within the Tourist Core and its vicinity.

**Land Coverage**: An analysis of TRPA's LiDAR impervious coverage data estimates land coverage in the Tourist Core at approximately ~~60~~62.1% (~~169~~ 189.6 acres) for hard coverage and ~~2~~1.6% (~~5~~ 4.9 acres) for soft coverage (Table 3-3). Coverage at the parcel level ranges from vacant parcels with no coverage to parcels that are 100% covered. On average, parcels with existing development are approximately 72% covered. See Figure 3-3 for areas of existing coverage.

**TABLE 3-3: IMPERVIOUS LAND COVERAGE**

| Coverage | Roads | ~~Trails~~Paths/ Sidewalks | Buildings | Other | Total Impervious | Total Area | Total Impervious Percent |
|---|---|---|---|---|---|---|---|
| Hard | ~~31.~~ ~~3~~33.7 | 5. 6 | ~~48. 6~~53.0 | ~~83.~~ ~~6~~97.3 | ~~169. 1~~189.6 | ~~282.~~ ~~8~~305.2 | ~~59. 8~~62.1% |
| Soft | - | 0. 4 | - | 4. 5 | 4. 9 | | ~~1. 7~~1.6% |
| Total | ~~31.~~ ~~3~~33.7 | 6. 0 | ~~48. 6~~53.0 | ~~89.~~ ~~1~~101.8 | ~~174. 0~~194.5 | | ~~61. 5~~63.7% |
| Percent | ~~11.~~ ~~1~~11.0% | ~~2. 1~~1.9% | ~~17. 2~~17.3% | ~~31.~~ ~~2~~33.3% | ~~61. 5~~63.7% | | |

Source: TRPA GIS LiDAR, 2010.

The Stateline/Ski Run Community Plan noted numerous opportunities to mitigate excess land coverage within the area. Since 1994 over 1,107,900 square feet of hard coverage has been removed. Examples include:

- Park Avenue Redevelopment Project (Heavenly Village, Raley's Center and US Highway 50 Pedestrian Improvement Project) resulted in over 356,500 square feet of coverage removed to create open space and landscaping features.
- Redevelopment Project Area #1 (~~former Embassy Suites,~~ Lake Tahoe Vacation Resort, formerly Embassy Suites at Ski Run Boulevard, Marina Village, McDonalds, and Valero Gas Station, now Chevron) resulted in 388,000 square feet of coverage reduction by removing older commercial/tourist buildings to create open space and landscaping features.
- Ski Run Boulevard Improvement Project reduced the overall width of Ski Run Boulevard and installed landscaping features.
- The Colony Inn, which was located in SEZ lands by the intersection of Montreal Road and Heavenly Village Way was demolished and 64,800 square feet of land coverage was removed and banked, and the site stabilized. The existing tourist accommodation units removed from the site are proposed for transfer to the Boulder Bay Project in North

Stateline. A condition of the Boulder Bay permit requires that the ~~property~~ disturbed SEZ be restored to a functioning SEZ prior to the units being transferred. The restoration plan was approved by TRPA in 2015, and a deed restriction was recorded in 2016, documenting the transfer of the tourist accommodation units and the restoration of the SEZ. Subsequently, it was determined that the restoration effort was not successful. In 2023, the property owners submitted a revised stream environment zone plan to TRPA to modify and enhance the stream environment zone to ensure functionality as required by the TRPA permit condition.

- Slalom Inn located on Ski Run Boulevard was demolished; the site was returned to its natural state and 20,435 square feet of coverage was removed and transferred.
- Wildwood and Fern Water Quality Improvement Projects resulted in the removal of existing commercial/tourist buildings and 202,500 square feet of hard coverage from SEZ lands to construct retention basins to treat stormwater runoff. The tourist accommodation units that were formerly sited on the Wildwood parcels were transferred to Redevelopment Project No. 1.
- Osgood SEZ Restoration resulted in removal of existing residential structures and 50,900 square feet of land coverage from SEZ lands.

Of the total land coverage removed approximately 318,200 square feet or 7.3 acres came from SEZ lands. Figure 3-4 depicts major public and private projects that have resulted in the removal of existing hard coverage within the Tourist Core and its vicinity.

**Water Quality**

*Best Management Practices (BMPs)*: Every property within the Tourist Core Area Plan boundary is subject to the requirements of TRPA Code of Ordinances, Chapter 60~~:~~, *Water Quality*, which requires implementation of ~~Best Management Practices (~~BMPs~~)~~ to reduce storm water runoff, minimize soil erosion and capture polluted water before it enters Lake Tahoe. The TRPA Code requires all property owners to infiltrate the volume of a 20-year/1 hour storm on their property or meet alternative standards in instances where special circumstances limit infiltration.

All projects permitted by the City under the Memorandum of Understanding (MOU) with TRPA are reviewed for compliance with Chapter 60. In some cases, the City has entered into agreements with private property owners to treat runoff in the City's area-wide stormwater systems. For example, stormwater from Heavenly Village and Crescent V Shopping Center is conveyed and treated in the City's Park Avenue basins.

According to TRPA's BMP database the Tourist Core Area Plan has a 44% BMP compliance rate for BMP certification. Based on TRPA's BMP database a total of 291 out of 664 parcels have been issued their Certificate of Compliance from TRPA. However, it should be noted that the BMP compliance rate is based on issuance of a BMP certificate and not on actual BMP installation which is a permit requirement for all project approvals. Within the Tourist Core there are parcels that have BMPs installed but have not been issued a Certificates of Compliance. These parcels include Heavenly Village, Crescent V, ~~Embassy Suites,~~ Lake Tahoe Vacation Resort, and the Valero gas station (now Chevron gas station).

Currently, TRPA is focusing its compliance efforts on ~~commercial and multi-family projects in~~ watersheds that are connected to the lake, or in catchments that have planned environmental improvement projects, or capital improvement projects proposed. Because of Caltrans' on-going water quality improvement project along US Highway 50 within the City of South Lake Tahoe, TRPA has not focused their compliance efforts along the US Highway 50 corridor. TRPA did send ~~sent~~ Notices of Failure to implement BMPs to commercial properties along the US 50 corridor that

do not have Certificates of Compliance or active permits on file. Although the majority of the properties that were notified are located outside the area plan boundary, 20 properties within the area plan boundary did receive notices. An analysis of the notified properties indicate that some parcels have BMPs installed but have not requested a Certificate of Compliance. In other instances, properties ~~are on hold in order to~~ participate in ~~an~~ the Bijou Commercial Core Erosion Control Project area-wide treatment system s~~uch as the Bijou Commercial Core Erosion Control Project~~.

*Storm Water Drainage*: Caltrans and the City are responsible for reducing erosion and storm water runoff from roads under their jurisdiction. This includes installing curbs, gutters, rock-lined channels, bio-swales, infiltration basins and other improvements that capture runoff from developed areas. The Stateline/Ski Run Community Plan called for implementation of an area-wide solution with construction of a series of detention basins and wetlands, interconnected by pipes and stream channels. This area-wide solution was implemented with the construction of the Park Avenue Redevelopment Project (Heavenly Village and Crescent V Shopping Center) and is further described below. Within the Tourist Core the following water quality improvement projects have been constructed:

- Stateline Water Quality Improvement Project: This project collects and treats drainage from Pine Avenue to Stateline Avenue to Van Sickle Road to Park Avenue. In addition, this system collects "clean" stormwater runoff from the area ~~easterly~~ east (mountain side) of Montreal Road and directs it to the North Ditch. It consists of curb and gutter, drainage conveyance systems, retention basins and revegetation.
- Park Avenue Redevelopment Project: ~~Is~~ This project is a completely separate "urban storm water collection and conveyance system" that collects runoff from Heavenly Village and Crescent V Shopping Center and is ~~-~~treated by the Stateline Water Quality Improvement Project described above.
- Ski Run Blvd Boulevard/Osgood Drainage Basin Water Quality Improvement Project: This project collects and treats drainage from Ski Run Boulevard. It consists of curbs, gutters, drop inlets, and drainage pipes that convey storm water to the Osgood Basin for treatment prior to being released into the Ski Run Marina.
- Rocky Point 1-4: This project collects and treats drainage from the road right-of-way in the vicinity of Pioneer Trail and US Highway 50 and the residential neighborhood adjacent to the Tourist Core.
- US Highway 50 Water Quality Improvement Project: This project collects and treats water along US Highway 50 within the Caltrans right-of-way beginning at Al Tahoe Boulevard to 1000 feet west of the intersection of US Highway 50 and Ski Run Boulevard. It consists of curb, gutters, drainage conveyance, ADA compliant pedestrian sidewalks, Class II bike lanes and pedestrian street lighting.

Figure 3-5 depicts completed water quality improvement projects within the Tourist Core and its vicinity.

*Total Maximum Daily Load (TMDL)*: The TMDL program is a requirement of the Federal Clean Water Act. The program is designed to protect Lake Tahoe, an Outstanding Natural Resource Water, from certain pollutants of concern, including fine sediments, phosphorus and nitrogen.

Through the Lake Tahoe TMDL, the Lahontan Regional Water Quality Control Board (Lahontan) established five-year load reduction targets to assess each jurisdiction's progress towards meeting overall load reduction goals. Load reduction targets for Fine Sediment Particles (FSP), Total Phosphorus (TP), and Total Nitrogen (TN) have been established based on attainment of California's Lake Tahoe transparency standard (~ 97 feet) over an estimated 65-year

implementation period. To meet the requirements of the TMDL Program, each jurisdiction holding a National Pollutant Discharge Elimination System (NPDES) permit is required to reduce ~~their~~ its baseline pollutant load by the following amounts shown in Table 3-4.

**TABLE 3-4: LOAD REDUCTION TARGETS FOR THE TAHOE TMDL**

| Pollutant | 5-Year Milestone 2016 | 10-Year Milestone ~~2012~~2021 | 15-Year Milestone 2026 | Transparency Standards (~65-Years) |
|---|---|---|---|---|
| Fine Sediment Particles | 10% | 21% | 34% | 71% |
| Total Phosphorus | 7% | 14% | 21% | 50% |
| Total Nitrogen | 8% | 14% | 19% | 46% |

Source: Final Lake Tahoe Total Maximum Daily Load, August 2011)

In ~~2011~~2016, the City submitted to Lahontan the City's *Lake Tahoe TMDL Baseline Pollutant Load ~~Estimate~~Update ~~Report~~* which was subsequently incorporated into the City's NPDES permit. The City's load reduction requirement through ~~2016~~ 2026 under the NPDES permit is shown in Table 3-5.

**TABLE 3-5: CSLT ~~2016~~ 2026 LOAD REDUCTION REQUIREMENTS**

| Parameter | Baseline Load (~~kg~~lbs/year) | Required Percent Reduction | Required Load Reduction (~~kg~~lbs/year) | Allowable Load (~~kg~~lbs/year) |
|---|---|---|---|---|
| Fine Sediment Particle (mass) | ~~176,450~~476,677 | ~~10~~34% | ~~14,650~~162,070 | ~~158,800~~314,606 |
| Fine Sediment Particles (# of particles) | ~~1. 94~~2.38E+19 | ~~10~~34% | ~~1. 94~~1.57E+~~18~~19 | ~~1. 75~~1.57E+19 |
| Total Phosphorus | ~~789~~2,020 | ~~7~~21% | ~~55~~424 | ~~734~~1,596 |
| Total Nitrogen | ~~3,361~~18,034 | ~~8~~19% | ~~269~~1,526 | ~~3,092~~6,508 |

Source: City of South Lake Tahoe Pollutant Load Reduction Plan, ~~January 2013.~~2018

The City ~~authorized~~ completed the development of a *Pollutant Load Reduction ~~Strategy Report~~Plan* to ~~assess potential approaches~~ define a path to compliance with the requirements to ~~for reducing~~ reduce pollutant loading to Lake Tahoe from urban stormwater runoff. The goal of the ~~Strategy~~ Load Reduction Report was to identify feasible and cost effective actions to meet anticipated targets ~~to~~. ~~Subsequently, in~~In ~~February 2013~~September 2021, the City Council ~~adopted the~~ received a draft of the 2021 *City of South Lake Tahoe Pollutant Load Reduction Plan* which documents the City's proposed approach and timeline for meeting the ~~2016~~ 2026 load reduction targets set forth in the City's NPDES permit, which was then submitted to Lahontan in October, 2021 and must be updated and resubmitted September, 2023. ~~Lahontan subsequently approved the City's Load Reduction Plan in June 2013.~~ Proposed strategies outlined in the Load Reduction Plan for meeting the load reduction targets are incorporated in the Tourist Core Area Plan and are discussed in detail in Section 7, *Natural and Cultural Resources* and Section 10, *Implementation*.

**Scenic Resources:** TRPA has adopted three separate regional scenic resource thresholds: 1) travel route ratings; 2) scenic quality ratings of individual resources; and 3) scenic resources seen from public recreation areas. All are numerical in nature. The first two thresholds apply to scenic resources visible from the Region's state and federal highways and Pioneer Trail and from Lake Tahoe itself. The Tourist Core contains a portion of Roadway travel route Unit #32, Casino Core, a portion of Roadway Unit #33, The Strip, a portion of Roadway Units #45, Pioneer Trail (North), and a portion of Shoreline Unit #31, Bijou. Figure 3-6 depicts the roadway and shoreline scenic units including identified scenic resources located within each corridor.

Roadway Units #32, #33 and #45 are all presently not in attainment with the threshold and are targeted for restoration in the Scenic Quality Improvement Program (SQIP) and the Stateline/Ski Run Community Plan. All three units had identified areas of concern and the SQIP and the Stateline Community Plan outlined recommended scenic improvements to bring the units toward attainment status. Scenic improvements called for in the community plan included improving the architectural style of existing and new buildings, using natural appearing building material, using natural colors, consolidating driveway access, locating parking lots in the rear or side yards, incorporating landscaping treatments, sign compliance and the undergrounding of utility lines whenever possible.

Since the adoption of the Community Plan and Tourist Core Area Plan, numerous redevelopment, transportation and water quality projects have been implemented in the Tourist Core that have directly contributed towards scenic threshold gains. The ~~2006~~ TRPA Threshold Evaluations (Evaluations) noted that the majority of roadway units with improved threshold scores fall partially or wholly within ~~Community Plan areas~~the Area Plan. Removal of degraded structures, improvement in architectural quality of new and remodeled structures, increased landscaping, creation of open space and landscape drainage basins, installing curb, gutters and pedestrian sidewalks and consolidating highway curb cuts, and improved signage have all contributed to a transformation in many of these units. This improvement affects both travel route and scenic quality ratings.

Within Unit #32 and #33, the Evaluations noted that sidewalk/landscaping projects, erosion control and water quality improvement projects, land buy-out by public agencies that removed decrepit structures have without exception improved the sense of place and the functionality of a core community area that resulted in scenic threshold improvements. Specifically, the ~~Threshold~~ Evaluations noted an improvement in scenic indicators for man-made features and roadway distractions, as a result of the completion of the Lake Tahoe Vacation Resort, (formerly Embassy Suites ~~Vacation Resort~~, Heavenly Village, and Crescent V Shopping Center. The most recent Evaluation (2019) further noted continual improvements within the two units and ~~F~~future redevelopment efforts in the casino core and ~~on the lakeside of~~ along US Highway 50 ~~from the state line to Park Avenue~~ are expected to improve the scenic and visual quality of this unit dramatically. It should be noted that redevelopment of the Knights Inn property occurred after the 2019 Threshold Evaluation and when evaluated is expected to further improve scenic quality in Unit #33.

Along the US Highway 50 corridor from Park Avenue to Ski Run Boulevard the Evaluations also noted an improvement in scenic indicators for man-made features, roadway distractions, lake views and landscape views as a result of the completion of the Ski Run Marina Village, the linear park and the landscaped wildwood drainage basins. Moreover, the Evaluations noted improved lake views from US Highway 50 and Ski Run Boulevard as a result of improved site design and large setback ~~of~~ at the Lake Tahoe Vacation Resorts. ~~Although the 2011~~The Evaluations noted that between 2006 and ~~2011~~2019, relatively few development and redevelopment projects were carried out in Unit #33, those projects that were implemented, the Evaluations noticed improvements in architectural and design quality that incrementally ~~improves~~ improved the scenic resource threshold. Examples of these projects include the Ski Run Center, ~~and the~~ Valero Gas Station (now Chevron), and new landscaping and fencing installed along the frontage of Lakeland

Village. ~~both located at the intersection of US 50 and Ski Run Boulevard~~. The following photographs illustrate completed projects in the Tourist Core that have been identified by TRPA's Threshold Evaluations as contributing to improving the scenic and community design thresholds.

Ski Run Commercial Center Rebuild

Ski Run Commercial Center Screening

Valero Gas Station Rebuild (now Chevron)

McDonalds Rebuild

Lake Tahoe Resort Hotel (formerly Embassy Suites)

Linear Parkway

Heavenly Village Mixed-Use Project

Wildwood Basins and Children's Memorial

Lakeland Village

Unit #45 has also seen minor increase in its threshold score. The improvement is a result of implementation of the Ski Run Boulevard pedestrian improvements that improved the overall character of the roadway corridor resulting in an increase in the man-made feature and lake view threshold scores. Only a portion of Unit #45 is located within the Tourist Core, and therefore, the plan is not fully responsible for bringing Unit #45 into full attainment. However, ~~it's~~ it is expected that continual implementation of the SQIP at the project level and the installation of the pedestrian sidewalks along Pioneer Trail will contribute towards bringing this unit into threshold attainment.

Shoreline Unit #31 is currently in attainment for the Scenic Threshold. The 2011 Threshold Evaluation noted improvements along the shoreline as a result of the redesign and rehabilitation of El Dorado Beach (Lakeview Commons). The Evaluations also noted that additional improvement could be realized in the man-made environment if the Lake Tahoe Vacation Resort building improved color/material of the existing roof. Lake Tahoe Vacation Resort is currently upgrading their roof and siding to darker earthtone colors that will reduce the overall visual contrast and improve the view as seen from Shoreline Unit #31. The 2019 Threshold Evaluation did not note any changes in the landscape or built environment for his shoreline unit.

Scenic Quality Ratings (Scenic Resources 31.3, 32.1, 33.2, 45.1, 45.2, and 45.3) for the individual scenic resources located within the Roadway and Shoreline Travel Routes are all currently in attainment for the Scenic Threshold.

The current scenic threshold scores are provided in Table 3-6 below.

**TABLE 3-6: THRESHOLD TRAVEL ROUTE AND SCENIC QUALITY RATINGS**

| Unit | 1982 | 1991 | 1996 | 2001 | 2006 | 2011 | 2015 | 2019 | Need for Attainment |
|---|---|---|---|---|---|---|---|---|---|
| **31** | 9.0 | 9.0 | 9.0 | 9.5 | 9.5 | ~~10.~~ ~~5~~9.5 | 9.5 | 9.5 | +0. 0 |
| **32** | 13.0 | 11.0 | 11.0 | 11.5 | 13.5 | 13. 5 | 14.5 | 14.5 | +~~2. 0~~1.0 |

| Source: ~~2012~~ 2019 TRPA Threshold Evaluation | | | | | | | |

**Open Space:** Open space parcels in the planning area are primarily held in public ownership and generally include environmentally sensitive lands and lands designated for the treatment of stormwater runoff. The Tourist Core contains ~~15~~ 14.5 acres of land that is designated as open space. This accounts for ~~5.3~~4.8% percent of the total land in the Tourist Core.

**Cultural Resources:** Most of the Tourist Core has been subject to archaeological survey during the preparation of the Stateline/Ski Run Community Plan and during review of development projects. The archival review and field surveys resulted in no evidence of, potentially significant prehistoric, archaeological or Washoe cultural sites within the Tourist Core. However, several potential significant historic properties were identified in the ~~south shore~~South Shore in TRPA's historic resource database. Resources identified include Tahoe Meadows, located adjacent to the Tourist Core, which is designated as a Historic District by TRPA and is listed on the National Register of Historic Places. The Lapham Hotel (later Lakeside House or Lakeside Park) was situated at the present day intersection of Pioneer Trail and US Highway 50 (Koval, 1990). Modern development in the area has in all likelihood destroyed any archaeological evidence that might have remained. The McCombers Station was situated near the intersection of Pioneer Trail and Ski Run Boulevard; however, subsequent surveys during project review for the City of South Lake Tahoe Fire Station #1 and the Aspens at South Lake Affordable Housing projects did not turn up intact archaeological evidence of the site. The Lake Valley Lumber Pier and Railroad was located adjacent to and paralleled the present day Timber Cove Pier. Due to safety and navigation concerns the pier and railroad was demolished in the mid-1980s. In addition, the Pony Express Trail (California Trail) travels through the boundaries of the Tourist Core. The Pony Express was a mail service delivering messages and mail from St. Joseph, Missouri across the Great Plains, over the Rocky Mountains and the Sierra Nevada to Sacramento, California by horseback, using a series of relay stations. The route generally follows Pioneer Trail through the

Tourist Core to Yank's Station in Meyers and then roughly follows ~~U. S. Highway 50~~US Highway 50 to Placerville, California and Sacramento, California.

All Projects and activities affecting sites, objects, structures, or districts that have been designated, or are pending designation by TRPA, or are discovered are subject to TRPA Code of Ordinances Chapter 67, *Historic Resource Protection*, and subject to CEQA threshold of significance if it is found to have ~~.~~a substantial, or potentially substantial, adverse change in the physical conditions that would impact objects of historic or cultural significant.

## TRANSPORTATION

**Highways and Streets:** The highway and street network within the Tourist Core is largely dominated by US Highway 50 which provides access along the entire length of the plan area. US Highway 50 is the major east-west roadway facility connecting Sacramento, California and Carson City, Nevada, and is the main facility serving the ~~south shore~~South Shore area of Lake Tahoe. Along most of its 2 mile length within the Area Plan, US Highway 50 is a five-lane arterial with a continuous two-way left-turn median lane that transitions to dedicated left-turn pockets at major intersections. In addition to US Highway 50, there is an irregular network of arterial, collector, and local streets that provide the remaining framework for the overall roadway system. These secondary streets serve as the connection points to local neighborhoods as well as serving as some of the few points where access is available to Lake Tahoe and mountain-based recreation opportunities. The existing transportation and circulation facilities are shown in Figure 3- 7.

The combination of a relatively limited network of roads along with the high traffic volumes created during peak visitor periods emphasizes the importance of having a well-functioning transportation and circulation system. During peak hours, congestion affects the area. ~~Currently under consideration~~TRPA has approved ~~is~~ the US Highway 50/South Shore Community Revitalization Project, ~~a plan~~ to realign a portion of US Highway 50 within the plan area in an effort to minimize peak season traffic delays. Along with this highway realignment the proposal is to narrow the existing highway right of way in order to create a pedestrian friendly ~~main street~~Main Street, while helping achieve the TRPA's water quality and scenic ~~-~~thresholds. The City Council has adopted Resolution 2021-005 stating support for the Mainstreet Management Plan portion of the project and directing the City Manager to continue working with partner agencies to develop an alignment of US Highway 50 that preserves the Rocky Point neighborhood and does not require the use of eminent domain. ~~The proposed plan is currently titled the US 50/South Shore Community Revitalization Project. and is currently undergoing environmental review.~~

**Level of Service (LOS):** TRPA's existing Goals and Policies set standards for vehicle "level of service" (LOS). LOS is a qualitative measure that describes the operating performance of transportation facilities. For roadways, LOS is an indicator of traffic flow from the perspective of motorists based on factors such as speed, travel time, delay, freedom to maneuver, volume, and capacity. It is defined on a scale from LOS A, the least congested operating conditions, to LOS F, the most congested operating conditions.

The TRPA Goals and Policies and the Stateline Community plan require that peak period traffic flow not exceed LOS D for major roadways (arterials and collector routes), and signalized intersections shall be at LOS D. LOS E may be acceptable during peak periods, not to exceed 4 hours per day.

Within the Tourist Core the US Highway 50/Ski Run Boulevard intersection is operating at LOS D, and the US Highway 50/Park Avenue and Heavenly Village Way is operating at LOS C, while US

50 roadway segment is operating at LOS E during the summer Friday evening peak hour (TRPA, 2012).

As noted previously, TRPA LOS policies permit LOS E operations in urban areas not to exceed four hours per day. To determine whether LOS E operations occur for more than four hours, hourly traffic volume data were obtained from Caltrans' PeMS database for a Friday in August 2010 for several segments of US Highway 50. The analysis concluded that the US Highway 50 roadway segment, within the Tourist Core, currently operates within the TRPA LOS goals.

While a number of roadways currently operate at LOS D or E, the key intersections connecting those facilities generally operate at LOS C or better. This is because many of those intersections have been designed with additional travel lanes, channelized "free" right-turn movements, and other capacity enhancements to operations for this segment (TRPA, 2012a).

**Vehicle Miles Travelled (VMT):** The TRPA Project Impact Assessment (PIA) Guidelines describe requirements for development projects amendments in the Tahoe Basin. These guidelines reflect 2021 updates to the TRPA Environmental Thresholds, which involved replacement of the previous VMT-based nitrate deposition threshold with a new VMT-based threshold focused on reducing mobile source GHG emissions, reducing dependency on the personal automobile, and creating more sustainable communities. This update resulted in revisions to TRPA Code of Ordinances, Chapter 65, *Air Quality/Transportation,* to establish PIA requirements designed to implement the revised TRPA environmental threshold and ensure that it aligns with recent California legislative changes (i.e., Senate Bill 743, Public Resources Code Section 21099, and California Code of Regulations Section 15064.3) that have occurred relative to transportation impact analysis and the use of VMT as the primary metric.

Some project types, as outlined in TRPA Code Subparagraph 65.2.3.D and listed below, are presumed to result in a less-than-significant VMT impact absent any evidence to the contrary (TRPA 2021). The following screening criteria are potentially applicable to the project:

- Projects Generating Low VMT: Projects will be screened from further transportation analysis using the following vehicle miles travelled calculations:
    - 1,300 in-Basin VMT within town centers and the half-mile buffer around them.
    - 715 in-Basin VMT in all other areas.
    - Redevelopment Projects: For projects replacing an existing development or use, the net average daily VMT generation should be considered against the screening criteria. This requires calculating both existing average daily VMT and average daily VMT under the proposed project.

The TRPA Code requires that projects that involve more than 650 daily VMT must describe and evaluate the significance of all impacts in the Initial Environmental Checklist. A project that is not screened must analyze whether it meets the standard of significance.

On average there is 11 percent less VMT per capita in designated town centers, due to better connections to transit, sidewalks, and bicycle trails. Thus any development within the Tourist Core boundary is expected to reduce overall VMTs.

**Multi-Modal Transportation:** Ongoing and proposed development within the Tourist Core highlights the importance of improving area connectivity by providing multi-modal transportation

options to mitigate peak period traffic congestion along US Highway 50 in the project area. Public transportation options, bike paths and sidewalks are all integral to establishing a comprehensive multi-modal system that promotes pedestrian safety and access to ensure that the area will be a safe, convenient, and an attractive place to visit. Currently public transportation options along US 50 include the South Shore fixed-route service (~~Blue Go Buses~~Tahoe Transportation District)~~, the summer seasonal Nifty 50 Trolley~~, Lake Link, and ~~winter seasonal ski shuttles and~~ commuter bus service to ~~Carson City and~~ the Carson Valley. In addition, there are two transit centers, one located within the Tourist Core and one located just outside. The Stateline Transit Center is located adjacent to the Heavenly Gondola in the Tourist Core and the Kingsbury Transit Center is located at the base of SR 207 in Nevada.~~.~~ These services and facilities are designed to provide mobility options to both local residents and visitors by connecting the outlying residential areas with employment, resort and entertainment facilities.

While US Highway 50 serves as the primary vehicular route through the plan area, there is a need for a continuous pedestrian infrastructure and bicycle lanes to encourage the use of alternative forms of transportation. US Highway 50 currently has a Class I bike path that extends from Ski Run Boulevard to the intersection of US Highway 50 and Pioneer Trail which then connects to an existing pedestrian sidewalk that extends the length of US Highway 50 to the state line on the mountain side. The portion of pedestrian sidewalk that runs on the mountain side of US Highway 50 from Heavenly Village Way to the state line is designed to meet Class I ~~shared~~ shared-use path standards. In addition, a Class I ~~shared~~ shared-use path extends from Ski Run Marina along Ski Run Boulevard to the intersection of Pioneer Trail which then connects to a Class II bike lane that extends to the intersection of Pioneer Trail and US Highway 50. Other Class II bike lanes in the plan area include a short segment along Heavenly Village and a 1.95 mile segment that extends westward along US Highway 50 from the intersection of Ski Run Boulevard out of the plan area to just past Al Tahoe Boulevard. In general sidewalks are not adequately sized to accommodate the pedestrian demand and their location, in most places, is directly adjacent to the highway which limits the potential for creating attractive and enjoyable places to walk. One exception exists in the vicinity of the Heavenly Village area, where the sidewalks are buffered from the highway with landscaping and sidewalk widths are up to 26 ~~'~~feet. This area is also one of the primary access points to Heavenly Mountain Resort via the gondola.

**Parking Facilities:** Most private businesses located within the Tourist Core provide off-street parking for employees and patrons. The majority of businesses provide at grade paved lots with the exception of two structured parking lots. One is located on Ski Run Boulevard and provides parking for the Lake Tahoe Vacation Resort and the second is located at Heavenly Village and is owned by the City of South Lake Tahoe. In most cases, newer facilities have incorporated landscaped islands and berms to reduce the visual and scenic impact of large expanses of asphalt. In addition, on-street parking is permitted on local streets on the lakeside of US Highway 50 between Park Avenue and the state line. Parking is limited to two hours and is enforced by the City.

## RECREATION

Access to year-round recreational facilities and activities within the Tourist Core or within close proximity includes: beach recreation, boating, golfing, skiing, snowmobiling, hiking and biking.

Public access to the lake for boating and beach recreation is provided at Ski Run Marina, Lakeside Marina and Timber Cove Pier. Forest lands managed by the US Forest Service, located nearby at Rabe Meadow, also provide access to the lake and beach recreation at Nevada Beach as well as walking, bike riding and passive outdoor recreation opportunities. Access to hiking, equestrian and mountain biking trails are directly accessible from the Tourist Core through the Van Sickle Bi-State Park, which connects to the Lake Tahoe Rim Trail. Two publicly accessible golf courses are located adjacent to the Tourist Core. They are the privately owned Edgewood Golf Course and the City

owned Bijou Golf Course. Access to winter sport activities is provided by Heavenly Resort, which is accessible from Ski Run Boulevard or directly from Heavenly Village at Stateline via the gondola. During the summer months, Heavenly Ski Resort provides numerous summer recreation opportunities via the gondola.

Other informal recreation activities, such as biking, jogging and walking, are provided by an extensive multi-modal transportation network that includes ~~shared~~ shared-use paths, pedestrian sidewalks and Class II bike lanes that provides access within the Tourist Core to many of the recreation facilities mentioned above. In addition, the recreation facilities are accessible via public transit, which is provided by ~~Blue Go~~Tahoe Transportation District.

Figure 3-8 depicts recreation facilities and recreation access opportunities within the Tourist Core and those within close proximity.

## PUBLIC SERVICES AND FACILITIES

Within the Tourist Core Area Plan, the following utility services are provided:

**Water:** South Tahoe Public Utility District (STPUD) and Lakeside Park Association provide water service to the Tourist Core.

STPUD is a California Special District established in 1950. The 27,000-acre service area encompasses the ~~south shore~~South Shore area of Lake Tahoe from Emerald Bay on the west, Christmas Valley in the south, to the California-Nevada state line on the east. The California portion of the Lake Tahoe Basin is allocated a total annual surface water and groundwater diversion of 23,000 acre-feet per year (AFY). Of this, the California State Water Resources Control Board (SWRCB) allocated a total maximum of 12,493 AFY for use within the STPUD service area. STPUD currently owns a total maximum allocation of 9,528 AFY, and the district projects that its available water supplies will remain at 9,528 AFY through 2030 (STPUD, 2007 & CSLT, 2011).

Water demands are projected by applying the California Department of Finance's 50-year population projection growth rate for El Dorado County of 0.37% to the 2020 water demand. As of 2020, the District has 116 unmetered connections. The District is installing meters on all connections and intends to be fully metered by 2025. Since 2009, when the District initiated metering, water usage per account has decreased almost 20% from 0.498 AFY per account in 2009, when six percent of the accounts were metered, to 0.406 AFY per account in 2020, when 96% of the accounts were metered. Metering has been an effective means of conservation; these savings are likely a function of the metering and the ability for District staff to be able to communicate directly to customers regarding water use and leaks, as well as provide education and resources to increase water conservation (STPUD 2020).

According to STPUD's ~~2005~~ 2020 Urban Water Management Plan, water demands within the service area will increase from an estimated ~~7,600~~5,778 AFY in ~~2010~~ 2020 to approximately ~~8,400~~6,338 AFY in ~~2030~~2045. This is a projected increase of only ~~800~~ 560 AFY, or ~~10. 5~~8.8 percent, over the ~~20~~25-year period and is still well within STPUD's existing 9,528 AFY (STPUD, ~~2007~~ 2020~~& CSLT, 2011~~). Due to TRPA's strict growth controls as well as the low number of remaining vacant parcels within the STPUD service area (approximately 3,000); it is unlikely that the maximum water diversion allocation for the STPUD service area will be exceeded as a result of development within the Tourist Core.

Lakeside Park Association (LPA) was incorporated in 1938 to provide water and recreation facilities to the first subdivision ~~at~~ in South Lake Tahoe, which ~~subdivision~~ had been established

in 1909. LPA, a non-profit corporation, owns and operates a Mutual Water District whose franchise area serves the neighborhood now located in the Tourist Core between US Highway 50 and Pine Boulevard and between Stateline Avenue and Park Avenue, as well as the neighborhood adjacent to the Tourist Core from Azure Avenue to the Lake and from Park Avenue to the state line. Lakeside Park Association service covers potable water as well as interior and neighborhood fire suppression.

LPA serves the entire area within the LPA Mutual Water District with the exception of 6 parcels and 6 fire hydrants which were or are served by STPUD. Current plans to develop the Chateau Project at the corner of US Highway 50 and Stateline Avenue encompass 2 parcels originally served by LPA and 4 parcels served by STPUD. ~~,~~ All but 2 of the remaining parcel's water service will be the responsibility of LPA upon completion of the project.

The LPA obtained water rights from SWRCB to pump approximately 1 million gallons per day (mgd) of water from Lake Tahoe. LPA draws water from Lake Tahoe ~~thru~~ through an intake line from a point 2,300 feet from the shore line to a depth of 33 feet. The water is transferred from a pump station located at the North end of Lakeside Park Beach on the shoreline of Lake Tahoe to the treatment plant which includes a 220,000 gallon treatment/storage tank located on Pine Boulevard located within the Tourist Core. The water treatment system can supply up to 700 gallons per minute (gpm) with a 37,000 gallon reserve storage for consumption using a combination of surface and ground water. LPA can also supply ground water from a well (Well #3) that is located next to the storage tank. ~~An~~ A ~~10 inch~~10-inch inter~~-~~tie exists with STPUD should either system require additional water supplies during an emergency.

Lakeside's current surface water pumping rate is ~~approximately~~ two pumps at ~~200~~ 700 gpm as a result of the reduced number of lodging and commercial customers from the Project 3 redevelopment. Lakeside also pumps groundwater from well #3 at a rate of approximately 350 gpm during the summer months and during peak usage hours (LPA, 2013). LPA's average daily flow is 124,300 (gallon per day) gpd ~~-~~with a throughput capacity of 1 million gallons. All the flow rates calculated above are for potable quality water. In the event of a major fire the rate can be increased further. LPA Mutual Water District has the capacity to serve the future development in its franchise area by a factor of ~~8~~ eight (LPA, 2013). Since only a small portion of the Lakeside community is located within the Tourist Core, and it is primarily built out, and adequate capacity exists, it is unlikely that the maximum water diversion allocation for the LPA service area will be exceeded as a result of development within the Tourist Core.

**Wastewater**: South Tahoe Public Utility District provides wastewater treatment service to those areas of the Tahoe Basin in El Dorado County, including the entire City of South Lake Tahoe.

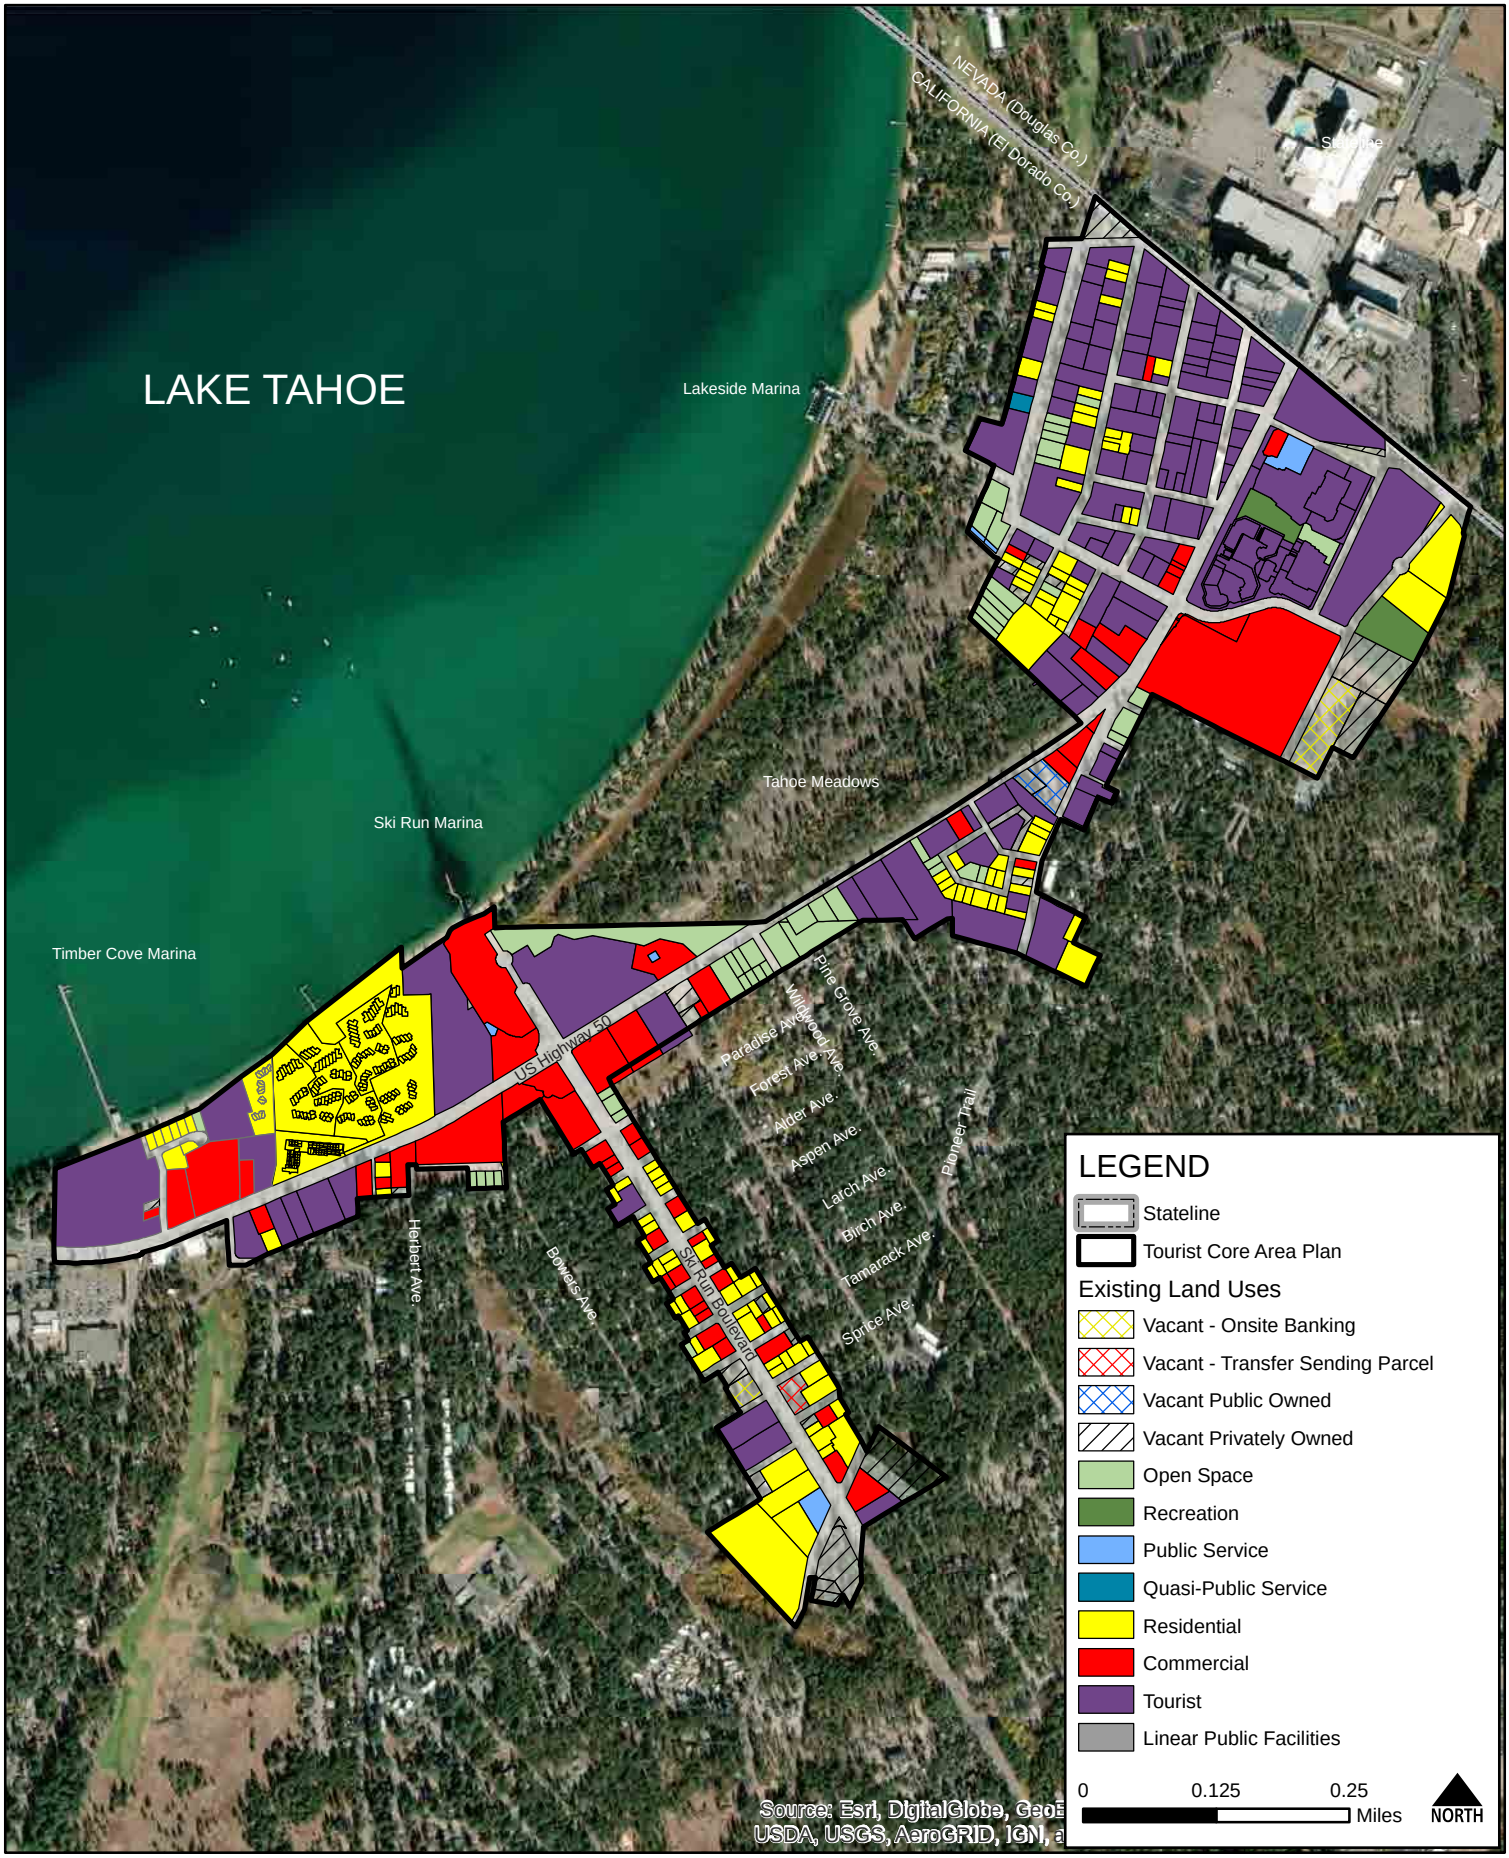
STPUD's wastewater collection/treatment/recycling processes are a 7.7 million gallon per day (mgd) advanced secondary operation serving approximately ~~17~~18,000 customers (STPUD, ~~2007~~2020). STPUD operates 22 pump stations in its service area including ~~2~~ two located within the Area Plan: Ski Run and Bijou. STPUD's wastewater treatment plant ~~has a 7.7 mgd capacity and~~ treats about 1.8 billion gallons of wastewater annually with an average flow rate of 4.0 mgd (STPUD, ~~2013~~2020).

Because the STPUD wastewater treatment plan currently exhibits excess capacity of approximately ~~3.7~~4.0 mgd on average dry days and 1.7 mgd on peak dry days, the limited amount of anticipated development or the redevelopment of existing commercial or residential uses in the Tourist Core is not expected to require additional treatment capacity at the wastewater treatment plant.

**Solid Waste**: South Tahoe Refuse (STR) provides solid waste removal service in the Tourist Core. STR has a franchise agreement with the City of South Lake Tahoe for the collection and

transportation of solid waste to processing and/or disposal facilities. Solid waste is delivered to the Lockwood Regional Landfill in Storey County, Nevada. The Lockwood Regional Landfill ~~has a remaining capacity of 32 million cubic yards (approximately 22 million tons) with plans to expand the total capacity from 64.8 million cubic yard to 302 million cubic yards (approximately 204 million tons) (TRPA, 2012)~~covers 856 acres and has a total waste volume of 302 million cubic yards (NDEP, 2013). In 2016, the landfill accepted an average of 2,960 tons of solid waste per day. The volume of waste conveyed to the landfill from California communities accounts for 7.5 percent of municipal solid waste. The landfill has a remaining capability of 267 million cubic yards and an estimated closure date of 2150 (NDEP, 2017) The growth permitted by the adopted TRPA Regional Plan is anticipated to increase solid waste by 111,600 tons per year ~~basin~~ basin-wide and only a fraction of that total would be generated in the Tourist Core. Given the substantial existing capacity of ~~22~~ 267 million ~~tons~~cubic yards, and the planned expansion of the landfill, the Tourist Core will be adequately served in the future.

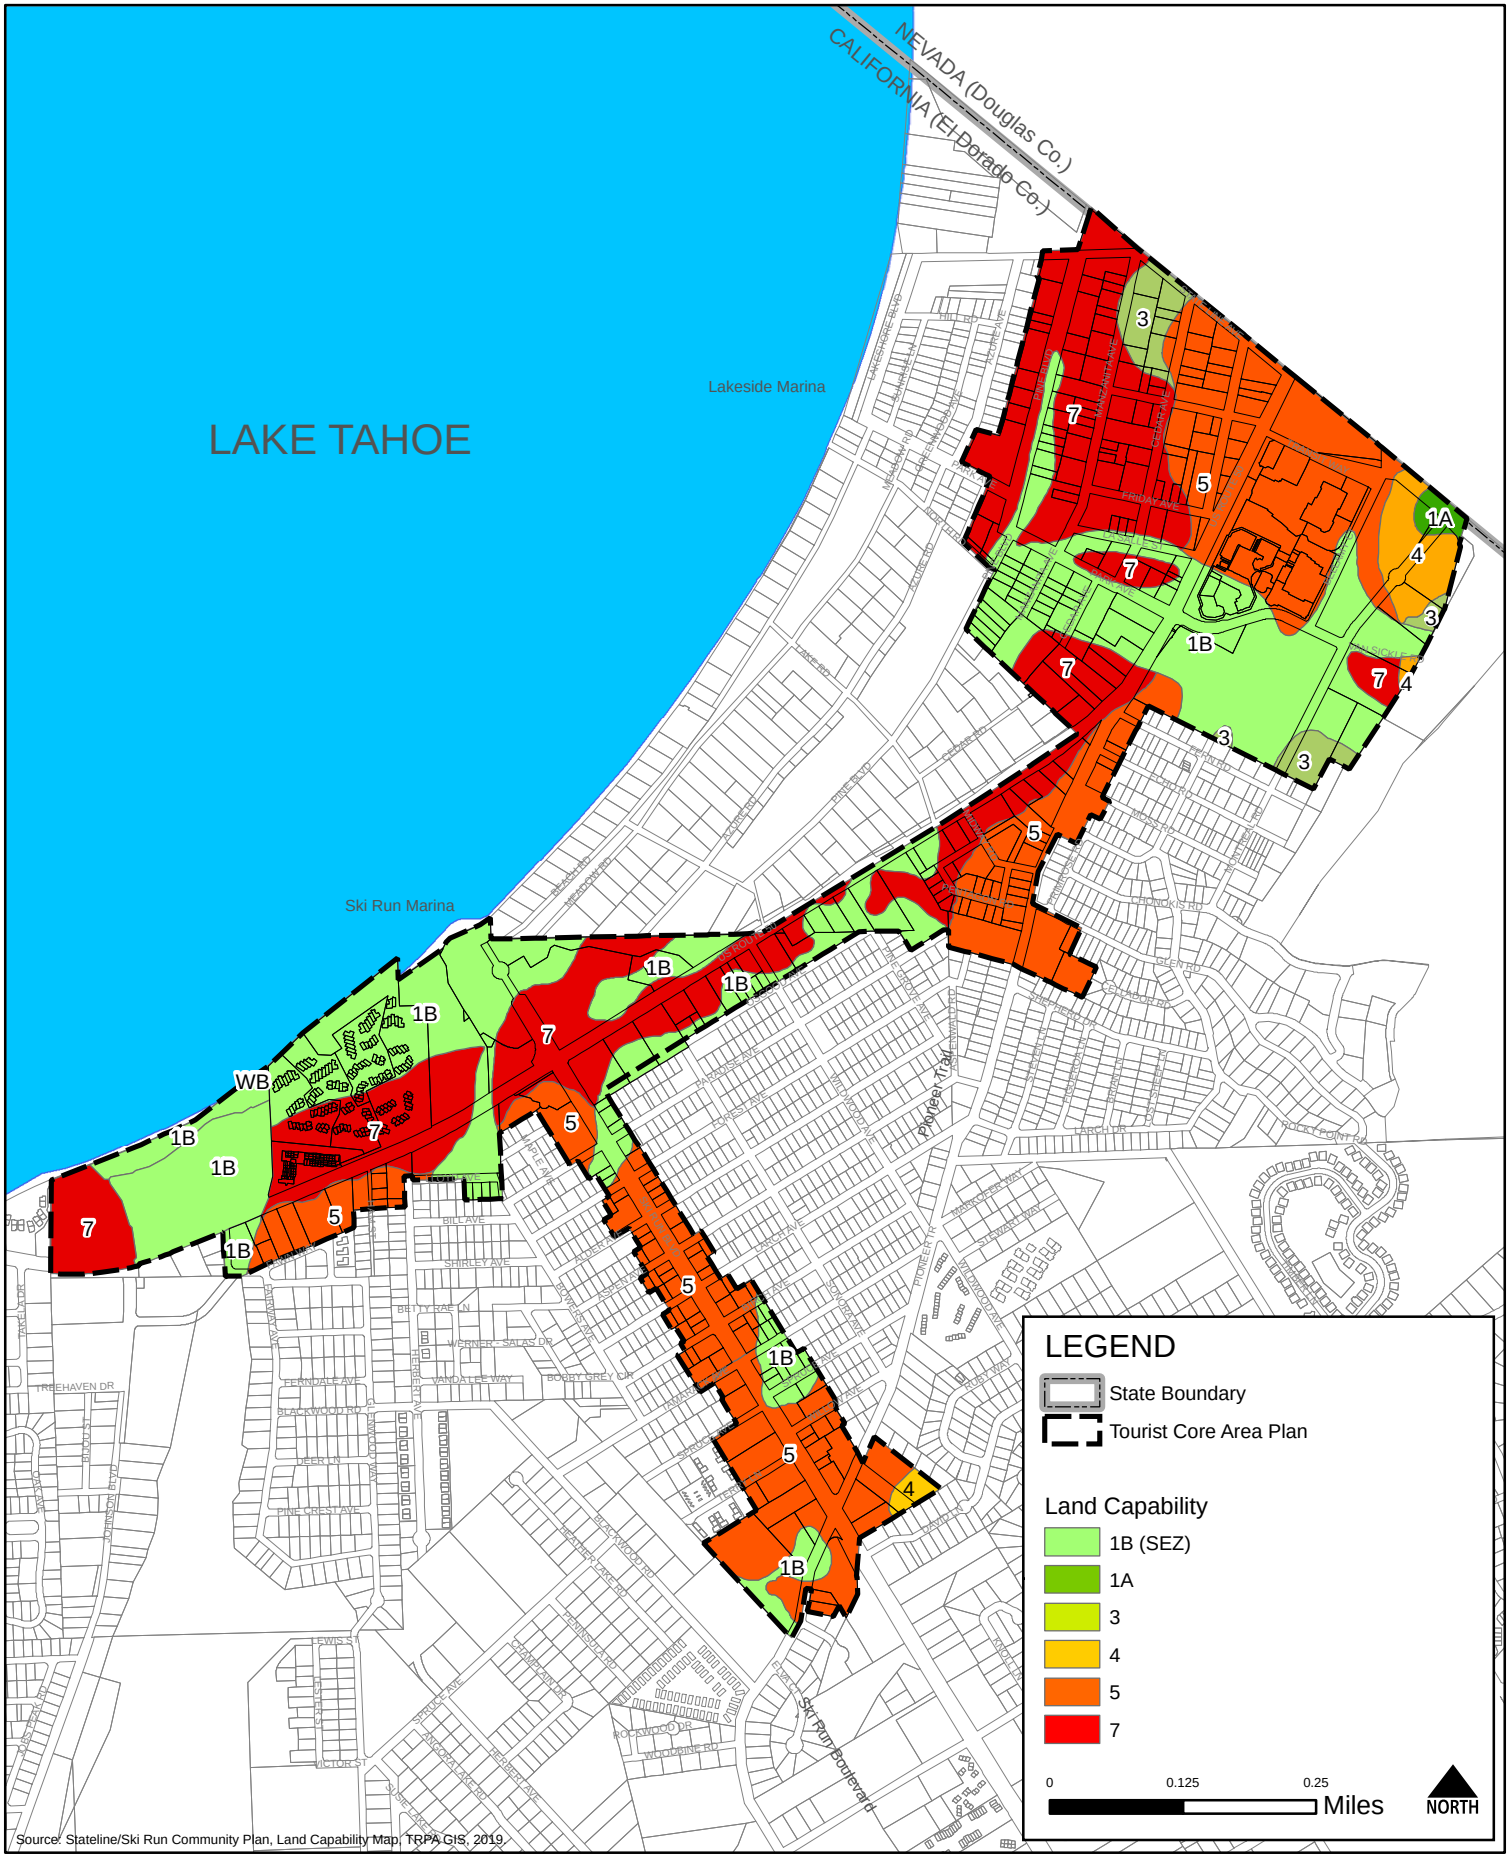
**Electricity Services**: Liberty Utilities provides electrical service to the Tourist Core. Liberty Utilities has one major transmission line rebuild on the north shore in the planning phases and a variety of smaller projects underway to ensure system wide reliability for its planning horizon. Liberty Utilities claims to have enough excess capacity to accommodate any future development anticipated in the adopted TRPA Regional Plan (TRPA, 2012).



**Gas Services:** Southwest Gas provides natural gas service to theTourist Core. Southwest Gas has experienced around 1 percent growth per year in the Lake Tahoe Area. Although it has a number of projects underway to replace old polyvinyl chloride (PVC) main lines, it has no plans for substantial expansion of the existing system, which it believes can accommodate growth anticipated in the adopted TRPA Regional Plan (TRPA, 2012).

**Telephone and Cable Services:** AT&T and Charter Communications provide telephone and cable services to the Tourist Core.

**City of South Lake Tahoe Facilities**: Fire Station #1 is located at 1252 Ski Run Boulevard. This facility is owned by the City and is one of four that serve South Lake Tahoe. This station services the Ski Run and Stateline area with response time between three and five minutes. The Fire Department provides local ambulance service, and has mutual aid agreements with other fire and emergency response agencies in the Tahoe Region.



The City's General Plan does not identify any new locations for new fire protection facilities within the Tourist Core. However, the General Plan does identify requirements for future development to ensure adequate fire protection services, which could result in new or expanded facilities. It is expected that new development in the Tourist Core will increase demand for fire protection; ~~however~~and, implementation of fire protection provisions of the General Plan would ensure that existing fire protection services address impacted~~s~~ areas ~~addressed~~.

# Section 4
# VISION AND GUIDING PRINCIPLES

By virtue of its location, in proximity to Lake Tahoe with access to excellent skiing facilities, beach recreation and gaming in Nevada, the Stateline/Ski Run area is one of the most popular destinations within the Lake Tahoe Region. The Tourist Core Area Plan reflects the City of South Lake Tahoe's and the community's effort to rekindle the economic vitality of the Stateline/Ski Run area. A fundamental cornerstone of this Area Plan is the conviction that Stateline/Ski Run area should be a regional tourist destination and recreation center. To accomplish this vision, guiding principles, goals and policies encourage diversification of tourist, recreation and commercial attractions to create the high quality development expected in a destination resort community.

## 4.1 VISION STATEMENT

The area is envisioned as a central destination that provides full services for tourists and permanent residents and offers unique experiences related to the many outdoor recreation possibilities that surround the core area. The revitalization of the South Shore will catalyze the transformation from a failing and vestigial gaming economy into a sustainable outdoor tourism and recreational destination by incorporating active streetscapes, shopping, entertainment and outdoor dining opportunities. In addition, transit and alternative travel will provide an essential part of the envisioned destination resort experience, resulting in significant environmental gain and improved scenic quality.

## 4.2 GUIDING PRINCIPLES

Guiding principles for this Area Plan are derived from the South Shore Vision Plan and the existing adopted Stateline/Ski Run Community Plan. The following principles of the Area Plan create the foundation for a more ~~a~~ sustainable, economically prosperous, communal and environmental future:

- Include transit and alternative travel modes as an essential part of the destination resort experience.
- Implement transportation improvements that provide for both vehicular and pedestrian circulation.
- Create complete streets that allow for multiple uses including automobiles, bikes, and pedestrians.
- Implement environmental improvements to upgrade the natural and built environment.
- Establish a diversity and concentration of mixed-uses that create a strong, lively market.
- Establish gateway mixed-use resort nodes with a strengthened recreational presence.

- Establish the areas between the resort nodes on US Highway 50 as open space areas (remove old buildings and restore stream environment zones and open space).
- Establish a ~~low~~ low-speed Main Street in the center.
- Surround the resort center with visual open space.
- Establish a physical environment that creates a distinct sense of place.
- Establish an animated street for retail, dining, entertainment and events.
- Accomplish urban ~~place~~ place-making through the creation of interesting public gathering places.
- Locate recreation uses in close proximity to the tourist accommodation bed base and include a diverse array of outdoor activities.
- Create ~~high~~ high-quality accommodations to replace the obsolete properties.
- Originate critical access to Lake Tahoe from the resort center and visually and physically make the lake central to the resort experience.
- Develop new programs and facilities as catalysts to improve market attraction and improve area attractions (i.e., conference, indoor and outdoor theater, visitor center, museum, etc.).

These principles are incorporated into the land use districts, development and design standards and other sections of this Area Plan.

## 4.3 GOALS

In addition to the principles established above, the goals of the Tourist Core Area Plan are:

- Reduce dependency on the automobile and improve the movement of people, goods, and services within the Tourist Core and Tahoe Region consistent with the economic and environmental goals of the Area Plan.
- Maintain a balance between economic ~~health~~ and environment health by correcting past deficiencies in land use and being responsive to the needs and opportunities of the Tourist Core.
- Preserve, enhance and create additional high quality recreational opportunities and experiences within the Tourist Core.
- Ensure that the design elements of new, remodeled, and rehabilitated development are compatible with the scenic, recreation, and community values of the Tourist Core Area Plan and that physical development is consistent with the environmental and ecology of the Tahoe Region.
- Public services and facilities should be upgraded to support existing and new development.
- Preserve existing residential uses and increase multi-family housing options in the area plan.

# Section 5
# LAND USE
# AND COMMUNITY DESIGN

This section sets forth goals and policies for both land use and community design for the Tourist Core Area Plan.

## 5.1 GOALS AND POLICIES

This subsection outlines land use goals and policies for the Tourist Core Area Plan. These goals and policies implement the vision and guiding principles discussed earlier.

**Goal LU-1 Land Use**
Continue to shape the Tourist Core into a pedestrian-oriented destination center for tourist and permanent residents that provide high quality services, accommodations, and recreational experiences.

- **Policy LU-1.1**
  Reinforce the Tourist Core as the primary visitor and tourist district in South Lake Tahoe.

- **Policy LU-1.2**
  Promote the revitalization of the Tourist Core by encouraging a mixed land use pattern that combines tourist accommodation, residential, commercial, public facilities, and public spaces to serve visitors~~-~~ and locals alike.

- **Policy LU-~~-~~1.3**
  Create distinctive, connected, and walkable districts that have a strong sense of identity.

- **Policy LU-1.4**
  Animate streets by allowing uses, such as retail, entertainment, special events, and outdoor dining and seating, oriented towards the sidewalk.

- **Policy LU-1.5**
  Continue to promote a vibrant ~~pedestrian~~ pedestrian-oriented center that includes retail, entertainment, tourist accommodation and residential uses, and community activity centers, such as a public plaza that serves the needs of visitors and residents.

- **Policy LU-1.6**
  Continue to develop Ski Run Boulevard as a multi-modal, mixed-use corridor with a streetscape that provides identity to the street and allows for a rich mix of uses including, but not limited to, services, public facilities, recreation, entertainment, retail, restaurants, tourist accommodation, residential and office spaces.

- **Policy LU-1.7**
  Create a connection to the casino core in Nevada with a seamless pedestrian street environment on both sides of the US HighwayHwy 50 and across the state line.

- **Policy LU-1.8**
  Designate areas within the tourist center and mixed-use corridor districts as a Special Events Area allowing for temporary events and activities to increase pedestrian and economic activity in these areas. All other temporary events and uses proposed outside these areas shall require a temporary use permit.

- **Policy LU-1.9**
  Encourage the operation of Farmers' Farmer's and Outdoor Markets in the Tourist Center and Mixed-Use Corridor districts.

- **Policy LU-1.10**
  Allow for the diversification of land uses within the Tourist Core to promote mixed uses and increase commercial, recreation, and tourist business opportunities to strengthen the south shore'sSouth Shore's economic base.

- **Policy LU-1.11**
  All proposed new uses located within the Heavenly Village District requires prior approval by the Park Avenue Development Management Association (PADMA) Board of Directors.

- Policy LU-1.12. Explore a focused pedestrian--oriented sustainable tourism destination in SLTSouth Lake TAhoe called the "Lake District," from Lakeview to Lakeside. Ensure pedestrian and bike connectivity between the Tourist Core and the Lake District.

-

**Goal LU-2 Community Design**
Ensure that the design of new, remodeled, and rehabilitated development improves the community character of the Tourist Core through appropriate site and building design standards that promotes a high quality physical environment that establishes a distinct sense of place.

- **Policy LU-2.1**
  Create an intriguing built environment by promoting the use of architectural themes in new development and redevelopment that complement the surrounding natural beauty. Encourage the use of pitched roofs, natural colors, and natural materials or natural appearing materials such as rock and wood.

- **Policy LU-2.2**
  Maximize views of the Lake and surrounding mountain ridgelines from U.S. US Highway 50 and public gathering places through appropriate site and building design.

- **Policy LU-2.3**
  Establish pedestrian-scaled and strategically-placed lighting along sidewalks and multi-use paths that promotes pedestrian safety and comfort and enhances architectural and site design concepts. Prevent unnecessary and intrusive lighting that detracts from the night time dark skies.

- **Policy LU-2.4**
  Locate parking so that it is not a dominant visual feature of the pedestrian environment by

locating parking to the side or rear of buildings. Encourage underground parking and shared parking where appropriate.

- **Policy LU-2.5**
  All projects within the Tourist Core that propose to change an exterior façade or site design shall require City Design Review.

- **Policy LU-2.6**
  The maximum density for parcels developed as part of the South Tahoe Redevelopment Demonstration Project No. 1 shall be subject to TRPA Code Section 31.4.3.

**Goal LU-3 Housing**
Provide for adequate housing in close proximity to the Casino Core, Heavenly Village and the Crescent V Shopping Center.

- **Policy LU-3.1**
  Promote ~~multi-family and condominium~~and incentivise residential units to be constructed as part of ~~a~~ mixed-use ~~development~~projects.

- **Policy LU-3.2**
  Promote density incentives for affordable and workforce housing projects. Continue to coordinate with TRPA to incorporate state law regarding density bonus within the framework of the Regional Plan.

- **Policy LU-3.3**
  Encourage and coordinate with employers to develop workforce housing.

- **Policy LU-3.4**
  Promote ADUs throughout the area plan and within adjacent residential neighborhoods.

- **Policy LU-3.5**
  Require mitigation for the loss of any residential units due to conversion or demolition.

- **Policy LU-3.6**
  Establish a minimum density for the Tourist Core Area Plan.

- **Policy LU-3.7**
  Coordinate with TRPA to incorporate state law regarding the reasonable accommodation procedures within the framework of the Regional Plan. This should include additional land coverage for necessary site improvements for ADA accessibility.

- ~~**Policy LU-3.2**~~
  ~~Promote home ownership by allowing for condominium units in TSC-NMX district.~~

**Goal LU-4 Coordination**
Coordinate with local, ~~State~~ state and federal agencies and private entities to develop Area Plans and codes that conform to the TRPA Regional Plan and City General Plan.

- **Policy LU-4.1**
  Coordinate with Douglas County on the South Shore Area Plan and ensure compatible land use strategies and street design standards within the Tourist Core Area Plan.

- **Policy LU-4.2**
  Coordinate with El Dorado County and Heavenly Resort as appropriate to ensure any Area Plan anticipated for the California Base Resort Recreation District is compatible and integrated with the goals, policies and implementation strategies of the City's General Plan and the Tourist Core Area Plan.

**Goal LU-5 Sustainability**
Create a sustainable and energy-efficient built environment.

- **Policy LU-5.1**
  Incorporate green building and increased energy efficiency components into the design, construction, and operation of new construction and major renovations.

**Goal LU-6 Transfer of Development**
To focus development in centers in order to maximize incentives and create transit-, bicycle-, and pedestrian-oriented places that serve the needs of both residents and visitors.

- **LU-6.1**
  Encourage and allow for the revitalization and consolidation of development within centers by encouraging the transfer and conversion of residential units of use, tourist accommodation units –and commercial floor area pursuant to TRPA Code Chapter 51.

**Goal LU-7 Noise**
To reduce exposure of harmful and annoying effects of excessive noise and ground-bourne borne noise levels within the Tourist Core.

- **Policy LU-7.1**
  The City shall require the mitigation of new transportation noise sources to the levels shown in Table HS-2 of the City General Plan at all outdoor activity areas and interior spaces of existing noise-sensitive land uses.

- **Policy LU-7.2**
  The City shall require an acoustical analysis as part of the environmental review process when noise-sensitive land uses are proposed in areas exposed to existing or anticipated exterior noise levels exceeding the levels shown in Table HS-1 and HS-2 of the City General Plan, so noise mitigation may be included in the project design. All acoustical analysis shall:

  - Be the financial responsibility of the applicant;
  - Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics;
  - Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions and the predominant noise sources; and
  - Estimate existing and projected cumulative (20 year20-year) noise levels in terms of Ldn or CNEL and/or the standards shown in Table HS-1, and compare those levels to the policies in this section;
  - Recommend appropriate mitigation to achieve compliance with the adopted policies and standards in this section, giving preference to proper site planning and design over mitigation measures which require the construction of noise

barriers or structural modifications to buildings which contain noise-sensitive land uses;

- Estimate noise exposure after the prescribed mitigation measure(s) has been implemented; and
- Describe a post-project assessment program that could be used to evaluate the effectiveness of the proposed mitigation measures.

- **Policy LU-7.3**
  The City shall require an analysis of potential vibration impact be conducted for all construction activities that include impact equipment and activities such as pile driving, soil compaction, or vibratory hammers that occur within 200 feet of existing structures. The analysis will address the potential for adverse vibration levels based on the criteria contained in Table 4.6-12 of the City General Plan ~~Draft~~ Final EIR. The City will ensure that construction operations are designed to avoid or mitigate ~~for~~ vibrations above 0.02 inches/second (0.5 mm/second).

- **Policy LU-7.4**
  The City shall incorporate measures to ensure noise/land use compatibility on a project-specific basis. Such measures may include, but are not limited to, the following:
  - Construction of barriers, berms, and/or acoustical shielding;
  - Establishment of setback requirements for new development in specific areas exposed to roadway noise;
  - Noise-reducing acoustical treatment of existing and proposed buildings; and
  - Use of building layout and project features for noise-screening purposes.

## 5.2 LAND USE AND ZONING

This section describes planned land use zoning districts for the Tourist Core Area Plan.

Pursuant to TRPA's Regional Plan, Chapter 13 of the TRPA Code of Ordinances, the City of South Lake Tahoe is partnering with TRPA to prepare an Area Plan that conforms to the TRPA Regional Plan Conceptual Land Use Map and the City of South Lake Tahoe General Plan Land Use Diagram. The Tourist Core Area Plan will serve as the regulating plan with specific zoning districts and specific regulations that establish permitted and conditional land uses, and development standards that establish regulations for maximum density, building setbacks, and building height.

### TOURIST CORE AREA PLAN

The zoning districts for the Tourist Core Area Plan are Tourist Center Core (TSC-C), Tourist Center Mixed-Use (TSC-MU), Tourist Center Mixed-Use Corridor (TSC-MUC), Tourist Center Gateway (TSC-G) and Tourist Center Neighborhood Mixed-Use (TSC-NMX). The location and boundaries of the zoning districts are depicted in Figure 5-1.

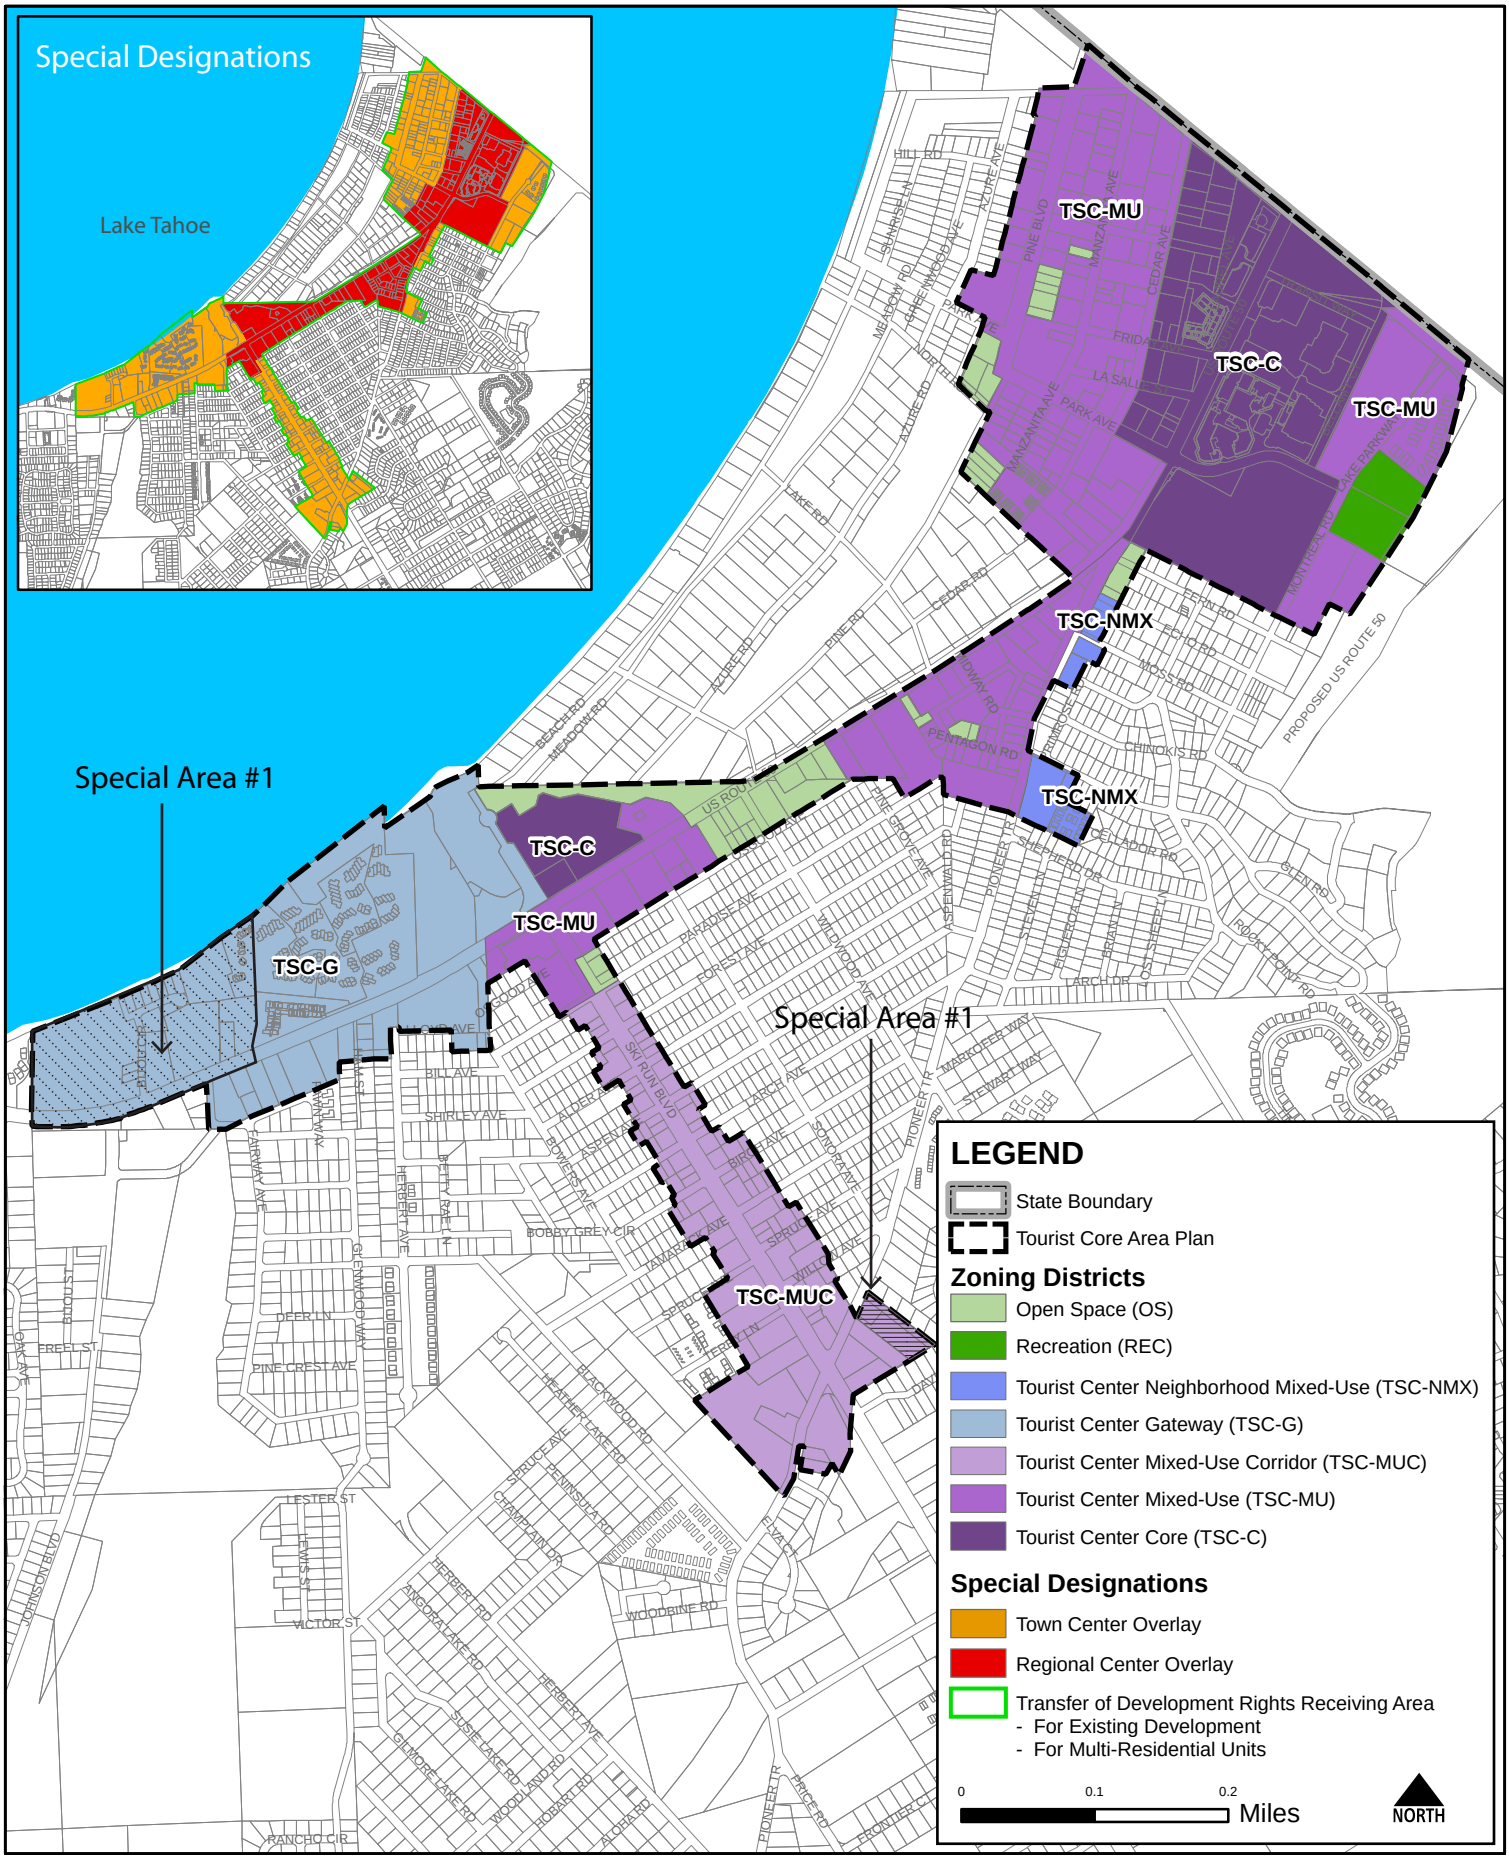
**Tourist Center Core (TSC-C)**
This district is the activity center of the Tourist Core Area Plan and intended to become a commercial, tourist and recreation destination with public gathering places, animated streets and intensive retail activity meeting the needs of both tourists and residents of the ~~south shore~~South

Shore. This district allows for horizontal and vertical ~~mixed~~ mixed-use projects with a focus on street-level active storefronts encouraging pedestrian activity. The sub-district contains complete streets that support multi-modal transportation options. Permissible uses include tourist accommodation, retail commercial, entertainment, restaurants, recreation and mixed-use residential development.

**Tourist Center Mixed-Use (TSC-MU)**
This district is intended to primarily provide for tourist accommodation uses, with supporting retail commercial uses to meet the regional demand for quality accommodation in the Stateline area in a manner compatible with a pedestrian environment.

**Tourist Center Mixed-Use Corridor (TSC-MUC)**
This district is intended to support Ski Run Boulevard as a multi-modal, mixed-used corridor with a wide array of uses that encourage pedestrian activity. Permissible uses include a rich mixture of employment services, professional offices, commercial, public service, recreation, tourist accommodation and residential buildings organized around an aesthetically-pleasing pedestrian environment.

**Tourist Center Gateway (TSC-G)**
This district is intended to create an attractive mixed-use commercial and tourist accommodation corridor that provides a welcoming gateway to the South Shore area. The physical form varies to reflect the mixed-use character of the gateway corridor and to transition to the more intensive Tourist Center Core District. Permissible uses include tourist accommodation, residential, commercial, restaurants, and recreation.



**Tourist Center Neighborhood Mixed Use (TSC-NMX)**
This district is intended to allow a variety of residential and non-residential uses to encourage a greater mix and intensity of uses in a pedestrian scaled environment that is appropriate to its neighborhood context and adjacent residential uses. Permissible uses include commercial, public service, professional offices, as well as residential and tourist development.

**Recreation (REC)**
This district is intended to allow a variety of recreation uses such as dispersed recreation and parks. Permissible uses include day use areas and group facilities.

**Open Space (OS)**
This district is intended to preserve land in its present use that would: 1) conserve and enhance natural or scenic resources; 2) protect stream~~s~~ environment zones, sensitive lands, water quality or water supply; 3) promote soil and habitat conservation; 4) enhance recreation opportunities; and/or 5) preserve visual quality along highways, roads, and street corridors or scenic vistas. The land is predominantly open, undeveloped~~,~~ or ~~in a~~ lightly developed, and is suitable for any of the following: natural areas, wildlife and native plant habitat; erosion control facilities, stream environment zones, stream corridors; passive parks; and/or trails for non-motorized activities.

## PERMISSIBLE USES, DEVELOPMENT AND DESIGN STANDARDS

The permissible use list, development standards and design standards for all zoning districts in the Tourist Core Area Plan are found in Appendix C of this Plan.

CITY OF SOUTH LAKE TAHOE

Figure 5-1
Zoning Map
April 1153

# Section 6
# TRAFFIC AND CIRCULATION

This section sets forth goals and policies for transportation and recommends strategies to enhance mobility patterns by enabling users to satisfy their travel needs while supporting the area's environmental, social, and recreational goals.

## 6.1 GOALS AND POLICIES

This subsection outlines transportation and circulation goals and policies for the Tourist Core Area Plan that implements the vision and guiding principles discussed earlier in Section 4.

**Goal T-1**
Provide for safe and efficient vehicular circulation for the Tourist Core Area Plan.

- **Policy T-1.1**
  Encourage the modification of US Highway 50 to a ~~low~~ low-speed pedestrian ~~main street~~Main Street through the TSC-C District.

- **Policy T-1.2**
  Strive to maintain a level of service (LOS) D or better on all arterials, collectors and at signalized intersections. This LOS standard may be exceeded during peak periods, not to exceed 4 hours per day when provisions for multi-modal amenities and/or services (such as transit, bicycling, and walking facilities) are adequate to provide mobility for users.

- **Policy T-1.3**
  Install an integrated way-finding and directional signage program throughout the Tourist Core Area Plan directing visitors to recreation, commercial, tourist, transit and parking facilities.

- **Policy T-1.4**
  Reduce the number of ingress/egress points along US Highway 50 by combining and realigning driveways to improve traffic flow and eliminate pedestrian conflict.

- **Policy T-1.5**
  The City shall participate with the TMPO, TTD, FHWA, NDOT, Caltrans, Douglas County, the State Parks of California and Nevada in the planning and implementation of the South Shore Community Revitalization Project.

**Goal T-2**
To create a functional, safe, convenient, and integrated pedestrian and bikeway system which

provides access to recreation, retail and entertainment opportunities as an alternative to vehicle trips.

- **Policy T-2.1**
  Establish the Lakeside plan area, Stateline Avenue and Park Avenue as a pedestrian/bike street connection to Lakeside Marina and access to Lake Tahoe.

- **Policy T-2.2**
  Provide adequate pedestrian and bicycle facilities such as continuous sidewalks, bike paths and bike lanes throughout the plan area that connect commercial, entertainment and recreation areas of the plan.

- **Policy T-2.3**
  Install bicycle racks or lockers at public parks, gathering areas, shared parking facilities, and ~~the~~ transit centers, and require them in all new private ~~construction~~ developments and changes of use or tenant improvements ~~remodels that require major or minor design review~~.

- **Policy T-2.4**
  Bicycle and pedestrian improvement projects identified in ~~The~~ the City General Plan, TRPA Regional Plan, Area Plans and/or TRPA Bike and Pedestrian Master Plan, which are adjacent to or within private development areas, shall be implemented as conditions of approval.

- **Policy T-2.5**
  Where applicable, sidewalks shall be required for all new and expanded uses as conditions of project approval.

- **Policy T-2.6**
  Install an integrated way-finding and directional signage program for pedestrians to encourage walking and biking to recreation, commercial and tourist facilities.

- **Policy T-2.7**
  Where feasible, the City shall strive to maintain sidewalks and bicycle facilities for year-round use.

**Goal T-4**
To promote the use and expansion of multi-modal transportation options, including transit for visitors and residents.

- **Policy T-4.1**
  Collaborate with the Tahoe Transportation District and other transportation entities and service providers to ensure adequate transit service and facilities in the Tourist Core Area Plan. Ensure that the Tourist Core Area Plan is served by frequent bus service along US Highway 50 and along routes that provide access to the lake and other recreation opportunities. Ensure that adequate bus shelters and bus pull-outs are installed throughout the Tourist Core Area Plan.

- **Policy T-4.2**
  Encourage the use of water-borne transit along the ~~south shore~~South Shore from Camp Richardson Resort to Zephyr Cove Resort and provide stops at Ski Run and Lakeside Marinas.

- **Policy T-4.3.**
  Continue to partner with South Shore Transportation Management Association, Tahoe Transportation District, Tahoe Regional Planning Agency, and other partners to identify new and existing funding sources to expand fixed routes, other transit options, and electrify micro-transit service.

- **Policy T-4.4.**
  Building upon the US Highway 50 safety project, develop a Corridor Plan for US Highway 50 from the "Y" to "Stateline," including major connecting arterials while identifying options to prioritize alternative modes of transportation.

- **Policy T-4.5**
  Coordinate with South Shore Transportation Management Association, Tahoe Transportation District, and businesses to create an enhanced mobility hub within the Tourist Core Area Plan Town Center District to complement existing and planned multi-modal options.

**Goal T-5**
To develop complete streets in the South Shore Area that allow for multiple uses including automobiles, bikes and pedestrians.

- **Policy T-5.1**
  Develop and adopt complete street roadway design standards for US Highway 50, arterial streets and collector streets. and the following collector streets: Park Avenue, Heavenly Village Way, Stateline Avenue, and Pioneer Trail and Ski Run Boulevard.

**Goal T-6**
To provide adequate parking facilities that are integrated with and support a walkable, vibrant Tourist Core.

- **Policy T-6.1**
  Encourage underground parking where feasible, shared parking, reduced parking, or on-street parking to promote a pedestrian friendly main streetMain Street in the Tourist Core.

- **Policy T-6.2**
  Allow projects in pedestrian areas, areas with concentration of overnight accommodations, and in areas served by transit to reduce the parking requirement of the Citywide Parking Ordinances and waive the onsite parking requirement if a parking study and a plan is completed and approved. Allow mixed-use projects to reduce their parking requirements provided that a parking demand analysis is submitted and approved by the City. p Projects can offset parking demand through additional parking management, contributions to shared parking facilities, public transportation and/or right of way improvements. , or if parking is exempted under state or regional law. or through additional contributions to public transportation and right of way improvements.

- **Policy T-2.6**
  Established reduced parking requirements for affordable housing projects that are not exempt from parking requirements by state law.

- **Policy T-2.7**

- Conduct public outreach and studies to determine the feasibility of establishing a parking benefit district to facilitate the development of shared public parking facilities and parking management within the district.

- **Policy T-2.8**
  Promote shared parking for mixed-use projects.

- **Policy T-2.9**
  Encourage affordable housing developers to unbundle parking and rent parking spaces separately from the units.

## 6.~~1~~2 PROPOSED IMPROVEMENTS

This subsection outlines transportation and circulation improvements that implement the vision, guiding principles and the goals and policies of the Tourist Core Area Plan listed above.

A variety of improvements to the area's transportation and mobility system, which are intended to encourage safety, connectivity, and access to the area's recreational opportunities, are proposed by various agencies and are in various phases of design, permitting or environmental review.

The South Tahoe Greenway and the Nevada Stateline-to-Stateline Bikeway are examples of projects that would enhance the area's recreational opportunities by establishing an alternative mode of transportation for visitors and locals interested in connecting to the region's recreation attractions, community centers, transportation facilities, and residential neighborhoods.

### CITY OF SOUTH LAKE TAHOE

The following Capital Improvement Projects will be constructed or are planned within the Tourist Core Area Plan or its vicinity:

- Pioneer Trail Pedestrian Upgrades: The Pioneer Trail Pedestrian Upgrade project includes five-foot wide paved sidewalks and streetlights on both sides of Pioneer Trail from ~~U.S.~~US Highway 50 to ~~Larch Avenue~~Ski Run Boulevard. The sidewalks will meet American Disability Act (ADA) design standards. In addition, transit bus shelter pads will be constructed at bus transit stops in the Pioneer Trail project area. The Tahoe Transportation District (TTD) will follow up with arranging the construction of the bus shelters on the concrete pads in the near future. The improvements are expected to provide safe pedestrian access from adjacent residential neighborhoods to the Tourist Core, a major commercial and employment center, and encourage workers and visitors in the area to walk to their destinations. ~~Work~~ Construction on Phase 1 from US Highway 50 to Larch Avenue has been completed. Construction of Phase 2 from Larch Avenue to Ski Run Boulevard has been permitted and is scheduled to begin in ~~mid-July and be completed by October 15, 2013~~summer of 2024.

- ~~Linear Park Improvements: This project includes upgrading landscaping, lighting, irrigation, and the shared use pedestrian-bicycle pathway pavement section. The~~

proposed streetlight work includes the removal of existing bollard lights and replacing them with the City's current streetlight standard (Ski Run Blvd streetscape style lighting). The existing pedestrian-bicycle path pavement has large transverse cracks that will be pulverized to provide a better structural sub-section and repaved with crack resistant polymer modified pavement. The improvements are expected to enhance the pedestrian and bicycling experience between the major tourist and commercial uses at Stateline to the recreation opportunities and lake access at Ski Run Boulevard. In addition, the project is expected to improve the visual quality of the scenic corridor. This project has been approved by TRPA and work is scheduled to begin in early May and be completed by mid-July 2013.

- El Dorado Beach to Ski Run Bike Trail: The El Dorado Beach to Ski Run Bike Trail project includes construction of an approximately 1-mile long Class 1 bike path (paved bike path in dedicated right-of-way separated from roadway right-of-way) on the north side of U.S. Highway 50 between El Dorado Beach and Ski Run Boulevard.

- Fixin' Highway 50 Initative: The Fixin' Highway 50 Initiative was adopted by the City Council in May, 2011 with the adoption of the City's first-ever Business Plan. The goal of the Initiative is to leverage resources to construct improvements adjacent to Highway 50 at the same time as Caltrans is improving Highway 50 during the next two to three years.

## CALIFORNIA TAHOE CONSERVANCY

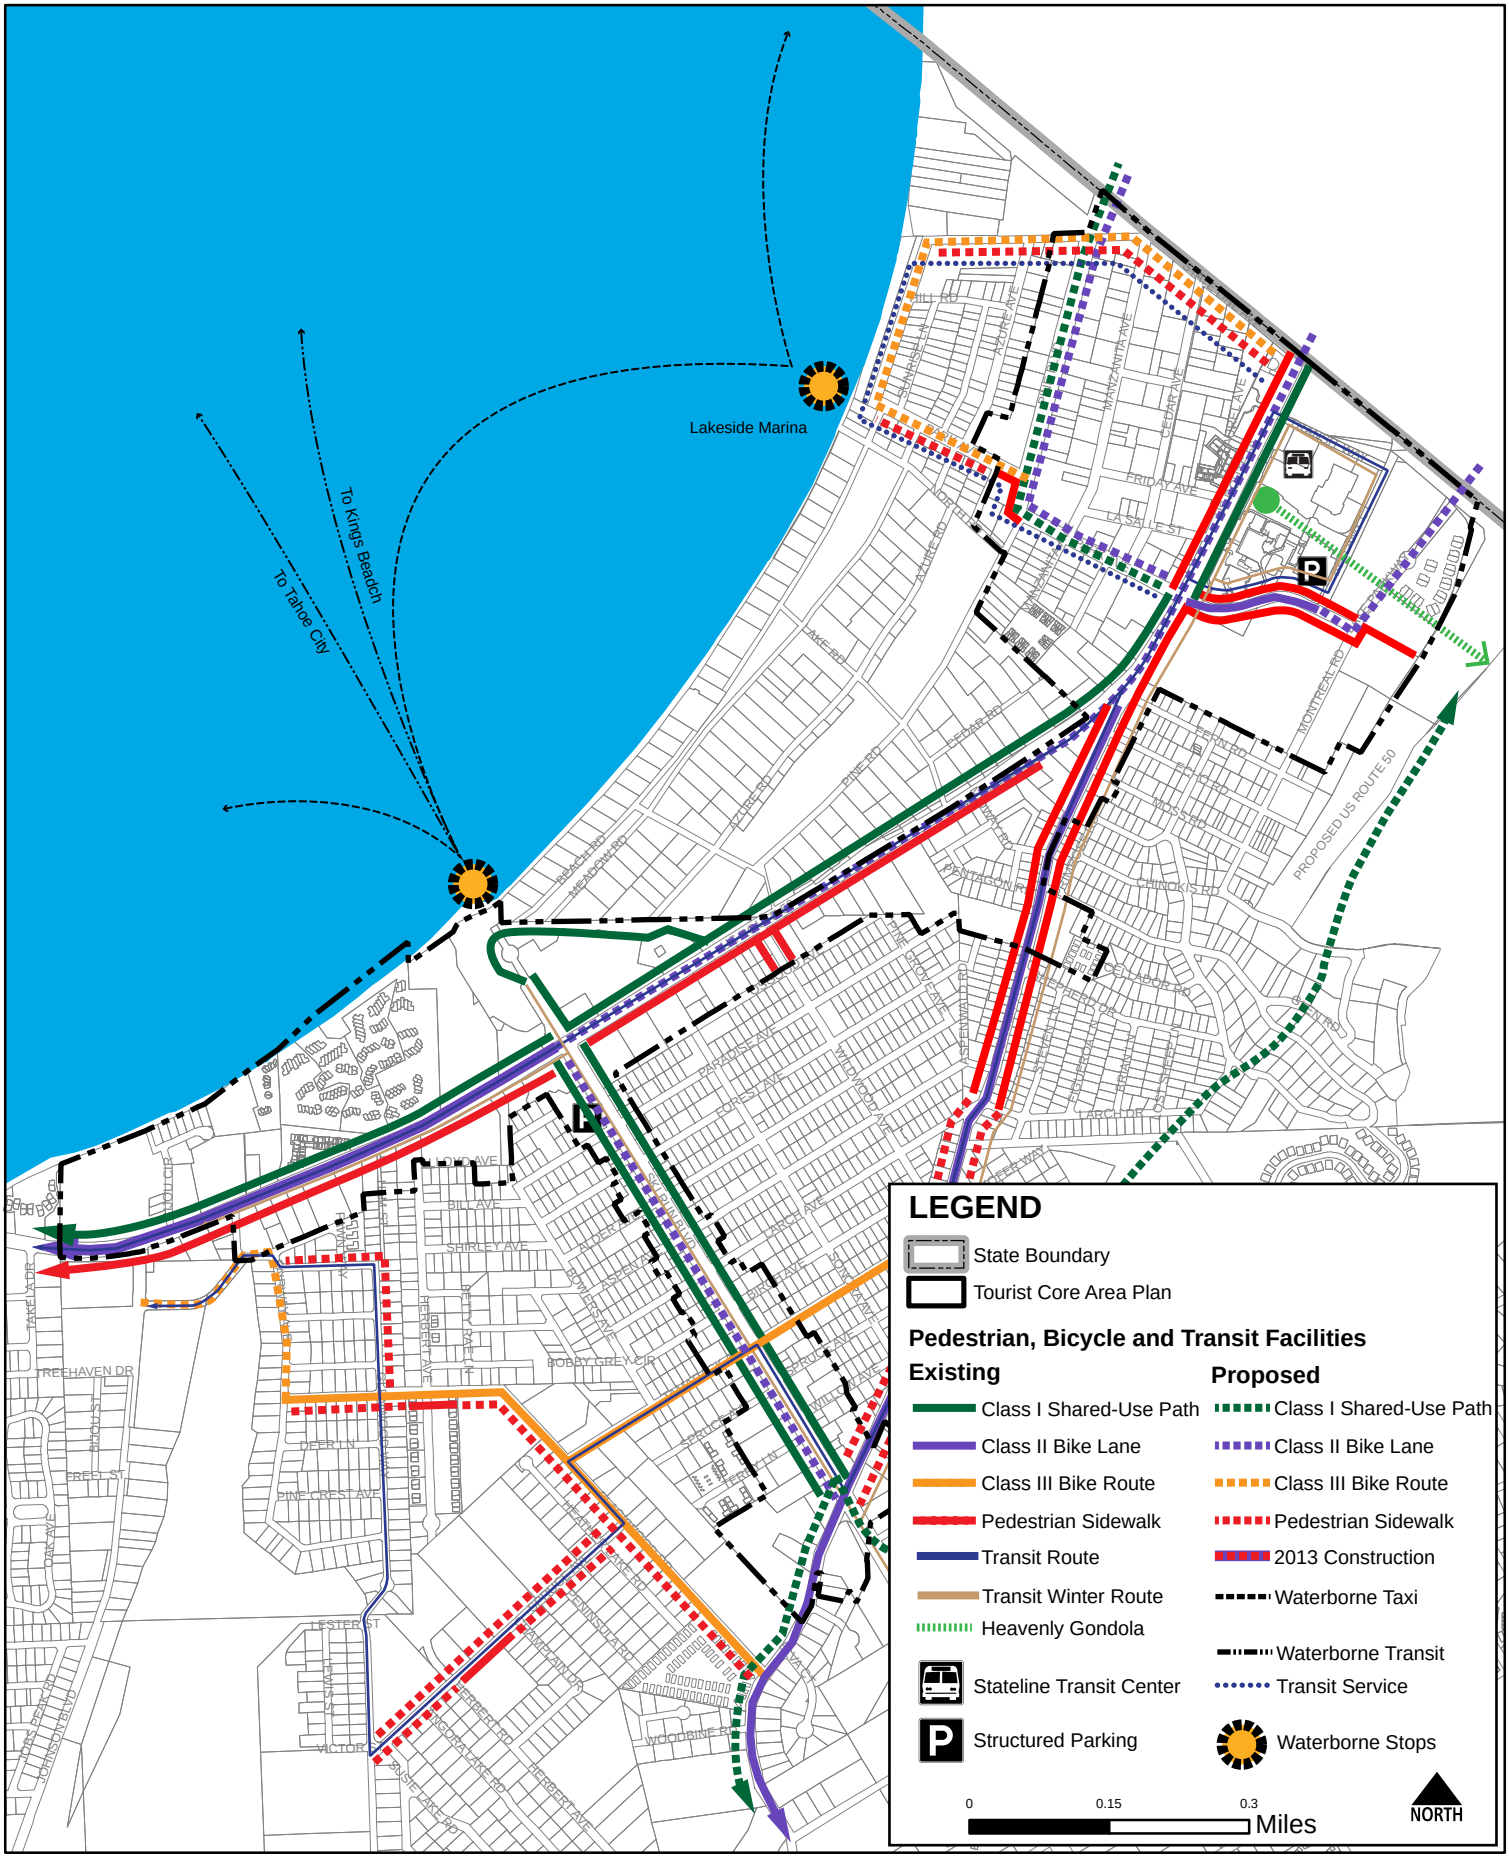
- South Tahoe Greenway: The proposed South Tahoe Greenway Shared Shared-Use Trail will create the backbone of the bicycle and pedestrian network in South Lake Tahoe and will take a major step forward in furthering sustainability goals of the south shoreSouth Shore communities. The Greenway will connect residents and visitors to community and recreation destinations from Stateline to Meyers, providing a high- -quality alternative to private automobile use. The highest priority 1.8-mile segment will link urban neighborhoods in the core of South Lake Tahoe to shopping, social services, schools, and recreation destinations. Continuing the trail system northward to the state line provides important connections to the largest concentration of visitor services in the region, including shopping, lodging and transit. Completion of this link also connects the recreation resources at Van Sickle Bi-State Park to the network. A southern trail extension to Meyers, not part of the current project, would complete the transportation link. Future actions will identify the best alignment for this extension. Because the share share-use trail terminates within the Tourist Core it's it is imperative that the Area Plan leverages this resource by supporting connectivity from within the plan area to those trails. Currently, Phase 1A, 1B and 2 have been constructed that connects Sierra Boulevard to Herbert Avenue, and is approximately 1.8 miles in length. Planning and design efforts are currently underway to construct Phase 1C, which would connect Herbert Avenue to Ski Run Boulevard.

## TAHOE TRANSPORTATION DISTRICT

- South Shore Community RevitalizationMainstreet Management Plan Project: The most significant change would be the implementation of the Mainstreet Management PlanUS 50/South Shore Community Revitalization Project. This project wouldto promote increased safety, efficient traffic flow, and environmental and visual improvements. The proposed plan would convert the US Highway 50 existing route through the commercial/resort core into a main streetMain Street with pedestrian amenities. The project is currently under environmental review and four alternatives are being analyzed.

- Nevada Stateline-to-Stateline Bike ~~trail~~Trail: Although not located within the Area Plan this important linkage connects the Tourist Core to the proposed region-wide bike trial network and recreation opportunities. The entire 30+-mile Nevada Stateline-to-Stateline Bikeway will extend from the Nevada Stateline in Crystal Bay to the Nevada Stateline in South Lake Tahoe. The project also includes two demonstration projects that are approximately 3 miles in length~~—~~, the north demonstration project extends from Incline Village to Sand Harbor and the south demonstration project extends from Lake Parkway to Round Hill Pines. Partnering with Douglas County and the US Forest Service Lake Tahoe Basin Management Unit, TTD managed the construction of the one-mile Rabe Meadow Bike Path, the first phase of the 3.2-mile Stateline to Round Hill segment. This segment was completed in October 2012 and accesses Nevada Beach and the Kahle Community Center.

  In June of 2013, the second phase of the bike trail from Elks Point to Roundhill and a ~~spur~~ link to Nevada beach will be constructed.



- Waterborne Transit: The TTD in collaboration with local and state governments and the private sector are evaluating a waterborne solution, such as a passenger ferry service, as an option in the "North-South Transit Connection Alternatives Analysis." The study is currently underway to apply for federal funding.

## PRIVATE SECTOR

- Water Taxi: A secondary water taxi service would connect the marinas and beaches along the south shore, creating a unique and convenient way for connecting people to local recreation resources. Currently, a water taxi service is provided between Camp Richardson, Timber Cove Pier, and Lakeside Marina.

Future improvements to the area's transportation and circulation system will provide opportunities for residents and visitors to walk, bike, or use public transit throughout the area. While slight adjustments to the existing roadway system may be possible, the greatest potential for improving the overall transportation and circulation system will be achieved through the development of a comprehensive multi-modal network. Continuing to make connections between the completed trails and sidewalks and proposed additions, as well as strengthening the connections to public transportation options, will create the foundation for a transportation network with the ability to improve TRPA's thresholds for Vehicles Miles Travelled (VMT), air quality, water quality and noise, support the local economy, improve public health and support a connected, walkable and bikeable community.

Figure 6-1 depicts proposed improvements to the transportation network.

April 1160

# Section 7
# NATURAL AND CULTURAL RESOURCES

This section sets forth Natural and Cultural Resources goals and policies for the Tourist Core Area Plan. In addition, it lists specific strategies to achieve environmental improvements in the areas of water quality, scenic resources, and Stream Environment Zones (SEZs).

## 7.1 GOALS AND POLICIES

This subsection outlines Conservation goals and policies for the Tourist Core Area Plan. These goals and policies implement the vision and guiding principles discussed in Section 4.

**Goal NCR-1 Scenic Resources**
To protect and enhance the visual connection between South Lake Tahoe and the Lake Tahoe Region's scenic resources.

- **Policy NCR-1.1**
  Improve the visual quality of the built environment consistent with the general recommendations for site planning found in the TRPA Scenic Quality Improvement Program (SQIP) to attain threshold attainment for Scenic Roadway Units # 32, 33 and 45.

- **Policy NCR-1.2**
  Maintain Stream Environment Zone (SEZ) restoration sites and stormwater drainage basins as view corridors and scenic resources to relieve the strip commercial character along US Highway 50 within the Tourist Core.

- **Policy NCR-1.3**
  Adopt siting and building design standards and guidelines to protect, improve, and enhance the scenic quality of the natural and built environment and take full advantage of scenic resources through site orientation, building setbacks, preservation of viewsheds, and height limits.

**Goal NCR-2 Stream Environment Zones**
To protect ~~past~~ existing Stream Environment~~al~~ Zone (SEZ) restoration projects and areas of undisturbed SEZ within the Tourist Core Area Plan.

- **Policy NCR-2.1**
  Increase the area of naturally functioning SEZs by preserving existing SEZs and initiating and completing the restoration/rehabilitation of 7 acres of disturbed SEZs.

- **Policy NCR-2.2**
  Protect and direct development from SEZs, and encourage the removal and transfer of

existing development from disturbed SEZs that can be feasibly restored by creating incentives for their removal.

- **Policy NCR-2.3**
  Encourage the use and access to designated open space for passive recreation uses when they conform to resource restrictions.

- **Policy NCR-2.4**
  Restore SEZs and other sensitive lands within and outside of the Area Plan through transfers of existing development, development potential, and coverage to high capability lands within the Tourist Core.

**Goal NCR-3 Water Quality**
To protect and enhance the clarity of Lake Tahoe and water quality in the area's rivers, creeks, and groundwater

- **Policy NCR-3.1**
  Ensure installation and maintenance of Best Management Practices (BMPs) on all projects delegated under the permitting authority of the Memorandum of Understanding between TRPA and the City of South Lake Tahoe.

- **Policy NCR-3.2**
  Coordinate with TRPA to support and/or enforce private property BMP certification with a near-term focus on commercial and multi-family land uses that are adjacent, have connected impervious surfaces, or are in the same catchment as ~~EIP~~ Environmental Improvement Program (EIP) projects or public projects.

- **Policy NCR-3.~~2~~3**
  Coordinate with TRPA to prioritize and implement ~~Environmental Improvement Program~~EIP ~~(EIP)~~ water quality improvement projects based primarily on their ability to reduce pollutant loads.

- **Policy NCR-3.~~3~~4**
  Implement the recommendations outlined in the *City of South Lake Tahoe Pollutant Load Reduction Plan (PLRP)* to achieve the Lake Tahoe TMDL five-year load reduction targets ~~for year 2016~~.

- **Policy NCR-3.~~4~~5**
  Collaborate with Lahontan to update and refine the *Pollutant Load Reduction Strategy* for load reduction targets beyond the year 2016 and update the *Pollutant Load Reduction Plan* as necessary to achieve the Lake Tahoe TMDL load reduction targets. The Tourist Core Area Plan hereby incorporates by reference all, monitoring~~-~~, operations and maintenance, and reporting required by the City's NPDES permit, the adopted Pollutant Load Reduction Plan and the Stormwater Management Plan, which will also be utilized by TRPA in the 4-year Area Plan recertification process pursuant to TRPA Code Sections 13.8.2 and 13.8.5.

- **Policy NCR-3.~~5~~6**
  Coordinate with Caltrans to ensure the implementation of water quality improvement projects along US Highway 50 within the Tourist Core Area Plan.

**Goal NCR-4 Land Coverage**
Maximize opportunities to remove or mitigate excess land coverage throughout the Tourist Core Area Plan

- **Policy NCR-4.1**
  Onsite land coverage reduction will occur primarily through environmental redevelopment by providing development incentives in centers that promote the relocation and transfer of land coverage. The City will endeavor, where feasible, to reduce and avoid creating new coverage in order to benefit the objectives of the TCAP and other areas of South Tahoe.

- **Policy NCR-4.2**
  The City shall consider opportunities for coverage reduction in all private and public redevelopment projects in the Tourist Core.

- **Policy NCR-4.3**
  Encourage on-site landscaping in all private and public redevelopment projects that results in coverage reduction. Landscape features should be integrated with BMPs to treat stormwater runoff.

- **Policy NCR-4.4**
  Priority should be given to transferring hard coverage from SEZs and other sensitive lands to ~~high capability~~high-capability lands within the Tourist Core.

**Goal NCR-5 Air Quality**
To incorporate air quality improvements and emission reductions in the Tourist Core.

- **Policy NCR-5.1**
  The City shall incorporate measures to reduce construction-generated emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

  - Implement measures recommended by the El Dorado County Air Quality Management District.
  - Prohibit open burning of debris from site clearing unless involved with a fuels reduction project.
  - Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.
  - Restriction of idling of construction equipment and vehicles.
  - Apply water to control dust as needed to prevent dust impacts offsite.

## 7.2 IMPLEMENTATION STRATEGIES

This subsection outlines natural resource strategies that implement the vision, guiding principles and the goals and policies of the Tourist Core Area Plan.

### SCENIC RESOURCES

As discussed in ~~the~~ Section 3, Existing Conditions, TRPA Threshold Evaluations noted that the majority of roadway units with improved threshold scores fall partially or wholly within Community Plan ~~areas~~Areas. Removal of degraded structures, improvement in architectural quality of new and remodeled structures, increased landscaping, creation of open space and landscape drainage basins, installing curb, gutters and pedestrian sidewalks and consolidating highway curb cuts, and improved signage have all contributed to a transformation in many of these units. This improvement affects both travel route and scenic quality ratings.

Within the Area Plan, two Scenic Threshold Travel Routes (Units #32 and #33) are close to threshold attainment and one (Unit #31) is in attainment. Continued improvements in the built environment by implementing the recommendations of the Scenic Quality Improvement Program, implementing design standards of the Area Plan that upgrade the overall architectural quality, preserving open space and viewsheds, installing curb and gutter along US Highway 50 are expected to move these units into attainment. The following implementation strategies are intended to promote threshold attainment:

- Zone SEZ restoration sites and stormwater drainage basins as Open Space in the Tourist Core Area Plan
- Designate the following as scenic resources:
  - The view of the Wildwood Basins and artificial wetlands located adjacent to US Highway 50.
  - The mountain and ridgeline viewshed located at the intersection of US Highway 50 and Ski Run Boulevard looking towards East Peak and Heavenly Ski Resort.
  - The view of Lake Tahoe located at the intersection of US Highway 50 and Ski Run Boulevard looking towards Lake Tahoe and Ski Run Marina.
- Incorporate design standards that enhance the scenic quality of the natural and built environment in the Tourist Core ~~-~~for the following areas:
  - Architectural Style
  - Building Materials
  - Building Colors
  - Building Height
  - Access Drives
  - Parking
  - Lighting
  - Landscaping
  - Signs
  - Utility Lines
- Install pedestrian sidewalks along Pioneer Trail from the intersection of US Highway 50 to Larch Avenue
- Upgrade the Linear Parkway.
- Install curb and gutters as part of the Caltrans US 50 Water Quality Improvement Project from just west of Ski Run Boulevard to Wildwood Avenue.
- Implement the City of South Lake Tahoe's Business Façade Improvement Program to provide low-interest loans to local businesses and Business Improvement Districts to aesthetically improve building facades.

Figure 7-1 depicts proposed new scenic resources within the Tourist Core Area Plan.

## STREAM ENVIRONMENT ZONE

The Tourist Core Area Plan responds to the needed SEZ improvements. The following programs and key strategies are intended to promote SEZ threshold attainment:

- Prioritize the existing tourist accommodation uses east of the ~~wildwood basins~~Wildwood Basins for SEZ restoration. Encourage property owners to use TRPA's transfer incentives to relocate the tourist accommodation units to more appropriate locations.

- Restore the disturbed SEZ on the Colony Inn parcel located along Montreal Road.

## WATER QUALITY

The Tourist Core Area Plan responds to the needed EIP improvements in water quality by continuing to require installation of on-site BMPs, construction and maintenance of water quality improvement projects within the Tourist Core ~~-~~and implementation of the City's TMDL Pollutant Load Reduction Plan. The following programs and key strategies are intended to promote water quality threshold attainment.

**BMPs:** Implement the following BMP Projects

- Focus BMP installation and compliance on commercial and multi-family projects within the Tourist Core that are adjacent, have connected impervious surfaces, or the same catchment as EIP or public projects.
- The City shall require BMPs to be installed and maintained ~~in~~ on all projects reviewed under the City's MOU to capture a 20-year, one-hour storm or alternative BMPs if infiltration is not possible.
- Coordinate with TRPA to support and/or enforce private property BMP certification with a near-term focus on approximately 290 acres of commercial land uses that directly discharge stormwater to Lake Tahoe

**EIP Projects**: Implement the following Water Quality Improvement Projects (WQIPs):

- US Highway 50 Water Quality Improvement Project: Caltrans will treat ~~storm~~ stormwater runoff from US Highway 50 from the intersection of US Highway 50 and Ski Run Boulevard to Wildwood Avenue. This project is completed.~~under construction.~~
- Rocky Point Erosion Control Project, Phase 4b: Implement adaptive management to previously constructed water quality improvements to improve storm~~-~~water treatment efficiency. Adaptive management measures include improved storm drain inlets to increase the amount of storm~~-~~water captured and infiltrated in basins, vegetation restoration, rock slope protection, and addressing perceived safety issues. This project is ~~scheduled for construction in 2013~~completed.
- Bijou Area Erosion Control Project: Phase I project focuses on two key elements: ~~(~~1) replacement of the existing Bijou Creek storm drain system that conveys storm~~-~~water runoff from the 1,300-acre Bijou Creek watershed to Lake Tahoe; and ~~(~~2) construction of a comprehensive regional treatment system for runoff generated in the Bijou ~~commercial~~

Commercial ~~core~~Core. The existing, failing fifty ~~(50)~~ year old Bijou Creek storm drain system will be replaced from the outlet of Bijou Meadow, under Fairway Drive and ~~U.S.~~US Highway 50, through the Bijou ~~commercial~~ Commercial ~~core~~Core, and to Lake Tahoe, with a new underground drainage system. Replacement will allow for the separation of storm~~-~~water from the upper watershed from high pollutant load ~~storm~~ stormwater in the ~~commercial~~ Commercial ~~core~~Core. The Bijou ~~commercial~~ Commercial ~~core~~ Core component is designated as a priority project in the City's Pollution Load Reduction Plan and is discussed in further detail below under the Tahoe TMDL. This project is completed.

**Tahoe TMDL:** Implement the recommendations identified in the City of South Lake Tahoe Pollutant Load Reduction Plan (PLRP) ~~for achieving the 10 percent load reduction target for the first five years~~to achieve the 10 percent load reduction target for the first five years.

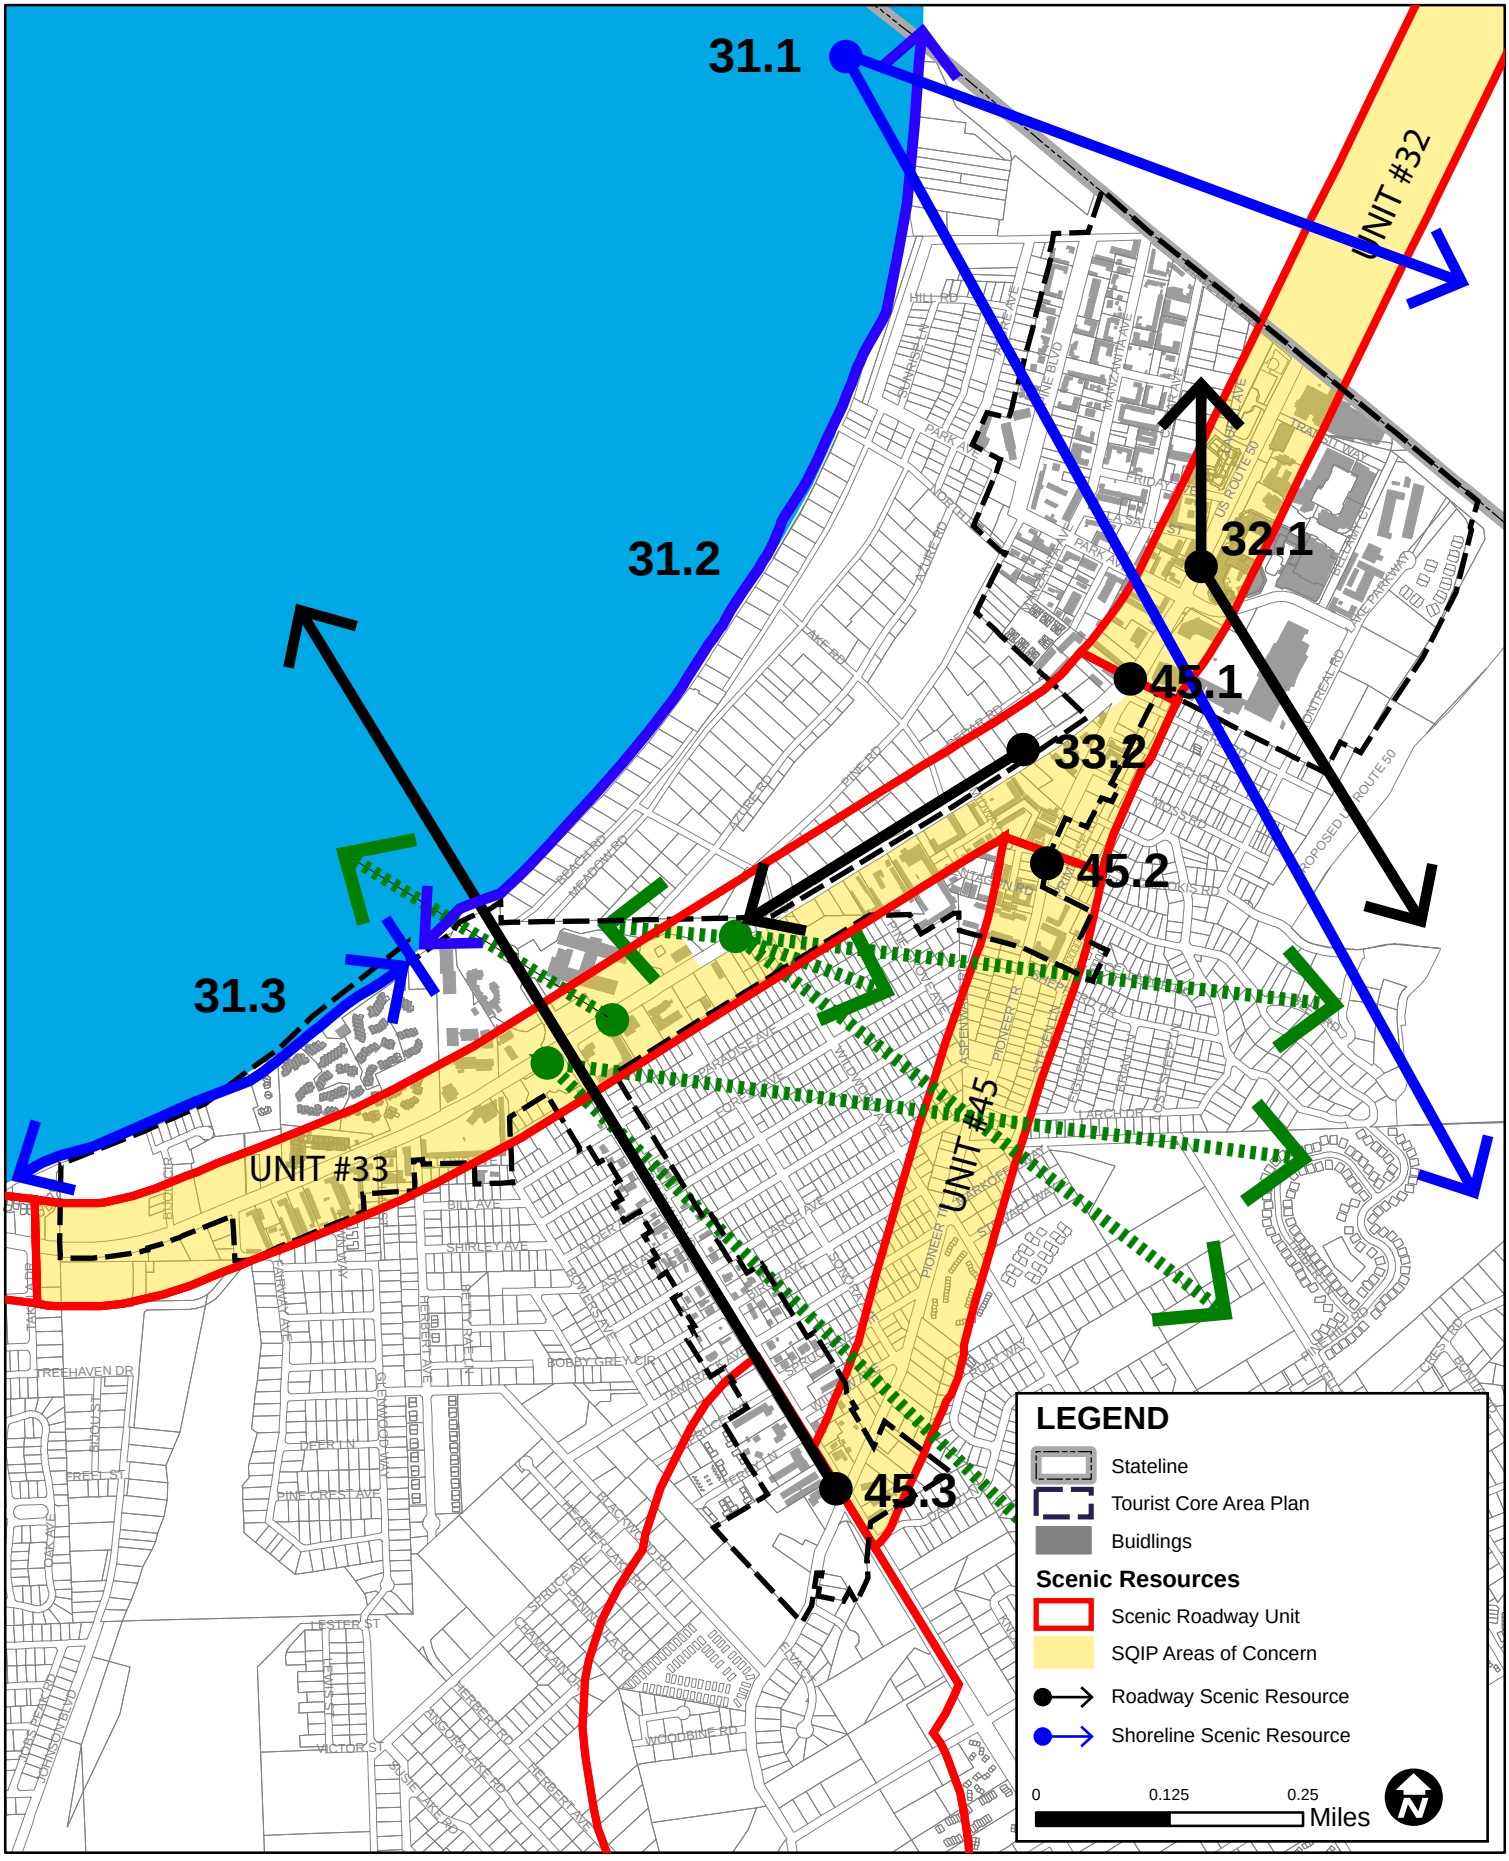
The City's selected approach to meet load reduction targets combines the registration of Water Quality Improvement Projects (WQIP) completed from 2004-2016 with the implementation of a ~~pilot~~ program to improve road operations for water quality. Specific actions include the following:

- Register Completed WQIPs (2004-2012): The City has completed seven WQIPs. The Urban Planning Catchments (UPCs) that encompasses the seven completed project areas will be registered with the Lake Clarity Crediting Program. Of the seven WQIP projects completed by the City that will be registered, two are located within the Tourist Core Area Plan and treat runoff from within the Area Plan and from adjacent neighborhoods. The two WQIPs are Rock Point 1 & 2 and Rock Point 3 & 4.
- Construct and Register Active WQIPs (2013-2016): Three WQIPs are in active stages of planning and design. ~~Construction is expected to be completed by the load reduction deadline of September 2016 and the UPCs associated with the three projects will be registered with the Lake Clarity Crediting Program.~~ The three new projects identified in the Load Reduction Plan are: 1) Bijou Commercial Core, 2) Harrison Avenue and 3) Sierra Tract Phase 3 & 4. Of the three projects, only the Bijou Community Core falls partially within the Tourist Core Area Plan. The Bijou Community Core project has been constructed and has been registered.

  High pollutant storm~~-~~water from City right-of-way, Caltrans right-of-way, and private property in the Bijou ~~commercial~~ Commercial ~~core~~ Core will be collected in a separate drainage system and directed through a series of underground vaults to remove sediment. Storm water will then be pumped through an underground storm drain pipe to water quality treatment basins in the upper watershed for infiltration.

- ~~Implement a Pilot Program for Improved Road Conditions~~Road Operations: ~~Through a pilot program, the City will implement the following: 1) Switch to a road abrasive source with less Fine Sediment Particle (FSP) to reduce the average annual mass of FSP generated by City roads from sanding practices, and 2) Improve FSP recovery on a subset of City roads that generate high amounts of pollutants through frequent sweeping. The pilot program will target frequent sweeping of Primary Roads within UPCs that are directly connected to Lake Tahoe. Specifically, these roads include Ski Run Boulevard, Pioneer Trail, and portions of Needle Peak road and Wildwood Avenue. Of the targeted roads, Ski Run Boulevard and Pioneer Trail are located within the Tourist Core Area Plan. The targeted roads will be swept with the City's dustless regenerative air sweepers after each winter abrasive application, as road conditions allow, and once monthly otherwise.~~Implement road operations improvements to attain a Road RAM score of 3.0 on all City Streets through improved road operations including 1) spot sanding at key intersections, steep hills, and critical public safety areas; 2) utilize the refined Washoe Sand specification developed by El Dorado County Transportation Division, which are

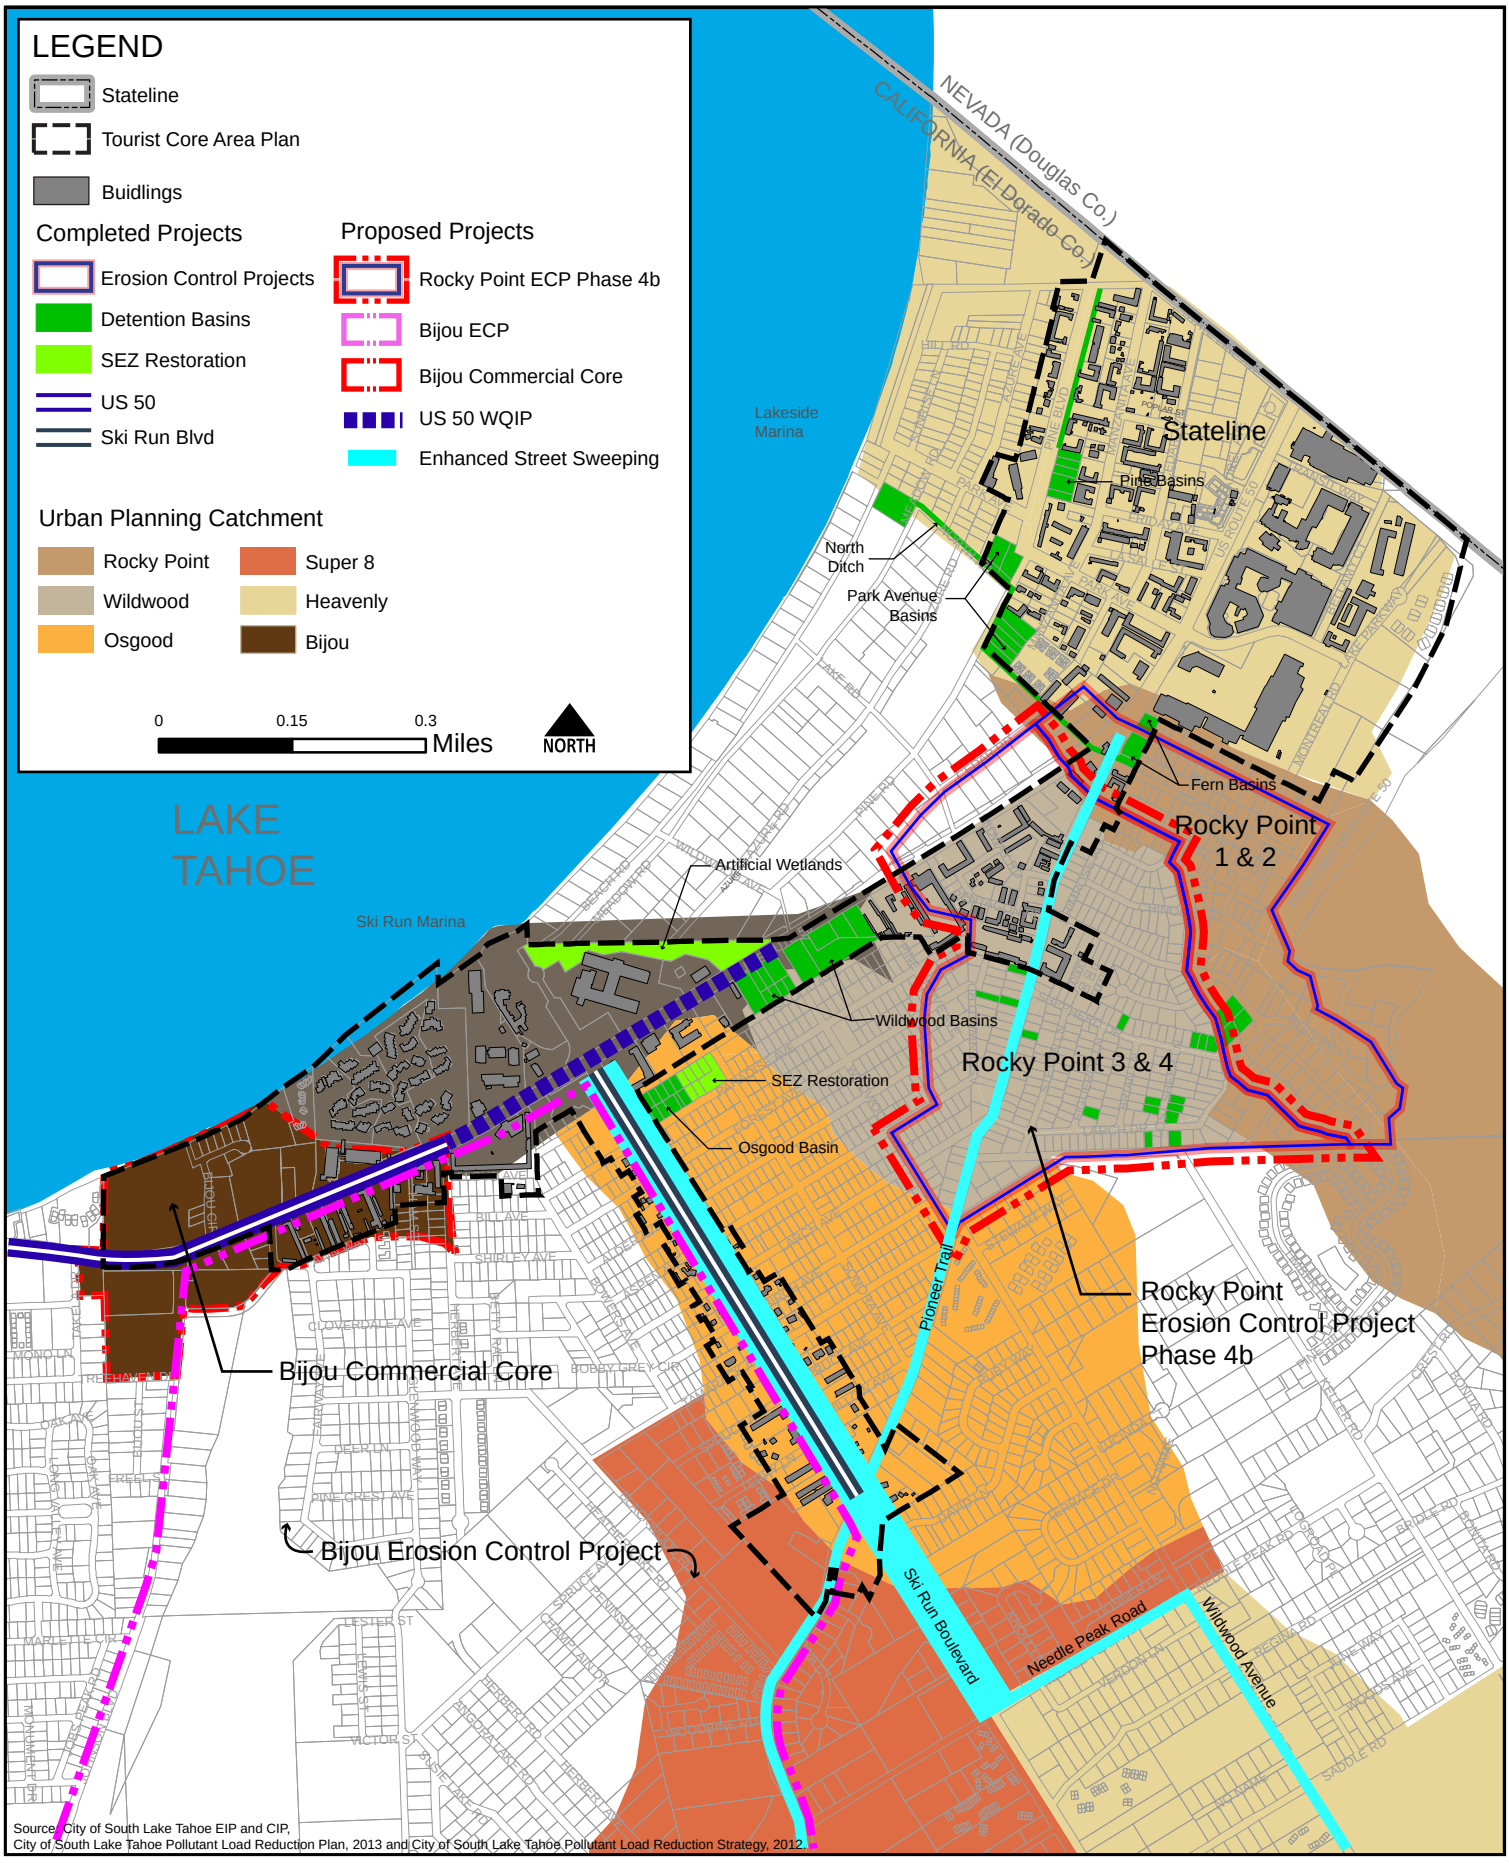
less prone to pulverization when compared to the previously used volcanic cinders; 3) use advanced Epoke sander units with precision application controls, ability to pre-wet sand with brine to reduce bounce and scatter, enabling more targeted and effective deployment of traction sand; and 4) increase street sweeping with new Elgin Eagle dustless sweepers as soon as weather and roadway conditions allow after application of traction sand.



Using the Lake Clarity Credits as the defining performance metric, the Pollutant Load Reductin Model (PLRM) analysis ~~estimates that the City will obtain the necessary credits to achieve the 10 percent reduction by 2016.~~concluded that the City met the 2016 load reduction requirements contained in the 2011 MS4 permit.

~~In addition to the load reduction targets, the MS4 permit issued by Lahontan to the City of South Lake identified a number of milestones for load reduction planning efforts which include:~~

- ~~Pollutant Load Reduction Progress Report – October 1, 2013~~
- ~~Report of Waste Discharge and Updated Pollutant Load Reduction Plan – June 9, 2016~~



The City will continue to track abrasive applications and materials recovered by sweeping and vactoring, which helps identify areas with high pollutant loading. City will continue to inspect facilities during large runoff events, to determine whether constructed source control, conveyance, and treatment measures are functioning as designed. The City will also complete annual stormwater system, construction and commercial, industrial, and municipal site inspections as required in the MS4 permit. These activities form the foundation of the City's internal approach to ~~assess~~ assessing its stormwater management activities and provide data to support assessments and reporting of load reduction progress during the implementation of the PLRP. ~~Moreover, it provides valuable data for updating of the PRLP for year 2016 and beyond.~~

Figure 7-2 depicts proposed EIP and TMDL water quality improvement projects within the Tourist Core Area Plan and its vicinity to be implemented to improve the water quality, soils and SEZ thresholds.

# Section 8
# RECREATION

This section outlines recreation goals and policies for the Tourist Core Area Plan. These goals and policies implement the vision and guiding principles discussed in Section 4.

## 8.1 GOALS AND POLICIES

**Goal R-1**
To preserve and enhance the ~~high-quality~~high-quality recreational experience in the Tourist Core

- **Policy R-1.1**
  Develop an interconnected system of open spaces, gathering places, bike and pedestrian trails, and other types of public and private spaces as part of new development and redevelopment of existing sites.

**Goal R-2**
To increase open space opportunities within the Tourist Core.

- **Policy R-2.1**
  Encourage the reduction of roadway width of US Highway 50 thoroughfare between Park Avenue through the Casino Resort area and increase the amount of landscaping and pedestrian sidewalks on both sides of the highway.

- **Policy R-2.2**
  Encourage open space to "spill" into the adjacent roadways, parking lots and commercial areas with planting islands and landscaped walking trails.

- **Policy R-2.3**
  Encourage landscaped, small, passive parks in and around the Tourist Core.

**Goal R-3**
To increase connection to recreation access and opportunities.

- **Policy R-3.1**
  Develop a bike trail system that links Ski Run Marina, Ski Run Boulevard, the pedestrian/tourist center at Stateline, Lakeside Beach area and Van Sickle Bi-State Park.

- **Policy R-3.2**
  Provide pedestrian and bicycle access from the Tourist Center District to Lake Tahoe and Van Sickle Bi-State Park along Stateline Avenue and Park Avenue.

- **Policy R-3.3**
  Install an integrated way-finding signage system to direct bicycles and pedestrians to recreation opportunities and ~~the~~ Lake Tahoe.

- **Policy R-3.4**
  Maintain and develop information centers for entertainment ~~information~~ and recreation opportunities in the ~~south shore~~South Shore.

- **Policy R-3.5**
  Incentivize the establishment of businesses and facilities that promote the ~~south shore~~South Shore as an eco-tourism recreation destination.

**Goal R-4**
To increase public access to Lake Tahoe from the Tourist Center District.

- **Policy R-4.1**
  Improve transit and trail connections that access beach recreation facilities.

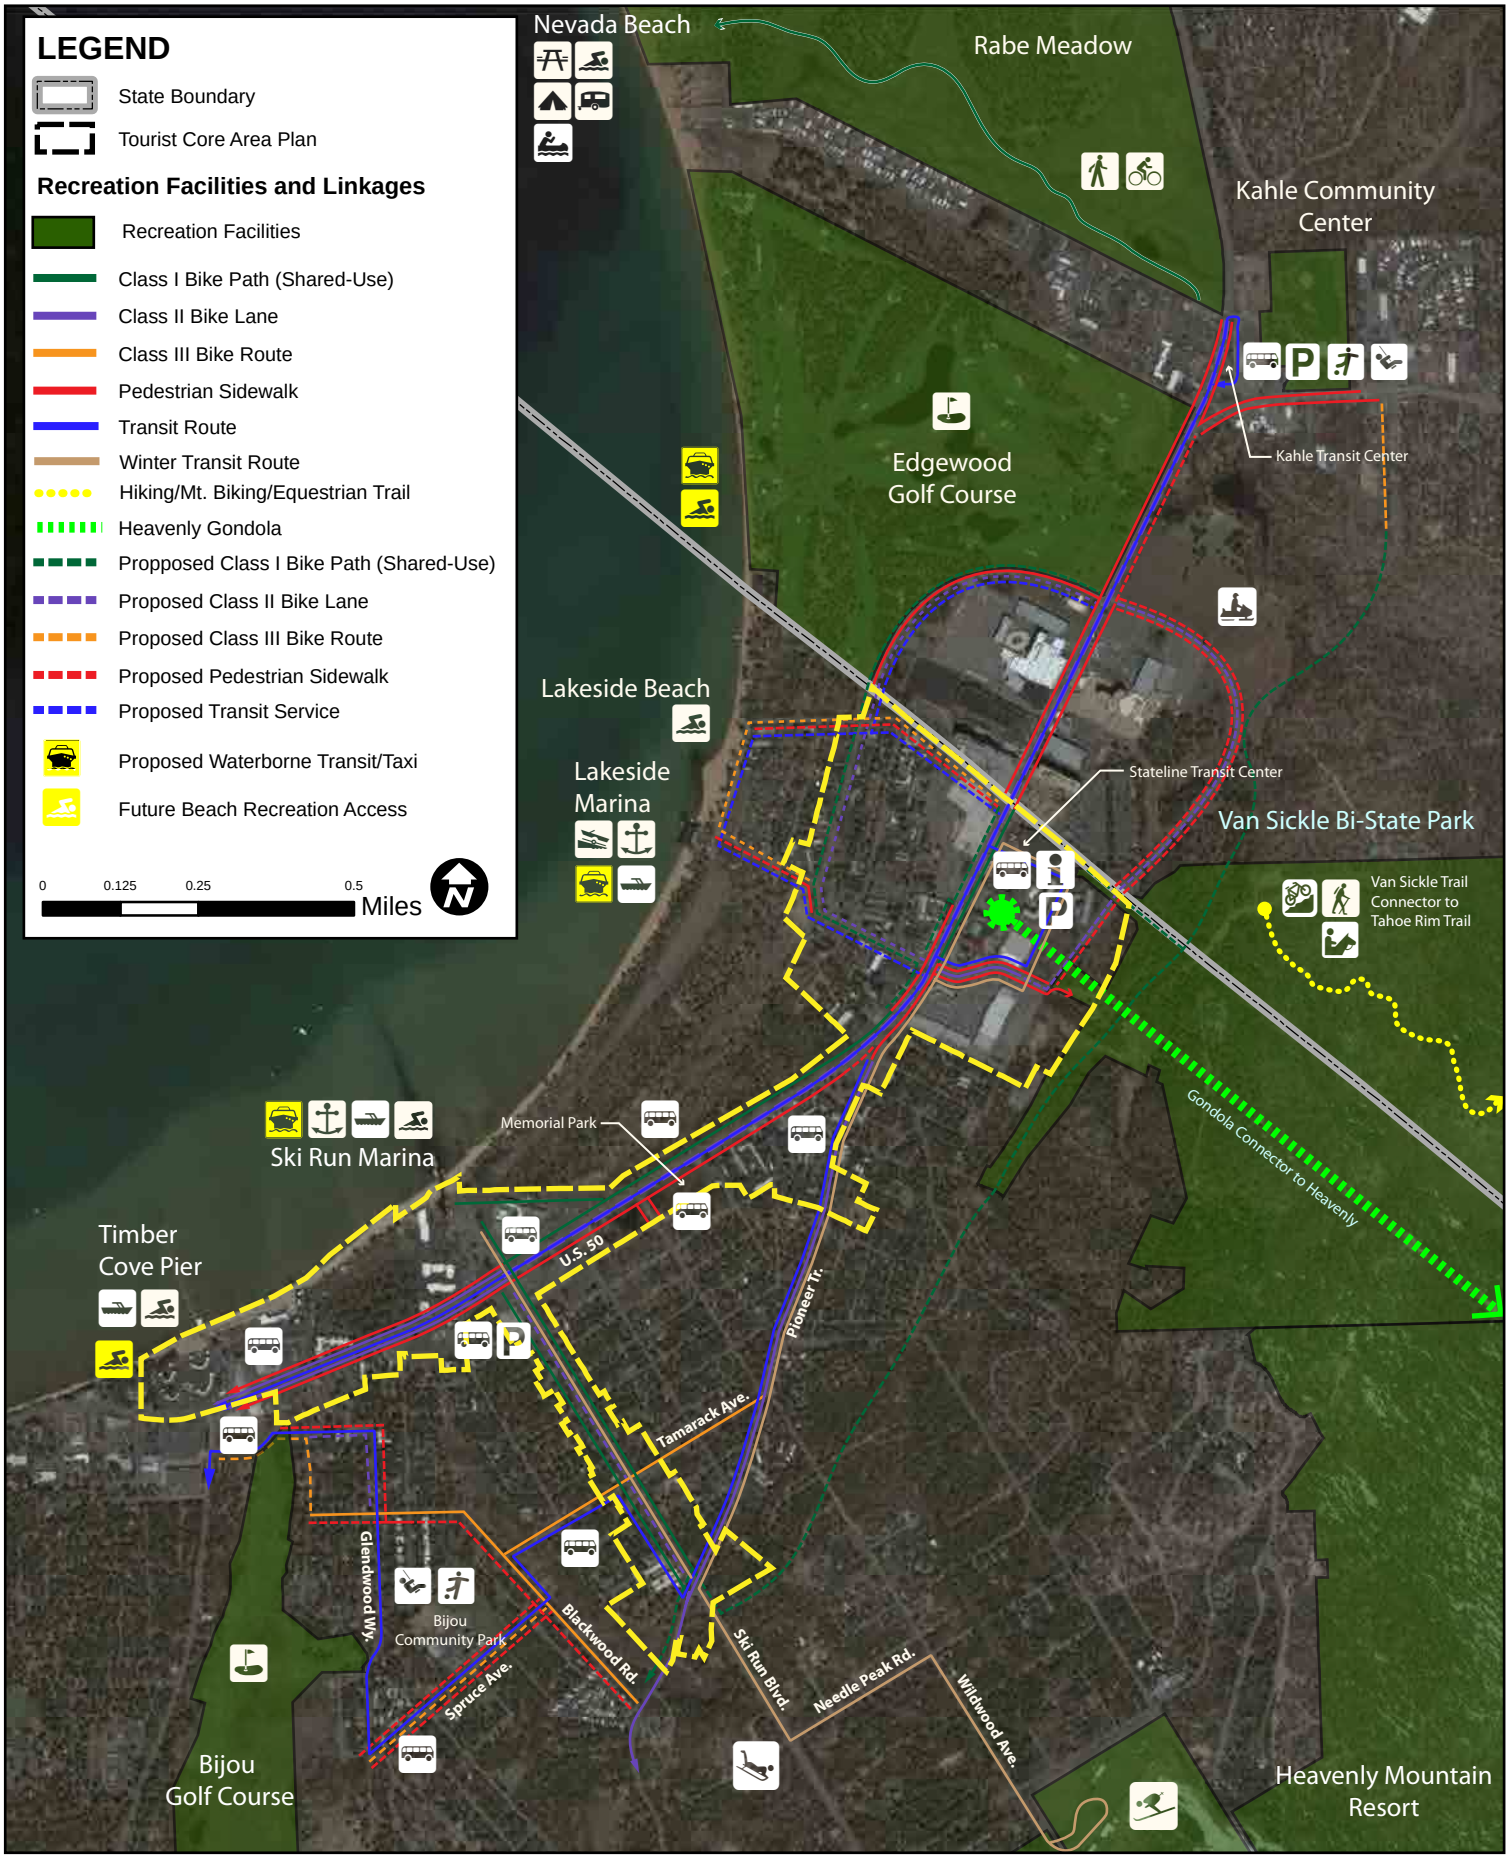
- **Policy R-4.2**
  Encourage increased public use of the Ski Run and Lakeside Marina through such means as public access, commercial expansion and waterborne transit.

**Goal R-5**
To create public gathering spaces for visitors and residents to meet, socialize, relax and interact.

- **Policy R-5.1**
  Require projects over 50,000 square feet within the TSC-C district to provide informal gathering areas and places for community activities and performances.

- **Policy R-5.2**
  Require all gathering places to include seating, tables and other amenities attractive to shoppers and pedestrians.

- **Policy R-5.3**
  Promote Art in Public Places in open space parcels, pedestrian areas as well as within and surrounding tourist accommodations and commercial shopping centers.



**Goal R-6**
Provide for temporary events in the Tourist ~~Center District~~Core Area Plan.

- **Policy R-6.1**
  Encourage temporary events and activities within the Tourist Core on public and private lands to increase pedestrian activity in commercial areas.

## 8.2 IMPLEMENTATION STRATEGIES

This subsection outlines recreation improvements that implement the vision, guiding principles ~~and the goals~~, goals, and policies of the Tourist Core Area Plan listed above.

- ~~-~~Expand the City's Way-Finding program in the Tourist Center Core District to direct pedestrian and bicycle traffic to recreation opportunities ~~including but not limited to:~~, including but not limited to Van Sickle Bi-State Park, Lakeside Marina, Edgewood Golf Course, Heavenly Gondola and the Nevada Beach Trail.
- Prioritize the existing tourist accommodation uses east of the ~~wildwood basins~~Wildwood Basins for SEZ restoration. Encourage property owners to use TRPA transfer incentives to relocate ~~the~~ tourist accommodation units to higher capability lands in the Tourist Core.
- Establish a dialogue with the California Tahoe Conservancy (CTC) and the United States Fores Service (USFS) to consider allowing access to open space parcels for passive recreation uses that conform to resource restrictions within the Tourist Core and its surroundings.
- Modify policies on Commercial Floor Area (CFA) and coverage allocations from the City's bank to incentivize businesses and facilities that promote the South Shore as an eco-tourism recreation destination.
- Support the ~~California Tahoe Conservancy~~CTC in its efforts to implement the Connelly Beach Public Access Project located west of the Beach Retreat parcel to provide a second access to Connelly Beach in addition to Timber Cove pier.

CITY OF SOUTH LAKE TAHOE

Figure 8-1
Proposed Recreation Facilities

# Section 9
# PUBLIC/QUASI-PUBLIC FACILITIES AND SERVICES

This section outlines public/quasi-public facilities and services goals and polices for the Tourist Core Area Plan. These goals and policies implement the vision and guiding principles discussed in Section 4.

## 9.1 GOALS AND POLICIES

**Goal PS-1**
To improve public and quasi-public facilities in the Tourist Core.

- **Policy PS-1.1**
  Public and quasi-public service facilities should be upgraded to support~~ing~~ existing development, redevelopment, and planned development within the Tourist Core consistent with TRPA's Regional Plan and the City's General Plan.

- **Policy PS-1.2**
  Locate appropriate public service facilities within the Tourist Core so as to increase pedestrian/bicycle transportation and serve as a catalyst for private development.

**Goal PS-2**
To maintain adequate water and sewer capacity within the Tourist Core.

- **Policy PS-2.1**
  Support South Tahoe Public Utility District and the Lakeside Park Association in upgrading their water and sewer systems as necessary to service all properties and provide for emergency needs.

# Section 10
# IMPLEMENTAT~~AT~~ION

This section sets how the goals and policies of the Tourist Core Area Plan are to be implemented. This section describes environmental and capital improvement projects, mitigation fee programs, and incentive programs to implement the policies of this area plan to promote Threshold gains.

## 10.1 CAPITAL AND EIP PROGRAMS

### TRANSPORTATION AND CIRCULATION

To improve traffic, circulation. pedestrian mobility and air quality in the area, the following improvements are planned.

| Improvements | Description | Responsible Party |
|---|---|---|
| US 50/South Shore Community Revitalization Project. | This project would create a pedestrian and bicycle friendly ~~commercial~~ Commercial ~~core~~ Core between Pioneer Trail and Stateline along US Highway 50. | TTD |
| South Tahoe Greenway | This project would construct a Class I ~~multi~~shared-use path from Van Sickle Bi-State Park to Meyers. A segment that runs from Sierra Boulevard to Herbert Avenue has been constructed. | CTC |
| Linear Park Improvements | The Linear Park Improvements include the repair of the Class I bike path, re-landscaping and installing irrigation and new pedestrian lighting along the US Highway 50 frontage in the vicinity of the Tahoe Meadows subdivision. This project has been approved by TRPA. | CSLT |
| Pioneer Trail Improvements | The Pioneer Trail Pedestrian Upgrade project consists of construction of sidewalks along both sides of Pioneer Trail between ~~U.S.~~US Highway 50 and Larch Avenue. This project is ~~scheduled for 2013~~completed. | CSLT |
| | Continue to construct pedestrian sidewalks on both sides of Pioneer Trail from Larch Avenue to the intersection of Pioneer Trail and Ski Run Boulevard. This project is projected to started in 2024. | CSLT |
| Ski Run Improvements | To stripe a Class II bike lane on both sides of Ski Run Boulevard from US Highway 50 to Pioneer Trail. | CSLT |
| US 50 Improvements | The US Highway 50 Water Quality Improvement Project consists of upgrading US Highway 50 to treat stormwater runoff and installing new ADA compliant sidewalks and pedestrian streetlights from 200 feet west of Ski Run Blvd. to Wildwood Avenue on the | CALTRANS |

| Improvements | Description | Responsible Party |
|---|---|---|
| | south side of US 50. ~~Scheduled 2013.~~This project is completed. | |
| | Construct a Class II bike lane from the intersection of Ski Run Boulevard and US Highway 50 to the Stateline. | CALTRANS |
| | RTP #74. US Highway 50 Signal Synchronization and Adaptive Signals Project. Upgrade signal timing equipment at signalized intersections along US Highway 50 to improve traffic flow. | CALTRANS |
| | RTP #81. Signalization Upgrade. Upgrade signal timing equipment at City of South Lake Tahoe signalized intersections to improve traffic flow. | CSLT<br>CALTRANS |
| Bike Paths, Lanes and Routes Improvements | Construct a Class I ~~multi~~shared-use bike path from the intersection of Pioneer Trail to the Stateline on the lakeside of US Highway 50. | CSLT |
| | Construct a pedestrian sidewalk and Class II lane from the intersection of Park and Pine Avenues down Pine Avenue to Lakeshore Boulevard. | CSLT |
| | Construct a Class I ~~multi~~shared-use path connecting the Tourist Core to Van Sickle Bi-State Park in the vicinity of the state line. Completed. | TTD<br>CTC<br>CSLT |
| | Construct a Class I ~~multi~~shared-use bike path from the US 50 and Ski Run Boulevard heading west to Lakeview Commons. ~~Scheduled 2015.~~Completed. | CSLT |
| | Construct a Class II bike lane along US Highway 50 from the intersection of Park Avenue and Pine Avenue to the state line. | CSLT |
| | Construct a pedestrian sidewalk and Class III bike route along Stateline Avenue from US Highway 50 to Lakeshore Boulevard | CSLT<br>PRIVATE |
| | Construct a Class II bike lane along Lake Parkway from Heavenly Village Way to the state line. | CSLT<br>CALTRANS |
| Pedestrian Improvements | Complete the pedestrian sidewalks in the ~~tourist core area~~Tourist Core Area by installing a sidewalk on the north side of US Highway 50 from Friday Avenue to the Stateline. ~~Schedule 2014.~~Completed. | PRIVATE<br>CALTRANS |

## TRANSIT IMPROVEMENTS

To reduce vehicle trip ends and level of service targets; transit services should be improved.

| Improvements | Description | Responsible Party |
|---|---|---|
| Waterborne Transit | Two forms of waterborne transit are envisioned, one would provide passenger ferry service to connect the ~~south shore~~South Shore of Lake Tahoe, potentially Ski Run Marina, to the n~~orth shore~~North Shore, tentatively Tahoe City Marina. This service would serve as a commuter option for those traveling between ~~north~~ North and ~~south shore~~South Shore but it would also provide visitors with a quicker and more scenic alternative to driving. A secondary water taxi service would connect the marinas and beaches along the ~~south shore~~South Shore creating a unique and convenient way for connecting people to local recreation resources. | Private<br>TTD |
| Transit Service | Expand transit service to Lakeside Marina, Lakeside Beach, and | TTD |

| Improvements | Description | Responsible Party |
|---|---|---|
| | Edgewood Golf Course. | |

## STREAM ENVIRONMENT ZONE RESTORATION PROGRAM

The purpose is to restore as much SEZ as possible, where feasible, to help meet TRPA threshold targets.

| Improvements | Description | Responsible Party |
|---|---|---|
| US Highway 50/Wildwood | Prioritize the existing tourist accommodation uses east of the ~~wildwood basins~~Wildwood Basins for SEZ restoration. Encourage property owners to use TRPA transfer incentives to relocate ~~the~~ tourist accommodation units to higher capability lands in the Tourist Core. | CSLT |

## WATER QUALITY IMPROVEMENTS

The purpose is to implement water quality improvement projects and programs to help achieve TRPA's water quality threshold and the California Regional Water Quality Control Board-Lahontan Region TMDL pollutant load reduction targets.

| Improvements | Description | Responsible Party |
|---|---|---|
| US Highway 50 Water Quality Improvement Project: | Caltrans will treat stormwater runoff from US Highway 50 from the intersection of US Highway 50 and Ski Run Boulevard to Wildwood Avenue. Completed~~This project is currently under construction.~~ | CALTRANS |
| Rocky Point Erosion Control Project, Phase 4b | Implement adaptive management to previously constructed water quality improvements to improve storm-water treatment efficiency. Adaptive management measures include improved storm drain inlets to increase the amount of storm-water captured and infiltrated in basins, vegetation restoration, rock slope protection, and addressing perceived safety issues. ~~This project is scheduled for construction in 2013.~~Completed | CSLT |
| Bijou Area Erosion Control Project | Phase I project focuses on two key elements: ~~(~~1) replacement of the existing Bijou Creek storm drain system that conveys storm water runoff from the 1,300-acre Bijou Creek watershed to Lake Tahoe; and ~~(~~2) construction of a comprehensive regional treatment system for runoff generated in the Bijou ~~commercial~~ Commercial ~~core~~Core. The existing, failing fifty ~~(50)~~ year old Bijou Creek storm drain system will be replaced from the outlet of Bijou Meadow, under Fairway Drive and ~~U.S.~~US Highway 50, through the Bijou ~~commercial~~ Commercial ~~core~~Core, and to Lake Tahoe, with a new underground drainage system. Replacement will allow for the separation of storm-water from the upper | CSLT |

| Improvements | Description | Responsible Party |
|---|---|---|
| | watershed from high pollutant load storm-water in the ~~commercial~~ Commercial ~~core~~ Core The Bijou ~~commercial~~ Commercial ~~core~~ Core component is designated as a priority project in the City's PLRP and is discussed in further detail below under the Tahoe TMDL. ~~Scheduled 2013.~~Completed | |
| Register Completed WQIPs (2004-2012): | The City has completed seven WQIPs. The ~~Urban Planning Catchments (UPCs) that encompasses~~urban planning catchments (UPCs) that encompass the seven completed project areas will be registered with the Lake Clarity Crediting Program. Of the seven WQIP projects completed by the City that will be registered, two are located within the Tourist Core Area Plan and treat runoff from within the Area Plan and from adjacent neighborhoods. The two WQIPs are Rock Point 1 & 2 and Rock Point 3 & 4. | CSLT |
| Construct and Register Active WQIPs (2013-2016) | Three WQIPs are in active stages of planning and design. ~~Construction is expected to be completed by the load reduction deadline of September 2016 and the UPCs associated with the three projects will be registered with the Lake Clarity Crediting Program.~~ The three new projects identified in the Load Reduction Plan are: 1) Bijou Commercial Core, 2) Harrison Avenue and 3) Sierra Tract Phase 3 & 4. Of the three projects, only the Bijou Community Core falls partially within the Tourist Core Area Plan. Completed<br><br>High pollutant storm-water from City right-of-way, Caltrans right-of-way, and private property in the Bijou ~~commercial~~ Commercial ~~core~~ Core will be collected in a separate drainage system and directed through a series of underground vaults to remove sediment. Storm-water will then be pumped through an underground storm ~~drain pipe~~drainpipe to water quality treatment basins in the upper watershed for infiltration. Completed | CSLT |
| Enhanced Street Sweeping | Continue road operations improvements to attain a Road RAM score of 3.0 on all City Streets through improved road operations, including 1) spot sanding at key intersections, steep hills, and critical public safety areas; 2) utilize the refined Washoe Sand specification developed by El Dorado County Transportation Division, which are less prone to pulverization when compared to the previously used volcanic cinders; 3) use advanced Epoke sander units with precision application controls, ability to pre-wet sand with brine to reduce bounce and scatter, enabling more targeted and effective deployment of traction sand; and 4) increase street sweeping with new Elgin Eagle dustless sweepers as soon as weather and roadway conditions allow after application of traction sand.~~Through a pilot program, the City will implement the following: 1) Switch to a road abrasive source with less Fine Sediment Particle (FSP) to reduce the average annual mass of FSP generated by City roads from sanding practices, and 2) Improve FSP recovery on a subset of City roads that generate high amounts of pollutants through frequent sweeping. The pilot program will target frequent sweeping of Primary Roads within UPCs that are directly connected to Lake Tahoe. Specifically, these roads include Ski Run Boulevard, Pioneer Trail, and the portion of Needle Peak road and Wildwood Avenue. Of the targeted roads, Ski Run Boulevard and Pioneer Trail are located within the Tourist Core Area Plan. The targeted roads will be swept with the City's~~ | CSLT |

| Improvements | Description | Responsible Party |
|---|---|---|
| | ~~dustless regenerative air sweepers after each winter abrasive application, as road conditions allow, and once monthly otherwise.~~ | |
| Stormwater System | City will complete annual stormwater system, construction and commercial, industrial, and municipal site inspections required in the NPDES MS4 permit. | CSLT |
| BMP Compliance | Focus BMP installation and compliance on commercial and multi-family projects within the Area Plan that are adjacent, have connected impervious surfaces, or the same catchment as EIP or public projects. | TRPA |
| | Ensure BMPs are incorporated in all projects reviewed under the City's MOU to capture a 20-year, one-hour storm or alternative BMPs if infiltration is not possible. | CSLT |
| | Coordinate with TRPA to support and/or enforce private property BMP certification with a near-term focus on approximately 290 acres of commercial land uses that directly discharge stormwater to Lake Tahoe | CSLT<br>TRPA |
| Road Operations | The City will continue to track abrasive applications and materials recovered by sweeping and vactoring in order to identify areas with high pollutant loads. | CSLT |

## SCENIC IMPROVEMENTS

To continue to restore the scenic quality of US Highway 50 and Pioneer Trail scenic roadway units and improve the overall community character within the area plan.

| Improvements | Description | Responsible Party |
|---|---|---|
| US 50 | Install curb, gutter, sidewalks, street lights and landscaping to provide a "clean edge" along the roadway. Implement the following projects:<br>- US Highway 50 Water Quality Improvement Project<br>- Pioneer Trail Pedestrian Upgrades<br>- Linear Park Improvements<br>- Completed. | CALTRANS<br>CSLT |
| Development and Design Standards | Implement the development and design standards and guidelines for the Tourist Core Area Plan to enhance the built environment, promote pedestrian mobility and provide for scenic viewshed protection. | CSLT |
| Land Use | Designate SEZ restoration sites and stormwater drainage basins as Open Space in the Tourist Core Area Plan. Completed. | CSLT |
| Scenic Quality Ratings | Designate the following as scenic resources:<br>- Wildwood Basins.<br>- Mountain and ridgeline viewshed located at the intersection of US Highway 50 and Ski Run Boulevard looking towards East Peak and Heavenly Ski Resort.<br>- Lake viewshed located at the intersection of US Highway 50 and Ski Run Boulevard looking towards Lake Tahoe and Ski Run Marina.<br>- Completed. | CSLT<br>TRPA |

| Improvements | Description | Responsible Party |
|---|---|---|
| Business Façade Improvement Program | Implement a program to provide low-interest loans to local businesses and Business Improvement Districts to install aesthetically improved building facades. | CSLT |
| SQIP | Implement the SQIP recommendations in non-attainment scenic roadway units during project review. | CSLT |

### RECREATION IMPROVEMENTS

To improve access to public recreation opportunities.

| Improvements | Description | Responsible Party |
|---|---|---|
| Way-Finding Signage Program | Expand the City's Way-Finding program in the Tourist Center Core District to direct pedestrian and bicycle traffic to recreation opportunities including but not limited to: Van Sickle Bi-State Park, Lakeside Marina, Edgewood Golf Course, Heavenly Gondola and the Nevada Beach Trail. | CSLT<br>CALTRANS<br>CTC<br>Private |
| Parks | Prioritize the relocation of existing tourist accommodation uses east of the ~~wildwood basins~~Wildwood Basins for SEZ restoration and expand the existing passive ~~memorial park~~Memorial Park. Encourage property owners to use TRPA transfer incentives to relocate the tourist units to higher capability lands in the Tourist Core Area Plan. | CSLT<br>CTC |
| | Allow open space parcels to be utilized for passive recreation and seating areas. Ensure the use conforms with resource restrictions such as SEZs. | CSLT<br>CTC |
| Commercial Floor Area | Amend the CFA ~~allocations procedures to add additional criteria for earning CFA from the City~~allocation procedures to add additional criteria for earning CFA from the City's unallocated pool. The City should add criteria that allow projects that promote the South Shore as an eco-tourism recreation destination to access the City's CFA pool | CSLT |

## 10.2 ECONOMIC AND SUSTAINABILITY PROGRAMS

To promote economic ~~activity~~ and increase pedestrian activit~~ies~~y in the Tourist Core.

| Improvements | Description | Responsible Party |
|---|---|---|
| Special Event Area Designation | The City shall pursue obtaining a TRPA special event permit designation for areas within the Tourist Core. Temporary activities may occur in the special event area without further TRPA review upon approval of a special event area. All other ~~temporary~~ special events outside the identified special event area will require a ~~temporary~~ special activity permit. | CSLT |
| ~~Commercial Floor Area~~ | ~~Amend the CFA allocations procedures to add additional criteria for earning CFA from the City unallocated pool. The City should add criteria that allow projects that voluntarily achieve a LEED or~~ | ~~CSLT~~ |

| Improvements | Description | Responsible Party |
|---|---|---|
| | ~~Energy Star green building certification to access the City's CFA pool.~~ | |

## 10.3 INCENTIVE PROGRAMS

The purpose of this program is to provide incentives to property owners and local governments to implement improvements in the Tourist Core and support the attainment of TRPA's Thresholds.

- Alternative Excess Land Coverage Program

  The purpose of this program is to reduce excess land coverage in the area plan and related hydrologic area. This system is in lieu of the TRPA excess coverage program set forth in Section 30.6 of the TRPA Code of Ordinances

  Excess coverage reductions, which occur when implementing Capital Improvement Project (CIP) and~~CIP~~/EIP projects, shall be banked for use by participants in an assessment district or other such program. Pursuant to TRPA Code Subsection 30.6.1.B.5, a land banking accounting system is established to bank and credit coverage not necessary for the CIP/EIP in the Tourist Core. ~~The~~ TRPA, with City concurrence, will allow individual property owners to access this land bank to meet their obligations under TRPA Code Section 30.6~~:~~, *Excess Land Coverage Mitigation Program*. The maximum amount of draw from the bank shall be limited to the amount of financial participation the individual property owner has made to the improvement.

  Private entities which contribute financially to ~~an~~ assessment district projects may utilize the excess coverage credits if they are credited to the district.

- Alternate Water Quality Fee Program

  An Area Plan may propose to establish area-wide water quality treatments and funding mechanisms in lieu of certain site-specific BMPs, subject to the requirements outlined in TRPA Code ~~section~~ Section 13.5.3.B.3. All properties within the Tourist Core Area Plan that participate in an area-wide treatment system that have been implemented through ~~public~~ Public ~~works~~ Works projects will be considered as meeting the requirement of TRPA Code Chapter 60~~:~~, *Water Quality* for drainage storage and treatment. Any financial contributions for these drainage systems, when on-site drainage is also provided, shall be credited to the Chapter 60 off-site mitigation fee requirements. On-site BMP treatment, such as paving and revegetation, are still required where feasible as part of this program.

  Public and private entities which contribute financially are eligible to participate.

- ~~Alternate Traffic and Air Quality Fee Program~~

  ~~The purpose of this program is to implement the transportation improvements listed in the Transportation and Circulation Element and to provide a substitute to Subsection~~

~~65.2.4.C of the TRPA Code of Ordinances for collection of fees for offsite traffic and air quality mitigation.~~

~~The Transportation and Circulation Element of the Tourist Core Area Plan lists improvements needed to help meet the VMT and Air Quality Thresholds. Implementation of the listed improvements will provide the necessary mitigation. Fees or assessments paid equivalent to the requirements of TRPA Code Section 65.2.4 to implement the improvement listed, will be considered in lieu of the requirements of TRPA Code Section 65.2.4.~~

~~Public and private entities demonstrating equivalent contributions to the construction of the listed improvements may credit such contributions to TRPA Code Section 65.2.4 requirements.~~

- Land Coverage

A conforming Area Plan is eligible for the transfer of coverage program pursuant to TRPA Code Section 30.4.2~~:~~, *Transferred Land Coverage Requirements*. Maximum coverage for facilities located in the Tourist Core but further than 300 feet of the High Water Line of Lake Tahoe is 70 percent of the project area located within Land Capability Districts 4 – 7, inclusive. Moreover, the transfer of soft coverage from SEZs can be used for all use types in the Tourist Core Area Plan.

~~The following land coverage provisions in TRPA Code Section 30.6.4 are applicable throughout the Region:~~

- ~~Non-motorized public trails are exempt from coverage subject to accessibility, trail route design, trail design, and designation provisions.~~
- ~~Coverage exemptions for non-permanent structure up to 120 square feet subject to BMPs, land capability verification, location, and aggregate limitation provisions.~~
- ~~Coverage exemptions for new residential pervious decks subject to size, design, BMPs, location, and aggregate limitation provisions.~~
- ~~Coverage exemptions for legally existing decks that meet all approval criteria are met.~~

- Transfer of Nonconforming Land Coverage in Centers

Pursuant to TRPA Code Subsection 30.4.2.C of the TRPA Code of Ordinances, existing development, relocated to a Town Center or a Regional Center ~~where~~ and the sending site is restored and retired, may maintain nonconforming land coverage. The receiving site shall be developed in accordance with all applicable TRPA ordinances and the site shall be either the same size or larger than the prior site. If the new project site is smaller, the amount of nonconforming coverage transferred shall be reduced on a proportional basis. The balance of nonconforming coverage may be banked and transferred elsewhere.

- Off-site Excess Coverage Mitigation

A project may mitigate its excess land coverage by reducing coverage off-site in a different ~~hydrologically~~ hydrologically-related area provided the restoration occurs on more sensitive lands than the project area.

- On-site Removal and Retirement of Excess Coverage in the Tourist Core Area Plan

Pursuant to TRPA Code Section 30.6.3 of the TRPA Code of Ordinances, on-site removal of remaining excess coverage, in a Town Center or a Regional Center, may earn multi-residential bonus units, tourist accommodation bonus units, and/or commercial floor area.

- ~~Commercial Floor Area Allocation~~Development Rights

The City of South Lake Tahoe provides ~~a pool of Commercial Floor Area (CFA)~~ development rights (CFA, coverage, units of use, potential units of use) at a reasonable cost and free for certain project types in order to create an investment stimulant for creating change. CFA is provided as an incentive, not an entitlement, in order to encourage property owners to move forward with projects that are beneficial to the environment, community and the economy.

Projects eligible for an allocation of CFA from the City's pools must meet the following criteria:

1. ~~Be within an adopted community plan area,~~The subject property must be in the City of South Lake Tahoe.
2. ~~Meet the criteria for CFA allocations required by the applicable community plan,~~A planning application shall be on file with the Development Services Department.
3. ~~Meet all applicable design standards,~~
4. ~~Include the construction of improvements that will benefit the public and community which are more extensive than required by the applicable community plan or City Code; and~~
5. ~~5.~~3. Provide an economic benefit to the community with enough significance to merit the allocation of the City's CFA resource.

An additional 160,347 square feet of CFA is available from the TRPA Pool as development transfer match to Town Centers and the Regional Center. See Transfer of Development Rights to the Tourist Core Area Plan and Transfer of Existing Development to the Tourist Core Area Plan program descriptions below.

- Tourist Accommodation Bonus Units

A total of 147 tourist bonus units are available for use by projects in the Tourist Core. ~~Twenty-five (25)~~ 25 bonus units are assigned to the Tourist Core, 40 bonus units are available from TRPA's Community Plan pool, and 82 are available from TRPA's Special Projects Pool.~~–~~ Tourist bonus units from the TRPA Community Plan pool or units assigned to the area plan may be earned in accordance with TRPA Code Section 52.4 when matched with a transfer of an existing tourist accommodations unit. Tourist bonus units may also be earned from the Special Project Pool in accordance with TRPA Code Section 50.6.4.D.

In addition to the TRPA Code provisions listed above, tourist bonus units may also be earned as a transfer match for the transfer of existing development to Town Centers and the Regional Center in accordance with TRPA Code Section 51.5.3~~:~~, *Transfer of Existing Development to Centers*. See Transfer of Existing Development to the Tourist Core Area Plan program description below.

- Residential Bonus Units

The original Stateline/Ski Run Community Plan was assigned one hundred and forty-five (145) residential bonus units under the 1987 Plan. When the Tourist Core Area Plan was adopted in 2013 a~~A~~ total of ~~eighty-nine~~ninety (~~8990~~)89 residential bonus units ~~are~~remained ~~assigned to the Tourist Core Area Plan that may be used~~ for affordable housing units or as a match for transferring development rights to centers. The remaining 488 in TRPA's pool that may be used region wide and 600 new residential units are available for use only in Town Centers, the Regional Center or the High Density Tourist District. Residential bonus units may be earned and used by Projects in accordance with TRPA Code Section 52.3: *Multi-Residential Incentive Program*, of the TRPA Code. Residential bonus units used for affordable housing under this section does not require residential allocations. Residential bonus units used for moderate income housing required an allocation. The City of South Lake Tahoe has a Certified Moderate Income Housing Program pursuant to Section 50.5.2.B and 52.3.6 of the TRPA Code, thus moderate income housing units are eligible to earn allocations from TRPA's unused allocation pool subject to TRPA's allocation procedures.

Pursuant to TRPA Code Section 21.3.2.B, residential bonus units can also be earned under the City's Local Government Housing Program that has been certified by TRPA. The program allows for the conversion of illegal secondary units into deed restricted affordable housing unit.

In addition, residential bonus units may also be earned and used for projects in the Tourist Core~~-~~ in accordance with TRPA Code Section 51.3.3.C~~:~~, *Transfer of Development Rights to Centers*, or TRPA Code Section 51.5.3~~:~~, *Transfer of Existing Development to Centers*. See Transfer of Development Rights to the Tourist Core and Transfer of Existing Development to the Tourist Core Area Plan program descriptions below.

- Transfer of Existing Development to the Tourist Core

Pursuant to TRPA Code Section 51.5.3, residential bonus units, CFA ~~and tourist bonus unit are available as development transfer match for existing development (residential, tourist accommodation and commercial uses) that is~~ , and tourist bonus units are available as development transfer matches for existing developments (residential, tourist accommodation, and commercial uses) that are transferred to the Tourist Core. Receiving parcels in the plan area may earn residential bonus units, tourist bonus units or CFA at an enhanced transfer ratio based on the land capability of the sending parcels. Transfers of existing residential units are eligible for an additional enhanced transfer ratio based on the sending parcel's distance from the Tourist Core and primary transit route. Residential bonus units earned under this program ~~does~~ do not require an allocation to construct a residential unit.

- Transfer of Development Rights to the Tourist Core

Residential bonus units from the TRPA Pool are available as development transfer match for transferring development rights to the Tourist Core Area Plan. Receiving parcels in the plan area may earn residential bonus units at an enhanced transfer ratio based on the land capability of the sending parcel, and its distance from the Tourist Core and primary transit routes. Residential bonus units earned under this program do not require an allocation to construct a residential unit. The transferred development right is eligible to receive an allocation from TRPA's unused allocation pool pursuant to Section 51.3.3.C.4 of the TRPA Code.

- Persons At One Time

Projects are eligible for the Persons At One Time (PAOT) allocations pursuant to TRPA Code Section 50.9~~.~~, *Regulation of Additional Recreation Facilities*, of the TRPA Code of Ordinances.

The TRPA Code requires that certain recreation uses and activities are assigned additional PAOTs from TRPA prior to a construction of a project or commencement of an activity. Uses such as marinas, boat launching facilities, information centers, recreation centers, day uses areas, beach recreation, commercial boating, water-oriented outdoor recreation concession, downhill ski facilities, developed campgrounds, group facilities, and recreational vehicle parks are eligible for PAOT allocations from the TRPA Pool.

- City of South Lake Tahoe Green Building Program

In November 2010, the City Council adopted the City of South Lake Tahoe Green Building Program (Resolution 2010-92). The program encourages the incorporation of energy efficiency in City buildings and facilities, and provides clear incentives for private property owners to retrofit residential, commercial, and industrial buildings to save energy and reduce the carbon foot print.

~~Residential projects that incorporate green building measures will be given priority for plan check, by all City Departments, over projects that meet only mandatory requirements. For projects that propose to voluntarily achieve a third party certification such as LEED, Energy Star or Green Point Rated would be eligible for the following:~~ Residential projects that voluntarily achieve third-party certification are eligible for the following:

- ~~Projects would receive priority plan check, over all other projects, by all City Departments.~~ Priority plan check, over all other projects, by all City Departments.
- ~~Residential projects would have p~~Priority on the residential allocation waiting list. ~~– 10% of residential allocations would be offered to Green Building projects before other projects on the waiting list.~~
- ~~Projects would receive r~~Recognition at a televised City Council meeting and on the City Website.

Commercial projects that voluntarily achieve ~~LEED certification or an Energy Star Label~~ third-party certification are ~~would be~~ eligible for the following:

- ~~Projects would receive p~~Priority plan check, over all other projects, by all City Departments.

- ~~Projects would be eligible for~~ CFA allocation from the City's unallocated CFA pool.
- ~~Project would receive r~~Recognition at a televised City Council meeting and on the City Website

~~▪ Change in Use~~

~~Commercial changes in use are exempt from project review if the following criteria are met:~~

~~1. The change in use is within the commercial use classification;~~

~~2. The change in use is to an allowed use;~~

~~3. The property is a member of an approved parking assessment district;~~

~~4. The change does not increase the parking requirement to a greater requirement than 1 space for 200 square feet., or the number established upon creating the district;~~

~~5. The proposed activity is consistent with the Tourist Core Area Plan, is not a project by other requirement of TRPA Code Chapter 2: *Applicability of the Code of Ordinances* of the TRPA Code of Ordinances; and~~

~~6. The change in use does not have the potential to intensify pollutant loads over and above the capability of treatment by existing installed BMPs.~~

▪ Off-site Parking

Use of off-site and shared parking is permissible pursuant to the parking standards in Appendix ~~B~~ C of this Plan.

▪ Density Bonus

▪ Projects approved as part of the South Tahoe Redevelopment Demonstration Project No. 1 shall be subject to TRPA Code Section 31.4.3 for density calculations.

▪ Conversion of Use

Pursuant to ~~TRPA Code~~the TRPA Code of Ordinances, Chapter 51, existing development rights consisting of commercial floor area, tourist accommodation units, and residential units of use may be converted from one development right to another, provided the conversion complies with the provisions of Chapter 51. ~~Section 50.10: *Election of Conversion of Use*, the following conversion incentives are available in the Tourist Core Area Plan.~~

When a Tourist Accommodation use is to be converted to a Residential use, TRPA Code of Ordinances Section 31.4.5 shall apply.

~~Up to 200 existing Tourist Accommodation Units (TAUs) basin wide can be converted to Existing Residential Units of Use for multi-unit projects subject to the following conditions:~~

~~1. Each converted unit maximum size is 1,250 square feet of residential floor area; and~~

~~2. The conversion must happen on the same parcel.~~

~~Conversion of an existing residential unit of use or tourist accommodation unit to a residential, tourist or commercial use may be permitted when the units are transferred from sensitive lands.~~

~~Conversion of an existing residential unit of use or tourist accommodation units to a residential, tourist, or commercial use may be permitted if the conversion results in the elimination of a non-conforming use.~~

~~Conversion of an existing residential unit to tourist or commercial use or an existing tourist accommodation unit to a commercial use or multi-family unit may be permitted onsite or for transfers if the project meets the TRPA standards applicable for a project proposed on an undeveloped project area.~~

~~Conversion of an existing residential unit of use to a tourist or commercial use or an existing tourist accommodation unit of use to a commercial use or a residential use may be permitted onsite or for transfer if the converted use is include as part of a project that has linked status pursuant to Chapter 15 of the TRPA Code.~~

~~Conversion of existing tourist accommodation units of use to residential may be permitted onsite if the converted units will be used for deed-restricted affordable housing.~~

**Density**

Mixed-use projects in conforming area plans may be developed to the maximum density allowed per the TCAP for each use.

Regarding legal, non-conforming tourist and residential densities, TRPA Code of Ordinances Section 31.4.6 shall apply.

## 10.4 MONITORING AND REPORTING PROGRAMS

### TOURIST CORE AREA PLAN

The TRPA Code of Ordinances Section 13.8~~.~~, *Monitoring, Certification, and Enforcement of Area Plan*, requires quarterly monitoring of building permits issued by the City and an annual review and certification of the area plan.

- On a quarterly basis, the City shall provide TRPA with all building permits issued in the plan area. At a minimum, the permits shall contain and make clear the necessary

development information that TRPA needs to measure compliance with the terms of the area plan, such as additional land coverage, commercial floor area, residential units, or tourist accommodation units.

Annual review and certification shall be conducted by TRPA. TRPA shall select and review a sample of development permits issued within the plan area in order to certify that the permits are issued in conformance with the area plan.

## LAKE TAHOE TMDL

Through the Lake Tahoe TMDL, Lahontan established five-year load reduction targets to assess a jurisdiction's progress towards meeting overall load reduction goals. The first load reduction target is specified in the NPDES permit (MS4), which requires a 10 percent Fine Sediment reduction, 7 percent Total Phosphorus, and an 8 percent Total Nitrogen from baseline pollutant loading by September 30, 2016.

In addition, the MS4 permit identifies the following milestones for load reduction planning and reporting efforts.

- On an annual basis (March 15), the City will provide Lahontan with a progress report on the City's Five Year Pollutant Load Reduction Plan.
- ~~Pollutant Load Reduction Progress Report - October 1, 2013.~~
- ~~Report of Waste Discharge and Updated Pollutant Load Reduction Plan – June 9, 2016.~~

The City will continue to track abrasive applications and materials recovered by sweeping and vactoring, which helps identify areas with high pollutant loading. City will continue to inspect facilities during large runoff events, to determine whether constructed source control, conveyance, and treatment measures are functioning as designed. The City will also complete annual stormwater system, construction and commercial, industrial, and municipal site inspections required in the MS4 permit. These activities form the foundation of the City's internal approach to assess its stormwater management activities and provide data to support assessments and reporting of annual load reduction progress during the implementation of the PLRP. Moreover, it provides valuable data for updating ~~o~~f the ~~PRLP~~PLRP ~~for year 2016 and beyond~~.

# 1 SECTION ONE INTRODUCTION

The South Lake Tahoe Design Guidelines (Guidelines) provide visual imagery in order to support and clarify the intent of the City of South Lake Tahoe design standards. The Guidelines were developed to help project applicants and their designers understand the community's desired visual character and appearance for South Lake Tahoe. They apply to all projects except single family and multi-family residential projects within the City of South Lake Tahoe.

The Guidelines were developed as part of a collaborative outreach process. Community members were invited to take part of three public workshops and two online surveys. The first meeting and online survey focused on understanding what types of buildings, signage and landscape elements best represented the type of mountain architecture the community desired for South Lake Tahoe. The second meeting and online survey provided a venue for community members to comment on the Draft Design Guidelines. Survey and meeting results indicated that participants felt the imagery provided represented their desired aesthetic character for South Lake Tahoe. At the final public meeting the Final Draft Design Guidelines were presented, areas where the Draft Design Guidelines had been modified to respond to public input were identified and the community was provided another opportunity to provide input.

## PURPOSE & INTENT

The primary purpose of the South Lake Tahoe Design Guidelines (Guidelines) is to provide a visual tool to help guide project applicants on how to meet the required design standards in a manner that meets the desired aesthetic of the community. They are intended to assist landowners, developers, tenants and their consultants, such as architects, who propose any alteration, addition, construction, and/or development in understanding the basic design ideas related to the City of South Lake Tahoe's (City's)design standards in order to improve the area's visual quality.

The Guidelines are not intended to inhibit innovative design or espouse one style of mountain design. They are intended to allow freedom of expression, innovation and creativity while developing built elements that are timeless or do not appear overly trendy. They provide an illustrative and descriptive tool for establishing and maintaining an overall unifying character and image for the entire community.

The goal of the Guidelines is to communicate design principles regarding how structures relate to the land, respond to climate, step with natural grades, and harmonize with the character of the surrounding landscape. Since there is not a required theme or style of mountain architecture, it is all the more essential for structures to relate to each other through the use of design elements such as locally found materials, scale, fenestration, style, massing and exterior paint colors.

The Guidelines are intended to be an aid to enhance the existing visual quality and experience within the community and direct future development in ways that are responsive to the specific environmental conditions and natural setting of South Lake Tahoe. They were developed in conjunction with community input in order to establish parameters which align with the community's objectives for mountain architecture and the desire for enhanced visual quality throughout the city.

The Guidelines describe how to aesthetically and sensitively execute applicable design standards and codes in a manner that is compatible with the mountain environment. For example, there are codes that set the parameters for height and coverage, however, they do not describe how to aesthetically and sensitively apply them to a site. This manual provides the guidance to accomplish this.

## APPLICABILITY

The Design Guidelines apply to all commercial, tourist, mixed use, public/institutional and industrial projects (including additions, remodeling, relocation or new construction). They do not apply to single and multi-family residential projects. The Guidelines will be used during City review of permit applications as additional criteria for project review and communication with project applicants.

The Guidelines relate to aesthetic consideration of project development. Nothing herein alters current codes or best management practices (BMPs) requirements. All regulations and guidance in the City of South Lake Tahoe City Code, applicable Area Plans, the Tahoe Regional Planning Agency (TRPA) Code of Ordinance, TRPA BMP Handbook and other applicable documents shall remain in effect.

The Guidelines are not intended as a "blueprint" for approval, rather they outline the important design elements and features which should be considered. The City will consider these Guidelines in reviewing projects. Applicants are invited to submit creative and imaginative projects which build on these Guidelines and contribute to the overall character of South Lake Tahoe.

Individuals and entities proposing projects within the City of South Lake Tahoe should review these guidelines before initiating the design and development process. To facilitate project approvals, questions regarding the Guidelines, as well as other development-related questions, should be discussed with the City's Development Services staff as early in the development process as possible. The Guidelines have been developed in accordance with the City Code and Area Plans and TRPA's Code of Ordinances Design Standards and BMPs and are intended to further the broader goals and policies of the Regional Plan and the City's General Plan.

## DOCUMENT ORGANIZATION

The Guidelines have been organized to correlate with the City's citywide design standards and Area Plan design standards. They are presented in five sections:

- Site Design
  - General Design
  - Grading and Drainage
  - Building Placement
  - Parking
  - Bicycle Parking
  - Visual Screening
  - Pedestrian Circulation
  - Public Plazas and Open Space
- Building Design
  - Building Design and Articulation
  - Roofs
  - Building Height
  - Green Design
- Landscape
- Exterior Lighting
- Signage

Each section includes images, diagrams and illustrative examples in order to visually communicate how the Design Guidelines and existing city design standards can be met while developing a project that is compatible with the surrounding mountain environment. A summary of the section's design objective is provided at the start of each section. Image captions are provided to further communicate the design idea presented by the images, diagrams and illustrations.

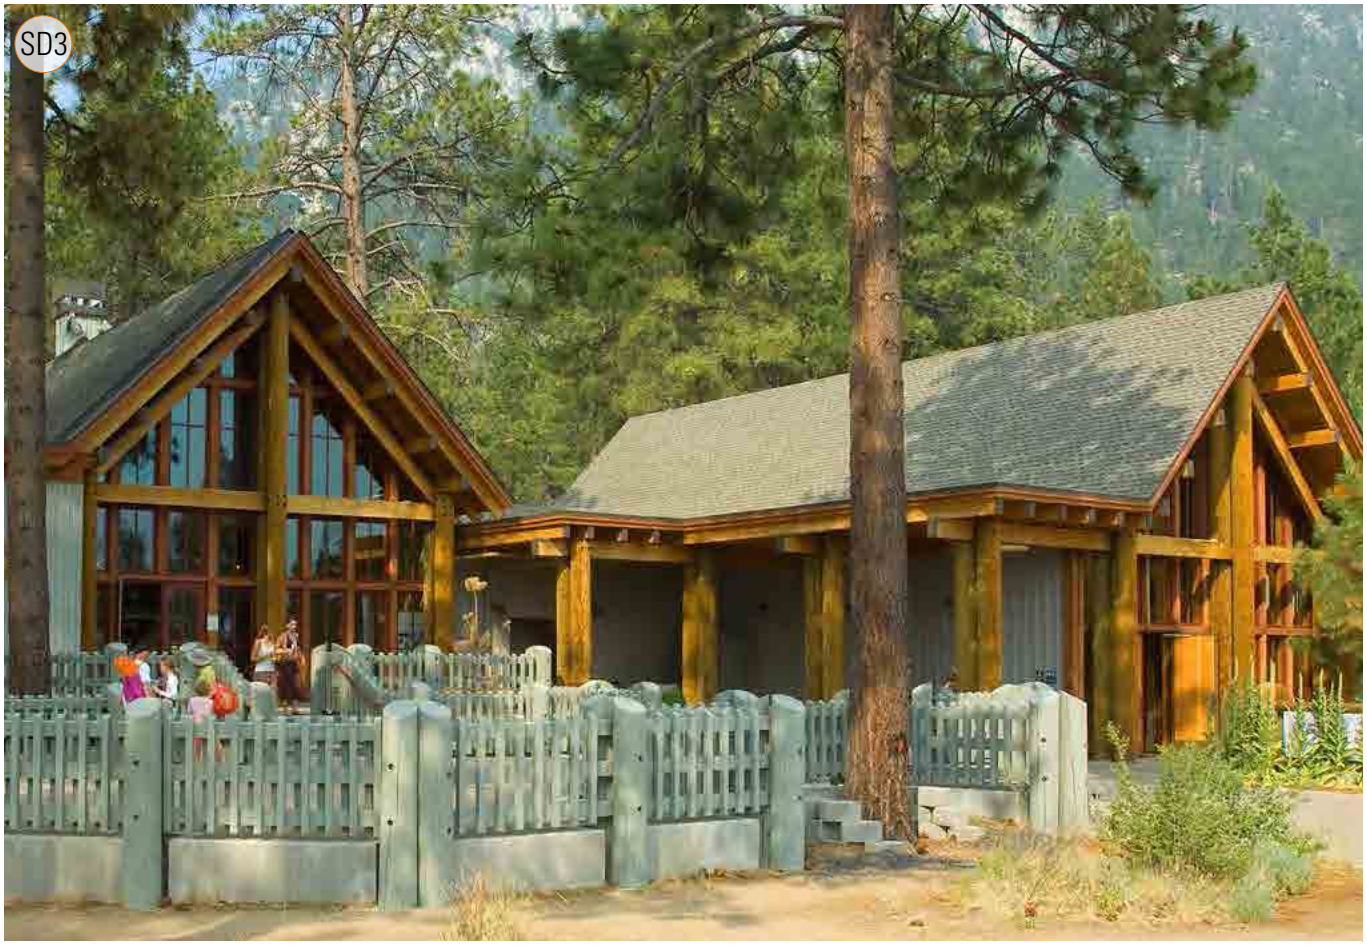
The Design Guidelines apply to all projects within the City of South Lake Tahoe except single and multi-family residential projects. The unique natural setting of South Lake Tahoe is the best starting point for developing the site and building design.

# 2 SECTION TWO SITE DESIGN

## OBJECTIVE

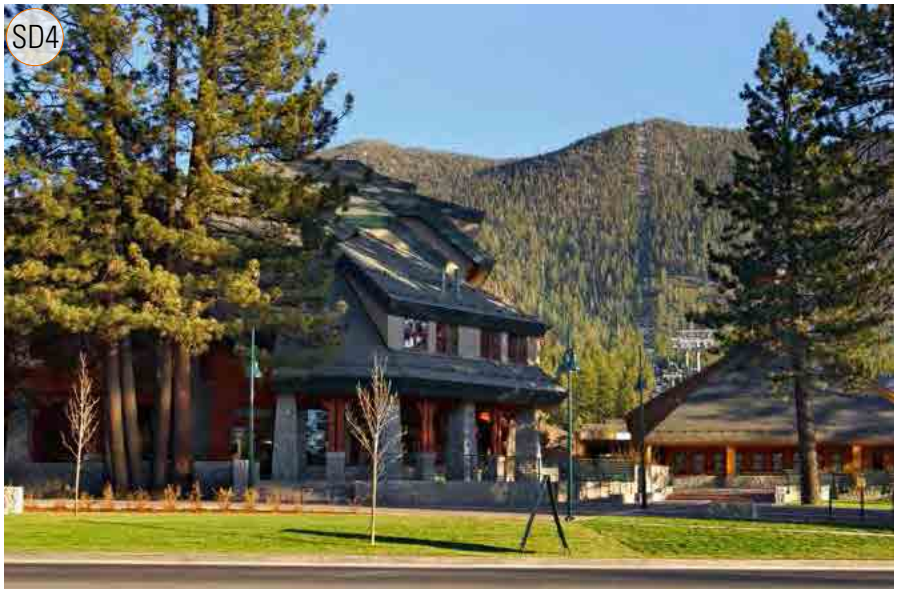
Fit and blend man-made improvements into the topography and forest.

The way in which buildings and built elements relate to the land is an important factor in defining the character and enhancing the visual quality of South Lake Tahoe. The area's natural setting with its forested mountains, crystal blue lake and fragile meadows are South Lake Tahoe's most important features. This section describes design guidelines for site work elements including grading and drainage, building placement, parking areas, pedestrian circulation, and public plazas and open spaces in order to ensure that the character of South Lake Tahoe is maintained.



## LIMIT NEW DISTURBANCE AND KEEP EXISTING TREES, BOULDERS AND NATURAL ELEMENTS

Rock outcroppings and other natural elements should be incorporated into site design and public areas.



Retain existing natural features such as rock outcrops, trees and topographic features.

Site buildings and paved areas over existing disturbance to ensure the least amount of new site disturbance as possible.

## MAINTAIN AND HIGHLIGHT VIEWS OF THE MOUNTAINS, FORESTS AND LAKE

Organize and design buildings to maintain ridgeline and forest canopy views.

Site buildings and structures to maintain views of the mountains and lake.

Orient site features to capitalize and highlight views of the surrounding mountain and lake landscape.

Underground new utilities along commercial corridors in order to reduce visual distractions and enhance views of the surrounding landscape.

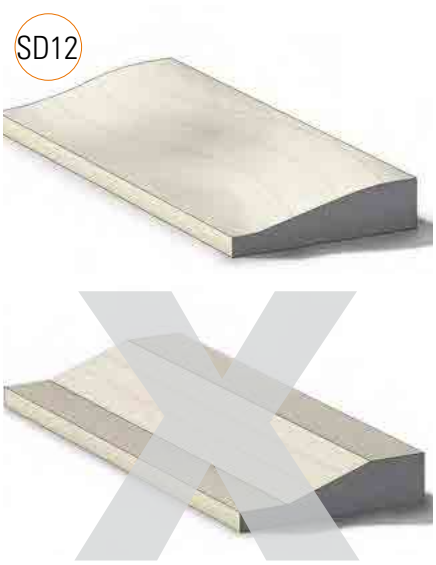
Buildings and site elements should be organized to preserve lake views of significant size to make a greater visual impact when viewed from public areas.

# GRADING AND DRAINAGE

## OBJECTIVE

Work with existing topography so that built elements appear to be an extension of the existing natural forms or nestle easily within the landscape setting.

The most aesthetically pleasing mountain towns are those that appear to nestle into their setting, working through and around the landscape instead of perching on top of it. The intent of these guidelines is to foster grading which results in built work that appears to sit easily within the landscape instead of being imposed upon it.



Minimize grading and work with existing topography to minimize the use of retaining walls and integrate buildings into the site.

Preserving existing trees and incorporating naturally functioning systems into the site design is integral to the establishing the aesthetics of the place.

Revegetate graded slopes.

Smoothly merge graded areas into existing terrain and undulate the graded surface to mimic existing landforms. Do not create sharp transitions with a flat graded surface.

Natural drainage courses and existing drainage patterns should be protected.

Design graded areas to appear as natural landforms. Smoothly merge graded areas into the existing terrain. Undulate slopes to mimic the surrounding landscape.

Gracefully blend stormwater features into the look and feel of the surrounding terrain. Do not use sharp transitions or flat slopes that do not appear natural.

## BUILDING PLACEMENT

### OBJECTIVE

Organize buildings in such a way that respond to and take advantage of Tahoe's natural setting while reinforcing the character of pedestrian and public areas in order to optimize visitor and resident enjoyment of outdoor spaces.

Building placement has a powerful impact on the perceptions of visitors and residents. Consideration should be given to all the aspects of the site: the physical characteristics, environmental conditions and social expectations to determine the arrangement and location for buildings that will provide the greatest benefit. The guidelines for siting of buildings are intended to encourage designs that respond to the natural setting.

Because each building's relationship to the street impacts the character and function of pedestrian areas, the guidelines also encourage designs which reinforce the character of public areas and optimize visitor and resident enjoyment of outdoor spaces. Well organized buildings can create comfortable pedestrian plazas, promote walkability, encourage commerce, improve building performance and reinforce community identity.

SD16

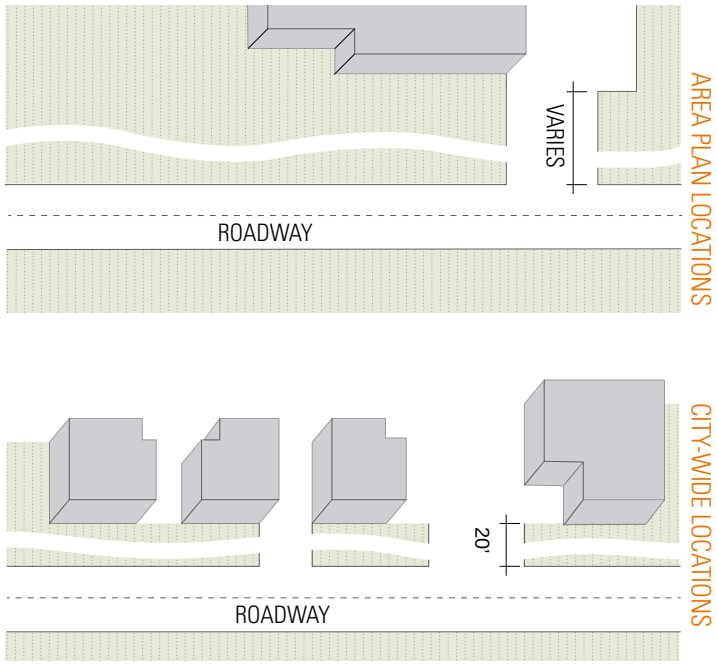


***Image courtesy of BSA Architects***

Site buildings at setback lines to create visual interest along the road corridors, allow for substantial landscape areas and pedestrian walkways.

SD17

***Image courtesy of Tahoe Donner Cross Country Ski Center; Tahoe Donner Association, Dale Cox Architects***

Modulate buildings to avoid creating a long row of buildings.

SD18

Locate corner buildings at the setbacks in order to create a strong street presence, define the pedestrian realm and encourage pedestrian activity.

Seating, outdoor dining and public gathering areas can be incorporated within the setback area.

Building placement should not intrude on or diminish the views of mountains or the lake as seen from public spaces and roadways.

## RELATIONSHIP TO PUBLIC SPACES AND OTHER BUILDINGS

Cluster buildings where appropriate to create desirable and comfortable public outdoor spaces.

Site buildings in a manner that complements adjacent buildings.

## RELATIONSHIP TO PEDESTRIAN MOVEMENT AND ACCESS

Site buildings so their spatial relationship provides for and promotes pedestrian access.

Highlight building entries through architecture and landscape.

Place building entries and frontage toward the primary linear street frontage to encourage and support a pedestrian environment.

Provide covered entries.

Orient the entry and major façade of commercial buildings toward the primary street frontage.

# PARKING

## OBJECTIVE

Provide convenient parking that is not visually obtrusive and does not impact pedestrian movement.

Parking with its related vehicular circulation and access points establishes the pattern of movement for trucks and automobiles and influences pedestrian and cyclist movement. The point where a driver enters or leaves a site affects both a project and the community as a whole.

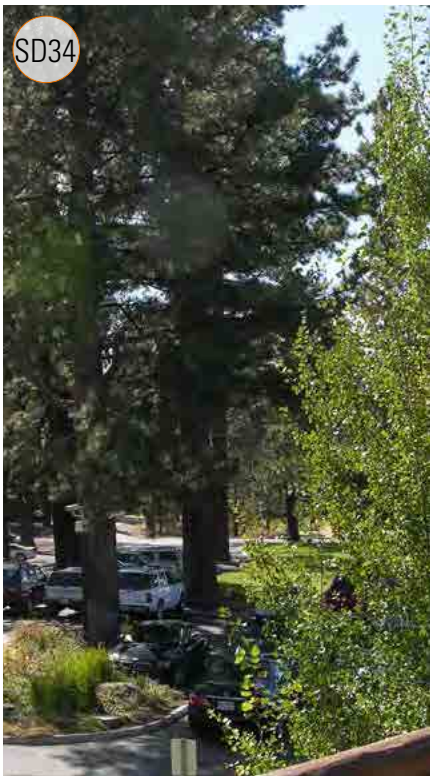
The guidelines focus on siting and designing parking areas which do not dominate views from the roadway and public areas and encourage pedestrian movement by minimizing vehicular/pedestrian conflict areas and creating opportunities to park once and walk to multiple destinations.

Divide parking into smaller lots to decrease the view of large parking expanses.

Parking located behind a building or on an interior side has less visual impact from the street in order to create a cohesive pedestrian environment and building frontage.

## USING LANDSCAPE AND EXISTING TREES TO BREAK UP PAVING AREAS

Best management practices (BMPs), such as infiltration basins, can be incorporated into parking areas as part of landscape areas and offer an aesthetically pleasing and lower cost alternative to conventional stormwater treatment strategies.



Integrate landscaping and barriers that prevent parking outside of designated areas as part of the overall parking and landscape design.

Incorporate islands of adequate size between parking areas to visually break up long lengths of parking as well as provide areas for snow storage that are out of the public rights of way.

Integrate boulders into the landscape design where appropriate to prevent parking in landscape areas.

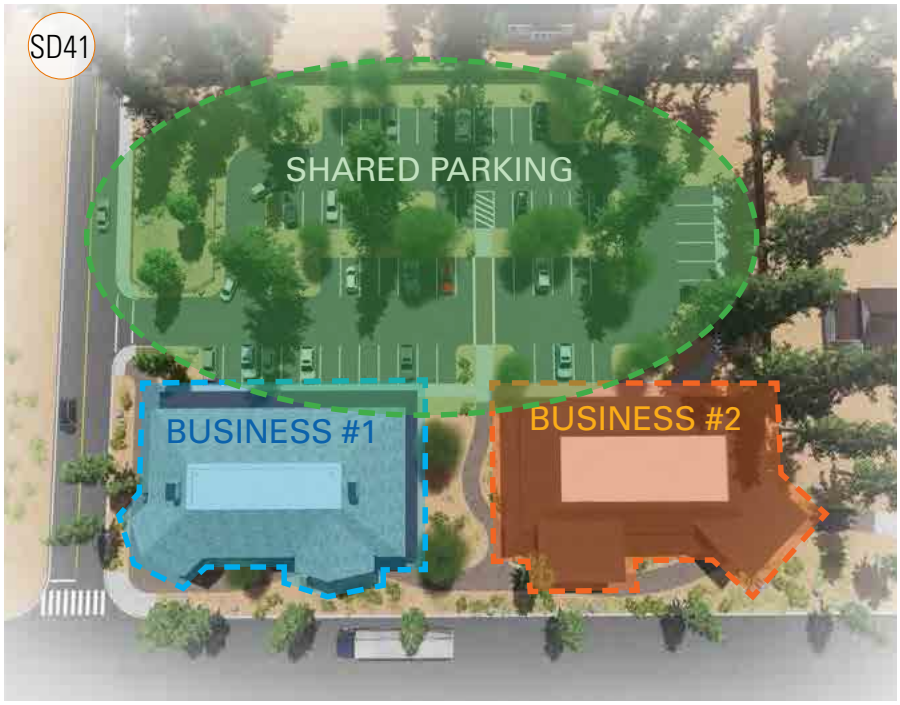
Incorporate existing trees into parking lot design and provide adequate buffer to maintain and enhance plant health.

## VISUAL SCREENING

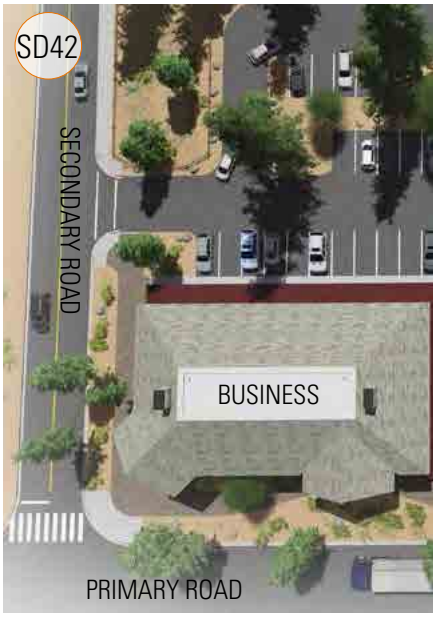
Fencing can be incorporated as part of the landscape elements used to screen parking from the roadway.

Incorporate landscaping in the setback area to screen parking from the street. Utilize informal planting strategies to create a more naturalized appearance of landscaping.

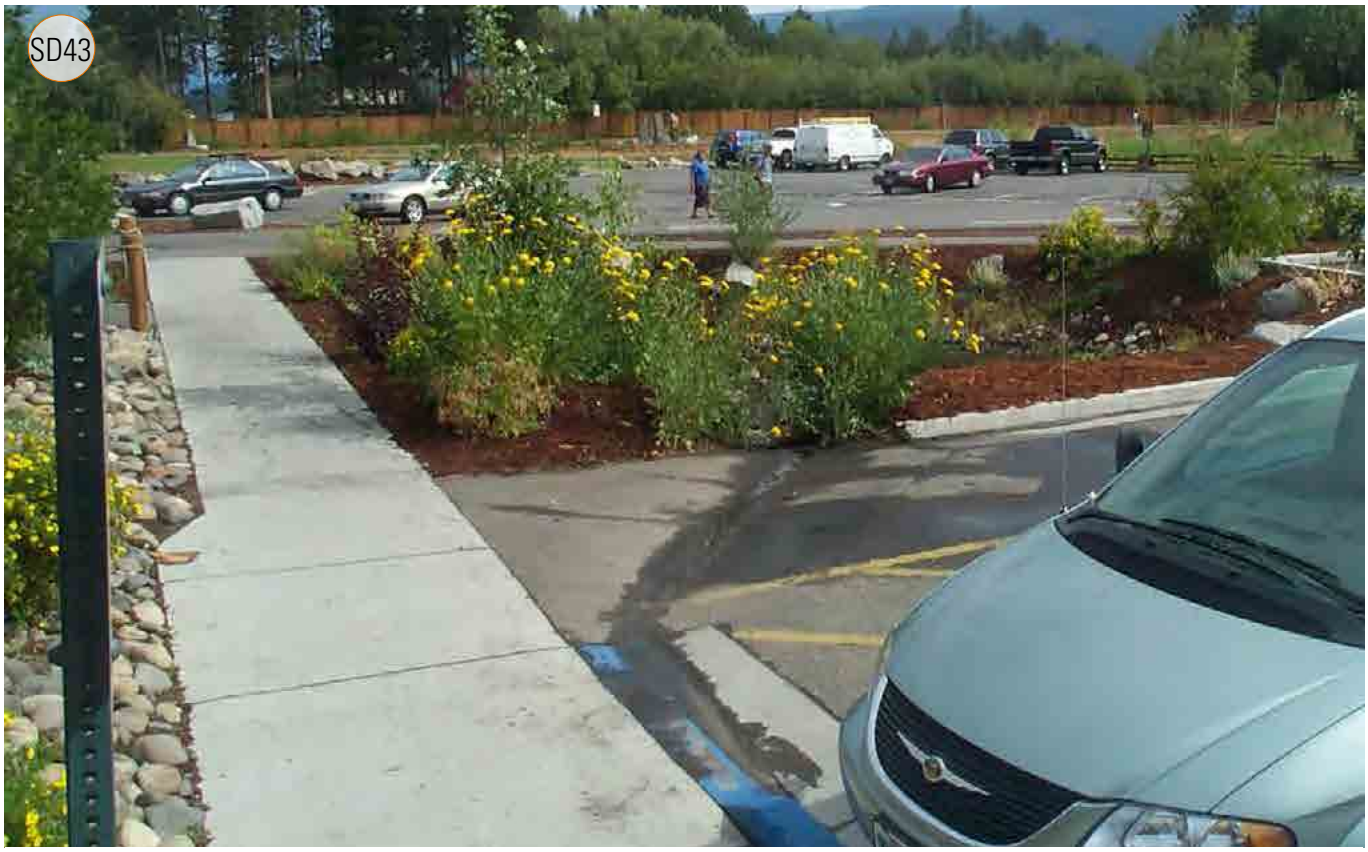
Utilize landscaping to screen underground parking that extends above natural grade.



Buffer parking from neighboring residential uses with fencing.



The use of vertical separation, landscape and fencing can help screen parking areas from the road.



## ENCOURAGING PEDESTRIAN MOVEMENT

Encourage walkability and a park once atmosphere by providing shared parking and shared parking access points.

Locating access drives from side streets and alleys fosters pedestrian movement along the primary street corridor by reducing the number of times vehicle and pedestrians interface.

Pedestrian walkways through parking areas provide a safe place for people to walk away from moving vehicles and should be separated from the building by a landscape area.

## BICYCLE PARKING

### OBJECTIVE

Encourage active transportation use with secure and convenient facilities.

Bicycle trail connections in combination with bike-friendly amenities help encourage use of alternative modes of transportation.

Locate bike racks within close proximity to the main building entry.

Locate bike racks so they do not obstruct pedestrian movement.

Incorporate long-term bike parking to serve people staying at a site for over four hours. Long-term bike parking can be provided indoors when possible.

Locate bike racks so they are visible to encourage use and enhance security.

Design dumpster enclosures using materials and finishes consistent with the building architecture to unify the appearance of site structures and help protect visual quality. Screen dumpster enclosures that are visible from the street with landscaping. Dumpsters should be covered whenever possible to prevent precipitation from entering the dumpster, mixing with contents and then leaking out.

Utilize site planning and building placement and design to minimize the visibility of parking, utilities, and service and maintenance areas from public rights of way.

Utilize a combination of fencing, walls and landscaping to provide attractive visual screening.

## VISUAL SCREENING

### OBJECTIVE

Minimize the visual impacts of parking and service areas.

The architectural design of a project shall include elements that screen from public view all external mechanical equipment, including refuse enclosures, electrical transformer pads and vaults, satellite receiving disks, communication equipment and utility hardware on roofs, buildings or the ground.

# PEDESTRIAN CIRCULATION AND DESIGN

## OBJECTIVE

Encourage safe and easy pedestrian movement within a site and between adjacent properties.

The design of the circulation system on a site is critical to creating safe travel routes between parking areas and building entrances. The guidelines identify the need for creating clearly defined and aesthetically pleasing circulation systems within and between project sites and providing connectivity to nearby transit stops and citywide pedestrian circulation systems.

Circulation systems should be separated from vehicular areas and provide convenient connections to pedestrian areas.

Integrate project walkways with the existing and planned active transportation network, community areas and transit.

Provide for pedestrian circulation within the site and between adjacent properties.

Create an interesting and inviting pedestrian environment with walkways and shared use paths that are separated from the roadway.

Design walkways for year-round circulation.

Provide wider sidewalks in heavily used commercial and tourist areas to accommodate higher numbers of pedestrians and provide opportunities for outdoor dining.

Sidewalks shall be provided along the full length of buildings that feature customer entrances.

Provide internal pedestrian connectivity to buildings, parking, open spaces and public amenities.

Separate walkways from vehicular areas in parking lots.

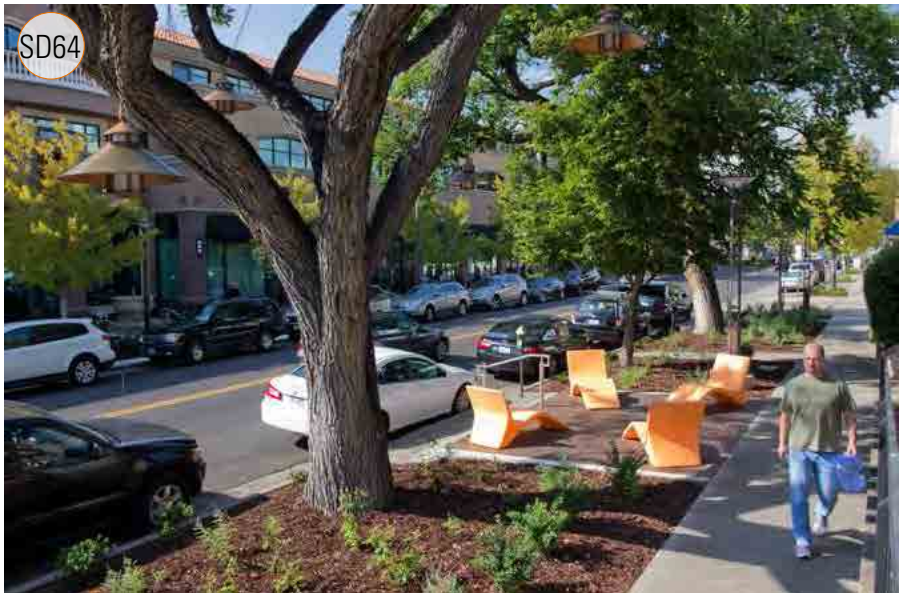
# PUBLIC PLAZAS AND OPEN SPACE

## OBJECTIVE

Create comfortable and desirable public gathering spaces.

Great public places are settings that bring people together—a place to see and to be seen. They provide a sense of character to the surrounding buildings and provide places for people to relax and enjoy themselves. They can serve as focal points and add to an area's visual enhancement. The guidelines describe the importance of designing high quality spaces that consider the surrounding landscape and scenic elements while providing for human comfort and visual interest.

Site public gathering spaces in locations with good solar exposure.



Provide desirable and comfortable public plazas. Site gathering spaces to take advantage of natural resources where possible.

Locate outdoor dining areas where solar exposure will maximize the opportunity for a comfortable year-round experience.

Site public gathering spaces where they are visible from the public street or other on-site pedestrian areas.

Use high quality plants, hardscape and pedestrian features that create an inviting atmosphere.

*Image courtesy of magazine.inspirato.com/featrued/family-time-in-vail-beaver-creek*

Enhance the site's comfort and aesthetics through the use of seating, public art, shade, information kiosks and other amenities and design elements.

Provide pedestrian amenities in convenient locations, including benches and trash receptacles. Consider providing ski and snowboard racks in commercial areas near ski resorts, where appropriate.

# 3 SECTION THREE BUILDING DESIGN

## OBJECTIVE

Design buildings and structures that harmonize with the character of the surrounding landscape, avoid a bulky and "box-like" appearance, and contribute to the quality and character of the mountain community.

The building guidelines establish a quality and character for the built environment that reflects the area's mountain setting and environmental conditions. These guidelines are not intended to restrict imagination, innovation or variety in design, but rather are intended to highlight design principles that can result in creative solutions that establish special characteristics for the built environment. Scenic and visual quality is not a question of style and therefore no specific architectural style or theme is proposed. The intent is to create design solutions that encourage a variety of architectural forms, scales, colors and materials that collectively fit within the natural mountain environment.

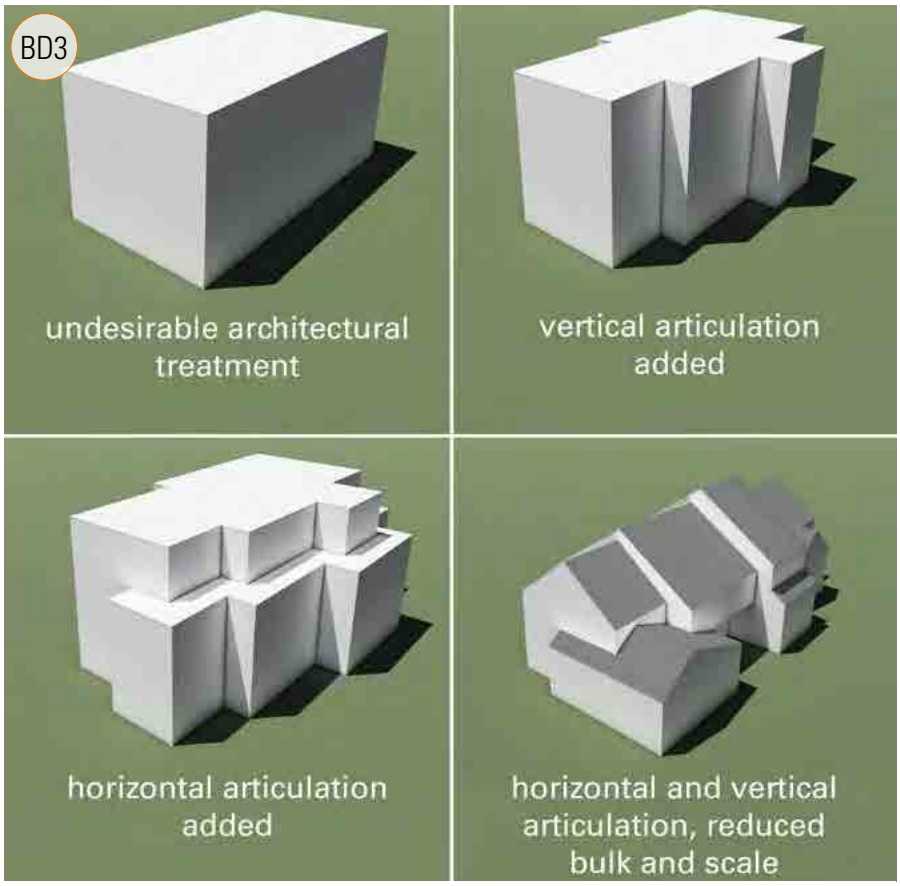
# BUILDING DESIGN AND ARTICULATION

## OBJECTIVE

Building form, articulation, materials and colors should be compatible with the surrounding Tahoe environment.

Building exteriors are typically designed with clear distinction between the three main building components; the base, middle and top. The base grounds the building to the site through the use of materials and forms that convey a sense of weight and stability. The base of a building is also the most visually dynamic zone due to its connection to the street level. The building's middle section should incorporate materials, textures, colors and detailing to provide interest and articulation. The tops of buildings are encouraged to be capped with well-proportioned, pitched roofs that act as the uppermost unifying component.

*Image courtesy of BSA Architects*



Buildings should have consistent architectural style and related detailing. All elevations visible to the public should have a complementary level of detailing.

*Image courtesy of Ben Fish*

Use gables, shed roof forms, cornices, balconies, roof terraces and other elements to step and articulate roof lines.

## BUILDING FORMS AND ARTICULATION

Use both horizontal and vertical articulation to reduce a building's scale and mass.

The visual mass of large buildings should be broken up through the use of elements such as roof forms, gables, projections and arcades.

Break up building facades with projections, recesses, piers, textured materials, trim and other architectural details to avoid a bulky or "box-like" appearance.

## BUILDING FORMS AND ARTICULATION

Screen all mechanical equipment from view.

Differentiated materials is one way to visually separate the base floors from the upper floors.

Protruding overhead canopies create interesting architectural façades and provide protection from falling snow.

## BUILDING FORMS AND ARTICULATION

The choice of quality, timeless materials is an investment in a place that will last for generations. Placement, shapes, materials, texture, details and colors should contribute to the overall building articulation. Design complex building forms with setback, overhangs, porches and varied skylines and avoid simple or monolithic forms.

Use brackets and overhangs to intercept sunlight and encourage building shadowing articulation where significant amounts of glazing is used. Windows and doors should relate to the structural expression of the building.

Glazing should avoid large amounts of reflective window planes without suitable overhangs or other mitigation.

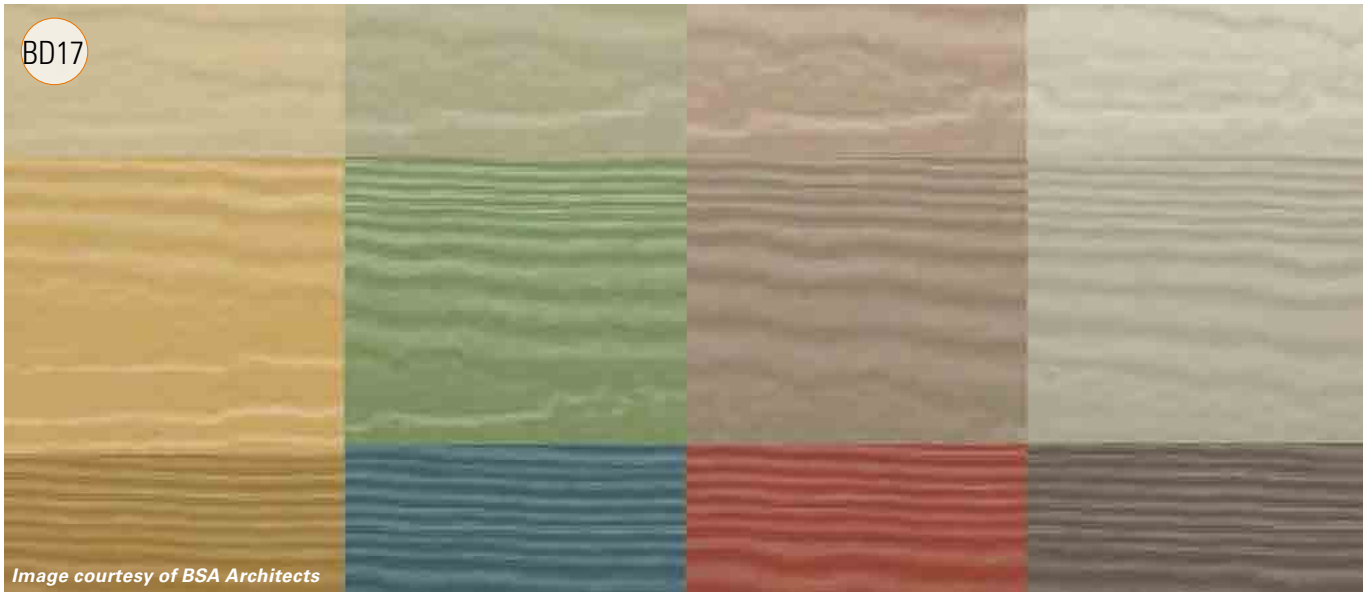
## PEDESTRIAN LEVEL DESIGN AND DETAILING

Views into a hotel lobby or retail space are visually inviting.

The quality and character of each building should contribute to the overall public space and create pleasing, usable outdoor spaces.

## PEDESTRIAN LEVEL DESIGN AND DETAILING

Store front detailing should be scaled to the pedestrian.

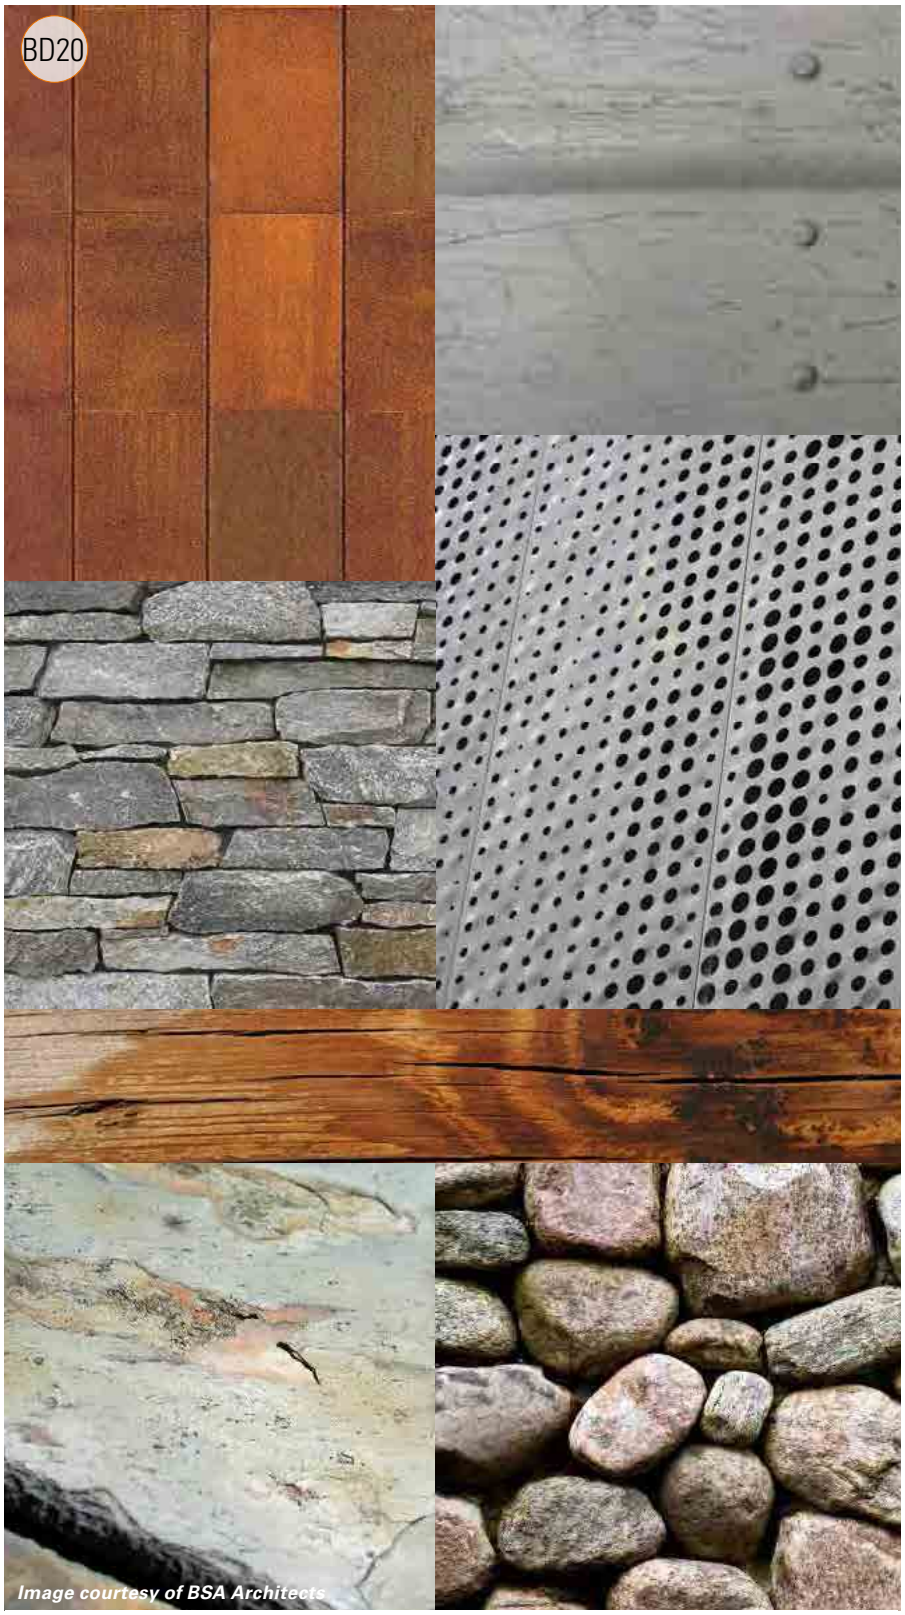


Massing of building elements should emphasize pedestrian scale, create intricacy and detail in the built environment and prevent a cold or impersonal aesthetic.

## COLOR SUGGESTIONS

Varying the texture and scale of wall materials of appropriate color adds visual interest. Textures shall be incorporated throughout each structure, in both materials and in the form and detailing of the building. Materials should appear closer to their natural state rather than a manufactured state.

Building Facade Color Suggestions



Doors and Windows Color Suggestions

Building colors shall draw from a natural palette in darker shades and minimize reflectivity. Avoid bright colors that compete with the natural surroundings and consider how the color may appear over large surface areas and in juxtaposition to other building materials. Use accent colors (maximum 10% of building face) for doorways, windows, graphics and storefront displays. Accent colors should complement base colors.

## USE OF NATURAL MATERIALS

Local Natural Palette

Textured Materials + Trim

Utilize natural building materials such as wood and stone to articulate design features. Natural stone can link building elements to the surrounding environment. The use of larger stone at the building's base gives it an anchored and structural appearance. Metal elements are typically incorporated as accents.

## SIMPLICITY IN FORM AND DETAILING

*Image courtesy of BSA Architects*

Incorporate metals and other more contemporary materials as accents.

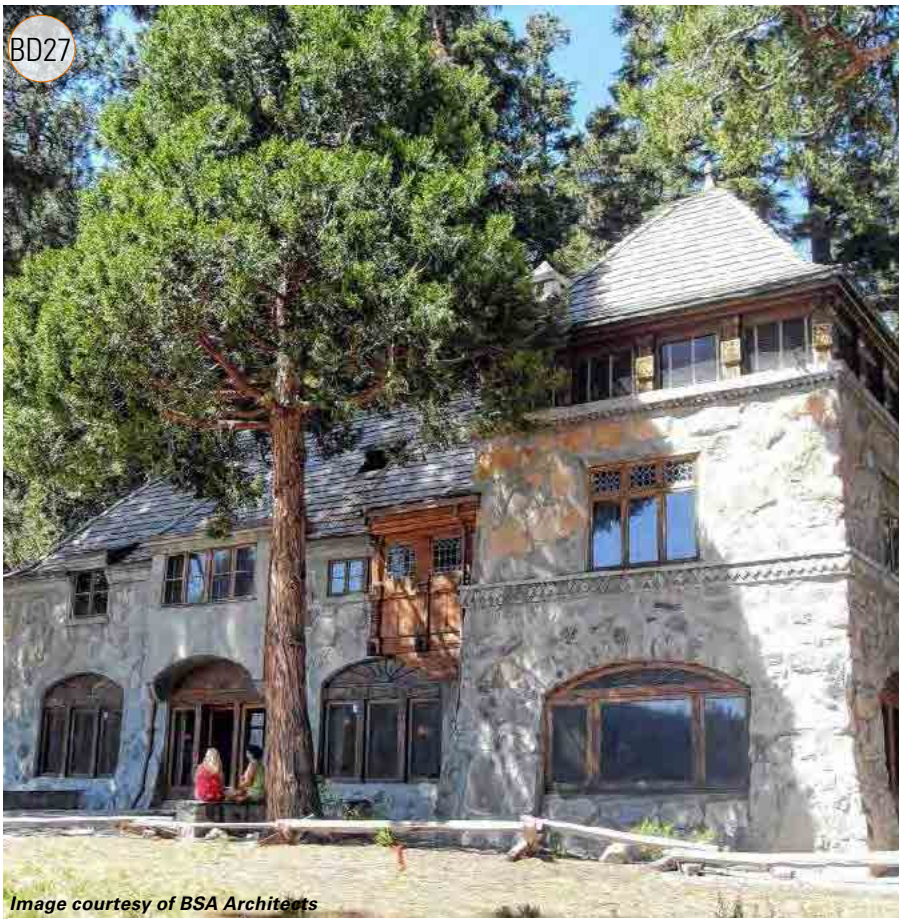
Remodels can enhance existing buildings by incorporating dormers for building articulation, adding windows and transparency to encourage pedestrian movement, and utilizing a neutral color palette that fits within the mountain landscape.

*©Vance Fox.com; Ward Young Architects and Clark and Sullivan Construction*

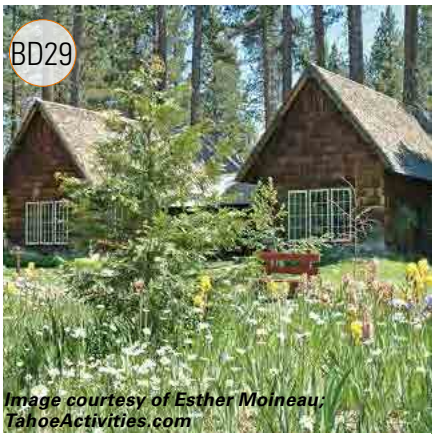
Use metals and other contemporary materials sparingly. Simplicity in overall composition should be the goal. Consider how metals and other contemporary materials relate to primary building materials such as wood and stone.

## SIMPLICITY IN FORM AND DETAILING

Use stucco sparingly and in combination with natural materials such as stone and wood.



Simplifying the number and types of materials used allow for greater emphasis to be placed on construction details such as bracket, joints and overhangs.



Materials which complement each other and respond to the natural surroundings can create a simple, seamless transition from building to landscape.

## DRAW FROM ELEMENTS OF HISTORIC ARCHITECTURE

Example of historic building from which to draw design elements and materials.

Examples of historic buildings from which to draw design elements.

Consider old Tahoe heritage historical references and incorporate stone and other design elements in a manner which takes into account the building's overall composition, massing and style.

## MOUNTAIN ENVIRONMENT DESIGN

©Vance Fox.com; Ward Young Architects and Clark and Sullivan Construction

Image courtesy of John Hitchcock

©VanceFox.com; Sierra Nevada College

Authentic building materials such as stone and timber are consistent with traditional mountain architecture, but they may also be incorporated into more contemporary designs that also fit within the natural mountain environment. Consider the importance of timelessness and do not create overly trendy designs that may quickly become dated.

# ROOFS

## OBJECTIVE

Create varied, sloping roof-scapes that complement natural forms and Tahoe architectural traditions.

Roof design is important to snow management as well as being a major contributor to building character. Roofscapes should be considered not only for their appearance from the pedestrian level, but also from the view of the overall skyline. South Lake Tahoe's alpine character and mountain backdrop can be reinforced through roof design.

Snow management shall be considered during the design of the architecture and landscape. The effects of snow and ice buildup, if improperly handled, can pose risks to property and pedestrians, and impose high maintenance and snow removal costs.

BD34

*Image courtesy of BSA Architects*

Roof forms should be designed to minimize ice dams and damage due to snow creep (glacial action) and freeze/thaw cycles.

BD35

*Image courtesy of Brent Bingham Photography; Tom Cole Architect*

Roof slopes shallower than 5:12 may be considered where they comply with snow load requirements, other design standards and guidelines, and provide architectural interest.

BD36

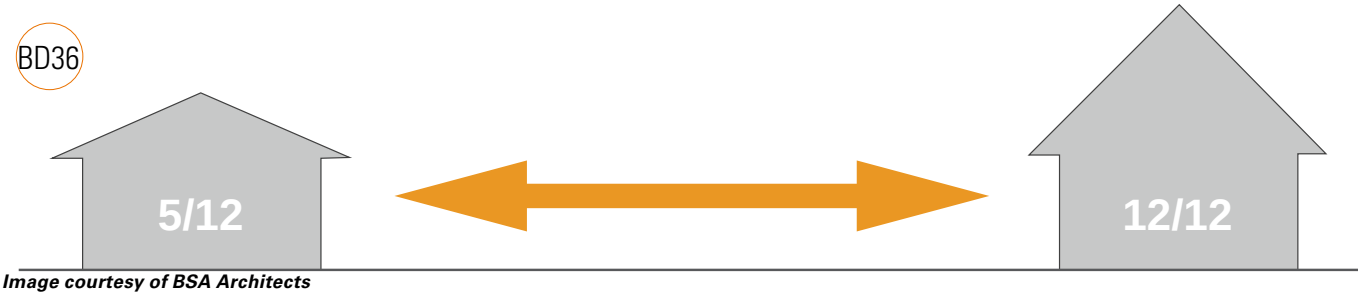


*Image courtesy of BSA Architects*

Pitch roofs that are no less than 5:12 and no more than 12:12 are preferred. Roof pitches below 5:12 may be considered on an individual basis.

## ROOF COLORS AND MATERIALS

Appropriate roof materials, colors and reflectivity should take their cue from the surrounding natural environment.

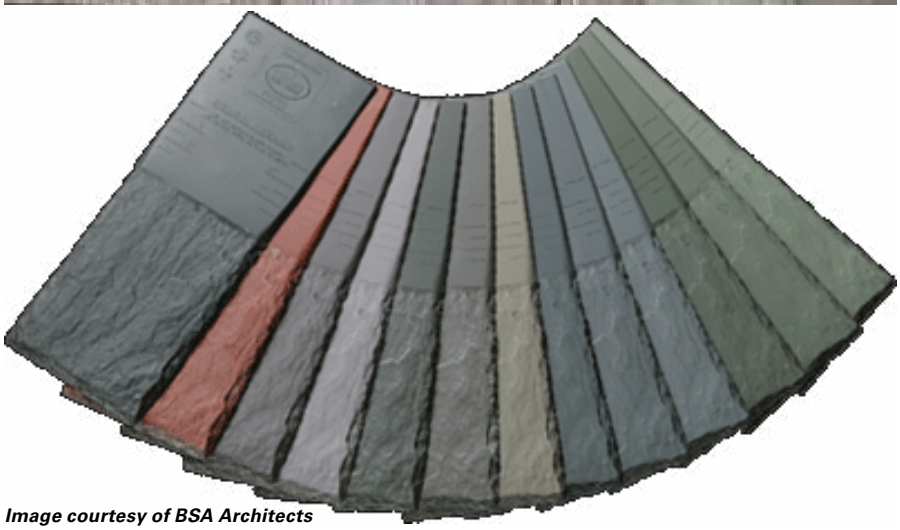

*Image courtesy of BSA Architects*

Roof material and colors should minimize reflectivity and blend with natural surroundings. Utilize nonglare and earthtone finishes to minimize reflectivity for roofs, mechanical equipment and skylights.

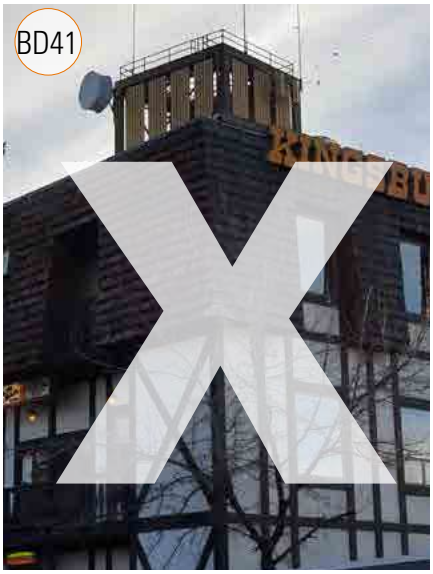

*Image courtesy of BSA Architects*

Use snow clips and snow fences where necessary. Consider retaining snow on the roof to minimize the impacts and liability of shedding snow and increase building insulation value.

## ROOF FORMS

The use of timbers and visible logs should appear consistent with the timbers' structural properties and ability to support roof elements.

Mansard roof forms and flat roofs should not be used.

Different roof shapes, heights and slopes helps to break up the appearance of a large mass of the buildings.

*Image courtesy of BSA Architects*

*Image courtesy of BSA Architects*

Roof forms should be designed to protect public entry ways and pathways from ice and shedding snow without using energy consuming snow melt systems.

## ROOF ARTICULATION

Roofs offer the opportunity to include distinctive design elements to relate the building to the mountain setting and prevent "block-like" structures by breaking up the rectangular form.

Roof design should have a definitive "top" that steps or breaks the rectangular form. Modulated roof forms that are varied in height or broken with architectural features and roof design elements are encouraged.

Cornices, balconies and other elements should be used, where appropriate, to terminate rooflines and accentuate setbacks between stories.

## BUILDING HEIGHT

### OBJECTIVE

Create a built environment that preserves views and visually corresponds with the surrounding mountain environment.

The skillful massing of building elements should emphasize pedestrian scale, create intricacy and detail in the built environment, and prevent a cold or impersonal aesthetic. The guidelines for building heights are intended to prevent structures from looming over the highway and overshadowing the naturalistic mountain aesthetic of the community.

Establish a consistent building frontage through the use of a minimum 15' height of the ground floor.

Relate building heights to open spaces to allow maximum sun and ventilation, protect from prevailing winds, enhance public views of surrounding mountains and minimize obstruction of view from adjoining structures.

BD50

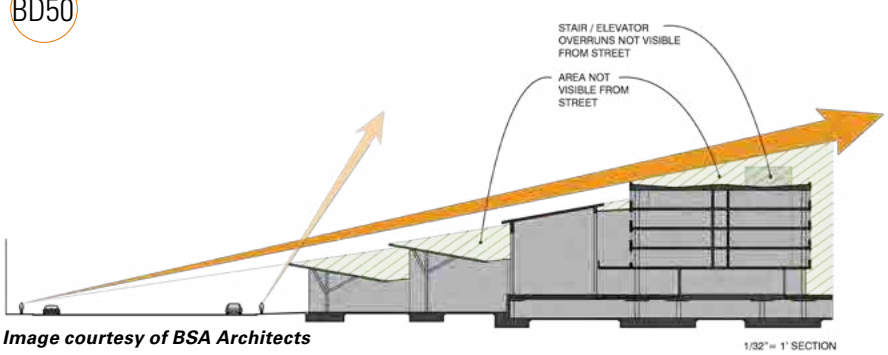

*Image courtesy of BSA Architects*

Step back building within a daylight plane along street frontages and adjacent residential areas to protect viewsheds, allow light and air, limit winter shading and preserve the pedestrian scale.

BD51

*Image courtesy of Scott Kennedy at Sierra Tahoe Realty*

Roof overhangs, projections and other architectural features can help visually step a building back from the street.

BD52

*Image courtesy of hannastepan.cz; stepan*

Ensure compatibility with adjacent uses. Provide additional buffering in addition to required setback for buildings permitted additional height.

BD53

Ensure compatibility with adjacent uses and viewsheds. Do not project building above forest canopy, ridge lines or detract from mountain or lake views.

BD54

Height and scale of buildings should be compatible with that of surrounding development. New development height should "transition" from the height of adjacent development to the maximum height of the proposed building.

## GREEN BUILDING

### OBJECTIVE

Minimize a building's impact on the environment while reinforcing the natural harmony of the Lake Tahoe landscape.

Incorporate durable buildings materials including the consideration of recycled materials and locally sourced building materials, e.g., stone and timber, when possible.

BD56

*Image courtesy of BSA Architects*

Reuse previously disturbed sites and incorporate new technologies to reduce the use of resources, including energy and water.

*Image courtesy of BSA Architects*

*Image courtesy of BSA Architects*

Exposed solar panels should be screened when possible and/or compatible with roof forms and the building's architectural character. Solar shingles can also be incorporated as part of green building design.

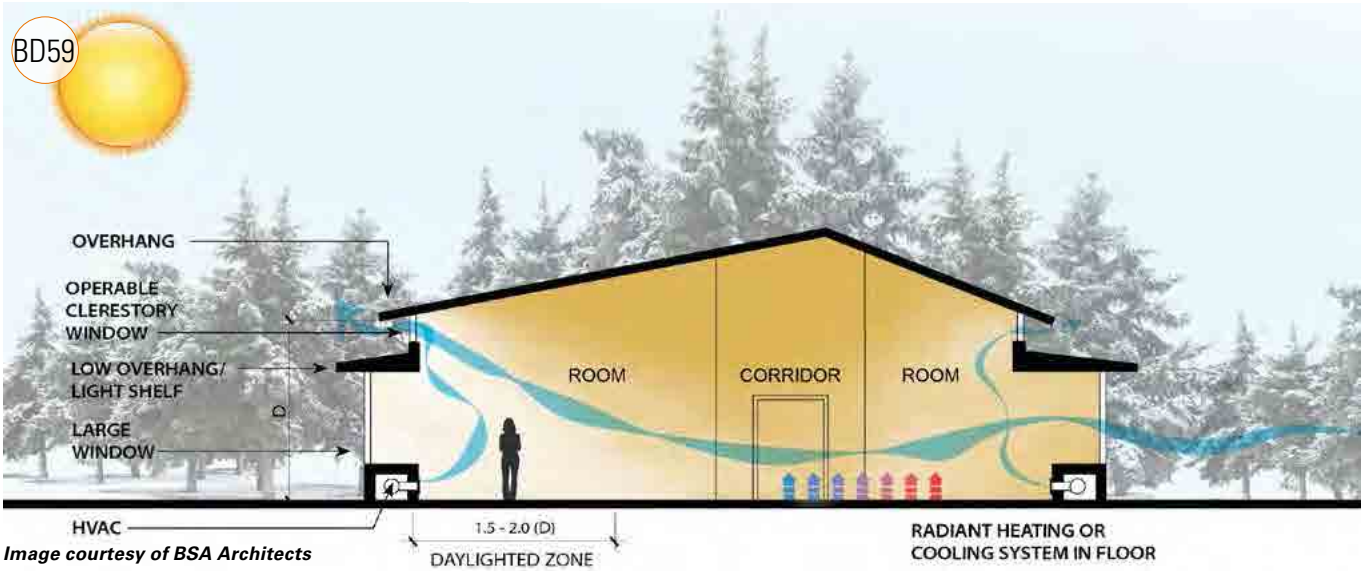

*Image courtesy of BSA Architects*

Use sustainable building materials that support indoor environmental health, passive environmental systems are encouraged.

# 4 SECTION FOUR LANDSCAPE

## OBJECTIVE

Create an aesthetically pleasing, maintainable landscape environment while continuously reinforcing a connection to the natural environment that defines South Lake Tahoe.

The design of landscapes should respond to the intended site function with consideration of issues such as safety, maintenance and desired aesthetic quality. In areas focused on commercial and tourist activities, the landscape should create an inviting environment for pedestrians. This may be accomplished by establishing a rhythm of elements that unify the streetscape, providing plazas and gathering spaces that respond to a site's environmental factors and by screening undesirable views or framing impressive vistas. In contrast, undeveloped areas and areas abutting natural landscapes should incorporate plant materials spaced in natural-looking groups to seamlessly transition into the natural environment.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES

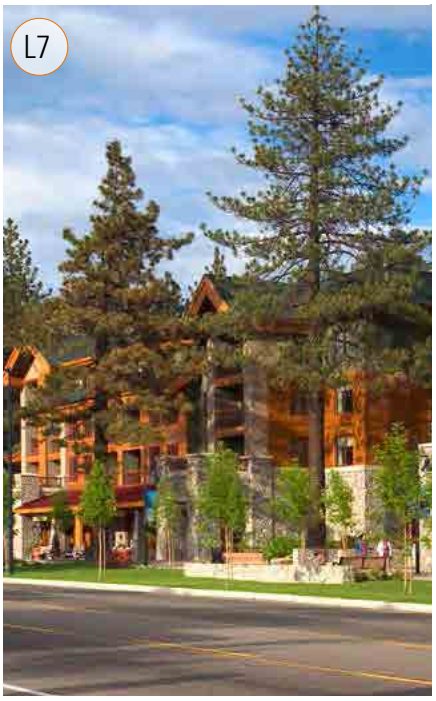
Incorporate combinations of shrubs, groundcovers and boulders to create an attractive edge between the highway frontage and sidewalk while not blocking views of the lake.

Utilize vegetation to create pleasant outdoor spaces, reduce glare and heat, deflect wind, muffle noise, prevent erosion and integrate buildings into the surrounding landscape.

Create a quality built environment with the inclusion of amenities such as street furnishing, plantings and artworks to enhance the places that people will walk, gather or recreate.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES

Design landscapes to respond to seasonal environmental conditions to encourage outdoor spaces that are comfortable year-round.



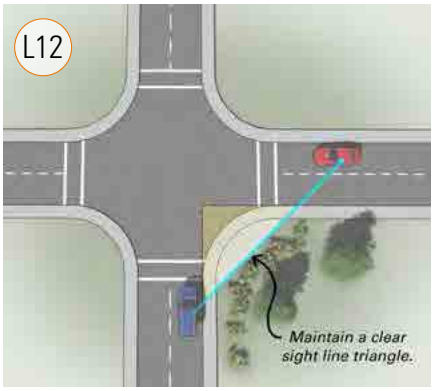
Utilize ornamental and accent plant materials at building entries, exterior dining areas and pedestrian areas.

Consider the use of deciduous trees in street frontages of commercial areas to allow for seasonal solar access and enhance the pedestrian zone.

Landscape materials should enhance the street environment and commercial areas.

Incorporating evergreens as part of the design of front yard setback areas can help restore a natural vertical element to the highway streetscape and integrate buildings into the surrounding landscape.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES



Vegetate setback areas. Consider opportunities to exceed minimum requirements for the appearance of a more established landscape.

Integrate stormwater facilities and bioswales as part of streetscapes, parking areas and other landscape areas. Landscaping should be recessed to receive stormwater runoff whenever feasible. Allowing for stormwater to flow into and infiltrate in landscape areas is preferred.

Maintain lines of site at intersections and driveways for vehicular traffic.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES

Utilize opportunities to incorporate natural drainage features as part of the landscape design.

Incorporating groupings of plant materials can add variety while also organizing the landscape to facilitate maintenance.

Consider the opportunity to incorporate pockets of color and seasonal interest as part of the design of public spaces.

## VISUAL SCREENING

Creating landscape berms with naturalized shapes and contouring should be considered as part of visual screening for parking and service areas.

Plant materials should be used to help block the view of trash enclosures from public areas and roads.

Screen parking and service areas with landscape materials. Incorporate a mix of plant materials to avoid a “wall” affect.

## PLANT SELECTION CONSIDERATIONS

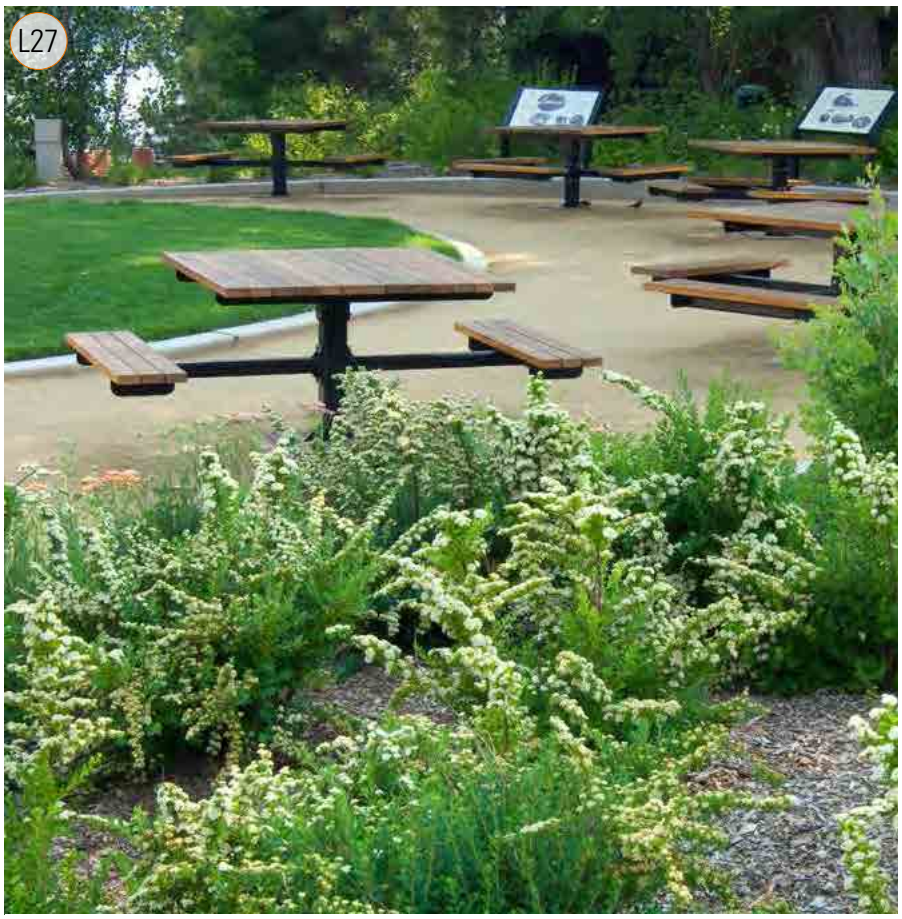
Select drought tolerant plant materials that are suited to the microclimatic variations in sunlight, soil and moisture conditions.

Utilize vegetation that is native or adapted to the region's climatic conditions while also considering the plant material's water needs. Limit ornamental species to accent plantings.

Preserve groups of existing trees where possible to increase the likelihood of survival.

In snow storage areas and roof shed zones, utilize plant materials that are durable enough to handle abuse from snow loading such as herbaceous ground covers, grasses or flexible stemmed shrubs that grow back from their base such as dogwoods.

Consider shade, sun exposure and wind blocking during the selection of trees.



## WATER CONSERVATION

Use efficient water methods, group plantings into similar hydro-zones, use low-water use plant material and use irrigation systems with moisture sensors to control and conserve the use of water.

Consider maintenance and water conservation/irrigation needs during landscape design.

Utilize turf grass only in focused, limited applications.

Irrigate plantings and provide correct water levels to support the long-term growth of landscape. Drip and low-flow systems can minimize irrigation inefficiencies and evapotranspiration in order to maximize the use of every drop of water.

# 5 SECTION FIVE EXTERIOR LIGHTING

## OBJECTIVE

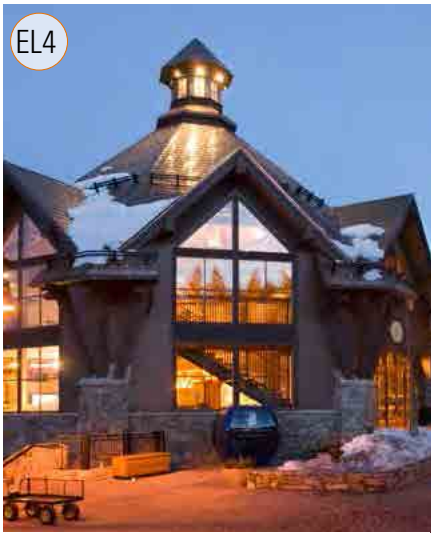
Provide illumination for safety and security as well as enhancing the aesthetic appeal of a site.

Carefully designed lighting can reinforce the ambiance of streetscapes and public gathering areas as well as protect the night sky. These exterior lighting guidelines focus on limiting excess light, while still providing for safety and security and encouraging an enjoyable night time atmosphere for community spaces.

## ACCENT LIGHTING TO ENHANCE AESTHETIC APPEAL

*Image courtesy of Il Villagio Osteria*

Accent lighting can be used to accentuate building entries and signage.



Illuminate areas necessary for safe and comfortable use and illuminate special features of a building or landscape to add to the aesthetic appeal of a site.

*Image courtesy of lampsplus.com*

Accent landscape elements with down lighting with concealed fixtures or fixtures with lens hoods.

Use lighting to accent features such as entries, arcades, chimneys, cornices, balconies, exterior trusses, highly textured material, knee braces, enriched architectural facades or landmark features. Do not light blank walls.

Use built in lighting and wall lighting to illuminate stairs and level changes.

## ACCENT LIGHTING TO ENHANCE AESTHETIC APPEAL

Use exterior lighting to activate public pedestrian retail space.

Utilize exterior lighting to accent architectural and landscape features and illuminate parking lots, streets and walkways. Seasonal lighting should only be used between November 1 and March 1 or as by approved permit.

Use pedestrian light poles that allow for approved banners to encourage an active pedestrian environment. Banners should be replaced as needed to maintain visual appeal and avoid showing damaged or faded banners. Plan for seasonal lighting. Consider the need for electrical outlets and incorporate as part of site design features such as tree wells, light poles and walls.

Use lighting to enhance the pedestrian zone, public gathering spaces and private outdoor gathering areas.

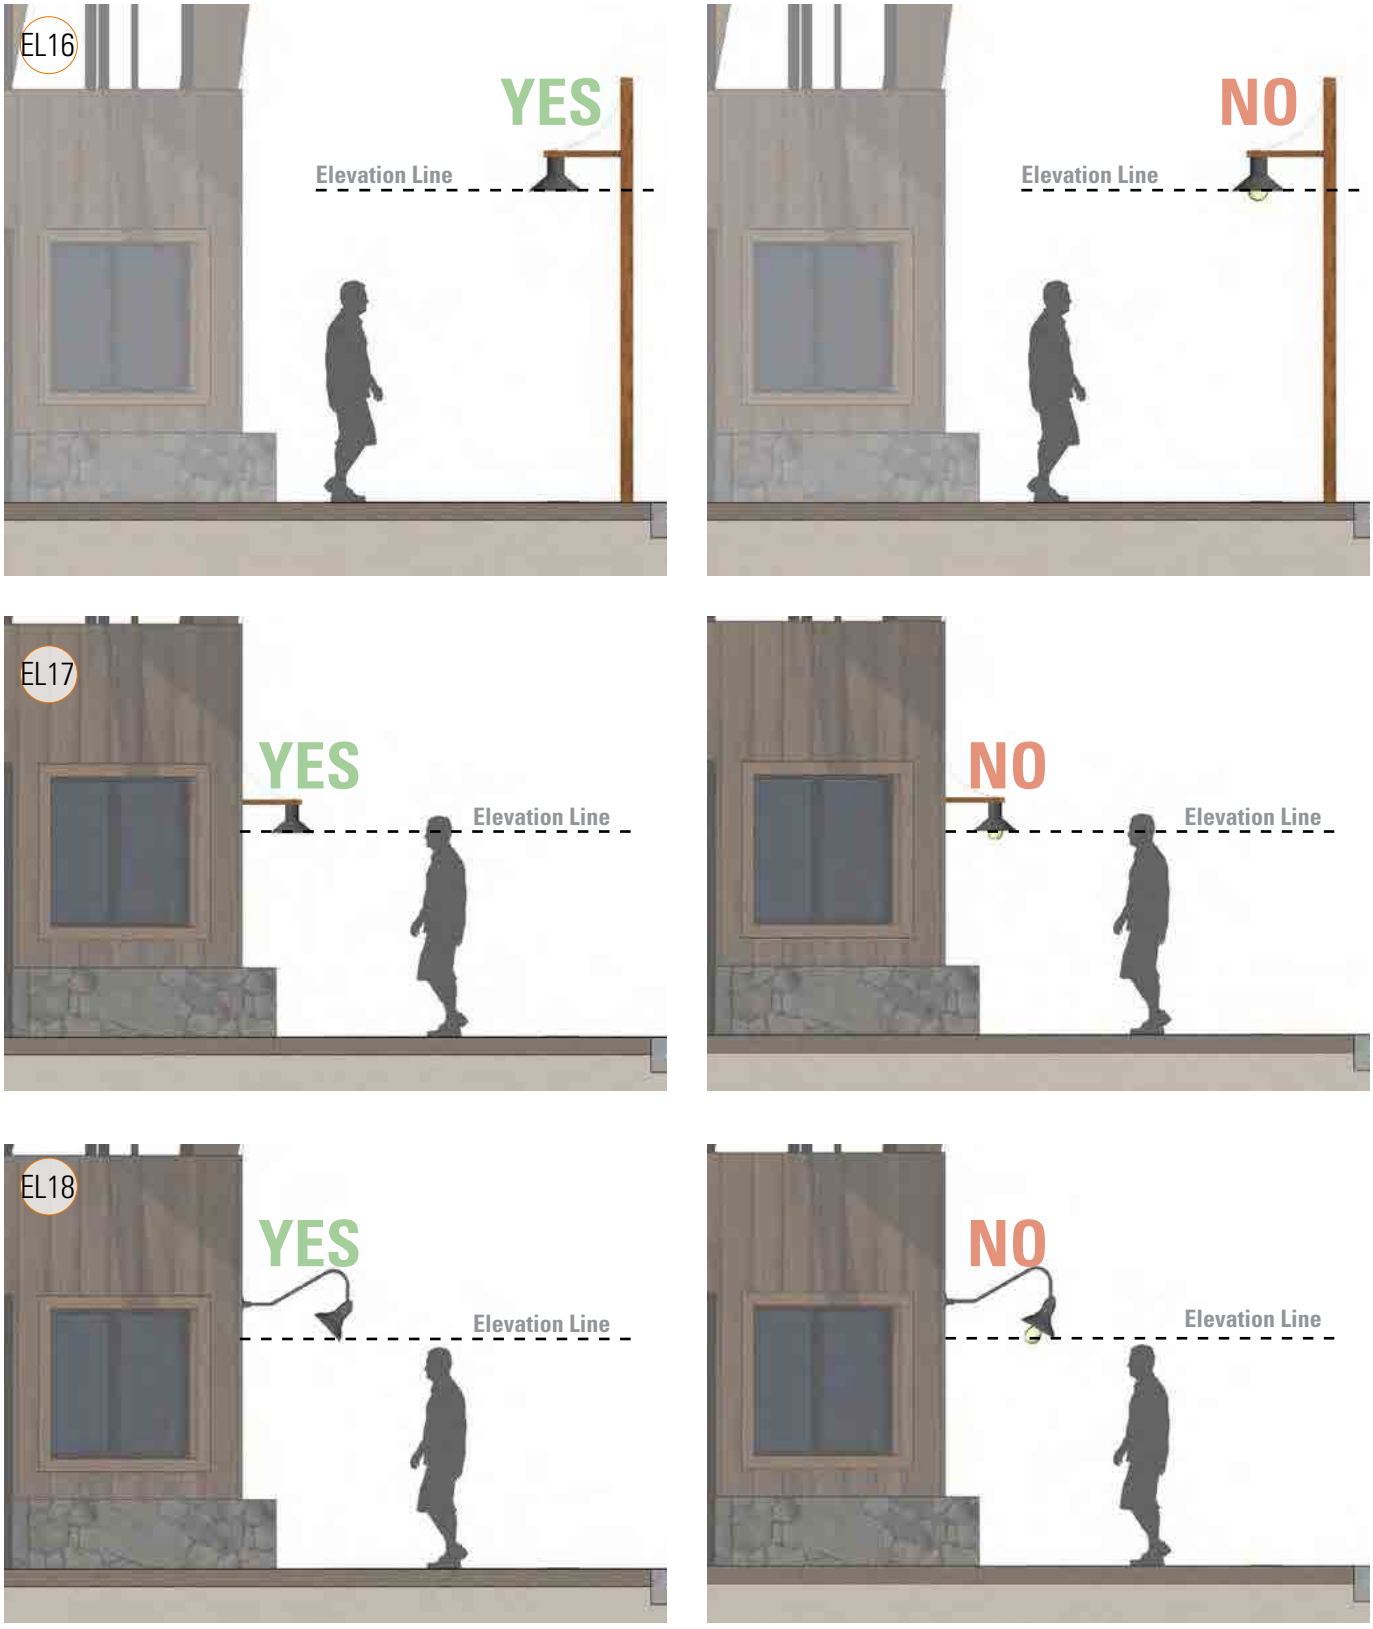
## ACCENT LIGHTING TO ENHANCE AESTHETIC APPEAL

Wall lights may be incorporated as part of the design to both provide accent lighting and illuminate the walking surface.

Direct accent lighting downward to illuminate landscape elements.

The combination of pedestrian lights, architectural lighting and interior lighting can create a more inviting pedestrian environment. Avoid the tendency to over-light which can create bright spots that tend to make adjacent unlit areas seem even darker. Carefully design lighting to consider both architectural/accent and functional lighting in order to provide reasonable levels for safety and security.

## LIGHTING TYPES: CONSISTENT COLOR WITH TRUE COLOR RENDERING



A consistent light color should be provided throughout a project and lighting that appears in the warm color range is preferred over a bluish/white light color. Energy efficient lighting types, including LED lighting, are recommended.

## NIGHT SKY PROTECTION: DIRECTING LIGHT

Face or direct light fixtures so light does not spill over to adjacent properties or up into the sky.

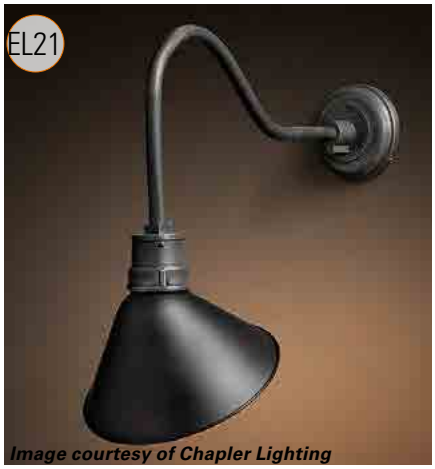
## NIGHT SKY PROTECTION: SHIELDED LIGHT SOURCES

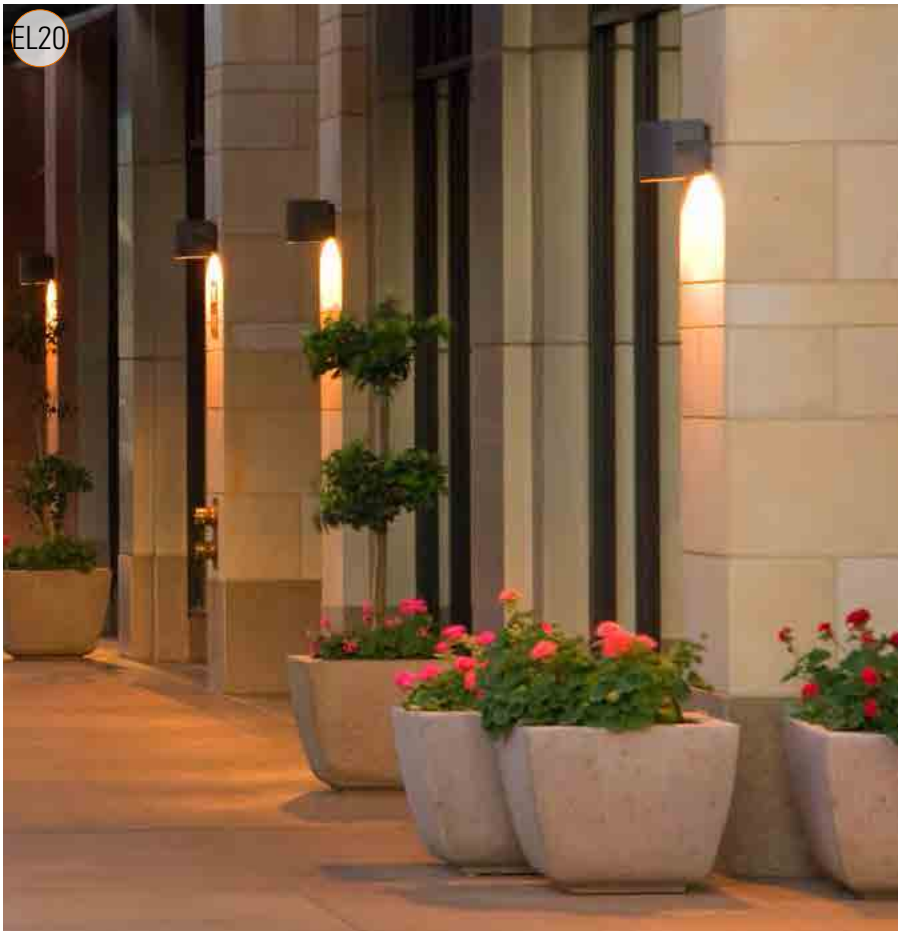
Direct light downward and utilize luminaries that shield light sources from view so the light is not visible as seen in elevation in order to preserve night sky views and reduce glare.

## NIGHT SKY PROTECTION: SHIELDED LIGHT SOURCES

EL19

*Image courtesy of BSA Architects*





EL21

*Image courtesy of Chapler Lighting*

EL20

EL22

Luminaires that shield light sources and direct light downward should also complement the character of the public space and the building materials of adjacent architecture.

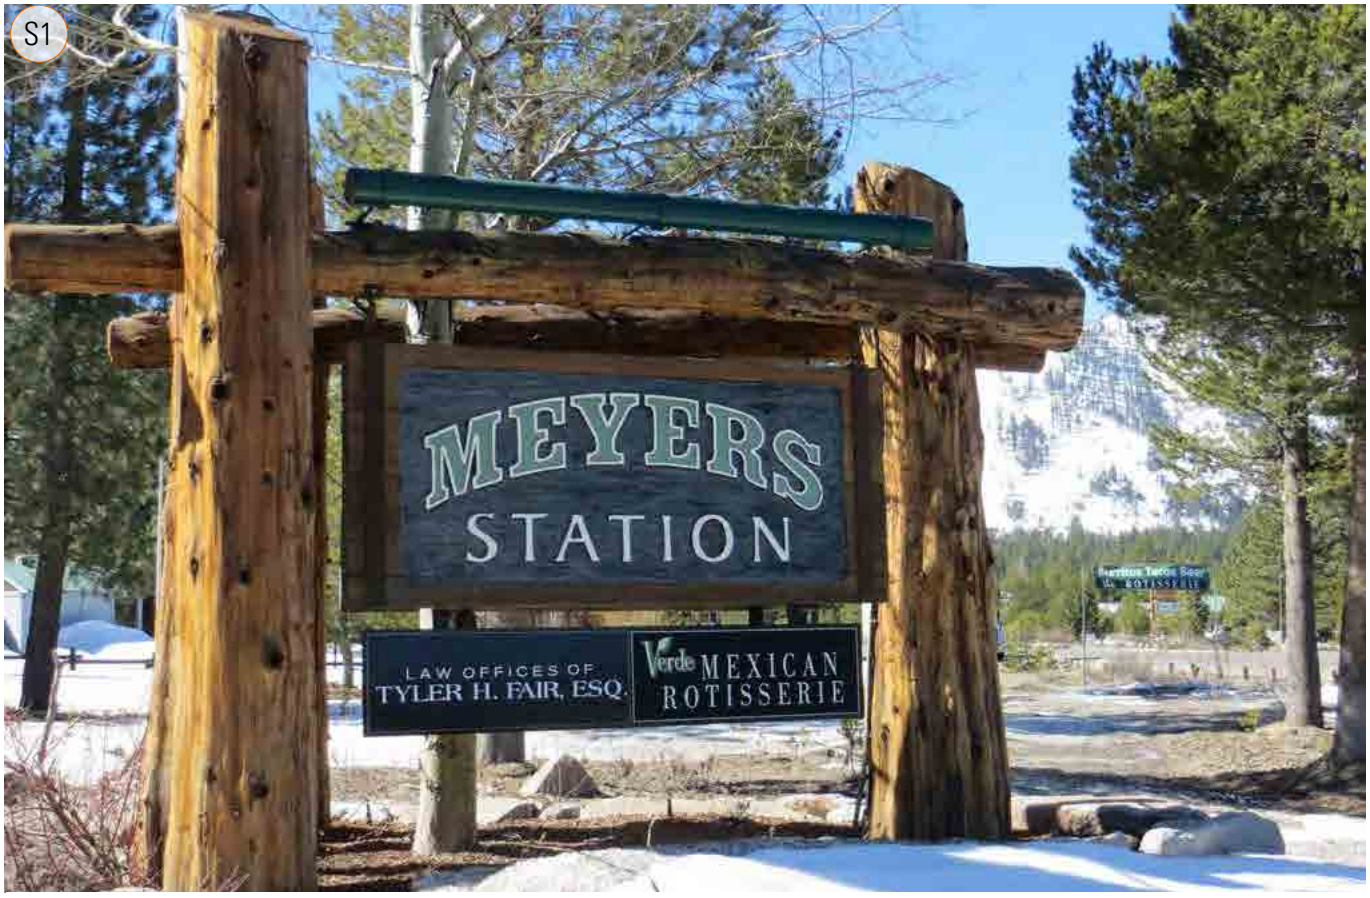
# 6 SECTION SIX SIGNAGE

## OBJECTIVE

Enhance the city's visual environment by complementing the building's architecture and enlivening the streetscape while clearly and succinctly communicating business information.

The sign guidelines recognize commercial communication requirements of all sectors of the business community as well as the need to enhance the area's visual quality. Well-designed signs can contribute to a district's overall identity and help pedestrians and drivers locate businesses and services.

South Lake Tahoe includes a range of pedestrian and automobile oriented environments which require different signage considerations. The Guidelines focus on design criteria that can enhance the ability for signage to communicate effectively while positively contributing to South Lake Tahoe's visual environment through proper placement, use of materials and being appropriate to its setting.



Along with architecture and landscape, signage is one of the most noticeable visual elements along South Lake Tahoe's roadways. Signs are an important part of the built environment in order to communicate information about area businesses and encourage economic vitality. Well-designed signs can contribute to a district's overall identity and help pedestrians and drivers locate businesses and services. However, poorly designed signs and the overabundance of signage can severely detract from the surrounding mountain and lake environment.

The following design principles are illustrated in this section and should be considered during the design and development of projects:

### LESS IS MORE

The purpose and message of a sign should be immediately apparent. Signage that merely attracts attention without communicating the message is not effective. Too much information can be visually distracting to viewers, especially motorists. Limiting the amount of information included on a sign intended to be viewed from a motorist's vantage point can enhance overall legibility and wayfinding.

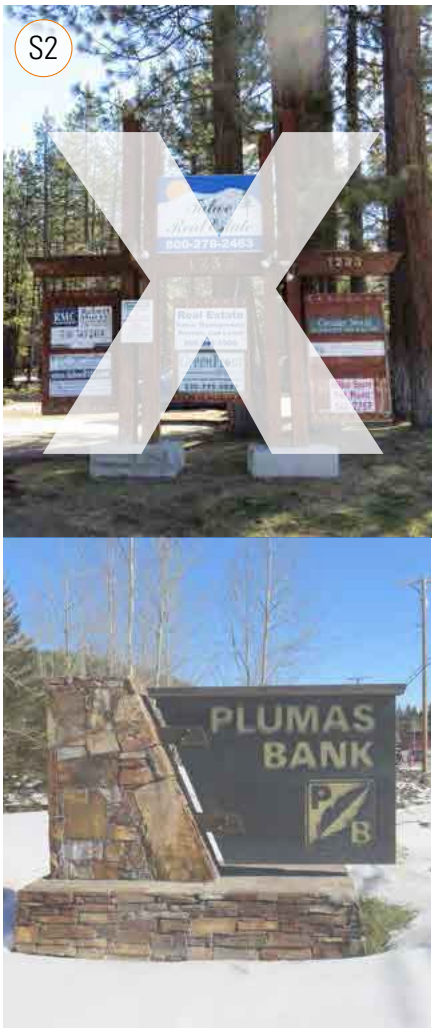
- ***Keep the message brief and simple***: A succinct message that is simple and easy to read looks cleaner and is more visually appealing.
- ***Consider every word***: Every word should directly contribute to the sign's overall message. Remove any unnecessary words to create a clear message.
- ***Convey primary information***: Words and graphics should convey a business's identity or the services offered. Where possible, multi-tenant areas should consider branding the project area to reduce the information on the primary roadway sign and incorporate secondary level signage within the commercial center.
- ***Use easy to read typefaces***: Typefaces should be easy to read. Overly intricate and mixed fonts can take more time for a viewer to decipher. Faddish typefaces may also become dated.

Keeping the message simple and branding the commercial centers can help effectively direct people to community destinations while reducing the amount of signage seen from the roadways.

## PROPORTION AND BALANCE

The aesthetic quality of a sign arises from the relationships between sign design elements such as proportion and balance. Proportion is the relationship of one element to another. It is most often thought of in terms of the relative size and shape of elements. Proportion can help define the relationship among the sign elements and implies the order of significance.

Well-designed signs will have appropriate proportion between the various parts of the structure as well as between the various components of the graphic content. Sign proportions should be considered between the structure's height, width and depth, between elements of the graphic content, and between the graphic content to the overall sign.



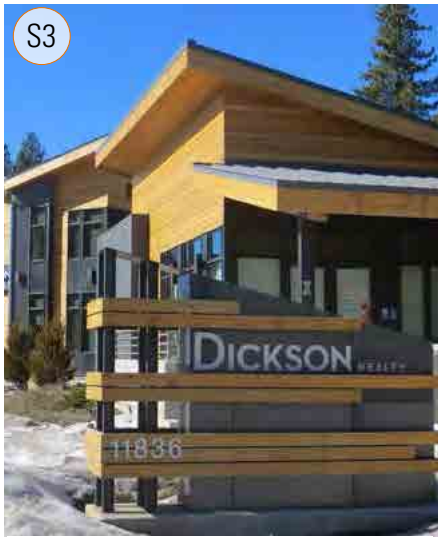
Carefully consider the proportion of the copy to the overall sign background. If the letters take up too much of a sign, they may be harder to read. A general rule is that letters should not appear to occupy more than 75% of the sign panel area.

Physical balance is best described by two objects that are of equal weight, although they may not be of equal size. Visual balance is the perceived equilibrium of design elements. Balance on a horizontal axis can be achieved by having signs that do not appear "top-heavy". Monument bases that are proportional with the sign's height and other sign components can help achieve balance on the horizontal axis.

Balance on a vertical axis can be either symmetrical or asymmetrical. Symmetrical balance can be achieved when each half of the sign is a mirror image of the other half. In asymmetrical balance, each half is not identical, but the elements are arranged in a way that they feel balanced. This can be achieved by considering some of the following principles:

Visually,

- A large form is heavier than a smaller form
- Dark values are heavier than light values
- A textured form is heavier than a smooth form
- A complex form is heavier than a simple form
- Two or more smaller forms balance one large form



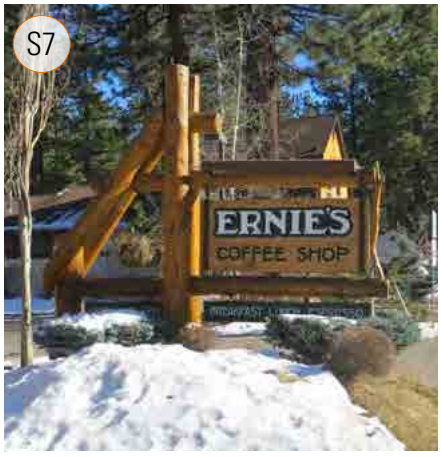
A sign's graphic content should relate to the overall proportions of the sign's structure. Aesthetic quality is enhanced when the relationships between sign design elements are balanced and in proportion with each other.

## COLORS AND MATERIALS

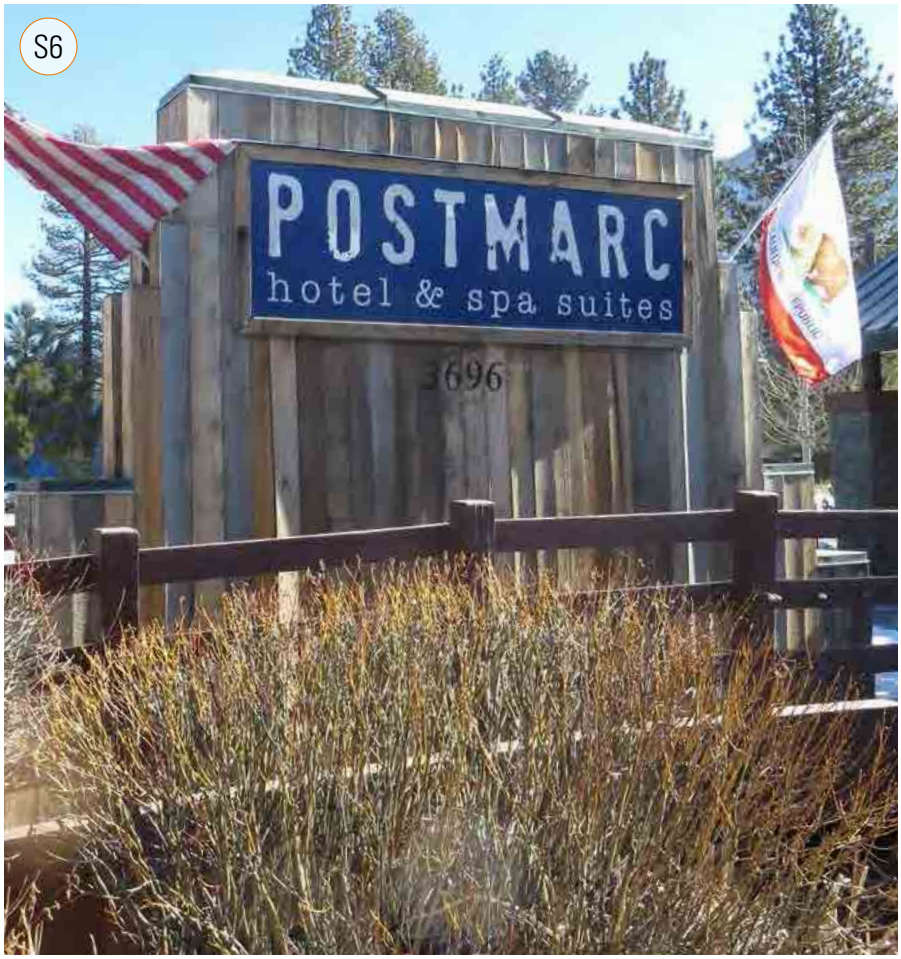
Similar to building design, sign colors and materials should draw from the area's natural palette, including darker backgrounds and the use of stone and wood. Bright colors should be limited and reflective, fluorescent and primary colors should not be used. Additionally, consideration should be given to the following:

- Colors and materials should contribute to overall legibility and design.
- Significant contrast should be provided between the sign background and the letters. Dark materials are recommended for sign backgrounds and light materials/colors are recommended for the sign letters.
- Too many colors can compete with content for the viewer's attention. Avoid too many different colors and limit the use of accent colors to increase visibility.

## MATERIALS AND CONTRIBUTION TO ARCHITECTURE



Signage that coordinates with the building architecture can add another opportunity for architectural expression.



Complement a project's architectural style and exterior lighting with signage. Select materials and supporting devices that positively contribute to the overall character of the area.

Use natural building materials such as wood and stone that is coordinated with site architecture.

Materials and font types should contribute to a sign's overall legibility and positively contribute to the area's overall visual character.

Colors should draw from a natural palette and dark, muted background colors are preferred. Limit the use of bright colors to accents and avoid reflective, fluorescent colors.

## SIGN PLACEMENT

*Image courtesy of Matthew Lehman @ Matthewy Lehman Real Estate*

Integrate freestanding signs into the landscape through the use of plants and sign bases that visually anchor the sign to the site.

*Image courtesy of Solaris Village Shopping; SolarisVail.com*

Provide pedestrian level identification of major buildings through flush building signage.

Utilize elevation signs hung from the soffit board of fascia for businesses that can be viewed from the street and sidewalk.

Pedestrian level signage can be smaller and attached under arcades to reduce the number of signs along a street.

Incorporate building signage with internally illuminated channel letters between appropriately spaced architectural features such as columns or dormers.

Signage placed in dormers can be incorporated as an architectural element.

## SIGN CONSTRUCTION ELEMENTS AND COPY

Sign construction elements that are well proportioned and balanced with the sign face area may be considered if they meet other design standards.

Support freestanding signs with two or more poles or a monument base. Supporting devices should provide aesthetic contributions to the sign structure.

Use trademarks on natural backgrounds to quickly convey messaging.

The visual quality of motor fuel price signs are enhanced by incorporating them within a thoughtfully designed stone monument base.

Keep copy simple and easy to read by keeping the amount of text to a minimum. Too many messages can be visually distracting. A sign with a brief, succinct message is more attractive and is typically more effective as it is easier to read quickly.

## ILLUMINATION

Lighting should comply with night sky standards, including being directed downward and being fully shielded in order to illuminate the sign face and avoid light spill into adjacent areas.

Use dark colors or opaque material as the background of interior illuminated signs to limit the amount of light transmitted.

Indirect backlighting of individual letters can create a soft glow while providing adequate illumination.

Use indirect and/or diffused lighting to prevent light sources from being visible from public rights of way or adjacent properties and to soften the light's appearance.

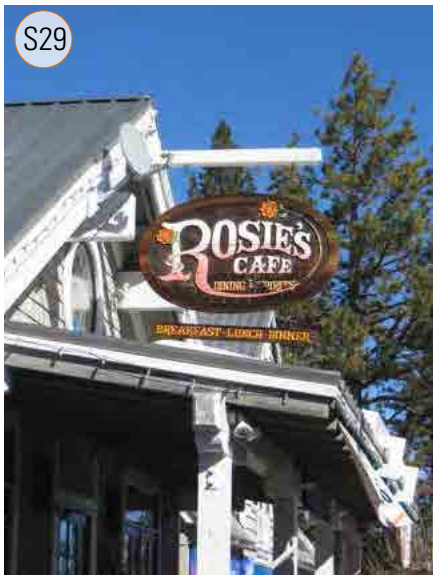
## MULTI-TENANT SIGNAGE

Consolidating signage into a unified system with consistent font types and colors can reduce sign clutter and helps to avoid overwhelming motorists with too many signs. Consider flexibility in design so tenants can be added or changed over time.

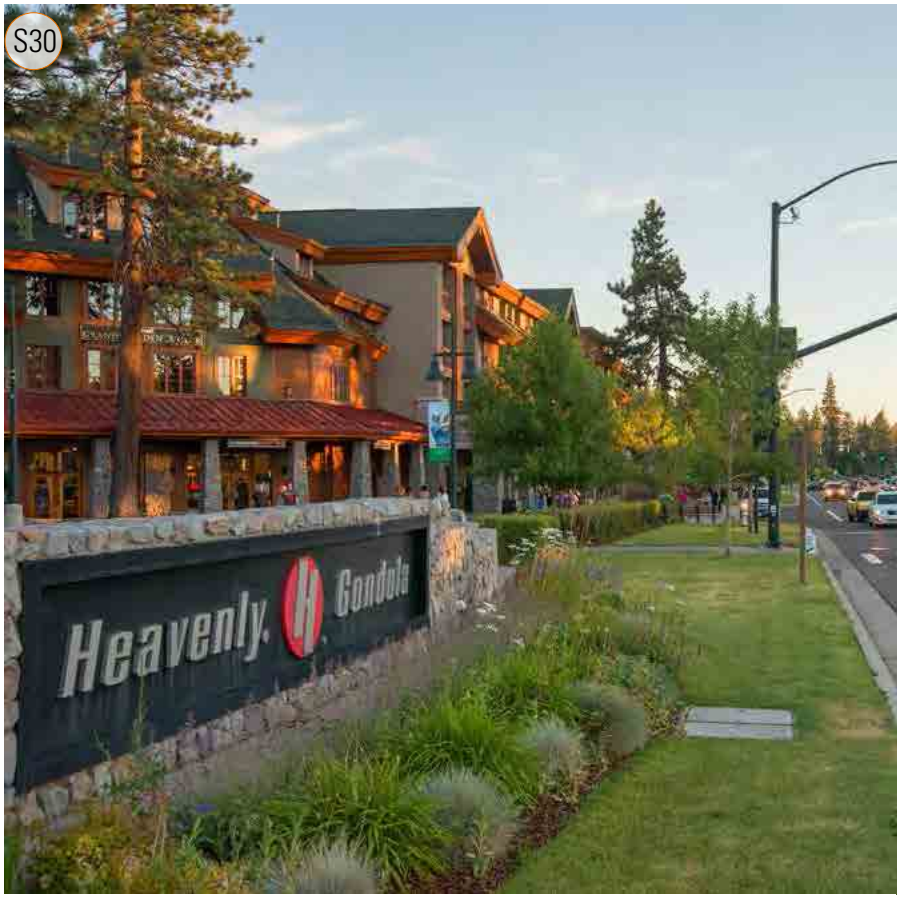
Develop signs with a high aesthetic quality and professional construction standards.

Signage carved into natural wood or high density foam core can help unify tenant signage.

Branding multi-tenant commercial areas can help reduce the number of individual businesses listed on each street sign. Simplify tenant names and use logos where possible to reduce the amount of copy on each sign.



Design and locate signs to be compatible with their surroundings in terms of size, shape, color, texture and lighting. Do not visually compete with other signs.

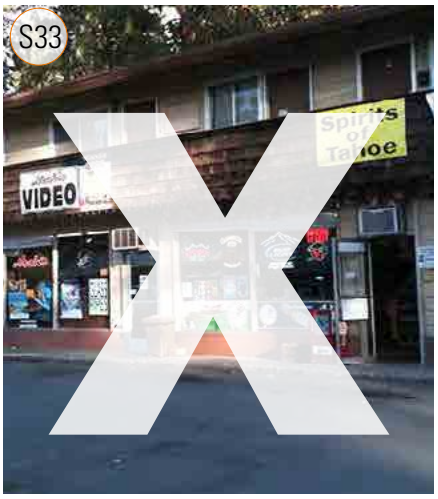


## INTEGRATING SIGNAGE AS PART OF BUILDINGS AND LANDSCAPE ELEMENTS

Signage presents an opportunity to convey unique and interesting aspects of a business through artful designs.

Incorporating signage as part of the building design can eliminate barriers for pedestrian movement and allow more space for other outdoor public spaces.

Integrating signs as part of the landscape feature can help reduce sign proliferation along the roadway. Incorporating plantings can soften the view of a sign from all sides.

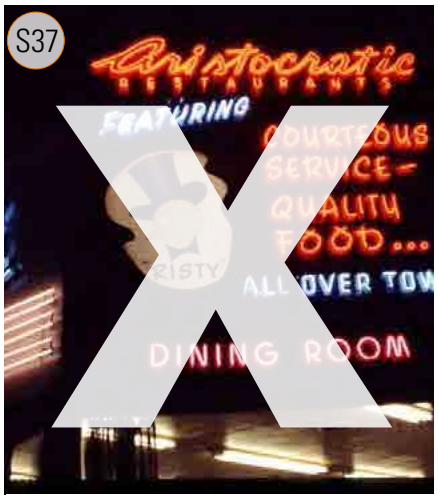


Window signage that does not exceed 25 percent of the window area can be an elegant way to communicate business information to pedestrians and create interest at the street level.

## GENERALLY INAPPROPRIATE SIGNS

Pole signage

Banner signage and signage attached to mansard roof



Amount of sign copy and structural elements are not proportional

Signage attached to roof

Construction elements don't add to the overall aesthetics

Bright, neon signage

Signage that is dark, dated and has trendy typefaces

Inflatable sign displays

Flags and banner signs

# Appendix C
# DEVELOPMENT AND DESIGN STANDARDS

This section sets out the development standards, design standards and permissible uses for the land use districts in the Tourist Core Area Plan to achieve its desired urban form.

Applicability: All projects within the Tourist Core Area Plan shall meet the standards provided below and the Design Guidelines contained within Appendix E. In addition, all projects are required to meet the Citywide Development and Design Standards ~~as well~~ when applicable. Should a conflict occur between the Citywide standards and the Tourist Core Area Plan standards, the standards of this Area Plan shall apply. All regulations in the TRPA Code of Ordinances shall remain in effect unless superseded by the provisions of this Area Plan.

## PERMISSIBLE USES

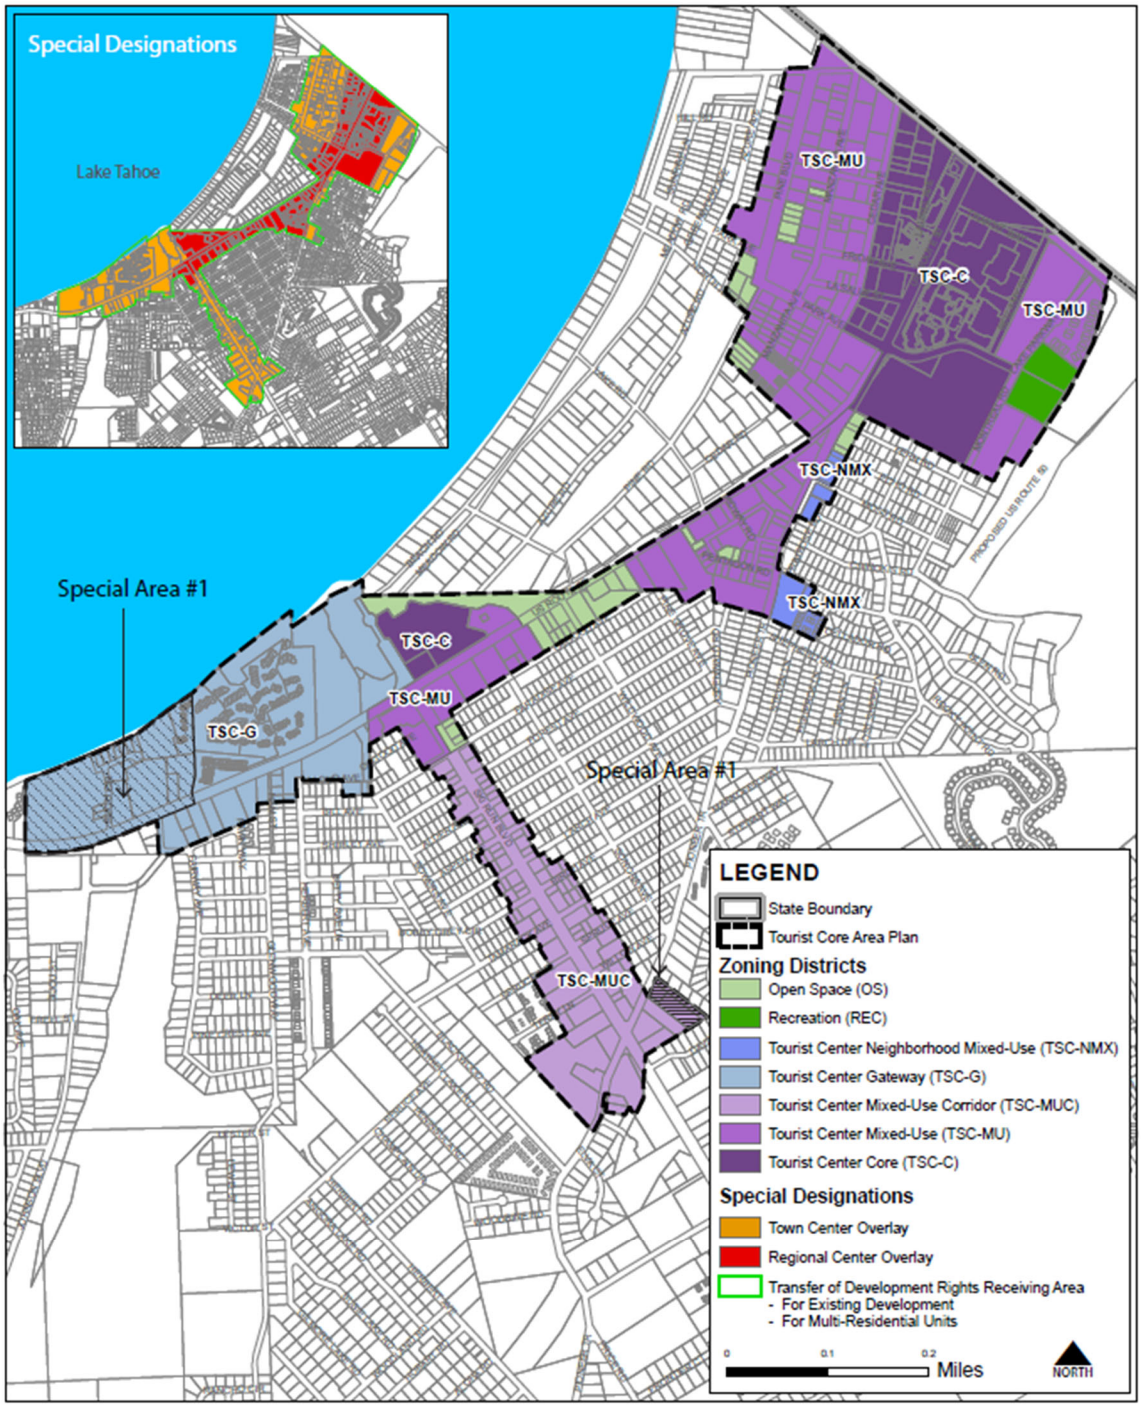


Table 1 lists the permitted primary land uses by district for the Tourist Core Area Plan, and land use definitions are provided in Table 2. The regulations for the district are established by letter designations listed below. The designations apply strictly to the permissibility of land uses; applications for buildings or structures may require discretionary review. Uses not listed in the Table are prohibited. Refer to Figure 5-1 for the Tourist Core Area Plan Zoning Map

**(A)** designates allowed uses subject to zoning compliance. An allowed use is one that can be established as the primary use of a building.

**(S)** designates uses that are permitted subject to approval of a Special Use Permit. A Special Use Permit requires discretionary approval by the City Planning Commission or Zoning Administrator following review and a determination that the nature of the proposed use, at the location proposed, is not detrimental to the public welfare or injurious to property or improvements in the neighborhood. To obtain a special use permit, the applicant must ~~generally~~ show that the contemplated use is compatible with the zoning ordinance and land use standards. Findings that such use would be essential or desirable to the public convenience or welfare, and will not impair the integrity and character of the zoned district or be detrimental to the public health, safety, morals, or welfare are required.

**(TRPA)** designates uses that require TRPA review and permitting.

**(-)** designates uses that are not permitted.

Note: In the Regional Center all residential projects equal to or exceeding 100,000 square feet of new floor area or non-residential projects equal to or exceeding 80,000 square feet of new floor area require TRPA review and approval. In the Town Center all residential projects equal to or exceeding 50,000 square feet of new floor area or non-residential projects equal to or exceeding 40,000 square feet of new floor area require TRPA review and approval.

1. Caretaker Residence Only.
2. All Health Care Services are allowed except emergency outpatient or urgent care facilities and shall not front Lake Tahoe Boulevard. ~~which shall only be considered along Heavenly Village Way, formerly Park Avenue.~~
3. ~~Allow Realty Offices within the district and limit financial services to ATMs.~~

~~4. Allow consideration for placement of Realty Offices within the district, and only when operated in conjunction with approved Park Avenue Redevelopment fractional ownership tourist accommodation projects. Such use shall occupy no more than five percent (5%) of the commercial floor area with any project area within the district.~~

~~5. All Health Care Services uses permissible throughout special district; provided that any Health Care Services uses proposed to front on either side of US Highway 50 and/or the intersections of Heavenly Village Way (formerly Park Avenue) and Stateline Avenue are limited to second floor or higher. See TRPA Ordinance 2009-05 Exhibit 2 for specific limitation locations.~~

6. Outdoor storage and display is prohibited.
7. Shall not front on US Highway 50.
8. Condominiums only.
9. Use not permitted in TSC-MUC Special Area #1, which comprises of APNs 028-081-02, 028-081-04 & 028-081-15. Daycare center allowed as an accessory use.

~~10. Daycare center allowed as an accessory use.~~

11. Land use category is identified in TRPA Code Section 60.3 as a "possible contaminating activity." Triggering special requirements pursuant to TRPA Code Section 60.4 if located within a Source Water Protection Zone.
12. Use only allowed in connection with a retail commercial use where it will enhance the visitor experience and is limited in size to 30% of the associated retail space.
13. Facilities with the capacity for 200 or more persons require a special use permit.
14. Only deed restricted Multi-family dwelling units or multi-person dwelling units owned and maintained by public or private entities for purposes of housing employees

~~13.~~ 1

15. When Measure T was passed in 2018, the Tourist Core Area Plan became one of the limited areas in South Lake Tahoe where vacation home rentals were are allowed. This exception, however, only applies to single-family residential properties within the Area Plan as of 2017. Any areas added to the plan area, through subsequent amendments, are not eligible for vacation home rental permits.

| ~~Table~~ TABLE 2: LIST OF PRIMARY USES AND USE DEFINITIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| **RESIDENTIAL** | |
| Domestic Animal Raising | The keeping, feeding, or grazing of animals as an avocation, hobby, or school project, secondary to the principal residential use of a property greater than two acres. The use applies to species commonly considered as farm animals~~,~~ but does not include exotic animals. Household pets, such as dogs and cats, are included when such animals are being bred for commercial reasons. Outside storage or display is included as part of the use. |
| ~~Employee Housing~~ | ~~Residential units owned and maintained by public or private entities for purposes of housing employees of said public or private entity.~~ |
| Multiple Family Dwelling | More than one residential unit located on a parcel. Multiple-family dwellings may be contained in separate buildings such as two or more detached houses on a single parcel, or in a larger building on a parcel such as a duplex, a triplex, or an apartment building. This includes ~~multi~~multiple- family dwelling units owned and maintained by public or private entities for purposes of housing employees of said entity. ~~Vacation rentals are included, up to but not exceeding a four-plex, provided they meet the Local Government Neighborhood Compatibility Requirements as defined in the TRPA Code of Ordinances. One detached secondary residence is included.~~ |
| Multi-Person Dwelling | A building designed primarily for permanent occupancy by individuals unrelated by blood, marriage, or adoption in other than single-family dwelling units or transient dwelling units. A multi-person dwelling includes, but is not limited to, facilities such as dormitories and boarding houses, but not such facilities as hotels, motels, and apartment houses. This includes multi-person dwelling units owned and maintained by public or private entities for purposes of housing employees of said public or private entity. |
| Single Family Dwelling (includes condominiums) | One residential unit located on a parcel. A single-family dwelling unit may be contained in a detached building such as a single-family house, or in a subdivided building containing two or more parcels such as a town house condominium. Vacation rentals are included provided they meet the Local Government Neighborhood Compatibility Requirements as defined in the TRPA Code of Ordinances. A caretaker residence is included in this definition. Employee housing providing accommodations for six or fewer employees within a single unit pursuant to Division 13, Part 1 of the California Health and Safety Code, commencing with Section 17000, shall be deemed a single-family structure. |
| Nursing and Personal Care | Residential establishments with in-patient beds providing nursing and health-related care as a principal use, such as skilled nursing care facilities, extended care facilities, convalescent and rest homes, and board and care homes. |
| Residential Care | Establishments primarily engaged in the provision of residential social and personal care for children, the aged, and special categories of persons with some limits on ability for selfcare, but where medical care is not a major element. The use includes, but is not limited to, children's homes, halfway houses, orphanages, rehabilitation centers, and self-help group homes. |
| **TOURIST ACCOMMODATION** | |
| Bed & Breakfast Facilities | Residential-type structures that have been converted to or constructed as tourist accommodation facilities where bedrooms without individual cooking facilities are rented for overnight lodging, and where at least one meal daily is provided. The use does not include ~~"~~"Hotels and Motels,"~~"~~ |

| ~~Table~~ TABLE 2: LIST OF PRIMARY USES AND USE DEFINITIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| | which are defined separately; nor rooming and boarding houses (see ~~"~~"Multiple-Family Dwellings~~"~~"). |
| Hotel, Motel, Other Transient Dwelling Units | Commercial transient lodging establishments, including hotels, motor-hotels, motels, tourist courts, or cabins, primarily engaged in providing overnight lodging for the general public whose permanent residence is elsewhere. This use does not include Bed and Breakfast Facilities or Vacation Rentals. |
| Time Sharing | A right to exclusively use, occupy, or possess a tourist accommodation unit, according to a fixed or floating time schedule on a periodic basis occurring annually over a period of time in excess of three years. |
| **RETAIL COMMERCIAL** | |
| General Retail and Personal Services | An establishment for the retail sale of merchandise or the provision of personal services. A retail facility includes but is not limited to antique or art shops, clothing, drug, dry good, florist, furniture, gift, grocery, hobby, mailing services, office supply, package liquor, paint, pet, shoe, sporting, bike or moped, boats, golf carts, snowmobiles, jet skis, automobile parts, books, toy stores, and other miscellaneous retail shopping goods (auto, mobile home and vehicle sales are not included in this definition). A personal service facility includes facilities primarily engaged in providing non-medical services generally involving the care of persons, such as: beauty and barber shops; shoe repair shops; health and athletic clubs; ~~saunas and hot tubs~~ day spas that offers a variety of services intended to meet personal needs of individuals such as skin treatment, manicures and pedicures and massage; laundromats (self-service laundries); dry cleaning pick-up stores and small-scale dry cleaners without pick-up and delivery services; clothing rental; dating and escort services; funeral parlors, cemetery real estate sales, and related facilities; offsite rental of sporting equipment; and wedding chapels. The use may also include the accessory retail sales of products related to the services provided. |
| Building Material & Hardware | Retail trade establishments within buildings primarily engaged in selling lumber and other building materials, including paint, wallpaper, glass, hardware, nursery stock, and lawn and garden supplies. The use includes all such stores selling to the general public, even if contractor sales account for a larger proportion of total sales. Outside storage or display is included as part of the use. Establishments primarily wholesaling plumbing, heating and air conditioning equipment, and electrical supplies are classified in ~~"~~"Wholesale and Distribution.~~"~~" |
| Nursery | Commercial retail and wholesale establishment where plants are grown or stored for transplanting at other sites. Outside storage or display is included as part of the use. |
| Outdoor Retail Sales | Retail trade establishments operating outside of buildings on a daily or weekly basis, such as: roadside stands; flea markets; swap meets; seasonal sales involving Christmas trees, pumpkins, or other seasonal items; regular sales of art or handcrafted items in conjunction with community festivals or art shows; and retail sales of various products from individual motor vehicles locations outside the public right-of-way, not including bakery, ice cream, and similar vending vehicles that conduct all sales within the right-of-way and do not stop in any location except on customer demand. Outside storage or display is included as part of the use. |

| ~~Table~~ TABLE 2: LIST OF PRIMARY USES AND USE DEFINITIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Eating & Drinking Places | Restaurants, bars, and other establishments selling prepared foods and drinks for on-premise consumption, as well as facilities for dancing and other entertainment that are accessory to the principal use of the establishment as an eating and drinking place. The use also includes drive-in restaurants, lunch counters, and refreshment stands selling prepared goods and drinks for immediate consumption. |
| Service Stations | Retail trade establishments primarily engaged in the sale of gasoline, which may also provide lubrication, oil change and tune-up services, and the sale of automotive products incidental to gasoline sales. The use may also include as accessory uses towing, mechanical repair services, car washing and waxing, and trailer rental. The use does not include storage of wrecked or abandoned vehicles, paint spraying body and fender work, and retail sale of gasoline as an accessory use to food and beverage retail sales when limited to not more than two pumps. |
| **ENTERTAINMENT COMMERCIAL** | |
| Amusement & Recreation and Assembly & Entertainment Facilities | Amusement and recreation uses are ~~E~~establishments providing amusement or entertainment for a fee or admission charge, such as: arcades and coin-operated amusements; billiard and pool halls; bowling alleys; card rooms; clubs and ballrooms that are principal uses rather than being subordinate to an eating or drinking place; dance halls; gymnasiums; ~~health and athletic clubs;~~ ice skating and roller skating facilities; indoor sauna~~, spa,~~ or hot tub facilities; motion picture theaters; reducing salons; and tennis, handball, racquetball, indoor archery and shooting ranges, and other indoor sports activities. Assembly and Entertainment facilities are establishments such as: auditoriums; exhibition and convention halls; theaters, meeting halls and facilities for “live” theatrical presentations or concerts by bands and orchestras; amphitheaters; meeting halls for rent; and similar entertainment and assembly uses. |
| ~~Privately Owned Assembly and Entertainment~~ | ~~Commercially operated facilities for public assembly and group entertainment with a capacity of greater than 300 people, such as: auditoriums; exhibition and convention halls; theaters, meeting halls and facilities for ""live"" theatrical presentations or concerts by bands and orchestras; amphitheaters; meeting halls for rent; and similar public assembly uses.~~ |
| Outdoor Amusements | Commercial establishments for outdoor amusement and entertainment such as: amusement parks; theme and kiddie parks; go cart and miniature auto race tracks; and miniature golf courses. Outside storage or display is included as part of the use. |
| **SERVICE COMMERCIAL** | |
| Animal Husbandry Services | Establishments primarily engaged in performing services for animals, such as veterinary services, animal hospitals, and animal kennels. The use does not include publicly operated animal control and wildlife care (see “Local Public Health and Safety Facilities”). |
| Business Support Services | Service establishments within buildings that provide other businesses with services including maintenance, repair and service, testing, and rental. This includes establishments such as: outdoor advertising services, mail advertising services (reproduction and shipping); blueprinting, photocopying, and photofinishing; computer-related services (rental, repair, and maintenance); commercial art and design (production); film processing laboratories; and services to structures such as window |

| ~~Table~~ TABLE 2: LIST OF PRIMARY USES AND USE DEFINITIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| | cleaning, exterminators, janitorial services, and business equipment repair services. |
| Health Care Services | Service establishments primarily engaged in furnishing medical, mental health, surgical, and other personal health services such as: medical, dental, and psychiatric offices; medical and dental laboratories; outpatient care facilities; and allied health services. Associations or groups primarily engaged in providing medical or other health services to members are included. Nursing homes and similar long-term personal care facilities are classified in ~~"~~"Nursing and Personal Care,"~~"~~ and mental health-related services, including various types of counseling practiced by licensed individuals other than medical doctors or psychiatrists or unlicensed individuals, are included under Professional Offices. |
| Professional Offices | A place where the following kinds of business are transacted or services rendered: engineering, architectural and surveying; real estate agencies; educational, scientific and research organizations; financial services; writers and artists; advertising agencies; photography and commercial art studios; publishing with offsite printing facilities; broadcasting studios; employment services; off premise concessions (OPC); reporting services; computer services; management, public relations, and consulting services; organizational offices; detective agencies; professional services; attorneys; and counseling services (other than licensed psychiatrists; see ~~"~~"Health Care Services"~~"~~). Incidental offices are considered accessory uses to a primary use. |
| Schools – Business & Vocational | Business and vocational schools offering specialized trade and commercial courses. |
| Secondary Storage | The outdoor storage of various materials or the public display of merchandise on the same site as a principal building or use that supports the activities or conduct of the principle use and does not increase the intensity of the use. This does not apply to primary uses that include outside storage and display as part of the use. |
| **LIGHT INDUSTRIAL COMMERCIAL** | |
| Industrial Services | Service establishments providing other businesses with services, including maintenance, repair, service, testing, publishing, and rental. This includes establishments such as: welding repair, armature rewinding, and heavy equipment repair, ~~vehicle repair,~~ (except vehicle repair; see "Auto Repair and Service"); research and development laboratories, including testing facilities; soils and materials testing laboratories; equipment rental businesses that are entirely within buildings (for equipment rental yards, see "Sales Lots"), including leasing tools, machinery and other business items except vehicles; and other business services of a "heavy service" nature. Outside storage or display is included as part of the use. |
| Small Scale Manufacturing | Establishments primary engaging in retail sales and secondarily as a fine art or craftsman demonstration workshop of light industrial nature such as sculptor, potter, weaver, carver, jeweler, or other similar art that requires artistic skill. Outside storage or display would require approval of a Special use Permit. |
| **WHOLESALE/STORAGE COMMERCIAL** | |

| ~~Table~~ TABLE 2: LIST OF PRIMARY USES AND USE DEFINITIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Vehicle Storage & Parking | Service establishments primarily engaged in the business of storing operative cars, buses, or other motor vehicles. The use includes both day use and long-term public and commercial garages, parking lots, and structures. Outside storage or display is included as part of the use. The use does not include wrecking yards (see "Recycling and Scrap"). |
| **GENERAL PUBLIC SERVICE** | |
| Religious Assembly | Religious organization assembly or institutional facility operated for worship or promotion of religious activities, including churches and incidental religious education. Other establishments maintained by religious organizations, such as full-time educational institutions, hospitals, and other potentially related operations (such as a recreational camp) are not considered a religious assembly and are classified according to their respective activities. |
| Cultural Facilities | Permanent public or quasi-public facilities generally of a noncommercial nature, such as art exhibitions, planetariums, botanical gardens, libraries, museums, archives, and arboretums. |
| Daycare Centers/Preschool | Establishments used for the care of seven or more children residing elsewhere. |
| Government Offices | Buildings containing offices for public agencies, including administrative offices, and meeting rooms that are incidental and accessory to another government use such as transit terminals, vehicle storage, campground, or storage yards. |
| Local Public Assembly Facilities ~~& Entertainment~~ | Facilities for public assembly ~~and entertainment~~ for the local community, ~~not to exceed a capacity of 300 people,~~ such as community centers, meeting halls, and multi-purpose centers. |
| Post Office | Establishments providing mail service and delivery, such as postal substations and neighborhood delivery centers. |
| Local Public Health and Safety Facilities | Facilities operated by public or quasi-public entities for the local protection of the public, such as: fire stations and other fire prevention facilities; police and sheriff substations; satellite highway maintenance and snow removal facilities; water tanks, pumps, wells and related facilities; monitoring facilities; sewage pumps and related facilities; and emergency services. Outside storage or display is included as part of the use. |
| ~~Public Owned Assembly & Entertainment~~ | ~~Facilities owned and operated by a public or nonprofit entity for public assembly and group entertainment with a capacity of greater than 300 people, such as: public auditoriums; exhibition and convention halls; civic theaters, meeting halls and facilities for live theatrical presentations or concerts by bands, choirs, and orchestras; meeting halls for rent; community centers; and similar public assembly uses.~~ |
| Public Utility Centers | Public and quasi-public facilities serving as junction points for transferring utility services from one transmission to another or to local distribution and service, such as: electrical substations and switching stations; major telephone switching centers; natural gas regulating and distribution facilities; public water system wells, treatment plants and storage; and community wastewater treatment plants and settling ponds. Outside storage or display is included as part of the use. The use does not include |

| ~~Table~~ TABLE 2: LIST OF PRIMARY USES AND USE DEFINITIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| | office or service centers (see "Professional Offices or Government Offices"). |
| Social Service Organizations | Public and quasi-public establishments providing social services and rehabilitation services, counseling centers, welfare offices, job counseling and training centers, or vocational rehabilitation agencies, serving persons with social or personal problems requiring special services and the handicapped and the disadvantaged. The use includes organizations soliciting funds to be used directly for these and related services. The use also includes establishments engaged in community improvement and neighborhood development. |
| **LINEAR PUBLIC FACILITIES** | |
| Pipelines & Power Transmission | Transportation facilities primarily engaged in the pipeline transportation of refined products of petroleum, such as: gasoline and fuel oils; natural gas; mixed, manufactured, or liquefied petroleum gas; or the pipeline transmission of other commodities. The use includes facilities for the transmission of electrical energy for sale, including transmission and distribution facilities. Outside storage or display is included as part of the use. The use does not include offices or service centers (see "Professional Offices"); equipment and material storage yards (see "Storage Yards"); distribution substations (see "Public Utility Centers"); and power plants (see "Power Generating Plants"). |
| Transit Stations & Terminals | Passenger stations for vehicular and mass transit systems; also, terminal facilities providing maintenance and service for the vehicles operated in the transit system. The use includes, but is not limited to, buses, taxis, railway, and ferries. Outside storage or display is included as part of the use. |
| Transportation Routes | Public right-of-ways that are improved to permit vehicular, pedestrian, and bicycle travel. |
| Transmission & Receiving Facilities | Communication facilities for public or quasi-public, commercial, and private electronic, optic, radio, microwave, electromagnetic, and photo-electrical transmission and distribution, such as: repeater and receiving facilities, feeder lines, and earth stations for satellite communications for radio, television, telegraph, telephone, data network, and other microwave applications. The use includes local distribution facilities such as lines, poles, cabinets, and conduits. Outside storage or display is included as part of the use. The use does not include uses described under Broadcasting Studios. |
| **RECREATION** | |
| Beach Recreation | Recreational use of a beach, supported by developed facilities such as sanitation facilities, parking, and picnic sites, and nearshore facilities such as multiple-use piers and buoys. Nearshore and foreshore facilities are included in Chapter 81, *Permissible Uses and Structures in the Shorezone and Lakezone*, of the TRPA Code of Ordinances. |

| ~~Table~~ TABLE 2: LIST OF PRIMARY USES AND USE DEFINITIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Boat Launching Facilities | Recreational establishments that provide boat launching, parking, and short-term trailer storage for the general public. The storage, mooring, and maintenance of boats are included under "Marinas." Raft launching is included under "Day Use Areas." Outside storage or display is included as part of the use. |
| Cross Country Ski Courses | Land or premises used as a commercial operation for Nordic skiing. Outside storage or display is included as part of the use. |
| Day Use Areas | Land or premises, other than Participant Sports Facilities, designated by the owner to be used by individuals or the general public, for a fee or otherwise, for outdoor recreation purposes on a daily basis such as regional and local parks, picnic sites, vista points, snow play areas, rafting facilities, and playgrounds. |
| Developed Campgrounds | Land or premises designed to be used, let, or rented for temporary occupancy by campers traveling by motorized vehicle or recreational vehicles, and that contain such facilities as campsites with parking area, barbecue grills, tables, restrooms, and at least some utilities. |
| Group Facilities | Establishments that provide overnight accommodations and outdoor recreation to organized groups such as recreational camps, group or organized camps, and religious camps. |
| Marinas | Establishments primarily providing water-oriented services, such as: yachting and rowing clubs; boat rentals; storage and launching facilities; sport fishing activities, excursion boat and sightseeing facilities; and other marina-related activities, including but not limited to fuel sales and boat and engine repair. Marinas contain water-oriented facilities and structures, which are regulated and defined in Chapter 81. Outside storage or display is included as part of the use. The use does not include condominiums, hotels, restaurants, and other such uses with accessory water-oriented, multiple-use facilities. |
| Outdoor Recreation Concessions | Facilities that are dependent on the use of outdoor recreation areas, such as onsite food and beverage sales, onsite recreational equipment rentals, parasailing, rafting, and onsite recreation instruction. The use also includes outfitter or guide service establishments whose base facilities are located on or near a recreation area, such as horse packing outfitters or snowmobiling outfitters. Outside storage or display is included as part of the use. |
| Participant Sport Facilities | Facilities for various outdoor sports and recreation including, but not limited to, tennis courts, swim and tennis clubs, ice skating rinks, and athletic fields (non-professional). Outside storage or display is included as part of the use. |
| Recreation Centers | Indoor recreation establishments operated by a public or quasi-public agency providing indoor sports and community services, such as swimming pools, ice skating rinks, multi-purpose courts, weight rooms, and meeting and crafts rooms. |
| Riding and Hiking Trails | Planned paths for pedestrian, bike, and equestrian traffic, including trail heads. |
| Rural Sports | Establishments that provide for special outdoor recreation group activities, such as: outdoor archery, pistol, rifle, and skeet clubs and facilities; hunting and fishing clubs; and equestrian facilities, stables, and exhibition facilities. The use does not include indoor shooting facilities (see "Amusements and Recreational Services"). |
| Snowmobile Courses | Mapped areas, pathways, and trails utilized in, and approved for, commercial snowmobile operations. |

| ~~Table~~ TABLE 2: LIST OF PRIMARY USES AND USE DEFINITIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Visitor Information Centers | Nonprofit establishments providing visitor information and orientation. |
| **RESOURCE MANAGEMENT** | |
| Forest and Timber Resource Management | Activities associated with the protection, restoration, and management of timber such as reforestation, regeneration harvest, sanitation salvage cut, selection cut, special cut, thinning and timber stand improvement. |
| Vegetation Resource Management | Activities associated with the protection, restoration, and management of vegetation including fire detection and suppression, fuels treatment and management, insect and disease suppression, prescribed fire and burn management. |
| Water Quality Improvements and Watershed Management | Activities associated with the protection, restoration, and management of watersheds including erosion control, runoff control and stream environment zone restoration. |
| Wildlife and Fisheries Resource Management | Activities associated with the protection, restoration, and management of wildlife and fisheries resources. |
| Range Management | Activities associated with range management including range pasture management, range improvement and grazing. |
| **OPEN SPACE** | |
| Allowed in all areas of the Region | Land with no land coverage and maintained in a natural condition or landscaped condition consistent with best management practices, such as deed-restricted properties and designated open space area |
| **SHOREZONE** | Refer to TRPA Code Chapter 90 – Definitions. |

## COMMUNITY NOISE EQUIVALENT LEVEL (CNEL)

The maximum community noise equivalent level for this Area Plan is as follows:

**TABLE 3: COMMUNITY NOISE EQUIVALENT LEVEL (CNEL)**

| DISTRICT | TSC-C & TSC-MU SPECIAL AREA #1 | TSC-MU | TSC-MUC | TSC-G & TSC-G SPECIAL AREA #1 | TSC-NMX | REC | OS | US 50 |
|---|---|---|---|---|---|---|---|---|
| CNEL | 60 | 60 | 60[1] | 60[2] (55 within the shorezone) | ~~65~~55 | 55 | 55 | 65[3] |

1. Maximum CNEL for Special Area #1, which comprises of APNs 028-081-02, 028-081-04 & 028-081-15 is 55.
~~2. Maximum CNEL for TSC-G Special Area #1 is identical to the TSC-G Zoning District.~~
~~2.~~3. This ~~recommended~~ threshold overrides the land use CNEL thresholds and is limited to an area within 300 feet from the edge of the road.

## DEVELOPMENT STANDARDS

The development standards for the Tourist Core are intended to provide physical development requirements to implement the South Shore Tourism Core Area Plan's vision, goals, and policies; implement the goals and policies of the recently adopted General Plan and the Regional Plan ~~Update~~, and enable the South Shore Tourism Core Area Plan to be found as a conforming Area Plan by the TRPA Governing Board. The standards were developed based on a review of the TRPA Regional Plan ~~Update~~ policies, the TRPA Area Plans Framework, the General Plan, the Stateline/Ski Run Community Plan, the City of South Lake Tahoe Code and Design ~~Manual~~Guidelines, Redevelopment Demonstration Plan, and the South Shore Vision Plan.

Form-based coding techniques are used for development standards. The standards of each district list density and lot coverage limits, lot dimensional requirements, building location standards, height requirements, parking and access provisions, and minimum open space and landscaping requirements. Furthermore, supplemental standards address building orientation and design, pedestrian access, and bicycle parking. ~~Buildings are required to be oriented toward and include a public entrance on a public street. Building design standards are intended to avoid bulky and "box-like" buildings and encourage appropriate architectural features.~~

Tables 4 through 9 prescribe the development standards for the Tourist ~~Center Districts~~Core Area Plan. Individual letters in parentheses refer to additional regulations that directly follow the table. The numbers in each illustration below refer to corresponding regulations in the "#" column in the associated table.

### LOT AND DENSITY

~~Maximum allowed densities are consistent with the limits set in the Regional Plan Update. The Regional Plan Update allows maximum densities of 25 units per acre for multi-family residential development and 40 units per acre for tourist accommodation with the adoption of an Area Plan. Existing lot size and dimension requirements are proposed to be carried forward. Lot coverage standards reflect the allowances established in the Regional Plan Update, 50 percent within 300 feet of the High Water Mark of Lake Tahoe, 70 percent beyond 300 feet.~~

| TABLE 4: LOT AND DENSITY STANDARDS | | | | | | | |
|---|---|---|---|---|---|---|---|
| DISTRICT | TSC-C | TSC-MU | TSC-MUC & TSC-MUC SPECIAL AREA #1 | TSC-G & TSC-G SPECIAL AREA #1 | TSC-NMX | REC |
| ~~Maximum Density: Employee Housing Family (dwelling units/ acre)~~ | ~~15~~ | ~~15~~ | ~~15~~ | ~~15~~ | ~~15~~ | ~~15~~ |

| Residential Care (person/acre) | 65 | 65 | 65 | 65 | 65 | n/a |
| Maximum Density: Tourist Accommodation (dwelling units/ acre) | 40 | 40 | 40 | 40 | 40 | n/a |
| **Lot Size** | | | | | | |

| TABLE 4: LOT AND DENSITY STANDARDS | | | | | | |
|---|---|---|---|---|---|---|
| **DISTRICT** | **TSC-C** | **TSC-MU** | **TSC-MUC & TSC-MUC SPECIAL AREA #1** | **TSC-G & TSC-G SPECIAL AREA #1** | **TSC-NMX** | **REC** |
| Minimum Lot Size, Depth, Width | Subject to City Code Section 6.55.180 for commercial/public uses and Chapter 6.85 for residential uses. | | | | | |
| ~~Minimum Lot Size (sq ft)~~ | ~~10,000 (A)~~ | ~~10,000 (A)~~ | ~~10,000 (A)~~ | ~~10,000 (A)~~ | ~~6,000 (A)~~ | ~~10,000 (A)~~ |
| ~~Minimum Lot Width (sq ft)~~ | ~~80 (A)~~ | ~~80 (A)~~ | ~~80 (A)~~ | ~~80 (A)~~ | ~~60 (A)~~ | ~~80 (A)~~ |
| ~~Minimum Lot Depth (sq ft)~~ | ~~100 (A)~~ | ~~100 (A)~~ | ~~100 (A)~~ | ~~100 (A)~~ | ~~100 (A)~~ | ~~100 (A)~~ |
| **Coverage** | | | | | | |
| Maximum Land Coverage-Base + Transferred (% of project area located within land capability districts 4-7) | ~~Within 300 feet of the High Water Mark of Lake Tahoe, maximum coverage shall be 50 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive. Further than 300 feet from the High Water Line of Lake Tahoe, maximum land coverage shall be 70 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive. Also s~~See Section 30.4 of the TRPA Code of Ordinances | | | | | |

~~A. **Reduced Minimum Lot Size and Dimensions.** Smaller lots may be approved as part of a condominium, or other airspace subdivision pursuant to City Code 6.55.190.~~

~~**Mixed-Use** Density.~~

~~The maximum density for mixed-use projects includes up to 40 Tourist Units per acre and up to 25 residential units per acre. If a project includes non-conforming tourist or residential density, any new tourist or residential density must take into account the overage in overall density and reduce the allowable density for new construction so that the total density does not exceed 65 units per acre.~~

~~In the case of a mixed-use project that includes a commercial use or other use that is not subject to a density calculation, combined with residential and/or tourist uses, the project may include the total allowable commercial square footage, and the maximum allowable tourist and residential units per acre, using the full parcel area as the denominator in the density calculation.~~

~~The maximum mixed-use density for TSC-G Special Area 1 is 40 units per acre. Otherwise, the lot and density standards for TSC-G Special Area 1 are identical to those in the TSC-G zoning district.~~

~~A.~~ **Accessory Dwelling Unit~~'s~~s**. Construction of accessory dwelling units on parcels developed with residential uses are subject to City Code Section 6.85.050. In accordance with TRPA Code of Ordinances Section 31.4.7, accessory dwelling units shall not be considered in the calculation of density.

~~B.~~ **No Minimum Density for Qualifying Mixed-Use Projects.** Mixed-use developments may be exempt from the minimum density standards when the following are met.

1. ***Vertical Mixed-Use.*** The first floor shall be dedicated to non residential uses.

2. ***Horizontal Mixed-Use.*** At least 25 percent of the gross floor area shall be dedicated to non-residential uses.

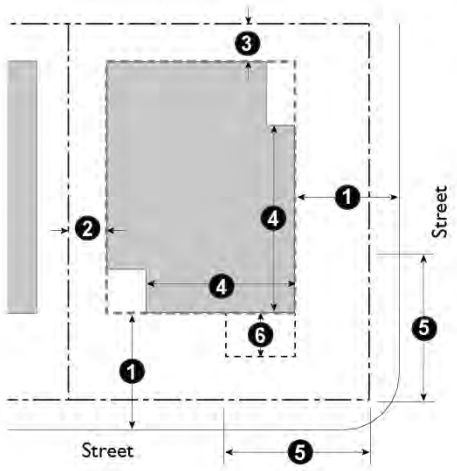
~~C.~~ **Mixed-Use Density.** The maximum density for a mixed-use project shall be the maximum density as shown in Table 4 for the given uses.

~~B.~~D. **No Net Loss of Residential Units.** When a parcel containing a residential use is redeveloped to a lower density or to a non residential use, the units not rebuilt on site shall be redeveloped elsewhere in the plan area and shall be equivalent in size and number of bedrooms as those being replaced. A deed restriction shall be placed on any resulting single-family dwelling prohibiting use as a Vacation Home rental as defined in City Code Section 3.50.370.

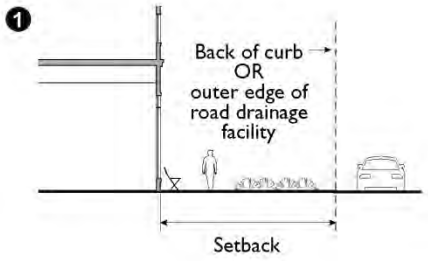
~~C.~~E. **Density for Deed Restricted Developments.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 13.5.3.I.

~~D.~~

## BUILDING PLACEMENT AND ORIENTATION



Minimum building setbacks and street frontage improvements are established to complement a walkable, ~~tourist center district~~Tourist Center District. ~~Along Highway 50/Lake Tahoe Boulevard, buildings are required to be setback 30 feet from the back of the curb. The setback area is to consist of a 10 foot sidewalk/use area in which a minimum of six feet clear must be reserved for pedestrian movement and the other area must be improved as part of a wider sidewalk or provide outdoor dining/seating area or landscaping.~~



~~Along all other street frontages, with exceptions as noted in the standards, buildings are required to be setback 20 feet from the back of the curb or the outer edge of road or drainage improvements where no curb exists. This setback would include a five foot sidewalk, while the remaining area would be improved as part of a wider sidewalk or provide outdoor dining/seating area or landscaping.~~

Standards require buildings to be built at ~~this~~ setback line~~s~~ ~~for a certain percentage of the linear street frontage~~ in order to establish a consistent and engaging street frontage and improve the pedestrian experience. ~~Additional regulations require pedestrian-oriented street frontage improvements such as the provision of street trees and lighting. Awnings, overhangs, and other elements to provide a covered walkway, public plaza, or outdoor eating area are allowed to project into the setback area.~~ With approval by the Director of Development Services, any standard may be waived for public service uses where the strict application would interfere with use of specialized equipment or operations or create an unsafe environment.

All purely residential developments shall adhere to design standards of City Code Chapter 6.85, except when fronting Lake Tahoe Boulevard~~/Hwy 50~~.

## TABLE 5: BUILDING PLACEMENT STANDARDS

KEY
Property Line
Setback Line

*Note:* All properties are subject to snow easement requirements contained in Section 4 of the *City of South Lake Tahoe Public Improvement and Engineering Standards.*

| DISTRICT | TSC-C | TSC-MU | TSC-MUC & TSC-MUC SPECIAL AREA #1 | TSC-G & TSC-G SPECIAL AREA #1 | TSC-NMX | REC | # |

| **Minimum Setbacks (ft)** | | | | | | | |
| Street Frontage, ~~Hwy~~ US Highway 50/Lake Tahoe Blvd (measured from back of curb) | 30 ft., must include a 10 ft. sidewalk/use area with a minimum 6 ft. wide clear sidewalk for pedestrian movement and the balance of the area improved as part of wider sidewalk, outdoor dining/seating area, or landscaping; (A) | | | | | n/a | ❶ |
| Street Frontage, Ski Run Boulevard north of ~~Hwy~~ US Highway 50/Lake Tahoe Blvd (measured from back of curb) | 75 ft. (A) | n/a | | 75 ft. (A) | n/a | | ❶ |
| Street Frontage, Montreal Road and Lake Parkway (measured from back of curb) | n/a | 50 ft. | n/a | n/a | n/a | 50 ft. | ❶ |
| Street Frontage, all other streets (measured from back of curb or outer edge of road or drainage improvements if no curb) | 20 ft.; must include a ~~five~~six-foot sidewalk. The balance of the area is required to be improved as part of wider sidewalk, outdoor dining/seating area, or landscaping; (A) | | | | | n/a | ❶ |
| Interior Side (ft.) | Nonresidential Uses: 0; 10 adjacent to residential district<br>Residential Uses: 10 | | | | ~~10~~5 | | ❷ |
| Rear (ft.) | Nonresidential Uses: 0; 10 adjacent to residential district<br>Residential Uses: 10 | | | | 10 | | ❸ |
| Build-to-Line: Minimum Building Frontage at Street Setback Line | 75 east of intersection with | 50 (B) | 50 (B) | 50 (B) | 50 (B) | n/a | ❹ |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| (% of linear street frontage) (commercial only) | Pioneer Trail (~~CB~~) | | | | | | |
| Corner Build Area (ft.) | 50 (C) | 50 (C) | 50 (C) | 50 (C) | n/a | | ❺ |
| Maximum Projection into Setback | Awnings and overhangs to provide a covered walkway, public plaza, or outdoor eating area may project up to 10 ft. into the required setback. | | | | | n/a | ❻ |
| Shorezone Setback | 100 ft. from the high waterline or in accordance with TRPA Shorezone Ordinances, whichever is more restrictive | | | | | | |

~~A.~~ **Street Frontage Improvements.** The improvement of the public right-of-way is necessary for the safety and convenience of residents and visitors, improving the quality of the community and unifying the appearance of the community with the establishment of a consistent set of improvement standards. ~~New development shall provide street frontage improvements in accordance with the following or in accordance with the improvements outlined in this Area Plan that contains specific streetscape standards:~~

1. ***Street Trees.*** A minimum of two trees and four shrubs shall be planted for every 50 linear feet of street frontage.

2. ***Lighting.*** ~~Pedestrian~~ Pedestrian-scaled lighting consistent with City pedestrian lighting standards. Lighting standards that include attachments from which banners identifying the area or announcing community events may be hung are encouraged.

3. ***Sidewalks.*** Unless noted in Table 5, sidewalk widths shall be consistent with City Code Section 6.10.180 and the City of South Lake Tahoe Public Improvement and Engineering Standards (PIES).

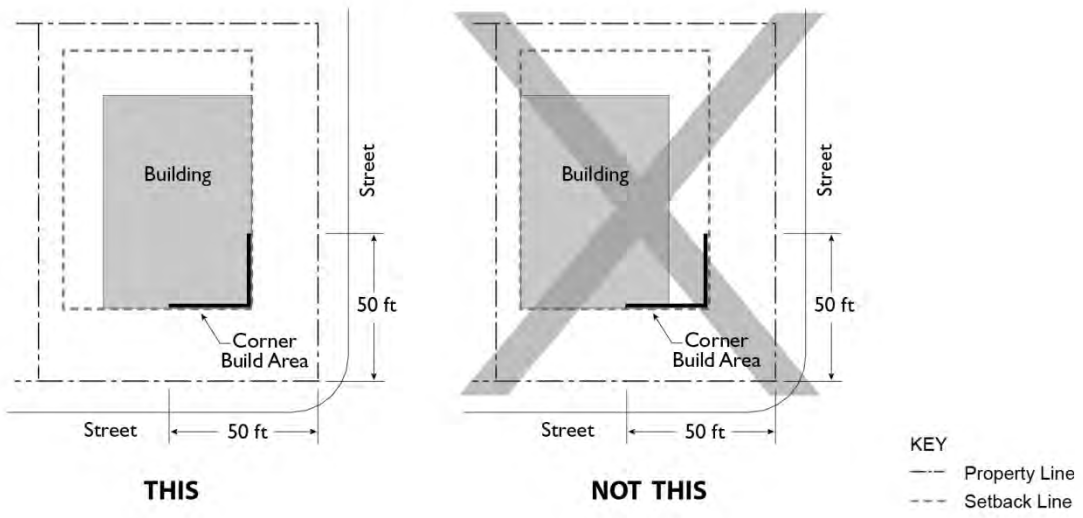
   ~~2.~~1. The requirements to construct a sidewalk may be waived by the Director of Public Works if it is found that the construction of sidewalks could impede drainage or that the location has been identified for City initiated street improvements.

~~B.~~ **Build-~~to~~ to-Line.** Buildings shall be constructed at the required setback for the percent of linear street frontage identified in Table 5. This requirement may be modified or waived by the Director of Development Services upon finding that:

1. The area between the built-to-line and the building are ~~E~~entry courtyards, plazas, entries, ~~or~~ outdoor eating areas or other public spaces; and ~~are located between the build-to line and building, provided that the buildings are built to the edge of the courtyard, plaza, or dining area; or~~

2. The building incorporates an alternative entrance design that creates a welcoming pedestrian entry feature facing the street~~.~~; or

   ~~2.~~3. Topographic features, lot configuration or other conditions make it impractical to require compliance with the build-to lines.



~~C.~~ **Corner Build Area.** Buildings must be located at the point of intersection of the two setback lines at street corners, and must occupy the street frontage at the setback line for at least 50 feet from the street corner property line (See Figure C-1). Public plazas may be at the street corner provided buildings are built to the edge of the public plaza. Where a parcel is bounded by more than two streets, this requirement only applies to the primary street frontage and one side street frontage. Corners in designated Scenic Corridors are exempt from this requirement. This requirement may be modified or waived by the Director of Development Services upon finding that:

1. Where buildings placed on a corner would negatively impact a designated scenic view, visual open space, visual access, or views of mountains ridgelines; or

2. Where buildings placed on a corner would negatively affect the sun angle plane to reduce icing on US Highway 50 and public sidewalks, or

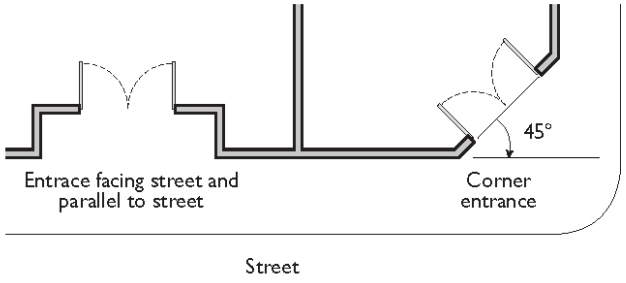
3. Where buildings placed on a corner would encroach in a stream environment zone or require destruction or removal of significant natural features.

**FIGURE C-1: CORNER BUILD AREA**

~~C.~~D. **Building Orientation and Entrances.**

1. Primary building entrances for all buildings shall be located facing a public street.

   1. Where a commercial use is adjacent to a bike route, lane, or path, a business, or business complex shall integrate access from the route to the primary entrance.



2. Building entrances shall be emphasized with special architectural and landscape treatments, shall provide covered overhead protection in the form of recessed arcades or protruding canopies, and shall ensure protection from unloading roof snow.

3. Entrances located at corners shall generally be located at a ~~45~~ 45-degree angle to the corner and shall have a distinct architectural treatment to animate the intersection and facilitate pedestrian flow around the corner. Different treatments may include angled or rounded corners, arches, and other architectural elements.

~~3.~~4. All building and dwelling units located in the interior of a site shall have entrances from the sidewalk that are designed as an extension of the public sidewalk and connect to a public sidewalk.

4.5. Entrances to residential units as part of mixed-use projects shall be physically separated from the entrance to the ~~permitted commercial~~ non residential uses and clearly marked with a physical feature incorporated into the building or an appropriately scaled element applied to the façade.

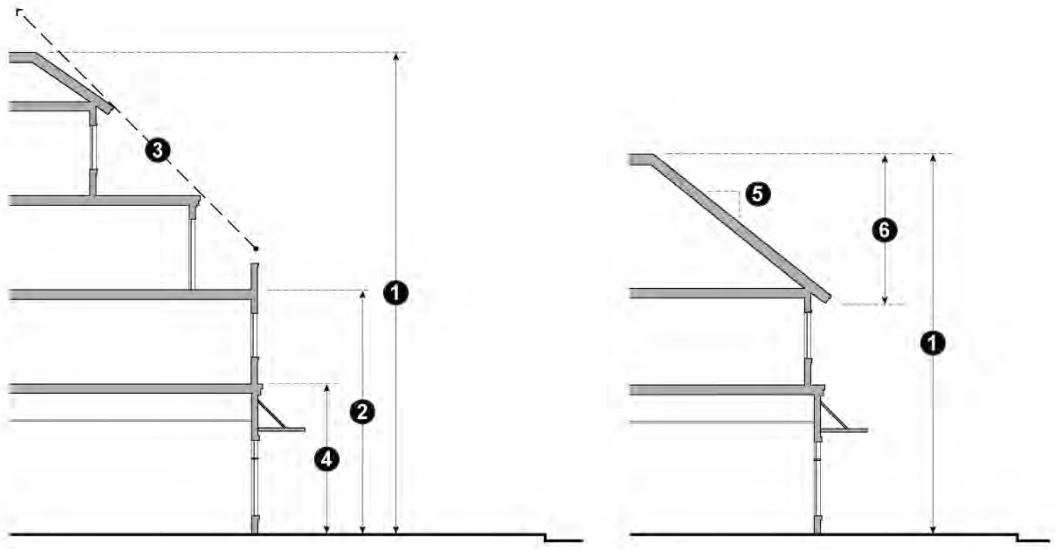


**FIGURE ~~C~~D-1~~2~~: BUILDING ORIENTATION AND ENTRANCES**

## HEIGHT

~~Maximum height limits proposed in the Regional Plan Update have been refined to reflect the nature of development in each sub-district. Buildings are required to step back within a daylight plane along street frontages and adjacent to residential areas to address massing, protect viewsheds, allow light and air, and limit winter shading in public areas.~~ Minimum heights are proposed for ground floors in order to establish a consistent building frontage along the street and to accommodate a wide range of uses. Buildings are required to step back within a daylight plane along street frontages and adjacent to residential areas to address massing, protect viewsheds, ~~allow~~provide light and air, and limit winter shading in public areas. Roofs are required to be sloped to support alpine character in design. ~~Limited areas of flat roofs are allowed as long as they are not visible from the public right-of-way.~~

**TABLE ~~7~~6: HEIGHT AND ROOF STANDARDS**

| DISTRICT | TSC-C | TSC-MU | TSC-MUC & TSC-MUC SPECIAL AREA #1 | TSC-G &[1] TSG-G SPECIAL AREA #1* | TSC-NMX | REC | # |
|---|---|---|---|---|---|---|---|
| Building Height Maximum (feet) | 95, with the exception of 75 at the northeast corner of Ski Run/US Highway 50 | ~~56~~ 65 | 56 | 42 | 36 | 36 | ❶ |
| ~~Building Height Maximum (stories)~~ | ~~6 (D)~~ | ~~4 (D)~~ | ~~4 (D)~~ | ~~3 (D)~~ | ~~3 (D)~~ | ~~3 (D)~~ | ~~❶~~ |
| Minimum Number of Stories at the Street Wall along Hwy 50/Lake Tahoe Blvd | 2 (Stateline Node Only) | n/a | | | | | ❷ |

| Street Facing | Structures shall not interrupt a line of a 1:1 slope extending upward from 30 feet above the | | | | n/a | | ❸ |

| | | | | | | |
|---|---|---|---|---|---|---|
| | existing grade of the ~~street~~ street-facing setback line | | | | | |
| Adjacent to Residential District | Structures shall not interrupt a line of a 1:1 slope extending upward from 25 feet above existing grade of the setback line adjacent to the residential district (~~E~~D) | | | | n/a | ❸ |
| Ground Floor Minimum Height, Non-Residential Uses (ft) | 15 | 15 | 15 | n/a | n/a | ❹ |
| Roof Slope | ~~5~~3:12 to 12:12 (~~F~~E) | | | | | ❺ |
| ~~Roof Height~~ | ~~For buildings one to three stories, the height of the sloped roof must be a minimum 40% of the height of the building. (F)~~ | | | | | ~~❻~~ |
| ~~1.~~* The maximum height for TSC-G Special Area 1 is 56 feet~~, or 4 stories~~ for uses other than single-family dwellings. | | | | | | |

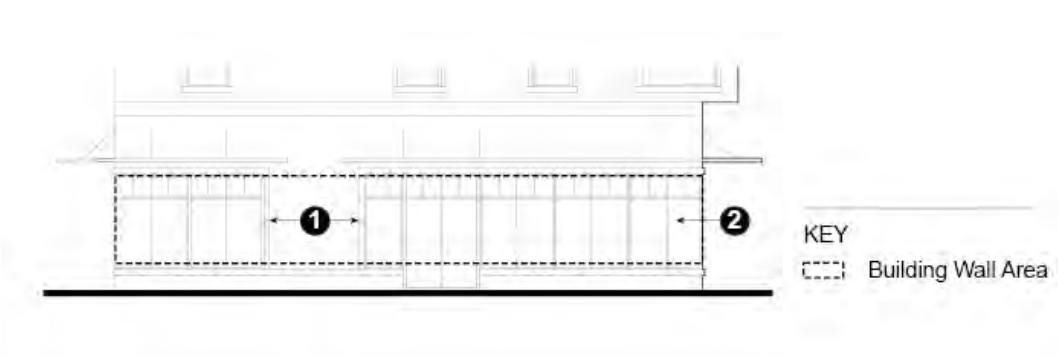
**A. Additional Height for Public Service Facilities.** Building height, as specified above, may be increased to the minimum necessary to accommodate facilities serving regional transportation and/or safety needs. Findings 1, 3, 5, and 9 of Section 37.7 of the TRPA Code of Ordinance shall be made.

**B. 100% Deed Restricted Housing in Town Centers.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 13.5.3.I.

~~D.~~ **C. Viewshed Protection.** To ensure compatibility with adjacent uses and viewshed protection, buildings must not project above the forest canopy, ridge lines, or otherwise detract from the viewshed and the review authority must make findings 1, 3, 5, and 9 of Section 37.7 of the TRPA Code of Ordinances in approving any project consisting of three or more stories (see Appendix B).

~~E.~~ **D. Transition Height.** To ensure compatibility with adjacent residential uses, buildings that are permitted additional height shall have additional buffering in addition to the required setback. Provisions may include, but are not limited to the following:

- Reduced height
- Increased side ~~yard~~ or rear yard setback
- Building orientation
- ~~Landscaping~~ Landscape buffering with oversized trees



~~F.~~ **E. Roof Design.** Buildings shall have a definitive "top" that steps, slopes, or otherwise breaks the rectangular form of the building. Dormer windows and other roof appurtenances (chimneys, towers, or other special features) are encouraged within the ~~sloping~~ sloped roof area and may be erected to a height ten percent of the otherwise permissible maximum height, or a height of six feet, whichever is less. A portion of the roof area may be less than 3:12 ~~flat. Flat roof area is limited to 50 percent of the building footprint and shall not be the primary roof pitch and shall not be within the predominant view of~~as long as it is not visible~~.~~ from the public right-of-way or a TRPA scenic resource~~….~~. Covered parking and parking structures are exceptions and may be

permitted to have flat roofs, but must be concealed through architectural design or landscaping. Rooftop equipment shall be concealed from view and/or integrated within the building architecture.

## BUILDING FORM

Building form standards limit blank walls, require a minimum amount of building transparency (i.e. windows and doors providing views into work areas, display areas, sales areas, or similar active spaces) along street frontages, and require the modulation of building facades to create visual interest and engage pedestrians.

**TABLE ~~8~~7: BUILDING FORM STANDARDS**

| DISTRICT | TSC-C | TSC-MU | TSC-MUC & TSC-MUC SPECIAL AREA #1 | TSC-G & TSC-G SPECIAL AREA #1 | TSC-NMX | # |
|---|---|---|---|---|---|---|
| Maximum Length of Blank Wall | 25 (~~G~~A) | 25 (~~G~~A) | 25 (~~G~~A) | 25 (~~G~~A) | 25 (~~G~~A) | ❶ |
| Required Transparency (% of building wall area) | 75 (~~G~~A) | 60 (~~G~~A) | 75 (~~G~~A) | 60 (~~G~~A) | n/a | ❷ |
| Building Design and Articulation~~Modulation~~ | Any building over 50 feet wide shall not run in a continuous plane (~~H~~B) ~~shall be broken down simulate a series of buildings no wider than 50 feet each~~ | | | | n/a | |

~~G.~~ **A. Building Transparency and Blank Wall Limits; Required Openings for Non- Residential Uses.** Exterior walls facing and within 20 feet of a front or street side property line or pedestrian walkway shall include windows, doors, or other openings for at least the percentage stated in Table 8 of the building wall area located between 2.5 and seven feet above the level of the sidewalk or adjacent ground grade. No wall may run in a continuous horizontal plane for more than 25 feet without an opening or transparency on the ground floor of a building.

1. ***Design of Required Openings.*** Openings fulfilling this requirement shall have transparent glazing and provide views into work areas, display areas, sales areas, lobbies, or similar active spaces, or into window displays that are at least three feet deep.

2. ***Exceptions for Parking Garages.*** Multi-level garages are not required to meet the building transparency requirement of this subsection. Instead, they are subject to the building setback standards in Table 5, Building Placement Standards and the following standard:

    1. *Parking Garage Rooftop Planting.* Uncovered parking on the top level of a parking structure shall have rooftop planters with a minimum ~~dimension~~ depth of 24 inches along perimeter walls of the top floor that face public streets or other public areas.

3. ***Alternatives through Director Review.*** Alternatives to the building transparency requirement may be approved if the Development Services Director finds that:

    1. The proposed use has unique operational characteristics with which providing the required openings is incompatible, such as in the case of a cinema or theater; and

    2. Street-facing building walls will exhibit architectural relief and detail, and will be enhanced with landscaping in such a way as to create visual interest at the pedestrian level.

~~H.~~ **B. Building Design and Articulation.** Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance and materials and colors that reinforce the Region's natural and mountain identity.

~~1.~~4. ***C. Building Modulation and Details.*** Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance. There shall be a clear distinction between the base, middle, and top of the building, as illustrated in Appendix B, South Lake Tahoe Design Guidelines (2-26), Section 3.

1. The top of the building shall be accentuated by the use of roof forms, gables, projections, brackets, and overhangs.

~~1.~~2. Building façades shall be articulated and include active facades, with~~include~~ building projections or recesses, doorway and window trims, textured materials, differentiated piers and columns, awnings, and other details that provide architectural articulation and design interest.

~~2.~~3. Cornices, balconies, roof terraces, and other architectural elements should be used~~, as appropriate,~~ to terminate rooflines and accentuate setbacks between stories.

~~3.~~4. ~~All applied~~ Buildings shall have surface ornamentation or decorative detailing ~~shall be~~ that is consistent with the architectural style of the building.

~~4.~~5. Each side of the building, that is visible from a public right-of-way, shall be designed with a complementary level of detailing. Particular attention shall be given to the detailing within the pedestrian's range of touch and view, such as the use of special store-front detailing and façade ornamentation to reinforce the pedestrian character of the street.

~~5.~~6. Buildings greater than 50 feet wide shall be broken down vertically and horizontally, so that any plane visible from the public right-of-way does not

run continuously for more than 50 feet without incorporating at least 2 of the following design elements through separate features:

a. A minimum 2-foot change in plane for at least 15 feet.

b. Use of pilasters or columns at a minimum of 12-foot increments and/or at each change in height or wall plane. Pilasters shall protrude a minimum of 8 inches. Columns shall be accentuated with stone or wood.

c. A minimum 18-inch change in height for at least 15 feet.

~~a.~~d. Ground floor courtyards that are recessed at least 15 feet into the building footprint.

***D. Exterior Building Materials and Colors.*** Colors shall be used to help delineate windows and other architectural features to increase architectural interest, while maintaining compatibility with the surrounding natural environment.

7. A unified palette of quality materials shall be used on all sides of buildings.

~~6.~~8. Stucco and plaster shall be limited to 40 percent of each building façade. Stucco areas shall blend with the natural materials to provide interest and variety. Rough textured materials are preferred.

~~7.~~9. Colors shall be used to help delineate windows and other architectural features to increase architectural interest.

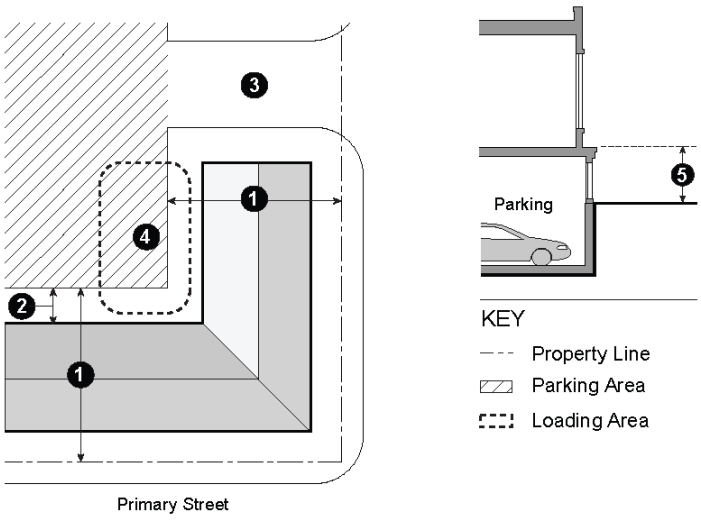
~~8.~~10. A variety of natural-appearing materials (e.g., wood siding, rock wainscoting, rough sawn timber, log timbers, natural stained lumber) shall ~~should~~ provide contrast on building facades.

~~9.~~11. Colors should be chosen to blend in with the setting and to minimize reflectivity. Bright colors should be used for accent only and should be applied to a maximum of 10 percent of the building façade.

12. Roofs, including mechanical equipment and skylights, shall be constructed of non-glare finishes and earth tone colors that minimize reflectivity.

~~E.~~ ***E. Dumpster and Trash Enclosures Design Standards.*** In addition to requirements in SLCC Section 6.10.110.A.5, the materials and colors used for the enclosure shall match that of the primary structure.

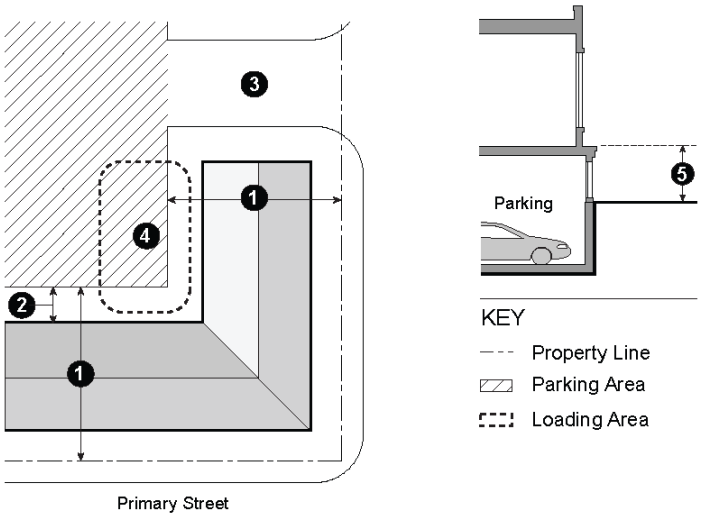
## PARKING, LOADING, LANDSCAPING AND OPEN SPACE



The proposed parking and loading location standards are intended to enhance walkability and reduce the visual dominance of surface parking lots in the area by setting them back from the street. ~~Parking in each district is required to be setback from the street property line with access from a side street or alley wherever possible. Limitations on the number of curb cuts and driveway widths from the South Tahoe Redevelopment Demonstration Plan have been carried forward.~~ To support a “park once” atmosphere where visitors park once and patronize multiple businesses, new parking facilities are to be designed to accommodate cross-access to/from

adjacent properties to allow parking areas to become joint use facilities even if initially serving only one development.

Outdoor parking areas shall be designed to decrease visual impacts associated with large expanses of pavement and vehicles. They can be divided into smaller parking areas and/or include landscaping within and around them. Consider using perimeter landscaping and landscaped islands as bio-swales with a lower grade than the paved surface to reduce irrigation requirements and meet stormwater retention requirements.



~~Standards are established for the minimum amount of open space and landscaping. Residential open space is required in all residential and mixed-use development. A key component of the vision for the Tourist Center District is to provide areas for public gathering. To implement this vision, public open space is required with substantial developments (developments over 50,000 square feet of nonresidential floor area on site greater than two acres in size) in the TSC-C and TSC-MUC districts.~~

**TABLE ~~9~~8: PARKING, LOADING, LANDSCAPING, AND OPEN SPACE STANDARDS**

| DISTRICT | TSC-C | TSC-MU | TSC-MUC & TSC-MUC SPEICAL AREA #1 | TSC-G & TSC-G SPECIAL AREA #1 | TSC-NMX | # |
|---|---|---|---|---|---|---|
| Minimum Parking Setbacks | Parking setbacks are subject to the frontage setback standards established in Table 5 (~~I~~A)~~.~~ | | | | | ❶ |
| ~~Minimum Setback from Street Property Line (ft)~~ | ~~30 (H)~~ | ~~20 (H)~~ | ~~20 (H)~~ | ~~20 (H)~~ | ~~20 (H)~~ | ❶ |
| Setback from Buildings and Public Plazas (ft) | Above ground parking shall be setback from buildings and public plazas with a walkway and/or landscaping~~.~~ | | | n/a | n/a | ❷ |
| Access Location | Side street or alley wherever possible | | | | | ❸ |
| Shared Access | See additional regulations (~~I~~B) | | | | | ❸ |
| Curb Cuts | Minimized and in areas least likely to affect pedestrian circulation; maximum one driveway per frontage for lots with 150 feet of frontage or less, maximum two driveways for lots with more than 150 feet of frontage | | | | | |

**TABLE ~~98~~: PARKING, LOADING, LANDSCAPING, AND OPEN SPACE STANDARDS**

| DISTRICT | TSC-C | TSC-MU | TSC-MUC & TSC-MUC SPEICAL AREA #1 | TSC-G & TSC-G SPECIAL AREA #1 | TSC-NMX | # |
|---|---|---|---|---|---|---|
| Loading/Service Areas/Porte Cochere | Side or rear of lot; must be screened from public ~~ROW~~right-of-way | | | | | ❹ |
| Underground Parking Visibility | Maximum height of underground parking area visible from the street (parking podium) is 3 feet from finished grade. | | | | | ❺ |
| Parking, Driveway and Loading Standards | ~~See~~ Subject to South Lake Tahoe City Code, Chapter ~~5~~6.10, Land Use Development Standards, Article VII~~I~~. Parking, Driveway and Loading Spaces. | | | | | |
| Minimum Residential Open Space (sq ft per unit) | 100 (~~J~~H) | 100 (~~J~~H) | 100 (~~J~~H) | 100 (~~J~~H) | 100 (~~J~~H) | |
| Minimum Public Open Space, sites two acres or more in size | (~~K~~I) | n/a | (~~K~~I) | n/a | n/a | |
| Minimum Amount of Landscaping (% of site) | 10 | 15 | 15 | 15 | 20 | |

~~I.~~A. **A. Limitations on Location of Parking.** Parking shall be located underground, behind a building, or on the interior side or rear of the site. Parking may be located within the required setback, subject to the following requirements.

1. ***Completely Underground ~~and Partially~~ Submerged Parking.*** Parking completely ~~or partially~~ underground, may be located within the required side or rear setback. Any above ground portions need to meet setback requirement~~….~~.

2. ***Surface Parking.*** Above ground surface parking may be located within the required front setback with Development Services Director approval provided:

~~1. Buildings are built close to the public sidewalk to the maximum extent feasible;~~A minimum of 30 percent of the frontage is maintained for pedestrian access through a courtyard, plaza, or vegetated area; and

~~2.~~1. The parking area is screened along the public right-of-way with public art, hedges, trellises, and/or landscaping; ~~and~~ or

3. The site is small and/or constrained such that locating parking outside the required setback is not feasible.Topographic features, lot configuration or other conditions make it impractical to require compliance with the setback requirements.

3. ***Parking Garages.*** Multi-level parking garages are subject to the building setback standards in Table 5, Building Placement Standards..

3.4. ***Adjacent to Residential Districts.*** When adjacent to a residential district, the side and rear parking area setback shall be 50 percent of the required structure setback. City-approved parking barriers/bollards, vegetation, and fence shall be installed in the setback.

J.B. **Shared Access.** To encourage shared parking and shared access points on public streets, new parking facilities shall be designed to accommodate cross-access to/from adjacent properties to allow parking areas to become joint use facilities even if initially serving only one development. When cross-access for vehicles is deemed impractical by the Development Services Director, the requirement for cross-access may be waived if bicycle and pedestrian connections are provided between adjacent development.

C. **Automobile Parking, Driveway, and Loading Standards.** See City Code Chapter 6.10, Article VII.

K.D. **Commercial Parking Ratios in Town Centers**. The number of parking spaces, as stated in City Code Section 6.10.410 shall serve as the required number of spaces. Modifications may be made as follows. Area Plan or City Code parking requirements may be superseded where California State Law prohibits or limits parking requirements for qualifying projects.

1. When the project is within a half mile of a transit stop, a 25 percent reduction in parking spaces may be applied.

2. The required number of parking spaces may be further reduced should the project incorporate alternative transportation measures, including but not limited to those listed below, or provide a parking demand analysis that supports the number of proposed spaces. The extent of the reduction shall be at the discretion of the decision-making authority.

    a. Installing or upgrading pedestrian, bicycle, transit, or other alternative infrastructure and/or facilities beyond improvements required by the Area Plan or City Code. Cost estimates and proposed infrastructure design and construction shall be approved by the Public Works Director.

    b. Creating shared parking areas between different parcels and land uses. Reduction of ingress/egress points and addition of connecting pedestrian infrastructure may be required. This shall be recorded through a deed restriction.

    c. Preparing a parking management plan and recording a deed restriction on the property, ensuring on-going compliance with the approved plan to minimize parking impacts on adjacent property.

d. Payment into a parking management district, established by the City or other entity responsible for parking facilities and management in the area.

3. The required number of parking spaces may be increased by 25 percent when the following findings are made.

a. Due to the nature or business patterns of the use, additional parking is required to meet vehicle demand.

b. Applicant shall demonstrate the need for requested parking.

~~1.~~4. The required number of parking spaces may be increased beyond 25 percent through the issuance of a ~~use permit~~Special Use Permit per ~~SLTCC~~ City Code Section 6.55.620, and when all the following are met~~:~~:

a. A parking demand analysis justifies the proposed number of spaces.

b. It is demonstrated that safety for pedestrians and other vehicles will be enhanced by the additional parking.

c. The environmental impact of the use will be lessened by the increase in parking spaces.

d. Any additional information as deemed necessary.

~~E.~~ ***Multi-Family Residential Parking Ratios.*** One parking space shall be permitted per residential unit. The number of required parking spaces may be reduced up to 20 percent if a deed restriction is placed on the property making the property owner responsible for parking management.

a. Parking for 100% deed-restricted affordable, moderate, or achievable housing shall adhere to TRPA Code of Ordinances Section 34.4.1.

~~F.~~ Open Space. Site design shall consider pedestrian safety during snow conditions. Sidewalks, plazas, and other pedestrian areas should be designed for maximum solar exposure, with snow melt systems, or for efficient snow removal.

~~L.~~

~~M.~~G. **Residential Open Space.** To promote community building, residential open space shall be accessible to all residents and compliant with the Americans with Disabilities Act. These areas typically consist of walks, patios, swimming pools, barbeque areas, playgrounds, turf, or other such improvements as are appropriate to enhance the outdoor environment of the development ~~Residential open space may be common or private open space. Private areas typically consist of balconies, decks, patios, fenced yards, and other similar areas outside the residence. Common areas typically consist of landscaped areas, walks, patios, swimming pools, barbeque areas, playgrounds, turf, or other such improvements as are appropriate to enhance the outdoor environment of the development. Landscaped courtyard entries that are oriented towards a public street are considered common areas. All areas not improved with buildings, parking, vehicular accessways, trash enclosures, and similar items shall be developed as common areas~~.

1. ***Minimum Dimensions***.

~~1.~~a. ~~*Private Open Space.* Private open space located on the ground level (e.g., yards, decks, patios) shall have no horizontal dimension less than 10 feet. Private open space located above ground level (e.g., balconies) shall have no horizontal dimension less than six feet.~~

~~2.~~b. ~~*Common Open Space.*~~ Minimum horizontal dimension of 20 feet.

2. ***Usability.*** A surface shall be provided that allows convenient use for outdoor living and/or recreation. Such surface may be any practical combination of lawn, garden, flagstone pavers, wood ~~planking~~planks, concrete, or other serviceable, ~~dust~~ dust-free surfacing. The maximum slope shall not exceed 10 percent. Seating areas and plazas should be located in areas with good solar exposure.

3. ***Accessibility.***

~~1.~~a. ~~*Private Open Space.* The space shall be accessible to only one living unit by a doorway to a habitable room or hallway.~~

~~2.~~b. *Common Open Space.* The space shall be accessible to all the living units on the lot and be ADA compliant.

4. ***Limitations on Open Space***. Open space may be limited to 10% of the parcel's maximum allowable coverage should the Director of Development Services deem that construction of open space to the extent required in Table 9 would result in a reduction of dwelling units.

~~N.~~H. **Public Open Space.** Developments with 50,000 square feet or more of nonresidential floor area on sites two acres or more in size shall provide public open space according to the following standards:

1. ***Minimum Area.*** Forty square feet for every 1,000 square feet of nonresidential floor area for the first 100,000 square feet of floor area, plus 20 square feet for every 1,000 square feet of nonresidential floor area over 100,000 square feet.

2. ***Minimum Dimensions*.** Minimum horizontal dimension of 40 feet.

3. ***Usability.*** A surface shall be provided that allows convenient use for outdoor living, recreation, and public gathering. Such surface may be any practical combination of high-quality plant and hardscape materials such as bricks, stone, concrete, permeable paving, or tile. Surfaces shall be sloped for positive drainage and constructed to withstand snow removal and de-icing maintenance. The maximum slope shall not exceed 10 percent. Seating areas and plazas should be located in areas with good solar exposure.

4. ***Accessibility.*** On-site public space shall be visible from a public street and from on-site areas normally frequented by nearby retail uses.

5. ***Amenities.*** On-site public space shall include benches or other seating. Amenities shall be included that enhance the comfort, aesthetics, or usability of the space, including but not limited to trees and other landscaping, shade structures, drinking fountains, water features, public art, trash receptacles, information kiosks, or performance areas.

SUBSTITUTE DESIGN STANDARDS

~~Substitute Design standards address site design and amenities, building orientation and design, pedestrian access, bicycle parking, landscaping, lighting, signage, parking, driveway and loading spaces.~~

~~Buildings are required to be oriented toward and include a public entrance on a public street. Building design standards are intended to avoid bulky and "box-like" buildings and encourage appropriate architectural features.~~

~~On-site access and circulation standards require a system of pedestrian walkways that connect all buildings on a site to each other, to on-site parking areas, and open space or pedestrian amenities. Regular connections are to be provided to the public sidewalk as well as to adjoining commercial and residential areas. Walkway standards establish requirements for minimum width, paving, grade separations, bollards, landscaping, lighting, or other means to clearly delineate pedestrian areas for both day and night use.~~

~~Standards are for the amount, design, and location of bicycle parking is incorporated. The standards have different requirements for long- and short-term bicycle parking that reflect the varying needs of visitors, locals, and employees.~~

~~Landscape standards reinforce the resort destination experience in the Area Plan by guiding the desired design of planting and hardscape materials while providing for opportunities to accommodate stormwater runoff.~~

~~Lighting standards for streets and exterior spaces is provided that are necessary to provide safety and security as well as provide, in limited areas, the night lighting that will allow for a festive atmosphere enhancing the qualities of an active civic place.~~

~~All projects within the Tourist Core Area Plan shall meet the standards listed below and the standards in the Citywide Design Standards and the Parking, Driveway and Loading Space Standards in Chapter 5 of the City Code and the Sign Standards in Chapter 25 of the City Code. and are required to be consistent with Appendix E, Design Guidelines. Should a conflict occur between the standards of this Area Plan and the standards of the City Code, the standards of the area plan shall apply. All regulations in the TRPA Code of Ordinances shall remain in effect unless superseded by the provisions of this Area Plan.~~

~~O.~~I. **Site Design and Amenities.**

1. Site design shall consider adjoining properties to avoid creating nuisances such as noise, light intrusion, invasion of privacy, and traffic, particularly when development is adjacent to sensitive uses such as residential development.

2. Outdoor parking areas shall be designed to decrease visual impacts associated with large expanses of pavement and vehicles. They can be divided into smaller parking areas and/or include landscaping within and around them. Consider using perimeter landscaping and landscaped islands as bio-swales with a lower grade

than the paved surface to reduce irrigation requirements and meet stormwater retention requirements.

~~2.~~3. Fences, parking barriers, landscaping, and other site design features shall be used to create a physical and visual barrier where commercial parking areas are adjacent to residential uses,

~~3.~~4. Site design shall consider pedestrian safety during snow conditions. Sidewalks, plazas and other pedestrian areas should be designed for maximum solar exposure, with snow melt systems, or for efficient snow removal.

~~4.~~5. Trash and recycling receptacles shall be provided and conveniently located in areas with heavy pedestrian use.

~~5.~~6. Ski and snowboard racks shall be provided in areas where there will be a need to temporarily store them. Racks should be located ~~at~~ in areas adjacent to ~~ski~~ ski-related facilities, public areas, transit stops, and destination locations.

7. For developments with multiple commercial or service tenants, include directional/directory maps on-site to orient and direct pedestrians.

~~J.~~ **Outdoor Dining and Seating.** Outdoor dining and seating are desirable and consistent with the Tourist Core Area Plan policies to activate the streetscape.

1. ***Location***. Outdoor dining and seating areas shall not encroach into pedestrian pathways, public right-of-way, or impede vehicle circulation.

2. ***Site Design***. New and modifications to outdoor dining and seating areas may be subject to Design Review.

   a. Seating areas shall be separated from vehicle circulation and parking areas by parking barriers/bollards and vegetation.

   b. No additional signage shall be associated with outdoor dining/seating areas.

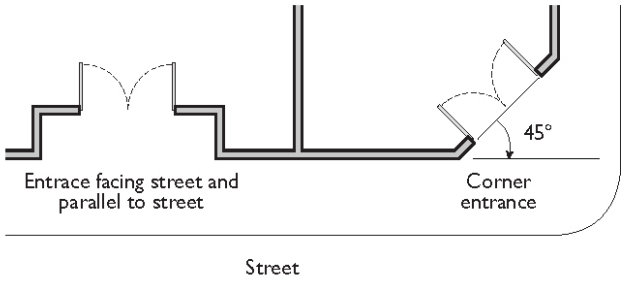
   c. In no case shall outdoor dining areas be used for storage. Furniture may remain when not in use but shall be maintained in a clean and orderly state.

   d. ~~The maximum area dedicated to outdoor dining, by right, shall not exceed 20 seats. Areas may expand beyond this with a CFA allocation and design review.~~ Outdoor dining areas that exceed 300 square feet or 20 seats, whichever is less, will require a CFA allocation.

~~P.~~

~~Q.~~K. ~~**Building Orientation and Entrances.**~~

1. ~~Primary building entrances for all buildings shall be located facing a public street.~~



2. ~~Building entrances shall be emphasized with special architectural and landscape treatments, shall provide covered overhead protection in the form of recessed arcades or protruding canopies, and shall ensure protection from unloading roof snow.~~

3. ~~Entrances located at corners shall generally be located at a 45 degree angle to the corner and shall have a distinct architectural treatment to animate the intersection and facilitate pedestrian flow around the corner. Different treatments may include angled or rounded corners, arches, and other architectural elements.~~

3.4. All building and dwelling units located in the interior of a site shall have entrances from the sidewalk that are designed as an extension of the public sidewalk and connect to a public sidewalk.

4.5. Entrances to residential units shall be physically separated from the entrance to the permitted commercial uses and clearly marked with a physical feature incorporated into the building or an appropriately scaled element applied to the façade.

**FIGURE C-2: BUILDING ORIENTATION AND ENTRANCES**

R.L. **Building Design and Articulation.** Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance.

1. ***Exterior Building Materials and Colors.***

   1. A unified palette of quality materials shall be used on all sides of buildings.

   2. Colors shall be used to help delineate windows and other architectural features to increase architectural interest.

   3. A variety of natural-appearing materials should provide contrast on building facades.

   4. Colors should be chosen to blend in with the setting and to minimize reflectivity. Bright colors should be used for accent only and should be applied to a maximum of 10 percent of the building façade.

   5. Roofs, including mechanical equipment and skylights, shall be constructed of non-glare finishes and earth tone colors that minimize reflectivity.

2. ***Building Details.*** Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance.

   1. Building façades shall include building projections or recesses, doorway and window trim, textured materials, differentiated piers and columns, awnings, and other details that provide architectural articulation and design interest.

   2. Cornices, balconies, roof terraces, and other architectural elements should be used, as appropriate, to terminate rooflines and accentuate setbacks between stories.

   3. All applied surface ornamentation or decorative detailing shall be consistent with the architectural style of the building.

4. Each side of the building that is visible from a public right-of-way shall be designed with a complementary level of detailing. Particular attention shall be given to the detailing within the pedestrian's range of touch and view, such as the use of special store-front detailing and façade ornamentation to reinforce the pedestrian character of the street.

3. ***Green Building***. New buildings and retrofits to existing buildings are long term investments and should feature quality design/materials, flexible design to deal with changing demands and be built green. The City encourages residential, commercial and industrial properties to consider incorporating green building measures. Property owners who participate in the City Green Building Incentive Program (See Appendix D) are eligible for the following incentives:

1. Projects will receive priority plan check by City Departments.

2. Residential projects will receive priority on the residential allocation waiting list.

3. Commercial projects area eligible for CFA allocations form the City's CFA pool.

4. Projects will receive recognition by the City Council.

S.M. **Pedestrian Orientation and Access.** On-site pedestrian circulation and access must be provided according to the following standards.

1. ***Internal Connections.*** A system of pedestrian walkways shall connect all buildings on a site to each other, to on-site automobile and bicycle parking areas, and to any on-site open space areas or pedestrian amenities.

2. ***To Circulation Network.*** Regular connections between on-site walkways and the public sidewalk shall be provided. An on-site walkway shall connect the primary building entry or entries to a public sidewalk on each street frontage.

3. ***To Neighbors.*** Direct and convenient access shall be provided from commercial and mixed-use projects to adjoining residential and commercial areas to the maximum extent feasible while still providing for safety and security.

4. ***To Transit.*** Safe and convenient pedestrian connections shall be provided from transit stops to building entrances.

5. ***Interior On-Site Pedestrian Walkway Design***.

1.a. Walkways shall have a minimum clear, unobstructed width of six feet, shall be hard-surfaced, and paved with concrete, stone, tile, brick, pervious paving, or comparable material.

2.b. Where a required walkway crosses driveways, parking areas, or loading areas, it must be clearly identifiable through the use of a raised crosswalk, a different paving material, or a similar method.

3.c. Where a required walkway is parallel and adjacent to an auto travel lane, it must be raised or separated from the auto travel lane by a raised curb at least four inches high, bollards, or other physical barriers.

N. **Bicycle Parking.**

1. Bicycle parking spaces for ruses not listed and for multi-business complexes shall be required at staff discretion. Modifications may be granted by a decision-

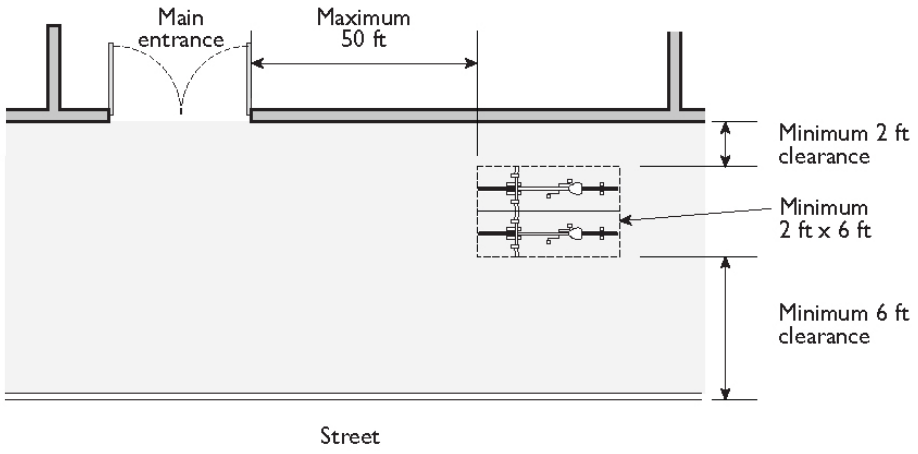
making authority. In no case may fewer than one short-term and one long-term space be provided.

| Land Use | Examples | Short-Term | Long-Term |
|---|---|---|---|
| High Turnover, High Capacity Commercial | Eating and Drinking Uses, Coffee Shops | Minimum 5; 1/200 sf | 1 per 6 employees |
| Low Turnover Commercial | Fine Dining, Personal Service, Service station | 1/600 sf | 1 per 6 employees |
| High Density Residential | Multi-Family, Multi-Person | 1 per 4 units | 1 per unit |
| Tourist Accommodation | All Tourist Accommodation Uses | 1 per 5 units | 1 per 10 unit |
| Professional Uses | Office Space, Medical Offices, Government Offices | 1 per 200 sf | 1 per 6 employees |
| Assembly Uses | Religious Assembly, Schools, Membership Organizations, most Amusement and Recreation Uses, Library, Athletic Facilities | 20% of maximum occupancy | 3% of maximum occupancy |
| General Commercial retail | Grocery, General Retail, Nursery | 1 per 1500 sf | 1 per 6 employees |
| Industrial | Warehousing, Manufacturing, Hospital, Post Office | 1 per 6000 sf | 3% of maximum occupancy |
| Parking Lots, Garages, Parking Structures | | | 1 per 15 vehicle spaces or 3% of the total floor area |
| Bicycle parking spaces for uses not listed and multi-business complexes shall be required at staff discretion. | | | |

~~T.~~

~~1. ***Short-Term Bicycle Parking.*** Short-term bicycle parking shall be provided in order to serve shoppers, customers, messengers, guests and other visitors to a site who generally stay for a short time.~~

~~1.~~2. ~~*Parking Spaces Required.* The number of short-term bicycle parking spaces shall be at least 10 percent of the number of required automobile parking spaces, with a minimum of two spaces per establishment, for commercial, mixed-use, and multi-family structures.~~



a. *Location.* Short-term bicycle parking must be located within 50 feet of a main entrance to the building it serves. Bicycle parking shall be visible from the street, ~~or~~ from the main building entrance, from outdoor seating areas, or a sign must be posted at the main building entrance indicating the location of the parking area. Bicycle parking shall be located outside of the public ~~right~~ right-~~of~~ of-way except with an encroachment permit in the TSC-C and TSC-MUC districts, provided an unobstructed sidewalk clearance of six feet is maintained for pedestrians at all times.

~~2.~~a. Exception: Notwithstanding the above standard, when a commercial use is adjacent to a bike route, or bike path, short-term bicycle parking may be provided near the route or secondary entrance.

~~3.~~b. *Anchoring and Security.* For each short-term bicycle parking space required, a stationary, securely anchored object shall be provided to which a bicycle frame and one wheel can be secured with a high-security U-shaped shackle lock if both wheels are left on the bicycle. One such object may serve multiple bicycle parking spaces. Preferred rack styles are inverted U shapes, post and ring, and wheel well-secured.

~~4.~~c. *Size and Accessibility.* Each short-term bicycle parking space shall be a minimum of two feet in width and six feet in length and shall be accessible without moving another bicycle. Two feet of clearance shall be provided between bicycle parking spaces and adjacent walls, poles, landscaping, street furniture, drive aisles, and pedestrian ways and at least five feet from vehicle parking spaces.

**FIGURE C-3: SHORT-TERM BICYCLE PARKING**

~~2. **Long-Term Bicycle Parking.** Long-term bicycle parking shall be provided in order to serve employees, residents, commuters, and others who generally stay at a site for four hours or longer.~~

~~1. *Parking Spaces Required.*~~

~~a. Residential Uses. A minimum of one long-term bicycle parking space shall be provided for every five units for multi-unit residential and group residential projects.~~

~~b.~~3. ~~Parking Structures. Long-term bicycle parking shall be provided at a minimum ratio of one space per 50 vehicle spaces.~~

2.a. *Location.* Long-term bicycle parking must be located on the same lot as the use it serves. In parking garages, long-term bicycle parking must be located near an entrance to the facility.

3.b. *Covered Spaces.* At least 50 percent of required lLong-term bicycle parking must be covered. Covered parking can be provided inside buildings, under roof overhangs or awnings, in bicycle lockers, or within or under other structures.

4.c. *Security.* All long-term bicycle parking must be located in a secure area such as the following:

a. An enclosed bicycle locker;

b. A fenced, covered, locked or guarded bicycle storage area;

c. A rack or stand inside a building that is within view of an attendant or security guard or visible from employee work areas; or

d. Other secure area approved by the Development Services Director.

5.d. *Size and Accessibility.* Each bicycle parking space shall be a minimum of two feet in width and six feet in length and shall be accessible without moving another bicycle. Two feet of clearance shall be provided between bicycle parking spaces and adjacent walls, poles, landscaping, street furniture, drive aisles, and pedestrian ways and at least five feet from vehicle parking spaces.

U.O. **Snow Storage**: . Snow storage shall be in conformance with City Code Section 6.10.140. Accommodating snow removal and storage presents unique challenges to site planning and design. During snow months, roofs, parking areas, and walkways become areas which need to be cleared of snow for safety and convenience. When snow is not disposed of off-site, provisions need to be made to store the snow on-site. Of consideration in planning for snow storage is the ability to meet surface water discharge standards.

1. Standard: Commercial, tourist accommodation, industrial, public service, recreation and multi-residential projects shall provide, within the project area, snow storage areas of a size adequate to store snow removed from parking, driveway and pedestrian areas or have arrangements by means of recorded easements or arrangements to remove and store accumulated snow off-site. Adequacy and location of snow storage shall be approved by the city.

2. Standard: Snow storage infiltration shall conform to the TRPA's Handbook of Best Management Practices.

V.P. **Landscape Design**: . Landscaping can be used to successfully integrate the built environment into the natural environment. It can also provide pleasant outdoor spaces for people, mitigate noise and air quality impacts, and help screen undesirable elements. Regional climatic and physiographic conditions generally impact landscape and plant materials, and must be taken into account early in the design process. It is recommended that landscape design and planning take advantage of the different visual environments in formulating a design theme or concept as well as to conserve water. Landscape design shall meet the following standards.

1. Standard: ***Landscape and Irrigation Plan.*** : A landscape and irrigation plan shall be submitted in accordance with City Code Chapter 6.80.take into consideration the following elements.

1. Planning and design: Develop a landscape plan that allows for proper placement of plants and material.

2. Grouping of plant selection: Group by water needs (hydrozones)

3. Soil analysis: Determine the type of soil and plant the appropriate plant material that will flourish.

4. Efficient irrigation: Design and installation shall reflect hydrozones. (Also see Water Conservation, Standard I.2.)

5. Practical turf areas: Place turf in appropriate areas to achieve maximum use.

6. Use of surface mulches: By using mulches, water at the root basins will last longer.

7. Appropriate maintenance: Maintenance includes a sound water management plan. In order to establish newly installed plant materials, some form of irrigation system shall be provided. Once established, some form of permanent irrigation system shall be provided that will insure the growth and survivability of the plant materials. Fertilizer use must be well thought out and carefully managed in accordance with the TRPA BMP Handbook and is prohibited in SEZ's.

2. Standard: Species on the TRPA recommended native and adapted plant list shall be used for lawns and landscaping. Modifications to these standards may be considered on a case by case basis by both the City and TRPA.

Plant species not found on the recommended native and adapted plant list (Table 3) may be used minimally in the landscape as accent plantings. Such plants shall be limited to borders, entry ways, flower beds, and other similar locations to provide accents to the overall native or adapted landscape design.

3. Standard: Minimum Plant sizes and spacing for projects other than single family home projects, and erosion control/revegetation projects, the following spacing shall be required for woody plant materials at time of planting:

1. Trees shall be a minimum of six feet tall or 1-1/2 inch diameter at breast height.

2. Shrubs shall be a minimum of three gallon pot size where: upright shrubs have a minimum height of 18 inches and minimum spread of 18 inches; and spreading shrubs have a minimum spread of 18-24 inches.

3. Groundcovers shall be a minimum four inch pot size or one gallon container and shall be a maximum 24 inches on center spacing.

4.2. Standard: ***US Highway 50 Landscape Concept.***

1.a. To create a clean and attractive edge to the built environment, a turf edge shall be installed along the Highway frontage at a minimum, between the curb line and the sidewalk, except at:

a.i. Locations of existing or restored meadows; or

b.ii. Where a significant length of frontage is not developed and has existing natural vegetation.

2.b. To restore a vertical natural element to the Highway and to reduce the impact of the built environment, each property shall be responsible for having randomly spaced evergreen trees within the front yard setback, said evergreen trees shall be Jeffrey Pine or approved equal. The number of trees required shall be based on a ratio of one tree per 35 feet of highway frontage. The exception to this standard shall be meadows and lake views, which front on US Hghway 50.

5. Standard: Obstruction of views: New landscaping shall not be located in such a manner that would create safety problems or obstruct significant views, either when first installed or upon maturity.

6. Standard: Landscaped Setbacks: All structures shall have a landscaped setback (either existing natural vegetation or introduced plantings) from any public roadway. The existing practice of having no landscaping between the facade of a structure and the roadway is not allowed.

7. Standard: Irrigation: In order to establish newly installed plant materials, some form of irrigation system shall be provided. Once established, some form of permanent irrigation system shall be provided that will insure the growth and survivability of the plant materials. The purpose of the irrigation system is to effectively manage the flow of water.

Landscape irrigation shall:

1. Incorporate low flow sprinkler heads.

2. Incorporate soil moisture sensing device or automatic timer in all irrigation systems.

3. Incorporate drip emitter heads for shrubs and trees.

4. Select low water usage plant materials, including drought tolerant turf grasses.

5. Develop and follow an irrigation schedule.

6. Water at night or early in the morning to minimize evaporation.

7. Optimize use of irrigated turf grass by minimizing the amount of turf grass area and targeting only selected areas. Exceptions to this is in a playground, park, or golf course where a majority of the site may need to be landscaped with turf.

8. Tourist Core Area Plan Landscape Design. In addition the following landscape standards apply to the Tourist Core Area, Modifications to these standards may be considered on a case by case basis by both the City and if applicable , TRPA:

9.3. ***Plant Materials***.: Invasive species are prohibited. Plants adapted to the Lake Tahoe basin Basin region are listed on TRPA's recommended species list. See list following Landscaped Standards. Plants not on the recommended list (Table 39) may be considered and used in locations that have the following characteristics:

1.a. The character of the place is urban and the proposed landscape character is not natural landscape condition. This would be characterized by little natural vegetation existing on a site. This may also include street trees, areas that accents entries, exterior dining areas, and areas of high pedestrian use.

~~10.~~4. ***Size and Conditions of Plant Material Installed.*** ~~:~~ Landscape materials for projects other than single-family residential projects, shall be a minimum of 3~~-~~ inch caliper for deciduous trees, 14 feet for coniferous trees, 5 gallon container for shrubs and 1 gallon container~~s~~ for perennials or groundcovers. New ~~Plant~~ plant materials shall be healthy, disease free, and be planted in prepared soils.

~~1.~~a. Street trees in paved areas shall have a soil volume of at least 75 cubic feet per tree. This assumes the depth of soil is 3 feet.

~~2.~~b. Trees not within paved areas shall have adequate space to provide protection from vehicle traffic that would compact soils in the root zone.

~~11.~~5. ***Location of Required Landscape Areas.*** ~~:~~ Required landscape areas shall be the following:

~~1.~~a. A minimum space of 20 feet, between the street and surface parking lots, shall be landscaped to buffer and screen the parking lot from the street view. ~~Within this area sidewalks~~ Sidewalks are permitted within this area..

~~2.~~b. Within surface parking lots an area equal to at least 15~~%~~ percent of the parking lot shall be used for landscape planting~~.~~. This zone may also be used for snow storage provided the design allows for landscaping that can also store snow.

~~3.~~c. Landscape shall be required for the street frontage that enhances the pedestrian zone and creates a continuous street edge. This includes street trees~~,~~ and landscape elements that create~~s~~ interest, color, and identification of entries. The optimum spacing of street trees is no less than 30 feet along primary and secondary streets. However, this is an average condition, and tree~~s~~ spacing may include close groupings or gaps for view.

~~4.~~d. Landscape shall be used to screen service yards and drives. This may be done in conjunction with screen walls or other architectural features that create full screening.

e. Parking structures that face the primary and secondary streets shall have screen planting that buffers the garage from the public streets.

~~5.~~f. New landscaping shall not be located in such a manner that would create safety problems or obstruct significant views, either when first installed or upon maturity.

~~12.~~6. ***~~Recommended d~~Design for ~~landscape~~Landscape.*** ~~:~~ These are ~~suggested~~ design practices for the Area Plan:

~~1.~~a. Use deciduous trees in areas where visibility is needed ~~to~~ at retail frontages.

~~2.~~b. Create a canopy of trees to create and improve the shade conditions on pedestrian areas. This will reduce the reflectance from pavements, lower ground and air temperatures, and provide comfortable outdoor spaces.

~~3.~~c. Create a quality built environment with the inclusion of amenities such as street furnishings, plantings, art~~-~~works, and water features to enhance the places that people will walk, gather, or recreate. These spaces should be artfully designed and attractive for their functions.

4.d. Minimize the use of turf, but when used, place turf in appropriate areas to achieve maximum use as a recreation amenity rather than a visual amenity.

13.7. ***Landscape applications in Low Impact Development.*** Low impact Impact development Development refers to the integration of systems and practices that use or mimic natural processes to infiltrate, evapotranspirate (return water to the atmosphere either through evaporation or by plants), or to accommodate stormwater runoff on the site where it is generated. Low Impact Development elements reduce the impact of built areas and promote the natural movement of water within an ecosystem or watershed. The following practices should be integrated with the overall design of landscape areas to combine the functions of stormwater treatment with aesthetically pleasing landscape features:

1.a. Pervious materials that allow water to pass through the paving and infiltrate into the ground are encouraged for pedestrian applications. Other pavement surfaces may incorporate pervious surfaces but shall be designed in conjunction with the site's BMPs. Pervious surfaces are defined as any surface that allows at least 75 percent of precipitation to directly reach and infiltrate the ground throughout the life of the surface.

2.b. Preserving existing trees should be planned for with efforts on preserving large groups of forest rather than individual trees that are subjected to changes of runoff, grades, or surface coverage. The protection zone for trees extends to the drip-line of the tree's canopy.

3.c. As part of surface water management, small areas of infiltration catchments are to be incorporated into the final contour of the landscape. These features will offer the reduction in run-off from each site.

| TABLE ~~39~~: TRPA SITE TYPE RECOMMENDED SPECIES LIST | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Scientific Name [1, 2]** | **Common Name** | **Wetland** | **SEZ/Riparian-Wet Meadow** | **Upland—Generic** | **Upland—Full Shade** | **Upland—Full Sun/ Dry Site** | **Upland—High Disturbance** |
| Grasses, Rushes, and Sedges | | | | | | | |
| *Achnatherum lemmonii* | Lemmon's needlegrass | | | • | | • | |
| *Achnatherum occidentale* | western needlegrass | | | • | | • | |
| *Agrostis exarata* | spike bentgrass | | • | | | | |
| *Bromus carinatus* | California brome | | • | • | | • | |
| *Bromus marginatus* | mountain brome | | | • | | | |
| *Calamagrostis canadensis* | bluejoint | • | • | | | | |
| *Carex praegracilis* | slender sedge | | • | | | | |
| *Danthonia californica* | California oatgrass | | | • | | | |
| *Deschampsia caespitosa* | tufted hairgrass | | • | | | | |
| *Deschampsia elongata* | slender hairgrass | | • | | | | |
| *Elymus elymoides* | squirreltail | | | • | | • | |
| *Elymus glaucus*[3] | blue wildrye | • | • | | • | | |
| *Elymus trachycaulus* | slender wheatgrass, | | • | • | | • | |
| *Festuca brevipila* | hard fescue | | | • | | | • |
| ***Festuca ovina 'Covar'*** | sheep fescue, 'Covar' | | | • | | • | • |
| *Festuca rubra*[3] | red fescue | | • | | • | | • |
| *Festuca rubra ssp. arenaria*[3] | Boreal creeping red fescue | | • | | • | | • |
| *Glyceria striata*[3] | fowl mannagrass | | • | | • | | |
| *Hordeum brachyantherum* | meadow barley | | • | | | | |
| *Hordeum brachyantherum ssp. californicum* | California barley | | • | | | | |
| *Juncus arcticus ssp. littoralis* | mountain rush | • | • | | | | |
| *Juncus effusus* | common rush | • | • | | | | |
| *Leymus triticoides* | beardless wildrye | | • | | | | |
| *Melica californica* | California oniongrass | | | • | | | |
| *Phalaris arundinacea* | reed canarygrass | | • | | | | |
| *Phleum alpinum* | alpine timothy | | • | | | | |
| *Poa ampla, 'Sherman'* | big bluegrass, 'Sherman' | | | • | | • | • |
| *Poa secunda* | Sandberg bluegrass | | | • | | • | • |
| ***Thinopyrum intermedium*** | intermediate wheatgrass | | | • | | | • |
| ***Thinopyrum intermedium 'Greenar'*** | intermediate wheatgrass, 'Greenar' | | | • | | | • |
| ***Thinopyrum intermedium 'Oahe'*** | intermediate wheatgrass, 'Oahe' | | | • | | | • |

| *Sambucus racemosa* | red elderberry | | • | | | | |
| *Sorbus scopulina* | Greene's mountain ash | | • | | | | |
| *Spiraea douglasii* | rose spirea | | • | | | | |
| *Spiraea splendens*[3] | rose meadowsweet | | • | | • | | |
| *Symphoricarpos molllis* | creeping snowberry | | | | • | | |

**Notes:**
1 – Nomenclature follows U.S. Department of Agriculture's PLANTS Database~~.~~
2 – Names of nonnative species are displayed in bold font~~.~~
3 – Mesic shaded uplands only
4 – Talus, rocky alpine slopes only
5 – Invasive of wet meadows
6 – Subalpine sites only

~~W.~~P. **Exterior Lighting**: The functional objectives in providing exterior area lighting are to illuminate areas necessary for safe and comfortable use. In certain situations, area lighting can add to the aesthetic appeal of a site by highlighting architectural features of a building or illuminating pathways and landscape plantings. In these instances, only the special features of a building or landscape should be illuminated.

Protection of the night sky will be addressed by the type of permitted lighting. Lighting of the area will be provided for function, safety and security by directing light toward the locations where it is needed. ~~The night sky will be protected from fugitive light with cut-off shields and other devices that direct light onto surfaces, rather than having wide visibility of the lighting source.~~

1. ~~Standard:~~ Outdoor lights (including winter seasons display) shall not blink, flash, change intensity or give the illusion of movement.
2. ~~Standard:~~ Exterior lighting shall not be attached to trees except for the winter seasonal display.
3. Lighting shall be limited to Incandescent, High Pressure Sodium, ~~Metal Halide~~, Compact Florescent, or LED type lighting in all applications for exterior use. Cut-off shields and other devices shall be used to direct light onto surfaces, rather than having wide visibility.

   The maximum color temperature of outdoor lighting shall not exceed 3,000 degress Kelvin. City staff may authorize color temperatures up to 5,000 Kelven when required for public safety. Outdoor lighting for commercial uses shall not exceed 2,500 Lumens, and the total lighting shall not exceed 100,000 Lumens per acre.

4. ~~Standard:~~ Seasonal Lighting may be displayed and shall not be used to create advertising messages or signs.

   ~~1.~~a. Temporary and seasonal installation of string lights, rope lights, or other decorative lighting is allowed for seasonal lighting between November 26th and March 1st subject to the following criteria:

      ~~2.~~a. Lights shall not be installed for more than 90 days;

      ~~3.~~b. Lights shall be LED or low voltage (24 volts or less);

      ~~4.~~c. Installation may be subject to building or fire department inspection.

5. Installation of string lights, rope lights, or other decorative lighting for a period longer than 90 days or outside of the November 26th through March 1st season ~~will~~ require approval of a minor review application. Review of the application will include a review of the total amount of exterior lighting on a site, curfew hours for lighting to be turned off, and energy efficiency. Lights shall be LED or low voltage (24 volts or less). A building permit may also be required for some lighting installations and installations may be subject to building and/or fire department inspection.

6. Pedestrian Zone Lighting

   ~~1.~~a. Pedestrian areas, including pedestrian plaza spaces, sidewalks, and ~~pedestrian~~ pedestrian-only areas will have the opportunity to use light standards, bollards, lighting that spans the space as liner strings, and lighting from architectural features (such as soffits).

   ~~2.~~b. Light standards may establish the level of the light fixture up to 20 feet tall as measured from the finished grade.

   ~~3.~~c. The entire lighting assembly (pole and fixture) shall be painted a dark, matte color such as brown, black, gray, or green,

   ~~4.~~d. General light level shall not exceed 5.0 foot candles in pedestrian spaces or approved locations unless approved by the planning commission.

   ~~5.~~e. Lighting shall not be attached to trees except for seasonal winter displays.

7. Street Lighting

   ~~1.~~a. Street lighting along primary and secondary streets will be designed in conjunction with the vehicular and pedestrian level needs.

   ~~2.~~b. Light fixtures shall not exceed 20 feet in height except for cobra head fixtures placed at major intersections of state highways which conform to the state standard for height of such poles. The entire lighting assembly (pole and fixture) shall be painted a dark, matte color such as brown, black or green. When lighting pedestrian spaces and sidewalks, in conjunction with roadway lighting, pedestrian lighting shall be designed to have lower pole heights, rather than use the street light poles to illuminate pedestrian use areas.

   ~~3.~~c. Safety and security lighting needs are to be focused on the crossing points, street intersections and in areas where pedestrians are exposed to conflicts with traffic.

8. Lighting for Safety and Security

~~1.~~a. Secondary pedestrian areas or landscape zones with minor uses may be illuminated for security and pedestrian safety. ~~These may include i~~Illumination level~~s~~ shall not ~~to~~ exceed 2.5 foot candles and may be a combination of pole lighting, feature lighting, bollards, and lighting from architectural structures.

~~2.~~b. Level changes and features, like steps, are to be illuminated for pedestrian safety. ~~Built~~ Built-in lighting or wall lights are the preferred design choice. Other methods will require approval by the ~~planning~~ Planning ~~commission~~Commission.

~~3.~~c. Walkways in all ~~zones~~ zoning districts allow for lighting to ensure safely at night with bollard, feature, or pole standards. Lighting levels for pathways ~~may not~~ shall not exceed 2.5 foot candles.

9. ~~Standard:~~ Lighting may be used for outdoor landscaping, parking lots, street lights, walkways, illumination or highlighting architectural or landscape features only, and shall not be designed for, or used as, an advertising display. Illumination utilizing exterior light fixtures is permitted provided the following criteria are met:

~~1.~~a. Lighting shall only be directed downward (not above the horizontal plane) to avoid sky-lighting. Up-lighting for any purpose, including the lighting of architectural or landscape ~~architectural~~ features is not permitted except with overhead shields to prevent nighttime sky-lighting

~~2.~~b. The light source (bulbs), within a fixture as seen in elevation, shall not be visible, including the cobra head fixture style.

~~3.~~c. No light (freestanding or ~~building~~ wall mounted) shall spray ~~off~~ off-site. The use of cutoff shields, or other devices as approved by staff shall be required, including parking garages (Note: parking garages shall not have fluorescent lighting).

~~4.~~d. The maximum height of exterior architectural building lighting and landscape lighting shall be 26 feet and the light source is shielded from view except for areas designated as Tourist Center Core District (TSC-C).

~~5.~~e. Feature Lighting for Architectural Highlights and Landmarks in the Tourist Center District (TSC-C)

a. Architectural feature lighting and accents may be included as part of a lighting plan to prevent dark, uninviting, and oppressive building surfaces above the first floor. Illumination shall be for selective architectural features that serve to landmark, or otherwise highlight design features. Specifically, lighting of distinguished architectural features such as entries, arcades, chimneys, cornices, balconies, exterior trusses, highly textured material, knee braces, enriched architectural facades or landmark features are permitted subject to the following criteria:

(1) The lighting is subject to a visual analysis.

(2) Wall lighting of blank walls or repetitive wall facades shall not be permitted.

(3) Light features may be attached to buildings or structures as down-lights, soffit lights or ~~wall~~ wall-mounted lights.

(4) All accent lighting shall be directed downward.

(5) Lighting shall be restricted to incandescent type lights.

(6) Roofs, in part or in total, shall not be illuminated. Such prohibition includes such methods as flood lighting, reflective material, or lighting strips, including neon/fluorescent tubing, and the like.

b. Landscape lighting is allowed to highlight elements of the landscape architecture or existing landscape features through the use of down lighting. Down lighting landscape can be done with concealed fixtures or fixtures with lens hoods to screen the light source. Landscape light~~ing~~ fixtures must be dark colors including brown, gray, black or green.

(1) The lighting is subject to a visual analysis.

(2) The entire freestanding lighting assembly (pole and fixture) shall be painted a dark earth tone color such as black, dark green or dark brown, so as to blend into the forest character of the city.

(3) ~~-~~Lighting levels shall not exceed a maximum of 25 foot-candles, measured within one foot of the base at ground level.

(4) Roofs, in part or in total, shall not be illuminated. Such prohibition includes such methods as flood lighting, reflective material, or lighting strips, including neon/fluorescent tubing, and the like.

~~(5) The entire freestanding lighting assembly (pole and fixture) shall be painted a dark earth tone color such as black, dark green, or dark brown, so as to blend into the forest character of the city.~~

~~(6) Lighting levels shall not exceed a maximum of 25 foot-candles, measured within one foot of the base at ground level.~~

~~(7) Lighting levels shall not exceed a maximum of 25 foot-candles, measured within one foot of the base at ground level.~~

(5) Low pressure sodium lights (monochromatic orange color) are not allowed.

~~6.~~f. Searchlights. The commercial operation of searchlights for advertising or any other purpose is prohibited.

~~X.~~Q. **Water Conservation**: Water conservation is accepted as a practical and economical water management technique. Water conservation measures increase water supplies, save energy, and save money. Residential water use includes water used indoors and outdoors. The largest share of that typically is used for landscape irrigation. Bathroom fixtures typically account for the largest share of indoor water use. Water-using fixtures and appliances have in the past been designed with little or no regard for water efficiency. Today's appliances however, are designed with a greater sensitivity toward efficiency.

1. ~~Standard: ~~Water conservation devices shall be installed in new facilities or when replaced in existing facilities.

2. ~~Standard: ~~Irrigation systems shall conform to water conservation standards contained within the landscaping standards (Substitute Design Standards Section H Standard 7) ~~of this manual~~as noted in the South Lake Tahoe Design Guidelines, which is consistent with ~~AB 325 (see also City Resolution No. 1992-97)~~City Code Chapter 6.80 Water Efficient Landscaping.

~~Y.~~R. **Street Right-of-Way Improvements**~~:~~. Street Right-of-Way improvements are subject to City Code Section 6.10.180. ~~The improvement of the public right-of-way is necessary for the safety and convenience of the residents, improving the quality of the community and the lake and unifying the appearance of the community with the establishment of a consistent set of improvement standards.~~

~~1. Standard: All new road construction projects or the repair of existing improvements within the publicly owned right-of-way shall comply with the City of South Lake Tahoe Public Improvement Engineering Standards.~~

~~2. Standard: Road fixtures, including but not limited to retaining walls, safety barriers, traffic signals and controllers, light standards, and other structures, shall be designed and installed in compliance with the with the City of South Lake Tahoe Public Improvement Engineering Standards.~~

~~3. Standard: Color of road fixtures (other than signals, their auxiliary equipment and sign standards). Refer to the City of South Lake Tahoe Public Improvement Engineering Standards for specific details.~~

~~4. Standard: Signal poles and their ancillary equipment and sign structures. Refer to the City of South Lake Tahoe Public Improvement Engineering Standards for specific details.~~

~~5. Standard: Retaining walls and other erosion control devices. Refer to the City of South Lake Tahoe Public Improvement Engineering Standards and Chapter 36, City Grading Ordinance~~Chapter 7.20 of the City Code~~, for specific details.~~

~~6. Standard: Street improvements required. Public and private projects shall be required to construct off-site improvements including curb, gutter, sidewalk and other improvements required by the city engineering division, consistent with the standards contained within the City of South Lake Tahoe Public Improvement Engineering Standards, including street right-of-way improvements and landscaping standards, SLTCC 5-24, or at the discretion of the city engineer provide in-lieu fees when:~~

~~1. The project involves new construction on raw land, a vacant lot and/or is a demolition and reconstruction project;~~

~~a. The project is processed as a special use permit and is determined by the city engineering division that the off-site improvements are necessary for the orderly development of the area;~~

~~b. A public project, not subject to the special use permit process, is determined by the city engineering department to need off-site improvements for the orderly development of the area. (Ord. 903; Ord. 1002)~~

~~Z.~~S. **Scenic Highway Corridors**~~:~~. The Lake Tahoe Region offers many outstanding opportunities to view and photograph scenic resources. Many of these opportunities are available while driving around the lake on the main highways (US Highway 50, State Routes 28, 89, 207, 267 and 431, and Pioneer Trail). The highways listed are also travel

routes used in TRPA's scenic quality thresholds. Maintaining and, in some cases, upgrading the scenic quality of the view from the road is the primary goal behind both scenic highway corridors and scenic quality thresholds.

All projects which are within the scenic highway corridors, as defined by the TRPA, of US Highway 50, State Ropute 89 and Pioneer Trail shall meet design standards listed below. (Note: A scenic corridor is defined as including the street right-of-way and property abutting such right-of-way, a distance of 300 feet.).

1. Standard: All new electrical lines which operate at 32 kilovolts or less, including service connection lines, shall be placed underground. Exceptions to this requirement will be based on the city finding that undergrounding would produce a greater environmental impact than above-ground installation. When new electrical lines are permitted to be installed above ground, the new lines, poles and hardware shall be screened from view of the scenic highway to the maximum extent possible.
2. Standard: All new communication lines including telephone lines, cable television lines, and service connection lines shall be placed under–ground. Exceptions to this requirement will be based on the city finding that undergrounding would produce a greater environmental impact than above-ground installation. When new communication lines are permitted to be installed above ground, the new lines, poles, and hardware shall be screened from view of the scenic highway to the maximum extent possible.
3. Standard: See also standards for street right-of-way improvements.
4. Standard: TRPA Code Section 66.2.2 development standards for ruralshall apply to tto applicable sections of Pioneer Trail designated as Transitional Scenic corridors Corridor. shall apply to the applicable sections of Pioneer Trail.

AA.T. **Shorezone**: The shorezone is regulated by the TRPA Code, Chapters 80 through 86, and not reiterated here. As a result, all projects which fall within this area shall be referred to the TRPA for review. The city's City's review will be limited to providing input into the TRPA process and processing the project through the city permit process.

BB.U. **Signage**: City Code Section 6.40.420 allows for the establishment of policy and standards applicable to all signage within the boundaries of the ~~plan area~~area plan. The policies and standards contained within the ~~tourist core area plan~~Tourist Core Area Plan shall be applied to all future signage or modifications to signage within the ~~plan area~~area plan. The purpose of this section is to augment the city-wide sign ordinance with a set of specific design standards tailored to meet the urban design plan for the Tourist Core Area Plan. All signage definitions can be found in City Code Section 6.40.040.

~~**Article I. Purpose and Scope**~~

~~**25-1 Authority.**~~

~~This chapter is prepared pursuant to the TRPA Code of Ordinance is prepared pursuant to the TRPA Code of Ordinances, Section 38.2.3, which permits local jurisdictions to prepare equal or superior sign standards to the TRPA Sign Ordinance, contained in Chapter 38.~~

~~**25-2 Purpose.**~~

~~The purpose of this chapter shall be to coordinate the type, placement and scale of signs within the different land-use categories and to recognize the commercial communication requirements of all sectors of the business community; to improve the visual quality of South Lake Tahoe; encourage the innovative use of design; to promote both renovation and proper maintenance; to allow for special circumstances; and to guarantee equal treatment under the law through accurate record keeping and consistent enforcement. This shall be accomplished by regulation of the display, erection, use, and maintenance of signs. The use of signs is regulated according to category. The placement and scale of signs are regulated primarily by business square footage, number of streets that access the business, vehicle speed limit, designation of the street, height of sign, setback, and angle of the sign to the street.~~
~~Scope: This chapter shall not relate to building design. Nor shall the City Ordinance regulate official traffic or government signs (Note: the TRPA, Chapter 38 shall regulate the signs); the copy and message of signs; signs not intended to be viewed from a public right-of way; interior window displays; scoreboards on athletic fields; flags of any nation or government; gravestones; religious symbols; memorial signs; the residential display of street numbers; or any display or construction not defined herein as a sign.~~

~~The primary intent of this Ordinance shall be to regulate signs of a commercial nature intended to be readable from any public street, recreation area, bike trail or from Lake Tahoe.~~

~~**Article II. Definitions**~~

~~**25-3 Definitions.**~~

~~1. "Abandoned Sign" means a sign, non-conforming or conforming which no longer identifies or advertises a bonafide business, lessor, service, owner, product or activity for a period of six months or longer. For Compliance, see SLTCC 25-19.~~

~~2. "Access" means any public vehicle access. Does not include pedestrian or service vehicle access.~~

~~3. "Animated Sign" (also see and note difference from changeable sign) means a sign or display manifesting either kinetic or illusionary motion occasioned by natural, manual, mechanical, electrical, or other means. Animated signs include the following types:~~

~~1. Naturally Energized: Signs whose motion is activated by wind or other atmospheric impingement. Wind-driven signs include flags, pennants, streamers, spinners, metallic disks, windsocks other similar devices designed to move in the wind.~~

2. Mechanically Energized: Signs manifesting a repetitious pre-programmed physical movement or rotation in either one or a series of planes activated by means of mechanically based drives.

3. Electrically Energized: Illuminated signs whose motion or visual impression of motion is activated primarily by electrical means. Electrically energized animated signs are of two types:

a. Flashing Signs: Illuminated signs exhibiting a pre-programmed repetitious cyclical interruption of illumination from one or more sources in which the duration of the period of illumination (on phase) is either the same as or less than the duration of the period of darkness (off phase), and in which the intensity of illumination varies from zero (off) to 100 percent (on) during the programmed cycle.

b. Illusionary Movement Signs: Illuminated signs exhibiting the illusion of movement by means of a pre-programmed repetitious sequential switching action in which illuminated elements of the sign are turned on or off to visually simulate the impression of motion characteristic of chasing, running, blinking, oscillating, twinkling, scintillating, or expanding and contracting light patterns.

4. "Appurtenant Sign" means a sign, emblem, or decal informing the public of goods, facilities, or services available on the premises, e.g., a credit card sign or a sign indicating hours of business, membership affiliation, chain service, spa, phones, business association.

5. Area. See "Sign, area of."

6. "Area identification sign" identifies an area of a distinct character composed of more than one ownership, such as a neighborhood, subdivision, shopping or industrial area, or a large parcel(s) of land reserved for visual or usable open space, such as a conservatory area and the like.

7. "Awning" means a shelter projecting from and supported by the exterior wall of a building constructed of canvas, plastic or similar nonrigid materials on a supporting framework. Compare "Marquee."

8. "Awning sign" means a sign painted on, printed on, or attached flat against the surface of an awning.

9. Backlit Awning. See "Electric awning sign."

10. "Balloon"means an inflatable bag filled with air or gas used for advertising or promotional purposes, whether or not it contains letters, words, phrases or logos.

11. "Banner Sign" means a piece of cloth or other flexible material such as plastic/vinyl sheets or canvas, that contains copy.

12. "Base Reference Budget (BRB)"means the amount of sign area, prior to adjustments, available to a business or a multiple business complex (MBC). This amount is calculated from:

1. Gross floor area of buildings; and

2. Number of streets that access the property; and

3. Whether the business is part of a multiple business complex.

13. "Building Sign" means any sign attached to a building and supported by a wall of a building, or the wall of a structure, including a mansard roof. Any permanent window signs shall be considered a building sign. For the purpose of this definition the following signs are considered as a part of the building sign area (see definition for more clarification).

1. Awning signs;

2. Canopy signs;

3. Marquee signs;

4. Landscape wall signs;

5. Mansard roof signs;

6. Permanent window signs.

14. "Business" means a single commercial unit of operation. There may be more than one business within a building (see "Multiple business complex)"; or there may be a single business in one building on one project area.

14.1 "Can sign" means a sign in which the sign copy is placed on a transparent face, which is attached to an enclosed box or can, usually made of metal, that has an internal light source.

15. "Canopy Sign" means a sign affixed or applied to the exterior facing surface or surfaces of a building canopy or freestanding canopy.

16. "Canopy (Building)" means a structure or roof covered with fabric, metal or other material and supported by a building at one or more points or extremities and by columns or posts embedded in the ground at other points or extremities. May be illuminated by means of internal or external sources. (compare "Marquee")

17. "Canopy (Freestanding)" means a structure or roof covered with fabric, metal or other material supported by columns or posts embedded in the ground. May be illuminated by means of internal or external sources.

18. "Changeable Sign"means a sign whose informational content can be changed or altered by manual or electric, electro-mechanical, or electronic means. Changeable signs include the following types:

1. Manually Activated: Signs whose alphabetic, numeric, pictographic, or symbolic informational content can be changed or altered by manual means. (See also seasonal copy change)

2. Electrically Activated: Signs whose alphabetic, numeric, pictographic, or symbolic informational content can be changed or altered on a fixed display surface composed of electrically illuminated or mechanically driven changeable segments. Includes the following two types:

a. Fixed Message Electronic Signs: Signs whose basic informational content has been pre-programmed to include only certain types of information, such as time, temperature, predictable traffic conditions, or other events.

b. Computer Controlled Variable Message Electronic Signs: Signs whose informational content can be changed or altered by means of computer-driven electronic impulses.

19. City. Unless the context clearly discloses a contrary intent, the word "city" shall mean the city of South Lake Tahoe.

20. "Clearance (of a sign)" means the smallest vertical distance between the grade of the adjacent street, highway, or street curb and the lowest point of any sign, including framework and embellishments, extending over that grade.

21. "Clear Zone" means the area at a street corner or driveway defined as follows:

1. Street corner clear zone is created by extending the front property line and street side property line to a point and measuring from the point along the

front property line and street side yard property line to a distance of 15 feet and connecting these two points to create a triangular area.

2. Driveway clear zone is created by measuring, from the point of driveway and property line intersection, along the driveway and property lines to a distance of 15 feet and connecting these two points to create a triangular area.

21.1 "Community Benefit Sign" means a temporary sign displayed by a non-profit organization, to raise funds for a community wide benefit, such as the community blood drive and the like. It does not include advertising for a commercial for profit enterprise, such as a ski sale or private arts and craft show and the like.

22. "Construction sign" means a temporary sign identifying an architect, contractor, subcontractor, material supplier, funding sources and other related information pertinent to the property on which the sign is located.

23. "Copy" means the graphic content of a sign surface in either permanent or removable letter, numeric, symbolic, or alphabetic form. Also see "Mural."

24. "Copy area" means the area shall be calculated by enclosing the perimeter of the copy within a rectilinear geometric figure which encloses the extreme limits of the copy and measuring the area within the perimeter.

25. "Deceptive sign" means any sign which by varying the size of print, by wording, by coloration, or by any other device, give a normal viewer a false or deceptive impression of prices or rates, charges or services, or number of units available.

26. "Directional/Information Sign" means any sign which is used soley for the purpose of traffic or pedestrian information, direction or safety, and placed on the property to which or on which the public is directed and which contains no advertising copy.

27. "Double-faced sign" means a sign with two faces, essentially back-to-back. Each sign face is to be calculated to determine sign area.

28. "Electric awning sign" means an internally illuminated, fixed space-frame structure with translucent, flexible reinforced covering, designed to awning form and with graphics or copy applied to the visible surface of the awning.

29. "Electrical sign" means a sign or sign structure in which electrical wiring, connections, or fixtures are used.

30. Electronic Message Center. See "Changeable signs, electrically activated."

31. "Embellishment" means a portion of a sign structure intended to accent a sign rather than to provide or carry additional message area, e.g., framing, roofing, foundations, landscaping and the like.

32 "Facade" means the entire building elevation including the parapet.

33. "Festoons" means a string of ribbons, tins, or pinwheels.

34. "Flag" means an article of cloth on flexible material displayed to the public.

a. Official Flag. The flag of any nation, state, county, city or other recognized governmental entity, flown in accordance with the state and federal laws governing such displays. A U.S. flag shall be flown in conjunction with any foreign flag.

b. Insignia Flag. A flag bearing the insignia, name, device, rank, logo type, or similar designation of specific activities, political parties, person, agencies, private business, and the like.

35. Flashing Sign. See "Animated sign, electrically energized."

36. "Freestanding Sign" means a sign which is permanently supported in a fixed location on the ground by poles, braces, a foundation, a planter, pedestal, retaining wall or other structure and not attached to or supported by any building.. Such signs include building wing wall signs(See also "Low Profile Sign)

37. "Frontage, street" means that portion of a project area bounded by public roadway.

38. "Graphic" means the use of letters, symbols, numbers to convey a message.

Note: Adding graphics to a mural creates copy.

39. "Government sign" means any temporary or permanent sign erected and maintained by the city, county, state, or federal government for traffic direction or for designation of or direction to any school, hospital, historical site, or public service property or facility.

40. "Grade" means the surface elevation of the street, or the natural ground elevation beneath the sign.

40.1 "Grand opening temporary activity" means a use which proposes a temporary activity to promote the opening of a new business at that location. For the purpose of the sign ordinance, a use shall have only one "grand opening temporary activity" and it shall occur no later than 30 days after issuance of city business license, change of operation review and/or an occupancy permit for the new business. As a "grand opening temporary activity," it shall be subject to the same requirements as all temporary activities (SLTCC 32-21.1) including obtaining a planning permit. A "grand opening temporary activity" may have the limited use of balloons as outlined in SLTCC 25.5.1(G).

41. "Gross floor area (GFA)" means the measure of commercial square footage calculated as the floor area within the outer walls of a building or store space, including storage space. This shall not include stairwells and airshafts.

If more than one business is occupying the same floor space, the floor space shall be counted once to determine the gross floor area.

If a business occupies one floor of a two story business, the GFA shall be based on the one floor. Should the business extend to the second floor, its new sign area shall be recalculated including the second floor. Should the business revert back to the first floor, then the GFA reverts back to floor one. Any signage increase resulting from the expansion to the second floor shall now have to be reduced accordingly.

42. "Height (of a Sign)", means

Freestanding Sign: the vertical distance measured from the highest point of the sign structure, including decorative embellishments, to the curb grade of the adjacent street or the surface grade beneath the sign, whichever is less.

Building Sign: the vertical distance measured form the highest point of the sign or sign structure to the building grade.

42.1. "Icon sign" means three-dimensional representation of an object that does not contain copy. Examples include a child's building blocks to denote a children's store or an ice cream cone to denote an ice cream shop. The intent of the icon sign is to provide business identification in a highly concentrated pedestrian environment (Mainstreet district of the South Tahoe redevelopment plan area) in a whimsical and entertaining manner without using copy. For sign area and locational standards, see SLTCC 25-45(C)(2)(a).

43. "Identification sign" means a sign whose copy is limited to the name and address of a multiple family or condominium complex, building, institution, or person or to the activity or occupation being identified.

44. "Individual sign area" is computed from the BRB and is the allowable sign area for a specific individual sign, taking into account the following adjustments:

    a. Specific individual sign setback;

    b. Vehicle speed on the closest street;

    c. Specific individual sign angle using the street frontage as a reference plane; and

    d. Height.

45. "Illegal sign" means a sign which does not meet the requirements of this code, including but not limited to the placement or installation of a sign without first obtaining a city sign permit or installing a sign that is not consistent with the sign permit and which has not received legal nonconforming status.

46. "Illuminated sign" means a sign with an artificial light source incorporated internally or externally for the purpose of illuminating the sign. The following are types of illumination:

    a. Diffuse. "Diffused lighting" is where the light source is internal and located behind a translucent sign face; i.e., internally illuminated electric can sign.

    b. Indirect. "Indirect lighting" is where the copy and/or the sign face are illuminated by an external light source. The external light source should be shielded from public view.

    c. Direct. "Direct lighting" is where the sign copy is the light source, e.g., individual light bulbs organized to create the sign copy.

47. "Kiosk" means a pedestrian-oriented freestanding sign within public right-of-way used for display of information. All kiosk locations as well as information content shall be subject to the city use permit process.

48. "Landscape wall sign" means a sign attached to a retaining wall which is integrated into the project area landscape and the single sign face is parallel to the street.

49. "Lot" means a parcel of land legally defined on a subdivision or parcel map recorded with the El Dorado County recorder.

50. "Low profile sign" means a type of freestanding sign mounted directly to the ground with maximum height not to exceed six feet.

51. "Maintenance" means, for the purposes of this chapter, upkeep, or preservation of the condition of a sign in order to keep the existing components safe, neat and orderly in condition and appearance and to prevent corrosion or deterioration caused by weather, age or other conditions. Maintenance includes cleaning, painting, repair or replacement of defective parts of a sign. Maintenance does not include any changes to sign area, the copy, graphic design, or the external dimensions of the sign or structure.

52. "Mansard roof" means normally the roof slope exceeds 45 degrees (12:12). A roof-like facade architecturally comparable to a building wall.

53. "Mansard roof sign" means a sign attached to a mansard roof.

54. "Marquee" means a permanent roof-like structure or canopy of rigid materials supported by and extending from the facade of a building. Compare "Awning" and "Canopy sign."

55. "Memorial signs" means tablets for names of buildings, date of erection, architects, etc. when built into the walls of a building.

56. Monument Sign. See "Low profile sign."

57. "Motor fuel price sign" means that portion of a freestanding sign which advertises the price of motor vehicle fuel offered for sale.

58. "Motor vehicle signs" means a sign attached, affixed or painted upon the exterior of a motor vehicle.

59. "Multiple business complex" means a building or group of buildings within a single architectural plan and within one project area housing two or more businesses with one or more parcels.

60. "Multiple business complex sign" means a sign whose purpose is to identify the MBC, not individual tenants.

61. "Multiple-faced sign" means a sign containing three or more sign faces, not necessarily in back-to-back configuration. Each sign face shall be calculated to determine sign area.

62. "Mural" means a picture pictograph (especially large) painted or applied directly on a wall, ceiling or roof, contains no copy and is not a visual representation of a business or service so as to be viewed as advertisement for the business or service.

63. "Nameplate" means a nonelectric, on-premises residential identification sign giving only the name and address of an occupant.

64. "Nonconforming sign" means a sign which was erected legally, but which does not comply with subsequently enacted sign restrictions and regulations.

65. "Occupancy" means the portion of a building or premises owned, leased, rented, or otherwise occupied for a given use.

66. "Off-Premise Sign" means a sign erected or maintained on a parcel or project area advertising an establishment, merchandise, service, or entertainment, which is not sold, produced, manufactured, or furnished at the property on which the use or activity advertised by the sign is not located.

67. "On-Premise Sign" means a sign erected or maintained on a parcel or project area on which the use or activity advertised by the sign is located.

68. "Official signs" means traffic, fire and police signs, signals, devices and markings of public agencies and utilities for which illumination and motion is permitted, other safety signs, and legal notices.

69. "Opaque background" means a sign background that doesn't transmit light. For the purpose of this chapter the amount of light transmitted shall be limited to the range of approved background colors shown in Exhibit 3 (see also SLTCC 25-34).

70. "Owner" means the legal owner of record. This information may be available through a search of the county recorder's records or as shown on the most recent property tax roll provided by El Dorado County assessor. For the purposes of this chapter, the owner of property on which a sign is located is presumed to be the owner of the sign unless facts to the contrary are officially recorded or otherwise brought to the attention of the city, e.g., a sign leased from a sign company.

~~71. "Parapet" means the extension of a false front or wall above a roofline.~~

~~72. "Parking signs" means signs that state "Private Parking Only – Consent of the Owner Required" and shall be otherwise consistent with the California Vehicle Code Section 22658A.~~

~~73. "Parked motor vehicle sign" means a sign attached to, located on, or located within any motor vehicle trailer or other related device, when parked for the primary purpose of displaying signage or to augment existing signage of a business located on the parcel, lot, or project area where the parked motor vehicle is located. A parked motor vehicle sign meets this definition if the copy is easily readable from a vehicle or pedestrian traveling upon a public right-of-way (of a scenic corridor). Examples of such signs are, business delivery vehicle(s), personal vehicles and the like. Excluded from this are vans or trucks which have short term deliveries of merchandise and goods to the retailer or restaurant.~~

~~74. "Pedestrian scale" means copy, graphics, proportions and locations that are easy to comprehend and intended to be primarily read by pedestrians.~~

~~74.1 "Pedestrian Sign" means a permanent sign in "pedestrian scale" which provides information and directions to pedestrians, such as a "directory/information sign" and kiosk sign."~~

~~75. "Pennant" means a piece of cloth, plastic, paper, or other such material varying in size, shape or design to draw attention to the site where located.~~

~~76. "Permanently affixed" shall mean painted or permanently attached with glue, adhesive, bolts, nails, approved concrete footings, not intended to be easily removed. Tape shall not be considered as meeting this definition.~~

~~77. "Person" means any individual, corporation, association, firm, partnership, or similarly defined interest.~~

~~77.1 "Plant List" means the Recommended Native and Adaptive Species List adopted by TRPA.~~

~~78. "Point of purchase display" means advertising of a retail item accompanying its display, e.g., an advertisement on a soft drink or water dispenser, tire display, ice machines, etc.~~

~~79. "Pole cover" means cover enclosing or decorating poles or other structural supports of a sign.~~

~~79.1 "Political Sign" means a sign advertising a candidate for public office, a proposition, or other issue to be voted on by the general public.~~

~~22. "Portable Sign" means any sign designed to be moved easily and not permanently affixed to the ground or to a structure or building.~~

~~23. "Project area" means one or more parcels or leases that are linked together for a common and definitive purpose, such as parking, or access, or utilities, or are under one umbrella management unit.~~

~~24. "Projecting Sign" means a sign, other than a flat building sign, which projects form and is supported by a wall of a building, and is not mounted parallel to the plan of the wall.~~

~~83. "Public right-of-way" means that portion of land owned by the public in which the street, sidewalk and utilities are placed. Note: Normally the public right-of-way is wider than the paved street.~~

~~84. "Real estate sign, on-premises" means a temporary sign advertising the real estate upon which the sign is located as being for rent, lease, or sale.~~

85. "Roofline" means the top edge of a roof or building parapet, whichever is higher, excluding any mansards, cupolas, pylons, chimneys, or minor projections.

86. "Roof sign" means any sign erected over or on the roof of a building. No roof sign dormer can extend above the roofline as measured in elevation.

87. "Room rate" means the posting of room rate signs and shall be consistent with this chapter and SLTCC 28A-6.

88. Rotating Sign. See "Animated sign, mechanically energized."

89. Scenic Corridor. The following roads are considered scenic corridors: Lake Tahoe Boulevard, U.S. 89, U.S. Highway 50 and the Loop Roads.

90. "Sculpture" means to cut, carve, chisel, cast, weld, mold, etc., into statues or figures.

91. "Seasonal Change of Copy" means the changing of the sign face copy, to reflect the different seasons or seasonally uses.

92. "Seasonal graphics and murals" means such graphics and murals that depict seasonal events with no commercial messages. Examples include Christmas, Valentine's Day, Easter, Mother's and Father's Day, Homecoming and the like.

93. Setback: Setback, for all signs shall be measured from the property line.

94. "Sign" means any character, letter, figure, symbol, design, model or device or combination of these used to attract attention or convey a message and which is visible from a public street, public recreation area, bicycle trail or from Lake Tahoe. The term includes banners, pennants, streamers, moving mechanisms and lights. The term does not include scoreboards or ball field signs where the sign is oriented to the recreation use.

95. "Sign, Area of" means the sum total of display areas of one or more sign faces (also see sign face). If the sign is composed of individual letters or symbols using the wall as the background with no added decoration, the sign area shall be calculated by enclosing the perimeter of each word within a rectilinear geometric figure which encloses the extreme limits of the copy and measuring the area within the perimeter.

96. "Sign dormer" means a structure attached to the roof that provides a vertical mounting surface on a sloping roof. The dormer is usually constructed of the same material as the roof.

97. "Sign face" means the plane of a sign on which the copy is placed. A normal size frame is not considered as a part of the sign face.

98. "Snipe sign" means a temporary sign or poster affixed to a tree, fence, telephone pole, etc.

99. "Subdivision identification sign" means a freestanding or wall sign identifying a recognized subdivision, condominium complex or residential development.

100. "Temporary Sign" means any sign not intended for long term

101. "Under-canopy pedestrian-oriented sign" means a sign suspended beneath and not projecting beyond the face of a canopy, ceiling, roof, or marquee.

102. "Unit of operation" means an individual and separate unit of activity or function within a building, such as a single shop within a business complex or a single business occupying an entire building.

103. "Use" means the purpose for which a building, lot, sign, or structure is intended, designed, occupied, or maintained.

~~104. "Window" means an opening in a building for letting in light or air or for looking through, and having a pane(s) of glass set in a frame or sash. Note: Placing a false window on a building does not meet the definition of window and window signs. Also see "Parked motor vehicle sign."~~

~~105. "Window Sign" means all signs placed in a window which are intended to be primarily visible from a public right-of-way, includes permanent and temporary signs.~~

~~Note: A temporary window sign does not count as building sign area if it is within the 25% window area devoted to window signs.~~

~~25-5 Compliance Required: It shall hereafter be unlawful for any person to erect, place, or maintain a sign in the City of South Lake Tahoe except in accordance with the provisions of this chapter.~~

~~25-5.1 Signs Prohibited: The following types of signs are prohibited in all districts:~~

~~A. Pennants, festoons, search lights;~~
~~B. Signs imitating or resembling official traffic or government signs or signals;~~
~~C. Snipe signs, when located in the public right-of-way;~~
~~D. Off premise parked motor vehicle signs~~
~~E. Portable signs not specifically permitted by this Ordinance, i.e., real estate signs~~
~~F. Animated signs~~
~~G. Balloons; except for a "grand opening temporary activity" as part of a city-approved TRPA permit for a temporary activity/use. The "grand opening temporary activity" use of balloons shall not exceed 72 continuous hours~~
~~H. Changeable copy signs; computer controlled variable message electronics sings. Exceptions:~~
~~1. Computer controlled variable message electronic signs that are include in City gateway signage and publicly owned community event signs.~~
~~2. Manually activated, changed seasonal copy changes~~
~~I. Insignia flags, unless otherwise allowed by this chapter.~~
~~J. Flags in the form of pennants or festoons, and the like, unless approved as part of a Temporary Activity Permit.~~
~~K. Sound producing signs~~
~~L. Illegal signs~~
~~M. Off-premise signs, except for "off premise" temporary real estate residential open house signs (see SLTCC 25-7) and garage sale signs (See SLTCC 25-7) allowed by this chapter.~~
~~N. Appurtenant Signs, unless counted as a part of approved signage area and each sign does not exceed 12" x 12'°. Further, no appurtenant sign shall be hung from or otherwise attached to a freestanding sign unless the attachment is included as a part of the sign face copy~~
~~O. All signs riot specifically noted~~
~~P. The display of sculpture, murals and seasonal graphics, unless approved by the City Planning Division.~~
~~Q. Window signs not contained within the 25% allowable window signage area.~~
~~R. Freestanding signs in clear zones that have height between 3' and 1 ' from grade or with pole/base support larger than 12 inches in diameter~~
~~R. Signage for prohibited uses.~~
~~S. Signs not in compliance with this Chapter.~~
~~T. Hand held signs for commercial use~~

~~25-6 Planning Permits Required: Unless otherwise provided by this Ordinance, all signs shall require a Planning Permit and payment of fees as described in Article VII of this chapter.~~

~~25-7 Signs and Activities Not Requiring Permits: The following types of signs are exempt from permit requirements but shall be standards of this chapter.~~

~~A. Maintenance or cleaning of a sign.~~

~~B. Memorial signs, when cut into masonry surfaces or when constructed of bronze or other metals and affixed to a wall, that do not exceed three square feet in area.~~

~~C. Temporary government signs indicating danger and/or service and safety information.~~

~~D. In residential areas, (1) name plates, (2) names on mailboxes or newspaper tubes, (3) private property parking or warning the public against trespassing or danger from animals, provided they do not exceed two square feet.~~

~~E. Signs not readable from a public street, recreation area, bicycle trail, or Lake Tahoe, such as window placards denoting community special events.~~

~~F. Directional and information signs on private property which conform to the following: 12" x 18" or smaller, which limit access, provide direction, parking admittance or pertain to security provisions; signs 18" x 18 °' or smaller, defining entrance or exit; and octagonal stop signs, 24'° or smaller. Any sign larger than the limits described shall be counted as either freestanding or building sign as appropriate.~~

~~Larger signs may be allowed in those instances where a business is located on a public street which is being repaired or reconstructed that negatively affects the economic viability of a business(s). Size of sign shall be subject to City review on a case by case basis. At a minimum, the sign shall not exceed 6 feet high and be setback a minimum of 5 feet from all property lines and be outside a defined corner clearzone.~~

~~G. Highway signs, street signs and other regulatory and directional signs which are located on a public right-of-way shall conform to the applicable sign standards set forth in the Manual on Uniform Traffic Control Devices, 1978, or other standards which may be contained in a memoranda of understanding between the TRPA and a public agency with jurisdiction over the travel way or upon design approval by the TRPA and a public agency with jurisdiction over the travel way.~~

~~H. Seasonal graphics and murals. At such time as the Seasonal Graphic or Mural has business related copy, the Seasonal Graphic or Mural is considered to be a business sign and the entire Seasonal Graphic or Mural, including copy, is considered sign area and requires a permit.~~

~~I. Off premise temporary real estate residential "Open House" signs provided the following standards are met:~~

~~1. The signs shall not exceed 3 square feet. Within the 3 square feet, all copy shall be placed including arrows, logos, name of real estate office, address and the like. The height of sign shall not exceed 3 feet. For the purpose of this provision, the 3 foot high signs may be placed on top of a snow berm.~~

~~2. All signs shall not be located within the public right of way.~~

~~4. The signs shall not be allowed within the Tahoe Keys Blvd. median, the 15th street median and parkway, or the Loop Road median and parkway.~~

~~5. The maximum number of signs per "Open House" shall be limited to three (3).~~

~~6. The "Open House" signs shall be either freestanding, mounted on a stake, or an "A-frame." The location and/or size of such signs shall not create a traffic hazard.~~

7. The "Open House" signs shall be displayed only during the hours which the house is open for viewing, and the open house signs shall be immediately removed when the open house is closed for the day.

J. On-premise temporary real estate signs provided the following standards are met;

1. Residential

a. One "For Sale" sign per premise, unless the property for sale has both a front and rear street frontage, in which case, two “for sale” signs are permitted;

b. On the day of showing, one "Open House" sign per premise;

c. The standards for all signs shall be:

i. If freestanding, the sign area shall not exceed 3 square feet. Should the sign be mounted on a stake, the stake shall not exceed 5 feet in height. The sign or its supports shall not encroach into the public right-of-way and shall not create a traffic hazard or encroach into a clear zone area. Said sign may be double faced.

ii. If a wall sign, the area shall not exceed 3 square feet.

iii. Shall not be illuminated; and

iv. Shall not contain more than two sign riders each a maximum side of 6”X18”; and

v. Shall not contain more than one flier box.

2. .Commercial

a. One "For Sale" sign per premise, unless the property for sale has both a front and rear street frontage, in which case, two “for sale” signs are permitted;

b. The standards for all signs shall be:

ii. If freestanding, the sign area shall not exceed 32 square feet; shall not exceed 6 feet in height. The sign or its supports shall be a minimum of five feet from the property lines and shall not encroach into a clear zone area. Said sign may be double faced;

iii. If a wall sign, the area shall not exceed 32 square feet;

iv. Shall conform to the design standards contained in SLTCC 25-38 and 25-39; and

v. Shall not be illuminated.

K. Motor vehicle signs which conform to the following: non-projecting and permanently affixed to the exterior of the vehicle. Painted and magnetic signs are considered permanently affixed. Taped signs are not.

L. Commercial street address numbers which do not exceed 3 square feet. If greater than 3 square feet, shall require a permit and shall be calculated as a part of the sign area.

M. Open/closed signs which do not exceed 12 square inches and credit identification signs. This applies to all illuminated and non-illuminated signs and credit identification.

N. Window signage that does not exceed 25% of the window area. Each window shall have a maximum of 25 percent of window area for use of all permanent and temporary signs except for seasonal graphic displays. In a single façade which contains a group of windows that is visible from a street, the window signage for that façade may be concentrated in one window of that group. The permissible area shall be based on the total window of that façade’s widow grouping.

O. Banners and sandwich board signs in compliance with the following standards: Displayed only during the following holiday periods: the month of December, New Year's Eve day and New Year's Eve, Martin Luther King weekend, President's Day weekend, Memorial Day weekend, July 4th weekend, Labor Day weekend, Thanksgiving weekend, or during City sanctioned community events;

i. Signs are not within a street right of way, sidewalk, bicycle path, pedestrian walkway, designated parking spaces, ADA accessible zone or path, or clear zone;

ii. Signs do not impede pedestrian or bicycle circulation; and

iii. Signs are professionally designed and manufactured; or

iv. Banner signs that are community benefit signs in areas designated by a community plan.

Q. Garage sale signs displayed Friday, Saturday, Sunday, or Monday of a holiday weekend. Must be outside of street rights of way and must not impeded pedestrian, bicycle, or vehicle traffic.

R. The following temporary signs:

i. Temporary government signs.

ii. Temporary window signs, provided they are within the 25 percent allowable window area for signs.

iii. Temporary on- and off-premises real estate signs.

iv. "Community benefit" temporary activity signs at the Chamber of Commerce area and those "community benefit" temporary activity signs placed off-premises as a part of an approved community plan or area plan.

**25-8. Maintenance.**

All signs shall be properly maintained. Exposed surfaces shall be clean and painted if paint is required. Defective parts shall be replaced. The [City] TRPA shall have the right to order the repair or removal of any sign which is defective, damaged, or substantially deteriorated as defined in the Uniform Building Code.

**25-9. Lighting.**

Unless otherwise prohibited by this Ordinance, all signs may be illuminated consistent with this chapter.

**25-10. Sign Contractor's License or Exemption.**

No person shall engage in the business of erecting, altering, relocating, constructing or maintaining signs without a valid contractor's license and meeting the provisions for all required state and federal licenses (unless said maintenance does not require a state or federal license) or meets the Uniform Building code "Owner/Builder", Section.

**25-11 Insurance.**

All persons involved in the business of maintenance, installation, alteration, or relocation of signs shall maintain all required insurance and shall file with the state a satisfactory certificate of insurance to indemnify the TRPA, state, county, or city against any form of liability.

**25-12 Signs Permitted in all PAS.**

Unless otherwise noted, the following signs requiring Planning Division permits, are permitted in all Plan Areas, and they shall conform with all standards of this chapter:

A. Political signs which conform to the following: for each parcel, one temporary sign per street frontage which is not greater than 12 square feet in area, is not internally illuminated, and is not displayed for more than 30 days in a calendar year, except that for 60 days preceding a general, primary or special election more than one such sign may be placed on each parcel, provided they are removed immediately after the election. (TRPA Section 2.3.4.E).

B. Area identification signs which conform to the following additional standards:

1. Signs shall not exceed 25 square feet in area;
2. Signs shall be low profile signs and not exceed five feet in height, with the following exception:

The height of an area identification sign may exceed five feet, when:

a. The sign is placed on public property (or property which acts as public property such as property dedicated for public use), outside the public right-of-way;

b. The sign is placed within an approved community plan;

c. The sign is placed within a community plan which allows multi-story buildings (above two);

d. The sign shall be constructed as part of a project subject to city review and approval;

e. The project shall have all of the following public infrastructure: curb, gutter, sidewalk, street lighting and drainage improvements;

f. The sign setback shall conform to the freestanding sign setback and height chart shown in SLTCC 25-35(D);

g. The number and location of signs shall be included in each community plan;

h. Signs shall be landscaped as required by Article VIII, Sign Design Standards, with the following exceptions:

The landscaping requirements may be reduced when:

a. The sign will be constructed as a part of a project where the city has review and approval;

b. The sign placement within the project is pedestrian oriented hardscape and therefore not conducive to meet the landscaping standards in Article VIII; and

c. The project shall have full public improvements, including any of the following: curb, gutter, sidewalk, street lighting, and drainage improvements.

C. Construction Signs. One construction sign may be erected on site, provided it not exceed 32 square feet, six feet in height, shall be set back a minimum of five feet from all property lines and conform to the design standards contained in SLTCC 25-33 and 25-34. Such signs shall not be erected prior to the issuance of the project building permit and shall be removed within 10 days of completion of construction or building occupancy, whichever occurs first.

D. All public use signs.

E. Directional signs on public property which provide direction to public and semi-public uses, such as recreation uses, churches, hospitals, schools and the like. Said signage shall be no larger than 18 inches by 18 inches. If located on Caltrans right-of-way, a Caltrans encroachment permit is required before

issuance of this sign permit. If located on city right-of-way, a city encroachment permit is required before issuance of the sign permit.

**25-13 Signs permitted in residential PAS.**

For all signs not requiring permits, see SLTCC 25-7.

A. The following signs do not require planning division permits: all signs listed in SLTCC 25-7.

B. The following signs requiring planning division permits are allowed in residential PAS. They shall conform with all standards of this chapter:

1. All signs permitted in all PAS (SLTCC 25-12).

2. Identification sign provided the following standards are met:

a. Sign area shall not exceed 32 square feet; and

b. One sign per street entrance.

3. For permitted nonresidential uses, including places of worship, but excluding home occupations, the following standards shall be required: (a) freestanding sign not to exceed 32 square feet in sign area, and (b) building sign not to exceed 32 square feet in area.

C. Special regulations for residential PAS are as follows: all allowed freestanding signs shall be a low profile sign with a height limit of six feet and be set back a minimum of 15 feet from any public right-of-way.

**25-14 Signs Permitted in Commercial/ Tourist Plan Areas.**

A. The following signs do not require planning division permits: all signs not requiring permits (SLTCC 25-7).

B. The following signs require issuance of a permit by the planning division and are allowed in the above plan areas, provided they conform to the following standards and all other standards of this chapter:

1. All signs permitted in all PAS (SLTCC 25-12).

2. a. Under-canopy pedestrian-oriented signs shall not be counted as building signs provided they conform to the following:

i. Placed at right angle to pedestrian walk; and

ii. Located at or near the public entrance to the building; and

iii. Not internally illuminated; and

iv. Do not exceed five square feet (each side) and are a minimum of eight feet above grade of the pedestrian walk.

b. Those under-canopy signs which do not conform to subsection (B)(2)(a) of this section shall be considered to be a building sign subject to requirements contained in SLTCC 25-39 through 25-41, and if in the Stateline/Ski Run CP, see SLTCC 25-42 through 25-45.

3. Building and Freestanding Signs. For information on size, location, setback, height, etc., see SLTCC 25-39 through 25-41, and if in the Stateline/Ski Run CP, see SLTCC 25-42 through 25-45.

4. Seasonal change of sign copy is subject to a limit of two changes per year: one summer and one winter.

C. Special regulations for tourist accommodations uses are as follows: the maximum sign area for tourist accommodation use is:

1. For properties with entrance on one street, the maximum sign area shall be 120 square feet. Of that 120 square feet, a maximum of 80 square feet shall be permitted for a freestanding sign.

2. For properties with major entrances on two, three or four street(s) (excluding service drives), the maximum sign area shall be 240 square feet, 360 square feet, and 480 square feet, respectively. Of the maximum allowed per street frontage, a maximum of 80 square feet may be used for any one freestanding sign.

## Article V. Construction Specifications

### 25-15 Construction Specifications.

All signs shall be installed in compliance with the building and electrical codes as required by the city building division.

## Article VI. Administration and Enforcement

### 25-16 Planning Divisions.

Planning division is authorized to process applications for sign permits and enforce and carry out all provisions of this chapter through a memorandum of understanding (MOU) between the TRPA and the city. The division is authorized to promulgate regulations, interpretations and procedures consistent with this function.

[The division is empowered, upon presentation of proper identification, to enter or inspect any building, structure, or premises in the city for the purpose of inspection of a sign. Should potential building and/or electrical code problems occur in this inspection, the division is authorized to request the building division to inspect the sign for possible building and electrical code violations in accordance with applicable provisions of state and federal law.]

### 25-17 Application for Permits.

Application for a sign permit for the erection, relocation, or change of copy shall be approved by the planning division upon a form provided by the division. Incomplete applications shall result in the immediate return of the application to the applicant without a decision.]

### 25-18 Permit Fees.

All applications for a sign permit shall be accompanied by the payment of a fee based upon the city council adopted fee schedule. Failure to provide the fee at the time of application submittal shall result in the immediate return of the application to the applicant without a decision.]

### 25-19 Permit Issuance.

The division staff shall issue a sign permit for the erection, relocation, or change of copy provided it is in receipt of a valid application (including fee) and provided the sign conforms to all applicable laws and regulations of this chapter.]

### 25-20 Revocation.

The division may revoke a sign permit for any false statement or misrepresentation of fact in the application. Any sign which has been erected, relocated, change of copy or color, based upon a false statement or misrepresentation, shall be considered an illegal sign and subject to the terms and conditions of this chapter.

### 25-21 Inspection Upon Completion.

Any person erecting, relocating, changing copy or color, for which a sign permit has been issued, shall notify the division when the work has been completed. The division shall inspect the sign for conformance with the permit. This inspection shall not relieve the applicant from obtaining any other inspection from other divisions or agencies.

**25-22 Exceptions**

A. Exceptions to those design standards contained in Article IX and X of this chapter may be allowed, provided the following findings can be made:

1. The situation exists whereby strict application of the standard is unfair and infeasible to the applicant; and

2. The exception is in harmony with the purpose and intent of this chapter; and

3. The approval of the exception will not have a significant effect upon other property owners or occupants of property in the vicinity; and

4. The exception produces benefits equal to the benefits contained in this chapter.

B. In granting each exception the planning division staff may attach additional conditions necessary to carry out the spirit and purpose of this chapter in the public interest, including, but not limited to:

1. Removal of other nonconforming signs.

2. Copyrighted colors on logos. Those logos which do not conform to the standard with regard to color contrast would be allowed if the logo is placed on a dark background which would not be less than 40 percent of the sign area.

3. Reduction in sign area. This may involve the reduction in sign area for freestanding or building signs. The proposals which reduce the sign area for those signs that are visible from the scenic corridor shall provide more mitigation than those which are not.

C. A scenic analysis shall be required for any exception on a scenic threshold travel unit or recreation area. Those exemptions not on a scenic threshold travel unit or recreational area may require a scenic analysis.

D. Designated locally unique signs pursuant to Section 25-23 may be granted exceptions in order to preserve their locally unique attributes.

**25-23 Locally Unique Signs.**

i. A business or property owner may apply to have a sign designated as a “locally unique” sign. The application shall be made to the city planning division on a designated form and include a fee set by the planning division fee schedule.

ii. The application will be considered by the city planning commission. Approval will be based on the following criteria:

a. The sign is in good condition and is in compliance with all building and safety code requirements;

b. The sign has historically been well maintained;

c. The sign advertises a business that is currently in operation and/or products or services currently provided by that business;

d. The sign does not degrade the scenic quality of the area;

e. The sign does not impede existing, or planned for, vehicle, transit, bicycle, or pedestrian circulation;

f. The sign demonstrates a creative and unique design or construction technique;

g. The sign is a widely recognizable icon or landmark within the city.

iii. The decision of the planning commission regarding the locally unique sign application shall be final and binding and applicant may not appeal this decision to any other decision making body.

**25-24 Partial Compliance to Nonconforming Signs.**

Modifications to existing nonconforming signs that bring a sign closer to compliance with this chapter shall be permitted provided:

i. The property owner has not received notification of a violation of this chapter or notification of nonconforming sign compliance requirements;

ii. The sign does not create a safety hazard as determined by the city manager or his/her designee;

iii. The sign is in good aesthetic condition as determined by the city manager or his/her designee; and

iv. The property owner enters into a signed written agreement with the city agreeing that the sign will be brought into full compliance within five years from the date of enactment of this amended ordinance and that failure to do so shall result in enforcement proceedings as set forth in this chapter.

**25-25 Violations.**

A. Signs Displayed Without a Permit and Modifications to Existing Signs Without a Permit. If any sign is or has been installed or placed on any property prior to the receipt of a required city sign permit, it is in violation of this chapter. Signs in violation of this chapter shall be removed within 10 days of notification of the violation to the property owner. If not removed according to the notice, a monetary penalty shall be required pursuant to the planning division fee schedule. The payment of the penalty shall not relieve any person of any other requirements or penalties within this chapter.

B. Installed Signs Existing Prior to May 1, 1994 (Previously Legal Nonconforming). Signs not brought into compliance within 90 days of city notification to the property owner that the amortization period for legal nonconforming signs has expired (expired May 2009) and legal nonconforming signs shall therefore be brought into compliance with this chapter. Failure to bring signs into compliance according to the notice will result in a monetary penalty pursuant to the planning division fee schedule.

**25-26 Appeals.**

Decisions of city staff on the approval or denial of a permit or determination of violations of this chapter may be appealed to the planning commission within five days of receipt of notification of the decision. The decision of the planning commission shall be final and binding and the applicant may not appeal this decision to any other decision-making body.

The following additional appeals procedures shall apply only to locally unique signs (SLTCC 25-23): The final decision of the planning commission may be appealed to the city council. Notice of appellant's intent to appeal to the city council shall be served upon the city clerk in writing no later than five days following the planning commission's decision.

**Article VI. Conflict, Severability and Effective Date**

**25-27 Conflict.**

~~If any portion of this chapter is found to be in conflict with any other provision of any zoning, building, fire, safety, or health ordinance of the city code, the provision which establishes the more restrictive standard shall prevail.]~~

**~~25-28 Severability.~~**

~~If any section, subsection, sentence, clause, or phrase of this chapter or its application to any person or circumstance is held invalid by the decision of any court of competent jurisdiction, the remainder of this chapter or the application of the provision to other persons or circumstances is in effect and shall remain in full force and effect.~~

**~~Article VIII. Sign Design Standards~~**

**~~25-29 Applicability.~~**

~~The following design standards are applicable to all signs erected, relocated, or change of copy within the city, including the community plan areas unless the community plan has a standard specific to the area.~~

~~These standards have been developed to improve the scenic quality ranking of the scenic corridor.~~

**~~25-30 Copy.~~**

~~A. **Standard.** This chapter shall not regulate the copy message.~~

~~**Guideline.** Copy should be simple to read and limited to six to eight words, and denote the name and type of business or services rendered; using copy to display menus, products and the like adds to the complexity of the copy.~~

~~B. **Standard.** In Section 13531 et seq. of the Business and Professions Code, which regulates motor fuel price signs, the following shall be required:~~

~~1. The sign shall not advertise more than three major grades of motor vehicle fuel offered for sale (propane is not considered a motor vehicle fuel).~~

~~2. The numerals designating the price of motor fuel shall be the minimum size as allowed under Section 13531 et seq. of the Business and Professions Code.~~

~~C. **Standard.** Sign area containing copy required by law (such as state required gas prices, security exchange commission (NASAD)) will not be deducted from the maximum allowable sign area, provided the copy does not exceed the minimum size requirements of the law.~~

~~D. **Standard.** Any increase in sign area copy beyond what is required by law is allowable provided the additional area is deducted from the appropriate BRB.~~

~~E. **Standards** for Tourist Accommodations Only.~~

~~1. **Standard.** The display of amenities and affiliations provided shall be limited to the list of city-approved symbols based on The Symbol Sourcebook. Should a symbol not exist then the city shall determine the appropriate symbol and include it in the list of city-approved symbols. The symbols shall be 12 inches by 12 inches and located in the bottom one-third of the sign face. Copy is not permitted in lieu of the symbols. (See Exhibit 1.)~~

~~**Guideline.** The uniform symbols are intended to provide the public a consistent and easily understood set of amenities and affiliation symbols throughout the city and to also reduce the copy on signs.~~

~~In the design of the sign face, owners should allow for change of symbols, keeping in mind that the chapter does not allow changeable copy signage.~~

For example, on internally illuminated signs, the symbols could be made of vinyl attached to the face. Should the owner desire to change the symbol, it could be done by simply changing the one vinyl symbol.

2. **Standard.** The vacancy/no vacancy signage shall be limited to a maximum height of letters of six inches.

**Guideline.** If exposed fluorescent tubing direct lighting is to be used for vacancy/no vacancy, the color red is suggested, as it is most visible as well as provides the public with a consistent color and symbol.

**25-31 Lighting.**

A. **Standard.** All illuminated signs shall have either or both indirect or diffused lighting.

**Guideline.** Indirect backlighting of individual letters is the encouraged method of sign illumination.

B. **Standard.** Indirect lighting sources shall be shielded to prevent the light source from being visible from a public right-of-way or adjacent property.

**Guideline.** Methods that can be used include an enclosure that extends past the light source sufficiently that will channel the light onto the sign face and not spill light to other areas. Landscape materials and mounding may also be used. Approval of the shielding method and its design will be based on how well the standard is met.

C. **Standard.** The intensity of lighting shall not create a visual hazard to the public.

D. **Standard.** All internally illuminated signs shall have a background which transmits a limited amount of light. (For the standard, see SLTCC 25-34, Color.)

**25-32 Landscaping.**

A. **Standard.** All freestanding signs shall be placed wholly within a landscaped area. The minimum landscape area shall be equal to the city standard setback, and across the property frontage, excluding driveways. Should a sign not be located within the standard property setback, the sign shall be placed in a landscape island. The island shall have a minimum depth from each sign face/edge of 10 feet. (Also see SLTCC 5-24, Landscaping. Planning commission design manual shall apply.)

**Guideline.** See the city design manual and SLTCC 5-24.

B. **Standard.** In the event that the landscaping provisions cannot be met as they pertain to freestanding signs, because of the physical limitations of the property, the staff may grant an exception under SLTCC 25-22, Exceptions.

Multiple partial compliance applications may be approved prior to the required compliance deadline; however, additional new measures towards compliance must be provided for each application.

C. **Standard.** A security deposit for the installation of the required sign landscaping may be allowed by the staff based on the winter ground disturbance prohibition from October 15th through April 30th of each year. Staff may place conditions, as appropriate, to ensure timely compliance.

**25-33 Construction.**

A. **Standard.** All supporting devices and braces shall be an aesthetic contribution to the sign structure and not a utilitarian appendage to hold up a sign, e.g., angle iron, pipes, guy wires are not allowed.

B. **Standard.** Freestanding signs shall be supported by two or more poles/supports or a monument base.

**Guideline.** The use of monument bases in conjunction with low-profile signs is encouraged.

**25-34 Color.**

A. **Standard.** Internally illuminated signs shall have backgrounds of a dark color, or opaque material which does not transmit light. If opaque, only the individual letters and/or symbols may be illuminated. Under day and night lighting conditions, the copy on internally illuminated signs shall be lighter than the background.

**Guideline.** Natural wood and high density foam core signs which can be carved and painted consistent with the design standards, including dark backgrounds, are also encouraged.

B. **Standard.** Externally illuminated signs may be any color background and copy except for bright neon colors (fluorescent) and reflective colors, which are prohibited.

**Guideline.** Bright colors are generally discouraged on signs except when used as accent colors.

C. **Standard.** The color standard shall not apply to nationally registered trademarks if the color is a part of the trademark. If the trademark only pertains to the copy, then the copy shall be placed on a city approved background color. The minimum background shall be 40 percent of the sign area.

**Guideline.** The use of trademarks on natural backgrounds is encouraged.

**25-35 Sign location.**

A. **Standard.** The maximum height of a roof sign shall not exceed 15 feet from grade and shall be placed within a sign dormer.

For building signs more than 50 feet from the property line, no sign shall be mounted on the roof of a building or mansard roof, unless the sign is placed on a "sign dormer" which is located within the bottom one-half of the roof, as seen in elevation.

**Guideline.** "Sign dormers" should be designed as an architectural element and materials should be compatible with the building. Buildings with flat roofs should construct a new roof to accommodate a roof dormer for signage. The minimum roof slope should be 5:12.

Individual letter signs should be used within "sign dormers" as they do not dominate the roof as do "canned" signs.

C. **Standard.** In the design of new buildings and major remodels, all improvements subject to design review shall identify signage locations.

**Guideline.** Architectural details of a building often suggest locations, size or shape of signs. Signs should complement the building and not be considered after the building is designed.

C. **Standard.** One freestanding sign shall be permitted per the street frontage or project area. Additional freestanding signs are only permitted on parcels or project areas on which there are more than one licensed business. In such circumstances, multiple freestanding signs shall only be permitted if each sign is at least 100 feet apart and each sign complies with all other provisions of this chapter.

1. Distance between freestanding signs shall be a minimum of 100 feet apart.

D. **Standard.** The location (setback) of a freestanding sign is subject to the maximum height allowed per the following setback chart, but in no case shall a sign be closer than five feet, zero inches to a property line.

**Guideline.** Where possible a low-profile sign is encouraged.

| **Freestanding Sign Setback** | **Height** |
|---|---|
| 13 or less | 10.00 |
| 14 | 10.25 |
| 15 | 10.50 |
| 16 | 10.75 |
| 17 | 11.00 |
| 18 | 11.25 |
| 19 | 11.50 |
| 20 | 11.75 |
| 21 | 12.00 |

25-36 Multiple Business Complex.

Repealed by Ord. 888.

25-37 Sign height.

A. **Standard.** For freestanding signs, see SLTCC 25-35.

B. **Standard.** For all other signs, including window signs and banners:

1. If a single story building is located within 50 feet of the property line, the maximum sign height shall be 15 feet, measured from grade.

2. If a single story building is greater than 50 feet, the maximum sign height shall be 25 feet.

C. **Standard.** For multi-story buildings, a building sign height over 15 feet is allowed, up to a maximum of 25 feet.

25-38 General Sign Design.

All signs should promote the city value of enhancing the unique beauty of Lake Tahoe by adherence to a high aesthetic quality and professional construction standards.

**Article IX. Sign Area Formula City-Wide**

**25-39 Introduction.**

Signage is a very complex problem. A number of factors guide the process of sign regulation. These factors include legal constraints of local, state, and federal laws as well as factors such as topography, traffic speed and local demographic makeup.

Basic to the use of signs is the communicative aspect of signage, which in many cases is the only viable and cost effective means of advertising the presence of a business. It is this aspect that complicates the development of a sign ordinance as it is impossible to predict the communicative needs of all businesses. The rules that are developed may or may not serve the communicative needs of the sign user and the community.

This sign chapter will allow the individual business owners the flexibility to develop a sign package that will meet their own individual communication needs, within a framework that will be sensitive to the local environment.

**25-40 Concept.**

Each business and multiple business complex (MBC) has a computed sign budget. From this budget, the business owner has the flexibility to apply the budget to freestanding and/or one or more building signs.

A. **Standard.** The area of each sign face shall be calculated to determine sign area. For example, a freestanding sign, at right angles to the road with each sign face being 20 square feet, has a total area of 40 square feet.

**25-41 Computing the Sign Area.**

The calculation is a two-step process.

A. The first step is to establish the base reference budget (BRB) for the business or MBC.

B. The second step is to calculate the individual sign area for each freestanding and building sign.

These steps are translated into the following formulas:

For Step 1, calculate the BRB for signage identifying a business

$$BRB = C \bullet D(\sqrt[2.5]{A + 80})$$

Where

A = Area of business floor space (feet)

C = 1.1 for businesses not located in a multiple business complex

= 0.9 for businesses in a multiple business complex where signage is (or will be) provided to identify the complex

= 1.0 for businesses in a multiple business complex where signage is not (and will not) be provided to identify the complex

D = With respect to principal customer access

= 1.0 where the business is accessed by one street

= 1.41 where the business is accessed by two streets

= 1.73 where the business is accessed by three streets

= 2.0 where the business is accessed by four streets

For Step 1 calculate the BRB for signage identifying a multiple business complex

$$BRB = D(\sqrt[2.5]{A + 80})$$

Where

A = Area of business floor space for the entire complex (feet)

D = With respect to principal customer access

= 0.50 where the business is accessed by one street

= 0.70 where the business is accessed by two streets

= 0.85 where the business is accessed by three streets

= 1.0 where the business is accessed by four streets

1. **Standard.** The BRB used to calculate the sign area for each individual sign of a business when added together shall not exceed the total BRB for that business.
2. **Standard.** The BRB used to calculate the sign area for each individual sign of a multiple business complex when added together shall not exceed the total BRB for that multiple business complex.
3. **Standard.** Freestanding sign area shall be limited to 50 percent of the base reference budget (BRB).

If the project area qualifies for two freestanding signs, no single freestanding sign shall be permitted more than 35 percent of the BRB.

If the project area qualifies for three freestanding signs no single freestanding sign shall be permitted more than 28 percent of the BRB.

If the project area qualifies for four freestanding signs no single freestanding sign shall be permitted more than 25 percent of the BRB.

For Step 2 calculate the sign area for an individual sign.

$$\text{new sign area} = \frac{(BRB) \bullet V \bullet S}{35} \left(1 + \frac{H}{250}\right)^2$$

Where

S = Vehicle speed limit on the street where the sign is to be viewed from (in miles per hour)

H = Height of the sign (as measure from finish grade to the top of the sign; in feet. Maximum height is 26 feet)

V = Horizontal viewing distance coefficient (as determined by the following chart)

**Setback and Angle Table**

| **Setback Footage** | | **Angle Values** | | | | | |
|---|---|---|---|---|---|---|---|
| Greater Than | Less Than or Equal | 0 to 15 | 16 to 30 | 31 to 45 | 46 to 60 | 61 to 75 | 76 to 90 |
| >5 ft. | < = 50 ft. | 0.50 | 0.60 | 0.70 | 0.80 | 0.90 | 1.00 |
| >50 ft. | < = 100 ft. | 0.55 | 0.65 | 0.75 | 0.85 | 0.95 | 1.05 |
| >100 ft. | < = 150 ft. | 0.60 | 0.70 | 0.80 | 0.90 | 1.00 | 1.10 |
| >150 ft. | < = 200 ft. | 0.65 | 0.75 | 0.85 | 0.95 | 1.05 | 1.15 |
| >200 ft. | < = 250 ft. | 0.70 | 0.80 | 0.90 | 1.00 | 1.10 | 1.20 |
| >250 ft. | < = 300 ft. | 0.75 | 0.85 | 0.95 | 1.05 | 1.15 | 1.25 |
| >300 ft. | < = 350 ft. | 0.80 | 0.90 | 1.00 | 1.10 | 1.20 | 1.30 |
| >350 ft. | < = 400 ft. | 0.85 | 0.95 | 1.05 | 1.15 | 1.25 | 1.35 |
| >400 ft. | < = 450 ft. | 0.90 | 1.00 | 1.10 | 1.20 | 1.30 | 1.40 |
| >450 ft. | < = 500 ft. | 0.95 | 1.05 | 1.15 | 1.25 | 1.35 | 1.45 |
| >500 ft. | | 1.00 | 1.10 | 1.20 | 1.30 | 1.40 | 1.50 |

These formulas have been incorporated into a computerized spread sheet program. The spread sheet format will permit the applicant the ability to easily adjust and manipulate the various factors to see what is the best signage package for the business or multiple business complex. (Exhibit 4.)

~~As an alternative to the computer, a manual worksheet has been developed to accomplish the same result. (Exhibit 5.)~~

~~C. The following shall not be considered sign area:~~

~~1. Pedestrian signs;~~

~~2. Temporary signs;~~

~~3. Temporary window signs;~~

~~4. Sign embellishments; and~~

~~5. Appurtenant signs.~~

## Article X. Tourist Core Area Plan Provisions

### 25-42 Purpose.

The purpose of this section is to augment the city-wide sign ordinance with a set of specific design standards tailored to meet the urban design plan for the Tourist Core Area Plan.

~~**25-43 Scope.**~~

~~The Tourist Core Area Plan is composed of two parts:~~

~~A. The redevelopment plan area; and~~

~~B. The area outside the redevelopment plan area. (See Exhibit 2.)~~

~~Within the redevelopment plan area all the sections of the city-wide sign ordinance apply, however, Article VIII, Sign Design Standards, has been augmented with additional standards in SLTCC 25-44.~~

~~Within the area outside the redevelopment plan area, all the sections of the city-wide sign ordinance apply.~~

### 25-44 Redevelopment Sign Design Standards.

The following redevelopment sign design standards shall apply to the redevelopment plan area only. Should a conflict arise between the city-wide standards contained within Article VIII and the following standards, the redevelopment sign design standards shall apply.

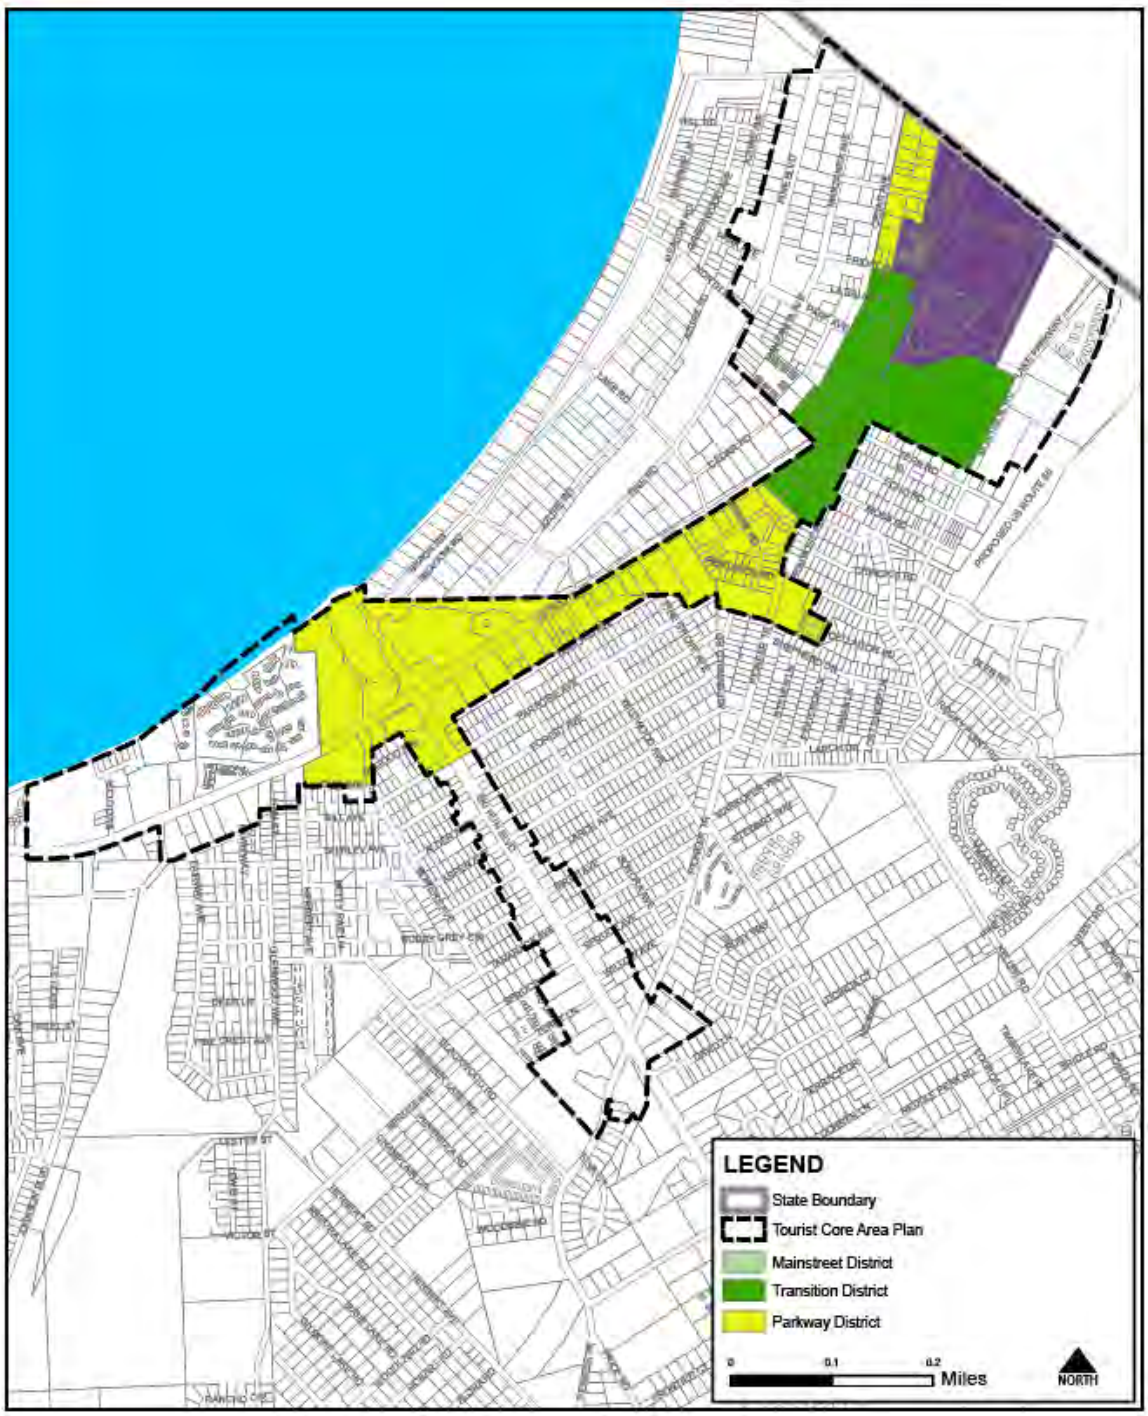
A. **Standard.** Redevelopment plan area definitions:

1. Mainstreet District. This district is generally described as being located in the Stateline core area, along both sides of U.S. Highway 50, between Park Avenue/Heavenly Village Way and the California/Nevada state line and between Bellamy Court and Cedar/Friday/Laurel Avenues. (~~See city staff for precise boundaries~~See figure below.)

This district is oriented around intense pedestrian activity. As a result, the sign standards are reflective of a pedestrian environment: no freestanding signs are allowed; only building, landscape, wall and window signs are allowed.

2. Transitional District. This district is generally described as being located along both sides of U.S. Highway 50, adjacent to the Mainstreet district, between the California Loop Road diversion and Park Avenue/Heavenly Village Way and the North Loop Road and a line westerly of the extension of Cedar Avenue. (See ~~city staff for precise boundaries~~figure below.)

This district is characterized as being both pedestrian and automobile oriented. As such, the sign standards are sensitive to both traffic modes, but will only permit those freestanding signs that are low profile signs.



3. Parkway Districts. These districts are generally located:

   a. Along both sides of U.S. Highway 50 for the depth of the commercial property, from Herbert Avenue to the California Loop Road diversion;

   b. Along Ski Run Boulevard for the depth of the commercial property from U.S. Highway 50 to Paradise Avenue;

   c. Within the Lakeside Motel district between Laurel Avenue and Cedar Avenue and Friday Avenue to Stateline Avenue. (See ~~city staff for precise boundaries~~figure below.)

      The Parkway districts are characterized as automobile oriented and permit both freestanding and building signs.

B. **Standard.** All legal nonconforming signs shall be brought into conformance with this chapter when:

1. Refer to Article VI of this chapter for compliance triggers; or
2. A major remodel of a structure occurs, such as adding units or additional square footage is constructed; or
3. Curb, gutter, and sidewalks are constructed adjoining the property.

D. **Standard.** All redevelopment signs shall comply with the following color standards:

1. All copy appearing on a building, freestanding or window sign shall be placed on a dark background to create a contrast. Under day and night lighting conditions, the copy shall be lighter than the background.
2. The copy may be any color except for bright neon colors (fluorescent) and reflective colors, which are prohibited.

   **Guideline.** Bright colors are generally discouraged on signs except when used as accent colors.
3. The color standard shall not apply to nationally registered trademarks if the color is a part of the trademark. If the trademark only pertains to the copy, then the copy shall be placed on a city approved background color. The minimum background shall be 40 percent of the sign area.

   **Guideline.** The use of trademarks on natural backgrounds is encouraged.

**25-45 Mainstreet District.**

A. **Standard.** Freestanding signs shall not be permitted. (Note: Landscape wall signs, as defined, are not considered to be freestanding signs, but are counted as building signs.)

1. Exception: The Park Avenue/Heavenly Village Way and the Bellamy Court frontages in the Mainstreet district are allowed freestanding signs. The design standards for this exception sign are:
   a. Materials: Stone retaining wall matching the architectural stone with metal lettering on a rectangular solid background. Metal letters may be applied directly to the stone wall as an option. No can signs allowed.
   b. Letter height: Up to two feet, zero inches.
   c. Wall height: Up to four feet, zero inches, unless in a defined clear zone, in which case the sign can be up to three feet, zero inches.
   d. Sign area: Maximum of 20 square feet per sign face for a maximum of 40 square feet. The height and width of the solid backdrop on which the letters are attached shall be used to compute the sign area. The stone wall, on which the solid backdrop is attached, shall not be counted as sign area.
   e. Installation method: Concrete footing.
   f. Lighting: Up-lighting from nonvisible source on ground or back-lighted individual letters onto solid backdrop.
   g. Sign Orientation: Either parallel or up to 90 degrees to the center lne of the street.
   h. Number allowed – Major buildings:
      i. Mountain Side.

1. Grand Summit Hotel: One on-site freestanding sign on Heavenly Village Way.
2. Timber Lodge: One on-site freestanding sign on Bellamy Court.

ii. Lake Side.

1. None.

i. Purpose: To allow some auto-oriented signage in the non-intensive pedestrian public space, while maintaining a pedestrian scale for the sign.

With the following exception:

Two freestanding area identification signs conforming to the exemption standards contained in SLTCC 25-12(B)(2), may be located as follows:

i. Mountain Side.

1. One on the southeast corner of U.S. Highway 50 and Park Avenue/Heavenly Village Way;

ii. Lake Side.

1. One on the northwest corner of U.S. Highway 50 and Stateline Avenue.

B. **Standard.** Landscape wall signs: The design standards for a landscape wall sign are:

1. Materials: Stone retaining wall matching the architectural stone with metal lettering on a rectangular solid backdrop. Metal letters may be applied directly to the stone wall as an option. No can signs allowed.
2. Letter height: Up to two feet, zero inches.
3. Wall height: The wall on which the sign is placed shall not exceed four feet, zero inches, unless in a defined clear zone, in which case the wall can be up to three feet, zero inches.

   Exception: If the wall is a part of a structural element to facilitate the use of the site, i.e., a retaining wall, the wall height shall be as high as deemed appropriate by an engineer to accomplish the wall's purpose. As a part of the sign permit, conditions may be imposed to ensure a pedestrian scale is maintained for the wall, including terracing or other landscape features.
4. Sign area: Maximum of 40 square feet. This is a total maximum square footage for the sum of all landscape wall and building signs on the parcel. The height and width of the solid backdrop on which the letters are attached shall be used to compute the sign area. The stone wall, on which the solid backdrop is attached, shall not be counted as sign area.
5. Installation method: Concrete footing.
6. Lighting: Up-lighting from nonvisible source on ground or back-lighted individual letters onto solid backdrop.
7. Sign orientation: Only parallel to the centerline of the street.
8. Number allowed – Major buildings:

   a. Mountain Side.

      i. One for the Timber Lodge.

      ii. One for the Gondola.

      ii. One for Cecil's Market.

      iv. One for the transit center.

v. One for the Grand Summit on U.S. Highway 50.

b. Lake Side.

i. One for the Convention Center.

ii. One for Project A.

iii. One for Project B.
iv. One for Stardust Timeshare.

9. Purpose: To not have a proliferation of freestanding signs along the highway corridor but rather have those signs which are a part of a landscape feature, such as a retaining wall, be allowed to incorporate signage. If the sign is not a part of a landscape feature, then the sign may be permitted, provided it is integrated into the landscape so as not to be a dominant sign form. Such integration shall include such items as pedestrian amenities such as pedestrian seating, water feature, art, boulders or the use of landscape material to frame and soften the sign from all sides.

C. **Standard.** Building signs: There are two types of building signs: (1) those which provide secondary identification to the major buildings, and (2) those which identify the individual businesses.

The design standards are:

1. Secondary Identification of Major Buildings.

a. Materials: Signs may be metal or wood. No can signs allowed.

b. Letter height: Up to one foot, two inches.

c. Sign height: Up to 15 feet.

d. Sign area: Maximum of 40 square feet. This is a total maximum square footage for the sum of all landscape wall and secondary identification of major building signs on the parcel.

e. Installation method: Flush attachment to building wall and avoid contrasting attachment anchors.

Exception: The parking garage building sign may use a projecting sign in lieu of a sign attached flush to building wall.

f. Lighting: Down-lighted from nonvisible source on building wall or back-lighted individual letters onto solid backdrop.

g. Sign orientation: Varies depending on building wall orientation.

h. Number allowed – Major buildings:

i. Mountain Side.

1. Four for the Timber Lodge.

2. Two for Cecil's Market.

3. Two for the transit center.

4. None for the Gondola.

5. Two for the Grand Summit Hotel.

6. One for the cinema.

7. One for the parking garage.

ii. Lake Side.

1. Two for Project A (one on U.S. Highway 50 and one on the public space).
2. Two for Project B (one on U.S. Highway 50 and one on the public space).
3. Two for the Stardust Timeshare Hotel.

i. Purpose: To provide pedestrian level identification for major buildings in the project site.

2. Individual Businesses. There are three types of individual business signs: (a) those which provide identification to businesses with an elevation sign to be viewed from the street and sidewalks, (b) those which provide identification to businesses from within the pedestrian space under the canopy of the building arcade, and (c) a three-dimensional icon placed on a column of the building arcade.

a. Elevation Signs.

i. Materials: Signs may be metal or wood with a minimum edge thickness of two inches; no can signs will be permitted.

ii. Letter height: Up to nine inches.

iii. Sign height above ground: Varies depending on the arcade fascia.

iv. Sign area: In place of the formula, the sign area is regulated by the uniform backdrop dimensions of a height of one foot, eight inches and a length of 12 feet, zero inches (20 square feet).

v. Installation method: Signs shall be hung from the soffit board of the arcade. See city planning for criteria.

vi. Lighting: Down-lighted from nonvisible source from arcade wall or back-lighted individual letters. See city planning for criteria.

vii. Sign orientation: Parallel to arcade.

viii. Number allowed: One for each tenant space.

ix. Purpose: To provide business locations with a building sign (elevation) that can be viewed from the street and sidewalk.

b. Under-Canopy Projecting Arcade Sign.

i. Materials: Signs may be metal or wood; no can signs will be permitted.

ii. Letter height: Variable; typical is six inches.

iii. Sign height: Bottom of sign is no lower than eight feet from sidewalk, nor higher than 15 feet.

iv. Sign area: In place of the formula, the sign area is regulated by the uniform backdrop dimensions of a maximum height of two feet, zero inches and a maximum length of three feet, six inches (each side is seven square feet for a total of 14 square feet)..

v. Installation method: Signs shall be attached to and hung at 90 degrees to the wall of the building. The mounting brackets shall be strong enough to prevent sagging over the life of the sign.

vi. Lighting: None. The arcade lighting will illuminate the sign or back-lighted individual letters.

vii. Sign orientation: 90 degrees to the building wall on which it is attached.

ix. Number allowed: One for each tenant space.
x. Purpose: To provide identification to businesses from the pedestrian space under the canopy of the building arcade.

c. Icon Sign

i. Materials: Icon may be metal, plastic or wood.

ii. Letter height: No letters unless they are a significant and integral element of the icon, such as the letters ABC on a child's building block.

iii. Sign height: Bottom of sign is no lower than eight feet from sidewalk, nor higher than 15 feet.

iv. Sign area: In place of the formula, the icon shall wholly fit within an imaginary cube with a maximum height of one and one-half feet, a maximum width of one and one-half feet and a depth of one and one-half feet. For the purpose of computing sign area, only the one dimensional plane shall be used. Therefore, the icon sign area shall be computed in the same manner as an under-canopy projecting sign, i.e., a double-sided sign (each side is two and one-half square feet for a total of five square feet).

v. Installation method: The icon shall be attached to the building arcade support column. The mounting brackets shall be strong enough to prevent sagging over the life of the sign.

vi. Lighting: None.

vii. Sign orientation: 90 degrees to the building arcade support column and oriented to the street or the sidewalk side of the arcade canopy and not oriented to the pedestrians under the arcade canopy.

viii. Number allowed: One for each tenant space.

ix. Purpose: To provide iconic identification to businesses in a whimsical and entertaining manner creating a festive character to the pedestrian streetscape environment.

D. Standard. In addition to the building signs allowed in subsections A, B and C of this section, a computer-controlled variable message electronic sign is allowed in the Mainstreet sign district, subject to the following:

a. Materials: Sign materials are subject to the city-wide design standards in Article VIII.

b. Letter height: Sign letter height is subject to the city-wide design standards in Article VIII.

c. Sign height: Maximum height is 25 feet.

d. Sign area: Sign area is a maximum of 80 square feet. The unused portion of the 80 square feet area shall not be transferred to other building signs allowed in subsections A, B and C of this section. The 80 square feet area may be split into multiple sign faces subject to the public hearing process.

e. Installation method: Flush attachment to building wall and avoid contrasting attachment anchors.

f. Lighting: Sign lighting is subject to the city-wide design standards in Article VIII.

g. Sign orientation: Varies depending on building wall orientation.

h. Number allowed – Major buildings:

i. Mountain Side.

1. None.

ii. Lake Side.

1. One for the Convention Center.

i. Purpose: To provide identification for activities within the Convention Center.

j. Other.

i. The message and sign area illumination must remain constant, except for that period of time when the message is being changed. The rate of copy change shall not exceed four message changes per one-hour period.

ii. A public hearing and notice to surrounding property owners, including environmental documentation, shall be required for all computer-controlled variable message electronic signs. This public hearing is required irrespective of whether the sign needs an exception to any design standards contained in Articles VIII and X (see SLTCC 25-49, Exceptions).

iii. The intent of a computer-controlled variable message electronic sign is to convey a written message. The intent does not include a graphic and/or written message which includes motion, such as a television.

E. Standard. Seasonal graphics are allowed subject to the following:

1. All the public infrastructure has been installed according to a city approved master streetscape plan, including curbs, gutter, sidewalks/bike trails, landscaping and street lights;

2. All the signs are in conformance with the city sign ordinance and the building design and improvements are in conformance with the city design standards;

3. The light standard is designed to accept the seasonal graphic;

4. There is a business association in place;

5. Conform to the following:

a. Materials: Fabric, metal or wood; no can signs will be permitted;

b. Letter height: Not applicable;

c. Sign height: Bottom of graphic is no lower than eight feet from sidewalk, nor higher than 15 feet;

d. Sign area: A maximum length of four feet, zero inches and a maximum width of one foot, six inches;

e. Installation method: Signs shall be attached to the light pole on city building division approved mounting brackets to prevent bending from wind and snow loads over the life of the brackets;

f. Lighting: None. The streetlight will provide illumination;

g. Sign orientation: 90 degrees to the street;

h. Number allowed: Maximum of two per light pole;

i. Purpose: To provide a festive character to the pedestrian streetscape environment;

6. Have city planning approval to ensure compliance with these provisions prior to installation.

**25-46 Transition District.**

A. **Standard.** The maximum height of freestanding signs shall be limited to low-profile signs (see SLTCC 25-4, Definitions, for low profile).

1. Exception: Multiple business complexes in which the primary tenant is a major grocery store and set back a minimum of 150 feet from the front property line shall be allowed to have freestanding signs with heights consistent with the city sign formula.

B. **Standard.** The maximum area allowed in the Transitional district shall be 80 square feet.

1. Exception: Multiple business complexes in which the primary tenant is a major grocery store and set back a minimum of 150 feet from the front property line shall be allowed to have freestanding signs with sign areas consistent with the city sign formula. The design standards for this exception sign are:

a. Materials: Signs to be constructed of stone, metal and wood; no can signs will be permitted.

b. Letter height: Variable.

c. Sign height: Based on city sign formula.

d. Sign area: Based on city sign formula.

e. Installation method: Concrete footer with steel framing.

f. Lighting: Down-lighting from nonvisible light source on the freestanding sign.

g. Sign orientation: Variable, based on city sign formula.

h. Number allowed: Two; one on U.S. Highway 50 and one on Park Avenue.

i. Purpose: To provide tenant information for the neighborhood retail project.

C. **Standard.** The maximum building sign area shall be 40 square feet.

1. Exception: Multiple business complexes in which the primary tenant is a major grocery store and set back a minimum of 150 feet from the front property line shall be allowed to have building signs with sign areas consistent with the city sign formula. The design standard for this exception sign is:

a. Materials: Two-inch thick by 18- to 24-inch high, internally illuminated Plexiglas faced individual channel aluminum letters.

b. Letter height: Variable.

i. Major grocery store: Store name, up to four to eight feet; secondary uses, up to 24 inches.

ii. Major tenants' names: Up to 30 inches.

iii. Other tenants' names: Up to 18 inches.

c. Sign Height.

i. Major grocery store: Store name, up to 25 feet; secondary uses, up to 15 feet.

ii. Major tenants' names: Up to 15 feet.

iii. Other tenants' names: Up to 15 feet.

d. Sign area: Based on city sign formula.

e. Installation method: Letters affixed to a six by six painted channel raceway sandwiched between two arcade beams. See concept sketch.

f. Lighting: Internally illuminated channel letters.

g. Sign orientation: Varies depending on arcade orientation.

h. Number Allowed.

i. Major grocery store: Three.

ii. Major tenants: One for each tenant space.

iii. Other tenants: One for each tenant space.

i. Purpose: To provide tenant information for the neighborhood retail project.

**25-47 Parkway Districts.**

A. **Standard**: The maximum freestanding sign area allowed in the Parkway District shall be 80 square feet. The maximum building sign area shall be 40 square feet.

Exception: The signs for Hotel B of project 3 shall conform to the Mainstreet District signage standards as outlined in SLTCC 25-5

**Guideline**: The signs on Ski Run Blvd. should be limited to low profile signs to convey a pedestrian scale.

**25-48 Sign Area Formula – Redevelopment Plan Area.**

A. Mainstreet District. The formulas within Article IX are maintained, however, the standards contained in Article X take precedence over the city-wide ordinance and standards.

B. Transitional District. The formulas within Article IX are maintained, however, the standards contained in Article X take precedence over the city-wide ordinance and standards.

C. Parkway Districts. The formulas within Article IX are maintained, however, the standards contained in Article X take precedence over the city-wide ordinance and standards.

**25-49 Exceptions.**

A. In addition to those exemptions noted within this chapter, the only other exceptions allowed are those design standards contained in Articles VIII and X of this chapter, provided the following findings can be made:

1. The situation exists whereby strict application of the standard is unfair and infeasible to the applicant; and

2. The exception is in harmony with the purpose and intent of this chapter; and

3. The approval of the exception will not have a significant effect upon other property owners or occupants of property in the vicinity; and

4. The exception produces benefits equal to the benefits contained in this chapter.

B. In granting each exception the planning division staff may attach additional conditions necessary to carry out the spirit and purpose of this chapter in the public interest, including, but not limited to:

1. Removal of other nonconforming signs.

2. Copyrighted colors on logos. Those logos which do not conform to the standard with regard to color contrast would be allowed if the logo is placed on a dark background which would not be less than 40 percent of the sign area.

3. Reduction in sign area. This may involve the reduction in sign area for freestanding or building signs. The proposals which reduce the sign area for those signs that are visible from the scenic corridor shall provide more mitigation than those which are not.

C. A scenic analysis shall be required for any exception on a scenic threshold travel unit or recreation area. Those exemptions not on a scenic threshold travel unit or recreational area may require a scenic analysis. The city and TRPA shall determine the level and type of scenic analysis.

D. A public hearing and notice to surrounding property owners shall be required for a computer-controlled variable message electronic sign exception(s).

~~H. **Parking, Driveway and Loading Spaces:** See City Code, Chapter 5, Article VIII, Parking, Driveways and Loading Spaces.~~

# Appendix D
# CITY OF SOUTH LAKE TAHOE GREEN BUILDING PROGRAM

The City has identified LEED, Energy Star, Green Point, BREEAM, and the National Green Build Standard as certification programs in alignment with the City's sustainable building and emissions reductions goals as outlined in the Climate Action Plan. Obtaining one of these certifications makes the project eligible for one or all of the incentives below. Should an applicant wish to complete a certification program not listed, the program may be reviewed by City staff and the Sustainability Coordinator for consistency with this program's goals.

In addition to requirements of the third-party certification, the following measures are encouraged:

- Appliances – All kitchen appliances meet Energy Star rating if an Energy Star designation is available for that appliance.
- Reduction in cement uses – Foundation mixes contain at least 20% reduction in cement by replacing cement with products such as flyash, slag, silica fume, or rice hull ash.
- Renewable/Recycled materials – At least 20% of all hard floor covering in the home may be a recycled content material or be of rapidly renewable materials such as bamboo, cork, natural linoleum flooring, engineered wood products, or minimum of 50% recycled content tile.
- Low VOC flooring – At least 80% of the total area of resilient flooring installed may be certified under the Resilient Floor Covering Institute (RCFI) FloorScore program and at least 80% of the total area of carpet meet the CRI Green Label Plus requirements for carpet.
- Radon Resistant construction – Radon resistant construction that meets the criteria of the Basic Techniques for Radon Resistant Construction recommended by the US EPA, is included in the project and the owner has been provided with information on radon risks, the radon resistant construction in the home, and radon testing options.
- Sustainable deck products – All decks surfaces utilize Forest Stewardship Council (FSC) certified wood, salvaged wood, or recycled content plastic or composite decking. Plastic or composite decking materials must be approved by the Office of the State Fire Marshall for use in the Wildland Urban Interface area.
- Low water consumption landscaping – The project does not include lawn area greater than 5% of the lot area and all landscaping is irrigated with a drip irrigation system that includes soil moisture control sensors.
- Kitchen faucet – Maximum flow rate at sink faucets is not greater than 1.5 gallons per minute at 60 psi.

**RESIDENTIAL PROJECT INCENTIVES**

Residential projects that voluntarily achieve third-party certification would be eligible for the following:

- Priority plan check, over all other projects, by all City Departments.
- Priority on the residential allocation waiting list.
- Recognition at a televised City Council meeting and on the City Website

~~**Level 1 – "Priority Plan Check"**~~

~~For residential projects, including new construction, additions and remodels, City staff has drafted a list of "Recommended Green Measures for Residential Projects." These measures are feasible to implement and do not require significant additional investment beyond the mandatory measures of building codes and the CalGreen Code. Additionally, they have a good "bang for the buck" and the City would like to encourage applicants to incorporate them into their residential projects.~~

~~Recommended Green Measures for Residential Projects~~

- ~~Appliances – All kitchen appliances meet Energy Star rating if an Energy Star designation is available for that appliance.~~
- ~~Reduction in cement uses – Foundation mixes contain at least 20% reduction in cement by replacing cement with products such as flyash, slag, silica fume, or rice hull ash.~~
- ~~Renewable/Recycled materials – At least 20% of all hard floor covering in the home must be a recycled content material or be of rapidly renewable materials such as bamboo, cork, natural linoleum flooring, engineered wood products, or minimum of 50% recycled content tile.~~
- ~~Low VOC flooring – At least 80% of the total area of resilient flooring installed must be certified under the Resilient Floor Covering Institute (RCFI) FloorScore program and at least 80% of the total area of carpet meet the CRI Green Label Plus requirements for carpet.~~
- ~~Radon Resistant construction – Radon resistant construction that meets the criteria of the Basic Techniques for Radon Resistant Construction recommended by the US EPA, is included in the project and the owner has been provided with information on radon risks, the radon resistant construction in the home, and radon testing options.~~
- ~~Sustainable deck products – All decks surfaces utilize Forest Stewardship Council (FSC) certified wood, salvaged wood, or recycled content plastic or composite decking. Plastic or composite decking materials must be approved by the Office of the State Fire Marshall for use in the Wildland Urban Interface area.~~
- ~~Low water consumption landscaping – The project does not include lawn area greater than 5% of the lot area and all landscaping is irrigated with a drip irrigation system that includes soil moisture control sensors.~~
- ~~Kitchen faucet – Maximum flow rate at sink faucets is not greater than 1.5 gallons per minute at 60 psi.~~

~~Projects that incorporate these measures will be given priority for plan check, by all City Departments over projects that meet only mandatory requirements. An applicant will be required to submit the checklist along with supporting materials, and a signed testimony that the project complies with the measures with the building permit application. Compliance with the recommended green measures would be verified during the plan check and building inspections.~~

~~A fine of $500 would be imposed on projects that, at the time of building occupancy, have not incorporated the green measures but received priority plan check. Funds from the fine would be placed in an account that would be used for City sustainability efforts.~~

~~**Level 2 – "Priority Plan Check, Allocation, and Recognition"**~~

~~As part of this program, it is important to utilize the nationally recognized green building certification systems so that the City's green building success is recognized beyond the City limits. Builders and building owners may also find this important in their marketing efforts. An article in the January 2010 issue of Find Homebuilding magazine emphasized this point when stating that, "builders are looking to certification programs not only because they want to build better homes but also because they want to differentiate themselves from those who aren't building homes of similar quality." Certification provides proof that the home has been built to a widely recognized standard. The article goes on to state that, "certification becomes a powerful marketing tool for builders as well as homeowners who plan to sell their home one day."~~

~~Therefore, the second level of voluntary measures requires third party green building certification. Residential buildings that obtain green building LEED, Energy Star or GreenPoint Rated certification would be eligible for the following:~~

- ~~Projects would receive priority plan check, over all other projects, by all City Departments.~~
- ~~Projects would receive recognition at a televised City Council meeting and on the City Website.~~

~~Proof of final certification will be required prior to issuing a certificate of occupancy. If certification is not obtained when occupancy is required, the applicant may post a security equal to $10,000 in order to receive a certificate of occupancy for the building. The security would be held until green building certification is obtained. If certification is not obtained within 1 year of occupancy, the security would be forfeited and deposited into the City fund to be used for City sustainability efforts. If the project is not requesting residential allocation(s) they can still qualify for the other incentives and would need to provide a signed testimony and documentation demonstrating their intent to obtain green building certification with their building permit application and provide final certification prior to occupancy.~~

**COMMERCIAL PROJECT INCENTIVES**

Commercial projects that voluntarily achieve third-party certification would be eligible for the following:

- Priority plan check, over all other projects, by all City Departments.
- CFA allocation from the City's unallocated CFA pool.
- Recognition at a televised City Council meeting and on the City Website

~~There is only one level of incentives provided for Commercial projects, "Priority Plan Check, Allocation, and Recognition."~~

~~Buildings that obtain green building certification LEED certification or an Energy Star Label would be eligible for the following:~~

- ~~Projects would receive priority plan check, over all other projects, by all City Departments.~~

- Residential Commercial projects would have eligible for CFA allocation from the City's unallocated CFA Pool.
- Projects would receive recognition at a televised City Council meeting and on the City Website.

When submitting a Design Review application for a new commercial project, applicants can include a request for Commercial Floor Area (CFA) form the City's unallocated CFA pool. Currently, these requests would require consideration by the City Planning Commission and eligible projects are required to meet the following criteria:

1. Be within an adopted Community Plan Area,
2. Meet the criteria for CFA allocation required by the applicable Community Plan,
3. Meet all applicable design standards,
4. Include the construction of improvements that will benefit the public and community which are more extensive than required by the applicable Community Plan or City Code, and
5. Provide an economic benefit to the community with enough significance to merit the allocation of the City's CFA resource.

This policy for allocation of CFA from the unallocated pool was adopted by the City Council on June 7, 2007. In order to provide CFA as an incentive for green building certification, the policy would be amended to include LEED or Energy Star green building certification as one of the criteria. As part of the Design Review application, the applicant would indicate which certification program they will pursue. Prior to issuing a building permit, documentation that demonstrates pursuit of the certification is required (application for Designed to Earn the Energy Star, or LEED Project Registration). Proof of final certification will be required prior to issuing a certificate of occupancy. If certification is not obtained when occupancy is required, the applicant may post a security of $1.50 per square foot of the building (minimum security of $10,000) in order to obtain occupancy of the building. The security would be held until green building certification is obtained. If certification is not obtained within 1 year of occupancy, the security would be forfeited and deposited into a City fund to be used for City sustainability efforts. If the project is not requesting commercial floor area they can still qualify for the other incentives.

## PROOF OF CERTIFICATION

All applications for projects utilizing this program shall include a signed testimony and documentation demonstrating their intent to obtain green building certification and provide final certification prior to issuance of a certificate of occupancy.

## GREEN BUILDING CERTIFICATION CRITERIA

Green building certification is required to obtain residential level 2 incentives or commercial incentives. Certification programs that have been found to be nationally recognized and achieve green building goals of the City include, but are not limited to, are the LEED, GreenPoint Rated, and Energy Star programs. For more information on these programs, go to:

LEED: http://www.gbci.org/homepage.aspx
GreenPoint Rated: http://www.builditgreen.org/greenpoint-rated
Energy Star: http://www.energystar.gov/index.cfm

Other green building certification programs are gaining recognition and there will likely be new ones in the future. In order to accommodate this trend, there would be an application process for other green building certification programs to be added to the list of LEED, GreenPoint Rated and Energy Stargreen building certificaitoncertification programs that qualify for the level 2 residential

~~incentives and commercial incentives. The application would be considered by the Planning Commission with a recommendation from the Sustainability Commission.~~

## EDUCATION AND OUTREACH

It is important that knowledge of green building within the community in general be increased. Knowledge of green building and its benefits can reduce utility bills, increase the quality of construction, increase indoor quality, and increase comfort of buildings.

At this time, the following efforts would be feasible for City staff to implement within the next year:

- City publication of Residential and Commercial Green Building Guides – Summer 2010
- Hold a workshop on the CalGreen Code mandatory requirements – Fall 2010
- Prepare a list of green building materials and products for local building and hardware stores and encourage them to carry them in their inventories – Fall 2010
- Establish Green Building Information Center at the Services Center building to provide clearinghouse information on Green Building – Continuous Effort
- South Lake Tahoe Green Building Website with information on green building certification programs and local architects, engineers, contractors, etc. with Green Building credentials or experience – Winter 2010
- Advertising at the Services Center for Green Building education and events put on by other organizations

CITY OF
SOUTH LAKE TAHOE

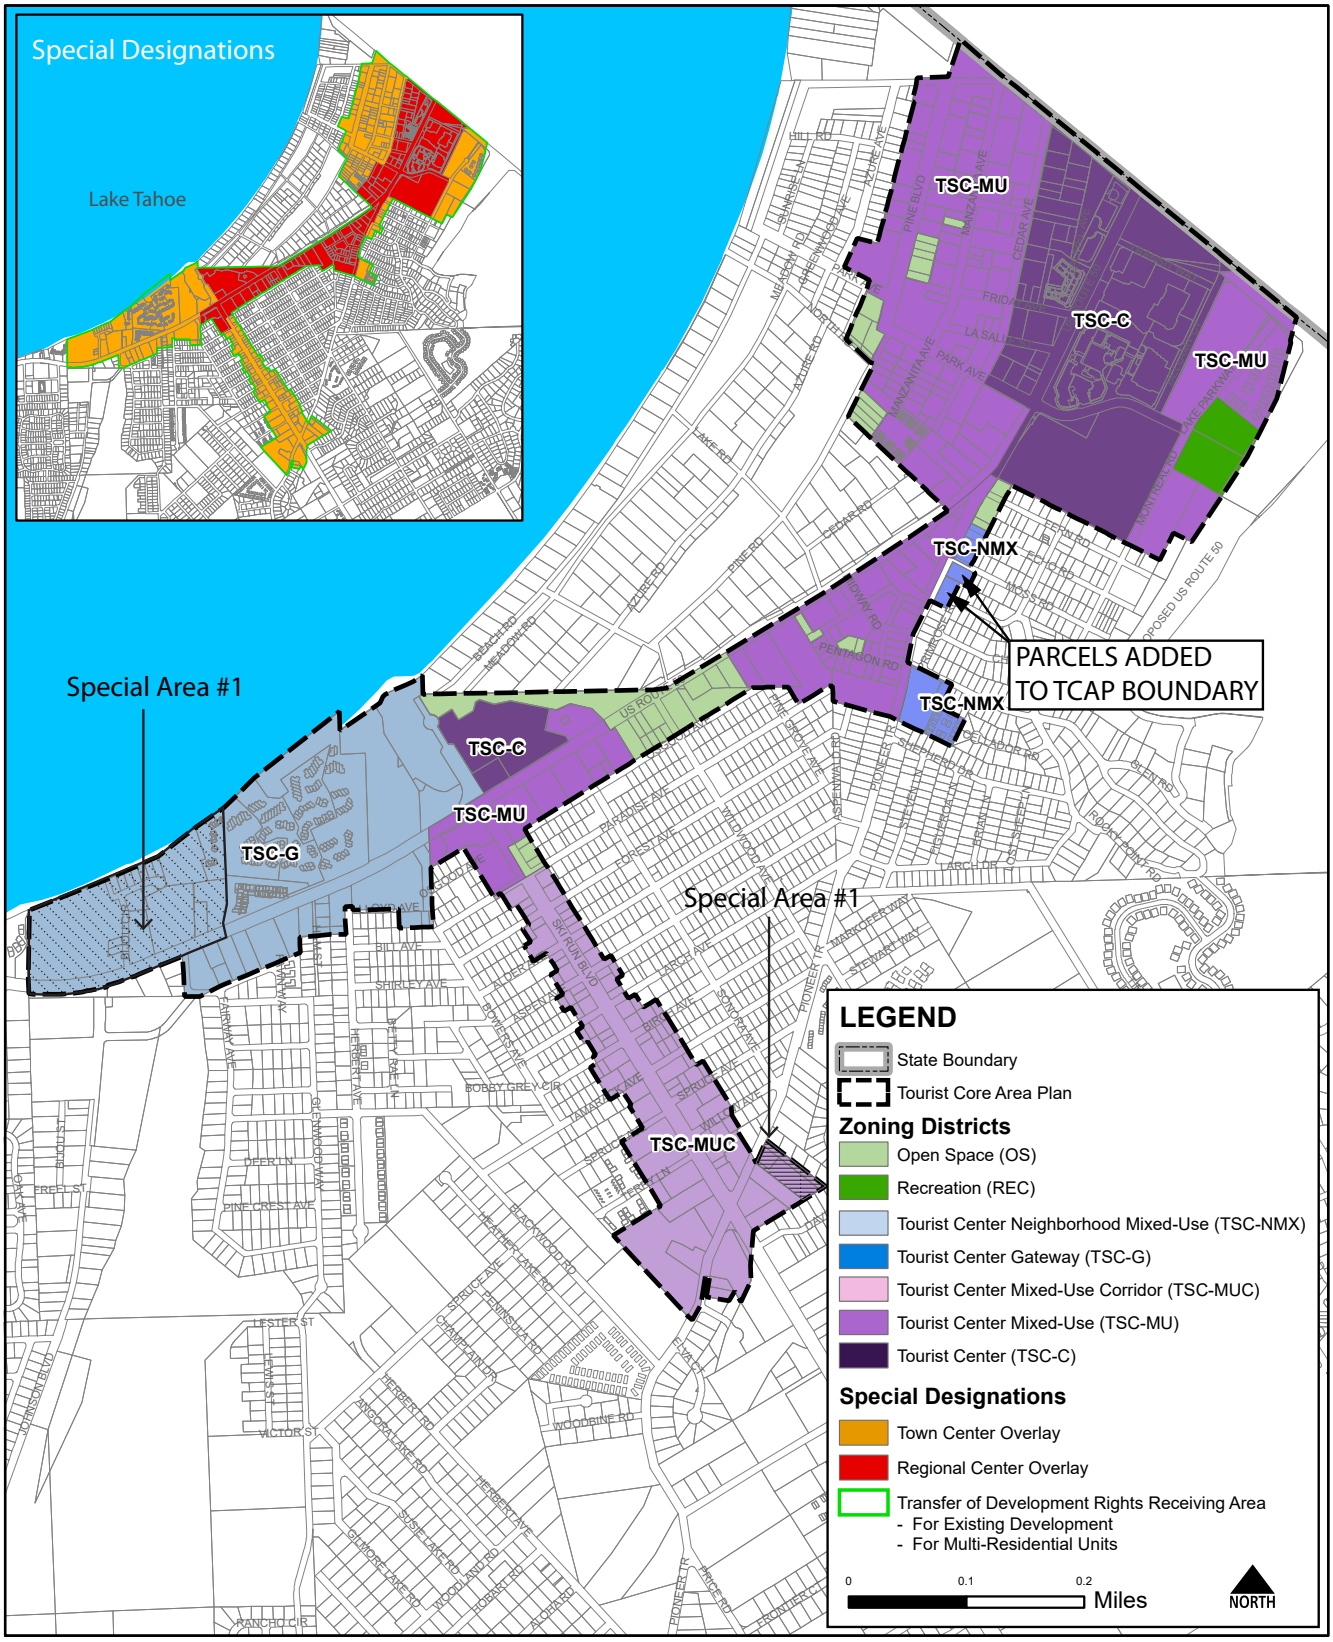
# NOTICE OF AVAILABILITY /NOTICE OF INTENT TO ADOPT A NEGATIVE DECLARATION FOR THE TOURIST CORE AREA PLAN AMENDMENTS

The City of South Lake Tahoe (City) is seeking public comments on a proposed amendment to the Tourist Core Area Plan (TCAP). The City of South Lake Tahoe proposes numerous amendments to the TCAP, specifically:

- Expand the Area Plan boundary to incorporate two developed tourist accommodation parcels located at 3900 and 3918 Pioneer Trail (0.83 acres). See attached map.
- Update various area plan sections: land use, community design and housing; revitalization and economic development; development/design standards; and incorporate general changes throughout to improve consistency with state laws and other existing plans.

The amended plan will serve as a mutual plan for the City of South Lake Tahoe and TRPA by providing direction for how the applicable area shall be regulated to achieve regional environmental and land use objectives. The development standards and the specific policies referenced in the amendments are the land use standards intended to administer and regulate development within the 305 acre boundary of the TCAP.

The City has prepared an Initial Study/ Negative Declaration (IS/ND) for the proposed amendment in compliance with the California Environmental Quality Act (CEQA, Public Resources Code Section 21000 et seq.), the CEQA Guidelines. The IS/ND is being circulated for public review and comment pursuant to Section 15073 (a) of the CEQA Guidelines. **The 30-day comment period begins on April 11, 2024, and ends on May 10, 2024**. Comments should be submitted by email to jhitchcock@cityofslt.us or by mail to:



John Hitchcock, Planning Manager
City of South Lake Tahoe Planning Division
1052 Tata Lane
South Lake Tahoe, CA 96150

The City of South Lake Tahoe Planning Commission will hold a public hearing on the proposed amendments at their regularly scheduled meeting on **May 16, 2024, at 3:00 p.m**. The Planning Commission agenda packet for this item will be available three days prior to the hearing at https://cityofslt.us/84/Watch-City-CouncilCommission-Meetings. The hearing will be held in the City Council Chambers at 1901 Lisa Maloff Way, South Lake Tahoe, CA.

The IS/ND and a track changes version of the proposed TCAP Area Plan amendments may be viewed and downloaded at the Planning Division web page: https://cityofslt.us/2290/Area-Plan-Proposals-and-Updates. If you require additional information, please contact John Hitchcock at (530) 542-7472. A hard copy of the IS/ND is also available for public review at 1052 Tata Lane, South Lake Tahoe, California.

Written public comments received 72 hours prior to the meeting will be distributed to the Planning Commission. Any writings or documents provided to a majority of the Planning Commission regarding any open session item will be made available for public inspection within the Agenda posted on the City's Website.

Every reasonable effort will be made to accommodate any person needing special assistance to participate in Planning Commission meetings. Contact the City Clerk at (530) 542-6005 in advance of the meeting for assistance [28 CFR 35.102.35.104 ADA Title II and Brown Act Government Code Sections 54953.2, 54954.1, 54954.2, and 54957.5].

# 2.0 PROJECT DESCRIPTION

## 2.1 AREA PLAN OVERVIEW AND DESCRIPTION OF CHANGES

The proposed project is an update to the Tourist Core Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. The updated Tourist Core Area Plan proposes to incorporate two parcels fronting Pioneer Trail, currently located in residential Plan Area Statement 092, into the Tourist Center Neighborhood Mixed-Use (TSC-NMX) District. Both parcels (APNs 029-352-010 and 029-371-016) are developed with existing tourist accommodation uses. The addition of these parcels, totaling approximately 36,000 square feet (0.83 acres) is intended to increase opportunity for redeveloping the sites. Permissible uses consistent with the previous PAS for this area are supplemented with additional residential land uses. ; As part of these amendments, a minimum density standard is also adopted to encourage the development of high-density housing. Modifications to existing design standards and parking standards are also proposed to promote walkability.

The Area Plan includes changes necessary to opt in to the TRPA Phase 2 Housing Code Amendments adopted in December 2023 for the areas within and outside of the Town Center/Regional Center Overlay – these amendments are included in the proposed changes to density, height and land coverage limits applicable to deed restricted affordable housing as documented in Tourist Core Area Plan Appendix C.

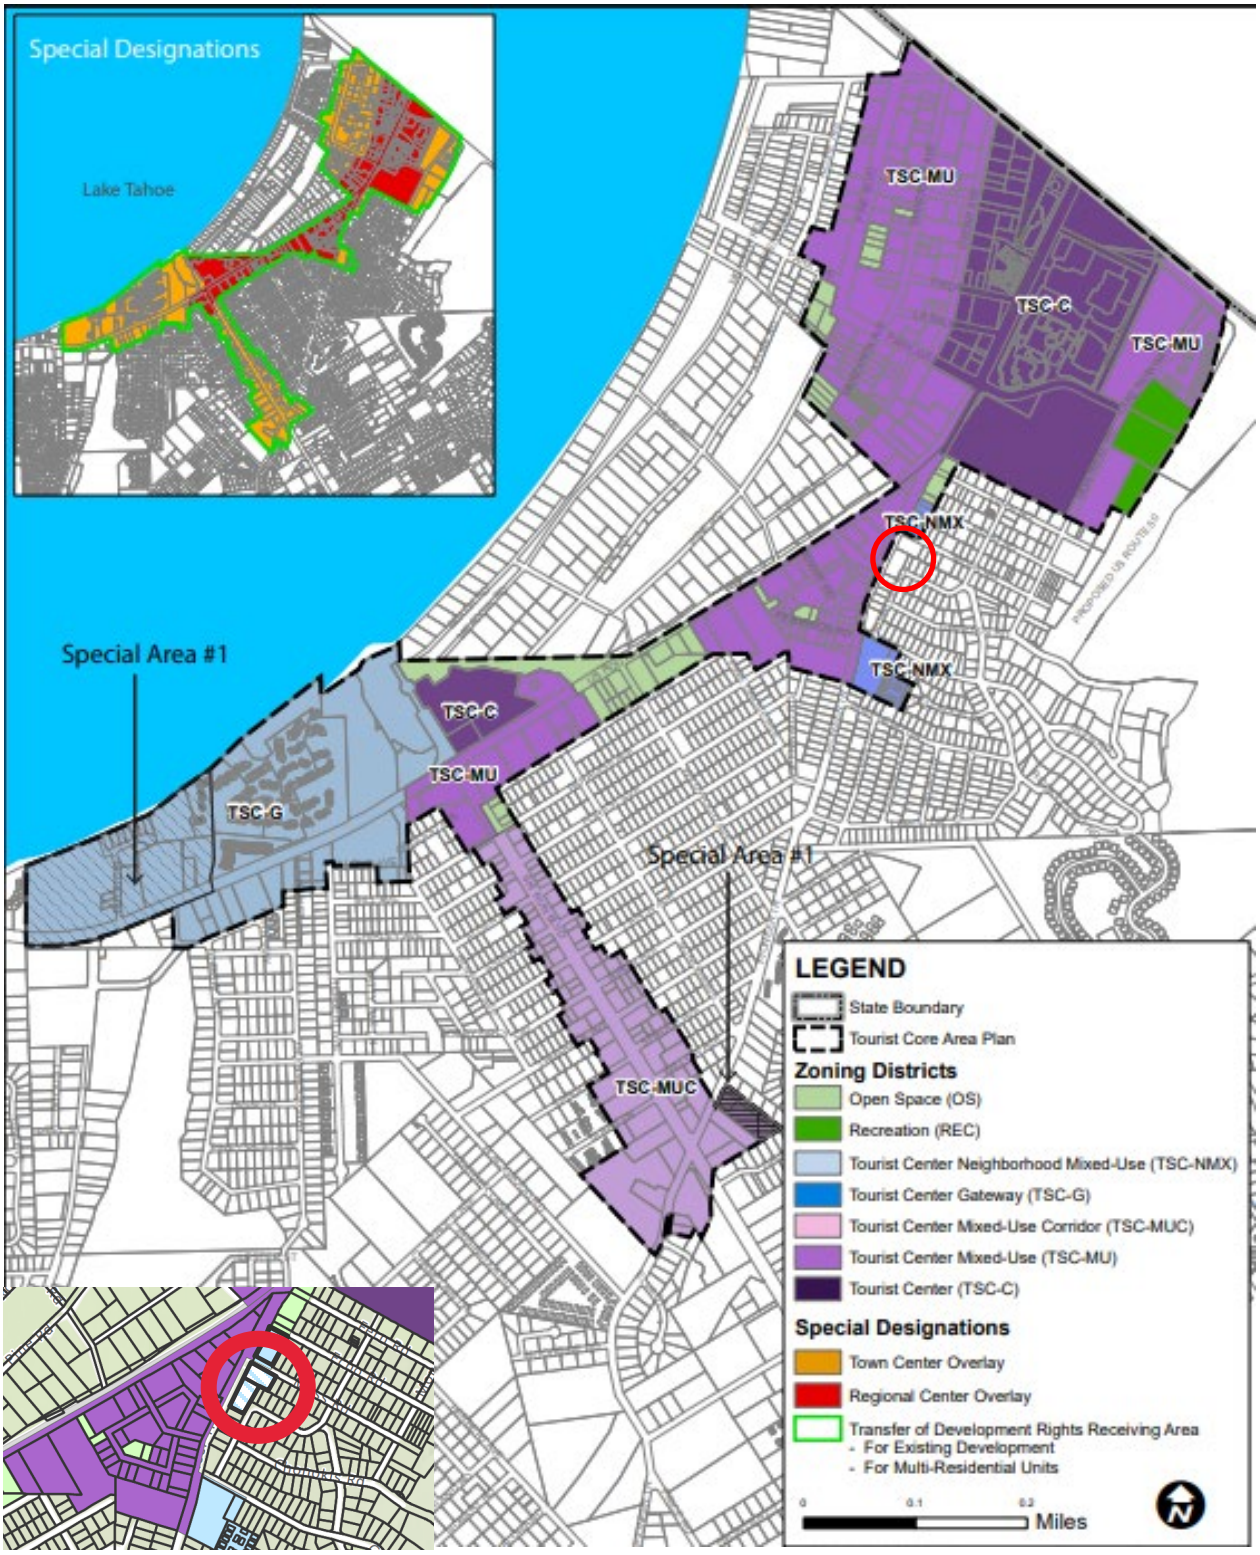

**Table 1** provides an overview of the existing plans, maps, and ordinances that are relevant to the Tourist Core Area Plan, a synopsis of the proposed changes, and a brief description of those changes.

**Table 1 Elements of Tourist Core Area Plan**

| Tourist Core Area Plan Element | Proposed Change from Existing Plans, Maps, and Ordinances | Summary Description |
|---|---|---|
| Vision and Guiding Principles | Adds a new housing policy | ▪ Includes new policy to preserve existing residential uses and increase multi-family options. |
| Land Use Element, and Land Use Map | Amends and adds new land use policies and amends zoning map to incorporate two parcels | ▪ Includes new policy to create a pedestrian oriented "Lake District" adjacent to the Tourist Core Area Plan<br>▪ Includes new policies encouraging the development of workforce housing in the Tourist Core Area Plan.<br>▪ Includes a new policy to establish minimum density standards for multi-family development.<br>▪ Amend Land Use Map to incorporate APNs 029-352-010 and 029-371-016 into the TSC-NMX District (see Figure 3 below). |
| Transportation Element | Adds new transportation policies | ▪ Includes new policy to coordinate with transportation agencies to expand alternatives modes of transportation.<br>▪ Includes new policies to promote shared parking and enhanced mobility hub. |

| Table 1 Elements of Tourist Core Area Plan | | |
|---|---|---|
| Tourist Core Area Plan Element | Proposed Change from Existing Plans, Maps, and Ordinances | Summary Description |
| Implementation Element | Update status of projects | ▪ Updated implementation status of various improvement projects.<br>▪ Updated Development Rights incentives provided by the City.<br>▪ Updated the number of residential bonus units available in the Tourist Core Area Plan.<br>▪ Added new incentives for residential/tourist conversion and density incentives adopted by the TRPA.<br>▪ The City incentive of RUUs at no cost for ADUs and multi-family developments has been included.<br>▪ Alternate Traffic and Air Quality Fee Program was deleted. New projects are subject to TRPA's Mobility Mitigation Fee requirements of Chapter 65 of the TRPA Code of Ordinances<br>▪ The Change in Use section was removed as it is no longer contained in the South Lake Tahoe City Code or TRPA Code of Ordinances.<br>▪ The Conversion of Use section was updated to reflect the current Chapter 51 of TRPA Code of Ordinances.<br>▪ Density incentives adopted by TRPA are added. |
| Appendix B | Replaced with Commercial Design Guidelines | ▪ TRPA height findings were removed from this appendix. The findings are applicable through reference to TRPA Code of Ordinances.<br>▪ The South Lake Tahoe Commercial Design Guidelines have been included as Appendix B to provide visual representations of the intent of design standards in Appendix C. |
| Appendix C, Development and Design Standards | Modify existing use matrix for clarity and consistency.<br><br>Modification of existing standards for clarity. | ▪ Permissible use matrix and definitions have been modified for consistency and simplification.<br>▪ All items previously included in in Substitute Design Standards have been relocated to the main standards section.<br>▪ The maximum building height for the TSC-MU district is increased from 56 feet to 65 feet. |
| Appendix D, CSLT Green Building Program | Include more recent sustainable building certification programs. | ▪ Additional green building certifications are being added to the Green Building Program to make projects eligible for development incentives. Development incentives are no longer tiered and shall be based on the discretion of the decision-making authority. |

**Figure 3 – Proposed Tourist Core Area Plan Expansion**

As part of the TCAP, the City of South Lake Tahoe will comply with all mitigation measures from the Regional Plan Update EIS certified by the TRPA Governing Board on December 12, 2012. The adoption of these measures includes compliance with measures that have already been incorporated into the TRPA Code, adopted on December 12, 2012 and effective on Februray 9, 2013.

Also part of the Tahoe Valley Area Plan is the City of South Lake Tahoe's continued compliance with all mitigation measures from the General Plan EIR certified by the City on May 17, 2011.

Table 2 provides a summary of the proposed development standard and land use updates to TCAP zoning districts. The full text of the proposed amendments is provided in revisions to TCAP Appendix C, available for review on the City's webpage: https://cityofslt.us/2290/Area-Plan-Proposals-and-Updates.

**Table 2**
**Development Standards for the Tourist Core Area Plan**

| Development Standard | | Tourist Center (TSC-C) District |
|---|---|---|
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | Single Family Dwelling | Only condominiums allowed at 12-65 units/acre |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Healthcare Services | Allowed by right but can't front on Lake Tahoe Boulevard. |
| | Professional Offices | Allowed by right throughout district. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | This standard was removed. |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |

| Development Standard | | Tourist Center Gateway (TSC-G) District |
|---|---|---|
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Tourist Center Mixed-Use (TSC-MU) District** |
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |

| | | |
|---|---|---|
| | Eating and Drinking Places | Changed to Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Tourist Center Mixed-Use Corridor (TSC-MUC) District and TSC-MUC Special Area #1 District** |
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single Family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |

| | | |
|---|---|---|
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Tourist Center Neighborhood Mixed-Use (TSC-NMX) District** |
| Maximum Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Range Management | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Recreation (REC) District** |
| Density | Multiple Family Dwelling | ~~n/a~~ 12-25 units/acre (Employee Housing Only) |
| | Multi-Person Dwelling | Add 65 persons/acre, no minimum (Employee Housing Only) |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Add as an Allowed by right |
| | Multi-Person Dwelling | Add as an Allowed by right |

| | | |
|---|---|---|
| | Privately Owned Assembly and Entertainment | Deleted and incorporated into Amusement, Recreation, & Entertainment Facilities. |
| Height and Roof Standards | Roof Slope | Minimum roof slope changed from 5:12 to 3:12 |
| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |
| **Development Standard** | | **Tourist Center Gateway (TSC-G) Special Area #1 District** |
| Density | Multiple Family Dwelling | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Add 65 persons/acre, no minimum |
| | Residential Care | Add 65 persons/acre, no minimum |
| | | |
| | Employee Housing | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Permissible Uses | Multi-Person Dwelling | Changed to Allowed by right |
| | Nursing and Personal Care | Added Allowed by right |
| | Residential Care | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |

| | Building Height Maximum (stories) | This standard was removed. |
| | Roof Height | This standard was removed. |

| Table 3<br>Development Standards for the Tourist Core Area Plan Boundary Expansion | | | |
|---|---|---|---|
| **Development Standard** | | **PAS 092** | **Tourist Center Neighborhood Mixed-Use (TSC-NMX) District** |
| Density | Multiple Family Dwelling | 15 units/acre | ~~25~~ 12-65 units/acre |
| | Multi-Person Dwelling | 25 persons/acre | ~~25~~ 65 persons/acre, no minimum |
| | Nursing and Personal Care | Not permitted | Add 65 persons/acre, no minimum |
| | Residential Care | Not permitted | Add 65 persons/acre, no minimum |
| | Single Family Dwelling | 1 unit per parcel | Only condominiums allowed at 12-65 units/acre |
| | Employee Housing | Not permitted | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Nursing and Personal Care | Not permitted | Added Allowed by right |
| | Residential Care | Not permitted | Added Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (Not permitted)<br>Privately Owned Assembly & Entertainment (Not permitted)<br>Public Owned Assembly & Entertainment (Not permitted) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Healthcare Services | Not permitted | Allowed by right but can't front on Lake Tahoe Boulevard. |
| | Professional Offices | Special Use | Allowed by right throughout district. |
| | Local Public Assembly Facilities | Local Assembly & Entertainment (Not permitted) | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | Not applicable | This standard was removed. |
| | Building Height Maximum (stories) | Not applicable | This standard was removed. |
| | Roof Slope | TRPA Code Chapter 37.3.4 | Minimum roof slope changed from 5:12 to 3:12 |

## Permissible Use List

The Tourist Core Area Plan updates propose modifications to the existing permissible use list to consolidate multiple similar uses under one category, to create more succinct criteria, and to increase compatibility within categories. "Employee Housing" has been eliminated as an independent use and shall be included in other residential uses. Health and athletic clubs, day spas, and funeral parlors are now included under General Retail and Personal Service as they are consistent with the existing criteria of the category in that they are "non-medical services involving the care of persons." Categories in which there was overlap of criteria have been consolidated into one use encompassing amusement, recreation, assembly, and entertainment.

## Design and Development Standards

The Tahoe Valley Area Plan includes development and design standards that are specific to the Plan Area and replace the City of South Lake Tahoe City Code Chapters 6.10 and 6.55 development standards, and portions of the TRPA Code of Ordinances Chapter 30, land coverage, Chapter 31 regarding density, Chapter 36 regarding design standards, and Chapter 37 regarding height standards. Standards for the Area Plan are contained in Appendix C of the Tourist Core Area Plan. Further design and development standards are housed in the South Lake Tahoe Design Guidelines (2016). This document has historically been used as a supplemental document to Appendix C. As part of the updates to the plan, this document shall be included as Appendix B and shall be used in conjunction with Appendix C to provide examples of the standards. Specific standards that have been changed through this process include:

- Allowing roof pitches of 3:12 to 12:12 (previously the minimum roof pitch was 5:12) and the removal of the roof height requirement.
- Shifting to more objective building modulation and articulation standards.
- Increased flexibility in corner build and build to line requirements.
- Increased bicycle parking requirements
- Reducing residential parking requirements by right
- Allowing for a reduction in commercial parking spaces.

Significant changes were made to the organization of Appendix C by incorporating design standards previously designated as "substitute" into the primary standards. Purely residential projects in certain districts may now follow the residential design standards contained in the City of South Lake Tahoe City Code Chapter 6.85.

## Building Height and Design

The maximum building height for the TSC-MU district is increased from 56' to 65'. In order to increase the efficiency and feasibility of large buildings, a minimum roof pitch of 3:12 is being proposed (previously 5:12) as well as elimination of the requirement that a building's roof be 40% of the building height. Further, the amendments would eliminate the building height maximum (stories) standard that limited the number of stories in addition to a buildings total height (feet).Numerous other changes are being made for clarity and consistency, most notably the creation of objective design standards to achieve desired levels of building articulation.

## Density

New density maximums and a minimum density standard are being proposed. For the first time the City is proposing a minimum density of 12 units per acre for multiple family dwellings in all districts except for recreation district. Mixed-use projects meeting certain criteria may be exempt from the minimum density. The maximum density for multiple family dwellings in the TSC-C, TSC-MU, TSC-MUC, and TSC-G is increased from 25 to 65 units per acre. The Tourist Core Area Plan will incorporate the City's accessory dwelling unit (ADU) ordinance; however, these units are not counted towards density. To maintain consistency with the 2011 City of South Lake Tahoe General Plan, Table LU-2 (Development Intensity Standards) must be amended to permit up to 65 residential units per acre in the Town Center and Tourist Center land use designations.

**NOTICE OF A PUBLIC HEARING CITY OF SOUTH LAKE TAHOE CITY COUNCIL**

NOTICE IS HEREBY GIVEN that in accordance with Sections 65090 and 65091 (Planning and Zoning Law) of the Government Code: the City of South Lake Tahoe City Council will conduct a public hearing on June 18, 2024 at 5:30 p.m., or as soon thereafter as possible, in the City Council Chambers, 1901 Lisa Maloff Way, South Lake Tahoe Airport, to consider the following:

- **South Tahoe Refuse Delinquent Fees Report**

*Summary: The City Council will be considering the South Tahoe Refuse Delinquent Fees Report and directing the Finance Department to send a Certified Copy of the Report to the El Dorado County Auditor-Controller to add the delinquent amounts to the county property tax rolls for collection, (gschooleman@cityofslt.us.*

- **Tahoe Valley Area Plan Amendments**

*Summary: Consideration of amendments to the Tahoe Valley Area Plan to eliminate regulatory inconsistencies, provide certainty in the project permitting process, increase redevelopment and property investments to revitalize the area's ageing infrastructure, and increase opportunities to activate the Town Center, increase housing, transportation, and circulation options (Anna Kashuba, akashuba@cityofslt.us).*

- **Tourist Core Area Plan Amendments**

*Summary: Consideration of amendments to the Tourist Core Area Plan to eliminate regulatory inconsistencies, provide certainty in the project permitting process, increase redevelopment and property investments to revitalize the area's ageing infrastructure, and increase opportunities to activate the Town Center, increase housing, transportation and circulation options (John Hitchcock, jhitchcock@cityofslt.us).*

Any interested person may appear at the public hearing and present written testimony or speak in favor or against the project proposal. Pursuant to Government Code Section 65009(b)(2), if you challenge the above application in court, you may be limited to raising only those issues, you, or someone else, raised at the public hearing described in this notice, or in written correspondence delivered to the South Lake Tahoe City Council at, or prior to, the public hearing. Written testimony may be addressed to the City Council in care of the City Clerk to PublicComment@cityofslt.us or mailed to 1901 Lisa Maloff Way, Suite 206, South Lake Tahoe, CA 96150. City Council agendas and related staff reports are available at least 72 hours in advance of regular meetings on the City's website https://cityofslt.us/84/Watch-City-CouncilCommission-Meetings or by contacting the City Clerk.

# City of South Lake Tahoe

**Agenda Item Executive Summary**

Joe Irvin, City Manager

**Meeting Date:** June 18, 2024
**Agenda Item #:**19

**Agenda Item:** Tahoe Valley Area Plan Amendments and Adoption of the Initial Study/Mitigated Negative Declaration

**Executive Summary:** Amendments are being proposed to the Tahoe Valley Area Plan in order to address errors and increase consistency with recently amended TRPA regulations, state regulations, and City goals, and increase housing opportunities and community equity in appropriate areas. The amendments have been discussed at four (4) public hearings and two (2) stakeholder meetings. City Council will review the final proposed changes and is being asked adopt the changes and associated IS/MND.

**Requested Action / Suggested Motions:** Pass a Resolution (1) Adopting the Initial Study/Mitigated Negative Declaration and the Tahoe Valley Area Plan/Specific Plan Amendments, and 2) making additional findings.

**Responsible Staff Member:** Anna Kashuba, Senior Planner

**Reviewed and Approved By:** Zachary Thomas, Director of Development Services Susan Blankenship, City Clerk Olga Tikhomirova, Director of Finance Heather Stroud, City Attorney Joseph Irvin, City Manager

# City of South Lake Tahoe
Report to **City Council**

**Meeting Date: June 18, 2024**

**Title:** Recommended Adoption of Tahoe Valley Area Plan Amendments and associated IS/MND Environmental Review

**Location:** Citywide

**Responsible Staff Member:** Anna Kashuba, Senior Planner

**Background:** The Tahoe Valley Area Plan (TVAP) is one of the City's two area plans and was originally adopted in 2015. The amendments proposed today are the first significant amendments made to the Area Plan. They are meant to bring the plan up to date with the City's current strategic goals, new state laws, and TRPA Regional Plan goals.

The Tahoe Valley area, originally developed before the City of South Lake Tahoe was incorporated, was as a commercial corridor servicing travellers along Highway 50. Today the area is a town center evolved around providing services and necessities for residents. In recent years the Tahoe Valley area has been transformed and redeveloped at a slower rate than the midtown and tourist core areas of South Lake Tahoe.

These amendments are an opportunity to achieve goals in three main categories which staff has identified as needing improvement: increasing housing opportunities, activating town centers, and increasing transportation and circulation opportunities.

The amendment process began January 2023 when the City notified TRPA of the intent to amend the area plan. Throughout the planning process there were four (4) opportunities for public participation during public hearings and two (2) stakeholder meetings. Staff was also available for private meetings to discuss the amendments.

The amendments were reviewed by Planning Commission at the regularly scheduled meeting on May 16, 2024. Commissioners directed minor additional changes that were stated in the motion and which have been included in the amendments as presented today. Planning Commission passed a resolution recommending City Council adopt the proposed changes and Initial Study/Mitigated Negative Declaration.

**Issue and Discussion:** City Council will be presented with the final amendments to the Tahoe Valley Area Plan and the environmental analysis conducted pursuant to the California Environmental Quality Act (CEAQ). The drafts contain original text with redlined changes based on direction from City Council, Planning Commission, and the public. Blue

text indicates text of the original document that was relocated. Below are summaries of the major changes to the plan.

The requested action is that City Council pass a resolution adopting the proposed amendments to the Tahoe Valley Area Plan and accept the accompanying Initial Study/Mitigated Negative Declaration.

No Net Loss of Housing

To disincentivise the conversion of multifamily dwellings into single family homes, the resulting single-family dwelling shall be prohibited from obtaining a VHR permit so that long term housing is maintained. In addition, any units not rebuilt one site are required to be developed elsewhere within the area plan boundary so that there is no net loss of housing.

Density

A minimum density of 12 units per acre has been applied to all districts, applicable to multifamily developments, including those that are proposed to be converted to condominiums. Certain mixed-use projects have been exempted from the minimum density standard, as staff believe this would make some mixed-use projects infeasible and prevent development of onsite workforce housing.

The maximum density has been increased to 65 in the Town Center and has remained at 25 elsewhere. Recent TRPA Code of Ordinance changes have been included, allowing 100% deed restricted housing to exceed this maximum.

Commercial Parking

Flexibility has been given to commercial users to reduce their parking by right when located within a half-mile of a transit stop, with further reductions should the project incorporate alternative transportation measures.

In recognition of uses' unique demands and seasonality, options have been included for additional parking when specific findings are met.

Residential Parking

One parking space shall be permitted per residential unit, with the option for a 20 percent reduction if a deed restriction is placed on the property, making the property owner responsible for parking management.

Emerald Bay Connection Corridor District

What was initially presented as the Emerald Bay Residential District has been renamed the Emerald Bay Connection Corridor District. This is the result of a discussion and City Council direction to pursue development of a parking hub/mobility center near the Town Center Core District and the desire to include parcels in this district as potential sites. Limited commercial uses are being

proposed to encourage an active streetscape, provide interest for individuals when going to and from the Town Center Core, and to support a potential mobility hub.

Bicycle Parking

Bicycle parking standards are now based on use rather than number of vehicle parking spaces. Minor modifications have been made to the location standards to allow flexibility for uses adjacent to bike paths or routes.

Green Building Program

Additional third-party certification programs have been included, and the program has been simplified. Incentives may be offered at the discretion of the decision-making authority rather than by levels as was the prior program structure. Staff acknowledges that recent updates to the 2022 California Building Code and the pending adoption of the City's Reach Code have weakened the significance of the original Green Building Incentive Program but believes recognition should be given to those who go above and beyond to have a project certified.

Outdoor Dining

Staff is proposing exempting the first 20 outdoor dining seats from obtaining CFA. Based on the California Building Code, 20 nonfixed seats require a minimum area of 300 square feet. Outdoor dining ares that exceed 300 square feet or 20 seats, whichever is less, will require a CFA allocation.

Residential Open Space

To further reduce barriers to high desntiy housing developments, the residential open space standard has been modified to reduce coverage constraints. If it is found that the open space requirement would limit the number of residential units proposed, open space may be capped at 10% of the maximum allowable coverage area.

2. Resolution
3. Exhibit 1 - Initial Study/Initial Environmental Checklist
4. Exhibit 2 - Mitigated Negative Declaration
5. Exhibit 3 - TVAP as proposed
6. Current TVAP with tracked changes

**Financial Implications:** There are no financial implications associated with the adoption of area plan amendments.

**Environmental Considerations:** Pursuant to the California Environmental Quality Act of 1970, Cal. Pub. Res. Code §21000 et seq., potential environmental impacts of the proposed amendments have been evaluated in an Initial Study. An IS is a preliminary environmental analysis that is used by the lead agency as a basis for determining whether

an Environmental Impact Report (EIR), a Mitigated Negative Declaration (MND), or a Negative Declaration is required for a project under California Environmental Quality Act (CEQA) guidelines. This IS is tiered from the City of South Lake Tahoe 2010 General Plan EIR and the 2015 Tahoe Valley Area Plan IS in accordance with Sections 15152 and 15168 of the CEQA Guidelines and Public Resources Code Section 21094.

This document also includes an Initial Environmental Checklist and Finding of No Significance (IEC/FONSE), prepared pursuant to the requirements of Article VI of the Tahoe Regional Planning Agency (TRPA) Rules of Procedure and Chapter 3 of TRPA's Code of Ordinances. TRPA serves as lead agency pursuant to its own regulations and will be asked to accept the IEC/FONSE.

In most areas evaluated by the IS, no impacts were found, or they were determined to be less than significant. The plan and amendments are designed to self-mitigate through standards such as building design to maintain aesthetic appeal and limitations on construction activity to prevent offensive noise.

Several items in Section 5.4.10, Hazards and Hazardous Materials (CEQA) and Risk of Upset and Human Health (TRPA), were determined to require mitigation to reduce impacts to a less than significant level. Mitigation measures are included and will be applied to projects as required.

Staff will continue to evaluate each project that is proposed in the Tahoe Valley plan area independently for potential significant environmental impacts.

The IS/IES was circulated from March 27, 2024, until April 26, 2024. Two comments were received during this timeframe. The comment from Wells Barnett Associates, LLC (WBA) is not specific to the environmental review. It expresses support of the amendments on behalf of the South Tahoe Association of Realtors, a client of WBA. The comment also identifies an error in Figure 2 (pg 8), Existing Land Uses. A correct figure is included in the Final IS and the corresponding figure in the TVAP (Figure 8) will be corrected before adoption. The second comment was received from the California Department of Transportation. The concerns it expresses are addressed through individual project review, and therefore did not require any changes to the IS/MND.

In anticipation of proposed changes to the General Plan, an errata was prepared subsequent to the IS/MND and has since been incorporated into the IS.

**Policy Implications:** Updating the City's area plans is consistent with General Plan Goal LU-2, to focus future commercial, multi-family residential, tourist, civic, and social gathering space development in community plan areas to maximize incentives and create transit, bicycle, and pedestrian-oriented places that serve the needs of both residents and visitors. Policies under this General Plan goal that are specific to the TVAP include:

Policy LU-2.2: The City shall periodically update and implement the four Community Plans as a way to focus development commodities and revitalization efforts.

Policy LU-2.7: The City shall transform the Tahoe Valley area into an attractive gateway commercial district that serves both residents and visitors.

Policy LU-2.9: The City shall define two Nodes, one at the Tahoe Valley Y Intersection and the other at Stateline and make them a focus of future development and revitalization efforts in the City. To this end, the City shall work with the Tahoe Regional Planning Agency to encourage allocations of development commodities (e.g., Commercial Floor Area, Residential Units of Use) to these areas.

Policy LU-2.10: The City, in coordination with the Tahoe Regional Planning Agency, shall encourage compact, mixed-use, transit-oriented, and higher-density development within the Stateline Node and Tahoe Valley Gateway District by providing the maximum incentives for these types of projects. Incentives should include an increase in allowed coverage, increased commercial floor area allocations, financing opportunities available through Redevelopment Plans, and exemptions from coverage limitations for affordable and moderate-income housing.

Policy LU-2.11: The City shall ensure that the Tahoe Valley Gateway District will be a primary area in the City for resident-serving commercial uses, workforce housing (e.g., housing affordable to local workers in all industries), and affordable housing. The City should work with property owners to transform the Node into a contemporary, pedestrian-oriented, mixed-use, commercial service district served by a transit center and alternate transportation opportunities.

Policy LU-2.13: The City shall create active and inviting social and economic centers in the two Nodes that include a variety of housing types, mixed-use development, recreational or social gathering spaces, cultural uses, civic uses and facilities, and commercial services.

The amendments are also consistent with Land Use Policy LU-1.2 to create walkable, mixed-use centers that provide a range of housing opportunities and choices.

While the amendments are consistent with all policies within the Tahoe Valley Area Plan, the following were specifically identified in guiding the amendments.

Policy LU-1.1 – Active Streets: Animate streets by allowing uses such as retail, entertainment, special events, outdoor dining and seating, oriented towards the sidewalk.

Policy LU-1.5 – Auto-Oriented Commercial Use Consolidation: Encourage the consolidation of existing auto-oriented commercial development into pedestrian-oriented development.

Policy LU-3.2 – Architectural Style: Require the use of “mountain” architectural theme in new development and through remodeling. Mountain architecture features the use of pitched roofs, natural colors, and natural materials such as rock and wood.

Policy H-1.9 – Housing Needs: Encourage the consolidation of parcels within the Tahoe Valley area or the incorporation of parcels adjacent to the Area Plan boundaries for the development of multi-residential units.

# Resolution 2024-000

**Adopted by the City of South Lake Tahoe City Council**

**June 18, 2024**

## Recommending that the City Council adopt the Tahoe Valley Area Plan/Specific Plan Amendments and the Initial Study/Mitigated Negative Declaration

### BACKGROUND

A. California Government Code sections 65450-65457 allow cities to prepare specific plans (area plans) for systematic implementation of the general plan; and

B. Tahoe Regional Planning Agency (TRPA) Code of Ordinances chapter 13 allows local jurisdictions to adopt area plans; and

C. The Tahoe Valley Area Plan/Specific Plan was adopted by the South Lake Tahoe City Council on June 2, 2015, by Ordinance 2015-1087, followed by adoption by TRPA on July 22, 2015; and

D. On January 11, 2023, the City of South Lake Tahoe issued a notice of intent to TRPA to amend the Tahoe Valley Area Plan/Specific Plan; and

E. The City solicited public input on the Tahoe Valley Area Plan/Specific Plan at four (4) public meetings and from stakeholder groups on two (2) occasions.

F. The adoption of amendments is consistent with City's General Plan, Housing Element, and TRPA's Regional Plan; and

G. Pursuant to the provisions of the California Environmental Quality Act, Public Resources Code sections 21000 et seq. ("CEQA"), the State of California's CEQA Guidelines, and California Code of Regulations, title 14, section 15000 et seq., the City of South Lake Tahoe determined that there is no substantial evidence that the adoption these amendments to the Tahoe Valley Area Plan/Specific Plan would result in a significant adverse effect on the environment. Accordingly, the Initial Study/Mitigated Negative Declaration is prepared in conjunction with the adoption of the Tahoe Valley

Area Plan.

H. Government Code section 65853 et seq. requires the Planning Commission to conduct a public hearing and provide a written recommendation to the City Council on any new zoning ordinance or regulation of the use of land.

I. The City of South Lake Tahoe Planning Commission conducted a public hearing, received public comments, considered evidence in the record, and deliberated.

J. The Planning Commission has reviewed the proposed amendments and Initial Study/Mitigated Negative Declaration and found the project to be consistent with the City's General Plan.

K. A notice of the City Council hearing was published in the Tahoe Daily Tribune on June 7, 2024.

L. The City of South Lake Tahoe City Council conducted a public hearing, received public comments, considered evidence in the record, and deliberated.

M. The City Council has reviewed the proposed amendments and Initial Study/Mitigated Negative Declaration and found the project to be consistent with the City's General Plan.

**BASED ON THE FACTS SET FORTH IN THE BACKGROUND, BE IT RESOLVED,** that the Planning Commission of the City of South Lake Tahoe:

1. Finds that the Initial Study (Exhibit 1) reflects the City's independent judgement and analysis.
2. Finds that there is no substantial evidence that the proposed Tahoe Valley Area Plan/Specific Plan Amendments will have a significant effect on the environment.
3. Finds the foregoing recitals are true and correct and made part of this resolution.
4. Finds that the purpose of this resolution is to align the Tahoe Valley Area Plan with City intentions, TRPA Code, and recently adopted California law; and
5. Recommends that the City Council adopt the Initial Study, Mitigated Negative Declaration, and the Tahoe Valley Area Plan/Specific Plan Amendments, included as Exhibits 1, 2, and 3 respectively.

Adopted by the City of South Lake Tahoe City Council on June 18, 2024, by the following vote:

Yes:
No:
Absent:
Abstain:

_____ Date:_____
Cody Bass, Mayor

Attest:

_____
Susan Blankenship, City Clerk

The presence of an electronic signature certifies that the foregoing is a true and correct copy as approved by the South Lake Tahoe City Council.

# 1.0 INTRODUCTION

## 1.1 INITIAL STUDY/INITIAL ENVIRONMENTAL CHECKLIST

This Initial Study/Initial Environmental Checklist (IS/IEC) has been prepared to address the potential environmental effects of amendments to the Tahoe Valley Area Plan in South Lake Tahoe, California. The proposed project is an update to the Tahoe Valley Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. The proposed amendments would expand the Area Plan boundary to incorporate parcels fronting US Highway 50 from the existing boundary line south to H Street, plus APNs 032-161-012, 032-161-013, 032-161-009, and 032-161-008 (previously PAS 114). The addition of these parcels as the Emerald Bay Connection Corridor District would increase opportunity for residential development near a town center and provide additional transit opportunities for residents. Second, seven parcels fronting Melba Drive would be added so that the area plan is contained in this corner by the intersection of E Street and Melba Drive (previously PAS 114). This area was identified as having high redevelopment potential, which may be incentivized by the benefits of being in an area plan Town Center. The third area of expansion is in the northeast corner of the Area Plan. All parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave would be included up until the existing area plan boundary, in addition to 023-221-020 north of Eloise Ave (previously PAS 111). In addition to the boundary amendments described above, other changes are proposed as documented in Chapter 2.

An IS is a preliminary environmental analysis that is used by the lead agency as a basis for determining whether an Environmental Impact Report (EIR), a Mitigated Negative Declaration (MND), or a Negative Declaration is required for a project under California Environmental Quality Act (CEQA) guidelines. An IEC is a preliminary environmental analysis that is used for determining whether an Environmental Impact Statement (EIS), a Mitigated Finding of No Significant Effect, or a Finding of No Significant Effect (FONSE) is required for a project under TRPA guidelines. The IS and the IEC contain a project description, description of environmental setting, identification of environmental effects by checklist or other similar form, explanation of environmental effects, discussion of mitigation for significant environmental effects, evaluation of the project's consistency with existing, applicable land use controls, and the name of persons who prepared the study.

This IS/MND has been prepared pursuant to the California Environmental Quality Act of 1970, Cal. Pub. Res. Code §21000 et seq. The CEQA lead agency for this project is the City of South Lake Tahoe (City).

This document also serves as an IEC/FONSE prepared pursuant to the requirements of Article VI of the Tahoe Regional Planning Agency (TRPA) Rules of Procedure and Chapter 3 of TRPA's Code of Ordinances. TRPA serves as lead agency pursuant to its own regulations.

The Tahoe Valley Area Plan was adopted in 2015 by the City pursuant to Chapter 13 of the TRPA Code of Ordinances, which allows local governments to adopt conforming Area Plans that contain policies and development ordinances that are consistent with and further the goals and policies of the TRPA Regional Plan. This chapter also allows for amending of Area Plans through the same process as initial adoption. Chapter 13 established a conformity process that:

- Allows local governments to adopt and amend an Area Plan that supersedes TRPA plans and ordinances if the plan is found to be in conformance with the Regional Plan;
- Defines required content in an Area Plan that includes but is not limited to applicable policies, maps, ordinances and development and design standards; and

- Defines which development activities will not have a substantial effect on the natural resources in the Region and allows TRPA to transfer limited development permitting authority to local governments.

## 1.2 TIERING PROCESS

**CEQA**

The CEQA concept of "tiering" refers to the evaluation of general environmental matters in a broad program-level EIR, with subsequent focused environmental documents for individual projects that implement the program. This environmental document is specific to the 2023 updates of the Tahoe Valley Area Plan. It incorporates by reference the discussions in the 2010 City General Plan EIR (the Program EIR) and the 2015 Tahoe Valley Area Plan IS/IEC which was created for the area plan's initial adoption. CEQA and the CEQA Guidelines encourage the use of tiered environmental documents to reduce delays and excessive paperwork in the environmental review process. This is accomplished in tiered documents by eliminating repetitive analyses of issues that were adequately addressed in previous EIRs and by incorporating those analyses by reference.

Section 15168(d) of the State CEQA Guidelines provides for simplifying the preparation of environmental documents on individual parts of the program by incorporating by reference analyses and discussions that apply to the program as a whole. Where an EIR has been prepared or certified for a program or plan, the environmental review for a later activity consistent with the program or plan should be limited to effects that were not analyzed as significant in the prior EIR or that are susceptible to substantial reduction or avoidance (CEQA Guidelines Section 15152(d)).

This Initial Study is tiered from the City of South Lake Tahoe 2010 General Plan EIR and the 2015 Tahoe Valley Area Plan IS/IEC in accordance with Sections 15152 and 15168 of the CEQA Guidelines and Public Resources Code Section 21094.

The 2010 General Plan EIR is a Program EIR that was prepared pursuant to Section 15168 of the CEQA Guidelines. The 2011 General Plan (General Plan) is a comprehensive land use plan that guides physical development within the City of South Lake Tahoe through 2030. The 2010 General Plan EIR analyzes full implementation of uses and physical development proposed under the 2011 General Plan, and it identifies measures to mitigate the significant adverse program-level and cumulative impacts associated with that growth. The Tahoe Valley Area Plan is an element of change that was anticipated in the 2011 General Plan and evaluated in the 2010 General Plan EIR. By tiering from the 2010 General Plan EIR, this Initial Study will rely on the 2010 General Plan EIR for the following aspects that have remained consistent through these amendments:

- a discussion of general background and setting information for environmental topic areas;
- overall growth-related issues;
- issues that were evaluated in sufficient detail in the 2010 General Plan EIR for which there is no significant new information or change in circumstances that would require further analysis; and
- assessment of cumulative impacts.

This Initial Study will evaluate the potential environmental impacts of the proposed changes to the Tahoe Valley Area Plan with respect to the 2010 General Plan EIR and 2015 Tahoe Valley Area Plan IS/IEC to

determine what level of additional environmental review, if any, is appropriate. As shown in the Determination in Section 5.2 of this document and based on the analysis contained in this Initial Study, it has been determined that the proposed amendments to the Tahoe Valley Area Plan would not have significant effects on the environment that were not adequately addressed in the 2010 General Plan EIR, 2015 Tahoe Valley Area Plan IS/IEC, or cannot be mitigated to a level of insignificance; therefore, a Mitigated Negative Declaration will be prepared.

This Initial Study concludes that the many potentially significant impacts are addressed by the measures that have been adopted as part of the approval of the 2011 General Plan and subsequent approval of the 2015 Tahoe Valley Area Plan. Therefore, those General Plan EIR and Area Plan IS/IEC mitigation measures will reduce the impacts to a less than significant level. Since these mitigation measures are already being carried out as part of implementation of the 2011 General Plan and 2015 Area Plan, they will not be readopted. The impact analysis herein assumes implementation of the 2011 General Plan and 2015 Area Plan for purposes of determining the significance of any impact. The benefits of these mitigation measures will be achieved independently of considering them as specific mitigation measures of this Tahoe Valley Area Plan. Nothing in this Initial Study in any way alters the obligations of the City to implement the General Plan mitigation measures. Additional environmental review may be necessary as specific development projects and improvements are proposed for construction if potentially significant impacts associated with the construction of those projects have not been adequately addressed in this programmatic document.

## TRPA

The TRPA concept of "tiering" refers to the coverage of general matters in broader EISs (Program EIS) and subsequent narrow environmental documents incorporating by reference the general discussions and concentrating solely on the issues specific to the document subsequently prepared. Therefore, when an EIS has been certified for a project or matter, TRPA should limit the analysis on a later related or consistent project or matter to effects which were not examined as significant effects in the prior EIS or which are susceptible to substantial reduction or avoidance by revisions in the project or matter through conditions of approval or mitigation. Tiering is limited to situations where a later project or matter is consistent with a program, plan, policy or ordinance for which an EIS was prepared, is consistent with applicable TRPA plans, and a supplemental EIS is not required.

This Initial Environmental Checklist is tiered from the TRPA 2012 Regional Plan Update ("RPU") Environmental Impact Statement ("EIS") and 2020 Linking Tahoe: Regional Transportation Plan and Sustainable Communities Strategy Initial Environmental Checklist and Mitigated Finding of No Significant Effect in accordance with Section 6.12 of the TRPA Rules of Procedure. The 2012 RPU EIS is a Program EIS that was prepared pursuant to Article VI of TRPA Rules of Procedure and Chapter 3 of the TRPA Code of Ordinances. The Regional Transportation Plan identifies a broad range of projects, programs, and strategies needed to comprehensively improve Tahoe's transportation system over the next 25 years. The 2012 RPU is a comprehensive land use plan that guides physical development within the Lake Tahoe Region through 2035. The 2012 RPU EIS analyzes full implementation of uses and physical development proposed under the 2012 RPU, and it identifies measures to mitigate the significant adverse program-level and cumulative impacts associated with that growth. The proposed project is an element of the growth that was anticipated in the 2012 RPU and evaluated in the 2012 RPU EIS. By tiering from the 2012 RPU EIS, this Initial Environmental Checklist will rely on the 2012 RPU EIS for the following:

- a discussion of general background and setting information for environmental topic areas;
- overall growth-related issues;

- issues that were evaluated in sufficient detail in the 2012 RPU EIS for which there is no significant new information or change in circumstances that would require further analysis; and

- assessment of cumulative impacts.

This Initial Environmental Checklist will evaluate the potential environmental impacts of the proposed project with respect to the 2012 RPU EIS to determine what level of additional environmental review, if any, is appropriate. As shown in the Determination in Section 6.3 of this document, and based on the analysis contained in this Initial Environmental Checklist, it has been determined that the proposed project would not have a significant effects on the environment that were not previously addressed or adequately addressed in the 2012 RPU EIS, or that cannot be mitigated to a level of insignificance, therefore, a Mitigated Finding of No Significant Effect will be prepared.

This Initial Environmental Checklist concludes that the potentially significant project impacts are addressed by the measures that have been adopted as part of the approval of the 2012 RPU. Therefore, those 2012 RPU EIS mitigation measures that may reduce the impacts of this project will be identified in this Initial Environmental Checklist. Since these mitigation measures are already being carried out as part of implementation of the 2012 RPU, they will not be readopted, but rather are incorporated as part of the project and the impact analysis assumes implementation for purposes of determining the significance of any project impact. The benefits of these mitigation measures will be achieved independently of considering them as specific mitigation measures of this project. Nothing in this Initial Environmental Checklist in any way alters the obligations of TRPA to implement the RPU mitigation measures.

## 1.3 BACKGROUND

Chapter 13: *Area Plans* of the TRPA Code of Ordinances provides for the necessary implementation steps for the development, consideration, adoption, and amendment of an area plan. As provided for in Section 13.3 of the TRPA Code of Ordinances, an adopted area plan replaces the plan area statements for areas within the area plan boundary. Area plans are allowed to establish applicable goals, policies, maps, standards, and other related materials, which must demonstrate conformance with the TRPA Regional Plan (Regional Plan).

The initial Tahoe Valley Area Plan boundary adopted in 2015 was primarily contained in TRPA Plan Area Statement (PAS) 110, South Y, which recommended that the area be established as a community plan. The Tahoe Valley area was previously designated as a Community Plan area in the City's 2011 General Plan to establish a sense of community along the US 50 and SR 89 corridors. The community plan was adopted in 2006 by the City and remained in place until it was replaced with the Tahoe Valley Area Plan in 2015. With the adoption of the TRPA Regional Plan Update in 2012, the new process for the establishment of Area Plans was created. In the 2012 RPU, TRPA identified the area of the South Y as a town center, eligible for certain development allowances upon adoption of a conforming area plan. Thereafter, the City initiated the development of the Tahoe Valley Area Plan, utilizing information and public input collected through the original community plan process, the City's General Plan Update process, and the TRPA Regional Plan update process. The draft Tahoe Valley Area Plan was released for public review and comment on June 3, 2014.

For the first time since its adoption, the plan is being amended to allow for progress in housing availability and affordability, alternative transportation, and activation of town centers. The updates bring the Area Plan in better alignment with the City's goals, recent state laws, and TRPA policy and code updates.

The process of amending the Tahoe Valley Area Plan was initiated in October of 2022 with City staff identifying areas out of date and in need of general improvements to reflect the City and State's evolving goals and new laws. The City provided TRPA with an Intent to Amend notice and a general project description on January 11, 2023. At this time staff had not yet begun to draft amendments, as stakeholder, Planning Commission, and City Council input were needed to inform the changes. Stakeholders representing a variety of interest groups in the Tahoe Valley were invited to a workshop on February 1, 2023, to discuss the potential list of updates. During the months of February 2023 through May 2023, hearings were held to receive input on the proposed updates before the Planning Commission (February 23, 2023), City Council (May 16, 2023), and TRPA Regional Plan Implementation Committee (May 24, 2023). Throughout this process, City and TRPA staff met bimonthly to discuss the potential area plan amendments as well as concurrent changes to TRPA Code of Ordinances that may affect the final list of necessary updates.

All land within the Lake Tahoe Basin falls under the jurisdiction of the Tahoe Regional Planning Agency. This includes land under the local jurisdiction of the City. In order to be responsive to the unique needs and opportunities of the Region and local communities, the TRPA Regional Plan encourages and authorizes local jurisdictions to develop and adopt individual Area Plans that provide more specific development objectives and standards that are adapted to the needs of the specified area. Local jurisdictions are permitted to develop, adopt, and implement regulations so long as they are consistent with the TRPA Regional Plan. The 2030 South Lake Tahoe General Plan is the City's primary policy document guiding land use, transportation, infrastructure, community design, environmental, and other decisions in a manner consistent with the planning statues for the State of California. The Tahoe Valley Area Plan is designed to supplement the City's General Plan by designating zoning districts and providing specific guidance for the area included within the Area Plan boundaries. The development standards and the specific policies referenced in this Area Plan are the land use standards intended to administer and regulate the land use for the Tahoe Valley.

## 1.4 PROJECT LOCATION, SETTING AND SURROUNDING LAND USES

The Tahoe Valley Area Plan is located in the southwestern portion of the City of South Lake Tahoe (see **Figure 1**). Regional access to the Tahoe Valley plan area is provided by US Highway 50 (US 50) and California State Route 89 (SR 89). The Tahoe Valley Area Plan serves as the gateway for the City of South Lake Tahoe for travelers heading south on SR 89 and east on US 50. The Tahoe Valley Area Plan, as initially adopted, was located within PAS 110, South Y, and the parcel located at 1117 Bonanza Avenue Emerald Bay Road (APN 032-141-18) within PAS 114, Bonanza, Special Area #1. The Area Plan Boundary shall be expanded to the southwest to include parcels fronting US Highway 50 from the existing boundary line south to H Street, plus APNs 032-161-012, 032-161-013, 032-161-009, and 032-161-008 (previously PAS 114). Seven parcel fronting Melba Drive shall be added so that the Area Plan is contained in this corner by the intersection of E Street and Melba Drive (previously PAS 114). The third area of expansion is in the northeast corner of the Area Plan. All parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave shall be included up until the existing Area Plan boundary, in addition to 023-221-020 north of Eloise Ave (previously PAS 111). (See **Figure 3**).

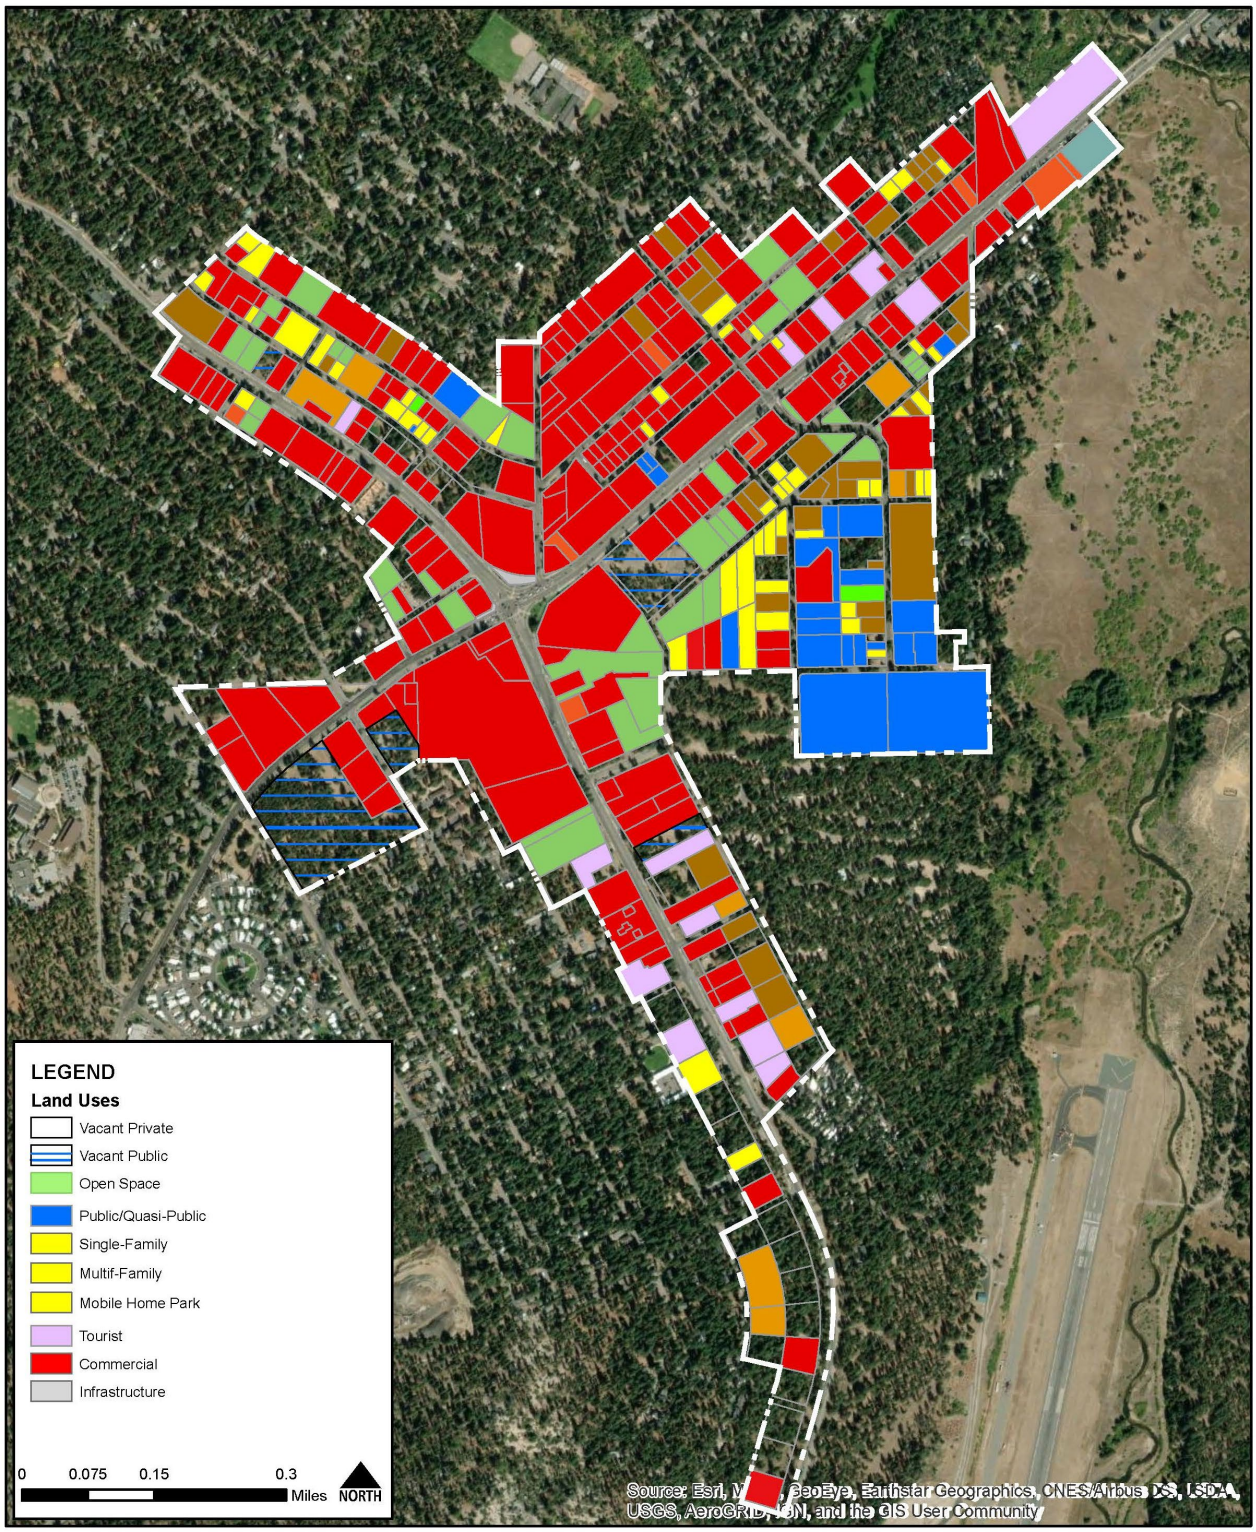
The Area Plan consists of approximately 374 acres and includes 525 public and privately owned parcels that include residential, commercial, tourist accommodation, industrial, and public service land uses (see **Table 1** and **Figure 2**). Land uses to the west, north, and northeast of the Tahoe Valley Area Plan consist of residential subdivisions dating from earlier development of the area during the 1960s through the 1990s. Immediately adjacent to the Tahoe Valley Area Plan to the east lies a large open space area (stream environment zone [SEZ]) consisting of the floodplain for the Upper Truckee River, which is near the eastern boundary of the Tahoe Valley Area Plan. The Lake Tahoe Airport is located to the southeast of the Tahoe

Valley Area Plan. This single-runway airport serves the vicinity with charter flights, air tours (helicopters and fixed-wing aircraft), and general aviation. Portions of the noise, safety, and height restriction areas described in the Airport Land Use Compatibility Plan (ALUCP) overlay the Tahoe Valley Area Plan.

**Table 1** provides an overview of existing land uses in the Tahoe Valley Area Plan.

**Table 1**
**Existing Land Uses – Tahoe Valley Area Plan**

| Land Use | Acres | Percent of Acreage |
|---|---|---|
| Residential | 47.1 | 12.6% |
| Tourist | 13.0 | 3.5% |
| Commercial | 145.3 | 38.9% |
| Public | 19.2 | 5.1% |
| Quasi-Public | 8.2 | 2.2% |
| Recreation | 3.3 | 0.9% |
| Vacant Private | 31.3 | 8.4% |
| Vacant Public | 15.3 | 4.1% |
| Open Space | 20.2 | 5.4% |
| Roads and Infrastructure | 71.1 | 19.0% |
| **TOTAL** | **374** | **100%** |
| Source: TRPA GIS, March 2014. | | |



*Source: City of South Lake Tahoe, 2023*

As noted in **Table 1** (and further discussed in Section 6.4.12 Land Use and Planning), commercial uses are the primary land use in the Tahoe Valley plan area and include clothing stores, factory outlets, automotive supply stores and dealerships, drug and liquor stores, restaurants, and supermarkets. Buildings and other structures in the Tahoe Valley Area Plan range in age and physical condition from designated historic buildings to recent construction. The majority of buildings are provided in strip development along US 50 and SR 89. Barton Memorial Hospital and associated health care related facilities and offices also play a dominant role in the area. Identified issues for the Tahoe Valley plan area's historic form of development include multiple curb cuts, small and fragmented parcels, stand-alone structures, old motels, sprawling parking lots, and lack of coordinated sidewalks, bike paths, landscaping, and other related amenities. Lastly, several motels located within the Tahoe Valley Area Plan are currently poor generators of transient occupancy tax as a result of low occupancy rates.

There are approximately 46.6 acres (31.3 privately owned and 15.3 publicly owned) of vacant land in the Tahoe Valley Area Plan (**Figure 2**). The majority of the privately owned vacant land is concentrated in the Emerald Bay Connection Corridor District, while the public parcels are dispersed. The plan area contains 20.2 acres of open space. These properties are owned and managed by the federal government, the state, and the City. The area contains urban–altered Jeffrey pine forest. Commercial and residential areas are interspersed throughout the forest stands. The reader is referred to Section 6.4.6, Biological Resources, for a further discussion on natural communities and habitat in the Tahoe Valley plan area.

Tahoe Valley Area Plan: Zoning Changes and Areas of Expansion

February 2024

## 1.5 PROJECT OBJECTIVES/PURPOSE AND NEED

As identified above, the purpose of the Tahoe Valley Area Plan is to facilitate implementation of a land use plan to further the goals and policies of the City General Plan and TRPA Regional Plan. The Tahoe Valley Area Plan helps to realize the community's vision, assist in achieving and maintaining TRPA's Environmental Threshold Carrying Capacities, implement the City of South Lake Tahoe Sustainability Plan, implement the Tahoe Metropolitan Planning Organization's Sustainable Communities Strategy, and implement the TRPA Regional Plan and City's General Plan. The City developed the Area Plan to integrate these plans to the extent practical, while providing more detailed direction, in order to simplify compliance with local and regional requirements, and improve the efficiency of plan administration.

The plan is being amended to keep pace with changes that have been made to California law, TRPA Regional Plan and Code of Ordinances, the City's General Plan Housing Element, and City strategic goals. At the forefront of these changes is the goal of increasing housing opportunities with an emphasis on affordable housing. The Area Plan's existing density limits (25 units per acre) are a large barrier for affordable housing developments as they cannot be competitive for grants or financing at the current density; meanwhile, the lack of a minimum density prevents parcels central to transportation and amenities from being utilized to their highest potential. In accordance with California law, workforce and co-living housing opportunities shall be expanded through modifications to use definitions and zoning designations.

Another key element of the updates is to enhance the "Y" intersection area (intersection of Lake Tahoe Boulevard [US 50] and Emerald Bay Road [SR 89]) as a focal point of mixed-use development and activity of the area. As a result of slower redevelopment, this area receives less economic activity and attention than the midtown and tourist centers. The primary change intended to address this is reducing barriers to expansion of eating and drinking uses by reducing the Commercial Floor Area requirement for limited outdoor eating and dining spaces.

The following project objectives are identified for the Tahoe Valley Area Plan updates:

- Expand the boundary of the Area Plan to add parcels that will benefit from greater density, height and land coverage and help promote residential development near services and transit facilities.
- Improve the effectiveness of Housing Element policies and achievement of Housing Element goals.
- Update residential design standards to allow ministerial approval of purely residential developments, including ADUs.
- Modify permissible use definitions to create better compatibility between uses and zoning districts.
- Better activate town centers by expanding opportunity for events and establishing design criteria for outdoor dining.
- Create objective design standards for commercial and mixed-use developments that complement the natural environment, promote the mountain theme architecture, and create walkable and bikeable streetscapes.
- Transition to a less auto-centric town center by creating opportunities for reduced parking and project contribution to alternative transportation methods.
- Implement zoning, boundary, and district changes where appropriate to better integrate existing development and incentivize key redevelopment opportunities.

## 1.6 DOCUMENT ORGANIZATION

This IS/IEC follows the standard content for environmental documents under CEQA and TRPA Code of Ordinances and Rules of Procedure. An EIR/EIS was determined to be unnecessary, as there are not potentially significant environmental effects associated with the proposed amendment of this Area Plan.

This IS/IEC is a full disclosure document, describing the plan and its environmental effects in sufficient detail to aid decision-making.

Chapter 5 contains a summary of the environmental effects and necessary mitigation measures if applicable.

## 1.7 PUBLIC INVOLVEMENT

Opportunities for public participation in the development of the Area Plan amendments were provided in February through May of 2023 as documented in Section 1.2. Opportunities for public participation in the environmental document review process are provided to promote open communication and better decision-making. All persons and organizations having a potential interest in the proposed Area Plan amendments are invited to provide comments during the thirty-day comment period for the IS/IEC ending on April 30, 2024.

Pursuant to the requirements of CEQA, this IS/IEC will be sent, along with a Notice of Completion, to the California State Clearinghouse. In addition, copies of this document will be distributed to other Lake Tahoe Basin reviewing agencies and interested individuals and entities for review. After closure of the public review period, City staff will respond to all comments. City staff will then prepare an agenda item for the City Planning Commission's recommendation and City Council action that include the IS/IEC, the comments, and responses to the comments. If the Council determines that the proposed Area Plan would not have significant adverse impacts after mitigation, the City Council would certify the environmental document and adopt the plan. Following Council approval, the Notice of Determination would be filed with the county recorder-clerk.

Pursuant to the TRPA's Rules of Procedure and Chapter 3 of the TRPA Code of Ordinances, this IS/IEC will be made available for public review to those people who request copies. TRPA staff will prepare an agenda item for the Advisory Planning Commission's recommendation and Governing Board action. If it is determined that significant adverse impacts would not result from the proposed project after mitigation, the Governing Board would issue a Mitigated Finding of No Significant Effect, certify the environmental document and adopt the Area Plan.

## 1.8 RELATIONSHIP TO LAND USE PLANS, POLICIES AND REGULATIONS

The Tahoe Valley Area Plan falls under the direct jurisdiction of both the City of South Lake Tahoe and the Tahoe Regional Planning Agency. In addition, Federal and State agencies exercise varying levels of control concerning specific parcels or resources. This section identifies each agency's responsibility relative to the proposed Area Plan; it also identified the plans and policies to which the Area Plan must show compliance.

Federal: The US Environmental Protection Agency (EPA) has designated Lake Tahoe an Outstanding National Resource Water (ONRW). ONRWs are provided the highest level of protection under EPA's Anti-degradation Policy, stipulating that states may allow some limited activities that result in temporary and short-term changes to water quality, but that such changes should not adversely affect existing uses or alter the essential character or special uses for which the water was designated on ONRW. Although the Area Plan does not require approval from EPA, the incentives related to coverage are dependent upon EPA certifying TRPA's updated Water Quality Management Plan for the Tahoe Region (208 Plan). The Updated 208 Plan was certified on June 19, 2013.

Regional: TRPA is a bi-state planning agency with authority to regulate growth and development within

the Lake Tahoe Region. TRPA implements that authority through its Regional Plan. The Regional Plan Goals and Policies establish an overall framework for development and environmental conservation in the Lake Tahoe Region.

In December 2012, the TRPA Governing Board adopted an updated Regional Plan. Priorities of the updated Regional Plan that apply to this Area Plan include:

- Accelerating water quality restoration and other threshold gains by supporting environmental redevelopment opportunities, restoration of disturbed lands and Environmental Improvement Program (EIP) investments.
- Transitioning to more permitting by local governments to create one-stop-shopping for homeowner improvements in order to return TRPA to the more regional role the Compact originally intended.
- Creating walkable communities and increasing alternative transportation options.

Important policies addressed in the Regional Plan include:

- Retaining the established regional growth control system. Under this system, rampant overdevelopment was stopped and open spaces preserved. Most of the policies from the 1987 Regional Plan stayed in place.
- Creating a more efficient planning system that integrates TRPA requirements into the plans and permits of other government agencies.
- Encouraging property owners to transfer development rights from sensitive or outlying areas to Town Centers with the goal of restoring these lands.
- Eliminating regulatory barriers to the environmental redevelopment of rundown buildings.
- Simplifying burdensome regulations for homeowners while achieving threshold gain.
- Integrating with the Regional Transportation Plan to support sidewalk and bike trail projects that reduce automobile dependency and increase walkability and safety.
- Continuing to deliver restoration projects under the EIP that achieve erosion control on roadways and restore forests and wetlands.

The TRPA Code of Ordinances allows for the creation and maintenance of Area Plans to refine and implement the Regional Plan policies appropriate to specific areas. Chapter 13, *Area Plans*, includes provisions that allow for local, state, and federal agencies, in coordination with TRPA staff, to prepare coordinated Area Plans for the implementation of land use goals, policies, and ordinances. The Area Plans, which include implementing ordinances and zoning, are required to be consistent with the Regional Plan. Under a conforming area plan, a local jurisdiction may assume permitting authority by Memorandum of Understanding (MOU) with TRPA. In 2014 a MOU was created that expanded permitting authority of the City within the Tahoe Valley Area Plan.

State of California: Several State agencies may play a role in development decisions within the Tahoe Region. As such, these State agencies must grant permits or other forms of permission prior to physical development. Affected agency staff will review the proposed Area Plan for consistency with adopted plans and policies. The Area Plan does not require State agency approval.

State agencies that may have a responsible agency role in projects that may be implemented in the Area Plan include:

*California Tahoe Conservancy:* The mission of the California Tahoe Conservancy (CTC) is to protect and restore the natural environment of Lake Tahoe, including the lake's exceptional clarity and diversity of wildlife habitat in the basin. The CTC implements a comprehensive set of programs to affirmatively address resource needs in the Tahoe Basin, including the protection and restoration of the natural environment, especially water quality; enhancement of wildlife habitat; provision of public access and recreation opportunities; and management of acquired public land at Lake Tahoe.

The CTC has developed and initiated implementation of a number of programs involving acquisitions, site improvements, and land management activities, and involving direct activities as well as grants, which require capital funding. Program areas include:

- Water Quality and Watersheds
- Forest Habitat Enhancement
- Recreation and Public Access
- Land Management and Acquisition
- Coverage and Marketable Rights
- Climate Change and Sustainability

With the proposed expansion of the area plan boundary, the California Tahoe Conservancy will own seven (7) parcels, totaling 16.9 acres, in the plan area that are considered "asset lands" and may be available for development. Within the CTC's overall land inventory of 4,890 parcels totaling more than 6,500 acres, there are just over 300 Conservancy-owned properties throughout the basin that are regarded as "*asset lands*." Asset lands are parcels which are not essential to carrying out Conservancy goals, which could have significant market value, and which are not otherwise restricted from disposal by law or Board policy. In fact, some asset lands, at the time of acquisition, were identified for possible future transfer or sale. The CTC defines these classes of lands as "Area Plan or Town Center Asset Lands." These area plan asset lands are considered to be developable lands, or portions thereof, in highly urbanized areas that could support sustainable, compact development or other uses consistent with the Goals and Policies of the Regional Plan and local area plans (CTC, 2014). There are a total of 17 area plan asset land parcels located basin-wide with 7 of those located within the boundaries of the Tahoe Valley Area Plan. The Tahoe Valley Area Plan asset lands account for approximately 16.9 acres and each of the parcels are vacant except for two along Tata Lane (approximately 11.6 acres) that are being developed as the Sugar Pine Village Affordable Housing project.

The CTC also manages a Land Bank Program that is designed to facilitate a number of natural resource objectives, assist the needs of the general public and environmental projects, and provide funding benefits. An MOU signed with TRPA in early 1988, enables the Conservancy to sell rights from the Land Bank on the open market.

The retirement of the development potential on properties can generate a wide range of development rights or credits, depending on what existed or was credited to the property at the time of acquisition (either land coverage or other marketable rights). The Conservancy periodically acquires these other rights, including those for tourist accommodations, sewer connections, residential units, and commercial floor area. Such rights are usually sold to parties building or remodeling a commercial site or a multi- family unit(s). The rights are recognized by the various regulatory agencies within the Basin and can therefore be sold or transferred under the proper circumstances. The use of these rights is reserved for projects in the areas where the rights originated in order to maintain the economic base of those communities.

*Lahontan Regional Water Quality Control Board:* Lahontan has water quality responsibilities including the California-side of the Lake Tahoe Basin. This agency establishes water quality standards, subject to the approval of the State Water Quality Control Board, and has broader enforcement power than TRPA. By issuing waste discharge permits and requiring monitoring to show compliance, among other activities, Lahontan actively enforces attainment of standards.

Any party responsible for construction activity over one acre must obtain a National Pollution Discharge Elimination System Permit (NPDES Permit) from Lahontan to eliminate or reduce pollutants in storm water discharged to surface waters, which include riparian zones, from area of construction activity.

Lahontan is also responsible for incorporating the Lake Tahoe Daily Maximum (TMDL) pollutant load reduction targets into the NPDES permit for California municipalities in the Tahoe Basin. This permit regulates stormwater discharge from the City's stormwater management infrastructure and Federal rules require the City to implement programs to control pollutant runoff.

The NPDES permit issued to the City stipulates a September 30, 2016, deadline to reduce estimated 2004 baseline jurisdictional pollutant loads of fine sediment particles by 10%, total nitrogen by 8% and total phosphorus by 7%. In 2016, the City submitted to Lahontan the City's Lake Tahoe TMDL Baseline Pollutant Load Update Report which was subsequently incorporated into the City's NPDES permit. The City's load reduction requirement through 2026 under the NPDES permit is shown in the table below. Lahontan continues to update the NPDES permit every five years to include additional load reduction targets. Attainment of the 2026 target, termed the Clarity Challenge, is estimated to return Lake Tahoe to an average annual transparency of 80 feet (Lahontan 2010).

| CSLT 2026 LOAD REDUCTION REQUIREMENTS | | | | |
|---|---|---|---|---|
| **Parameter** | **Baseline Load (lbs./year)** | **Required Percent Reduction** | **Required Load Reduction (lbs./year)** | **Allowable Load (lbs./year)** |
| Fine Sediment Particle (mass) | 176,450 | 34% | 14,650 | 158,800 |
| Fine Sediment Particles (# of particles) | 2.38E+19 | 34% | 1.58E+19 | 1.57E+19 |
| Total Phosphorus | 2,020 | 21% | 55 | 1,596 |
| Total Nitrogen | 8,034 | 19% | 269 | 6,508 |
| Source: Lahontan Lake Tahoe Municipal NPDEs Permit, Board Order R6T-2022-0046, NPCESA NO. CAG616001 | | | | |

The City completed development of a Pollutant Load Reduction Plan (PLRP) to define a path to compliance with the requirements to reduce pollutant loading to Lake Tahoe from urban stormwater runoff. The goal of the Load Reduction Report was to identify feasible and cost-effective actions to meet anticipated targets. In September 2021, the City Council received a draft of the 2021 City of South Lake Tahoe PLRP which documents the City's proposed approach and timeline for meeting the 2026 load reduction targets set forth in the City's NPDES permit, which was then submitted to Lahontan in October, 2021. Proposed strategies outlined in the Load Reduction Plan for meeting the load reduction targets are incorporated in the Area Plan and are discussed in detail in Section 10, Natural and Cultural Resources.

The PLRP estimates the City's pollutant load reduction from water quality projects and enhanced operations and maintenance activities by using the same Pollutant Load Reduction Model (PLRM) which was used in establishing the City's 2004 baseline pollutant load. Estimated load reductions for specific projects and operational improvements are shown in the PLRP. Pollutant load reductions will be credited to the City as

catchments (subwatersheds) with projects and/or operational improvements registered with Lahontan pursuant to the Lake Clarity Crediting Program.

*California Department of Transportation (Caltrans):* Caltrans is responsible for planning, designing, constructing, and maintaining all state highways. The jurisdictional interest of Caltrans extends to improvements to roadways on the state highway system (including roadways designated as U.S. highways). Any federally funded transportation improvements would be subject to review by Caltrans staff and the California Transportation Commission, either on or off of the state highway system.

California Trustee Agencies: State agencies with trustee responsibility in the Tahoe Valley area include: California Division of Forestry (tree removal and forest resource concerns), State Office of Historic Preservation (cultural resources), California Department of Fish and Wildlife (wildlife resources), and State Lands Commission with regard to state-owned "sovereign" lands such as the bed of Lake Tahoe.

City of South Lake Tahoe: The City of South Lake Tahoe is the only incorporated city within the Lake Tahoe Region. The City implements its regulatory authority through its General Plan and City Code. The City's 1999 General Plan adopted TRPA's Plan Area Statements (PAS) to replace its previous local zoning. In the City's 2011 General Plan update, the City adopted new land use designations for PASs located within the City's jurisdiction but retained the PASs and Community Plans as its zoning system. The PASs will remain in effect until superseded by an Area Plan.

Federal: The US EPA has designated Lake Tahoe an Outstanding National Resource Water (ONRW). ONRWs are provided the highest level of protection under EPA's Anti-degradation Policy, stipulating that states may allow some limited activities that result in temporary and short-term changes to water quality, but that such changes should not adversely affect existing uses or alter the essential character or special uses for which the water was designated on ONRW. Although the Area Plan does not require approval from EPA, the incentives related to coverage is dependent upon EPA' certifying TRPA's updated Water Quality Management Plan for the Tahoe Region (208 Plan). The Updated 208 Plan was certified on June 19, 2013.

# 2.0 PROJECT DESCRIPTION

## 2.1 AREA PLAN UPDATES OVERVIEW

The proposed project is an update to the Tahoe Valley Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. The updated Tahoe Valley Area Plan includes the following changes to the plan boundary and zoning:

- Incorporate 19 parcels fronting US Highway 50 on the west side of the centerline from the existing southern boundary line south to H Street, including four APNs (032-161-012, 032-161-013, 032-161-009, and 032-161-008) located west of the fronting parcels and south of F Street. The addition of these former Plan Area 114 Special Area #1 parcels (totaling 17.5 acres) within the newly created Emerald Bay Connection Corridor (EB-CC) District is intended to increase opportunity for residential development and include potential sites for a future transit center. Permissible uses are consistent with the previous PAS of this area; however, as part of the area plan these parcels are allowed greater density, making future housing development more feasible. In addition, several low intensity commercial uses are added to support the development of a transit center, encouraging an active streetscape and providing interest for individuals when going to and from the Town Center Gateway and Core Districts.

- Incorporate one parcel west of US Highway 50 at the southern plan boundary and seven parcels fronting Melba Drive to the existing Town Center Gateway (TC-G) District so that the Area Plan is contained in this corner by the intersection of E Street and Melba Drive. The addition of these former Plan Area 114 Special Area #1 parcels (totaling 6.2 acres) is a benefit because of their high redevelopment potential, which may be incentivized by the benefits of being in an area plan Town Center.

- Incorporate 15 parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave including one APN (023-221-020) north of Eloise Ave to the existing Town Center Neighborhood Professional (TC-NP) District (previously located within Plan Area 111 Special Area #2). These parcels (totaling 5.3 acres) were previously part of a PAS special area recognizing the legal, but nonconforming nature of the subject parcels. With the incorporation of these parcels into the Area Plan, various existing land uses (e.g., realty offices, professional offices) will become conforming, while giving the existing multi-family residential properties is this area the opportunity to be redeveloped at higher densities within a Town Center.

- Rezone two open space parcels. The first APN (032-191-004), recently identified as asset land between US Highway 50 and Melba Drive, would be rezoned from open space to Town Center Gateway (TC-G). A second APN (023-241-022) recently acquired by the California Tahoe Conservancy at the southwest corner of US Highway 50 and 4$^{th}$ Street would be rezoned from Town Center Mixed-Use Corridor (TC-MUC) to open space.

- Move one APN (023-081-011) from Town Center Gateway (TC-G) to Tourist Center Core (TC-C) south of the Raley's shopping center. This parcel was previously the location of the Barton Ranch House and has a high redevelopment potential for creating public gathering places with a high density multi-family residential component.

The Area Plan includes changes necessary to opt in to the TRPA Phase 2 Housing Code Amendments adopted in December 2023 for the areas within and outside of the Town Center – these amendments are

included in the proposed changes to density, height and land coverage limits applicable to deed restricted affordable housing as documented in Appendix C.

In addition to the changes to area plan boundaries and zoning districts described above, changes are proposed to various area plan sections: land use, community design and housing; revitalization and economic development; development/design standards; and general changes to improve consistency with state laws and other existing plans. These amendments are summarized below – the detailed list of the proposed amendments are documented using track changes (strike out and underline) in the Area Plan chapters and Appendices on the City's website (https://cityofslt.us/2290/Area-Plan-Proposals-and-Updates).

Residential Density – increase multi-family dwelling density to 65 units per acre in the Town Center Core, Town Center Mixed-Use Corridor, and Town Center Gateway Districts, and to 65 units in the Commercial Mixed-Use Services District but only as part of a mixed-use project. Set a minimum multi-family dwelling density of 12 units per acre in each District, though certain mixed-use projects may be exempt from the minimum density in the CMX-S District. To maintain consistency with the 2011 City of South Lake Tahoe General Plan, Table LU-2 (Development Intensity Standards) must be amended to permit up to 65 residential units per acre in the Town Center and Tourist Center land use designations and up to 25 residential units per acre in the High Density Residential land use designation. General Plan Land Use Diagram LU-1 must also be amended to maintain consistency with changes to TVAP Zoning District boundaries. These amendments include: 1) replacing High Density Residential with Town Center for the Gateway District expansion at the south end of the Area Plan and the Neighborhood Professional District expansion at the north end of the Area Plan; 2) replacing Low Density Residential with High Density Residential for the proposed Emerald Bay Connection Corridor District at the southern end of the Area Plan; and 3) replacing Neighborhood Center with Town Center to recognize those parcels locations within the existing Town Center Mixed-Use Corridor Zoning District.
Retention of Housing – each existing residential unit of use located within the area plan that is proposed for demolition must be rebuilt on the same parcel or elsewhere within the area plan boundary. In addition, the replacement unit must be equivalent in size and number of bedrooms, and will be prohibited from obtaining a vacation home rental permit. Further, new condominiums built after adoption of the amendments shall be prohibited from obtaining a vacation home rental permit.

Consistency with California state law – design standards have been updated to clarify accessory dwelling unit (ADU) applicability. Multi-person dwellings, nursing and personal care uses, and residential care uses have been expanded and are now allowed in all area plan Districts where multi-family dwellings are allowed (except CMX-S where multi-family dwellings are only allowed as part of a mixed-use project).

Residential Design Standards – Area Plan Appendix C has been updated to allow 100 percent residential projects in the Healthcare and Neighborhood Professional Districts to utilize standards in City Code 6.85 (Residential Development and Design Standards), adopted in compliance with California SB 35 and SB 330, rather than existing area plan standards that were adopted with commercial and mixed-use projects in mind.

Permissible Uses – Employee housing has been eliminated from the land use matrix as a stand alone category. Employee housing shall be classified as single family, multiple family, or multiple person dwellings based on the design and organization of accommodations.

The public owned assembly and entertainment use has been removed and is now included with local public assembly facilities. The amusement and recreation and privately owned assembly and entertainment uses have been consolidated under amusement, recreation, and entertainment facilities. The general retail and personal service use definition has been expanded to explicitly include health and athletic clubs;

gymnasiums; day spas that perform massages, manicures, etc.; and funeral parlors and related services. Tree farms, which were erroneously left out of the use matrix at the time of the area plan's initial adoption, has been added.

Commercial Floor Area and Outdoor Dining - To reduce barriers associated with establishing outdoor dining, 20 outdoor dining seats will be allowed by right for eating and drinking uses, without the need to obtain additional commercial floor area (CFA). The 20 seats of outdoor dining was selected based on a determination by the South Tahoe Public Utility District that restaurants may have up to 20 outdoor dining seats without an increase to the business' usage fee. TRPA Code (Section 50.6.1.B.2) also allows for additions to, or expansions of, legally existing CFA of up to 500 square feet which supports the proposed amendment to allow outdoor dining up to 20 seats. Outdoor dining and seating create more active streetscapes and do not have the same impacts as indoor seating due to their seasonal nature.

Advertising for Accessory Uses - accessory uses may advertise separately from the primary use; however, they are still subject to the signage area allowed per SLTCC Chapter 6.40.

Commercial Design Standards - Building articulation and modulation standards were previously included for commercial projects, but were unclear and subjective. Objective design standards have been added to Appendix C for new construction and major façade improvements. These standards draw heavily from the South Lake Tahoe Design Guidelines (2016), which are now included in the TVAP as Appendix B.

The roof height requirement and building height limitation applicable to the maximum number of stories has been eliminated, and the minimum roof pitch reduced from 5:12 to 3:12. Exceptions to the corner build area standard have been added for parcels where SEZ or other natural features are present and should be retained. Exceptions have been added for additional height when required for public safety and transportation uses, as well as flexibility in building placement and orientation.

Parking - A recent California law prohibits local governments from enforcing minimum parking requirements for residential and commercial projects within one-half mile of a major transit stop. While the City of South Lake Tahoe does not have major transit stops as defined by the California Public Resource Code Section 21064.3, in anticipation of improved transit services, parking standards have been adjusted to be in alignment with the intention of this state law. The update includes an automatic but optional 25 percent reduction in parking when the project site in within a half mile of a transit stop. Parking may be further reduced when the project includes contributions to alternative transportation. While most businesses wish to reduce onsite parking, some require additional parking due to seasonal demands and popularity. The plan offers flexibility for an applicant to provide a parking demand analysis, for review and approval by the Planning Commission, to build more parking than otherwise allowed. Bicycle parking has been adjusted so that it is no longer based on the number of automobile spaces.

General Code Corrections and Consistency Improvements - General improvements include correcting City Code and TRPA Code references, incorporating amendments implemented by TRPA through Ordinance 2021-01, and referencing new TRPA policies that support the proposed amendments. TRPA Code of Ordinances 31.4.6 will be referenced to ensure that legal, non-conforming tourist and residential densities can be maintained and managed pursuant to that section. The TVAP includes the TRPA interpretation that commercial and residential/tourist mixed-use projects are allowed to use the full parcel area in determining density, regardless of the amount of commercial floor area on the parcel. Commercial floor area shall also be the maximum allowable in that district.

Right of Way Improvements and Complete Streets Consistency - Transportation and Circulation Policies have been amended to reflect current areas of focus, and align with and progress the City's Complete Streets Program. Recent mobility improvement concepts from TRPA's Active Transportation Plan and Lake Tahoe

Unified School District's Safe Routes to School Master Plan have been incorporated. Implementation efforts have been updated to account for completed projects, and identify new areas of support, such as implementation of TRPA's SR 89 Recreation Corridor Management Plan.

**Table 2** provides an overview of the plan, maps, and ordinances that are relevant to the Tahoe Valley Area Plan, a synopsis of the proposed changes, and a brief description of those changes.

**Table 2**
**Elements of the Tahoe Valley Area Plan**

| Tahoe Valley Area Plan Element/ Section | Proposed Change from Existing Plans, Maps, and Ordinances | Summary Description |
|---|---|---|
| Land Use, and Land Use Map | Update maps to include newly incorporated parcels in existing Town Center Zoning Districts.<br><br>Add the Emerald Bay Connection Corridor District (EB-CC).<br><br>Expand on existing policy. | ▪ Elaborate Policy LU-2.1 to encourage mixed-use projects in the Town Center – Core District.<br>▪ Establish a vision for the newly formed Emerald Bay Connection Corridor District |
| Existing Conditions | Modified to reflect changes since area plan initial adoption.<br><br>Updated maps. | ▪ Existing land use table modified to reflect plan area expansion.<br>▪ The Airport Land Use Compatibility Plan section was updated to reflect the Airport Land Use Compatibility Plan which replaced the Comprehensive Land Use Plan.<br>▪ Updated Total Daily Maximum Load standards and compliance. |

| | | |
|---|---|---|
| Zoning Map Amendment (Zoning map) | Change zoning for newly incorporated parcels. | ▪ One (1) parcel from the TC-G (Town Center Gateway) rezoned as TC-C (Town Center Core).<br>▪ Eight (8) parcels from PAS 114, Special Area #1 rezoned as TC-G.<br>▪ Fifteen (15) parcels from PAS 111, Special Area #2 rezoned as TC-NP (Town Center Neighborhood Professional).<br>▪ Nineteen (19) parcels from PAS 114 and PAS 114, Special Area #2 included as Emerald Bay Connection Corridor District.<br>o The Emerald Bay Connection Corridor District was created to allow for high-density residential development adjacent to the town center as well as to provide potential sites for a transit center. This is a transitional area of mixed uses limited to those compatible with scenic restoration, the intensity of Highway 50/89, and the background residential areas. Permissible uses are drawn from to those allowed in the adjacent Bonanza Plan Area Statement (114), in which these parcels were previously included. These uses consist of residential, tourist accommodation, neighborhood compatible commercial uses, and public service. |
| Land Use and Community Design | Modification to existing policy | ▪ Modified Policy LU-8.1 to acknowledge the increase of residential uses in the Commercial Mixed-Use Service District. Recognize the need to maintain industrial services in a manner that is compatible with residential uses. |
| Economic Development | Include new economic development policies and modification of existing policies. | ▪ Create consistency between Policy ED-1.3 and Resolution 2023-051 regarding commercial floor area incentives.<br>▪ Addition of Policy ED-1.6 to clarify when Commercial Floor Area (CFA) is needed.<br>▪ Addition of Policy ED-1.7 indicating the City's intent to pursue a special event designation for the Tahoe Valley.<br>▪ Modify Policy ED-3.1 to encourage neighborhood compatible industrial uses. |
| Housing | Modify and add to policies. | ▪ Modify Policy H-1.2 to reflect current City housing incentives and include density bonuses per AB 682.<br>▪ Addition of Goal H-2 and associated policies (H-2.1 and H-2.2) to maintain long term housing. |
| Transportation and Circulation | Modifications to existing policies and addition of new policies regarding reduced parking strategies.<br><br>Updates to Transportation and Circulation Strategies table to indicate progress and completion. | ▪ Update Policy T-2.5 to allow projects to offset parking demand through additional parking management, contributions to shared parking facilities, public transportation and/or right of way improvements.<br>▪ Addition of Policy T-2.6 establishing reduced parking requirements for affordable housing projects that are not exempt from parking requirements by state law.<br>▪ Addition of Policies T-2.7 and T-2.8 to explore a parking benefit district and parking hub.<br>▪ Various other policy modifications to reflect evolved goals of pedestrian and bicycle circulation.<br>▪ Completed implementation strategies have been moved to a new table with completion dates. Strategies in progress have |

| | | |
|---|---|---|
| | | been updated to reflect current stages based on City or other agency action. |
| Natural and Cultural Resources | Updates to reflect completed and progressed scenic quality improvements, stream zone restoration, and water quality improvement strategies. | ▪ Completed implementation strategies have been moved to a new table with completion dates. |
| Incentive and Mitigation Programs | Update CFA allocation, Tourist Accommodation Bonus Units, and Residential Bonus Units sections to remove outdated numbers.<br><br>Include Accessory Dwelling Unit and Multi-family development right incentives. | ▪ The count of CFA, Tourist Accommodation Bonus Units, and Residential Bonus Units was removed to avoid having outdated numbers in the Area Plan.<br>▪ Secondary units have been replaced with accessory dwelling units.<br>▪ The City incentive of RUUs at no cost for ADUs and multi-family developments has been included.<br>▪ The Change in Use section was removed as it is no longer contained in the South Lake Tahoe City Code or TRPA Code of Ordinances.<br>▪ The Conversion of Use section was updated to reflect the current Chapter 51 of TRPA Code of Ordinances. |
| Appendix B, | Replaced with Commercial Design Guidelines | ▪ TRPA height findings were removed from this appendix. The findings are applicable through reference to TRPA Code of Ordinances.<br>▪ The South Lake Tahoe Commercial Design Guidelines have been included as Appendix B to provide visual representations of the intent of design standards in Appendix C. |
| Appendix C, Development and Design Standards | Modify existing use matrix for clarity and consistency.<br><br>Modification of existing standards for clarity. | ▪ Permissible use matrix and definitions have been modified for consistency and simplification.<br>▪ All items previously included in the Substitute Design Standards have been relocated to the main standards section. |
| Appendix D, CSLT Green Building Program | Include more recent sustainable building certification programs. | ▪ Additional green building certifications are being added to the Green Building Program to make projects eligible for development incentives. Development incentives are no longer tiered and shall be based on the discretion of the decision-making authority. |

As part of the Tahoe Valley Area Plan, the City of South Lake Tahoe will maintain compliance with all mitigation measures from the Regional Plan Update EIS certified by the TRPA Governing Board on December 12, 2012. The adoption of these measures includes compliance with measures that have already been incorporated into the TRPA Code, adopted on December 12, 2012, and effective on February 9, 2013.

Also part of the Tahoe Valley Area Plan is the City of South Lake Tahoe's continued compliance with all mitigation measures from the General Plan EIR certified by the City on May 17, 2011.

The following is a description of proposed updates to land use zoning districts identified in **Figure 3.**

Town Center Core District

This district is the heart of the Tahoe Valley area and intended to become a place of public gathering and retail activity meeting the needs of both area residents and tourists. This district allows for mixed-use projects with a focus on ground-level active storefronts and pedestrian- and transit-oriented development that encourages pedestrian activity and supports multi-modal transportation. Allowable uses include tourist accommodation, retail, commercial, entertainment, and office uses, as well as mixed-use residential development.

**Table 3** summarizes changes to development standards that apply to this district (refer to Appendix C of the draft Tahoe Valley Area Plan for more detail):

**Table 3**
**Development Standards for the Town Center Core District**

| Development Standard | | Existing Core | Proposed Core |
|---|---|---|---|
| Density | Multiple Family Dwelling | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | Not permitted | 65 persons/acre, no minimum |
| | Nursing and Personal Care | Not permitted | 65 persons/acre, no minimum |
| | Residential Care | Not permitted | 65 persons/acre, no minimum |
| | Single Family Dwelling | Condos only | Condos only. 12-65 units/acre |
| | Employee Housing | As per the limitations set forth for multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Nursing and Personal Care | Not permitted | Allowed by right |
| | Residential Care | Not permitted | Allowed by right |
| | Multi-Person Dwelling | Not permitted | Allowed by right |
| | Nursery | Not permitted | Requires special use permit |
| | Membership Organization | Not permitted | Allowed by right |
| | Religious Assembly | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (A)<br>Privately Owned Assembly & Entertainment (A)<br>Public Owned Assembly & Entertainment (A) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Small Scale Manufacturing | Requires a special use permit. | Allowed by right |
| | Local Public Assembly Facilities | Local Assembly & Entertainment (A) | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | The height of the sloped roof must be a minimum 40% of the height of the building | This standard was removed. |
| | Roof Slope | 5:12 to 12:12 | 3:12 to 12:12 |

Town Center Gateway District

The Gateway District, which includes properties surrounding the "Y" intersection and properties along Lake Tahoe Boulevard and Emerald Bay Road, is a key arrival area for travelers to South Lake Tahoe. This district is intended to create an attractive mixed-use commercial corridor that provides a welcoming gateway to South Lake Tahoe. The physical form varies to reflect the commercial mixed-use character of

the gateway corridor and to transition from surrounding, lower-density districts to the Town Center Core. Allowable uses include tourist accommodation, retail, commercial, recreation, office uses, as well as mixed-use residential development. **Table 4** summarizes development standards that apply to this district (refer to Appendix C of the draft Tahoe Valley Area Plan for more detail):

**Table 4**
**Development Standards for the Town Center Gateway District**

| Development Standard | | PAS 114 Special Area #1 | Existing Gateway | Proposed Gateway |
|---|---|---|---|---|
| Density | Multiple Family Dwelling | 15 units/acre | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | Not permitted | Not permitted | 65 persons/acre, no minimum |
| | Nursing and Personal Care | 25 persons/acre | Not permitted | 65 persons/acre, no minimum |
| | Residential Care | 25 persons/acre | Not permitted | 65 persons/acre, no minimum |
| | Single Family Dwelling | 1 unit per parcel | Condos only | Condos only, 12-65 units/acre |
| | Employee Housing | Not permitted | Not permitted | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Multi-Person Dwelling | Allowed by right | Not permitted | Allowed by right |
| | Nursing and Personal Care | Allowed by right | Not permitted | Allowed by right |
| | Residential Care | Allowed by right | Not permitted | Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (Not permitted)<br>Privately Owned Assembly & Entertainment (Not permitted)<br>Public Owned Assembly & Entertainment (S) | Amusement & Recreation (A)<br>Privately Owned Assembly & Entertainment (S)<br>Public Owned Assembly & Entertainment (A) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | Local Assembly & Entertainment (Not permitted) | Local Assembly & Entertainment (A) | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Religious Assembly | Not permitted | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Range Management | Not permitted | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | No applicable | The height of the sloped roof must be a minimum 40% of the height of the building | This standard was removed |
| | Roof Slope | TRPA Code Chapter 37.3.4 | 5:12 to 12:12 | 3:12 to 12:12 |

Town Center Mixed-Use Corridor

This district is intended to facilitate the transformation of the eastern and western portions of Lake Tahoe Boulevard into a multi-modal, mixed-use corridor. Allowable uses include a rich mixture of retail, service, public facility, recreation, entertainment, and housing organized in a compact development pattern, creating an aesthetically-pleasing and safe environment for pedestrians, cyclists, and automobile drivers. **Table 5** summarizes development standards that apply to this district (refer to Appendix C of the Tahoe Valley Area Plan for more detail):

**Table 5**
**Development Standards for the Town Center Mixed-Use Corridor District**

| Development Standard | | Existing TC-MUC | Proposed TC-MUC |
|---|---|---|---|
| Density | Multiple Family Dwelling | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | Not permitted | 65 persons/acre, no minimum |
| | Nursing and Personal Care | Not permitted | 65 persons/acre, no minimum |
| | Residential Care | Not permitted | 65 persons/acre, no minimum |
| | Single Family Dwelling | Condos only | Condos only, 12 – 65 units/acre |
| | Employee Housing | As per the limitations set forth for multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Multi-Person Dwelling | Not permitted | Allowed by right |
| | Nursing and Personal Care | Not permitted | Allowed by right |
| | Residential Care | Not permitted | Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (A)<br>Privately Owned Assembly & Entertainment (S)<br>Public Owned Assembly & Entertainment (A) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | Local Assembly & Entertainment (A) | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Auto Repair and Service | Not permitted | Requires special use permit |
| | Religious Assembly | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously |
| | Small Scale Manufacturing | Requires a special use permit. | Allowed by right. Previously required a special use permit. |
| Height and Roof Standards | Roof Slope | 5:12 to 12:12 | 3:12 to 12:12 |
| | Roof Height | The height of the sloped roof must be a minimum 40% of the height of the building | This standard was removed. |

Town Center Neighborhood Professional

This district is intended to allow a variety of residential and non-residential uses to encourage a greater mix and intensity of uses in a pedestrian and bikeable environment at a scale and form that is appropriate to its neighborhood context and adjacent residential uses. Allowable uses include commercial, public service, healthcare, and office uses, social services, neighborhood parks, as well as all types of residential development. **Table 6** summarizes development standards that apply to this district (refer to Appendix C of the Tahoe Valley Area Plan for more detail):

**Table 6**
**Development Standards for the Town Center Neighborhood Professional District**

| Development Standard | | PAS 111 Special Area #2 | Existing TC-NP | Proposed TC-NP |
|---|---|---|---|---|
| Density | Multiple Family Dwelling | 8 units/acre | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | Not permitted | 25 persons/acre | 65 persons/acre, no minimum |
| | Nursing and Personal Care | 25 persons/acre | 25 persons/acre | 65 persons/acre, no minimum |
| | Residential Care | 25 persons/acre | 25 persons/acre | 65 persons/acre, no minimum |
| | Single Family Dwelling | 1 unit per parcel | 2 units per parcel, provide one is an authorized secondary residence | 1 unit per parcel, excluding ADUs |
| | Employee Housing | Not permitted | As per the limitations set forth for the multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | General Retail and Personal Service | Not permitted | Not permitted | Allowed by right |
| | Nursery | Requires a special use permit | Not permitted | Allowed by right |
| | Religious Assembly | Not permitted | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Range Management | Not permitted | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | Not applicable | Not applicable | Not applicable |
| | Roof Slope | TRPA Code Chapter 37.3.4 | 5:12 to 12:12 | 3:12 to 12:12 |

Town Center Healthcare District

The Healthcare District contains the area within the immediate vicinity of Barton Hospital, north and south of South Avenue and between Third Street and Winnemucca Avenue. Despite the upcoming relocation of Barton Hospital out of this district, it is intended to remain a core area for healthcare services and shall be expanded to include a broader range of commercial services related to and independent from healthcare. **Table 7** summarizes development standards that apply to this district (refer to Appendix C of the Tahoe Valley Area Plan for more detail):

**Table 7**
**Development Standards for the Town Center Health-Care District**

| Development Standard | | Existing TC-HC | Proposed TC-HC |
|---|---|---|---|
| Density | Multiple Family Dwelling | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | 25 persons/acre | 65 persons/acre, no minimum |
| | Nursing and Personal Care | 25 persons/acre | 65 persons/acre, no minimum |
| | Residential Care | 25 persons/acre | 65 persons/acre, no minimum |
| | Single Family Dwelling | 1 unit per parcel | 1 unit per parcel, excluding ADUs |
| | Employee Housing | As per the limitations set forth for multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Single Family Dwelling (includes condominiums) | Requires a special use permit | Allowed by right |
| | General Retail and Personal Service | Not permitted | Allowed by right |
| | Nursery | Not permitted | Allowed by right |
| | Animal Services | Not permitted | Allowed by right |
| | Professional Offices | Not permitted | Allowed by right |
| | Business Support Services | Not permitted | Allowed by right |
| | Local Public Assembly Facilities | Not permitted | Requires a special use permit |
| | Membership Organizations | Not permitted | Allowed by right |
| | Religious assembly | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Schools - College | Not permitted | Requires a special use permit |
| | Schools – Kindergarten through Secondary | Not permitted | Requires a special use permit |
| | Threshold Related Research Facilities | Not permitted | Allowed by right |
| | Cultural Facilities | Requires a special use permit | Allowed by right |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously |
| | Small Scale Manufacturing | Not permitted | Requires a special use permit. |
| Height and Roof Standards | Roof Slope | 5:12 to 12:12 | 3:12 to 12:12 |
| | Roof Height | Not applicable | Not applicable |

Commercial Mixed-Use Service District

This district is intended to provide for a mix of small- and medium-scale commercial, support services, and light industrial uses to meet local and regional demand. **Table 8** summarizes development standards that apply to this district (refer to Appendix C of the draft Tahoe Valley Area Plan for more detail):

**Table 8**
**Development Standards for the Commercial Mixed-Use Services District**

| Development Standard | | Existing CMX-S | Proposed CMX-S |
|---|---|---|---|
| Density | Multiple Family Dwelling | 25 units/acre | 12-65 units/acre, allowed only as part of a mixed-use project. Certain mixed-use projects may be exempt from the minimum density standard. |
| | Multi-Person Dwelling | Not permitted | 255 persons/acre, allowed only as part of a mixed-use project. No minimum |
| | | | |
| | | | |
| | Single Family Dwelling | 1 unit per parcel | 1 unit per parcel, allowed only as part of a mixed-use project. |
| | Employee Housing | As per the limitations set forth for multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Multi-Family Dwelling | Requires a special use permit | Allowed by right as part of mixed-use project |
| | Multi-Person Dwelling | Requires a special use permit | Allowed by right as part of mixed-use project |
| | Single Family Dwellings (includes condos) | Requires a special use permit | Allowed by right as part of mixed-use project |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (A)<br>Privately Owned Assembly & Entertainment (Not permitted)<br>Public Owned Assembly & Entertainment (Not permitted) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Religious Assembly | Requires special use permit | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously |
| Height and Roof Standards | Roof Slope | 5:12 to 12:12 | 3:12 to 12:12 |
| | Roof Height | Not applicable | Not applicable |

Emerald Bay Connection Corridor District

The Emerald Bay Connection Corridor District is proposed to allow for higher-density residential development adjacent to the town center. This is a transitional area of mixed uses limited to those compatible with scenic restoration, the intensity of Highway 50/89, and the background residential areas. The City sees within this district a potential opportunity for a transit center close to high density development and along a major travel way. Permissible uses are drawn from those allowed in the adjacent Bonanza Plan Area Statement (114), in which these parcels were previously included. Permissible uses include residential, tourist accommodation, neighborhood compatible commercial uses, and public service and are listed below. Developments within this district shall meet all applicable standards of the TVAP. **Table 9** summarizes development standards that apply to this district (refer to Appendix C of the draft Tahoe Valley Area Plan for more detail):

**Table 9**
**Development Standards for the Emerald Bay Connection Corridor District**

| Development Standard | | PAS 114 Special Area #1 | Proposed EB-CC |
|---|---|---|---|
| Density | Mobile Home Dwelling | 8 units/acre, special use permit required | 8 units/acre, requires a special use permit |
| | Multiple Family Dwelling | 15 units/acre, allowed by right | 12-25 units/acre, allowed by right |
| | Multi-Person Dwelling | Not permitted | 25 persons/acre, allowed by right |
| | Nursing and Personal Care | 25 persons/acre, allowed by right | 25 persons/acre, allowed by right |
| | Residential Care | 25 persons/acre, allowed by right | 25 persons/acre, allowed by right |
| | Single Family Dwelling | 1 unit per parcel | Condominiums only, allowed by right. See multi-family density. |
| | Bed & Breakfast Facilities | 10 units/acre, special use permit required | 10 units/acre, requires a special use permit |
| | Hotel, Motel, and Other Transient Dwelling Units | 40 units/acre, special use permit required | 40 units/acre, requires a special use permit |
| | Employee Housing | Not permitted | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Eating and Drinking | Not permitted | Requires a special use permit |
| | General Retail and Personal Service | Not permitted | Requires a special use permit |
| | Nursery | Requires a special use permit | Requires a special use permit |
| | Professional Offices | Requires a special use permit | Requires a special use permit |
| | Schools – Business & Vocational | Requires a special use permit | Requires a special use permit |
| | Parking Lots | Not permitted | Requires a special use permit |
| | Cultural Facilities | Requires a special use permit | Allowed by right |
| | Daycare Centers/Preschool | Requires a special use permit | Requires a special use permit |
| | Government Offices | Requires a special use permit | Requires a special use permit |
| | Local Public Assembly Facilities | Requires a special use permit | Requires a special use permit |
| | Local Public Health and Safety Facilities | Requires a special use permit | Allowed by right |
| | Membership Organizations | Requires a special use permit | Allowed by right |
| | Religious Assembly (churches) | Requires a special use permit | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Social Service Organization | Requires a special use permit | Requires a special use permit |
| | Pipelines & Power Transmission | Requires a special use permit | Requires a special use permit |
| | Transit Stations & Terminals | Requires a special use permit | Requires a special use permit |
| | Transmission & Receiving Facilities | Requires a special use permit | Requires a special use permit |
| | Transportation Routes | Requires a special use permit | Allowed by right |
| | Day Use Areas | Allowed by right | Allowed by right |

| | | | |
|---|---|---|---|
| | Outdoor Recreation Concessions | Not permitted | Requires a special use permit |
| | Participant Sport Facilities | Requires a special use permit | Requires a special use permit |
| | Riding and Hiking Trails | Allowed by right | Allowed by right |
| | Visitor Information Centers | Not permitted | Requires a special use permit |
| | Forest and Timber Resource Management | Allowed by right | Allowed by right |
| | Tree Farms | Not permitted | Allowed by right |
| | Vegetation Resource Management | Allowed by right | Allowed by right |
| | Water Quality Improvements and Watershed Management | Allowed by right | Allowed by right |
| | Wildlife and Fisheries Resource Management | Allowed by right | Allowed by right |
| | Range Management | Not permitted | Allowed by right |
| | Open Space | Allowed by right | Allowed by right |
| | Small Scale Manufacturing | Not permitted | Requires a special use permit |
| Height and Roof Standards | Roof Slope | 5:12 to 12:12 | 3:12 to 12:12 |
| | Roof Height | Not applicable | Not applicable |

Open Space

This district is intended to preserve land in its present use that would: 1) conserve and enhance natural or scenic resources; 2) protect streams environment zones, sensitive lands, water quality or water supply; 3) promote soil and habitat conservation; 4) enhance recreation opportunities; and/or 5) preserve visual quality along highways, roads, and street corridors or scenic vistas. The land is predominantly open, undeveloped, or lightly developed with trails or water quality projects, and is suitable for any of the following: natural areas, wildlife and native plant habitat; erosion control facilities, stream environment zones, stream corridors; passive parks; and/or trails for non-motorized activities. One CTC parcel identified as an asset land, APN 032-191-004, was rezoned from open space to TC-G and one parcel recently acquired by the CTC (023-241-022) was rezoned from TC-MUC to open space. No changes to the development standards of the Open Space District were made.

TRPA Town Center Overlay

This overlay contains much of the region's non-residential services and has been identified as a significant source of sediments and other contaminants that continue to enter Lake Tahoe. Town Centers are targeted for redevelopment in a manner that improves environmental conditions, creates a more sustainable and less auto-dependent development pattern, and provides economic opportunities in the region. The overlay designation also establishes areas of the region that qualify for additional land coverage, height, and density incentives to encourage redevelopment activity and provide capacity for transfers of development from sensitive and outlying areas. These amendments propose to expand the TRPA Town Center Overlay by 11.5 acres to include additions to the TC-NP and TC-G Zones (see Figure 3).

Permissible Use List

The Tahoe Valley Area Plan updates propose modifications to the existing permissible use list to consolidate multiple similar uses under one category, to create more succinct criteria, and to increase compatibility within categories. "Employee Housing" has been eliminated as an independent use and shall be included in other residential uses where occupant organization is the defining criteria rather than ownership. Health and athletic clubs, day spas, and funeral parlors are now included under General Retail and Personal Service as they are consistent with the existing criteria of the category in that they are "non-medical services involving the care of persons." Categories in which there was overlap of criteria have been consolidated into one use encompassing amusement, recreation, assembly, and entertainment. Permissible uses in the Health Care District have been expanded to reflect those of the Neighborhood Professional District. This is a change made in anticipation of Barton Health downsizing their presence at this location.

Anticipated Development

By the year 2034, the Tahoe Valley Area Plan is anticipated to accommodate an additional 77,000 to 102,000 square feet of CFA that would consist of CFA allocated to the Area Plan by TRPA, CFA from the City Pool and the transfer of existing CFA that would be transferred from outside of the Area Plan. These projections are unchanged from the 2015 Area Plan adoption. Policy provisions in the Tahoe Valley Area Plan identify the desire for developing and repurposing existing commercial uses towards resident-serving and recreation-based retail uses, and turning Tahoe Valley into an entertainment and recreation center.

As analyzed for the 2015 Area Plan, residential development and redevelopment by 2034 would primarily occur as multi-family, live/work, and mixed-use units, and is anticipated to consist of 373 new dwelling units. The development and redevelopment would occur through a combination of the current City and TRPA allocation system, including provisions for bonus units for affordable, moderate, and market-rate housing, and the potential conversion of 100 tourist accommodation units in the Tahoe Valley plan area. This plan amendment identifies the need for additional housing in Tahoe Valley and expands the number of parcels that are eligible for residential development incentives under Area Plan Section 7 – Housing policies H-1.2 (Housing Incentives), H-1.3 (Residential Improvement), H-1.5 (Redirection of Development), H-1.9 (Housing Needs), H-1.10 (Conversions) and H-2.2 (Housing in the Town Center Core District). The addition of 11.5 acres of new parcels to the Area Plan Town Center and 17.5 acres of parcels to the newly formed Emerald Bay Connection Corridor District (outside of the Town Center boundary) would help increase the rate of predicted residential buildout for the Area Plan. It is also possible that the addition of new parcels within the Town Center would increase the number of new dwelling units assumed for Tahoe Valley Area Plan buildout in the Regional Plan Update EIS. However, the Area Plan amendments do not propose any changes to the TRPA growth management system, so overall residential development limits would remain unchanged.

Design and Development Standards

The Tahoe Valley Area Plan includes development and design standards that are specific to the Plan Area and replace the City of South Lake Tahoe City Code Chapters 6.10 and 6.55 development standards, and portions of the TRPA Code of Ordinances Chapter 30, land coverage, Chapter 31 regarding density, Chapter 36 regarding design standards, and Chapter 37 regarding height standards. Standards for the Area Plan are contained in Appendix C of the Tahoe Valley Area Plan. Further design and development standards are housed in the South Lake Tahoe Design Guidelines (2016). This document has historically been used as a supplemental document to Appendix C. As part of the updates to the plan, this document

shall be included as Appendix B and shall be used in conjunction with Appendix C to provide examples of the standards. Specific standards that have been changed through this process include:

- Allowing roof pitches of 3:12 to 12:12 (previously the minimum roof pitch was 5:12) and the removal of the roof height requirement.
- Shifting to more objective building modulation and articulation standards.
- Increased flexibility in corner build and build to line requirements.
- Increased bicycle parking requirements
- Reducing residential parking requirements by right, for example, each multi-family residential unit is permitted one parking space and that number may be reduced further if a deed restriction is placed on the property making the property owner responsible for parking management.
- Allowing for a reduction in commercial parking spaces, for example, a 25% reduction in parking supply for projects located within ½ mile of a transit stop.

Significant changes were made to the organization of Appendix C by incorporating design standards previously designated as "substitute" into the primary standards. Purely residential projects in certain districts may now follow the residential design standards contained in the City of South Lake Tahoe City Code Chapter 6.85.

Maximum Transferred Land Coverage

No changes to the land coverage system of the Tahoe Valley Area Plan are being proposed. 11.5 acres would be added to the Town Center under the amendments, increasing the allowable land coverage therein to a maximum of 70 percent on high capability lands with transfer. The newly created Emerald Bay Connection Corridor District shall adhere to coverage limitations set forth in TRPA Code of Ordinances Chapter 30: Land Coverage.

Building Height and Design

The maximum building height and number of stories for each district shall remain the same for commercial and mixed-use projects. Purely residential developments in TC-NP and TC-HC and all projects in the Emerald Bay Connection Corridor District shall meet the height requirements of City Code Chapter 6.85 and TRPA Code of Ordinances Section 37.4. In order to increase the efficiency and feasibility of large buildings, a minimum roof pitch of 3:12 is being proposed (previously 5:12) as well as elimination of the requirement that a building's roof be 40 percent of the building height.

Numerous other changes are being made for clarity and consistency, most notably the creation of objective design standards to achieve desired levels of building articulation.

Density

New density maximums and a minimum density standard are being proposed. For the first time the City is proposing a minimum density of 12 units per acre for multiple family dwellings in all Tahoe Valley area plan districts. Mixed-use projects meeting certain criteria may be exempt from the minimum density. The maximum density for multiple family dwellings in the TC-C, TC-MUC, and TC-G shall be increased from 25 to 65 units per acre. Residential projects in all other districts shall remain at 25 units per acre.

The Tahoe Valley Area Plan will incorporate the City's accessory dwelling unit (ADU) ordinance; however, these units are not counted towards density.

Redevelopment Incentives

The Tahoe Valley Area Plan already provides several incentives for redevelopment of properties in the plan area. These incentives are described in the draft Tahoe Valley Area Plan and have not undergone changes. Refer to Resolution 2023-051 passed by City Council on June 6, 2023, for the City's policy on distributing TRPA commodities.

Transportation

The Tahoe Valley Area Plan calls for various improvements to vehicle, bike, and pedestrian routes. No specific projects are approved through the plan and all future projects would be subject to applicable environmental review and permitting requirements. Section 8 of TVAP provides summaries of transportation and circulation strategies proposed and completed in the Tahoe Valley. Some improvements that have been completed remain in the table of strategies to ensure maintenance.

Recreation and Open Space

No changes are being made to the Recreation and Open Space elements of the Tahoe Valley Area Plan, except for the rezoning of one parcel, 1123 Emerald Bay Road, from Open Space to Town Center Gateway District and another parcel near Third Street and Barton Avenue from TC-MUC to OS. The first change is being made to allow for development of housing, as the parcel has been identified as an Asset Land. The second change recognizes the CTC's acquisition of a formerly private parcel.

The Tahoe Valley Area Plan does not propose an allocation of People at One Time (PAOT) summer day recreation use. However, the Plan includes a Recreation Section that contains policies to promote a range of recreation uses (e.g., public open space areas with and without recreational improvements, green spaces, plazas and public gathering places, dog park, neighborhood pocket parks/playgrounds, bike and pedestrian opportunities, and establishment of a "recreation hub" near the "Y" intersection area).

A major component maintained in the Tahoe Valley Area Plan is construction of the Tahoe Valley Greenbelt. The project calls for construction of a unique recreation and open space community amenity located just southeast of the Y intersection. The project will serve as an enhanced area-wide stormwater treatment system that includes SEZ restoration, installation of pedestrian-bicycle paths, pedestrian amenities, and interpretive signage. The Greenbelt will serve as a visual amenity for adjacent residential and commercial uses and provide a bicycle and pedestrian linkage connecting the commercial core to adjacent residential uses.

Public Services

The Tahoe Valley Area Plan includes policy provisions that support upgrading the Lukins Brothers Water System (though no specific improvements have been identified), encouraging new and remodeled structures to design for solar orientation and solar panels, and incorporating a greater variety of green technology design techniques to reduce energy consumption, and promoting access to broadband.

Conservation//Natural and Cultural Resources

In the Tahoe Valley Area Plan the City identifies natural and cultural resource goals, policies and implementation strategies to implement provisions of the Regional Plan and General Plan. The following is a summary of improvements identified in the initial Tahoe Valley Area Plan, which have not been modified:

- Zoning SEZ restoration sites and stormwater drainage basins as open space.
- Designate the view of Tahoe Mountain and the distant ridgeline views of Monument Peak as new scenic resources.
- Incorporate design standards to ensure that the built environment is compatible with the natural scenic qualities of the Lake Tahoe Basin.
- Complete construction of the US 50 and SR 89 Water Quality Improvement Project.
- Restore disturbed SEZs located within the Tahoe Valley Greenbelt.
- Coordinate with the California Tahoe Conservancy to prioritize the removal of development and land coverage from delineated SEZs and the TRPA designated Stream Restoration Plan Area.
- Amend the 1987 Bailey Mapped Land Capability Map to adopt an updated map that more accurately delineate the boundaries of the SEZs located within the Tahoe Valley plan area.
- Implement the area-wide stormwater system for the Tahoe Valley Water Quality Improvement Project.
- Implement the City's Pollutant Load Reduction Plan by registering the Glorene and 8th Street Water Quality Improvement Project.
- Promote the transfer of coverage from disturbed SEZs by creating a bonus coverage transfer match for transfers from the TRPA designated Stream Restoration Plan Area, the Tahoe Valley Greenbelt, and from the Upper Truckee River Hydrologically Related Area.

# 3.0 BASELINE

As specified in Section 13.3.1 of the TRPA Code, all plans, policies, and regulations in the Regional Plan and the TRPA Code shall remain in effect unless superseded by the provisions of an area plan. Thus, existing baseline conditions for the purposes of this IS/IEC reflect current 2023 environmental conditions (the time of writing of this IS/IEC) with the updated Regional Plan, TRPA Code, City General Plan and Code in effect, and the existing plans (PAS 111 and PAS 114), maps, and ordinances also in effect. The Tahoe Valley Area Plan has an approximate 20-year planning horizon.

The proposed project evaluated in this IS/IEC are the proposed amendments to the Tahoe Valley Area Plan, which was adopted on July 22, 2015 .

# 4.0 METHODOLOGY AND ASSUMPTIONS

This IS/EIC was prepared to evaluate the potential environmental effects of changes proposed to the Tahoe Valley Area Plan using CEQA and TRPA checklist questions, responses, and supporting narrative. The analysis tiers and incorporates by reference specific analyses contained in the following environmental review documents, as appropriate:

- TRPA, *Regional Plan Update EIS,* certified by the TRPA Governing Board on December 12, 2012 (RPU EIS).
- TRPA/Rincon Consultants, Inc., *2020 Linking Tahoe: Regional Transportation Plan & Sustainable Communities Strategy IS/ND/IEC/FONSE*, April 2021.
- CSLT, *General Plan Update EIR*, certified by the City Council on May 17, 2011 (CSLT EIR).
- City of South Lake Tahoe, *Tahoe Valley Area Plan IS/MND/IEC/FONSE*, certified by the City Council on June 2, 2015 and adopted by the TRPA on July 22, 2015.

These program-level environmental documents include a regional scale analysis and a framework of mitigation measures that provide a foundation for subsequent environmental review at an area plan level. These documents serve as first-tier documents for the TRPA and City review of the proposed Tahoe Valley Area Plan. To the extent that the Tahoe Valley Area Plan is consistent with the City General Plan, the TRPA Regional Plan and the RTP, for which the program documents were prepared, the Tahoe Valley Area Plan could be found to be "within the scope" of the program documents.

This Tahoe Valley Area Plan Amendments IS/IEC is also a program-level environmental document. No specific development projects are proposed at this time or analyzed herein. All future projects within the Tahoe Valley area would be subject to project-level environmental review and permitting by City and/or TRPA, with the permitting agency determined based on the size, nature, and location of the project (Section 13.7.3 of the TRPA Code). Project-level environmental documents would identify and describe mitigation for any potentially significant environmental impacts.

TRPA has prepared an Area Plan Environmental Analysis Guidelines flowchart intended to assist local jurisdictions in considering environmental review requirements associated with the land uses proposed in area plans. The guidance poses the following questions:

- Does a land use district in the area plan allow a use that has a greater potential impact than the corresponding land use in the Regional Plan? This includes any community plans and/or PASs that would be wholly or partially replaced by the area plan.
- Does a zoning district in the area plan allow a use that has a greater potential impact than the corresponding land use district in the PAS?
- Does the project have a greater potential impact than the use allowed by the existing zoning district/PAS?

These questions contemplate whether land use changes resulting from adoption of amendments would result in new uses that could result in potential environmental impacts not previously contemplated by the community plans, PASs, and Regional Plan.

To address these questions, the proposed amendments to the Tahoe Valley Area Plan Land Use Map and Zoning Map, and TRPA Conceptual Land Use Map were carefully reviewed. The adopted 2015 land use and zoning map are consistent with the TRPA Conceptual Land Use Map adopted as part of the 2012 Regional Plan and the City General Plan which was adopted in 2011. Proposed additions to the town center boundary (Town Center Gateway and Town Center Neighborhood Professional Districts) in these amendments would expand town center areas envisioned in TRPA's Regional Plan Conceptual Land Use Map which classifies Tahoe Valley as mixed-use. As a result, amendments to expand the Town Center and the TRPA regional plan maps will need to comply with TRPA Code Section 13.5.3.G (Modification to Centers) and be adopted by the TRPA Governing Board following City adoption of the Area Plan amendments.

The tables included in Chapter 2 of this IS/IEC compares the existing permissible uses allowed within PAS 111 and 114 with those uses that would be allowed with the Tahoe Valley Area Plan, as specified in the Development and Design Standards of the Tahoe Valley Area Plan.. Generally, the types of land uses that would be permissible in the TC-G, TC-C, TC-MUC, TC-NP, TC-HC and CMX-S zoning districts are consistent with the mix of uses (commercial, public service, light industrial, office, tourist accommodation, and residential) envisioned for community centers in the Regional Plan (TRPA 2012a, p. 2-33) and the General Plan (CSLT 2011, pp. LU-3 and LU-10); the uses that would be permissible within these zoning districts reflect the mix of uses envisioned for recreation areas in the Regional Plan (TRPA 2012a, p. 2-19); and the uses within the OS zoning district would be limited to passive recreation uses, storm water facilities, and restoration activities.

Because the proposed new uses would be consistent with the uses envisioned in the Regional Plan, the analysis herein focuses on the unique characteristics of the allowed uses, new district, and potential environmental impacts associated with their implementation (e.g., land use compatibility, water quality, scenic resources, and traffic).

The checklist responses include cross-referencing to other checklist items to reduce redundancy, where appropriate.

# 5.0 ENVIRONMENTAL CHECKLIST AND IMPACT ANALYSIS

1. Project title: Tahoe Valley Area Plan Amendments

2. Lead agency name and address:

   The City of South Lake Tahoe is the California Environmental Quality Act (CEQA) lead agency responsible for preparing an Initial Study/Negative Declaration (IS/ND) and the Tahoe Regional Planning Agency (TRPA) will serve as the lead agency for the Initial Environmental Checklist (IEC) under the Tahoe Regional Planning Compact.

   City of South Lake Tahoe
   1052 Tata Lane
   South Lake Tahoe, California 96150

   Tahoe Regional Planning Agency
   P.O. Box 5310
   Stateline, Nevada 89449

3. Contact person and phone number

   City of South Lake Tahoe: Anna Kashuba, Assistant Planner, (530) 542-7405

   Tahoe Regional Planning Agency: Alyssa Bettinger, Senior Planner, (775) 589-5301

4. Project location:

   The Tahoe Valley Area Plan is in the southwestern portion of the City of South Lake Tahoe (see **Figure 1**). Regional access to the Tahoe Valley plan area is provided by US Highway 50 (US 50) and California State Route 89 (SR 89). The Tahoe Valley plan area serves as the gateway for the City of South Lake Tahoe for travelers heading south on SR 89 and east on US 50. The initial Tahoe Valley plan area encompassed PAS 110, South Y, and the parcel located at 1117 Bonanza Avenue Emerald Bay Road (APN 032-141-18) within PAS 114, Bonanza, Special Area #1 (see **Figure 3**). The amendments expand the plan area in three locations. To the southwest, parcels fronting US Highway 50 from the existing boundary line south to H Street, plus APNs 032-161-012, 032-161-013, 032-161-009, and 032-161-008 (previously PAS 114) were incorporated. Seven parcels fronting Melba Drive were added so that the Area Plan is contained in this corner by the intersection of E Street and Melba Drive (previously PAS 114). The third area of expansion is the northeast corner of the Area Plan. All parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave shall be included up until the existing Area Plan boundary, in addition to 023-221-020 north of Eloise Ave (previously PAS 111). The Area Plan consists of approximately 374 acres and includes 525 public and privately owned parcels that include residential, commercial, tourist accommodation, industrial, and public service land uses (see **Table 1** and **Figure 2**).

5. Project sponsor's name and address

   City of South Lake Tahoe
   1052 Tata Lane
   South Lake Tahoe, California 96150

6. General Plan designation:

   The City's General Plan designates the Tahoe Valley area as Mixed-Use and TRPA's Conceptual Town Center.

7. Zoning

   The Tahoe Valley Area Plan contains multiple zoning designations within the 374-acre area.

8. Description of project:

   The proposed project is an update to the Tahoe Valley Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. Chapter 2 provides a detailed summary of the proposed amendments. The exact language of the proposed amendments is provided on the City's website (https://cityofslt.us/2290/Area-Plan-Proposals-and-Updates). The updated Tahoe Valley Area Plan proposes to incorporate parcels fronting US Highway 50 from the existing boundary line south to H Street, plus APNs 032-161-012, 032-161-013, 032-161-009, and 032-161-008 (previously PAS 114). The addition of these parcels as the Emerald Bay Connection Corridor District is specifically to increase opportunity for residential development near a town center and provide additional transit opportunities for residents. Permissible uses are consistent with the previous PAS of this area; and several low intensity commercial uses have been incorporated as well to support a potential mobility hub. As part of the area plan these parcels are allowed greater density and coverage, making additional housing and transit facilities more feasible. Seven parcels fronting Melba Drive shall be added so that the area plan is contained in this corner by the intersection of E Street and Melba Drive (previously PAS 114). This area was identified as having high redevelopment potential, which may be incentivized by the benefits of being in an area plan as mentioned above. The third area of expansion is in the northeast corner of the Area Plan. All parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave shall be included up until the existing area plan boundary, in addition to 023-221-020 north of Eloise Ave (previously PAS 111). These parcels were previously part of a PAS special area recognizing the legal, but nonconforming natural of multiple parcels. With the incorporation of these parcels into the Area Plan, various uses will become conforming, while giving the existing residential properties is this area the opportunity to be redeveloped at higher densities.

9. Surrounding land uses and setting:

   Land uses to the west, north, and northeast of the Tahoe Valley Area Plan boundaries consist of residential subdivisions dating from earlier development of the area during the 1960s through the 1990s. Immediately adjacent to the Tahoe Valley Area Plan to the east lies a large open space area (stream environment zone [SEZ]) consisting of the floodplain for the Upper Truckee River, which is near the eastern boundary of the Tahoe Valley Area Plan. The Lake Tahoe Airport is located to the southeast of the Tahoe Valley Area Plan. This single-runway airport serves the vicinity with charter flights, air tours (helicopters and fixed-wing aircraft), and general aviation. The noise, safety, and height restriction areas described in the Airport Land Use Compatibility Plan overlay portions of the Tahoe Valley area.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

Adoption and approval of the Tahoe Valley Area Plan amendments are only required by the City of South Lake Tahoe City Council and the TRPA Governing Board; however, any projects that may move forward as a result of the implementation of this Area Plan may also require approval by the California Department of Fish and Wildlife, the California Regional Water Quality Control Board, State Water Resources Control Board, El Dorado County Air Pollution Control District, California State Lands Commission, and/or the California Department of Transportation (Caltrans).

## 5.1 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

If environmental factors are checked below, there would be at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

| | | |
|---|---|---|
| ☐ Aesthetics | ☐ Agriculture/Forest Resources | ☐ Air Quality |
| ☐ Biological Resources | ☐ Cultural Resources | ☐ Energy |
| ☐ Geology Resources | ☐ Greenhouse Gas Emissions | ☒ Hazards/Hazardous Materials |
| ☒ Hydrology/Water Quality | ☐ Land Use/Planning | ☐ Mineral Resources |
| ☐ Noise | ☐ Population/Housing | ☐ Public Services |
| ☐ Recreation | ☐ Transportation/Traffic | ☐ Tribal Cultural Resources |
| ☐ Utilities/Service Systems | ☐ Wildfire | ☐ Mandatory Findings of Significance |
| | ☐ None | ☒ None with Mitigation Incorporated |

## 5.2 CEQA ENVIROMENTAL DETERMINATION

On the basis of this Initial Study:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

April 30, 2024

John Hitchcock, Planning Manager
City of South Lake Tahoe

Date

## 5.3 TRPA ENVIRONMENTAL DETERMINATION (TO BE COMPLETED BY TRPA)

On the basis of this TRPA Initial Environmental Checklist:

| | | | | |
|---|---|---|---|---|
| a. | The proposed project could not have a significant effect on the environment and a finding of no significant effect shall be prepared in accordance with TRPA's Rules of Procedures | ☐ | Yes | ☒ No |
| b. | The proposed project could have a significant effect on the environment, but due to the listed mitigation measures which have been added to the project, could have no significant effect on the environment and a mitigated finding of no significant effect shall be prepared in accordance with TRPA's Rules of Procedures. | ☒ | Yes | ☐ No |
| c. | The proposed project may have a significant effect on the environment and an environmental impact statement shall be prepared in accordance with this chapter and TRPA's Rules of Procedures. | ☐ | Yes | ☒ No |

Signature of Evaluator

Date

Title of Evaluator

# 5.4 EVALUATION OF ENVIRONMENTAL IMPACTS

The following environmental analysis has been prepared using the CEQA Guidelines Appendix G: Environmental Checklist Form to complete an Initial Study. This checklist also includes analysis of environmental impacts required in the TRPA Initial Environmental Checklist found at: http://www.trpa.org/wp-content/uploads/Inital_Environmental_Checklist.pdf.

### 5.4.1 CEQA

CEQA requires a brief explanation for answers to the Appendix G Environmental Checklist except "No Impact" responses that are adequately supported by noted information sources. Answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project- level, indirect as well as direct, and construction as well as operational impacts.

**Table 10: CEQA Defined Levels of Impact Significance**

| Impact Severity | Definition |
|---|---|
| No Impact | A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis). |
| Less than Significant Impact | "Less than Significant Impact" applies where the Project's impact creates no significant impacts based on the criterion or criteria that sets the level of impact to a resource and require no mitigation to avoid or reduce impacts. |
| Less than Significant Impact after Mitigation | "Less than Significant Impact after Mitigation" applies where the incorporation of mitigation measures has reduced an effect from potentially "Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level. |
| Significant Impact | "Significant Impact" is appropriate if there is substantial evidence that an effect is potentially significant, as based on the criterion or criteria that sets the level of impact to a resource. If there are one of more "Potentially Significant Impact" entries when the determination is made, an EIR is required. |

### 5.4.2 TRPA

Article VI of the TRPA Rules of Procedure presents the rules governing the preparation and processing of environmental documents pursuant to Article VII of the Compact and Chapter 3 of the Revised TRPA Code of Ordinances.

TRPA uses an IEC, in conjunction with other available information, to determine whether an EIS will be prepared for a project or other matter. This could include preparation of an Environmental Assessment, in accordance with Section 3.4 of the TRPA revised Code, when TRPA determines that an IEC will not provide sufficient information to make the necessary findings for a project.

The IEC includes a series of questions categorized by and pertaining to resources regulated by TRPA. Each checklist item requires a checked response of "Yes," "No," "No, with Mitigation," or "Data Insufficient." A checked response of "Data Insufficient" or a determination that a project may have a significant effect on the environment (Section 3.3.2 of the TRPA Code) indicates that additional environmental

review in the form of an Environmental Assessment (EA) or Environmental Impact Statement (EIS) would be required. The IEC form indicates that all "Yes" and "No, with Mitigation" responses require written explanations. This IEC provides supporting narrative for all responses. Where a checked response may not be intuitive or easily understood by the reader, that response has been marked with an asterisk (*) and a brief clarifying statement supporting the rationale for the checked response is included. Based on an initial review of the Project, TRPA staff determined that an IEC would provide sufficient information regarding the Project to make one of the findings below. As set forth in Code Subsection 3.3.1, based on the information submitted in the IEC, and other information known to TRPA, TRPA shall make one of the following findings and take the identified action:

5.4.2.1 The proposed project could not have a significant effect on the environment and a finding of no significant effect shall be prepared in accordance with TRPA's Rules of Procedure.

5.4.2.2 The proposed project could have a significant effect on the environment, but due to the listed mitigation measures which have been added to the project, could have no significant effect on the environment and a mitigated finding of no significant effect shall be prepared in accordance with TRPA's Rules of Procedure.

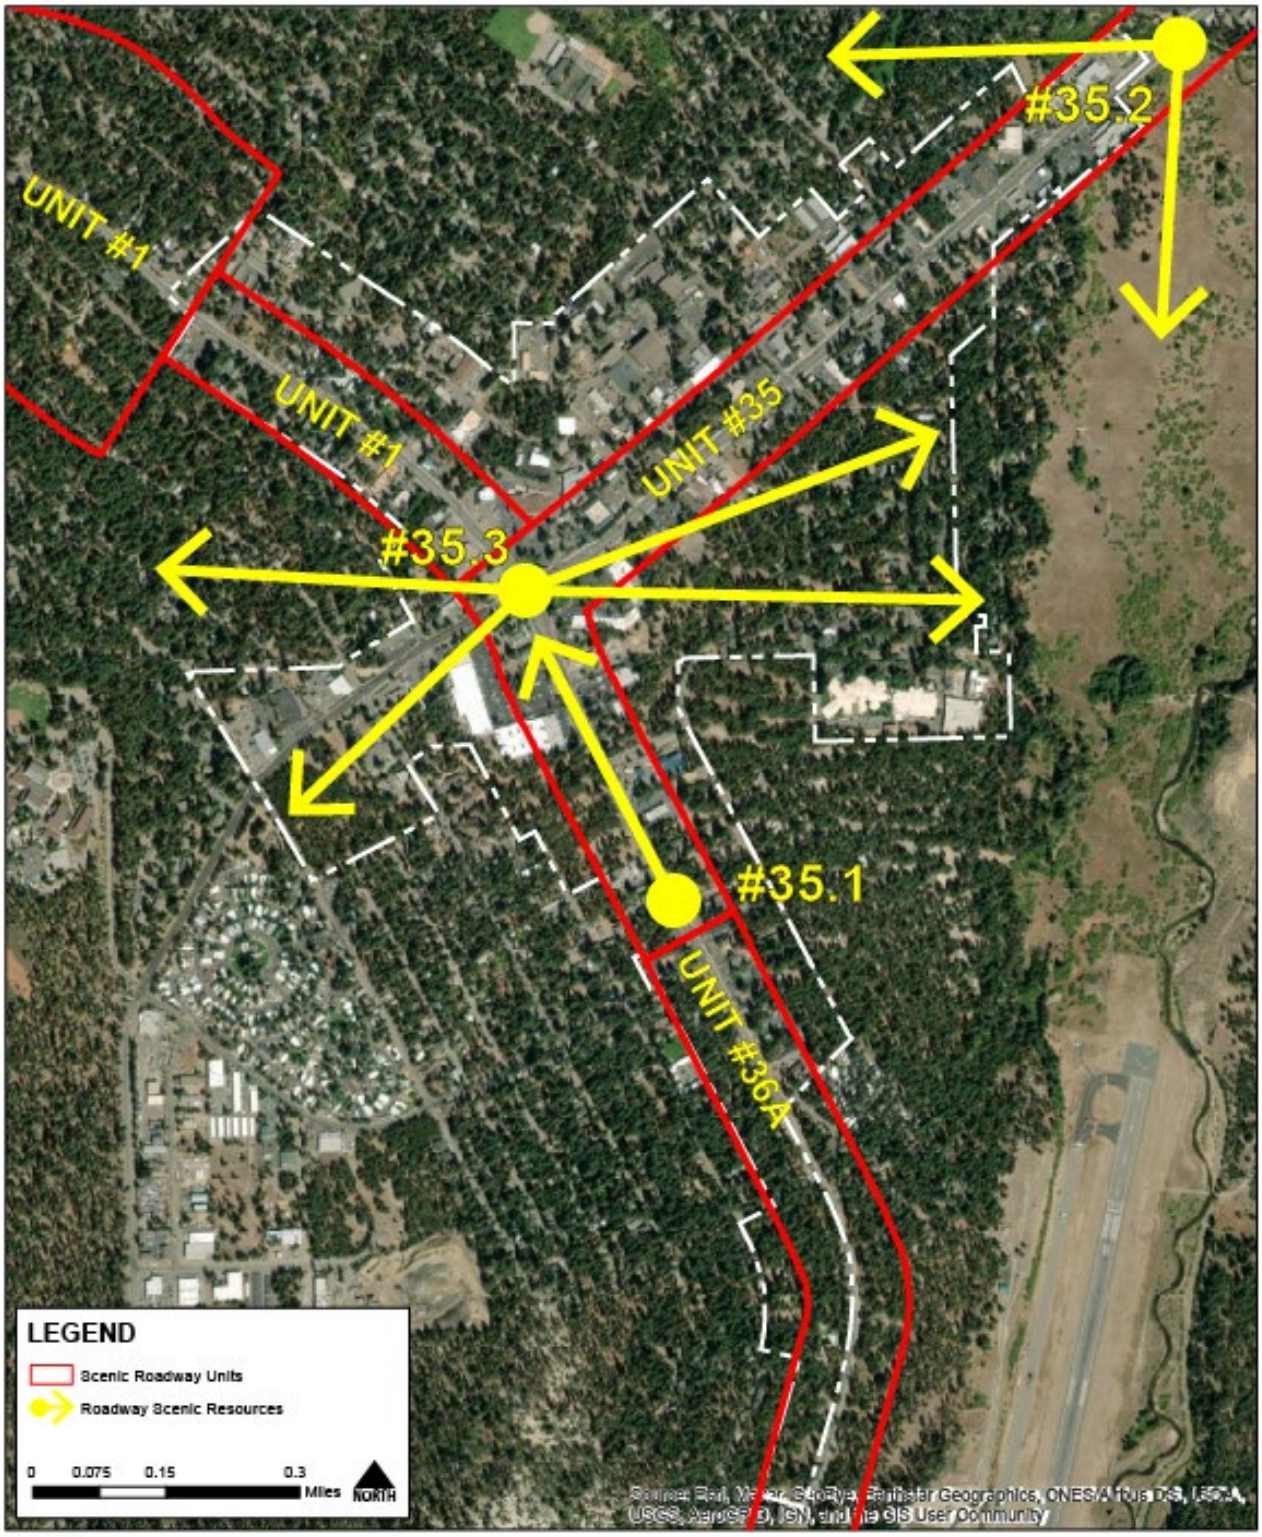
5.4.2.3 The proposed project may have a significant effect on the environment and an environmental impact statement shall be prepared in accordance with this Chapter and TRPA's Rules of Procedure.

When completed, TRPA reviews the IEC to determine the adequacy and objectivity of the responses. When appropriate, TRPA consults informally with federal, state, or local agencies with jurisdiction over the project or with special expertise on applicable environmental impacts.

### 5.4.3 Aesthetics (CEQA), Scenic Resources/Community Design and Light and Glare (TRPA)

This section presents the analyses for potential impacts to aesthetics, scenic resources/community design and light and glare. **Table 11** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 11**
**Aesthetics, Scenic Resources/Community Design and Light and Glare**



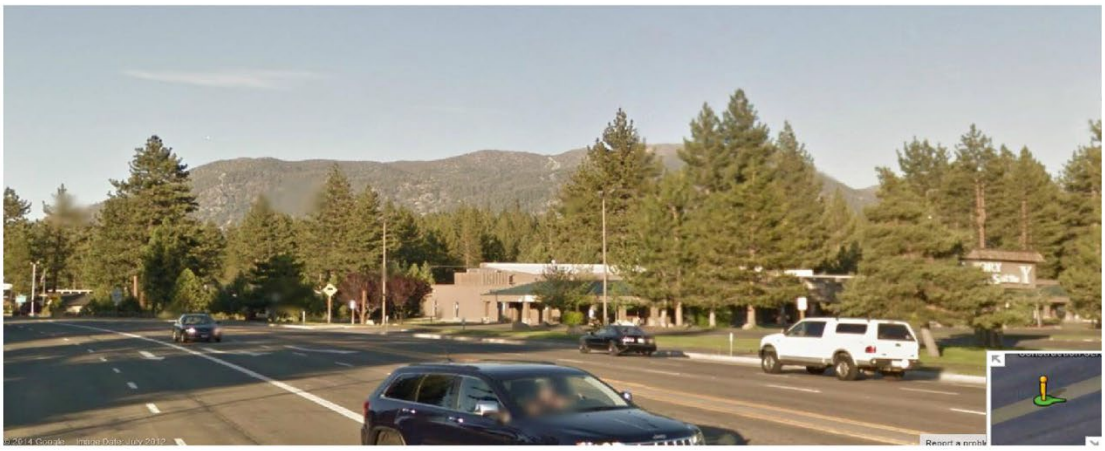
| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 1. Have a substantial adverse effect on a scenic vista? (CEQA Ia) | | | **X** | |
| 2. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, within a state scenic highway? (CEQA Ib) | | | **X** | |
| 3. Substantially degrade the existing visual character or quality of the site and its surroundings? (CEQA Ic) | | | **X** | |
| 4. Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area? (CEQA Id) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 5. Be visible from any state or federal highway, Pioneer Trail or from Lake Tahoe? (TRPA item 18a) | **X, LTS** | | | |
| 6. Be visible from any public recreation area or TRPA designated bicycle trail? (TRPA item 18b) | **X, LTS** | | | |
| 7. Block or modify an existing view of Lake Tahoe or other scenic vista seen from a public road or other public area? (TRPA item 18c) | | | | **X** |
| 8. Be inconsistent with the height and design standards required by the applicable ordinance or Community Plan? (TRPA item 18d) | | | | **X** |

| | | | | |
|---|---|---|---|---|
| 9. Be inconsistent with the TRPA Scenic Quality Improvement Program (SQIP) or Design Review Guidelines? (TRPA item 18e) | | | | **X** |
| 10. Include new or modified sources of exterior lighting? (TRPA item 7a) | **X, LTS** | | | |
| 11. Create new illumination which is more substantial than other lighting, if any, within the surrounding area? (TRPA item 7b) | | | | **X** |
| 12. Cause light from exterior sources to be cast off-site or onto public lands? (TRPA item 7c) | | | | **X** |
| 13. Create new sources of glare through the siting of the improvements or through the use of reflective materials? (TRPA item 7d) | | | | **X** |

### 1. Would the Project have a substantial adverse effect on a scenic vista? (CEQA Ia)

The existing visual landscape characteristics of the Tahoe Valley plan area consist of urban development intermixed with forest conditions. Existing urban development transitions into natural and forest conditions at the southern boundary along the US 50/SR 89 corridor as well as at the northern boundary along SR 89 (as noted in the SQIP for the description of Roadway Unit 1 – Tahoe Valley). The Tahoe Valley Area Plan's eastern boundary transitions to the open stream environment zone area associated with the Upper Truckee River. There are two designated scenic resource located within the planning area. Scenic Resource #35.1 is a view of the natural landscape as seen from US 50 looking north toward the "Y" intersection. The resource is currently in attainment but is rated low because of the dominance of the surrounding built environment. Scenic Resource #35.2 is a natural landscape view of the Truckee Marsh. This resource is in attainment and has a moderate rating. In addition, there are the following non-designated prominent scenic views from within the planning area:

- Distant scenic views in the planning area include forest conditions in the background;
- The open stream environment zone associated with the Upper Truckee River and Freel Peak in the background view;
- Scenic resource 35.3 with views from US 50 (from "Y" intersection) of the mountains looking east towards Monument Peak and Heavenly Mountain Ski Resort (Gun barrel ski run is visible). These views of the mountains are obscured in some areas by buildings and forest vegetation in the foreground; and
- Scenic resource 35.3 with views from US 50 (from "Y" intersection) of Tahoe Mountain looking west along Lake Tahoe Boulevard. The background view of Tahoe Mountain is framed by mature conifers and the foreground view is dominated by Lake Tahoe Boulevard. (See **Figures 4 and 5**.)



CITY OF SOUTH LAKE TAHOE

**Figure 5**
Existing Scenic Resources
Tahoe Valley Area Plan EIR/EIS

As depicted in **Figure 4** the planning area includes three scenic roadway units (1 – Tahoe Valley, 35 – Al Tahoe and 36A – Airport Area) along SR 89 and US 50 identified in the Lake Tahoe Basin Scenic Resource Inventory (1982) by TRPA. The TRPA 2019 Scenic Resources Threshold Evaluation for Roadway Units, identifies that while these roadway units are still in non-attainment, they have had some improvements associated with recent development. Recent installation of curbs & gutters with sidewalks, new road pavement, and renovation of shopping centers at the "Y" has improved the score for Roadway Units 35 and 1.

Amending the Tahoe Valley Area Plan boundary and multi-family density limits would allow for changes in the built environment that would be visible from US 50 and SR 89 scenic roadway corridors. Each of the parcels proposed for inclusion in the area plan boundary are either immediately adjacent to US 50 or immediately adjacent parcels that are contiguous to US 50. While redevelopment of an existing commercial corridor often results in improvement in the scenic quality of scenic roadway corridors, changes in the built environment could have undesirable consequences on scenic quality if they adversely affect views or vistas, damage or remove scenic resources, or result in development that is incompatible with the scenic values of the Region. The Tahoe Valley Area Plan amendments (Appendices B and C) improve upon existing standards for site, building, landscaping, and development design that are intended to preserve the basin scenic resources and enhance the built environment to emphasize a mountain identity. Subsequent development under the Tahoe Valley Area Plan would be subject to the updated standards and would alter the overall built environment to be consistent with the vision and principles of the Tahoe Valley Area Plan and improve scenic quality of the US 50 and SR 89 scenic roadway corridors. This impact is considered **beneficial** for the proposed Tahoe Valley Area Plan.

US 50 and SR 89 have been identified by TRPA as not meeting scenic threshold targets and improvement of these roadway corridors has been identified. In addition, development within other portions of the Tahoe Valley plan area outside of the SR 89 and US 50 roadway corridors could also result in localized scenic impacts to existing residents, businesses, and recreationalists using bikeways or passing through the area. The Tahoe Valley Area Plan has established specific site, building, and landscaping standards to improve the visual characteristic of the US 50 and SR 89 roadway corridors. These standards would result in positive improvements consistent with TRPA's Scenic Resource/Community Design goals and policies, recommendations identified in the TRPA Scenic Quality Improvement Program (SQIP) and the goals and policies of the Natural and Cultural Resource Element of the City General Plan. The following standards are currently required for the area plan and shall remain:

- Design Quality – Design standards promote a mountain architecture theme, building materials and colors that would be more compatible with the natural environment, and improvements that contribute to the character and quality of the built environment as viewed from the scenic roadway corridors.

- Building Setbacks and Site Design – Development visible from the roadway corridor and adjacent to residential areas require step-backs for any structures with a third story to reduce visual mass, maintain sun angle planes, and minimize impacts on existing scenic views. In the "Y" intersection area, the four corner parcels are required to maintain a deeper setback to maintain visual open space.

- Parking – The standards reduce the visual impact of parking lots by requiring parking lots to be located in the rear or side of lots.

- Landscaping – Design standards require the incorporation of landscaping and pedestrian sidewalks in the setback area to soften the urban appearance of the roadway corridors.

- Building Height – The Tahoe Valley Area Plan has varying building heights to promote visual interest and character. The maximum height of 45 feet is only be permitted in the Town Center Core District around the "Y" intersection. The two Gateway Districts that serve as entrances to the City and Neighborhood Professional District are restricted to 36 feet of height, which is more restrictive than existing height standards for Town Centers, to promote open spaces and preserve views. The existing maximum height standard of 42 feet would apply to the remaining districts (Healthcare, Commercial Mixed-Use, Mixed-Use Corridor and new Emerald Bay Connection Corridor). As discussed above, any structure with a third story is required to be stepped back. The new Emerald Bay Connection Corridor District would continue to utilize TRPA Code Section 37.4 to determine maximum building height.

The potential impact on scenic quality of views along US 50 and SR 89 associated with the additional development and height was previously analyzed in the RPU EIS (TRPA 2012a, Impact 3.9-1) and the General Plan EIR (CSLT 2011, Impact 4.13.1). The General Plan EIR analyzed the potential effects of allowing up to 75 feet of height (30 feet more than permissible in the Tahoe Valley Area Plan) and concluded that the impact was significant, requiring mitigation measures. The General FEIR recommended mitigation measure MM 4.13.1a and MM 4.13.1b (CSLT 2011, pp. 4.0-8 through 4.0-11) to reduce impacts to a less than significant level. The mitigation measure established a maximum height of 45 feet for the Tahoe Valley node, required step-backs for structures in excess of 36 feet, and required building and siting design not to obstruct mountain views, lake views, or stream environment zones as viewed from the arterial roadways and or public recreation areas. These mitigation measures are incorporated in the Tahoe Valley Area Plan Development and Design Standards (Appendix C), which includes a maximum height of 45 feet in the Town Center Core District, setbacks from the scenic highway corridor, and step-back siting and building design standards. No changes to these standards are being proposed in the current amendments.

The RPU EIS also analyzed the effects of 56 feet in designated Town Centers and concluded that the additional height was potentially significant, requiring mitigation (TRPA 2012a, p. 3.9-17). The mitigation measures were codified in Sections 37.7.16 and 37.7.17 of the TRPA Code and are incorporated in the Tahoe Valley Area Plan Development and Design Standards. The Tahoe Valley Area Plan proposed design standards require any buildings that consist of three or more stories to not project above the forest canopy, ridgelines or otherwise detract from the viewshed. In addition, it requires that TRPA Scenic Quality Findings 1, 3, 5 and 9 as described in Section 37.7.16 of the TRPA Code be made. The findings are as follows:

- When viewed from major arterials, scenic turnouts, public recreation areas, or the waters of Lake Tahoe, from a distance of 300 feet, the additional height will not cause a building to extend above the forest canopy, when present, or a ridgeline. For height greater than that set forth in Table 37.4.1-1 for a 5:12 roof pitch, the additional height shall not increase the visual magnitude beyond that permitted for structures in the shoreland as set forth in subsection 66.3.7, Additional Visual Magnitude, or Appendix H, Visual Assessment Tool, of the Design Review Guidelines.

- With respect to that portion of the building that is permitted the additional height, the building has been designed to minimize interference with existing views within the area to the extent practicable.

- The portion of the building that is permitted additional building height is adequately screened, as seen from major arterials, the waters of lakes, and other public areas from which the building is frequently viewed. In determining the adequacy of screening, consideration shall be given to the degree to which a combination of the following features causes the building to blend or merge with the background.

- The horizontal distance from which the building is viewed;
- The extent of screening; and
- Proposed exterior colors and building materials.

- When viewed from a TRPA scenic threshold travel route, the additional building height granted shall not result in the net loss of views to a scenic resource identified in the 1982 Lake Tahoe Basin Scenic Resource Inventory. TRPA shall specify the method used to evaluate potential view loss. (TRPA 2012a, p. 3.9-17.)

Incorporating the scenic quality findings of Section 37.7 of the TRPA Code of Ordinances in the Tahoe Valley Area Plan design standards, which prohibit buildings from protruding above the forest canopy or ridgeline and require site-specific design features to install landscaping, to minimizing ground disturbance, and to use natural materials and earth-tone colors, would not impact the scenic quality views along US 50 and SR 89.

Subsequent development as a result of implementing the Tahoe Valley Area Plan amendments would be subject to the updated design standards that protect existing viewsheds, improve the existing built environment, improve the visual quality of the scenic roadway corridors, avoid further degradation of the visual quality of the Tahoe Valley Area, and minimize impacts to existing views and identified scenic resource. Thus, this impact is considered **beneficial**.

Environmental Analysis: *Beneficial Impact.*

Required Mitigation: **None.**

**2. Would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? (CEQA Ib)**

The area does not contain any trees, rock outcroppings or historic buildings that are unique or contribute to the visual resources of the area.

As set forth above, incorporating the scenic quality findings of Section 37.7 of the TRPA Code of Ordinances in the Tahoe Valley Area Plan design standards, which prohibit buildings from protruding above the forest canopy or ridgeline and require site-specific design features to install landscaping, to minimizing ground disturbance, and to use natural materials and earth-tone colors, would not impact the scenic quality views along US 50 and SR 89.

Subsequent development as a result of implementing the Tahoe Valley Area Plan would be subject to the design standards that would protect existing viewsheds, improve the existing built environment, improve the visual quality of the scenic roadway corridors, avoid further degradation of the visual quality of the Tahoe Valley plan area, and minimize impacts to existing views and identified scenic resource.
Thus, this impact is considered **beneficial**.

Environmental Analysis: *Beneficial Impact.*

Required Mitigation: **None**.

**3. Would the Project substantially degrade the existing visual character or quality of the site and its surroundings? (CEQA Ic)**

The Area Plan includes detailed design standards that are intended to ensure that the built environment complements the natural appearance of the landscape in the Tahoe Region while improving the quality of life and promoting livability, sustainability and walkability. The Area Plan specifically regulates building form, materials and colors, including the following:

- Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance;
- A unified palette of quality materials shall be used on all sides of buildings;
- Colors shall be used to help delineate windows and other architectural features to increase architectural interest;
- A variety of natural-appearing materials should provide contrast on building facades and use of stucco shall be limited;
- Colors should be chosen to blend in with the setting and to minimize reflectivity. Bright colors should be used for accent only and should be applied to a maximum of 10 percent of the building façade; and
- Roofs, including mechanical equipment and skylights, shall be constructed of nonglare finishes and earth tone colors that minimize reflectivity.

For buildings that are located adjacent to residential areas, the Area Plan includes provisions to minimize the potential impact on the visual character and quality of the residential land uses. Buildings are required to step back within a daylight plane along street frontages and adjacent to residential areas to address massing, protect viewsheds, allow light and air, and limit winter shading in public areas.
