The Area Plan promotes a denser land use pattern to promote pedestrian- and transit-oriented development. Pursuant to TRPA's Code of Ordinances, the Area Plan provides additional height and increased density incentives to ensure adequate capacity for redevelopment and transfers of development. The change in amount, distribution and type of development since the plan's initial adoption has not had a significant impact on the visual character or quality of the Tahoe Valley area or its surroundings. The character and quality have improved as a result of the design standards discussed above and additional height granted to structures has not impacted existing viewsheds as discussed in Question 1 (CEQA Checklist Ia) above. Furthermore, improvements in the visual character and quality of this Area Plan have been documented in numerous TRPA Threshold Evaluations as projects implemented many of the design standards that are incorporated in this Area Plan. Addition of the new Emerald Bay Connection Corridor District and expansion of the Gateway and Neighborhood Professional Districts to the area plan boundary are anticipated to result in similar visual quality improvements as parcels develop or redevelop in the future. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**4. Would the Project create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area? (CEQA Id)**

All development is subject to City lighting standards in Chapter 6.10 and Chapter 6.85 of the City Code and Chapter 36 of the TRPA Code. These standards include the following provisions that would ensure that

subsequent development would not result in adverse lighting impacts:

These standards include the following provisions that would ensure that subsequent development would not result in adverse lighting impacts:

- Lights shall not blink, flash, change intensity, or give the illusion of movement.
- Parking lot, walkway, and building lights shall be directed downward to avoid light pollution. The use of cutoff shields on light fixtures is required, light sources shall not be visible, and parking garages may not use fluorescent lighting.
- The maximum height of exterior architectural building lighting shall be limited to 26 feet.
- Use of outdoor lighting is restricted to illumination purposes only and not for advertisement or for building/landscape treatment.

As previously discussed in Question 3 (CEQA Checklist Ic) and the exterior lighting discussion above, the Tahoe Valley Area Plan requires the use of a variety of natural-appearing materials and colors that blend in with the natural setting and prohibits the use of flood lighting, reflective materials, or lighting strips, including neon/fluorescent tubing to minimize reflectivity and glare. Therefore, no substantial glare or reflectivity of a project proposed under the Tahoe Valley Area Plan is expected to affect day or nighttime views in the area. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**5. Would the Project be visible from any state or federal highway, Pioneer Trail or from Lake Tahoe? (TRPA 18a)**

Development located in the Tahoe Valley plan area as amended may be visible from US Highway 50 and SR 89.

Amendments to the Tahoe Valley Area Plan would allow for changes in the built environment that would be visible from US 50 and SR 89 scenic roadway corridors. While redevelopment of an existing commercial corridor often results in improvement in the scenic quality of scenic roadway corridors, changes in the built environment could have undesirable consequences on scenic quality if they adversely affect views or vistas, damage or remove scenic resources, or result in development of vacant parcels that is incompatible with the scenic values of the Region. The Tahoe Valley Area Plan implements specific standards for site, building, landscaping, and development that are intended to preserve the basin scenic resources and enhance the built environment to emphasize a mountain identity. Subsequent development under the Tahoe Valley Area Plan would be subject to the standards and would alter the overall built environment to be consistent with the vision and principles of the Tahoe Valley Area Plan and improve scenic quality of the US 50 and SR 89 scenic roadway corridors.

The Tahoe Valley plan area contains a portion of TRPA Scenic Roadway Travel Unit #1 – Tahoe Valley (within 0.40 miles of "Y" Intersection); Scenic Roadway Travel Unit #35 – Al Tahoe; and Scenic Roadway Travel Unit #36A – Airport Area. There are no views of Scenic Shoreline Travel Units within the Tahoe Valley Area Plan.

The following is a summary of issues and recommendations drafted for the initial adoption of the plan for

improving scenic quality:

***Roadway Unit 1 – Tahoe Valley (within 0.40 miles of "Y" Intersection)***

The SQIP identifies that within 0.40 miles of the "Y" intersection along the SR 89 corridor that commercial uses become larger, signage is larger and becomes more distracting, and un-landscaped paved parking areas adjacent to the roadway dominate the view. The SQIP makes the following recommendations:

- Landscaping – Provision of native and naturalized landscaping and landscape buffers along the edges of the roadway to reduce the dominance of the parking areas. Landscaping should be an extension of the natural forest cover and be integrated with the existing forest background.

- Signs – Bring signs into compliance. Use of coordinated system of signs that minimizes competition of between signs and their contrast with the natural environment.

- Parking Areas – Limited and clearly defined access drives and parking areas should be provided. Landscape should be provided along roadways and parking areas as identified above under "Landscaping".

- Utility Lines – Underground overhead utility lines where possible.

- Building Materials and Colors – Building designs and materials should be complementary with the surrounding and man-made and natural environments (e.g., use of wood-siding, wood shakes, stone, bricks, etc.). Color hues should fall within a range of natural vegetation and earth tones.

***Roadway Unit 35 – Al Tahoe***

The SQIP identifies long stretches of heavy commercial development along US 50 (consisting of the US 50 corridor within the Tahoe Valley planning area) reduce the area's natural scenic quality by blocking most foreground or mid-distance views of the natural surroundings while creating numerous distracting elements. The SQIP makes the following recommendations:

- Design Quality – The architectural style should consist of design solutions that are compatible with the natural environment and contribute to the character and quality of the built environment. Building materials and colors should be complementary with the surrounding and man-made and natural environments (e.g., use of wood-siding, wood shakes, stone, bricks, etc.). Color should be subdued and not garish, with natural colors being preferable. Building heights should not exceed the height of the existing forest cover, should not interfere with views of significant scenic features, and should be compatible with the scale of surrounding buildings.

- Building Setbacks and Site Design – Increase building setbacks as well as vary setback distances to avoid tunnel-like effect of strip development and reduce the sense of sameness of development. Coordination in site design of the roadway corridor should be done to avoid haphazard and cluttered development.

- Circulation – Modification of the roadway corridor to remove the continuous left-turn center lane and provide a landscaped center median with limited left-turn pockets. This

would also include landscaping of the islands at the "Y" intersection.

- Driveways – Reduce the number of driveways on US 50 and encourage the use of shared driveways, parking areas and pedestrian plazas. Provide driveway access on side streets where feasible.

- Parking Area Landscaping – Provision of native and naturalized landscaping and landscape buffers to reduce the dominance of the parking areas pursuant to Chapter 30 of the TRPA Code of Ordinances. Landscaping should break up large expanses of pavement and parked cars. Parking should be provided in rear or side yards of buildings where feasible.

- Signs – Bring signs into compliance with Chapter 38of the TRPA Code of Ordinances. Use of coordinated system of signs that minimizes competition of between signs and their contrast with the natural environment.

- Landscaping – Provide substantial landscape treatments around all structures to soften building contours, reduce the amount of paved or bare dirt areas, and provide visual transition. Landscape should be provided to eliminate building frontages that abut sidewalk or roadway that currently have no landscape treatment.

- Satellite Dish Antennae – Site satellite dish antennae so that they are not visible from public rights-of-way or screened as required under Chapter 36 of the TRPA Code of Ordinances.

- Lighting – Night lighting should be done in a selective fashion and not exceed the amount of light actually required by users and viewers.

***Roadway Unit 36A – Airport Area***

The SQIP identifies that development along US 50 in the southern portion of the Tahoe Valley plan area needs to be improved by upgrading the architectural quality, compatibility with the natural surroundings and upgrading existing signs. The SQIP makes the following recommendations:

- Design Quality – The architectural style should consist of design solutions that are compatible with the natural environment and contribute to the character and quality of the built environment. Building materials and colors should be complementary with the surrounding and man-made and natural environments (e.g., use of wood-siding, wood shakes, stone, bricks, etc.). Color should be subdued and not garish, with natural colors being preferable.

- Parking Area and Landscaping – Encourage the use of shared driveways, parking areas and limit the extent of parking. Provision of native and naturalized landscaping and landscape buffers to reduce the dominance of the parking areas pursuant to Chapter 36 of the TRPA Code of Ordinances. Landscaping should break up large expanses of pavement and parked cars.

- Signs – Bring signs into compliance. Use of coordinated system of signs that minimizes competition of between signs and their contrast with the natural environment.

- Utility Lines – Underground overhead utility lines where possible.

- Landscaping – Provide substantial landscape treatments around all structures to soften

building contours, reduce the amount of paved or bare dirt areas, and provide visual transition. Landscape should be provided to eliminate building frontages that abut sidewalk or roadway that currently have no landscape treatment.

- Satellite Dish Antennae – Site satellite dish antennae so that they are not visible from public rights-of-way or screened as required under Chapter 36 of the TRPA Code of Ordinances.

As described in Question 3 (CEQA Checklist IC) above, the Tahoe Valley Area Plan includes detailed design standards that ensure that the built environment complements the natural appearing landscape in the Tahoe Region while improving the quality of life, promoting livability, sustainability and walkability. The Area Plan specifically regulates building form, materials and colors to avoid bulky and "box-like appearance, to promote materials and colors that blend with the natural setting, to reduce glare and reflectivity, and preserve views of the lake, ridgelines and meadows. Application of these standards for redevelopment of dilapidated structures, for the development of new structures, in conjunction with site design standards to protect viewsheds and minimize impact on adjacent residential areas, is expected to improve the visual quality and character of the Tahoe Valley plan area. This change in visual quality and character is not expected to adversely affect the scenic quality ratings for individual resources but would improve scenic conditions resulting in threshold gains in the three roadway units along SR 89 and US 50 identified for scenic quality improvement by the TRPA. The TRPA 2019 Thresholds Report identifies that while these roadway units are in non-attainment they have had some improvements associated with recent development improvements along SR 89 in Roadway Unit 1, including new curbs, sidewalks, and bike paths have resulting in a score increase of one point for the unit's road structure. Roadway Unit 35 (US 50 south and east of the "Y") also increased by one point due to new sidewalks, natural rock walls, building upgrades, and redevelopment. Roadway Unit 36A, along US 50 south of Unit 35, did not change. TRPA's threshold analysis notes recent, but limited redevelopment in this area of the Tahoe Valley area plan.

Thus, implementation of specific projects within the new boundaries of the Tahoe Valley Area Plan is not likely to result in adverse impacts on views from any state or federal highway, and will have **less than significant impact** on views from Pioneer Trail or Lake Tahoe.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**6. Would the Project be visible from any public recreation area or TRPA designated bicycle trail? (TRPA 18b)**

A review of the 1993 Lake Tahoe Basin Scenic Resource Evaluation indicates that there are two designated bicycle trails in the Tahoe Valley plan area. The Tahoe Valley Route and the Tahoe Valley to City of South Lake Tahoe City Limits.

The Tahoe Valley Route serves uses located south and east of US 50. The route is a bike lane along Helen Avenue from Winnemucca Street southwest to Fourth Street. This route passes through a wooded residential neighborhood area and connects to the Factory Store at the Y intersection, then south along Melba Street to C Street. The scenic quality of the route overall is relatively low and natural views are primarily of scattered forest vegetation, and a few views southwest to the mountain backdrops (1993 Scenic Resource Evaluation, p. 391).

The Tahoe Valley to City of South Lake Tahoe City Limits is a Class II lane that runs from the Y intersection along SR 89 north to the city limits. This lane travels through intense commercial development located within the area plan that reduces the scenic quality of the segment. The only scenic views are of

scattered forest vegetation interspersed between buildings and parking lots.

As set forth in detail above (CEQA Checklist item 1a through 1d), any proposed project within the Area Plan is not likely to affect scenic views from recreation areas or from designated bike paths or contribute to their degradation as a result of protective standards incorporated into the Tahoe Valley Area Plan to prohibit structures from protruding above the existing forest canopy and implementation of design standards to promote building design that complement the natural setting.

Projects resulting from implementation of the Tahoe Valley Area Plan would involve development and redevelopment consistent with the Area Plan's Development and Design Standards and Chapter 66 of the TRPA Code that would prohibit buildings to protrude above the forest canopy or ridgeline, include site-specific design features that minimize ground disturbance, incorporate screening, use of earth tone colors, materials and architectural style that complements the Tahoe landscape. Thus, implementation of specific projects under the Tahoe Valley Area Plan is not likely to result in impacts to views from any public recreation area or TRPA designated bicycle trails. All projects would comply with TRPA Code provisions and the Tahoe Valley Development and Design Standards, which would result in generally improved scenic conditions in the Tahoe Valley plan area. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**7. Would the Project block or modify an existing view of Lake Tahoe or other scenic vista seen from a public road or other public area? (TRPA 18c)**

As discussed above in Question 1 (CEQA Checklist 1a) and 6, the project area contains scenic vistas from the public roadway and is also visible from offsite public recreation areas. The design standards included in the Tahoe Valley Area Plan apply to the construction of new development and redevelopment projects. These projects could include new structures and introduce new massing that would modify views of existing scenic vistas. However, there will be no changes to design standards that would allow development to block or modify an existing resource or result in a significant impact. The current Area Plan includes protective measures prohibiting buildings from projecting above the forest canopy, ridge lines, or otherwise detracting from the view shed and the scenic quality findings of the TRPA Code of Ordinances must be made for any project granted additional height (see Question 1, CEAQ Checklist 1a discussion). Moreover, as discussed in Question 3 (CEQA Checklist Ic), projects are required to implement the Area Plan's design standards to ensure compatibility with the natural environment. Thus, implementation of specific projects under the amended Tahoe Valley Area Plan is not likely to result in obstructed views to and from scenic resources, recreation areas, bike trails, and public roadways. All projects would comply with TRPA Code provisions and the Tahoe Valley Development and Design Standards, which would result in generally improved scenic conditions in the Tahoe Valley plan area. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**8. Would the Project be inconsistent with the height and design standards required by the applicable ordinance or Community Plan? (TRPA 18d)**

Height: The Tahoe Valley Area Plan Amendments include several changes to the existing adopted maximum building height standards of the area plan, including new parcels added to several existing zoning

districts and elimination of the maximum building story limits. One parcel (APN 023-081-011) is proposed to be relocated from the Town Center Gateway District to the Town Center Core District and thus would qualify for additional height from 36 feet to 45 feet. However, the increase in height is not expected to have new impacts given the small area and the application of the Tahoe Valley Area Plan Design and Development Standards that prohibit buildings from protruding above the forest canopy or ridgeline, and require site-specific design features that minimize ground disturbance, screening, use of earth tone colors, materials and architectural style that complements the Tahoe landscape. Thus, this impact is **less than significant**.

Density: The Tahoe Valley Area Plan Amendments would incorporate parcels currently located in PAS 111 and PAS 114 and would permit a maximum of 25 units per acre for multi-dwelling residential uses. In the Core, Mixed Use Corridor, and Gateway Town Center Districts, the maximum density for multiple family dwellings shall be increased from 25 to 65 units per acre. Each of these parcels are either immediately adjacent to US 50 or immediately adjacent to parcels contiguous to US 50. The increase in density standards may result in increased bulk and mass visible from the scenic roadway corridor and from adjacent residential plan areas. However, as described in Impact 5.12.2-2 above, the Tahoe Valley Area Plan incorporates design standards such as setbacks from the scenic roadway corridor and from property lines, step-backs for structures over two stories, and architectural treatment to ensure that scenic views and vista, and community character are not impacted. Application of these design standards would serve to reduce the overall impact of massing that may result from the proposed increase in density. Specifically, the Tahoe Valley Area Plan standards require structures fronting along the US 50 and SR 89 to be set back 25 feet from the edge of curb and for third stories to be setback 10 feet from the second story facade. For structures that are located adjacent to residential areas, the Tahoe Valley Area Plan standards require any portion of a structure exceeding 25 feet to be stepped-back at a ratio of 1:1. Other standards to reduce the impact of increased bulk and mass include building design and articulation standards to avoid bulky and "box-like" appearance and building materials that mimic the natural mountain setting. This includes incorporating natural, and natural-appearing materials and colors, using earth-tone colors, and incorporating building facade articulation such as projections, recesses, dormers, or cornices to create visual interest. The design standards are consistent with TRPA's scenic quality and community design goals to enhance the natural features of the region while enhancing the quality of the built environment and are not in conflict with City or TRPA design standards. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**9. Would the Project be inconsistent with the TRPA Scenic Quality Improvement Program (SQIP) or Design Review Guidelines? (TRPA 18e)**

The TRPA Scenic Quality Improvement Program has been developed as a part of the TRPA Regional Plan to provide a program for implementing physical improvements to the built environment in the Tahoe Basin in order to assist in the attainment of scenic quality thresholds. The program specifically addresses scenic resources for the 23 roadway and 4 shoreline landscape units that do not meet scenic quality thresholds. This includes roadway units 1 (Tahoe Valley), 35 (Al Tahoe), and 36 (Airport Area) that are within the Tahoe Valley plan area.

All three segments are in need of improvement and have been designated as restoration areas by the SQIP. The SQIP promotes restoration of disturbed areas and requires that visual quality ratings be maintained and that non-attainment areas improve. Therefore, future area plan development applications that degrade existing scenic quality ratings would constitute a significant impact.

The evaluation presented above for Questions 1 through 7 (CEAQ Checklist 1a through 1d) concludes that while implementation the Tahoe Valley Area Plan would allow for construction of new development and redevelopment projects and result in visibility of new or redeveloped man-made features, the changes would not exceed significance standards when the design standards and protective measures of the Area Plan are implemented.

Due to the fact that the three roadway units are in still in need of improvement (TRPA Threshold Evaluation 2019), the SQIP planning recommendations for improving the scenic quality in the roadway segments are required during project review by the TRPA Code of Ordinances (Section 36.4). Recommendations are set forth in detail above. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**10. Would the Project include new or modified sources of exterior lighting? (TRPA 7a)**

See discussion and analysis for Question 4, which concludes the level of impact is **less than significant**.

Environmental Analysis: *Less than a Significant Impact*.

Required Mitigation: **None**.

**11. Would the Project create new illumination, which is more substantial than other lighting, if any, within the surrounding area? (TRPA 7b)**

See discussions and analyses and for Question 4 and Question 8 above, which concludes the level of impact is **less than significant**.

Environmental Analysis: *Less than a Significant Impact*.

Required Mitigation: **None**.

**12. Would the Project cause light from exterior sources to be cast off-site or onto public lands? (TRPA 7c)**

See discussions and analyses for Question 4 and Question 8, which concludes the level of impact is **less than significant**.

Environmental Analysis: *Less than a Significant Impact*.

Required Mitigation: **None**.

**13. Would the Project create new sources of glare through the siting of the improvements or through the use of reflective materials? (TRPA 7d)**

See discussion and analysis for Question 4, which concludes the level of impact is **less than significant**.

Environmental Analysis: *Less than a Significant Impact.*

Required Mitigation: **None.**

### 5.4.4 Agriculture and Forestry Resources

This section presents the analyses for potential impacts to agriculture and forestry resources. Some TRPA checklist items concern impacts to vegetation, which are addressed in Section 5.4.6, Biological Resources. **Table 12** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 12**
**Agriculture and Forestry Resources**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 14. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the CA Resources Agency, to a non-agricultural use? (CEQA IIa) | | | | **X** |
| 15. Conflict with existing zoning for agricultural use, or a Williamson Act contract? (CEQA IIb) | | | | **X** |
| 16. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resource Code section 12220(g), timberland (as defined by Public Resource Code section 4526) or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? (CEQA IIc) | | | | **X** |
| 17. Result in the loss of forest land or conversion of forest land to non-forest use? (CEQA IId) | | | | **X** |
| 18. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? (CEQA IIe) | | | | **X** |

**14. Would the Project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to a non-agricultural use? (CEQA IIa)**

The Tahoe Valley Area Plan primarily consist of already developed land and is not located in an area identified as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, and therefore poses **no impact** to such lands.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**15. Would the Project conflict with existing zoning for agricultural use, or a Williamson Act contract? (CEQA IIb)**

The Tahoe Valley Area Plan creates no conflicts with zoning for agricultural use or a Williamson Act contract because no contracts exist within the project area. Thus, there is **no impact.**

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**16. Would the Project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resource Code section 12220(g), timberland (as defined by Public Resource Code section 4526) or timberland zoned Timberland Production (as defined by Government Code section 51104(g))? (CEQA IIc)**

The Tahoe Valley Area Plan conflicts with no zoning of and causes no rezoning of forest land, timberland or timberland zoned Timberland Production. Thus, there is **no impact.**

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**17. Would the Project result in the loss of forest land or conversion of forest land to non-forest use? (CEQA IId)**

The loss of substantial forest land, defined above for Question 16, or conversion of forest land to non- forest use creates a significant impact if appropriate permits are not obtained.

See discussion and analysis for Question 16 which concludes **no impacts** to forest land are anticipated with implementation of the Tahoe Valley Area Plan.

Environmental Analysis: *No Impact*

Required Mitigation: **None**.

**18. Would the Project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use? (CEQA IIe)**

See discussions and analyses for Questions 15, 16 and 17, which conclude **no impacts** to farmland and forest land.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

### 5.4.5 Air Quality

This section presents the analyses for potential impacts to air quality. **Table 13** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 13**
**Air Quality**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 19. Conflict with or obstruct implementation of the applicable air quality plan? (CEQA IIIa) | | | | **X** |
| 20. Violate any air quality standards or contribute substantially to an existing or projected air quality violation? (CEQA IIIb) | | | **X** | |
| 21. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)? (CEQA IIIc) | | | **X** | |
| 22. Expose sensitive receptors to substantial pollutant concentrations? (CEQA IIId) | | | **X** | |
| 23. Create objectionable odors affecting a substantial number of people? (CEQA IIIe) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 24. Substantial air pollutant emissions? (TRPA 2a) | | | | **X** |
| 25. Deterioration of ambient (existing) air quality? (TRPA 2b) | | | | **X** |
| 26. Creation of objectionable odors? (TRPA 2c) | | | | **X** |

| | | | | |
|---|---|---|---|---|
| 27. Alteration of air movement, moisture or temperature, or any change in climate, either locally or regionally? (TRPA 2d) | **X, LTS** | | | |
| 28. Increased use of diesel fuel? (TRPA 2e) | **X, LTS** | | | |

**19. Would the Project conflict with or obstruct implementation of the applicable air quality plan? (CEQA IIIa)**

The Tahoe Valley Area Plan Amendments would not alter, revise, conflict with or obstruct the regulations pertaining to air quality. Consistent with existing conditions, subsequent projects that could occur under the Tahoe Valley Area Plan would be subject to subsequent environmental review and permitting, and would be required to comply with Chapter 65 of the TRPA Code. Chapter 65 includes provisions that apply to direct sources of air pollution in the Tahoe region, including certain motor vehicles registered in the region, combustion heaters installed in the region, open burning, stationary sources of air pollution, and idling combustion engines.

TRPA's Regional Transportation Plan 2020 Linking Tahoe (RTP) includes an analysis of its conformity with the California State Implementation Plan in to ensure that the RTP remains consistent with State and local air quality planning efforts to achieve and/or maintain the National Ambient Air Quality Standards (NAAQS). Also see response to Question 20 below.

The El Dorado County Air Quality Management District (AQMD) is the agency primarily responsible for ensuring that national and state air quality standards are not exceeded and that air quality conditions are maintained through a comprehensive program of planning, regulation, enforcement, technical innovation, and promotion of the understanding of air quality issues. The clean air strategy of the AQMD includes, but is not limited to, preparing plans for the attainment of ambient air quality standards, adopting and enforcing rules and regulations concerning sources of air pollution, issuing permits for stationary sources of air pollution, inspecting stationary sources of air pollution and responding to citizen complaints, monitoring ambient air quality and meteorological conditions, and implementing programs and regulations required by the federal Clean Air Act and the California Clean Air Act. The Tahoe Valley Area Plan Amendments would not alter, conflict or obstruct implementation of the AQMD rules, regulations, or permitting requirements.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**20. Would the Project violate any air quality standards or contribute substantially to an existing or projected air quality violation? (CEQA IIIb)**

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to air quality. Consistent with existing conditions, subsequent projects that could occur under the Tahoe Valley Area Plan would be subject to subsequent environmental review and permitting, and would be required to comply with Chapter 65 of the TRPA Code. Chapter 65 includes provisions that apply to direct sources of air pollution in the Tahoe region, including certain motor vehicles registered in the region, combustion heaters

installed in the region, open burning, stationary sources of air pollution, and idling combustion engines.

The Lake Tahoe Air Basin is in attainment or designated unclassified for all National Ambient Air Quality Standards (NAAQS) and is in attainment or designated unclassified for all California ambient air quality standards (CAAQS) except ozone and PM10 (**Table 15**). Implementation of subsequent projects under the Tahoe Valley Area Plan has the potential to produce substantial air pollutant emissions during project construction and operation, as discussed below.

Short-Term Construction Emissions

Subsequent development and redevelopment projects that could occur under the Tahoe Valley Area Plan would involve construction and construction emissions. Construction emissions are described as short- term or temporary in duration. ROG and NOx (ozone precursors) emissions are primarily associated with gas and diesel equipment exhaust and the application of architectural coatings. Fugitive dust emissions (PM10 and PM2.5) are primarily associated with site preparation and vary as a function of such parameters as soil silt content, soil moisture, wind speed, acreage or disturbance area, and vehicle travel by construction vehicles on- and off-site.

Although the details of projects are not known at this time, implementation of subsequent projects under the Tahoe Valley Area Plan would involve construction that would result in the temporary generation of ozone precursor and fugitive dust emissions from site preparation; off-road equipment, material import/export, worker commute exhaust emissions; paving; and other miscellaneous activities. Typical construction equipment associated with development and redevelopment projects includes dozers, graders, excavators, loaders, and trucks. Construction emissions associated with subsequent projects under the Tahoe Valley Area Plan have the potential to be substantial such that they could violate or contribute substantially to an existing or projected air quality violation, and/or expose sensitive receptors to substantial pollutant concentrations.

As part of mitigation from the City General Plan EIR (CSLT 2010, p. 4.5-33), the City adopted Policy NCR-5.10 as part of the General Plan (CSLT 2011, p. NCR-9) to address short-term construction emissions. Furthermore, the Area Plan also incorporates Policy NCR-8.1 to address short-term construction emissions (Tahoe Valley Area Plan 2015, Natural and Cultural Resources Section), which includes measures to reduce construction-generated emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District;
- Prohibit open burning of debris from site clearing unless involved with fuels reduction project;
- Restriction of idling of construction equipment and vehicles;
- Apply water to control dust as needed to prevent dust impacts offsite; and
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.

Long-Term Operational Emissions

Subsequent development and redevelopment projects that could occur under the Tahoe Valley Area Plan could affect regional air quality and could create localized exposure to carbon monoxide (CO) emissions.

Consistent with the Regional Plan and the General Plan, the Area Plan seeks to accommodate the expected growth in a way that improves traffic flow and mobility of residents and visitors to the Tahoe Valley area, and reduces localized traffic congestion and related CO concentrations. Based on the traffic analysis in the Regional Plan (TRPA 2012a, p. 3.4-22 through 3.4-26) and the General Plan (CSLT 2010, p. 4.5-42 through 4.5-43), estimated mobile-source CO emissions associated with the Regional Plan and the General Plan would not conflict with or obstruct regional CO maintenance efforts. Similarly, because the Tahoe Valley Area Plan expected growth and estimated mobile-source CO emission falls within that estimated for the General Plan and the Regional Plan, it too would not impede CO maintenance efforts.

With respect to localized CO impacts, the Transportation Project-Level Carbon Monoxide Protocol (Garza et al. 1997) states that signalized intersections that operate at an unacceptable level of service (LOS) represent a potential for a CO violation, also known as a "hot spot." Thus, an analysis of CO concentrations is typically recommended for receptors located near signalized intersections that are projected to operate at LOS E or F. According to the traffic analysis prepared for the RPU EIS, signalized intersections in the Basin under the Regional Plan, including those within the Tahoe Valley Area Plan, measured in 2035 would operate at an acceptable LOS (i.e., LOS D or better) (TRPA 2012a, p. 3.4-37). According to the traffic analysis prepared for the General Plan EIR, signalized intersections within the City limits under the General Plan, including those within the Tahoe Valley area measured in 2030 would operate at an acceptable LOS of D or better (CSLT 2010, p. 4.4-13).

Primarily affected intersections are not projected to operate at unacceptable levels of service (i.e., LOS E or worse) (LSC 2014) with implementation of the Tahoe Valley Area Plan. Given that the project would not contribute to unacceptable levels of service at primarily affected intersections, a detailed analysis of the project's contribution to localized mobile source CO concentrations would not be required. The project's contribution to localized CO concentrations would be considered less than significant. The Tahoe Valley Area Plan would not result in a substantial increase in the severity of air quality impacts beyond that associated with the development potential under both the City General Plan and TRPA Regional Plan and what was disclosed in and analyzed in their associated environmental documents. (TRPA 2012c, pgs. 3.4-36 – 3.4-38 and CSLT 2010, pgs. 4.5-42 – 4.5-43.)

Because the Tahoe Valley Area Plan is within the scope of what was envisioned in the General Plan and the Regional Plan, it too would not cause signalized intersections to operate at unacceptable levels. Therefore, traffic volumes would not be heavy enough to result in a CO "hot spot". For this reason, and based on the fact that CO emission factors would be reduced substantially (due to increasingly cleaner fuels and vehicles) over the planning period, the Tahoe Valley Area Plan would not result in congestion at intersections that would result in a violation of a CO air quality standard, contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations. Moreover, a traffic analysis was specifically prepared for the 2015 Tahoe Valley Area Plan. The resulting intersection volumes were evaluated using the Synchro (version 8.0) software package, which is based upon the Highway Capacity Manual methodologies (Transportation Research Board, 2010). The analysis concluded that all signalized intersections are found to attain LOS standards as follows:

1. US 50/SR 89 Y: LOS C
2. US 50/Third St: LOS B
3. US 50/Tahoe Keys Blvd: LOS B

With respect to other regional criteria air pollutants (ozone precursors, $PM_{10}$, and $PM_{2.5}$), consistent with the Regional Plan, subsequent projects that may occur under the Tahoe Valley Area Plan may include development and redevelopment projects that could generate long-term operational emissions, including mobile and area source emissions.

Based on the results of the emissions modeling conducted in support of the RPU EIS, RTP EIR/EIS, and the 2015 Tahoe Valley Area Plan (see **Table 14**), emissions of ozone precursors, CO in the Basin would be expected to decrease substantially by 2035. This can be explained by the fact that vehicle emissions standards would be improved substantially over the next 20 years, the increased use of electric vehicles, and limited development could occur within the Tahoe Basin. Any additional population growth and associated increase in operational ozone precursor emissions in the Basin would be more than offset by more stringent vehicle emissions standards, fuel economy standards, and truck and bus emission rules, over the planning period (TRPA 2012a, p. 3.4-33).

Emissions of $PM_{10}$ and $PM_{2.5}$ were projected to increase slightly by 2035 (approximately 4 tons per year (TPY) or 21 lb/day and 3 TPY or 14 lb/day, respectively). However, Section 65.1.4 of the TRPA Code requires that only wood stoves that meet EPA emissions standards would be installed and would allow air quality mitigation fees to be used for regional projects, which could include incentives to remove non-conforming stoves. These proposed changes would be expected to continue the existing trend of decreasing PM emissions in the Region over the planning period.

**Table 14**
**Predicted Tahoe Valley Area Plan Operations-Related Criteria Pollutant and Precursor Emissions (lbs/day)**

| Operational Activities | Reactive Organic Gases (ROG) | Nitrogen Oxide ($NO_X$) | Carbon Monoxide (CO) | Sulfur Dioxide ($SO_2$) | Coarse Particulate Matter ($PM_{10}$) | Fine Particulate Matter ($PM_{2.5}$) |

*Source: CalEEMod version 2013.2.2.*

Because the Tahoe Valley Area Plan Amendment is required to be consistent with the Regional Plan, continued implementation of the Tahoe Valley Area Plan, as amended would also be expected to result in a substantial long-term reduction in emissions of ozone precursors and CO. Because the increase in emissions of PM associated with build- out of the entire Regional Plan would be below the project-level increment considered significant by TRPA (82 lb/day), the Tahoe Valley Area Plan would not be anticipated to lead to nonattainment of national standards. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**21. Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)? (CEQA IIIc)**

The Region is designated by CAAQS as non-attainment for Ozone and $PM_{10}$, as presented in **Table 15**. A significant cumulative impact results if the Project causes an increase in $PM_{10}$ and Ozone.

**Table 15**
**Attainment Status of Criteria Pollutants in the Lake Tahoe Air Basin**

| Pollutant | National Designation[1] | State Designation[2] | Threshold Indicator Reporting Category[3] | TRPA Designation[3] |
|---|---|---|---|---|
| Ozone | Unclassified/ Attainment | Nonattainment | Highest 1-Hour Average Concentration | At or somewhat better than target |
| | | | Highest 8-Hour Average Concentration | Somewhat worse than target |
| | | | 3-Year Average of 4th Highest Concentration | At or somewhat better than target |
| | | | Oxides of Nitrogen Emissions | At or somewhat better than target |
| Particulate Matter – Coarse ($PM_{10}$) | Unclassified | Nonattainment | Highest 24-Hour Average $PM_{10}$ Concentration | Somewhat worse than target |
| | | | Annual Average $PM_{10}$ Concentration | Unknown |
| Particulate Matter – Fine ($PM_{2.5}$) | Unclassified/ Attainment | Attainment | 3-Year Average of 98th Percentile 24-Hour $PM_{2.5}$ Concentration | Considerably better than target |
| | | | Annual Average $PM_{2.5}$ Concentration | Considerably better than target |

| | | | | |
|---|---|---|---|---|
| Carbon Monoxide | Unclassified/ Attainment | Attainment | 1-Hour Carbon Monoxide Standard | Considerably better than target |

| Hydrogen Sulfide | No Designation | Unclassified | No Designation | |
| Sulfates | No Designation | Attainment | No Designation | |

*Sources: [1]CARB 2022b; [2]CARB 2022a; [3]TRPA 2019 Threshold Dashboard*
*https://ww2.arb.ca.gov/resources/documents/maps-state-and-federal-area-designations*

In the Lake Tahoe Region, these pollutants relate to automobile use and potential impacts measured with VMT calculations. No single project is sufficient in size to, by itself; result in nonattainment of ambient air

quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts.

With respect to ozone precursors and PM10, consistent with the Regional Plan, subsequent projects that may occur under the Tahoe Valley Area Plan may include development and redevelopment projects that could generate long-term operational emissions, including mobile and area source emissions.

Based on the results of the emissions modeling conducted in support of the RPU EIS and RTP EIR/EIS, emissions of ozone precursors in the Basin would be expected to decrease substantially by 2035. This can be explained by the fact that vehicle emissions standards would be improved substantially over the next 20 years, and limited development could occur within the Tahoe Basin. Any additional population growth and associated increase in operational ozone precursor emissions in the Basin would be more than offset by more stringent vehicle emissions standards, fuel economy standards, and truck and bus emission rules, over the planning period (TRPA 2012a, p. 3.4-33 and TMPO 2012, p. 3.4-331).

Emissions of $PM_{10}$ and $PM_{2.5}$ were projected to increase slightly by 2035 (approximately 4 tons per year (TPY) or 21 lb/day). However, Section 65.1.4 of the TRPA Code requires that only wood stoves that meet EPA emissions standards would be installed and would allow air quality mitigation fees to be used for regional projects, which could include incentives to remove non-conforming stoves. Furthermore, the City General Plan Policy NCR-8.11 requires that all feasible El Dorado County Air Quality Municipal District (EDCAQMD) recommended measures to reduce operational emissions of criteria pollutants be incorporated into project design and that all projects demonstrate compliance with TRPA's air quality mitigation program at the time of project consideration. These requirements would be expected to continue the existing trend of decreasing PM emissions in the Region over the planning period.

Because the Tahoe Valley Area Plan is required to be consistent with the Regional Plan, continued implementation of the Tahoe Valley Area Plan as amended would also be expected to result in a substantial long-term reduction in emissions of ozone precursors. Because the increase in emissions of PM associated with build-out of the entire Tahoe Valley area would be below the project-level increment considered significant by TRPA (82 lb/day), the Tahoe Valley Area Plan would not be anticipated to lead to nonattainment of national standards, and so will have a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**22. Would the Project expose sensitive receptors to substantial pollutant concentrations? (CEQA IIId)**

Typical sensitive receptors include residences, hospitals, and schools. There are three schools within a mile of the Tahoe Valley area (South Tahoe High School, Tahoe Valley Elem School and South Tahoe Middle School), and there is one hospital within the Tahoe Valley Area Plan. The Area Plan is surrounded on the west, north and northeast by residential neighborhoods.

Short-Term Construction Emissions

Subsequent development and redevelopment projects that could occur under the Tahoe Valley Area Plan would involve construction and construction emissions. Construction emissions are described as short- term or temporary in duration. ROG and NOx (ozone precursors) emissions are primarily associated with gas and diesel equipment exhaust and the application of architectural coatings. Fugitive dust emissions (PM10 and PM2.5) are primarily associated with site preparation and vary as a function of such parameters

as soil silt content, soil moisture, wind speed, acreage or disturbance area, and vehicle travel by construction vehicles on- and off-site.

Although the details of projects are not known at this time, continued implementation of subsequent projects under the Tahoe Valley Area Plan as amended would involve construction that would result in the temporary generation of ozone precursor and fugitive dust emissions from site preparation; off-road equipment, material import/export, worker commute exhaust emissions; paving; and other miscellaneous activities. Typical construction equipment associated with development and redevelopment projects includes dozers, graders, excavators, loaders, and trucks. Construction emissions associated with subsequent projects under the Tahoe Valley Area Plan have the potential to be substantial such that they could violate or contribute substantially to an existing or projected air quality violation, and/or expose sensitive receptors to substantial pollutant concentrations.

As part of mitigation from the City General Plan EIR (CSLT 2010, p. 4.5-33), the City adopted Policy NCR-5.10 as part of the General Plan (CSLT 2011, p. NCR-9) to address short-term construction emissions. Furthermore, the Area Plan also incorporates Policy NCR-8.1 to address short-term construction emissions (Tahoe Valley Area Plan 2015, p. 71), which includes measures to reduce construction-generated emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District;
- Prohibit open burning of debris from site clearing unless involved with fuels reduction project;
- Restriction of idling of construction equipment and vehicles;
- Apply water to control dust as needed to prevent dust impacts offsite; and
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.

Long-Term Operational Emissions

Subsequent development and redevelopment projects that could occur under the Tahoe Valley Area Plan could affect regional air quality and could create localized exposure to carbon monoxide (CO) emissions.

Consistent with the Regional Plan and the General Plan, the Area Plan seeks to accommodate the expected growth in a way that improves traffic flow and mobility of residents and visitors to the Tahoe Valley area, and reduces localized traffic congestion and related CO concentrations. Based on the traffic analysis in the Regional Plan (TRPA 2012a, pp. 3.4-22 through 3.4-26) and the General Plan (CSLT 2010, pp. 4.5-42 through 4.5-43), estimated mobile-source CO emissions associated with the Regional Plan and the General Plan would not conflict with or obstruct regional CO maintenance efforts. Similarly, because the Tahoe Valley Area Plan expected growth and estimated mobile-source CO emission falls within that estimated for the General Plan and the Regional Plan, it too would not impede CO maintenance efforts.

With respect to localized CO impacts, the Transportation Project-Level Carbon Monoxide Protocol (Garza et al. 1997) states that signalized intersections that operate at an unacceptable level of service (LOS) represent a potential for a CO violation, also known as a "hot spot." Thus, an analysis of CO concentrations is typically recommended for receptors located near signalized intersections that are projected to operate at LOS E or F. According to the traffic analysis prepared for the RPU EIS, signalized intersections in the Basin under the Regional Plan, including those within the Tahoe Valley Area Plan, measured in 2035 would

operate at an acceptable LOS (i.e., LOS D or better) (TRPA 2012a, p. 3.4-37). According to the traffic analysis prepared for the General Plan EIR, signalized intersections within the City limits under the General Plan, including those within the Tahoe Valley area measured in 2030 would operate at an acceptable LOS of D or better (CSLT 2010, p. 4.4-13).

Primarily affected intersections are not projected to operate at unacceptable levels of service (i.e., LOS E or worse) (LSC 2014) with implementation of the Tahoe Valley Area Plan. Given that the project would not contribute to unacceptable levels of service at primarily affected intersections, a detailed analysis of the project's contribution to localized mobile source CO concentrations would not be required. The project's contribution to localized CO concentrations would be considered less than significant. The Tahoe Valley Area Plan would not result in a substantial increase in the severity of air quality impacts beyond that associated with the development potential under both the City General Plan and TRPA Regional Plan and what was disclosed in and analyzed in their associated environmental documents. (TRPA 2012c, pgs. 3.4-36 – 3.4-38 and CSLT 2010, pgs. 4.5-42 – 4.5-43.)

Because the Tahoe Valley Area Plan, as proposed in the amendments, seeks to implement and is within the scope of what was envisioned in the General Plan and the Regional Plan, it too would not cause signalized intersections to operate at unacceptable levels (see Question 20 above). Therefore, traffic volumes would not be heavy enough to result in a CO "hot spot". For this reason, and based on the fact that CO emission factors would be reduced substantially (due to increasingly cleaner fuels and vehicles) over the planning period, the Tahoe Valley Area Plan would not result in congestion at intersections that would result in a violation of a CO air quality standard, contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations.

With respect to other regional criteria air pollutants (ozone precursors, $PM_{10}$, and $PM_{2.5}$), consistent with the Regional Plan, subsequent projects that may occur under the Tahoe Valley Area Plan may include development and redevelopment projects that could generate long-term operational emissions, including mobile and area source emissions.

Based on the results of the emissions modeling conducted in support of the RPU EIS and RTP EIR/EIS, emissions of ozone precursors, CO in the Basin would be expected to decrease substantially by 2035. This can be explained by the fact that vehicle emissions standards would be improved substantially over the next 20 years, and limited development could occur within the Tahoe Basin. Any additional population growth and associated increase in operational ozone precursor emissions in the Basin would be more than offset by more stringent vehicle emissions standards, fuel economy standards, and truck and bus emission rules, over the planning period (TRPA 2012a, p. 3.4-33).

Emissions of $PM_{10}$ and $PM_{2.5}$ were projected to increase slightly by 2035 (approximately 4 tons per year (TPY) or 21 lb/day and 3 TPY or 14 lb/day, respectively). However, Section 65.1.4 of the TRPA Code requires that only wood stoves that meet EPA emissions standards would be installed and would allow air quality mitigation fees to be used for regional projects, which could include incentives to remove non-conforming stoves. These proposed changes would be expected to continue the existing trend of decreasing PM emissions in the Region over the planning period.

Because the Tahoe Valley Area Plan is required to be consistent with the Regional Plan, implementation of the Tahoe Valley Area Plan, as amended would also be expected to result in a substantial long-term reduction in emissions of ozone precursors and CO. Because the increase in emissions of PM associated with build- out of the entire Regional Plan would be below the project-level increment considered significant by TRPA (82 lb/day), the Tahoe Valley Area Plan is not anticipated to expose sensitive receptors to substantial pollutant concentrations, and so would have a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**23. Would the Project create objectionable odors affecting a substantial number of people? (CEQA IIIe)**

The occurrence and severity of odor effects depend on the nature, frequency, and intensity of the odor source, wind speed and direction, and the presence of sensitive receptors. Offensive odors rarely cause physical harm, but odors can be unpleasant and generate citizen complaints to regulatory agencies and local governments. Typical sensitive receptors include residences, hospitals, and schools. There is one hospital within the Tahoe Valley Area Plan and residences can be found within the boundary of the Area Plan and located in adjacent neighborhoods.

As a general matter, the types of land use development that pose potential odor problems include wastewater treatment plants, refineries, landfills, composting facilities and transfer stations. No such uses occupy the project area. The proposed uses in the Area Plan as listed in Appendix C of the Tahoe Valley Area Plan, are not characteristic of the types of uses that would result in the development of a major source of objectionable odor.

In the short-term, odor impacts occur from the use of diesel engines and asphalt concrete paving during construction. As stated in the discussion of short-term impacts to sensitive receptors under Question 22 above, these odors are both temporary and localized, affecting only the area immediately adjacent to the active construction area. Diesel exhaust emissions and asphalt concrete paving odors dissipate rapidly away from the source and cease upon completion of construction activities and would be addressed by the Chapter 65 of the TRPA Code idling restrictions and General Plan Policy NCR-5.10 and Tahoe Valley Area Plan Policy NCR-5-8.1. Thus, the implementation of the Tahoe Valley Area Plan does not result in substantial direct or indirect exposure of sensitive receptors to offensive odors, and so would have a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**24. Would the Project result in substantial air pollutant emissions? (TRPA 2a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and is consistent with the RPU EIS. The Tahoe Valley Area Plan would not alter or revise the regulations pertaining to air quality. Consistent with existing conditions, subsequent projects that could occur under the Tahoe Valley Area Plan would be subject to subsequent environmental review and permitting, and would be required to comply with Chapter 65 of the TRPA Code. Chapter 65 includes provisions that apply to direct sources of air pollution in the Tahoe region, including certain motor vehicles registered in the region, combustion heaters installed in the region, open burning, stationary sources of air pollution, and idling combustion engines.

The Lake Tahoe Air Basin is in attainment or designated unclassified for all national ambient air quality standards (NAAQS) and is designated a nonattainment area for the ozone and PM10 California ambient air quality standards (CAAQS). Because the Tahoe Valley Area Plan incorporates measures similar to TRPA's Mitigation Measure 3.4-2 to reduce emissions to the extent feasible, subsequent projects under the Tahoe Valley Area Plan amendments would not result in substantial air pollutant emissions during project construction and operation, as discussed below.

See analyses for Questions 20 through 22 which concludes a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**25. Would the Project result in deterioration of ambient (existing) air quality? (TRPA 2b)**

See analyses for Questions 20 and 21 which concludes a **less than significant** impact and Questions 24, which concludes a **less than significant** to ambient air quality.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**26. Would the Project result in creation of objectionable odors? (TRPA 2c)**

See discussion and analysis for Question 23, which addresses the creation of objectionable odors and concludes a **less than significant** odor impact to short-term and long-term effects to sensitive receptors.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**27. Would the Project result in alteration of air movement, moisture or temperature, or any change in climate, either locally or regionally? (TRPA 2d)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and is consistent with the RPU EIS. (TRPA 2012a, Chapter 3.5)

Construction GHG Emissions

Subsequent development proposed within the Tahoe Valley Area Plan amendments would result in direct emissions of GHGs from construction. As noted in Section 6.4.5, Air Quality, the quantification of emissions resulting from future construction activities in the Tahoe Valley plan area is not possible due to project-level variability and uncertainties related to future individual projects. However, all construction projects can produce GHG emissions and all future development projects would be subject to various emission- reducing rules and regulations in effect at the time of construction. For example, City of South Lake Tahoe General Plan Policy NCR-5.10 and the Tahoe Valley Area Plan Policy NCR-8.1 requires that most discretionary projects implement all emission-reducing measures recommended by the EDCAQMD, prohibit the open burning of debris from site clearing, use low-emission construction equipment and/or fuels, and restrict idling of construction equipment or vehicles. Furthermore, all future development projects in the Tahoe Valley Area Plan would be required to analyze and mitigate of GHG emissions during development project review, pursuant to CEQA.

The City of South Lake Tahoe adopted policies for sustainable development and green buildings in the Land Use Element of the General Plan. Policies call for creating a sustainable and energy-efficient built environment as a key vision of the City. The same policy is also incorporated in the Tahoe Valley Area Plan (see Natural and Cultural Resources Policy NCR-2.1). The policies provide direction on strategies to achieve sustainable development practices. For instance, South Lake Tahoe General Plan Policy LU-9.1

states that the City will promote the use of sustainable construction in new housing units, commercial developments, and mixed- use centers, and Policy LU-9.2 states that the City will provide clear incentive for sustainable building practices.

As described above, TRPA has also implemented Mitigation Measure 3.4-2 of the TRPA Regional Plan Update EIS implementing construction best practices for air quality to reduce construction related GHG emission. Construction best practices are incorporated as standard conditions of approval for project permitting. For project review delegated to local jurisdictions, the local jurisdictions must also require the TRPA standard conditions of approval.

Construction-related GHG exhaust emissions would be generated by sources such as heavy-duty, off-road equipment, trucks hauling materials to the site, and worker commutes. Over the time span in which the Tahoe Valley Area Plan is redeveloped, exhaust emission rates of the construction equipment fleet in California are expected to decrease over time due to advancements in engine technology, retrofits, and turnover in the equipment fleet, which would result in increased fuel efficiency, potentially more alternatively fueled equipment, and lower levels of GHG emissions. In addition, existing programs to improve air quality in California, such as the Diesel Risk Reduction Plan, will result in cleaner technology for virtually all of California's diesel engine fleets, including construction equipment. Measures implemented under these plans are likely to result in future fleets of construction equipment that are more efficient than existing fleets. For these reasons, levels of GHG emissions associated with construction activity are expected to decrease over time as new regulations are developed in response to AB 32.

Construction activities are temporary only. Future potential impacts from construction would be required to be analyzed and mitigated during development project review, pursuant to CEQA. Standards currently exist that reduce construction-generated GHG emissions. Therefore, the generation of construction GHG emissions is a **less than significant** impact.

**Operational GHG Emissions**

The Tahoe Valley Area Plan would also result in long-term regional GHG emissions associated with new vehicular trips and indirect source emissions, such as electricity usage for lighting. **Table 16** presents estimated GHG emissions resultant from the 2015 Tahoe Valley Area Plan. Pursuant to City General Plan Policy NCR-5.11, the installation of wood-burning hearth devices in proposed residential dwelling units is prohibited. Therefore, the emissions projections presented in **Table 16** account for the prohibition against wood-burning hearths.

**Table 16**
**Operational Greenhouse Gas Emissions for Tahoe Valley Area Plan – Metric Tons per Year**

| | $CO_2e$ (Metric Tons per Year) | | | | | |
|---|---|---|---|---|---|---|
| | **Area Source** | **Energy** | **Mobile** | **Solid Waste** | **Water** | **Total** |
| Tahoe Valley Area Plan | 271 | 1,420 | 2,329 | 90 | 153 | **4,263** |

*Source: Emissions modeled by PMC in 2015 using the CalEEMod computer program.*

*Notes: Emission estimates account for no residential hearths. Mobile source emissions derived from traffic*

*analysis prepared for the 2015 Tahoe Valley Area Plan.*

As part of the 2015 Tahoe Valley Area Plan buildout assumptions, up to 193 existing lodging units were expected to be removed. The GHG emissions offsets projected from the removal of 193 existing lodging units equals 3,042 metric tons of $CO_2e$.

As previously described, Mitigation Measure 3.5-1 of the TRPA Regional Plan Update EIS mandates TRPA to require, through TRPA-approved plans, project permitting, or projects/programs developed in coordination with local or other governments, that GHG emissions from project-specific construction and operational activities permitted pursuant to and in accordance with the Regional Plan are reduced to the maximum extent feasible. Therefore, it is anticipated that this process would be effective in substantially reducing GHG emissions.

TRPA is requiring each local jurisdiction to develop a GHG reduction strategy, using the Lake Tahoe Sustainability Action Plan as a guide in order to attain a 15 percent reduction below the existing emissions inventory for Area Plans. Accounting for the GHG emissions reduction associated with the removal of existing lodging units for operation would result in a 71 percent reduction under the proposed Tahoe Valley Area Plan. Therefore, the Tahoe Valley Area Plan would offset the contribution of GHG emissions greater than 15 percent. Other strategies included in the Tahoe Valley Area Plan that are intended to reduce GHG emission include the following:

- Sustainable Communities Strategy (TVAP Policies LU-8.1, T-6.1)
- Green Building Standards (TVAP Policies NCR-2.1, H-3.2)
- Green Building Incentives (TVAP Policy ED-1.3)
- Energy Efficiency (TVAP Policy H-3.1)
- Mobility and Connectivity (TVAP Policies LU-1.2, LU-1.5, LU-5.1, LU-5.2)
- Pedestrian Facilities (TVAP Policies T-3.1, T-3.4, T-3.6, T-3.7)
- Bicycle Facilities (TVAP Policies T-4.1, T-4.2)
- Transit Service (TVAP Policies T-5.1, T-5.2, T-5.3, T-5.4, T-5.6)
- Recreation Access (TVAP Policy T-5.5)
- Redirection of Development (TVAP Policy H-1.5)
- Mixed-Use Development (TVAP Policies LU-2.1, LU-5.1, H-1.6, H-2.1, H-2.2)

In addition, the City has adopted the Figtree PACE Financing Program to allow property owners in the City to voluntarily place assessment liens on their property for the purpose of installing renewable energy, energy efficiency, and water conservation improvements. The Figtree PACE Financing Program uses private capital to provide property owners with funding. By enrolling in the Figtree PACE Financing Program the City can offer PACE financing to property owners without impacting the City's budget.

TRPA has targeted the removal and replacement of woodstoves that do not meet current EPA Phase II certification requirements. A rebate program is projected to result in the replacement of 126 woodstoves. Other actions taken include revising the Chapter 37, Design Standards of the TRPA Code of Ordinances to

remove unintended barriers to GHG-reducing projects such as roof top solar panels and vegetated roofs. Impacts from buildout of the Tahoe Valley Area Plan, as amended, are considered to be **less than significant** as the Tahoe Valley Area Plan would not result in an increase in the severity of greenhouse gas-related impacts beyond that associated with the development potential assumed under both the City General Plan and TRPA Regional Plan and what was disclosed and analyzed in their associated environmental documents. (TRPA 2012c, 3.5-15 – 3.5-25 and CSLT 2010, pp. 4.5-47 – 4.5-56.)

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**28. Would the Project result in increased use of diesel fuel? (TRPA 2e)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis is tiered from and is consistent with the RPU EIS. (TRPA 2012a, Chapter 3.13.)

Construction associated with subsequent projects under the Tahoe Valley Area Plan would require the use of diesel fuel for the operation of construction equipment. Certain specific projects that involve on-going truck deliveries or motorized vehicle use (such as snowmobile courses) as part of their operations could also increase gasoline and diesel fuel consumption relative to existing conditions.

From an air quality perspective, one of the primary concerns related to diesel fuel consumption is the resultant exposure of sensitive receptors to emissions of toxic air contaminants (TACs) that can occur during both the construction and operational phases of a project.

The construction of subsequent projects under the Tahoe Valley Area Plan could result in short-term diesel exhaust emissions, including diesel particulate matter (PM), from the use of off-road diesel equipment required for site grading and excavation, paving, and other construction activities. Diesel PM was identified as a TAC in 1998. The potential cancer risk from the inhalation of diesel PM is a more serious risk than the potential non-cancer health impacts (TRPA 2012a, p. 3.4-39). Consistent with the findings in the RPU EIS, the proximity of heavy-duty diesel-fueled construction equipment to existing sensitive receptors within or adjacent to the Tahoe Valley Area Plan during construction activities resulting from implementation of the Tahoe Valley Area Plan may result in exposure of sensitive receptors to TACs.

<u>Short-Term Construction Emissions</u>

Subsequent development and redevelopment projects that could occur under the Tahoe Valley Area Plan would involve construction and construction emissions. Construction emissions are described as short- term or temporary in duration. ROG and NOx (ozone precursors) emissions are primarily associated with gas and diesel equipment exhaust and the application of architectural coatings. Fugitive dust emissions (PM10 and PM2.5) are primarily associated with site preparation and vary as a function of such parameters as soil silt content, soil moisture, wind speed, acreage or disturbance area, and vehicle travel by construction vehicles on- and off-site.

Although the details of projects are not known at this time, implementation of subsequent projects under the Tahoe Valley Area Plan would involve construction that would result in the temporary generation of ozone precursor and fugitive dust emissions from site preparation; off-road equipment, material import/export, worker commute exhaust emissions; paving; and other miscellaneous activities. Typical construction equipment associated with development and redevelopment projects includes dozers, graders, excavators, loaders, and trucks. Construction emissions associated with subsequent projects under the Tahoe Valley Area Plan have the potential to be substantial such that they could violate or contribute

substantially to an existing or projected air quality violation, and/or expose sensitive receptors to substantial pollutant concentrations.

As part of mitigation from the City General Plan EIR (CSLT 2010, p. 4.5-33), the City adopted Policy NCR-5.10 as part of the General Plan (CSLT 2011, p. NCR-9) to address short-term construction emissions. Furthermore, the Area Plan also incorporates Policy NCR-5.1 to address short-term construction emissions (Tahoe Valley Area Plan 2015, p. 71), which includes measures to reduce construction-generated emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District;
- Prohibit open burning of debris from site clearing unless involved with fuels reduction project;
- Restriction of idling of construction equipment and vehicles;
- Apply water to control dust as needed to prevent dust impacts offsite; and
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.

As part of a Mitigation Measure 4.5.5 from the General Plan EIR (CSLT 2010, p. 4.5-47) the City also adopted Land Use Policy LU-8.18 (CSLT 2011, p. LU-19) to reduce exposure of TACs by requiring that all new or relocated discretionary development that would be a source of TACs near residences or sensitive receptors to either provide an adequate buffer, or filters, or other equipment, or incorporate mitigation measures to reduce potential exposure to acceptable levels.

Therefore, because measured identified in the RPU EIS and General Plan EIR that would reduce construction-related TAC emission to the extent feasible have been incorporated into the Tahoe Valley Area Plan, subsequent projects under the Tahoe Valley Area Plan involving the use of heavy-duty diesel- fueled construction equipment would not result in the exposure of sensitive receptors to TACs.

Finally, based on a review of the proposed permissible uses in the Tahoe Valley Area Plan amendments, the Tahoe Valley Area Plan would not include the construction or operation of any major sources of TAC emissions such as power-generating plants or other heavy industrial uses. The land use strategy of the Tahoe Valley Area Plan, the City General Plan, as well as the Regional Plan, would include incentivizing development in the in the town and regional centers, which are located along the Basin's main transportation corridors (US Highway 50). The ARB recommends a minimum setback distance of 500 feet from urban roads with 100,000 vehicles per day or rural roads with 50,000 vehicles per day to minimize the health risk of sensitive receptors to mobile-source TACs (TRPA 2012a, p. 3.4-39). US Highway 50 cannot accommodate more than 50,000 vehicles per day (TRPA 2012a, p. 3.4-40). Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

### 5.4.6 Biological Resources (Stream Environment Zones, Wetlands, Wildlife and Vegetation)

This section presents the analyses for potential impacts to biological resources, including impacts to SEZs, wetlands, wildlife and vegetation. **Table 17** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 17**
**Biological Resources**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 29. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? (CEQA IVa) | | | **X** | |
| 30. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service? (CEQA IVb) | | | **X** | |
| 31. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? (CEQA IVc) | | | **X** | |
| 32. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? (CEQA IVd) | | | **X** | |
| 33. Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance? (CEQA IVe) | | | **X** | |
| 34. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? (CEQA IVf) | | | | **X** |

| TRPA Initial Environmental Checklist Item | Yes | No, With Mitigation | Data Insufficient | No |
|---|---|---|---|---|
| 35. Removal of native vegetation in excess of the area utilized for the actual development permitted by the land capability/IPES system? (TRPA 4a) | | | | **X** |
| 36. Removal of riparian vegetation or other vegetation associated with critical wildlife habitat, either through direct removal or indirect lowering of the groundwater table? (TRPA 4b) | | | | **X** |
| 37. Introduction of new vegetation that will require excessive fertilizer or water, or will provide a barrier to the normal replenishment of existing species? (TRPA 4c) | | | | **X** |
| 38. Change in the diversity or distribution of species, or number of any species of plants (including trees, shrubs, grass, crops, micro flora and aquatic plants)? (TRPA 4d) | | | | **X** |
| 39. Reduction of the numbers of any unique, rare or endangered species of plants? (TRPA 4e) | | | | **X** |
| 40. Removal of streambank and/or backshore vegetation, including woody vegetation such as willows? (TRPA 4f) | | | | **X** |
| 41. Removal of any native live, dead or dying trees 30 inches or greater in diameter at breast height (dbh) within TRPA's Conservation or Recreation land use classifications? (TRPA 4g) | | | | **X** |
| 42. A change in the natural functioning of an old growth ecosystem? (TRPA 4h) | | | | **X** |
| 43. Change in the diversity or distribution of species, or numbers of any species of animals (birds, land animals including reptiles, fish and shellfish, benthic organisms, insects, mammals, amphibians or microfauna)? (TRPA 5a) | | | | **X** |
| 44. Reduction of the number of any unique, rare or endangered species of animals? (TRPA 5b) | | | | **X** |
| 45. Introduction of new species of animals into an area, or result in a barrier to the migration or movement of animals? (TRPA 5c) | | | | **X** |
| 46. Deterioration of existing fish or wildlife habitat quantity or quality? (TRPA 5d) | | | | **X** |

**29. Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? (CEQA IVa)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and is consistent with the General Plan EIR. (CSLT 2010, Chapter 4.9.)

The Tahoe Valley Area Plan amendments would not alter or revise any regulations that adversely affect any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

Special Status Plant Species

Special-status plant species with the potential to occur in the Tahoe Valley plan area include broad-nerved hump-moss (CNPS List 2, LBTMU-S), water bulrush (CNPS List 2), and marsh skullcap (CNPS List 2). Subsequent development could directly impact these species by direct take during construction or destruction or degradation of these species' habitat(s). A majority of the development and increases in land coverage are anticipated to occur in the existing developed urban lands and disturbed areas along US 50 and SR 89, and the "Y" intersection which is highly disturbed, and not in SEZs, with which these species are associated with. However, there is still limited potential for these species to be impacted.

This potential effect is the same as that analyzed in Impact 3.10-1 (TRPA 2012a, p. 3.10-34 to 3.10-41) of the TRPA RPU EIS, and therefore that analysis is incorporated herein by this reference. The RPU EIS concluded that with existing regulatory measures in place this impact would have a less than significant effect. Any new development or redevelopment project under the Tahoe Valley Area Plan would be required to comply with existing TRPA, federal, and state regulations, permitting requirements, and environmental review procedures that protect SEZs, wetlands, and other sensitive habitats. These regulations and procedures address potential construction-related impacts to SEZs and other sensitive habitats through site-specific environmental review; require development and implementation of project-specific measures to minimize or avoid impacts through the design and permitting process; and require compensatory or other mitigation for any significant effects as a condition of project approval and permitting. Specifically, existing regulations and permitting requirements would minimize the loss of sensitive habitats during construction and provide habitat compensation for the loss of riparian, wetland, and other sensitive habitats through CWA Section 404, TRPA, and other permitting/review processes.

Specifically the following regulatory measure would be applicable to any project proposed in the Tahoe Valley plan area. Chapter 33 of the TRPA Code (Vegetation Protection During Construction) outlines measures that must be taken during construction to protect vegetation. In addition, Chapter 61 of the TRPA Code (Vegetation Protection and Management) further protects vegetation by managing and maintaining vegetation health and diversity including common, rare and sensitive plant species. Chapter 61 of the TRPA Code (Sensitive and Uncommon Plant Protection and Fire Hazard Reduction) also sets forth standards to preserve and manage sensitive plant species and specifically projects and activities that may impact sensitive plans to fully mitigate their significant adverse effects. Section 61.4.5 of the TRPA Code (Revegetation) sets forth standards for revegetation. Therefore, construction of approved development under the Tahoe Valley Area Plan would have a less than significant impact on special- status plant species.

The Tahoe Valley Area Plan amendments would allow coverage up to 70 percent on high capability land within newly added town center areas in the Gateway and Neighborhood Professional Districts, provided that coverage is transferred at a ratio of one-to-one from SEZs and sensitive lands. As described in Section 5.4.8, Geology and Soils, the Tahoe Valley Area Plan could potentially result in the transfer and

restoration of 43.5 acres of sensitive lands, thus restoring additional special-status plant species habitat within the Tahoe Valley plan area and the Upper Truckee Hydrologically Related Area. The Tahoe Valley Area Plan has also identified approximately 1.02 acres of disturbed SEZs within the boundary of the Tahoe Valley Area Plan that are targeted for restoration, thus increasing and improving habitat within the Tahoe Valley plan area.

Specific policies of the Tahoe Valley Area Plan that would benefit habitat improvement include the following.

- **Policy NCR-4.1 – Stream Environment Zones** Increase the area of naturally functioning SEZ by preserving existing SEZ and restoring/rehabilitating disturbed SEZ in the Tahoe Valley area, prioritizing the Greenbelt area.

- **Policy NCR-4.2 – Redirection and Transfer of Development** Direct new development away from SEZs and encourage the removal and transfer of existing development from disturbed SEZs that can be feasibly restored. Encourage property owners to use TRPA's transfer incentives available in Chapter 51 of the TRPA Code. Development rights and existing development that are transferred from SEZs and other sensitive lands are eligible to earn residential bonus units, commercial floor area, and tourist accommodation bonus units, when transferred to Centers.

Moreover, the City General Plan also includes policies that contain specific, enforceable requirements and/or restrictions and corresponding performance standards that address potential impacts on special-status plant species or create opportunities for habitat improvement.

- **Policy NCR-3.1: Natural Habitat Preservation** The City shall protect, maintain, and restore key riparian areas, natural open space meadows, and Stream Environment Zones for the preservation of natural habitats.

- **Policy NCR-3.2: Large Scale Development Adjacent to Stream Environment Zones** The City shall minimize the impacts to Stream Environment Zones (SEZ) and sensitive habitat areas from adjacent new large- scale developments.

- **Policy NCR-3.3: Vegetation Preservation** The City shall preserve as much vegetation as possible on site and require revegetation for all proposed development as a condition of approval, so long as it does not conflict with adequate fire abatement.

- **Policy NCR-3.4: Natural Growth Protection** The City shall limit the extent of construction to provide a natural growth zone for vegetation.

- **Policy NCR-3.6: Stream Environment Zone (SEZ) Restoration and Enhancement** The City shall increase the area of naturally functioning SEZs by preserving existing SEZ and restoring/rehabilitating disturbed SEZ.

- **Policy NCR-3.10: Stream Environment Zone Management** The City shall consider stream stability, water quality objectives, fisheries and wildlife, open space, and public health and safety in maintaining or managing Stream Environment Zone (SEZ) restoration projects.

- **Policy NCR-3.11: Natural Habitat and Open Space Management:** The City shall encourage and support public agencies formed to acquire and manage important natural habitat areas, and other open space lands.

- **Policy ROS-2.1: Open Space and Critical Environmental Area Protection** The City shall use the best "un- biased" science and engineering technologies to protect and preserve open space and critical environmental areas allowing public usage if deemed reasonable.
- **Policy ROS-2.2: Riparian Area Preservation and Restoration** The City shall protect and restore key riparian areas and natural features.
- **Policy ROS-2.6: Connecting Surrounding Forests to Urban Open Spaces** The City shall connect surrounding forests to urban open spaces, parks, natural areas and SEZs when appropriate to further biodiversity and habitat.
- **Policy ROS-2.8: Restoration Effort Protection** The City shall ensure that public access does not jeopardize restoration activities and water quality treatment projects on publicly- owned open space lands.
- **Policy ROS-2.9: Permanent Open Space Protection** The City shall permanently protect as open space areas of natural resource value, including forests, wetlands, stream and riparian corridors, and floodplains.
- **Policy ROS-2.10: Sufficient Size Open Space and Natural Areas** The City shall maintain open space and natural areas that are interconnected and of sufficient size to protect biodiversity, accommodate wildlife movement, and provide more sustainable ecosystems.
- **Policy ROS-2.11: Open Space Funding** The City should continue to seek and obtain local, State, and Federal funding for beach, meadow, and open space acquisition.

Implementation of the Tahoe Valley Area Plan and General Plan policies to ensure that SEZs and other open space and natural areas are created, protected, and connected to further biodiversity and improve special-status plant species habitats would result in a beneficial impact.

Special Status Wildlife Species

Habitat conditions of the Tahoe Valley Area Plan have been substantially altered as a result of historic development. There is, however, some suitable habitat for wildlife species listed as endangered, threatened, rare, proposed, candidate, or listed as "fully protected" in the Fish and Game Code of California (Section 3511, 4700, 5050, 5515), referred to as "listed species." A majority of the development (anticipated to be up to an additional 102,000 square feet of CFA and 373 dwelling units by the year 2034) and increase in land coverage is anticipated to occur in the existing developed urban lands which is already highly disturbed. The majority of land disturbance would occur in sagebrush and Jeffrey pine forest lands. Most direct impacts could occur from development of vacant parcels or undeveloped portions of the Tahoe Valley plan area. **Table 18** lists the listed special-status wildlife species that may utilize the habitat within the Tahoe Valley plan area. It should be noted that there are no recorded occurrences of these species in the Tahoe Valley plan area.

**Table 18**
**Listed Special-Status Species**

| Common Name | Status | | |
|---|---|---|---|
| | Federal | State | Regional |
| **Birds** | | | |
| Bald eagle | FD; MNBMC | SE; CFP | LBTMU (MIS) TRPA (SI) |
| Little willow flycatcher | MNBMC | SE | LBTMU (MIS, S) |
| **Mammals** | | | |
| Sierra Nevada red fox | ~ | ST | LBTMU (S) |

*Source: USFWS, 2014 and CDFG, 2014*

Bald eagles may be impacted if construction activities occur within 500 feet of the nest (though no active nests have been identified in the area).

The little willow flycatcher nests and forages in riparian habitat. Approximately 0.44 acres of riparian habitat occur within the Tahoe Valley plan area (City GIS, 2014; USFS, 1991). Riparian areas occur in the immediate vicinity of the Tahoe Valley plan area are primarily associated with the Upper Truckee River. This species may be directly impacted if construction activities occur within 100 feet of the nest or if riparian habitat is disturbed or removed.

The Sierra Nevada red fox may be directly impacted by subsequent development, if this species is found within or adjacent to construction activities. During the breeding season or during hibernation, the species may be rearing young or otherwise unable to relocate from the den, burrow, or other shelter where they are currently residing. If the species is present within a construction zone, construction activities could result in direct mortality of this species.

This potential effect is the same as those analyzed in Impact 3.10-4 (TRPA 2012a, pp. 3.10-50 to 3.10-55) of the TRPA RPU EIS, and therefore that analysis is incorporated herein. The RPU EIS, Impact 3.10-4, concluded that impacts to special-status wildlife species would be less than significant. The Tahoe Valley Area Plan would result in some construction and other projects that could affect special status wildlife species, depending on the specific locations, presence of suitable habitat, and the type, timing, and specific nature of the project actions. During project-level planning and evaluation, impacts on species with potential to be affected would be determined based on the species' distribution and known occurrences relative to the project area, the presence of suitable habitat for the species in or near the project area, and preconstruction surveys. TRPA's existing policies and Code provisions address potential impacts to special-status species through site-specific environmental review, require development and implementation of project-specific measures to minimize or avoid impacts through the design process, and require compensatory or other mitigation for any significant effects on special-status species as a condition of project approval. For any TRPA special interest wildlife species that could be affected, compliance with the TRPA Code of Ordinances requires that projects or land uses within TRPA non-degradation zones

will not significantly affect the habitat or cause the displacement or extirpation of the population; and TRPA will not permit a project that would degrade habitat without compensatory mitigation to avoid a significant effect. For other special-status species, project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore this impact is considered less than significant.

Specifically, the following regulatory measure would be applicable to any project proposed in the Tahoe Valley plan area. Chapter 62 (Wildlife Resources) of the TRPA Code contains regulations to protect and enhance the existing diverse wildlife habitats, with special emphasis on protecting or increasing habitats of special significance, such as deciduous trees, wetlands, meadows, and riparian areas. Chapter 61 of the TRPA Code (Tree Removal) outlines measures to protect existing trees. In addition, Chapters 33 and 61 of the TRPA Code of would further mitigate impacts to listed wildlife species and their habitats. Therefore, construction of approved development under the Tahoe Valley Area Plan would have a less than significant impact on special status wildlife species.

Furthermore, Implementation of the General Plan Policies NCR-3.1 – NCR-3.4, NCR-3.6, NCR-3.10, NCR-3.11, ROS-2.1, ROS-2.2, ROS-2.6, and ROS-2.8 – ROS-2.11, and the following policy listed below, would also address potential impacts on listed special-status wildlife species:

- **Policy NCR-3.13: Improving Wildlife Habitat:** The City shall encourage the use of native or compatible non-native, non-invasive plant species as part of project landscaping to improve wildlife habitat values.

Implementation of the General policies listed above to improve habitat values would result in a beneficial impact.

While the Tahoe Valley Area Plan would include the potential for taller buildings (up to 45 feet in height at the "Y" intersection), this additional height would not exceed the height of trees in the Tahoe Valley Area Plan and therefore would not obstruct bird or raptor flight (bird strikes). It is expected that these buildings would be quite visible to birds and raptors passing through the Tahoe Valley plan area and they would have ample area to maneuver around the buildings. In addition, the majority of migratory bird movement along the Pacific Flyway is to the east and west of the Sierra Nevada mountain range rather than directly over it. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**30. Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service? (CEQA IVb)**

The potential effects are the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and is consistent with the General Plan EIR.

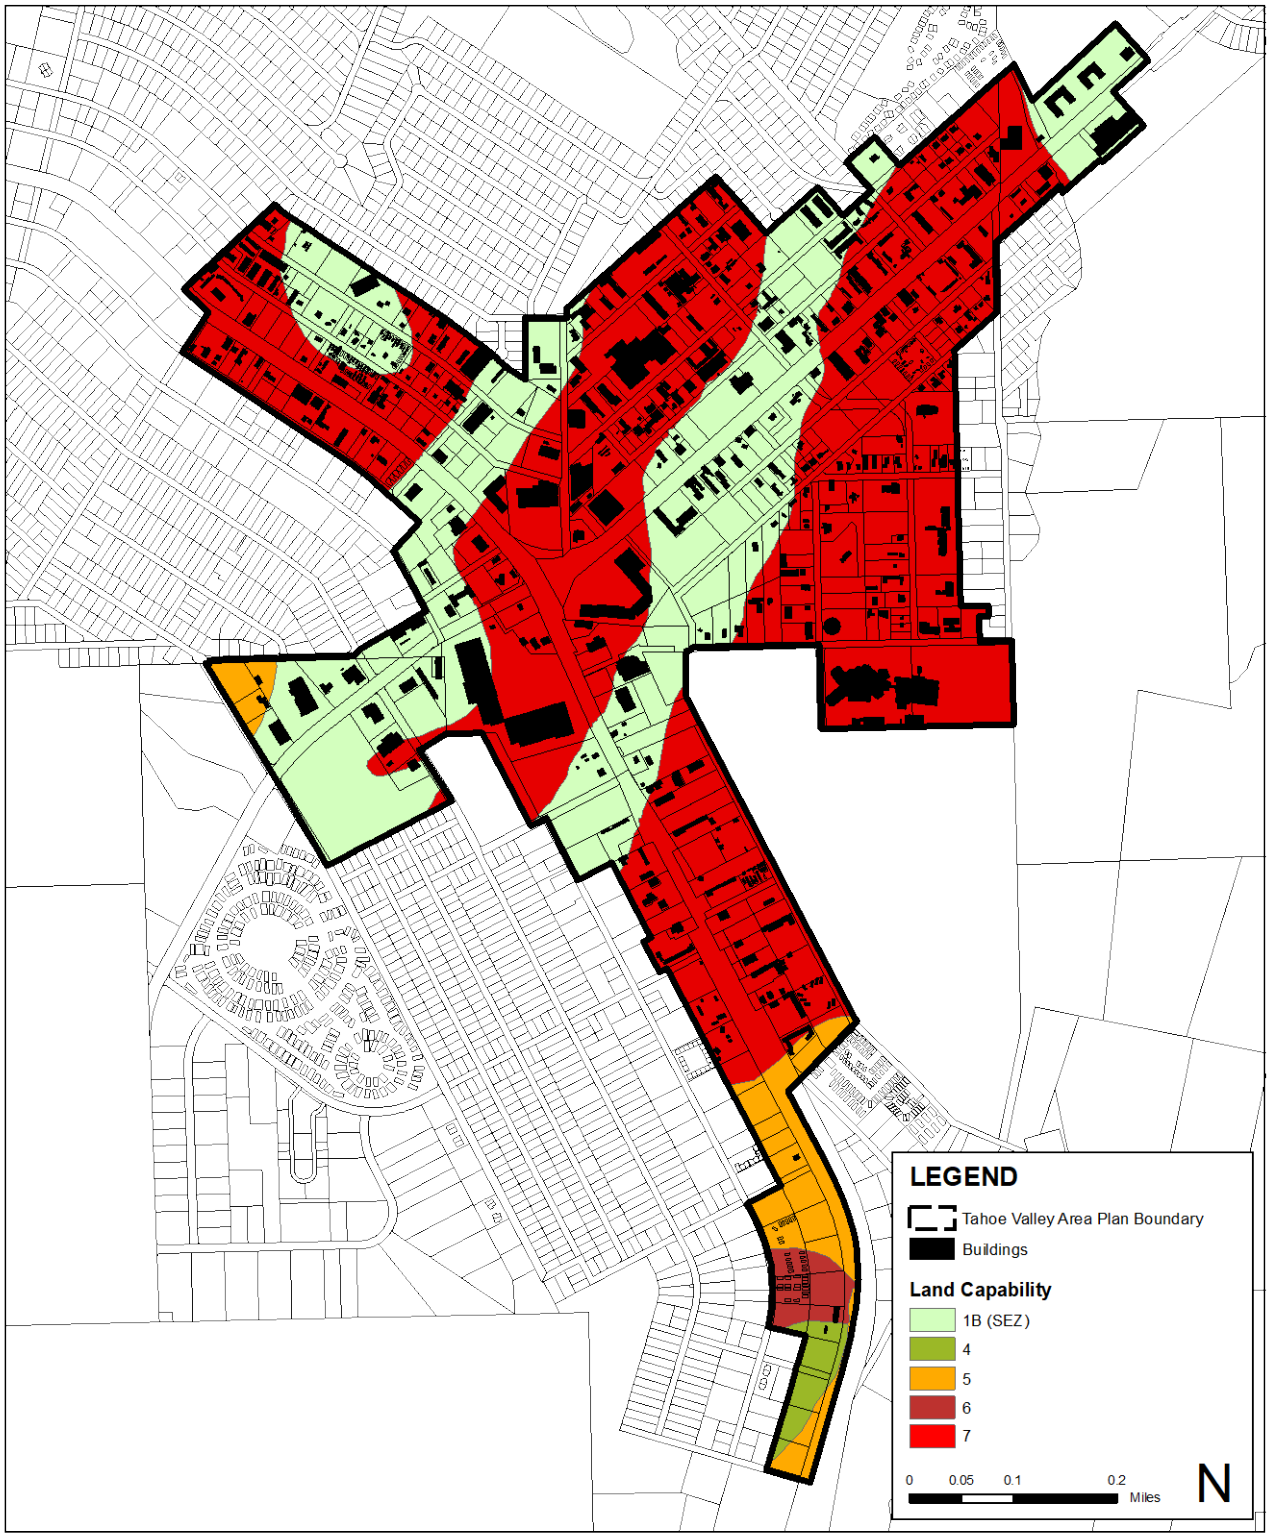
Subsequent development may result in the loss or degradation of sensitive natural communities, such as riparian habitat and wetland features, and tree removal. Since the exact nature and location of development is not known at this time, the exact amount of acreage lost cannot be verified.

The TRPA Code of Ordinances Chapter 62 (Wildlife Resources) protects and enhances the existing diverse

wildlife habitats, with special emphasis on protecting or increasing habitats of special significance, such as deciduous trees, wetlands, meadows, and riparian areas. Section 61.1 (Tree Removal) of the TRPA Code of Ordinances outlines measures to protect existing trees. In addition, Section 33.6 (Vegetation Protection During Construction) and Chapter 61 (Vegetation and Forest Health) of the TRPA Code of Ordinances would further mitigate impacts to sensitive natural communities. Furthermore, the buildout of the Tahoe Valley plan area could result in the restoration of 44.5 acres of sensitive lands, thus providing an opportunity for expansion of natural habitats for these species. Consistency with the TRPA Code of Ordinances and implementation of General Plan policies listed in response to Question 29 above would mitigate direct or indirect impacts to sensitive natural communities in the Tahoe Valley plan area; therefore, impacts to vegetation and habitat from subsequent development would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

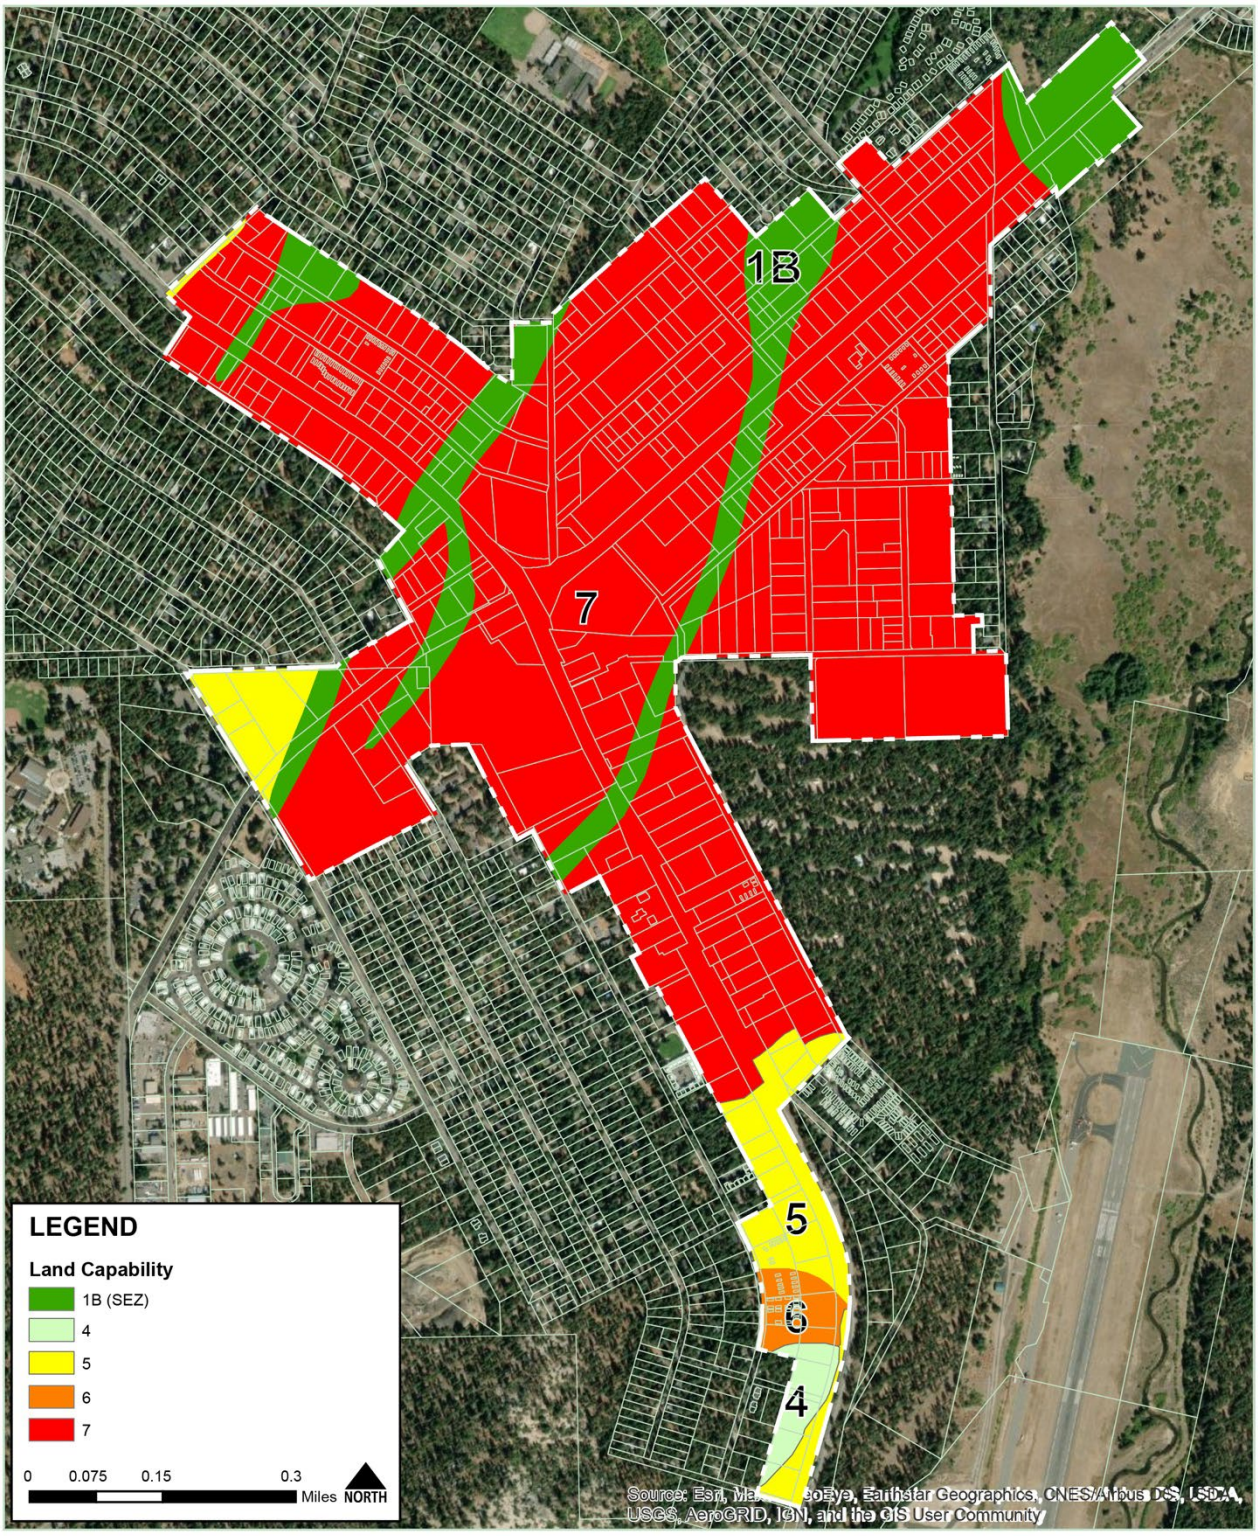
Required Mitigation: **None.**



**31. Would the Project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? (CEQA IVc)**

Habitats within the Tahoe Valley plan area include stream environment zones (SEZs), riparian habitat, and potential jurisdictional wetlands and waters of the U.S., as regulated under Section 404 of the CWA. SEZs and related hydrologic zones are a sensitive resource that is protected pursuant to TRPA's Regional Plan and the Code of Ordinances. These areas consist of the natural marsh and meadowlands, watercourses and drainage ways, and floodplains which provide surface water conveyance from upland areas into Lake Tahoe and its tributaries. SEZs are determined by the presence of riparian vegetation, alluvial soil, minimum buffer strips, water influence areas, and floodplains (TRPA, 1986). According to a recent soils study (see Section 6.4.8, Geology and Soils and see discussion of updated SEZ delineation below), there are 50.7 acres of SEZ within the Tahoe Valley plan area (based on updated SEZ delineation), although these are historic occurrences of SEZs based on soils and historical data. These stream conditions have been largely disturbed through historic development of the Tahoe Valley plan area and the underground piping and channelization of these SEZs. There are no streams currently running through the Tahoe Valley plan area.

There has been extensive disturbance of SEZs in the planning area. The opportunities to implement area-wide BMPs, improve drainage systems, and increase SEZ restoration to benefit stream environment zone function exist in the planning area, but are dependent upon verifying and delineating accurate SEZ boundaries. Accordingly, as part of the effort in preparing the Tahoe Valley Area Plan, the SEZ map for the plan area was updated.



<u>Updated SEZ Delineation</u>

In drafting the original 2015 Area Plan, the City hired Cardno/Entrix and Terra Sciences, experts in the field of soil science and hydrology, to review the existing mapped SEZs and verify the land capability districts for the Tahoe Valley Area Plan. The consultants analyzed previous land capability verifications, site assessments and land capability challenges that have occurred in the planning area, conducted a visual inspection of SEZs (reviewing vegetation, landforms, topography and aerial photography, and examined soil samples to closely examine near-surface soil conditions). In July 2014, Terra Science, Inc. completed a Stream Environment Zone Report for the Tahoe Valley Area Plan. The report includes an SEZ map for the Tahoe Valley plan area that updates the map prepared in 1974. The historic and current SEZ are shown in **Figures 6 and 7** for the revised Area Plan boundary.

Source: TRPA GIS 2024, adapted by the City

**Figure 6**
1987 Bailey Land Capability Map
Tahoe Valley Area Plan Initial Study
March 2024

CITY OF SOUTH LAKE TAHOE

**Figure 7**
Amended Mapped Land Capability Districts
April 2023

The 2014 mapping efforts resulted in the SEZ and land capability district map (Terra Science Inc., 2014) included above as Figure 7. It should also be noted that even with an updated land capability map, property owners are still required to obtain parcel level site assessments and/or land capability verifications from TRPA prior to project submittal.

In response to Question 31, this potential effect is the same as that analyzed in Impact 3.10-1 of the TRPA RPU EIS (TRPA 2012a, pp. 3.10-34 to 3.10-41), and therefore that analysis is incorporated herein. The RPU EIS concluded that with existing regulatory measures in place this impact would have a less than significant effect. Any new development or redevelopment project under the Tahoe Valley Area Plan, as amended would be required to comply with existing TRPA, federal, and state regulations, permitting requirements, and environmental review procedures that protect SEZs, wetlands, and other sensitive habitats. These regulations and procedures address potential construction-related impacts to SEZs and other sensitive habitats through site-specific environmental review; require development and implementation of project- specific measures to minimize or avoid impacts through the design and permitting process; and require compensatory or other mitigation for any significant effects as a condition of project approval and permitting. Specifically, existing regulations and permitting requirements would minimize the loss of sensitive habitats during construction and provide habitat compensation for the loss of riparian, wetland, and other sensitive habitats through CWA Section 404, TRPA, and other permitting/review processes.

Riparian habitat is considered a sensitive natural community by CDFW and TRPA. There are approximately 0.44 acres of riparian habitat within the Tahoe Valley plan area (USFS, 1991). This sensitive habitat is not located within the areas of proposed Area Plan amendment. Wet meadow and aspen are CDFW-designated sensitive natural communities that occur in the region surrounding the Tahoe Valley plan area. Although aspen groves occur in moist habitats within the vicinity of the Tahoe Valley plan area, according to recent aspen mapping, no aspen stands occur within the Tahoe Valley plan area (LTBMU, 2003). There are no identified wet meadow habitats within the Tahoe Valley plan area (USFS, 1991). Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**32. Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? (CEQA IVd)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and is consistent with the General Plan EIR.

Wildlife movement corridors are routes frequently utilized by wildlife that provide shelter and sufficient food supplies to support wildlife species during migration. Movement corridors generally consist of riparian, woodland, or forested habitats that span contiguous acres of undisturbed habitat. Wildlife movement corridors are an important element of resident species home ranges, including black bear, deer, and coyote. The majority of the Tahoe Valley plan area is developed and surrounded by urban development as well as bisected by two highways (US 50 and SR 89) that substantially hinder movement through the area. Therefore, there is very little access from the Tahoe Valley plan area to undisturbed areas outside the project vicinity. In addition, no valuable resources occur in the vicinity to attract any significant movement to the Tahoe Valley plan area as a destination or through the area to an adjacent destination. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**33. Would the Project conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance? (CEQA IVe)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and is consistent with the General Plan EIR.

The Tahoe Valley Area Plan amendments would not alter or revise the regulations pertaining to the protection of biological resources such as tree preservation policies. Consistent with existing conditions, development or redevelopment projects associated with the Tahoe Valley Area Plan could result in removal of trees and vegetation depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations in Chapter 62 and 63 of the TRPA Code.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**34. Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? (CEQA IVf)**

The Project does not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan because no such plans exist for the project area. Thus, there will be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**35. Would the Project result in removal of native vegetation in excess of the area utilized for the actual development permitted by the land capability/IPES system? (TRPA 4a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tahoe Valley Area Plan amendments would not alter or revise regulations pertaining to native vegetation protection during construction. Consistent with existing conditions, vegetation surrounding the construction site of any project permitted by the Tahoe Valley Area Plan would be required to comply Section 33.6, Vegetation Protection During Construction, of the TRPA Code. Protective requirements include installation of temporary construction fencing, standards for tree removal and tree protection, standards for soil and vegetation protection, and revegetation of disturbed areas. Additionally, the Citywide design standards and the proposed landscaping standards of the Tahoe Valley Area Plan requires the use of lawn and landscaping species listed in the TRPA-recommended and approved Native and Adapted Plants for the Tahoe Basin, with the exception of accent plantings. Thus, there would be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**36. Would the Project result in removal of riparian vegetation other vegetation associated with critical wildlife habitat, either through direct removal or indirect lowering of the groundwater table? (TRPA 4b)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS. (TRPA 2012, p. 3.10-34 through 3.10-60)

The Tahoe Valley Area Plan amendments would not alter or revise the regulations pertaining to vegetation removal and groundwater management. Water supply within the Tahoe Valley Area Plan is primarily obtained from groundwater sources. Consistent with existing conditions, any project permitted through the Tahoe Valley Area Plan would be required to meet TRPA requirements for water supply. TRPA regulations prohibit the approval of any development requiring water unless there is adequate water supply within an existing water right (Section 32.4.1 of the TRPA Code). Additionally, Section 33.3.6 of the TRPA Code prohibits excavation that intercepts or interferes with groundwater except under specific circumstances and with prior approval by TRPA (Section 33.3.6.A.2). For these reasons, consistent with existing conditions, projects approved under the Tahoe Valley Area Plan would not directly or indirectly lower the groundwater table.

Further, consistent with existing conditions, vegetation removal associated with projects that could occur under the Tahoe Valley Area Plan with subsequent approval would be required to comply with existing TRPA, federal, and state regulations, permitting requirements, and environmental review procedures that protect habitat that supports riparian vegetation and critical wildlife. Specifically, riparian vegetation and wildlife habitat are protected by Sections 61.1.6 (Management Standards for Tree Removal), 61.3.3 (Protection of Stream Environment Zones), and 63.3 (Fish Habitat Protection), and Chapter 62 (Wildlife Resources) of the TRPA Code. For these reasons, development associated with the Tahoe Valley Area Plan is not expected to result in the removal of riparian or other vegetation associated with critical wildlife habitat, and so there will be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**37. Would the Project result in introduction of new vegetation that will require excessive fertilizer or water, or will provide a barrier to the normal replenishment of existing species? (TRPA 4c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS. (TRPA 2012, p. 3.10-34 through 3.10-60)

The Tahoe Valley Area Plan amendments would not alter or revise the regulations pertaining to new vegetation. Consistent with existing conditions, implementation of new development or redevelopment projects associated with the Tahoe Valley Area Plan would be required to comply with the TRPA Code provisions (e.g., Section 61.4, Revegetation) and Goals and Policies that prohibit the release of non-native species in the Tahoe Region. Generally, native species require less fertilizer and water than non-native species. In addition, the existing Water Efficient Landscape Ordinance requires vegetation maintenance plans to provide the appropriate amount of water to support the long-term growth of landscape, using efficient watering methods which are incorporated in in the Tahoe Valley Area Plan. Provisions for fertilizer management and preparation of fertilizer management plans that address the type, quantity, and frequency of use of fertilizers are included in Section 60.1.8 of the TRPA Code. Projects associated with implementation of the Tahoe Valley Area Plan would be subject to subsequent project-level environmental review and permitting, and at that time they would be required to demonstrate that any proposed new

vegetation would not require excessive fertilizer or water, or provide a barrier to the normal replenishment of existing species. Thus, there would be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**38. Would the Project result in change in the diversity or distribution of species, or number of any species of plants (including trees, shrubs, grass, crops, micro flora and aquatic plants)? (TRPA 4d)**

See discussion and analyses in Questions 35 through 37, and 39 through 42, concluding a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**39. Would the Project result in reduction of the numbers of any unique, rare or endangered species of plants? (TRPA 4e)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis is tiered from the RPU EIS.

The Tahoe Valley Area Plan amendments would not alter or revise the regulations pertaining to unique, rare, or endangered species of plants. The natural resource protection provisions of Chapters 61 and 62 of the TRPA Code are still applicable to the Tahoe Valley Area Plan. Consistent with existing conditions, construction activities associated with implementation of the Tahoe Valley Area Plan could affect special-status plant species and the presence of suitable habitat, depending on the type, timing, and specific nature of any proposed actions. All projects associated with the Tahoe Valley Area Plan would be subject to subsequent project-level environmental review and permitting. At a project-level, potential effects on plant species would be determined based on the species' distribution and known occurrences relative to the project area, the presence of suitable habitat for the species in or near the project area, and preconstruction surveys. TRPA's existing policies and Code provisions address potential impacts to special-status species through site-specific environmental review, require development and implementation of project-specific measures to minimize or avoid impacts through the design process, and require compensatory or other mitigation for any adverse effects on special-status species as a condition of project approval (Sections 61.3.6 and 62.4 of the TRPA Code). Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore, implementation of the Tahoe Valley Area Plan would not result in the reduction in the number of any unique, rare, or endangered species of plants, and so would have **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**40. Would the Project result in removal of streambank and/or backshore vegetation, including woody vegetation such as willows? (TRPA 4f)**

See discussion and analysis for Question 36 above, concluding **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**41. Would the Project result in removal of any native live, dead or dying trees 30 inches or greater in diameter at breast height (dbh) within TRPA's Conservation or Recreation land use classifications? (TRPA 4g)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis is tiered from the RPU EIS.

TRPA regulates the management of forest resources in the Lake Tahoe Basin to achieve and maintain the environmental thresholds for species and structural diversity, to promote the long-term health of the resources, and to create and maintain suitable habitats for diverse wildlife species. Provisions for tree removal are provided in the TRPA Code (Chapter 36, and 71), and tree removal requires the review and approval of TRPA.

Per TRPA Code, Sections 61.1.4, within lands classified by TRPA as conservation or recreation land use or SEZs, any live, dead or dying tree greater than or equal to 30 inches diameter at breast height (dbh) in westside forest types shall not be cut, and any live, dead or dying tree greater than or equal to 24 inches dbh in eastside forest types shall not be cut. Within the non-SEZ urban area, individual trees larger than 30 inches dbh that are healthy and sound shall be retained as desirable specimen trees having aesthetic and wildlife value. For trees within the SEZ and non-SEZ areas, there are the following exceptions: (1) all reasonable alternatives are not feasible to retain the tree, including reduction of parking areas or modification of the original design; or (2) if TRPA determines that they would contribute to a fire hazard, pose an unacceptable risk to occupied or substantial structures or areas of high human use, or if removal of severely insect-infested or diseased trees is warranted to help control an outbreak. In addition, trees and vegetation not scheduled to be removed must be protected during construction in accordance with TRPA Code, Chapter 33. Thus, there would be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**

**42. Would the Project result in a change in the natural functioning of an old growth ecosystem? (TRPA 4h)**

See discussion and analysis for Question 41 above, concluding **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**43. Would the Project result in change in the diversity or distribution of species, or numbers of any species of animals (birds, land animals including reptiles, fish and shellfish, benthic organisms, insects, mammals, amphibians or microfauna)? (TRPA 5a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS.

The Tahoe Valley Area Plan amendments would not alter the regulations pertaining to the protection of

animal species. The resource management provisions contained in Chapters 60 through 68 of the TRPA Code are still applicable to the Tahoe Valley Area Plan. Any subsequent projects allowed within the Tahoe Valley Area Plan would be subject to subsequent project-level environmental review and permitting. Consistent with existing conditions, permit applicants would be required to demonstrate that any proposals would occur consistent with TRPA Code provisions related to resource management, including specifically the provisions of Chapters 62 and 63 that address protection of wildlife and fish resources, respectively. For these reasons, adoption of the Tahoe Valley Area Plan would not result in the change in the diversity or distribution of species, or numbers of any species or animals. Thus, there would be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**44. Would the Project result in reduction of the number of any unique, rare or endangered species of animals? (TRPA 5b)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS. See also, discussion and analysis for Question 29 above.

The Tahoe Valley Area Plan amendments would not alter or revise the regulations pertaining to special-status or listed species of animals. Consistent with existing conditions, development or redevelopment projects associated with the Tahoe Valley Area Plan could affect unique, rare, or endangered species depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations pertaining to the protection of animal species. The protections for rare and special-status species contained in Sections 61.3.6 and 62.4 of the TRPA Code are still applicable to the Tahoe Valley Area Plan. At a project-level, potential effects on animal species would be determined based on the species' distribution and known occurrences relative to the project area, the presence of suitable habitat for the species in or near the project area, and preconstruction surveys. TRPA's existing policies and Code provisions address potential impacts to special-status species through site-specific environmental review, require development and implementation of project-specific measures to minimize or avoid impacts through the design process, and require compensatory or other mitigation for any adverse effects on special-status species as a condition of project approval (Sections 61.3.6 and 62.4 of the TRPA Code). Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore, implementation of the Tahoe Valley Area Plan would not result in the reduction in the number of any unique, rare, or endangered species of animals. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**45. Would the Project result in introduction of new species of animals into an area, or result in a barrier to the migration or movement of animals? (TRPA 5c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS. See also discussion and analysis for Question 32 above.

The Tahoe Valley Area Plan amendments would not alter or revise the regulations pertaining to the introduction of new species and barriers to the migration or movement of animals. The types of uses that

would be permitted in the Tahoe Valley Area Plan are not of the nature that would be expected to introduce any new animal species into the area. Consistent with existing conditions, development or redevelopment projects associated with the Tahoe Valley Area Plan could result in a barrier to the migration or movement of animals depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations pertaining to maintenance of migration routes and movement of animals. The protections for movement and migration corridors contained in Section 62.3.2 of the TRPA Code are applicable to the Tahoe Valley Area Plan. Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval.

Wildlife movement corridors are routes frequently utilized by wildlife that provide shelter and sufficient food supplies to support wildlife species during migration. Movement corridors generally consist of riparian, woodland, or forested habitats that span contiguous acres of undisturbed habitat. Wildlife movement corridors are an important element of resident species home ranges, including black bear, deer, and coyote. The majority of the Tahoe Valley plan area is developed and surrounded by urban development as well as bisected by two highways (US 50 and SR 89) that substantially hinder movement through the area. Therefore, there is very little access from the Tahoe Valley plan area to undisturbed areas outside the project vicinity. In addition, no valuable resources occur in the vicinity to attract any significant movement to the Tahoe Valley plan area as a destination or through the area to an adjacent destination. Therefore, implementation of the Tahoe Valley Area Plan would not result in a barrier to the migration or movement of animals, and this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**46. Would the Project result in deterioration of existing fish or wildlife habitat quantity or quality? (TRPA 5d)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS. See also discussion and analysis for Questions 29 through 31 above.

The Tahoe Valley Area Plan amendments would not alter or revise the regulations pertaining to existing fish or wildlife habitat quantity or quality. Consistent with existing conditions, development or redevelopment projects associated with the Tahoe Valley Area Plan could affect fish and wildlife depending on the type, timing, and specific nature of proposed actions. However, any such projects would be subject to subsequent project-level environmental review and permitting at which time they would be required to demonstrate compliance with all federal, state, and TRPA regulations pertaining to the protection of fish and wildlife contained in Chapters 62 and 63 of the TRPA Code. Project-level planning and environmental analysis would identify potentially significant effects, minimize or avoid those impacts through the design process, and require mitigation for any significant effects as a condition of project approval. Therefore, implementation of the Tahoe Valley Area Plan would not result in the deterioration of existing fish or wildlife habitat quantity. Moreover, the Tahoe Valley Area Plan specifically identifies priority areas for SEZ restoration that would directly benefit water quality, scenic, recreation and habitat quantity and quality. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None**

### 5.4.7 Cultural Resources (CEQA) and Archaeological/Historical (TRPA)

This section presents the analyses for potential impacts to cultural, archaeological and historical resources, discussing the Project impacts on cultural resources related to the disturbance of archaeological, historical, architectural, and Native American/traditional heritage resources. The section also addresses disturbance of unknown archaeological resources, as well as paleontological resources (fossils). **Table 19** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 19**
**Cultural Resources and Archaeological/Historical**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 47. Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5? (CEQA 5a) | | | **X** | |
| 48. Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5? (CEQA 5b) | | | **X** | |
| 49. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? (CEQA 5c) | | | **X** | |
| 50. Disturb any human remains, including those interred outside of formal cemeteries? (CEQA 5d) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 51. Will the proposal result in an alteration of or adverse physical or aesthetic effect to a significant archaeological or historical site, structure, object or building? (TRPA 20a) | | | | **X** |
| 52. Is the proposed project located on a property with any known cultural, historical, and/or archaeological resources, including resources on TRPA or other regulatory official maps or records? (TRPA 20b) | **X, LTS** | | | |

| | | | | |
|---|---|---|---|---|
| 53. Is the property associated with any historically significant events and/or sites or persons? (TRPA 20c) | **X, LTS** | | | |
| 54. Does the proposal have the potential to cause a physical change which would affect unique ethnic cultural values? (TRPA 20d) | | | | **X** |
| 55. Will the proposal restrict historic or pre-historic religious or sacred uses within the potential impact area? (TRPA 20e) | | | | **X** |

**47. Would the Project cause a substantial adverse change in the significance of a historical resource as defined in §15064.5? (CEQA 5a)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and is consistent with the General Plan EIR.

The 2015 Tahoe Valley Area Plan contains historic sites CA-Eld-721-H and CA-Eld-2240-H as identified by archaeological and historical investigations. These sites are associated with Pony Express and historic roadway along US Highway 50 and located in adjacent to US Highway 50. No additional cultural or historic sites are known to exist within the parcels proposed for inclusion in the Area Plan boundary amendments. Previous cultural resources studies within the Tahoe Valley plan area suggest that it is sensitive for the presence of undiscovered prehistoric sites, historic sites, and historic buildings and structures (e.g., given the location of the former Barton Ranch complex, motels/auto courts). Therefore, known and undiscovered prehistoric and historic resources and human remains could be impacted by implementation of the Tahoe Valley Area Plan, which would result in the construction of approximately 373 additional dwelling units as well as an additional 102,000 square feet of commercial floor area (CFA).

The City and TRPA have historic resource protection policies and standards in place that are designed to ensure that known and undiscovered prehistoric resources, historic resources and human remains are not impacted as a result of a project, activity, or soil disturbance.

The Tahoe Valley Area Plan includes Policy NCR-6.1 that requires that identified historic and cultural resources be preserved where feasible. Where it is found that a resource has no economically viable future use, mitigation for the loss of the resource that would preserve public access to its historic or cultural significance shall be required.

General Plan Policy NCR-4.1 and NCR-4.2 directs the City to designate and preserve sites of historical, cultural, and architectural significance within the City and Section 67.3.4 of the TRPA Code of Ordinances prohibits soil disturbance in areas where designated historic resources are present.

General Plan Policy NCR-4.3 requires archeological investigations for all applicable discretionary projects, in accordance with CEQA regulations, for areas not previously surveyed and/or that are determined sensitive for cultural resources. The City requires the preservation of discovered archeologically significant resources in place if feasible, or provide mitigation prior to further disturbance. Section 67.3.1 requires projects and activities to cease all operations if a potential archeological, cultural, or historical resource is discovered, and a site survey to be performed by a qualified archaeologist to evaluate the potential for

significance of the resource.

General Plan Policy NCR-4.5 requires applicants and contractors for projects and other ground disturbing activities to notify the City if human remains are discovered and for all work to halt. The County Coroner shall be notified pursuant to California's Public Resources Code and Health and Safety Code Section 7050.5. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and (e) shall be followed.

Section 67.3.2 of the TRPA Code of Ordinances requires a site survey to be performed by a qualified archaeologist within a project area of known or newly discovered sites of cultural and/or historic significance prior to TRPA project approval. The standard also requires consultation with the Washoe Tribe of California and Nevada for the presence of Washoe sites. If resources are discovered and deemed significant, then soil disturbance activity is prohibited until a resource protection plan is prepared that includes measures to protect the resource.

Implementation of the policies and standards listed above would ensure that cultural and ethnic values of known and undiscovered prehistoric resources, historic resources and human remains would not be impacted. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None**

**48. Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5? (CEQA 5b)**

See discussion and analysis for Question 47 above, concluding a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None**

**49. Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? (CEQA 5c)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and is consistent with the General Plan EIR.

A search of the University of California, Berkeley Museum of Paleontology collections database did not identify any evidence of paleontological resources within the Tahoe Valley plan area. Paleontological resources, however, have been identified in El Dorado County. Therefore, it is possible that implementation of any ground-disturbing activities as a result of the Tahoe Valley Area Plan could uncover previously unknown paleontological resources and could result in physical impacts to resources as a result of the construction of approximately 373 additional dwelling units as well as an additional 102,000 square feet of commercial floor area (CFA) that would be transferred from outside of the Tahoe Valley plan area.

The City has adopted General Plan Policy NCR-4.4 that requires paleontological resource evaluations be prepared, and measures to mitigate impacts to paleontological resources be identified, when fossils are discovered during ground-disturbing activities (CSLT 2011, p. NCR-7).

In addition, federal and state regulations, and TRPA Code (Chapter 67) address protection of

paleontological resources and provide processes to avoid or minimize impacts to identified and discovered resources. Because any development associated with the Tahoe Valley Area Plan would be required to comply with these requirements during project specific review and construction activity, it would not alter or adversely affect paleontological resources. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**50. Would the Project disturb any human remains, including those interred outside of formal cemeteries? (CEQA 5d)**

The State, City and TRPA have historic resource protection policies and standards in place that are designed to ensure that known and undiscovered prehistoric resources, historic resources, and human remains are not impacted as a result of a project, activity, or soil disturbance.

General Plan Policy NCR-4.1 and NCR-4.2 directs the City to designate and preserve sites of historical, cultural, and architectural significance within the City and Section 67.3.4 of the TRPA Code of Ordinances prohibits soil disturbance in areas where designated historic resources are present.

General Plan Policy NCR-4.3 requires archeological investigations for all applicable discretionary projects, in accordance with CEQA regulations, for areas not previously surveyed and/or that are determined sensitive for cultural resources. The City requires the preservation of discovered archeologically-significant resources in place if feasible, or provide mitigation prior to further disturbance. Section 67.3.1 requires projects and activities to cease all operations if a potential archeological, cultural, or historical resource is discovered, and a site survey to be performed by a qualified archaeologist to evaluate the potential for significance of the resource.

General Plan Policy NCR-4.5 and Tahoe Valley Area Plan Policy NCR-6.3 requires applicants and contractors for projects and other ground disturbance activities to notify the City if human remains are discovered and for all work to halt. The County Corner shall be notified pursuant to State Public Resources Code and California's Health and Safety Code Section 7050.5. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission, and the procedures outlined in CEQA Section 15064.5(d) and (e) shall be followed.

Section 67.3.2 of the TRPA Code of Ordinances requires a site survey to be performed by a qualified archaeologist within a project area of known or newly discovered sites of cultural and/or historic significance prior to TRPA project approval. The standard also requires consultation with the Washoe Tribe of California and Nevada for the presence of Washoe sites. If resources are discovered and deemed significant, then soil disturbance activity is prohibited until a resource protection plan is prepared that includes measures to protect the resource.

Implementation of the policies and standards listed above would ensure that cultural and ethnic values of known and undiscovered prehistoric resources, historic resources and human remains would not be impacted. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**51. Will the Project result in an alteration of or adverse physical or aesthetic effect to a significant archaeological or historical site, structure, object or building? (TRPA 20a)**

This potential effect is the same as those analyzed in the City General Plan Update and therefore the analysis is tiered from and is consistent with the General Plan EIR. Also see discussion and analysis for Question 47 above.

The Tahoe Valley Area Plan amendments would not alter or revise the regulations pertaining to the protection of archaeological and historical resources.

The Tahoe Valley Area Plan contains historic sites CA-Eld-721-H and CA-Eld-2240-H as identified by archaeological and historical investigations. These sites are associated with the Pony Express Trail and an historic roadway near the Upper Truckee River and Marsh and are located nearby the existing US Highway 50 alignment where no changes are proposed to the Area Plan boundary. No additional cultural or historic sites are known to exist within the parcels proposed for inclusion in the amendments. Previous cultural resources studies within the Tahoe Valley plan area suggest that it is sensitive for the presence of undiscovered prehistoric sites, historic sites, and historic buildings and structures (e.g., given the location of the former Barton Ranch complex, motels/auto courts). Therefore, known and undiscovered prehistoric and historic resources and human remains could be impacted by the Tahoe Valley Area Plan, which would result in the construction of approximately 373 additional dwelling units as well as an additional 102,000 square feet of commercial floor area (CFA).

The potential exists within the Tahoe Valley plan area, like elsewhere in the Tahoe Basin and consistent with existing conditions, for previously undiscovered archaeological or historic resources to be discovered during any earth-moving activities.

The Tahoe Valley Area Plan would accommodate development, which could occur on properties that include known historical or archaeological resources; be associated with historically significant events or individuals; or result in adverse physical or aesthetic effects to a significant historical or archaeological site, structure, object, or building. Additionally, development permitted within the Tahoe Valley area could result in physical changes that would affect unique ethnic cultural values or restrict historic or prehistoric religious or sacred uses. However, federal and state regulations, TRPA Code (Chapter 67) and General Plan policies address protection of these resources and provide processes to avoid or minimize impacts to historic and archaeological resources. Because any development associated with the Tahoe Valley Area Plan would be required to comply with these regulations, consistent with existing practices, it would not alter or adversely affect archeological or historical resources. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None**

**52. Is the Project located on a property with any known cultural, historical, and/or archaeological resources, including resources on TRPA or other regulatory official maps or records? (TRPA 20b)**

See discussion in Question 51 above that identified two mapped resources on TRPA's official maps. Because any development associated with the Tahoe Valley Area Plan amendments would be required to comply with TRPA regulations (Chapter 67) that prohibits grading, operation of equipment, or other soil disturbance in areas where a designated historic resource is present, except in accordance with a TRPA-approved resource protection plan, it would not alter or adversely affect cultural, historical, and/or archaeological resources identified on TRPA's or other regulatory maps. Thus, this would be a **less than**

**significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**53. Is the Project associated with any historically significant events and/or sites or persons? (TRPA 20c)**

See discussions and analyses discussions for Questions 47 through 52 above, concluding a **less than significant** impact..

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**54. Does the Project have the potential to cause a physical change which would affect unique ethnic cultural values? (TRPA 20d)**

See discussions and analyses for Question 51 and 52 above. Implementation of, federal and state regulations, TRPA Code (Chapter 67) and General Plan policies address protection of historic, cultural, archaeological and paleontological resources and provide processes to avoid or minimize impacts to these resources. Therefore any development associated with the Tahoe Valley Area Plan would not result in a physical change which would affect unique ethnic cultural values. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**55. Will the Project restrict historic or pre-historic religious or sacred uses within the potential impact area? (TRPA 20e)**

See discussion and analysis for Question 51 above, concluding a **less than significant** impact..

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

### 5.4.8 Geology and Soils (CEQA) and Land (TRPA)

This section presents the analyses for potential impacts to geology, soils and land. **Table 20** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 20**
**Geology and Soils and Land**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 56. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:<br>i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42?<br>ii) Strong seismic ground shaking?<br>iii) Seismic-related ground failure, including liquefaction?<br>iv) Landslides? (CEQA VIa) | | | **X** | |
| 57. Result in substantial soil erosion or the loss of topsoil? (CEQA VIb) | | | **X** | |
| 58. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? (CEQA VIc) | | | **X** | |

| | | | | |
|---|---|---|---|---|
| 59. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property? (CEQA VId) | | | X | |
| 60. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water? (CEQA VIe) | | | | X |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 61. Compaction or covering of the soil beyond the limits allowed in the land capability or Individual Parcel Evaluation System (IPES)? (TRPA 1a) | | | | X |
| 62. A change in the topography or ground surface relief features of site inconsistent with the natural surrounding conditions? (TRPA 1b) | | | | X |
| 63. Unstable soil conditions during or after completion of the proposal? (TRPA 1c) | | | | X |
| 64. Changes in the undisturbed soil or native geologic substructures or grading in excess of 5 feet? (TRPA 1d) | | | | X |
| 65. The continuation of or increase in wind or water erosion of soils, either on or off the site? (TRPA 1e) | | | | X |
| 66. Changes in deposition or erosion of beach sand, or changes in siltation, deposition or erosion, including natural littoral processes, which may modify the channel of a river or stream or the bed of a lake? (TRPA 1f) | | | | X |
| 67. Exposure of people or property to geologic hazards such as earthquakes, landslides, backshore erosion, avalanches, mud slides, ground failure, or similar hazards? (TRPA 1g) | | | | X |

**56. Would the Project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:**

**56.i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42? (CEQA VIa)**.

This potential effect is the same as those analyzed in the City General Plan EIR and therefore this analysis tiers from the General Plan EIR. (CSLT 2010, p. 4.8-28.)

The Tahoe Valley Area Plan is located in the Sierra Nevada geomorphic province, which is a block mountain range tilting west approximately 400 miles long and 50 to 80 miles wide. Its east face is a high, rugged multiple scarp, while the gentle western slope is overlapped by sedimentary rocks of the Great Valley geomorphic province. Volcanic sheets are found to the north, extending south from the Cascade Range. Elevations of the peaks within the province range from 1,000 to 14,495 feet (300 to 4,407 meters). The province is composed of Mesozoic granitic and ultramafic rocks, Paleozoic and Mesozoic strongly metamorphosed sedimentary and volcanic rocks, and Cenozoic volcanic rocks.

The Tahoe Valley Area Plan is located in UBC Seismic Hazard Zone 3. This designation indicates that earthquakes in the region have the potential to make standing difficult and to cause stucco and some masonry walls to fall. Structures in this zone must be designed to meet the regulations and standards associated with Zone 3 hazards set forth in the UBC and CBC. The Tahoe Valley plan area is located in a region of California characterized by historical seismic activity. However, the UBC recognizes no active seismic source in the Tahoe Valley plan area vicinity.

The Basin is located in a region of active and potentially active faults as evidenced by historical seismic data and certain topographical features. Specifically, recent fault activity has been identified along the major north-south fault zone that lies along the eastern edge of the Sierra Nevada. There are no active faults within the City; however, there are several known faults within 10 miles of the Tahoe Valley plan area including the active, class B, Genoa Fault.[6] **Table 21** identifies all known faults in the vicinity of the Tahoe Valley plan area.

**Table 21**
**Faults in the Vicinity of City of South Lake Tahoe**

| Name | Approximate Distance and Direction from Planning Area | Time of Most Recent Deformation | Active or Potentially Active? |
|---|---|---|---|
| West Tahoe-Dollar Point Fault Zone | 5 miles northwest | Quaternary (<2.0 Ma) | Potentially Active |
| Genoa Fault Zone | 8 miles east | Latest Quaternary (<15 ka) | Active |
| Tahoe Valley Fault Zone | <1 mile west, south and east | Tertiary or Earlier | |
| East Tahoe Fault Zone | 2 miles north | Quaternary (1.6 Ma) | Potentially Active |
| Tahoe-Sierra Frontal Fault Zone | 4 miles northwest | Tertiary of Earlier | |

*Source: USGS Quaternary Fault Database; CGS, 2023*

The risk of fault-related ground rupture is low within the Tahoe Valley plan area, but faults in the greater vicinity could create the potential for seismic-related ground shaking and ground failure, such as liquefaction. In addition, due to the high groundwater levels in the Tahoe Valley plan area, excavations and construction of below-ground structures have the potential to intercept or interfere with groundwater and may contribute to the potential for ground failure. However, all future development within the Tahoe Valley Area Plan will be designed and constructed according to UBC Seismic Zone 3 requirements, thereby minimizing risks associated with ground shaking. Future development in the area would also be subject to the restrictions contained in Section 33.3.6 of the TRPA Code or Ordinances related to excavation. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**56.ii) Strong seismic ground shaking?**

See discussion and analysis for Question 56.i above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**56.iii) Seismic-related ground failure, including liquefaction?**

See discussion and analysis for Question 56.i above.

The potential for seismic-related ground shaking in the Region could also contribute to public safety risks and property damage associated with ground failure including liquefaction, lateral spreading, collapse, and settlement. In addition, portions of the Tahoe Valley Area Plan have relatively high ground water levels that can contribute to the potential for ground failure, particularly during excavation and construction of below-grade structures (CSLT 2010, pp, 4.8-28 to 4.8-29). Hazards associated with seismic-related ground failure are also regulated by the CBC standards which are adopted in Chapter 6.15 of the City Code to ensure that structures area properly designed and constructed to withstand anticipated ground failure. Therefore, the risk of injury or property damage from strong ground shaking or resulting ground failure would not be substantially increased from implementation of the Tahoe Valley Area Plan and therefore **a less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**56.iv) Landslides?**

The varied topography within the Lake Tahoe Basin makes many areas susceptible to landslide hazards, however, the Tahoe Valley plan area is located in a relatively alluvial fan with slopes that range from 0 to 5 percent. It is not anticipated that the Tahoe Valley Area Plan will not expose people or structures to landslides.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**57. Would the Project result in substantial soil erosion or the loss of topsoil? (CEQA VIb)**

See discussions and analyses for Questions 62, 63 and 64 below.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**58. Would the Project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? (CEQA VIc)**

See discussions and analyses for Questions 56i through iv above and Question 59 below.

Environmental Analysis*: Less than Significant Impact*.

Required Mitigation: **None**.

**59. Would the Project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property? (CEQA VId)**

According to the Swelling Clays Map of The Coterminous United State, the Tahoe Basin falls within an area that is underlain with little to no clays with swelling potential (USGS 1989). However, soil units mapped within the Basin contain soils with low to high shrink/well potential (NRCS 2007).

The Tahoe Valley plan area is located within the Upper Truckee Hydrologically Related Area. Soil map units within the Tahoe Valley plan area are predominantly coarse-textured and are not expansive. Additionally, through adherence to existing regulation, projects implemented within the Tahoe Valley Area Plan would be required to undergo site-specific environmental review and, as appropriate, geotechnical analysis (TRPA Code Section 33.4 and City Code Title 6 and Title 7) to determine the design, grading, and construction practices required to avoid or reduce geologic hazards including those associated with unstable, expansive soils and slope failure. Absence of expansive soils and adherence to existing regulations would ensure impacts would be less than significant.

Environmental Analysis: *Less than Significant Impact.*

Required mitigation: **None**.

**60. Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater? (CEQA VIe)**

Development of septic systems or alternative wastewater disposal systems in areas of soils that are inadequate to support such a use results in a significant impact. However, the Porter-Cologne Water Quality Act requires all sewage and wastewater to be disposed of outside the Lake Tahoe Basin. Therefore, the use of septic tanks or alternative wastewater disposal are prohibited in the Lake Tahoe Basin.

Environmental Analysis: *No Impact.*

Required mitigation: **None.**

**61. Would the Project result in compaction or covering of the soil beyond the limits allowed in the land capability or Individual Parcel Evaluation System (IPES)? (TRPA 1a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and is consistent with the RPU EIS. As discussed in Impact 3.7-1 of the DEIS (TRPA 2012a, pp. 3.7-18 to 3.7-19), the analysis concluded that increased coverage allowances up to 70 percent in conforming area plans would have a less than significant effect provided that it's located on high capability lands and the increased coverage comes from the transfer and retirement of existing coverage.

The following maximum allowable coverage provisions (base allowable plus transferred) would apply in the Tahoe Valley Area Plan:

For new development and redevelopment of all use types in the Town Center Core, Town Center Gateway, Town Center Mixed-Use Corridor, Town Center Neighborhood Professional, and Town Center Health Care districts, the maximum coverage is 70 percent of the project area located in high capability lands. Under the proposed amendment, 23 parcels (11.5 acres) would be added to the Town Center boundary and therefore eligible for additional land coverage up to 70 percent with transfer. In addition, the adoption of TRPA Phase 2 Housing Amendments would increase land coverage limits for 100 percent deed restricted affordable housing projects within Town Centers and areas zoned for multi-family housing nearby to Town Centers. However, TRPA amendments that permit increased land coverage for deed restricted affordable housing also require that the housing developments connect to a public stormwater treatment system, or that the project stormwater treatment system be maintained and operated by a responsible public entity.

In the proposed Tahoe Valley Emerald Bay Connection Corridor Residential district, the maximum allowed coverage is unchanged and is based on either the Individual Parcel Evaluation System (IPES) for single-family dwellings, or Bailey land capability classification for multi-family dwellings.

The existing transfer provisions of the TRPA Code of Ordinances would apply to the Tahoe Valley Area Plan with one modification to incentivize the relocation of land coverage from SEZs and retirement of land coverage from non-sensitive lands. Pursuant to Section 30.3.3 of the TRPA Code of Ordinances, development proposing coverage in excess of the base allowable is required to transfer coverage up the maximum permitted as follows:

In the Town Center Gateway, Town Center Mixed-Use Corridor, Town Center Neighborhood Professional, Town Center Healthcare, and the Commercial Mixed-Use districts, coverage shall be transferred at a ratio of 1:1 from sensitive land up to the maximum land coverage of 70 percent. Pursuant to TRPA Code Section 30.4.2, coverage from non-sensitive land shall be transferred at a ratio of 1:1 up to 50 percent, then on an increasing sliding scale based on the total resulting coverage on the receiving parcel up to maximum land coverage of 70 percent, which is transferred at 2:1.

Coverage transferred to the Tahoe Valley plan area can earn bonus coverage from the City's coverage pool as follows: Coverage transferred from the TRPA designated Stream Restoration Plan Area can earn 1 square foot of bonus coverage for every 1 square foot of SEZ coverage transferred; coverage transferred from the Tahoe Valley Greenbelt project area may earn 1 square foot of bonus coverage for every 1 square foot of SEZ coverage transferred; and coverage transferred from the Upper Truckee River HRA may earn one-half square foot of bonus coverage for every 1 square foot of SEZ coverage transferred.

For two parcels within the Tahoe Valley Area Plan where Barton Hospital is currently located (El Dorado County APNs 023-081-03 and 023-081-09), coverage shall be transferred pursuant to following transfer provisions:

- Coverage transferred up to 70 percent shall be transferred pursuant to section 30.4.3 of the TRPA Code.
- Coverage greater than 70 percent shall be transferred at a ratio of 1:1 from sensitive lands and at a ratio of 2.5:1 from non-sensitive lands up the minimum amount needed.
- Coverage transferred shall be transferred from parcels that have not installed permanent BMPs. (TVAP, Exhibit C, p. C-18, Linear Public Facilities and Public Health and Safety Facilities.)

For the Barton Hospital parcels, coverage would be transferred pursuant to Table 30.4.4-1 of the TRPA Code using the existing sliding scale up to 70 percent, and between 70 percent and 90 percent coverage shall be transferred at a ratio of 2.5:1.

Implementation of the Tahoe Valley Area Plan could potentially result in an increase in coverage on vacant and under covered parcels containing high capability land as a result of constructing 373 residential units and up to 102,000 square feet of commercial floor area. The Tahoe Valley Area Plan would implement the existing land coverage standards of Chapter 30 of the TRPA Code of Ordinances which would allow development to exceed the base allowable coverage through transfer of coverage, and pursuant to Chapter 13 of the TRPA Code of Ordinances. Proposed coverage limits, when combined with transfer incentives can potentially result in coverage reduction on sensitive land and retirement of coverage on other high capability land as shown in **Table 22.**

**Table 22**
**Coverage Reduction as a Result of Updated Mapping, Proposed Coverage Standards, and Transfer Incentive**

| | 2015 Tahoe Valley Area Plan |
|---|---|
| Coverage Reduction from Transfers from Sensitive Lands | 43.5 |
| Coverage Reductions from Transfers from Non-Sensitive Lands | 72.4 |
| Coverage Retirement from Transfers | 28.9 |

*Source: TRPA, Aerial LiDAR 2010, TRPA GIS, 2014; adapted by City of South Lake Tahoe.*

Under the Tahoe Valley Area Plan, development would continue to occur on a project-by-project basis. Future development projects would be assessed on an individual basis and would be required to conform to the existing land coverage requirements under Chapters 30 and 53 of the TRPA Code of Ordinances and the proposed alternative land coverage management system of the Tahoe Valley Area Plan. Continuation of existing coverage policies in the Tahoe Valley Area Plan would focus on limiting coverage outside the plan area boundaries, by providing incentives for concentrating coverage on high capability lands in the town center and promoting the removal and transfer of coverage from SEZs and sensitive lands by allowing a maximum of 70 percent coverage. As depicted in **Table 23**, buildout of the 2015 Tahoe Valley Area Plan would result in an increase of 13.6 acres of additional base allowable coverage as a result of updated 2015 land capability mapping, and 43.5 acres of transferred coverage for a total net increase of 57.0 acres in coverage on vacant or under covered parcels containing high capability land in the Tahoe Valley plan area. To achieve this increased coverage, restoration and transfers of existing coverage would be required. Applying the existing transfer provisions, implementation of the Tahoe Valley Area Plan could result in the reduction of 43.5 acres of coverage in sensitive land, or a reduction and relocation of 72.4 acres of coverage and permanent retirement of 28.9 acres of coverage in non-sensitive land. Since the 2015 Area Plan adoption the construction of the Barton Center of Excellence resulted in the transfer of 49,669 square feet (1.14 acres) of SEZ coverage from the South Upper Truckee HRA to the project site and the permanent retirement of 30,663 (0.7 acres) of SEZ coverage. Further buildout of the Tahoe Valley Area Plan would result in the decrease of land coverage within the Upper Truckee HRA and sensitive land, while increasing coverage within high capability lands as development is further concentrated in the expanded town center to promote a compact land use pattern.

| Table 23<br>Estimated Land Coverage – 2015 Tahoe Valley Area Plan Buildout | |
|---|---|
| Existing Coverage | 127.1 |
| New Base Allowable Coverage[1] | 13.6 |
| Transferred of Coverage up to 50% | 15.9 |
| Transferred Coverage up to 70% | 25.0 |
| Transferred Coverage up to 90% | 2.6 |
| **Total Maximum Coverage (Base + Transferred)** | **57.0** |

*Source: TRPA, Aerial LiDAR 2010, TRPA GIS, 2014; adapted by City of South Lake Tahoe.*

*1. New base allowable coverage is based on individual parcels and does not include the US 50, SR 89 or City streets.*

Although the proposed Tahoe Valley Area Plan would allow new base coverage and relocate existing coverage to parcels in the Tahoe Valley plan area, all new impervious base coverage and transferred coverage would still fall within the limits established by the Bailey Land Capability Classification System. Although it is not possible to be certain where coverage transfers will come from (other than the Upper Truckee River HRA), it is feasible to assume that existing and proposed land coverage policies and regulations of the Tahoe Valley Area Plan, which established maximum allowable coverage, prohibits additional coverage in sensitive lands (with few exceptions allowed by TRPA Code), and establishes transfer ratios that incentivize coverage removal will result in either restoration of sensitive lands or the permanent retirement of coverage. Therefore, the Tahoe Valley Area Plan would result in additional coverage that would be limited such that the total coverage permitted by the Bailey system is not exceeded, and in many cases would result in a reduction of coverage. Thus, coverage impacts under the proposed Tahoe Valley Area Plan would be **less than significant**.

In addition to the above analysis concluding a less than significant impact, the Tahoe Valley Area Plan also adopts the following policies to ensure that land coverage limitations are not exceeded and incentives are provided for the relocation of coverage from sensitive lands:

> **Policy NCR-7.1 – Land Coverage** Provide redevelopment incentives in centers that promote reduction, relocation and transfer of land coverage to reduce onsite land coverage. The City will endeavor to reduce overall coverage in order to benefit the objectives of the Tahoe Valley Area Plan.
>
> **Policy NCR-7.2 – Land Coverage Transfer Incentives** To promote SEZ restoration in the Tahoe Valley plan area and the Upper Truckee Hydrologic watershed, all projects transferring and removing coverage from designated sending areas to offset existing excess coverage pursuant to Section 30.6 of the TRPA Code or to go up to the maximum coverage of 70 percent within land capability districts 4-7, inclusive, may be awarded coverage from the City's coverage pool, subject to availability. Bonus coverage from the City may be earned pursuant to the transfer ratios in the following table:

| Sending Area | Bonus Coverage Earned (per sq. ft.) |
|---|---|
| TRPA Designated Stream Restoration Plan Area | 1 |
| Tahoe Valley Greenbelt and Associated SEZs | 1 |
| Other SEZs in the Upper Truckee Watershed Hydrologically Related Area Located within the City Limits | 0.5 |

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**62. Will the Project result in a change in the topography or ground surface relief features of site inconsistent with the natural surrounding conditions? (TRPA 1b)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and is consistent with the RPU EIS. (TRPA 2012a, pp. 3.7-47 to 3.7-48.)

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to grading. Consistent with existing requirements, grading and construction activities associated with projects that could occur under the Tahoe Valley Area Plan with subsequent approval would be required to comply with the provisions of Chapter 33, "Grading and Construction," of the TRPA Code and Chapters 7.15 and 7.20 of the City Code. Chapter 33 includes specific provisions for timing of grading, winterization of construction sites, specifications for cut and fills areas, protection of vegetation during construction, and preparation of a Slope Stabilization Plan for projects at the request of TRPA.

Additionally, in accordance with Section 7.15.100 of the City Code, all projects are required to implement temporary best management practices (BMPs) in accordance with the *Handbook of Best Management Practices* and maintained throughout the construction period until winterization and installation of permanent BMPs once construction has been finalized.

Any subsequent projects allowed within the Tahoe Valley Area Plan would be subject to permitting by the City and/or TRPA. Consistent with existing requirements, permit applicants would be required to demonstrate that any proposed grading would occur consistent with TRPA Code and City Code provisions that are protective of topography and ground surface relief features and are intended to retain natural conditions. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact*.

Required mitigation: **None.**

**63. Will the Project result in unstable soil conditions during or after completion of the proposal? (TRPA 1c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and is consistent with the RPU EIS. (TRPA 2012a, pp. 3.7-47 to 3.7-48.)

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to BMPs for soil erosion. Consistent with existing requirements, soil disturbance associated with projects that could occur under the Tahoe Valley Area Plan with subsequent approval would be required to comply with

Chapters 33 and 60 through 68 of the TRPA Code and Chapter 7.20 of the City Code. See discussion under Question 62 above.

Any subsequent projects allowed within the Tahoe Valley Area Plan would be subject to permitting by the City and/or TRPA. Consistent with existing requirements, permit applicants would be required to demonstrate that any proposed soil disturbance would occur consistent with TRPA and City Code provisions related to BMPs. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact*.

Required mitigation: **None.**

**64. Will the Project result in changes in the undisturbed soil or native geologic substructures or grading in excess of 5 feet? (TRPA 1d)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and is consistent with the RPU EIS. (TRPA 2012a, pp. 3.7-47 to 3.7-53.)

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to grading, excavation, and new disturbance. Consistent with existing requirements, projects that could occur under the Tahoe Valley Area Plan with subsequent approval could result in new soil disturbance, changes to native geologic substructures, and grading in excess of 5 feet. However, all projects would be required to comply with the provisions of Chapter 30 of the TRPA Code and Chapter 7.20 of the City Code regarding permanent disturbance and Section 33.3.6 of the TRPA Code regarding excavation depths that protect subsurface groundwater. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required mitigation: **None**.

**65. Will the Project result in the continuation of or increase in wind or water erosion of soils, either on or off the site? (TRPA 1e)**

See discussion and analysis for Question 62 above, concluding a **less than significant** impact..

Environmental Analysis: *Less than Significant Impact.*

Required mitigation: **None**.

**66. Will the Project result in changes in deposition or erosion of beach sand, or changes in siltation, deposition or erosion, including natural littoral processes, which may modify the channel of a river or stream or the bed of a lake? (TRPA 1f)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and is consistent with the RPU EIS. (TRPA 2012a, pp. 3.7-47 to 3.7-53.)

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to the deposition of beach sand, or changes in siltation, deposition, or erosion, including natural littoral processes, and the Tahoe Valley Area Plan does not contain any lakes, streams or rivers. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required mitigation: **None.**

**67. Will the Project result in exposure of people or property to geologic hazards such as earthquakes, landslides, backshore erosion, avalanches, mudslides, ground failure, or similar hazards? (TRPA 1g)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore the analysis is tiered from and is consistent with the RPU EIS. (TRPA 2012a, pp. 3.7-47 to 3.7-53.) See also, discussion and analyses for Questions 56i through 56iv above.

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to geologic hazards. Chapter 35, Natural Hazard Standards, of the TRPA Code includes provisions addressing avalanche, floodplains, and wildfire and Chapter 6.15 of the City Code which addresses CBC and IBC building standards, which includes protections for persons and property from seismic and geologic hazards. Consistent with existing conditions, any subsequent project allowed within the Tahoe Valley Area Plan would be subject to project-level permitting and environmental review by the City and/or TRPA. Such projects would be required to meet all applicable building codes and standards and would be required to undergo site-specific geotechnical analysis as specified by Section 33.4 of the TRPA Code and Title 6 and Title 7 of the City Code. Therefore, the Tahoe Valley Area Plan would not expose people or property to geologic hazards. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required mitigation: **None.**

### 5.4.9 Greenhouse Gas Emissions

This section presents the analyses for potential impacts to greenhouse gas (GHG) emissions. **Table 24** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 24**
**Greenhouse Gas Emissions**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 68. Greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? (CEQA VIIa) | | | **X** | |
| 69. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases? (CEQA VIIb) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| Same as Question 27: Will the Project significantly alter climate, air movement, moisture, or temperature? (TRPA 2d) | **X, LTS** | | | |

Certain gases in the earth's atmosphere, classified as greenhouse gases (GHGs), play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected toward space. This absorbed radiation is then emitted from the earth a low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. The earth has a much lower temperature than the sun; therefore, the earth emits lower frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead trapped, resulting in a warming atmosphere. The phenomenon, knows as the greenhouse effect, is responsible for maintaining a habitable climate on earth. Prominent GHGs contributing to the greenhouse effect are carbon dioxide ($CO_2$), methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. Human-caused emissions of GHGs in excess of natural ambient concentrations are believed to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the earth's climate, known as global climate change or global warming. It is "extremely likely" that more than half of the observed increase in global average surface temperature from 1951 to 2010 was caused by the anthropogenic increase in GHG concentrations and other anthropogenic forcing (IPCC 2014:3, 5).

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants, which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of any particular GHG molecule is dependent on multiple variables and cannot be pinpointed, it is understood that more $CO_2$ is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, and other forms of sequestration. Of the total annual human-caused $CO_2$ emissions, approximately 55 percent is sequestered through ocean and land uptakes every year, averaged over the last 50 years, whereas the remaining 45 percent of human-caused $CO_2$ emissions remains stored in the atmosphere (IPCC 2013:467). The quantity of GHGs that ultimately result in climate change is not precisely known; but is enormous; no single project alone would measurably contribute to an incremental change in the global average temperature, or to global, local, or microclimates. From the standpoint of CEQA, GHG impacts to global climate change are inherently cumulative.

GHG emissions are attributable in large part to human activities associated with the transportation, industrial/manufacturing, utility, residential, commercial, and agricultural emissions sectors (CARB 2017a).

In California, the transportation sector is the largest emitter of GHGs, followed by electricity generation (CARB 2017a). Emissions of $CO_2$ are byproducts of fossil fuel combustion. Methane, a highly potent GHG, primarily results from off gassing (the release of chemicals from nonmetallic substances under ambient or greater pressure conditions) and is largely associated with agricultural practices and landfills. Nitrous oxide is also largely attributable to agricultural practices and soil management. $CO_2$ sinks, or reservoirs, include vegetation and the ocean, which absorb $CO_2$ through sequestration and dissolution ($CO_2$ dissolving into the water), respectively, two of the most common processes for removing CO2 from the atmosphere.

**Assembly Bill 32, the California Global Warming Solutions Act of 2006**

In September 2006, the California Global Warming Solutions Act of 2006, Assembly Bill (AB) 32, was signed into law. AB 32 establishes regulatory, reporting, and market mechanisms to achieve quantifiable reductions in GHG emissions and a cap on statewide GHG emissions. AB 32 requires that statewide GHG emissions be reduced to 1990 levels by 2020. AB 32 also requires that (a) the statewide greenhouse gas emissions limit remain in effect unless otherwise amended or repealed, (b) the statewide greenhouse gas emissions limit continue in existence and be used to maintain and continue reductions in emissions of greenhouse gases beyond 2020, and (c) [CARB] shall make recommendations to the Governor and the Legislature on how to continue reductions of greenhouse gas emissions beyond 2020 [California Health and Safety Code, Division 25.5, Part 3, Section 38551]. For the purposes of AB 32 and other legislation in California, GHGs are expressed in carbon-dioxide-equivalent ($CO_2e$). $CO_2e$ is a measurement used to account for the fact that different GHGs have different potential to retain infrared radiation in the atmosphere and contribute to the greenhouse effect. This potential, known as the global warming potential of a GHG, is dependent on the lifetime, or persistence, of the gas molecule in the atmosphere.

**Executive Order B-30-15**

On April 20, 2015, EO B-30-15 established a California GHG reduction target of 40 percent below 1990 levels by 2030. The EO aligns California's GHG reduction targets with those of leading international governments such as the 28-nation European Union, which adopted the same target in October 2014. California is on track to meet or exceed the target of reducing GHG emissions to 1990 levels by 2020, as established in the California Global Warming Solutions Act of 2006 (Assembly Bill 32, discussed above). California's new emission reduction target of 40 percent below 1990 levels by 2030 sets the next interim step in the State's continuing efforts to pursue the long-term target expressed under Executive Order S-3-05 to reach the ultimate goal of reducing emissions 80 percent below 1990 levels by 2050. This is in line

with the scientifically established levels needed in the U.S. to limit global warming below 2 degrees Celsius, the warming threshold at which major climate disruptions are projected, such as super droughts and rising sea levels.

**Senate Bill 32 and Assembly Bill 197 of 2016**

In August 2016, SB 32 and AB 197 were signed into law, which serve to extend California's GHG reduction programs beyond 2020. SB 32 amended the Health and Safety Code to include Section 38566, which contains language to authorize CARB to achieve a statewide GHG emission reduction of at least 40 percent below 1990 levels by no later than December 31, 2030. SB 32 codified the targets established by EO B-30-15 for 2030, which set the next interim step in the State's continuing efforts to pursue the long-term target expressed in EOs S-3-05 and B-30-15 of 80 percent below 1990 emissions levels by 2050.

**Climate Change Scoping Plan and Updates**

In December 2008, CARB adopted its first version of its Climate Change Scoping Plan, which contained the main strategies California will implement to achieve the mandate of AB 32 (2006) to reduce statewide GHG emissions to 1990 levels by 2020. In May 2014, CARB released and subsequently adopted the First Update to the Climate Change Scoping Plan to identify the next steps in reaching the goals of AB 32 (2006) and evaluate the progress made between 2000 and 2012 (CARB 2014). After releasing multiple versions of proposed updates in 2017, CARB adopted the next version titled California's 2017 Climate Change Scoping Plan (2017 Scoping Plan) in December of that same year (CARB 2017b). The 2017 Scoping Plan indicates that California is on track to achieve the 2020 statewide GHG target mandated by AB 32 of 2006 (CARB 2017b:9). It also lays out the framework for achieving the mandate of SB 32 of 2016 to reduce statewide GHG emissions to at least 40 percent below 1990 levels by the end of 2030 (CARB 2017b). The 2017 Scoping Plan identifies the GHG reductions needed by each emissions sector.

The 2017 Scoping Plan also identifies how GHGs associated with proposed projects could be evaluated under CEQA (CARB 2017b:101-102). Specifically, it states that achieving "no net increase" in GHG emissions is an appropriate overall objective of projects evaluated under CEQA if conformity with an applicable local GHG reduction plan cannot be demonstrated. CARB recognizes that it may not be appropriate or feasible for every development project to mitigate its GHG emissions to zero and that an increase in GHG emissions because of a project may not necessarily imply a substantial contribution to the cumulatively significant environmental impact of climate change. The latest 2022 Scoping Plan Update aims to assess progress towards achieving the Senate Bill 32 2030 target and lay out a path to achieve carbon neutrality by no later than 2045.

**Senate Bill X1-2, the California Renewable Energy Resources Act of 2011 and Senate Bill 350, the Clean Energy and Pollution Reduction Act of 2015**

SB X1-2 of 2011 requires all California utilities to generate 33 percent of their electricity from renewables by 2020. SB X1-2 sets a three-stage compliance period requiring all California utilities, including independently owned utilities, energy service providers, and community choice aggregators, to generate 20 percent of their electricity from renewables by December 31, 2013; 25 percent by December 31, 2016; and 33 percent by December 31, 2020. SB X1-2 also requires the renewable electricity standard to be met increasingly with renewable energy that is supplied to the California grid from sources within, or directly proximate to, California. SB X1-2 mandates that renewables from these sources make up at least 50 percent of the total renewable energy for the 2011-2013 compliance period, at least 65 percent for the 2014–2016 compliance period, and at least 75 percent for 2016 and beyond. In October 2015, SB 350 was signed into law, which requires retail sellers and publicly owned utilities to procure 50 percent of their electricity from renewable resources by 2030.

**El Dorado County Air Quality Management District**

The El Dorado County Air Quality Management District (EDCAQMD) has not adopted specific thresholds of significance for analyzing GHG emissions under CEQA. At present, the Sacramento Metropolitan Air Quality Management District (SMAQMD) along with a committee of EDCAQMD and other regional air districts (i.e., Placer County Air Pollution Control District [PCAPCD], Feather River Air Quality Management District, and Yolo-Solano Air Quality Management District) use guidance from the California Air Pollution Control Officers Association to develop draft threshold concepts for evaluating project-level GHG emissions. The goal of the thresholds is to capture at least 90 percent of GHG emissions from new stationary sources and land development projects. The nearby PCAPCD has developed thresholds of significance for analyzing climate change impacts in consideration of this strategy. PCACPD has adopted a 10,000 and 1,100 metric tons of carbon dioxide equivalent ($MTCO_2e$) bright-line thresholds of significance for analyzing construction and operational emissions, respectively. In lieu of adopted thresholds of significance governed by EDCAQMD and Tahoe Regional Planning Agency (TRPA), these thresholds of significance were applied to the project.

**City of South Lake Tahoe Climate Action Plan**

In 2017, the City passed Resolution 2017-26, Establishing Renewable Energy and Carbon Emissions Reduction Goals. These goals include achieving 50 percent of municipal energy sources from renewable energy by 2025, 100 percent of municipal energy sources from renewable energy by 2032, and 100 percent of community energy sources from renewable electricity by 2032. The resolution additionally outlines the emissions reduction targets of a 50 percent reduction in community-wide emissions by 2030 and an 80 percent reduction in community-wide emissions by 2040. After establishing these reduction targets, the City completed a community-wide GHG emissions inventory to identify the emissions-generating sources in the community. This inventory was used as the foundation for developing the City's first Climate Action Plan, and City Council adopted it on October 20, 2020. It serves as a long-term plan to reduce GHG emissions from community activities and prepare for the impacts of climate change.

**68. Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? (CEQA VIIa)**

This potential effect is the same as those analyzed in the City General Plan Update EIR. (Cite 4.5-47 to 4.5-56.) Also see discussion and analysis for Question 27 above.

Implementation of the Tahoe Valley Area Plan amendment would result in some level of development and population growth anticipated during the plan horizon. In addition, the amendments would permit restaurants to add up to 20 seats of outdoor dining with no requirement for obtaining additional CFA. This amendment is considered to have a less than significant impact on greenhouse gas emissions given STPUD and TRPA determinations that this level of restaurant expansion would not require a change to sewer allocations or require new CFA for the business. Although many of the sustainability- and conservation-oriented land use and transportation policies of the Regional Plan and General Plan would reduce VMT, increase opportunities for transit and non-motor vehicle travel, and allow or encourage redevelopment that would improve energy efficiency, the combined influence of development and population growth occurring during the planning horizon of the City General Plan and the TRPA Regional Plan would result in an increase in overall greenhouse gas (GHG) emissions that would make a cumulative contribution to global climate change.

Increases of GHG emissions attributable to the General Plan and the Tahoe Valley Area Plan amendment would consist primarily of $CO_2$. To a lesser extent, emissions of $CH_4$ and $N_2O$ would also contribute to overall increases in GHG emissions. Mobile-source emissions account for a majority of the increase in GHG emissions, representing roughly 85 percent of the total GHG emissions increase. To a lesser extent,

electricity and natural gas consumption and use of wood-burning hearth devices also contribute to increased GHG emissions, accounting for a majority of the remaining GHG emissions. While substantial increases in total GHG emissions are anticipated, the General Plan would have substantially reduced GHG emissions per new service population (i.e., total number of new residents and employees in the Planning Area) as compared to development under the existing General Plan and 1987 TRPA Regional Plan (13.54 versus 23.57 MTCO2e per year) (CSLT 2010, pp. 4.85-47 through 4.5-56).

An increase in greenhouse gas emissions would be considered significant if the project would obstruct implementation of any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions. This standard of significance approach for analysis of climate change impacts is generally supported by the California Air Resources Control Board (Preliminary Draft Staff Proposal - Recommended Approaches for Setting Interim Significance Thresholds for Greenhouse Gases under the California Environmental Quality Act, October 2008). As previously discussed, AB 32 requires total statewide GHG emissions to be reduced to 1990 emissions level by year 2020, which represents an approximate 15 percent reduction, in comparison to current GHG emissions.

As discussed in Question 27 above, TRPA is requiring each local jurisdiction to develop a GHG reduction strategy, using the Lake Tahoe Sustainability Action Plan as a guide in order to attain a 15 percent reduction below the existing emissions inventory for Area Plans. As shown in **Table 16** above in the air quality analysis, accounting for the GHG emissions reduction associated with the removal of existing lodging units for operation would result in a 71 percent reduction under the Tahoe Valley Area Plan. Therefore, anticipated buildout of the Tahoe Valley Area Plan, as amended would offset the contribution of GHG emissions greater than 15 percent.

In addition, the proposed Area Plan would be considered to have a significant impact from global climate change if it would result in the exposure of residents to hazards associated with climate change.

The General Plan Update contains numerous policies that include specific, enforceable requirements and/or restrictions and corresponding performance standards that would apply in the Tahoe Valley Area Plan and would reduce VMT and air quality emissions, including construction-related and operational- related GHG emissions. These policies include actions that would promote the use of alternative fuels, alternative means of transportation, energy conservation, integrating land use and transportation strategies to reduce travel demand, and promoting sustainable development (CSLT 2010, pp. 4.5-49 through.4.5- 55).

The following mitigation measure from the General Plan EIR are also adopted as goals and policies in the General Plan to reduce GHG emission:

Goal NCR-5: To incorporate air quality improvements and emission reductions directly with land use and transportation planning.

- Policy NCR-5.12: Support local, TRPA, and statewide efforts to reduce emission of greenhouse gases linked to climate change.
- Policy NCR-5.13: Develop a citywide greenhouse gas emission inventory and establish regular time frames for updating the inventory.
- Policy NCR-5.14: Establish a greenhouse gas emission reduction target consistent with AB 32 and SB 375 reduction efforts.
- Policy NCR-5.15Analyze and mitigate significant increases in carbon emissions during project review pursuant to the California Environmental Quality Act.

Goal NCR-6: To encourage energy conservation in new and existing development in order to reduce greenhouse gas emissions, limit their effect on global warming, and to create a more sustainable environment.

- Policy NCR-6.1: Shift away from reliance on non-renewable sources, should emerging research show net environmental benefits in the use of biofuels.
- Policy NCR-6.2: Develop a comprehensive strategy to reduce GHG emissions and climate impacts.
- Policy NCR-6.20: Develop strategies to protect the City from the impacts of climate change, such as reduced snowpack, lower lake levels, and natural disasters.

In addition to the measures described above, the Area Plan incorporates General Plan Policy NCR-5.10 (CSLT 2011, p. NCR-9) in Policy NCR-8.1 of the Area Plan to address short-term construction emissions (Tahoe Valley Area Plan, p. 71), which include incorporating measures to reduce construction-related GHG emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District;
- Prohibit open burning of debris from site clearing unless involved with fuels reduction project;
- Restriction of idling of construction equipment and vehicles;
- Apply water to control dust as needed to prevent dust impacts offsite; and
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.

In May 2008, the California Office of the Attorney General issued a paper for use by local agencies in carrying out their duties under CEQA as they relate to global warming, which include the measures adopted in the General Plan Update. In addition, these measures are consistent with the recently adopted Climate Change Scoping Plan associated with emission reduction measures for energy efficiency, regional transportation-related greenhouse gas targets, and green building strategy (CARB, 2008). It i also important to note that the City has adopted a Climate Action Plan, which includes many of the same measures adopted in the General Plan Update. The City's General Plan Update policies and the Climate Action Plan are consistent with efforts by the State of California. Reductions in VMT attributable to the proposed policies and action items would account for a reduction in mobile-source GHG emissions (higher density standards in town centers and multi-family zones). Additional reductions would also occur associated with implementation of proposed policies that would decrease emissions from area sources, such as measures that would promote green building, energy conservation, and sustainable development.

Moreover, the Tahoe Valley Area Plan Amendments would increase the density to 65 units per acre to incentivize residential development within town centers and multi-family zones, closer to employment and service centers, with better connections to transit, sidewalks, and bicycle trails. On average, there is 11 percent less MVT per capita in these town center and multi-family areas; thus, reducing VMTs and the associated GHG emissions compared to traditional residential districts farther from town centers.

Implementation of relevant policies from the General Plan, the City's Climate Action Plan (which calls for

development of a GHG inventory and reduction target), and associated mitigation measure MM 4.5.6 are anticipated to mitigate GHG emissions in a manner consistent with current state efforts to reduce GHG emissions under AB 32 and SB 375. Specifically implementation of IMP-8.6 (Greenhouse Gas Emission Reduction Strategy in the years 2013-2015) in combination with implementation of Mitigation Measure MM 4.5.6 that would require coordination with future TRPA GHG reduction efforts, and the establishment of an emission reduction target consistent with AB 32 and SB 375 reduction efforts, would ensure that City GHG emissions are mitigated. Thus, this impact is considered less than significant (CSLT 2011a, p. 4.0-4 through 4.0-5). Because the Tahoe Valley Area Plan is consistent with and implements the General Plan and is consistent with the General Plan EIR, development and population growth anticipated during the Tahoe Valley Area Plan horizon is not expected to make a considerable contribution to global climate change. Thus this impact is considered **less than significant**.

Environmental Analysis*: Less than Significant Impact.*

Required Mitigation: **None.**

**69. Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases? (CEQA VIIb)**

The Tahoe Valley Area Plan Amendments is consistent with applicable plan, policies and regulations adopted in the TRPA Regional Plan, Sustainable Communities Strategy, and the City General Plan to reduce emissions of greenhouse gases. As discussed in Question 68 above, the City and/or TRPA would continue to implement existing practices described in Mitigation Measure 3.5-1 of the RPU EIS, General Plan Policy NCR-5.10, and Tahoe Valley Area Plan Policy NCR-8.1 which includes developing GHG reduction measures on a project-specific basis within the Tahoe Valley Area Plan. Moreover, the Tahoe Valley Area Plan would implement policies of the TRPA Regional Plan and the City General Plan which— among others—calls for concentrating development and redevelopment in town centers at higher densities (e.g., the TC-C, TC-G, TC-MUC, TC-G, TC-NP, and TC-HC zoning districts) in a pedestrian- and transit-oriented environment that focuses on enhancing non-auto modes such as walking, biking, and transit as a strategy to reduce greenhouse gas emissions. Thus, this would be a **less than significant** impact.

Environmental Analysis*: Less than Significant Impact.*

Required Mitigation: **None.**

**Refer to Question 27. Will the Project significantly alter climate, air movement, moisture, or temperature? (TRPA 2d)**

See discussion and analysis for Question 27 above, concluding a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

### 5.4.10 Hazards and Hazardous Materials (CEQA) and Risk of Upset and Human Health (TRPA)

This section presents the analyses for potential impacts to hazards and hazardous materials and risk of upset and human health. **Table 25** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 25**
**Hazards and Hazardous Materials and Risk of Upset and Human Health**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 70. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? (CEQA VIIIa) | | | X | |
| 71. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? (CEQA VIIIb) | | | X | |
| 72. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? (CEQA VIIIc) | | X | | |
| 73. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? (CEQA VIIId) | | X | | |

| | | | | |
|---|---|---|---|---|
| 74. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area? (CEQA VIIIe) | | | | **X** |
| 75. For a Project within the vicinity of a private airstrip, would the Project result in a safety hazard for people residing or working in the project area? (CEQA VIIIf) | | | | **X** |
| 76. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? (CEQA VIIIg) | | **X** | | |
| 77. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands? (CEQA VIIIh) | | **X** | | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 78. Involve a risk of an explosion or the release of hazardous substances including, but not limited to, oil, pesticides, chemicals, or radiation in the event of an accident or upset conditions? (TRPA 10a) | | **X** | | |
| 79. Involve possible interference with an emergency evacuation plan? (TRPA 10b) | | **X** | | |
| 80. Creation of any health hazard or potential health hazard (excluding mental health)? (TRPA 17a) | | **X** | | |
| 81. Exposure of people to potential health hazards? (TRPA 17b) | | **X** | | |

**70. Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? (CEQA VIIIa)**

This potential effect is the same as those analyzed in the City General Plan Update, and therefore this analysis tiers from the General Plan EIR. (CSLT 2010, pp. 4.3-36 to 4.3-38.)

The primary source for the impact would occur as a direct result of demolition, update, or construction of land uses within the Tahoe Valley plan area. The Tahoe Valley Area Plan Amendments is expected to result in some increase in land uses within the project area. Increased density, development of new land uses, and updates of previously constructed land uses may result in the need for transportation, storage, use, and disposal of normal hazardous materials used during construction. However all development would be required to adhere to federal, state, and local regulations regarding the handling, transportation, and disposal of hazardous materials.

The Tahoe Valley Area Plan may result in 373 new dwelling units and 77,000 to 102,000 square feet of commercial floor area (CFA). Construction of new homes and commercial improvements would require the routine transportation and use of hazardous materials including paints, adhesives, solvents, fuel, lubricants, and other commonly used materials. The transportation of hazardous materials on area roadways is regulated by the California Highway Patrol (CHP), U.S. Department of Transportation (Hazardous Materials Transportation Act), and Caltrans. Use of these materials is regulated by the DTSC (22 Cal. Code Regs §§66001, et seq.). The use, storage, and transport of hazardous materials by developers, contractors, business owners, and others are required to be in compliance with local, state, and federal regulations during project construction and operation. Facilities that use hazardous materials are required to obtain permits and comply with appropriate regulatory agency standards and regulations designed to avoid hazardous material releases. All existing and future development in the Tahoe Valley plan area would be required to comply with federal, state, and local regulations regarding the handling and transportation, disposal, and cleanup of hazardous materials.

The El Dorado County Department of Environmental Management is responsible for consolidating, coordinating and making consistent the administration requirements, permits, inspection, and enforcement activities of state standards regarding the transportation, use, and disposal of hazardous materials in the County and the Tahoe Valley plan area. The City has incorporated specific, enforceable requirements and/or restrictions and corresponding performance standards that address hazardous materials. General Plan Policy HS-6.4 would require private waste collectors to provide household hazardous waste collection programs and Policy HS-6.5 requires private waste collectors to transport hazardous waste during non-peak hours (CSLT 2011, p. HS-7).

All existing and new development in the Tahoe Valley plan area would be required to comply with federal, state, and local regulations regarding the handling and transportation, disposal, and cleanup of hazardous materials. Therefore, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**71. Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? (CEQA VIIIb)**

This potential effect is the same as those analyzed in the City General Plan Update, and therefore this analysis tiers from the General Plan EIR. (CSLT 2010, pp. 4.3-38 to 4.3-39.)

The General Plan EIR (2010) identified that development and redevelopment within the City limits could result in the release of hazardous materials into the environment under reasonably foreseeable upset or accident conditions. Exposure to such materials could occur either through routine use or due to accidental release and concluded that this was a potentially significant impact requiring mitigation (CSLT 2010, pp. 4.3-38-39). The General Plan EIR identified two mitigation measures that were incorporated into the final adopted General Plan (2011). Policy HS-6.1 requires existing and new commercial and industrial uses involving the use, handling, transport, or disposal of hazardous materials within the city to disclose their activities in accordance with El Dorado County guidelines and the requirements of state law. Policy HS-6.2 requires that all construction activity cease if contamination is discovered on construction projects. Remediation is required to the satisfaction of the appropriate responsible agency (i.e., El Dorado County Department of Environmental Management, Lahontan Regional Water Quality Control Board, Department of Toxic Substances Control, or the City of South Lake Tahoe) (CSLT 2011, p. HS-7).

All existing and new development in the Tahoe Valley plan area is required to and will implement and is consistent with regional, federal, state, and local regulations regarding the release of hazardous materials into the environment due to reasonably foreseeable upset and accident conditions Therefore, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**72. Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school? (CEQA VIIIc)**

This potential effect is the same as those analyzed in the City General Plan Update, and therefore this analysis tiers from the General Plan EIR. (CSLT 2010, pp. 4.3-40 to 4.3-41.)

Locations where existing or past hazardous material leaks may exist in the Tahoe Valley plan area are shown in **Table 26** below as well as other undiscovered or unregistered locations. Several other sites were indicated in the database search but these other sites have been remediated and closed by the Regional Water Quality Control Board.

**Table 26**
**Active Hazardous Materials Release Sites in the Tahoe Valley Area Plan**

| Site/Facility Name | Regulatory Database | Status | Address Description |
|---|---|---|---|
| Former Swiss Mart Gas Station | LUST | Decommission wells associated with the subject site. Open – Eligible for Closure | 913 Emerald Bay Road |
| Tahoe Suds Laundromat (previously Lake Tahoe Laundry Works) | SLIC | PCE release to groundwater. Open – Remediation | 1024 Emerald Bay Road |
| Former Big O Tires | SLIC | VOC and PCE released to groundwater. Open | 1961 Lake Tahoe Boulevard |
| Former Norma's Cleaners | SLIC | PCE released to groundwater. Open -Site Assessment | 961 Emerald Bay Road |

*Source: LRWQCB, online Geotracker Database, May 23, 2023, http://geotracker.waterboards.ca.gov; Environmental Protection Agency, Enviromapper, May 12, 2008, http://www.epa.gov/enviro/html/em/*

*Note: Portions of Lake Tahoe Boulevard and Emerald Bay Road coincide with US 50 and SR 89, respectively. Also, while the EPA Enviromapper is cited, no active toxic releases were indicated in the EPA's databases.*

**Figure 8** displays all of the known hazardous material contaminating activities/sites within the Tahoe Valley plan area.

Due to the fact that much of the Tahoe Valley plan area was developed prior to the ban on polychlorinated biphenyls (PCBs), it is conceivable that electrical transformers and industrial products currently located within the area could contain PCBs and other heavy metals. Persistent residential chemicals may also be present in the form of pesticides, herbicides, and fertilizers used in typical landscaping efforts by property owners in the past. Accidental release of these materials could occur as a result of demolition, development, or update of land uses within the Tahoe Valley plan area, further exposing people to toxic emissions. Sensitive receptors such as children, the elderly, or hospital patients can be significantly affected by these emissions. As schools are located in close proximity and both a hospital and housing typically utilized by senior citizens are located within the Tahoe Valley plan area, this is a primary concern.

As discussed under Question 71 above, the transportation of hazardous materials is regulated by the CHP, U.S. Department of Transportation, and Caltrans. Use, storage, and disposal of hazardous materials is regulated by DTSC as well as local, state, and federal regulations. This is true for both demolition/construction and operation of projects. Facilities that use hazardous materials are required to obtain permits and comply with appropriate regulatory agency standards designed to avoid hazardous waste releases.

In regard to schools, there are four public schools located within two miles of the Tahoe Valley plan area: South Tahoe High School (which includes the Mount Tallac Continuation School and Transitional Learning Center on the campus), Tahoe Valley Elementary School, South Tahoe Middle School, and Sierra House Elementary School. All four schools are located outside the Tahoe Valley plan area, with South Tahoe High School and Tahoe Valley Elementary School being located closest to the Tahoe Valley plan area – approximately 0.16 miles and 0.13 miles, respectively.

In order to site and construct a state-funded school, a public school district must complete an extensive and independent statutory review process in accordance with the siting requirements of the California Department of Education. In addition to CEQA review and in order to ensure that each new school site is safe from toxic hazards, new school sites may be subject to review from the following agencies: DTSC, the State Allocation Board, which administers and allocates funding requests, and the Division of the State Architect, which reviews the design, plans, and construction of public-funded schools. These review processes are most typically done on a site-specific basis. The selection of new public school sites must comply with the California Education Code (including Section 17521, requiring the governing board of the school district to adopt a resolution in connection with consideration of a proposal for occupancy of a building to be constructed on its property, and to conduct a public meeting), and the California Code of Regulations (CCR), Title 5, Sections 14001 through 14012, which outlines the powers and duties and establishes standards with which the California Department of Education and all public school districts must comply in the selection of new school sites. Furthermore, no new schools are planned and the number of students located within the City has declined. Therefore, impacts resulting from the construction of new schools are expected to be less than significant.

CITY OF SOUTH LAKE TAHOE

**Figure 8**
Active Hazardous Materials Sites
March 2024

The proposed Tahoe Valley Area Plan would result in an additional 373 dwelling units and 77,000 to 102,000 square feet CFA. Construction of these additional uses is not expected to require the use of any unusual amounts of construction-based hazardous materials, such as gasoline fuels, demolition materials, asphalt, lubricants, toxic solvents, and other related materials. In addition, certain commercial uses store, use, and routinely transport hazardous material to and from their facilities which could pose a potential hazard to the environment and the public, such as the use of above and below ground storage tanks. All existing and future development in the Tahoe Valley Area Plan would be required to comply with federal, state, and local regulations regarding the handling, transportation, disposal, and cleanup of hazardous materials. However, subsequent development could expose construction workers and future residents to hazards associated with previous land uses and future land uses. This impact is **potentially significant**.

Mitigation Measures

The following mitigation measures would apply to the proposed Tahoe Valley Area Plan:

**Mitigation Measure HAZ-1** Require all subsequent projects that would be located on sites suspected or known to contain hazardous materials and/or are identified in a hazardous material/waste search to be reviewed, tested, and remediated for potential hazardous materials in accordance with all local, state, and federal regulations. The City and TRPA shall require written confirmation from applicable local, regional, state, and federal agencies that known contaminated sites have been deemed remediated to a level appropriate for land uses proposed prior to the City and TRPA approving site development or provide an approved remediation plan that demonstrates how contamination will be remediated prior to site occupancy. This documentation will specify the extent of development allowed on the remediated site as well as any special conditions and/or restrictions on future land uses.

**Mitigation Measure HAZ-2** Subsequent projects that meet the definition of a "Possible Contaminating Activity" under Section 60.3.5 of the TRPA Code of Ordinances shall demonstrate compliance with the findings and requirements under Section 60.3.3.D of the TRPA Code of Ordinances and demonstrate that adequate protections are in place to avoid soil and groundwater contamination and protect public health of area residents. This demonstration shall be required prior to subsequent project approvals and implemented as part of project design.

Implementation of the above mitigation measures would ensure that site-specific hazardous material contamination and potential exposure from previous, current, or future land uses are addressed prior to development in order to protect public health. Thus, implementation of these mitigation measures would mitigate this impact to **less than significant**.

Environmental Analysis: *Less than Significant Impact after Mitigation.*

Required Mitigation: **MM HAZ-1 and MM HAZ-2**.

**73. Would the Project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? (CEQA VIIId)**

This section addresses potentially adverse environmental, health, and safety hazards in the Tahoe Valley Area Plan associated with hazardous or regulated material/waste. The State of California Hazardous Waste and Substances Site List (also known as the "Cortese List") is a planning document used by state and local agencies and developers to comply with California Environmental Quality Act (CEQA) requirements for providing information about the location of hazardous materials sites. Government Code Section 65962.5 requires the California Environmental Protection Agency (Cal-EPA) to annually update the Cortese List.

The Department of Toxic Substances Control (DTSC) is responsible for providing a portion of the information that comprises the Cortese List. Other state and local government agencies are required to provide additional hazardous material release information that is part of the complete list. The CAL-SITES Abandoned Sites Program Information System (ASPIS) Database is compiled by the California Environmental Protection Agency to identify and track potential hazardous waste sites. Searches of the above resources and records identified 30 hazardous material sites within the Tahoe Valley Area Plan known to handle and store hazardous materials and/or sites associated with a hazardous material-related release or occurrence. The terms "release" or "occurrence" include any means by which a substance could harm the environment by spilling, leaking, discharging, dumping, injecting, or escaping.

Material hazards indicated in the vicinity of the Tahoe Valley Area Plan primarily concern gasoline, diesel fuel oil, methyl tertiary-butyl ether (MBTE), and perchloroethylene (PCE). Both gasoline and diesel fuels by themselves can be inhalant and ingestion hazards to people and damaging to both animals and plants. MBTE was a common gasoline additive, commonly added to fuel as an oxygenate. MBTE was developed as a replacement for lead additives used prior to 1979. MBTE has been shown to be a carcinogen when inhaled, but limited data is available concerning MBTE's cancer-causing potential in groundwater. Regardless, it is considered hazardous and several groundwater wells in the City have shown MBTE contamination. PCE is a common chlorofluorocarbon (CFC) used most often in dry cleaning operations. Exposure to PCE usually occurs through inhalation. Depending on the length and severity of exposure, PCE can cause effects such as dizziness, fatigue, headaches, and sweating and in higher exposures can lead to unconsciousness. Contact with PCE can cause skin, eye, nose, and throat irritation. Long-term, low-dose exposure has been shown to cause kidney and liver damage and in some cases cancer in study animals.

**Table 26 and Figure 8** display all of the known hazardous material contaminating activities/sites within the Tahoe Valley plan area. These known sites were identified through the California GeoTracker database as well as the Landfill Database, which lists active but not necessarily polluting landfills. Several records were listed in the Tahoe Valley plan area in the GeoTracker databases that are not included in this table as those records were closed and remediated. **Table 26** only includes active records.

Future development or redevelopment within the Tahoe Valley Area Plan may be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, this impact is **potentially significant**.

Mitigation Measures

The following mitigation measures would apply to the proposed Tahoe Valley Area Plan:

**Mitigation Measures HAZ-1 and HAZ-2** as set forth in the discussion and analysis of Question 73 above**.**

Implementation of the above mitigation measures would ensure that site-specific hazardous material contamination and potential exposure from previous, current, or future land uses are addressed prior to development in order to protect public health. Thus, implementation of these mitigation measures would mitigate this impact to **less than significant**.

Environmental Analysis: *Less than Significant Impact after Mitigation.*

Required Mitigation: **MM HAZ-1 and MM HAZ-2**.

**74. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard for people residing or working in the project area? (CEQA VIIIe)**

As stated above, the Tahoe Valley Area Plan Amendments would result in additional dwelling units and CFA. Additional structures and residents within the plan area could potentially expose those people and structures to typical hazards associated with general aviation aircraft overflights and approach to and departure from the Lake Tahoe Airport.

Hazards associated with airport operations are generally associated with aircraft accidents. Aircraft accidents of most concern occur during takeoff and landing operations during which aircraft are operated close to the ground and within close proximity to one another. Potential hazards around an airport can be increased due to many external factors such as incompatible land uses in the vicinity of the airport, installation of power transmission lines, wildlife hazards (i.e., bird strikes, migrating wildlife, etc.), and construction of tall structures.

Lake Tahoe Airport Land Use Comprehensive Plan

As part of the land use planning process mandated by the Division of Aeronautics and the California Airport Land Use Planning Handbook, several Airport Land Use Commissions (ALUCs) have been formed throughout the state to prepare and administer Airport Land Use Compatibility Plans ALUCP) for each public-use airport in the state. El Dorado County has an operating ALUC that has prepared ALUCPs for many of the airports in the county. However, the City of South Lake Tahoe has been designated as the administrator of the Lake Tahoe Airport by Caltrans' Division of Aeronautics. As such, the City operates as its own ALUC and the City has developed the Lake Tahoe Airport ALUCP.

The Lake Tahoe Airport ALUCP provides land use compatibility guidelines on which compatibility of land uses in the vicinity of the airport is determined. The primary action of the ALUCP is to establish three planning boundaries around the airport concerning height of ground structures, noise, and safety. The most recent Lake Tahoe Airport ALUCP was adopted by the ALUC 2019.

It is important to note that while ALUCP have been developed, ALUCs do not have the power to mandate land uses in the vicinity of the airport under state law. The Division of Aeronautics allows for non-conforming land uses within the ALUCP boundaries. For a jurisdiction to adopt such non-conforming uses, however, a specific process must be conducted that allows for full disclosure of the discrepancy to the public.

City of South Lake Tahoe Airport Ordinance

Section 6.55.200 of the South Lake Tahoe City Code is considered the Airport Ordinance. This ordinance is enacted to protect the health, safety, and peace and to promote the welfare and convenience of the general public making use of the Lake Tahoe Airport by providing regulations for the orderly flow of traffic of aircraft, motor vehicles, and persons and the orderly and safe conduct of business thereon.

The Overflight Zone of the Lake Tahoe Airport is located over the southern portion of the proposed Tahoe Valley Area Plan, generally the area south of US 50 as it travels eastward from the "Y" intersection. As such, certain land uses are not allowed within this area, including privately owned assembly and entertainment, collection stations, and sport assemblies. Development of these uses within the plan area could represent elevated hazards to people on the ground during use of these types of structures. The City's General Plan includes Policy HS-7.1 which stipulates that land uses within the ALUCP boundaries adhere to the requirements of the ALUCP.

Additional concern for flight safety, and thus the safety of people and structures on the ground, concerns tall structures that may impede flights over the plan area. The portions of the plan area within the ALUCP boundaries lie under the horizontal imaginary surface, located 6,414 feet above mean sea level (msl). The highest point within the proposed plan area is located at approximately 6,319 feet msl, resulting in a minimum height restriction over the Tahoe Valley plan area of approximately 100 feet or approximately 10 stories. The maximum structure height proposed in the Tahoe Valley Area Plan is 45 feet. Therefore, it is unlikely that any new structures would be constructed high enough to pierce the horizontal surface.

According to the current City General Plan, Policy HS-7.1 will implement the land use restrictions stated in the ALUCP. As such, development of the above land uses within the southern portion of the Tahoe Valley plan area would not be allowed, regardless of the status of the Tahoe Valley Area Plan. In addition to the requirements of the General Plan, the Tahoe Valley Area Plan specifically includes HNS- 1.1, which requires that land use development within the area be measured against both the requirements of the Tahoe Valley Area Plan and the ALUCP, ensuring that the safety and height requirements of the CLUP are upheld. Implementation of this action item as well as required consistency with height restrictions would ensure that the proposed Tahoe Valley Area Plan would result in a less than significant impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**75. For a Project within the vicinity of a private airstrip, would the Project result in a safety hazard for people residing or working in the project area? (CEQA VIIIf)**

The Project is not located within the vicinity of a private airstrip and therefore has no impact on public safety in the vicinity of a private airstrip.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**76. Would the Project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? (CEQA VIIIg)**

The City of South Lake Tahoe is responsible for emergency operations within the city limits. The City has adopted a Local Hazard Mitigation Plan (adopted October 2022) which has been approved by the Federal Emergency Management Agency (FEMA). This plan provides guidance to the City for the development of pre-mitigation and post-mitigation recovery for disasters in all hazard classification.

Chapter 1.15 of the City Code provides for the preparation and carrying out of plans for the protection of persons and property within the City in the event of an emergency and the coordination of the emergency functions of the City with all other public agencies, corporations, organizations, and affected private persons. The City Manager, or his designee, serves as the director of emergency services and is empowered to proclaim or threatened existing of an "emergency", or to issue such as proclamation. The City has adopted General Plan policies in the Health and Safety Element: Policy HS-1.1 requires the City to periodically review and update the City's Local Emergency Operations Plan; Policy HS-1.3 requires the City to maintain a reverse 911 system; and HS- 1.4 requires the City to identify pre-planned areas for disaster staging and evacuations (CSLT 2011, p. HS-2).

As described above, the Tahoe Valley Area Plan is expected to result in an increase in dwelling units and

CFA within the plan area. Increased density has the potential to adversely affect emergency response described in local, regional, and state emergency response and/or evacuation plans, including but not limited to the County Emergency Operations Plan, the City's Emergency Operations Plan, and the SLTFD Fire Planning Process. Increased density can result in greater numbers of residents and employees within an area that would need to be protected and potentially evacuated. Increased square footage of homes and CFA area represent greater resources that require protection and, in the event of an emergency, response. As such, the Tahoe Valley Area Plan Amendments is expected to result in an incremental impact on emergency plans in plan area. However, existing roadways provide multiple options for evacuation of the area and no roadway closures are expected as a result of the Tahoe Valley Area Plan Amendments.

Indirect effects to emergency response occur when construction and roadway improvements result in temporary and permanent changes in circulation patterns and individual site access. Construction can often disrupt emergency response and thus adversely affect response coordinated through local emergency plans. Construction-related impacts would be temporary in nature – lasting only as long as construction – and overall traffic improvements are expected to improve circulation within the Tahoe Valley plan area, resulting in a net decrease in response times.

While temporary, construction-related impacts are not expected to be significant. The permanent effect of additional residents, employees, and structures within the Tahoe Valley plan area could significantly increase the amount and severity of emergency response required in the area, affecting emergency response and evacuation plans. **Therefore, this impact is potentially significant.**

Mitigation Measures

**Mitigation Measure HAZ-3** Subsequent projects shall incorporate all fire protection and design provisions identified by the South Lake Tahoe Fire Department intended to improve access point(s) and circulation of the subsequent project sites and the overall area in combination with other fire protection requirements (defensible space, fire flow improvements, fire resistant building materials, landscape treatments, placement of hydrants, and installation of sprinklers). The South Lake Tahoe Fire Department shall review and approve the subsequent project site design prior to commencement of project construction.

**Mitigation Measure HAZ-4** Subsequent projects shall be required to prepare and receive approval of a Traffic Management Plan (TMP) in accordance with local and state guidelines and standards, including Caltrans Guidelines for Projects Located on the California State Highways in the Lake Tahoe Basin (as applicable). Approval of the TMP shall be obtained from the City and Caltrans (if TMP impacts US 50 or SR 89) prior to site disturbance. Provisions in the TMP shall include, but are not limited to:

- Reduction, to the extent feasible, the number of vehicles (construction and other) on the roadways adjacent to construction sites during project construction.
- Reduction, to the extent feasible, the interaction between construction equipment and other vehicles.
- Improvement and maintenance of public safety aimed at driver and roadway safety.
- Establishment and/or maintenance of safe routes through the project area for bicycles and pedestrians.
- Establishment and/or maintenance of adequate emergency access for police, fire, ambulance, and other emergency service vehicles – as determined through direct consultation with those service providers.

Implementation of the above mitigation measures will ensure that future projects within the Tahoe Valley plan area will not adversely impact emergency response or emergency response plans, resulting in a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact after Mitigation.*

Required Mitigation: **MM HAZ-3, MM HAZ-4**.

**77. Would the Project expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands? (CEQA VIIIh)**

The risk of wildfire through the City and the Tahoe Valley plan area is high due to both the extent and nature of the forested area. A network of federal, state, and local agencies has been established with responsibility for fire and emergency response. Primary response to the Tahoe Valley plan area would be the responsibility of the SLTFD, but additional response is possible from adjacent departments, the County, CAL-FIRE, and the U.S. Forest Service.

Development anticipated under the Tahoe Valley Area Plan Amendments may increase the number of dwellings and amount of CFA within the planning area. As such, additional resources and people in need of protection would be located in the area, potentially exposing those structures and people to risks of wildland fire. Following the Angora Fire, several efforts have been undertaken that will improve both land management (fuel reduction) and fire response within the Tahoe Valley plan area. Furthermore, recent changes to the allowed permits for removal and management of landscaping and vegetation around structures (agreed between TRPA and SLTFD) will further decrease the risk of wildland fire.

The Tahoe Valley Area Plan contains Policy HNS-1.3 which requires any new structure or addition to implement fire prevention techniques consistent with current California Building and Fire Codes.

Application and enforcement of TRPA Regional Plan policies, portions of the TRPA Code of Ordinances, Area Plan policies, SLTFD permitting process, and local fire codes and guidelines and required consistency with the Fire Planning Process for the City, the Lake Tahoe Basin Wildland Urban Interface Plan, and various other plans and requirements already enforced within the Tahoe Valley plan area will further reduce the risk of wildland fire to residents, employees, visitors, and structures within the area. **This impact, however, is considered to be potentially significant.**

Mitigation Measures

Implementation of mitigation measures HAZ-3 and HAZ-4 would mitigate increases to potential exposure to wildlife hazards to less than significant.

Environmental Analysis: *Less than Significant Impact after Mitigation.*

Required Mitigation: **MM HAZ-3, MM HAZ-4**.

**78. Will the Project involve a risk of an explosion or the release of hazardous substances including, but not limited to, oil, pesticides, chemicals, or radiation in the event of an accident or upset conditions? (TRPA 10a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis tiers from the General Plan EIR. (CSLT 2010, pp. 4.3-40 to 4.3-41.)

The risk of explosion or release of hazardous substances is discussed and analyzed in detail for Question 72 above and the impact is potentially significant. With the adoption of mitigation measures HAZ-1 and HAZ-2, this impact is reduced to a less than significant level.

Environmental Analysis: *Less than Significant Impact after Mitigation.*

Required Mitigation: **MM HAZ-1 and MM HAZ-2**.

**79. Will the Project involve possible interference with an emergency evacuation plan? (TRPA 10b)**

See discussion and analysis for Question 76 above that concludes that implementation of the Tahoe Valley Area Plan will have a **potentially significant** impact on existing emergency evacuation plans.

Environmental Analysis: *Less than Significant Impact after Mitigation.*

Required Mitigation: **MM HAZ-3, MM HAZ-4**.

**80. Will the Project result in creation of any health hazard or potential health hazard (excluding mental health)? (TRPA 17a)**

See discussions and analyses for Questions 70 through 73 above.

Environmental Analysis: *Less than Significant Impact after Mitigation.*

Required Mitigation: **MM HAZ-1 and MM HAZ-2**.

**81. Will the Project result in exposure of people to potential health hazards? (TRPA 17b)**

See discussions and analyses for Questions 70 through 73 above

Environmental Analysis: *Less than Significant Impact after Mitigation.*

Required Mitigation: **MM HAZ-1 and MM HAZ-2**.

### 5.4.11 Hydrology and Water Quality

This section presents the analyses for potential impacts to hydrology and water quality. **Table 27** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 27**
**Hydrology and Water Quality**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 82. Violate any water quality standards or waste discharge requirements? (CEQA IXa) | | X | | |
| 83. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)? (CEQA IXb) | | | X | |
| 84. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site? (CEQA IXc) | | | X | |
| 85. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site? (CEQA IXd) | | | | X |
| 86. Create or contribute runoff water which would exceed the | | | X | |

| | | | | |
|---|---|---|---|---|
| capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff? (CEQA IXe) | | | | |
| 87. Otherwise substantially degrade water quality? (CEQA IXf) | | **X** | | |
| 88. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map? (CEQA IXg) | | | | **X** |
| 89. Place within a 100-year flood hazard area structures which would impede or redirect flood flows? (CEQA IXh) | | | | **X** |
| 90. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam? (CEQA IXi) | | | **X** | |
| 91. Inundation by seiche, tsunami, or mudflow? (CEQA IXj) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 92. Changes in currents, or the course or direction of water movements? (TRPA 3a) | | | | **X** |
| 93. Changes in absorption rates, drainage patterns, or the rate and amount of surface water runoff so that a 20 yr. 1 hr. storm runoff (approximately 1 inch per hour) cannot be contained on the site? (TRPA 3b) | | | | **X** |
| 94. Alterations to the course or flow of 100-yearflood waters? (TRPA 3c) | | | | **X** |
| 95. Change in the amount of surface water in any water body? (TRPA 3d) | | | | **X** |
| 96. Discharge into surface waters, or in any alteration of surface water quality, including but | | **X** | | |

| | | | | |
|---|---|---|---|---|
| not limited to temperature, dissolved oxygen or turbidity? (TRPA 3e) | | | | |
| 97. Alteration of the direction or rate of flow of ground water? (TRPA 3f) | | | | **X** |
| 98. Change in the quantity of groundwater, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations? (TRPA 3g) | | | | **X** |
| 99. Substantial reduction in the amount of water otherwise available for public water supplies? (TRPA 3h) | | | | **X** |
| 100. Exposure of people or property to water related hazards such as flooding and/or wave action from 100-year storm occurrence or seiches? (TRPA 3i) | | | | **X** |
| 101. The potential discharge of contaminants to the groundwater or any alteration of groundwater quality? (TRPA 3j) | | **X** | | |
| 102. Is the Project located within 600 feet of a drinking water source? (TRPA 3k) | **X, LTS** | | | |

**82. Would the Project violate any water quality standards or waste discharge requirements? (CEQA IXa)**

Subsequent development under the Tahoe Valley Area Plan amendment could result in temporary and permanent water quality impacts to surface runoff from construction and increases in impervious coverage. However, the Tahoe Valley Area Plan would continue to promote and implement existing policies related to (1) construction of best management practices and permitting requirements; (2) reducing land coverage impacts in low capability lands by transferring coverage to high capability lands and installing BMPs; (3) promoting retrofit of existing development with BMPs through existing and proposed Tahoe Valley Area Plan policies; and (4) implementing area-wide treatment systems. Application of existing transfer and restoration provisions of the TRPA Code, and proposed Tahoe Valley Area Plan policies for SEZ restoration, BMP implementation, and area-wide treatment would allow continued compliance with water quality standards and waste discharge requirements. Moreover, as discussed below in the Water Quality Impacts of Concentrated Coverage and results of pollutant load modeling, implementation of the Tahoe Valley Plan would result in a net reduction of pollutant loads to Lake Tahoe when compared to the baseline conditions.

Water Quality Impacts of Concentration of Coverage

The 2015 Area Plan IS/IEC analyzed the potential impacts to water quality from increased land coverage allowances for Town Centers included in the 2012 TRPA RPU. The proposed expansion of the Area Plan boundary will result in potential for additional coverage on 23 parcels (11.5 acres) within the Gateway and Neighborhood Professional districts. With their inclusion in the area plan boundary, these parcels shall be added to a TRPA designated Town Center where maximum allowed land coverage equals 70 percent of the project area. These parcels all contain high capability soils that previously could not exceed 30 percent coverage. Increasing the allowable coverage to 70 percent creates the potential for approximately 200,000 square feet (4.6 acres) of additional impervious area in the TVAP Town Center with transfer from offsite locations.

Transfers of this additional coverage shall be subject to TRPA Code of Ordinances 30.4: Land Coverage Limitations. All coverage beyond the base allowed comes from the transfer and retirement of existing coverage so that there is no net increase within the basin.

This potential effect is largely the same as that analyzed in the General Plan EIR, and therefore the analysis is tiered from and is consistent with the General Plan EIR. (CLST 2010, p. 4.7-48 to 4.7-62.) The potential effect is also the same as that analyzed in the RPU EIS. As discussed in Impact 3.8-4 of the DEIS (TRPA 2012a, p. 3.8-32), the analysis concluded that increased coverage allowances up to 70 percent in conforming area plans would have a less than significant effect on surface water runoff, provided that it's located on high capability lands and the increased coverage comes from the transfer and retirement of existing coverage.

To achieve this increased coverage, restoration and transfers of existing coverage would be required. Applying the existing transfer provisions, implementation of the 2015 Tahoe Valley Area Plan would result in the reduction of up to 57.0 acres of coverage in sensitive land, or a reduction and relocation of 72.4 acres of coverage and permanent retirement of 28.9 acres of coverage in non-sensitive land. The Tahoe Valley Area Plan would result in the decrease of land coverage within the Upper Truckee HRA and sensitive land, while increasing coverage within high capability lands as development is further concentrated in the town center to promote a compact land use pattern (see Section 6.4.8 Geology, Soils, Land Capability, and Coverage for analysis of potential changes in coverage). While coverage in Town Centers would increase, the additional coverage would still be limited to high capability lands and would be required to meet existing BMP standards to control potential increases in stormwater runoff and pollutant loading from the additional coverage, including maintenance requirements.

The potential effects of concentrated coverage on water quality in the 2015 Tahoe Valley Area Plan was analyzed using the Pollutant Load Reduction Model (PLRM) – a publicly available computer model used to evaluate and compare alternatives for storm water quality improvement projects in the Lake Tahoe Basin. The PLRM is a tool to compare urban stormwater quality improvement alternatives in an urban catchment based on the predicted load reductions of the pollutants of concern.

The PLRM summarizes output as average annual runoff volumes and pollutant loads for each modeled scenario. The PLRM quantifies pollutant generation from an urban land use and associated land use condition. Urban land use types include single family residential, multi-family residential, commercial, primary roads, and secondary roads, etc. Condition is defined as the existing state of a land use relative to the pollutant generation risk during a subsequent storm and is the integration of physiographic characteristics, pollutant source controls, and the effectiveness of pollutant recovery efforts.

As discussed above and depicted in **Table 28,** a PLRM model run of the net effect of increased coverage resulting from the Tahoe Valley Area Plan estimates that pollutant loadings to surface waters would be reduced overall when compared to the baseline conditions that existed in the Tahoe Valley plan area in

2015.

Overall, analysis conducted for the 2015 Tahoe Valley Area Plan predicted reductions of: runoff volumes by 27%; Total Suspended Sediment (TSS) by 23%; FSP by 25 %; Total Phosphorus (TP) by 20%; Soluble Reactive Phosphorus (SRP) by 41%; Total Nitrogen (TN) by 21%; and Dissolved Inorganic Nitrogen (DIN) by 24%. The decrease in the pollutant load is the result of a number of factors including implementation of BMPs on existing developed parcels that qualify for additional coverage. Currently, the compliance rate for BMP installation in the Tahoe Valley plan area is approximately 32 percent. As existing parcels with no BMPs are redeveloped, and BMPs are installed, pollutant loads are captured and treated. Furthermore, implementation of the Tahoe Valley Area Plan would facilitate the construction of the Tahoe Valley Stormwater System which would treat runoff from city streets and function as an area-wide treatment system that adjacent commercial projects will plumb into. Because the stormwater system will be maintained by the City, the area-wide treatment system is expected to be more effective in treating pollutant loads than parcel-level BMPs.

Additionally, it can be assumed that some portion of the coverage transferred to the area plan will come from properties that are not in compliance with TRPA BMP standards, thus the net effect of coverage reduction and transfer to high capability lands in the Town Center would result in reduced pollutant loads. Thus, the water quality impacts of concentrated coverage in Town Centers will be **beneficial**.

**Table 28**
**Pollutant Load Reduction Model Results For the Tahoe Valley Area Plan**

| | Runoff Volume | | TSS[1] | | FSP[2] | | TP[3] | | SRP[4] | | TN[5] | | DIN[6] | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

2. Fine Sediment Particles
3. Total Phosphorus
4. Soluble Reactive Phosphorus
5. Total Nitrogen
6. Dissolved Inorganic Nitrogen

Construction Impacts

This potential effect is the same as that analyzed in the General Plan EIR, and therefore the analysis is tiered from and is consistent with the General Plan EIR. (CLST 2010, p. 4.7-57 to 4.7-62.) This analysis addresses the specific circumstance of the project and considers the identified level of potential development within the Tahoe Valley Area Plan.

The 2015 Tahoe Valley Area Plan may result in the construction of 373 new dwelling units and 77,000 to 102,000 square feet of commercial floor area, potentially generating runoff containing various pollutants that could contaminate surface and/or groundwater supplies (if not properly treated with water quality controls) as runoff percolates into the soil. However, the statewide NPDES permits for construction runoff, dewatering and other low-threat releases to surface water, and discharges from municipal storm drain systems (MS4s) require the provision of water quality control measures that would protect groundwater quality from future development activities. In addition, numerous other regulations at the state, regional, and local levels are currently in place to protect and improve water quality in the region. (CSLT 2010, p.

4.7-57.)

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to discharge into surface waters and surface water quality. Chapter 60 of the TRPA Code, which includes standards for discharge limits to surface and ground waters and Chapter 7.15 of the City Code which regulates urban runoff and stormwater quality. Additionally, consistent with existing conditions, all development, redevelopment, and infrastructure improvements within the Tahoe Valley Area Plan would be required to meet the discharge standards of the Lahontan Regional Water Control Board and the City's municipal stormwater discharge permit. All projects that would create more than one acre of disturbance are required to prepare a Storm Water Pollution Prevention Plan (SWPPP) in accordance with The City's Stormwater Management Plan (2007).

Because all existing state and local protections for surface water would remain in place, and water quality BMPs (in accordance with Chapter 60 of the TRPA Code Chapter 7.15 of the City Code) would continue to be required for all properties within the Tahoe Valley Area Plan, construction activities within the Tahoe Valley Area Plan would not result in discharges to surface waters or alteration of surface water quality. This impact would be **less than significant**.

Groundwater Impacts

This potential effect is the same as that analyzed in the General Plan EIR, and therefore the analysis is tiered from and is consistent with the General Plan EIR. (CSLT 2010, p. 4.7-37 to 4.7-43.) This analysis addresses the specific circumstance of the Tahoe Valley planning area and considers the groundwater elevations and areas of existing soil and/or groundwater contamination identified in the Tahoe Valley plan area.

The Tahoe Valley plan area includes of areas of known high groundwater elevations, and areas of existing soils and/or groundwater contamination, that could be intercepted by excavations from subsequent development activities and/or altered through infiltration of surface water into the ground. Interception of groundwater could result in alteration of the direction of groundwater flow, alteration of the rate of flow, and could contaminate groundwater quality.

Groundwater interception or interference is prohibited under Section 33.3.6 of the TRPA Code, except under certain circumstances, described as follows:

*1. Excavation is prohibited that interferes with or intercepts the seasonal high water table by:*

*a. Altering the direction of groundwater flow;*

*b. Altering the rate of flow of ground water;*

*c. Intercepting ground water;*

*d. Adding or withdrawing ground water; or*

*e. Raising or lowering the water table.*

*2. TRPA may approve exceptions to the prohibition of groundwater interception or interference if TRPA finds that:*

*a. Excavation is required by the International Building Code (IBC) or local building code for minimum depth below natural ground for above ground structures;*

*b. Retaining walls are necessary to stabilize an existing unstable cut or fill slope;*

*c. Drainage structures are necessary to protect the structural integrity of an existing structure;*

*d. It is necessary for the public safety and health;*

*e. It is a necessary measure for the protection or improvement of water quality;*

*f. It is for a water well;*

*g. There are no feasible alternatives for locating mechanical equipment, and measures are included in the project to prevent groundwater from leaving the project area as surface flow, and any groundwater that is interfered with is rerouted in the ground water flow to avoid adverse impacts to riparian vegetation;*

*h. It is necessary to provide two off-street parking spaces, there is no less environmentally harmful alternative, and measures are taken to prevent groundwater from leaving the project area as surface flow;*

*i. It is necessary to provide below grade parking for projects that qualify for additional height under subsection 37.5.4 or 37.5.9 to achieve environmental goals, including scenic improvements, land coverage reduction, and area-wide drainage systems. Measures shall also be included in the project to prevent ground water from leaving the project area as surface flow and that any groundwater, that is interfered with is rerouted into the groundwater flow to avoid adverse impacts to hydrologic conditions, SEZ vegetation, and mature trees; or*

*j. It is necessary for a marina expansion approved pursuant to Chapter 14: Specific and Master Plans, and the environmental documentation demonstrates that there will be no adverse effect on water quality.*

Where active hazardous materials release sites are located (See Question 72, **Table 26**) there is the potential for surface water infiltration associated with BMPs to disturb and/or distribute the pollutants further prior to remediation. The EPA recommends keeping non-contaminated stormwater separate from contaminated soils and water to prevent leaching and spreading of contaminants. Direct infiltration in these locations may introduce additional pollutant loads to groundwater and nearby surface waters (EPA, *Design Principles for Stormwater Management on Compacted, Contaminated Soils in Dense Urban Areas, April 2008*). Although both parcel-specific BMP systems and area-wide systems have the potential to create this adverse impact by infiltrating stormwater, area-wide systems are typically implemented by government entities and their scale requires detailed site reconnaissance and environmental analysis, including evaluation of Source Water Protection Maps in accordance with TRPA Code section 60.3. Therefore, it is more likely that the potential for this impact would be identified and mitigated through an area-wide system than a parcel-specific BMP system implemented by a private property owner. The possibility of surface water infiltration where active release sites are located is a **potentially significant** impact.

Mitigation Measures

**Mitigation Measure HYD-1** As part of soil/hydrologic investigations for subsequent development and activities in the Tahoe Valley plan area, TRPA and the City will require that a determination of the potential to encounter groundwater from site development may occur. Subsequent project stormwater pollution prevention plans (SWPPP) will include a dewatering program and measures to mitigate potential contamination of groundwater as well as design provisions to allow groundwater to flow through or around

underground structures. Measures to control water quality may include use of settling tanks and Active Treatment Systems (ATS) for treatment of dewatering as well as contamination prevention measures such as proper material storage, secondary containment systems, vehicle fluid drip pans, temporary berms or dikes to isolate construction activities, use of vacuum trucks, and other measures to capture contamination releases.

**Mitigation Measure HYD-2** The City and TRPA shall consult with the Lahontan Regional Water Quality Control Board and online Geotracker Database to determine the potential for hazardous material releases on property where BMP installation is proposed prior to issuance of permits, approving the installation of BMPs. Where City and/or TRPA staff determines a potential to exist, the property is required to tie in to an existing area-wide system if one is available in lieu of parcel specific BMPs. Where an area-wide system is not available, the site shall be deemed constrained, per TRPA Code 60.4.8.B, until the time that an area-wide system is available or the site has been remediated and closed by the Water Quality Control Board.

**MM HAZ-1 and MM HAZ-2** (see Question 72 above).

Significance after Mitigation

Implementation of mitigation measures **HYD-1 and HYD-2** as well as the TRPA Code would mitigate potential groundwater impacts to **less than significant**. The reader is referred to Question 72 above, Hazards and Hazardous Materials, for potential groundwater impacts associated with future land uses, which would be mitigated through implementation of **MM HAZ-1 and MM HAZ-2**.

Environmental Analysis: *Less than Significant Impact after Mitigation*.

Required Mitigation: **MM HYD-1, MM HYD-2, MM HAZ-1 and MM HAZ-2.**

**83. Would the Project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)? (CEQA IXb)**

This potential effect is the same as that analyzed in the City General Plan EIR, and so this analysis is tiered from the General Plan EIR. (CLST 2010, 4.7-37 to 4.7-43.)

The Tahoe Valley Area Plan would not alter or revise the regulations pertaining to surface water management. Surface water and water rights in California are managed by the California State Water Resources Board. Consistent with existing conditions, projects that could occur under the Tahoe Valley Area Plan with subsequent approval that would require additional water supply affecting the amount of surface water in Lake Tahoe or another water body would be required to comply with Chapters 32 and 60 of the TRPA Code. These regulations pertain to the provision of basic services to projects and the protection of source water.

The potential impact of development and redevelopment within the Tahoe Region, including development within the Tahoe Valley plan area, on the availability of public water supplies was analyzed in the RPU EIS (TRPA 2012a, p. 3.13-11) and in the General Plan EIR (CLST 2010, 4.7-37 to 4.7-43 and 4.12-12 to 4.12-13). Because the regional water demand at build-out would be less than the regional surface water allocation, and because TRPA Code Section 32.4 requires demonstration of adequate available water supply within an existing water right prior to permit approval, implementation of the Tourist Core Area Plan would not result in a substantial reduction in the amount of surface water or the water available for public water

supplies. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**84. Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site? (CEQA IXc)**

This potential effect is the same as those analyzed in Impact 4.7.6 (CSLT 2010, pp. 4.7-62 to 4.7-65) of the City General Plan Update EIR, and therefore the analysis is tiered from and is consistent with the General Plan EIR. Impact 4.7.6 concluded that development within the City limits would not have a significant effect on drainage flows or result in increased flood hazards.

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to the course or direction of water movements. In accordance with Section 13.7.3 of the TRPA Code, TRPA would retain responsibility for enforcing and implementing Chapter 93 o the TRPA Code. Stream modifications are limited by the provisions of Chapter 63 which requires protection of fish resources, and Sections 61.3.3 and 30.5, which requires protection of SEZ areas, thereby protecting streams as well. Consistent with existing requirements, projects that could occur within the Tahoe Valley Area Plan that could alter the course or direction of water movements would be subject to subsequent permitting and environmental review, and TRPA Code sections described above as well as all other federal, state, and local regulations pertaining to the course or direction of water movements. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**85. Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site? (CEQA IXd)**

A small area within the Tahoe Valley plan area is within Special Flood Hazard Areas designated on the NFIP Flood Insurance Rate Maps. This area is located where the Upper Truckee River passes under US Hwy 50 and the 100-year flood zone includes properties adjacent to Hwy 50 and the river. No areas proposed for expansion of the Tahoe Valley Area Plan are located within the Special Flood Hazard Areas. Thus, there is **no impact** from the proposed amendments.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**86. Would the Project create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff? (CEQA IXe)**

This potential effect is the same as those analyzed in Impact 4.7.6 (CSLT 2010, pp. 4.7-62 to 4.7-65) of the City General Plan Update EIR, and therefore the analysis is tiered from and is consistent with the General Plan EIR. Impact 4.7.6 concluded that development within the City limits would not have a significant

effect on drainage flows or result in increased flood hazards. Also see discussion and analysis for Questions 82, 84 and 85 above, concluding **no impact** or a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**87. Would the Project otherwise substantially degrade water quality? (CEQA IXf)**

This potential effect is the same as those analyzed in Impact 4.7.6 (CSLT 2010, pp. 4.7-62 to 4.7-65) of the City General Plan Update EIS, and therefore the analysis is tiered from and is consistent with the GP EIS. Impact 4.7.6 concluded that development within the City limits would not have a significant effect on drainage flows or result in increased flood hazards. Also see discussion and analysis for Questions 82, 84 and 85 above.

Because all existing state and local protections for surface water would remain in place, and water quality BMPs (in accordance with Chapter 60 of the TRPA Code Chapter 7.15 of the City Code) would continue to be required for all properties within the Tahoe Valley plan area, any potential development or redevelopment of amendment parcels would not result in discharges to surface waters or alteration of surface water quality. Potential water quality impacts relating to identified active release sites set forth above in Question 82 will be **less than significant** after mitigation.

Environmental Analysis: *Less than Significant Impact after Mitigation*.

Required Mitigation: **MM HYD-1, MM HYD-2, MM HAZ-1 and MM HAZ-2.**

**88. Would the Project place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map? (CEQA IXg)**

See discussion and analysis for Question85 above

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**89. Would the Project place within a 100-year flood hazard area structures which would impede or redirect flood flows? (CEQA IXh)**

See discussion and analysis for Question 85 above.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**90. Would the Project expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam? (CEQA IXi)**

No levees or dams are located within the boundaries of or upstream from the Tahoe Valley Area Plan, therefore no person or structures would be at a significant risk of loss, injury or death involving flood as a result of the dam or levee failure. Therefore this is a **less than significant** impact.

Flooding of the Tahoe Valley as a result of wave action from 100-year storm occurrence or seiches is discussed and analyzed in Question 91 below.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**91. Would the Project cause inundation by seiche, tsunami, or mudflow? (CEQA IXj)**

This potential effect is the same as those analyzed in Impact 4.7.8 (CSLT 2010, pp. 4.7-66 to 4.7-69) of the City General Plan Update EIR, and therefore the analysis is tiered from and is consistent with the General Plan EIR. Impact 4.7.8 concluded that after adoption of Mitigation Measure 4.7.8 requiring the City to update the Local Emergency Operations Plan and Emergency Management Plan to include planning and response provisions for seiche wave hazards, the impact would be **less than significant**. Also see discussion and analysis for Question 84 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**92. Will the Project result in changes in currents, or the course or direction of water movements? (TRPA 3a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the General Plan EIR. (CSLT 2010, pp. 4.7-34 through 4.7-37.) The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to the course or direction of water movements. Stream modifications are limited by the provisions of Chapter 63 of the TRPA Code, which requires protection of fish resources, and Sections 61.3.3 and 30.5, which requires protection of SEZ areas, thereby protecting streams as well. Consistent with existing requirements, projects that could occur under the Tahoe Valley Area Plan that could alter the course or direction of water movements would be subject to subsequent permitting and environmental review, and TRPA Code sections described above as well as all other federal, state, and local regulations pertaining to the course or direction of water movements. Thus, this would be a **less than significant** impact.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**93. Will the Project result in changes in absorption rates, drainage patterns, or the rate and amount of surface water runoff so that a 20 yr. 1 hr. storm runoff (approximately 1 inch per hour) cannot be contained on the site? (TRPA 3b)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis tiers from the RPU EIR. (TRPA 2012a, pp. 3.8-31 to 3.8-53.) The General Plan EIR also analyzed this impact, and this analysis therefore incorporates by reference the General Plan EIR. (CSLT 2010, pp. 4.7-62 through 4.7-64.) Also see discussion and analyses for Question 84-86 above.

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to surface water runoff. All projects within the Tahoe Valley plan area must demonstrate compliance with the land capability and coverage provisions of Chapter 30 of the TRPA Code which is incorporated into the Tahoe Valley Area Plan Development and Design Standards.

The potential effects of these changes related to water quality were analyzed in the RPU EIS (TRPA 2012a, pp. 3.8-32 to 3.8-53) and in response to Question 82 above. Coverage increases on high capability land would be achieved through restoration and transfer of existing land coverage. Additionally, all development within the Tahoe Valley Area Plan would be required to meet existing BMP standards to control potential increases in stormwater runoff and pollutant loading from the additional coverage. As specified in Section 60.4.6 of the TRPA Code, except where special conditions exist and are approved by TRPA, infiltration facilities designed to accommodate the volume of runoff generated by a 20-year 1-hour storm are required for approval of all projects within the Tahoe Basin, including the Tahoe Valley plan area. Moreover, the pollutant load modeling and analysis discussed in Question 82 above, concluded that implementation of the Tahoe Valley Plan would reduce pollutant loads when compared to the baseline conditions. Therefore, future projects that may occur within the Tahoe Valley plan area would not inhibit the ability to infiltrate surface water runoff from a 20-year 1-hour storm event. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**94. Will the Project result in alterations to the course or flow of 100-year floodwaters? (TRPA 3c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS. (TRPA 2012a, p. 3.14-13.) Also see discussion and analyses for Question 84-86 above. The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to floodplains in Section 35.4 of the TRPA Code or Chapter 6.65 of the City Code. Portions of the Tahoe Valley Area Plan are located within the 100-year floodplain. All future development within the Tahoe Valley Area Plan would be required to meet both the requirements of Chapter 35 of the TRPA Code and Chapter 6.65 of the City Code related to floodplain management. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**95. Will the Project result in change in the amount of surface water in any water body? (TRPA 3d)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS. (TRPA 2012a, pp. 3.13-11 to 3.13-15.)

Also see discussion and analyses for Question 84-86 above concluding that the Tahoe Valley Area Plan would not result in significant increases in surface water in any water body.

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to surface water management. Surface water and water rights in California are managed by the California State Water Resources Control Board. Consistent with existing conditions, projects that could occur under the Tahoe Valley Area Plan that would require additional water supply affecting the amount of surface water in Lake Tahoe or another water body would be required to comply with Chapters 32 and 60 of the TRPA Code. These regulations pertain to the provision of basic services to projects and the protection of source water.

The potential impact of development and redevelopment within the Tahoe Region, including development

within the Tahoe Valley plan area, on the availability of public water supplies was analyzed in the RPU EIS (TRPA 2012a, pp. 3.13-11 to 3.13-15) and discussed in detail in Questions 156 and 164 below. Because the regional water demand at build-out would be less than the regional surface water allocation, and because TRPA Code Section 32.4 requires demonstration of adequate available water supply within an existing water right prior to permit approval, implementation of the Tahoe Valley Area Plan would not result in a substantial reduction in the amount of surface water or the water available for public water supplies. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**96. Will the Project result in discharge into surface waters, or in any alteration of surface water quality, including but not limited to temperature, dissolved oxygen or turbidity? (TRPA 3e)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS. (TRPA 2012a, p. 3.8-24 to 3.8-31.) Also see discussion and analyses for Questions 82-87 above.

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to discharge into surface waters and surface water quality. Chapter 60 of the TRPA Code, which includes standards for discharge limits to surface and ground waters and Chapter 7.15 of the City Code which regulates urban runoff and stormwater quality. Additionally, consistent with existing conditions, all development, redevelopment, and infrastructure improvements within the Tahoe Valley Area Plan would be required to meet the discharge standards of the Lahontan Regional Water Control Board and the City's municipal stormwater discharge permit. All projects that would create more than one acre of disturbance are required to prepare a Storm Water Pollution Prevention Plan (SWPPP) in accordance with The City's Stormwater Management Plan (2007).

Because all existing state and local protections for surface water would remain in place, and water quality BMPs (in accordance with Chapter 60 of the TRPA Code Chapter 7.15 of the City Code) would continue to be required for all properties within the Tahoe Valley Area Plan, the Tahoe Valley Area Plan would not result in discharges to surface waters or alteration of surface water quality. Potential water quality impacts relating to identified active release sites set forth above in Question 82 will be **less than significant** after mitigation.

Environmental Analysis: *Less than Significant Impact after Mitigation*.

Required Mitigation: **MM HYD-1, MM HYD-2, MM HAZ-1 and MM HAZ-2.**

**97. Will the Project result in alteration of the direction or rate of flow of ground water? (TRPA 3f)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis tiers from the RPU EIS. (TRPA 2012a, Chapters 3.8 and 3.13.) See also discussion and analysis for Question 83 above.

The Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to excavations that could intercept or otherwise interfere with groundwater. Section 33.3 of the TRPA Code prohibits excavations, except under certain defined and permitted conditions, that interfere with or intercept the high water table by: altering the direction of groundwater flow; altering the rate of flow of groundwater;

intercepting groundwater; adding or withdrawing groundwater; or raising or lowering the groundwater table. Additionally, excavation in excess of 5 feet below ground surface (or less in areas of known high groundwater) is generally prohibited because of the potential to intercept or interfere with groundwater is prohibited. Such excavations may be permitted under certain defined conditions (Section 3.3.6.B of the TRPA Code), and in such cases it must be demonstrated in a soils/hydrologic report that no interference or interception of groundwater would occur as a result of the excavation. Therefore, consistent with existing conditions, future projects that may occur within the Tahoe Valley plan area are subject to subsequent environmental review and permitting by the City and/or TRPA, which would require the project applicant to demonstrate compliance with Chapter 33 of the TRPA Code and the protection of groundwater. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**98. Will the Project result in change in the quantity of groundwater, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations? (TRPA 3g)**

See discussions and analyses for Questions 95 through 97 above, concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**99. Will the Project result in substantial reduction in the amount of water otherwise available for public water supplies? (TRPA 3h)**

See discussion and analysis in Question 95 above and analyses in Questions 156 and 164 below which conclude that potential impact of development and redevelopment within the Tahoe Region on the availability of public water supplies, including development within the Tahoe Valley plan area, would have a **less than significant** impact

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**100. Will the Project result in exposure of people or property to water related hazards such as flooding and/or wave action from 100-year storm occurrence or seiches? (TRPA 3i)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis tiers from the RPU EIS. (TRPA 2012a, p. 3.14-13 to 3.14-14.) Also see discussion and analysis for Question 91 above, concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**101. Will the Project result in potential discharge of contaminants to the groundwater or any alteration of groundwater quality? (TRPA 3j)**

See discussions and analyses for Questions 95 through 97 above.

Because all existing state and local protections for surface water would remain in place, and water quality BMPs (in accordance with Chapter 60 of the TRPA Code Chapter 7.15 of the City Code) would continue to be required for all properties within the Tahoe Valley Area Plan. The Tahoe Valley Area Plan Amendments would not result in discharges to surface waters or alteration of surface water quality. As discussed in detail above, however, where active hazardous materials release sites are located (See Question 72, **Table 26**) there is the potential for surface water infiltration associated with BMPs to disturb and/or distribute the pollutants further prior to remediation. Potential water quality impacts relating to identified active release sites set forth above in Question 82 will be **less than significant** after mitigation.

Environmental Analysis: *Less than Significant Impact after Mitigation*.

Required Mitigation: **MM HYD-1, MM HYD-2, MM HAZ-1 and MM HAZ-2.**

**102. Is the Project located within 600 feet of a drinking water source? (TRPA 3k)**

Sources of drinking water are located within 600 feet of the project area, however, the Tahoe Valley Area Plan Amendments would not alter or revise the regulations pertaining to source water protection and is therefore consistent with the goals of the Regional Plan and the RPU EIS. Chapter 60 of the TRPA Code includes protections for drinking water sources. Specifically, Section 60.3.3.C.1 of the TRPA Code identifies a Source Water Protection Zone that includes a 600-foot radius around wells, lake intakes, and springs assessed by TRPA. Into total, TRPA's Source Water Assessment Map identifies 12 active wells located in the boundary of the Tahoe Valley Area Plan All development within Source Water Protection Zones is subject to the requirements of Section 60.3.3.D, including installation of water quality BMPs and development of a spill control plan. Any subsequent projects allowed within the Tahoe Valley plan area would be subject to permitting by the City and/or TRPA. Consistent with existing conditions, permit applicants within 600 feet of a drinking water source would be required to demonstrate compliance with the source water protection provisions in Chapter 60 of the TRPA Code. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

## 5.4.12 Land Use and Planning

This section presents the analyses for potential impacts to land use and planning. **Table 29** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 29: Land Use and Planning**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 103. Physically divide an established community? (CEQA Xa) | | | | **X** |
| 104. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? (CEQA Xb) | | | **X** | |
| 105. Conflict with any applicable habitat conservation plan or natural community conservation plan? (CEQA Xc) | | | | **X** |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 106. Include uses which are not listed as permissible uses in the applicable Plan Area Statement, adopted Community Plan, or Master Plan? (TRPA 8a) | | | | **X** |
| 107. Expand or intensify an existing non-conforming use? (TRPA 8b) | **X, LTS** | | | |

### 103. Would the Project physically divide an established community? (CEQA Xa)

Division of an established community commonly occurs as a result of development and construction of physical features that constitute a barrier to easy and frequent travel between two or more constituent parts of a community. For example, a large freeway structure with few crossings could effectively split a

community. Likewise, geographic features could similarly affect the community, such as the development of a large residential project on the opposite side of a river from the existing community. The Tahoe Valley Area Plan Amendments would not include any features that would have the potential to divide the community. Moreover, the Tahoe Valley Area Plan would include planned improvements along US 50 and SR 89, including signalization upgrades, specific roadway, pedestrian, and bicycle facility improvements which would have a net benefit to circulation within the Tahoe Valley plan area, providing for greater connectivity between land uses and between the Tahoe Valley plan area and the rest of the south shore community.

Tahoe Valley Area Plan Amendments would not include any features that would have the potential to divide the community. Furthermore, by allowing for circulation to travel more than one route through the area plan, interconnectivity between land uses is increased rather than impeded. As such, the proposed Tahoe Valley Area Plan Amendments would result in a **beneficial impact**.

Environmental Analysis: *No Impact*.

Required Mitigation: **None.**

**104. Would the Project conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect? (CEQA Xb)**

The Tahoe Valley Area Plan Amendments proposes to amend the Area Plan boundary, Town Center Overlay boundary as follows (see Figure 3):

- Incorporate seven parcels abutting Melba Avenue into the area plan and Town Center Overlay for the purposes of incentivizing high-density housing.. The parcels are a mix of privately owned vacant and developed multi-family parcels totaling approximately 5.2 acres in size. One parcel is public owned and is currently vacant. The parcels are located in Plan Area Statement (PAS) 114 Special Area #1, and are zoned residential and designated as high-density residential in the City General Plan. The parcels would be rezoned as Town Center Gateway District and added to the Town Center overlay.
- Incorporate one tourist accommodation developed parcel located at 1220 Emerald Bay Road (APN 032-151-002) into the area plan and Town Center Overlay and rezone the property from PAS 114, Special Area #1 residential to Town Center Gateway District. The approximately one acre parcel is designated high-density residential in the City General Plan.
- Incorporate 15 parcels located between James Avenue and Eloise Avenue into the Town Center and rezone the parcels from PAS 111 Special Area #2, residential to Town Center Neighborhood Professional for the purpose of incentivizing high-density housing and redevelopment of existing commercial properties. The parcels include a mix of multi-family, commercial, and public service uses. The parcels are designated high-density residential in the City General Plan.
- Amend the Town Center Core District to incorporate one parcel located at 1080 Emerald Bay Road (APN 023-081-011), immediately south of the Raley's Shopping Center, for the development of high-density housing by allowing an increase in height from 36 feet to 42 feet. The parcel is currently zoned Town Center Gateway District.
- Incorporate 19 residential parcels located south of the Tahoe Valley Area Plan and between Emerald Bay Road and Bonanza Avenue into the area plan and create a new Residential (Emerald

Bay Connection Corridor) District to promote high-density housing. The parcels are currently located in PAS 114, Special Area #1, residential. The proposed amendment would not substantially change the use list but would allow an increase in density from 15 units per acre to 25 units per acre. The parcels are primarily private undeveloped parcels with two properties operating as active mobile home parks. The area is designated High-Density Residential and Low-Density Residential in the City General Plan.

Pursuant to Chapter 13 of the TRPA Code (Section 13.5.3.G), modifications to a Town Center Overlay boundary to incorporate an undeveloped parcel are permitted if they comply with the following:

1. At least three sides of the parcel to be included are adjacent to developed parcels.

2. Properties included in a Town Center are less than ¼ mile from existing commercial and Public Service uses.

3. Properties included in a Town Center shall encourage and facilitate the use of existing or planned transit stops and transit system.

The parcels along Melba Avenue in the south and adjacent to James and Eloise Avenues in the north are generally surrounded by development on at least three sides given the predominance of development along the US Highway 50 corridor. The Melba Avenue parcels are located directly adjacent to the existing Town Center Gateway District and are immediately adjacent to commercial establishments fronting US Highway 50 including Ernie's Coffee Shop and Blue Granite Climbing Gym and tourist accommodation units such as the High Country Lodge. The James and Eloise Avenue parcels are immediately adjacent to commercial establishments fronting US Highway 50 including O'Reilly Auto Parts, several restaurants, and other general retail establishments. Each of the proposed Town Center parcels are close to existing transit facilities at the "Y" intersection or walkways and trails located along US Highway 50. The proposed modification is consistent with Regional Plan and General Plan land use and housing policies to create additional housing choices in the Tahoe Valley area, and to locate future growth in Town Centers and within close proximity to commercial uses, public services, employment centers, transit service, and bike and pedestrian infrastructure. Development of any future multi-family housing would be subject to TRPA's growth management system requiring the allocation of residential bonus units. Moreover, the development of multi-family housing within close proximity to a service and employment center is consistent with existing land use and sustainability policies and strategies to reduce vehicle miles travelled, daily vehicle trips ends, and greenhouse gas emissions.

The incorporation of the parcels listed above into the TRPA Town Center Overlay would not conflict with a plan or regulation adopted to avoid or reduce environmental impacts. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**105. Would the Project conflict with any applicable habitat conservation plan or natural community conservation plan? (CEQA Xc)**

The Tahoe Valley Area Plan Amendments does not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan because no such plans exist for the project area. Thus, there would be **no impact**.

Environmental Analysis: *No Impact*.

Required Mitigation: **None.**

**106. Will the Project include uses which are not listed as permissible uses in the applicable Plan Area Statement, adopted Community Plan, or Master Plan? (TRPA 8a)**

The Tahoe Valley Area Plan Amendments proposes modifications to the land use mix of the parcels that will be moved from Plan Area Statement 111, Special Area #2 and Plan Area Statement 114, Special Area #1 to improve the concentration and the mixing of commercial, tourist and residential uses. These adjustments to the permissible use list would result in permitting uses that are currently prohibited in those portions of plan areas 111 and 114. The amendments also modify the permissible uses and allowable densities in existing Districts. The modifications are outlined in Tables 3 through 9 in Chapter 2 and are summarized in Table 2.

The modifications promote an expansion of the current land use pattern that allows for residential uses in close proximity to commercial and employment centers and the mixing of residential, commercial, and tourist uses to promote live/work units as part of a mixed-use project, thus increasing housing options in the Tahoe Valley plan area and providing opportunities to live near potential employers and services.

The modifications to the uses are intended to make the Tahoe Valley Area Plan consistent with the types of uses envisioned for areas designated as "Mixed-Use" by the TRPA Regional Plan and "Town Center" by the City General Plan. Areas with these designations are intended to provide a mix of commercial, public services, light industrial, office, and residential uses in a concentrated, higher density land use pattern for public convenience, and enhanced sustainability. The proposed uses and higher densities are consistent with the types of uses envisioned for these areas, thus would not result in any land use inconsistency. The expansion of the applicability of some uses to other areas of the Tahoe Valley plan area is not expected to have any significant impact because the proposed uses would be consistent with the uses envisioned in the Regional Plan and General Plan designated Town Centers.

The more concentrated land use pattern is expected to reduce automobile reliance, reduce emissions, and increase feasibility of transit, decrease environmental impacts, and increase the availability of housing in close proximity to employment and commercial service. The Tahoe Valley Area Plan includes provisions to concentrate development in the Town Center which would result in greater opportunity for alternative transportation options, reduced VMT, reduce air pollutant emissions, increase preservation and restoration of open space as a result of transfer of development. Furthermore, any subsequent projects allowed within the Tahoe Valley Area Plan would be subject to permitting by the City and/or TRPA. Consistent with existing conditions, permit applicants would be required to demonstrate that any proposed project would not have a significant effect on the environment including but not limited to traffic, land coverage, scenic resources, air quality, water quality, etc. Thus this impact is considered **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None**

**107. Will the Project expand or intensify an existing non-conforming use? (TRPA 8b)**

The amendments would expand the existing Town Center Neighborhood Professional District to include 15 existing parcels located in Plan Area 111, Special Area #2 and the Town Center Gateway District to include 7 existing parcels located in Plan Area 114, Special Area #1. The amendment area of Plan Area 111 currently contains a number of professional office land uses (e.g., 965 Tahoe Keys and 2265 Eloise - Realty

World) and membership organizations (e.g., South Tahoe Association of Realtors) that are non-conforming uses in Special Area #2. The amendment area of Plan Area 114 currently contains a number of land uses that conform to the permissible uses in Special Area #1. The reason for the boundary amendment here is that many of these parcels are large and contain aging residential uses. Should they be redeveloped in the future, there will be opportunity to take advantage of additional coverage and density to provide more housing units. Consistent with the policies of the Regional Plan and General Plan, promoting the concentration and mixing of uses, the Tahoe Valley Area Plan amendments would change the permissible use list for these two areas to allow existing non-residential uses (professional office, membership organizations, storage) in the former special areas of residential plan areas.

The changes to the permissible use list would make existing non-residential uses a conforming use and allow for new residential uses (i.e., employee housing and multi-person dwelling) at higher densities. However, as discussed above, the adjustment to the land use mix is in line with the policies of the Regional Plan and General Plan, promoting the concentration of and mixing of uses within close proximity to service and employment centers such as Tahoe Valley. The proposed land use changes promote the concentration of multi-residential uses and single-family live/work units within close proximity to the town center, thus reducing the need for vehicle trips and reducing air pollutant emissions. Development of residential units would continue to be subject to the TRPA growth management and allocation system and must meet the requirements of the City building and design standards for parking, setbacks and noise attenuation. Therefore, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

### 5.4.13 Mineral Resources (CEQA) and Natural Resources (TRPA)

This section presents the analyses for potential impacts to mineral resources and natural resources. **Table 30** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 30: Mineral Resources and Natural Resources**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 108.Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? (CEQA XIa) | | | | **X** |
| 109.Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? (CEQA XIb) | | | | **X** |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 110.A substantial increase in the rate of use of any natural resources? (TRPA 9a) | | | | **X** |
| 111.Substantial depletion of any non-renewable natural resource? (TRPA 9b) | | | | **X** |

**108. Would the Project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? (CEQA XIa)**

There are no mapped mineral resources within the Tahoe Valley plan area, nor does the City General Plan, nor any specific plan or other plan, such as the TRPA Regional Plan and Plan Area Statement, identify any sites within the Tahoe Valley plan area as an important mineral recovery site. Thus, there would be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**109. Would the Project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan? (CEQA XIb)**

See discussion and analysis for Question 108 above, concluding **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**110. Will the Project result in a substantial increase in the rate of use of any natural resources? (TRPA 9a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis tiers from the RPU EIS. (TRPA 2012a, 5-3.)

The use of natural resources, such as construction wood or metals, or gasoline would increase incrementally as more commercial, tourist, and residential developments are constructed as envisioned in the Tahoe Valley Area Plan. The RPU EIS (TRPA 2012a, p. 5-3) acknowledged the potential increase in the use of natural resources resulting from increased development and redevelopment within the Tahoe Region, however any project permitted through the Tahoe Valley Area Plan would be subject to project level environmental review and site-specific mitigation measures if necessary. Therefore, any increase in the rate of use of natural resources would not be substantial and would not be in quantities that would result in a significant effect. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**111. Will the Project result in a substantial depletion of any non-renewable natural resource? (TRPA 9b)**

Non-renewable natural resources such as gasoline and diesel would be consumed during the construction of development projects; however, the potential for new development would be limited through restrictions to TRPA regulated commodities (see project description) such as commercial floor area, residential allocations and tourist accommodation units. Because construction would be limited and would not require quantities of non- renewable resources beyond those of typical residential and commercial construction, projects associated with the Tahoe Valley Area Plan would not result in substantial depletion of any non-renewable natural resource. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

### 5.4.14 Noise

This section presents the analyses for potential impacts related to noise. **Table 31** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 31**
**Noise**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 112. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? (CEQA XIIa) | | | **X** | |
| 113. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels? (CEQA XIIb) | | | **X** | |
| 114. A substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project? (CEQA XIIc) | | | **X** | |
| 115. A substantial temporary or periodic increase in ambient noise levels in the Project vicinity above levels existing without the Project? (CEQA XIId) | | | **X** | |
| 116. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the project area to excessive noise levels? (CEQA XIIe) | | | **X** | |
| 117. For a Project within the vicinity of a private airstrip, would the Project expose people residing or working in the project area to excessive noise levels? (CEQA XIIf) | | | | **X** |

| TRPA Initial Environmental Checklist Item | Yes | No, With Mitigation | Data Insufficient | No |
|---|---|---|---|---|
| 118. Increases in existing Community Noise Equivalency Levels (CNEL) beyond those permitted in the applicable Plan Area Statement, Community Plan or Master Plan? (TRPA 6a) | | | | **X** |
| 119. Exposure of people to severe noise levels? (TRPA 6b) | | | | **X** |
| 120. Single event noise levels greater than those set forth in the TRPA Noise Environmental Threshold? (TRPA 6c) | | | | **X** |

**112. Would the Project result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? (CEQA XIIa)**

This potential effect is the same as those analyzed in the General Plan Update, and therefore the analysis is tiered from and is consistent with the General Plan EIR. (CSLT 2010, Chapter 4.6.)

The potential for noise conflicts from development, including construction of additional residential, commercial floor area, industrial facilities, recreational facilities, and infrastructure such as roadway improvements, water and sewer lines that is expected to occur under the Tahoe Valley Area Plan amendments, includes conflicts as a result of adjacent land uses and their operational aspects. Parcels located along Melba Drive are currently within Plan Area 114 which has a maximum community noise equivalent level of 50 CNEL for areas outside of the US Highway 50 corridor (which has a 65 CNEL limit). These parcels would be added to the Town Center Gateway District, which has a 65 CNEL limit for all locations within the District. The Tahoe Valley Area Plan addresses these potential conflicts through the land use designation, zoning identification, and development standard process, however, the potential exists for some development allowed under amended land use designations and zoning to have operational aspects that could create noise impacts on other adjacent land uses. Thus, the Tahoe Valley Area Plan incorporates noise protection policies to maintain the CNEL standards, to mitigate new transportation noise sources, to require acoustical analysis during project review, to mitigate ground-borne vibration, and to ensure land use compatibility through appropriate site design. The Tahoe Valley Area Plan noise policies are:

- Poly HNS-2.1, Maximum Community Noise Equivalent Level
- Policy HNS-2.2, Transportation Noise
- Policy HNS-2.3, Project Review
- Policy HNS-2.4, Construction Noise
- Policy HNS-2.5, Land Use Compatibility

In addition, this potential effect is the same as that analyzed in the City General Plan DEIR (CSLT 2010, p. 4.6-24 to 4.6-27) in Impact 4.6.1, and therefore this analysis tiers from and is consistent with the DEIR. The DEIR concluded that application of the General Plan (CSLT 2011a, p. HS-9 through HS-13) noise policies was adequate to mitigate any potential noise impacts. The City's noise policies provide expanded protection for ambient conditions, which are designed toward eliminating land use conflicts with respect to

noise. Policies include specific numeric noise level standards for new projects affected by or including both transportation and non-transportation noise sources, as well as guidance in evaluating noise impacts and for identification of noise mitigation measures. The applicable General Plan noise policies are:

- HS-8.1, Annoying and Excessive Non-Transportation Noise Protection
- HS-8.2, Annoying and Excessive Non-Transportation Noise Mitigation
- HS-8.3, Overall Background Noise Mitigation
- HS-8.4, Annoying and Excessive Transportation Noise Protection
- HS-8.5, New Transportation Noise Source Mitigation
- HS-8.6, Acoustical Analysis Preparation
- HS-8.7, California State Building Code Title 24 Consistency
- HS-8.8, Lake Tahoe Airport Comprehensive Land Use Plan Compliance
- HS-8.9, Airport Noise Mitigation for Adjacent Residential Projects
- HS-8.10, Airport Noise Level Compatibility

It should also be noted that existing noise standards set forth in Chapter 68 of the TRPA Code of Ordinances are applicable to any future development in the Tahoe Valley area. Thus, application of the Tahoe Valley Area Plan and General Plan noise policies and Chapter 68 of the TRPA Code of Ordinances would reduce this impact to a **less than significant** level.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**113. Would the Project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels? (CEQA XIIb)**

The effects of ground-borne vibration can vary from no perceptible effects at the lowest levels, low rumbling sounds and detectable vibrations at moderate levels, and slight damage to nearby structures at the highest levels. At the highest levels of vibration, damage to structures is primarily architectural (e.g., loosening and cracking of plaster or stucco coatings) and rarely results in structural damage. The effects of ground-borne vibration are influenced by the duration of the vibration and the distance from the vibration source.

There are no federal, state, or local regulatory standards for vibration. However, various criteria have been established to assist in the evaluation of vibration impacts. For instance, Caltrans has developed vibration criteria based on human perception and structural damage risks. For most structures, Caltrans considers a peak-particle velocity (ppv) threshold of 0.2 inches per second (in/sec) to be the level at which architectural damage (i.e., minor cracking of plaster walls and ceilings) to normal structures may occur. Below 0.10 in/sec there is "virtually no risk of 'architectural' damage to normal buildings." Damage to historic or ancient buildings could occur at levels of 0.08 in/sec ppv. In terms of human annoyance, continuous vibrations in excess of 0.1 in/sec ppv are identified by Caltrans as the minimum level perceptible for ground-borne vibration. Short periods of ground-borne vibration in excess of 0.2 in/sec ppv can be expected to result in increased levels of annoyance to people in buildings (Caltrans, 2002).

Construction activities are expected to continue to occur within the amended Tahoe Valley plan area resulting in ground-borne vibration. However, the Tahoe Valley Area Plan incorporates Policy HNS-2.4

requiring an analysis of potential vibration impact be conducted for all construction activities that include impact equipment and activities such as pile driving, soil compaction, or vibratory hammers that occur within 200 feet of existing structures. The analysis will address the potential for adverse vibration levels based on the criteria contained in **Table 32** below. The City will ensure that construction operations are designed to avoid or mitigate for vibrations above 0.02 in/second (0.5 mm/second). Thus, this impact is **less than significant**.

**Table 32**
**Effects of Vibration on People and Buildings**

| Peak Particle Velocity inches/second | Peak Particle Velocity mm/second | Human Reaction | Effect on Buildings |
|---|---|---|---|
| 0 -.006 | 0.15 | Imperceptible by people | Vibrations unlikely to cause damage of any type |
| 0..6 - .02 | 0.5 | Range of threshold of perception | Vibrations unlikely to cause damage of any type |
| 0.8 | 2.0 | Vibrations clearly perceptible | Recommended upper level of which ruins and ancient monuments should be subjected |
| 0.1 | 2.54 | Level at which continuous vibrations begin to annoy people | Virtually no risk of architectural damage to normal buildings |
| 0.2 | 5.0 | Vibrations annoying to people and buildings | Threshold at which there is a risk of architectural damage to normal dwellings |
| 1.0 | 25.4 | | Architectural damage |
| 2.0 | 50.45 | | Structural damage to residential buildings |
| 6.0 | 151.0 | | Structural damage to commercial buildings |

*Source: Caltrans, 1976*

It should also be noted that TRPA Standard Conditions of Approval for Grading Projects and Standard Conditions of Approval for Residential Projects require projects to utilize sonic pile driving wherever feasible, and pre-drill pile driving holes to the extent feasible when approved by a design engineer.

Future projects are subject to Policy HSN-2.4 and TRPA standard conditions of approval to reduce ground-borne vibration; thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**114. Would the Project result in a substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project? (CEQA XIIc)**

See discussion and analysis for Question 112 above, concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation**: None**

**115. Would the Project result in a substantial temporary or periodic increase in ambient noise levels in the Project vicinity above levels existing without the Project? (CEQA XIId)**

See discussion and analysis for Question 112 above, concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**116. For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the project area to excessive noise levels? (CEQA XIIe)**

Helicopter Noise Associated with Barton Hospital

Helicopter noise occurs due to emergency operations associated with the day-to-day operations of Barton Hospital. Section 68.9 (Exemptions to Noise Limitations) in Chapter 68 of the TRPA Code of Ordinances provides exemptions from noise limitations for activities associated with emergency work to protect life or property. In addition, the project does not result in an increase in these noise levels when compared to CEQA standards.

**Table 33**
**Significance of Changes in Noise Exposure (Based Upon CEQA)**

| Ambient Noise Level Without Project, CNEL/$L_{dn}$ | Increase Required for Significant Impact |
|---|---|
| <60 dB | +5.0 dB or more |
| 60-65 dB | +3.0 dB or more |
| >65 dB | +1.5 dB or more |

*Source: Federal Interagency Committee on Noise (FICON)*

Lake Tahoe Airport

Pursuant to the City Code Chapter 2.65.100, the Lake Tahoe Airport is closed to all operations between the hours of 8:00 p.m. and 8:00 a.m., except for emergency and mercy flights, military and government owned aircraft, and aircraft operations that will not result in a Single Event Noise Exposure Level reading exceeding 77.1. Thus, no nighttime noise impacts are expected from airport operations. In addition, consistent with General Plan Policy HS-8.8, the City requires all projects located in the airport flight safety overlay zone to comply with the Lake Tahoe Airport Comprehensive Land Use Plan. Concurrently,

General Plan Policy HS 8.9 and City Code Chapter 6.55.200, requires all new residential projects within the Lake Tahoe Airport's 55 dB and 60 dB CNEL contours, as defined in the Lake Tahoe Airport Land Use Compatibility Plan, to be designed to limit intruding noise such that the interior noise levels shall not exceed 45 dB CNEL in any habitable room. If the 45 dB CNEL standard is only achieved with the windows and doors in the closed position, a mechanical air exchange will need to be provided as a part of the project design. Future projects within the amended Tahoe Valley Area Plan would also comply with the General Plan and TRPA policies and standards, and so this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**117. For a Project within the vicinity of a private airstrip, would the Project expose people residing or working in the project area to excessive noise levels? (CEQA XIIf)**

The project area is not within the vicinity of a private airstrip and therefore does not expose people working in the project area to excessive noise levels from aircrafts. Thus, there would be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**118. Would the Project result in increases in existing Community Noise Equivalency Levels (CNEL) beyond those permitted in the applicable Plan Area Statement, Community Plan or Master Plan? (TRPA 6a)**

See discussion and analysis for Question 112 above, concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**119. Would the Project result in exposure of people to severe noise levels? (TRPA 6b)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis tiers from and is consistent with the RPU EIS. (TRPA 2012a, p. 3.6-11.)

Increased Traffic Noise

Based upon a comparison of **Tables 34** and **35** prepared for the 2015 Tahoe Valley Area Plan IS/IEC, Area Plan buildout will result in an increase in traffic noise levels between 0 dB and 1 dB CNEL. Amendment of the Area Plan boundary would not result in a measurable increase to the predicted CNEL levels given the small size of the expanded boundary. This is not considered to be a significant increase in noise levels under CEQA. Projects would be required to comply with the Tahoe Valley Area Plan CNEL noise standards and policies to reduce excessive transportation noise levels and other provisions of Chapter 68 of the TRPA Code of Ordinances including Section 68.8.3 that requires major roadway projects on roadway segments that are not meeting CNEL standards to incorporate noise mitigating design features. Furthermore, as analyzed in Section 6.4.18, Transportation, the implementation of the 2015 Tahoe Valley Area Plan would reduce region-wide vehicle miles traveled (VMT) by 10,702 below the region-wide modeled total of 1,932,441 (see discussion and analyses for Question 142 below). In addition, planned improvements associated with pedestrian, bicycling, and transit improvements are further expected to reduce vehicle trips, thereby reducing overall noise levels associated with traffic. Thus, people would not be exposed to severe

noise levels.

**Table 34**
**Predicted Existing No Project and Existing plus 2015 Tahoe Valley Area Plan Traffic Noise Levels**

| Roadway | Segment | Traffic Noise Levels (CNEL, dB) | | | | Distance to Noise Level Contours (feet) | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Distance (feet) | 2014 No Project | 2014 + ALT 3 | Δ Change | 2014 No Project (CNEL, dB) | | | 2014 + Proposed Tahoe Valley Area Plan (CNEL, dB) | | |
| | | | | | | 65 | 60 | 55 | 65 | 60 | 55 |

Increased Noise from Additional Light Industrial, Public Service and Commercial Uses

The Tahoe Valley Area Plan could include development of additional commercial or light industrial uses that contain noise sources, but it is not expected to exceed the Tahoe Valley Area Plan's noise level standards of 55dB and 65dB. The Tahoe Valley Area Plan incorporates two noise protection policies. Policy HNS-2.3 requires acoustical analysis as part of the environmental review process for when noise-sensitive land uses are proposed, and Policy HNS-2.5 requires the incorporation of noise reducing measures on a project specific basis. Such measure may include but are not limited to:

- Construction of barriers, berms, and/or acoustical shielding;
- Establishment of setbacks;
- Noise reducing acoustical treatment; or
- Use of building layout.

Additional policies in the General Plan would also be applicable to future development in the Tahoe Valley plan area. General Plan Policy HS-8.1 requires that annoying and excessive non-transportation noise not exceed the exterior noise level standards shown in Table HS-1 of the General Plan. In addition, Policy HS-8.2 requires appropriate mitigation to be incorporated in a project's design to achieve the noise standards. City site design standards also require projects (industrial and stationary sources) that may potentially exceed a plan area noise standard to include a noise analysis as part of the environmental review process and incorporate design features and self-monitoring components to ensure compliance with noise standards.

Application of the Tahoe Valley Area Plan and General Plan policies would ensure that people would not be exposed to severe noise levels.

Construction Noise

Construction activities are expected to occur within the Tahoe Valley plan area. Construction activities associated with new development and redevelopment include site preparation (e.g., demolition, clearing, excavation, grading), foundation work, paving, building construction, utility installation, finishing, and cleanup. These activities typically involve the use of noise-generating equipment such as cranes, excavators, dozers, graders, dump trucks, generators, backhoes, compactors, and loaders. Noise levels associated with these types of equipment are typically between 70 and 85 dBA Lmax at 50 feet. In unique circumstances, specialized construction equipment (such as pile drivers) or techniques (such as blasting) that are inherently louder than typical construction equipment (typically between 94 and 101 dBA Lmax at 50 feet) may be required. This noise increase would be of short duration and would likely occur primarily during daytime hours. Construction noise impacts are not considered significant under CEQA if the construction activity is temporary, the use of heavy equipment and noise activities is limited to daytime

hours, and all feasible noise abatement measures are used for noise-producing equipment. All construction activities are not considered to be adverse noise sources as long as construction occurs between the hours of 8:00 a.m. and 6:30 p.m. pursuant to Chapter 68 Noise Limitations, of the TRPA Code of Ordinances. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**120. Will the Project result in single event noise levels greater than those set forth in the TRPA Noise Environmental Threshold? (TRPA 6c)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis incorporates by reference the RPU EIS. (TRPA 2012a, Chapter 3.6.)

Single-event noise standards are set for in Section 68.3.1 of the TRPA Code for aircraft, watercraft, motor vehicles, motorcycles, off-road vehicles, and over-snow vehicles. The Regional Plan also sets forth single event numerical standards as set forth in **Table 36**.

**Table 36.**
**Single Event Numerical Noise Standards**

| Source | Overall | Less than 35 Mph | Greater than 35 MPH | Monitoring Distances |
|---|---|---|---|---|
| Aircraft | 80 | -- | -- | 6,500m – start of takeoff roll<br>2,000m – runway threshold approach |

The TRPA Regional Plan Goals and Policies also contain applicable goals and policies in the Noise Subelement, as described below:

- **Goal N-1: Single Event Noise Standards Shall Be Attained and Maintained.** People can be annoyed by a specific noise source. Thresholds have been adopted that apply to aircraft, boats, motor vehicles, off-road vehicles, and snowmobiles to reduce impacts associated with single noise events.

- **Policy N-1.1.** Unless superseded by an update to the 1996 Airport Master Plan, an ordinance and enforcement program shall permit only aircraft that meet the single event noise thresholds to use the airport.

- **Policy N-1.2.** Boats will only be allowed on Lake Tahoe if in compliance with the single-event threshold.

- **Policy N-1.3.** Motor vehicles and motorcycles shall comply with the appropriate noise thresholds.

- **Policy N-1.4.** Off-road vehicle use is prohibited in the Lake Tahoe Region except on specified roads, trails, or designated areas where the impacts can be mitigated.

- **Policy N-1.5.** The use of snowmobiles will be restricted to designated areas.

- **Policy N-1.6.** Permit uses only if they are consistent with the noise standards. Noise mitigation measures may be required on all structures containing uses that would otherwise adversely impact the prescribed noise levels.

Development within the Tahoe Valley Area Plan could involve uses that include these types of motorized vehicles. As is the case under existing conditions, new uses involving over-snow or other vehicles would be required to meet the TRPA Code provisions pertaining to single-event noise. Thus, this impact would be **less than significant**.

With respect to possible single event noise arising from construction, see discussion and analyses for Questions 112, 113 and 118.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

### 5.4.15 Population and Housing

This section presents the analyses for potential impacts to population and housing. **Table 37** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 37**
**Population and Housing**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 121. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)? (CEQA XIIIa) | | | **X** | |
| 122. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere? (CEQA XIIIb) | | | **X** | |
| 123. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere? (CEQA XIIIc) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 124. Alter the location, distribution, density, or growth rate of the human population planned for the Region? (TRPA 11a) | | | | **X** |
| 125. Include or result in the temporary or permanent displacement of residents? (TRPA 11b) | | | | **X** |

| | | | | |
|---|---|---|---|---|
| 126. Affect existing housing, or create a demand for additional housing?<br>To determine if the proposal will affect existing housing or create a demand for additional housing, please answer the following questions: (1) Will the proposal decrease the amount of housing in the Tahoe Region? (2) Will the proposal decrease the amount of housing in the Tahoe Region historically or currently being rented at rates affordable by lower and very-low-income households? (TRPA 12a) | | | | **X** |
| 127. Will the proposal result in the loss of housing for lower-income and very-low-income households? (TRPA 12b) | | | | **X** |

**121. Would the Project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)? (CEQA XIIIa)**

This potential effect is the same as those analyzed in the City General Plan EIR and therefore this analysis tiers from the General Plan EIR (CSLT 2010, p. 4.2-12).

The Tahoe Valley Area Plan Amendments may result in an increase in dwelling units and CFA within the boundaries of the area plan as a result of demolition and construction of land uses. As documented in 2015 for the initial Area Plan adoption, the Tahoe Valley Area Plan is expected to result in 373 dwelling units (approximately 932 new residents) as well as 102,000 square feet of CFA transferred to the Tahoe Valley Area Plan (approximately 204 full-time equivalent employees) by the year 2034. The rate of growth is assumed to occur over 20 years as a result of residential allocations assignments, bonus unit assignments, conversion of tourist accommodation units, and transfer of existing development to the Tahoe Valley Area Plan. At build out, the 2015 Tahoe Valley Area Plan predicted the construction of 97 affordable residential units and 276 market rate units. Since adoption, the Sugar Pine Village affordable housing project was approved and will eventually construct 248 affordable housing units. The affordable units require a bonus unit assignment from TRPA which currently has approximately 950 available through 2032. The market rate units would require a residential allocation from the approximately 1,650 allocations currently remaining and forecasted to be constructed through the year 2045. Conversion of use and transfer of existing development into residential units of use are not considered additional growth by the TRPA Code of Ordinances.

The Tahoe Valley Area Plan would implement the mixed-use zoning concepts envisioned by the Regional Plan and the General and analyzed in the RPU EIS (TRPA 2012a) and the General Plan EIR (CSLT 2010, p. 4.2-12). The TRPA Regional Plan and the City General Plan would result in changes to the overall density and distribution of the region's population and gradually increase the density of the population within

centers such as the Tahoe Valley plan area and simultaneously phase out lower-density uses outside these centers. Although this represents a change in the density and distribution of the region's population, such changes are not anticipated to result in environmental degradation. The transition to higher-density, compact, transit-oriented development is anticipated to reduce environmental impacts associated with traffic (vehicle miles traveled), air quality, land disturbance, infrastructure expansion, and other environmental issue areas and to provide opportunities for stream environment restoration and improved water quality control facilities which would be beneficial. Growth within the Tahoe Valley plan area would continue to be constrained to that which is allowed by the growth management system set forth in Chapter 50 of the TRPA Code. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**122. Would the Project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere? (CEQA XIIIb)**

The Project does not displace housing or necessitate the construction of replacement housing elsewhere but rather incentivizes the transfer of existing residential uses located in sensitive land or distant from community centers to transfer to community mixed-use centers. The intent of the plan is promote higher density residential uses within the mixed-use centers to promote walkability and feasibility of alternative transportation options and adhere to statutory requirements of the Sustainable Communities Strategy to reduce passenger vehicle-related greenhouse gas emission in California. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**123. Would the Project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere? (CEQA XIIIc)**

See discussions and analyses for Questions 121 and 122 above, concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**124. Will the Project alter the location, distribution, density, or growth rate of the human population planned for the Region? (TRPA 11a)**

See discussions and analyses for Questions 121 and 122 above, concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**125. Will the Project include or result in the temporary or permanent displacement of residents? (TRPA 11b)**

See discussions and analyses for Questions 121 and 122 above, concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**126. Will the Project affect existing housing, or create a demand for additional housing?**

**(1) Will the proposal decrease the amount of housing in the Tahoe Region? (2) Will the proposal decrease the amount of housing in the Tahoe Region historically or currently being rented at rates affordable by lower and very-low-income households? (TRPA 12a)**

(1) The vision for the Tahoe Valley Area Plan is a central destination that provides full services for tourists and permanent residents. The potential development and redevelopment associated with the Tahoe Valley Area Plan is anticipated to create an increase in temporary and permanent jobs, which would result in a commensurate increase in the demand for housing.

The amount and timing of additional housing units within the Region and similarly the Tahoe Valley plan area is limited by TRPA's existing growth management provisions. The TRPA Code provides incentives for the development of affordable and moderate-income housing, as discussed below under Item 2. Also, the creation of workforce and affordable housing is a priority of the City of South Lake Tahoe. The Housing Element of the City's General Plan includes several goals and actions related to increasing housing opportunities within the City, including affordable housing units at Lake Tahoe (Goal HE-1 and Goal HE-2, CLST 2011). The City has programs in place to facilitate housing including reserving one-third of its annual allocation for multi-residential projects, collaborating with TRPA to convert illegal mother-in-law units to legal accessory dwelling units, and when funding is available supporting the First-Time Homebuyer and Moderate- Income Homebuyers Programs. The City also collaborates with TRPA and other local jurisdictions on the Living Working Group and implementing policies that are called for in TRPA's Goals and Policies (TRPA, 2012d, p. A5-1). Implementation of the Tahoe Valley Area Plan would not result in a decrease in the amount of housing available in the Tahoe Region, but would rather result in more housing options available for residents of the Tahoe Basin due to propose changes to require a minimum multi-family density, and standards that prohibit the replacement of existing housing with vacation homes within the area plan.

(2) This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore tiers from the RPU EIS. (TRPA 2012a, 3.12-8 to 3.12-13.)

The Regional Housing Needs Assessment (RHNA) is mandated by State Housing Law as part of the periodic process of updating local housing elements of the General Plan. The RHNA quantifies the need for housing within each jurisdiction during specified planning periods. The total RHNA allocation for the projection period from January 1, 2006 to June 30, 2013 was a total of 218 units from very low to above moderate units (CSLT 2011, p. HE-53). The City met its obligation of 291 units for the 2006-2013 projection period. The total RHNA allocation for the June 2014-June 2022 projection period is 336 units. During this cycle, the City provided 408 housing units towards the RHNA obligation. The City recently adopted (June 2022) an updated Housing Element to provide direction on addressing housing issues and the RHNA allocation. The total RHNA allocations from

2022 through 2027 is 289 units. At this time (March 2024), 230 units have been permitted.

Additionally, Regional Plan Policy HS-1.2 requires local governments to assume their "fair share" of the responsibility to provide low and very low-income housing. The TRPA Code also provides incentives for the development of affordable and moderate-income housing, including increased density (Section 31.4.1 of the TRPA Code), height (Section 37.5.5 of the TRPA Code), and exemption from residential allocation requirements (Section 52.3.4 of the TRPA Code). Finally, in accordance with Regional Plan Goal HS-3 and Policy HS-3.1 (TRPA 2012d), TRPA is required to develop and implement a Regional Housing Needs Program. The Housing Needs Program will evaluate progress towards the adopted housing goals and recommend policy and ordinance changes necessary to achieve those goals. Changes may include, but are not limited to, the conversion of residential allocations to bonus units that would be available only for the construction of affordable and/or moderate-income housing, the creation of new bonus units for affordable housing and modification of development standards to promote housing affordability.

Additionally, the following Policies in the Tahoe Valley Area Plan will promote housing affordability:

**Policy LU-2.11** designates the Tahoe Valley as a primary area in the City for resident-serving commercial uses, workforce housing and affordable housing. Furthermore, the policy encourages transforming the area into a contemporary, pedestrian-oriented, mixed-use, commercial service district served by a transit center and alternate transportation opportunities.

**Policy LU-5.1 – Town Center Core** Create a compact, mixed-use, vibrant Town Center Core district focused on the "Y" intersection that includes resident-serving commercial uses, retail and entertainment uses, and workforce and affordable housing.

**Policy H-1.1 – Housing Options** Provide for a range of housing options that include affordable, moderate-income, and workforce housing so that people can live and work in the City.

**Policy H-1.7 – Tahoe Livable Communities Program** Collaborate and support efforts of the California Tahoe Conservancy to remove blighted properties and repurpose associated development commodities. Encourage the use of residential commodities for affordable housing in Tahoe Valley area.

**Policy H-1.8 – Regional Housing Needs Assessment** Collaborate with TRPA on the Regional Housing Needs Assessment to develop updated policies and implementation strategies to remove barriers and facilitate the development of affordable housing. Regional housing policies and programs should complement and not conflict with or duplicate state or local housing policies and programs.

For these reasons implementation of the Tahoe Valley Area Plan and other housing programs implemented on a regional scale is likely to increase the number of affordable units within the Tahoe region. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**127. Will the Project result in the loss of housing for lower-income and very-low-income households? (TRPA 12b)**

See discussion and analysis for Question 126 above, concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

### 5.4.16 Public Services

This section presents the analyses for potential impacts to public services. **Table 38** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 38**
**Public Services**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 128. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: | | | | |
| Fire protection? | | | **X** | |
| Police protection? | | | **X** | |
| Schools? | | | **X** | |
| Parks? | | | **X** | |
| Other public facilities? (CEQA XIVa) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| Will the proposal have an unplanned effect upon, or result in a need for new or altered governmental services in any of the following areas? | | | | |
| 129. Fire protection? (TRPA 14a) | | | | **X** |
| 130. Police protection? (TRPA 14b) | | | | **X** |

| | | | | |
|---|---|---|---|---|
| 131. Schools? (TRPA 14c) | | | | **X** |
| 132. Parks or other recreational facilities? (TRPA 14d) | | | | **X** |
| 133. Maintenance of public facilities, including roads? (TRPA 14e) | | | | **X** |
| 134. Other governmental services? (TRPA 14f) | | | | **X** |

**128. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Fire protection? Police protection? Schools? Parks? Other public facilities? (CEQA XIVa)**

Schools

The Tahoe Valley Area Plan amendments could result in additional dwelling units based on increased density and land coverage limits for former Plan Area 111 and 114 parcels, generating approximately new students. The Lake Tahoe Unified School District has experienced a drop in student enrollment in the past several decades. As such, it is expected that any additional students generated as a result of the Tahoe Valley Area Plan amendments will be adequately served by existing educational facilities in the City, several of which are located in close proximity to the Tahoe Valley plan area. As the Tahoe Valley Area Plan would not require the provision of new or updated schools to serve students generated in Tahoe Valley plan area, there would not be an adverse impact to schools.

Police Services

Police service in the Tahoe Valley plan area is provided by the City of South Lake Tahoe Police Department. The South Lake Tahoe Police Department has a jurisdictional area of approximately 13 square miles, five of which include waters of Lake Tahoe. The department is located at 1352 Johnson Boulevard and currently has 42 full-time sworn officers. Supporting the 42 sworn positions are 20 civilian personnel. (Email Comm.; Chief David Stevenson, 2/26/2024)

As of February, 2024, the current staffing level at the South Lake Tahoe Police Department is approximately 1.9 officers per 1,000 residents, based on a Census population of 21,508 (CA Department of Finance, 2023). According to U.S. Bureau of Justice statistics (2008), Municipal and township police departments employed an average of 2.3 full-time officers per 1,000 residents.

Dispatch service is provided by the Operations Division of the police department. The dispatch center logs when a call is made to report a crime, when an officer is dispatched, when the officer arrives at the scene, and when the officer leaves the scene. An analysis of the of the dispatch logs indicates that the average response time for all calls (emergency and non-emergency) is approximately 9 minutes.

Fire Protection Services

The City of South Lake Tahoe Fire Department (SLTFD) consists of one Fire Chief, one administrative

Executive assistant, three shift commanders Battalion Chiefs, one Battalion Chief/Fire Marshal, one Fire Inspector II, nine captains, nine engineers, and sixteen firefighter paramedics of which fifteen are paramedics, and 13 reserve firefighters (Per Comm. Sallie Ross-Filgo, Administrative Executive Assistant to the Fire Chief, 2/27/2024).

Fire Station 1 is located within the Tourist Core and is located at 1252 Ski Run Boulevard at the intersection of Ski Run and Pioneer Trail. This is the Battalion Headquarters. Fire Station 2 is located at 2951 Lake Tahoe Boulevard.

Fire station 3 is located at 2101 Lake Tahoe Blvd and is located 2 blocks east of the Y intersection within the Tahoe Valley Area Plan boundary. This is the Administration Headquarters and staffed by one Type 1 Engine, one Type 3 Engine, an OES Type 6 Engine for back country rescue, 2 utility vehicles, a mobile air station, and a hazardous materials response trailer. Station 3 staff also operates Marine 17 (Rescue Boat) which is located in the Tahoe Keys.

Stations 1, 2 and 3 are minimum staffed with 1 Captain, 1 Engineer and 1 Firefighter/Paramedic. In addition, the SLTFD maintains mutual aid agreements with other fire and emergency response agencies in the Tahoe Region, including the Tahoe Douglas Fire District, Lake Valley Fire Protection District, and the US Forest Service, providing for area-wide fire response services both in and outside the City limits.

The Tahoe Valley Area Plan amendments may result in a modest increase in residential dwelling units and CFA previously predicted for buildout within the Tahoe Valley plan area in 2015, resulting in an increased need for fire and emergency response. This impact would be potentially significant.

The 2015 Tahoe Valley Area Plan Initial Study predicted up to 373 additional dwelling units and 102,000 square feet of CFA within the plan area. The Tahoe Valley Area Plan incorporates supporting policies to ensure that the increase in development potential will not cause an increase in demand for fire and emergency response that would result in a significant impact. The following proposed policies related to fire protection are incorporated in the Safety and Noise Section of the Tahoe Valley Area Plan:

- **Policy HNS-1.3 Fire Protection** Require any new structure or any addition, alteration or repair, to implement fire prevention techniques consistent with the current California Building and Fire Codes in order to obtain a building permit.

- **Policy HNS-1.4 – Defensible Space and Fire-Safe Landscaping** Require property owners to maintain defensible space through annual landscape maintenance, including the removal of dead/dying material and pruning/thinning of flammable vegetation. Ensure that landscape plans for new and rehabilitated structures conform to defensible space requirements of Section 4291 of the California Public Resources Code.

- **Policy HNS-1.6 – Water Lines** Require all public water providers to maintain adequate water supply systems and flows to meet fire suppression needs throughout the City.

- **Policy HNS-1.7 – Minimum Fire Flow Requirements** Require that all new construction meet the minimum fire flow requirements as set forth in the current California Building and Fire Codes.

- **Policy HNS-1.8 – Healthcare Campus District** Collaborate with Barton Healthcare System to ensure adequate access is provided for emergency vehicles in any new construction or reconstruction of facilities in the Healthcare District.

In addition to the proposed policies of the Tahoe Valley Area Plan listed above, the City has adopted policy provisions in the General Plan (CSLT 2011, p. PQP-9) and fire protection standards in Title 5 of the City Code to ensure adequate fire protection services in the future. These provisions include maintaining adequate staffing levels, maintaining appropriate response times, requiring projects to install fire resistant

materials and interior sprinklers, incorporating fire safe landscaping and defensible space in all remodeled and new construction. Taken together with compliance with the California Fire Code, these existing provisions would help prevent and minimize the occurrence of fires. Prior to any project approval, the South Lake Tahoe Fire Department is consulted during project review to ensure that any subsequent project would not adversely affect the Fire Department's ability to provide fire and emergency response to a project within the Tahoe Valley plan area as a whole. The development within the Tahoe Valley Area Plan would concentrate development or commodities, including residential units of use, that could already be constructed in the City in a single area, thereby resulting in a gross, but not net, increase in population. The Tahoe Valley Area Plan also proposes economic redevelopment that would increase the property tax base and sales tax, thereby increasing City revenues available to pay for added services, including additional fire personnel.

Fire Flow

Water infrastructure located within the Tahoe Valley Area Plan may not support adequate fire flow to serve the needs of the South Lake Tahoe Fire Department. However, implementation of General Plan, Municipal Code, California Fire Code protection policies and standards, and Tahoe Valley Area Plan Health and Safety Policy HSN-1.3 would reduce this impact to a less than significant level.

According to Lukins Brothers Water Company (Lukins) Water System Rehabilitation and Replacement Design Report, adopted in 2009 (per comm: Jennifer Lukins, 3/10/2015), the water purveyor for the northwest portion of the Tahoe Valley plan area, some of the water lines underlying the Tahoe Valley plan area are smaller than eight inches in diameter, generally considered the minimum required to provide adequate fire flow to hydrants and risers. In the case of a significant fire event, adequate flow may not be maintained to firefighters responding to the blaze. Older, smaller diameter lines (e.g., 4 inches) within the Tahoe Valley plan area will require update in order to adequately provide fire flow to the area.

The Lukins system rehabilitation report identifies needed improvements and recommended improvements to bring the water system up to current fire flow standards. Phase 1 of the waterline replacement was completed in the spring of 2014 and involved the installation of a 12-inch main along 12$^{th}$ Street, the installation of fire hydrants, and upgrading residential service connection to 1-inch pipes to accommodate fire sprinkler requirements (Lukins 2014). Phase 2 extends the replacement of 4-inch water mains with 12-inch water mains, hydrants and meters in the James Avenue area. This project is pending funding from State of California Department of Water Resources, State Revolving Funding Program.

Although the Lukins system is not completely upgraded at this time, the requirement of existing policies and standards of the General Plan, City Municipal Building Code, Tahoe Valley Area Plan, and the California Fire Code, which requires all new construction meet the minimum fire flow requirements, installation of sprinklers and fire resistance materials, and incorporation of fire safe landscaping and defensible space, would help prevent and minimize the occurrence of fires. Implementation of these measures reflects the SLTFD's orientation toward preventing structural fires by incorporating these measures in projects, thus reducing the likelihood of a fire and reducing the need for additional staffing.

See discussion and analysis in Question 132 below for parks and recreation impacts.

With respect to other public facilities, the City has facilities located throughout the City of South Lake Tahoe, which are used for various purposes including social gathering and recreation uses. However, within the Tahoe Valley Area Plan there are no city-owned recreational facilities.

Implementation of the Tahoe Valley Area Plan may result in increased demand for community facilities and services as well as a need for new or physically altered governmental facilities. However, the changes

in demand to community services and facilities are not expected to result in substantial effects to the physical environment. However, as with other projects developed within the Tahoe Valley plan area and consistent with existing conditions, environmental review of specific projects would be required to ensure that physical impacts on the environment area fully mitigated.

Given current staffing levels, the proximity of existing police, fire, and emergency service facilities, implementation of City General Plan policies to minimize fire risk and reduce demand, as well as declining school enrollment, it is not anticipated that implementation of the Tahoe Valley Area Plan would create a need to construct new facilities that, in turn, could require new or improved facilities, the construction of which could result in adverse effects to the environment. However, as with other projects developed within the Tahoe Valley plan area and consistent with existing conditions, environmental review of specific projects would be required to ensure that staffing needs are identified and properly mitigated.

Health Services

Barton Memorial Hospital has served the South Lake Tahoe community since 1963 as a regional medical center. Since its inception, the hospital has been fully accredited by the Joint Commission on Accreditation of Health Care Organizations and the State of California. Part of the Barton HealthCare System, Barton Hospital, is South Lake Tahoe's largest medical facility and largest employer (900 employees).

The Barton HealthCare System facilities located within the Tahoe Valley plan area include:

**Barton Memorial Hospital and Helicopter Landing Pad.** Located at 2170 South Avenue, South Lake Tahoe.

**Barton Center for Orthopedics and Wellness.** Located at 2170 South Avenue, South Lake Tahoe.

**Barton Community Clinic.** Located at 2201 South Avenue, South Lake Tahoe.

**Barton Administrative Building.** Located at 2155 South Avenue, South Lake Tahoe.

**Tahoe Medical Offices.** Located at 2169 South Avenue, South Lake Tahoe.

**Barton Physician Offices**. Located at 2175 South Avenue, South Lake Tahoe.

**Barton Physician Offices**. Located at 1139 Third Street, South Lake Tahoe

**Barton Physician Offices**. Located at 1090 Third Street, South Lake Tahoe.

**Barton Laboratory**. Located at 1067 Fourth Street, South Lake Tahoe.

**Barton Offices**. Located at 1111-1113 Emerald Bay Road, South Lake Tahoe.

**Barton Offices**. Located at 2092 Lake Tahoe Boulevard, South Lake Tahoe.

The following facility is outside of the Tahoe Valley plan area but still may serve residents and visitors to the area:

**Stateline Medical Center.** Located at 155 Highway 50, Stateline, Nevada.

**Lake Tahoe Surgery Center.** Located at 212 Elks Point Road, Zephyr Cove, Nevada.

**Tahoe Orthopedics & Sports Medicine.** Located at 212 Elks Point Road, Zephyr Cove, Nevada.

As reported in 2015 at the time of adoption, the Tahoe Valley Area Plan could result in development of 373 additional dwelling units as well as 102,000 additional square feet of CFA, incrementally increasing demand for health services in the Tahoe Valley plan area. The 2015 Tahoe Valley Area Plan established a Town Center Healthcare District east of the "Y" intersection. Establishment of this district consolidated health services within the Tahoe Valley plan area and the City as a whole, increasing convenience for users, providing adequate access through improvements to circulation and pedestrian/bicycle facilities to and from the district, and other similar ancillary benefits of consolidation. At the request of Barton, the proposed amendments would add numerous land uses to the District as documented in Table 7 of Chapter 2. The Tahoe Valley Area Plan includes the following objective and policy regarding Health Care District:

- **Policy LU-6.2 – Barton Hospital Campus** Encourage Barton Healthcare to consolidate its facilities within the Town Center Hospital Campus District (TC-HC). This district would provide for healthcare services such as an orthopedic center, employee housing, temporary housing for patients' family members**,** and a parking garage. Encourage Barton Healthcare to prepare a Campus Master Plan for the Town Center Healthcare District that provides a blueprint for future development and redevelopment that connects existing and future facilities through an integrated pedestrian and bike friendly system.

- **Policy LU-6.4 – Parking** The Campus Master Plan should include an analysis of parking needs in the Town Center Healthcare District and incorporate parking management strategies to centralize and consolidate parking to create a "park-once" environment that is efficient, convenient and accessible by all the facilities located within the district.

- **Policy ED-2.1 – Healthcare** Encourage additional healthcare-related facilities to locate in the Town Center Healthcare District.

- **Policy ED-2.2 – Barton Hospital Campus Master Plan** Encourage and collaborate with Barton Hospital to develop a Campus Master Plan for the Town Center Healthcare District that promotes connectivity, walkability, and bikeability. (See also Policies LU-6.2 and LU-6.3.)

- **Policy ED-2.3 – Barton Hospital Incentives** Provide flexibility for the Barton Hospital to engage in public-private ventures. Upon adoption of a Campus Master Plan, healthcare services in which Barton Hospital owns a majority interest and are located within the Town Center Healthcare District will be considered public services provided by a non-profit organization, and may be exempt from the requirements for CFA entitlements pursuant to TRPA Code Section 50.8.3.

Update of older structures and the construction of new health care facilities would result in typical construction- and operational-related concerns of such uses. These effects include, but are not limited to, air quality impacts from both construction and operation, traffic impacts related to greater vehicle trips, biological and hydrological resources impacts (site dependent), and other similar effects of construction and operation of new structures within the Tahoe Valley plan area. These effects are discussed in the pertinent technical sections of this IS/IEC. The Tahoe Valley Area Plan would increase demand but also increase the effectiveness of health services, as well as potentially creating additional health related services within the City.

The Tahoe Valley Area Plan could result in development of 373 additional dwelling units and 102,000 square feet of CFA, and thus an associated increase in demand for healthcare services within the City. Additionally, as described above, the amendment to the Town Center Healthcare District to add new land uses is expected to result in greater flexibility for future redevelopment of health care-related structures

within the Tahoe Valley plan area. The reader is referred to Question 104 regarding proposed Policy ED-2.2 that would exempt certain health care services from the requirements of CFA entitlements.

Implementation of the Tahoe Valley Area Plan will have a **less than significant** impact to governmental services.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**129. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services: fire protection? (TRPA 14a)**

See discussion and analysis for Question 128 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**130. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services: police protection? (TRPA 14b)**

See discussion and analysis for Question 128 above.

Environmental Analysis: *Less than Significant Impact*

Required Mitigation: **None**.

**131. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services: schools? (TRPA 14c)**

See discussion and analysis for Question 128 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**

**132. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services: parks or other recreational facilities? (TRPA 14d)**

This effect was analyzed in the RPU EIS and therefore tiers from the RPU EIS. (TRPA 2012a, Chapter 3.11.) This effect was also analyzed in the General Plan EIR, and this incorporates by reference the analysis from the General Plan EIR. (CSLT 2010, pp. 4.14-9 to 4.14-9.)

Within the Tahoe Valley Area Plan there are no City-owned or City-operated recreational facilities. Informal recreational activities available within the Tahoe Valley Area Plan include dispersed recreation activities, such as bicycling, running, jogging, walking, skateboarding, and in-line skating.

The City of South Lake Tahoe Parks and Recreation Department maintains the following facilities outside of the Tahoe Valley Area Plan. **Table 39** provides a list of these facilities along with their location and a description of the amenities offered.

| Table 39<br>Parks and Recreation Facilities within City of South Lake Tahoe | | |
|---|---|---|
| **Name** | **Address** | **Facilities** |
| Recreation and Aquatics Center | Rufus Allen Blvd. near its intersection with US Highway 50 | Construction on a new recreation and aquatics center is scheduled for 2024. The new facility includes a pool, lazy river, gym, elevated track, commercial grade kitchen, and meeting rooms. |
| Recreation and Swim Pool Complex | 1180 Rufus Allen Blvd. | Pool, weight room, multi-purpose gym, BBQ, new outdoor playground, sand volleyball court, meeting and party room rentals, adult, youth and teen programs, snack bar, and swim shop. |
| Ice Arena | 1176 Rufus Allen Blvd. | NHL size ice surface with public skating, classes and hockey programs. Café, video arcade, disc sales, party room rentals, and pro shop. |
| Campground by the Lake | 1150 Rufus Allen Blvd. | Open April–October. Cabins, group sites, hook ups. |
| Bijou Municipal Golf Course | 3464 Fairway Ave. & Johnson Blvd. | Open May–October. 9-hole executive golf course with pro shop, practice net, putting green, snack bar and rentals. |
| South Lake Tahoe Recreation Area, El Dorado Beach, Boat Ramp & Parking | On US 50 at Lakeview Ave. | Concessionaire, picnic and BBQ areas. Boat ramp availability depends on lake level. |
| Conolley Beach | Behind Timber Cove Lodge on US 50 | Public beach. |
| Lakeview Commons and El Dorado Beach | On US 50 across from Campground by the Lake | Public beach. |
| Regan Beach | ½ mile west of El Dorado Beach off Lakeview Avenue at Sacramento Avenue | Public beach, playground, volleyball court, concessions, and restrooms. |
| Bijou Community Park | 1201 Al Tahoe Blvd. | Group picnic shelters, gazebo/bandstand, playground, game court area, sand volleyball courts, horseshoe pits, fitness trail, 27-hole disc golf course, skateboard park (helmets and pads required), and a central concession/restroom building. |
| South Lake Tahoe Community Play Fields | 1300 Al Tahoe Blvd. | 110,000 sq. ft. synthetic turf multi-use play fields with warm-up area, parking, and restrooms. |
| South Lake Tahoe Senior Center | 3050 Lake Tahoe Blvd. | Facility with meeting rooms and programs. |
| Explore Tahoe — An Urban Trailhead | 4114 Lake Tahoe Blvd. | Tahoe Visitor's Center. |

The Lake Tahoe Unified School District maintains South Tahoe High School (located east of the Tahoe Valley Area Plan), which has tennis courts, ball fields, and a gymnasium, and Tahoe Valley Elementary School (located north of the Tahoe Valley Area Plan), which has play areas. Forest lands managed by the U.S. Forest Service located near the Tahoe Valley Area Plan provide opportunities for active and passive outdoor recreation.

In addition, bike and pedestrian trails have been incorporated in some of the open spaces within the Tahoe Valley plan area providing connections to adjacent neighborhoods and to regional recreation amenities. Further, the City General Plan incorporates policies designed to meet any increase in demand for recreational opportunities. (CSLT 2010, pp. 4.14-9 to 4.14-9.)

Under the 2015 Tahoe Valley Area Plan buildout projections, it is assumed that approximately 373 new residential units will be developed in the Tahoe Valley plan over the next 20 years. Using the City's average household population of 2.5 persons, this new development would increase the area's population by about 932 persons. There would also be additional activity associated with the anticipated 102,000 square feet of commercial floor area. However, this minimal growth potential is not expected to have an impact on existing facilities. Moreover, the Tahoe Valley Area Plan would result in the development of a new open space greenbelt, and bike and pedestrian trails to serve the existing and future population of the Tahoe Valley plan area. Therefore, a substantial increase in the use of the existing parks and recreational facilities in the Tahoe Valley plan area and surrounding region is not anticipated based on the small amount of anticipated growth and no substantial physical deterioration of these facilities would occur as a result of implementing the Tahoe Valley Area Plan. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**133. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services in maintenance of public facilities, including roads? (TRPA 14e)**

The Tahoe Valley Area Plan would not alter or revise policies and practices pertaining to maintenance of public facilities, including roads. The City General Plan, Public/Quasi-Public Facilities and Services Element (CSLT 2011, p. PQP-4) lists the following goal and policy:

- **Goal PQP-1.1** To ensure the timely maintenance, expansion, and upgrades of public facilities and services for the entire community.

- **Policy PQP-1.5** The City shall require that new development pay it fair share of the cost of providing new public services and/or the costs of expanding/upgrading existing facilities in services impacted by new development.

- **Policy PQP-1.8** The City shall identify operations and maintenance costs and priorities for existing infrastructure, and identify and develop a fair, equitable, and stable fiscal program to finance the ongoing maintenance of infrastructure.

Therefore, subsequent projects under the Tahoe Valley Area Plan would be required to pay all appropriate fees associated with the maintenance of public facilities. Any subsequent projects proposed within the Tahoe Valley plan area would be subject to permitting by City and/or TRPA. Consistent with existing requirements, permit applicants would be required to demonstrate how any additional public maintenance requirements would be accomplished. Thus, this impact would be **less than significant**.

Environmental Analysis*: Less than Significant Impact.*

Required Mitigation: **None.**

**134. Will the Project have an unplanned effect upon, or result in a need for new or altered governmental services in other governmental services? (TRPA 14f)**

There are no other known governmental services that would be directly affected by development associated with the Tahoe Valley Area Plan.

Environmental Analysis*: No Impact.*

Required Mitigation: **None.**

### 5.4.17 Recreation

This section presents the analyses for potential impacts to recreation. **Table 40** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 40**
**Recreation**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 135. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? (CEQA XVa) | | | **X** | |
| 136. Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? (CEQA XVa) | | | **X** | |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 137. Create additional demand for recreation facilities? (TRPA 19a) | | | | **X** |
| 138. Create additional recreation capacity? TRPA 19b) | | | | **X** |
| 139. Have the potential to create conflicts between recreation uses, either existing or proposed? (TRPA 19c) | | | | **X** |
| 140. Result in a decrease or loss of public access to any lake, waterway, or public lands? (TRPA 19d) | | | | **X** |

**135. Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? (CEQA XVa)**

See response to Question 132 above.

As described above, there are currently no City-owned or City-operated parks or active recreational facilities within the Tahoe Valley plan area; however, there are some recreational facilities provided at the public schools adjacent to the Tahoe Valley plan area as well as informal recreational activities available throughout the Tahoe Valley plan area including bicycling, running, jogging, walking, skateboarding, and in-line skating. In addition, bike and pedestrian trails have been incorporated in some of the open spaces within the Tahoe Valley plan area providing connections to adjacent neighborhoods and to regional recreation amenities.

Under the 2015 Tahoe Valley Area Plan buildout projections, it is assumed that approximately 373 new residential units will be developed in the Tahoe Valley plan over the next 20 years. Using the City's average household population of 2.5 persons, this new development would increase the area's population by about 932 persons. There would also be additional activity associated with the anticipated 102,000 square feet of commercial floor area. However, this minimal growth potential is not expected to have an impact on existing facilities. Moreover, the Tahoe Valley Area Plan would result in the development of a new open space greenbelt, and bike and pedestrian trails to serve the existing and future population of the Tahoe Valley plan area. Therefore, a substantial increase in the use of the existing parks and recreational facilities in the Tahoe Valley plan area and surrounding region is not anticipated based on the small amount of anticipated growth and no substantial physical deterioration of these facilities would occur as a result of implementing the Tahoe Valley Area Plan. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**136. Would the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? (CEQA XVb)**

The Tahoe Valley Area Plan includes recreation goals, policies and implementation strategies that would encourage the development of additional recreational improvements within the Tahoe Valley plan area. These improvements include the following:

- Creating additional public open spaces (limited or no development);
- Constructing the Tahoe Valley Greenbelt (public open space with recreation access and recreation amenities);
- Encouraging public plazas and gathering spaces in commercial nodes;
- Improving the safety, convenience and attractiveness of pedestrian facilities;
- Constructing Class I bike paths, Class II bike lanes, and Class III bike routes linkages;
- Improving bicycle route crossings at major streets, state highways and the "Y" intersection;
- Improving the bike way-finding signage program; and
- Promoting the Town Center Core District as a recreation "hub" at Highway 50/89 intersection.

Environmental impacts of development and operation of these additional recreation amenities and improvements cannot be directly quantified as none of these proposed improvements have been designed and no specific proposals for construction of these improvements has been received by either TRPA or the City. However, general impacts are expected to be largely similar to other construction expected within the

Tahoe Valley plan area (air quality impacts from both construction traffic/equipment; potential soils impacts from grading and ground development as well as additional public use of open space; traffic generated through maintenance and use of these amenities; etc.). The potential environmental effects of constructing these recreational facilities are addressed as part of overall development of the Tahoe Valley Area Plan throughout this document at a programmatic level and mitigation measures are provided where necessary to minimize project impacts. In addition, each improvement would be subject to its own environmental review at a project-specific level prior to construction. Implementation of the policies contained in the proposed Area Plan and the mitigation measures identified herein, and the completion of project-level environmental review for each improvement will reduce this impact to a **less than significant** level.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**137. Will the Project create additional demand for recreation facilities? (TRPA 19a)**

See response to Question 132 above concluding that this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**138. Will the Project create additional recreation capacity? (TRPA 19b)**

See discussions and analyses in Questions 136 through 137 above that concludes that any potential new demand that is created by development within the Tahoe Valley plan area is expected to be easily met. Furthermore, the Tahoe Valley Area Plan also proposes policies and implementing strategies to enhance public transit, biking and pedestrian linkages to recreation uses within and beyond the boundaries of the Tahoe Valley Area Plan. By providing access to a wider range of public recreation opportunities within and outside the boundary will limit the disproportional effect on any one recreation site or activity.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**139. Will the Project have the potential to create conflicts between recreation uses, either existing or proposed? (TRPA 19c)**

Any projects permitted through the Tahoe Valley Area Plan would be subject to subsequent project-level environmental review and permitting. Goal R-5 of the Regional Plan specifically addresses incompatibility of recreational uses and the associated system for regulating PAOTs (Section 50.9 of the TRPA Code), which would preclude any conflicts between existing or proposed recreational uses (TRPA 2012d, pp. 5-7 and 5-8). Additionally, the potential for expanded land uses to create conflicts between existing land uses was analyzed in Impact 3.11-2 of the RPU EIS (TRPA 2012a, p. 3.11-21) and was found to be **less than significant** due to the existing protections in the goals and policies of the Regional Plan.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**140. Will the Project result in a decrease or loss of public access to any lake, waterway, or public lands? (TRPA 19d)**

TRPA policy encourages the preservation and enhancement of the high-quality recreation experience through the preservation of high-quality undeveloped shorezone and other natural areas and through the provision of additional access to such areas. The Tahoe Valley plan area does not encompass any shorezone. However, a portion of the Tahoe Valley plan area (18.9 acres) is already preserved as publicly-owned open space.

The Tahoe Valley Area Plan includes recreation goals and policies that would result in better utilization of public land in the Tahoe Valley plan area for recommended recreation amenities and provide for additional public open space amenities that are linked to adjacent neighborhoods and regional recreation sites. Specific recreational improvements called for in the Tahoe Valley plan area include restoring two disturbed sites acquired by the California Tahoe Conservancy to open space, and developing the Tahoe Valley Greenbelt as an open space and recreation amenity that can be accessed from the commercial nodes and adjacent residential areas. Also called for in the Tahoe Valley Area Plan is increased safety, convenience, access and attractiveness of pedestrian facilities and trails, construction of Class I bike paths, Class II bike lanes, and Class III bike routes, improvements to bike crossings, and other transportation and recreation improvements integrating the trail system to other regional recreation facilities that provide access to natural areas and public lands.

The Tahoe Valley Area Plan would specifically implement the following policies related to recreation:

- **Policy REC-1.1 – Hierarchy and Interconnection** Develop an interconnected system of open spaces, community parks, plazas, bike and pedestrian trails, and other types of public and private spaces as part of new development and redevelopment of existing sites.

- **Policy REC-1.3 – Private Improvements** Encourage the private sector to make recreational improvements on their land. Improvements may include establishing community event areas, providing paths and walkways that connect to adjacent sidewalks and bike paths, establishing appropriate space for the outdoor display of for sale or rent recreation equipment.

- **Policy REC-1.4 – Access** Enhance the existing trail and bike system that connects the Tahoe Valley area to recreation opportunities in the south shore.

- **Policy REC-2.1 – Preservation** Preserve and maintain open spaces within the Tahoe Valley plan area that provide a visual break from the urban environment as well as views of surrounding mountains, forests, and stream environment zones. Depending upon their ecological sensitivity, open spaces may incorporate paths, boardwalks, pedestrian and bicycle trails, and benches.

- **Policy REC-2.2 – Public Access** Ensure that public access does not jeopardize restoration activities and water quality and stormwater treatment projects on publicly-owned open space lands.

- **Policy REC-2.3 – Multi-Use** Encourage the multi-use of open spaces in the Tahoe Valley area for storm water treatment, pedestrian and bicycle connectivity, passive recreation uses and as a visual break from the developed environment.

- **Policy REC-2.4 – Tahoe Valley Greenbelt** Construct the Tahoe Valley Greenbelt Project as multi-use area incorporating stormwater treatment facilities, pathways, and open space. Allow for the accommodation of active and passive recreation uses that include but are not limited to installing bike/pedestrian paths, pedestrian amenities, and interpretive signage.

- **Policy REC-2.5– Adjacent Uses** Encourage commercial uses located adjacent to the Tahoe Valley Greenbelt to provide direct access to the greenbelt and use it as a visual amenity.

- **Policy REC-3.1 – Recreation Hub** Promote the Town Center Core District as a recreation hub by allowing for a mix of uses that promote outdoor recreation concessionaires, recreation based commercial services, and temporary activities. Connect the recreation hub to recreation opportunities by upgrading existing bike and pedestrian trails, constructing new connections, and increasing transit service. Improve access to recreation opportunities by installing way-finding and interpretive signage within the Town Center Core District and improve access along bike trails.

- **Policy REC-3.3 – Neighborhood/Pocket Parks** Develop neighborhood/pocket parks within the Neighborhood Professional District and surrounding residential areas.

Therefore, implementation of the proposed policies above, creating and preserving additional open space, construction of additional bike trails, and constructing the Tahoe Valley Greenbelt are consistent with TRPA policies encouraging the preservation of natural areas. Providing access to public recreation lands will result in a **beneficial impact**.

Environmental Analysis: *Beneficial Impact.*

Required Mitigation: **None.**

### 5.4.18 Transportation and Traffic (CEQA) and Traffic and Circulation (TRPA)

This section presents the analyses for potential impacts to transportation, traffic and circulation. **Table 41** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 41**
**Transportation, Traffic and Circulation**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 141. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? (CEQA XVIa) | | | **X** | |
| 142. Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways? (CEQA XVIb) | | | **X** | |
| 143. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks? (CEQA XVIc) | | | | **X** |
| 144. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? (CEQA XVId) | | | **X** | |
| 145. Result in inadequate emergency access? (CEQA | | | **X** | |

| | | | | |
|---|---|---|---|---|
| XVIe) | | | | |
| 146.Conflict with adopted policies, plans or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? (CEQA XVIf) | | | | **X** |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 147.Generation of 650 or more new average daily Vehicle Miles Travelled? (TRPA 13a) | **X, LTS** | | | |
| 148.Changes to existing parking facilities, or demand for new parking? (TRPA 13b) | | | | **X** |
| 149.Substantial impact upon existing transportation systems, including highway, transit, bicycle or pedestrian facilities? (TRPA 13c) | | | | **X** |
| 150.Alterations to present patterns of circulation or movement of people and/or goods? (TRPA 13d) | | | | **X** |
| 151.Alterations to waterborne, rail or air traffic? (TRPA 13e) | | | | **X** |
| 152.Increase in traffic hazards to motor vehicles, bicyclists, or pedestrians? (TRPA 13f) | | | | **X** |

**141. Would the Project conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? (CEQA XVIa)**

The Tahoe Valley Area Plan amendments would not alter, revise or conflict with any applicable plan, ordinance or policy establishing the measures of effectiveness for the performance of the circulation system. Consistent with the Regional Plan, development and redevelopment associated with the Tahoe Valley Area Plan as a whole, and individual projects therein, that would generate a net increase of 1,300 vehicle miles traveled (VMT) or more would be required to prepare a project-level traffic analyses in accordance with Section 65.2.4.B of the TRPA Code. Under the proposed amendments, restaurants would be permitted to add up to 20 seats of outdoor dining with no requirement for obtaining additional CFA. This amendment is considered to have a less than significant impact on applicable transportation plans given STPUD and TRPA determinations that this level of restaurant expansion would not require a change to sewer allocations or require new CFA for the business. For any new VMT that are generated, TRPA requires an applicant to offset the potential regional traffic and air quality effects of the new VMT by requiring an applicant to meet the standards of significance listed in Table 65.2.3-1. In accordance with Section 65.2.4.C of the TRPA

Code, regional and cumulative mitigation measures may include, but not be limited to transit facility construction; transportation system management measures (such as bicycle and pedestrian facilities and use of alternative fuels in fleet vehicles); or transfer and retirement of offsite development rights. In order to offset regional and cumulative impacts, additional development, excepting deed-restricted affordable, moderate, and achievable housing development within areas eligible for Residential Bonus Units, shall contribute to the Mobility Mitigation Fund. The amount of contribution is established in Code subparagraph 65.2.4.D. Thus, this impact would be **less than significant**.

Also see discussion and analysis in Question 19 above which conclude that all signalized intersections are found to attain LOS standards and analysis in Question 142 below which concludes that the 2015 Tahoe Valley Area Plan is forecast to result in a reduction in region- wide VMT of 10,702 or 0.55 percent below the baseline region-wide modeled total of 1,932,441.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**142. Would the Project conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways? (CEQA XVIb)**

The Tahoe Valley Area Plan amendments would not alter, revise or conflict with the applicable congestion management program including but not limited to, level of service standards and travel demand measures, or other standards established by the congestion management agency for designated roads or highways. TRPA is the designated Regional Transportation Planning Agency in the Tahoe Basin and has established Level of Service standards for roadways and intersections and Vehicle Miles of Travel (VMT) standards.

The potential effect is the same as those analyzed in the City General Plan Update EIR, which included an evaluation of LOS for key roadway segments intersections. At full build out under the General Plan the General Plan EIR concluded that all roadway segments and all intersections would achieve the LOS standards under year 2030 traffic conditions (CSLT 2010, pp. 4.4-30 through 4.4-40). The amount and location of potential development allowed in the Tahoe Valley Area Plan is consistent with the City General Plan. All intersections would provide adequate (D or better) LOS under current traffic control.

The RPU EIS also evaluated roadway LOS in 2035 along US 50 and SR 89. The assumptions regarding future development in the Tahoe Valley plan area are articulated in Appendix E.7 of the RPU EIS (2012a). These assumptions include an increase in residential, tourist accommodation, and commercial uses in the Tahoe Valley plan area, consistent with increases that could occur under implementation of the Regional Plan. The amount and location of potential development allowed in the Tahoe Valley Area Plan is consistent with the Regional Plan and the RPU EIS analysis. Therefore, based on this modeling, roadway and intersection LOS standards along roadway segments in the Tahoe Valley would be acceptable in 2035 (TRPA 2012a, pp. 3.3-42 to 3.3-44). Any subsequent project implemented under the Tahoe Valley Area Plan that would not meet screening criteria for VMT (Code Section 65.2.3.D) would be required to prepare a project-level traffic analyses in accordance with Sections 65.2.4.B of the TRPA Code. Any impacts that exceed VMT standards of significance (Table 65.2.3-1) would require mitigation at a project level.

The 2015 Tahoe Valley Area Plan is consistent with the Regional Plan and analysis of VMT contained in the Regional Plan EIS. The City of South Lake Tahoe is also subject to the residential allocation procedures established by the TRPA Code that phases the release of land use allocations contingent upon VMT Threshold being maintained. As shown in **Table 42** the 2015 Tahoe Valley Area Plan is forecast to result

in a reduction in region-wide VMT of 10,702 or 0.55 percent below the baseline region-wide modeled total of 1,932,441. This includes consideration of proposed VMT reduction measures and environmental improvements in the Tahoe Valley Area Plan. To the degree that adoption of the Area Plan results in expanded implementation, this is considered to be a **beneficial impact**. The addition of approximately 11.5 acres to the Area Plan Town Center in the Gateway and Neighborhood Professional Districts and establishment of the new Emerald Bay Connection Corridor District (17.5 acres) would not adversely effect the projected benefits to VMT, as the land uses and densities are consistent with the existing goals of the Area Plan to concentrate development within close proximity to services and transit facilities.

**TABLE 42**
**IMPACT ON REGIONAL VEHICLE MILES OF TRAVEL AT BUILDOUT OF 2015 AREA PLAN**

| | Model Regional Vehicle Miles of Travel | Model Change from Baseline Conditions | Additional Reductions in VMT | | Total Impact on VMT | % Total Impact on Regional VMT |
|---|---|---|---|---|---|---|
| | | | Transit Improvements | Bicycle / Pedestrian Improvements | | |
| WITH REGIONAL PLAN UPDATE LAND USE | | | | | | |
| Baseline Conditions | 1,932,331 | 0 | 0 | 0 | - | - |
| 2015 Tahoe Valley Area Plan | 1,924,144 | -8,297 | -850 | -1,555 | -10,702 | -0.55% |

*Source: TRPA Regional Transportation Model*

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

### 143. Would the Project result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks? (CEQA XVIc)

The Project does not change air traffic patterns or air traffic. With respect to air traffic safety risks, see response to Question 74 above. Thus, there would be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

### 144. Would the Project substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? (CEQA XVId)

Consistent with the TRPA Regional Plan and City General Plan, implementation of the Tahoe Valley Area Plan is expected to enhance pedestrian and bicycle safety. Figure 13 of the Transportation and Circulation Element includes the existing and planned bicycle and pedestrian facilities within the Tahoe Valley Area Plan.

Further, Policy T-3.4 of the Transportation and Circulation Element requires sidewalks for all new and

expanded uses. The Tahoe Valley Area Plan amendment areas would also be required to include improvements that would separate pedestrian and bicycle travel from roadway travel lanes, thus reducing the potential for conflicts between motor vehicles, bicyclists, and pedestrians. Specifically, by virtue of adding sidewalks, dedicated bike paths, enhanced transit, and other amenities, safety conditions would be improved and the potential for conflict would be reduced. Furthermore, all transportation and traffic related facilities proposed in the Tahoe Valley Area Plan would conform to the appropriate federal, state and local roadway, sidewalk intersection design standards (e.g., ASHTOO, MUTCD, Caltrans Highway Design Manual and City Roadway Design Standards) for public health and safety reasons.

The Transportation Element of the proposed Tahoe Valley Area Plan includes policies that provide for minimizing through traffic on residential streets, Complete Street strategies on collector streets, and improvements to separate bicycle/pedestrian and vehicular traffic. It would also result in a net reduction in vehicle-miles of travel. To the degree that adoption of the Area Plan results in expanded implementation of these strategies, this impact would be **beneficial**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**145. Would the Project conflict with adopted policies, plans or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? (CEQA XVIf)**

The implementation of the Tahoe Valley Area Plan would implement policies of the adopted TRPA Regional Plan and City General plan which encourages a land use pattern that promotes the use of alternative modes of transportation. Tahoe Valley Area Plan policies call for construction of pedestrian sidewalk, bike paths, bike lanes and expansion of transit routes to recreation sites. It is expected that the adding sidewalks, dedicated paths, and enhanced transit options will improve safety conditions and allow efficient movement of people in the Tahoe Valley plan area. To the degree that adoption of the Area Plan results in expanded implementation of these strategies, this impact would be **beneficial**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**146. Would the Project conflict with adopted policies, plans or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities? (CEQA XVIf)**

The implementation of the Tahoe Valley Area Plan would implement policies of the adopted TRPA Regional Plan and City General plan which encourages a land use pattern that promotes the use of alternative modes of transportation. Tahoe Valley Area Plan policies call for construction of pedestrian sidewalk, bike paths, bike lanes and expansion of transit routes to recreation sites. It is expected that the adding sidewalks, dedicated paths, and enhanced transit options will improve safety conditions and allow efficient movement of people in the Tahoe Valley plan area. To the degree that adoption of the Area Plan results in expanded implementation of these strategies, this impact would be **beneficial**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**147. Will the Project result in generation of 650 or more new average Daily Vehicle Miles Travelled? (TRPA 13a)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis tiers from and is consist with the RPU EIS. (TRPA 2012a, Chapter 3.3.)

While the 2015 Tahoe Valley Area Plan as amended would permit additional development on newly added vacant lands which could result in generation of new VMT, this change in area plan boundary is still consistent with the increase in development envisioned in the Regional Plan and analyzed in the RPU EIS, which projected to result in a 10 percent reduction in VMT region wide. Further, the proposed amendment under consideration is not a single project (to which the standard of 650 or more VMT is applicable), but an Area Plan, the implementation of which would likely result in some level of traffic increase.

The Tahoe Valley Area Plan amendments would not alter or revise the regulations pertaining to trip generation. Consistent with the Regional Plan, development and redevelopment associated with the Tahoe Valley Area Plan as a whole, and individual projects therein, is likely to generate 650 or more new average daily VMT. TRPA's updated project assessment process replaces average daily vehicle trip ends with VMT to determine a project's impact to transportation. The updated process screens eventual Area Plan development projects from additional analysis depending on its location: less than 1,300 average daily VMT when a project is within, or within 1⁄2 mile of a town or regional center; less than 715 average daily VMT in all other areas in the Region. Any subsequent project implemented under the Tahoe Valley Area Plan that would generate a net increase of VMT over these standards would be required to prepare a project-level traffic analyses in accordance with Section 65.2.4.B of the TRPA Code. The amendments would permit restaurants to add up to 20 seats of outdoor dining with no requirement for obtaining additional CFA. This amendment is considered to have a less than significant impact on VMT given TRPA's determination (Code Section 50.6.1.B.2) that this level of restaurant expansion would not require new CFA for the business. The amendments would allow accessory land uses to advertise separately from the primary land use – this is a change from TRPA Code. This amendment may result in increased visitation to accessory land uses and increase VMT. However, based on other limitations such as accessory use signage area and floor area, the potential increase to VMT is considered to be less than significant (e.g., under 650 or more new average daily VMT). For any new VMT that are generated by unexempted Area Plan projects, TRPA requires an applicant to offset the potential regional traffic and air quality effects of the new VMT by requiring payment of the calculated Mobility Mitigation Fee. The mobility mitigation fee amount would be assessed in accordance with the current mitigation fee schedule in the TRPA Rules of Procedure. Thus, this impact would be **less than significant**.

See also response to Question 142 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**148. Will the Project result in changes to existing parking facilities, or demand for new parking? (TRPA 13b)**

While the Tahoe Valley Area Plan amendments could result in changes to existing parking facilities, the changes would be consistent with the development envisioned in the Regional Plan and analyzed in the RPU EIS and this analysis tiers from the RPU EIS. (TRPA 2012a, Chapter 3.3.) Therefore, the potential changes to existing parking facilities would comply with the Regional Plan and would occur in compliance with the City and TRPA Codes.

The City Code (Chapter 6.10) and proposed amendments to the Tahoe Valley Area Plan design standards (Appendix C) require any subsequent development under the Area Plan to meet standards for parking supply and design. The proposed Area Plan amendments include possibilities for reductions to parking supply standards for multi-family residential and commercial projects located within 0.5 mile of transit stops or with contribution to alternative transportation measures. To utilize the reduced parking standards, an applicant must demonstrate that the alternative parking standards would not impact offsite parking facilities. As this would ensure the adequate design and provision of parking, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**149. Will the Project result in substantial impact upon existing transportation systems, including highway, transit, bicycle or pedestrian facilities? (TRPA 13c)**

See discussions and analyses for Questions 147, 148, 150, 151 and 152.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**150. Will the Project result in alterations to present patterns of circulation or movement of people and/or goods? (TRPA 13d)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis is tiered from the RPU EIS. (TRPA 2012a, Chapter 3.3.)

The Tahoe Valley Area Plan would not alter or revise the regulations pertaining to roadway and intersection level of service (LOS). The total amount of new development in the Tahoe Valley plan area is constrained by the growth control system in the Regional Plan and the proposed new permissible uses in the Tahoe Valley Area Plan would be consistent with the types of uses envisioned in the Regional Plan (see project description of this IS/IEC). As such, the Tahoe Valley Area Plan is within the development potential envelope of the Regional Plan, and no additional information on potential future projects within the Tahoe Valley plan area is known. Therefore, there is no need to further analyze roadway and intersection LOS beyond what was contemplated for the Regional Plan.

The RPU EIS also evaluated roadway LOS in 2035 along US 50 and SR 89. The assumptions regarding future development in the Tahoe Valley plan area are articulated in Appendix E.7 of the RPU EIS (2012a). These assumptions include an increase in residential, tourist accommodation, and commercial uses in the Tahoe Valley plan area, consistent with increases that could occur under implementation of the Regional Plan. The amount and location of potential development allowed in the Tahoe Valley Area Plan is consistent with the Regional Plan and the RPU EIS analysis. Proposed amendments would add parcels to the Area Plan boundary, but buildout assumptions for residential units and commercial floor area are not substantially increased. Therefore, based on the TRPA RPU modeling, roadway and intersection LOS standards along roadway segments in the Tahoe Valley would be acceptable in 2035 (TRPA 2012a, pp. 3.3-42 and 3.3-44). Any subsequent project implemented under the Tahoe Valley Area Plan that would generate a net increase of VMT over the standards of significance (Code Section 65.2.3.D.2) would be required to prepare a project-level traffic analyses in accordance with Section 65.2.4.B of the TRPA Code. Any impacts on roadway or intersection LOS would require mitigation at a project level. Thus, this impact would be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**151. Will the Project result in alterations to waterborne, rail or air traffic? (TRPA 13e)**

Implementation of the Tahoe Valley Area Plan will not result in alterations to waterborne, rail or air traffic. Thus, there would be **no impact**.

Environmental Analysis: *No Impact.*

Required Mitigation: **None.**

**152. Will the Project result in increase in traffic hazards to motor vehicles, bicyclists, or pedestrians? (TRPA 13f)**

This potential effect is the same as those analyzed in the TRPA Regional Plan Update, and therefore this analysis is tiered from the RPU EIS. (TRPA 2012a, Chapter 3.3.)

Consistent with the TRPA Regional Plan and City General Plan, implementation of the Tahoe Valley Area Plan is expected to enhance pedestrian and bicycle safety. Figure 8-1 of the Transportation and Circulation Element includes the existing and planned bicycle and pedestrian facilities within the Tahoe Valley plan area.

Further, Policy T-3.4 of the Transportation and Circulation Element requires sidewalks for all new and expanded uses. The proposed Tahoe Valley Area Plan improvements would separate pedestrian and bicycle travel from roadway travel lanes, thus reducing the potential for conflicts between motor vehicles, bicyclists, and pedestrians. Specifically, by virtue of adding sidewalks, dedicated bike paths, enhanced transit, and other amenities, safety conditions would be improved and the potential for conflict would be reduced. Furthermore, all transportation and traffic related facilities proposed in the Tahoe Valley Area Plan would conform to the appropriate federal, state and local roadway, sidewalk intersection design standards (e.g., ASHTOO, MUTCD, Caltrans Highway Design Manual and City Roadway Design Standards) for public health and safety reasons.

The Transportation Element of the proposed Tahoe Valley Area Plan includes policies that provide for minimizing through traffic on residential streets, Complete Street strategies on collector streets, and improvements to separate bicycle/pedestrian and vehicular traffic. It would also result in a net reduction in vehicle-miles of travel. To the degree that adoption of the Area Plan results in expanded implementation of these strategies, this impact would be **beneficial**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

### 5.4.19 Tribal Cultural Resources (CEQA)

This section provides analysis regarding the project's potential for substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, as it applies to the following. **Table 43** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 43: Tribal Cultural Resources**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: | | | | |
| 153. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k) (CEQA XVIIIa) | | | **X** | |
| 154. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (C) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (C) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe (CEQA XVIIIb). | | | **X** | |

**153. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)? (CEQA XVIIIa)**

The proposed amendment does not alter regulations pertaining to cultural resources.

There is no evidence of intact, potentially significant Washoe cultural sites within the existing TVAP or proposed amendment areas. Pursuant to AB 52, the City of South Lake Tahoe sent notification letters to the Ione Band of Miwok Indians, Washoe Tribe of California and Nevada, Shingle Springs Band of Miwok Indians, and the United Auburn Indian Community on March 13, 2023. To date, no response has been received.
Federal and state regulations, the TRPA Code (Chapter 67) and City General Plan policies address protection of tribal cultural resources and provide processes to avoid or minimize impacts to such resources. Included in the existing Codes and policies are measures to identify tribal cultural resources discovered during ground disturbing construction activities, and protect those deemed by the tribes to have unique ethnic values. Project development within the amendment area will be required compliant with federal and state regulations, TRPA Code and General Plan policies during project specific review, and therefore, would not alter or adversely affect tribal cultural resources.

See discussion and analysis for Questions 47 through 50 above. Implementation of federal and state regulations, TRPA Code (Chapter 67), and General Plan policies address protection of historic, cultural, archaeological and paleontological resources and provide processes to avoid or mitigate impacts to these resources. Therefore, any development associated with the proposed amendments would not result in a physical change that would affect unique ethnic cultural values. Thus, this impact is considered to be **less than significant**.

Environmental Analysis: *Less than Significant Impact*

Required Mitigation: **None.**

**154. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision( c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe? (CEQA XVIIIb).**

See discussion and analysis for Question 153 above.

Environmental Analysis: *Less than Significant Impact*

Required Mitigation: **None.**

### 5.4.20 Utilities and Service Systems (CEQA) and Energy and Utilities (TRPA)

This section presents the analysis for potential impacts to utilities, service systems and energy. **Table 44** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 44: Utilities, Service Systems and Energy**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 155. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board? (CEQA XVIIa) | | | **X** | |
| 156. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? (CEQA XVIIb) | | | **X** | |
| 157. Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? (CEQA XVIIc) | | | **X** | |
| 158. Have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new or expanded entitlements needed? (CEQA XVIId) | | | **X** | |
| 159.Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments? (CEQA XVIIe) | | | **X** | |

| | | | | |
|---|---|---|---|---|
| 160. Be served by a landfill with sufficient permitted capacity to accommodate the Project's solid waste disposal needs? (CEQA XVIIf) | | | X | |
| 161. Comply with federal, state, and local statutes and regulations related to solid waste? (CEQA XVIIg) | | | | X |
| **TRPA Initial Environmental Checklist Item** | **Yes** | **No, With Mitigation** | **Data Insufficient** | **No** |
| 162. Use of substantial amounts of fuel or energy? (TRPA 15a) | | | | X |
| 163. Substantial increase in demand upon existing sources of energy, or require the development of new sources of energy? (TRPA 15b) | | | | X |
| Except for planned improvements, will the proposal result in a need for new systems, or substantial alterations to the following utilities: | | | | |
| 164. Power or natural gas? (TRPA 15a) | | | | X |
| 165. Communication systems? (TRPA 15b) | | | | X |
| 166. Utilize additional water which amount will exceed the maximum permitted capacity of the service provider? (TRPA 15c) | | | | X |
| 167. Utilize additional sewage treatment capacity which amount will exceed the maximum permitted capacity of the sewage treatment provider? (TRPA 15d) | | | | X |
| 168. Storm water drainage? (TRPA 15e) | | | | X |
| 169. Solid waste and disposal? (TRPA 15f) | | | | X |

**155. Would the Project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board? (CEQA XVIIa)**

STPUD currently quantifies expected and current wastewater generation in terms of sewer units. A sewer

unit represents a single point source for wastewater, such as a kitchen or bathroom. Each sewer unit is assumed to generate on average 80 gallons per day (gpd) during normal flows.

Under the adopted 2015 Tahoe Valley Area Plan, the Tahoe Valley area could experience development of 373 additional dwelling units by the year 2032. According to current generation rates provided by STPUD (STPUD assumes that new multi-family dwellings are likely to include three sewer units per dwelling unit), this would result in approximately 1,119 new sewer units, which equates to 89,520 gpd of additional wastewater or 0.089 million gallons per day (mgd). While exact commercial wastewater generation flows cannot be determined by STPUD until specific commercial uses are identified, it is estimated that 102,000 square feet of CFA could generate approximately 31,824 gallons per day or 0.031 mgd of wastewater flow. As the STPUD wastewater treatment plant currently exhibits excess capacity of 3.7 mgd on average dry days, the project is not expected to require additional treatment capacity at the wastewater treatment plant. Moreover, STPUD wastewater demand projections for 2028 were estimated to be 5.8 mgd, which is well within the maximum capacity of 7.7 mgd.

As described above, the wastewater generated by potential increases in development within the Tahoe Valley area would not require additional capacity or infrastructure. The proposed amendments would help facilitate development within the Area Plan, but would add little additional potential development potential at buildout given the existing TRPA growth management restrictions. Therefore, the Tahoe Valley Area Plan would have a **less than significant** impact on wastewater collection and treatment systems.

Environmental Analysis*: Less than Significant Impact.*

Required Mitigation: **None**.

**156. Would the Project require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? (CEQA XVIIb)**

This potential effect is the same as those analyzed in the City General Plan EIR and therefore this analysis tiers from the General Plan EIR. (CSLT 2010, pp. 4.12-12 to 4.12-16 and 4.12-26 to 4.12-27.)

See discussion and analysis for Question 155 above that concludes adequate wastewater capacity exists and therefore the construction of new water or wastewater treatment facilities or expansion of existing facilities is unlikely. With respect to water supply systems, the adopted 2011 Tahoe Valley Area Plan could result in an additional 373 dwelling units and 102,000 square feet of CFA within the Tahoe Valley plan area. The amendents would expand the area plan boundary and help facilitate completion of the proposed residential and commercial buildout. This development would result in the need for upgraded water delivery infrastructure in both the Lukins and STPUD service areas.

Updates of water supply infrastructure commonly involve typical construction impacts including, but not limited to, potential impacts to surface waters, air quality (from exhaust equipment and particulate matter or dust), biological resources, and soils issues. These specific types of impacts are addressed programmatically with overall implementation of the Tahoe Valley Area Plan in the appropriate sections herein. Future environmental review of individual water infrastructure improvement projects may require project-specific environmental documentation, likely to be prepared with STPUD acting as lead agency once specific projects are designed.

The following list includes those Tahoe Valley Area Plan and General Plan policies that contain specific, enforceable requirements and/or restrictions and corresponding performance standards that address these potential impacts.

Tahoe Valley Area Plan

- **Policy PS-2.1 – Lukins Brothers Water**
  Coordinate with South Tahoe Public Utility District and Lukins Brothers Water in upgrading water system in the Tahoe Valley area.

General Plan

- **Policy PQP-1.1:** Infrastructure Expansion in Under-Served Areas. The City shall coordinate and prioritize infrastructure expansion and/or improvements in areas that are under-served.
- **Policy PQP-1.2:** Provider Requirements. The City shall work within available legal means to ensure statutory requirements are met by all providers.
- **Policy PQP-1.3:** Utility Service Agency Coordination Meetings. The City shall conduct periodic coordination meetings with utility service agencies.
- **Policy PQP-1.4:** Public Facility Master Plans. The City shall prepare and annually review and regularly update public facility master plans to ensure compliance with appropriate regional, State, and Federal laws, use of modern and cost effective technologies, and compatibility with current land use policy.
- **Policy PQP-1.5** Fair Share Costs on New Developments. The City shall require that new development pay its fair share of the cost of providing new public services and/or the costs of expanding/upgrading existing facilities and services impacted by the new development.
- **Policy PQP-1.7** Ultimate Capacity Needs. The City shall ensure, through the development review process, that public facilities and infrastructures are designed and constructed to meet ultimate capacity needs, pursuant to a master plan, to avoid the need for future replacement to achieve upsizing.
- **Policy PQP-2.2** Coordination with Urban Water Management Plan. The City should coordinate with and support the planning efforts of the South Tahoe Public Utility District (STPUD), including all measures contained in the Urban Water Management Plan.
- **Policy PQP-2.4** Sustainable Water Use. The City shall encourage efficient practices that ensure water is used in a sustainable manner.
- **Policy PQP-2.5** Sustainable Water Distribution. The City shall support local water supply agencies in upgrading public water systems, as needed, to ensure efficient and sustainable water distribution.
- **Policy PQP-2.7** Water and Wastewater Management Strategy. The City shall support water and wastewater agencies in developing an innovative water and wastewater management strategy that considers water supply and treatment systems.
- **Policy PQP-6.2** The City shall coordinate efforts with water providers to ensure that fire protection needs and adequate water flows are met throughout the community. The City shall also work with water providers to design systems and processes, and build infrastructure necessary to ensure fire protection.

- **Policy HS-2.4** The City shall require all public water providers to maintain adequate water supply systems and flows to meet fire suppression needs throughout the city.

- **Policy HS-2.5** The City shall require that all new construction meets the minimum fire flow requirements as set forth in the California Building and Fire Codes.

The existing General Plan and proposed Tahoe Valley Area Plan policies listed above would ensure that the City coordinates with STPUD and the other water purveyors in the Tahoe Valley plan area on the planning and construction of water supply infrastructure required by new development (Policy PQP-2.7). These policies would also ensure that the City requires new development to pay its fair share of the costs of expanding and upgrading existing facilities and services impacted by the new development as well as to meet minimum fire flow requirements (Policy HS-2.4 and HS-2.5). As such, this impact is considered to be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**157. Would the Project require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? (CEQA XVIIc)**

This potential effect is the same as those analyzed in the City General Plan EIR and therefore this analysis tiers from the General Plan EIR. (CSLT 2010, Chapter 4.7.)

See also responses to Questions 82 and 84-86 above.

All development permitted though the Tahoe Valley Area Plan would be required to meet TRPA BMP standards to reduce runoff and pollutant loading from impervious cover as specified in Section 60.4.6 of the TRPA Code, except where special conditions exist and are approved by TRPA, infiltration facilities designed to accommodate the volume of runoff generated by a 20-year, 1- hour storm are required for approval of all projects. Therefore, there would be no unplanned alterations or changes to existing stormwater drainage systems associated with buildout of the Tahoe Valley Area Plan that are not first studied and approved by proper regulatory agencies. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None**.

**158. Would the Project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? (CEQA XVIId)**

This potential effect is the same as those analyzed in the City General Plan EIR and therefore this analysis tiers from the General Plan EIR. (CSLT 2010, Chapter 4.11.)

The adopted 2015 Tahoe Valley Area Plan could result in up to 373 residential dwelling units as well as up to 102,000 square feet of new CFA by the year 2032 (though it should be noted that potential CFA development in the proposed Tahoe Valley Area Plan is considerably less than that analyzed in the City's General Plan EIR [CSLT 2010, Chapter 4.11], which concluded a less than significant impact). The proposed amendments would not substantially increase the estimates at buildout. Buildout of the 2015 Area Plan would result in an annual water demand of approximately 179 acre-feet annually, and would not be

substantially increased by the proposed amendments. This water demand is well within STPUD's projected water demands through year 2030 (4,587 acre-feet annually), its water allocation, as well as the total annual 12,493 acre-feet allocation for use within the Tahoe Valley plan area under the Truckee-Carson-Pyramid Lake Water Rights Settlement Act and the California-Nevada Interstate Compact Concerning Water of Lake Tahoe, Truckee River, Carson River, and Walker River Basins. As identified in STPUD's Urban Water Management Plan, groundwater levels are stable in the STPUD service area and are considered a reliable source of water during drought years. Thus, adequate groundwater supply exists to meet the Tahoe Valley Area Plan's demands under existing and future conditions.

Furthermore, all development permitted by the Tahoe Valley Area Plan would be required to comply with Section 32.4 of the TRPA Code, which requires that a project applicant demonstrate the availability of adequate water quantity and quality for both domestic consumption and fire protection prior to project approval. This is demonstrated at a project-level through the acquisition of a Will Serve Letter from the applicable water purveyor.

Additionally, any project proposing construction, reconstruction, or expansion of a structure would be required to meet the Basic Services and Facilities Standards con contained in the TRPA Code. Therefore, implementation of the Tahoe Valley Area Plan would not create water use in excess of the maximum permitted capacity of the service provider. Thus, this impact is **less than significant.**
Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**159. Would the Project result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments? (CEQA XVIIe)**

See response to Question 155 above.

All development permitted by the Tahoe Valley Area Plan would be required to comply with Section 32.5 of the TRPA Code, which requires that all projects be served by facilities that provide treatment and export of wastewater from the Tahoe Region. Section 50.4.1(C) of the TRPA Code prohibits distribution of allocations to jurisdictions with insufficient wastewater capacity to support residential development, and Section 13.10.7 of the TRPA Code requires demonstration of adequate sewer capacity prior to occupancy of a transferred unit (TRPA 2012a, p. 3.13-16). Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**160. Would the Project be served by a landfill with sufficient permitted capacity to accommodate the Project's solid waste disposal needs? (CEQA XVIIf)**

This potential effect is the same as that analyzed in the General Plan Update EIR. (CSLT 2010, Chapter 3.11.) The adopted 2015 Tahoe Valley Area Plan provides for 373 new residential units and up to 102,000 square feet of CFA over the next 20 years. Based on a per capita residential solid waste generation rate of 0.25 tons per resident per year (CIWMB, 2007b) and an average of 2.5 persons per household, the anticipated residential development would be expected to generate an additional 235 tons of solid waste per year by 2030. Based on an average per employee solid waste generation rate of 1.3 tons per employee per year (CIWMB, 2007c) and an estimated 400 new employees in the Tahoe Valley plan area (based on an average of 250 square feet per employee ratio), the anticipated commercial development would be expected

to generate an additional 520 tons per year. Therefore, full buildout of the 2015 Tahoe Valley Area Plan would result in the generation of approximately 635 additional tons of solid waste per year by 2030 (or about 2 tons per day).

The South Tahoe Refuse (STR) is under contract with the City to collect solid waste from city households and businesses as well as to process and transfer all solid waste for disposal or recycling. STR's main facility, which consists of a transfer station, materials recovery facility, and the Tahoe Basin Container Service, has a total permitted capacity of 370 tons per day, but currently receives 200 to 250 tons per day. The remaining capacity of 120 to 170 tons per day is sufficient to serve the growth anticipated under the proposed General Plan Update. Any additional staffing or equipment required to increase service to the city would be funded through the additional service rates that would be collected by STR from the new development. Solid waste is expected to be disposed of at the Lockwood Regional Landfill in Sparks, Nevada. This landfill has a total capacity of approximately 43 million tons and is expected to reach capacity by the year 2025. However, multiple large-scale expansions to the facility are expected before this capacity is reached. In addition, the city currently achieves a nearly 50 percent diversion rate (CIWMB, 2008a); therefore, the increase in solid waste requiring disposal at the landfill would be anticipated to be about half that generated by the planned development. In addition, implementation of the City's Sustainability Plan includes developing a recycling action plan to achieve a 55 percent diversion rate.

Both the STR main facility and the Lockwood Regional Landfill have sufficient capacity to manage the growth anticipated under the proposed General Plan Update as well as the Tahoe Valley Area Plan. Therefore, this impact is considered to be **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**161. Would the Project comply with federal, state, and local statutes and regulations related to solid waste? (CEQA XVIIg)**

The Lockwood Regional Landfill will receive solid waste generated within the Tahoe Valley Area Plan and have sufficient capacity to serve the needs as discussed in Question 160 above. Existing resource recovery operations provide recycling of various materials, including green waste and construction material, which further reduces the quantity of waste sent to the landfill pursuant to state law. All projects proposed within the Tahoe Valley plan area would be subject to Chapter 4.150 of the City Code regulating refuse and garbage, as well as TRPA Regional Plan Land Use Element Goal 5, Policy ,1 Public Services Element Goal 3, Policy 2, and the City General Plan Policy PQP-3.3 requiring the transport of solid waste outside the Basin in compliance with California state laws. Thus, the Tahoe Valley Area Plan complies with federal, state, and local statutes and regulations related to solid waste.

Environmental Analysis: *No Impact.*

Required Mitigation: **None**.

**162. Will the Project result in use of substantial amounts of fuel or energy? (TRPA 15a)**

All development permitted through the Tahoe Valley Area Plan would occur in accordance with the Regional Plan and City Code. While any new construction would require electric and natural gas service as part of the basic services (Chapter 32 of the TRPA Code) the entire area within the Tahoe Valley plan area is located within close proximity to existing electric and gas infrastructure. Additionally, projects requiring new or modified connections would be subject the requirements and fees of the applicable utility providers.

The utility companies project that based on their forecasting and recent growth trends, the available capacity would far exceed the demand generated at build-out of the Regional Plan (TRPA 2012a, p. 3.13-20). Thus, this impact is **less than significant**.

Also see discussion and analysis for Question 110 above.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**163. Will the Project result in substantial increase in demand upon existing sources of energy, or require the development of new sources of energy? (TRPA 15b)**

See discussion in Question 162 above that concludes that the available capacity would far exceed the demand generated at build-out of the TRPA Regional Plan; therefore, demand create by implementation of the Tahoe Valley Area Plan, as amended would not exceed available capacity, or require the development of new sources of energy. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**164. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to power or natural gas? (TRPA 16a)**

See discussion and analysis for Question 162 above that concludes that the available capacity would far exceed the demand generated at build-out of the TRPA Regional Plan; therefore, demand create by implementation of the Tahoe Valley Area Plan, as amended would not result in a need for new systems, or substantial alterations to power or natural gas. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**165. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to communication systems? (TRPA 16b)**

Communication systems are not listed as a required basic service by TRPA Code or the City Code; however, the City Code requires any new communication wires to be installed underground (City Code Chapter 7.10.060). Any development or redevelopment permitted through the Tahoe Valley Area Plan, as amended would be located within existing service areas for communication systems providers. Each project would be responsible for any elected connection or subscription to communication systems within the region. Additionally, the increased development and re-development could stimulate investment in improved broadband service, which was identified as a need in the Lake Tahoe Basin Prosperity Plan (WNDD 2010). Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**166. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to utilize additional water which amount will exceed the maximum permitted capacity of the service provider? (TRPA 15c)**

See discussion and analysis for Question 158 above that concludes additional capacity exists in the Tahoe Region and therefore a need for new systems, or substantial alterations to utilize additional water is unlikely. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**167. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to utilize additional sewage treatment capacity which amount will exceed the maximum permitted capacity of the sewage treatment provider? (TRPA 15d)**

See discussions and analyses for Questions 155, 156 and 159 above that concludes additional sewage capacity exists in the Tahoe Region and therefore a need for new systems, or substantial alterations to utilize additional treatment capacity is unlikely. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**168. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to storm water drainage? (TRPA 15e)**

See discussion and analysis for Question 157 above, concluding that this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

**169. Except for planned improvements, will the Project result in a need for new systems, or substantial alterations to solid waste and disposal? (TRPA 15f)**

See discussion and analysis for Question 160 above. Implementation of the Tahoe Valley Area Plan, as amended would result in new development that would increase the Region's overall solid waste generation. Solid waste generation under the TRPA Regional Plan is anticipated to increase to 115,200 tons per year with some small portion of that attributable to the Tahoe Valley Area Plan. Given the substantial existing capacity of 22 million tons, and planned expansion that would allow for a total capacity of 204 million tons at the Lockwood Regional Landfill, waste disposal needs for development under the Tahoe Valley Area Plan could be adequately served in the future. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None.**

### 5.4.21 Mandatory Findings of Significance

This section presents the analyses for mandatory findings of significance. **Table 45** identifies the applicable impacts, anticipated level of impact, and whether mitigation measures are required to reduce impacts to a less than significant level.

**Table 45: Mandatory Findings of Significance**

| CEQA Environmental Checklist Item | Potentially Significant Impact | Less Than Significant with Mitigation Measures | Less Than Significant Impact | No Impact |
|---|---|---|---|---|
| 170. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? (CEQA XVIIIa) | | | X | |
| 171. Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? (CEQA XVIIIb) | | | X | |
| 172. Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? (CEQA XVIIIc) | | | X | |

| TRPA Initial Environmental Checklist Item | Yes | No, With Mitigation | Data Insufficient | No |
|---|---|---|---|---|
| 173. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California or Nevada history or prehistory? (TRPA 21a) | | | | X |
| 174. Does the Project have the potential to achieve short-term, to the disadvantage of long-term, environmental goals? (A short-term impact on the environment is one which occurs in a relatively brief, definitive period of time, while long-term impacts will endure well into the future.) (TRPA 21b) | | | | X |
| 175. Does the Project have impacts which are individually limited, but cumulatively considerable? (A project may impact on two or more separate resources where the impact on each resource is relatively small, but where the effect of the total of those impacts on the environmental is significant?) (TRPA 21c) | | | | X |
| 176. Does the Project have environmental impacts which will cause substantial adverse effects on human being, either directly or indirectly? (TRPA 21d) | | | | X |

**170. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? (CEQA XVIIIa)**

Fish and Aquatic Habitat

The Tahoe Valley Area Plan would not alter or revise any TRPA Regional Plan policies pertaining to the management of aquatic resources, or permitting of projects affecting these habitats. The Tahoe Valley Area Plan would permit development and redevelopment only in accordance with the Regional Plan and General Plan, and any projects proposed within the plan area that could affect aquatic habitats would be subject to TRPA's existing regulations requiring project-specific environmental review and development and implementation of project-specific measures for any significant effects on fish habitat as a condition of project approval. This potential impact was analyzed in the RPU EIS and, with implementation of TRPA's existing policies and code provisions, found to be less than significant (TRPA 2012a, p. 3.10- 45). Construction activities could result in temporary increases in sedimentation, small amounts of fill placed in aquatic habitats, and the release and exposure of construction-related contaminants. As under existing conditions, these impacts would be minimized and mitigated through construction BMPs and compensatory mitigation requirements as specified in TRPA and City policies and code provisions, and other applicable federal and state regulations.

Rare or Endangered Species and Communities

The Tahoe Valley Area Plan would not alter or revise TRPA Regional Plan policies regarding the protection of rare, endangered, or sensitive plant and animal communities. Compliance with all provisions of the Resource Management and Protection regulations found in Chapter 67 of the TRPA Code is still required for all project review delegated to the City. The Tahoe Valley Area Plan would permit development and redevelopment only in accordance with the TRPA Regional Plan and City General Plan, and any projects proposed within the plan area that could affect sensitive plant or animal communities would be subject to TRPA's existing regulations requiring project-specific environmental review and development and implementation of project-specific measures for any significant effects on fish habitat as a condition of project approval. This potential impact was analyzed in the RPU EIS and, with implementation of TRPA's existing code provisions and requirements, found to be less than significant (TRPA 2012a, p. 3.10-50). During project-level environmental review, potential impacts to protected plant or animal communities would be identified and minimized through the design process and/or through compensatory mitigation, as required under TRPA and applicable federal and state regulations. Additionally, any new development and redevelopment with the Tahoe Valley Area Plan boundary would occur in accordance with TRPA policies that incentivize transfers of land coverage and development rights from sensitive lands, and require restoration and retirement of the sending sites (TRPA 2012a). This policy could result in a benefit to the associated special status species through enhancement and restoration of riparian and wetland habitats.

Cultural, Historical, and Archeological Resources

The Tahoe Valley Area Plan would not alter or revise TRPA Regional Plan policies regarding the protection of cultural, historical, or archeological resources. Compliance with all provisions of the Resource Management and Protection regulations found in Chapter 67 of the TRPA Code is still required for all project review delegated to the City. In addition, federal and state regulations address protection of these resources and provide mechanisms to minimize impacts. The Tahoe Valley Area Plan would permit development and redevelopment only in accordance with the TRPA Regional Plan and the City General Plan, some of which could occur on properties with known or unknown cultural, historical, or archeological

resources. The proposed Tahoe Valley Area Plan contains historic sites CA-Eld-721-H and CA-Eld-2240-H as identified by archaeological and historical investigations. Previous cultural resources studies within the Tahoe Valley plan area suggest that it is sensitive for the presence of undiscovered prehistoric sites, historic sites, and historic buildings and structures (e.g., given the location of the former Barton Ranch complex, motels/auto courts). The potential impacts to cultural resources were analyzed in the RPU EIS and, with implementation of TRPA's existing code provisions, found to be less than significant (TRPA 2012a, beginning on p. 3.15-13). During project-level environmental review, cultural, historical, and archeological resources specific to the site would be identified, significance determined, and appropriate mitigation implemented in accordance with federal, state, City, and TRPA regulations.

Because the Tahoe Valley Area Plan amendment proposes no changes to existing policies regarding aquatic habitats, special status plant or animal communities, or to cultural, historical, and archeological resources, and because federal, state, and TRPA protections are already in place, implementation of the Tahoe Valley Area Plan would not result in the degradation of these resources.

In addition, the Tahoe Valley Area Plan, as amended, is consistent with the TRPA Code of Ordinances Chapter 13.5.3.G concerning modification to Town Center boundaries. As analyzed herein, TRPA and the City have determined that implementation of the updated Tahoe Valley Area Plan, including all elements of the plan, existing environmental protection requirements, and adopted mitigation, would achieve and maintain TRPA's environmental threshold carrying capacities and result in environmental improvement. Therefore, the Tahoe Valley Area Plan amendment would not have the potential to degrade the quality of the environment. Thus, these impacts are **less than significant**.

Environmental Analysis: *Less than Significant Impact*.

Required Mitigation: **None**.

**171. Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? (CEQA XVIIIb)**

Like the General Plan itself, the Tahoe Valley Area Plan amendment is a collection of goals, policies, and measures designed to guide the development of the plan area and support the Region in attaining environmental thresholds and other important objectives. Because these policies are implemented in the Tahoe Valley Area Plan over the long-term (i.e., the remaining 20 years of the Plans applicability) and are applicable to all programs and projects over this period, they are inherently cumulative in nature.

The cumulative projects contemplated in the General Plan EIR (CSLT 2010, Chapter 5.0; and see TRPA 2012a, pp. 4-2 through 4-10) include Environmental Enhancement, Land Management Plans, TTD/TMPO projects and programs, and other development projects. These projects and programs also apply to the Tahoe Valley Area Plan, their scope and characteristics are not known to have substantially changed, no additional cumulative projects or programs are known at this time.

Because the Tahoe Valley Area Plan, as amended, will be wholly consistent with the General Plan and because no specific projects are proposed for which contributions to cumulative impacts may be defined and assessed, the cumulative impacts analysis prepared for the Regional Plan is also applicable to the Tahoe Valley Area Plan. As discussed in Question 68, the General Plan EIR concluded that General Plan implementation could result in increased development, redevelopment, and construction activity resulting in an increase in overall greenhouse gas (GHG) emission that would make a cumulatively considerable contribution to global climate change. Because the Tahoe Valley Area Plan amendment is consistent with

and implements the General Plan and the General Plan EIR, development and population growth anticipated during the Tahoe Valley Area Plan horizon could also contribute cumulatively to global climate change. The General Plan EIR disclosed this significant effect; mitigated it and concluded that with implementation of relevant policies from the General Plan Update, the City's Sustainability Plan (which calls for development of a GHG inventory and reduction target), and associated mitigation measure MM 4.5.6 are anticipated to mitigate GHG emissions in a manner consistent with current state efforts to reduce GHG emissions under AB 32 and SB 375. Specifically implementation of IMP-8.6 (Greenhouse Gas Emission Reduction Strategy in the years 2013-2015) in combination with implementation of Mitigation Measure MM 4.5.6 that would require coordination with future TRPA GHG reduction efforts and the establishment of an emission reduction target consistent with AB 32 and SB 375 reduction efforts would ensure that City GHG emissions are mitigated. Thus, this impact is considered less than cumulatively considerable (CSLT 2011a, pp. 4.0-4 through 4.0-5). Because the Tahoe Valley Area Plan, as amended is consistent with and implements the General Plan and is consistent with the General Plan EIR, development and population growth anticipated during the Tahoe Valley Area Plan planning horizon is not expected to make a considerable contribution to global climate change. Thus this impact is considered **less than significant**.

Additional consideration is applied below to those resources that could result in more localized cumulative effects, including noise, geologic hazards, scenic resources, and recreation.

Traffic

The Tahoe Valley Area Plan amendment would not alter, revise or conflict with applicable plan, ordinance or policy establishing the measures of effectiveness for the performance of the circulation system. Consistent with the Regional Plan, development and redevelopment associated with the Tahoe Valley Area Plan as a whole, and individual projects therein, that would generate a net increase of 650 average daily VMT or more would be required to prepare a project-level traffic analyses in accordance with Section 65.2.4.B of the TRPA Code. For any new VMT that are generated, TRPA requires an applicant to offset the potential regional traffic and air quality effects of the new VMT by requiring an applicant to contribute to the Mobility Mitigation Fund. The mobility mitigation fee amount would be assessed in accordance with the current mitigation fee schedule in the TRPA Rules of Procedure. Furthermore, all individual projects would be required to meet all applicable LOS standards for roadways and intersection standards. For these reasons the Tahoe Valley Area Plan, as amended would not contribute to an increase in traffic levels that results in cumulatively adverse impacts. Thus, this impact is **less than significant**.

Water Quality

The Tahoe Valley Area Plan potential effect on water quality was discussed above in response to Questions 82-102. All new development and redevelopment within the Tahoe Valley plan area as amended would be required to meet existing BMP standards to control potential increases in stormwater runoff and pollutant loading onsite. As specified in Section 60.4.6 of the TRPA Code, except where special conditions exist and are approved by TRPA, infiltration facilities designed to accommodate the volume of runoff generated by a 20-year 1-hour storm are required for approval of all projects within the Tahoe Basin. Therefore, new development within the Tahoe Valley plan area is not expected to cumulatively create or contribute additional runoff that would exceed the capacity of existing or planned stormwater drainage system. Thus, this impact is **less than significant**.

Cultural Resources

Because federal and state regulations, the TRPA Code (Chapter 67) and General Plan Policies (CSLT 2010, pp. NCR-6 trough NCR-7) address protection of these resources and provide processes to avoid or minimize

impacts to historic and archaeological resources and any development associated with the Tahoe Valley Area Plan would be required to comply with federal and state regulations, TRPA Code and General Plan policies, during project specific review, it would not contribute to an adverse cumulative effect on archeological or historical resources. Thus, this impact is **less than significant**.

Noise

The Tahoe Valley Area Plan would continue or strengthen the noise standards currently in effect. In addition, the City and/or TRPA would continue to implement the project specific noise reduction measures described in the Regional Plan EIS, General Plan EIR and the Tahoe Valley Area Plan. For these reasons the Tahoe Valley Area Plan, as amended would not contribute to an adverse cumulative increase in noise levels. Thus, this impact is **less than significant**.

Hazards

Because existing TRPA and City protections are in place, and because project-specific environmental review would be required for all projects, implementation of the Tahoe Valley Area Plan, as amended would not result in increased exposure of people or property to geologic hazards. As part of the 2012 RPU EIS analysis, TRPA conducted an analysis of wildfire risk and its impact on emergency evacuation analysis, considering the amount of growth forecast for the region. This amendment does not propose additional growth, only amendments to area plan boundary, land uses and design standards intended to encourage buildout of the remaining residential and commercial development within the Tahoe Valley Area Plan. As such, the amendments do not exacerbate previously identified wildfire risk from the buildout development of new residential housing. The proposed amendments are focused on town centers and areas immediately adjacent to town centers, where wildfire danger is inherently less because these areas are further from the wildland-urban interface, and there is more defensible space and urban development (e.g., pavement). New housing developments and commercial buildings that may be facilitated by the amendments are still subject to local building standards that are written to ensure structures can withstand fire and be used to shelter in place. Thus, this impact is **less than significant**.

Scenic Resources

Because the Tahoe Valley Area Plan carries forward and strengthens the existing scenic protections, and because all permitted projects would continue to meet the TRPA scenic threshold non-degradation standard, the Tahoe Valley Area Plan, as amended would not contribute to an adverse cumulative effect on scenic resources. Thus, this impact is **less than significant**.

Recreation

The Tahoe Valley Area Plan protects existing recreational resources and provides for the development of increased recreation opportunities through the construction of a bike paths and lanes. Implementation of the Tahoe Valley Area Plan would be consistent with land use changes and policies contemplated and analyzed in the General Plan EIR, including their potential to contribute to cumulative environmental effects. Because all permitted projects would continue to meet the TRPA recreation threshold non-degradation standard, the Tahoe Valley Area Plan, as amended would not contribute to an adverse cumulative effect on recreation resources. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**172. Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? (CEQA XVIIIc)**

As described above in question 171, projects permitted through the Tahoe Valley Area Plan would require project-level environmental review and would be required to comply with all applicable TRPA, federal, state, county, and City regulations, including protections for human health and safety. Therefore, implementation of the Tahoe Valley Area Plan, as amended would not create a substantial direct or indirect adverse effect on human beings. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**173. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California or Nevada history or prehistory? (TRPA 21a)**

See analysis in Question 171 that concludes implementation of the Tahoe Valley Area Plan would be consistent with land use changes and policies contemplated and analyzed in the RPU EIS, including their potential to contribute to cumulative environmental effects. This discussion of cumulative effects tiers from the cumulative impact discussion included in the RPU EIS. Additionally, the RPU EIS identified resources with localized cumulative issues such as noise, geologic hazards, scenic impacts, and recreation impacts, which were further analyzed in this IS/IEC and were not found to have adverse cumulative effects. Therefore, the Tahoe Valley Area Plan, as amended and the cumulative projects contemplated in the RPU EIS would not result in a considerable contribution to cumulative adverse conditions. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**174. Does the Project have the potential to achieve short-term, to the disadvantage of long-term, environmental goals? (TRPA 21b)**

The TRPA Regional Plan is a broad suite of policies, ordinances, and land use controls designed specifically to achieve long-term environmental goals. The Tahoe Valley Area Plan would implement the policies of the TRPA Regional Plan and City General Plan, which—among others—call for concentrating development and redevelopment in town centers (e.g., the TC-G, TC-C, TC-MUC and TC-HC zoning districts), combined with transfer of land coverage and development rights from sensitive lands and lands more distant from community centers, and restoration of those areas (TRPA 2012a).

The Tahoe Valley Area Plan, like the Regional Plan itself, is a collection of policies and ordinances; no specific projects are proposed or would be approved through approval of the Tahoe Valley Area Plan. However, as described in Section 5.4 of the RPU EIS, the Regional Plan will be implemented through projects that would have short-term effects, but through which long-term term environmental goals will be achieved.

The potential development permitted through the Tahoe Valley Area Plan, as amended could commit raw land to new development resulting in permanent alterations to soils, habitats, and land uses.

Development in accordance with RPU and Tahoe Valley Area Plan policies and ordinances, however, would result in a refinement of the land use pattern within the Region through redevelopment in urban areas and transfer of development rights from sensitive lands to improve the long-term sustainability of natural resources and to support social and economic health (TRPA 2012a). Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None**.

**175. Does the Project have impacts which are individually limited, but cumulatively considerable? (A project may impact on two or more separate resources where the impact on each resource is relatively small, but where the effect of the total of those impacts on the environmental is significant?) (TRPA 21c)**

See analysis in Question 171 that concludes implementation of the Tahoe Valley Area Plan would be consistent with land use changes and policies contemplated and analyzed in the RPU EIS, including their potential to contribute to cumulative environmental effects.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

**176. Does the Project have environmental impacts which will cause substantial adverse effects on human being, either directly or indirectly? (TRPA 21d)**

See discussion and analysis for Question 172 above that concludes that projects permitted through the Tahoe Valley Area Plan would require project-level environmental review and would be required to comply with all applicable TRPA, federal, state, county, and City regulations, including protections for human health and safety. Therefore, implementation of the Tahoe Valley Area Plan, as amended would not create a substantial direct or indirect adverse effect on human beings. Thus, this impact is **less than significant**.

Environmental Analysis: *Less than Significant Impact.*

Required Mitigation: **None.**

## 5.5 CERTIFICATION [TRPA ONLY]

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this initial evaluation to the best of my ability, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

## Project Description:

This Initial Study (IS) has been prepared to address the potential environmental effects of the Tahoe Valley Area Plan (TVAP) Amendment, located in the City of South Lake Tahoe, California. An Initial Study is a preliminary environmental analysis that is used by the California Environmental Quality Act (CEQA) lead agency as a basis for determining whether an EIR, a Mitigated Negative Declaration, or a Negative Declaration is required for a project under CEQA guidelines. The IS has been prepared pursuant to the California Environmental Quality Act (CEQA) of 1970, Cal. Pub. Res. Code §21000 et seq. The City of South Lake Tahoe is the CEQA lead agency for this project. This IS evaluates the potential for the Area Plan Amendment to adversely affect the physical environment, and is an informational document that provides the City, other public agencies, interested parties and the public with an objective assessment of the potential environmental impacts that could result from project implementation.

The proposed project is an update to the Tahoe Valley Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. The proposed amendments would expand the Area Plan boundary to incorporate parcels fronting US Highway 50 from the existing boundary line south to H Street, plus APNs 032-161-012, 032-161-013, 032-161-009, and 032-161-008 (previously PAS 114). The addition of these parcels as the Emerald Bay Connection Corridor District would increase opportunity for residential development near a town center and provide additional transit opportunities for residents. Second, seven parcels fronting Melba Drive would be added so that the area plan is contained in this corner by the intersection of E Street and Melba Drive (previously PAS 114). This area was identified as having high redevelopment potential, which may be incentivized by the benefits of being in an area plan Town Center. The third area of expansion is in the northeast corner of the Area Plan. All parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave would be included up until the existing area plan boundary, in addition to 023-221-020 north of Eloise Ave (previously PAS 111). In addition to the boundary amendments described above, other changes are proposed as documented in IS Chapter 2.

## Finding:

An Initial Study/Mitigated Negative Declaration (IS/MND) has been prepared to assess the project's potential effects on the environment and the significance of those effects. Based on the IS, it has been

determined that the proposed project would not have significant effects on the natural environment after implementation of mitigation measures. This conclusion is supported by the following findings:

1. The proposed project would have no effects, no impact, or less-than-significant impacts related to aesthetics, biological resources, cultural/archaeological/historical/tribal resources, agricultural and forest resources, mineral and natural resources, energy, air quality, greenhouse gas emissions, geology and soils, wildfire, land use and planning, noise, population and housing, public services, recreation, transportation/traffic, utilities/service systems/energy resources and mandatory findings of significance.

2. Mitigation is required to avoid or reduce potentially significant impacts related to hydrology/water quality and hazards/hazardous materials.

The following mitigation measures have been incorporated in the Project by the City of South Lake Tahoe to avoid or minimize environmental impacts. These mitigation measures were developed during the environmental analysis prepared for the original TVAP adoption in 2015. Implementation of these mitigation measures would avoid or reduce the environmental impacts of the proposed project to a less-than-significant level. These measures are included in the Mitigation Monitoring and Reporting Program (Attachment A).

**Mitigation Measure HAZ-1**

Require all subsequent projects that would be located on sites suspected or known to contain hazardous materials and/or are identified in a hazardous material/waste search to be reviewed, tested, and remediated for potential hazardous materials in accordance with all local, state, and federal regulations. The City and TRPA shall require written confirmation from applicable local, regional, state, and federal agencies that known contaminated sites have been deemed remediated to a level appropriate for land uses proposed prior to the City and TRPA approving site development or provide an approved remediation plan that demonstrates how contamination will be remediated prior to site occupancy. This documentation will specify the extent of development allowed on the remediated site as well as any special conditions and/or restrictions on future land uses.

**Mitigation Measure HAZ-2**

Subsequent projects that meet the definition of a "Possible Contaminating Activity" under Section 60.3.5 of the TRPA Code of Ordinances shall demonstrate compliance with the findings and requirements under Section 60.3.3.D of the TRPA Code of Ordinances and demonstrate that adequate protections are in place to avoid soil and groundwater contamination and protect public health of area residents. This demonstration shall be required prior to subsequent project approvals and implemented as part of project design.

**Mitigation Measure HAZ-3**

Subsequent projects shall incorporate all fire protection and design provisions identified by the South Lake Tahoe Fire Department intended to improve access point(s) and circulation of the subsequent project sites and the overall area in combination with other fire protection requirements (defensible space, fire flow improvements, fire resistant building materials, landscape treatments, placement of hydrants, and installation of sprinklers). The South Lake Tahoe Fire Department shall review and approve the subsequent project site design prior to commencement of project construction.

**Mitigation Measure HAZ-4**

Subsequent projects shall be required to prepare and receive approval of a Traffic Management Plan (TMP) in accordance with local and state guidelines and standards, including Caltrans Guidelines for Projects Located on the California State Highways in the Lake Tahoe Basin (as applicable). Approval of the TMP shall be obtained from the City and Caltrans (if TMP impacts US 50 or SR 89) prior to site disturbance. Provisions in the TMP shall include, but are not limited to:

- Reduction, to the extent feasible, the number of vehicles (construction and other) on the roadways adjacent to construction sites during project construction.
- Reduction, to the extent feasible, the interaction between construction equipment and other vehicles.
- Improvement and maintenance of public safety aimed at driver and roadway safety.
- Establishment and/or maintenance of safe routes through the project area for bicycles and pedestrians.
- Establishment and/or maintenance of adequate emergency access for police, fire, ambulance, and other emergency service vehicles – as determined through direct consultation with those service providers.

**Mitigation Measure HYD-1**

As part of soil/hydrologic investigations for subsequent development and activities in the Tahoe Valley plan area, TRPA and the City will require that a determination of the potential to encounter groundwater from site development may occur. Subsequent project stormwater pollution prevention plans (SWPPP) will include a dewatering program and measures to mitigate potential contamination of groundwater as well as design provisions to allow groundwater to flow through or around underground structures. Measures to control water quality may include use of settling tanks and Active Treatment Systems (ATS) for treatment of dewatering as well as contamination prevention measures such as proper material storage, secondary containment systems, vehicle fluid drip pans, temporary berms or dikes to isolate construction activities, use of vacuum trucks, and other measures to capture contamination releases.

**Mitigation Measure HYD-2**

The City and TRPA shall consult with the Lahontan Regional Water Quality Control Board and online Geotracker Database to determine the potential for hazardous material releases on property where BMP installation is proposed prior to issuance of permits, approving the installation of BMPs. Where City and/or TRPA staff determines a potential to exist, the property is required to tie into an existing area-wide system if one is available in lieu of parcel specific BMPs. Where an area-wide system is not available, the site shall be deemed constrained, per TRPA Code 60.4.8.B, until the time that an area-wide system is available or the site has been remediated and closed by the Water Quality Control Board.

# 2.0 APPROVAL OF THE IS/MND

Certification by Those Responsible for Preparation of this Document. The City of South Lake Tahoe has been responsible for the preparation of this mitigated negative declaration and the incorporated initial study. I believe this document meets the requirements of the California Environmental Quality Act, is an accurate description of the proposed project, and that the lead agency has the means and commitment to implement the regulatory compliance measures/mitigation measures that will assure the project does not have any significant, adverse effects on the environment. I recommend approval of this document.

John Hitchcock Digitally signed by John Hitchcock Date: 2024.05.01 08:09:58 -07'00' May 1, 2024

# 3.0 RESPONSE TO COMMENTS

The Draft IS was circulated for public review and comment between March 27, 2024 and April 26, 2024. A Notice of Intent to adopt a Mitigated Negative Declaration was sent to state agencies and persons and organizations expressing interest in the project. Copies of the Draft IS and supporting documents were available online on the City of South Lake Tahoe's website.

Comments in the form of two letters were received from Wells Barnett Associates and Caltrans District 3 on the Draft IS. The following pages provide a formal response to the comments contained within each letter/email. A list of those who offered comments is provided below:

## Comments Received by Date

1. A. Lyn Barnett, AICP, Wells Barnett Associates, LLC – 04/22/24
2. Gary Arnold, Branch Chief, Caltrans District 2 – 4/29/24

## Comments and Responses

Each unique comment on the content of the IS/IEC is provided below, followed by a response to the full comment. Attachment B provides a copy of the comment letters as numbered.

### 1. A. Lyn Barnett, 04/22/24 Letter

**Comment 1**
This office represents the South Tahoe Association of Realtors (STAOR) whose office at 2307 James Avenue is located in an area proposed for inclusion into the TVAP and rezoned to Town Center – Neighborhood Professional (TC-NP). In past permits, STOAR was verified as a "membership organization" by the City of South Lake Tahoe and the Tahoe Regional Planning Agency (TRPA). Membership organizations are public service uses and are currently "allowed" in the existing zoning for the STAOR property (Plan Area Statement 111, Special Area 2) and also in the proposed TC-NP zone in the updated TVAP. The new TC-NP zone also includes "local assembly and entertainment" as a special use. This public service designation would allow STAOR to apply for a special use permit to rent their underutilized meeting hall to organizations and groups of people beyond what is currently allowed an exempt temporary activity in accordance with Subsection 2.3.5 of the TRPA Code of Ordinances. We support the proposed TVAP amendments for this reason.

**Response 1**
Comment noted.

**Comment 2**
We have reviewed the draft Tahoe Valley Area Plan Amendment Initial Study/Initial Environmental Checklist dated March 2024 and concur with its analysis. Please note, however, that we recommend that the following corrections be made to Figure 2 on page 8:

1. The existing use of the STAOR property should be "public/quasi-public" rather than "commercial," as currently mapped, and
2. The legend should be corrected so that existing multi-family uses (currently marked as yellow) match the multi-family uses illustrated in the map (shown as brown)."

**Response 2**
Figure 2 has been revised to correct the land use for the STAOR property and the error in the legend.

## 2. Caltrans, 04/29/24 Letter

**Comment 1**
Highway Operations / Traffic Safety
The SLT Wye is the intersection with the highest amount of conflicting traffic as the intersection of two state highways. A Traffic Impact Study and VMT analysis will be needed to analyze the impact on US 50 and on SR 89. Queuing and operational analysis will be needed for proposed changes to the intersection and the affected highways of this plan.

**Response 1**
The Initial Study documents the need for future study of the state highways and the Wye intersection when the potential for increased traffic would result from future Area Plan development. Mitigation measure HAZ-4 includes the requirement to prepare a Traffic Management Plan (TMP) to management construction traffic for projects located on California state highways. The analysis prepared for question 141 (page 186) documents that future projects that would generate a net increase of 1,300 vehicle miles traveled (VMT) or more would be required to prepare a project-level traffic analyses per TRPA Code. Further, on page 187 that analysis states "Any subsequent project implemented under the Tahoe Valley Area Plan that would not meet screening criteria for VMT (Code Section 65.2.3.D) would be required to prepare a project-level traffic analyses in accordance with Sections 65.2.4.B of the TRPA Code. Any impacts that exceed VMT standards of significance (Table 65.2.3-1) would require mitigation at a project level. Finally, regarding proposed transportation or traffic related facility improvements within the Area Plan, page 192 states "all transportation and traffic related facilities proposed in the Tahoe Valley Area Plan would conform to the appropriate federal, state and local roadway, sidewalk intersection design standards (e.g., ASHTOO, MUTCD, Caltrans Highway Design Manual and City Roadway Design Standards) for public health and safety reasons."

**Comment 2**
Right of Way
If any of the development abuts State right of way (ROW), plans will need to delineate and clearly identify our state ROW along with all proposed improvements within our ROW, mapping can be obtained by contacting the district 3 ROW Map counter at: d3rwmaprequest@dot.ca.gov. Applicant or their representatives may also need to identify any possible vulnerable survey monuments in the development area that will need to be preserved and/or perpetuated, as required by PE Act 6731.2 and PLS Act 8771.

**Response 2**
Comment noted. Future Area Plan development will comply with applicable right of way regulations.

**Comment 3**
Hydraulics
Tahoe Valley Plan area is in the southwestern portion of the city of South Lake Tahoe. Regional access to the plan area is provided by US 50 and California SR 89. The Area Plan Boundary is going to be expanded to the southwest to include parcels fronting US 50.

Based on the information as provided, there should not be any immediate effect on existing drainage facilities for inclusion of the mentioned parcels in TVAP. However, during development process of the new parcels, following new land coverage, appropriate drainage facilities should be provided to avoid any flooding or ponding of run off in the State Highways.

There should not be any significant concerns to the SHS for implementing the proposed project.

**Response 3**
Comment noted. Future Area Plan development will comply with TRPA stormwater management ordinances to protect state facilities from site drainage.

**Comment 4**
Encroachment Permit
Any project or work, including access modification and drainage work, that takes place along or within the State's ROW requires an encroachment permit issued by Caltrans.

**Response 4**
Comment noted.

# 4.0 TEXT MODIFICATIONS TO THE INITIAL STUDY

The following changes to the IS dated March 2024 have been made based on public comment on the IS. **Bold/Underlined** text is new text that has been added to the IS. Text that is shown in ~~strikeout~~ has been removed from the IS.

Figure 2 (below) has been revised to correct the existing land use for the STAOR property on James Avenue and the error in the legend.

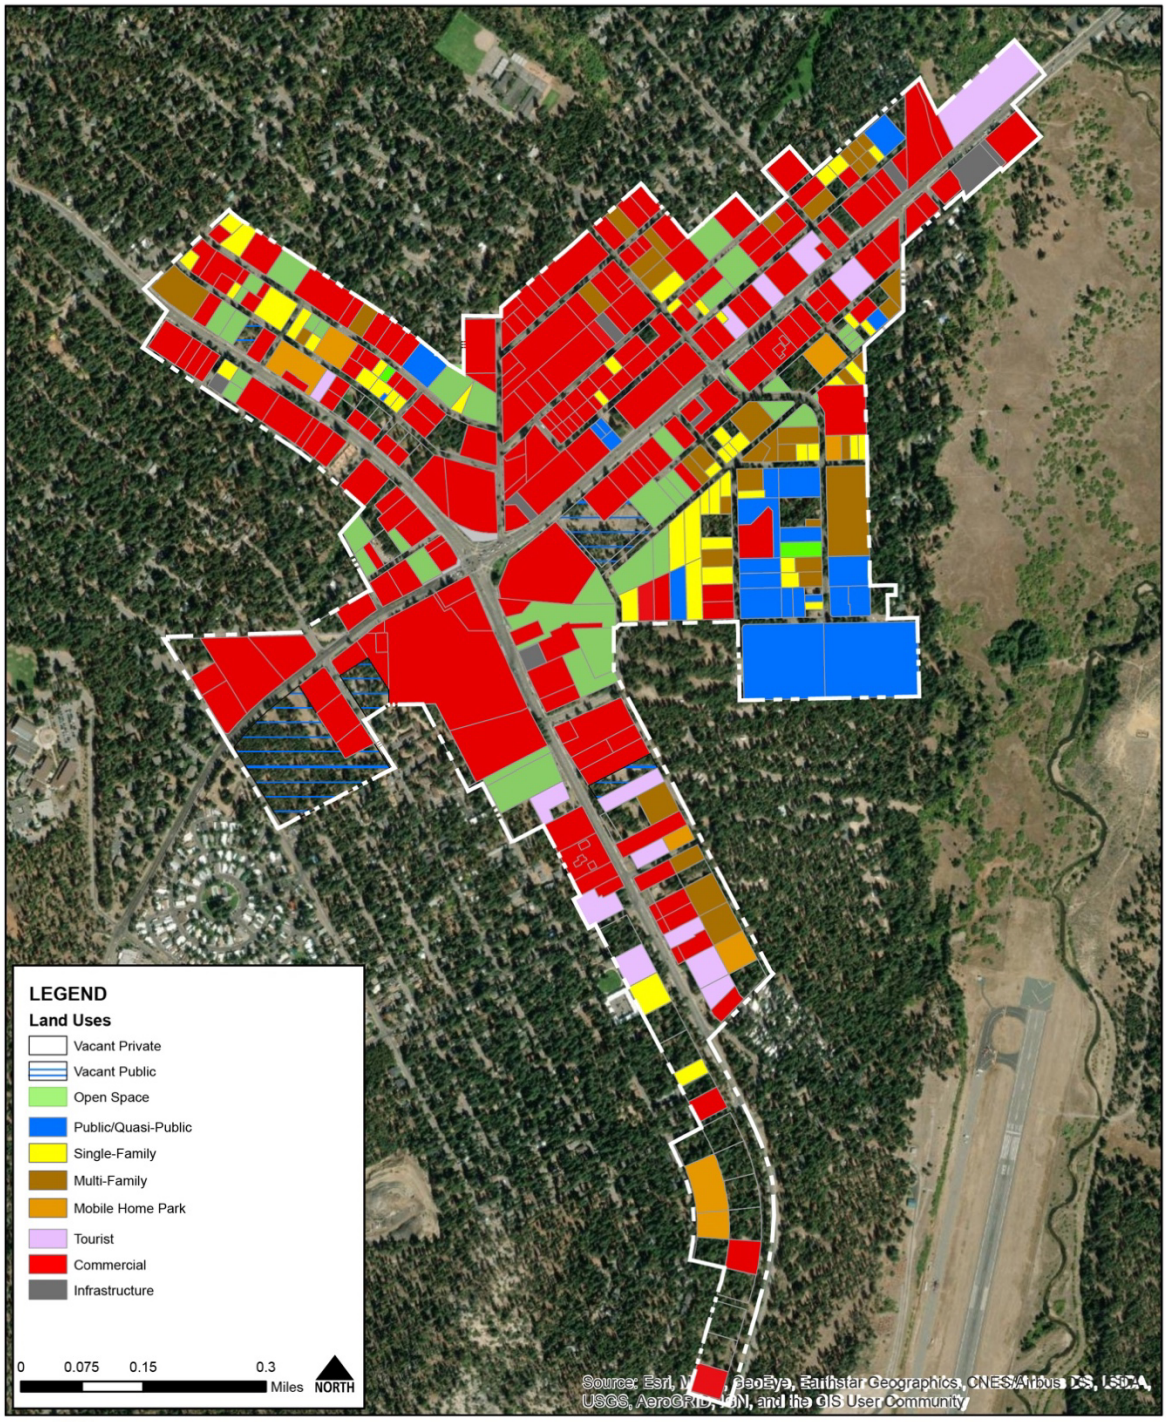

**Figure 2**
Existing Land Uses
April 2023

# ATTACHMENT A MITIGATION MONITORING AND REPORTING PROGRAM

The Mitigation Monitoring and Reporting Program (MMRP) for the Tahoe Valley Area Plan Amendment is provided in Table A-1 and prepared in compliance with requirements of California Public Resources Code Section 21081.6 and Section 15097 of the California Environmental Quality Act Guidelines. In general, the City of South Lake Tahoe shall be responsible for implementing and monitoring the measures identified below. Table A-1 describes each mitigation measure and identifies the responsible agency, timing, and monitoring requirements.

## Table A-1

Mitigation Monitoring and Reporting Program Checklist for TVAP Amendment

| Mitigation Measure Description | Monitoring Responsibility | Timing | Monitoring Requirement |
|---|---|---|---|
| Mitigation Measure HAZ-1<br>Require all subsequent projects that would be located on sites suspected or known to contain hazardous materials and/or are identified in a hazardous material/waste search to be reviewed, tested, and remediated for potential hazardous materials in accordance with all local, state, and federal regulations. The City and TRPA shall require written confirmation from applicable local, regional, state, and federal agencies that known contaminated sites have been deemed remediated to a level appropriate for land uses proposed prior to the City and TRPA approving site development or provide an approved remediation plan that demonstrates how contamination will be remediated prior to site occupancy. This documentation will specify the extent of development allowed on the remediated site as well as any special conditions and/or restrictions on future land uses.<br>ses proposed prior to the City and TRPA approving site development or provide an approved remediation plan that demonstrates how contamination will be remediated prior to site occupancy. Subject: Comments on Draft Tahoe Valley Area Plan Amendment Initial Study/Initial Environmental Checklist dated March 2024

Dear Ms. Kashuba:

Thank you for the opportunity to comment on the subject draft environmental document for proposed updates to the Tahoe Valley Area Plan (TVAP). This office represents the South Tahoe Association of Realtors (STAOR) whose office at 2307 James Avenue is located in an area proposed for inclusion into the TVAP and rezoned to Town Center – Neighborhood Professional (TC-NP).

**1** In past permits, STOAR was verified as a "membership organization" by the City of South Lake Tahoe and the Tahoe Regional Planning Agency (TRPA). Membership organizations are public service uses and are currently "allowed" in the existing zoning for the STAOR property (Plan Area Statement 111, Special Area 2) and also in the proposed TC-NP zone in the updated TVAP. The new TC-NP zone also includes "local assembly and entertainment" as a special use. This public service designation would allow STAOR to apply for a special use permit to rent their underutilized meeting hall to organizations and groups of people beyond what is currently allowed an exempt temporary activity in accordance with Subsection 2.3.5 of the TRPA Code of Ordinances. We support the proposed TVAP amendments for this reason.

**2** We have reviewed the draft *Tahoe Valley Area Plan Amendment Initial Study/Initial Environmental Checklist* dated March 2024 and concur with its analysis. Please note, however, that we recommend that the following corrections be made to Figure 2 on page 8:

1. The existing use of the STAOR property should be "public/quasi-public" rather than "commercial," as currently mapped, and
2. The legend should be corrected so that existing multi-family uses (currently marked as yellow) match the multi-family uses illustrated in the map (shown as brown).

**Tahoe Valley Area Plan Amendments**

Dear Ms. Kashuba,

Thank you for including the California Department of Transportation (Caltrans) in the review process for the project referenced above. We reviewed this local development for impacts to the State Highway System (SHS) in keeping with our mission, vision, and goals, some of which includes addressing equity, climate change, and safety, as outlined in our statewide plans such as the California Transportation Plan, Caltrans Strategic Plan, and Climate Action Plan for Transportation Infrastructure.

The Tahoe Valley Area Plan is located in the southwestern portion of the City of South Lake Tahoe, California. Regional access to the Tahoe Valley plan area is provided by US Highway 50 (US 50) and State Route (SR) 89. The Tahoe Valley Area Plan serves as the gateway for the City of South Lake Tahoe for travelers heading south on SR 89 and east on US 50. The Tahoe Valley Area Plan, as initially adopted, was located within PAS 110, South Y, and the parcel located at 1117 Bonanza Avenue Emerald Bay Road within PAS 114, Bonanza, Special Area #1. The Area Plan Boundary shall be expanded to the southwest to include parcels fronting US 50 from the existing boundary line south to H Street. Seven parcel fronting Melba Drive shall be added so that the Area Plan is contained in this corner by the intersection of E Street and Melba Drive. The third area of expansion is in the northeast corner of the Area Plan. All parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave shall be included up until the existing Area Plan boundary, in addition to north of Eloise Ave.

The City of South Lake Tahoe proposes numerous amendments to the TVAP, specifically:

- Expand the Area Plan boundary to incorporate a new Emerald Bay Connection Corridor District (17.5 acres) to the south of the current boundary and add parcels fronting Melba Drive and parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave to the Town Center (11.5 acres).
- Update various area plan sections: land use, community design and housing; revitalization and economic development; development/design standards; and incorporate general changes throughout to improve consistency with state laws and other existing plans.

The amended plan will serve as a mutual plan for the City of South Lake Tahoe and TRPA by providing direction for how the applicable area shall be regulated to achieve regional environmental and land use objectives. The development standards and the specific policies referenced in the amendments are the land use standards intended to administer and regulate development within the 374-acre boundary of the TVAP Based on the Mitigated Negative Declaration documents provided, Caltrans has the following requests and recommendations:

**Highway Operations / Traffic Safety**

Increasing walkability and bikeability of the location is an admirable goal, but until the tens of thousands of tourists who visit the South Lake Tahoe area each year become full time residents of the South Lake Tahoe area, they will continue to drive their cars to come visit. The SLT Wye is the intersection with the highest amount of conflicting traffic as the intersection of two state highways. Unless and until a different route in and out of the south shore area with similar capacity becomes available, the intersection needs to be able to handle these large volumes of tourist, local, and interregional traffic. This is a primary truck route into and through SLT so bear this in mind with your active transportation improvements. A Traffic Impact Study and VMT analysis will be needed to analyze the impact on US 50 and on SR 89. Queuing and operational analysis will be needed for proposed changes to the intersection and the affected highways of this plan. 1

**Right of Way**

If any of the development abuts State right of way (ROW), plans will need to delineate and clearly identify our state ROW along with all proposed improvements within our ROW, mapping can be obtained by contacting the district 3 ROW Map counter at: d3rwmaprequest@dot.ca.gov. Applicant or their representatives may also need to identify any possible vulnerable survey monuments in the development area that will need to be preserved and/or perpetuated, as required by PE Act 6731.2 and PLS Act 8771. 2

**Hydraulics**

Tahoe Valley Plan area is in the southwestern portion of the city of South Lake Tahoe. Regional access to the plan area is provided by US 50 and California SR 89. The Area Plan Boundary is going to be expanded to the southwest to include parcels fronting US 50.

Out of total 29.0 acres of newly incorporated parcels, 'Land Use' of 23 new parcels, totaling 11.5 acres of land, have been amendment with proposed changes to density, height, and land coverage limits. Before inclusion in the TVAP, those parcels were approved for 30% land coverage whereas per revised zoning the land coverage area increased to 70%. That is increased coverage area has been increased by 40% which is about 4.6 acre (200,000 SQF). This means the 200,000 SQF of impervious area will be increased due to this amendment after future development. However, as shown in Figure 3, only little portion of the newly incorporated parcels are directly connected to US 50 or SR 89. So, the possibility of drainage impact on State Highways is very slim.

3

It is also mentioned in Section 82 of the Initial Study Report, '…. there is no net increase within the basin' due to this amendment of Area Plan. In addition, as shown in Table 27 of Section 5.4.11 (Hydrology and Water Quality), none of the 'CEQA Environmental Checklist Items', has any 'Potentially Significant Impact' due to inclusion of new parcels in Plan Area.

Based on the information as provided, there should not be any immediate effect on existing drainage facilities for inclusion of the mentioned parcels in TVAP. However, during development process of the new parcels, following new land coverage, appropriate drainage facilities should be provided to avoid any flooding or ponding of run off in the State Highways.

There should not be any significant concerns to the SHS for implementing the proposed project.

**Encroachment Permit**

4

Any project or work, including access modification and drainage work, that takes place along or within the State's ROW requires an encroachment permit issued by Caltrans. To apply, a completed encroachment permit application, environmental documentation, and five sets of plans clearly indicating State ROW must be submitted to:

Hikmat Bsaibess
California Department of Transportation District 3, Office of Permits
703 B Street
Marysville, CA 95901

Please provide our office with copies of any further actions regarding this project. We would appreciate the opportunity to review and comment on any changes related to this development.

If you have any questions regarding these comments or require additional information, please contact Satwinder Dhatt, Local Development Review Coordinator, by phone (530) 821-8261 or via email at satwinder.dhatt@dot.ca.gov.

Sincerely,

GARY ARNOLD, Branch Chief
Local Development Review and Complete Streets
Division of Planning, Local Assistance, and Sustainability
California Department of Transportation, District 3

# SECTION 1
# Introduction

The Tahoe Valley Area Plan (Area Plan) serves as the comprehensive land use and zoning plan for the Tahoe Valley area, consistent with the Lake Tahoe Regional Plan (Regional Plan) and the City of South Lake Tahoe General Plan (General Plan). The Area Plan is intended to realize the community's vision, assist in achieving and maintaining the Tahoe Regional Planning Agency's (TRPA) Environmental Threshold Carrying Capacities, implement the City of South Lake Tahoe Climate Action Plan, implement the Tahoe Metropolitan Planning Organization's (TMPO) Sustainable Communities Strategy, and implement policy direction of both the Regional Plan and General Plan.

The Tahoe Valley Area Plan defines a vision for the future of the Tahoe Valley area. The Tahoe Valley Area Plan planning area (plan area) is a 374-acre area, centered on the US Highway 50 and State Route (SR) 89 "Y" intersection, in the southwest corner of South Lake Tahoe, California. The plan area is roughly bounded by 10$^{th}$ Street on the north, H Street on the south, Truckee Drive on the east, and Julie Lane on the west (Figure 1).

The Tahoe Valley area developed primarily in the 1950s as a commercial corridor for highway travelers. While some of South Lake Tahoe (such as the Stateline/Ski Run area) has been dramatically transformed in the last ten years, the Tahoe Valley area has changed at a slower rate. Examples of significant improvements as a result of private investment in façade improvements and rebuilds include Smart & Final, Goodwill, TJ Maxx, Ernie's Coffee Shop, BevMo, the Crossings, and Coldwell Banker.

This Area Plan establishes a vision for the Tahoe Valley area based on a realistic assessment of the area's potential. The Area Plan sets policies as well as implementation measures to ameliorate existing conditions and create new development and redevelopment opportunities. It describes how this area can focus the resources needed to become a vital economic center of the South Shore and the Tahoe Basin while reflecting Tahoe Valley's unique characteristics and supporting the local community's vision.

The Area Plan provides more detailed direction for the Tahoe Valley area and incorporates both the Regional Plan and the General Plan by reference, including the respective implementing ordinances. The Area Plan integrates these plans to the extent practical to simplify compliance with local and regional requirements, and improve the efficiency of plan administration. It establishes the land use regulations, development standards, implementation strategies, and needed environmental improvements for the area, and encourages new development and redevelopment that enhances the built environment to revitalize the Tahoe Valley community. Renovation of this gateway to the South Shore is important to achieving the City's economic development goals for revitalizing the community, improving infrastructure, and diversifying the local tax base.

## 1.1 Relationship to the Tahoe Valley Community Plan

Tahoe Valley was initially designated a "Preliminary Community Plan" area in the City's 1999 General Plan and TRPA's 1987 Regional Plan. The Tahoe Valley Community Plan was initiated in February 2003 through a joint planning effort by the City and TRPA. That process resulted in the Draft Tahoe Valley Community Plan that was published in March 27, 2007, and presented to the City Council on April 3, 2007. The City retained Pacific Municipal Consultants to prepare an Environmental Impact Report (EIR) on the draft community plan, which was completed in November 2008 but was not circulated. Because TRPA was in the midst of updating their 1987 Regional Plan that had the potential to alter land use regulations and incentives strategies, a decision was made to postpone adoption of the community plan until after an updated Regional Plan was adopted. Subsequently, TRPA adopted an updated Regional Plan in December 2012 that fundamentally changed the community planning process and provided an alternative planning process for local jurisdictions to adopt conforming Area Plans.

## 1.2 Area Plan Adoption

In early summer of 2015, the South Lake Tahoe City Council and TRPA Governing Board held public hearings on the Tahoe Valley Area Plan and, finding it in conformance with the City's General Plan and TRPA's Regional Plan, took action to adopt the plan. This Area Plan supersedes Plan Area Statement (PAS) #110, "South 'Y'", and portions of PAS 114, "Bonanza" for the purposes of land use regulation for both agencies and will provide management direction for all projects proposed within the plan's boundaries.

**Figure 1**

April 2023

## 1.3 Organization of the Area Plan

Following this Introduction, Section 2 characterizes the legal authority and regulatory setting of South Lake Tahoe. Section 3 provides an overview of the Area Plan's existing conditions and opportunities and constraints for redevelopment and conservation. Section 4 summarizes the plan's vision for the future and guiding principles for development and redevelopment. Sections 5-12 outline the policy direction for the plan, with individual sections on the following:

Section 5 – Land Use and Community Design
This section supplements the Land Use Element of the TRPA Regional Plan, and the Land Use Element of the City of South Lake Tahoe General Plan. This section includes the Area Plan's Goals and Policies related to land use and community design, and establishes land use and zoning regulations for the Area Plan.

Section 6 – Economic Development
This section supplements the Economic Development Element of the City of South Lake Tahoe General Plan. This section includes the Area Plan's Goals and Policies related to economic development and sustainability to create a vibrant and sustainable local economy.

Section 7 – Housing
This section supplements the Housing Sub-element of the TRPA Regional Plan, and the Housing Element of the City of South Lake Tahoe General Plan. This Section includes the Area Plan's Goals and Policies related to housing to achieve the Plan's vision of increasing the availability of quality workforce housing and affordable housing.

Section 8 – Transportation and Circulation
This section supplements the Transportation Element of the TRPA Regional Plan, TRPA/Tahoe Metropolitan Planning Organization (TMPO) Regional Transportation Plan, and the Transportation and Circulation Element of the City of South Lake Tahoe General Plan. Consistent with these plans, this section lists the specific policies applicable to the Area Plan and describes the improvements necessary to implement these policies.

Section 9 – Public/Quasi-Public Facilities and Services
This section supplements the Public Services and Facilities Element of the TRPA Regional Plan and the Public/Quasi-Public Facilities and Services Element of the City of South Lake Tahoe General Plan. This section identifies public/quasi-public service providers and needed improvement to facilities and services.

Section 10 – Natural and Cultural Resources
This section supplements the Conservation Element of the TRPA Regional Plan and the Natural and Cultural Resources Element of the City of South Lake Tahoe General Plan. It contains the Area Plan's environmental conservation and management strategy. It lists the needed environmental improvements for the Area Plan.

Section 11 – Recreation
This section supplements the Recreation Element of the TRPA Regional Plan and the City of South Lake Tahoe General Plan. It contains the plan's strategy for improving recreational opportunities and identifies proposed recreational improvements within the plan.

Section 12 – Health, Safety, and Noise
This section supplements the Noise Sub-element of the TRPA Regional Plan, and the Health and Safety Element of the City of South Lake Tahoe General Plan. This section includes the Area Plan's Goals and Policies related to public health and safety issues.

Section 13 – Incentive Programs
This section supplements the Implementation Element of the TRPA Regional Plan and the Implementation Program of the City of South Lake Tahoe General Plan. It describes public and private sector implementation strategies including capital improvement projects and planning and coordination activities, including a summary of incentives, and the plan reporting and revision process.

Appendix A – References

Appendix B - South Lake Tahoe Design Guidelines (2016)
Appendix B shall supplement Appendix C by providing context for the intent and visual illustrations of the Area Plan's design standards.

Appendix C – Development and Design Standards
Appendix C sets development standards, design standards and permissible uses for the Area Plan's land use districts. The standards are intended to improve the scenic quality of the built environment, promote a sense of place, and support the community's desired community character. Development, redevelopment, or expansions of existing uses will be reviewed by the City or TRPA for consistency with these standards.

Appendix D – City of South Lake Tahoe Green Building Program
Appendix D sets criteria for earning City incentives for incorporating exceptional energy efficiency in new and redeveloped projects.

# SECTION 2
# Legal Authority and Regulatory Setting

The City of South Lake Tahoe plans and regulates within the policy and regulatory framework of both the Tahoe Regional Planning Agency (TRPA) and the State of California. This section describes the policy and regulatory framework for the Tahoe Valley Area Plan.

The purpose of the Tahoe Valley Area Plan is to define land use regulations and guidelines for planning decisions. The Tahoe Valley Area Plan presents principles, goals, policies and implementation strategies designed to encourage redevelopment, create a vibrant walkable pedestrian-oriented community and provide for environmental improvements. The Area Plan is used by the City and TRPA to review specific development proposals in Tahoe Valley. The Plan also provides direction to property owners, community groups, and interested individuals in planning and design of development and redevelopment projects.

The Tahoe Valley Area Plan, once adopted, will become a part of TRPA's Regional Plan and the City of South Lake Tahoe General Plan. The Area Plan will also revise the official zoning map of the City of South Lake Tahoe.

## 2.1 Tahoe Regional Planning Agency

**Regional Plan**

In December 2012, the TRPA Governing Board adopted an updated Regional Plan. The TRPA Regional Plan Goals and Policies serve as a guide for all future land use decisions within the Tahoe Region. Priorities of the updated Regional Plan that apply to this Area Plan include:

- Accelerating water quality restoration and other Threshold gains by supporting environmental redevelopment opportunities, restoration of disturbed lands and Environmental Improvement Program (EIP) investments.
- Transitioning to more permitting by local governments to create "one-stop-shopping" for homeowner improvements in order to return TRPA to the more regional role the Compact originally intended.
- Creating walkable communities and increasing alternative transportation options.
- Retaining the established regional growth control system. Under this system, rampant overdevelopment was stopped and open spaces preserved. Most of the policies from the 1987 Regional Plan stayed in place with adoption of the 2012 Regional Plan.
- Creating a more efficient planning system that integrates TRPA requirements into the plans and permits of other government agencies.

- Encouraging property owners to transfer development rights from sensitive or outlying areas to Town Centers, with the goal of restoring these lands.
- Eliminating regulatory barriers to the environmental redevelopment of rundown buildings.
- Simplifying burdensome regulations for homeowners while achieving threshold gain.
- Integrating with the TRPA/TMPO Regional Transportation Plan to support sidewalk and bike trail projects that reduce automobile dependency and increase walkability and safety.
- Continuing to deliver restoration projects under the EIP that achieve erosion control on roadways and restore forests and wetlands.

TRPA's Regional Plan Conceptual Land Use Map classifies the majority of Tahoe Valley as Mixed-Use and also designates a portion of the area as Residential, Town Center Overlay, and Stream Restoration Plan Area. TRPA's Regional Conceptual Land Use Map is depicted in Figure 2.

The following descriptions define the intention and purpose of TRPA's land use classification, overlay districts and special designations:

Mixed-Use: Mixed-use areas are urban areas that have been designated to provide a mix of commercial, public services, light industrial, office, and residential uses to the Region or have the potential to provide future commercial, public service, light industrial, office, and residential uses. The purpose of this classification is to concentrate higher intensity land uses for public convenience, and enhanced sustainability.

Residential: Residential areas are urban areas having potential to provide housing for the residents of the Region. In addition, the purpose of this classification is to identify density patterns related to both the physical and manmade characteristics of the land and to allow accessory and non-residential uses that complement the residential neighborhood. These lands include: (1) areas now developed for residential purposes; (2) areas of moderate-to-good land capability; (3) areas within urban boundaries and serviced by utilities; and (4) areas of centralized location in close proximity to commercial services and public facilities.

Town Centers: Town centers contain most of the Region's non-residential services and have been identified as a significant source of sediments and other contaminants that continue to enter Lake Tahoe. Town centers are targeted for redevelopment in a manner that improves environmental conditions, creates a more sustainable and less auto-dependent development pattern and provides economic opportunities in the Region.

Stream Restoration Plan Area: Stream Restoration Plan Areas are Stream Environment Zones along major waterways that have been substantially degraded by prior or existing development. Individual Restoration Plans should be developed for each Stream Restoration Plan Area in coordination with the applicable local government and property owners in the plan area. Restoration Plans may be developed as a component of an Area Plan or as a separate document and should identify feasible opportunities for environmental restoration.

**Area Plan**

Area Plans allow for planning that is responsive to the unique circumstances of communities within the Tahoe Region. TRPA and local governments, in close coordination with the local community, may prepare plans for a specific area in conformance with the Regional Plan. The authority and requirements for this Area Plan are provided in Chapter 13 (Area Plans) of the TRPA Code of Ordinances.

**Sustainable Communities Strategies**

California's Senate Bill 375 (SB 375) requires metropolitan planning organizations to develop regional land use and transportation policies to reduce greenhouse gas (GHG) emissions from cars and light trucks in order to meet targets established by the California Air Resources Board's Regional Targets Advisory Committee. SB 375 calls for each metropolitan planning organization to develop a Sustainable Communities Strategy (SCS) identifying the transportation, land use, and housing strategies that will reduce regional GHG emissions. The TRPA/TMPO adopted Regional Transportation Plan serves as the Region's Sustainable Community Strategy Plan.

The Tahoe Valley Area Plan is designed to be consistent with the TRPA Regional Transportation Plan and the SCS by providing a framework for implementing land use and transportation practices to reduce GHG emissions. These strategies include creating a mixed-use, pedestrian and transit-oriented land use pattern, providing for alternative modes of transportation and encouraging a variety of housing types within close proximity to transit, services and employment centers.

## 2.2 State of California

The Tahoe Valley Area Plan is designed to meet State of California requirements for specific plans and to facilitate the implementation of development goals and policies by establishing zoning districts, standards and criteria for development, and to set the distribution, location and extent of planned land uses consistent with the adopted City General Plan.

## 2.3 City of South Lake Tahoe

The City of South Lake Tahoe must adhere to both TRPA plans and regulations adopted pursuant to the Compact and to California State law, to the extent that State laws do not conflict with the Compact. Under the Compact, TRPA addresses general regional matters, while the City retains its power over purely local matters. The City can adopt more strict regulations than TRPA and can regulate matters over which TRPA has no authority.

**General Plan (2011)**

The City of South Lake Tahoe General Plan designation for Tahoe Valley is Town Center (TC). This designation provides for a mixture of uses, including tourist accommodation, commercial, intensive recreation, high-density residential, and mixed-use residential. This designation is applied to areas that are currently developed as commercial/visitor centers, have excess land coverage, where vertical mixed-use projects are appropriate, and are near commercial, employment, transit, and public services. The City's General Land Use Diagram is depicted in Figure 3.

The overall purpose of the Town Center is to:

- Provide for the orderly, well-planned, and balanced growth of the Town Center and support the area's role as an important commercial, tourist, and recreation center that provides full services to residents while appealing to visitors.
- Promote the Town Center as a pedestrian- and transit-oriented, mixed-use activity center and a gateway to an outdoor tourism recreational destination and expand its role as an economic center for residents of South Lake Tahoe.
- Encourage a mix of uses that promotes convenience, economic vitality, and a pleasant quality of life and improve access to a greater range of facilities and services for residents and visitors.
- Establish development and design standards that improve pedestrian- and transit-orientation and the visual quality of development and that will create unified, distinctive, and attractive community character.

The General Plan includes the following policies that are directly applicable to the Tahoe Valley Area Plan:

**Policy LU-2.2** directs the City to periodically update and implement the four community plans, of which Tahoe Valley is one, as a way to focus development commodities and revitalization efforts.

**Policy LU-2.7** directs the City to transform the Tahoe Valley area into an attractive gateway commercial district that serves both residents and visitors.

**Policy LU-2.9** defines Tahoe Valley as one of the City's nodes that is targeted for future development and revitalization.

**Policy LU-2.10** encourages the use of incentives to create a compact, mixed-use, transit-oriented, and higher-density development pattern within the Tahoe Valley area.

**Policy LU-2.11** designates the Tahoe Valley as a primary area in the City for resident-serving commercial uses, workforce housing and affordable housing. Furthermore, the policy encourages transforming the area into a contemporary, pedestrian-oriented, mixed use, commercial service district served by a transit center and alternate transportation opportunities.

**Policy LU-2.13** designates the Tahoe Valley area as a social and economic center that includes a variety of housing types, mixed-use development, recreational or social gathering spaces, cultural uses, civic uses and facilities, and commercial services.

The development of the Tahoe Valley Area Plan is intended to meet the directive of the General Plan policies outlined above.

**Sustainability Plan**

The City of South Lake Tahoe adopted policies for sustainable development and "green" buildings in the Land Use Element of the General Plan. The policies call for creating a sustainable and energy-efficient built environment as a key vision of the City of South Lake Tahoe. The policies provide direction on the use of "green" building technology, energy efficiency, and strategies to achieve sustainable development practices.

The City has implemented specific strategies including providing streamlined permitting to encourage "green" building practices and instituting a plastic bag ban for grocery stores, food vendors, and retail establishments.

**Climate Action Plan**

The City adopted a Climate Action Plan (CAP) in 2020, setting carbon pollution goals for 2030 and 2040. 2030 has been identified as a key milestone year to achieve significant carbon pollution reductions to avoid the worst impacts of climate change. On June 21, 2022, the City officially adopted a science-based carbon pollution target, refining the originally estimated target established in Resolution 2017-026. This target establishes a reduction target of 59.2% from the 2018 baseline levels and aligns with the City's commitment to carbon pollution reduction and renewable energy goals. The CAP outlines a framework consisting of five overarching strategies, each encompassing specific actions. These strategies are categorized as follows: transportation, land use, water and solid waste, carbon sequestration and watershed health, and building energy. Under each strategy, a set of actions is identified to guide the City's efforts in addressing climate change and promoting sustainability.

The Tahoe Valley Area Plan incorporates policy and land use direction to advance CAP strategies to improve public transit, increase the use of electric vehicles, increase walking and biking, encourage high-density mixed-use neighborhoods close to public transit, improve energy efficiency of buildings, reduce wildfire risk, and protect watersheds.

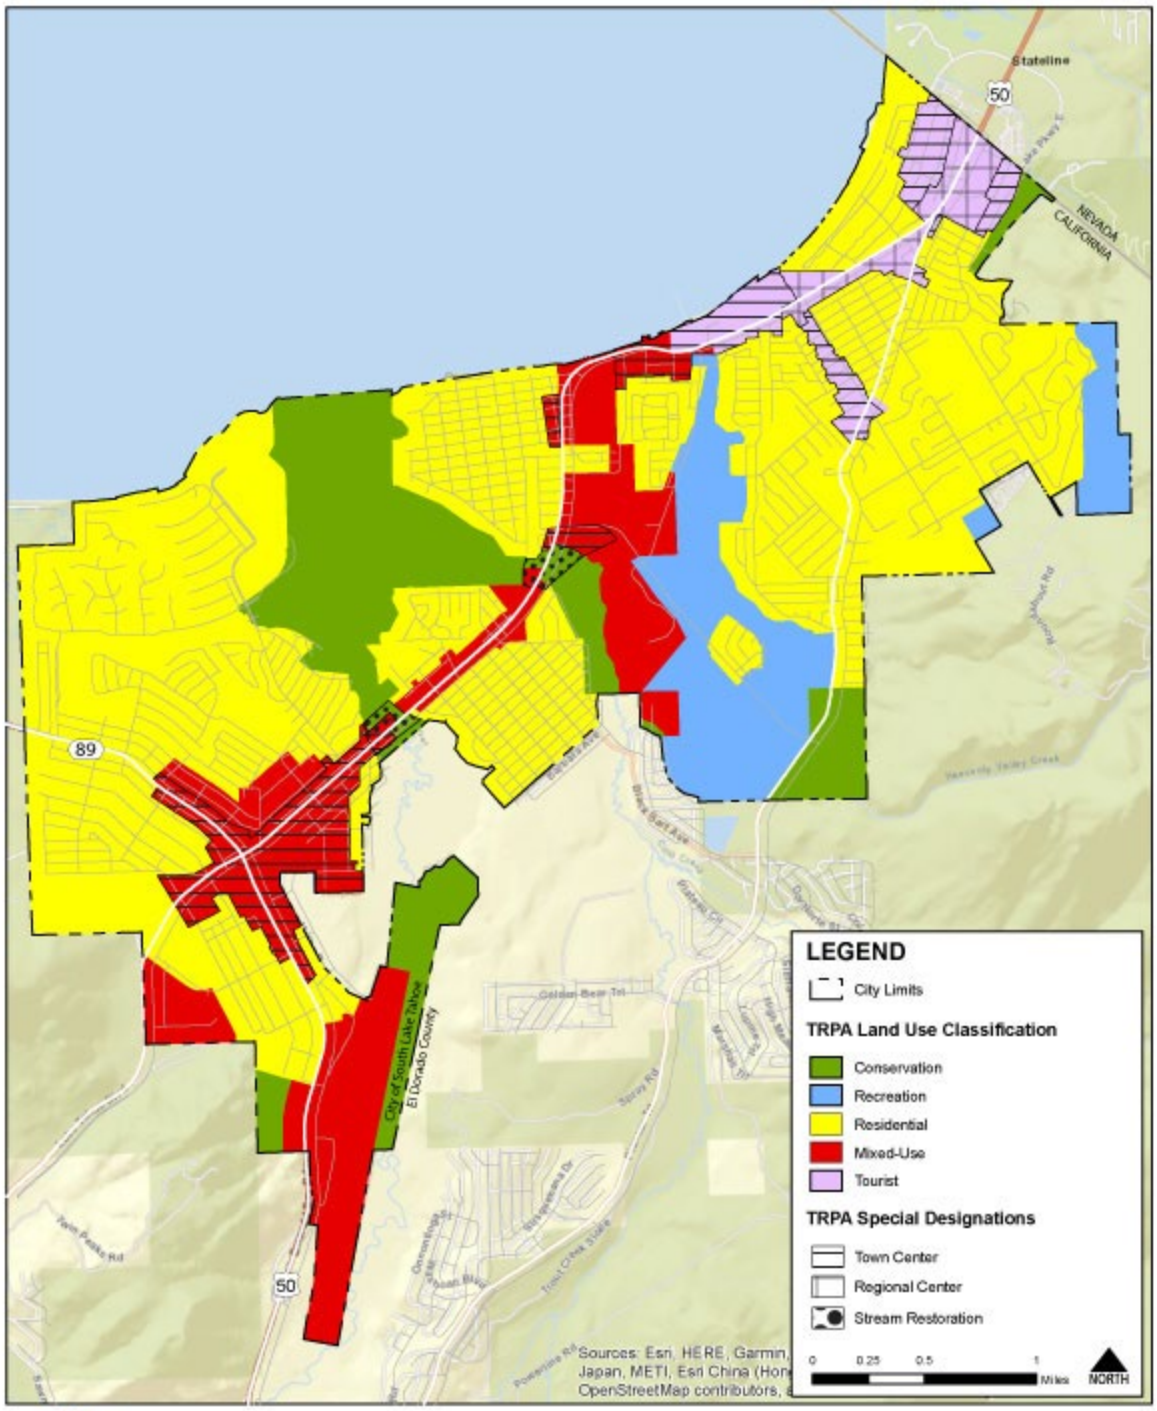
**Plan Area Statements**

Upon its adoption in 2015, the Tahoe Valley Area Plan replaced Plan Area Statement (PAS) 110, "South 'Y'," and a small portion of PAS 114, "Bonanza" (APNs: 32-141-02 and -18).

Updates to the plan in 2023 expanded the Area Plan boundary in three areas. To the southwest, parcels fronting US Highway 50 from the existing boundary line south to H Street, plus APNs 032-161-012, 032-161-013, 032-161-009, and 032-161-008 (previously PAS 114) were incorporated. Seven parcels fronting Melba Drive were added so that the Area Plan is contained in this corner by the intersection of E Street and Melba Drive (previously PAS 114). The third area of expansion was the northeast corner of the plan area. All parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave shall be included up until the existing Area Plan boundary, in addition to APN 023-221-020 north of Eloise Ave (previously PAS 111).

**Standards and Guidelines**

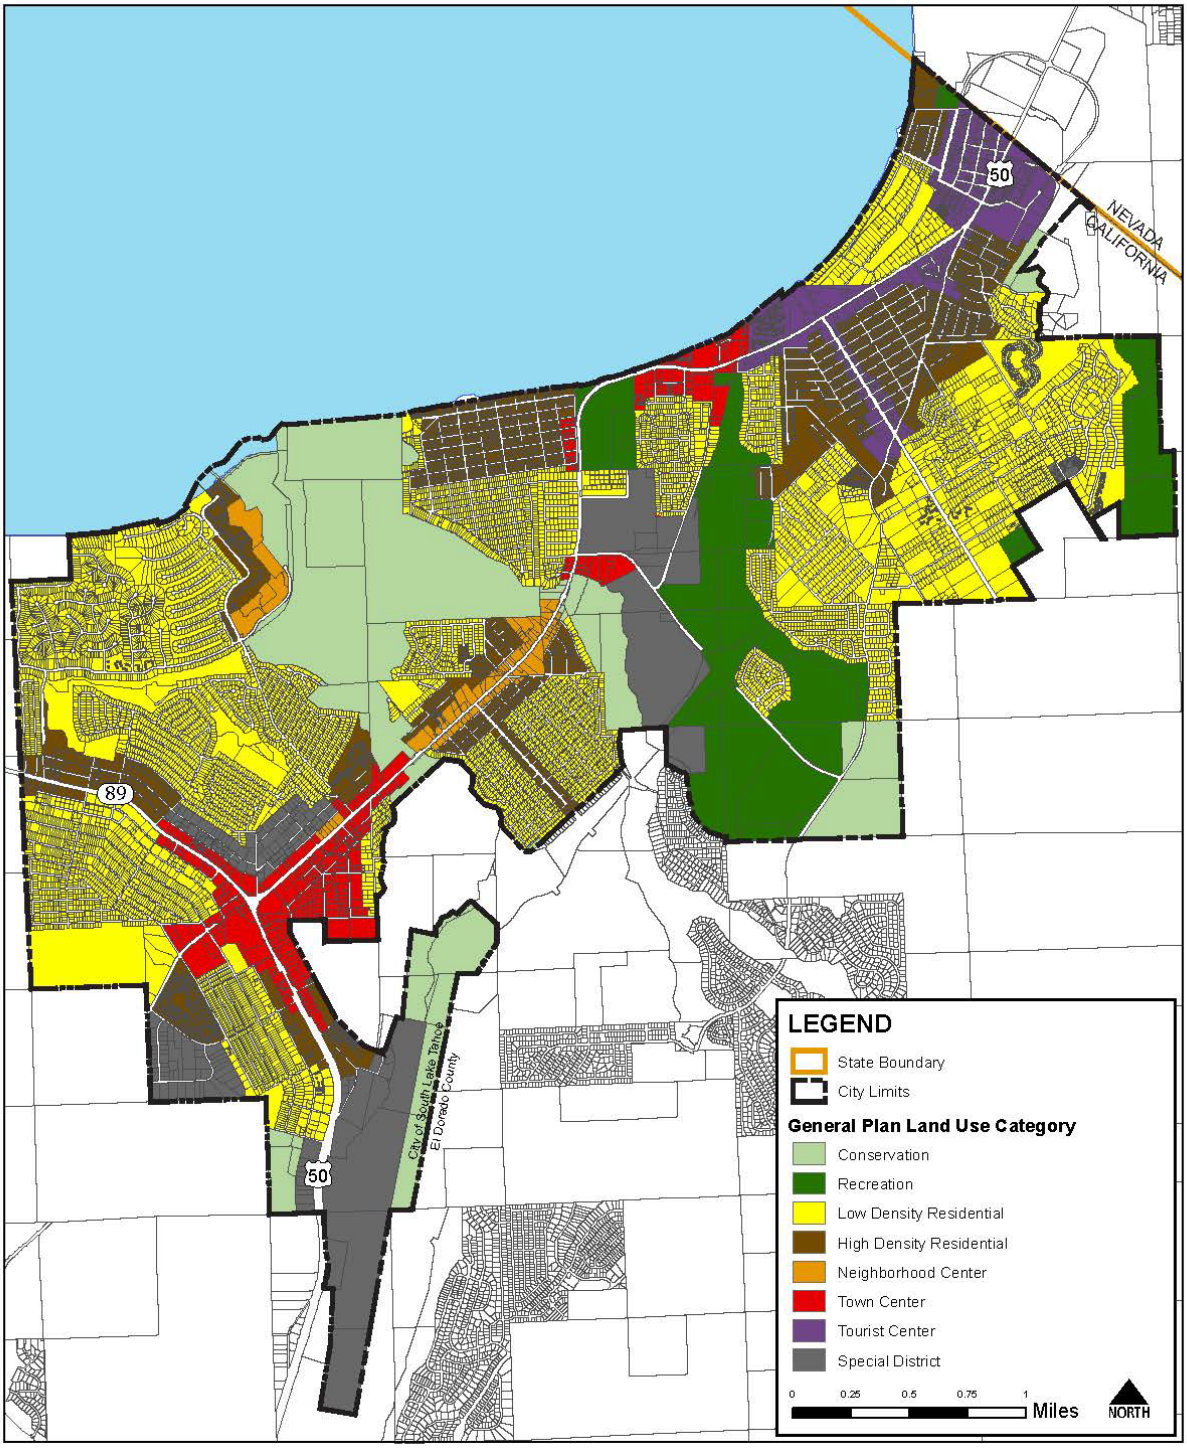
The City of South Lake Tahoe and TRPA have jointly adopted Standards and Guidelines that include citywide design standards, guidelines, and specific design standards for the three previously adopted Community Plans.



The citywide design standards and guidelines, as well as specific design standards tailored towards the Area Plan are incorporated in the Tahoe Valley Area Plan and will provide design guidance for the plan area.

**Smart Growth Principles**

In August 2005, the South Lake Tahoe City Council endorsed a set of Smart Growth Principles for possible inclusion in the City General Plan for South Lake Tahoe. These principles are organized under the following headings:



- Land Use
- Transportation
- Community Livability
- Governance

The Tahoe Valley Area Plan is designed to implement the City's smart growth principles by encouraging a land use pattern that focuses on walkable, compact mixed-use centers, with access to transportation choices while preserving open spaces and critical environmental areas.

# SECTION 3
# Existing Conditions

This section describes the existing physical conditions within the Tahoe Valley plan area, both natural and human made. The Tahoe Valley area has been extensively altered by human activity and development since it was first settled in the late 1800s. The present pattern of development in the area has evolved primarily since the 1950s. The conditions summarized in this section act as opportunities or constraints (or sometimes both) to development, redevelopment, and conservation of resources within the plan area.

This section is organized into the following topics: Land Use, Economic Conditions, Transportation and Circulation, Public/Quasi-Public Facilities and Services, Natural Resources and Cultural Resources, Open Space, and Health and Safety.

## 3.1 Economic Conditions

The economy of South Lake Tahoe is largely dependent upon tourism, which fluctuates seasonally. The lodging industry at the South Shore has experienced substantial difficulties over the past 10 years. The number of annual rooms rented has declined 35 percent. More recently, a slight uptick has been observed in 2010/2011, and reports indicate 2011/2012 also showed slight improvements. However, these figures are still substantially lower than the levels seen in 2001/2002 and before, which translates into less local revenue generated as well as fewer job opportunities. (TTD, 2013).

The Tahoe Valley area is largely dominated by strip commercial development along South Lake Tahoe's key corridor (US 50). Shortcomings of this type of development include the area's many curb cuts for driveways, relatively small and fragmented parcels, stand-alone structures, older motels struggling to be profitable, and lack of continuous sidewalks, bike paths, landscaping, and other amenities. In addition, this type of development pattern is difficult and costly to modify. South Lake Tahoe also has a strict regulatory environment created around the need to protect the environment in the Tahoe Basin, which adds to the challenges of redevelopment.

In summary, there is a clear need to revitalize the physical appearance and accessibility of the area to increase economic activity. The area is in a unique position to capture more local-resident-serving commercial sales, as well as capture more tourist sales.

## 3.2 Land Use

**Neighboring Land Uses**

The Tahoe Valley plan area is bounded on the north, west, and south primarily by residential subdivisions, dating from the 1960s to the 1990s. The plan area is bordered on the east by the Upper Truckee Marsh and to the southeast by the South Lake Tahoe Airport.

**Land Uses**

The plan area is made up of a variety of existing land uses, including residential, commercial, tourist accommodation, industrial, and public service. Table 1 summarizes existing uses within the plan area by acreage, percentage of total acreage, and number of parcels. The plan area encompasses 374 acres and 525 individual parcels (not including existing roadway/infrastructure related parcels) as shown in Figure 4. Tahoe Valley is the gateway neighborhood for South Lake Tahoe, and includes various commercial uses such as clothing stores, factory outlets, automotive supply stores and dealerships, drug and liquor stores, restaurants, and supermarkets. These uses occupy structures ranging in age and physical condition, from the 1890's to present day construction.

When Measure T was passed in 2018, commercially zoned parcels in the Tahoe Valley Area Plan became one of the limited areas in South Lake Tahoe where vacation home rentals are allowed. This exception, however, only applies to commercially zoned properties within the Area Plan as of 2017. Areas later rezoned to commercial are not eligible for vacation home rental permits. Additional restrictions to eligibility for a Vacation Home Rental permit are included in Appendix C.

**Table 1**
**Existing Land Use**

| Land Use | Acres | Percent of Acreage |
|---|---|---|
| Residential | 47.1 | 12.6% |
| Tourist | 13.0 | 3.5% |
| Commercial | 145.3 | 38.9% |
| Public | 19.2 | 5% |
| Quasi-Public | 8.2 | 2.2% |
| Recreation | 3.3 | 0.9% |
| Vacant Private | 31.3 | 8.4% |
| Vacant Public | 15.3 | 4.1% |
| Open Space | 20.2 | 5.4% |
| Roads and Infrastructure | 71.1 | 19.0% |
| **TOTAL** | **374** | **100%** |

Source: TRPA GIS, March 2023.

***Residential***

Based on 2013 TRPA data, the plan area includes a total of 37.2 acres of residential land, of which 16.1 acres are single-family homes, 16.3 acres are multi-family, and 3.8 acres are mobile homes. The area adjacent to the Barton Hospital in particular contains a diverse range of housing types, including single and multi-family dwellings, senior care facilities, and mobile homes. The age and quality of these structures vary widely. The Industrial District contains a number of residential units, which are non-conforming under an industrial designation. The residential units in the plan area, for the most part, tend to be lower-priced rentals rather than owner-occupied housing.

***Non-Residential***

The plan area contains a wide array of commercial uses, most of which are located in commercial centers along the highways. The plan area does have several major commercial centers surrounding the Y intersection. These include a center anchored by Raley's supermarket, The Crossings at Tahoe Valley outlet store center, and commercial retail property occupied by a TJ Maxx. The area east of the Y intersection along Lake Tahoe Boulevard contains a car dealership, hardware store, and a tire sales and repair center.

The plan area also contains a mix of light industrial uses concentrated primarily in the northern part of Tahoe Valley. These uses include small-scale manufacturing, a solid waste transfer and recycling facility, auto repair shops, warehousing, wholesale, and other light industrial service uses. Many of these businesses are adjacent to residential uses.

Public and quasi-public uses are discussed in detail under Public/Quasi-Public Facilities and Services.

***Vacant Lands***

In 2014, approximately 18.1 acres (5.4 percent) of the plan area were vacant and privately owned. These vacant lots are not concentrated in any one part of the plan area, rather they are scattered throughout the plan area. At the time of the 2024 amendments, there were 31.3 acres (8.4%) of vacant private owned land. The main contributor to this increase was the addition of the Emerald Bay Connection Corridor District.

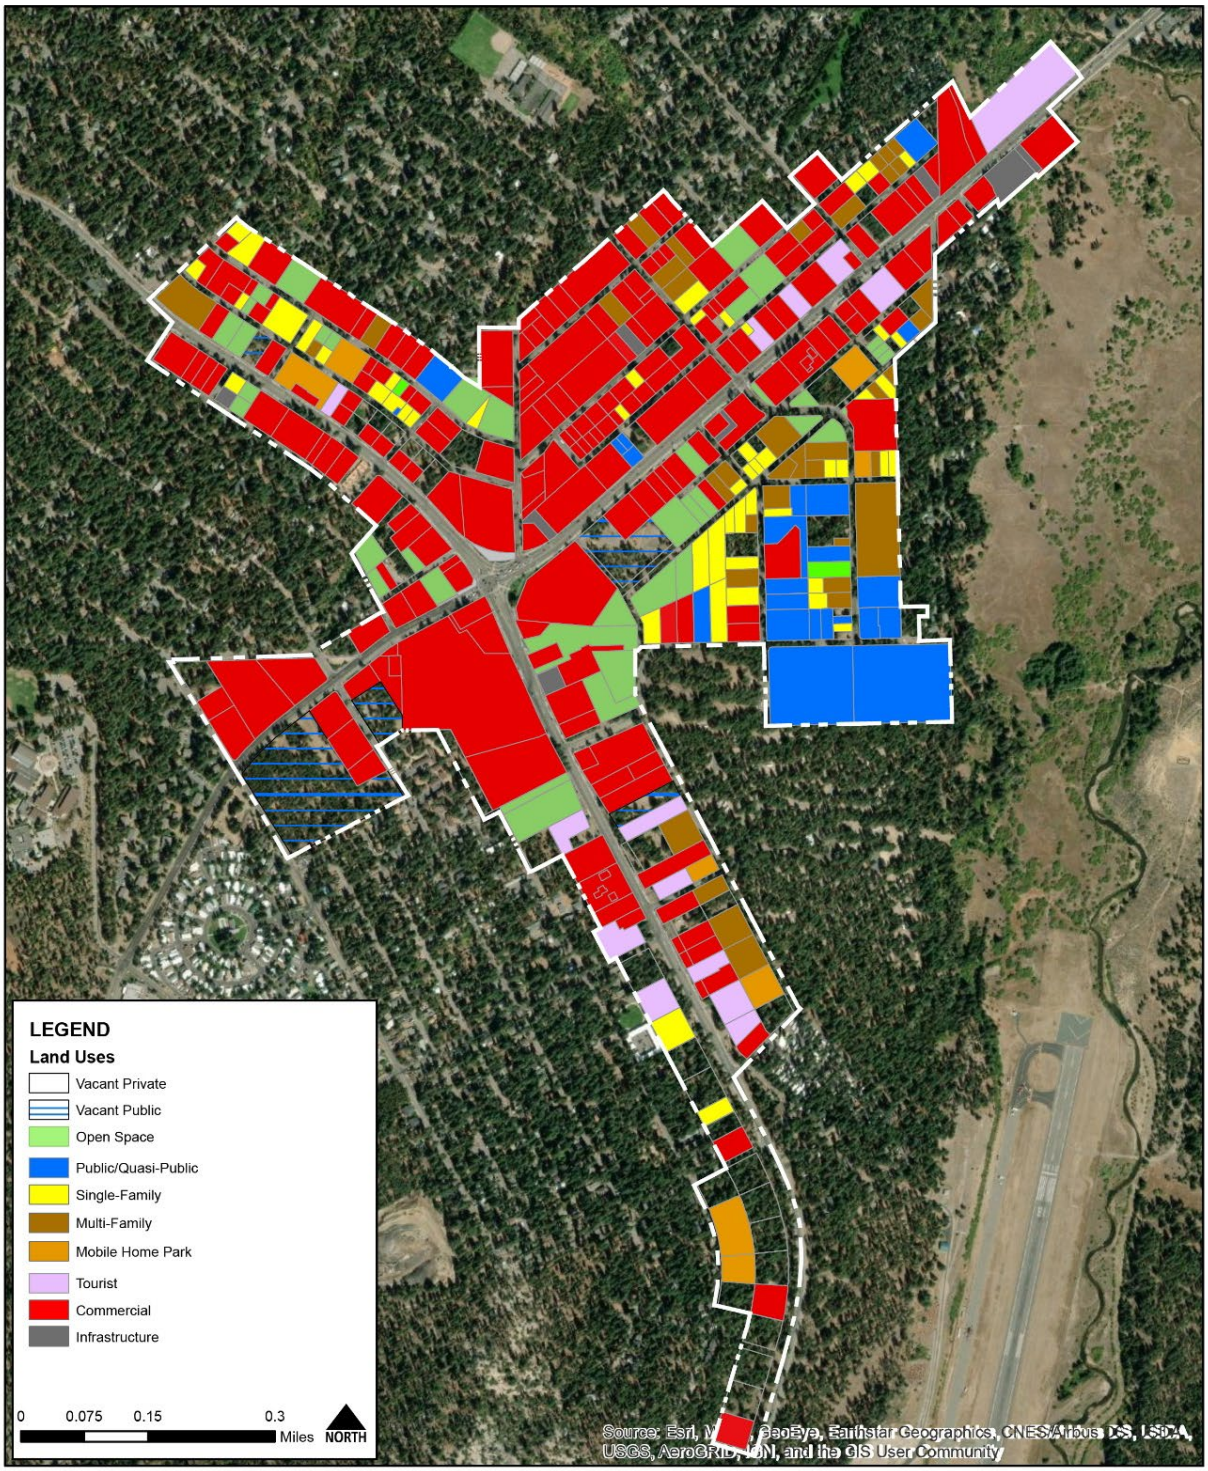
***Publicly-Owned Open Space***

The plan area contains a number of (5.4 percent, 20.2 acres) of publicly-owned vacant open space parcels. These properties are owned by the United States Forest Service, California Tahoe Conservancy, or City of South Lake Tahoe and are subject to various use and development restrictions based on which agency owns the property and the manner in which the property was acquired.

***California Tahoe Conservancy Asset Lands***

The California Tahoe Conservancy (CTC) owns seven (7) parcels, totaling 16.9 acres, in the plan area that are considered "asset lands" and may be available for development. The CTC's overall land inventory totals 4,677 parcels accounting for more than 6,500 acres, of that total there are 17 Conservancy-owned properties throughout the basin that are regarded as "*asset lands*." Asset lands are parcels which are not essential to carrying out Conservancy goals, which could have significant market value, and which are not otherwise restricted from disposal by law or Board policy. In fact, some asset lands, at the time of acquisition, were identified for possible future transfer or sale. The CTC defines these classes of lands as "Area Plan or Town Center Asset Lands." These area plan asset lands are considered to be developable lands, or portions thereof, in highly urbanized areas that could support sustainable, compact development or other uses consistent with the Goals and Policies of the Regional Plan and local area plans (CTC, 2014). There are a total of 17 area plan asset land parcels located basin-wide with 6 of those located within the boundaries of the Tahoe Valley Area Plan. The Tahoe Valley Area Plan asset lands account for approximately 16.4 acres. almost of the parcels are vacant except for one located on Tata Lane, developed as an offsite parking lot, and two parcels used for Sugar Pine Village affordable housing projecy.

***Commercial Floor Area***



TRPA regulates the rate and timing of growth within the region, including commercial floor area (CFA). TRPA requires an allocation from the City or from TRPA prior to constructing a project or commencing a use that creates additional CFA. TRPA also allows transferring and reconfiguring legally existing commercial floor area. The Tahoe Valley plan area contains approximately 1,161,000 square feet of existing developed CFA. An additional 15,000 square feet of CFA will be made available by the City for use upon adoption of the Tahoe Valley Area Plan.

***Lake Tahoe Airport Land Use Compatibility Plan***

As part of the land use planning process mandated by the Division of Aeronautics and the California Airport Land Use Planning Handbook, several Airport Land Use Commissions (ALUCs) have been formed throughout the state to prepare and administer an Airport Land Use Compatibility Plan (ALUCP) for each public-use airport in the state. The City of South Lake Tahoe has been named as the administrator of the Lake Tahoe Airport. As such, the City operates as its own ALUCP and the City adopted an ALUCP in August of 2019.

The policies contained in the ALUCP are designed to promote compatibility between the Airport and surrounding land uses to the extent that these areas are not already devoted to incompatible uses. As adopted, the ALUCP policies provide the foundation through which the ALUC can execute its duty to review land use development in areas around the airport.

All of the land within the Tahoe Valley Area is within the ALUCP Airport Influence Area. Much of the Area Plan is in Safety Zone 6, which is the least restrictive Safety Zone. A small southeastern portion of the Area Plan (e.g., Barton Hospital) lies within Safety Zone 3. The Horizontal Surface, located over the plan area is located at 6,419 feet elevation, 98 feet above the highest point in the Area Plan.

**Figure 5**
Lake Tahoe Airport Safety Zones & Noise Contours
April 2023

## 3.3 Transportation and Circulation

**Roadways**

The Tahoe Valley plan area is served by a variety of arterial, collector, and local streets. The existing road network is shown in Figure 6.

The highway and street networks within the plan area are largely dominated by US Highway 50 (Lake Tahoe Blvd.) and State Route (SR) 89 (Emerald Bay Rd.). US Highway 50 is the major east-west roadway facility connecting Sacramento, California and Carson City, Nevada, and is the main facility serving the South Shore area of Lake Tahoe. East of the "Y" intersection, US Highway 50 is also Lake Tahoe Boulevard. Along most of its 1.5-mile length within the plan area, Lake Tahoe Blvd is a five-lane arterial road with a continuous two-way left-turn median lane that transitions to dedicated left-turn pockets at major intersections. In addition to Lake Tahoe Blvd, a network of arterial, collector, and local streets that provide the remaining framework for the overall roadway system. These secondary streets serve as the connection points to adjacent neighborhoods as well as access to the Area Plan's Industrial District and Hospital District.

A well-functioning transportation and circulation system is necessary to address peak hour congestion. The existing road network is relatively limited and experiences high traffic volumes during peak visitor periods.

**Level of Service**

TRPA's Regional Plan Goals and Policies and Regional Transportation Plan, as well as the City's General Plan, set standards for vehicle "level of service" (LOS). LOS is a qualitative measure that describes the operating performance of transportation facilities. For roadways, LOS is an indicator of traffic flow from the perspective of motorists based on factors such as speed, travel time, delay, freedom to maneuver, volume, and capacity. It is defined on a scale from LOS A, the least congested operating conditions, to LOS F, the most congested operating conditions.

The TRPA Regional Plan and City General Plan require that peak period traffic flow not exceed LOS D for major roadways (arterials and collector routes), and signalized intersections shall be at LOS D. LOS E may be acceptable during peak periods, not to exceed 4 hours per day.

The US 50/SR 89 intersection is operating at LOS C while US 50 roadway segments are operating at LOS E during the summer Friday evening peak hour (TRPA, 2012).

While a number of roadways currently operate at LOS D or E, the key intersections connecting those facilities generally operate at LOS C or better. This is because many of those intersections have been designed with additional travel lanes, channelized "free" right-turn movements, and other capacity enhancements to operations for this segment (TRPA, 2012).

**Curbs and Gutters**

The City has historically required curb and gutter improvements only for projects requiring the issuance of a Special Use Permit. As a result, much of the Tahoe Valley plan area contains a discontinuous system

of curbs, gutters, and roadside stormwater infiltration. Along US 50, Caltrans has recently constructed a water quality improvement project that resulted in the installation of curbs and gutters from the Y intersection to E Street. Curbs and gutters are also scheduled to be installed on SR 89 from the "Y" intersection heading north in 2014 and on US 50 from the "Y" intersection to Trout Creek in 2016.

**"Y" Intersection**

The "Y" intersection commonly refers to the intersection of US 50, SR 89, and Lake Tahoe Boulevard. During peak tourist periods high traffic volumes and weather-related reductions in roadway capacity or vehicle speeds, westbound traffic on US 50 south of the "Y" to form queues that back through the "Y" and east on US 50. This is primarily due to a merger of two westbound lanes to a single lane when high volumes of traffic is leaving the Tahoe Basin in a short period of time. While the frequency and length of queue conditions vary year-to-year and records of queue periods are not kept, it is reasonable to estimate that queues form one to three hours per day on roughly 20 days per year for a total of roughly 50 hours per year (CSLT, 2005).

The intersection was improved in 2009 with restriped lanes, improved signalization and an improved right-turn "bypass lane" for the northbound-to-eastbound and the westbound-to-northbound movements, separated from through traffic by a raised island.

**Parking Facilities**

Most private commercial and industrial businesses provide off-street parking for employees and patrons. However, many of these properties do not meet current parking requirements of Chapter 6 of the City Code. This forces many people to park on roadways and unpaved areas which creates a problem for snow removal and street sweeping equipment. There are presently no off-street publicly-owned parking facilities within the plan area.

**Pedestrian and Bicycle Facilities**

The City of South Lake Tahoe's bicycle network is made up of three classes of bicycle facilities (classified by the California Department of Transportation), as follows:

- **Class I Shared Use Paths.** These paths provide a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross-flow from vehicles minimized. Existing Class I facilities in the Area Plan are limited, consisting of relatively short segments south and east of The Crossing at Tahoe Valley at the "Y" intersection and a facility crossing the Upper Truckee River just to the north of US 50 in the eastern end of the Area Plan. A nearby Class I facility follows SR 89 to Camp Richardson and Spring Creek, starting at the northern end of Eloise Avenue at 15$^{th}$ Street. In 2022, a Class I facility was constructed along the south side of Lake Tahoe Blvd from Viking Way to the "Y" intersection.
- **Class II Bike Lane.** Class II facilities provides a striped lane for one-way bicycle travel on a street or highway. Within the Area Plan, these facilities are provided along Tahoe Keys Boulevard, Helen Avenue, Melba Drive, B Street, C Street, 10th Street, Lake Tahoe Boulevard west of the "Y" intersection, and US 50 from the "Y" intersection just beyond E street.
- **Class III Bike Route.** As with Class II facilities provides for shared use with bicycle or motor vehicle traffic, typically on lower volume roadways. Class III facilities are typically provided along low-volume streets to minimize the potential for conflicts between bicyclists and motorists. In the

Area Plan, Class III routes are designated along Eloise Avenue and SR 89 north of the "Y" intersection. This route connects to the Class I path that roughly parallels SR 89 to Camp Richardson and beyond.

The Tahoe Valley plan area contains various Class I, II, and III Bicycle Routes (Figure 6). Where bike facilities are not provided it is common to see pedestrians and bicyclists using the street right-of-ways to navigate the community.

**Transit Services and Facilities**

South Lake Tahoe, including the Tahoe Valley plan area, is served by Tahoe Transportation District (TTD) fixed route bus service, seasonal recreation routes, and Amtrak buses. A senior van service assists many area seniors in getting to appointments and running errands. The routes of these various transit services are shown in Figure 6.

All fixed route bus stops within the plan area have benches, while some of the stops also provide shelter for bus users. The City has been coordinating with the Tahoe Transportation District on installing additional bus shelters along US 50 as funding becomes available.

The Y Transit Center is located at the southwest corner of the Y intersection. This center is one of two City-owned transit centers and provides a transfer point for transit users on Tahoe Transportation District's fixed-route bus services. The transit center is also served by Amtrak buses connecting to the Capitol Corridor train route in Sacramento.

**South Lake Tahoe Airport**

The Tahoe Valley plan area is located approximately one mile northwest of the Lake Tahoe Airport. The airport, which is a general aviation airport owned and operated by the City of South Lake Tahoe, contains a single north-south 8,541 foot long runway. The airport facility includes a commercial passenger terminal, 169 plane tie-down spaces, and a 57-unit hangar and storage complex.

According to the airport administration, aircraft presently based (2014) at the airport consist of 22 single engine, three multi-engine aircraft, and three helicopters. There were 23,540 annual operations counted by the FAA tower in 2010 (FAA Air Traffic Activity System [ATADS] http://aspm.faa.gov/opsnet/sys/Airport.asp).

## 3.4 Public/Quasi-Public Facilities and Services

This section describes the public and quasi-public facilities and services located in the Tahoe Valley plan area. In addition to these, the area hosts several cellular towers, offices for local power and gas suppliers, day care centers, places of worship, and social service organizations.

**Water and Wastewater Services**

Water service within the Tahoe Valley plan area is provided by the South Tahoe Public Utilities District (STPUD) and Lukins Brothers Water Company (Lukins). STPUD provides water service to the majority of the plan area. Lukins provides water services to parcels located north of Emerald Bay Road and west of Dunlap Drive.

STPUD is a California Special District established in 1950. The 27,000-acre service area covers the South Shore of Lake Tahoe from Emerald Bay on the west, Christmas Valley on the south, the California-Nevada state line to the east, and Lake Tahoe to the north. The District's water supply comes entirely from 20 active municipal wells that pump groundwater from the Lake Tahoe Basin. The District maintains one pump station and one active groundwater well within the plan area.

The Lukins Brothers Water Company is a private water purveyor established in 1942 which is governed by the California Public Utility Commission. It provides service to approximately 200 customers within the Tahoe Valley plan area including businesses (75 percent), single-family (5 percent) and multi-family (20 percent) dwellings.

Wastewater collection service within the Tahoe Valley plan area is provided by STPUD. STPUD collects and treats wastewater from businesses and residents within the District's service area, which encompasses approximately 42 square miles and includes the City of South Lake Tahoe and unincorporated area of El Dorado County within the Tahoe Basin. The District's wastewater collection/treatment/recycling processes include a maximum 7.7 million gallons per day (mgd) advanced secondary operation serving 17,000 customers. The District's collection system and wastewater treatment plant produces an average dry day rate of 4.3 mgd, 100 percent of which is recycled. Flows are conveyed to the District's Wastewater Treatment Plant (WWTP). The District's WWTP, last expanded in 1989, has a capacity 7.7 mgd. Treated effluent is exported 26 miles to Harvey Place Reservoir in Alpine County (STPUD, 2007 & 2014).

**Electricity Services**

Liberty Utilities provides electrical services to the plan area. Service is primarily transmitted over existing overhead lines along collector and local streets and underground along arterials (i.e., US 50, SR 89 and Lake Tahoe Boulevard). Liberty Utilities' office is also located within the Area Plan on Eloise Avenue.

**Gas Services**

Natural gas service in the Tahoe Valley area is provided by Southwest Gas, which has been providing gas to the South Lake Tahoe area since 1963. Southwest Gas is regulated by the California Public Utilities Commission for the service they provide in California.

**Telephone and Cable Services**

AT&T, Verizon, and T-Mobile provide telephone and cellular service to the plan area. Charter Cable provides cable television, phone and internet services under a franchise agreement with the City. Three cellular towers are located within the plan area.

**City of South Lake Tahoe Facilities**

- **City Services Center.** Located at 1052 Tata Lane, this facility is owned by the City and houses the Development Services Department
- **Public Works Department.** The Public Works Department offices are located at 1740 D Street. Vehicle maintenance is completed by the Fleet Services Division at 1700 D Street and 1691 Shop Street.
- **Information Technology.** The City's IT Department operates from 1700 D Street.

- **Fire Station #3.** Located at 2101 Lake Tahoe Boulevard, this facility is owned by the City and is one of three fire stations that serve South Lake Tahoe. This station serves the Tahoe Valley area with response times between three and five minutes.
- **Transit Center.** The transit center, owned by the City of South Lake Tahoe and located at the "Y" intersection, provides shelter and a transfer location for the TTD bus system, and a pickup/drop-off point for Amtrak buses.

**El Dorado County Facilities**

- **El Dorado County Department of Transportation.** Located at 924 Emerald Bay, this privately-owned facility is rented by the County.
- **El Dorado County Health and Human Services Agency.** Located at 1900 Tata Lane, this office includes the Mental Health, Public Health, Community Services, and Social Services divisions.

**State Facilities**

- **California Tahoe Conservancy (CTC).** Located at 1061 Third Street, the Conservancy is an independent State agency within the State Resource Agency. It was established in its present form by State law in 1984 to develop and implement programs through acquisitions and site improvements to improve water quality in Lake Tahoe, preserve the scenic beauty and recreational opportunities of the region, provide public access, preserve wildlife habitats, and manage and restore natural lands. Conservancy staff is housed in a privately-owned, rented building.

**Federal Facilities**

- **Lake Valley Post Office.** Located at 950 Emerald Bay Road, this post office provides post office boxes for the 96158 zip code and full postal services to customers out of a privately-owned rented building.
- **Tahoe Resource Conservation District**. Located in a privately owned building at 870 Emerald Bay Road, the Tahoe Resource Conservation District promotes the conservation, stewardship and education of the Lake Tahoe Region's natural resources.

**Barton HealthCare System Facilities**

Barton Memorial Hospital has served the South Lake Tahoe community since 1963 as a regional medical center. Part of the Barton HealthCare System, Barton Hospital is South Lake Tahoe's largest medical facility and largest employer (900 employees). The hospital and its associated medical clinics and emergency medical centers perform approximately 3,180 surgeries (2,800 within the City limits and 380 outside the City limits) and 20,000 emergency visits per year (Lyn Barnett, per. comm. 4/17/2014).

**South Tahoe Refuse**

South Tahoe Refuse has franchise agreements with the City of South Lake Tahoe, El Dorado County, and Douglas County for the collection and transportation of solid waste to processing and/or disposal facilities. This includes waste from all residential, commercial, and industrial properties, including recyclable

material. These facilities support the processing of this waste before its ultimate disposal outside of the Tahoe Basin. South Tahoe Refuse operates the following facilities:

- **Administrative Office/Transfer Station/Materials Recovery Facility/Resource Recovery Facility/Tahoe Basin Container Service.** All located at 2140 Ruth Avenue.
- **Recycling Center.** Located at 2192 Ruth Avenue.
- **Truck parking, fueling, and wash facility.** Located at 2143 Ruth Avenue.

## 3.5 Natural and Cultural Resources

Natural resources within the Tahoe Valley plan area include the Upper Truckee Rive; two ephemeral streams; natural and landscaped vegetation; stream environment zones; and views of distant mountain ridgelines. The plan area includes three drainage basins including the Tahoe Valley system that runs south of the "Y" intersection, which is directly connected to the Truckee River. The other two drainage basins drain into the Tahoe Keys Lagoons before being released into Pope Marsh. Many properties contain excess coverage over the Bailey land capability limitations.

Native vegetation consists primarily of Jeffrey pine and white fir trees with little understory vegetation on high-capability lands and willows and grasses on low-capability lands. Many of the developed parcels are also landscaped with native vegetation. Stream environment zones within the plan area generally have been disturbed.

**Land Capability and Stream Environment Zone**

The land capability system established by Bailey is the basis of the land coverage standards and limitations set forth in Chapter 30 of the TRPA Code of Ordinances. Chapter 30 uses land capability districts (LCDs) ranging from class 1 to 7 that assign a percentage of allowable land coverage in a designated LCD area as identified below:

- Land capability classes 1a-c and 2 are not suited for urbanization or intensive forestry use, but are suited for open space, conservation areas, and low-intensity recreation.
- Land capability class 3 is not suited for urbanization but is suited for forestry and low-density housing use.
- Land capability classes 4, 5, 6, and 7 include land suitable for urbanization and other uses.

Tahoe Valley is predominately flat, and according to the TRPA's mapped land capability map, mostly comprised of high capability lands (LC 4 – 7) suitable for redevelopment and infill with SEZ areas associated with drainage in the Upper Truckee River hydrologic area. In 2015 The City contracted with a soil scientist to conduct area specific investigation and field analysis. The analysis concluded that portions of the SEZs that run through the Area Plan account for a smaller portion than that depicted in the original Land Capability Overlay Map. A revised map was prepared and adopted with the Tahoe Valley Area Plan. The revised map indicates three primary areas of environmentally sensitive or SEZ lands accounting for approximately 50.7 acres. SEZs can be found in the vicinity of James Avenue and Seventh Avenue, and just north and south of the "Y" intersection (see Figure 7). According to the revised land capability, just over a tenth (13.6%) of the plan area is SEZs with the remaining areas being high capability lands (86.4%). Table

2 below provides an accounting of revised land capability district in the plan area. This issue is discussed in further detail in Section 10, Natural and Cultural Resources.

| Table 2<br>Mapped Land Capability District | | |
|---|---|---|
| **Land Capability District** | **Total Acreage** | **Percent** |
| 1B | 50.7 | 13.6% |
| 4 | 3.9 | 1.0% |
| 5 | 24.1 | 6.5% |
| 6 | 4.6 | 1.2% |
| 7 | 290.3 | 77.7% |
| Totals | 373.6 | 100.0% |
| Source: TRPA Land Capability Overly Maps (1"=400'), 1987, and TRPA GIS, 2014. | | |

**Land Coverage**

An analysis of TRPA's LiDAR impervious coverage data estimates that approximately 48.3% (180.5 acres) of the Tahoe Valley plan area is covered with impervious coverage. Hard coverage accounts for 46.8% (173 acres) and soft coverage accounts for 2.5% (9.4 acres). Most of the plan area's existing coverage are parking lots (54.1%); the remainder is equally divided between building structures (22.4%) and paved roadways (22.0%). Just over three-fourths of existing coverage (156.7 acres, 85.7%) is located on high-capability lands with the remaining quarter located in SEZs (26.1 acres, 14.3%). Existing land coverage conditions in the Area Plan is presented in Table 3 below and Figure 8.

| Table 3<br>Existing Land Coverage (acres) | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Coverage Type** | **Roads** | **Trails** | **Buildings** | **Other** | **Total Impervious** | **Total Area Plan Acreage** | **Percent Impervious** |
| Hard | 39.7 | 2.1 | 40.4 | 89.0 | 173.0 | 374 | 45.8% |
| Soft | 0.0 | 0.7 | 0.0 | 8.6 | 9.3 | | 2.5% |
| Totals | 39.7 | 2.8 | 40.4 | 97.6 | 180.5 | | 48.3% |
| Percent | 22.0% | 1.6% | 22.4% | 54.1% | | | |
| **Existing Land Coverage by Land Capability District (acres)** | | | | | | | |

**Water Quality**

Lake Tahoe is Federally designated as an Outstanding National Resource Water pursuant to the provisions found in the Clean Water Act (CWA). The Act states that "[w]here high-quality waters constitute an outstanding National resource, such as waters of National Parks, State parks and wildlife refuges, and waters of exceptional recreational or ecological significance, that water quality shall be maintained and protected." Its designation provides the maximum amount of protection to the water quality of Lake Tahoe under the CWA, ensuring that no permanent degradation of water quality will occur.

***Stormwater Drainage***

The City and California Department of Transportation (Caltrans) are responsible for reducing erosion and storm water runoff from roads under their jurisdictions. This includes installing curbs, gutters, rock-lined channels, bio-swales, infiltration basins and other improvements that captures runoff and reduce fine sediment loads to Lake Tahoe.

The Tahoe Valley plan area contains a series of natural and human-made systems constructed by the City to convey and treat drainage. The area to the north of the "Y" intersection is collected and treated by two drainage systems (i.e., Gardner Mountain Catchment and Eloise Catchment) that are comprised of conveyance pipes, rock lined ditches, and basins. The outfall for the two catchments is the Tahoe Keys lagoon located between Whitney Drive and Lassen Drive. The lagoon drains into Pope Marsh before entering Lake Tahoe. The area to the south of the "Y" intersection (Upper Truckee River Catchment) is treated by the Tahoe Valley Erosion Control Project. The system collects and treats runoff from much of the densely developed commercial areas near US 50, both north and south of the "Y" intersection, and from the Bonanza and Barton Hospital neighborhoods. Storm water is conveyed through an ephemeral stream and a series of pipes and rock lined ditches, where it is treated in the vicinity of James Avenue and Tahoe Keys Boulevard, before flowing into a ditch north of Sky Meadows and out to the Truckee River. This drainage basin is a high priority for storm water runoff treatment and the City is currently in the planning stages to update the system and design water quality improvements to reduce pollutant loads discharged to the Upper Truckee River.

Storm water runoff along US 50 and SR 89 is the responsibility of Caltrans. Caltrans in the process of constructing a water quality improvement project that runs from the Y intersection to the Lake Tahoe Airport. The first mile of project running from the Y intersection to E Street was constructed in the summer of 2013. The improvement project will collect and treat runoff along US 50 and also includes the installation of curb, gutter and sidewalks, and the widening of the roadway to accommodate a Class III bike routes. Construction of water quality improvements along SR 89 started in the Fall of 2014 and US 50 from the Y intersection to Trout Creek Bridge is scheduled for 2016.

Figure 9 depicts the existing water quality improvement projects within the plan area.

***Best Management Practices***

Every property within the Tahoe Valley plan area is subject to the requirements of Chapter 60 of the TRPA Code of Ordinances for drainage treatment, paved parking and drives, slope stabilization, revegetation, and providing snow storage areas. The Code also requires property owners to infiltrate the volume of a 20-year/1 hour storm on their property or meet alternative standards in instances where special circumstances limit infiltration. The City requires, and reviews, BMP installation for all projects for which it has reviewing authority under the Memorandum of Understanding (MOU) with TRPA. TRPA is

responsible for BMP enforcing and permitting retrofits on existing development. The TRPA issues Certificates of Compliance for all projects in the Basin.

According to TRPA's BMP database, 127 out of 400 parcels in the plan area have received their TRPA Certificate of Compliance, resulting in a 32% BMP compliance rate. The compliance rate for commercial uses located within the Area Plan is 47%. Since the BMP compliance rate is based on issuance of a BMP certificate and not on actual BMP installation, the actual rate of BMP installation is higher than the 32% certificate compliance rate.

***Total Maximum Daily Load (TMDL)***

The Total Maximum Daily Load (TMDL) program is a requirement of the Federal Clean Water Act. The program is designed to protect Lake Tahoe, an Outstanding Natural Resource Water, from certain pollutants of concern, including fine sediments, phosphorus, and nitrogen.

Through the Lake Tahoe TMDL, the Lahontan Regional Water Quality Control Board (Lahontan) established five-year load reduction targets to assess each jurisdiction's progress towards meeting overall load reduction goals. Load reduction targets for Fine Sediment Particles (FSP), Total Phosphorus (TP), and Total Nitrogen (TN) have been established based on attainment of California's Lake Tahoe transparency standard (~ 97 feet) over an estimated 65-year implementation period. To meet the requirements of the TMDL Program, each jurisdiction holding a National Pollutant Discharge Elimination System (NPDES) permit is required to reduce the baseline pollutant load within their jurisdiction by the amounts shown in Table 4.

**Table 4**
**LOAD REDUCTION TARGETS FOR THE TAHOE TMDL**

| Pollutant | 5-Year Milestone 2016 | 10-Year Milestone 2021 | 15-Year Milestone 2026 | Transparency Standards (~65-Years) |
|---|---|---|---|---|
| Fine Sediment Particles | 10% | 21% | 34% | 71% |
| Total Phosphorus | 7% | 14% | 21% | 50% |
| Total Nitrogen | 8% | 14% | 19% | 46% |

Source: Final Lake Tahoe Total Maximum Daily Load, August 2011

In 2016, the City submitted to Lahontan the City's Lake *Tahoe TMDL Baseline Pollutant Load Update Report* which was subsequently incorporated into the City's NPDES permit. The City's load reduction requirement through 2026 under the NPDES permit is shown in Table 5.

**Table 5**
**CSLT 2026 LOAD REDUCTION REQUIREMENTS**

| Parameter | Baseline Load (lbs./year) | Required Percent Reduction | Required Load Reduction (lbs./year) | Allowable Load (lbs./year) |
|---|---|---|---|---|

| | | | | |
|---|---|---|---|---|
| Fine Sediment Particle (mass) | 476,677 | 34% | 162,070 | 314,606 |
| Fine Sediment Particles (# of particles) | 2.38E+19 | 34% | 1.58E+19 | 1. 57E+19 |
| Total Phosphorus | 2,020 | 21% | 424 | 1,596 |
| Total Nitrogen | 8,034 | 19% | 1,526 | 6,508 |
| Source: Lahontan Lake Tahoe Municipal NPDEs Permit, Board Order R6T-2022-0046, NPCESA NO. CAG616001 | | | | |

The City completed development of a *Pollutant Load Reduction Plan,* defining a path to compliance with the requirements to reduce pollutant loading to Lake Tahoe from urban stormwater runoff. The goal of the Load Reduction Report was to identify feasible and cost-effective actions to meet anticipated targets. In September 2021, the City Council received a draft of the 2021 *City of South Lake Tahoe Pollutant Load Reduction Plan* which documents the City's proposed approach and timeline for meeting the 2026 load reduction targets set forth in the City's NPDES permit, which was then submitted to Lahontan in October, 2021 and must be updated and resubmitted September, 2023. Proposed strategies outlined in the Load Reduction Plan for meeting the load reduction targets are incorporated in the Area Plan and are discussed in detail in Section 10, Natural and Cultural Resources.

***Underground Sources of Potential Water Quality Concerns***

In 1989, the contaminant tetrachloroethylene (PCE) was first found in drinking water wells near the intersection of Highways 50 and 89 (the "Y" Area). The PCE remains in groundwater and forms a contaminant plume believed to cover more than 400 acres. PCE is a manmade chemical that was used from the early 1960s through the mid-1980s as a solvent for dry cleaning clothes and degreasing metal. Presently, five public drinking water wells have been impacted by the South "Y" PCE Plume. When PCE is detected in a well, the well is shut down and treatment is added to remove the contaminant, or an alternative source of drinking water supply is provided.

The South "Y" Plume extends north from the South "Y" to the Tahoe Keys, and toward Lake Tahoe. Groundwater used by wells operated by the Lukins Brothers Water Company (LBWC) and Tahoe Keys Property Owners Association (TKPOA) have been impacted by the plume. During the 1990s, the South Tahoe Public Utility District (STPUD) installed a treatment facility to remove PCE from four drinking water wells. Today, three of the wells have been destroyed and the remaining well is currently not used. In 2009, TKPOA installed a treatment system to remove PCE from groundwater at one of its wells. In 2014, Lukins discovered PCE in two wells and immediately stopped using them. All three drinking water systems are interconnected, and the water providers have the ability to share water and are working together to ensure the entire community has access to reliable and safe drinking water.

The Lahontan Regional Water Quality Control Board is the state regulatory agency overseeing the enforcement and cleanup of contaminated groundwater. Lahontan has conducted numerous investigations to determine the source of PCE and is working with the responsible parties to determine the total extent of the contamination and approaches to resolve the issue, through either remediation or treatment. The South Tahoe water providers are working together to develop and implement short-term fixes and long-term solutions to provide clean drinking water while the underlying issues with the groundwater PCE plume are being addressed.

South Tahoe Public Utility District's system includes 1,700 sewer laterals (the portion of the sewer system connecting the building to the main). Twenty-two percent (22%) of these are over 40 years old, 39 percent are 30 to 40 years old, 24 percent are 20 to 30 years old, and only eight percent are less than 10 years old. While a lateral can last 50 to 100 years, its life expectancy is determined by its material, original installation, root intrusion or external pressure, soil stability and chemical makeup, high water tables, corrosion (sometimes from the hydrogen sulfide gas present in the sewer system), and forces leading to structural failure.

***Source Water Considerations***

TRPA-designated "source water protection zones" overlay much of Tahoe Valley. These protection zones consist of a fixed 600-foot radius circle around wells that provide drinking water from an aquifer with five or more service connections. Source Water Protection Zones were broadly mapped by TRPA in 1999. Table 6 shows the wells on TRPA's Source Water Assessment Map (12-2-99) that are located in the plan area and Figure 10 shows their locations.

**Table 6**
**TRPA Source Water Wells**

| APN/Well Number | Status | Name/Owner |
|---|---|---|
| 02316106W11 | Active | Washoe Motel |
| 02316133W11 | Active | CMO Properties |
| 02318201W11 | Active | Bel Pac South |

Source: TRPA Source Water Assessment Map, December 1999.

TRPA Code [Section 60.3.3] defines “possible contaminating activities” as activities equivalent to TRPA primary uses identified by either the California Department of Public Health Services or the Nevada Bureau of Water Quality Planning, regardless of where the project is located, as having the potential to discharge contaminants to surface or groundwaters. Some of the existing and permissible industrial uses in the Industrial District qualify under this definition. New project applications for uses that constitute possible contaminating activities within these zones must make findings based on criteria established in Chapter 60 of the TRPA Code in order to be approved. The following uses are considered possible contaminating uses in Section 60.3.5 of the TRPA Code:

**Residential**

1. Domestic animal raising

**Commercial**

1. Service stations
2. Auto repair and service
3. Business support services
4. Laundries and dry cleaning plant
5. Repair services
6. Batch plants
7. Fuel and ice dealers
8. Industrial services
9. Recycling and scrap
10. Storage yards
11. Vehicle storage and parking
12. Vehicle and freight terminals

**Public Service**

1. Airfields, landing strips, and heliports
2. Collection stations
3. Hospitals
4. Local public health and safety facilities
5. Regional public health and safety facilities
6. Power generating
7. Public utility centers
8. Schools

**Linear Public Facilities**

1. Transit stations and terminals

**Recreation**

1. Beach recreation
2. Boat launching facilities
3. Developed campgrounds
4. Golf courses
5. Marinas
6. Recreational vehicle parks
7. Rural sports

**Resource Management**

1. Timber Stand improvement
2. Grazing
3. Range pasture management

**Watershed Improvements**

1. Runoff control

**Shore zone**

1. Construction equipment storage
2. Seaplane operations
3. Tour Boat operations
4. Water-oriented outdoor recreation concessions

Businesses with fuel tanks or other potentially contaminating materials used as part of their operations are required to have spill contingency plans that address how to respond to accidental spills. Plans meeting specific content requirements are required for potentially contaminating activities located within a Source Water Protection Zone.

**Cultural Resources**

Eight archaeological and historical investigations were previously conducted within the Tahoe Valley plan area. These investigations identified historic sites CA-Eld-721-H and CA-Eld-2240-H. Site CA-Eld-721-H is a portion of the Pony Express Trail that generally follows the alignment of U.S. Highway 50. Site CA-Eld-2240-H is a historic road that passes through the plan area. In addition, a heritage resources study was conducted specifically for the Area Plan (Lindström and Rucks, 2006). This study did not include a formal archaeological survey or architectural inventory of the Tahoe Valley plan area, but did identify areas that are important to the Native American community and potentially significant historic buildings and structures (e.g., motels/auto courts) within the Area Plan. In addition, the Barton Ranch is located within the plan area at 1080 Emerald Bay Road and is listed on TRPA's Historic Sites Maps (1984).

The study concluded in more recent times, the "Y" appears to have been a central point for historical interactions between Washoe and non-Washoe and it seems to continue to represent this period of adjustment in Washoe history. Interviews with Washoe participants demonstrated that the "Y" has remained an important travel corridor, meeting place, and access point to post-contact Washoe camps and work opportunities associated with ranching. Although the study indicates no point specific Washoe "sites" within the plan area, it did recommend that project planning should be sensitive to traditional Native American values and recommends on-going communication with the Washoe Tribe to determine the significance of historic buildings and sites (Lindstrom & Rucks, 2006).

The Mosher Family who owns the Barton Ranch commissioned a report, entitled "Historic Architectural Resources Studies W.D. Barton Ranch," in February 2009. The report provides information on the historical context of Barton Ranch and its role in Lake Tahoe ranching and Native American significance. The buildings are associated with the livestock and dairy industries in the Tahoe Basin, an important era in the history of Lake Tahoe. The property is also associated with an important Lake Tahoe family, the Bartons, who were longtime ranches in the area, and who donated the land for the Barton Hospital, which is located within the plan area. The report concluded that the Barton Ranch Complex is eligible for listing on the National and California Registers at the local level of significance and could serve as a historical

centerpiece if the adaptive reuse of the ranch can be economically viable and the interest of the property owners are protected (Marvin, 2006)

**Recreation**

There are no City-owned or -operated recreational facilities within the plan area. Informal recreational activities available within Tahoe Valley include bicycling, running, jogging, walking along city streets and designated routes and paths.

South Tahoe High School (located just east of the Tahoe Valley plan area) has tennis courts, ball fields, and a gymnasium. Tahoe Valley Elementary School (located just north of the Tahoe Valley plan area) has play areas. Nearby forest lands managed by the Forest Service provide opportunities for active and passive outdoor recreation. The plan area is the gateway to the Forest Service's South Shore Recreation Area, which contains beach access, bike trails, the Tallac Historic Site, a Visitor's Center (with its Stream Profile Chamber and newly reconstructed amphitheater), and Camp Richardson Resort. Located within three miles of the "Y" intersection, all of these areas provide for some of the recreation needs of the nearby residential neighborhoods, as well as for visitors, and are accessible by bike routes and bike paths that either run through or adjacent to the plan area (See Figure 6).

**Scenic Resources and Community Design**

The Tahoe Valley plan area consists of 482 public and privately owned parcels that include residential, commercial, tourist accommodation, industrial, and public service land uses. Land uses to the west, north, and northeast of the plan area consist of residential subdivisions dating from the 1960s through the 1990s. Immediately adjacent to the plan area to the east lies a large open space area (stream environment zone [SEZ]) consisting of the floodplain for the Upper Truckee River, which is near the eastern boundary of the plan area. Commercial uses are the primary land use in the plan area and include clothing stores, factory outlets, automotive supply stores and dealerships, drug and liquor stores, restaurants, and supermarkets. Buildings and other structures in the plan area range in age and physical condition from the 1890s to recent construction. They are provided in strip development along US 50 and SR 89. Identified issues for the plan area's current form of development include many curb cuts for driveway access, small and fragmented parcels, stand-alone structures, old motels, sprawling parking lots, and lack of coordinated sidewalks, bike paths, landscaping, and other related amenities.

As described above, the existing visual landscape characteristics of the plan area consist of urban development intermixed with forest conditions. Existing urban development transitions into natural and forest conditions at its southern boundary along the US 50/SR 89 corridor as well as at the northern boundary along SR 89. The eastern boundary transitions to the open stream environment zone area associated with the Upper Truckee River. From within the plan area views of mountains looking east towards Heavenly Mountain Ski Resort (Gunbarrel ski run is visible) as well as views of Tahoe Mountain looking west are visible from US 50 and the "Y" intersection. These views are not currently identified as TRPA designated resources.

TRPA has adopted three separate regional scenic resource thresholds: 1) Travel Route Ratings; 2) Scenic Quality Ratings of individual resources; and 3) Scenic Quality Ratings of individual resources seen from public recreation areas. All are numerical in nature. The first two thresholds apply to scenic resources visible from the Region's state and federal highways and Pioneer Trail and from Lake Tahoe itself. The

2011 Threshold Evaluation concluded that regionally, all three threshold indicators are "at or somewhat better than target." (TRPA, 2012a).

**Roadway Travel Units**

The plan area contains a portion of Roadway Travel Route Unit #1, Tahoe Valley, a portion of Roadway Unit #35, Al Tahoe, and Roadway Unit #36A, Airport Area. All three roadway units are currently out of attainment; however, Unit #1 and Unit #36A are near attainment. The 2011 Threshold Evaluation noted that recent installation of curbs, gutters, and sidewalks have improved the road structure component score in Unit #35. Recent constructed improvements along US 50 and SR 89 and those planned in the near future are expected to improve the overall threshold rating scores in the near future. Figure 11 depicts the locations of the Roadway Travel Units and Table 7 below indicates the current threshold rating scores.

**TABLE 7**
**THRESHOLD TRAVEL ROUTE AND SCENIC QUALITY RATINGS**

| Unit | 1982 | 1991 | 1996 | 2001 | 2006 | 2011 | 2015 | 2019 | Needed for Attainment |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 11.0 | 11.0 | 12.0 | 12.0 | 12.0 | 12.0 | 12.0 | 13.0 | +2.5 |
| 35 | 7.0 | 7.5 | 7.5 | 7.5 | 8.0 | 8.5 | 8.5 | 9.5 | +6.0 |
| 36A[1] | 0.0 | 0.0 | 0.0 | 10.5 | 13.0 | 13.0 | 13.0 | 13.0 | +2.5 |

Source: TRPA 2019 Threshold Evaluation.

1. In 2001, Roadway Unit 36 was segmented into three sub roadway units: 36A, 36B and 36C.

As identified above, the three roadway units along SR 89 and US 50 are identified for scenic quality improvement by the TRPA in the Scenic Quality Improvement Program (SQIP). While the TRPA 2019 Threshold Evaluation recognizes these roadway units have seen some improvements associated with recent development, it calls for continual implementation of the SQIP recommendations at the project level to ensure continual scenic improvements. The 2019 Threshold Evaluation noted the following improvements that have been made in the Tahoe Valley area.

- Construction of sidewalks and rock retaining walls along Lake Tahoe Boulevard and sidewalks along Emerald Bay Road.
- Replacement of the amusement park with the Hanger Beer Garden and façade improvements on the existing structure.

**Scenic Quality Ratings**

There are only two designated resources within the boundaries of the Area Plan: Scenic Resource #35-1 and #36-7. Both resources are designated views of natural landscapes as seen from US 50. Both resources have low scenic quality rating of 1 because of the dominance of the built environment. Both resources are currently in attainment. While there are no prominent designated scenic resources in the plan area, there is the following scenic resource located adjacent to the plan area that has a moderate rating:

- Scenic Resource 35.2: Views of the Truckee River and associated stream environment zone on both sides of US 50.

**Scenic Resource Visible from Public Recreation Area and Bike Trails**

The 1993 Lake Tahoe Scenic Resource Evaluation established numerical standards for the scenic quality of lands visible from designated public recreation areas and bike trails. Within the plan area there are no designated recreation sites but there are two identified bike trails: the Tahoe Valley route and Tahoe Valley to City Limits route (see Figure 11).

The Tahoe Valley route serves uses located south and east of US 50. The route runs along Helen Street from Winnemucca Street towards the "Y" intersection, then heads south along Melba Street and ends at the US 50 junction. The route runs primarily through residential neighborhoods and connects users to the commercial node at the "Y" intersection.

The Scenic Resources Evaluation identified two views of the natural landscape visible from the bike route:

- Scenic Resource 9-1: Landscape view of scattered forest vegetation interspersed with residential and commercial uses; and
- Scenic Resource 9-2: Infrequent views of mountain backdrop.

This segment of bicycle route is not of high scenic quality with both views rated as fair. Its primary value is as an alternative transportation route along US 50 for visitors and residents. According to the 2011 Threshold Evaluation, these scenic resources are still in attainment.

**Open Space**

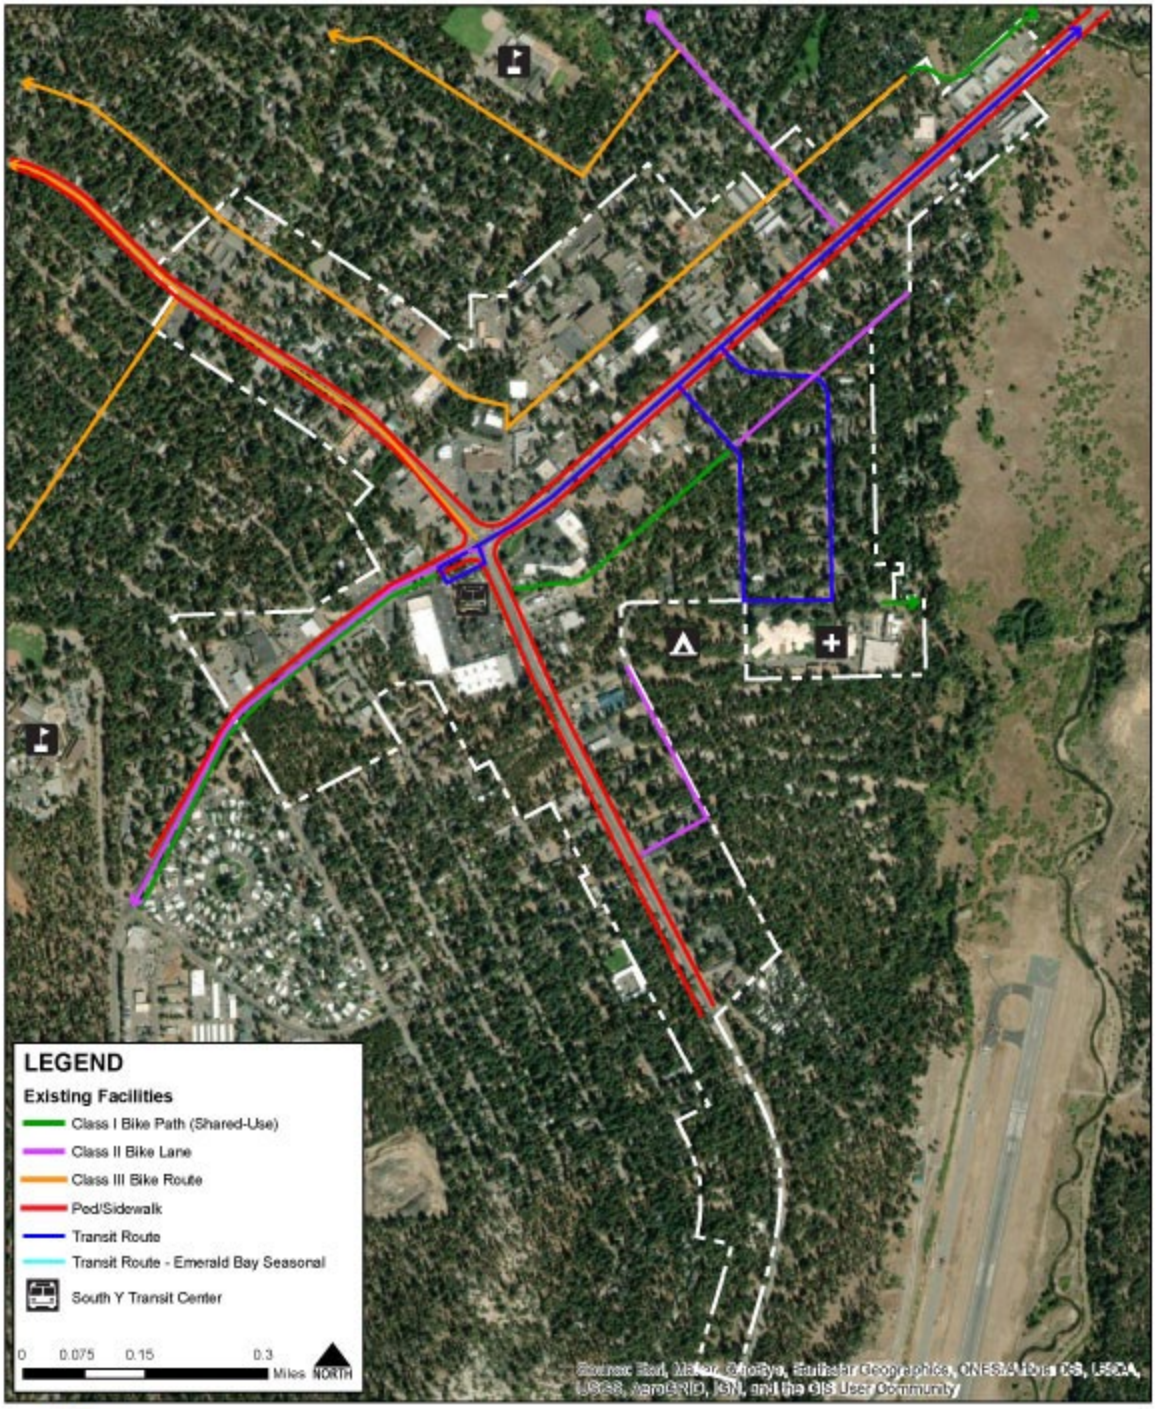
Open space in the plan area includes both undeveloped private lands, environmentally-sensitive public lands, and lands used for stormwater treatment. The plan area contains 36 parcels (20.2 acres) that are currently in open space (Table 1). This accounts for 6 percent of the total land in the plan area.

**Public Health and Safety**

***Flooding***

According to the National Flood Insurance Program Map for the City of South Lake Tahoe, the majority of the Tahoe Valley plan area lies outside the 100-year floodplain. Some areas located adjacent to the Upper Truckee River, east of the plan area, are included within Zone X and Zone AE. Zone AE is identified on FEMA maps as subject to inundation by the 1-percent-annual-chance flood event. Zone X are areas of moderate flood hazard from the principal source of flood in the area. Portions of the plan area impacted by Zone X and Zone AE include a small portion of Helen Avenue, Truckee Drive south of Lake Tahoe Boulevard, and east of James Avenue in the vicinity of Motel 6. The remainder of the plan area is located outside the 100-year floodplain.

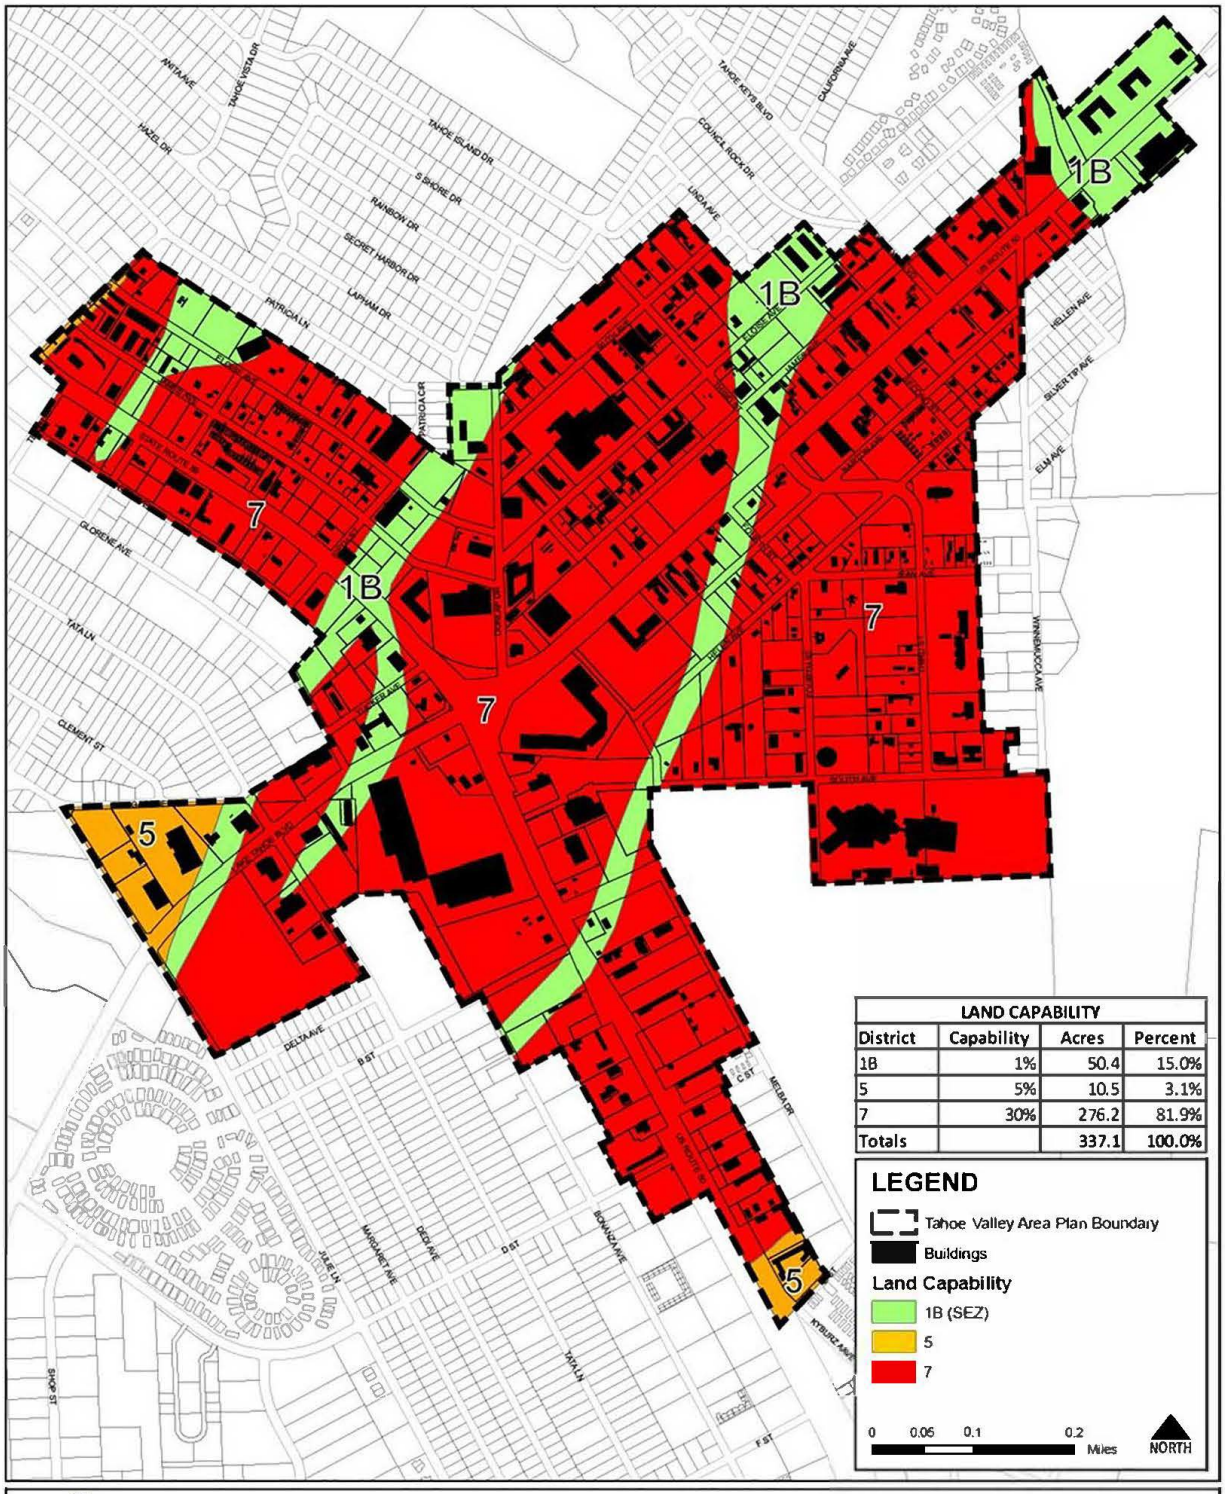
***Noise***



TRPA has adopted noise standards for the Tahoe Basin. The noise thresholds are Community Noise Equivalent Level (CNEL) values for the various land use categories and single event (Lmax) standards for specific noise sources. CNEL is the metric used by TRPA for determining land use compatibility. The CNEL

standard for the Tahoe Valley Area Plan is 60, except for the Healthcare District, where 55 CNEL is the standard, and the Commercial Mixed-Use Services where the standard is 65. The maximum CNEL for the SR 89 and US 50 corridors is 65 CNEL. No one activity, nor combination of activities, is allowed to exceed the applicable CNEL level. CNELs are calculated pursuant to Chapter 68 of the TRPA Code of Ordinances.

While the airport does not fall within the boundaries of the Area Plan, its associated overflight zones and noise contours do. According to the ALUCP for Lake Tahoe Airport (adopted August 2019), the 50 and 55 dB CNEL contour extends into a portion of the plan area.



***Fire***

Fire Station #3 is located within the plan area at 2101 Lake Tahoe Boulevard. The facility is owned by the City and is one of four that serves South Lake Tahoe. This station services the Tahoe Valley area with response time between three and five minutes. The Fire Department also provides local ambulance service, and has mutual aid agreements with other fire and emergency response agencies in the Tahoe Region.

# SECTION 4
# Vision and Guiding Principles

The Tahoe Valley Area Plan reflects the City of South Lake Tahoe's effort to rekindle the economic vitality and spirit of the Tahoe Valley community. The Tahoe Valley area is ready to recapture its local prominence, and the Area Plan outlines the strategy for the area's resurrection. This section summarizes the community's vision for the future of the Tahoe Valley. It also summarizes the guiding principles that were used to develop the Land Use Zoning Districts and the Plan's goals, objectives, and policies.

## 4.1 Vision Statement

The City aims to focus the energy of local residents, landowners, developers, and public officials to spark the transformation of the Tahoe Valley area and, in turn, the entire City of South Lake Tahoe. The City intends to use the Tahoe Valley Area Plan to create physical, social, and economic links that will improve the Tahoe Valley area and create a sustainable community. The vision for the Tahoe Valley area is as follows:

*"We shall transform the Tahoe Valley area into a strong and vibrant business district, creating a community that includes continuous and complimentary developments. We shall embrace outdoor enthusiasts and provide a healthy balance of commerce, employment, entertainment, and livability. Our Area Plan will create smaller, safer pedestrian-friendly districts that encourage patrons to visit multiple destinations for each vehicle trip. Our plan shall encourage retail businesses and services that meet local needs, encourage local ownership, and appeal to visitors seeking to mix with the local community.*

*Architectural and aesthetic standards shall emphasize a mountain identity through sensitive building design that incorporates open public spaces, and a walkable environment emphasizing unifying elements. Quality building designs shall emphasize character through massing and articulation that are characteristic of a mountain environment. No blank walls will be displayed. Pedestrians, transit riders, and cyclists will be encouraged and accommodated. Parking areas shall be unobtrusive, and serve more than one property.*

*We shall re-knit the fragmented elements that isolate the Tahoe Valley neighborhoods through a network of sidewalks, trails, and access to transit facilities. The transition between more intensive uses shall include design elements to ensure compatibility. The plan shall weave active and passive recreational staging areas, connecting to recreational opportunities located outside the plan boundaries. The Transit Center shall play a greater role, to include moving people locally and regionally within and outside of the Tahoe Basin.*

*Visually prominent and attractive design features shall welcome visitors entering the City from the scenic corridors of US 50 and SR 89. Through the use of environmentally conscious development techniques and restoration activities, the Area Plan will be considered a contributing component of the regional*

*ecosystem. Private and public development shall contribute to the creation of indoor and outdoor public spaces within these districts."*

## 4.2 Guiding Principles

As part of the vision, the following guiding principles create a foundation for a more sustainable, economically prosperous, communal and environmental future for Tahoe Valley:

- *Establish a land use plan and policy framework that will guide future development and redevelopment in the Tahoe Valley Plan area toward land uses that support transit ridership and economic development;*
- *Create a diversity and concentration of resident-serving shops and services that also appeal to visitors;*
- *Create public plazas, gathering spaces, and active streetscapes to promote a lively market;*
- *Encourage ground floor retail, large display windows, retail, dining and entertainment to activate the pedestrian streetscape;*
- *Preserve or replace trees and use native landscaping;*
- *Develop and implement urban design standards for buildings and structures that reflect Tahoe's mountain identity;*
- *Include transit and alternative travel modes as an essential part of the Tahoe Valley experience;*
- *Connect Tahoe Valley to adjacent residential neighborhoods with paths, trails, and sidewalks;*
- *Locate multi-family residential development within close proximity to the Tahoe Valley Town Center; and*
- *Develop new programs and facilities to meet the needs of residents, such as indoor and outdoor theaters.*

# SECTION 5
# Land Use and Community Design

This section supplements the Land Use Element of the TRPA Goals and Policies, and the Land Use Element of the City of South Lake Tahoe General Plan. This section includes the Area Plan's Goals and Policies related to land use and establishes land use and zoning regulations.

The overarching vision of the 2030 South Lake Tahoe General Plan and the TRPA Regional Plan and Sustainable Communities Strategy is to create a more sustainable community. One way this will be achieved is through focusing new development and revitalization within the areas designated as Town and Regional Centers in the Regional Plan and as Nodes in the General Plan. For the Tahoe Valley area, the focus is commercial, mixed-use, and multi-family development in a pedestrian, bicycle and transit oriented land use pattern that harmonizes with the overall natural environment. The land use and community design policies in this section seek to encourage pedestrian/bicycle-friendly and transit oriented developments that help reduce resident and visitor dependency on automotive travel and building types and patterns that reflect the mountain and surrounding natural environment.

## 5.1 Land Use Districts

The following describes the seven zoning districts and special designations that are included in the Tahoe Valley Area Plan and the land use vision for each district. Figure 12 shows the boundaries and location of each zoning district.

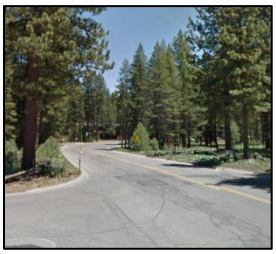
**ZONING DISTRICTS**

**Town Center Gateway District (TC-G)**

The Gateway District, which includes properties surrounding the "Y" intersection and properties along Lake Tahoe Boulevard and Emerald Bay Road, is a key arrival area for travelers to South Lake Tahoe.

This district is intended to create an attractive mixed-use commercial corridor that provides a welcoming gateway to South Lake Tahoe and conveys the arrival to South Lake Tahoe as a destination. The physical form varies to reflect the commercial mixed-use character of the gateway corridor and to transition from surrounding, lower-density districts to the Town Center Core. Allowable uses include tourist accommodation, retail, commercial, recreation, and office uses, as well as mixed-use residential development.

**Town Center Core (TC-C)**



This district is the heart of the Tahoe Valley area and intended to become a place of public gathering and retail activity meeting the needs of both area residents and tourists. This district allows for vertical mixed-use projects with a focus on ground-level active storefronts and pedestrian- and transit-oriented development that encourages pedestrian activity and supports multi-modal transportation. Allowable uses include tourist accommodation, retail, commercial, entertainment, and office uses, as well as mixed-use residential development.

**Town Center Mixed-Use Corridor (TC-MUC)**

This district is intended to facilitate the transformation of the eastern and western portions of Lake Tahoe Boulevard into a multi-modal, mixed-use corridor. Allowable uses include a rich mixture of retail, service, public facility, recreation, entertainment, and housing organized in a compact development pattern, creating an aesthetically-pleasing and safe environment for pedestrians, cyclists, and automobile drivers.

**Town Center Neighborhood Professional (TC-NP)**

This district is intended to allow a variety of residential and non-residential uses to encourage a greater mix and intensity of uses in a pedestrian and bikeable environment at a scale and form that is appropriate to its neighborhood context and adjacent residential uses. Allowable uses include commercial, public service, healthcare, and office uses, social services, and neighborhood parks, as well as all types of residential development.

**Town Center Healthcare District (TC-HC)**

The Healthcare District contains the area within the immediate vicinity of Barton Hospital, north and south of South Avenue and between Fourth Street and Winnemucca Avenue. This district will continue to be the core area for healthcare services and other related supporting services.

**Commercial Mixed-Use Service (CMX-S)**

This district is intended to provide for a mix of small- and medium-scale commercial, support services, and light industrial uses to meet local and regional demand. This district may also include residential uses as part of commercial or light industrial uses to facilitate live/work opportunities and recreation uses such as day use areas.

**Emerald Bay Connection Corridor (EB-CC)**

The Emerald Bay Connection Corridor District allows for higher-density residential development adjacent to the town center. This transitional area of mixed uses is compatible with scenic restoration, the intensity of Highway 50/89, and residential uses. Permissible uses are drawn from those allowed in the adjacent Bonanza Plan Area Statement (114), in which these parcels were previously included, as well as the Gateway District. Permissible uses include residential, tourist accommodation, neighborhood compatible commercial uses, and public service. This district is a potential location for a mobility hub to provide offsite parking and transit services within the region.

**Open Space (OS)**

This district is intended to preserve and maintain open spaces within the Tahoe Valley plan area that provide a visual break from the urban environment as well as views of surrounding mountains, forests, and stream environment zones. Depending upon their ecological sensitivity, open spaces may incorporate paths, boardwalks, pedestrian and bicycle trails, and benches.

**TRPA SPECIAL DESIGNATIONS**

**Town Center Overlay**

Town Center contains most of the region's non-residential services and have been identified as a significant source of sediments and other contaminants that continue to enter Lake Tahoe. Town Centers are targeted for redevelopment in a manner that improves environmental conditions, creates a more sustainable and less auto-dependent development pattern, and provides economic opportunities in the region.

**Stream Restoration Plan Area**

Stream Restoration Plan Areas are Stream Environment Zones along major waterways that have been substantially degraded by prior development. Individual Restoration Plans should be developed for each Stream Restoration Plan Area in coordination with the applicable Local Government and property owners in the Plan area. Restoration Plans may be developed as a component of an Area Plan or as a separate document and should identify feasible opportunities for environmental restoration.

**Transfer of Development Rights Receiving Area**

The following designations determine which plan areas, or portions thereof, are receiving areas for transfer of the development specified in Chapter 51: Transfer of Development:

1. Existing Development: The existing development designation determines which areas are eligible for the transfer of existing uses in the plan area.

2. Multi-Residential Units: The multi-residential unit designation determines which areas are eligible for the transfer of residential development rights.

## 5.2 Goals and Policies

This subsection outlines land use and community design goals and policies for the Tahoe Valley Area Plan. These goals and polices implement the vision and guiding principles discussed earlier.

**Goal LU-1: Land Use**

To shape the Tahoe Valley area into an attractive pedestrian, bike, and transit-oriented mixed-use commercial service district.

**Policy LU-1.1 – Active Streets**

Animate streets by allowing uses such as retail, entertainment, special events, outdoor dining and seating, oriented towards the sidewalk.

**Policy LU-1.2 – Connectivity**

Create bike, pedestrian and open space connections from the Tahoe Valley Area Plan to the adjacent residential neighborhoods and nearby recreation.

**Policy LU-1.3 – Special Events**

Designate an area within the Town Center Core as a Special Events Area allowing for temporary events and activities to increase pedestrian and economic activity in these areas.

**Policy LU-1.4 – Outdoor Markets**

Encourage the operation of Farmers' and Outdoor Markets in the Town Center Core.

**Policy LU-1.5 – Auto-Oriented Commercial Use Consolidation**
Encourage the consolidation of existing auto-oriented commercial development into pedestrian-oriented development.

**Policy LU-1.6 – Airport Compatibility**

Allowed uses shall be found to be consistent with noise, height and safety, policies of the City's adopted Land Use Compatibility Plan for the Lake Tahoe Airport.

**Policy LU-1.7 – Non-conforming Uses**

Legally existing uses that are not consistent with this plan will be considered non-conforming and grandfathered in. They will be allowed to continue at their existing density and intensity of use.

**Goal LU-2: Community Services**
To transform the Tahoe Valley area into an attractive gateway district that provides both residents and visitors access to high quality local and regional commercial uses, entertainment opportunities, recreation experiences, and tourist accommodation options.

**Policy LU-2.1 – Mixed Uses**
Promote mixed land uses within the Tahoe Valley area and adopt a use list that permits a wide range of commercial, retail, entertainment, tourist, residential, recreation, and public uses to service residents and visitors. This can be achieved through vertical or horizontal mix of uses within the same structure or in different structures on the same site. Vertical mixed-use projects are especially encouraged within the Town Center Core district, along Lake Tahoe Blvd/US 50 and Emerald Bay Road/SR 89.

**Goal LU-3: Community Design**
To improve community character through appropriate site and building design.

**Policy LU-3.1 – Distinctive Design**
Create connected and walkable districts that have a strong sense of identity while avoiding repetition in building design and siting.

**Policy LU-3.2 – Architectural Style**
Require the use of "mountain" architectural theme in new development and through remodeling as demonstrated in the 2016 South Lake Tahoe Design Guidelines. Mountain architecture features the use of pitched roofs, natural colors in darker shades, and natural materials such as rock and wood.

**Policy LU-3.3 – Inter-connected Development**
Ensure that every project is planned to enhance the physical, visual, and social connections to surrounding parcels and to the larger community.

**Policy LU-3.4 – Visual Impact of Parking**
Minimize the visual impact of parking by locating it to the rear and/or side of buildings and providing landscape screening.

**Policy LU-3.5 – Public Art**
Integrate public art into streetscape and landscape areas along US 50 and SR 89, and in the Town Center Core District. Encourage placement of interesting and attractive murals. All proposed public art must be approved by the City of South Lake Tahoe Public Art Review Process.

**Policy LU-3.6 – Lighting**
Establish pedestrian-scaled and strategically-placed lighting along US 50, SR 89, and Lake Tahoe Boulevard. Lighting must promote pedestrian safety and comfort and enhance architectural and site design. Prevent unnecessary and intrusive lighting that detracts from the beauty and view of the night sky.

**Policy LU-3.7 – Building Rehabilitation**
Encourage redevelopment through demolition, reconstruction, rehabilitation, remodeling, or other aesthetic improvement of buildings and signage.

**Policy LU-3.8 – Building Heights**

Maximum building heights established through the Area Plan public process are described in Appendix C, Development and Design Standards.

**Goal LU-4 Revitalization and Redevelopment**

To create a sustainable economic and community activity center through revitalization, reuse, and development of existing and buildable vacant sites in the Tahoe Valley Area Plan.

**Policy LU-4.1 – Infill and Underutilized Site Development**

Encourage physical change and economic development within the Tahoe Valley area by promoting infill development on high capability lands and redevelopment and revitalization on underutilized and over covered lands with existing infrastructure.

**Goal LU-5 Town Center Core**

To shape the Town Center Core into a primary area in the City for a vibrant mixed-use, resident-serving commercial and residential node.

**Policy LU-5.1 – Town Center Core**

Create a compact, mixed-use, vibrant Town Center Core district focused on the "Y" intersection that includes resident-serving commercial uses, retail and entertainment uses, and workforce and affordable housing.

**Policy LU-5.2 – Commercial Activity**

Create a pedestrian-oriented land use pattern that is served by transit and alternative transportation options. The Town Center Core should be a unique and recognizable district in South Lake Tahoe with its pedestrian-scale mountain architecture, active streetscapes, mix of uses, and focus on resident serving commercial uses.

**Policy LU-5.3 – Commercial Diversity**

Facilitate the development of commercial projects that include a mix of businesses that will kick off revitalization of the Tahoe Valley area. The first priority is the Town Center Core.

**Policy LU-5.4 – Gathering Spaces**

Create gathering spaces in the Town Center Core to promote social interaction, cultural and civic uses. The spaces should provide an area for people to gather, interact, relax, reflect, and pass time.

**Policy LU-5.5 – Entertainment**

Promote the establishment of the Town Center Core District as a central entertainment and recreation attraction for residents and visitors. Promote uses such as movie theaters, skating rinks, and recreation-based retail uses.

**Policy LU-5.6 – Building Orientation**

Orient buildings directly onto the four corners of the "Y" intersection and adjacent plazas so their entrances face and have frontage to the intersection with parking behind. Where there is adjacent open space, recreation, and/or pedestrian corridors, buildings may orient entrances in that direction but shall not be designed with an inactive "backside" facing the street.

**Policy LU-5.7 – Viewshed**
Maximize views of the surrounding trees and mountains from the "Y" intersection through appropriate site and building design.

**Policy LU-5.8 – Neighborhood Compatibility**
Require taller buildings to be designed to minimize negative visual impacts, particularly on adjacent residential areas, through such techniques as facade articulation, building orientation and location, and stepping back upper floors above two stories.

**Goal LU-6: Neighborhood Professional District**
To provide an area for professional offices, social services, and health-related facilities that can support and complement Barton Hospital.

**Policy LU-6.1 – Healthcare**
Encourage the concentration of healthcare providers and services in the Neighborhood Professional District (TC-NP) to provide convenience to patrons. This area will provide a mix of residential, tourist, and healthcare uses within a cohesive neighborhood setting that encourages walking and biking.

**Goal LU-7: Healthcare District**
To support and expand South Lake Tahoe's Healthcare Industry

**Policy LU-7.1 – Barton Hospital Campus**
Encourage Barton Healthcare to consolidate its facilities within the Healthcare District (TC-HC). This district would provide for healthcare services such as an orthopedic center, employee housing, temporary housing for patients' family members**,** and a parking garage. Encourage Barton Healthcare to prepare a master plan for the Healthcare District that provides a blueprint for future development and redevelopment that connects existing and future facilities through an integrated pedestrian and bike friendly system.

**Policy LU-7.2 – Parking**
Require the master plan to analyze parking needs in the Healthcare District and incorporate parking management strategies to centralize and consolidate parking to create a "park-once" environment that is efficient, convenient and accessible by all the facilities located within the district.

**Goal LU-8: Commercial Mixed-Use Service District**
To maintain an area for small-scale industrial and commercial mixed uses in the South Shore community.

**Policy LU-8.1 – Industrial Uses**
Support the industrial needs of South Shore's full-service community by continuing the Commercial Mixed-use Services District in a manner that is compatible with increasing residential uses.

**Policy LU-8.2 – Storage Containers**
Require industrial-style storage containers for on-site storage to be enclosed and screened from the public right-of-way; bike paths, lanes. and routes; pedestrian trails and sidewalks; and adjacent open spaces.

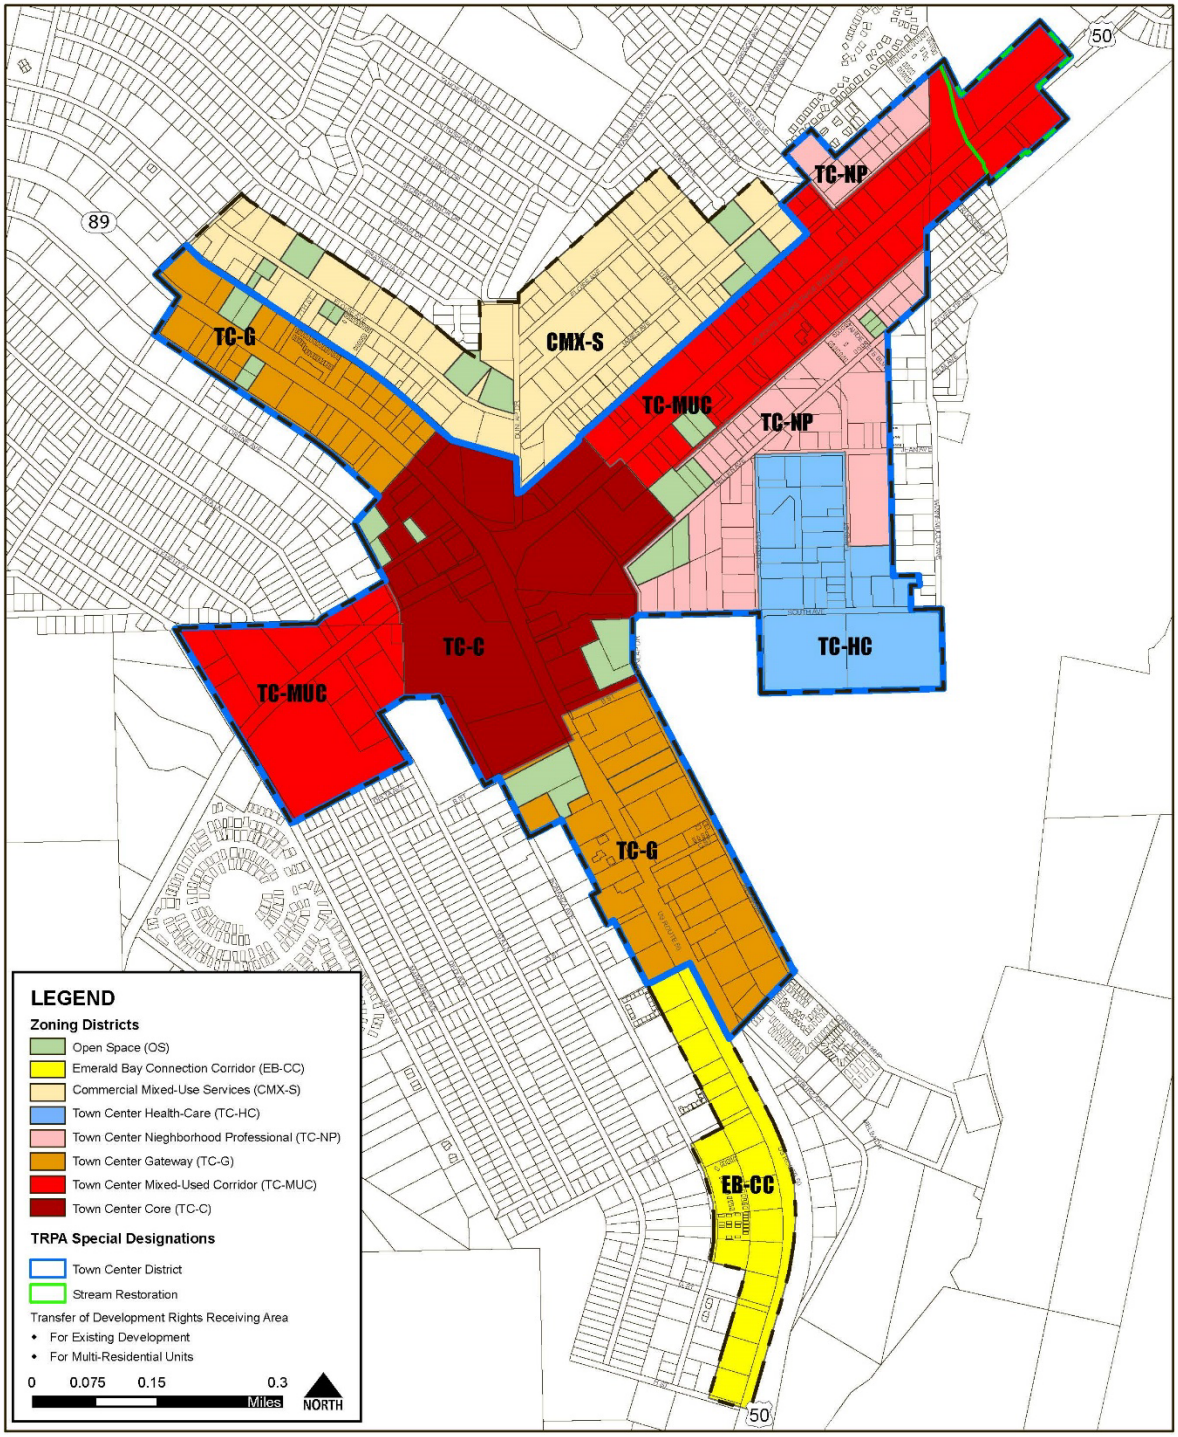
**Goal LU-9: Sustainability**
To create a sustainable community with reduced private automotive trips, reduced greenhouse gas emissions and a more energy-efficient built environment.

**Policy LU-9.1: Sustainable Communities Strategy**

Implement the TMPO's Sustainable Community Strategy in the Tahoe Valley area by integrating land use, transportation, and housing strategies to create walkable town centers, provide alternative transportation options, provide for a variety of housing types in close proximity to services, connect neighborhoods, and protect the area's natural resources.

**Policy LU-9.2: Commercial Floor Area Incentives**

Provide incentives such as streamlined permitting and priority access to Commercial Floor Area and Residential Allocations for projects that incorporate green building measures. Also see Policy ED-1.3.



**Goal LU-10: Transfer of Development**
To focus development in centers in order to maximize incentives and create transit-, bicycle-, and pedestrian-oriented places that serve the needs of both residents and visitors.

**Policy LU-10.1: Revitalization and Consolidation of Development**

Encourage and allow for the revitalization and consolidation of development within centers by allowing for the transfer in of residential units of use and tourist accommodation units that have been converted to commercial floor area pursuant to TRPA Code Section 50.10.

## 5.3 Development and Design Standards

The Development and Design Standards and permissible use list for the Tahoe Valley Area Plan are included in Appendix C.

CITY OF SOUTH LAKE TAHOE

**Figure 11**
Zoning Map
April 2023

# SECTION 6
# Economic Development

The Tahoe Valley plan area is largely dominated by obsolete strip commercial development along South Lake Tahoe's key corridor (US 50). This type of commercial development does not create an attractive environment for achieving the City's long-term economic development goals. Shortcomings include the area's multiple curb cuts, relatively small and fragmented parcels, stand-alone structures, older and sometimes obsolete motels struggling to survive, and lack of coordinated sidewalks, bike paths, landscaping, and other amenities. There is a clear need to revitalize the area to increase economic activity. The area is in a unique position to capture more local-resident-serving commercial sales, as well as capture more tourist sales. This local market is a major employment center that provides services including restaurants and eating places, general merchandise, apparel, home furnishings, and appliances stores, and building material groups which primarily (but not exclusively) serve local residents. This subsection outlines economic development goals and policies for the Tahoe Valley Area Plan.

## 6.1 Goals and Policies

**Goal ED-1: Economic Development**

To create a commercial, office, residential, and civic hub that will be a community focal point and destination place for South Lake Tahoe residents and visitors.

**Policy ED-1.1 – Gateway District**
Provide incentives and remove barriers to help redevelop the Gateway District into a mixed-use office, commercial, and residential corridor.

**Policy ED-1.2 – Town Center Core**
Provide incentives and remove barriers to help redevelop the Town Center Core District into the key focal place of South Lake Tahoe. Focus uses toward commercial retail, dining, groceries, professional offices and outdoor recreational uses.

**Policy ED-1.3 – Commercial Floor Area Incentives**
Provide City-owned CFA for purchase for mixed-use developments in the Town Center and for redevelopment or improvements to a distressed or blighted properties.

**Policy ED-1.4 – Coverage Incentives**
Promote revitalization in the Tahoe Valley area by leveraging the City's SEZ restoration credits and banked land coverage to help private projects offset their excess coverage mitigation fees and provide a source for land coverage transfers. See Policy NCR 7.2

**Policy ED-1.5 – Alternative Land Coverage Management System**

Property owners within the Town Center Core District, in coordination with the City, may develop alternative comprehensive coverage management systems as alternatives to the parcel-level coverage requirements outlined in subsections 30.4.1 and 30.4.2 of the TRPA Code of Ordinances,

provided that the alternative system complies with the provisions of subsection 13.5.3.B.1: *Alternative Comprehensive Coverage Management Systems* of the TRPA Code of Ordinances.

**Policy ED-1.6 – Commercial Floor Area Exceptions**

Where a primary use falls under "participant sport facilities," "amusement, recreation, and entertainment facilities," or the like, commercial floor area shall not be required for the following spaces and those of similar nature:

A. Performing stage and orchestra area

B. Area of play in a sporting facility (playing fields and courts, pool area, roller- or ice-skating rink, weight room, etc.)

C. Lanes in shooting or archery ranges, bowling alleys, etc.

**Policy ED-1.7 – Designated Special Events Area**

The City shall pursue special event designations for the Crossings (APN 023-231-025), the TJ Maxx/Blue Zone center (APN 023-421-001), and the Tahoe Valley Greenbelt. A keystone of this effort is identifying an entity to oversee events. The City shall continue to work with community members and business owners to identify this body.

**Goal ED-2: Neighborhood Professional and Healthcare Districts**
To support and expand South Lake Tahoe's healthcare industry.

**Policy ED-2.1 – Healthcare**
Encourage additional healthcare-related facilities to locate in the Healthcare District.

**Policy ED-2.2 – Barton Hospital Campus Master Plan**
Encourage and collaborate with Barton Hospital to develop a Campus Master Plan for the Healthcare District that promotes connectivity, walkability, and bikeability (See also Policies LU-7.1 and LU-7.2).

**Policy ED-2.3 – Barton Hospital Incentives**
Provide flexibility for the Barton Hospital to engage in public-private ventures. Upon adoption of a Campus Master Plan, healthcare services in which Barton Hospital owns a majority interest and are located within the Healthcare District will be considered public services provided by a non-profit organization, and may be exempt from the requirements for CFA entitlements pursuant to TRPA Code Section 50.8.3.

**Goal ED-3: Commercial Mixed-Use Service District**
To modernize the existing industrial uses in the Commercial Mixed-Use Service District.

**Policy ED-3.1 – Retention**
Maintain the Commercial Mixed-Use Service District as a secondary industrial area, while reducing interference with residential uses.

**Policy ED-3.2 – Modernization**
Support the modernization of the existing industrial uses in the Commercial Mixed-Use Service District so they are less polluting, less obtrusive to neighboring uses, and consume less energy.

**Policy ED-3.3 – South Tahoe Refuse**
Assist South Lake Tahoe Refuse with upgrading their existing facilities with state-of-the-art improvements to increase efficiency of service to the community and compatibility with surrounding land uses.

## 6.2 Implementation

The following implementation strategies are proposed to promote economic activity and increase pedestrian activity in the Tahoe Valley area.

| Economic Development Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| Project Review Memorandum of Understanding (MOU) with TRPA | The City and TRPA shall move forward with implementing the MOU that was certified by the City in November 2012 and adopted by TRPA in December 2014. | CSLT<br>TRPA |
| Special Event Area Designation | The City shall pursue obtaining a TRPA special event permit designation for the Town Center Core District. Temporary activities may occur in the special event area without further TRPA or City review upon approval of a special event area. All other temporary events outside the identified special event area will require a temporary activity permit. | CSLT |
| Commercial Floor Area | Amend the CFA allocation procedures to add additional criteria for earning CFA from the City unallocated pool. | CSLT |
| Land Coverage | Leverage the City's banked coverage and SEZ restoration credits to facilitate redevelopment, land coverage removal, and SEZ restoration in the Tahoe Valley area. | CSLT |

# SECTION 7
# Housing

This section supplements the Housing Sub-element of the TRPA Regional Plan Goals and Policies, and the Housing Element of the City of South Lake Tahoe General Plan. This section provides the policy context for the Tahoe Valley Area Plan to achieve the vision of creating a range of housing opportunities and choices. These opportunities include increasing the availability of quality workforce and affordable housing, providing for housing opportunities within close proximity to the Tahoe Valley Town Center Core, and allowing for the mixing of land uses to encourage live/work opportunities that allow business to grow and evolve over time.

## 7.1 Goals and Policies

**Goal H-1: Housing Development**
Promote the construction of a variety of high-quality housing types for all income levels in the Tahoe Valley area.

**Policy H-1.1 – Housing Options**
Provide for a range of housing options that include affordable, moderate-income, and workforce housing so that people can live and work in the City.

**Policy H-1.2 – Housing Incentives**
Provide the following incentives to encourage the development of a range of housing options in the Tahoe Valley plan area:

- Additional coverage and height for housing developments serving high-demand markets.
- Access to the City's banked coverage pool to offset excessive coverage mitigation fees and for transfer of coverage (see Policy NCR-7.2).
- Allow density bonuses for projects eligible under California state law.
- Provide Residential Units of Use at no cost for the development of accessory dwelling units.
- Provide development rights and land coverage at no cost for multi-family residential projects and mixed-use projects containing multi-family residential units when the project is in the Town Center.

- Provide sewer units at no cost for residential projects, where at least 50% of the newly constructed units are deed restricted to accommodate low, very low, and moderate-income families.

**Policy H-1.3 – Residential Improvement**
New residential development may take the form of both infill of vacant parcels and reuse of existing developed parcels that benefit from "grandfathered" excess land coverage, existing sewer units, and other benefits associated with the redevelopment of existing lots.

**Policy H-1.4 – Compatibility with Neighboring Uses**
Ensure new and rehabilitated residential developments are designed to be compatible with neighboring uses.

**Policy H-1.5 – Redirection of Development**
Direct high-density residential development to areas of Tahoe Valley that are within walking distance of public transit and services.

**Policy H-1.6 – Commercial Mixed-Use Service District**
Allow residential uses within the Commercial Mixed-Use District if they are part of a mixed-use project.

**Policy H-1.7 – Tahoe Livable Communities Program**
Collaborate and support efforts of the California Tahoe Conservancy to remove blighted properties and repurpose associated development commodities. Encourage the use of residential commodities for affordable housing in Tahoe Valley area.

**Policy H-1.8 – Regional Housing Needs Assessment**
Collaborate with TRPA on the Regional Housing Needs Assessment to develop updated policies and implementation strategies to remove barriers and facilitate the development of affordable housing. Regional housing policies and programs should complement and not conflict with or duplicate state or local housing policies and programs.

**Policy H-1.9 – Housing Needs**
Encourage the consolidation of parcels within the Tahoe Valley area or the incorporation of parcels adjacent to the Area Plan boundaries for the development of multi-residential units.

**Policy H-1.10 – Conversions**
Encourage property owners of older motels units located in the Gateway District to convert tourist accommodation units to residential units of use onsite pursuant to TRPA Code Section 50.10.2.

**Policy H-1.11 – Mixed-Income Neighborhoods**

To create a balanced community, the City shall promote mixed-income neighborhoods by encouraging innovative design (e.g., second units, live-work units, etc.).

**Goal H-2: Mixed-Use Housing**
To facilitate the development of housing for all income levels in association with mixed-use development within the Tahoe Valley Area Plan.

**Policy H-2.1 – General**
Encourage the creation of residential uses to support and add vitality to commercial and public service projects in the Tahoe Valley area.

**Policy H-2.2 – Town Center Core District**
Encourage residential and nonresidential mixed-use projects in the Town Center Core District. Residential uses shall be located above ground floor commercial uses or in separate residential structures located away from arterial roadways.

**Goal H-3: Energy Efficiencies**
To ensure energy efficiencies and appropriate weatherization for all new and existing homes.

**Policy H-3.1 – New Construction**
Ensure that new construction meets the Title 24 energy conservation requirements of the State of California.

**Policy H-3.2 – Green Building**
Encourage and promote green building practices during the development review process and implement the City's Green Building Incentive Program.

**Goal H-4: Preservation of Existing Housing**

Ensure no net loss of existing long term housing units.

**Policy H-4.1 – Mitigation for Reduced Housing Units**

When multi-family properties are redeveloped to lower density residential uses, commercial uses, or tourist accommodation uses, require one-for-one mitigation of the lost units within the Tahoe Valley plan area.

**Policy H-4.2 – Retaining Long Term Rentals**

Prohibit single-family dwellings that are the result of redevelopment on sites where a higher density previously existed from operating as short-term rentals.

# SECTION 8
# Transportation and Circulation

The Transportation and Circulation Section is a supplement to the Transportation Element of the Regional Plan, Transportation and Circulation Element of the City of South Lake Tahoe General Plan, and the TRPA/TMPO Regional Transportation Plan and Sustainable Communities Strategy. Consistent with these plans, this section provides the policy context for the Tahoe Valley Area Plan to achieve its vision for future transportation and circulation systems which are critical to the community's livability, economic viability, and environmental quality.

This section contains goals and policies and implementation strategies that will help create a safe, efficient, and integrated transportation system that provides quality mobility options and connectivity for all sectors of the population. The Area Plan seeks to improve connections to adjacent neighborhoods, increase pedestrian and bicycle connections, improve transit access, conserve energy resources, reduce vehicle miles traveled, reduce greenhouse gas emissions, improve air quality, and connect Tahoe Valley to the regional transportation system.

## 8.1 Goals and Policies

**Goal T-1: Roadways**
To provide safe and efficient vehicular circulation for the Tahoe Valley Area Plan.

**Policy T-1.1 – Level of Service**
Strive to maintain a level of service (LOS) D or better on all arterial and collector roads, and signalized intersections. This LOS standard may be exceeded during peak periods, not to exceed 4 hours per day when provisions for multi-modal amenities and/or services (such as transit, bicycling, and walking facilities) are adequate to provide mobility for users.

**Policy T-1.2 – "Wayfinding" Signage**
Install an integrated way-finding and directional signage program through the Tahoe Valley area directing visitors on foot, bikes, or in vehicles, to recreation, commercial, tourist, transit and parking facilities.

**Policy T-1.3 – US 50 and SR 89**
Coordinate with Caltrans for continued improvements to US 50 and SR 89 by installing bike lanes; enhancing bike facility treatments such as green paint, buffers and signage; installing and maintaining pedestrian sidewalks and sidewalk lighting.

Coordinate and support TRPA in implementation of the SR 89 Corridor Plan.

**Policy T-1.4 – Truck Routes**
Minimize truck traffic through residential neighborhoods by requiring trucks to use designated and posted truck routes.

**Policy T-1.5 – Vehicle Short Cuts**
Minimize vehicular traffic "shortcuts" through residential areas and commercial parking lots through use of street design, traffic controls, and traffic calming measures.

**Policy T-1.6 – Traffic Movements on Lake Tahoe Boulevard**
Discourage left turn movements on Lake Tahoe Boulevard, with the exception of signalized intersections.

**Policy T-1.7 – Complete Streets**
Develop and adopt complete street roadway design standards for US 50 and the following collector streets: Third Avenue and South Avenue.

**Policy T-1.8 – Healthcare District**

Coordinate with Barton Healthcare on the Campus Master Plan to ensure that any proposed roadway modifications or abandonments in the Healthcare District meet standards for safety, traffic, bike, and pedestrian movement.

**Policy T-1.9 – Barton Avenue**

Ensure that loading and delivery access is maintained along Barton Avenue as part of any roadway improvement project or construction of the Tahoe Valley Greenbelt.

**Goal T-2: Parking and Access**
To create an accessible, efficient, and an aesthetically pleasing parking system in the Tahoe Valley Area Plan.

**Policy T-2.1 – Shared Parking**
Encourage shared-use parking facilities and agreements between businesses/uses on adjacent parcels.

**Policy T-2.2 – Parking Structures**
Encourage the development of above-ground or underground structured parking, or public/shared parking lots near the Town Center Core to serve surrounding uses at the "Y" intersection and transit connections to other destinations.

**Policy T-2.3 – Driveway Consolidation**
Where feasible, reduce the number of ingress/egress points along US 50 and SR 89 by combining and realigning driveways to improve traffic flow and eliminate conflicts between pedestrians, bicycles, and vehicles.

**Policy T-2.4 – New Project Access**
Require new projects located on corner parcels to provide their vehicle access from side streets instead of from Lake Tahoe Boulevard or Emerald Bay Road, unless shown that highway access would be safer.

**Policy T-2.5 –Alternative Parking Demand**
Allow projects to reduce their parking requirements provided the project offsets parking demand through additional parking management and/or contributions to shared parking facilities, public transportation and/or right of way improvements.

**Policy T-2.6 Parking for Affordable Housing**

Establish reduced parking requirements for affordable housing projects that are not exempt from parking requirements by state law.

**Policy T-2.7 Parking Benefit District**

Conduct public outreach and studies to determine the feasibility of establishing a parking benefit district to facilitate development of shared public parking facilities and parking management within the district.

**Policy T-2.8 Tahoe Valley Mobility Hub**

Conduct public outreach and a feasibility analysis of developing a parking hub and identify priority locations to facilitate a park-once environment.

**Goal T-3: Pedestrian Facilities**
To create a functional, safe, convenient, and integrated pedestrian system in the Tahoe Valley area and the surrounding neighborhoods.

**Policy T-3.1 – Connectivity**
Provide adequate pedestrian and bicycle facilities such as continuous sidewalks, bike paths and bike lanes throughout the Tahoe Valley area that connect commercial, health services, entertainment, residential, and recreation areas.

**Policy T-3.2 – Pedestrian Priority**
Give pedestrian safety and convenience highest priority in site planning and roadway design.

**Policy T-3.3 – Pedestrian/Automobile Buffer**
Develop landscape strips between sidewalks and arterial roadways to buffer pedestrians from vehicular traffic.

**Policy T-3.4 – Sidewalks**
Require all projects on an arterial or collector street that include new development, major remodeling, and any significant addition to provide and maintain sidewalks along the public street frontage. Such sidewalks shall comply with ADA requirements.

**Policy T-3.5 –Pedestrian Obstacles**
Remove and/or relocate any existing impediments to pedestrian movement along sidewalks, such as poles, trees, signs, wires, and other public/private utility infrastructure.

**Policy T-3.6 – Pedestrian/Bicycle Crossing at the "Y" Intersection and US 50**
Develop strong pedestrian and bicycle links (e.g., crosswalks and refuge islands) between the four corners of the "Y" intersection and along US 50. Coordinate with Caltrans to evaluate

alternative crossings, that create safe passage across US 50 for pedestrians and cyclists south of the "Y" intersection.

**Policy T-3.7 – Pedestrian Access**

Develop a strong pedestrian (sidewalks, paths, and trails) access system that effectively links adjacent residential neighborhoods to Tahoe Valley's employment centers, commercial uses, public service uses, and recreational and educational opportunities as an alternative to vehicle trips.

**Goal T-4: Bikeways**

To develop a safe and efficient bikeway system that promotes biking as an alternative to local vehicle trips.

**Policy T-4.1 – Bikeway System**

Develop a bikeway system that effectively links residential neighborhoods, employment centers, commercial areas, public uses, recreation uses, and educational centers, both within and outside of the Tahoe Valley area. Bicycle and pedestrian improvements that are identified in the City General Plan, TRPA Regional Plan, and/or TRPA's Lake Tahoe Regional Bike and Pedestrian Master Plan, which are adjacent to or within private development project areas, shall be implemented as conditions of approval.

**Policy T-4.2– Bikeway Linkages**

Integrate and link existing bike paths with regional paths. Connect the Tahoe Valley trail system to the proposed Meyers – Stateline Greenway bike trail.

**Policy T-4.3– Winter Use**

Designate, where appropriate, Class I bike trails for winter use. Identify and study funding mechanisms to plow the trails where pedestrians and bikers need access or designate for cross country or snowshoe use. Implement snow removal practices along roadways to ensure that bike trail crossings are not blocked by snow berms.

**Policy T-4.4 – Bicycle Parking and Storage**

Install bicycle racks or lockers at all public parks, gathering areas, shared parking facilities, and transit centers. Require them in all new private developments and changes of use or tenant improvements.

**Policy T-4.5 – Bike Route Improvement**

Explore implementing measures to make the bike routes safer and more appealing bicycling experience.

**Policy T-4.6 – Bicycle Route Maintenance**

Prioritize the maintenance of roads containing designated bicycle routes and Class II bike lanes.

**Policy T-4.7 – Safe Routes to School**

Coordinate with the South Lake Tahoe Unified School District, non-profit community groups, and the Tahoe Transportation District to maintain and implement a Safe Routes to School Master Plan. Washington Avenue, Third Street, and D Street are potential safe routes to school.

**Policy T-4.8 – South "Y" Intersection Enhancements**

Coordinate with Caltrans to enhance and maintain combined bike lane/turn lanes, intersection crossing markings, and colored pavement to clearly demark auto and bicycle travel lanes and improve bicycle safety at the South "Y" intersection .

**Policy T-4.9 – Longevity of Bikeway Improvements**

Encourage practices that increase the longevity of bike path improvements, such as recessed paint or thermoplastic paint.

**Goal T-5: Transit**

To promote the use and expansion of transit options for South Lake Tahoe citizens.

**Policy T-5.1 – Transit Services**

Work with the Tahoe Transportation District to ensure that the Tahoe Valley area and its major employment centers, shopping destinations, and residential neighborhoods are served by frequent bus service with shorter headways. Coordinate with the Tahoe Transportation District and Tahoe Area Regional Transit to connect the South Shore transit service to North Shore transit service.

**Policy T-5.2 – Bus Turnouts and Shelters**

Coordinate with the Tahoe Transportation District to ensure that bus shelters and bus pullouts are installed at all bus stops throughout the Tahoe Valley area.

**Policy T-5.3 – Transit Stops**

Require all mixed use residential/retail development projects of more than three acres or containing more than five residential units to designate and reserve locations for transit/school bus stop locations where appropriate.

**Policy T-5.4 – Transit Center**

Work with Tahoe Transportation District and Amtrak to ensure that the City-owned Transit Center has the capacity for long-term transit growth.

**Policy T-5.5 – West Shore Shuttle Service**

Work with the Tahoe Transportation District to ensure continual and frequent shuttle service trips during the summer months from the South Y Transit Center to Camp Richardson, the US Forest Service beaches along SR 89, and Emerald Bay.

**Policy T-5.6 – Intelligent Signage**

Coordinate with Caltrans and California Highway Patrol to install and operate electronic message signs to convey traffic and parking conditions at recreation facilities located on SR 89 between the Y intersection and Emerald Bay.

**Policy T-5.7 – Funding for Expansion of Transit**

Continue to partner with South Shore Transportation Management Association, Tahoe Transportation District, Tahoe Regional Planning Agency, and other partners to identify new and existing funding sources to expand and electrify fixed-route bus services, micro-transit services, and other transit options.

**Goal T-6: Sustainable Communities Strategy**

To provide a transportation and circulation system that promotes reduction in greenhouse gases, creation of multimodal networks and promotion of a mix of land uses.

**Policy T-6.1 – SCS Implementation**

Implement the TMPO Sustainable Communities Strategy in the Tahoe Valley Area Plan by integrating land use, transportation, and housing strategies to create a walkable Town Center, provide alternative transportation options, provide for a variety of housing types in close proximity to services, connect neighborhoods, and protect the area's natural resources.

## 8.2 Implementation

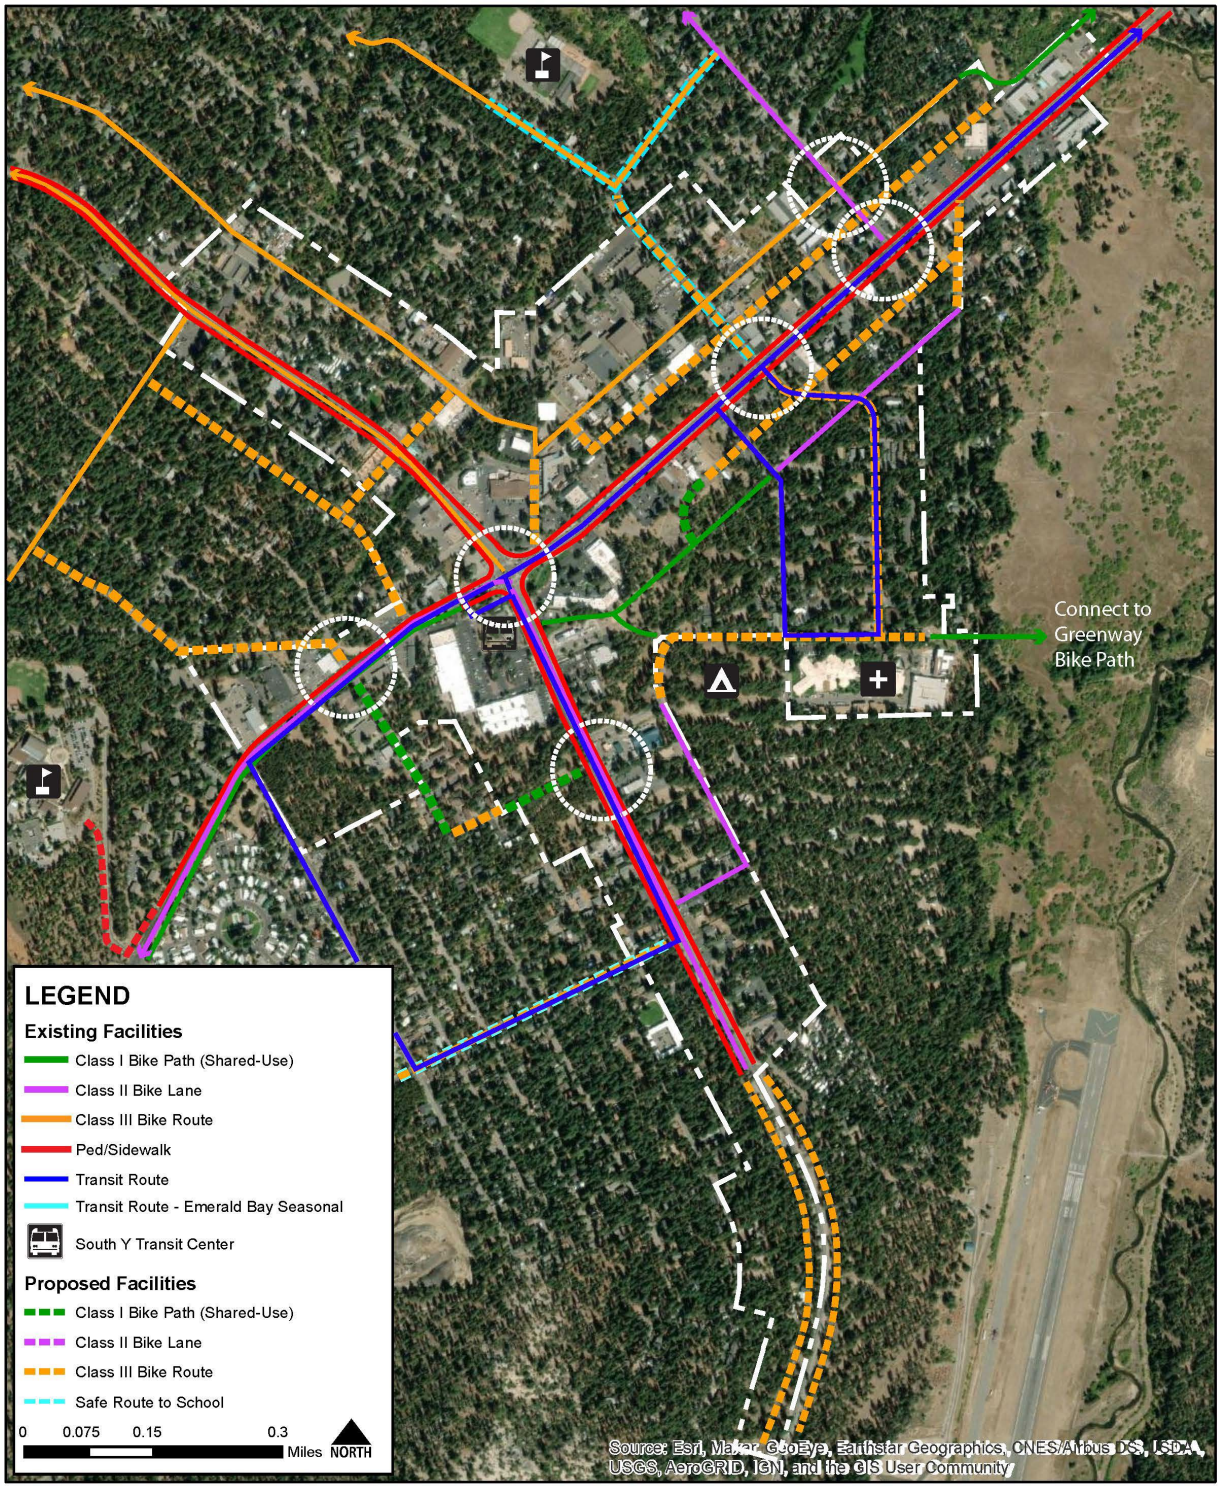
This subsection outlines transportation and circulation improvements that implement the vision, guiding principles and the goals and policies of the Tahoe Valley Area Plan (See Table 8.1).

Future improvements to the area's transportation and circulation system will provide opportunities for residents and visitors to walk, bike or use public transit throughout the area. While slight adjustments to the existing roadway system may be possible, the greatest potential for improving the overall transportation and circulation system will be achieved through the development of a comprehensive multi-modal network. Continuing to make connections between the completed and proposed trails and sidewalks and strengthening the connections to public transportation options will create the foundation for a complete transportation network. This will improve TRPA's thresholds for Vehicles Miles Travelled (VMT), air quality, water quality and noise, support the local economy, improve public health and support a connected, walkable and bikeable community.

A variety of improvements to the area's transportation and mobility system intended to encourage safety, connectivity, and access to the area's surrounding recreational opportunities are proposed by various agencies and are in various phases of design, permitting or environmental review, and are listed below:

| **Transportation and Circulation Strategies** | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| US 50 and SR 89 Improvements | RTP #74: US 50 Signal Synchronization and Adaptive Signals Project. Upgrade signal timing equipment at signalized intersections along US Highway 50 to improve traffic flow. | CALTRANS (existing capital project) |
| | RTP #81: Signalization Upgrade. Upgrade signal timing equipment at City of South Lake Tahoe signalized intersections to improve traffic flow. | CALTRANS (existing capital project) |
| | South "Y" Intersection Bike Lane Stripping. Maintain recent bike lane updates to the "Y" intersection, including the combined bike lane/turn lane, intersection crossing markings, | CSLT with CALTRANS coordination |

| Transportation and Circulation Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| | and colored pavement for enhancement of public safety and clear delineation of auto and bicycling travel lanes. | |
| | The Tahoe Valley Greenbelt: The project focuses on two key elements: (1) construction of a comprehensive regional storm water treatment system (see Tahoe Valley Erosion Control Project description); and (2) construction of a recreation and open space community amenity. This project will create a distinct and unique recreation and open space amenity southeast of the "Y" intersection. The project will include SEZ restoration, installation of pedestrian-bicycle pathways, pedestrian amenities and interpretive signage along with storm water improvements. The Greenbelt will serve as a visual amenity for adjacent residential and commercial uses and provide a bicycle and pedestrian link from residential neighborhoods to the Tahoe Valley commercial core. There are existing bicycle paths and stormwater facilities in the area, which would be upgraded and enhanced as part of this project. | CSLT<br>CTC |
| | South Tahoe Greenway: The proposed South Tahoe Greenway Shared Use Trail will create the backbone of the bicycle and pedestrian network in South Lake Tahoe and will take a major step forward in furthering sustainability goals of South Shore communities. The Greenway will connect residents and visitors to community and recreation destinations from Meyers to the Stateline, providing a high-quality alternative to private automobile use. The highest priority 1.8-mile segment will link urban neighborhoods in the core of South Lake Tahoe to shopping, social services, schools, and recreation destinations. Continuing the trail system northward to the state line provides important connections to the largest concentration of visitor services in the region, including shopping, lodging and transit. Completion of this link also connects the recreation resources at Van Sickle Bi-State Park to the network. A southern trail extension to Meyers, not part of the current project, would complete the transportation link. A spur trail to link the Tahoe Valley area to the Greenway is proposed at the west end of South Street. | CSLT |
| | Bicycle Transportation Signage System: Continue coordination with the Lake Tahoe Bicycle Coalition to develop and implement a consistent, functional bicycle transportation system that serves the commuting needs of employees, | LTBC<br>CSLT |



| Transportation and Circulation Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| | students, business owners, shoppers, and tourists in the South Shore. The intent of the program is to implement a consistent way-finding signage system and provide trailside amenities such as benches and tool stations that can safely and efficiently deliver cyclists and pedestrians to services, places of employment, and recreation opportunities. | |
| | Safe Pedestrian and Bicyclist Crossings: Coordinate with Caltrans to evaluate alternative crossings that create safe passage across US 50 and SR 89 for pedestrians and cyclist. | CSLT with CALTRANS coordination |
| Bike Paths, Lanes and Routes Improvements | Bike Lane: Sign and stencil Class III bike routes as depicted in Figure 13 of the Tahoe Valley Area Plan. While progress has been made, it is an ongoing effort to maintain lane striping and paint as the lifespan is significantly reduced by snow removal activities. | CSLT |
| | Implement complete streets roadway design standards for Tahoe Keys Blvd. The project is awaiting funding and is estimated to begin in 2028. | CSLT |
| | South Lake Tahoe Bus Shelters: Continue support of the Tahoe Transportation District's program of constructing new shelters in the South Shore. The structures will enhance rider comfort and safety while adding visibility to encourage transit use. | TTD |
| | Seasonal Bus Service: Continue bus service from the Tahoe Valley Transit Center to Emerald Bay during the summer season. | TTD |

**Completed Transportation and Circulation Strategies**

Since the initial adoption of the Tahoe Valley Area Plan in 2015, the following transportation and circulation improvements have been implemented.

| Improvements | Description | Completed |
|---|---|---|
| US 50 and SR 89 Improvements | US 50 Airport to "Y" Junction Water Quality Improvement Project: As part of this water quality improvement project, | CALTRANS, 2014 |

| | | |
|---|---|---|
| | Caltrans installed a 3- to 4-foot shoulder for a Class II bike lane and provided curbs, gutters, and sidewalks. | |
| | US 50 "Y" to Trout Creek Water Quality Improvement Project: As part of this water quality improvement project, Caltrans will install Class II bike lanes, and replace traffic signals, curbs, gutters, and sidewalks. | CALTRANS, 2018 |
| | SR 89 "Y" to Cascade Road Water Quality Improvement Project: As part of this water quality improvement project, Caltrans will install a Class III bike route. | CALTRANS, 2016 |
| | Tahoe Keys Intersection Improvements: Install a right turn lane on US 50 at the Tahoe Keys Intersection. | CALTRANS, 2018 |
| Bike Paths, Lanes, and Routes Improvements | Bike Path Rehabilitation: This project focuses on rehabilitating and laying new asphalt on an existing Class I bike path that runs from Trout Creek to the Y intersection. | CSLT, 2014 |
| Pedestrian Improvements | Pedestrian Improvements: Install sidewalks along US 50 and SR 89 as part of the US 50 and SR 89 Water Quality Improvement Projects. | CALTRANS 2016, 2018 |

CITY OF SOUTH LAKE TAHOE

Transportation and Circulation Improvements
April 2023

# SECTION 9
# Public/Quasi-Public Facilities and Services

The Public/Quasi-Public Facilities and Services Section is a supplement to the Public/Quasi-Public Facilities and Services Element of the City of South Lake Tahoe General Plan and the Public Services and Facilities Element of the TRPA Regional Plan. This section provides the policy context for future public and quasi-public facilities and services within the Tahoe Valley area.

## 9.1 Goals and Policies

This subsection outlines public/quasi-public facilities and services goals and policies for the Tahoe Valley area.

**Goal PS-1: Public Facilities**
To improve public facilities in the Tahoe Valley area.

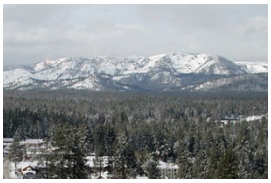
**Policy PS-1.1 – Co-Locate Public Facilities**
Locate appropriate public service facilities in commercial areas so as to add pedestrian/bicycle traffic and serve as a catalyst for private development, provided they do not detract from commercial activity in those areas.

**Policy PS-1.2 – Barton Hospital Campus Master Plan**

Encourage Barton Healthcare to prepare a Campus Master Plan for the Healthcare District that provides a blueprint for future development and redevelopment that connects existing and future facilities through an integrated pedestrian and bike friendly system. With an adopted Campus Master Plan, healthcare services in which Barton Hospital owns a majority interest and are located within the Healthcare District will be considered public services provided by a non-profit organization, and therefore will be exempt from the requirements for CFA entitlements

**Goal PS-2: Water and Wastewater**
To maintain adequate water and sewer service for all properties within the Tahoe Valley area.

**Policy PS-2.1 – Lukins Brothers Water**
Coordinate with South Tahoe Public Utility District and Lukins Brothers Water in upgrading water systems in the Tahoe Valley area.



**Goal PS-3: Power**
To promote the use of alternative energy to power structures in the Tahoe Valley area.

**Policy PS-3.1 – Solar Energy**
Encourage new and remodeled structures to design for peak solar orientation, include solar panels, and incorporate design techniques to reduce energy consumption.

**Goal PS-4: Broadband**
To promote economic prosperity by providing digital infrastructure in the Tahoe Valley area.

**Policy PS 4.1 – Fiber Optic**
Coordinate with the business community, Caltrans, and other public service and facility providers to plan for and construct fiber-optic conduit in the Tahoe Valley area.

# SECTION 10
# Natural and Cultural Resources

The Natural and Cultural Resources Section is a supplement to the Natural and Cultural Resources Element of the City of South Lake Tahoe General Plan and to the Conservation Element of the TRPA Regional Plan. Consistent with these plans, this section provides the policy context for the Tahoe Valley Area Plan to achieve its vision for future natural and cultural resource protection.

The City's many resources contribute to its economy and are important elements in the quality of life of South Lake Tahoe residents and quality of the recreation experience for visitors. The preservation of these resources is essential for a prosperous and sustainable future. This section contains goals and policies and implementation strategies that focus on the preservation and enhancement of scenic, water quality, air quality, soil conservation, and Stream Environment Zones.

## 10.1 Goals and Policies

This subsection outlines natural and cultural resource goals and policies for the Tahoe Valley Area Plan. These goals and polices implement the vision and guiding principles discussed earlier.

**Goal NCR-1: Natural Resources**
To design neighborhoods, sites, and buildings that complement the natural environment.

**Policy NCR-1.1 – TRPA Coordination**
Coordinate with TRPA on annual monitoring, reporting, and recertification of the Tahoe Valley Area Plan to ensure that projects permitted by the City are consistent with the goals, policies, and standards of the Tahoe Valley Area Plan, the Regional Plan, and the Sustainable Communities Strategy.

**Goal NCR-2: Energy Conservation**
To improve design and construction practices so that new buildings last longer, are energy efficient, cost less to operate, and provide better working environments.

**Policy NCR-2.1 – Green Buildings**
Ensure that the design, construction, and operation of new construction and major renovations are consistent with the California Green Building Code and other state standards for energy efficiency. Promote and encourage property owners to use incentives provided for in the City's Green Building Incentive Program.

**Goal NCR-3: Scenic Resources**
To achieve threshold attainment for Scenic Roadway Unit #1, Unit #35, and Unit #36A within the Tahoe Valley Area Plan.

**Policy NCR-3.1 – Scenic**
Improve the visual quality of the built environment consistent with the general recommendations for site planning found in the TRPA Scenic Quality Improvement Program (SQIP) for Scenic Roadway Unit #1, Unit #35, and Unit #36A and ensure consistency with the Development and Design Standards contained in Appendix C.

**Policy NCR-3.2 – New Scenic Resources**
Designate the views of Tahoe Mountain, Monument Peak, and Heavenly Valley as scenic resources.

**Policy NCR-3.3 – Viewshed Protection**
Implement design standards and guidelines (Appendix C) to preserve, improve, and enhance the scenic quality of the natural environment and take full advantage of scenic views in the Tahoe Valley area through building orientation, setbacks, and design. Buildings greater than two stories shall not result in the net loss of views to an identified scenic resource.

**Policy NCR-3.4 – Open Space**
Maintain existing open spaces, SEZs, and stormwater drainage basins as view corridors to provide visual relief from the urban environment.

**Goal NCR-4: Stream Environment Zones**
To protect Stream Environment Zone (SEZ) restoration projects and areas of undisturbed SEZ within the Tahoe Valley area.

**Policy NCR -4.1 – Stream Environment Zones**
Increase the area of naturally functioning SEZ by preserving existing SEZ and restoring/rehabilitating disturbed SEZ in the Tahoe Valley area, prioritizing the Greenbelt area.

**Policy NCR -4.2 – Redirection and Transfer of Development**
Direct new development away from SEZs and encourage the removal and transfer of existing development from disturbed SEZs that can be feasibly restored. Encourage property owners to use TRPA's transfer incentives available in Chapter 51 of the TRPA Code. Development rights and existing development that are transferred from SEZs and other sensitive lands are eligible to earn residential bonus units, commercial floor area, and tourist accommodation bonus units, when transferred to Centers.

**Policy NCR-4.3 – Stream Environment Zone Mapping and Restoration**

Utilize the updated Bailey Mapped Land Capability Map to more accurately delineate the SEZs within the Tahoe Valley area (See Figure 15). Coordinate with public agencies and private property owners to prioritize and target the removal of development and land coverage from the delineated SEZs and from the TRPA designated Stream Restoration Plan Areas.

**Goal NCR-5: Water Quality**
To protect and enhance Lake Tahoe's unique transparency, color and clarity, and improve the water quality in the South Shore's rivers, creeks, marshes, and groundwater.

**Policy NCR-5.1 – Stormwater System**
Construct the Tahoe Valley Water Quality Improvement Project as part of the Greenbelt Project

to treat stormwater from Tahoe Valley and adjacent residential areas, in order to reduce fine sediment loads to the Upper Truckee River and Lake Tahoe, and restore disturbed SEZs.

**Policy NCR-5.2 – Low Impact Development (LID) Techniques**
Incorporate site design elements to mimic and enhance natural hydrologic functions such as preserving and protecting environmentally sensitive site features and providing runoff storage, infiltration and groundwater recharge BMPs to reduce the transport of runoff and pollutants from the site at which they are generated.

**Policy NCR-5.3 – Best Management Practices**
Ensure installation and maintenance of Best Management Practices (BMPs) as required by the City's NPDES Permit and memorandums of understanding with TRPA.

**Policy NCR-5.4 – Best Management Practices Retrofit Certification**
Coordinate with TRPA to support private property BMP certification with a near-term focus on commercial and multi-family land uses that have drainage directly connected to Lake Tahoe and/or the Upper Truckee River, or are in the same catchment as Environmental Improvement Program (EIP) projects or public water quality improvement projects.

**Policy NCR-5.5 – Environmental Improvement Program (EIP)**
Coordinate with TRPA to implement the EIP water quality improvement projects in the Tahoe Valley area, with priority on Total Maximum Daily Load (TMDL) pollutant load reduction opportunities.

**Policy NCR-5.6 – Lake Tahoe Total Maximum Daily Load**

Collaborate with Lahontan Water Quality Control Board and refine the *Pollutant Load Reduction Strategy* for load reduction targets beyond the year 2016 and update the *Pollutant Load Reduction Plan* as necessary to achieve the Lake Tahoe TMDL load reduction targets. The Tahoe Valley Area Plan hereby incorporates by reference all monitoring, operations, maintenance, and reporting required by the City's NPDES permit, the adopted *Pollutant Load Reduction Plan* and the *Stormwater Management Plan*, which will also be utilized by TRPA in the 4-year Area Plan recertification process pursuant to TRPA Code Sections 13.8.2 and 13.8.5.

**Policy NCR-5.7 – Source Water Protection**
Prevent contamination of source water in the Tahoe Valley area by requiring projects located in a Source Water Protection Zone, as defined by Chapter 60 of the TRPA Code, to incorporate appropriate source water protection and site-specific best management practices including pretreatment technologies.

**Policy NCR-5.8 – Drainage Incentive**
Allow projects within the Tahoe Valley area, to provide in-lieu funding for an area-wide municipal stormwater treatment if sufficient treatment capacity exists within an area-wide water quality treatment system, subject to the requirements of TRPA Code Section 13.5.3.B.3. Properties participating in an area-wide system would be considered as meeting their water quality mitigation and BMP requirements of the TRPA Code. Require that full pretreatment of drainage occurs on a private property before it is accepted into a City system.

**Policy NCR-5.9 – Off Site Improvements**
Ensure that all new development or redevelopment projects, and projects subject to a special

use permit install and maintain off-site water quality improvements, including but not limited to curb, gutter, drainage facilities, stabilized road shoulders, at the direction of the City engineer.

**Goal NCR-6: Historic and Archeological Resources**
To preserve cultural and historic resources in the Tahoe Valley area.

**Policy NCR-6.1 – Resource Protection**
Preserve identified historic and cultural resources where feasible. Where it is found that a resource has no economically viable future use, require mitigation for the loss of the resource that would preserve public access to its historic or cultural significance.

**Policy NCR-6.2: Archeological Investigations**

The City shall require archeological investigations for all applicable discretionary projects, in accordance with CEQA regulations, for areas not previously surveyed and/or that are determined sensitive for cultural resources (e.g., undeveloped parcels near water features). The City shall require the preservation of discovered archeologically significant resources (as determined based on TRPA, State, and Federal standards by a qualified professional) in place if feasible, or provide mitigation (avoidance, excavation, documentation, curation, data recovery, or other appropriate measures) prior to further disturbance.

**Policy NCR-6.3: Human Remains Discovery**

The City shall require/condition projects and other ground disturbance activities to notify the City if human remains are discovered and halt work. The County Coroner will be notified according to Section 5097.98 of the State Public Resources Code and Section 7050.5 of California's Health and Safety Code. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission and Washoe Tribe, and the procedures outlined in CEQA Section 15064.5(d) and (e) shall be followed.

**Goal NCR-7: Excess Coverage Mitigation**
To maximize opportunities to remove and mitigate excess land coverage and facilitate environmental redevelopment in the Tahoe Valley area and to benefit environmental thresholds.

**Policy NCR-7.1 – Land Coverage**
Provide redevelopment incentives in centers that promote reduction, relocation, and transfer of land coverage to reduce onsite land coverage. The City will endeavor to reduce overall coverage in order to benefit the objectives of the Tahoe Valley Area Plan.

**Policy NCR-7.2 – Landscape Treatment**
Encourage onsite landscaping in all private and public redevelopment projects. Landscape features should be integrated with BMPs to treat stormwater runoff and be consistent with fire standards for defensible space.

**Policy NCR-7.3 – Transfer of Coverage**
Give priority to projects transferring hard and soft coverage from SEZs and other sensitive land to high capability lands within the Town Center Core District.

**Policy NCR-7.4 – Stormwater Enhancement**
Collaborate with the California Tahoe Conservancy in identifying priority parcels in sensitive lands for public acquisition and coverage removal to facilitate construction of the Tahoe Valley Water Quality Improvement Project.

**Goal NCR-8: Air Quality**

To achieve air quality improvement and emission reductions in the Tahoe Valley Area Plan.

**Policy NCR-8.1 – Construction Emissions**
Incorporate measures to reduce construction-generated emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District.
- Prohibit open burning of debris from site clearing unless involved with a fuels reduction project.
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.
- Restrict idling time for construction equipment and vehicles.
- Apply water to control dust as needed to prevent dust impacts.

## 10.2 Implementation

This subsection outlines Natural and Cultural Resources improvements that implement the vision, guiding principles and the goals and policies of the Tahoe Valley Area Plan. Figure 16 depicts proposed EIP and TMDL water quality improvement projects within the plan area and its vicinity to be implemented to improve the water quality, soils and SEZ thresholds.

**SCENIC RESOURCES**

As discussed in Section 3, Existing Conditions, TRPA Threshold Evaluations noted that the majority of roadway units with improved threshold scores fall partially or wholly within urbanized areas. Removal of degraded structures, improvement in architectural quality of new and remodeled structures, increased landscaping, creation of open space and landscaped drainage basins, installing curb, gutters and pedestrian sidewalks and consolidating highway curb cuts, and improved signage have all contributed to a transformation in many of these units. These improvements affect both travel route and scenic quality ratings.

Within the Tahoe Valley plan area, continued improvements in the built environment are anticipated through the implementation of the recommendations of the Scenic Quality Improvement Program, implementation of the design standards of the Area Plan that are intended to facilitate the upgrade of the overall architectural quality, the preservation of open space and viewsheds, and installation of curbs and gutters along US 50 and SR 89. The following implementation strategies are also intended to promote scenic threshold attainment:

| Scenic Quality Improvement Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| Development and Design Standards | Implement the development and design standards and guidelines during project review to enhance the built environment, promote pedestrian mobility and provide for scenic viewshed protection. Incorporate design standards that enhance the scenic quality of the natural and built environment in Tahoe Valley for the following elements:<br>▪ Architectural Style<br>▪ Building Materials<br>▪ Building Colors<br>▪ Building Height<br>▪ Access Drives<br>▪ Parking<br>▪ Lighting<br>▪ Landscaping<br>▪ Signs<br>▪ Utility Lines | CSLT, ongoing |
| Land Use | Designate SEZ restoration sites and stormwater drainage basins as Open Space in the Tahoe Valley area. | CSLT |
| Scenic Quality Resources | Designate the following as scenic resources:<br>▪ The mountain and ridgeline viewshed of Tahoe Mountain as viewed from the "Y" intersection.<br>▪ The mountain and ridgeline viewshed of Monument Peak and Heavenly Ski Resort from the South "Y" intersection. | CSLT<br>TRPA |
| Business Façade Improvement Program | Implement a program to provide low-interest loans to local businesses and Business Improvement Districts to install aesthetically improved building facades. | CSLT |
| SQIP | Implement the SQIP recommendations in non-attainment scenic roadway units during project review. | CSLT |

**Completed Scenic Quality Improvement Strategies**

Since adoption of the Tahoe Valley Area Plan in 2015, the following strategies have been completed.

| **Improvements** | **Description** | **Completed** |
|---|---|---|
| US 50 and SR 89 | Install curbs, gutters, sidewalks, streetlights, and landscaping to provide a "clean edge" along the roadway. | CSLT with CALTRANS |

| | | |
|---|---|---|
| | | coordination, 2016, 2018 |

**STREAM ENVIRONMENT ZONES**

There has been extensive disturbance of SEZs in the planning area. The opportunities to implement area-wide BMPs, improve drainage systems, and increase SEZ restoration to benefit stream environment zone function exist in the planning area, but are dependent upon verifying and delineating accurate SEZ boundaries. The City hired Cardno/Entrix and Terra Sciences, experts in the field of soil science and hydrology, to review the existing mapped SEZs and verify the land capability districts for the Tahoe Valley Area Plan. The consultants analyzed previous land capability verifications, site assessments and land capability challenges that have occurred in the planning area, conducted a visual inspection of SEZs (reviewing vegetation, landforms, topography and aerial photography, and examined soil samples to closely examine near-surface soil conditions). The experts concluded that the SEZ boundaries adopted in the 1987 Land Capability Map are not accurate to the Area Plan scale. Based on analysis of soils, these efforts have resulted in a new SEZ and land capability district map, which is included as Figure 15 (Terra Science Inc., 2014). Though not mentioned in the Terra Science report, it is acknowledged that there are two ephemeral streams contained within the new SEZ boundaries. It should also be noted that even with an updated land capability map, property owners are still required to obtain parcel level site assessments and/or land capability verifications from TRPA prior to project submittal.

The following programs and key strategies are intended to promote SEZ restoration threshold attainment in the Tahoe Valley area.

| **Stream Zone Restoration Strategies** | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| SEZ Restoration | The Tahoe Valley Greenbelt: Restore disturbed SEZ as part of the construction of the Tahoe Valley Greenbelt and Tahoe Valley Water Quality Improvement Project. | CSLT<br>CTC |
| | Coordinate with the California Tahoe Conservancy to prioritize and target the removal of development and land coverage in delineated SEZs and from TRPA designated Stream Restoration Plan Areas. | CSLT<br>CTC |

**Completed Stream Zone Restoration Strategies**

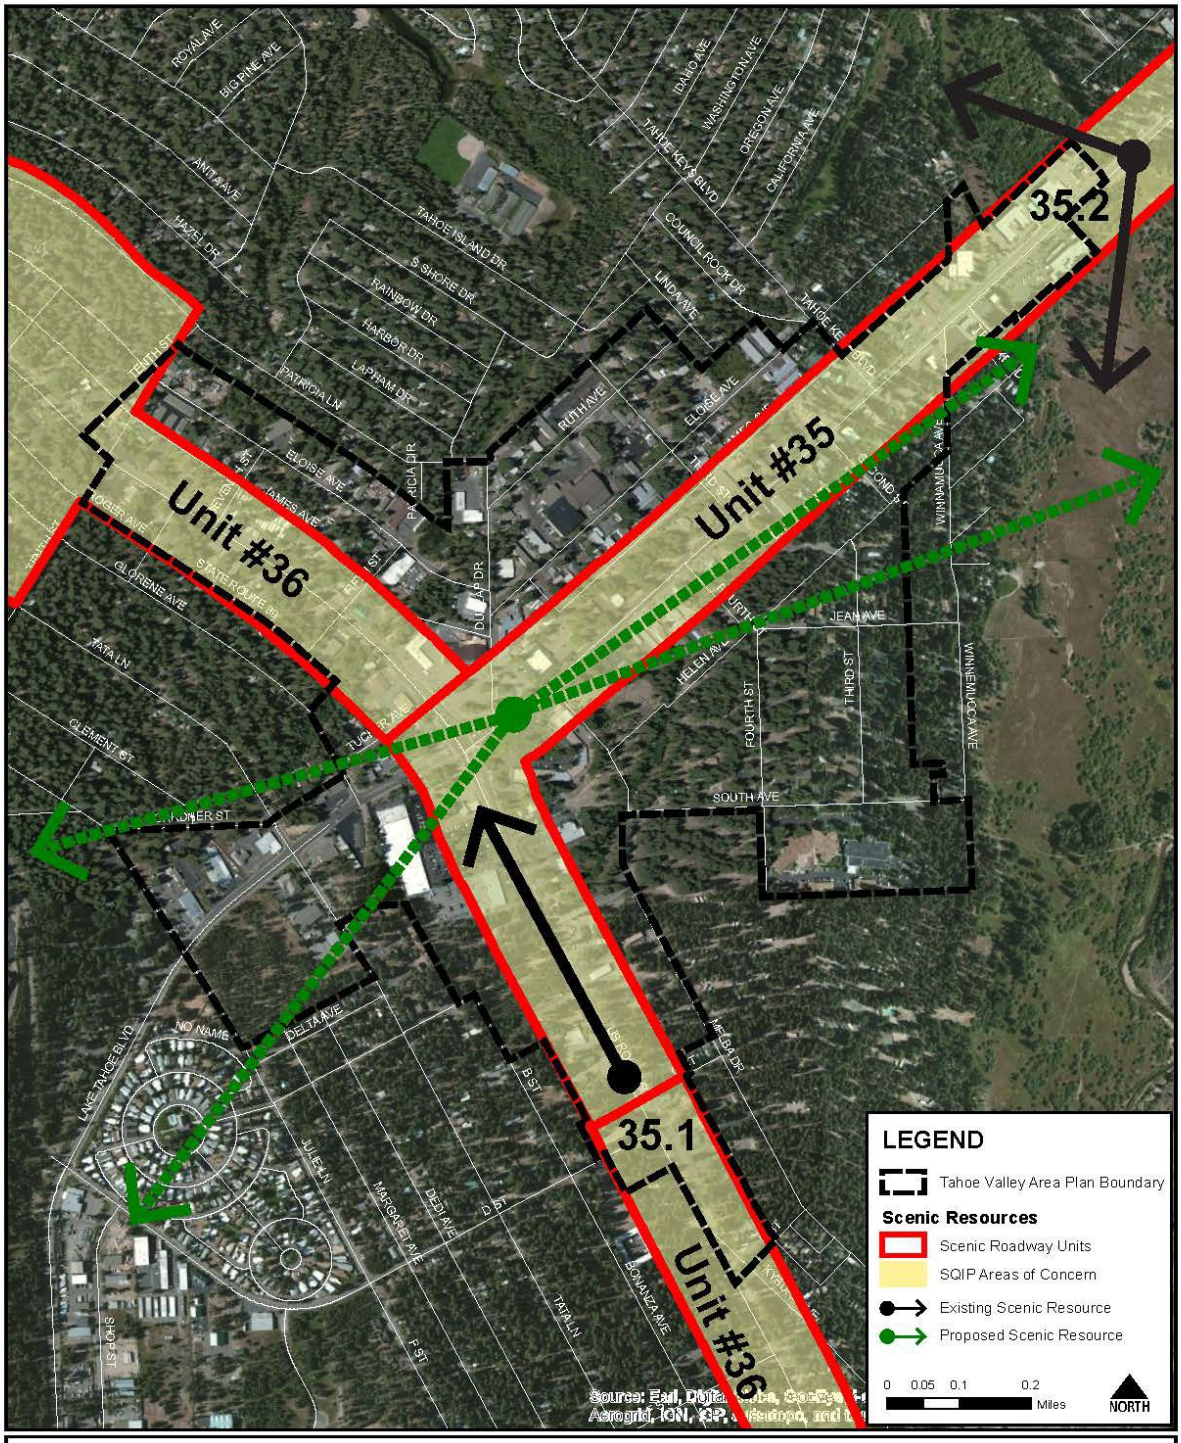
Since adoption of the Tahoe Valley Area plan in 2015, the following strategies have been completed.

| **Improvements** | **Description** | **Complete** |
|---|---|---|
| SEZ Restoration | Tahoe Valley Land Capability Map: Amend and utilize an updated Bailey Mapped Land Capability Map that more accurately delineates the boundaries of the SEZs that are in the Tahoe Valley area (Figure 15). Utilize the updated Land Capability Map and coordinate with the California Tahoe Conservancy to | CSLT, CTC, 2015 |

| | | |
|---|---|---|
| | prioritize the removal of development and coverage from delineated SEZs. | |

**WATER QUALITY**

The Tahoe Valley Area Plan responds to the needed improvements in water quality by continuing to require installation of on-site BMPs, construction and maintenance of water quality improvement projects within the Tahoe Valley plan area and implementation of the City's TMDL Pollutant Load Reduction Plan. The following programs and key strategies are intended to promote water quality threshold attainment:



| **Water Quality Improvement Strategies** | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| Tahoe Valley Water Quality Improvement Project | The Tahoe Valley Water Quality Improvement Project: This project includes much of the densely developed commercial areas near U.S. Highway 50, both north and south of the "Y" is a priority for treatment as storm water runoff discharges directly to the Upper Truckee River, which drains to Lake Tahoe. The project includes design of water quality improvements to reduce pollutant loads discharged to the Upper Truckee River. This project is proposed to be implemented along with the Greenbelt project. | CSLT |
| Tahoe TMDL | Register Completed WQIPs (2004-2012) from the Pollutant Load Reduction Plan. The City has completed seven WQIPs. The Urban Planning Catchments (UPCs) that encompasses the seven completed project areas will be registered with the Lake Clarity Crediting Program. Of the seven WQIP projects completed by the City that will be registered, one is located within Tahoe Valley and treats runoff from within the plan area and from adjacent residential neighborhoods. The WQIP is Glorene and 8th Street. | CSLT |
| Stormwater System | The City will complete annual stormwater system inspections for construction, commercial, industrial, and municipal sites as required in the NPDES MS4 permit. | CSLT |
| BMP Compliance | Focus BMP installation and compliance on commercial and multi-family projects that are adjacent, have connected impervious surfaces, or the same catchment as EIP or public projects. | TRPA |
| | Ensure BMPs are incorporated in all projects reviewed under the City's MOU to capture a 20-year, one-hour storm or alternative BMPs if infiltration is not possible. | CSLT |
| | Coordinate with TRPA to support and/or enforce private property BMP certification with a near-term focus on approximately 290 acres of commercial land uses that directly discharge stormwater to Lake Tahoe | CSLT<br>TRPA |
| Road Operations | The City will continue to track abrasive applications and materials recovered by sweeping and vactoring in order to identify areas with | CSLT |

| Water Quality Improvement Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| | high pollutant loads, and implement other actions to reduce pollutant loads. | |

**Completed Water Quality Improvement Strategies**

Since the initial adoption of the Tahoe Valley Area Plan in 2015, the following water quality improvements have been completed.

| Improvements | Description | Completed |
|---|---|---|
| US 50 and SR 89 Water Quality Improvement Project | US 50 Airport to "Y" Junction Water Quality Improvement Project: The project will collect and treat runoff along US 50. The project will provide a 3- to 4-foot shoulder for a Class II bike lane, and will provide curb, gutter and sidewalk. The project was completed in the fall of 2014. | CALTRANS, 2014 |
| | SR 89 "Y" to Cascade Road Water Quality Improvement Project: The project will collect and treat runoff along SR 89 from the "Y" junction to Cascade Road. The project will provide curbs, gutters, and sidewalks, and a 4-foot shoulder for a Class III bike route. Construction began in the Fall of 2014 and was completed in 2016. | CALTRANS, 2016 |
| | US 50 "Y" to Trout Creek Water Quality Improvement Project: The project will collect and treat stormwater runoff from the "Y" junction to Trout Creek. It will include 6-foot shoulders for Class II bike lanes, and replace traffic signals, curbs, gutters and sidewalks. | CALTRANS, 2018 |

# SECTION 11
# Recreation and Open Space

The Recreation and Open Space Section is a supplement to the Recreation and Open Space Element of the City of South Lake Tahoe General Plan and Recreation Element of the TRPA Regional Plan. Consistent with these plans, this section provides the policy context for the Tahoe Valley Area Plan to improve recreational opportunities.

Tahoe Valley serves as a hub for numerous outdoor recreation activities. A variety of recreational opportunities, such as boating, campgrounds, beaches, and mountain bike trails are easily accessible from the plan area. Public beaches, campgrounds, trail heads, interpretive centers, and boat launching facilities are all located in close proximity to Tahoe Valley and are accessible by bike paths and routes that run through the plan area and by transit from the South "Y" Transit Center. In addition, Tahoe Valley has numerous established businesses that cater to the recreation user by providing recreation based commercial services such as the sale and rental of biking, kayaking, and paddle board equipment. To further expand and enhance the recreation opportunities in the plan area and its surroundings, the goals, policies, and implementation strategies of this section promote the preservation and creation of open space, construction of bike and trail connections, increased transit service, and establishment of recreation based businesses within the plan area. Furthermore, the plan promotes ecotourism that unites conservation, communities, and sustainable travel. This means that those who implement and participate in ecotourism activities should follow the following ecotourism principles:

- Minimize impact.
- Build environmental and cultural awareness and respect.
- Provide positive experiences for both visitors and hosts.
- Provide direct financial benefits for conservation.
- Provide financial benefits and empowerment for local people.
- Raise sensitivity to host countries' political, environmental, and social climate.

## 11.1 Goals and Policies

This subsection outlines recreation goals and policies for the Tahoe Valley Area Plan. These goals and polices implement the vision and guiding principles discussed earlier.

**Goal REC-1: Recreation System**
To create a recreation system for the enjoyment of both local residents and tourists.

**Policy REC-1.1 – Hierarchy and Interconnection**
Develop an interconnected system of open spaces, community parks, plazas, bike and pedestrian trails, and other types of public and private spaces as part of new development and redevelopment of existing sites.

**Policy REC-1.2 – Coordination with Commercial Uses**
Require public trails and plazas to be incorporated into the development and redevelopment of commercial, industrial, public, and multi-family projects.

**Policy REC-1.3 – Private Improvements**
Encourage the private sector to make recreational improvements on their land. Improvements may include establishing community event areas, providing paths and walkways that connect to adjacent sidewalks and bike paths, establishing appropriate space for the outdoor display of for sale or for rent recreation equipment.

**Policy REC-1.4 – Access**
Enhance the existing trail and bike system that connects the Tahoe Valley area to recreation opportunities in the South Shore.

**Policy REC-1.5 – Eco-Tourism Incentives**
Provide the following incentives to businesses and facilities that promote the South Shore as an eco-tourism recreation destination:

- Priority plan check, over all other project applications, by all City Departments; and
- Recognition at a televised City Council meeting and on the City Website.

**Goal REC-2: Open Space**
To preserve, protect, and maintain open spaces in the Tahoe Valley plan area.

**Policy REC-2.1 – Preservation**
Preserve and maintain open spaces within the Tahoe Valley plan area that provide a visual break from the urban environment as well as views of surrounding mountains, forests, and stream environment zones. Depending upon their ecological sensitivity, open spaces may incorporate paths, boardwalks, pedestrian and bicycle trails, and benches.

**Policy REC-2.2 – Public Access**
Ensure that public access does not jeopardize restoration activities and water quality and stormwater treatment projects on publicly-owned open space lands.

**Policy REC-2.3 – Multi-Use**

Encourage the multi-use of open spaces in the Tahoe Valley area for storm water treatment, pedestrian and bicycle connectivity, passive recreation uses and as a visual break from the developed environment.

**Policy REC-2.4 – Tahoe Valley Greenbelt**

Construct the Tahoe Valley Greenbelt Project as a multi-use area incorporating stormwater treatment facilities, pathways, and open space. Allow for the accommodation of active and passive recreation uses that include but are not limited to installing bike/pedestrian paths, pedestrian amenities, and interpretive signage.

**Policy REC-2.5– Adjacent Uses**

Encourage commercial uses located adjacent to the Tahoe Valley Greenbelt to provide direct access to the greenbelt and use it as a visual amenity.

**Policy REC-2.6– Coordination**

Coordinate with the California Tahoe Conservancy to ensure that implementation of the Tahoe Valley Greenbelt is consistent with recreation and restoration goals and objectives of the California Tahoe Conservancy and the State of California.

**Goal REC-3: Recreation Opportunities**

To connect Tahoe Valley to a network of parks, open spaces, and recreation sites that serve the needs of South Lake Tahoe residents and tourists.

**Policy REC-3.1 – Recreation Hub**

Promote the Town Center Core District as a recreation hub by allowing for a mix of uses that promote outdoor recreation concessionaires, recreation based commercial services, and temporary activities. Connect the recreation hub to recreation opportunities by upgrading existing bike and pedestrian trails, constructing new connections, and increasing transit service. Improve access to recreation opportunities by installing way-finding and interpretive signage within the Town Center Core District and improve access along bike trails.

**Policy REC-3.2 – Neighborhood/Pocket Parks**

Develop neighborhood/pocket parks within the Neighborhood Professional District and surrounding residential areas.

**Goal REC-4: Plazas**

To provide area within commercial centers for people to meet, socialize, relax, and interact.

**Policy REC-4.1 – Plaza Location**

Require all large development within the Town Center Core District to provide informal public gathering areas and places for community activities.

**Policy REC-4.2 – Plaza Amenities**

Require all plazas to include seating, tables, and other amenities attractive to shoppers and pedestrians. Larger plazas should include trees, native landscaping, hardscape, year-round restrooms, formal eating areas, places for community activities, and possibly areas for spectator recreational activities such as climbing walls.

**Goal REC-5: Temporary Events**

To provide areas for temporary events in the Town Center Core District.

**Policy REC-5.1 – Temporary Event Locations**
Encourage temporary events and activities within public and private plazas in the Town Center Core District to increase pedestrian and economic activity in commercial areas.

## 11.2 Implementation

This subsection outlines recreation improvements that implement the vision, guiding principles and the goals and policies of the Tahoe Valley Area Plan.

In addition to the implementation strategies proposed in the transportation section to enhance recreation opportunities, the following recreation projects or programs are planned:

| Recreation and Open Space Improvement Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| Way-Finding Signage Program | Expand the City's Way-Finding program to direct pedestrian and bicycle traffic to recreation opportunities along the southwest shore of Lake Tahoe. | CSLT with CALTRANS and CTC coordination |
| Parks | Construct the Tahoe Valley Greenbelt and provide pedestrian and bicycle connectivity, passive recreation uses and provide a visual amenity for adjacent land uses. | CSLT with CTC coordination |
| Commercial Floor Area | Amend the CFA allocations procedures to add additional criteria for earning CFA from the City unallocated pool. The City should add criteria that allow projects that promote the South Shore as an eco-tourism recreation destination to access the City's CFA pool. | CSLT |

CITY OF SOUTH LAKE TAHOE

**Figure 18**
Conceptual Tahoe Valley Greenbelt
April 2023

# SECTION 12
# Safety and Noise

The Safety and Noise Section is a supplement to the Health and Safety Element of the City of South Lake Tahoe General Plan, and the Natural Hazards Element of the TRPA Regional Plan. Consistent with these plans, this section provides the policy context for the Tahoe Valley Area Plan for future health and safety. Safety hazards are naturally induced, such as seismic, geologic, flooding, snow, avalanche, and wildland fire hazards. Other hazards are human-made including aircraft crash hazards and hazardous materials. In addition, the planning process should account for other issues related to community health and safety, including noise exposure. Protection from the risks of natural and human-made hazards is essential in establishing a sense of well-being for residents and visitors.

## 12.1 Goals and Policies

This subsection outlines safety and noise goals and policies for the Tahoe Valley Area Plan. These goals and polices implement the vision and guiding principles discussed earlier.

**Goal HNS-1: Safety**
To protect the community from injury and damage resulting from natural catastrophes and hazardous conditions.

**Policy HNS-1.1 – Overflight Zones**
Require all new projects located within the overflight safety area to meet the standards and requirements of the Airport Land Use Compatibility Plan (ALUCP) in effect at the time the project is reviewed.

**Policy HNS-1.2 – Floodplains**
Support the restoration of floodplains through the use of incentives to relocate existing development to higher capability lands.

**Policy HNS-1.3 –Fire Protection**
Require any new structure or addition, to an existing structure to implement fire prevention techniques consistent with the current California Building and Fire Codes in order to obtain a building permit.

**Policy HNS-1.4 – Defensible Space and Fire-Safe Landscaping**
Require property owners to maintain defensible space through annual landscape maintenance, including the removal of dead/dying material and pruning/thinning of flammable vegetation. Ensure that landscape plans in new and rehabilitated structures conform to defensible space requirements of Section 4291 of the California Public Resources Code.

**Policy HNS-1.5 – Water Lines**
Require all public water providers to maintain adequate water supply systems and flows to meet fire suppression needs throughout the City.

**Policy HNS-1.6 – Minimum Fire Flow Requirements**
Require that all new construction meet the minimum fire flow requirements as set forth in the current California Building and Fire Codes.

**Policy HNS-1.7 – Healthcare Campus District**
Collaborate with Barton Healthcare System to ensure adequate access is provided for emergency vehicles in any new construction or reconstruction of facilities in the Healthcare District.

**Policy HNS-1.8 – Tahoe Valley Greenbelt**
Ensure adequate access for paramedic and fire vehicles to the Tahoe Valley Greenbelt. Ensure the greenbelt can be accessed from adjacent streets and that bike and pedestrian paths can accommodate emergency vehicles.

**Goal HNS-2: Noise**
To protect residents from the harmful and annoying effects of exposure to excessive noise.

**Policy HNS-2.1 – Maximum Community Noise Equivalent Level**
Maintain a maximum community noise equivalent level (CNEL) of 65 CNEL for the Tahoe Valley Area, except for the Neighborhood Professional and Healthcare Campus Districts, where the standard is 55 CNEL. Require any new project that is determined to have the potential to exceed the noise standards submit a noise analysis as part of the environmental review process. Noise measurements conducted for noise analyses must follow TRPA protocols for the CNEL measurements. These projects must incorporate design features to ensure compliance with noise standards.

**Policy HNS-2.2 – Transportation Noise**
Require the mitigation of new transportation noise sources to the levels shown in Table HS-2 of the City General Plan at all outdoor activity areas and interior spaces of existing noise-sensitive land uses.

**Policy HNS-2.3 – Project Review**
Require an acoustical analysis as part of the environmental review process when noise-sensitive land uses are proposed in areas exposed to existing or anticipated exterior noise levels exceeding the levels shown in Table HS-1 and HS-2 of the City General Plan, so noise mitigation may be included in the project design. All acoustical analyses shall:

- Be the financial responsibility of the applicant;
- Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics;
- Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions and the predominant noise sources;

- Estimate existing and projected cumulative (20-year) noise levels in terms of Ldn or CNEL and/or the standards shown in Table HS-1, and compare those levels to the policies in this section;
- Recommend appropriate mitigation to achieve compliance with the adopted policies and standards of this section, giving preference to proper site planning and design over mitigation measures which require the construction of noise barriers or structural modifications to building which contain noise-sensitive land uses;
- Estimate noise exposure after the prescribed mitigation measure(s) has been implemented; and
- Describe a post-project assessment program that could be used to evaluate the effectiveness of the proposed mitigation measure(s).

**Policy HNS-2.4 – Construction Noise**
Require an analysis of potential vibration impact be conducted for all construction activities that include impact equipment and activities such as pile driving, soil compaction, or vibratory hammers that occur within 200 feet of existing structures. The analysis will address the potential for adverse vibration levels based on the criteria contained in Table 4.6-12 of the City General Plan Draft EIR. The City will ensure that construction operations are designed to avoid or mitigate for vibrations above 0.02 in/sec. (0.5 mm/sec.)

**Policy HNS-2.5 – Land Use Compatibility**

Incorporate measures to ensure noise/land use compatibility on a project-specific basis. Such measures may include, but are not limited to , the following:

- Construction of berms and/or acoustical shielding;
- Establishment of setback requirements for new development in specific areas exposed to roadway noise;
- Noise-reducing acoustical treatment of existing and proposed buildings; and
- Use of building layout and project features for noise-screening purposes.

# SECTION 13
# Incentive and Mitigation Programs

This section sets forth incentives and mitigation fee programs applicable to the Tahoe Valley Area Plan.

## 13.1 Incentive Programs

Specific incentives are available to support implementation of the plan's vision and support attainment of TRPA's Thresholds. Some of these incentives are found in the plan itself, others are found in the TRPA Code of Ordinances, and additional incentives are provided through City programs.

**Alternate Water Quality Fee Program**

An Area Plan may propose to establish area-wide water quality treatments and funding mechanisms in lieu of certain site-specific BMPs, subject to the requirements outlined in TRPA Code Section 13.5.3.B.3. All properties within the Tahoe Valley area plan that participate in an area-wide treatment system implemented by the City will be considered as meeting the stormwater infiltration requirement of TRPA Code Chapter 60: Water Quality for drainage storage and treatment. Onsite BMP source treatment such as paving and revegetation are still required as part of this program where feasible.

Public and private entities which contribute financially are eligible to participate.

**Alternate Traffic and Air Quality Fee Program**

The purpose of this program is to implement the transportation improvements depicted on Figure 13 in the Transportation and Circulation Element and to provide a substitute to Subsection 65.2.4.C of the TRPA Code of Ordinances for collection of fees for offsite traffic and air quality mitigation.

Projects contributing to the construction of pedestrian and bicycle infrastructure depicted in Figure 13 will be credited with meeting the necessary mitigation equal to the value of the contribution. Fees or assessments paid equivalent to the requirements of TRPA Code Section 65.2.4 to construct the improvements, will be considered in lieu of the requirements of TRPA Code Section 65.2.4.

Public and private entities demonstrating equivalent contributions to the construction of the listed improvements may credit such contributions to TRPA Code Section 65.2.4 requirements.

**Land Coverage**

<u>Maximum Coverage in a TRPA Designated Town Center</u>
A conforming Area Plan is eligible for the transfer of coverage program pursuant to TRPA Code Section 30.4.2. Maximum coverage for facilities located in the TRPA designated Town Center, as depicted in the

Zoning Map (Figure 12), is 70 percent of the project area located within Land Capability Districts 4 – 7, inclusive. Coverage shall be transferred pursuant to TRPA Code Section 30.4.2 and 30.4.3.

Maximum Land Coverage in the Commercial Mixed-Use District

A conforming Area Plan is eligible for the transfer of coverage program pursuant to TRPA Code Section 30.4.2.B.2. Maximum coverage for commercial and mixed-use facilities located in the Commercial Mixed-Use District, as depicted in the Zoning Map (Figure 12) is:

1. For parcels upon which there is no development legally existing as of July 1, 1987, maximum land coverage shall be 70 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive;
2. For parcels upon which there legally exists development as of July 1, 1987, maximum land coverage shall be 50 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive; and
3. Land coverage shall be transferred to eligible parcels and eligible uses, in accordance with TRPA Code Sections 30.4.2 and 30.4.3.

Alternative Comprehensive Land Coverage Management Program

The purpose of this program is to promote project feasibility, revitalization, coverage reduction and SEZ restoration in the Tahoe Valley area. Property owners within the Town Center Core District, in coordination with the City and TRPA, may develop alternative comprehensive coverage management systems as alternatives to the parcel-level coverage requirements outlined in subsections 30.4.1 and 30.4.2 of the TRPA Code of Ordinances, provided that the alternative system complies with the provisions of subsection 13.5.3.B.1: *Alternative Comprehensive Coverage Management Systems* of the TRPA Code of Ordinances.

Land Coverage Incentives

The following land coverage provisions in TRPA Code Section 30.6.4 are applicable throughout the Region:

- Non-motorized public trails are exempt from coverage subject to accessibility, trail route design, trail design, and designation provisions.
- Coverage exemptions for non-permanent structures and utility installations up to 120 square feet subject to BMPs, land capability verification, location, and aggregate limitation provisions.
- Coverage exemptions for new residential pervious decks subject to size, design, BMPs, location, and aggregate limitation provisions.
- Coverage exemptions for legally existing decks that meet all approval criteria.
- Coverage exemptions for compliance with the Americans with Disability Act.

**Transfer of Nonconforming Land Coverage in Centers**

Pursuant to Subsection 30.4.2.C of the TRPA Code of Ordinances, existing development relocated to a Center where the sending site is restored and retired, may maintain nonconforming land coverage. The receiving site shall be developed in accordance with all applicable TRPA ordinances, and the site shall be

either the same size or larger than the prior site. If the new project site is smaller, the amount of nonconforming coverage transferred shall be reduced on a proportional basis. The balance of nonconforming coverage may be banked and transferred elsewhere.

**Offsite Excess Coverage Mitigation**

A project may mitigate its excess land coverage by reducing coverage offsite in a different hydrologically related area provided the restoration occurs on more sensitive lands than the project area.

**Onsite Removal and Retirement of Excess Coverage**

Pursuant to Section 30.6.3 of the TRPA Code of Ordinances, onsite removal of remaining excess coverage in a Center may earn multi-residential bonus units, tourist accommodation bonus units, and/or commercial floor area.

**Commercial Floor Area Allocation**

The City of South Lake Tahoe provides a pool of Commercial Floor Area (CFA) at a reasonable cost and subject to availability to create an investment stimulant for creating change. CFA is provided as an incentive, not an entitlement, in order to encourage property owners to move forward with projects that are beneficial to the environment, community, and the economy.

Projects eligible for an allocation of CFA from the City's pools must meet the following criteria:

1. Be within an adopted community or area plan;
2. Meet the criteria for CFA allocations required by the applicable community or area plan;
3. Meet all applicable design standards;
4. Include the construction of improvements that will benefit the public and community which are more extensive than required by the applicable community plan or City Code; and
5. Provide an economic benefit to the community with enough significance to merit the allocation of the City's CFA resource.

CFA can be used to support infill, community-serving retail opportunities, and reuse of existing assets (such as land coverage and CFA), as well as for smaller-scale improvements that add ambiance, diversity, and commercial district vitality and that benefit quality of life.

CFA is available from the TRPA Pool as development transfer match to Town Centers and the Regional Center. See Transfer of Development Rights to the Tahoe Valley Area Plan and Transfer of Existing Development to the Tahoe Valley Area Plan program descriptions below.

**Tourist Accommodation Bonus Units**

Tourist Bonus Units are available for use by projects from TRPA's Special Projects Pool in accordance with TRPA Code Section 50.6.4.D.

In addition to the TRPA Code provisions listed above, tourist bonus units may also be earned as a transfer match for the transfer of existing development to Town Centers in accordance with TRPA Code Section 51.5.3: Transfer of Existing Development to Centers. See Transfer of Existing Development to the Tahoe Valley Area Plan program description below.

**Residential Bonus Units**

Residential Bonus Units from TRPA are available for use in Town Centers. Residential bonus units may be earned and used by projects in accordance with Section 52.3: Multi-Residential Incentive Program of the TRPA Code. Residential bonus units used for affordable housing under this section do not require residential allocations. The City of South Lake Tahoe has a Certified Moderate Income Housing Program pursuant to Section 50.5.2.B and 52.3.6 of the TRPA Code, thus moderate-income housing units are eligible to earn allocations from TRPA's unused allocation pool subject to TRPA's allocation procedures.

Pursuant to TRPA Code Section 21.3.2.B, residential bonus units can also be earned under the City's Local Government Housing Program certified by TRPA. The program allows for the conversion of illegal secondary units into deed restricted affordable housing units.

In addition, residential bonus units may also be earned and used for projects in accordance with TRPA Code Section 51.3.3.C: Transfer of Development Rights to Centers or TRPA Code Section 51.5.3: Transfer of Existing Development to Centers. See Transfer of Development Rights to the Tahoe Valley and Transfer of Existing Development to the Tahoe Valley Area Plan program descriptions below.

**Residential Units of Use**

The City of South Lake Tahoe has set aside Tourist Accommodation Units for conversion to Existing Residential Units of Use for the construction of accessory dwelling units. The units are available at no cost and are provided on a first come-first-serve basis to eligible applicants.

The City of South Lake Tahoe has set aside Tourist Accommodation Units for conversion to Multi-Family Residential Unit of Use for the construction of multi-family projects. The units are available at no cost and are provided on a first come-first-serve basis to eligible applicants.

**Transfer of Existing Development to Tahoe Valley**

Pursuant to TRPA Code Section 51.5.3, residential bonus units, CFA and tourist bonus unit are available as development transfer match for existing development (residential, tourist accommodation and commercial uses) that is transferred to Centers. Receiving parcels in the plan area may earn residential bonus units, tourist bonus units or CFA at an enhanced transfer ratio based on the land capability of the sending parcels. Transfers of existing residential units are eligible for an additional enhanced transfer ratio based on the sending parcel's distance from Centers and primary transit routes. Residential bonus units earned under this program do not require an allocation to construct a residential unit.

**Transfer of Development Rights to Tahoe Valley**

Residential bonus units from the TRPA Pool are available as development transfer matches for transferring development rights to Centers. Receiving parcels in the plan area may earn residential bonus units at an enhanced transfer ratio based on the land capability of the sending parcel, and its distance from Centers and primary transit routes. Residential bonus units earned under this program do not require an allocation to construct a residential unit. The transferred development right is eligible to receive an allocation from TRPA's unused allocation pool pursuant to Section 51.3.3.C.4 of the TRPA Code.

**Persons At One Time**

Projects are eligible for the Persons At One Time (PAOT) allocations pursuant to TRPA Code Section 50.9: Regulation of Additional Recreation Facilities of the TRPA Code of Ordinances.

The TRPA Code requires that certain recreation uses and activities are assigned additional PAOTs from TRPA prior to a construction of a project or commencement of an activity. Uses such as marinas, boat launching facilities, information centers, recreation centers, day uses areas, beach recreation, commercial boating, water-oriented outdoor recreation concession, downhill ski facilities, developed campgrounds, group facilities, and recreational vehicle parks are eligible for PAOT allocations from the TRPA Pool.

**City of South Lake Tahoe Green Building Program**

In November 2010, the City Council adopted the City of South Lake Tahoe Green Building Program (Resolution 2010-92). The program encourages the incorporation of energy efficiency in City buildings and facilities, and provides clear incentives for private property owners to retrofit residential, commercial, and industrial buildings to save energy and reduce the carbon footprint.

- Residential projects that voluntarily achieve third-party certification are eligible for the following:
  - Priority plan check, over all other projects, by all City Departments.
  - Priority on the residential allocation waiting list.
  - Recognition at a televised City Council meeting and on the City Website.
- Commercial projects that voluntarily achieve third-party certification are eligible for the following:
  - Priority plan check, over all other projects, by all City Departments.
  - CFA allocation from the City's unallocated CFA pool.
  - Recognition at a televised City Council meeting and on the City Website.

**Offsite Parking**

Use of offsite and shared parking is permissible pursuant to the parking standards in Appendix C of this Plan.

**Conversion of Use**

Pursuant to TRPA Code of Ordinances, Chapter 51, existing development rights consisting of commercial floor area, tourist accommodation units, and residential units of use may be converted from one development right to another provided the conversion complies with the provisions of Chapter 51.

When a Tourist Accommodation use is to be converted to a Residential use, TRPA Code of Ordinances Section 31.4.5 shall apply.

**Density**

Mixed-use projects in conforming area plans may be developed to the maximum density allowed per the TVAP for each use.

Regarding legal, non-conforming tourist and residential densities, TRPA Code of Ordinances Section 31.4.6 shall apply.

# 1 SECTION ONE INTRODUCTION

The South Lake Tahoe Design Guidelines (Guidelines) provide visual imagery in order to support and clarify the intent of the City of South Lake Tahoe design standards. The Guidelines were developed to help project applicants and their designers understand the community's desired visual character and appearance for South Lake Tahoe. They apply to all projects except single family and multi-family residential projects within the City of South Lake Tahoe.

The Guidelines were developed as part of a collaborative outreach process. Community members were invited to take part of three public workshops and two online surveys. The first meeting and online survey focused on understanding what types of buildings, signage and landscape elements best represented the type of mountain architecture the community desired for South Lake Tahoe. The second meeting and online survey provided a venue for community members to comment on the Draft Design Guidelines. Survey and meeting results indicated that participants felt the imagery provided represented their desired aesthetic character for South Lake Tahoe. At the final public meeting the Final Draft Design Guidelines were presented, areas where the Draft Design Guidelines had been modified to respond to public input were identified and the community was provided another opportunity to provide input.

## PURPOSE & INTENT

The primary purpose of the South Lake Tahoe Design Guidelines (Guidelines) is to provide a visual tool to help guide project applicants on how to meet the required design standards in a manner that meets the desired aesthetic of the community. They are intended to assist landowners, developers, tenants and their consultants, such as architects, who propose any alteration, addition, construction, and/or development in understanding the basic design ideas related to the City of South Lake Tahoe's (City's)design standards in order to improve the area's visual quality.

The Guidelines are not intended to inhibit innovative design or espouse one style of mountain design. They are intended to allow freedom of expression, innovation and creativity while developing built elements that are timeless or do not appear overly trendy. They provide an illustrative and descriptive tool for establishing and maintaining an overall unifying character and image for the entire community.

The goal of the Guidelines is to communicate design principles regarding how structures relate to the land, respond to climate, step with natural grades, and harmonize with the character of the surrounding landscape. Since there is not a required theme or style of mountain architecture, it is all the more essential for structures to relate to each other through the use of design elements such as locally found materials, scale, fenestration, style, massing and exterior paint colors.

The Guidelines are intended to be an aid to enhance the existing visual quality and experience within the community and direct future development in ways that are responsive to the specific environmental conditions and natural setting of South Lake Tahoe. They were developed in conjunction with community input in order to establish parameters which align with the community's objectives for mountain architecture and the desire for enhanced visual quality throughout the city.

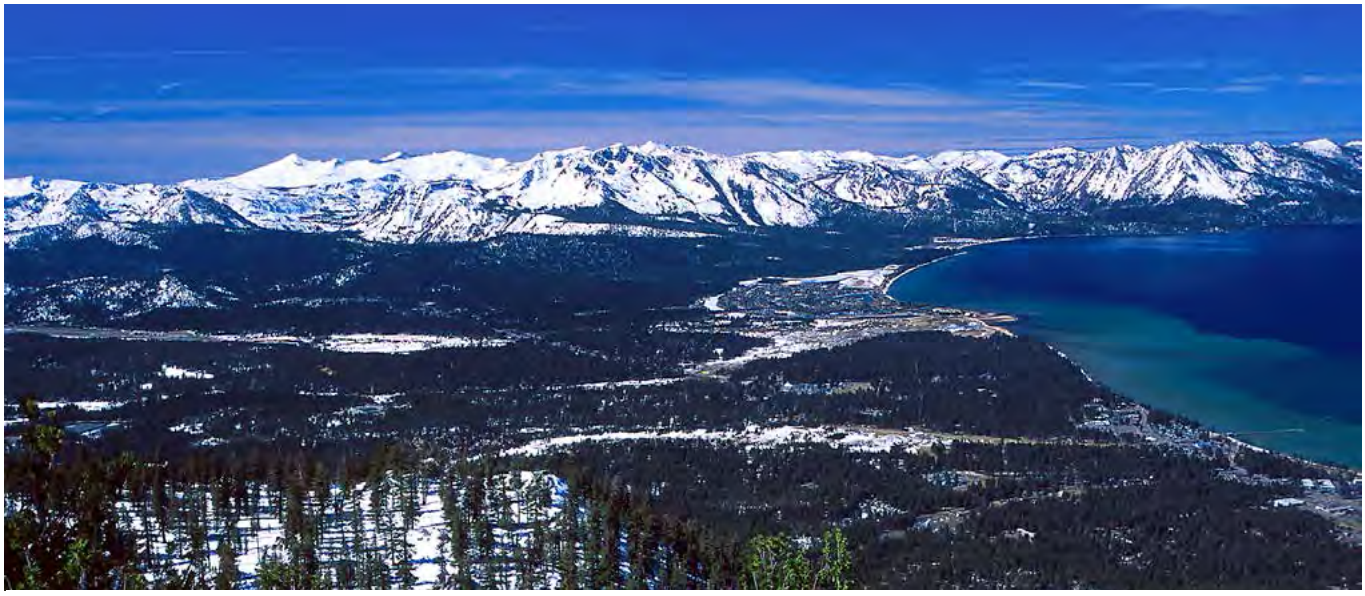
The Guidelines describe how to aesthetically and sensitively execute applicable design standards and codes in a manner that is compatible with the mountain environment. For example, there are codes that set the parameters for height and coverage, however, they do not describe how to aesthetically and sensitively apply them to a site. This manual provides the guidance to accomplish this.

## APPLICABILITY

The Design Guidelines apply to all commercial, tourist, mixed use, public/institutional and industrial projects (including additions, remodeling, relocation or new construction). They do not apply to single and multi-family residential projects. The Guidelines will be used during City review of permit applications as additional criteria for project review and communication with project applicants.

The Guidelines relate to aesthetic consideration of project development. Nothing herein alters current codes or best management practices (BMPs) requirements. All regulations and guidance in the City of South Lake Tahoe City Code, applicable Area Plans, the Tahoe Regional Planning Agency (TRPA) Code of Ordinance, TRPA BMP Handbook and other applicable documents shall remain in effect.

The Guidelines are not intended as a "blueprint" for approval, rather they outline the important design elements and features which should be considered. The City will consider these Guidelines in reviewing projects. Applicants are invited to submit creative and imaginative projects which build on these Guidelines and contribute to the overall character of South Lake Tahoe.



Individuals and entities proposing projects within the City of South Lake Tahoe should review these guidelines before initiating the design and development process. To facilitate project approvals, questions regarding the Guidelines, as well as other development-related questions, should be discussed with the City's Development Services staff as early in the development process as possible. The Guidelines have been developed in accordance with the City Code and Area Plans and TRPA's Code of Ordinances Design Standards and BMPs and are intended to further the broader goals and policies of the Regional Plan and the City's General Plan.

## DOCUMENT ORGANIZATION

The Guidelines have been organized to correlate with the City's citywide design standards and Area Plan design standards. They are presented in five sections:

- Site Design
  - General Design
  - Grading and Drainage
  - Building Placement
  - Parking
  - Bicycle Parking
  - Visual Screening
  - Pedestrian Circulation
  - Public Plazas and Open Space
- Building Design
  - Building Design and Articulation
  - Roofs
  - Building Height
  - Green Design
- Landscape
- Exterior Lighting
- Signage

Each section includes images, diagrams and illustrative examples in order to visually communicate how the Design Guidelines and existing city design standards can be met while developing a project that is compatible with the surrounding mountain environment. A summary of the section's design objective is provided at the start of each section. Image captions are provided to further communicate the design idea presented by the images, diagrams and illustrations.

The Design Guidelines apply to all projects within the City of South Lake Tahoe except single and multi-family residential projects. The unique natural setting of South Lake Tahoe is the best starting point for developing the site and building design.

# 2 SECTION TWO SITE DESIGN

## OBJECTIVE

Fit and blend man-made improvements into the topography and forest.

The way in which buildings and built elements relate to the land is an important factor in defining the character and enhancing the visual quality of South Lake Tahoe. The area's natural setting with its forested mountains, crystal blue lake and fragile meadows are South Lake Tahoe's most important features. This section describes design guidelines for site work elements including grading and drainage, building placement, parking areas, pedestrian circulation, and public plazas and open spaces in order to ensure that the character of South Lake Tahoe is maintained.

## LIMIT NEW DISTURBANCE AND KEEP EXISTING TREES, BOULDERS AND NATURAL ELEMENTS

Rock outcroppings and other natural elements should be incorporated into site design and public areas.

Retain existing natural features such as rock outcrops, trees and topographic features.

Site buildings and paved areas over existing disturbance to ensure the least amount of new site disturbance as possible.

## MAINTAIN AND HIGHLIGHT VIEWS OF THE MOUNTAINS, FORESTS AND LAKE

Organize and design buildings to maintain ridgeline and forest canopy views.

Site buildings and structures to maintain views of the mountains and lake.

Orient site features to capitalize and highlight views of the surrounding mountain and lake landscape.

Underground new utilities along commercial corridors in order to reduce visual distractions and enhance views of the surrounding landscape.

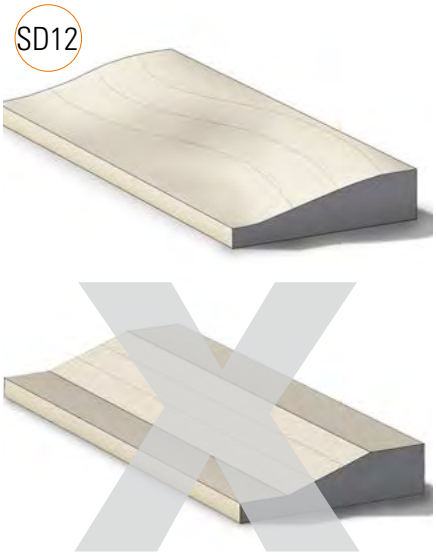
Buildings and site elements should be organized to preserve lake views of significant size to make a greater visual impact when viewed from public areas.

# GRADING AND DRAINAGE

## OBJECTIVE

Work with existing topography so that built elements appear to be an extension of the existing natural forms or nestle easily within the landscape setting.

The most aesthetically pleasing mountain towns are those that appear to nestle into their setting, working through and around the landscape instead of perching on top of it. The intent of these guidelines is to foster grading which results in built work that appears to sit easily within the landscape instead of being imposed upon it.



Minimize grading and work with existing topography to minimize the use of retaining walls and integrate buildings into the site.

Preserving existing trees and incorporating naturally functioning systems into the site design is integral to the establishing the aesthetics of the place.

Revegetate graded slopes.

Smoothly merge graded areas into existing terrain and undulate the graded surface to mimic existing landforms. Do not create sharp transitions with a flat graded surface.

Natural drainage courses and existing drainage patterns should be protected.

Design graded areas to appear as natural landforms. Smoothly merge graded areas into the existing terrain. Undulate slopes to mimic the surrounding landscape.

Gracefully blend stormwater features into the look and feel of the surrounding terrain. Do not use sharp transitions or flat slopes that do not appear natural.

## BUILDING PLACEMENT

### OBJECTIVE

Organize buildings in such a way that respond to and take advantage of Tahoe's natural setting while reinforcing the character of pedestrian and public areas in order to optimize visitor and resident enjoyment of outdoor spaces.

Building placement has a powerful impact on the perceptions of visitors and residents. Consideration should be given to all the aspects of the site: the physical characteristics, environmental conditions and social expectations to determine the arrangement and location for buildings that will provide the greatest benefit. The guidelines for siting of buildings are intended to encourage designs that respond to the natural setting.

Because each building's relationship to the street impacts the character and function of pedestrian areas, the guidelines also encourage designs which reinforce the character of public areas and optimize visitor and resident enjoyment of outdoor spaces. Well organized buildings can create comfortable pedestrian plazas, promote walkability, encourage commerce, improve building performance and reinforce community identity.

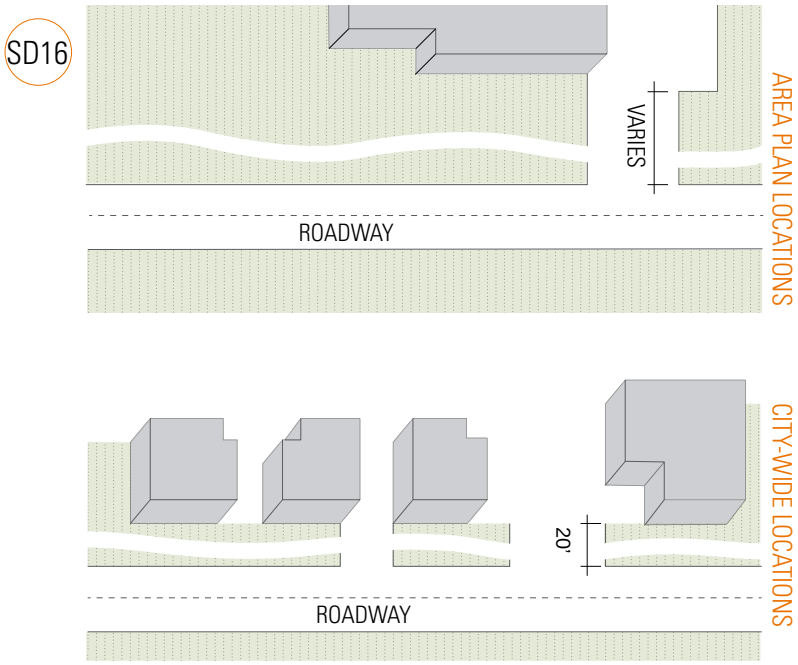


***Image courtesy of BSA Architects***

Site buildings at setback lines to create visual interest along the road corridors, allow for substantial landscape areas and pedestrian walkways.

***Image courtesy of Tahoe Donner Cross Country Ski Center; Tahoe Donner Association, Dale Cox Architects***

Modulate buildings to avoid creating a long row of buildings.

Locate corner buildings at the setbacks in order to create a strong street presence, define the pedestrian realm and encourage pedestrian activity.

Seating, outdoor dining and public gathering areas can be incorporated within the setback area.

Building placement should not intrude on or diminish the views of mountains or the lake as seen from public spaces and roadways.

## RELATIONSHIP TO PUBLIC SPACES AND OTHER BUILDINGS

Cluster buildings where appropriate to create desirable and comfortable public outdoor spaces.

Site buildings in a manner that complements adjacent buildings.

## RELATIONSHIP TO PEDESTRIAN MOVEMENT AND ACCESS

Site buildings so their spatial relationship provides for and promotes pedestrian access.

Highlight building entries through architecture and landscape.

Place building entries and frontage toward the primary linear street frontage to encourage and support a pedestrian environment.

Provide covered entries.

Orient the entry and major façade of commercial buildings toward the primary street frontage.

# PARKING

## OBJECTIVE

Provide convenient parking that is not visually obtrusive and does not impact pedestrian movement.

Parking with its related vehicular circulation and access points establishes the pattern of movement for trucks and automobiles and influences pedestrian and cyclist movement. The point where a driver enters or leaves a site affects both a project and the community as a whole.

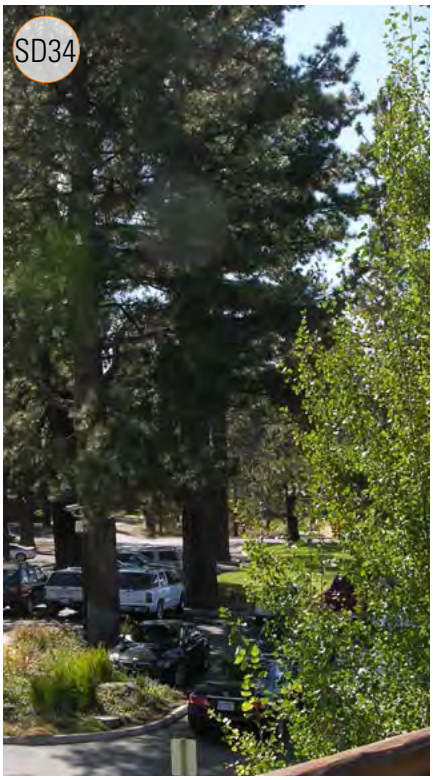
The guidelines focus on siting and designing parking areas which do not dominate views from the roadway and public areas and encourage pedestrian movement by minimizing vehicular/pedestrian conflict areas and creating opportunities to park once and walk to multiple destinations.

Divide parking into smaller lots to decrease the view of large parking expanses.

Parking located behind a building or on an interior side has less visual impact from the street in order to create a cohesive pedestrian environment and building frontage.

## USING LANDSCAPE AND EXISTING TREES TO BREAK UP PAVING AREAS

Best management practices (BMPs), such as infiltration basins, can be incorporated into parking areas as part of landscape areas and offer an aesthetically pleasing and lower cost alternative to conventional stormwater treatment strategies.



Integrate landscaping and barriers that prevent parking outside of designated areas as part of the overall parking and landscape design.

Incorporate islands of adequate size between parking areas to visually break up long lengths of parking as well as provide areas for snow storage that are out of the public rights of way.

Integrate boulders into the landscape design where appropriate to prevent parking in landscape areas.

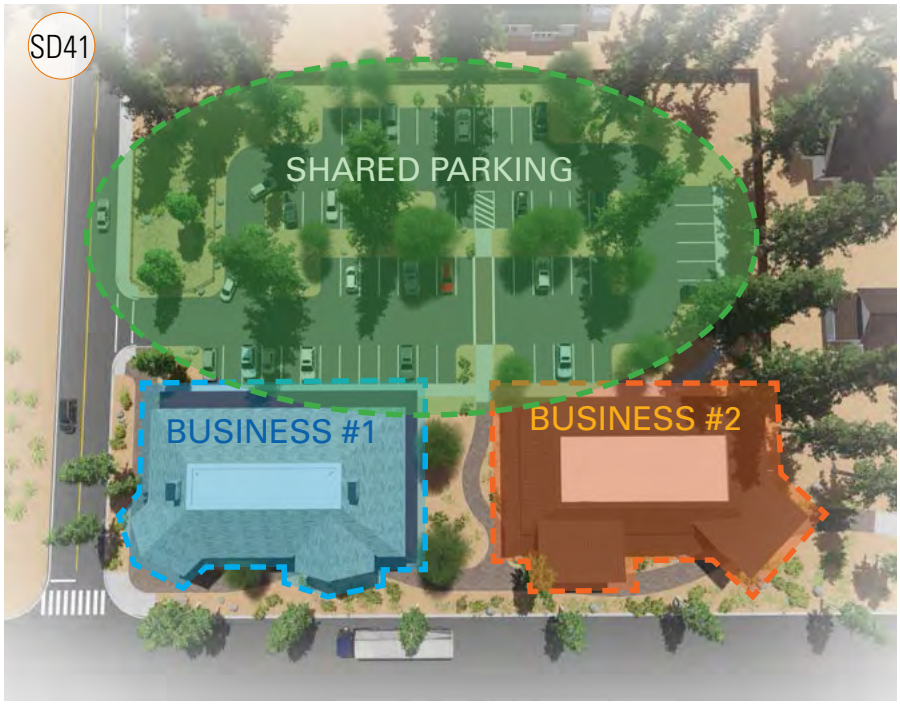
Incorporate existing trees into parking lot design and provide adequate buffer to maintain and enhance plant health.

## VISUAL SCREENING

Fencing can be incorporated as part of the landscape elements used to screen parking from the roadway.

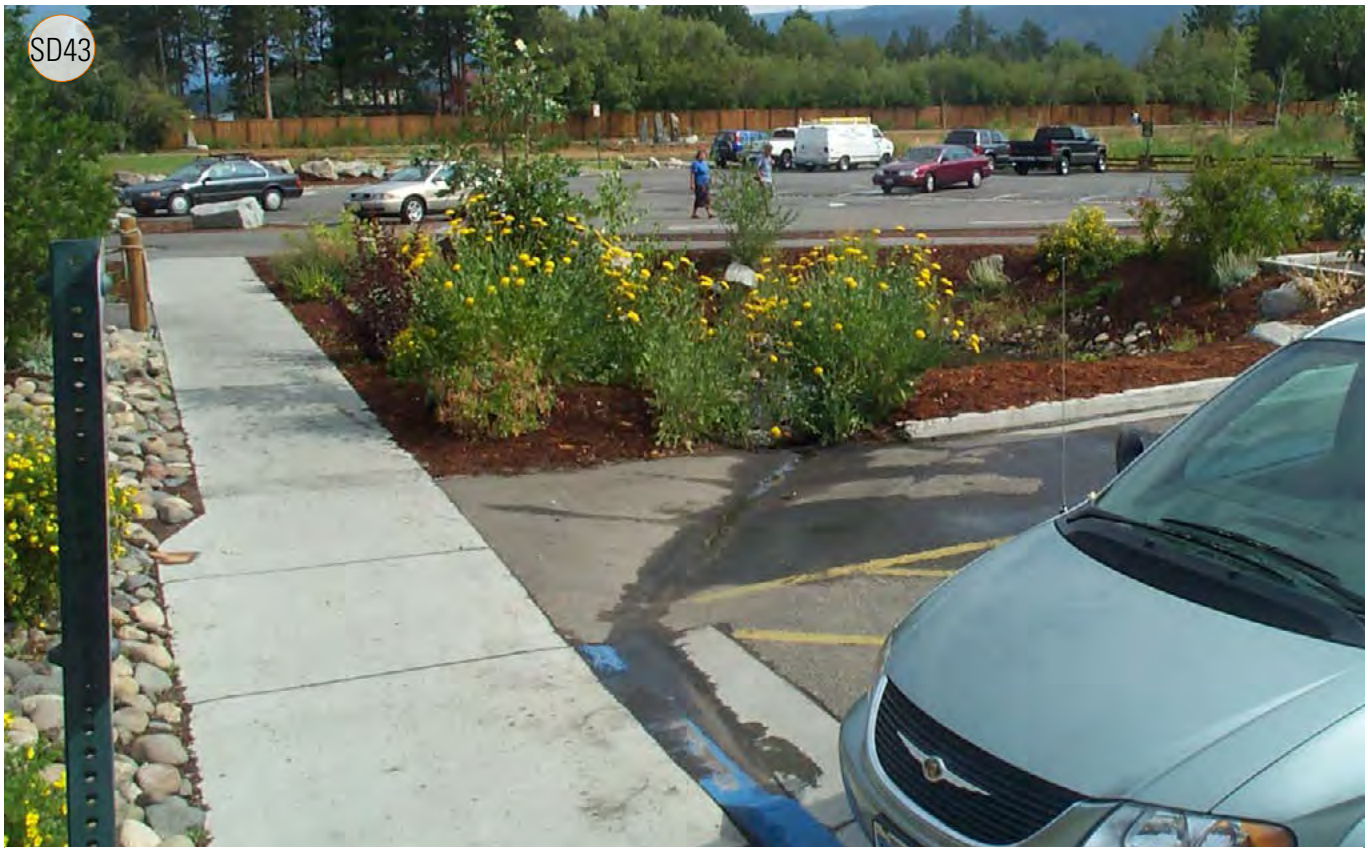
Incorporate landscaping in the setback area to screen parking from the street. Utilize informal planting strategies to create a more naturalized appearance of landscaping.

Utilize landscaping to screen underground parking that extends above natural grade.



Buffer parking from neighboring residential uses with fencing.

The use of vertical separation, landscape and fencing can help screen parking areas from the road.



## ENCOURAGING PEDESTRIAN MOVEMENT

Encourage walkability and a park once atmosphere by providing shared parking and shared parking access points.

Locating access drives from side streets and alleys fosters pedestrian movement along the primary street corridor by reducing the number of times vehicle and pedestrians interface.

Pedestrian walkways through parking areas provide a safe place for people to walk away from moving vehicles and should be separated from the building by a landscape area.

## BICYCLE PARKING

### OBJECTIVE

Encourage active transportation use with secure and convenient facilities.

Bicycle trail connections in combination with bike-friendly amenities help encourage use of alternative modes of transportation.

Locate bike racks within close proximity to the main building entry.

Locate bike racks so they do not obstruct pedestrian movement.

Incorporate long-term bike parking to serve people staying at a site for over four hours. Long-term bike parking can be provided indoors when possible.

Locate bike racks so they are visible to encourage use and enhance security.

Design dumpster enclosures using materials and finishes consistent with the building architecture to unify the appearance of site structures and help protect visual quality. Screen dumpster enclosures that are visible from the street with landscaping. Dumpsters should be covered whenever possible to prevent precipitation from entering the dumpster, mixing with contents and then leaking out.

Utilize site planning and building placement and design to minimize the visibility of parking, utilities, and service and maintenance areas from public rights of way.

Utilize a combination of fencing, walls and landscaping to provide attractive visual screening.

## VISUAL SCREENING

### OBJECTIVE

Minimize the visual impacts of parking and service areas.

The architectural design of a project shall include elements that screen from public view all external mechanical equipment, including refuse enclosures, electrical transformer pads and vaults, satellite receiving disks, communication equipment and utility hardware on roofs, buildings or the ground.

# PEDESTRIAN CIRCULATION AND DESIGN

## OBJECTIVE

Encourage safe and easy pedestrian movement within a site and between adjacent properties.

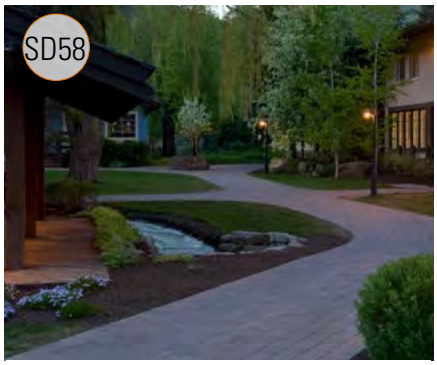
The design of the circulation system on a site is critical to creating safe travel routes between parking areas and building entrances. The guidelines identify the need for creating clearly defined and aesthetically pleasing circulation systems within and between project sites and providing connectivity to nearby transit stops and citywide pedestrian circulation systems.

Circulation systems should be separated from vehicular areas and provide convenient connections to pedestrian areas.

Integrate project walkways with the existing and planned active transportation network, community areas and transit.

Provide for pedestrian circulation within the site and between adjacent properties.

Create an interesting and inviting pedestrian environment with walkways and shared use paths that are separated from the roadway.



Design walkways for year-round circulation.

Provide wider sidewalks in heavily used commercial and tourist areas to accommodate higher numbers of pedestrians and provide opportunities for outdoor dining.

Sidewalks shall be provided along the full length of buildings that feature customer entrances.

Provide internal pedestrian connectivity to buildings, parking, open spaces and public amenities.

Separate walkways from vehicular areas in parking lots.

# PUBLIC PLAZAS AND OPEN SPACE

## OBJECTIVE

Create comfortable and desirable public gathering spaces.

Great public places are settings that bring people together—a place to see and to be seen. They provide a sense of character to the surrounding buildings and provide places for people to relax and enjoy themselves. They can serve as focal points and add to an area's visual enhancement. The guidelines describe the importance of designing high quality spaces that consider the surrounding landscape and scenic elements while providing for human comfort and visual interest.

Site public gathering spaces in locations with good solar exposure.

Provide desirable and comfortable public plazas. Site gathering spaces to take advantage of natural resources where possible.

Locate outdoor dining areas where solar exposure will maximize the opportunity for a comfortable year-round experience.

Site public gathering spaces where they are visible from the public street or other on-site pedestrian areas.

Use high quality plants, hardscape and pedestrian features that create an inviting atmosphere.

*Image courtesy of magazine.inspirato.com/featrued/family-time-in-vail-beaver-creek*

Enhance the site's comfort and aesthetics through the use of seating, public art, shade, information kiosks and other amenities and design elements.

Provide pedestrian amenities in convenient locations, including benches and trash receptacles. Consider providing ski and snowboard racks in commercial areas near ski resorts, where appropriate.

# 3 SECTION THREE BUILDING DESIGN

## OBJECTIVE

Design buildings and structures that harmonize with the character of the surrounding landscape, avoid a bulky and "box-like" appearance, and contribute to the quality and character of the mountain community.

The building guidelines establish a quality and character for the built environment that reflects the area's mountain setting and environmental conditions. These guidelines are not intended to restrict imagination, innovation or variety in design, but rather are intended to highlight design principles that can result in creative solutions that establish special characteristics for the built environment. Scenic and visual quality is not a question of style and therefore no specific architectural style or theme is proposed. The intent is to create design solutions that encourage a variety of architectural forms, scales, colors and materials that collectively fit within the natural mountain environment.

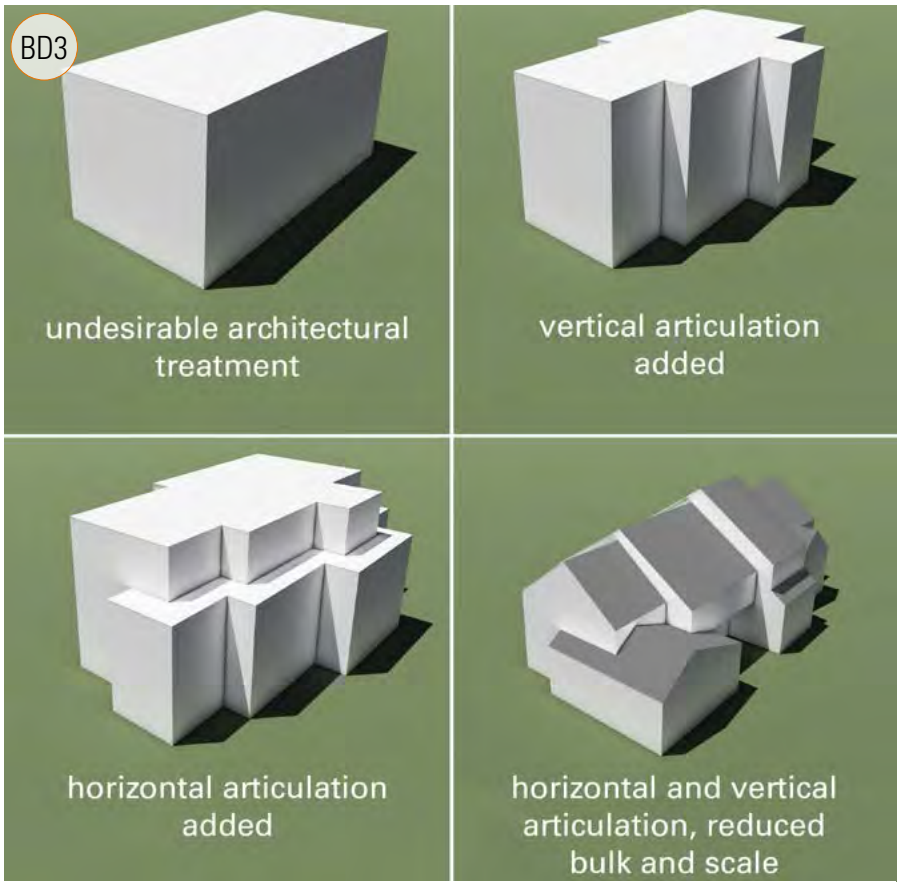
# BUILDING DESIGN AND ARTICULATION

## OBJECTIVE

Building form, articulation, materials and colors should be compatible with the surrounding Tahoe environment.

Building exteriors are typically designed with clear distinction between the three main building components; the base, middle and top. The base grounds the building to the site through the use of materials and forms that convey a sense of weight and stability. The base of a building is also the most visually dynamic zone due to its connection to the street level. The building's middle section should incorporate materials, textures, colors and detailing to provide interest and articulation. The tops of buildings are encouraged to be capped with well-proportioned, pitched roofs that act as the uppermost unifying component.

*Image courtesy of BSA Architects*



Buildings should have consistent architectural style and related detailing. All elevations visible to the public should have a complementary level of detailing.

*Image courtesy of Ben Fish*

Use gables, shed roof forms, cornices, balconies, roof terraces and other elements to step and articulate roof lines.

## BUILDING FORMS AND ARTICULATION

Use both horizontal and vertical articulation to reduce a building's scale and mass.

The visual mass of large buildings should be broken up through the use of elements such as roof forms, gables, projections and arcades.

Break up building facades with projections, recesses, piers, textured materials, trim and other architectural details to avoid a bulky or "box-like" appearance.

## BUILDING FORMS AND ARTICULATION

Screen all mechanical equipment from view.

Differentiated materials is one way to visually separate the base floors from the upper floors.

Protruding overhead canopies create interesting architectural façades and provide protection from falling snow.

## BUILDING FORMS AND ARTICULATION

The choice of quality, timeless materials is an investment in a place that will last for generations. Placement, shapes, materials, texture, details and colors should contribute to the overall building articulation. Design complex building forms with setback, overhangs, porches and varied skylines and avoid simple or monolithic forms.

Use brackets and overhangs to intercept sunlight and encourage building shadowing articulation where significant amounts of glazing is used. Windows and doors should relate to the structural expression of the building.

Glazing should avoid large amounts of reflective window planes without suitable overhangs or other mitigation.

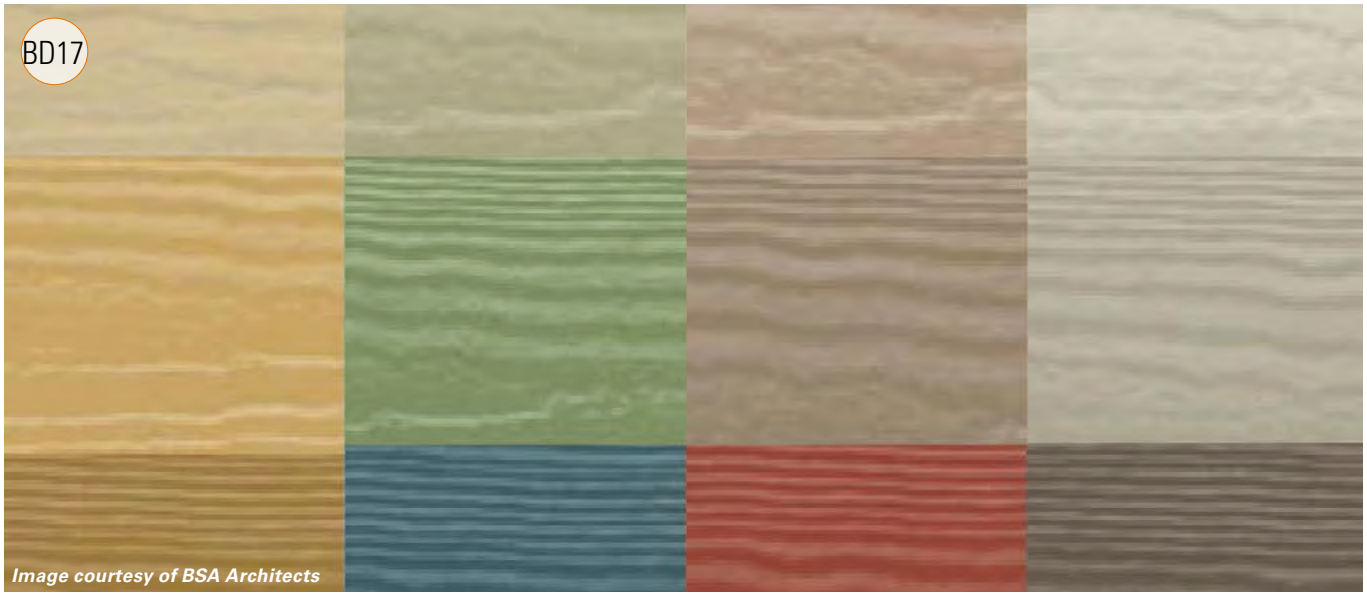
## PEDESTRIAN LEVEL DESIGN AND DETAILING

Views into a hotel lobby or retail space are visually inviting.

The quality and character of each building should contribute to the overall public space and create pleasing, usable outdoor spaces.

## PEDESTRIAN LEVEL DESIGN AND DETAILING

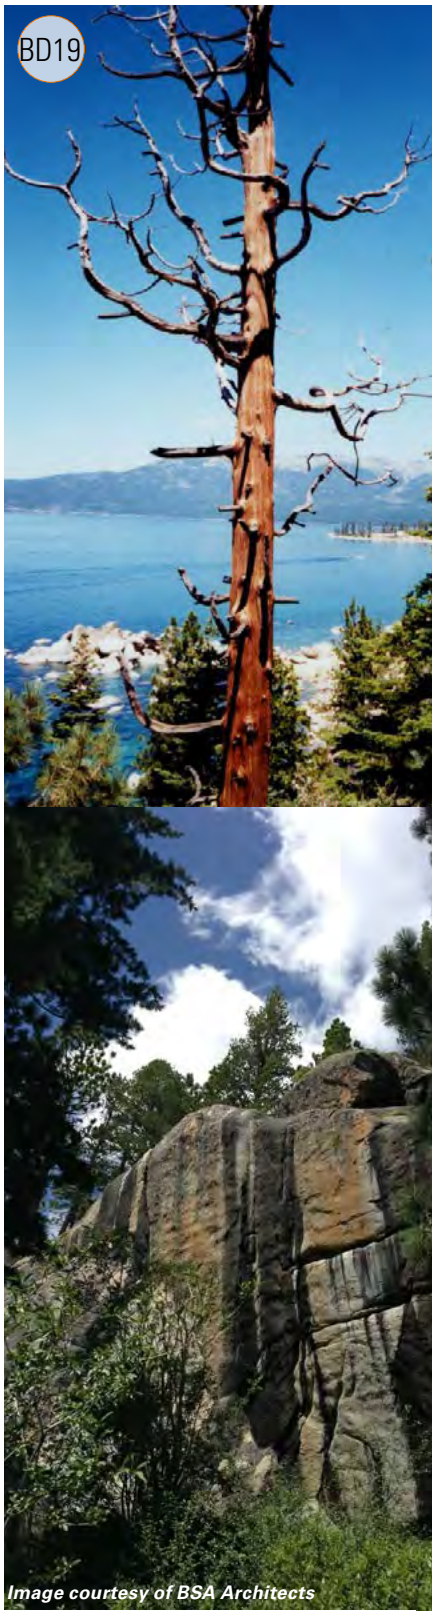
Store front detailing should be scaled to the pedestrian.



Massing of building elements should emphasize pedestrian scale, create intricacy and detail in the built environment and prevent a cold or impersonal aesthetic.

## COLOR SUGGESTIONS

Varying the texture and scale of wall materials of appropriate color adds visual interest. Textures shall be incorporated throughout each structure, in both materials and in the form and detailing of the building. Materials should appear closer to their natural state rather than a manufactured state.



Building Facade Color Suggestions

Doors and Windows Color Suggestions

Building colors shall draw from a natural palette in darker shades and minimize reflectivity. Avoid bright colors that compete with the natural surroundings and consider how the color may appear over large surface areas and in juxtaposition to other building materials. Use accent colors (maximum 10% of building face) for doorways, windows, graphics and storefront displays. Accent colors should complement base colors.

## USE OF NATURAL MATERIALS

Local Natural Palette

Textured Materials + Trim

Utilize natural building materials such as wood and stone to articulate design features. Natural stone can link building elements to the surrounding environment. The use of larger stone at the building's base gives it an anchored and structural appearance. Metal elements are typically incorporated as accents.

## SIMPLICITY IN FORM AND DETAILING

Incorporate metals and other more contemporary materials as accents.

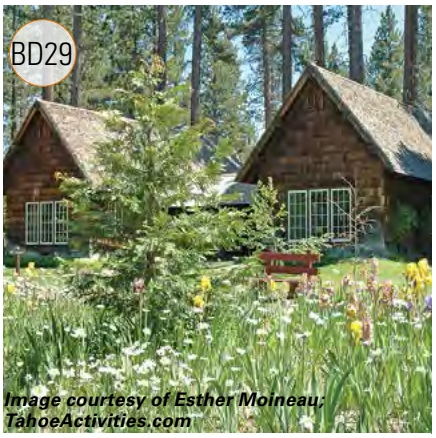
Remodels can enhance existing buildings by incorporating dormers for building articulation, adding windows and transparency to encourage pedestrian movement, and utilizing a neutral color palette that fits within the mountain landscape.

Use metals and other contemporary materials sparingly. Simplicity in overall composition should be the goal. Consider how metals and other contemporary materials relate to primary building materials such as wood and stone.

## SIMPLICITY IN FORM AND DETAILING

Use stucco sparingly and in combination with natural materials such as stone and wood.

Simplifying the number and types of materials used allow for greater emphasis to be placed on construction details such as bracket, joints and overhangs.



Materials which complement each other and respond to the natural surroundings can create a simple, seamless transition from building to landscape.

## DRAW FROM ELEMENTS OF HISTORIC ARCHITECTURE

Example of historic building from which to draw design elements and materials.

Examples of historic buildings from which to draw design elements.

Consider old Tahoe heritage historical references and incorporate stone and other design elements in a manner which takes into account the building's overall composition, massing and style.

## MOUNTAIN ENVIRONMENT DESIGN

©Vance Fox.com; Ward Young Architects and Clark and Sullivan Construction

Image courtesy of John Hitchcock

©VanceFox.com; Sierra Nevada College

Authentic building materials such as stone and timber are consistent with traditional mountain architecture, but they may also be incorporated into more contemporary designs that also fit within the natural mountain environment. Consider the importance of timelessness and do not create overly trendy designs that may quickly become dated.

## ROOFS

### OBJECTIVE

Create varied, sloping roof-scapes that complement natural forms and Tahoe architectural traditions.

Roof design is important to snow management as well as being a major contributor to building character. Roofscapes should be considered not only for their appearance from the pedestrian level, but also from the view of the overall skyline. South Lake Tahoe's alpine character and mountain backdrop can be reinforced through roof design.

Snow management shall be considered during the design of the architecture and landscape. The effects of snow and ice buildup, if improperly handled, can pose risks to property and pedestrians, and impose high maintenance and snow removal costs.

BD34

*Image courtesy of BSA Architects*

Roof forms should be designed to minimize ice dams and damage due to snow creep (glacial action) and freeze/thaw cycles.

BD35

*Image courtesy of Brent Bingham Photography; Tom Cole Architect*

Roof slopes shallower than 5:12 may be considered where they comply with snow load requirements, other design standards and guidelines, and provide architectural interest.

BD36

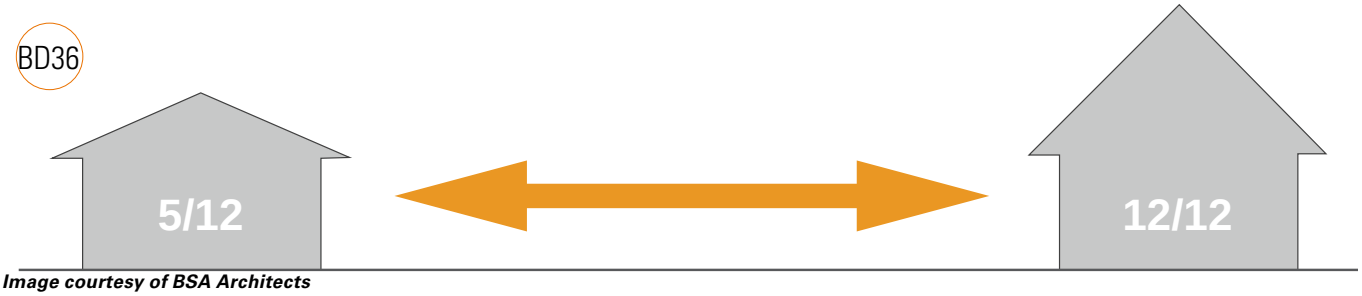


*Image courtesy of BSA Architects*

Pitch roofs that are no less than 5:12 and no more than 12:12 are preferred. Roof pitches below 5:12 may be considered on an individual basis.

## ROOF COLORS AND MATERIALS

Appropriate roof materials, colors and reflectivity should take their cue from the surrounding natural environment.

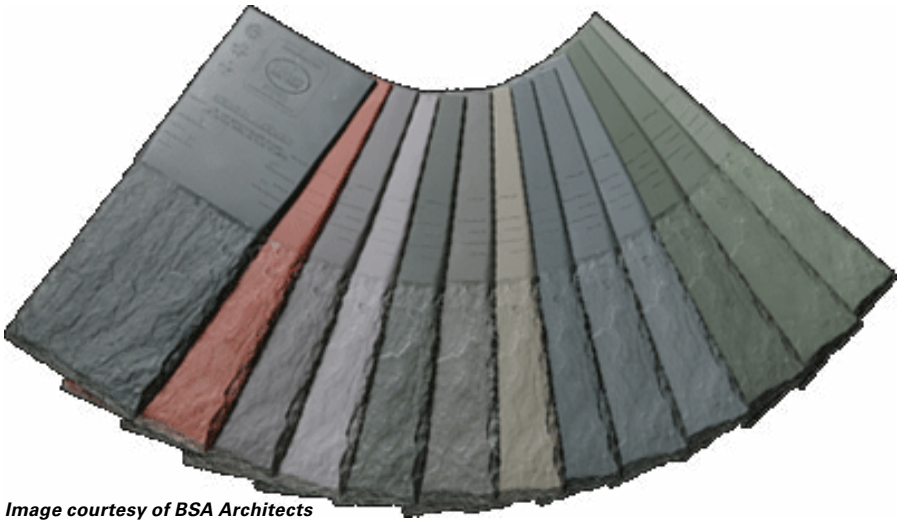

*Image courtesy of BSA Architects*

Roof material and colors should minimize reflectivity and blend with natural surroundings. Utilize nonglare and earthtone finishes to minimize reflectivity for roofs, mechanical equipment and skylights.

*Image courtesy of BSA Architects*

Use snow clips and snow fences where necessary. Consider retaining snow on the roof to minimize the impacts and liability of shedding snow and increase building insulation value.

## ROOF FORMS

The use of timbers and visible logs should appear consistent with the timbers' structural properties and ability to support roof elements.

Mansard roof forms and flat roofs should not be used.

Different roof shapes, heights and slopes helps to break up the appearance of a large mass of the buildings.

*Image courtesy of BSA Architects*

*Image courtesy of BSA Architects*

Roof forms should be designed to protect public entry ways and pathways from ice and shedding snow without using energy consuming snow melt systems.

## ROOF ARTICULATION

Roofs offer the opportunity to include distinctive design elements to relate the building to the mountain setting and prevent "block-like" structures by breaking up the rectangular form.

Roof design should have a definitive "top" that steps or breaks the rectangular form. Modulated roof forms that are varied in height or broken with architectural features and roof design elements are encouraged.

Cornices, balconies and other elements should be used, where appropriate, to terminate rooflines and accentuate setbacks between stories.

## BUILDING HEIGHT

### OBJECTIVE

Create a built environment that preserves views and visually corresponds with the surrounding mountain environment.

The skillful massing of building elements should emphasize pedestrian scale, create intricacy and detail in the built environment, and prevent a cold or impersonal aesthetic. The guidelines for building heights are intended to prevent structures from looming over the highway and overshadowing the naturalistic mountain aesthetic of the community.

Establish a consistent building frontage through the use of a minimum 15' height of the ground floor.

Relate building heights to open spaces to allow maximum sun and ventilation, protect from prevailing winds, enhance public views of surrounding mountains and minimize obstruction of view from adjoining structures.

BD50

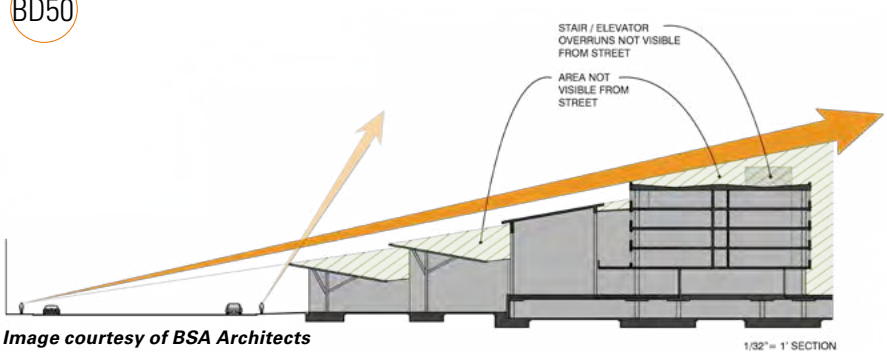

*Image courtesy of BSA Architects*

Step back building within a daylight plane along street frontages and adjacent residential areas to protect viewsheds, allow light and air, limit winter shading and preserve the pedestrian scale.

BD51

*Image courtesy of Scott Kennedy at Sierra Tahoe Realty*

Roof overhangs, projections and other architectural features can help visually step a building back from the street.

BD52

*Image courtesy of hannastepan.cz; stepan*

Ensure compatibility with adjacent uses. Provide additional buffering in addition to required setback for buildings permitted additional height.

BD53

Ensure compatibility with adjacent uses and viewsheds. Do not project building above forest canopy, ridge lines or detract from mountain or lake views.

BD54

Height and scale of buildings should be compatible with that of surrounding development. New development height should "transition" from the height of adjacent development to the maximum height of the proposed building.

# GREEN BUILDING

## OBJECTIVE

Minimize a building's impact on the environment while reinforcing the natural harmony of the Lake Tahoe landscape.

Incorporate durable buildings materials including the consideration of recycled materials and locally sourced building materials, e.g., stone and timber, when possible.

BD56

*Image courtesy of BSA Architects*

Reuse previously disturbed sites and incorporate new technologies to reduce the use of resources, including energy and water.

*Image courtesy of BSA Architects*

*Image courtesy of BSA Architects*

Exposed solar panels should be screened when possible and/or compatible with roof forms and the building's architectural character. Solar shingles can also be incorporated as part of green building design.

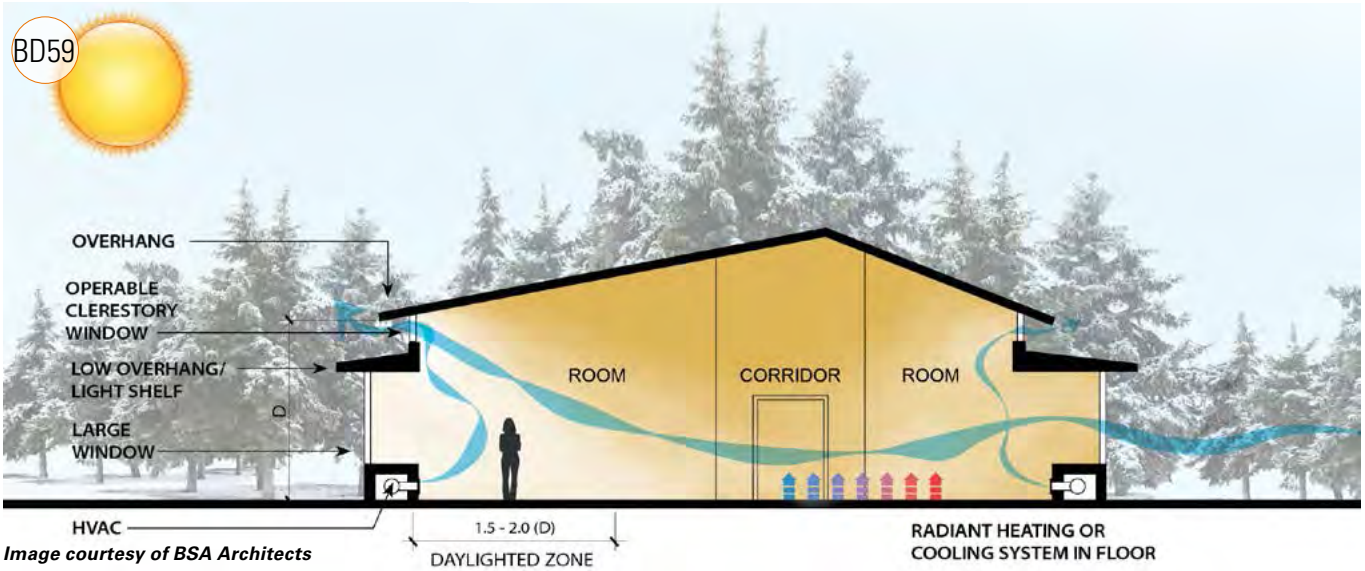

*Image courtesy of BSA Architects*

Use sustainable building materials that support indoor environmental health, passive environmental systems are encouraged.

# 4 SECTION FOUR LANDSCAPE

## OBJECTIVE

Create an aesthetically pleasing, maintainable landscape environment while continuously reinforcing a connection to the natural environment that defines South Lake Tahoe.

The design of landscapes should respond to the intended site function with consideration of issues such as safety, maintenance and desired aesthetic quality. In areas focused on commercial and tourist activities, the landscape should create an inviting environment for pedestrians. This may be accomplished by establishing a rhythm of elements that unify the streetscape, providing plazas and gathering spaces that respond to a site's environmental factors and by screening undesirable views or framing impressive vistas. In contrast, undeveloped areas and areas abutting natural landscapes should incorporate plant materials spaced in natural-looking groups to seamlessly transition into the natural environment.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES

Incorporate combinations of shrubs, groundcovers and boulders to create an attractive edge between the highway frontage and sidewalk while not blocking views of the lake.

Utilize vegetation to create pleasant outdoor spaces, reduce glare and heat, deflect wind, muffle noise, prevent erosion and integrate buildings into the surrounding landscape.

Create a quality built environment with the inclusion of amenities such as street furnishing, plantings and artworks to enhance the places that people will walk, gather or recreate.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES

Design landscapes to respond to seasonal environmental conditions to encourage outdoor spaces that are comfortable year-round.

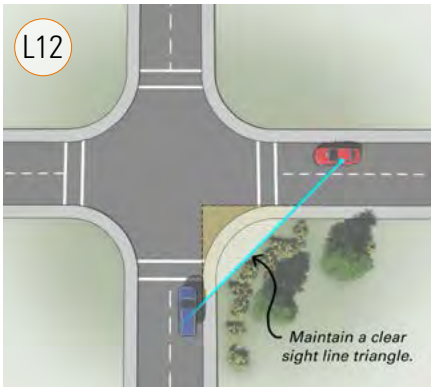
Utilize ornamental and accent plant materials at building entries, exterior dining areas and pedestrian areas.

Consider the use of deciduous trees in street frontages of commercial areas to allow for seasonal solar access and enhance the pedestrian zone.

Landscape materials should enhance the street environment and commercial areas.

Incorporating evergreens as part of the design of front yard setback areas can help restore a natural vertical element to the highway streetscape and integrate buildings into the surrounding landscape.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES



Vegetate setback areas. Consider opportunities to exceed minimum requirements for the appearance of a more established landscape.

Integrate stormwater facilities and bioswales as part of streetscapes, parking areas and other landscape areas. Landscaping should be recessed to receive stormwater runoff whenever feasible. Allowing for stormwater to flow into and infiltrate in landscape areas is preferred.

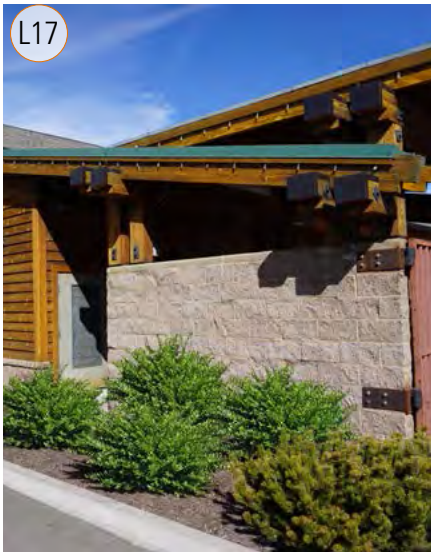
Maintain lines of site at intersections and driveways for vehicular traffic.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES

Utilize opportunities to incorporate natural drainage features as part of the landscape design.

Incorporating groupings of plant materials can add variety while also organizing the landscape to facilitate maintenance.

Consider the opportunity to incorporate pockets of color and seasonal interest as part of the design of public spaces.



## VISUAL SCREENING

Creating landscape berms with naturalized shapes and contouring should be considered as part of visual screening for parking and service areas.

Plant materials should be used to help block the view of trash enclosures from public areas and roads.

Screen parking and service areas with landscape materials. Incorporate a mix of plant materials to avoid a “wall” affect.

## PLANT SELECTION CONSIDERATIONS

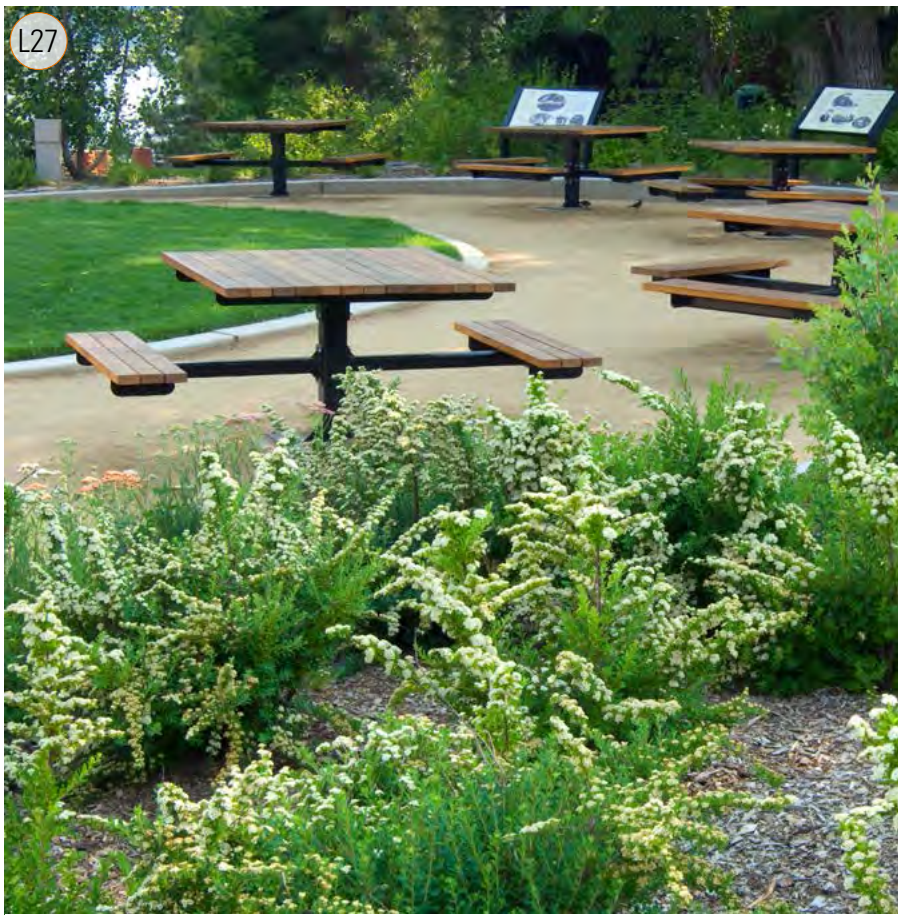
Select drought tolerant plant materials that are suited to the microclimatic variations in sunlight, soil and moisture conditions.

Utilize vegetation that is native or adapted to the region's climatic conditions while also considering the plant material's water needs. Limit ornamental species to accent plantings.

Preserve groups of existing trees where possible to increase the likelihood of survival.

In snow storage areas and roof shed zones, utilize plant materials that are durable enough to handle abuse from snow loading such as herbaceous ground covers, grasses or flexible stemmed shrubs that grow back from their base such as dogwoods.

Consider shade, sun exposure and wind blocking during the selection of trees.



## WATER CONSERVATION

Use efficient water methods, group plantings into similar hydro-zones, use low-water use plant material and use irrigation systems with moisture sensors to control and conserve the use of water.

Consider maintenance and water conservation/irrigation needs during landscape design.

Utilize turf grass only in focused, limited applications.

Irrigate plantings and provide correct water levels to support the long-term growth of landscape. Drip and low-flow systems can minimize irrigation inefficiencies and evapotranspiration in order to maximize the use of every drop of water.

# 5 SECTION FIVE EXTERIOR LIGHTING

## OBJECTIVE

Provide illumination for safety and security as well as enhancing the aesthetic appeal of a site.

Carefully designed lighting can reinforce the ambiance of streetscapes and public gathering areas as well as protect the night sky. These exterior lighting guidelines focus on limiting excess light, while still providing for safety and security and encouraging an enjoyable night time atmosphere for community spaces.

## ACCENT LIGHTING TO ENHANCE AESTHETIC APPEAL

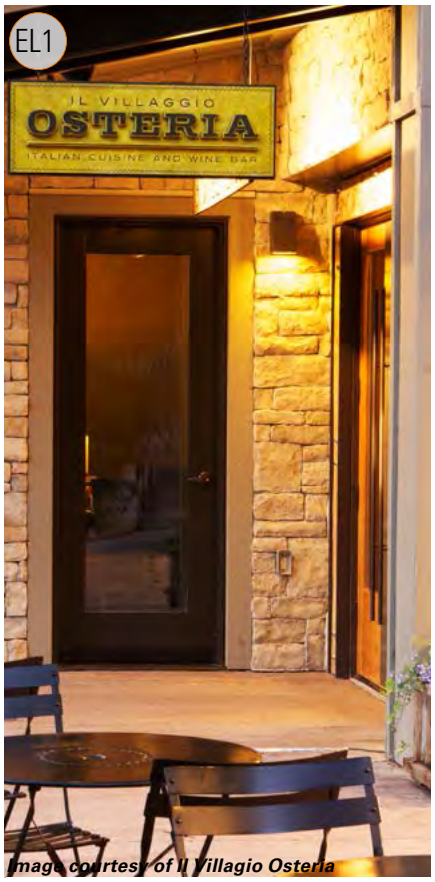


*Image courtesy of Il Villagio Osteria*

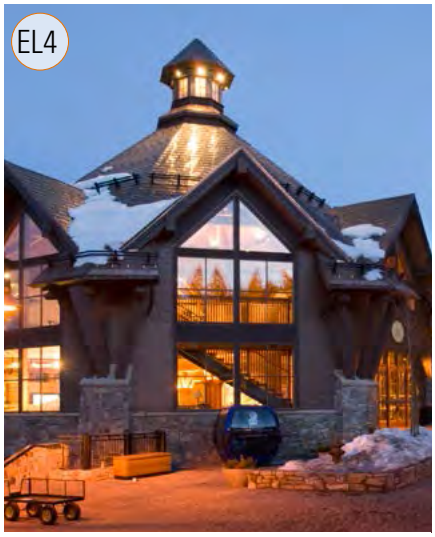
Accent lighting can be used to accentuate building entries and signage.



Illuminate areas necessary for safe and comfortable use and illuminate special features of a building or landscape to add to the aesthetic appeal of a site.

*Image courtesy of lampsplus.com*

Accent landscape elements with down lighting with concealed fixtures or fixtures with lens hoods.

Use lighting to accent features such as entries, arcades, chimneys, cornices, balconies, exterior trusses, highly textured material, knee braces, enriched architectural facades or landmark features. Do not light blank walls.

Use built in lighting and wall lighting to illuminate stairs and level changes.

## ACCENT LIGHTING TO ENHANCE AESTHETIC APPEAL

Use exterior lighting to activate public pedestrian retail space.

Utilize exterior lighting to accent architectural and landscape features and illuminate parking lots, streets and walkways. Seasonal lighting should only be used between November 1 and March 1 or as by approved permit.

Use pedestrian light poles that allow for approved banners to encourage an active pedestrian environment. Banners should be replaced as needed to maintain visual appeal and avoid showing damaged or faded banners. Plan for seasonal lighting. Consider the need for electrical outlets and incorporate as part of site design features such as tree wells, light poles and walls.

Use lighting to enhance the pedestrian zone, public gathering spaces and private outdoor gathering areas.

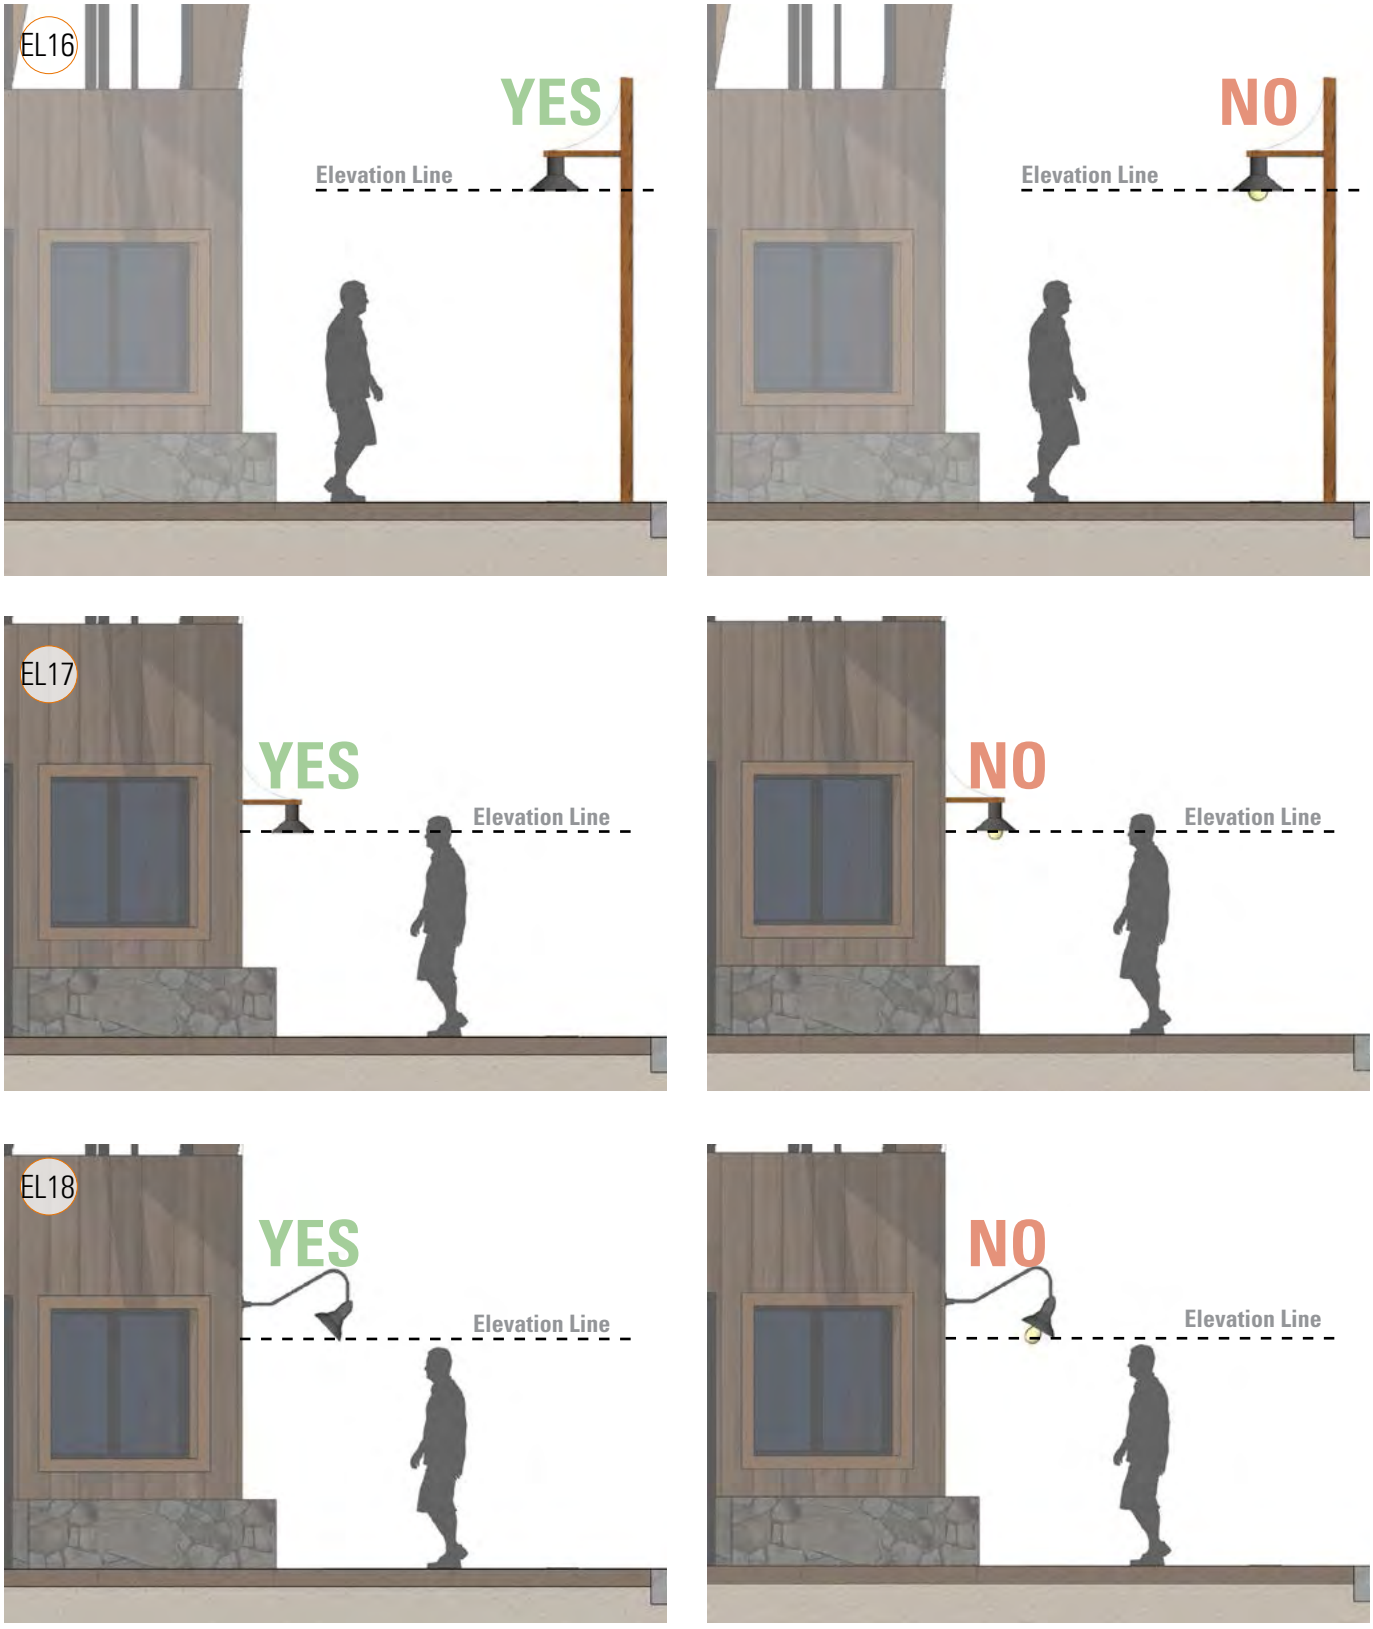
## ACCENT LIGHTING TO ENHANCE AESTHETIC APPEAL

Wall lights may be incorporated as part of the design to both provide accent lighting and illuminate the walking surface.

Direct accent lighting downward to illuminate landscape elements.

The combination of pedestrian lights, architectural lighting and interior lighting can create a more inviting pedestrian environment. Avoid the tendency to over-light which can create bright spots that tend to make adjacent unlit areas seem even darker. Carefully design lighting to consider both architectural/accent and functional lighting in order to provide reasonable levels for safety and security.

## LIGHTING TYPES: CONSISTENT COLOR WITH TRUE COLOR RENDERING



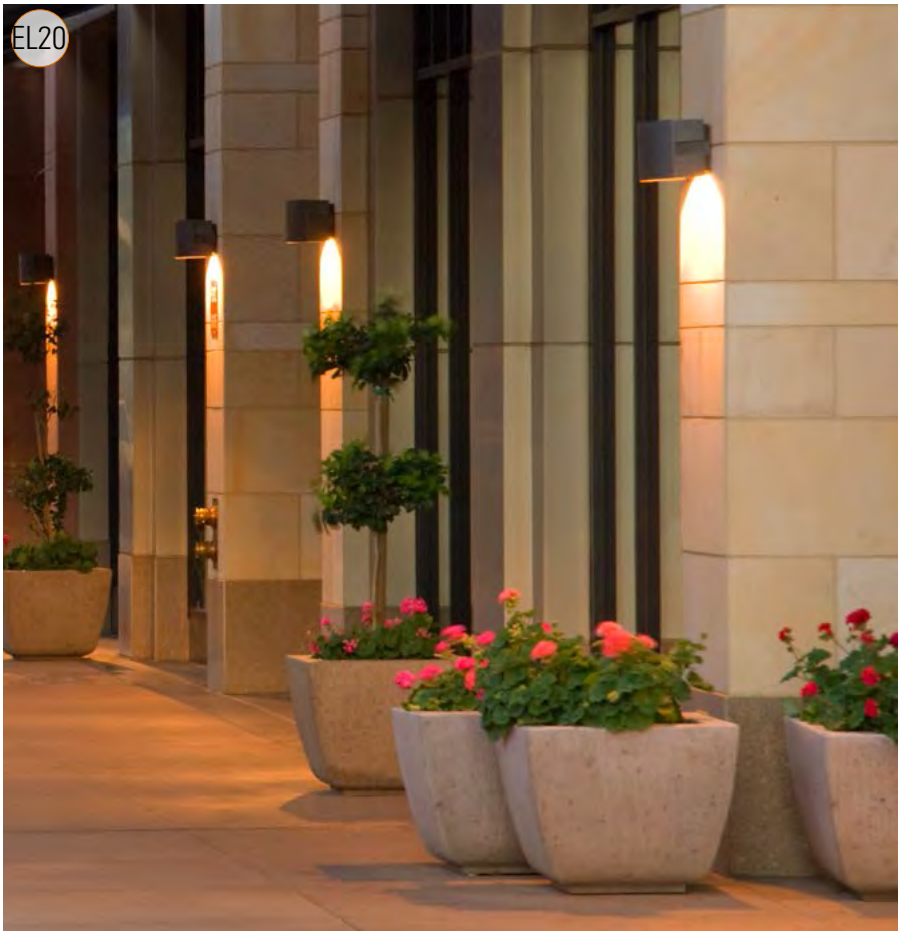
A consistent light color should be provided throughout a project and lighting that appears in the warm color range is preferred over a bluish/white light color. Energy efficient lighting types, including LED lighting, are recommended.

## NIGHT SKY PROTECTION: DIRECTING LIGHT

Face or direct light fixtures so light does not spill over to adjacent properties or up into the sky.

## NIGHT SKY PROTECTION: SHIELDED LIGHT SOURCES

Direct light downward and utilize luminaries that shield light sources from view so the light is not visible as seen in elevation in order to preserve night sky views and reduce glare.



## NIGHT SKY PROTECTION: SHIELDED LIGHT SOURCES

*Image courtesy of BSA Architects*

*Image courtesy of Chapler Lighting*

Luminaires that shield light sources and direct light downward should also complement the character of the public space and the building materials of adjacent architecture.

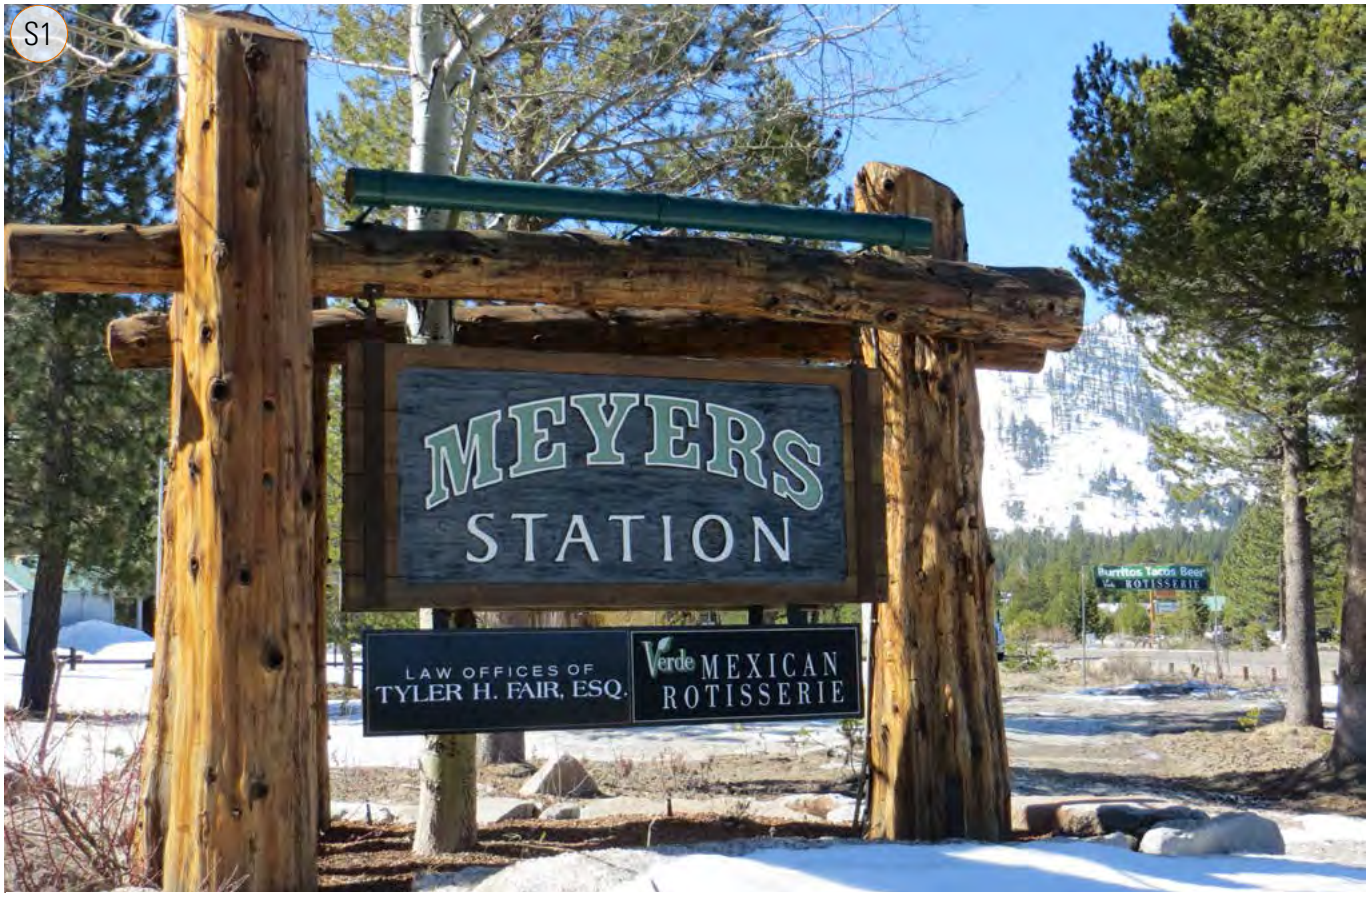
# 6 SECTION SIX SIGNAGE

## OBJECTIVE

Enhance the city's visual environment by complementing the building's architecture and enlivening the streetscape while clearly and succinctly communicating business information.

The sign guidelines recognize commercial communication requirements of all sectors of the business community as well as the need to enhance the area's visual quality. Well-designed signs can contribute to a district's overall identity and help pedestrians and drivers locate businesses and services.

South Lake Tahoe includes a range of pedestrian and automobile oriented environments which require different signage considerations. The Guidelines focus on design criteria that can enhance the ability for signage to communicate effectively while positively contributing to South Lake Tahoe's visual environment through proper placement, use of materials and being appropriate to its setting.



Along with architecture and landscape, signage is one of the most noticeable visual elements along South Lake Tahoe's roadways. Signs are an important part of the built environment in order to communicate information about area businesses and encourage economic vitality. Well-designed signs can contribute to a district's overall identity and help pedestrians and drivers locate businesses and services. However, poorly designed signs and the overabundance of signage can severely detract from the surrounding mountain and lake environment.

The following design principles are illustrated in this section and should be considered during the design and development of projects:

### LESS IS MORE

The purpose and message of a sign should be immediately apparent. Signage that merely attracts attention without communicating the message is not effective. Too much information can be visually distracting to viewers, especially motorists. Limiting the amount of information included on a sign intended to be viewed from a motorist's vantage point can enhance overall legibility and wayfinding.

- ***Keep the message brief and simple***: A succinct message that is simple and easy to read looks cleaner and is more visually appealing.
- ***Consider every word***: Every word should directly contribute to the sign's overall message. Remove any unnecessary words to create a clear message.
- ***Convey primary information***: Words and graphics should convey a business's identity or the services offered. Where possible, multi-tenant areas should consider branding the project area to reduce the information on the primary roadway sign and incorporate secondary level signage within the commercial center.
- ***Use easy to read typefaces***: Typefaces should be easy to read. Overly intricate and mixed fonts can take more time for a viewer to decipher. Faddish typefaces may also become dated.

Keeping the message simple and branding the commercial centers can help effectively direct people to community destinations while reducing the amount of signage seen from the roadways.

## PROPORTION AND BALANCE

The aesthetic quality of a sign arises from the relationships between sign design elements such as proportion and balance. Proportion is the relationship of one element to another. It is most often thought of in terms of the relative size and shape of elements. Proportion can help define the relationship among the sign elements and implies the order of significance.

Well-designed signs will have appropriate proportion between the various parts of the structure as well as between the various components of the graphic content. Sign proportions should be considered between the structure's height, width and depth, between elements of the graphic content, and between the graphic content to the overall sign.

Carefully consider the proportion of the copy to the overall sign background. If the letters take up too much of a sign, they may be harder to read. A general rule is that letters should not appear to occupy more than 75% of the sign panel area.

Physical balance is best described by two objects that are of equal weight, although they may not be of equal size. Visual balance is the perceived equilibrium of design elements. Balance on a horizontal axis can be achieved by having signs that do not appear "top-heavy". Monument bases that are proportional with the sign's height and other sign components can help achieve balance on the horizontal axis.

Balance on a vertical axis can be either symmetrical or asymmetrical. Symmetrical balance can be achieved when each half of the sign is a mirror image of the other half. In asymmetrical balance, each half is not identical, but the elements are arranged in a way that they feel balanced. This can be achieved by considering some of the following principles:

Visually,

- A large form is heavier than a smaller form
- Dark values are heavier than light values
- A textured form is heavier than a smooth form
- A complex form is heavier than a simple form
- Two or more smaller forms balance one large form

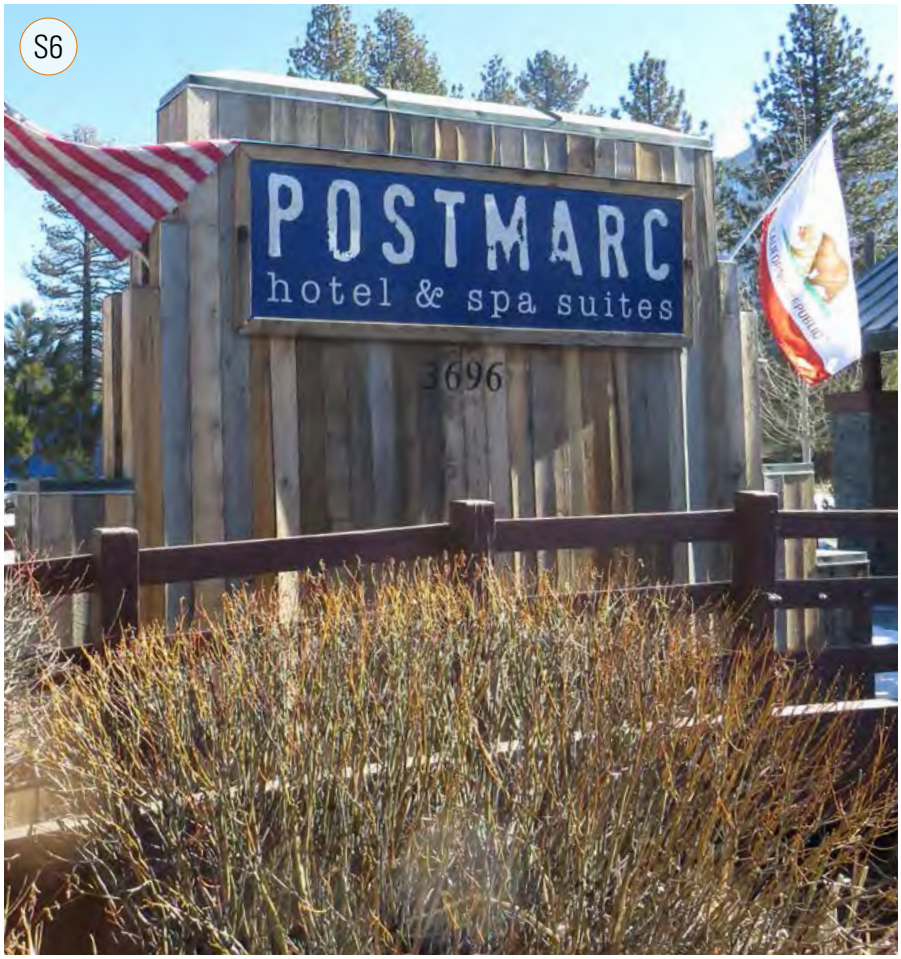
A sign's graphic content should relate to the overall proportions of the sign's structure. Aesthetic quality is enhanced when the relationships between sign design elements are balanced and in proportion with each other.

## COLORS AND MATERIALS

Similar to building design, sign colors and materials should draw from the area's natural palette, including darker backgrounds and the use of stone and wood. Bright colors should be limited and reflective, fluorescent and primary colors should not be used. Additionally, consideration should be given to the following:

- Colors and materials should contribute to overall legibility and design.
- Significant contrast should be provided between the sign background and the letters. Dark materials are recommended for sign backgrounds and light materials/colors are recommended for the sign letters.
- Too many colors can compete with content for the viewer's attention. Avoid too many different colors and limit the use of accent colors to increase visibility.

## MATERIALS AND CONTRIBUTION TO ARCHITECTURE



Signage that coordinates with the building architecture can add another opportunity for architectural expression.

Complement a project's architectural style and exterior lighting with signage. Select materials and supporting devices that positively contribute to the overall character of the area.

Use natural building materials such as wood and stone that is coordinated with site architecture.

Colors should draw from a natural palette and dark, muted background colors are preferred. Limit the use of bright colors to accents and avoid reflective, fluorescent colors.

Materials and font types should contribute to a sign's overall legibility and positively contribute to the area's overall visual character.

## SIGN PLACEMENT

S8

*Image courtesy of Matthew Lehman @ Matthewy Lehman Real Estate*

Integrate freestanding signs into the landscape through the use of plants and sign bases that visually anchor the sign to the site.

S9

*Image courtesy of Solaris Village Shopping; SolarisVail.com*

Provide pedestrian level identification of major buildings through flush building signage.

S10

Utilize elevation signs hung from the soffit board of fascia for businesses that can be viewed from the street and sidewalk.

S11

Pedestrian level signage can be smaller and attached under arcades to reduce the number of signs along a street.

S12

Incorporate building signage with internally illuminated channel letters between appropriately spaced architectural features such as columns or dormers.

S13

Signage placed in dormers can be incorporated as an architectural element.

## SIGN CONSTRUCTION ELEMENTS AND COPY

Sign construction elements that are well proportioned and balanced with the sign face area may be considered if they meet other design standards.

Support freestanding signs with two or more poles or a monument base. Supporting devices should provide aesthetic contributions to the sign structure.

Use trademarks on natural backgrounds to quickly convey messaging.

The visual quality of motor fuel price signs are enhanced by incorporating them within a thoughtfully designed stone monument base.

Keep copy simple and easy to read by keeping the amount of text to a minimum. Too many messages can be visually distracting. A sign with a brief, succinct message is more attractive and is typically more effective as it is easier to read quickly.

## ILLUMINATION

Lighting should comply with night sky standards, including being directed downward and being fully shielded in order to illuminate the sign face and avoid light spill into adjacent areas.

Use dark colors or opaque material as the background of interior illuminated signs to limit the amount of light transmitted.

Indirect backlighting of individual letters can create a soft glow while providing adequate illumination.

Use indirect and/or diffused lighting to prevent light sources from being visible from public rights of way or adjacent properties and to soften the light's appearance.

## MULTI-TENANT SIGNAGE

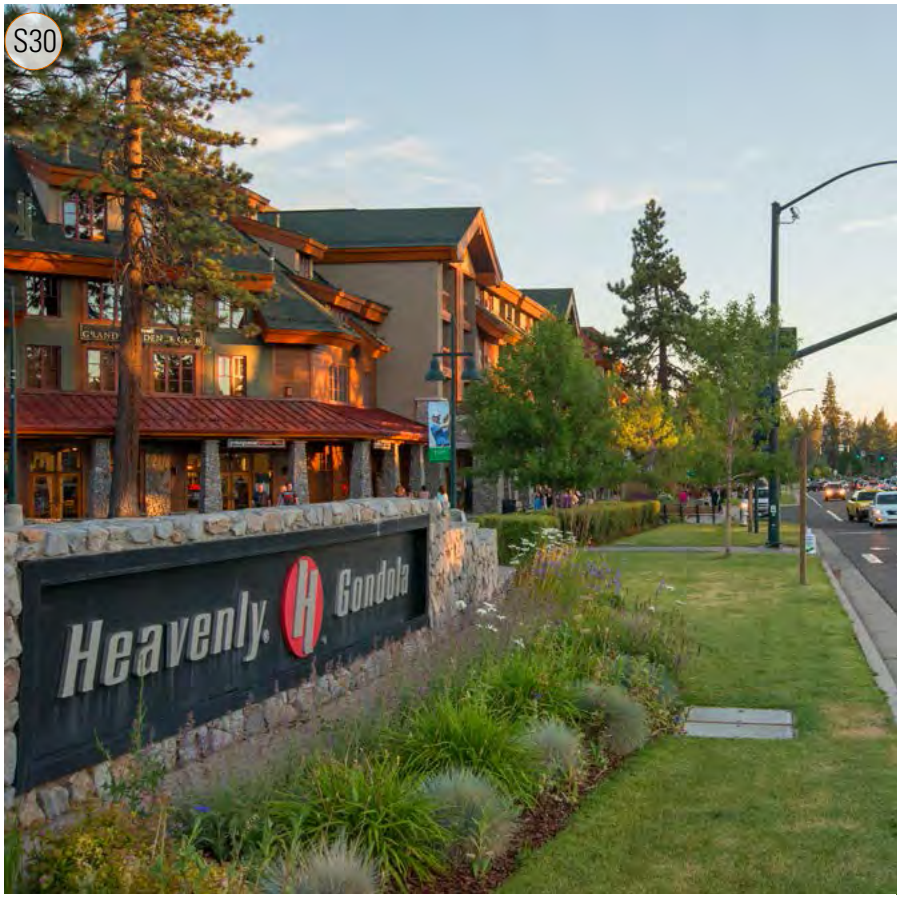
Consolidating signage into a unified system with consistent font types and colors can reduce sign clutter and helps to avoid overwhelming motorists with too many signs. Consider flexibility in design so tenants can be added or changed over time.

Branding multi-tenant commercial areas can help reduce the number of individual businesses listed on each street sign. Simplify tenant names and use logos where possible to reduce the amount of copy on each sign.

Develop signs with a high aesthetic quality and professional construction standards.

Signage carved into natural wood or high density foam core can help unify tenant signage.

Design and locate signs to be compatible with their surroundings in terms of size, shape, color, texture and lighting. Do not visually compete with other signs.



## INTEGRATING SIGNAGE AS PART OF BUILDINGS AND LANDSCAPE ELEMENTS

Signage presents an opportunity to convey unique and interesting aspects of a business through artful designs.

Incorporating signage as part of the building design can eliminate barriers for pedestrian movement and allow more space for other outdoor public spaces.

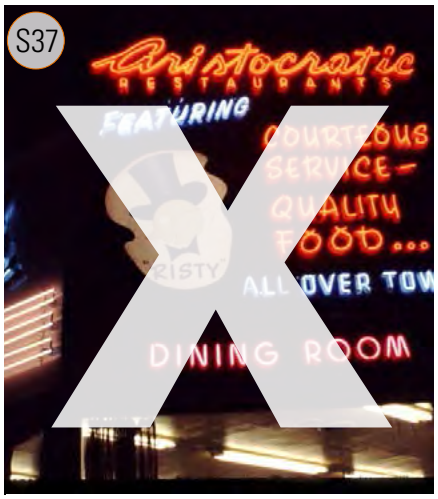
Integrating signs as part of the landscape feature can help reduce sign proliferation along the roadway. Incorporating plantings can soften the view of a sign from all sides.

Window signage that does not exceed 25 percent of the window area can be an elegant way to communicate business information to pedestrians and create interest at the street level.

## GENERALLY INAPPROPRIATE SIGNS

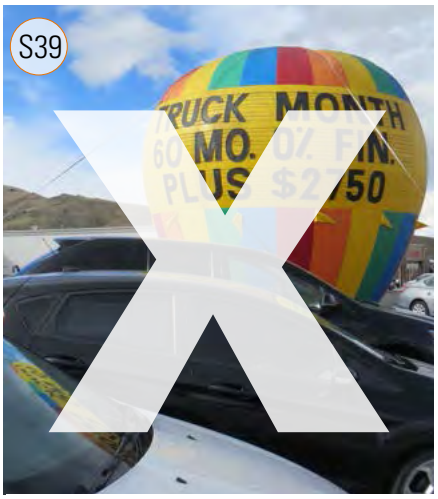
Pole signage

Banner signage and signage attached to mansard roof



Amount of sign copy and structural elements are not proportional

Signage attached to roof



Construction elements don't add to the overall aesthetics

Bright, neon signage

Signage that is dark, dated and has trendy typefaces

Inflatable sign displays

Flags and banner signs

# APPENDIX C
# Development and Design Standards

This section sets out the development and design standards and permissible uses for the Tahoe Valley Area Plan land use districts and has been designed to achieve the desired community vision and urban form.

Applicability: All projects within the Tahoe Valley Area Plan boundaries shall meet the standards provided below. The South Lake Tahoe Design Guidelines (2016), included as Appendix B, shall supplement this section to provide visual examples of the standards and their intentions. In addition, all projects are required to meet the Citywide Design Standards when applicable. Should a conflict occur between the Citywide standards and the Tahoe Valley Area Plan standards, the standards of this Area Plan shall apply. All regulations in the TRPA Code of Ordinances shall remain in effect unless superseded by the provisions of this Area Plan.

## Permissible Uses

Table 1 lists the permitted primary land uses by district for the Tahoe Valley Area Plan and land use definitions are provided in Table 2. The regulations for the district are established by letter designations listed below. The designations apply strictly to the permissibility of land uses; applications for buildings or structures may require discretionary review. Uses not listed in the Table are prohibited.

Portions of the Tahoe Valley Area Plan lie within the safety zones established by the Lake Tahoe Airport Land Use Compatibility Plan (ALUCP). Uses within these zones may be further restricted by the ALUCP. Users of this Area Plan should refer to the ALUCP to determine if additional restrictions are applicable to the property they are interested in or consult with the City of South Lake Tahoe Planning Division.

**(A)** designates allowed uses subject to zoning compliance. An allowed use is one that can be established as the primary use of a building.

**(S)** designates uses that are permitted subject to approval of a Special Use Permit. A Special Use Permit requires discretionary approval by the City Planning Commission or Zoning Administrator following review and a determination that the nature of the proposed use, at the location proposed, is not detrimental to the public welfare or injurious to property or improvements in the neighborhood. To obtain a special use permit, the applicant must generally show that the contemplated use is compatible with the zoning ordinance and land use standards. Findings that such use would be essential or desirable to the public convenience or welfare and will not impair the integrity and character of the zoned district or be detrimental to the public health, safety, morals or welfare are required.

**(TRPA)** designates uses that require TRPA review and permitting.

**(-)** designates uses that are not permitted.

Note: All major design review projects that are visible from TRPA's designated Scenic Highway Corridor (US Highway 50, State Route 89) will require a Planning Commission public hearing.

1. Land use category is identified in TRPA Code Section 60.3 as a “possible contaminating activity,” triggering special requirements pursuant to TRPA Code Section 60.4 if located within Source Water Protection Zone (see Figure 9).
2. Condominiums only. Refer to multiple family dwelling density standards.
3. As part of a mixed-use project only.
4. Limited to existing warehouse uses within the Town Center Gateway District (TC-G).
5. New non-emergency sites prohibited.
6. Facilities with the capacity for 200 or more persons require a special use permit.

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| **RESIDENTIAL** | |
| Mobile Home Dwelling | A home built entirely in the factory on a non-removable steel chassis that is transported to the building site on its own wheels and was installed prior to June 15, 1976, when the Federal Manufactured Home Construction and Safety Standards (commonly known as the HUD Code) went into effect. |
| Multiple Family Dwelling | More than one primary residential unit located on a parcel. Multiple-family dwellings may be contained in separate buildings such as two or more detached houses on a single parcel, or in a larger building on a parcel such as a duplex, a triplex, or an apartment building. This includes multi-family dwelling units owned and maintained by public or private entities for purposes of housing employees of said entity. |
| Multi-Person Dwelling | A building designed primarily for permanent occupancy by individuals unrelated by blood, marriage, or adoption in other than single-family dwelling units or transient dwelling units. A multi-person dwelling includes, but is not limited to, facilities such as dormitories and boarding houses, but not such facilities as hotels, motels, and apartment houses. This includes multi-person dwellings owned and maintained by public or private entities for purposes of housing employees of said entity. |
| Nursing & Personal Care | Residential establishments with in-patient beds providing nursing and health-related care as a principal use, such as skilled nursing care facilities, extended care facilities, convalescent and rest homes, and board and care homes. |
| Residential Care | Establishments primarily engaged in the provision of residential social and personal care for children, the aged, and special categories of persons with some limits on ability for selfcare, but where medical care is not a major element. The use includes, but is not limited to, children's homes, halfway houses, orphanages, rehabilitation centers, and self-help group homes. |
| Single Family Dwelling (includes condominiums) | One residential unit located on a parcel (excluding accessory dwelling units). A single-family dwelling unit may be contained in a detached building such as a single-family house, or in a subdivided building containing two or more parcels such as a town house condominium. Employee housing providing accommodations for six or fewer employees within a single unit pursuant to Division 13, Part 1 of the California Health and Safety Code, commencing with Section 17000, shall be deemed a single-family structure. |
| **TOURIST ACCOMMODATION** | |
| Bed & Breakfast Facilities | Residential-type structures that have been converted to or constructed as tourist accommodation facilities where bedrooms without individual cooking facilities are rented for overnight lodging, and where at least one meal daily is provided. The use does not include "Hotels and Motels," which are defined separately; nor rooming and boarding houses (see "Multi-Family Dwellings"). |
| Hotel, Motel, Other Transient Dwelling Units | Commercial transient lodging establishments, including hotels, motor-hotels, motels, tourist courts, or cabins, primarily engaged in providing overnight lodging for the general public whose permanent residence is elsewhere. This use does not include Bed and Breakfast Facilities or Vacation Rentals. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Time Sharing | A right to exclusively use, occupy, or possess a tourist accommodation unit, according to a fixed or floating time schedule on a periodic basis occurring annually over a period of time in excess of three years. |
| **RETAIL COMMERCIAL** | |
| Auto, Mobile Home, and Vehicle Dealers | Retail trade establishments selling new and/or used automobiles, boats, vans, campers, trucks, mobile homes, recreational and utility trailers, motorcycles, golf carts, snowmobile and jet skis (except bicycles and mopeds; see "General Merchandise"). Such businesses are considered a primary use when the establishment sells more than six vehicles per calendar year. The use also includes establishments selling new automobile parts, tires, and accessories (including tire recapping establishments), as well as establishments dealing in used automobiles exclusively. Includes automobile repair shops only when maintained by an establishment selling new vehicles on the same site. Does not include establishments dealing exclusively in used parts (see "Recycling and Scrap") or outside sales (see "Secondary Storage" or "Sales Lots"). |
| Building Material & Hardware | Retail trade establishments within buildings primarily engaged in selling lumber and other building materials, including paint, wallpaper, glass, hardware, nursery stock, and lawn and garden supplies. The use includes all such stores selling to the general public, even if contractor sales account for a larger proportion of total sales. Outside storage or display is included as part of the use. Establishments primarily wholesaling plumbing, heating and air conditioning equipment, and electrical supplies are classified in "Wholesale and Distribution." |
| Eating & Drinking Places | Restaurants, bars, and other establishments selling prepared foods and drinks for on-premise consumption, as well as facilities for dancing and other entertainment that are accessory to the principal use of the establishment as an eating and drinking place. The use also includes drive-in restaurants, lunch counters, and refreshment stands selling prepared goods and drinks for immediate consumption. |
| General Retail & Personal Services | An establishment for the retail sale of merchandise or the provision of personal services. A retail facility includes but is not limited to antique or art shops, clothing, drug, dry good, florist, furniture, gift, grocery, hobby, mailing services, office supply, package liquor, paint, pet, shoe, sporting, bike or moped, boats, golf carts, snowmobiles, jet skis, automobile parts, books, toy stores, and other miscellaneous retail shopping goods (auto, mobile home and vehicle sales are not included in this definition). A personal service facility includes facilities primarily engaged in providing non-medical services generally involving the care of persons, such as: beauty and barber shops; shoe repair shops; health and athletic clubs and gymnasiums; day spas that offer a variety of services intended to meet personal needs of individuals such as skin treatment, manicures and pedicures and massage; laundromats (self-service laundries); dry cleaning pick-up stores and small-scale dry cleaners without pick-up and delivery services; clothing rental; dating and escort services; funeral parlors, cemetery real estate sales, and related facilities; offsite rental of sporting equipment; and wedding chapels. The use may also include the accessory retail sales of products related to the services provided. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Nursery | Commercial retail and wholesale establishment where plants are grown or stored for transplanting at other sites. Outside storage or display is included as part of the use. |
| Outdoor Retail Sales | Retail trade establishments operating outside of buildings on a daily or weekly basis, such as: roadside stands; flea markets; swap meets; seasonal sales involving Christmas trees, pumpkins, or other seasonal items; regular sales of art or handcrafted items in conjunction with community festivals or art shows; and retail sales of various products from individual motor vehicles locations outside the public right-of-way, not including bakery, ice cream, and similar vending vehicles that conduct all sales within the right-of-way and do not stop in any location except on customer demand. Outside storage or display is included as part of the use. |
| Service Stations | Retail trade establishments primarily engaged in the sale of gasoline, which may also provide lubrication, oil change and tune-up services, and the sale of automotive products incidental to gasoline sales. The use may also include as accessory uses towing, mechanical repair services, car washing and waxing, and trailer rental. The use does not include storage of wrecked or abandoned vehicles, paint spraying body and fender work, and retail sale of gasoline as an accessory use to food and beverage retail sales when limited to not more than two pumps. |
| **ENTERTAINMENT COMMERCIAL** | |
| Amusement, Recreation, & Entertainment Facilities | Amusement and recreation uses are establishments providing entertainment for a fee or admission charge, such as: arcades and coin-operated amusements; billiard and pool halls; bowling alleys; card rooms; clubs and ballrooms that are principal uses rather than being subordinate to an eating or drinking place; dance halls; ice skating and roller skating facilities; indoor sauna, or hot tub facilities; motion picture theaters; live performance theatres; reducing salons; and tennis, handball, racquetball, indoor archery and shooting ranges, and other indoor sports activities. |
| Outdoor Amusements | Commercial establishments for outdoor amusement and entertainment such as: amusement parks; theme and kiddie parks; go cart and miniature auto racetracks; and miniature golf courses. Outside storage or display is included as part of the use. |
| **SERVICE COMMERCIAL** | |
| Animal Services | Establishments primarily engaged in performing services for animals, such as veterinary services, animal hospitals, animal kennels. The use does not include publicly operated animal control and wildlife care (see "Local Public Health and Safety Facilities"). |
| Auto Repair & Service | Service establishment engaged in repair, alteration, painting, washing, or waxing of automobiles as a principal use. The use also includes storage and maintenance yards for rental of cars, trucks, or trailers. Outside storage or display is included as part of the use. The use does not include: automobile parking (see "Transportation"); repair shops subordinate to and maintained by a vehicle dealership; service stations (which are separately defined); or automobile wrecking yards (see "Recycling and Scrap"). |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Business Support Services | Service establishments within buildings that provide other businesses with services including maintenance, repair and service, testing, and rental. This includes establishments such as: outdoor advertising services, mail advertising services (reproduction and shipping); blueprinting, photocopying, and photofinishing; computer-related services (rental, repair, and maintenance); commercial art and design (production); film processing laboratories; and services to structures such as window cleaning, exterminators, janitorial services, and business equipment repair services. |
| Health Care Services | Service establishments primarily engaged in furnishing medical, mental health, surgical, and other personal health services such as: medical, dental, and psychiatric offices; medical and dental laboratories; outpatient care facilities; and allied health services. Associations or groups primarily engaged in providing medical or other health services to members are included. Nursing homes and similar long-term personal care facilities are classified in "Nursing and Personal Care," and mental health-related services, including various types of counseling practiced by licensed individuals other than medical doctors or psychiatrists or unlicensed individuals, are included under Professional Offices. |
| Laundries & Dry-Cleaning Plant | Service establishments primarily engaged in high-volume laundry and garment services, such as power laundries (family and commercial); garment pressing and dry cleaning; linen supply; diaper service; industrial laundries; and carpet and upholstery cleaners. The use does not include coin-operated laundries or dry-cleaning pick-up stores without dry cleaning equipment (see "General Retail and Personal Services"). |
| Professional Offices | A place where the following kinds of business are transacted or services rendered: engineering, architectural and surveying; real estate agencies; educational, scientific and research organizations; financial services; writers and artists; advertising agencies; photography and commercial art studios; publishing with offsite printing facilities; broadcasting studios; employment services; off premise concessions (OPC); reporting services; computer services; management, public relations, and consulting services; organizational offices; detective agencies; professional services; attorneys; and counseling services (other than licensed psychiatrists; see "Health Care Services"). Incidental offices are considered accessory uses to a primary use. |
| Repair Services | Service establishment where repair of consumer products is the principal business activity, such as: electrical repair shops; television, radio, and other appliance repair; watch, clock, and jewelry repair; boat repair; small engine repair; and reupholstery and furniture repair. An outdoor storage yard associated with these uses is considered under "Secondary Storage." The use does not include businesses serving the repair needs of heavy equipment (see "Industrial Services"). |
| Sales Lot | Outdoor sales area for permanent display of motor vehicles, recreational vehicles, mobile homes, construction equipment, farm machinery, or other heavy equipment; outdoor equipment rental yards (not including recreational equipment rental); and large-scale, permanent outdoor sales activities such as livestock auctions and sales. Outside storage or display is included as part of the use. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Schools – Business & Vocational | Business and vocational schools offering specialized trade and commercial courses. |
| Secondary Storage | The outdoor storage of various materials or the public display of merchandise on the same site as a principal building or use that supports the activities or conduct of the principle use and does not increase the intensity of the use. This does not apply to primary uses that include outside storage and display as part of the use. |
| **LIGHT INDUSTRIAL COMMERCIAL** | |
| Food & Kindred Products | Manufacturing establishments producing or processing foods and beverages for human consumption and certain related products for distribution within the region, such as meat and poultry processing, dairy products processing, beverages and liquors processing, and miscellaneous food preparation from raw products. Outside storage or display is included as part of the use. |
| Fuel & Ice Dealers | Retail trade establishments primarily engaged in the sale to consumers of ice, bottled water, fuel oil, butane, propane, and liquefied petroleum gas (LPG), bottled or in bulk, as a principal use. Outside storage or display is included as part of the use. |
| Industrial Services | Service establishments providing other businesses with services, including maintenance, repair, service, testing, publishing, and rental. This includes establishments such as: welding repair, armature rewinding, and heavy equipment repair, vehicle repair; research and development laboratories, including testing facilities; soils and materials testing laboratories; equipment rental businesses that are entirely within buildings (for equipment rental yards, see "Sales Lots"), including leasing tools, machinery, and other business items; and other business services of a "heavy service" nature. Outside storage or display is included as part of the use. |
| Recycling & Scrap | Establishments engaged in assembling, breaking up, sorting, temporary storage, and distribution of recyclable or reusable scrap and waste materials, including auto wreckers engaged in dismantling automobiles for scrap. Outside storage or display is included as part of the use. The use does not include terminal waste disposal sites, which are prohibited and temporary storage of toxic or radioactive waste materials. |
| Small Scale Manufacturing | Establishments primary engaging in retail sales and secondarily as a fine art or craftsman demonstration workshop of light industrial nature such as sculptor, potter, weaver, carver, jeweler, or other similar art that requires artistic skill. Outside storage or display would require approval of a Special use Permit. |
| Light Manufacturing | Establishments considered to be light manufacturing or cottage industry that produce jewelry, silverware, and plated ware; musical instruments; toys; sporting and athletic goods; pens, pencils, and other office and artists' materials; buttons, costume novelties, miscellaneous notions; brooms and brushes; caskets; and other miscellaneous manufacturing industries. The use also includes artisan and craftsman-type operations that are not home occupations and that are not secondary to on-site retail sales. The use also includes small-scale blacksmith and welding services and the manufacture of trusses. Outside storage or display is included as |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| | part of the use. |
| **WHOLESALE/STORAGE COMMERCIAL** | |
| Storage Yard | Service establishments primarily engaged in the business of storing operative cars, buses, or other motor vehicles, construction equipment, materials or supplies, firewood lots, or industrial supplies. Outside storage or display is included as part of the use. |
| Vehicle & Freight Terminals | Transportation establishments furnishing services incidental to transportation, such as: freight forwarding services; transportation arrangement services; packing, crating, inspection and weighing services; freight terminal facilities; joint terminal and service facilities; trucking facilities, including transfer and storage; and postal service bulk mailing distribution centers. Outside storage or display is included as part of the use. |
| Parking Lots | Service establishments primarily engaged in storing operative cars, buses, or other motor vehicles. The use includes both day use and long-term public and commercial garages, parking lots, and structures. |
| Warehousing | –Establishments primarily engaged in the storage of furniture, household goods, or other commercial goods, such as warehouses and storage or mini-storage facilities offered for rent or lease to the general public. The use does not include warehouse facilities where the primary purpose of storage is for goods for wholesaling distribution. Outside storage or display is included as part of the use. The use does not include terminal facilities for handling freight (see "Vehicle and Freight Terminals"). |
| Wholesale & Distribution | Establishments engaged in the storage of merchandise for sale to retailers; to industrial, commercial, institutional, farm, or professional business users; or to other wholesalers; or acting as agents or brokers in buying merchandise for or selling merchandise to such persons or companies. The use includes such establishments as: merchant wholesalers; agents, merchandise or commodity brokers, and commission merchants; and assemblers. Outside storage or display is included as part of the use. |
| **GENERAL PUBLIC SERVICE** | |
| Airfields, Landing Strips & Heliports | Transportation facilities that are used for the landing or take-off of aircraft, including helicopters, such as airports, heliports, helipads, and seaplane bases. The use also includes any appurtenant areas used for airport buildings and accessory facilities, including terminals, aircraft sales and rentals, and fueling facilities. Outside storage or display is included as part of the use. |
| Collection Stations | Establishments engaged in the temporary accumulation and storage of recyclable or discarded materials, including toxic and hazardous wastes, which are subsequently transported to recycling centers or solid waste disposal sites for further processing on a regular and consistent schedule. Outside storage or display is included as part of the use. The use does not include automobile wrecking yards or any recycling processing facilities, which are listed under Recycling and Scrap or regional solid waste transfer stations, which are listed under Recycling and Scrap or Regional Public Health and Safety Facilities. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Cultural Facilities | Permanent public or quasi-public facilities generally of a noncommercial nature, such as art exhibitions, planetariums, botanical gardens, libraries, museums, archives, and arboretums. |
| Daycare Centers/Preschool | Establishments used for the care of seven or more children residing elsewhere. |
| Government Offices | Buildings containing office for public agencies, including administrative offices, and meeting rooms that are incidental and accessory to another government use such as transit terminals, vehicle storage, campground, or storage yards. |
| Hospitals | A public health and safety facility primarily engaged in providing diagnostic services and extensive medical treatment, including surgical and other hospital services. Such establishments have an organized medical staff, inpatient beds, and equipment and facilities to provide complete health care. |
| Local Public Assembly Facilities | Facilities for local community assembly, such as community centers, meeting halls, and multi-purpose centers. |
| Local Public Health & Safety Facilities | Facilities operated by public or quasi-public entities for the local protection of the public, such as: fire stations and other fire prevention facilities; police and sheriff substations; satellite highway maintenance and snow removal facilities; water tanks, pumps, wells, and related facilities; monitoring facilities; sewage pumps and related facilities; and emergency services. Outside storage or display is included as part of the use. |
| Membership Organizations | Permanent meeting facilities for organizations operating on a membership basis for the promotion of the interests of the members, such as: business associations; professional membership organizations; labor unions and similar organizations; civic, social, and fraternal organizations; political organizations; religious assembly or institutional facilities operated for worship or promotion of religious activities, including churches and incidental religious education; and other membership organizations. The use does not include country clubs in conjunction with golf courses (see "Golf Courses"); and lodging (see "Multi-person Dwelling"). The use does not include other establishments maintained by religious organizations, such as full-time educational institutions, hospitals, and other potentially related operations (such as a recreational camp); these shall be classified according to their respective activities. |
| Post Office | Establishments providing mail service and delivery, such as postal substations and neighborhood delivery centers. |
| Public Utility Centers | Public and quasi-public facilities serving as junction points for transferring utility services from one transmission to another or to local distribution and service, such as: electrical substations and switching stations; major telephone switching centers; natural gas regulating and distribution facilities; public water system wells, treatment plants and storage; and community wastewater treatment plants and settling ponds. Outside storage or display is included as part of the use. The use does not include office or service centers (see "Professional Offices or Government Offices"). |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Regional Public Health & Safety Facilities | Regional facilities operated by public or quasi-public entities for protection of the public, such as: water and sewage facilities; transportation maintenance/storage facilities; police and sheriff substations and headquarters, including secondary county short-term incarceration facilities; and solid waste transfer stations that TRPA finds to be regionally serving. Secondary county short-term incarceration facility means a county jail (not a state or federal prison facility) that is not the primary jail for the county. |
| Schools - College | Junior colleges, colleges, universities, and professional schools granting associate arts degrees, certificates, undergraduate and graduate degrees, and requiring for admission at least a high school diploma or equivalent general academic training. |
| Schools – Kindergarten through Secondary | Kindergarten, elementary, and secondary schools serving grades up to 12, including denominational and sectarian. |
| Social Service Organizations | Public and quasi-public establishments providing social services and rehabilitation services, counseling centers, welfare offices, job counseling and training centers, or vocational rehabilitation agencies, serving persons with social or personal problems requiring special services and the handicapped and the disadvantaged. The use includes organizations soliciting funds to be used directly for these and related services. The use also includes establishments engaged in community improvement and neighborhood development. |
| Threshold Related Research Facilities | Public or non-profit research establishments primarily engaged in implementing social, political, and scientific research relating to the Lake Tahoe Environmental Thresholds or the Lake Tahoe ecosystem. The use includes laboratories, monitoring stations, scientific interpretive centers, research and training classrooms, and related support facilities. Overnight multi-person facilities, outside storage, and caretaker facilities may be considered as accessory to this use. The use does not include facilities unrelated to threshold-related research, such as: general college administrative offices and classrooms (see Schools-College); and government administrative offices (see Government Offices and Facilities); or non- threshold-related research (which may be conducted under the Professional Office use). |
| **LINEAR PUBLIC FACILITIES** | |
| Pipelines & Power Transmission | Transportation facilities primarily engaged in the pipeline transportation of refined products of petroleum, such as: gasoline and fuel oils; natural gas; mixed, manufactured, or liquefied petroleum gas; or the pipeline transmission of other commodities. The use includes facilities for the transmission of electrical energy for sale, including transmission and distribution facilities. Outside storage or display is included as part of the use. The use does not include offices or service centers (see "Professional Offices"); equipment and material storage yards (see "Storage Yards"); distribution substations (see "Public Utility Centers"); and power plants (see "Power Generating Plants"). |
| Transit Stations & Terminals | Passenger stations for vehicular and mass transit systems; also, terminal facilities providing maintenance and service for the vehicles operated in the transit system. The use includes, but is not limited to, buses, taxis, |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| | railway, and ferries. Outside storage or display is included as part of the use. |
| Transmission & Receiving Facilities | Communication facilities for public or quasi-public, commercial, and private electronic, optic, radio, microwave, electromagnetic, and photo-electrical transmission and distribution, such as: repeater and receiving facilities, feeder lines, and earth stations for satellite communications for radio, television, telegraph, telephone, data network, and other microwave applications. The use includes local distribution facilities such as lines, poles, cabinets, and conduits. Outside storage or display is included as part of the use. The use does not include uses described under Broadcasting Studios. |
| Transportation Routes | Public rights-of-way that are improved to permit vehicular, pedestrian, and bicycle travel. |
| **RECREATION** | |
| Day Use Areas | Land or premises, other than Participant Sports Facilities, designated by the owner to be used by individuals or the general public, for a fee or otherwise, for outdoor recreation purposes on a daily basis such as regional and local parks, picnic sites, vista points, snow play areas, rafting facilities, and playgrounds. |
| Outdoor Recreation Concessions | Facilities that are dependent on the use of outdoor recreation areas, such as onsite food and beverage sales, onsite recreational equipment rentals, parasailing, rafting, and onsite recreation instruction. The use also includes outfitter, guide service establishments, or rental service whose base facilities are located on or near a recreation area, such as horse packing outfitters, snowmobiling outfitters, or bike rental facilities. This use includes offsite rental of sporting equipment whose base facilities is a commercial use. Outside storage or display is included as part of the use. |
| Participant Sport Facilities | Facilities for various outdoor sports and recreation including, but not limited to, tennis courts, swim and tennis clubs, ice skating rinks, and athletic fields (non-professional). Outside storage or display is included as part of the use. |
| Recreation Centers | Indoor recreation establishments operated by a public or quasi-public agency providing indoor sports and community services, such as swimming pools, ice skating rinks, multi-purpose courts, weight rooms, and meeting and crafts rooms. |
| Riding & Hiking Trails | Planned paths for pedestrian, bike, and equestrian traffic, including trail heads. |
| Visitor Information Centers | Nonprofit establishments providing visitor information and orientation. |
| **RESOURCE MANAGEMENT** | |
| Forest & Timber Resource Management | Activities associated with the protection, restoration, and management of timber such as reforestation, regeneration harvest, sanitation salvage cut, selection cut, special cut, thinning and timber stand improvement. |
| Tree Farms | An area where trees or other vegetation on the TRPA-approved species list are grown for commercial harvest. The use includes establishments where Christmas trees are cultivated or where other native trees and plants are grown for harvest at a later date. |
| Vegetation Resource Management | Activities associated with the protection, restoration, and management of vegetation including fire detection and suppression, fuels treatment and management, insect and disease suppression, prescribed fire and burn |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| | management. |
| Water Quality Improvements & Watershed Management | Activities associated with the protection, restoration, and management of watersheds including erosion control, runoff control and stream environment zone restoration. |
| Wildlife & Fisheries Resource Management | Activities associated with the protection, restoration, and management of wildlife and fisheries resources. |
| Range Management | Activities associated with range management including range pasture management, range improvement, and grazing. |
| **OPEN SPACE** | |
| Allowed in all areas of the Region | Land with no land coverage and maintained in a natural condition or landscaped condition consistent with best management practices, such as deed-restricted properties and designated open space area. |

## Community Noise Equivalent Level

The maximum community noise equivalent level (CNEL) for this Area Plan are as follows:

| | TABLE 3<br>COMMUNITY NOISE EQUIVALENT LEVEL (CNEL) | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| **DISTRICT** | **TC-C** | **TC-MUC** | **TSC-G** | CMX-S | **TC-NP** | **TC-HC** | **EB-CC** | **OS** | **US 50** | **SR 89** |
| CNEL | 60 | 60 | 60 | 65 | 55 | | | 55 | 65[1] | 65[1] |
| [1]These standards shall override district CNEL levels for areas within 300 feet of US Hwy 50 or SR 89. | | | | | | | | | | |

## Development Standards

The development standards for the Tahoe Valley Area Plan are intended to provide physical development requirements to implement the Plan's vision, goals, and policies; implement the goals and policies of the adopted General Plan and the TRPA Regional Plan; and enable the Tahoe Valley Area Plan to be found as a conforming Area Plan by the TRPA Governing Board. The standards were developed based on a review of the TRPA Regional Plan policies, the TRPA Area Plans Framework, the City General Plan, the Draft Tahoe Valley Community Plan, and the South Lake Tahoe City Code and Design Guidelines.

Form-based coding techniques are used for development standards. The standards of each district lists density, lot coverage limits, building location standards, height requirements, parking and access provisions, and minimum open space and landscaping and other site requirements. Furthermore, substitute design standards address building orientation and design, pedestrian access, and bicycle parking.

Tables 4 through 9 prescribe the development standards for the Area Plan. Individual letters in parentheses refer to additional regulations that directly follow the table. The numbers in each illustration below refer to corresponding regulations in the "#" column in the associated table.

**DENSITY AND COVERAGE**

Below are the minimum and maximum densities for residential and tourist accommodation uses.

| | TABLE 4<br>DEVELOPMENT STANDARDS | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | **DISTRICT** | **TC-C** | **TC-MUC** | **TC-G** | **TC-NP** | **TC-HC** | **EB-CC** | **CMX-S** | **OS** |
| Density | Mobile Home Dwelling (units/acre) | - | - | 1 to 8 | 1 to 8 | - | 1 to 8 | 1 to 8 | - |
| | Multiple Family Dwelling (units/acre) | 12 to 65(A-E) | 12 to 65(A-E) | 12 to 65(A-E) | 12 to 65(A-E) | 12 to 65(A-E) | 12 to 25(A-E) | 12 to 25(A-E) | - |
| | Multi-Person Dwelling (persons/acre) | 2-65 | 2-65 | 2-65 | 2-65 | 2-65 | 2-25 | 2-25 | - |
| | Nursing and Personal Care (persons/acre) | 2-65 | 2-65 | 2-65 | 2-65 | 2-65 | 2-25 | - | - |
| | Residential Care (persons/acre) | 2-65 | 2-65 | 2-65 | 2-65 | 2-65 | 2-25 | - | - |
| | Single Family Dwelling | See multiple family dwelling density for condominiums | | | 1 unit per parcel, (A, C) | 1 unit per parcel (A, C) | 1 unit per parcel (A, C) | 1 unit as part of a mixed use (A, C) | - |
| | Bed and Breakfast Facilities (units/acre) | - | - | 2-10 | 2-10 | - | 2-10 | - | - |
| | Hotel, Motel, Other Transient Dwelling Units (units/ acre) | 2-40 | 2-40 | 2-40 | 2-40 | 2-40 | 2-40 | - | - |
| | Time Sharing (units/acre) | 2-40 | 2-40 | 2-40 | - | - | - | - | - |
| Land Coverage | Maximum Land Coverage: Base + Transferred (% of project area located within land capability districts 4-7) | See TRPA Code Chapter 30. | | | | See TRPA Code Chapter 30. (F) | See TRPA Code Chapter 30. | | |
| | Alternative Comprehensive Land Coverage Management | Alternative Comprehensive Land Coverage Management System: In coordination with the City and TRPA, alternative comprehensive coverage management systems may be developed as alternatives to the parcel-level coverage requirements outlined in subsections 30.4.1 and 30.4.2 of the TRPA Code of Ordinances, | | | | | | | |

| | TABLE 4<br>DEVELOPMENT STANDARDS | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | DISTRICT | TC-C | TC-MUC | TC-G | TC-NP | TC-HC | EB-CC | CMX-S | OS |
| | System | provided that the alternative system complies with the provisions of subsection 13.5.3.B.1: Alternative Comprehensive Coverage Management Systems of the TRPA Code of Ordinances and is adopted as part of this Area Plan. | | | | | | | |

A. **Accessory Dwelling Units:** Parcels zoned for multi-family or single-family dwellings may contain accessory dwelling units pursuant to City Code 6.85.050.

1. In accordance with TRPA Code of Ordinances Section 31.4.7, accessory dwelling units shall not be considered in the calculation of density.

B. **Exceptions to Minimum Density**

1. Mixed use developments may be exempt from the minimum density standards when the following are met.

   a. ***Vertical Mixed-Use.*** The first floor shall be dedicated to non-residential uses.

   b. ***Horizontal Mixed-Use.*** At least 25 percent of the gross floor area shall be dedicated to non-residential uses.

2. Where there is an existing multifamily development that does not meet the minimum density, the minimum density standard shall not apply. Units may be added and are not required to bring the parcel in compliance with the minimum density.

C. **No Net Loss of Residential Units.** When a parcel containing a residential use is redeveloped to a lower density or to a nonresidential use, the units not rebuilt on site shall be redeveloped elsewhere in the plan area and shall be equivalent in size and number of bedrooms as those being replaced. A deed restriction shall be placed on any resulting single-family dwelling, including condominiums, prohibiting use as a Vacation Home rental as defined in City Code Section 3.50.370.

D. **Density for Deed Restricted Developments**

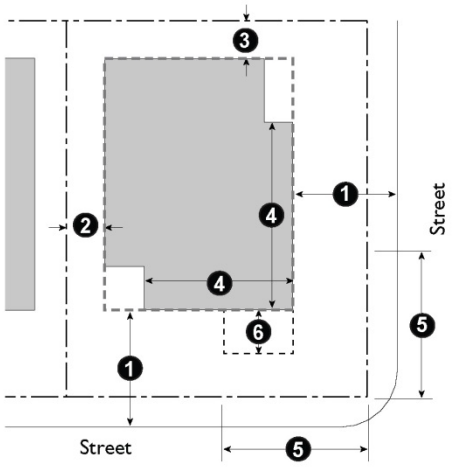
1. **In Town Centers.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 13.5.3.I.

2. **Outside of Town Centers.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 31.4.1.

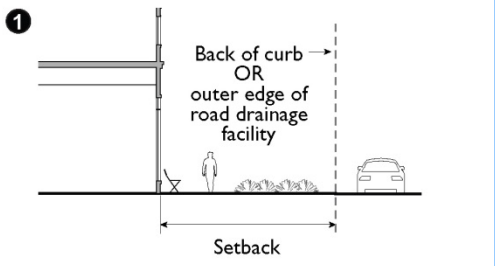
E. **Condominium Conversions.** Multiple Family Dwellings converted to condominiums after the date of this area plan amendment shall not be used as vacation rentals.

F. **Existing Hospital Uses.** Uses defined as a hospital that legally exists on the effective date of this area plan (El Dorado County APNs 023-081-03 and 023-081-09), coverage shall be transferred pursuant to following transfer provisions:

1. Coverage transferred up to 70 percent shall be transferred pursuant to section 30.4.3 of the TRPA Code.
2. Coverage greater than 70 percent shall be transferred at a ratio of 1:1 from sensitive lands and at a ratio of 2.5:1 from non-sensitive lands up the minimum amount needed.
3. Coverage transferred from non-sensitives lands shall be transferred from parcels that have not installed permanent BMPs.



**BUILDING PLACEMENT AND ORIENTATION**



All purely residential developments shall adhere to design standards of City Code Chapter 6.85, except when fronting Emerald Bay Road/Hwy 89 or Lake Tahoe Boulevard/Hwy 50.

Minimum building setbacks and street frontage improvements are established to create walkable districts and a vibrant town center character. Standards require buildings to be built at setback lines for a certain percentage of the linear street frontage in order to establish a consistent and engaging street frontage and improve the pedestrian experience.

With approval by the Director of Development Services, any of the following standard may be waived for public service uses where strict application would interfere with use of specialized equipment or operations or create an unsafe environment.

**TABLE 5 BUILDING PLACEMENT STANDARDS**

A. **Street Frontage Improvements.** The improvement of the public right-of-way is necessary for the safety and convenience of residents and visitors, improving the quality of the community and unifying the appearance of the community with the establishment of a consistent set of improvement standards.

1. ***Street Trees.*** A minimum of two trees and four shrubs shall be planted for every 50 linear feet of street frontage.

2. ***Lighting.*** Pedestrian scaled lighting on sidewalks and pathways consistent with City pedestrian lighting standards. Lighting standards that include attachments from which banners identifying the area or announcing community events may be hung are encouraged.

3. ***Sidewalks.*** Unless noted in Table 5, sidewalk widths shall be consistent with City Code Section 6.10.180 and the City of South Lake Tahoe Public Improvement and Engineering Standards (PIES).

    a. The requirement to construct a sidewalk may be waived by the Director of Public Works if it is found that construction of sidewalks could impede drainage or that the location has been identified for City initiated street improvements.

4. ***Alternatives through Director Review.*** Alternatives to the minimum setback requirement for the four parcels located at the South "Y" intersection may be approved if the Development Services Director finds that:

    a. The increased setback is needed to maintain a sun angle plane to reduce icing on US 50, SR 89 and public sidewalks, or

    b. The increased setback is needed to maintain visual open space, visual access, or preserve or increase views of the mountain ridgelines.

    Request to deviate from this standard through the Alternative Director Review process will require a noticing of affected property owners and a public hearing before the Zoning Administrator.

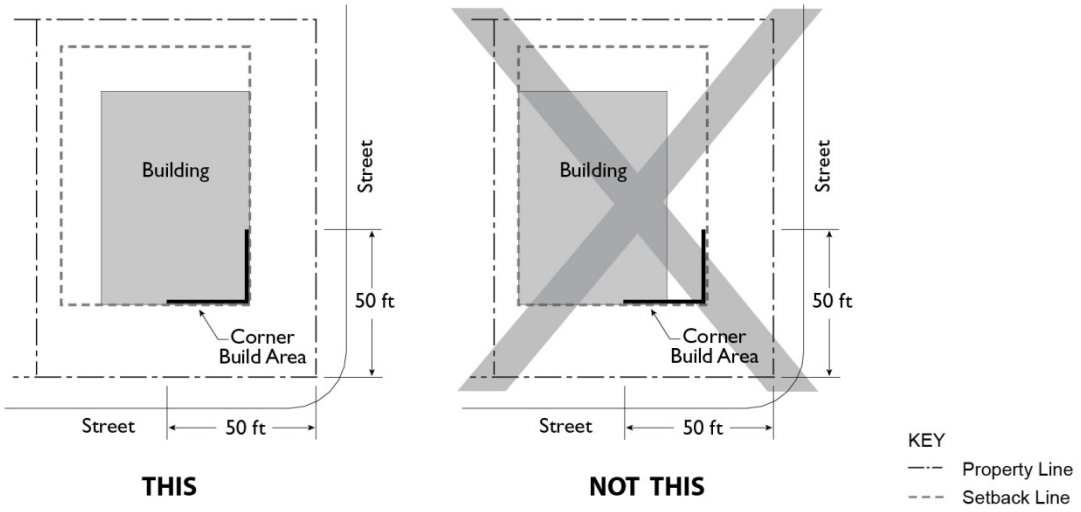
5. ***Scenic Highway Corridors.*** See City Code Section 6.10.190.

B. **Build-to Line.** Buildings shall be constructed at the required setback for the percent of linear street frontage identified in Table 5. This requirement may be modified or waived by the Director of Development Services upon finding that:

1. The area between the built-to line and the building are entry courtyards, plazas, entries, and outdoor eating areas or other public spaces; or

2. The building incorporates an alternative entrance design that creates a welcoming pedestrian entry feature facing the street; or

3. Topographic features, lot configuration, or other conditions make it impractical to require compliance with the build-to lines.



C. **Corner Build Area.** Buildings must be located at the point of intersection of the two setback lines at street corners and must occupy the street frontage at the setback line for at least 50 feet from the street corner property line. Public plazas may be at the street corner provided buildings are built to the edge of the public plaza. Where a parcel is bounded by more than two streets, this requirement only applies to the primary street frontage and one side street frontage. This requirement may be modified or waived by the Director of Development Services upon finding that:

1. Where buildings placed on a corner would negatively impact a designated scenic view, visual open spaces, visual access, or views of mountain ridgelines; or

2. Where building placed on a corner would negatively affect the sun angle plane to reduce icing on US 50, SR 89, and public sidewalks; or

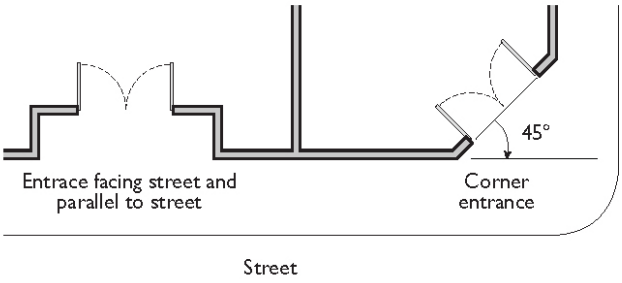
3. Where buildings placed on a corner would encroach in a stream environment zone or require destruction or removal of significant natural features.

**FIGURE C-1**
**CORNER BUILD AREA**

D. **Building Orientation and Entrances**

1. Primary building entrances for all buildings shall be located facing a public street.

   a. Where a commercial use is adjacent to a bike route, lane, or path a business or business complex shall integrate access from the route to the primary entrance.



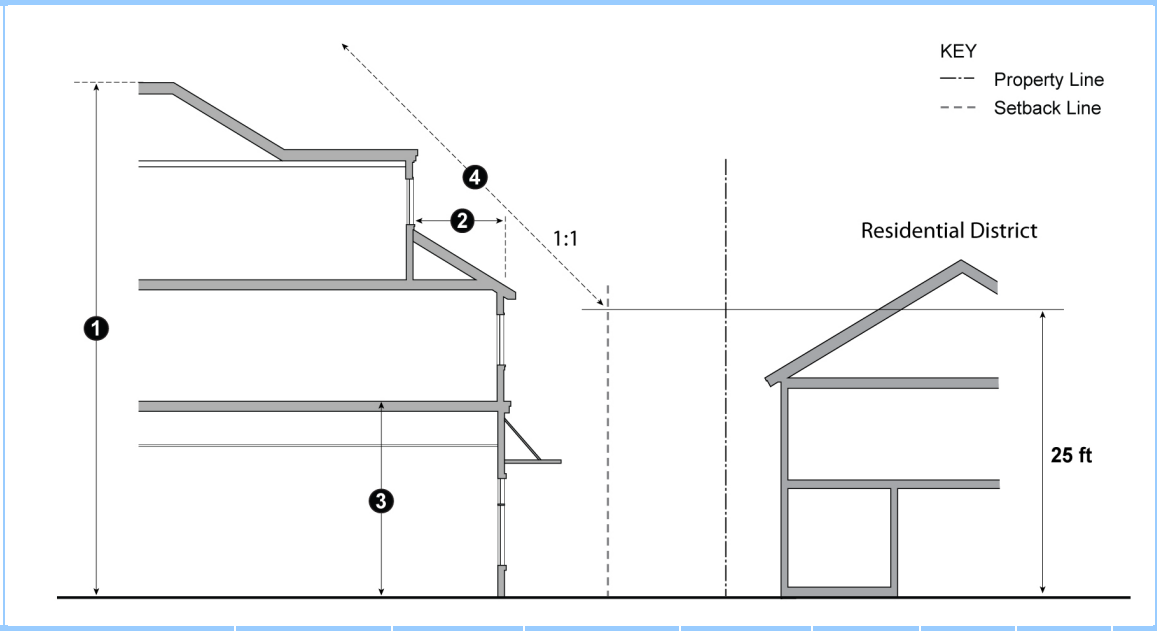
2. Building entrances shall be emphasized with special architectural and landscape treatments, shall provide covered overhead protection in the form of recessed arcades or protruding canopies, and shall ensure protection from unloading roof snow.

3. Entrances to commercial, tourist accommodation, and mixed-uses located at corners shall generally be located at a 45-degree angle to the corner and shall have a distinct architectural treatment to animate the intersection and facilitate pedestrian flow around the corner. Different treatments may include angled or rounded corners, arches, and other architectural elements.

4. All building and dwelling units located in the interior of a site shall have entrances from the sidewalk that are designed as an extension of the public sidewalk and connect to a public sidewalk.

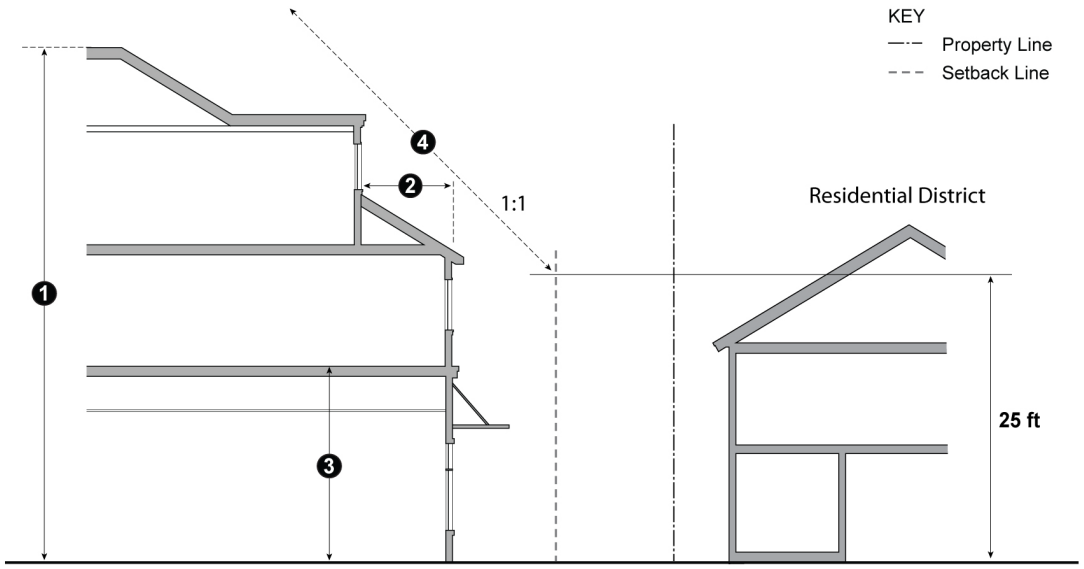
5. Entrances to residential units as part of mixed-use projects shall be physically separated from the entrance to the non-residential use and clearly marked with a physical feature incorporated into the building or an appropriately scaled element applied to the façade.

**FIGURE C-2**
**BUILDING ORIENTATION AND ENTRANCES**



**HEIGHT**

All purely residential developments shall adhere to design standards of City Code Chapter 6.85, except when fronting Emerald Bay Road/Hwy 89 or Lake Tahoe Boulevard/Hwy 50.



Maximum height limits proposed in the Regional Plan Update have been refined to reflect the nature of development in each sub district. Buildings are required to step back within a daylight plane along street frontages and adjacent to residential areas to address massing, protect viewsheds, and allow light and air, and limit winter shading in public areas and adjacent residential areas. Minimum heights are proposed for ground floors in order to establish a consistent building frontage along the street and to accommodate a wide range of uses. Roofs are required to be sloped to support alpine character in design. Limited areas of flat roofs are allowed as long as they are not visible from the public right-of-way.

**TABLE 7**
**HEIGHT AND ROOF STANDARDS**

| DISTRICT | TC-C | TC-MUC | TC-G | CMX-S | EB-CC | TC-NP | TC-HC | # |
|---|---|---|---|---|---|---|---|---|
| Building Height Maximum (feet) and Viewshed Protection | 45’ (A, B) | 42’, 36’ for properties with Hwy 50 frontage east of Tahoe Keys Blvd. (A, B) | 36’ (A, B) | See TRPA Code Section 37.4 (A, B) | See TRPA Code Section 37.4 (A, B) | 36’ (A, B) | 42’(A, B) | ❶ |
| Building Stepbacks: Upper Story along Street Frontage (ft.), applicable above the second story | 10’ from second story building face | | | - | 10’ from second story building face | - | | ❷ |
| Ground Floor Minimum | 15’ | 15’ | 15’ | - | | | | ❸ |

**TABLE 7**
**HEIGHT AND ROOF STANDARDS**

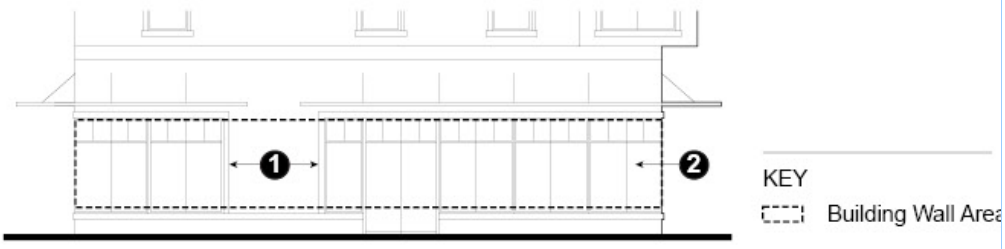
| | | | | | | |
|---|---|---|---|---|---|---|
| Height, Non-Residential Uses (ft) | | | | | | |
| Roof Slope and Design | 3:12 to 12:12 (C) | | | | | |
| Transition Height Adjacent to Residential District | Structures shall not interrupt a line of a 1:1 slope extending upward from 25 feet above existing grade of the setback line adjacent to the residential district. Buildings that are permitted additional height shall have additional buffering in addition to the required setback. Provisions may include, but are not limited to increased side yard or rear yard setbacks, building orientation, landscaping buffering with oversized trees. | | | | | 4 |
| Chimneys and Other Rooftop Appurtenances | Chimneys, flues, vents, antennas, and similar appurtenances may extend ten percent beyond the otherwise permissible maximum height of a building, or a height of six feet, whichever is less. | | | | | |

A. **Additional Height for Specific Projects**

1. **Public Service Facilities.** Building heights as specified above may be increased to the minimum necessary to accommodate facilities serving regional transportation and/or safety needs. Findings 1, 3, 5, and 9 of Section 37.7 of the TRPA Code of Ordinances shall be made.

2. **100% Deed Restricted Housing in Town Centers.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 13.5.3.I.

3. **100% Deed Restricted Housing outside of Town Centers.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 37.5.5.



B. **Viewshed Protection.** To ensure compatibility with adjacent uses and viewshed protection, buildings must not project above the forest canopy, ridge lines, or otherwise detract from the viewshed and the review authority must make findings 1, 3, 5, and 9 of Section 37.7 of the TRPA Code of Ordinances in approving any project consisting of 42 feet or greater.

C. **Roof Slope and Design.** Buildings shall have a definitive "top" that steps, slopes, or otherwise breaks the rectangular form of the building. Dormer windows are encouraged within the sloping roof area. A portion of the roof area may be less than 3:12 so long as it is not visible from the public right-of-way or a TRPA scenic resource. Covered parking and parking structures are exceptions and may be permitted to have flat roofs, but must be concealed through architectural design or landscaping. Rooftop equipment shall be concealed from view and/or integrated within the building architecture.

**BUILDING FORM**

All purely residential developments shall adhere to design standards of City Code Chapter 6.85, except when fronting Emerald Bay Road/Hwy 89 or Lake Tahoe Boulevard/Hwy 50. Building form standards limit blank walls, require a minimum amount of building transparency (i.e. windows and doors providing views into work areas, display areas, sales areas, or similar active spaces) along street frontages, and require the modulation of building facades to create visual interest and engage pedestrians.

**TABLE 8**
**BUILDING FORM STANDARDS**

| DISTRICT | TC-C | TC-MUC | TC-G | CMX-S | EB-CC | TC-NP | TC-HC | # |
|---|---|---|---|---|---|---|---|---|
| Maximum Length of Blank Wall (feet) | 25(A) | 25(A) | 25(A) | - | 25(A) | - | | ❶ |
| Required Transparency (% of building wall area) (commercial only) | 75(A) | 75(A) | 60(A) | - | 60(A) | - | | ❷ |
| Building Design and Articulation | (B) | | | - | (B) | | | |
| Dumpster and Trash Enclosures | In addition to requirements in SLCC Section 6.10.110.A.5, the materials and colors used for the enclosure shall be consistent with those of the primary structure. | | | | | | | |

A. **Building Transparency and Blank Wall Limits; Required Openings for Non-Residential Uses.** Exterior walls facing and within 20 feet of a front or street side property line or pedestrian walkway shall include windows, doors, or other openings for at least the percentage stated in Table 8 of the building wall area located between 2.5 and seven feet above the level of the sidewalk or adjacent ground grade. No wall may run in a continuous horizontal plane for more than 25 feet without an opening or transparency on the ground floor of a building.

1. ***Design of Required Openings.*** Openings fulfilling this requirement shall have transparent glazing and provide views into work areas, display areas, sales areas, lobbies, or similar active spaces, or into window displays that are at least three feet deep.

2. ***Exceptions for Parking Garages.*** Multi-level garages are not required to meet the building transparency requirement of this subsection. Instead, they are subject to

the building setback standards in Table 5, Building Placement Standards and the following standard:

a. *Parking Garage Rooftop Planting.* Uncovered parking on the top level of a parking structure shall have rooftop planters with a minimum dimension of 24 inches along perimeter walls of the top floor that face public streets or other public areas.

3. ***Alternatives through Director Review.*** Alternatives to the building transparency requirement may be approved if the Development Services Director finds that:

a. The proposed use has unique operational characteristics with which providing the required openings is incompatible, such as in the case of a cinema or theater; and

b. Street-facing building walls will exhibit architectural relief and detail and will be enhanced with landscaping in such a way as to create visual interest at the pedestrian level.

Requests may be made to deviate from this standard through the Alternative Director Review process. .

B. **Building Design and Articulation.** Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance and materials and colors that shall reinforce the region's natural features and mountain identity.

1. ***Articulation for all Buildings.*** There shall be clear distinction between the base, middle, and top of the building as illustrated in Appendix B, South Lake Tahoe Design Guidelines (2016), Section 3.

a. The top of the building shall be accentuated by use of roof forms, gables, projections, bracket, and overhangs.

b. Building façades shall be articulated and include active facades, with building projections or recesses, doorways and windows, textured materials, differentiated piers and columns, awnings, and other details that provide architectural articulation and design interest while providing views into and out of the building.

c. Cornices, upper floor balconies, roof terraces, and other architectural elements should be used, as appropriate, to terminate rooflines and accentuate setbacks between stories.

d. All applied surface ornamentation or decorative detailing shall be consistent with the architectural style of the building.

e. Each side of the building that is visible from a public right-of-way shall be designed with a complementary level of detailing. Particular attention shall be given to the detailing within the pedestrian's range of touch and

view, such as the use of special store-front detailing and façade ornamentation to reinforce the pedestrian character of the street.

2. ***Buildings Wider Than 50 Feet*** shall be broken down vertically and horizontally, so that any plane visible from the public right of way does not run continuously for more than 50 feet without incorporating at least 2 of the following design elements through separate features:

   a. A minimum 18-inch change in horizontal plane for at least 15 feet.

   b. Use of pilasters or columns at a minimum of 12-foot increments and/or at each change in height or wall plane. Pilasters shall protrude a minimum of 4 inches. Columns shall be accentuated with stone or wood.

   c. A minimum 3-foot or 10% change in height for at least 15 horizontal feet.

   d. Ground floor courtyards or entryways that are recessed at least 8 feet into the building footprint.

   e. Change in roof pitch or addition of dormers.

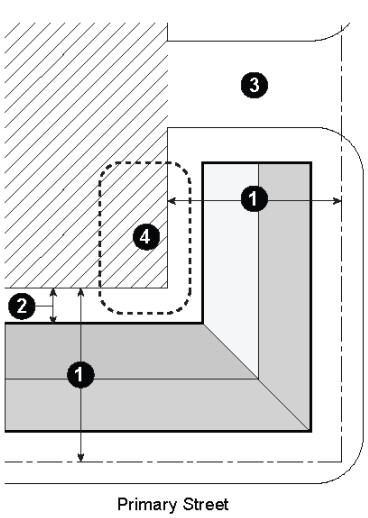
   f. Decks or balconies.

3. ***Building Materials and Colors.*** Colors shall be used to help delineate windows and other architectural features to increase architectural interest while maintaining compatibility with the surrounding natural environment.

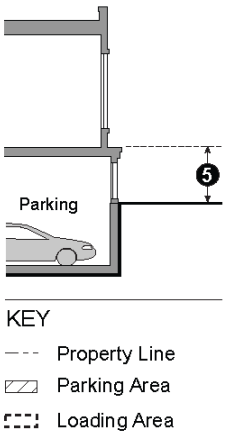
   a. A variety of natural and natural-appearing materials (e.g., wood siding, rock wainscoting, rough sawn timber, log timbers, natural stained lumber) shall provide contrast on building facades.

   b. Stucco and plaster shall be limited to 40% of each building facade. Stucco areas shall blend with the natural materials to provide interest and variety. Rough textured materials are preferred.

   c. Natural earth tone colors (e.g., browns, greens, dark tans) should be chosen to blend in with the setting and to minimize reflectivity. Bright colors may be used for accent only and shall not exceed 10 percent of the total building façade. All structures' colors shall be consistent with the Munsell Color palette set forth in the TRPA Approved Earth Tone Colors.



## PARKING, LOADING, LANDSCAPING, AND OPEN SPACE



All purely residential developments shall adhere to design standards of City Code Chapter 6.85, except when fronting Emerald Bay Road/Hwy 89 or Lake Tahoe Boulevard/Hwy 50.

The proposed parking and loading location standards are intended to enhance walkability and reduce the visual dominance of surface parking lots in the area by setting them back from the street. To support a "park once" atmosphere where visitors park once and patronize multiple businesses, new parking facilities are to be designed to accommodate cross-access to/from adjacent properties to allow parking areas to become joint use facilities even if initially serving only one development.

Outdoor parking areas shall be designed to decrease visual impacts associated with large expanses of pavement and vehicles. They can be divided into smaller parking areas and/or include landscaping within and around them. Consider using perimeter landscaping and landscaped islands as bio-swales with a lower grade than the paved surface to reduce irrigation requirements and meet stormwater retention requirements.

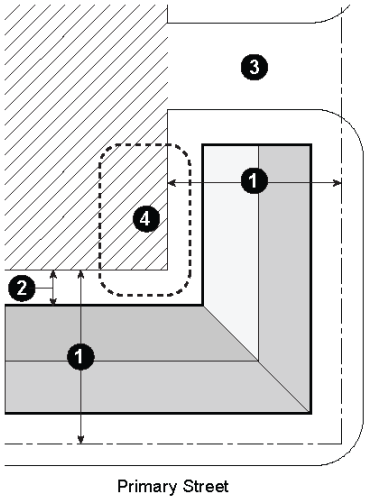


**TABLE 9**
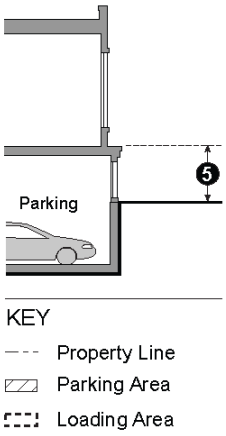
**PARKING, LOADING, LANDSCAPING, AND OPEN SPACE STANDARDS**



| DISTRICT | TC-C | TC-MUC | TC-G | EB-CC | CMX-S | TC-NP | TC-HC | # |
|---|---|---|---|---|---|---|---|---|
| Location of Parking: Minimum Setback from Streets (measured from back of curb or outer edge of road or drainage improvements if no curb) | 25(A), Parking shall be located underground, behind a building, or on the interior side or rear of the site. | | | | 20(A) | 20 (A) | | ❶ |
| Setback from Buildings and Public Plazas (ft.) | Above ground parking shall be setback from buildings and public plazas with a walkway and/or landscaping. | | | | - | - | | ❷ |
| Access Location | From adjacent parking areas, side street or alley wherever possible | | | | | | | ❸ |
| Shared Access | See additional regulations (B) | | | | | | | ❸ |
| Curb Cuts | Minimized and in areas least likely to affect pedestrian circulation. | | | | | | | |

**TABLE 9**
**PARKING, LOADING, LANDSCAPING, AND OPEN SPACE STANDARDS**

| DISTRICT | TC-C | TC-MUC | TC-G | EB-CC | CMX-S | TC-NP | TC-HC | # |
|---|---|---|---|---|---|---|---|---|
| Loading/Service Areas/Porte Cochere | Side or rear of lot; must be screened from public ROW | | | | | | | ❹ |
| Underground Parking Visibility | Maximum height of underground parking area visible from the street (parking podium) is 3 feet from finished grade. | | | | | | | ❺ |
| Automobile Parking, Driveway, and Loading Standards | (C) | | | | | | | |
| Minimum Residential Open Space (sq. ft. per unit) | 100(D) | 100(D) | 100(D) | 150(D) | - | 150(D) | | |
| Minimum Public Open Space, sites two acres or more in size | (D) | - | - | - | - | - | | |
| Pedestrian Orientation and Access | (E) | | | | | | | |
| Landscaping (% of site) and Exterior Lighting | 10 (F) | 10(F) | 10(F) | 10(F) | 5(F) | 10(F) | | |
| Snow Storage | (G) | | | | | | | |
| Bicycle Parking | (H) | | | | | | | |

A. **Limitations on Location of Parking.** Parking may be located within the required setback, subject to the following requirements.

1. ***Completely Underground Parking.*** Underground parking may be located no closer than 5 feet to the front property line.

2. ***Adjacent to Residential Districts.*** When adjacent to a residential district the side and rear parking area setbacks shall be 50% of the required structure setback. City-approved parking barriers/bollards, vegetation, and a fence shall be installed in the setback.

3. ***Surface Parking.*** Surface parking may be located within the required setback with Development Services Director approval provided:

a. A minimum, of 30% of the frontage is maintained for pedestrian only access through a courtyard, plaza, vegetated area, etc.; and

b. The parking area is screened along the public right-of-way with public art, hedge, trellis, and/or landscaping; and

c. Topographic features, lot configuration or other conditions make it impractical to require compliance with the setback requirements.

B. **Shared Access.** To encourage shared parking and shared access points on public streets, new parking facilities shall be designed to accommodate cross-access to/from adjacent properties to allow parking areas to become joint use facilities even if initially serving only one development. When cross-access for vehicles is deemed impractical by the Development Services Director, the requirement for cross-access may be waived if bicycle and pedestrian connections are provided between adjacent development.

C. **Automobile Parking, Driveway, and Loading Standards.** See City Code Chapter 6.10, Article VII.

1. ***Commercial Parking Ratios***. The number of parking spaces as stated in City Code 6.10.410 shall serve as the required number of spaces. Modifications may be made as follows. Area Plan or City Code parking requirements may be superseded where California State Law prohibits or limits parking requirements for qualifying projects.

a. When the project site is within a half mile of a transit stop, a 25% reduction in parking spaces may be applied.

b. The required number of parking spaces may be further reduced should the project incorporate alternative transportation measures, including but not limited to those listed below, or provide a parking demand analysis that supports the number of proposed spaces. The extent of the reduction shall be at the discretion of the decision-making authority.

i. Installing or upgrading pedestrian, bicycle, transit, or other alternative infrastructure and/or facilities beyond improvements required by the area plan or City Code. Cost estimates and proposed infrastructure design and construction shall be approved by the Public Works Director.

ii. Creating shared parking areas between different parcels and land uses. Reduction of ingress/egress points and addition of connecting pedestrian infrastructure may be required. This shall be recoded through a deed restriction.

iii. Preparing a parking management plan and recording a deed restriction on the property ensuring on-going compliance with the approved plan to minimize parking impacts on adjacent property.

iv. Payment into a parking management district, established by the City or other entity responsible for parking facilities and management in the area.

c. The required number of parking spaces may be increased by 25% when the following findings are made.

i. Due to the nature or business patterns of the use, additional parking is required to meet vehicle demand.

ii. Applicant shall demonstrate the need for requested parking.

d. The required number of parking spaces may be increased beyond 25% through the issuance of a use permit per SLTCC 6.55.620, and when all the following are met.

i. A parking demand analysis justifies the proposed number of spaces.

ii. It is demonstrated that safety for pedestrians and other vehicles will be enhanced by the additional parking.

iii. The environmental impact of the use will be lessened by the increase in parking spaces.

iv. Any additional information as deemed necessary.

2. ***Multi-Family Parking Ratios.*** One parking space shall be permitted per residential unit. The number of required parking spaces may be reduced up to 20 percent if a deed restriction is placed on the property making the property owner responsible for parking management.

a. Parking for 100% deed-restricted affordable, moderate, or achievable housing shall adhere to TRPA Code of Ordinances Section 34.4.1.

D. **Open Space.** Site design shall consider pedestrian safety during snow conditions. Sidewalks, plazas, and other pedestrian areas should be designed for maximum solar exposure, with snow melt systems, or for efficient snow removal.

1. **Residential Open Space.** To promote community building, residential open space shall be accessible to all residents and compliant with the Americans with Disabilities Act. These areas typically consist of walks, patios, swimming pools, barbeque areas, playgrounds, turf, or other such improvements as are appropriate to enhance the outdoor environment of the development.

a. ***Minimum Dimensions***. Open space shall have a minimum horizontal dimension of 20 feet.

b. ***Usability.*** A surface shall be provided that allows convenient use for outdoor living and/or recreation. Such surface may be any practical combination of lawn, garden, flagstone, wood planking, concrete, or other serviceable, dust free surfacing. The maximum slope shall not

exceed 10 percent. Seating areas and plazas should be located in areas with good solar exposure.

c. ***Accessibility***. The space shall be accessible from all the living units on the lot and be ADA compliant.

d. ***Limitations to Open Space*****.** Open space may be limited to 10% of the parcel's maximum allowable coverage should the Director of Development Services deem that construction of open space to the extent required in Table 9 would result in a reduction of dwelling units.

2. **Public Open Space.** Developments with 50,000 square feet or more of nonresidential floor area on sites two acres or more in size shall provide public open space according to the following standards:

a. ***Minimum Area.*** Forty square feet for every 1,000 square feet of nonresidential floor area for the first 100,000 square feet of floor area, plus 20 square feet for every 1,000 square feet of nonresidential floor area over 100,000 square feet.

b. ***Minimum Dimensions*****.** Minimum horizontal dimension of 40 feet.

c. ***Usability.*** A surface shall be provided that allows convenient use for outdoor living, recreation, and public gathering. Such surface may be any practical combination of high-quality plant and hardscape materials such as bricks, stone, concrete, permeable paving, or tile. Surfaces shall be sloped for positive drainage and constructed to withstand snow removal and de-icing maintenance. The maximum slope shall not exceed 10 percent. Seating areas and plazas should be located in areas with good solar exposure.

d. ***Accessibility.*** On-site public space shall be visible from a public street and from on-site areas normally frequented by nearby retail uses.

e. ***Amenities.*** On-site public space shall include benches or other seating. Amenities shall be included that enhance the comfort, aesthetics, or usability of the space, including but not limited to trees and other landscaping, shade structures, drinking fountains, water features, public art, trash receptacles, information kiosks, or performance areas.

E. **Pedestrian Orientation and Access.** On-site pedestrian circulation and access must be provided according to the following standards.

1. ***Internal Connections***. A system of pedestrian walkways shall connect all buildings on a site to each other, to on-site automobile and bicycle parking areas, and to any on-site open space areas or pedestrian amenities. Trash and recycling receptacles shall be provided and conveniently located in areas with heavy pedestrian use.

2. ***To Circulation Network***. Regular connections between on-site walkways and the public sidewalk shall be provided. An on-site walkway shall connect the primary building entry or entries to a public sidewalk on each street frontage.

3. ***To Neighbors***. Direct and convenient access shall be provided from commercial and mixed-use projects to adjoining residential and commercial areas to the maximum extent feasible while still providing for safety and security.

4. ***To Transit***. Safe and convenient pedestrian connections shall be provided from transit stops to building entrances.

5. ***On-Site Pedestrian Walkway Design***.

   a. Walkways shall have a minimum clear unobstructed width of six feet, shall be hard-surfaced, and paved with concrete, stone, tile, brick, pervious paving, or comparable material.

   b. Where a required walkway crosses driveways, parking areas, or loading areas, it must be clearly identifiable through the use of a raised crosswalk, a different paving material, or similar method.

   c. Where a required walkway is parallel and adjacent to an auto travel lane, it must be raised or separated from the auto travel lane by a raised curb at least four inches high, bollards, or other physical barriers.

F. **Landscaping and Lighting.** Landscape Design shall be consistent with City Code Section 6.10.150 and WELO as contained in City Code Chapter 6.80. Landscaping can be used to successfully integrate the built environment into the natural environment. It can also provide pleasant outdoor spaces for people, mitigate noise, and air quality impacts, and help screen undesirable elements. Regional climatic and physiographic conditions generally impact landscape and plant materials and must be considered early in the design process. It is recommended that landscape design and planning take advantage of the different visual environments in formulating a design theme or concept as well as to conserve water. Exterior lighting shall be consistent with City Code Section 6.10.160.

G. **Snow Storage.** See SLCC Section 6.10.140.

H. **Bicycle Parking.** Bicycle parking spaces for uses not listed and for multi-business complexes shall be required at staff discretion. Modifications may be granted by the decision-making authority. In no case may fewer than one short term and one long term space be provided.

| Land Use | Examples | Short Term | Long Term |
|---|---|---|---|
| High turnover, high-capacity commercial | Eating and drinking uses, coffee shop, | Minimum 5; 1/200 sf | 1 per 6 employees |
| Low turnover commercial | Fine dining, personal service, service station | 1/600 sf | 1 per 6 employees |
| High Density Residential | Multi-family, multi-person | 1 per 4 units | 1 per unit |
| Tourist Accommodation | All tourist accommodation uses | 1 per 5 units | 1 per 10 units |

| | | | |
|---|---|---|---|
| Professional Uses | Office space, medical offices, government offices | 1 per 2000 sf | 1 per 6 employees |
| Assembly Uses | Religious assembly, schools, membership organizations, most amusement and recreation use, library, athletic facilities | 20% of maximum occupancy | 3% of maximum occupancy |
| General commercial retail | Grocery, general retail, nursery, | 1 per 2500 sf | 1 per 6 employees |
| Industrial | Warehousing, manufacturing, hospital, post office | 1 per 6000 sf | 3% of maximum occupancy |
| Parking lots, garages, parking structures | Parking lots, garages, parking structures | - | 1 per 15 vehicle spaces or 3% of the total area |

1. **Short Term Bicycle Parking Standards.**

   a. ***Location****.* Short-term bicycle parking must be located within 50 feet of a main entrance to the building it serves. Bicycle parking shall be visible from the main building entrance, from outdoor seating areas, or a sign must be posted at the main building entrance indicating the location of the parking area. Bicycle parking shall be located outside of the public right of way.

      i. *Exception.* Notwithstanding the above standard, when a commercial use is adjacent to a bike route or bike path, short-term bicycle parking may be provided near the route or secondary entrance.

   b. ***Anchoring and Security.*** For each short-term bicycle parking space required, a stationary, securely anchored object shall be provided to which a bicycle frame and one wheel can be secured with a high-security U-shaped shackle lock if both wheels are left on the bicycle. One such object may serve multiple bicycle parking spaces. Preferred rack styles area inverted U shapes, post and ring, and wheel well-secured.

   c. ***Size and Accessibility.*** Each short-term bicycle parking space shall be a minimum of two feet in width and six feet in length and shall be accessible without moving another bicycle. Two feet of clearance shall be provided between bicycle parking spaces and adjacent walls, poles, landscaping, street furniture, drive aisles, and pedestrian ways and at least five feet from vehicle parking spaces.

**FIGURE C-3**
**SHORT-TERM BICYCLE PARKING**

2. ***Long-Term Bicycle Parking Standards.***

a. ***Location***. Long-term bicycle parking must be located on the same lot as the use it serves. In parking garages, long-term bicycle parking must be located near an entrance to the facility on the ground floor.

b. ***Covered Spaces.*** Long-term bicycle parking must be covered. Covered parking can be provided inside buildings, under roof overhangs or awnings, in bicycle lockers, or within or under other structures.

c. ***Security.*** All long-term bicycle parking must be located in a secure area such as the following:

i. An enclosed bicycle locker;

ii. A fenced, covered, locked or guarded bicycle storage area;

iii. A rack or stand inside a building that is within view of an attendant or security guard or visible from employee work areas; or

iv. Other secure area approved by the Development Services Director.

d. ***Size and Accessibility.*** Each bicycle parking space shall be a minimum of two feet in width and six feet in length and shall be accessible without moving another bicycle. Two feet of clearance shall be provided between bicycle parking spaces and adjacent walls, poles, landscaping, street furniture, drive aisles, and pedestrian ways and at least five feet from vehicle parking spaces.

**SIGNAGE**

A. **See SLCC Chapter 6.40.**

1. Accessory uses may have signage independent from the primary use, but are subject to the maximum sign area and standards established by the City Code.

**OUTDOOR DINING AND SEATING**

Outdoor dining and seating are desirable and consistent with TVAP policies to activate streets.

A. **Location.** Outdoor seating and dining areas shall not encroach in pedestrian pathways, vehicle circulation areas, or the public right of way.

B. **Commercial Floor Area.** The first 20 seats or 300 square feet of outdoor dining, whichever is less, shall be exempt from obtaining CFA. CFA shall be required for outdoor dining areas beyond 20 seats or 300 square feet.

C. **Site Design.** New and modifications to outdoor seating and dining areas may be subject to Design Review.

1. Seating areas shall be separated from vehicle circulation and parking areas by parking barriers/bollards and vegetation.
2. No additional signage shall be associated with outdoor dining/seating areas.
3. In no case shall outdoor dining areas be used for storage. Furniture may remain when not in use but shall be maintained in a clean and orderly state.

# APPENDIX D
## CSLT Green Building Program

The City has identified LEED, Energy Star, Green Point, BREEAM, and the National Green Build Standard as certification programs in alignment with the City's sustainable building and emissions reductions goals as outlined in the Climate Action Plan. Obtaining one of these certifications makes the project eligible for one or all of the incentives below. Should an applicant wish to complete a certification program not listed, the program may be reviewed by City staff and the Sustainability Coordinator for consistency with this program's goals.

In addition to requirements of the third-party certification, the following measures are encouraged:

- Appliances – All kitchen appliances meet Energy Star rating if an Energy Star designation is available for that appliance.
- Reduction in cement uses – Foundation mixes contain at least 20% reduction in cement by replacing cement with products such as flyash, slag, silica fume, or rice hull ash.
- Renewable/Recycled materials – At least 20% of all hard floor covering in the home may be a recycled content material or be of rapidly renewable materials such as bamboo, cork, natural linoleum flooring, engineered wood products, or minimum of 50% recycled content tile.
- Low VOC flooring – At least 80% of the total area of resilient flooring installed may be certified under the Resilient Floor Covering Institute (RCFI) FloorScore program and at least 80% of the total area of carpet meet the CRI Green Label Plus requirements for carpet.
- Radon Resistant construction – Radon resistant construction that meets the criteria of the Basic Techniques for Radon Resistant Construction recommended by the US EPA, is included in the project and the owner has been provided with information on radon risks, the radon resistant construction in the home, and radon testing options.
- Sustainable deck products – All decks surfaces utilize Forest Stewardship Council (FSC) certified wood, salvaged wood, or recycled content plastic or composite decking. Plastic or composite decking materials must be approved by the Office of the State Fire Marshall for use in the Wildland Urban Interface area.
- Low water consumption landscaping – The project does not include lawn area greater than 5% of the lot area and all landscaping is irrigated with a drip irrigation system that includes soil moisture control sensors.
- Kitchen faucet – Maximum flow rate at sink faucets is not greater than 1.5 gallons per minute at 60 psi.

**RESIDENTIAL PROJECT INCENTIVES**

Residential projects that voluntarily achieve third-party certification would be eligible for the following:

- Priority plan check, over all other projects, by all City Departments.

- Priority on the residential allocation waiting list.
- Recognition at a televised City Council meeting and on the City Website.

**COMMERCIAL PROJECT INCENTIVES**

Commercial projects that voluntarily achieve third-party certification would be eligible for the following:

- Priority plan check, over all other projects, by all City Departments.
- CFA allocation from the City's unallocated CFA pool.
- Recognition at a televised City Council meeting and on the City Website

**PROOF OF CERTIFICATION**

All applications for projects utilizing this program shall include a signed testimony and documentation demonstrating their intent to obtain green building certification and provide final certification prior to issuance of a certificate of occupancy. If certification is not obtained when occupancy is required, the applicant may post a security equal to $10,000 in order to receive a certificate of occupancy for the building. The security would be held until green building certification is obtained. If certification is not obtained within 1 year of occupancy, the security would be forfeited and deposited into the City fund to be used for City sustainability efforts.

**EDUCATION AND OUTREACH**

It is important that knowledge of green building within the community in general be increased. Knowledge of green building and its benefits can reduce utility bills, increase the quality of construction, increase indoor quality, and increase comfort of buildings. The City has identified, and for the most part implemented, the following education and outreach strategies:

- City publication of Residential and Commercial Green Building Guides – Summer 2010
- Hold a workshop on the CalGreen Code mandatory requirements – Fall 2010
- Prepare a list of green building materials and products for local building and hardware stores and encourage them to carry them in their inventories – Fall 2010
- Establish Green Building Information Center at the Services Center building to provide clearinghouse information on Green Building – Continuous Effort
- South Lake Tahoe Green Building Website with information on green building certification programs and local architects, engineers, contractors, etc. with Green Building credentials or experience – Winter 2010
- Advertising at the Services Center for Green Building education and events put on by other organizations

# SECTION 1
# Introduction

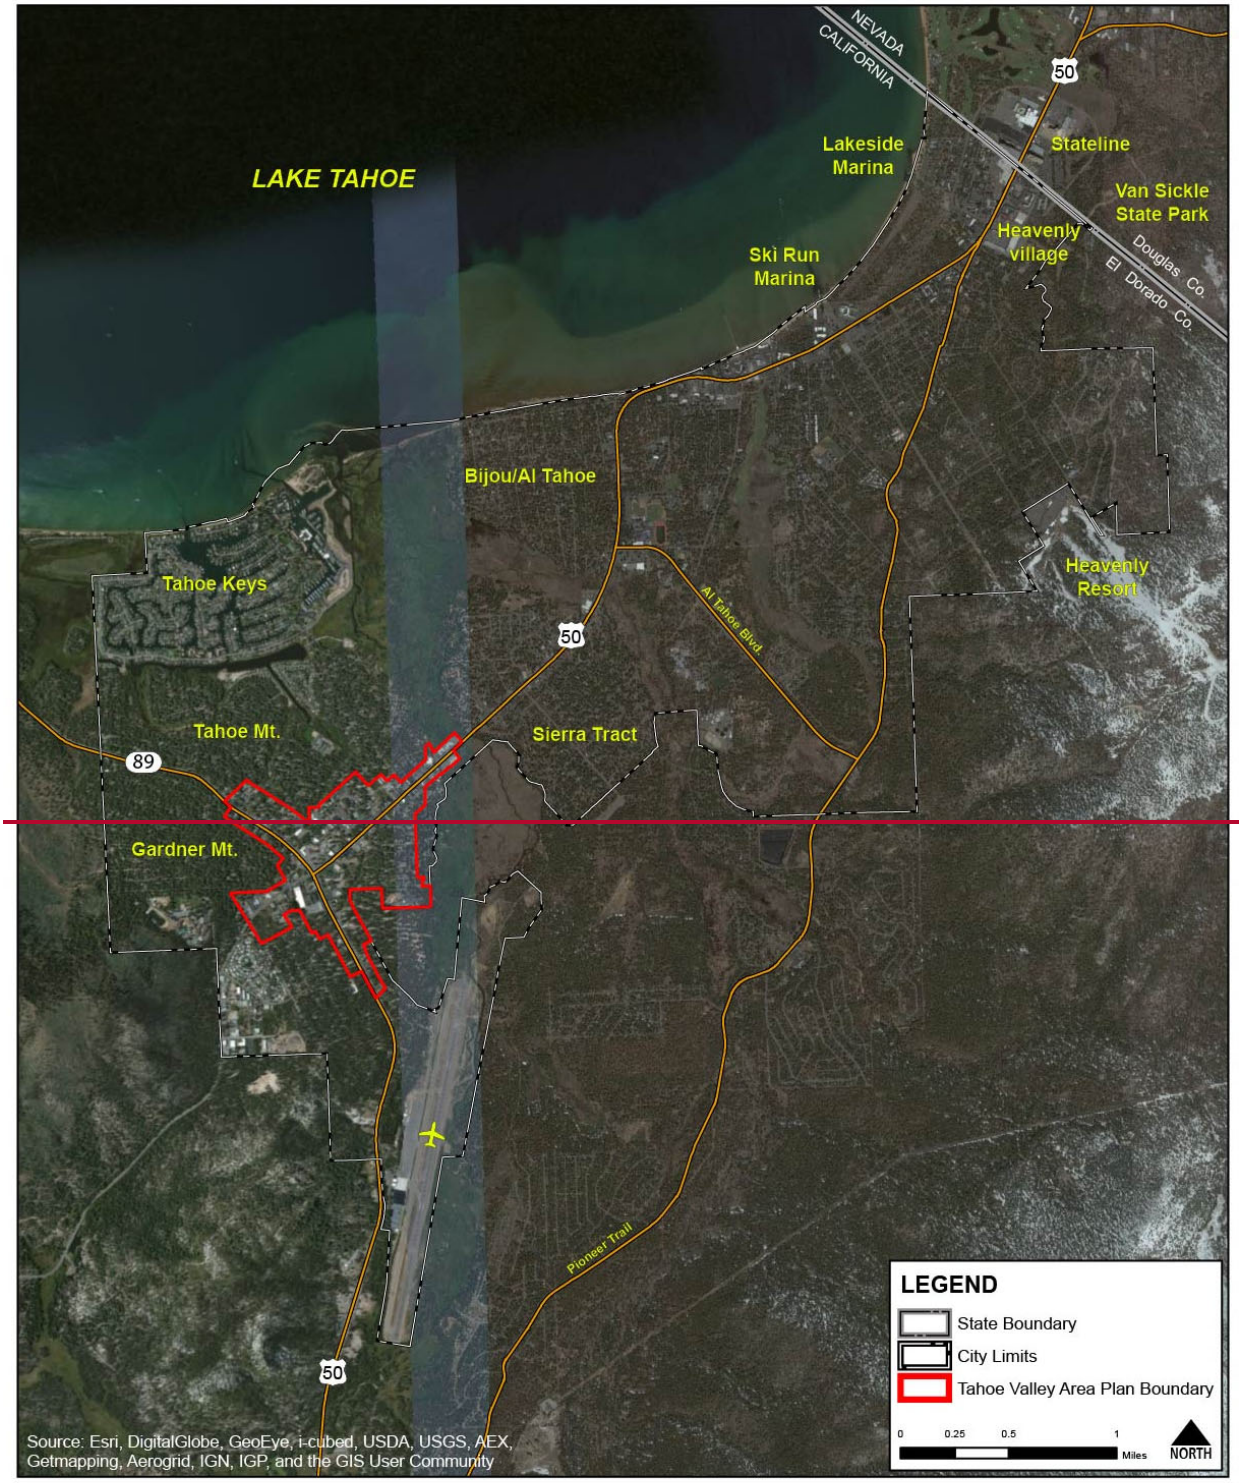
The Tahoe Valley Area Plan (Area Plan) serves as the comprehensive land use and zoning plan for the Tahoe Valley area, consistent with the Lake Tahoe Regional Plan (Regional Plan) and the City of South Lake Tahoe General Plan (General Plan). The Area ~~p~~Plan is intended to realize the community's vision, assist in achieving and maintaining the Tahoe Regional Planning Agency's (TRPA) Environmental Threshold Carrying Capacities, implement the City of South Lake Tahoe ~~Sustainability~~Climate Action Plan, implement the Tahoe Metropolitan Planning Organization's (TMPO) Sustainable Communities Strategy, and implement policy direction of both the Regional Plan and General Plan.

The Tahoe Valley Area Plan defines a vision for the future of the Tahoe Valley area. The Tahoe Valley Area Plan planning area (plan area) is a ~~337~~374-acre area, centered on the US Highway 50 and State Route (SR) 89 "Y" intersection, in the southwest corner of South Lake Tahoe, California. The plan area is roughly bounded by 10th Street on the north, ~~E~~ H Street on the south, Truckee Drive on the east, and Julie Lane on the west (Figure 1).

The Tahoe Valley area developed primarily in the 1950s as a commercial corridor for highway travelers. While some of South Lake Tahoe (such as the Stateline/Ski Run area) has been dramatically transformed in the last ten years, the Tahoe Valley area has changed ~~remained relatively stagnant~~at a slower rate. ~~Exceptions~~ Examples of significant improvements as a result of private investment in façade improvements and rebuilds include ~~the Staples~~Smart & Final, ~~Longs,~~ ~~Pier One~~Goodwill, TJ Maxx, Ernie's Coffee Shop, BevMo, the Crossings, and Coldwell Banker. ~~where significant improvements as a result of private investment have taken place~~in façade improvements and rebuilds.~~.~~

This Area Plan ~~sets~~establishes a vision for the Tahoe Valley area based on a realistic assessment of the area's potential. The Area Plan sets policies as well as implementation measures to ameliorate existing conditions and create new development and redevelopment opportunities. It describes how this area can focus the resources needed to become a vital economic center of the South Shore and the Tahoe Basin while reflecting Tahoe Valley's unique characteristics and supporting the local community's vision.

The Area Plan provides more detailed direction for the Tahoe Valley area and incorporates both the Regional Plan and the General Plan by reference, including the respective implementing ordinances. The Area Plan integrates these plans to the extent practical to simplify compliance with local and regional requirements, and improve the efficiency of plan administration. It establishes the land use regulations, development standards, implementation strategies, and needed environmental improvements for the area, and encourages new development and redevelopment that enhances the built environment to revitalize the Tahoe Valley community. Renovation of this gateway to the South Shore is important to achieving the City's economic development goals for revitalizing the community, improving infrastructure, and diversifying the local tax base.



## 1.1 Relationship to the Tahoe Valley Community Plan

Tahoe Valley was initially designated a "Preliminary Community Plan" area in the City's 1999 General Plan and TRPA's 1987 Regional Plan. The Tahoe Valley Community Plan was initiated in February 2003 through a joint planning effort by the City and TRPA. That process resulted in the Draft Tahoe Valley Community Plan that was published in March 27, 2007, and presented to the City Council on April 3, 2007. The City retained Pacific Municipal Consultants to prepare an Environmental Impact Report (EIR) on the draft community plan, which was completed in November 2008 but was not circulated. Because TRPA was in the midst of updating their 1987 Regional Plan that had the potential to alter land use regulations and incentives strategies, a decision was made to postpone adoption of the community plan until after an updated Regional Plan was adopted. Subsequently, TRPA adopted an updated Regional Plan in December 2012 that fundamentally changed the community planning process and provided an alternative planning process for local jurisdictions to adopt conforming Area Plans.

## 1.2 Area Plan Adoption

~~The South Lake Tahoe City Council and TRPA Governing Board will hold public hearings and take action on the Tahoe Valley Area Plan. Once found in conformance with the City's General Plan and TRPA's Regional Plan and adopted by both, this Area Plan will serve as the governing plan for the Tahoe Valley area for both the City of South Lake Tahoe and TRPA. This Area Plan will supersede Plan Area Statement (PAS) #110, South "Y", and a small portion of PAS 114, "Bonanza" (APNs: 32-141-02 and -18) for the purposes of land use regulation for both agencies and will provide management direction for all projects proposed within the plan's boundaries.~~

In early summer of 2015, the South Lake Tahoe City Council and TRPA Governing Board held public hearings on the Tahoe Valley Area Plan and, finding it in conformance with the City's General Plan and TRPA's Regional Plan, took action to adopt the plan. This Area Plan supersedes Plan Area Statement (PAS) #110, "South "Y"", and portions of PAS 114, "Bonanza" for the purposes of land use regulation for both agencies and will provide management direction for all projects proposed within the plan's boundaries.

## 1.3 Organization of the Area Plan

Following this Introduction, Section 2 characterizes the legal authority and regulatory setting of South Lake Tahoe. Section 3 provides an overview of the Area Plan's existing conditions and opportunities and constraints for redevelopment and conservation. Section 4 summarizes the plan's vision for the future and guiding principles for development and redevelopment. Sections 5-12 outline the policy direction for the plan, with individual sections on the following:

Section 5 – Land Use and Community Design
This section supplements the Land Use Element of the TRPA Regional Plan, and the Land Use Element of the City of South Lake Tahoe General Plan. This section includes the Area Plan's Goals and Policies related to land use and community design, and establishes land use and zoning regulations for the Area Plan.

Section 6 – Economic Development
This section supplements the Economic Development Element of the City of South Lake Tahoe General Plan. This section includes the Area Plan's Goals and Policies related to economic development and sustainability to create a vibrant and sustainable local economy.

Section 7 – Housing
This section supplements the Housing Sub-element of the TRPA Regional Plan, and the Housing Element of the City of South Lake Tahoe General Plan. This Section includes the Area Plan's Goals and Policies related to housing to achieve the Plan's vision of increasing the availability of quality workforce housing and affordable housing.

Section 8 – Transportation and Circulation
This section supplements the Transportation Element of the TRPA Regional Plan, TRPA/Tahoe Metropolitan Planning Organization (TMPO) Regional Transportation Plan, and the Transportation and Circulation Element of the City of South Lake Tahoe General Plan. Consistent with these plans, this section lists the specific policies applicable to the Area Plan and describes the improvements necessary to implement these policies.

Section 9 – Public/Quasi-Public Facilities and Services
This section supplements the Public Services and Facilities Element of the TRPA Regional Plan and the Public/Quasi-Public Facilities and Services Element of the City of South Lake Tahoe General Plan. This section identifies public/quasi-public service providers and needed improvement to facilities and services.

Section 10 – Natural and Cultural Resources
This section supplements the Conservation Element of the TRPA Regional Plan and the Natural and Cultural Resources Element of the City of South Lake Tahoe General Plan. It contains the Area Plan's environmental conservation and management strategy. It lists the needed environmental improvements for the Area Plan.

Section 11 – Recreation
This section supplements the Recreation Element of the TRPA Regional Plan and the City of South Lake Tahoe General Plan. It contains the plan's strategy for improving recreational opportunities and identifies proposed recreational improvements within the plan.

Section 12 – Health, Safety, and Noise
This section supplements the Noise Sub-element of the TRPA Regional Plan, and the Health and Safety Element of the City of South Lake Tahoe General Plan. This section includes the Area Plan's Goals and Policies related to public health and safety issues.

Section 13 – Incentive Programs
This section supplements the Implementation Element of the TRPA Regional Plan and the Implementation Program of the City of South Lake Tahoe General Plan. It describes public and private sector implementation strategies including capital improvement projects and planning and coordination activities, including a summary of incentives, and the plan reporting and revision process.

Appendix A – References

Appendix B - South Lake Tahoe Design Guidelines (2016)
Appendix B shall supplement Appendix C by providing context for the intent and visual illustrations of the Area Plan's design standards.

~~Appendix B – TRPA Height Findings~~
~~Appendix B includes height findings that are required for any structure that exceeds three stories in height.~~

Appendix C – Development and Design Standards
Appendix C sets development standards, design standards and permissible uses for the Area Plan's land use districts. The standards are intended to improve the scenic quality of the built environment, promote a sense of place, and support the community's desired community character. Development, redevelopment, or expansions of existing uses will be reviewed by the City or TRPA for consistency with these standards.

Appendix D – City of South Lake Tahoe Green Building Program
Appendix D sets criteria for earning City incentives for incorporating exceptional energy efficiency in new and redeveloped projects.

# SECTION 2
## Legal Authority and Regulatory Setting

The City of South Lake Tahoe plans and regulates within the policy and regulatory framework of both the Tahoe Regional Planning Agency (TRPA) and the State of California. This section describes the policy and regulatory framework for the Tahoe Valley Area Plan.

The purpose of the Tahoe Valley Area Plan is to define land use regulations and guidelines for planning decisions. The Tahoe Valley Area Plan presents principles, goals, policies and implementation strategies designed to encourage redevelopment, create a vibrant walkable ~~pedestrian~~ pedestrian-oriented community and provide for environmental improvements. The Area Plan is used by the City and TRPA to review specific development proposals in Tahoe Valley. The Plan also provides direction to property owners, community groups, and interested individuals in planning and design of development and redevelopment projects.

The Tahoe Valley Area Plan, once adopted, will become a part of TRPA's Regional Plan and the City of South Lake Tahoe General Plan. The Area Plan will also revise the official zoning map of the City of South Lake Tahoe.

## 2.1 Tahoe Regional Planning Agency

**Regional Plan**

In December 2012, the TRPA Governing Board adopted an updated Regional Plan. The TRPA Regional Plan Goals and Policies serve as a guide for all future land use decisions within the Tahoe Region. Priorities of the updated Regional Plan that apply to this Area Plan include:

- Accelerating water quality restoration and other Threshold gains by supporting environmental redevelopment opportunities, restoration of disturbed lands and Environmental Improvement Program (EIP) investments.
- Transitioning to more permitting by local governments to create "one-stop-shopping" for homeowner improvements in order to return TRPA to the more regional role the Compact originally intended.
- Creating walkable communities and increasing alternative transportation options.
- Retaining the established regional growth control system. Under this system, rampant overdevelopment was stopped and open spaces preserved. Most of the policies from the 1987 Regional Plan stayed in place with adoption of the 2012 Regional Plan.
- Creating a more efficient planning system that integrates TRPA requirements into the plans and permits of other government agencies.

- Encouraging property owners to transfer development rights from sensitive or outlying areas to Town Centers, with the goal of restoring these lands.
- Eliminating regulatory barriers to the environmental redevelopment of rundown buildings.
- Simplifying burdensome regulations for homeowners while achieving threshold gain.
- Integrating with the TRPA/TMPO Regional Transportation Plan to support sidewalk and bike trail projects that reduce automobile dependency and increase walkability and safety.
- Continuing to deliver restoration projects under the EIP that achieve erosion control on roadways and restore forests and wetlands.

TRPA's Regional Plan Conceptual Land Use Map classifies the majority of Tahoe Valley as Mixed-Use and also designates a portion of the area as Residential, Town Center Overlay, and Stream Restoration Plan Area. TRPA's Regional Conceptual Land Use Map is depicted in Figure 2.

The following descriptions define the intention and purpose of TRPA's land use classification, overlay districts and special designations:

Mixed-Use: Mixed-use areas are urban areas that have been designated to provide a mix of commercial, public services, light industrial, office, and residential uses to the Region or have the potential to provide future commercial, public service, light industrial, office, and residential uses. The purpose of this classification is to concentrate higher intensity land uses for public convenience, and enhanced sustainability.

Residential: Residential areas are urban areas having potential to provide housing for the residents of the Region. In addition, the purpose of this classification is to identify density patterns related to both the physical and manmade characteristics of the land and to allow accessory and non-residential uses that complement the residential neighborhood. These lands include: (1) areas now developed for residential purposes; (2) areas of moderate-to-good land capability; (3) areas within urban boundaries and serviced by utilities; and (4) areas of centralized location in close proximity to commercial services and public ~~facilitates~~facilities.

Town Centers: Town centers contain most of the Region's non-residential services and have been identified as a significant source of sediments and other contaminants that continue to enter Lake Tahoe. Town centers are targeted for redevelopment in a manner that improves environmental conditions, creates a more sustainable and less auto-dependent development pattern and provides economic opportunities in the Region.

Stream Restoration Plan Area: Stream Restoration Plan Areas are Stream Environment Zones along major waterways that have been substantially degraded by prior or existing development. Individual Restoration Plans should be developed for each Stream Restoration Plan Area in coordination with the applicable local government and property owners in the plan area. Restoration Plans may be developed as a component of an Area Plan or as a separate document and should identify feasible opportunities for environmental restoration.

**Area Plan**

Area Plans allow for planning that is responsive to the unique circumstances of communities within the Tahoe Region. TRPA and local governments, in close coordination with the local community, may prepare plans for a specific area in conformance with the Regional Plan. The authority and requirements for this Area Plan are provided in Chapter 13 (Area Plans) of the TRPA Code of Ordinances.

**Sustainable Communities Strategies**

California's Senate Bill 375 (SB 375) requires metropolitan planning organizations to develop regional land use and transportation policies to reduce greenhouse gas (GHG) emissions from cars and light trucks in order to meet targets established by the California Air Resources Board's Regional Targets Advisory Committee. SB 375 calls for each metropolitan planning organization to develop a Sustainable Communities Strategy (SCS) identifying the transportation, land use, and housing strategies that will reduce regional GHG emissions. The TRPA/TMPO adopted Regional Transportation Plan serves as the Region's Sustainable Community Strategy Plan.

The Tahoe Valley Area Plan is designed to be consistent with the TRPA Regional Transportation Plan and the SCS by providing a framework for implementing land use and transportation practices to reduce GHG emissions. These strategies include creating a mixed-use, pedestrian and ~~transit oriented~~transit-oriented land use pattern, providing for alternative modes of transportation and encouraging a variety of housing types within close proximity to transit, services and employment centers.

## 2.2 State of California

The Tahoe Valley Area Plan is designed to meet State of California requirements for specific plans and to facilitate the implementation of development goals and policies by establishing zoning districts, standards and criteria for development, and to set the distribution, location and extent of planned land uses consistent with the adopted City General Plan.

## 2.3 City of South Lake Tahoe

The City of South Lake Tahoe must adhere to both TRPA plans and regulations adopted pursuant to the Compact and to California State law, to the extent that State laws do not conflict with the Compact. Under the Compact, TRPA addresses general regional matters, while the City retains its power over purely local matters. The City can adopt more strict regulations than TRPA and can regulate matters over which TRPA has no authority.

**General Plan (2011)**

The City of South Lake Tahoe General Plan designation for Tahoe Valley is Town Center (TC). This designation provides for a mixture of uses, including tourist accommodation, commercial, intensive recreation, high-density residential, and mixed-use residential. This designation is applied to areas that are currently developed as commercial/visitor centers, have excess land coverage, where vertical mixed-use projects are appropriate, and are near commercial, employment, transit, and public services. The City's General Land Use Diagram is depicted in Figure 3.

The overall purpose of the Town Center is to:

- Provide for the orderly, well-planned, and balanced growth of the Town Center and support the area's role as an important commercial, tourist, and recreation center that provides full services to residents while appealing to visitors.
- Promote the Town Center as a pedestrian- and transit-oriented, mixed-use activity center and a gateway to an outdoor tourism recreational destination and expand its role as an economic center for residents of South Lake Tahoe.
- Encourage a mix of uses that promotes convenience, economic vitality, and a pleasant quality of life and improve access to a greater range of facilities and services for residents and visitors.
- Establish development and design standards that improve pedestrian- and transit-orientation and the visual quality of development and that will create unified, distinctive, and attractive community character.

The General Plan includes the following policies that are directly applicable to the Tahoe Valley Area Plan:

**Policy LU-2.2** directs the City to periodically update and implement the four community plans, of which Tahoe Valley is one, as a way to focus development commodities and revitalization efforts.

**Policy LU-2.7** directs the City to transform the Tahoe Valley area into an attractive gateway commercial district that serves both residents and visitors.

**Policy LU-2.9** defines Tahoe Valley as one of the City's nodes that is targeted for future development and revitalization.

**Policy LU-2.10** encourages the use of incentives to create a compact, mixed-use, transit-oriented, and higher-density development pattern within the Tahoe Valley area.

**Policy LU-2.11** designates the Tahoe Valley as a primary area in the City for resident-serving commercial uses, workforce housing and affordable housing. Furthermore, the policy encourages transforming the area into a contemporary, pedestrian-oriented, mixed use, commercial service district served by a transit center and alternate transportation opportunities.

**Policy LU-2.13** designates the Tahoe Valley area as a social and economic center that includes a variety of housing types, mixed-use development, recreational or social gathering spaces, cultural uses, civic uses and facilities, and commercial services.

The development of the Tahoe Valley Area Plan is intended to meet the directive of the General Plan policies outlined above.

**Sustainability Plan**

The City of South Lake Tahoe adopted policies for sustainable development and "green" buildings in the Land Use Element of the General Plan. The policies call for creating a sustainable and energy-efficient built environment as a key vision of the City of South Lake Tahoe. The policies provide direction on the use of "green" building technology, energy efficiency, and strategies to achieve sustainable development practices.

The City has implemented specific strategies including providing streamlined permitting to encourage "green" building practices and instituting a plastic bag ban for grocery stores, food vendors, and retail establishments.

**Climate Action Plan**

The City adopted a Climate Action Plan (CAP) in 2020, setting carbon pollution goals for 2030 and 2040. 2030 has been identified as a key milestone year to achieve significant carbon pollution reductions to avoid the worst impacts of climate change. On June 21, 2022, the City officially adopted a science-based carbon pollution target, refining the originally estimated target established in Resolution 2017-026. This target establishes a reduction target of 59.2% from the 2018 baseline levels and aligns with the City's commitment to carbon pollution reduction and renewable energy goals. The CAP outlines a framework consisting of five overarching strategies, each encompassing specific actions. These strategies are categorized as follows: transportation, land use, water and solid waste, carbon sequestration and watershed health, and building energy. Under each strategy, a set of actions is identified to guide the City's efforts in addressing climate change and promoting sustainability.

The Tahoe Valley Area Plan incorporates policy and land use direction to advance CAP strategies to improve public transit, increase the use of electric vehicles, increase walking and biking, encourage high-density mixed-use neighborhoods close to public transit, improve energy efficiency of buildings, reduce wildfire risk, and protect watersheds.

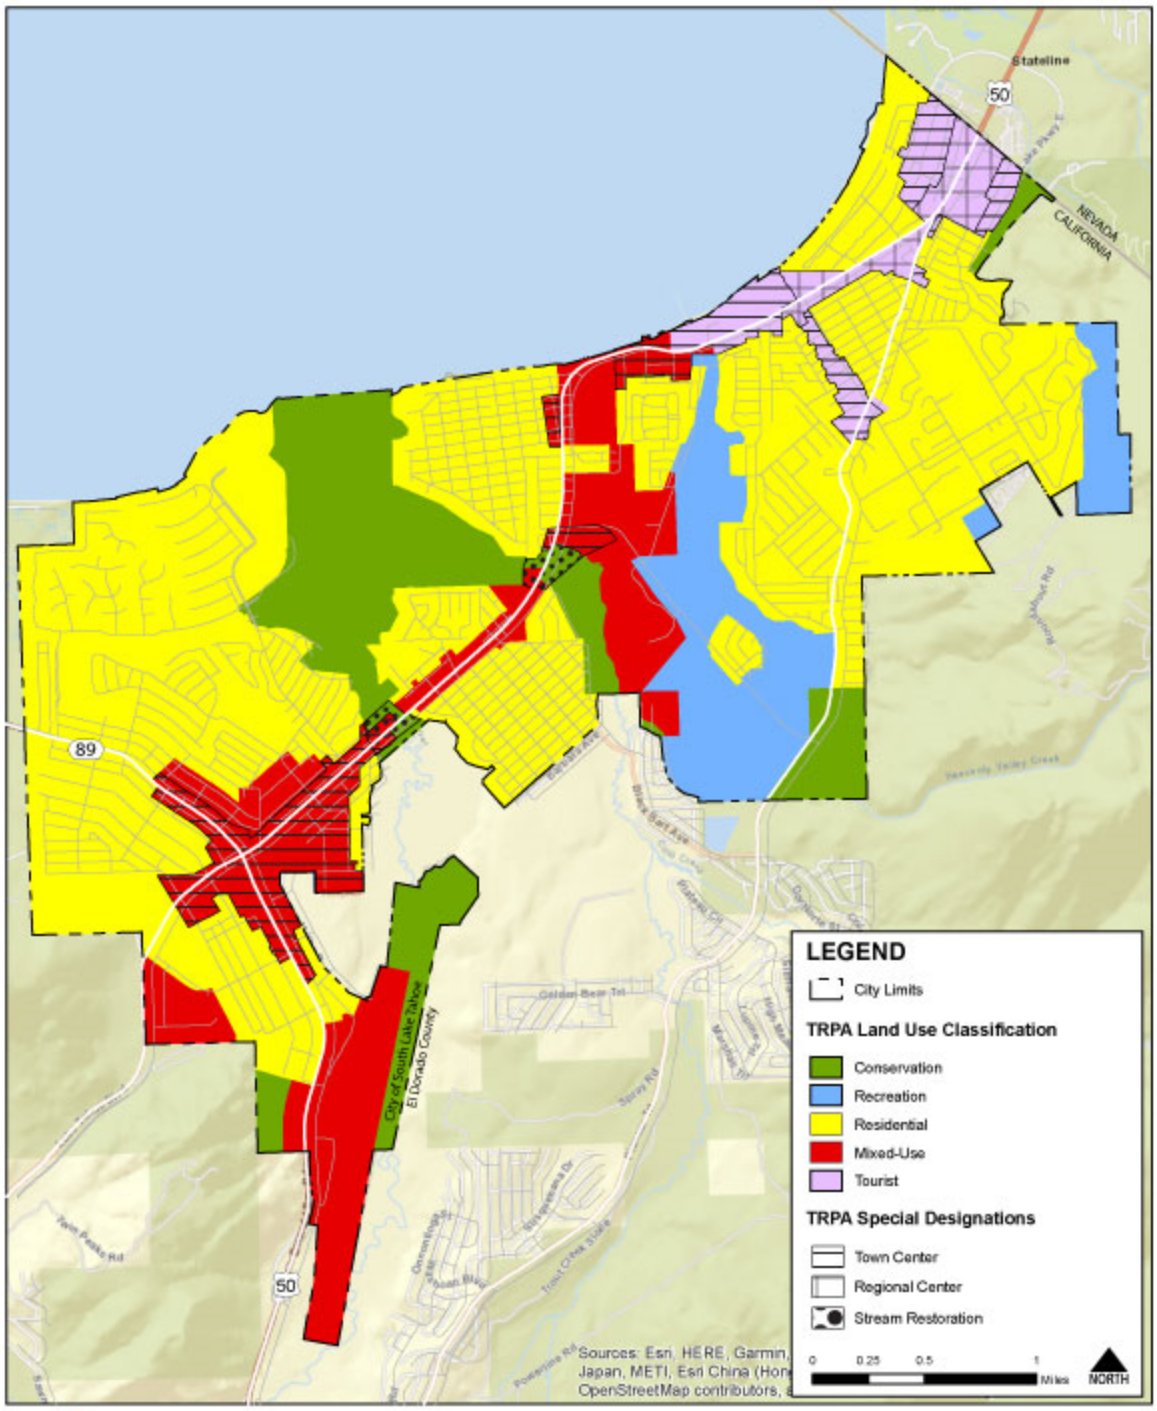
**Plan Area Statements**

~~Once adopted, the~~Upon its adoption in 2015, the Tahoe Valley Area Plan ~~will replace~~replaced ~~-~~Plan Area Statement (PAS) 110, "South ~~'"~~Y', ~~,~~ and a small portion of PAS 114, "Bonanza" (APNs: 32-141-02 and -18).

Updates to the plan in 2023 expanded the Area Plan boundary in three areas. To the southwest, parcels fronting US Highway 50 from the existing boundary line south to H Street, plus APNs 032-161-012, 032-161-013, 032-161-009, and 032-161-008 (previously PAS 114) were incorporated. Seven parcels fronting Melba Drive were added so that the Area Plan is contained in this corner by the intersection of E Street and Melba Drive (previously PAS 114). The third area of expansion was the northeast corner of the plan area. All parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave shall be included up until the existing Area Plan boundary, in addition to APN 023-221-020 north of Eloise Ave (previously PAS 111).

**Standards and Guidelines**

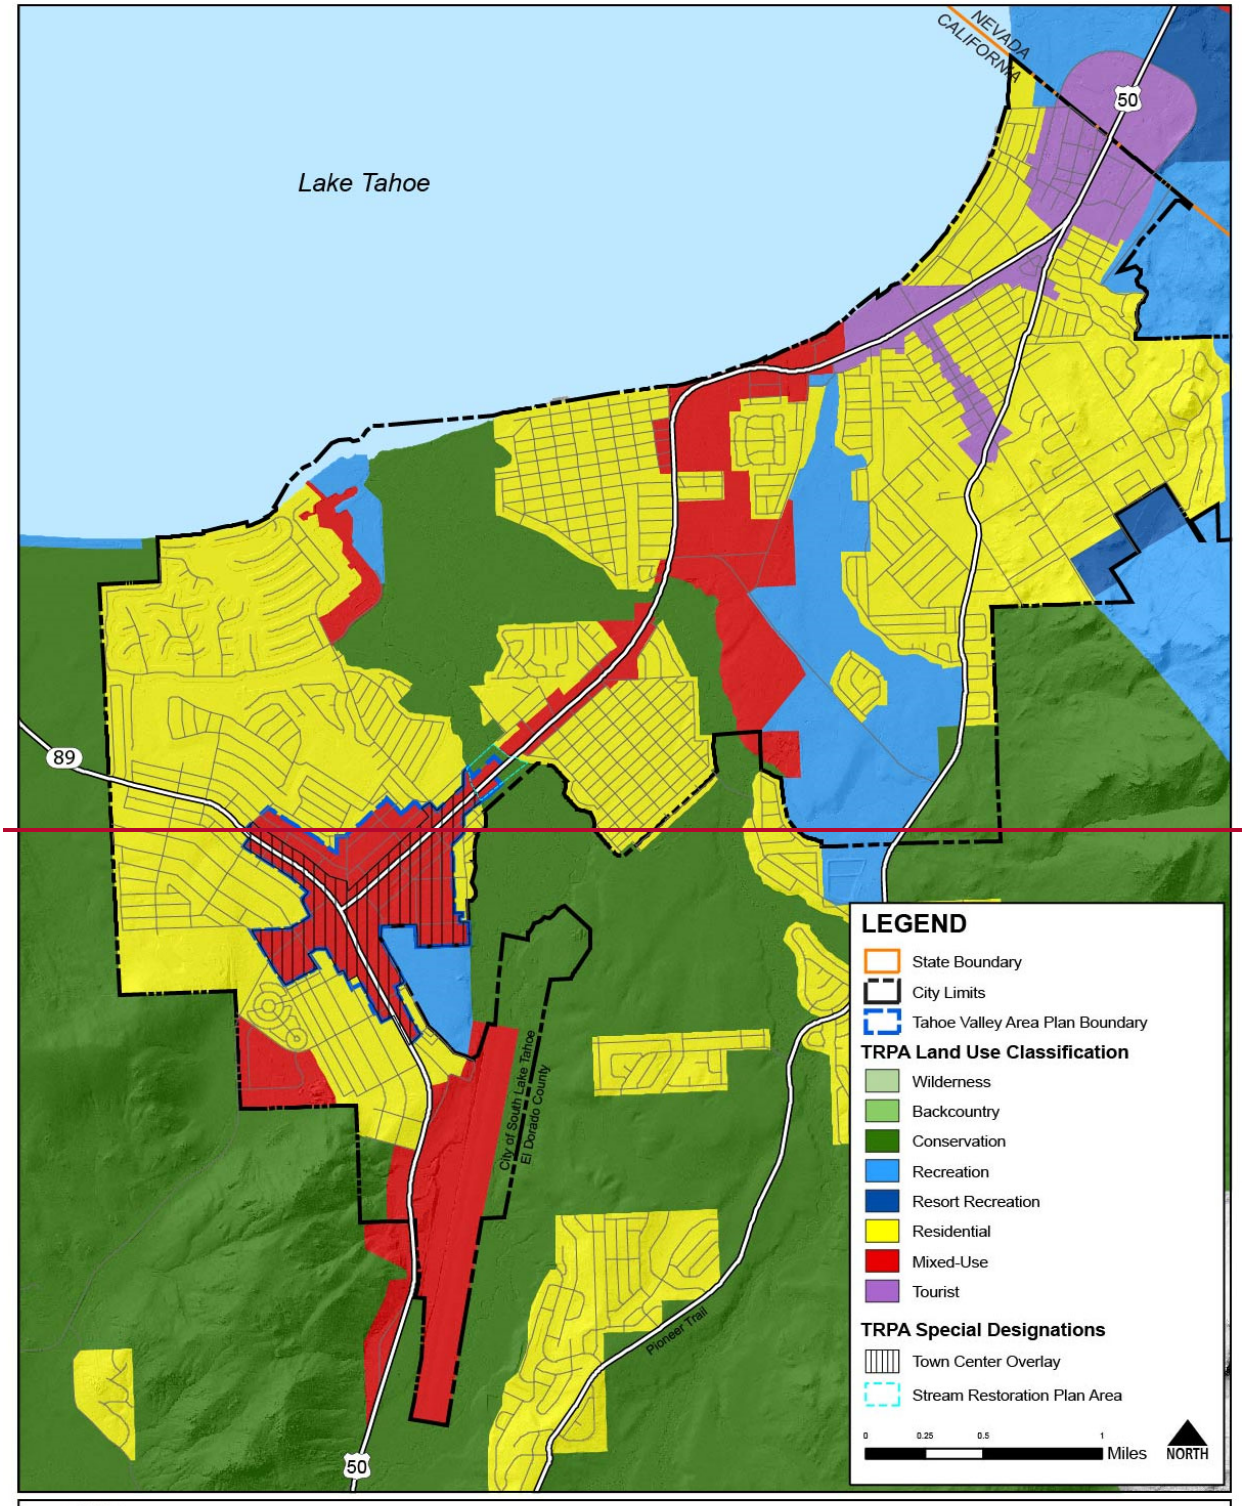
The City of South Lake Tahoe and TRPA have jointly adopted Standards and Guidelines that include citywide design standards, guidelines, and specific design standards for the three previously adopted Community Plans.



The citywide design standards and guidelines, as well as specific ~~substitute~~ design standards tailored towards the Area Plan are incorporated in the Tahoe Valley Area Plan and will provide design guidance for the ~~Area Plan~~plan area.

**Smart Growth Principles**

In August 2005, the South Lake Tahoe City Council endorsed a set of Smart Growth Principles for possible inclusion in the City General Plan for South Lake Tahoe. These principles are organized under the following headings:



- Land Use
- Transportation
- Community Livability
- Governance

The Tahoe Valley Area Plan is designed to implement the City's smart growth principles by encouraging a land use pattern that focuses on walkable, compact mixed-use centers, with access to transportation choices while preserving open spaces and critical environmental areas.

# SECTION 3
# Existing Conditions

This section describes the existing physical conditions within the Tahoe Valley plan area, both natural and human-made. The Tahoe Valley area has been extensively altered by human activity and development since it was first settled in the late 1800s. The present pattern of development in the area has evolved primarily since the 1950s. The conditions summarized in this section act as opportunities or constraints (or sometimes both) to development, redevelopment, and conservation of resources within the plan area.

This section is organized into the following topics: Land Use, Economic Conditions, Transportation and Circulation, Public/Quasi-Public Facilities and Services, Natural Resources and Cultural Resources, Open Space, and Health and Safety.

## 3.1 Economic Conditions

The economy of South Lake Tahoe is largely dependent upon tourism, which fluctuates seasonally. The lodging industry at the South Shore has experienced substantial difficulties over the past 10 years. The number of annual rooms rented has declined 35 percent. More recently, a slight uptick has been observed in 2010/2011, and reports indicate 2011/2012 also showed slight improvements. However, these figures are still substantially lower than the levels seen in 2001/2002 and before, which translates into less local revenue generated as well as fewer job opportunities. (TTD, 2013).

The Tahoe Valley area is largely dominated by strip commercial development along South Lake Tahoe's key corridor (US 50). Shortcomings of this type of development include the area's many curb cuts for driveways, relatively small and fragmented parcels, stand-alone structures, older motels struggling to be profitable, and lack of continuous sidewalks, bike paths, landscaping, and other amenities. In addition, this type of development pattern is difficult and costly to modify. South Lake Tahoe also has a strict regulatory environment created around the need to protect the environment in the Tahoe Basin, which adds to the challenges of redevelopment.

In summary, there is a clear need to revitalize the physical appearance and accessibility of the area to increase economic activity. The area is in a unique position to capture more local-resident-serving commercial sales, as well as capture more tourist sales.

## 3.2 Land Use

**Neighboring Land Uses**

The Tahoe Valley plan area is bounded on the north, west, and south primarily by residential subdivisions, dating from the 1960s to the 1990s. The plan area is bordered on the east by the Upper Truckee Marsh and to the southeast by the South Lake Tahoe Airport.

**Land Uses**

The plan area is made up of a variety of existing land uses, including residential, commercial, tourist accommodation, industrial, and public service. Table 1 summarizes existing uses within the plan area by acreage, percentage of total acreage, and number of parcels. The plan area encompasses ~~337~~ 374 acres and ~~482~~ 525 individual parcels (not including existing roadway/infrastructure related parcels) as shown in Figure 4. Tahoe Valley is the gateway neighborhood for South Lake Tahoe, and includes various commercial uses such as clothing stores, factory outlets, automotive supply stores and dealerships, drug and liquor stores, restaurants, and supermarkets. These uses occupy structures ranging in age and physical condition, from the 1890's to present day construction.

When Measure T was passed in 2018, commercially zoned parcels the Tahoe Valley Area Plan became one of the limited areas in South Lake Tahoe where vacation home rentals ~~were~~are allowed. This exception, however, only applies to commercially zoned properties within the Area Plan ~~at the time of Measure T's adoption~~as of 2017. ~~Any areas added to the plan area though subsequent amendments~~Areas later rezoned to commercial are not eligible for vacation home rental permits. Additional restrictions to eligibility for a Vacation Home Rental permit are included in Appendix C.

**Table 1**
**Existing Land Use**

| Land Use | Acres | Percent of Acreage |
|---|---|---|
| Residential | ~~37.2~~47.1 | ~~11.1~~12.6% |
| Tourist | ~~12.0~~13.0 | ~~3.6~~3.5% |
| Commercial | ~~141.0~~145.3 | ~~41.9~~38.9% |
| Public | 19.2 | ~~5.7~~5.1% |
| Quasi-Public | 8.2 | ~~2.4~~2.2% |
| Recreation | 3.3 | ~~1.0~~0.9% |
| Vacant Private | ~~18.1~~31.3 | ~~5.4~~8.4% |
| Vacant Public | ~~14.8~~15.3 | ~~4.4~~4.1% |
| Open Space | 20.2 | ~~6.0~~5.4% |
| Roads and Infrastructure | ~~62.5~~71.1 | ~~18.6~~19.0% |
| **TOTAL** | **~~336.5~~374** | **100%** |

Source: TRPA GIS, March ~~2014~~2023.

***Residential***

Based on 2013 TRPA data, the plan area includes a total of 37.2 acres of residential land, of which 16.1 acres are single-family homes, 16.3 acres are multi-family, and 3.8 acres are mobile homes. The area adjacent to the Barton Hospital in particular contains a diverse range of housing types, including single and multi-family dwellings, senior care facilities, and mobile homes. The age and quality of these structures vary widely. The Industrial District contains a number of residential units, which are non-conforming under an industrial designation. The residential units in the plan area, for the most part, tend to be lower-priced rentals rather than owner-occupied housing.

***Non-Residential***

The plan area contains a wide array of commercial uses, most of which are located in commercial centers along the highways. The plan area does have several major commercial centers surrounding the Y intersection. These include a center anchored by ~~a~~ Raley's supermarket~~ and Kmart~~, ~~an outlet store center~~The Crossings at Tahoe Valley outlet store center, and commercial retail property occupied by a TJ Maxx. The area east of the Y intersection along Lake Tahoe Boulevard contains a car dealership, hardware store, and a tire sales and repair center.

The plan area also contains a mix of light industrial uses concentrated primarily in the northern part of Tahoe Valley. These uses include small-scale manufacturing, a solid waste transfer and recycling facility, auto repair shops, warehousing, wholesale, and other light industrial service uses. Many of these businesses are adjacent to residential uses.

Public and quasi-public uses are discussed in detail under Public/Quasi-Public Facilities and Services.

***Vacant Lands***

In 2014, ~~A~~approximately 18.1 acres (5.4 percent) of the plan area ~~are currently (2014)~~were vacant and privately owned. These vacant lots are not concentrated in any one part of the plan area, rather they are scattered throughout the plan area. At the time of the 2024 amendments, there were 31.3 acres (8.4%) of vacant private owned land. The main contributor to this increase was the addition of the Emerald Bay Connection Corridor District.

***Publicly-Owned Open Space***

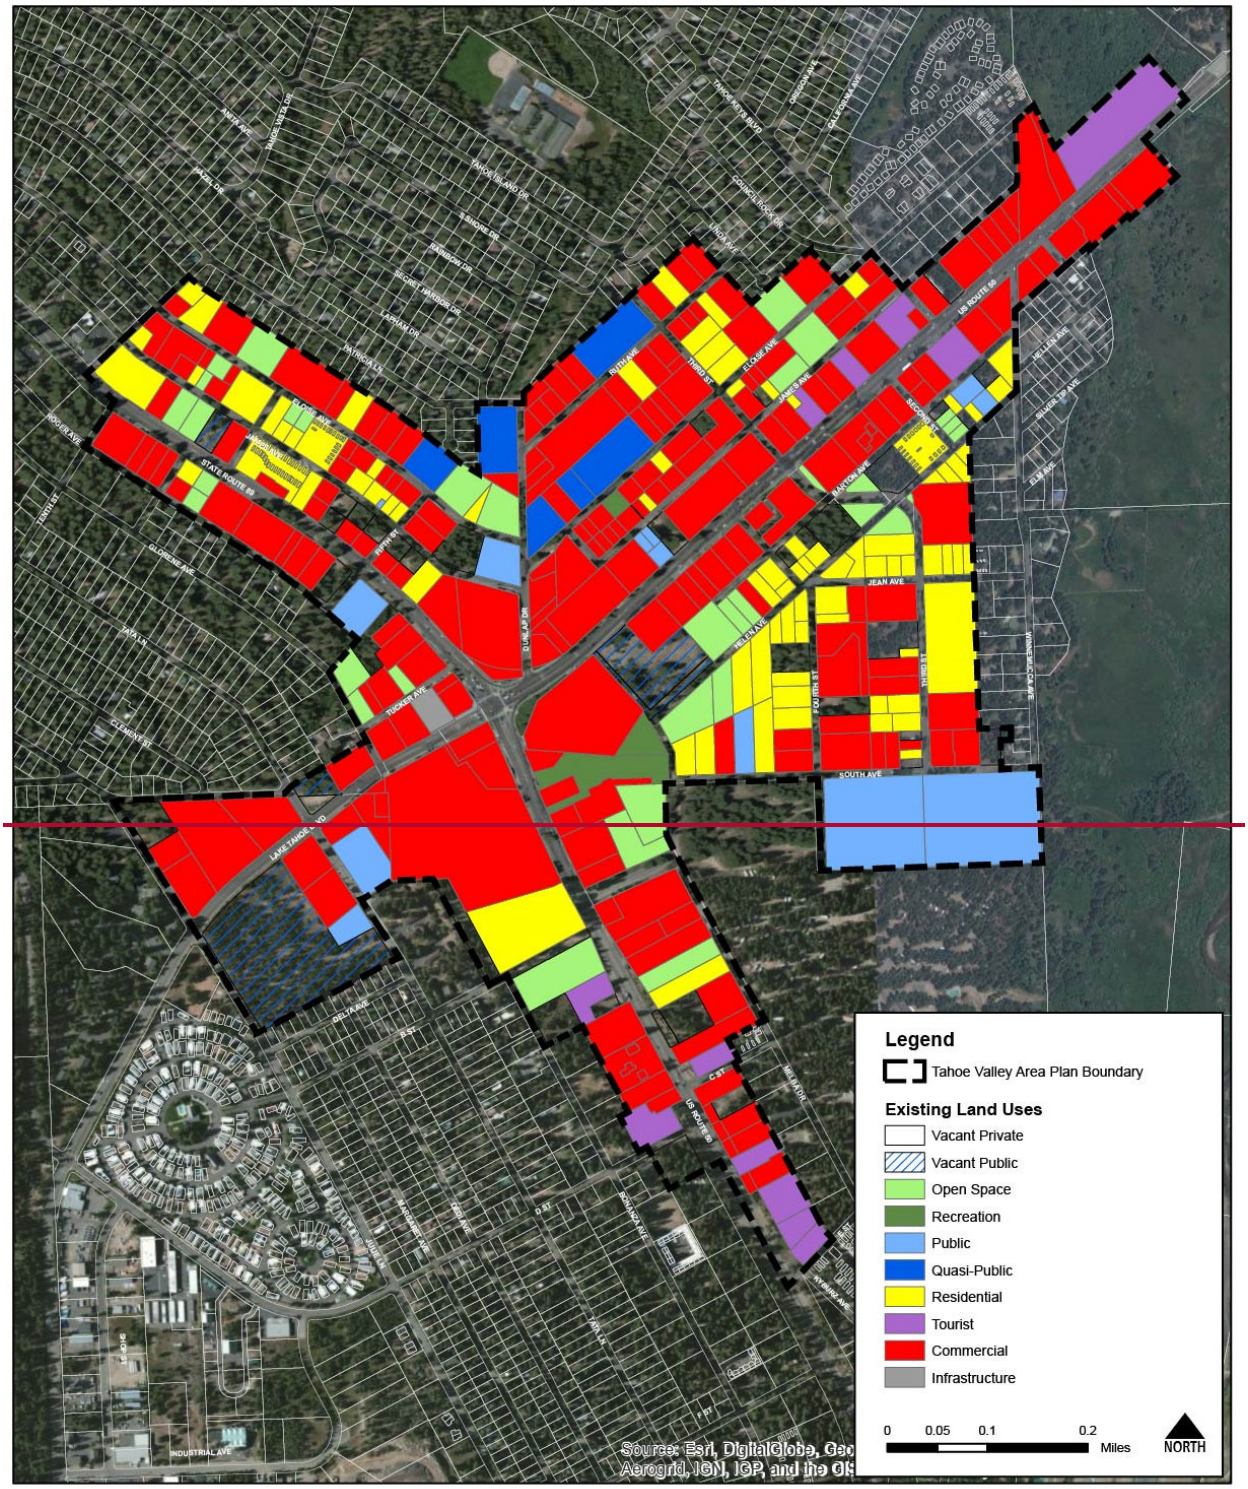
The plan area contains a number of (~~6~~ 5.4 percent, 20.2 acres) of publicly-owned vacant open space parcels. These properties are owned by the United States Forest Service, California Tahoe Conservancy, or City of South Lake Tahoe and are subject to various use and development restrictions based on which agency owns the property and the manner in which the property was acquired.

***California Tahoe Conservancy Asset Lands***

The California Tahoe Conservancy (CTC) owns ~~six~~ seven (~~6~~7) parcels, totaling 16.~~4~~9 acres, in the plan area that are considered "asset lands" and may be available for development. The CTC's overall land inventory totals 4,677 parcels accounting for more than 6,500 acres, of that total there are 17 Conservancy-owned properties throughout the basin that are regarded as "*asset lands*." Asset lands are parcels which are not essential to carrying out Conservancy goals, which could have significant market value, and which are not otherwise restricted from disposal by law or Board policy. In fact, some asset lands, at the time of acquisition, were identified for possible future transfer or sale. The CTC defines these classes of lands as "Area Plan or Town Center Asset Lands." These area plan asset lands are considered to be developable lands, or portions thereof, in highly urbanized areas that could support sustainable, compact development or other uses consistent with the Goals and Policies of the Regional Plan and local area plans (CTC, 2014). There are a total of 17 area plan asset land parcels located basin-wide with 6 of those located within the boundaries of the Tahoe Valley Area Plan. The Tahoe Valley Area Plan asset lands account for approximately 16.4 acres. ~~and all~~almost of the parcels are vacant except for one located on Tata Lane~~. The parcel is currently~~ developed as an offsite parking lot, and two parcels used for Sugar Pine Village affordable housing projecy.

***Commercial Floor Area***

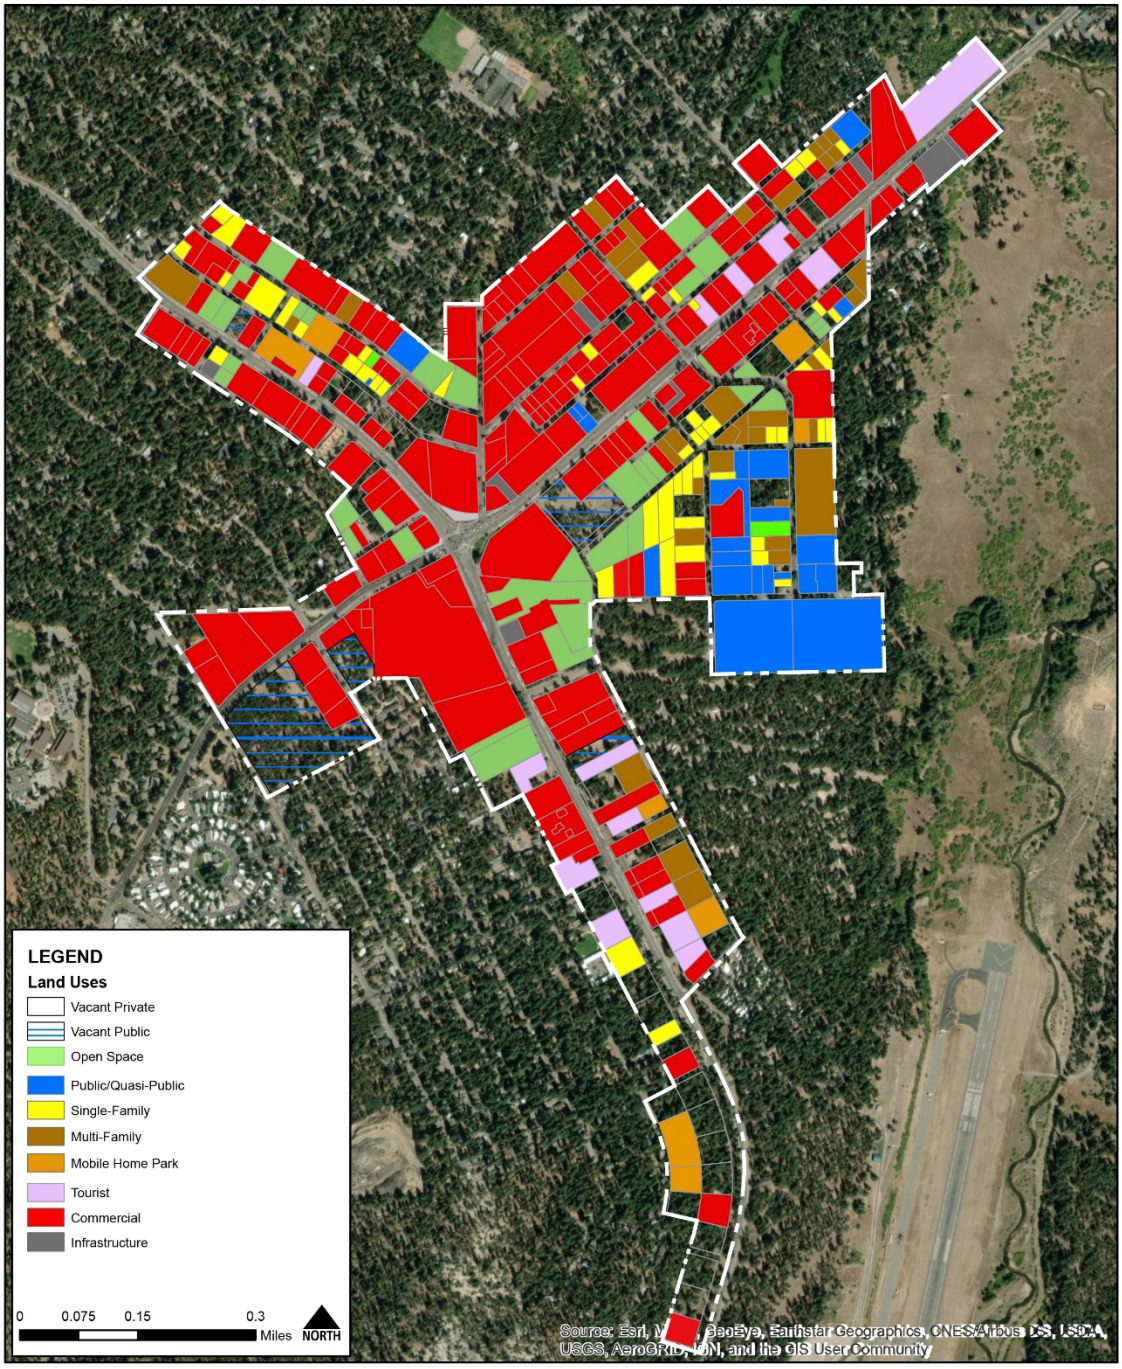
TRPA regulates the rate and timing of growth within the region, including commercial floor area (CFA). TRPA requires an allocation from the City or from TRPA prior to constructing a project or commencing a use that creates additional CFA. TRPA also allows transferring and reconfiguring legally existing commercial floor area. The Tahoe Valley plan area contains approximately 1,161,000 square feet of existing developed CFA. An additional 15,000 square feet of CFA will be made available by the City for use upon adoption of the Tahoe Valley Area Plan.



***Lake Tahoe Airport Land Use Compatibility Plan***

As part of the land use planning process mandated by the Division of Aeronautics and the California Airport Land Use Planning Handbook, several Airport Land Use Commissions (ALUCs) have been formed throughout the state to prepare and administer ~~Comprehensive Land Use Plans (CLUPs)~~an Airport Land Use Compatibility Plan (ALUCP) for each public-use airport in the state. ~~El Dorado County has an operating ALUC that has prepared CLUPs for the airports in the county. However, the~~ The City of South Lake Tahoe has been named as the administrator of the Lake Tahoe Airport. As such, the City operates as its own ~~ALUC~~ ALUCP and the City ~~has developed the Lake Tahoe Airport CLUP.~~ adopted an ALUCP in August of 2019.

The policies contained in the ALUCP are designed to promote compatibility between the Airport and surrounding land uses to the extent that these areas are not already devoted to incompatible uses. As adopted, the ALUCP policies provide the foundation through which the ALUC can execute its duty to review land use development in areas around the airport.



All of the land within the Tahoe Valley Area is within the ALUCP Airport Influence Area. ~~The~~ Much of the Area Plan is in Safety Zone 6, which is the least restrictive Safety Zone. A small southeastern portion of the ~~Tahoe Valley plan area~~Area Plan (e.g., Barton Hospital) lies within ~~the Overflight Safety Zone (~~Safety Zone 3.~~)~~ ~~and under the Horizontal Imaginary Surface of the Lake Tahoe Airport CLUP. Safety Zone 3 (see Figure 5) is the least restrictive Safety Zone around the airport and thus only privately owned assembly and entertainment, publicly owned assembly and entertainment, collection stations, and sport assemblies are prohibited within that area.~~ The Horizontal Surface, located over the ~~same portion of the~~ plan area ~~as Safety Zone 3,~~ is located at 6,419 feet elevation, 98 feet above the highest point in the Area Plan.

~~The Lake Tahoe Airport is in the process of updating the Airport Master Plan. Once the Master Plan is adopted by the City and TRPA, the CLUP, now referred to as an Airport Land Use Compatibility Plan (ALUCP), will also need to be updated.~~

## 3.3 Transportation and Circulation

**Roadways**

The Tahoe Valley plan area is served by a variety of arterial, collector, and local streets. The existing road network is shown in Figure 6.

The highway and street networks within the plan area ~~is~~ are largely dominated by US Highway 50 (Lake Tahoe Blvd.) and State Route (SR) 89 (Emerald Bay Rd.). US Highway 50 is the major east-west roadway facility connecting Sacramento, California and Carson City, Nevada, and is the main facility serving the South Shore area of Lake Tahoe. East of the "Y" intersection, US Highway 50 is also Lake Tahoe Boulevard. Along most of its ~~1.5 mile~~1.5-mile length within the plan area, Lake Tahoe Blvd is a five-lane arterial road with a continuous two-way left-turn median lane that transitions to dedicated left-turn pockets at major intersections. In addition to Lake Tahoe Blvd, a network of arterial, collector, and local streets that provide the remaining framework for the overall roadway system. These secondary streets serve as the connection points to adjacent neighborhoods as well as access to the Area Plan's Industrial District and Hospital District.

A well-functioning transportation and circulation system is necessary to address peak hour congestion. The existing road network is relatively limited and experiences high traffic volumes during peak visitor periods.

**Level of Service**

TRPA's Regional Plan Goals and Policies and Regional Transportation Plan, as well as the City's General Plan, set standards for vehicle "level of service" (LOS). LOS is a qualitative measure that describes the operating performance of transportation facilities. For roadways, LOS is an indicator of traffic flow from the perspective of motorists based on factors such as speed, travel time, delay, freedom to maneuver, volume, and capacity. It is defined on a scale from LOS A, the least congested operating conditions, to LOS F, the most congested operating conditions.

The TRPA Regional Plan and City General Plan require that peak period traffic flow not exceed LOS D for major roadways (arterials and collector routes), and signalized intersections shall be at LOS D. LOS E may be acceptable during peak periods, not to exceed 4 hours per day.

The US 50/SR 89 intersection is operating at LOS C while US 50 roadway segments are operating at LOS E during the summer Friday evening peak hour (TRPA, 2012).

While a number of roadways currently operate at LOS D or E, the key intersections connecting those facilities generally operate at LOS C or better. This is because many of those intersections have been designed with additional travel lanes, channelized "free" right-turn movements, and other capacity enhancements to operations for this segment (TRPA, 2012).

**Curbs and Gutters**

The City has historically required curb and gutter improvements only for projects requiring the issuance of a Special Use Permit. As a result, much of the Tahoe Valley plan area contains a discontinuous system

of curbs, gutters, and roadside stormwater infiltration. Along US 50, Caltrans has recently constructed a water quality improvement project that resulted in the installation of curbs and gutters from the Y intersection to E Street. Curbs and gutters are also scheduled to be installed on SR 89 from the "Y" intersection heading north in 2014 and on US 50 from the "Y" intersection to Trout Creek in 2016.

**"Y" Intersection**

The "Y" intersection commonly refers to the intersection of US 50, SR 89, and Lake Tahoe Boulevard. During peak tourist periods high traffic volumes and weather-related reductions in roadway capacity or vehicle speeds, westbound traffic on US 50 south of the "Y" to form queues that back through the "Y" and east on US 50. This is primarily due to a merger of two westbound lanes to a single lane when high volumes of traffic is leaving the Tahoe Basin in a short period of time. While the frequency and length of queue conditions vary year-to-year and records of queue periods are not kept, it is reasonable to estimate that queues form one to three hours per day on roughly 20 days per year for a total of roughly 50 hours per year (CSLT, 2005).

The intersection was improved in 2009 with restriped lanes, improved signalization and an improved right-turn "bypass lane" for the northbound-to-eastbound and the westbound-to-northbound movements, separated from through traffic by a raised island.

**Parking Facilities**

Most private commercial and industrial businesses provide off-street parking for employees and patrons. However, many of these properties do not meet current parking requirements of Chapter ~~5~~ 6 of the City Code. This forces many people to park on roadways and unpaved areas which creates a problem for snow removal and street sweeping equipment. There are presently no off-street publicly-owned parking facilities within the plan area.

**Pedestrian and Bicycle Facilities**

The City of South Lake Tahoe's bicycle network is made up of three classes of bicycle facilities (classified by the California Department of Transportation), as follows:

- **Class I ~~Shared Use~~Shared Use Path~~s Path~~.** These paths ~~provides~~provide a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross-flow from vehicles minimized. Existing Class I facilities in the Area Plan are limited, consisting of relatively short segments south and east of ~~the Factory Outlet Stores~~The Crossing at Tahoe Valley at the "Y" intersection and a facility crossing the Upper Truckee River just to the north of US 50 in the eastern end of the Area Plan. A nearby Class I facility follows SR 89 to Camp Richardson and Spring Creek, starting at the northern end of Eloise Avenue at 15th Street. In 2022, a Class I facility was constructed along the south side of Lake Tahoe Blvd from Viking Way to the "Y" intersection.
- **Class II Bike Lane.** Class II facilities provides a striped lane for one-way bicycle travel on a street or highway. Within the Area Plan, these facilities are provided along Tahoe Keys Boulevard, Helen Avenue, Melba Drive, B Street, C Street, 10th Street, Lake Tahoe Boulevard west of the "Y" intersection, and US 50 from the "Y" intersection just beyond E street.
- **Class III Bike Route.** As with Class II facilities provides for shared use with bicycle or motor vehicle traffic, typically on lower volume roadways. Class III facilities are typically provided along low-volume streets to minimize the potential for conflicts between bicyclists and motorists. In the

Area Plan, Class III routes are designated along Eloise Avenue and SR 89 north of the "Y" intersection. This route connects to the Class I path that roughly parallels SR 89 to Camp Richardson and beyond.

The Tahoe Valley plan area contains various Class I, II, and III Bicycle Routes (Figure 6). Where bike facilities are not provided it is common to see pedestrians and bicyclists using the street right-of-ways to navigate the community.

**Transit Services and Facilities**

South Lake Tahoe, including the Tahoe Valley plan area, is served by ~~BlueGo~~ Tahoe Transportation District (TTD) fixed route bus service, seasonal recreation routes, and Amtrak buses. A senior van service assists many area seniors in getting to appointments and running errands. The routes of these various transit services are shown in Figure 6.

All fixed route bus stops within the plan area have benches, while some of the stops also provide shelter for bus users. The City has been coordinating with the Tahoe Transportation District on installing additional bus shelters along US 50 as funding becomes available.

The Y Transit Center is located at the southwest corner of the Y intersection. This center is one of two City-owned transit centers~~,~~ and provides a transfer point for transit users on Tahoe Transportation District's ~~the BlueGo~~ fixed-route bus services. The transit center is also served by Amtrak buses connecting to the Capitol Corridor train route in Sacramento.

**South Lake Tahoe Airport**

The Tahoe Valley plan area is located approximately one mile northwest of the Lake Tahoe Airport. The airport, which is a general aviation airport owned and operated by the City of South Lake Tahoe, contains a single north-south 8,541 foot long runway. The airport facility includes a commercial passenger terminal, 169 plane tie-down spaces, and a 57-unit hangar and storage complex.

According to the airport administration, aircraft presently based (2014) at the airport consist of 22 single engine, three multi-engine aircraft, and three helicopters. There were 23,540 annual operations counted by the FAA tower in 2010 (FAA Air Traffic Activity System [ATADS] http://aspm.faa.gov/opsnet/sys/Airport.asp).

## 3.4 Public/Quasi-Public Facilities and Services

This section describes the public and quasi-public facilities and services located in the Tahoe Valley plan area. In addition to these, the area hosts several cellular towers, offices for local power and gas suppliers, day care centers, places of worship, and social service organizations.

**Water and Wastewater Services**

Water service within the Tahoe Valley plan area is provided by the South Tahoe Public Utilities District (STPUD) and Lukins Brothers Water Company (Lukins). STPUD provides water service to the majority of the plan area. Lukins provides water services to parcels located north of Emerald Bay Road and west of Dunlap Drive.

STPUD is a California Special District established in 1950. The 27,000-acre service area covers the South Shore of Lake Tahoe from Emerald Bay on the west, Christmas Valley on the south, the California-Nevada state line to the east, and Lake Tahoe to the north. The District's water supply comes entirely from 20 active municipal wells that pump groundwater from the Lake Tahoe Basin. The District maintains one pump station and one active groundwater well within the plan area.

The Lukins Brothers Water Company is a private water purveyor established in 1942 which is governed by the California Public Utility Commission. It provides service to approximately 200 customers within the Tahoe Valley plan area including businesses (75 percent), single-family (5 percent) and multi-family (20 percent) dwellings.

Wastewater collection service within the Tahoe Valley plan area is provided by STPUD. STPUD collects and treats wastewater from businesses and residents within the District's service area, which encompasses approximately 42 square miles and includes the City of South Lake Tahoe and unincorporated area of El Dorado County within the Tahoe Basin. The District's wastewater collection/treatment/recycling processes include a maximum 7.7 million gallons per day (mgd) advanced secondary operation serving 17,000 customers. The District's collection system and wastewater treatment plant produces an average dry day rate of 4.3 mgd, 100 percent of which is recycled. Flows are conveyed to the District's Wastewater Treatment Plant (WWTP). The District's WWTP, last expanded in 1989, has a capacity 7.7 mgd. Treated effluent is exported 26 miles to Harvey Place Reservoir in Alpine County (STPUD, 2007 & 2014).

**Electricity Services**

Liberty Utilities provides electrical services to the plan area. Service is primarily transmitted over existing overhead lines along collector and local streets and underground along arterials (i.e., US 50, SR 89 and Lake Tahoe Boulevard). Liberty Utilities' office is also located within the Area Plan on Eloise Avenue.

**Gas Services**

Natural gas service in the Tahoe Valley area is provided by Southwest Gas, which has been providing gas to the South Lake Tahoe area since 1963. Southwest Gas is regulated by the California Public Utilities Commission for the service they provide in California.

**Telephone and Cable Services**

AT&T, Verizon, and T-Mobile provide telephone and cellular service to the plan area. Charter Cable provides cable television, phone and internet services under a franchise agreement with the City. Three cellular towers are located within the plan area.

**City of South Lake Tahoe Facilities**

- **City Services Center.** Located at 1052 Tata Lane, this facility is owned by the City and houses the Development Services Department ~~and Engineering Division of the Public Works Department.~~
- **Public Works Department.** The Public Works Department offices are located at 1740 D Street. Vehicle maintenance is completed by the Fleet Services Division at 1700 D Street and 1691 Shop Street.
- **Information Technology.** The City's IT Department operates from 1700 D Street.

- **Fire Station #3.** Located at 2101 Lake Tahoe Boulevard, this facility is owned by the City and is one of three fire stations that serve South Lake Tahoe. This station serves the Tahoe Valley area with response times between three and five minutes.
- **Transit Center.** The transit center, owned by the City of South Lake Tahoe and located at the "Y" intersection, provides shelter and a transfer location for the ~~BlueGo~~ TTD bus system, and a pickup/drop-off point for Amtrak buses.

**El Dorado County Facilities**

- **El Dorado County Department of Transportation.** Located at 924 Emerald Bay, this privately-owned facility is rented by the County.
- **El Dorado County Health and Human Services Agency.** Located at 1900 Tata Lane, this office includes the Mental Health, Public Health, Community Services, and Social Services divisions.

**State Facilities**

- **California Tahoe Conservancy (CTC).** Located at 1061 Third Street, the Conservancy is an independent State agency within the State Resource Agency. It was established in its present form by State law in 1984 to develop and implement programs through acquisitions and site improvements to improve water quality in Lake Tahoe, preserve the scenic beauty and recreational opportunities of the region, provide public access, preserve wildlife habitats, and manage and restore natural lands. Conservancy staff is housed in a privately-owned, rented building.

**Federal Facilities**

- **Lake Valley Post Office.** Located at 950 Emerald Bay Road, this post office provides post office boxes for the 96158 zip code and full postal services to customers out of a privately-owned rented building.
- **Tahoe Resource Conservation District**. Located in a privately owned building at 870 Emerald Bay Road, the Tahoe Resource Conservation District promotes the conservation, stewardship and education of the Lake Tahoe Region's natural resources.

**Barton HealthCare System Facilities**

Barton Memorial Hospital has served the South Lake Tahoe community since 1963 as a regional medical center. Part of the Barton HealthCare System, Barton Hospital is South Lake Tahoe's largest medical facility and largest employer (900 employees). The hospital and its associated medical clinics and emergency medical centers perform approximately 3,180 surgeries (2,800 within the City limits and 380 outside the City limits) and 20,000 emergency visits per year (Lyn Barnett, per. comm. 4/17/2014).

**South Tahoe Refuse**

South Tahoe Refuse has franchise agreements with the City of South Lake Tahoe, El Dorado County, and Douglas County for the collection and transportation of solid waste to processing and/or disposal facilities. This includes waste from all residential, commercial, and industrial properties, including recyclable

material. These facilities support the processing of this waste before its ultimate disposal outside of the Tahoe Basin. South Tahoe Refuse operates the following facilities:

- **Administrative Office/Transfer Station/Materials Recovery Facility/Resource Recovery Facility/Tahoe Basin Container Service.** All located at 2140 Ruth Avenue.
- **Recycling Center.** Located at 2192 Ruth Avenue.
- **Truck parking, fueling, and wash facility.** Located at 2143 Ruth Avenue.

## 3.5 Natural and Cultural Resources

Natural resources within the Tahoe Valley plan area include the Upper Truckee River~~r,~~; two ephemeral streams~~, ~~; natural and landscaped vegetation~~, ~~; stream environment zones~~, ~~; and views of distant mountain ridgelines. The plan area includes three drainage basins including the Tahoe Valley system that runs south of the "Y" intersection, which is directly~~,~~ connected to the Truckee River. The other two drainage basins drain into the Tahoe Keys Lagoons before being released into Pope Marsh. Many properties contain excess coverage over the Bailey land capability limitations.

Native vegetation consists primarily of Jeffrey pine and white fir trees with little under-story vegetation on high-capability lands and willows and grasses on low-capability lands. Many of the developed parcels are also landscaped with native vegetation. Stream environment zones within the plan area generally have been disturbed.

**Land Capability and Stream Environment Zone**

The land capability system established by Bailey is the basis of the land coverage standards and limitations set forth in Chapter 30 of the TRPA Code of Ordinances. Chapter 30 uses land capability districts (LCDs) ranging from class 1 to 7 that assign a percentage of allowable land coverage in a designated LCD area as identified below:

- Land capability classes 1a-c and 2 are not suited for urbanization or intensive forestry use, but are suited for open space, conservation areas, and low-intensity recreation.
- Land capability ~~classes~~ class 3 ~~and 4 are~~is not suited for urbanization but ~~are~~ is suited for forestry and low-density housing use.
- Land capability classes 4, 5, 6, and 7 include land suitable for urbanization and other uses.

~~However, upon further investigation and field analysis conducted by soil scientists, preliminary information indicates that portions of the SEZs that run through the plan area may have been mapped erroneously and accounts for a smaller area than that depicted in TRPA's Land Capability Overlay Map. This issue is discussed in further detail in Section 10, Natural and Cultural Resources.~~

Tahoe Valley is predominately flat, and according to the TRPA's mapped land capability map, mostly comprised of high capability lands (LC ~~5~~ 4 – 7) suitable for redevelopment and infill with SEZ areas associated with drainage in the Upper Truckee River hydrologic area. In 2015 The City contracted with a soil scientist to conduct area specific ~~further~~ investigation and field analysis. The analysis concluded that portions of the SEZs that run through the Area Plan ~~were mapped erroneously and~~ account for a smaller

portion than that depicted in ~~TRPA's~~the original Land Capability Overlay Map. A revised map was prepared and adopted with the Tahoe Valley ~~Aera plan~~Area Plan. ~~(207.5 acres).~~ The revised map indicates~~The plan area includes~~ three ~~mapped~~ primary areas of environmentally sensitive or SEZ lands accounting for approximately ~~122.4~~50.7 acres. SEZs can be found in the vicinity of James Avenue and Seventh Avenue, and just north and south of the "Y" intersection (see Figure 7). According to ~~TRPA's land capability~~the revised land capability ~~map~~, just over a ~~third~~ tenth (~~36.4~~13.6%) of the plan area is SEZs with the remaining areas being high capability lands (~~63.4~~86.4%). Table 2 below provides an accounting of ~~mapped~~ revised land capability district in the plan area. This issue is discussed in further detail in Section 10, Natural and Cultural Resources.

~~As noted below, mapped SEZs account for approximately 36.4% of the plan area. However, upon further investigation and field analysis conducted by soil scientists, preliminary information indicates that portions of the SEZs that run through the plan area may have been mapped erroneously and accounts for a smaller area than that depicted in TRPA's Land Capability Overlay Map. This issue is discussed in further detail in Section 10, Natural and Cultural Resources.~~

**Table 2**
**Mapped Land Capability District**

| Land Capability District | Total Acreage | Percent |
|---|---|---|
| 1B | ~~122.4~~50.7 | ~~36.4~~13.6% |
| 4 | 3.9 | 1.0% |
| 5 | ~~6.6~~24.1 | ~~2.0~~6.5% |
| 6 | 4.6 | 1.2% |
| 7 | ~~207.5~~290.3 | ~~61.7~~77.7% |
| Totals | ~~336.5~~373.6 | 100.0% |

Source: TRPA Land Capability Overly Maps (1"=400'), 1987, and TRPA GIS, 2014.

**Land Coverage**

An analysis of TRPA's LiDAR impervious coverage data estimates that approximately ~~52.2~~48.3% (~~175.7~~ 180.5 acres) of the Tahoe Valley plan area is covered with impervious coverage. Hard coverage accounts for ~~49.5~~46.8% (~~167.3~~173 acres) and soft coverage accounts for 2.5% (~~8.4~~9.4 acres). Most of the plan area's existing coverage ~~is~~ are parking lots (~~55.4~~54.1%); the remainder is equally divided between building structures (~~22.4~~22.4%) and paved roadways (~~21.0~~22.0%). Just over ~~two-thirds~~three-fourths of existing coverage (~~117~~156.7~~.0~~ acres, ~~66.6~~85.7%) is located on high-capability lands with the remaining ~~third~~ quarter located in ~~mapped~~ SEZs (~~58.7~~26.1 acres, ~~33.3~~14.3%). Existing land coverage conditions in the Area Plan is presented in Table 3 below and Figure 8.

**Table 3**
**Existing Land Coverage (acres)**

| Coverage Type | Roads | Trails | Buildings | Other | Total Impervious | Total Area Plan Acreage | Percent Impervious |
|---|---|---|---|---|---|---|---|
| Hard | ~~37.0~~39.7 | ~~1.8~~2.1 | ~~39.3~~40.4 | ~~89.2~~89.0 | ~~167.3~~173.0 | ~~336.5~~374 | ~~49.7~~45.8% |
| Soft | 0.0 | ~~0.4~~0.7 | 0.0 | ~~8.0~~8.6 | ~~8.4~~9.3 | | 2.5% |

| | | | | | | | |

**Water Quality**

Lake Tahoe is Federally ~~-~~designated as an Outstanding National Resource Water pursuant to the provisions found in the Clean Water Act (CWA). The Act states that "[w]here high~~-~~quality waters constitute an outstanding National resource, such as waters of National Parks, State parks and wildlife refuges, and waters of exceptional recreational or ecological significance, that water quality shall be maintained and protected." Its designation provides the maximum amount of protection to the water quality of Lake Tahoe under the CWA, ensuring that no permanent degradation of water quality will occur.

***Stormwater Drainage***

The City and California Department of Transportation (Caltrans) are responsible for reducing erosion and storm water runoff from roads under their jurisdictions. This includes installing curbs, gutters, rock-lined channels, bio-swales, infiltration basins and other improvements that captures runoff and reduce fine sediment loads to Lake Tahoe.

The Tahoe Valley plan area contains a series of natural and human-made systems constructed by the City to convey and treat drainage. The area to the north of the "Y" intersection is collected and treated by two drainage systems (i.e., Gardner Mountain Catchment and Eloise Catchment) that are comprised of conveyance pipes, rock lined ditches, and basins. The outfall for the two catchments is the Tahoe Keys lagoon located between Whitney Drive and Lassen Drive. The lagoon drains into Pope Marsh before entering Lake Tahoe. The area to the south of the "Y" intersection (Upper Truckee River Catchment) is treated by the Tahoe Valley Erosion Control Project. The system collects and treats runoff from much of the densely developed commercial areas near US 50, both north and south of the "Y" intersection, and from the Bonanza and Barton Hospital neighborhoods. Storm water is conveyed through an ephemeral stream and a series of pipes and rock lined ditches, where it is treated in the vicinity of James Avenue and Tahoe Keys Boulevard, before flowing into a ditch north of Sky Meadows and out to the Truckee River. This drainage basin is a high priority for storm water runoff treatment and the City is currently in the planning stages to update the system and design water quality improvements to reduce pollutant loads discharged to the Upper Truckee River.

Storm water runoff along US 50 and SR 89 is the responsibility of Caltrans. Caltrans in the process of constructing a water quality improvement project that runs from the Y intersection to the Lake Tahoe Airport. The first mile of project running from the Y intersection to E Street was constructed in the summer

of 2013. The improvement project will collect and treat runoff along US 50 and also includes the installation of curb, gutter and sidewalks, and the widening of the roadway to accommodate a Class III bike routes. Construction of water quality improvements along SR 89 started in the Fall of 2014 and US 50 from the Y intersection to Trout Creek Bridge is scheduled for 2016.

Figure 9 depicts the existing water quality improvement projects within the plan area.

***Best Management Practices***

Every property within the Tahoe Valley plan area is subject to the requirements of Chapter 60 of the TRPA Code of Ordinances for drainage treatment, paved parking and drives, slope stabilization, revegetation, and providing snow storage areas. The Code also requires property owners to infiltrate the volume of a 20-year/1 hour storm on their property or meet alternative standards in instances where special circumstances limit infiltration. The City requires, and reviews, BMP installation for all projects for which it has reviewing authority under the Memorandum of Understanding (MOU) with TRPA~~.~~. TRPA is responsible for BMP enforcing and permitting retrofits on existing development. The TRPA issues Certificates of Compliance for all projects in the Basin.

According to TRPA's BMP database, 127 out of 400 parcels in the plan area have received their TRPA Certificate of Compliance, resulting in a 32% BMP compliance rate. The compliance rate for commercial uses located within the Area Plan is 47%. Since the BMP compliance rate is based on issuance of a BMP certificate and not on actual BMP installation, the actual rate of BMP installation is higher than the 32% certificate compliance rate.

***Total Maximum Daily Load (TMDL)***

The Total Maximum Daily Load (TMDL) program is a requirement of the Federal Clean Water Act. The program is designed to protect Lake Tahoe, an Outstanding Natural Resource Water, from certain pollutants of concern, including fine sediments, phosphorus, and nitrogen.

Through the Lake Tahoe TMDL, the Lahontan Regional Water Quality Control Board (Lahontan) established five-year load reduction targets to assess each jurisdiction's progress towards meeting overall load reduction goals. Load reduction targets for Fine Sediment Particles (FSP), Total Phosphorus (TP), and Total Nitrogen (TN) have been established based on attainment of California's Lake Tahoe transparency standard (~ 97 feet) over an estimated 65-year implementation period. To meet the requirements of the TMDL Program, each jurisdiction holding a National Pollutant Discharge Elimination System (NPDES) permit is required to reduce the baseline pollutant load within their jurisdiction by the amounts shown in Table 4.

**Table 4**
**LOAD REDUCTION TARGETS FOR THE TAHOE TMDL**

| Pollutant | 5-Year Milestone 2016 | 10-Year Milestone ~~2012~~2021 | 15-Year Milestone 2026 | Transparency Standards (~65-Years) |
|---|---|---|---|---|
| Fine Sediment Particles | 10% | 21% | 34% | 71% |

| | | | | |
|---|---|---|---|---|
| Total Phosphorus | 7% | 14% | 21% | 50% |
| Total Nitrogen | 8% | 14% | 19% | 46% |
| Source: Final Lake Tahoe Total Maximum Daily Load, August 2011 | | | | |

In ~~2011~~2016, the City submitted to Lahontan the City's Lake *Tahoe TMDL Baseline Pollutant Load ~~Estimate~~ Update Report* which was subsequently incorporated into the City's NPDES permit. The City's load reduction requirement through ~~2016~~ 2026 under the NPDES permit is shown in Table 5.

**Table 5**
**CSLT ~~2016~~ 2026 LOAD REDUCTION REQUIREMENTS**

| Parameter | Baseline Load (lbs~~.kg~~/year) | Required Percent Reduction | Required Load Reduction (lbs~~.kg~~/year) | Allowable Load (lbs~~.kg~~/year) |
|---|---|---|---|---|
| Fine Sediment Particle (mass) | ~~176,450~~476,677 | ~~10~~34% | ~~14,650~~162,070 | ~~158,800~~314,606 |
| Fine Sediment Particles (# of particles) | ~~1. 94~~2.38E+19 | ~~10~~34% | ~~1. 94~~1.58E+1~~98~~ | 1. ~~75E~~57E+19 |
| Total Phosphorus | ~~789~~2,020 | 21~~7~~% | ~~55~~424 | ~~734~~1,596 |
| Total Nitrogen | ~~3,361~~8,034 | 19~~8~~% | ~~269~~1,526 | ~~3,092~~6,508 |
| Source: ~~City of South Lake Tahoe Pollutant Load Reduction Plan, January 2013.~~ Lahontan Lake Tahoe Municipal NPDEs Permit, Board Order R6T-2022-0046, NPCESA NO. CAG616001 | | | | |

The City ~~authorized~~ completed development of a *Pollutant Load Reduction ~~Strategy Report~~Plan,* ~~to assess potential approaches for define~~defining a path to compliance with the requirements to reduce~~ing~~ pollutant loading to Lake Tahoe from urban stormwater runoff. The goal of the ~~Strategy~~ Load Reduction Report was to identify feasible and ~~cost-effective~~cost-effective actions to meet anticipated targets. ~~Subsequently, i~~In ~~February 2013~~September 2021, the City Council ~~adopted the~~received a draft of the 2021 *City of South Lake Tahoe Pollutant Load Reduction Plan* which documents the City's proposed approach and timeline for meeting the ~~2016~~ 2026 load reduction targets set forth in the City's NPDES permit, which was then submitted to Lahontan in October, 2021 and must be updated and resubmitted September, 2023. ~~Lahontan subsequently approved the City's Load Reduction Plan in June 2013.~~ Proposed strategies outlined in the Load Reduction Plan for meeting the load reduction targets are incorporated in the Area Plan and are discussed in detail in Section 10, Natural and Cultural Resources.

***Underground Sources of Potential Water Quality Concerns***

In 1989, the contaminant tetrachloroethylene (PCE) was first found in drinking water wells near the intersection of Highways 50 and 89 (the "Y" Area). The PCE remains in groundwater and forms a contaminant plume believed to cover more than 400 acres. PCE is a manmade chemical that was used from the early 1960s through the mid-1980s as a solvent for dry cleaning clothes and degreasing metal. Presently, five public drinking water wells have been impacted by the South "Y" PCE Plume. When PCE is

detected in a well, the well is shut down and treatment is added to remove the contaminant, or an alternative source of drinking water supply is provided.

The South "Y" Plume extends north from the South "Y" to the Tahoe Keys, and toward Lake Tahoe. Groundwater used by wells operated by the Lukins Brothers Water Company (LBWC) and Tahoe Keys Property Owners Association (TKPOA) have been impacted by the plume. During the 1990s, the South Tahoe Public Utility District (STPUD) installed a treatment facility to remove PCE from four drinking water wells. Today, three of the wells have been destroyed and the remaining well is currently not used. In 2009, TKPOA installed a treatment system to remove PCE from groundwater at one of its wells. In 2014, Lukins discovered PCE in two wells and immediately stopped using them. All three drinking water systems are interconnected, and the water providers have the ability to share water and are working together to ensure the entire community has access to reliable and safe drinking water.

The Lahontan Regional Water Quality Control Board is the state regulatory agency overseeing the enforcement and cleanup of contaminated groundwater. Lahontan has conducted numerous investigations to determine the source of PCE and is working with the responsible parties to determine the total extent of the contamination and approaches to resolve the issue, through either remediation or treatment. The South Tahoe water providers are working together to develop and implement short-term fixes and long-term solutions to provide clean drinking water while the underlying issues with the groundwater PCE plume are being addressed.

South Tahoe Public Utility District's system includes 1,700 sewer laterals (the portion of the sewer system connecting the building to the main). Twenty-two percent (22%) of these are over 40 years old, 39 percent are 30 to 40 years old, 24 percent are 20 to 30 years old, and only eight percent are less than 10 years old. While a lateral can last 50 to 100 years, its life expectancy is determined by its material, original installation, root intrusion or external pressure, soil stability and chemical makeup, high water tables, corrosion (sometimes from the hydrogen sulfide gas present in the sewer system), and forces leading to structural failure.

***Source Water Considerations***

TRPA-designated "source water protection zones" overlay much of Tahoe Valley. These protection zones consist of a fixed 600-foot radius circle around wells that provide drinking water from an aquifer with five or more service connections. Source Water Protection Zones were broadly mapped by TRPA in 1999. Table 6 shows the wells on TRPA's Source Water Assessment Map (12-2-99) that are located in the plan area and Figure 10 shows their locations.

**Table 6**
**TRPA Source Water Wells**

TRPA Code [Section 60.3.3] defines "possible contaminating activities" as activities equivalent to TRPA primary uses identified by either the California Department of Public Health Services or the Nevada Bureau of Water Quality Planning, regardless of where the project is located, as having the potential to discharge contaminants to surface or groundwaters. Some of the existing and permissible industrial uses in the Industrial District qualify under this definition. New project applications for uses that constitute possible contaminating activities within these zones must make findings based on criteria established in Chapter 60 of the TRPA Code in order to be approved. The following uses are considered possible contaminating uses in Section 60.3.5 of the TRPA Code:

**Residential**

1. Domestic animal raising

**Commercial**

1. Service stations
2. Auto repair and service
3. Business support services
4. Laundries and dry cleaning plant
5. Repair services
6. Batch plants
7. Fuel and ice dealers

8. Industrial services
9. Recycling and scrap
10. Storage yards
11. Vehicle storage and parking
12. Vehicle and freight terminals

**Public Service**

1. Airfields, landing strips, and heliports
2. Collection stations
3. Hospitals
4. Local public health and safety facilities
5. Regional public health and safety facilities
6. Power generating
7. Public utility centers
8. Schools

**Linear Public Facilities**

1. Transit stations and terminals

**Recreation**

1. Beach recreation
2. Boat launching facilities
3. Developed campgrounds
4. Golf courses
5. Marinas
6. Recreational vehicle parks
7. Rural sports

**Resource Management**

1. Timber stand improvement
2. Grazing
3. Range pasture management

**Watershed Improvements**

1. Runoff control

**~~Shorezone~~Shore zone**

1. Construction equipment storage
2. Seaplane operations
3. Tour Boat operations
4. Water-oriented outdoor recreation concessions

Businesses with fuel tanks or other potentially contaminating materials used as part of their operations are required to have spill contingency plans that address how to respond to accidental spills. Plans meeting specific content requirements are required for potentially contaminating activities located within a Source Water Protection Zone.

**Cultural Resources**

Eight archaeological and historical investigations were previously conducted within the Tahoe Valley plan area. These investigations identified historic sites CA-Eld-721-H and CA-Eld-2240-H. Site CA-Eld-721-H is a portion of the Pony Express Trail that generally follows the alignment of U.S. Highway 50. Site CA-Eld-2240-H is a historic road that passes through the plan area. In addition, a heritage resources study was conducted specifically for the Area Plan (Lindström and Rucks, 2006). This study did not include a formal archaeological survey or architectural inventory of the Tahoe Valley plan area, but did identify areas that are important to the Native American community and potentially significant historic buildings and structures (e.g., motels/auto courts) within the Area Plan. In addition, the Barton Ranch is located within the plan area at 1080 Emerald Bay Road and is listed on TRPA's Historic Sites Maps (1984).

The study concluded in more recent times, the "Y" appears to have been a central point for historical interactions between Washoe and non-Washoe and it seems to continue to represent this period of adjustment in Washoe history. Interviews with Washoe participants demonstrated that the "Y" has remained an important travel corridor, meeting place, and access point to post-contact Washoe camps and work opportunities associated with ranching. Although the study indicates no point specific Washoe "sites" within the plan area, it did recommend that project planning should be sensitive to traditional Native American values and recommends on-going communication with the Washoe Tribe to determine the significance of historic buildings and sites (Lindstrom & Rucks, 2006).

The Mosher Family who owns the Barton Ranch commissioned a report, entitled "Historic Architectural Resources Studies W.D. Barton Ranch," in February 2009. The report provides information on the historical context of Barton Ranch and its role in Lake Tahoe ranching and Native American significance. The buildings are associated with the livestock and dairy industries in the Tahoe Basin, an important era in the history of Lake Tahoe. The property is also associated with an important Lake Tahoe family, the Bartons, who were longtime ranches in the area, and who donated the land for the Barton Hospital, which is located within the plan area. The report concluded that the Barton Ranch Complex is eligible for listing on the National and California Registers at the local level of significance and could serve as a historical centerpiece if the adaptive reuse of the ranch can be economically viable and the interest of the property owners are protected (Marvin, 2006)

**Recreation**

There are no City-owned or -operated recreational facilities within the plan area. Informal recreational activities available within Tahoe Valley include bicycling, running, jogging, walking along city streets and designated routes and paths.

South Tahoe High School (located just east of the Tahoe Valley plan area) has tennis courts, ball fields, and a gymnasium. Tahoe Valley Elementary School (located just north of the Tahoe Valley plan area) has play areas. Nearby forest lands managed by the Forest Service provide opportunities for active and passive outdoor recreation. The plan area is the gateway to the Forest Service's South Shore Recreation Area, which contains beach access, bike trails, the Tallac Historic Site, a Visitor's Center (with its Stream Profile Chamber and newly reconstructed amphitheater), and Camp Richardson Resort. Located within three miles of the "Y" intersection, all of these areas provide for some of the recreation needs of the nearby residential neighborhoods, as well as for visitors, and are accessible by bike routes and bike paths that either run through or adjacent to the plan area (See Figure 6).

**Scenic Resources and Community Design**

The Tahoe Valley plan area consists of 482 public and privately owned parcels that include residential, commercial, tourist accommodation, industrial, and public service land uses. Land uses to the west, north, and northeast of the plan area consist of residential subdivisions dating from the 1960s through the 1990s. Immediately adjacent to the plan area to the east lies a large open space area (stream environment zone [SEZ]) consisting of the floodplain for the Upper Truckee River, which is near the eastern boundary of the plan area. Commercial uses are the primary land use in the plan area and include clothing stores, factory outlets, automotive supply stores and dealerships, drug and liquor stores, restaurants, and supermarkets. Buildings and other structures in the plan area range in age and physical condition from the 1890s to recent construction. They are provided in strip development along US 50 and SR 89. Identified issues for the plan area's current form of development include many curb cuts for driveway access, small and fragmented parcels, stand-alone structures, old motels, sprawling parking lots, and lack of coordinated sidewalks, bike paths, landscaping, and other related amenities.

As described above, the existing visual landscape characteristics of the plan area consist of urban development intermixed with forest conditions. Existing urban development transitions into natural and forest conditions at its southern boundary along the US 50/SR 89 corridor as well as at the northern boundary along SR 89. The eastern boundary transitions to the open stream environment zone area associated with the Upper Truckee River. From within the plan area views of mountains looking east towards Heavenly Mountain Ski Resort (Gunbarrel ski run is visible) as well as views of Tahoe Mountain looking west are visible from US 50 and the "Y" intersection. These views are not currently identified as TRPA designated resources.

TRPA has adopted three separate regional scenic resource thresholds: 1) Travel Route Ratings; 2) Scenic Quality Ratings of individual resources; and 3) Scenic Quality Ratings of individual resources seen from public recreation areas. All are numerical in nature. The first two thresholds apply to scenic resources visible from the Region's state and federal highways and Pioneer Trail and from Lake Tahoe itself. The 2011 Threshold Evaluation concluded that regionally, all three threshold indicators are "at or somewhat better than target." (TRPA, 2012a).

**Roadway Travel Units**

The plan area contains a portion of Roadway Travel Route Unit #1, Tahoe Valley, a portion of Roadway Unit #35, Al Tahoe, and Roadway Unit #36A, Airport Area. All three roadway units are currently out of attainment; however, Unit #1 and Unit #36A are near attainment. The 2011 Threshold Evaluation noted that recent installation of curbs, gutters, and sidewalks have improved the road structure component score in Unit #35. Recent constructed improvements along US 50 and SR 89 and those planned in the near future are expected to improve the overall threshold rating scores in the near future. Figure 11 depicts the locations of the Roadway Travel Units and Table 7 below indicates the current threshold rating scores.

**TABLE 7**
**THRESHOLD TRAVEL ROUTE AND SCENIC QUALITY RATINGS**

| Unit | 1982 | 1991 | 1996 | 2001 | 2006 | 2011 | 2015 | 2019 | Needed for Attainment |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 11.0 | 11.0 | 12.0 | 12.0 | 12.0 | 12.0 | 12.0 | 13.0 | +~~3~~2.5 |
| 35 | 7.0 | 7.5 | 7.5 | 7.5 | 8.0 | 8.5 | 8.5 | 9.5 | +~~7~~6.0 |

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| 36A[1] | 0.0 | 0.0 | 0.0 | 10.5 | 13.0 | 13.0 | 13.0 | 13.0 | +2.5 |

Source: TRPA ~~2011~~ 2019 Threshold Evaluation.

1. In 2001, Roadway Unit 36 was segmented into three sub roadway units: 36A, 36B and 36C.

As identified above, the three roadway units along SR 89 and US 50 are identified for scenic quality improvement by the TRPA in the Scenic Quality Improvement Program (SQIP). While the TRPA ~~2011~~ 2019 Threshold Evaluation recognizes these roadway units have seen some improvements associated with recent development, it calls for continual implementation of the SQIP recommendations at the project level to ensure continual scenic improvements. The 2019 Threshold Evaluation noted the following improvements that have been made in the Tahoe Valley area ~~in the Area Plan~~.

- Construction of sidewalks and rock retaining walls along Lake Tahoe Boulevard and sidewalks along Emerald Bay Road.
- Replacement of the amusement park with the Hanger Beer Garden and façade improvements on the existing structure.

**Scenic Quality Ratings**

There are only two designated resources within the boundaries of the Area Plan: Scenic Resource #35-1 and #36-7. Both resources are designated views of natural landscapes as seen from US 50. Both resources have low scenic quality rating of 1 because of the dominance of the built environment. Both resources are currently in attainment. While there are no prominent designated scenic resources in the plan area, there is the following scenic resource located adjacent to the plan area that has a moderate rating:

- Scenic Resource 35.2: Views of the Truckee River and associated stream environment zone on both sides of US 50.

**Scenic Resource Visible from Public Recreation Area and Bike Trails**

The 1993 Lake Tahoe Scenic Resource Evaluation established numerical standards for the scenic quality of lands visible from designated public recreation areas and bike trails. Within the plan area there are no designated recreation sites but there are two identified bike trails: the Tahoe Valley route and Tahoe Valley to City Limits route (see Figure 11).

The Tahoe Valley route serves uses located south and east of US 50. The route runs along Helen Street from Winnemucca Street towards the "Y" intersection, then heads south along Melba Street and ends at the US 50 junction. The route runs primarily through residential neighborhoods and connects users to the commercial node at the "Y" intersection.

The Scenic Resources Evaluation identified two views of the natural landscape visible from the bike route:

- Scenic Resource 9-1: Landscape view of scattered forest vegetation interspersed with residential and commercial uses; and
- Scenic Resource 9-2: Infrequent views of mountain backdrop.

This segment of bicycle route is not of high scenic quality with both views rated as fair. Its primary value is as an alternative transportation route along US 50 for visitors and residents. According to the 2011 Threshold Evaluation, these scenic resources are still in attainment.

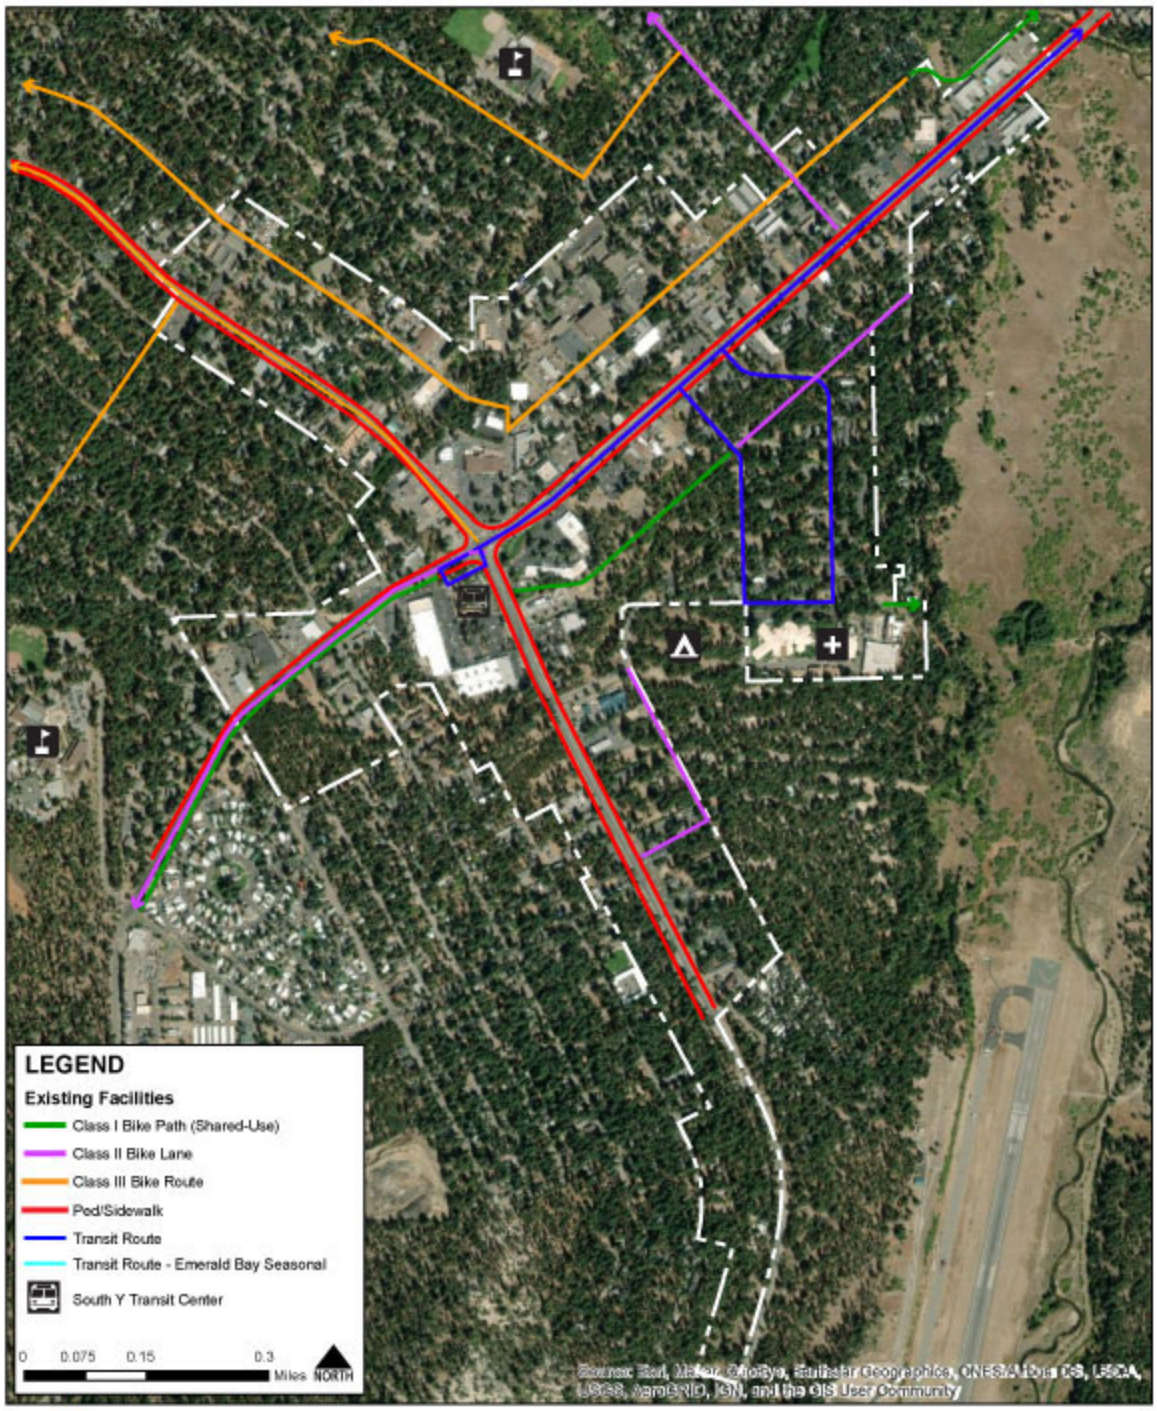
**Open Space**

Open space in the plan area includes both undeveloped private lands, environmentally-sensitive public lands, and lands used for stormwater treatment. The plan area contains 36 parcels (20.2 acres) that are currently in open space (Table 1). This accounts for 6 percent of the total land in the plan area.

**Public Health and Safety**

***Flooding***

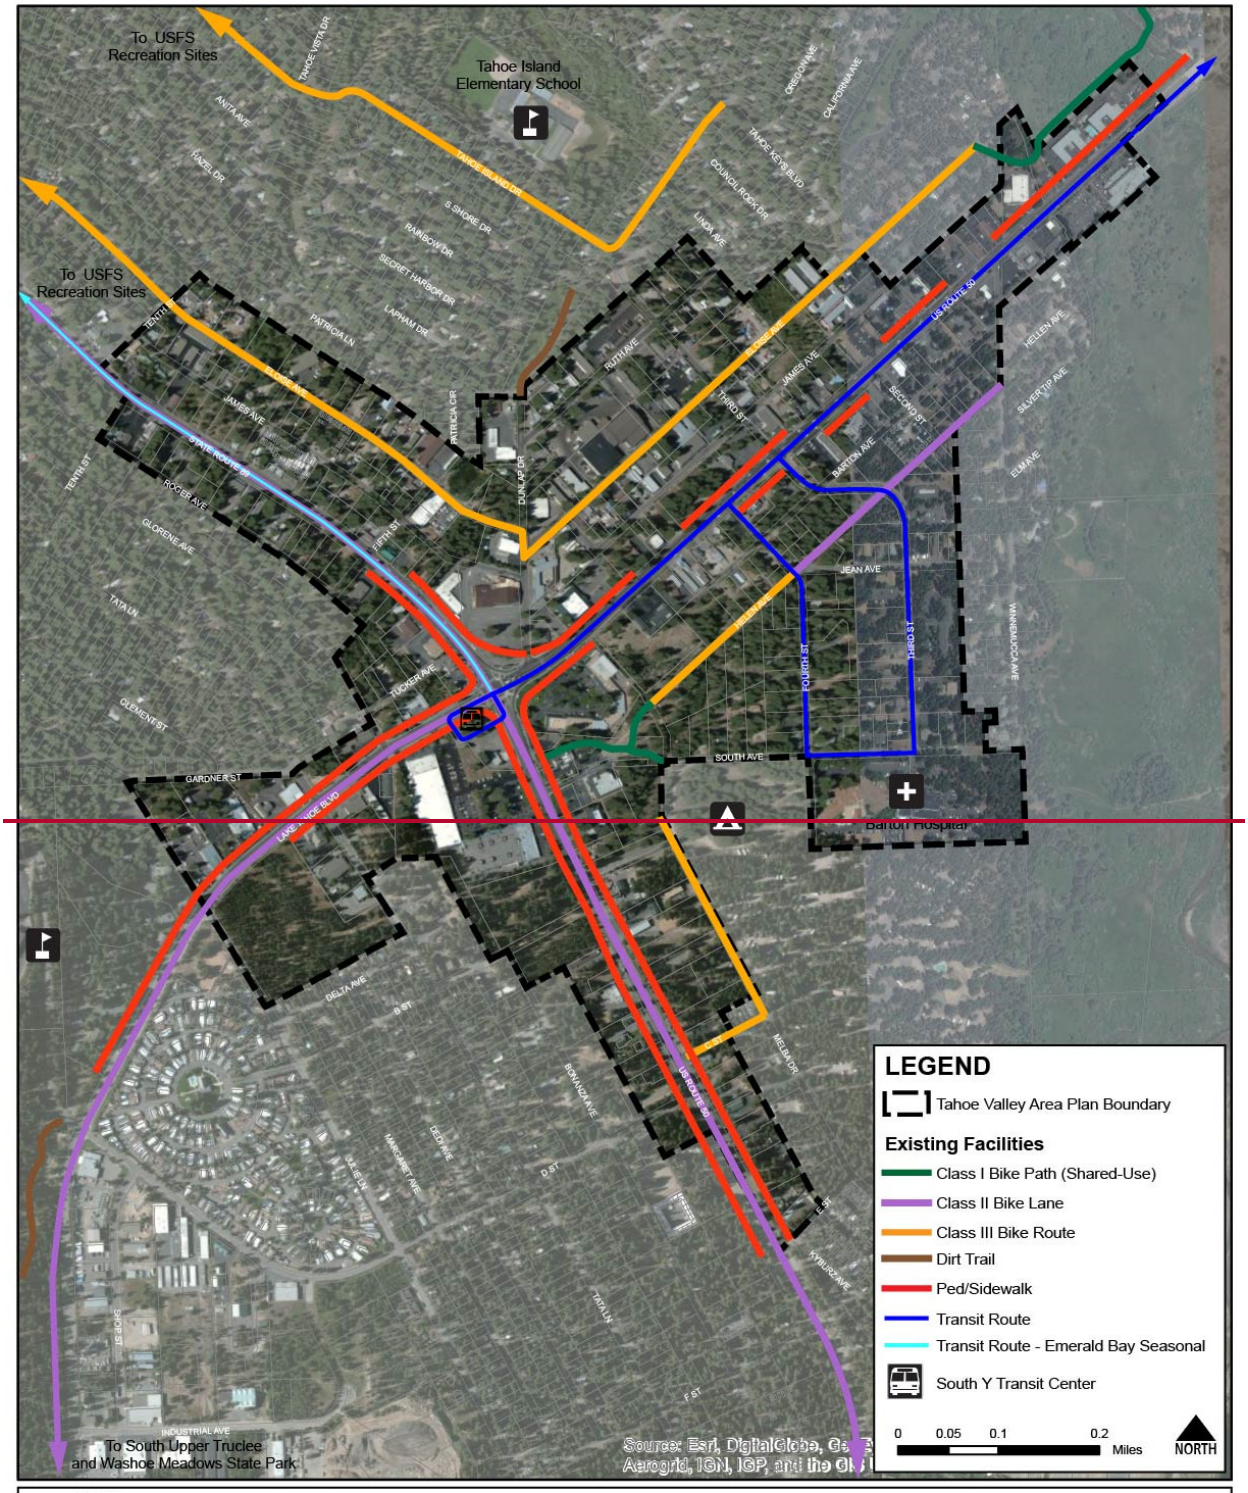
According to the National Flood Insurance Program Map for the City of South Lake Tahoe, the majority of the Tahoe Valley plan area lies outside the 100-year floodplain. Some areas located adjacent to the Upper Truckee River, east of the plan area, are included within Zone X and Zone AE. Zone AE is identified on FEMA maps as subject to inundation by the 1-percent-annual-chance flood event. Zone X are areas of moderate flood hazard from the principal source of flood in the area. Portions of the plan area impacted by Zone X and Zone AE include a small portion of Helen Avenue, Truckee Drive south of Lake Tahoe Boulevard, and east of James Avenue in the vicinity of Motel 6. The remainder of the plan area is located outside the 100-year floodplain.



***Noise***

TRPA has adopted noise standards for the Tahoe Basin. The noise thresholds are Community Noise Equivalent Level (CNEL) values for the various land use categories and single event (Lmax) standards for specific noise sources. CNEL is the metric used by TRPA for determining land use compatibility. The ~~maximum~~ CNEL standard for the Tahoe Valley Area Plan is ~~65~~60, except for the Healthcare District, where 55 CNEL is the standard, and the Commercial Mixed-Use Services where the standard is 65. The maximum CNEL for the SR 89 and US 50 corridors is 65 CNEL. ~~The CNEL threshold of 65 dBA that applies to industrial areas was adopted as a result of the 1996 threshold evaluation recommendations.~~ No one activity, nor combination of activities, is allowed to exceed the applicable CNEL level. CNELs are calculated pursuant to Chapter ~~23~~ 68 of the TRPA Code of Ordinances.

While the airport does not fall within the boundaries of the Area Plan, its associated overflight zones and noise contours do. According to the ~~Comprehensive Land Use Plan (CLUP)~~ALUCP for Lake Tahoe Airport (adopted ~~July 1990, amended December 2004~~August 2019), the ~~65~~ 50 and 55 dB CNEL contour extends into a portion of the plan area.



***Fire***

Fire Station #3 is located within the plan area at 2101 Lake Tahoe Boulevard. The facility is owned by the City and is one of four that serves South Lake Tahoe. This station services the Tahoe Valley area with response time between three and five minutes. The Fire Department also provides local ambulance service, and has mutual aid agreements with other fire and emergency response agencies in the Tahoe Region.

# SECTION 4
# Vision and Guiding Principles

The Tahoe Valley Area Plan reflects the City of South Lake Tahoe's effort to rekindle the economic vitality and spirit of the Tahoe Valley community. The Tahoe Valley area is ready to recapture its local prominence, and the Area Plan outlines the strategy for the area's resurrection. This section summarizes the community's vision for the future of the Tahoe Valley. It also summarizes the guiding principles that were used to develop the Land Use Zoning Districts and the Plan's goals, objectives, and policies.

## 4.1 Vision Statement

The City aims to focus the energy of local residents, landowners, developers, and public officials to spark the transformation of the Tahoe Valley area and, in turn, the entire City of South Lake Tahoe. The City intends to use the Tahoe Valley Area Plan to create physical, social, and economic links that will improve the Tahoe Valley area and create a sustainable community. The vision for the Tahoe Valley area is as follows:

*"We shall transform the Tahoe Valley area into a strong and vibrant business district, creating a community that includes continuous and complimentary developments. We shall embrace outdoor enthusiasts and provide a healthy balance of commerce, employment, entertainment, and livability. Our Area Plan will create smaller, safer pedestrian-friendly districts that encourage patrons to visit multiple destinations for each vehicle trip. Our plan shall encourage retail businesses and services that meet local needs, encourage local ownership, and appeal to visitors seeking to mix with the local community.*

*Architectural and aesthetic standards shall emphasize a mountain identity through sensitive building design that incorporates open public spaces, and a walkable environment emphasizing unifying elements. Quality building designs shall emphasize character through massing and articulation that are characteristic of a mountain environment. No blank walls will be displayed. Pedestrians, transit riders, and cyclists will be encouraged and accommodated. Parking areas shall be unobtrusive, and serve more than one property.*

*We shall re-knit the fragmented elements that isolate the Tahoe Valley neighborhoods through a network of sidewalks, trails, and access to transit facilities. The transition between more intensive uses shall include design elements to ensure compatibility. The plan shall weave active and passive recreational staging areas, connecting to recreational opportunities located outside the plan boundaries. The Transit Center shall play a greater role, to include moving people locally and regionally within and outside of the Tahoe Basin.*

*Visually prominent and attractive design features shall welcome visitors entering the City from the scenic corridors of US 50 and SR 89. Through the use of environmentally conscious development techniques and restoration activities, the Area Plan will be considered a contributing component of the regional*

*ecosystem. Private and public development shall contribute to the creation of indoor and outdoor public spaces within these districts."*

## 4.2 Guiding Principles

As part of the ~~V~~vision, the following guiding principles create a foundation for a more sustainable, economically prosperous, communal and environmental future for Tahoe Valley:

- *Establish a land use plan and policy framework that will guide future development and redevelopment in the Tahoe Valley Plan area toward land uses that support transit ridership and economic development;*
- *Create a diversity and concentration of resident ~~servicing~~ serving shops and services that also appeal to ~~the~~ visitors;*
- *Create public plazas, gathering spaces, and active streetscapes to promote a lively market;*
- *Encourage ground floor retail, large display windows, retail, dining and entertainment to activate the pedestrian streetscape;*
- *Preserve or replace trees and use native landscaping;*
- *Develop and implement urban design standards for buildings and structures that reflect Tahoe's mountain identity;*
- *Include transit and alternative travel modes as an essential part of the Tahoe Valley experience;*
- *Connect Tahoe Valley to adjacent residential neighborhoods with paths, trails, and sidewalks;*
- *Locate multi-family residential development within close proximity to the Tahoe Valley Town Center; and*
- *Develop new programs and facilities to meet the needs of residents, such as indoor and outdoor theaters.*

# SECTION 5
# Land Use and Community Design

This section supplements the Land Use Element of the TRPA Goals and Policies, and the Land Use Element of the City of South Lake Tahoe General Plan. This section includes the Area Plan's Goals and Policies related to land use and establishes land use and zoning regulations.

The overarching vision of the 2030 South Lake Tahoe General Plan and the TRPA Regional Plan and Sustainable Communities Strategy is to create a more sustainable community. One way this will be achieved is through focusing new development and revitalization within the areas designated as Town and Regional Centers in the Regional Plan and as Nodes in the General Plan. For the Tahoe Valley area, the focus is commercial, mixed-use, and multi-family development in a pedestrian, bicycle and transit oriented land use pattern that harmonizes with the overall natural environment. The land use and community design policies in this section seek to encourage pedestrian/bicycle-friendly and transit oriented developments that help reduce resident and visitor dependency on automotive travel and building types and patterns that reflect the mountain and surrounding natural environment.

## 5.1 Land Use Districts

The following describes the seven zoning districts and special designations that are included in the Tahoe Valley Area Plan and the land use vision for each district. Figure 12 shows the boundaries and location of each zoning district.

**ZONING DISTRICTS**

**Town Center Gateway District (TC-G)**

The Gateway District, which includes properties surrounding the "Y" intersection and properties along Lake Tahoe Boulevard and Emerald Bay Road, is a key arrival area for travelers to South Lake Tahoe.

This district is intended to create an attractive mixed-use commercial corridor that provides a welcoming gateway to South Lake Tahoe and conveys the arrival to South Lake Tahoe as a destination. The physical form varies to reflect the commercial mixed-use character of the gateway corridor and to transition from surrounding, lower-density districts to the Town Center Core. Allowable uses include tourist accommodation, retail, commercial, recreation, and office uses, as well as mixed-use residential development.

**Town Center Core (TC-C)**

This district is the heart of the Tahoe Valley area and intended to become a place of public gathering and retail activity meeting the needs of both area residents and tourists. This district allows for vertical mixed-use projects with a focus on ground-level active storefronts and pedestrian- and transit-oriented development that encourages pedestrian activity and supports multi-modal transportation. Allowable uses include tourist accommodation, retail, commercial, entertainment, and office uses, as well as mixed-use residential development.

**Town Center Mixed-Use Corridor (TC-MUC)**

This district is intended to facilitate the transformation of the eastern and western portions of Lake Tahoe Boulevard into a multi-modal, mixed-use corridor. Allowable uses include a rich mixture of retail, service, public facility, recreation, entertainment, and housing organized in a compact development pattern, creating an aesthetically-pleasing and safe environment for pedestrians, cyclists, and automobile drivers.

**Town Center Neighborhood Professional (TC-NP)**

This district is intended to allow a variety of residential and non-residential uses to encourage a greater mix and intensity of uses in a pedestrian and bikeable environment at a scale and form that is appropriate to its neighborhood context and adjacent residential uses. Allowable uses include commercial, public service, healthcare, and office uses, social services, and neighborhood parks, as well as all types of residential development.

**Town Center Healthcare District (TC-HC)**

The Healthcare District contains the area within the immediate vicinity of Barton Hospital, north and south of South Avenue and between Fourth Street and Winnemucca Avenue. This district will continue to be the core area for healthcare services and other related supporting services.

**Commercial Mixed-Use Service (CMX-S)**

This district is intended to provide for a mix of small- and medium-scale commercial, support services, and light industrial uses to meet local and regional demand. This district may also include residential uses as part of commercial or light industrial uses to facilitate live/work opportunities and recreation uses such as day use areas.

**Emerald Bay Connection Corridor (EB-CC)**

The Emerald Bay Connection Corridor District allows for higher-density residential development adjacent to the town center. This transitional area of mixed uses is compatible with scenic restoration, the intensity of Highway 50/89, and residential uses. Permissible uses are drawn from those allowed in the adjacent Bonanza Plan Area Statement (114), in which these parcels were previously included, as well as the Gateway District. Permissible uses include residential, tourist accommodation, neighborhood compatible commercial uses, and public service. This district is a potential location for a mobility hub to provide offsite parking and transit ~~for~~ services ~~in the Tahoe Valley, facilitate public transit, and serve as open space for surrounding residential uses~~within the region.

**Open Space (OS)**

This district is intended to preserve and maintain open spaces within the Tahoe Valley plan area that provide a visual break from the urban environment as well as views of surrounding mountains, forests, and stream environment zones. Depending upon their ecological sensitivity, open spaces may incorporate paths, boardwalks, pedestrian and bicycle trails, and benches.

**TRPA SPECIAL DESIGNATIONS**

**Town Center Overlay**

Town Center contains most of the region's non-residential services and have been identified as a significant source of sediments and other contaminants that continue to enter Lake Tahoe. Town Centers are targeted for redevelopment in a manner that improves environmental conditions, creates a more sustainable and less auto-dependent development pattern, and provides economic opportunities in the region.

**Stream Restoration Plan Area**

Stream Restoration Plan Areas are Stream Environment Zones along major waterways that have been substantially degraded by prior development. Individual Restoration Plans should be developed for each Stream Restoration Plan Area in coordination with the applicable Local Government and property owners in the Plan area. Restoration Plans may be developed as a component of an Area Plan or as a separate document and should identify feasible opportunities for environmental restoration.

**Transfer of Development Rights Receiving Area**

The following designations determine which plan areas, or portions thereof, are receiving areas for transfer of the development specified in Chapter 51: Transfer of Development:

1. Existing Development: The existing development designation determines which areas are eligible for the transfer of existing uses in the plan area.

2. Multi-Residential Units: The multi-residential unit designation determines which areas are eligible for the transfer of residential development rights.

## 5.2 Goals and Policies

This subsection outlines land use and community design goals and policies for the Tahoe Valley Area Plan. These goals and polices implement the vision and guiding principles discussed earlier.

**Goal LU-1: Land Use**

To shape the Tahoe Valley area into an attractive pedestrian, bike, and transit-oriented mixed-use commercial service district.

**Policy LU-1.1 – Active Streets**

Animate streets by allowing uses such as retail, entertainment, special events, outdoor dining and seating, oriented towards the sidewalk.

**Policy LU-1.2 – Connectivity**

Create bike, pedestrian and open space connections from the Tahoe Valley Area Plan to the adjacent residential neighborhoods and nearby recreation.

**Policy LU-1.3 – Special Events**

Designate an area within the Town Center Core as a Special Events Area allowing for temporary events and activities to increase pedestrian and economic activity in these areas.

**Policy LU-1.4 – Outdoor Markets**

Encourage the operation of Farmers' and Outdoor Markets in the Town Center Core.

**Policy LU-1.5 – Auto-Oriented Commercial Use Consolidation**
Encourage the consolidation of existing auto-oriented commercial development into pedestrian-oriented development.

**Policy LU-1.6 – Airport Compatibility**

Allowed uses shall be found to be consistent with noise, height and safety, policies of the City's adopted ~~Comprehensive~~ Land Use Compatibility Plan for the Lake Tahoe Airport.

**Policy LU-1.7 – Non-conforming Uses**

Legally existing uses that are not consistent with this plan will be considered non-conforming and grandfathered in. They will be allowed to continue at their existing density and intensity of use.

**Goal LU-2: Community Services**
To transform the Tahoe Valley area into an attractive gateway district that provides both residents and visitors access to high quality local and regional commercial uses, entertainment opportunities, recreation experiences, and tourist accommodation options.

**Policy LU-2.1 – Mixed Uses**
Promote mixed land uses within the Tahoe Valley area and adopt a use list that permits a wide range of commercial, retail, entertainment, tourist, residential, recreation, and public uses to service residents and visitors. This can be achieved through vertical or horizontal mix of uses within the same structure or in different structures on the same site. Vertical mixed-use projects ~~shall be~~are especially encouraged within the Town Center Core district, along Lake Tahoe Blvd/US 50 and Emerald Bay Road/SR 89.

**Goal LU-3: Community Design**
To improve community character through appropriate site and building design.

**Policy LU-3.1 – Distinctive Design**
Create connected and walkable districts that have a strong sense of identity while avoiding repetition in building design and siting.

**Policy LU-3.2 – Architectural Style**
Require the use of "mountain" architectural theme in new development and through remodeling as demonstrated in the 2016 South Lake Tahoe Design Guidelines. Mountain architecture features the use of pitched roofs, natural colors in darker shades, and natural materials such as rock and wood.

**Policy LU-3.3 – Inter-connected Development**
Ensure that every project is planned to enhance the physical, visual, and social connections to surrounding parcels and to the larger community.

**Policy LU-3.4 – Visual Impact of Parking**
Minimize the visual impact of parking by locating it to the rear and/or side of buildings and providing landscape screening.

**Policy LU-3.5 – Public Art**
Integrate public art into streetscape and landscape areas along US 50 and SR 89, and in the Town Center Core District. Encourage placement of interesting and attractive murals. All proposed public art must be approved by the City of South Lake Tahoe Public Art Review Process.

**Policy LU-3.6 – Lighting**
Establish pedestrian-scaled and strategically-placed lighting along US 50, SR 89, and Lake Tahoe Boulevard. Lighting must promote pedestrian safety and comfort and enhance architectural and site design. Prevent unnecessary and intrusive lighting that detracts from the beauty and view of the night sky.

**Policy LU-3.7 – Building Rehabilitation**
Encourage redevelopment through demolition, reconstruction, rehabilitation, remodeling, or other aesthetic improvement of buildings and signage.

**Policy LU-3.8 – Building Heights**

Maximum building heights established through the Area Plan public process are described in Appendix C, Development and Design Standards.

**Goal LU-4 Revitalization and Redevelopment**
To create a sustainable economic and community activity center through revitalization, reuse, and development of existing and buildable vacant sites in the Tahoe Valley Area Plan.

**Policy LU-4.1 – Infill and Underutilized Site Development**

Encourage physical change and economic development within the Tahoe Valley area by promoting infill development on high capability lands and redevelopment and revitalization on underutilized and over covered lands with existing infrastructure.

**Goal LU-5 Town Center Core**
To shape the Town Center Core into a primary area in the City for a vibrant mixed-use, resident-serving commercial and residential node.

**Policy LU-5.1 – Town Center Core**
Create a compact, mixed-use, vibrant Town Center Core district focused on the "Y" intersection that includes resident-serving commercial uses, retail and entertainment uses, and workforce and affordable housing.

**Policy LU-5.2 – Commercial Activity**
Create a pedestrian-oriented land use pattern that is served by transit and alternative transportation options. The Town Center Core should be a unique and recognizable district in South Lake Tahoe with its pedestrian-scale mountain architecture, active streetscapes, mix of uses, and focus on resident serving commercial uses.

**Policy LU-5.3 – Commercial ~~Activity~~Diversity**
Facilitate the development of commercial projects that include a mix of businesses that will kick off revitalization of the Tahoe Valley area. The first priority is the Town Center Core.

**Policy LU-5.4 – Gathering Spaces**
Create gathering spaces in the Town Center Core to promote social interaction, cultural and civic uses. The spaces should provide an area for people to gather, interact, relax, reflect, and pass time.

**Policy LU-5.5 – Entertainment**
Promote the establishment of the Town Center Core District as a central entertainment and recreation attraction for residents and visitors. Promote uses such as movie theaters, skating rinks, and recreation-based retail uses.

**Policy LU-5.6 – Building Orientation**
Orient buildings directly onto the four corners of the "Y" intersection and adjacent plazas so their entrances face and have frontage to the intersection with parking behind. Where there is adjacent open space, recreation, and/or pedestrian corridors, buildings may orient entrances in that direction but shall not be designed with an inactive "backside" facing the street.

**Policy LU-5.7 – Viewshed**
Maximize views of the surrounding trees and mountains from the "Y" intersection through appropriate site and building design.

**Policy LU-5.8 – Neighborhood Compatibility**
Require taller buildings to be designed to minimize negative visual impacts, particularly on adjacent residential areas, through such techniques as facade articulation, building orientation and location, and stepping back upper floors above two stories.

~~**Policy LU-5.9 – Multi-Family Housing**~~
~~Prohibit multi-family housing from fronting on either Emerald Bay Road or Lake Tahoe Boulevard within the Town Center Core District (TC-C).~~

**Goal LU-6: Neighborhood Professional District**
To provide an area for professional offices, social services, and health-related facilities that can support and complement Barton Hospital.

**Policy LU-6.1 – Healthcare**
Encourage the concentration of healthcare providers and services in the Neighborhood Professional District (TC-NP) to provide convenience to patrons. This area will provide a mix of residential, tourist, and healthcare uses within a cohesive neighborhood setting that encourages walking and biking.

**Goal LU-7: Healthcare District**
To support and expand South Lake Tahoe's Healthcare Industry

**Policy LU-7.1 – Barton Hospital Campus**
Encourage Barton Healthcare to consolidate its facilities within the Healthcare District (TC-HC). This district would provide for healthcare services such as an orthopedic center, employee housing, temporary housing for patients' family members**,** and a parking garage. Encourage Barton Healthcare to prepare a master plan for the Healthcare District that provides a blueprint for future development and redevelopment that connects existing and future facilities through an integrated pedestrian and bike friendly system.

**Policy LU-7.2 – Parking**
Require the master plan to analyze parking needs in the Healthcare District and incorporate parking management strategies to centralize and consolidate parking to create a "park-once" environment that is efficient, convenient and accessible by all the facilities located within the district.

**Goal LU-8: Commercial Mixed-Use Service District**
To maintain an area for small-scale industrial and commercial mixed uses in the South Shore community.

**Policy LU-8.1 – Industrial Uses**
Support the industrial needs of South Shore's full-service community by continuing the ~~secondary industrial area~~Commercial Mixed-use Services District in a manner that is compatible with increasing residential uses.

**Policy LU-8.2 – Storage Containers**
Require industrial-style storage containers for on-site storage to be enclosed and screened from the public right-of-way, bike paths, lanes, and routes, pedestrian trails and sidewalks, and adjacent open spaces.

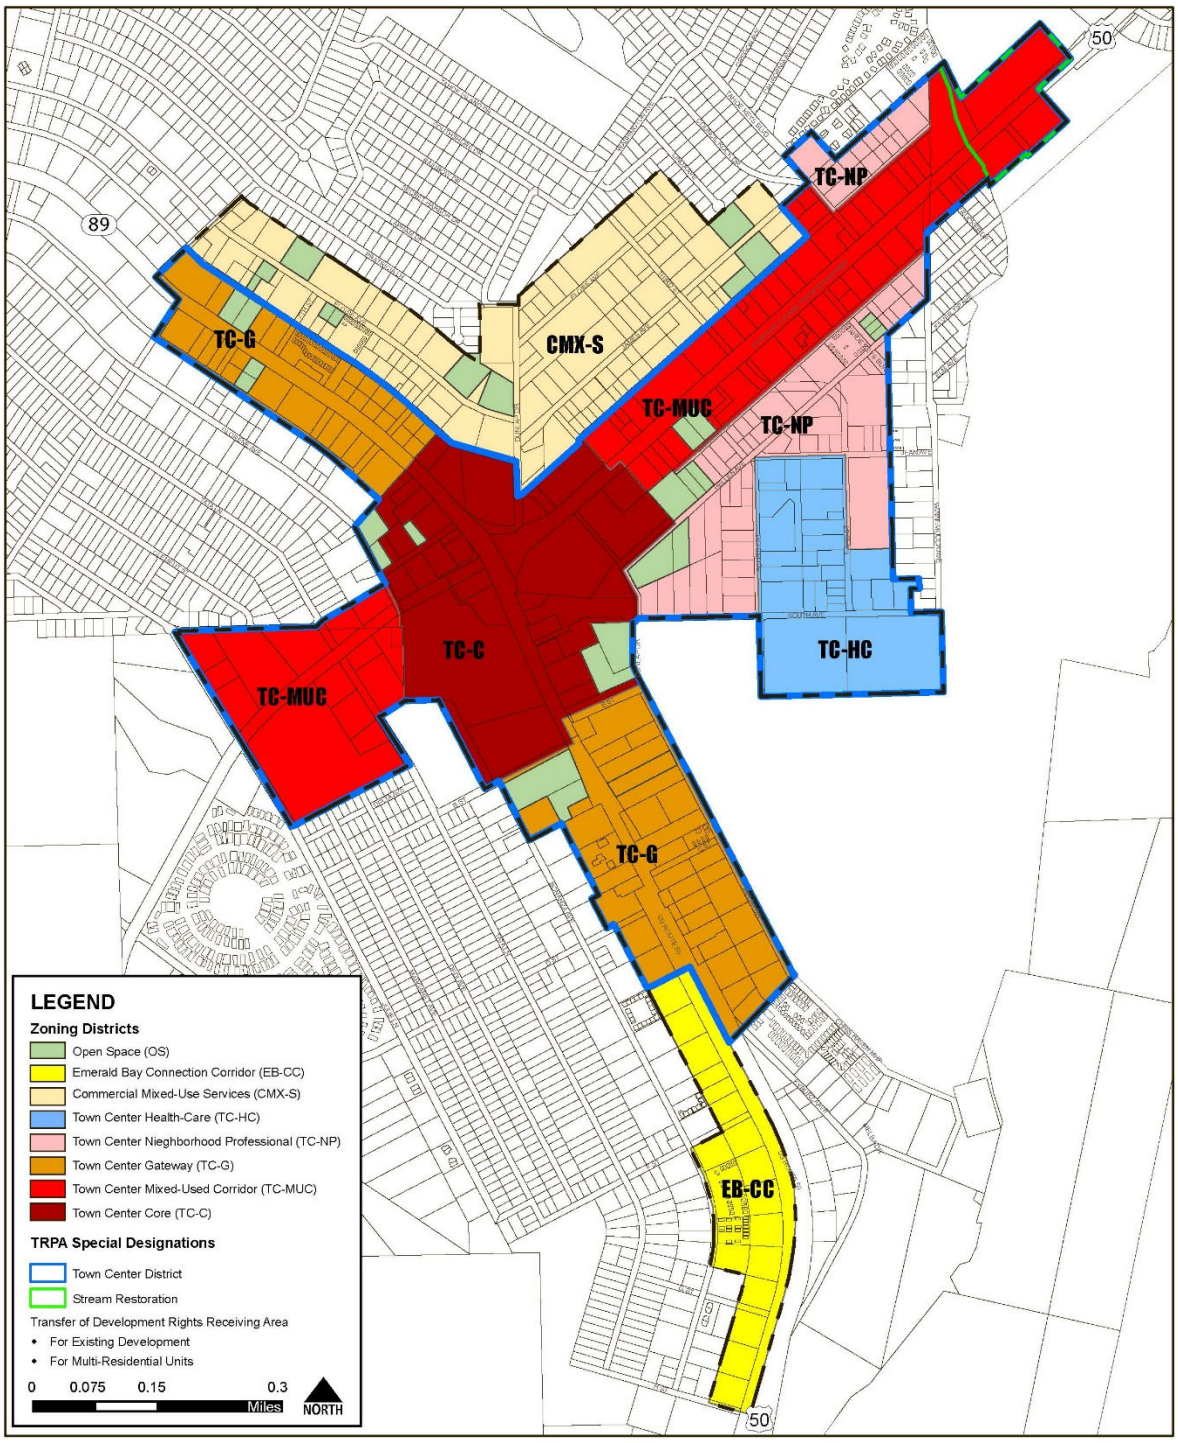
**Goal LU-9: Sustainability**
To create a sustainable community with reduced private automotive trips, reduced greenhouse gas emissions and a more energy-efficient built environment.

**Policy LU-9.1: Sustainable Communities Strategy**

Implement the TMPO's Sustainable Community Strategy in the Tahoe Valley area by integrating land use, transportation, and housing strategies to create walkable town centers, provide alternative transportation options, provide for a variety of housing types in close proximity to services, connect neighborhoods, and protect the area's natural resources.

**Policy LU-9.2: Commercial Floor Area Incentives**

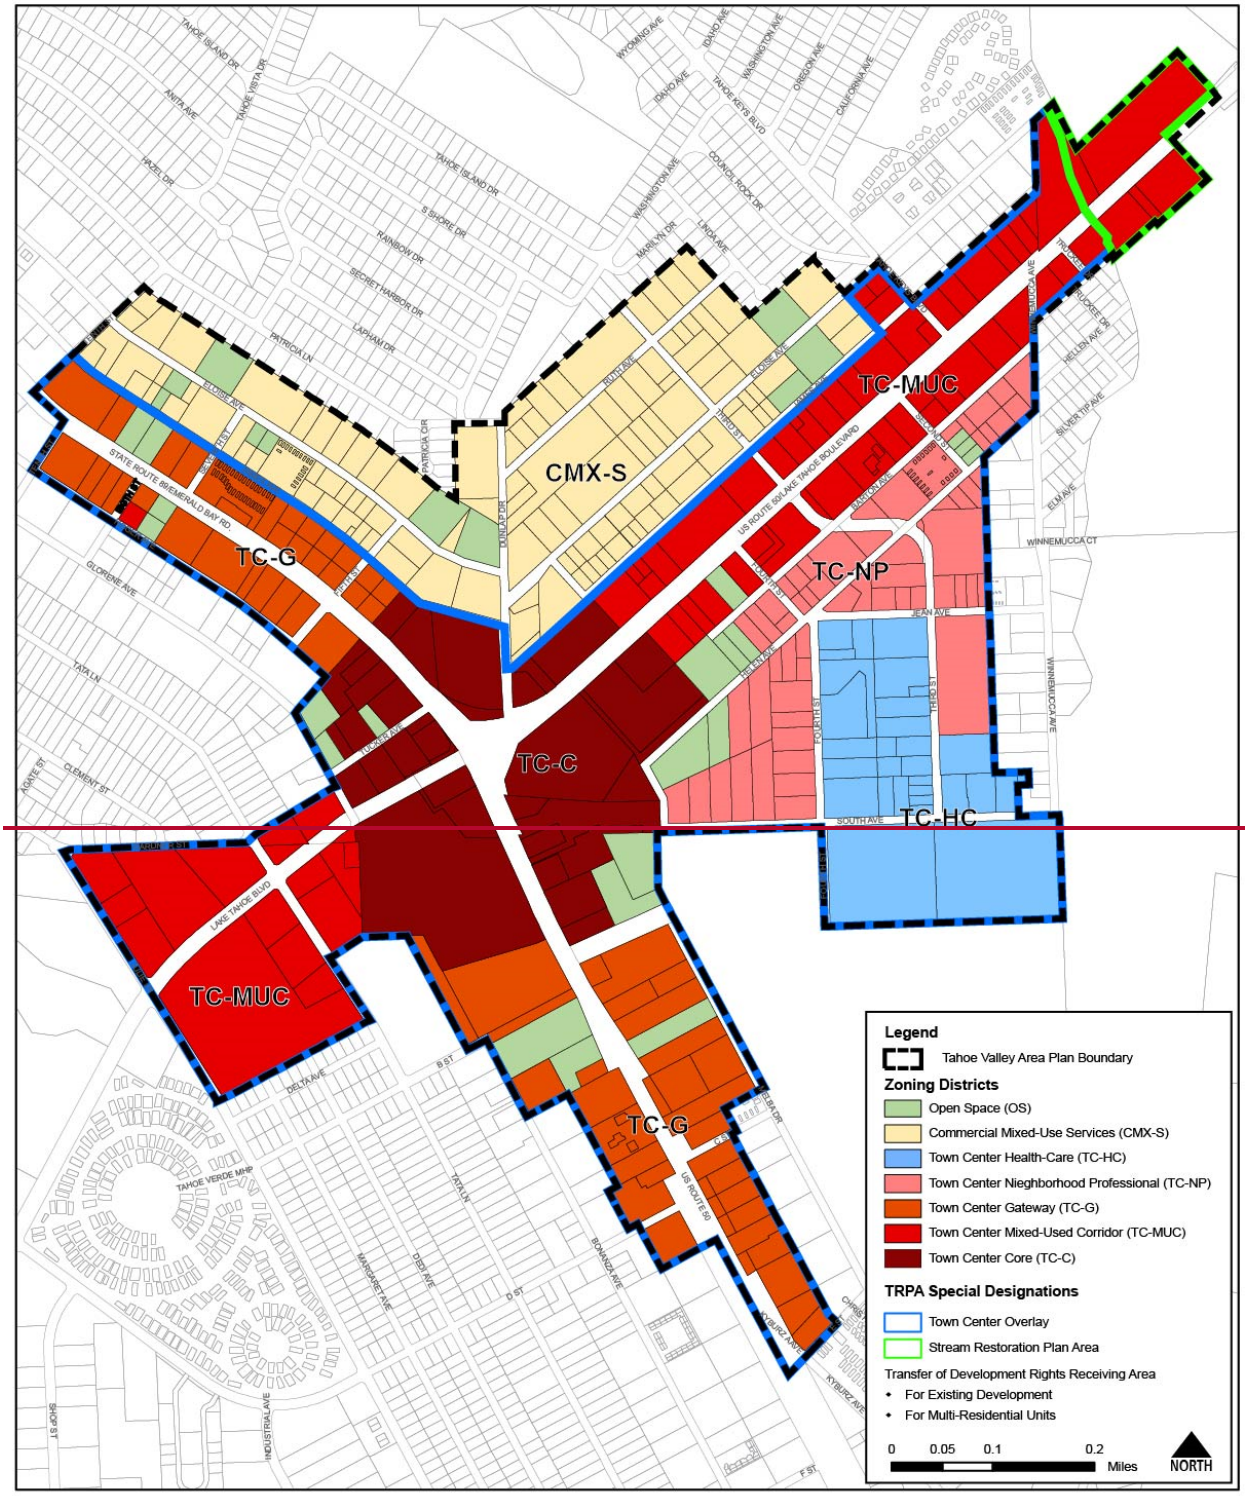
Provide incentives such as streamlined permitting and priority access to Commercial Floor Area and Residential Allocations for projects that incorporate green building measures. Also see Policy ED-1.3.



**Goal LU-10: Transfer of Development**
To focus development in centers in order to maximize incentives and create transit-, bicycle-, and pedestrian-oriented places that serve the needs of both residents and visitors.

**Policy LU-10.1: Revitalization and Consolidation of Development**

Encourage and allow for the revitalization and consolidation of development within centers by allowing for the transfer in of residential units of use and tourist accommodation units that have been converted to commercial floor area pursuant to TRPA Code Section 50.10.



## 5.3 Development and Design Standards

The Development and Design Standards and permissible use list for the Tahoe Valley Area Plan are included in Appendix C.

CITY OF SOUTH LAKE TAHOE

**Figure 11**
Zoning Map
April 2023

City of South Lake Tahoe, CA
Tahoe Valley Area Plan

Figure 12
Zoning Map
March 2015

# SECTION 6
# Economic Development

The Tahoe Valley plan area is largely dominated by obsolete strip commercial development along South Lake Tahoe's key corridor (US 50). This type of commercial development does not create an attractive environment for achieving the City's long-term economic development goals. Shortcomings include the area's multiple curb cuts, relatively small and fragmented parcels, stand-alone structures, older and sometimes obsolete motels struggling to survive, and lack of coordinated sidewalks, bike paths, landscaping, and other amenities. There is a clear need to revitalize the area to increase economic activity. The area is in a unique position to capture more local-resident-serving commercial sales, as well as capture more tourist sales. This local market is a major employment center that provides services including restaurants and eating places, general merchandise, apparel, home furnishings, and appliances stores, and building material groups which primarily (but not exclusively) serve local residents. This subsection outlines economic development goals and policies for the Tahoe Valley Area Plan.

## 6.1 Goals and Policies

**Goal ED-1: Economic Development**

To create a commercial, office, residential, and civic hub that will be a community focal point and destination place for South Lake Tahoe residents and visitors.

**Policy ED-1.1 – Gateway District**
Provide incentives and remove barriers to help redevelop the Gateway District into a mixed-use office, commercial, and residential corridor.

**Policy ED-1.2 – Town Center Core**
Provide incentives and remove barriers to help redevelop the Town Center Core District into the key focal place of South Lake Tahoe. Focus uses toward commercial retail, dining, groceries, professional offices and outdoor recreational uses.

**Policy ED-1.3 – Commercial Floor Area Incentives**
Provide City-owned CFA for purchase for mixed-use developments in the Town Center and for redevelopment or improvements to a distressed or blighted properties.

~~Coordinate with TRPA to encourage the conversion of units of use to commercial floor area and promote their transfer to the Tahoe Valley Area Plan.~~

~~In addition, projects that meet the City's economic and environmental goals, and implement one of the following community benefits may earn bonus CFA, subject to availability, from the City's CFA pool. CFA allocation from the City's pool is at the discretion of the City Council based on the following criteria for eligibility:~~

~~A. Achieve a third party green building certification such as LEED, Energy Star or Green Point Rated;~~

~~B. Incorporate housing units in the project;~~

~~C. Incorporate a mix of uses into the project with commercial, residential and office uses;~~

~~D. Transfer converted CFA from outside of the Area Plan boundary to a project inside the Area Plan boundary;~~

~~E. Participate in the implementation of the Tahoe Valley Greenbelt; or~~

~~Develop public facilities such as mini neighborhood parks in the adjacent residential areas.~~

**Policy ED-1.4 – Coverage Incentives**
Promote revitalization in the Tahoe Valley area by leveraging the City's SEZ restoration credits and banked land coverage to help private projects offset their excess coverage mitigation fees and provide a source for land coverage transfers. See Policy NCR 7.2

**Policy ED-1.5 – Alternative Land Coverage Management System**

Property owners within the Town Center Core District, in coordination with the City, may develop alternative comprehensive coverage management systems as alternatives to the parcel-level coverage requirements outlined in subsections 30.4.1 and 30.4.2 of the TRPA Code of Ordinances, provided that the alternative system complies with the provisions of subsection 13.5.3.B.1: *Alternative Comprehensive Coverage Management Systems* of the TRPA Code of Ordinances.

**Policy ED-1.6 – Commercial Floor Area Exceptions**

Where a primary use falls under "participant sport facilities," "amusement, recreation, and entertainment facilities," or the like, commercial floor area shall not be required for the following spaces and those of similar nature:

A. Performing stage and orchestra area

B. Area of play in a sporting facility (playing fields and courts, pool area, roller- or ice-skating rink, weight room, etc.)

C. Lanes in shooting or archery ranges, bowling alleys, etc.

**Policy ED-1.7 – Designated Special Events Area**

The City shall pursue special event designations for the Crossings (APN 023-231-025), the TJ Maxx/Blue Zone center (APN 023-421-001), and the Tahoe Valley Greenbelt. A keystone of this effort is identifying an entity to oversee events. The City shall continue to work with community members and business owners to identify this body.

**Goal ED-2: Neighborhood Professional and Healthcare Districts**
To support and expand South Lake Tahoe's healthcare industry.

**Policy ED-2.1 – Healthcare**
Encourage additional healthcare-related facilities to locate in the Healthcare District.

**Policy ED-2.2 – Barton Hospital Campus Master Plan**
Encourage and collaborate with Barton Hospital to develop a Campus Master Plan for the

Healthcare District that promotes connectivity, walkability, and bikeability (See also Policies LU-7.1 and LU-7.2).

**Policy ED-2.3 – Barton Hospital Incentives**
Provide flexibility for the Barton Hospital to engage in public-private ventures. Upon adoption of a Campus Master Plan, healthcare services in which Barton Hospital owns a majority interest and are located within the Healthcare District will be considered public services provided by a non-profit organization, and may be exempt from the requirements for CFA entitlements pursuant to TRPA Code Section 50.8.3.

**Goal ED-3: Commercial Mixed-Use Service District**
To modernize the existing industrial uses in the Commercial Mixed-Use Service District.

**Policy ED-3.1 – Retention**
~~Continue to m~~Maintain ~~industrial uses in~~ the Commercial Mixed-Use Service District as a secondary industrial area, ~~and allow residential uses if they are part of a mixed-use project~~while reducing interference with residential uses.

**Policy ED-3.2 – Modernization**
Support the modernization of the existing industrial uses in the Commercial Mixed-Use Service District so they are less polluting, less obtrusive to neighboring uses, and consume less energy.

**Policy ED-3.3 – South Tahoe Refuse**
Assist South Lake Tahoe Refuse with upgrading their existing facilities with state-of-the-art improvements to increase efficiency of service to the community and compatibility with surrounding land uses.

## 6.2 Implementation

The~~o~~ following implementation strategies are proposed to promote economic activity and increase pedestrian activity in the Tahoe Valley area.

| Economic Development Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| Project Review Memorandum of Understanding (MOU) with TRPA | The City and TRPA shall move forward with implementing the MOU that was certified by the City in November 2012 and adopted by TRPA in December 2014. | CSLT<br>TRPA |
| Special Event Area Designation | The City shall pursue obtaining a TRPA special event permit designation for the Town Center Core District. Temporary activities may occur in the special event area without further TRPA or City review upon approval of a special event area. All other temporary events outside the identified special event area will require a temporary activity permit. | CSLT |

| Economic Development Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| Commercial Floor Area | Amend the CFA allocation procedures to add additional criteria for earning CFA from the City unallocated pool. ~~The City should add criteria that allow projects that voluntarily achieve a LEED or Energy Star green building certification to access the City's CFA pool.~~ | CSLT |
| Land Coverage | Leverage the City's banked coverage and SEZ restoration credits to facilitate redevelopment, land coverage removal, and SEZ restoration in the Tahoe Valley area. | CSLT |

# SECTION 7
# Housing

This section supplements the Housing Sub-element of the TRPA Regional Plan Goals and Policies, and the Housing Element of the City of South Lake Tahoe General Plan. This section provides the policy context for the Tahoe Valley Area Plan to achieve the vision of creating a range of housing opportunities and choices. These opportunities include increasing the availability of quality workforce and affordable housing, providing for housing opportunities within close proximity to the Tahoe Valley Town Center Core, and allowing for the mixing of land uses to encourage live/work opportunities that allow business to grow and evolve over time.

## 7.1 Goals and Policies

**Goal H-1: Housing Development**
Promote the construction of a variety of high-quality housing types for all income levels in the Tahoe Valley area.

**Policy H-1.1 – Housing Options**
Provide for a range of housing options that include affordable, moderate-income, and workforce housing so that people can live and work in the City.

**Policy H-1.2 – Housing Incentives**
Provide the following incentives to encourage the development of a range of housing options in the Tahoe Valley plan area:

- Additional coverage and height for housing developments serving high–demand markets. ~~70 percent land coverage in the TRPA designated Town Center;~~
- ~~A maximum of 25 dwelling units an acre in the Town Center;~~
- ~~Height up to 45 feet in the Town Center Core District and 42 feet elsewhere;~~
- Access to the City's banked coverage pool to offset excessive coverage mitigation fees and for transfer of coverage (see Policy NCR-7.2)~~; and~~.
- Allow density bonuses for projects eligible under California state law.
- Provide Residential Units of Use at no cost for the development of accessory dwelling units. ~~and multi-family projects~~
- Provide development rights and land coverage at no cost for multi-family residential projects and mixed-use projects containing multi-family residential units when the project is in the Town Center.

- Provide sewer units at no cost for residential projects, where at least 50% of the newly constructed units are deed restricted to accommodate low, very low, and moderate-income families.

- ~~Secondary units allowed on parcels less than an acre in the Town Center Neighborhood Professional District.~~

**Policy H-1.3 – Residential Improvement**
New residential development may take the form of both infill of vacant parcels and reuse of existing developed parcels that benefit from "grandfathered" excess land coverage, existing sewer units, and other benefits associated with the redevelopment of existing lots.

**Policy H-1.4 – Compatibility with Neighboring Uses**
Ensure new and rehabilitated residential developments are designed to be compatible with neighboring uses.

**Policy H-1.5 – Redirection of Development**
Direct high--density residential development to areas of Tahoe Valley that are within walking distance of public transit and services.

**Policy H-1.6 – Commercial Mixed-Use Service District**
Allow residential uses within the Commercial Mixed-Use District if they are part of a mixed-use project.

**Policy H-1.7 – Tahoe Livable Communities Program**
Collaborate and support efforts of the California Tahoe Conservancy to remove blighted properties and repurpose associated development commodities. Encourage the use of residential commodities for affordable housing in Tahoe Valley area.

**Policy H-1.8 – Regional Housing Needs Assessment**
Collaborate with TRPA on the Regional Housing Needs Assessment to develop updated policies and implementation strategies to remove barriers and facilitate the development of affordable housing. Regional housing policies and programs should complement and not conflict with or duplicate state or local housing policies and programs.

**Policy H-1.9 – Housing Needs**
Encourage the consolidation of parcels within the Tahoe Valley area or the incorporation of parcels adjacent to the Area Plan boundaries for the development of multi-residential units.

**Policy H-1.10 – Conversions**
Encourage property owners of older motels units located in the Gateway District to convert tourist accommodation units to residential units of use onsite pursuant to TRPA Code Section 50.10.2.

**Policy H-1.11 – Mixed-Income Neighborhoods**

To create a balanced community, the City shall promote mixed-income neighborhoods by encouraging innovative design (e.g., second units, live-work units, etc.).

~~**Policy H-1.12 — Streamlined Review Process**~~

~~Encourage amendments to the TRPA Code of Ordinances to review affordable housing developments through the same, less restrictive process and decision maker authority as market rate projects.~~

**Goal H-2: Mixed-Use Housing**
To facilitate the development of housing for all income levels in association with mixed-use development within the Tahoe Valley Area Plan.

**Policy H-2.1 – General**
Encourage the creation of residential uses to support and add vitality to commercial and public service projects in the Tahoe Valley area.

**Policy H-2.2 – Town Center Core District**
~~Allow~~ Encourage residential and nonresidential mixed-use projects ~~uses~~ in the Town Center Core District ~~only when mixed with commercial, recreation, entertainment, or tourist primary uses~~. Residential uses shall be located above ground floor commercial uses or in separate residential structures located away from arterial roadways.

**Goal H-3: Energy Efficiencies**
To ensure energy efficiencies and appropriate weatherization for all new and existing homes.

**Policy H-3.1 – New Construction**
Ensure that new construction meets the Title 24 energy conservation requirements of the State of California.

**Policy H-3.2 – Green Building**
Encourage and promote green building practices during the development review process and implement the City's Green Building Incentive Program.

**Goal H-4~~2~~: Preservation of Existing Housing**

~~Require mitigation for~~Ensure no net loss of existing long term housing units.

**Policy H-4~~2~~.1 – Mitigation for Reduced Housing Units**

When multi-family properties are redeveloped to lower density residential uses, commercial uses, or tourist accommodation uses, require ~~a mitigation fee for each of the removed units or require that an equal number of residential units as those lost be constructed elsewhere in the area plan.~~one-for-one mitigation of the lost units within the Tahoe Valley plan area.

**Policy H-4~~2~~.2 – Retaining Long Term Rentals**

Prohibit single-family dwellings that are the result of redevelopment on sites where ~~from~~ a higher density previously existed ~~residential uses~~ from operating as short-term rentals.

# SECTION 8
# Transportation and Circulation

The Transportation and Circulation Section is a supplement to the Transportation Element of the Regional Plan, Transportation and Circulation Element of the City of South Lake Tahoe General Plan, and the TRPA/TMPO Regional Transportation Plan and Sustainable Communities Strategy. Consistent with these plans, this section provides the policy context for the Tahoe Valley Area Plan to achieve its vision for future transportation and circulation systems which are critical to the community's livability, economic viability, and environmental quality.

This section contains goals and policies and implementation strategies that will help create a safe, efficient, and integrated transportation system that provides quality mobility options and connectivity for all sectors of the population. The Area Plan seeks to improve connections to adjacent neighborhoods, increase pedestrian and bicycle connections, improve transit access, conserve energy resources, reduce vehicle miles traveled, reduce greenhouse gas emissions, improve air quality, and connect Tahoe Valley to the regional transportation system.

## 8.1 Goals and Policies

**Goal T-1: Roadways**
To provide safe and efficient vehicular circulation for the Tahoe Valley Area Plan.

**Policy T-1.1 – Level of Service**
Strive to maintain a level of service (LOS) D or better on all arterial and collector roads, and signalized intersections. This LOS standard may be exceeded during peak periods, not to exceed 4 hours per day when provisions for multi-modal amenities and/or services (such as transit, bicycling, and walking facilities) are adequate to provide mobility for users.

**Policy T-1.2 – "~~Way-Finding~~Wayfinding" Signage**
Install an integrated way-finding and directional signage program through the Tahoe Valley area directing visitors on foot, bikes, or in vehicles, to recreation, commercial, tourist, transit and parking facilities.

**Policy T-1.3 – US 50 and SR 89**
Coordinate with Caltrans ~~to continue making~~for continued improvements to ~~ensure that the~~ US 50 and SR 89 ~~water quality improvement projects include~~ by ~~the~~ installing~~ation of~~ bike lanes;~~,~~ enhanc~~inged~~ bike facility treatments such as green paint, buffers and signage;~~,~~ installing and maintaining pedestrian sidewalks and~~,~~ sidewalk lighting.~~, and curb and gutter to convey water for treatment.~~

Coordinate and support TRPA in implementation of the S~~T~~R 89 Corridor Plan.

**Policy T-1.4 – Truck Routes**
Minimize truck traffic through residential neighborhoods by requiring trucks to use designated and posted truck routes.

**Policy T-1.5 – Vehicle Short Cuts**
Minimize vehicular traffic "shortcuts" through residential areas and commercial parking lots through use of street design, traffic controls, and traffic calming measures.

**Policy T-1.6 – Traffic Movements on Lake Tahoe Boulevard**
Discourage left turn movements on Lake Tahoe Boulevard, with the exception of signalized intersections.

**Policy T-1.7 – Complete Streets**
Develop and adopt complete street roadway design standards for US 50 and the following collector streets: Third Avenue and~~,~~ South Avenue ~~and Tahoe Keys Boulevard~~.

**Policy T-1.8 – Healthcare District**

Coordinate with Barton Healthcare on the Campus Master Plan to ensure that any proposed roadway modifications or abandonments in the Healthcare District meet standards for safety, traffic, bike, and pedestrian movement.

**Policy T-1.9 – Barton Avenue**

Ensure that loading and delivery access is maintained along Barton Avenue as part of any roadway improvement project or construction of the Tahoe Valley Greenbelt.

**Goal T-2: Parking and Access**
To create an accessible, efficient, and an aesthetically ~~-~~pleasing parking system in the Tahoe Valley Area Plan.

**Policy T-2.1 – Shared Parking ~~and Driveway Consolidation~~**
Encourage shared-use parking facilities and agreements between businesses/uses on adjacent parcels.

**Policy T-2.2 – Parking Structures**
Encourage the development of above-ground or underground structured parking, or public/shared parking lots ~~in~~near the Town Center Core to serve surrounding uses at the "Y" intersection and transit connections to other destinations. ~~Encourage businesses to include bike parking as part of their parking strategies.~~

**Policy T-2.3 – Driveway Consolidation**
Where feasible, reduce the number of ingress/egress points along US 50 and SR 89 by combining and realigning driveways to improve traffic flow and eliminate conflicts between ~~pedestrian and bicycle~~pedestrians, bicycles, ~~conflicts with~~and vehicles.

**Policy T-2.4 – New Project Access**
Require new projects located on corner parcels to provide their vehicle access from side streets

instead of from Lake Tahoe Boulevard or Emerald Bay Road, unless shown that highway access would be safer.

**Policy T-2.5 – ~~Mixed-Use Project Parking~~Alternative Parking Demand**
Allow ~~mixed-use~~ projects to reduce their parking requirements provided ~~that~~the ~~a parking demand analysis is submitted and approved by the City~~ project~~s~~ offsets parking demand through additional parking management and/or contributions to shared parking facilities, public transportation and/or right of way improvements. ~~, parking is exempted under state or regional law, or through additional contributions to public transportation and right of way improvements~~.

**Policy T-2.6 Parking for Affordable Housing**

Establish~~ed~~ reduced parking requirements for affordable housing projects that are not exempt from parking requirements by state law.

**Policy T-2.7 Parking Benefit District**

Conduct public outreach and studies to determine the feasibility of establishing a parking benefit district to facilitate development of shared public parking facilities and parking management within the district.

**Policy T-2.8 Tahoe Valley Mobility Hub**

Conduct public outreach ~~to determine the desire for and~~ and a feasibility analysis of developing a parking hub and identify priority locations to facilitate a park-~~-~~once environment.

**Goal T-3: Pedestrian Facilities**
To create a functional, safe, convenient, and integrated pedestrian system in the Tahoe Valley area and the surrounding neighborhoods.

**Policy T-3.1 – Connectivity**
Provide adequate pedestrian and bicycle facilities such as continuous sidewalks, bike paths and bike lanes throughout the Tahoe Valley area that connect commercial, health services, entertainment, residential, and recreation areas.

**Policy T-3.2 – Pedestrian Priority**
Give pedestrian safety and convenience highest priority in site planning and roadway design.

**Policy T-3.3 – Pedestrian/Automobile Buffer**
Develop landscape strips between sidewalks and arterial roadways to buffer pedestrians from vehicular traffic.

**Policy T-3.4 – Sidewalks**
Require all projects on an arterial or collector street that include new development, major remodeling, and any significant addition to provide and maintain sidewalks along the public street frontage. Such sidewalks shall comply with ADA requirements.

**Policy T-3.5 –Pedestrian Obstacles**
Remove and/or relocate any existing impediments to pedestrian movement along sidewalks, such as poles, trees, signs, wires, and other public/private utility infrastructure.

**Policy T-3.6 – Pedestrian/Bicycle Crossing at the "Y" Intersection and US 50**
Develop strong pedestrian and bicycle links (e.g., crosswalks and refuge islands) between the four corners of the "Y" intersection and along US 50. Coordinate with Caltrans to evaluate alternative crossings, that create safe passage across US 50 for pedestrians and cyclists south of the "Y" intersection.

**Policy T-3.7 – Pedestrian Access**

Develop a strong pedestrian (sidewalks, paths, and trails) access system that effectively links adjacent residential neighborhoods to Tahoe Valley's employment centers, commercial uses, public service uses, and recreational and educational opportunities as an alternative to vehicle trips.

**Goal T-4: Bikeways**
To develop a safe and efficient bikeway system that promotes biking as an alternative to local vehicle trips.

**Policy T-4.1 – Bikeway System**
Develop a bikeway system that effectively links residential neighborhoods, employment centers, commercial areas, public uses, and recreational uses, and educational centers, both within and outside of the Tahoe Valley area. Bicycle and pedestrian improvements that are identified in the City General Plan, TRPA Regional Plan, and/or TRPA's Lake Tahoe Regional Bike and Pedestrian Master Plan, which are adjacent to or within private development project areas, shall be implemented as conditions of approval.

**Policy T-4.2– Bikeway Linkages**
Integrate and link existing bike paths with regional paths. Connect the Tahoe Valley trail system to the proposed Meyers – Stateline Greenway bike trail.

**Policy T-4.3– Winter Use**
Designate, where appropriate, Class I bike trails for winter use. Identify and study funding mechanisms to plow the trails where pedestrians and bikers need access or designate for cross country or snowshoe use. Implement snow removal practices along roadways to ensure that bike trail crossings are not blocked by snow berms.

**Policy T-4.4 – Bicycle Parking and Storage**
Install bicycle racks or lockers at all public parks, gathering areas, shared parking facilities, and the transit centers. and rRequire them in all new private construction developments and changes of use or tenant improvementsremodels that require major design review.

**Policy T-4.5 – Bike Route Improvement**
Explore designating James Avenue as a commercial service bike route and Eloise Avenue as a recreation bike route. Explore implementing measures to make the bike routes safer and more appealing bicycling experience.

**Policy T-4.6 – Bicycle Route ~~maintenance~~Maintenance**

Prioritize the maintenance of roads containing designated bicycle routes and Class II bike lanes.

**Policy T-4.7 – Safe Routes to School**

Coordinate with the South Lake Tahoe Unified School District, non-profit community groups, and the Tahoe Transportation District to ~~develop~~ maintain and implement a Safe Routes to School Master Plan. Washington Avenue, Third Street, and D Street are potential safe routes to school.

**Policy T-4.8 – South "Y" Intersection Enhancements**

Coordinate with Caltrans to enhance and maintain combined bike lane/turn lanes, intersection crossing markings, and colored pavement to clearly demark auto and bicycle~~ing~~ travel lanes and improve bicycle safety at the South "Y" intersection ~~by installing combined bike lane/turn lane, intersection crossing markings, and colored pavement to clearly demark auto and bicycling travel lanes~~.

**Policy T-4.9 – Longevity of Bikeway Improvements**

Encourage practices that increase the longevity of bike path improvements, such as recessed paint or thermoplastic paint.

**Goal T-5: Transit**

To promote the use and expansion of transit options for South Lake Tahoe citizens.

**Policy T-5.1 – Transit Services**

Work with the Tahoe Transportation District to ensure that the Tahoe Valley area and its major employment centers, shopping destinations, and residential neighborhoods are served by frequent bus service with shorter headways. Coordinate with the Tahoe Transportation District and Tahoe Area Regional Transit to connect the South Shore transit service to North Shore transit service.

**Policy T-5.2 – Bus Turnouts and Shelters**

Coordinate with the Tahoe Transportation District to ensure that bus shelters and bus pullouts are installed at all bus stops throughout the Tahoe Valley area.

**Policy T-5.3 – Transit Stops**

Require all mixed use residential/retail development projects of more than three acres or containing more than five residential units to designate and reserve locations for transit/school bus stop locations where appropriate.

**Policy T-5.4 – Transit Center**

Work with Tahoe Transportation District and Amtrak to ensure that the City-owned Transit Center has the capacity for long-term transit growth.

**Policy T-5.5 – West Shore Shuttle Service**

Work with the Tahoe Transportation District to ensure continual and frequent shuttle service

trips during the summer months from the South Y Transit Center to Camp Richardson, the US Forest Service beaches along SR 89, and Emerald Bay.

**Policy T-5.6 – Intelligent Signage**
Coordinate with Caltrans and California Highway Patrol to install and operate electronic message signs ~~in the Tourist Center Core District~~ to convey traffic and parking conditions at recreation facilities located on SR 89 between the Y intersection and Emerald Bay.

**Policy T-5.7 – Funding for Expansion of Transit**

Continue to partner with South Shore Transportation Management Association, Tahoe Transportation District, Tahoe Regional Planning Agency, and other partners to identify new and existing funding sources to expand and electrify fixed-route bus services, micro-transit services, and other transit options.

**Goal T-6: Sustainable Communities Strategy**

To provide a transportation and circulation system that promotes reduction in greenhouse gases, creation of multimodal networks and promotion of a mix of land uses.

**Policy T-6.1 – SCS Implementation**

Implement the TMPO Sustainable Communities Strategy in the Tahoe Valley Area Plan by integrating land use, transportation, and housing strategies to create a walkable Town Center, provide alternative transportation options, provide for a variety of housing types in close proximity to services, connect neighborhoods, and protect the area's natural resources.

## 8.2 Implementation

This subsection outlines transportation and circulation improvements that implement the vision, guiding principles and the goals and policies of the Tahoe Valley Area Plan (See Table 8.1).

Future improvements to the area's transportation and circulation system will provide opportunities for residents and visitors to walk, bike or use public transit throughout the area. While slight adjustments to the existing roadway system may be possible, the greatest potential for improving the overall transportation and circulation system will be achieved through the development of a comprehensive multi-modal network. Continuing to make connections between the completed and proposed trails and sidewalks and strengthening the connections to public transportation options will create the foundation for a complete transportation network. This will improve TRPA's thresholds for Vehicles Miles Travelled (VMT), air quality, water quality and noise, support the local economy, improve public health and support a connected, walkable and bikeable community.

A variety of improvements to the area's transportation and mobility system intended to encourage safety, connectivity, and access to the area's surrounding recreational opportunities are proposed by various agencies and are in various phases of design, permitting or environmental review, and are listed below:

| Transportation and Circulation Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| US 50 and SR 89 Improvements | ~~US 50 Airport to "Y" Junction Water Quality Improvement Project: As part of this water quality improvement project, Caltrans installed a 3- to 4-foot shoulder for a Class II bike lane and provided curbs, gutters and sidewalks.~~ | ~~CALTRANS (completed capital project)~~ |
| | ~~US 50 "Y" to Trout Creek Water Quality Improvement Project: As part of this water quality improvement project, Caltrans will install Class II bike lanes, and replace traffic signals, curbs, gutters and sidewalks. The project is currently in the design phase and construction is expected to begin late 2016 and be completed by 2019.~~ | ~~CALTRANS (existing capital project)~~ |
| | ~~SR 89 "Y" to Cascade Road Water Quality Improvement Project: As part of this water quality improvement project, Caltrans will install a Class III bike route. Construction began in 2014 and is expected to be completed by October 2015.~~ | ~~CALTRANS (existing capital project)~~ |
| | RTP #74: US 50 Signal Synchronization and Adaptive Signals Project. Upgrade signal timing equipment at signalized intersections along US Highway 50 to improve traffic flow. | CALTRANS (existing capital project) |
| | RTP #81: Signalization Upgrade. Upgrade signal timing equipment at City of South Lake Tahoe signalized intersections to improve traffic flow. | CALTRANS (existing capital project) |
| | ~~Tahoe Keys Intersection Improvements: Install a right turn lane on US 50 at the Tahoe Keys Intersection.~~ | ~~CALTRANS (existing capital project)~~ ~~CSLT~~ |
| | South "Y" Intersection Bike Lane Stripping. ~~Coordinate with Caltrans to consider upgrading the current bike lane stripping at the South "Y" intersection to install a combined bike lane/turn lane, intersection crossing markings, and colored pavement to enhance public safety and clearly demark auto and bicycling travel lanes~~Maintain recent bike lane updates to the "Y" intersection, including the combined bike lane/turn lane, intersection crossing markings, and colored pavement for enhancement of public safety and clear delineation of auto and bicycling travel lanes. | CSLT with CALTRANS coordination |

| Transportation and Circulation Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| Bike Paths, Lanes and Routes Improvements | The Tahoe Valley Greenbelt: The project focuses on two key elements: (1) construction of a comprehensive regional storm water treatment system (see Tahoe Valley Erosion Control Project description); and (2) construction of a recreation and open space community amenity. This project will create a distinct and unique recreation and open space amenity southeast of the "Y" intersection. The project will include SEZ restoration, installation of pedestrian-bicycle pathways, pedestrian amenities and interpretive signage along with storm water improvements. The Greenbelt will serve as a visual amenity for adjacent residential and commercial uses and provide a bicycle and pedestrian link from residential neighborhoods to the Tahoe Valley commercial core. There are existing bicycle paths and stormwater facilities in the area, which would be upgraded and enhanced as part of this project. | CSLT<br>CTC |
| | South Tahoe Greenway: The proposed South Tahoe Greenway Shared Use Trail will create the backbone of the bicycle and pedestrian network in South Lake Tahoe and will take a major step forward in furthering sustainability goals of South Shore communities. The Greenway will connect residents and visitors to community and recreation destinations from Meyers to the Stateline, providing a high-quality alternative to private automobile use. The highest priority 1.8-mile segment will link urban neighborhoods in the core of South Lake Tahoe to shopping, social services, schools, and recreation destinations. Continuing the trail system northward to the state line provides important connections to the largest concentration of visitor services in the region, including shopping, lodging and transit. Completion of this link also connects the recreation resources at Van Sickle Bi-State Park to the network. A southern trail extension to Meyers, not part of the current project, would complete the transportation link. A spur trail to link the Tahoe Valley area to the Greenway is proposed at the west end of South Street. | CSLT |
| | ~~Bike Path Rehabilitation: This project focuses on rehabilitating and laying new asphalt on an existing Class I bike path that~~ | ~~CSLT~~ |

| Transportation and Circulation Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| | ~~runs from Trout Creek to the Y intersection. Project completion is expected in October 2014.~~ | |
| | Bicycle Transportation Signage System: ~~The City is~~ Continue ~~coordinating~~ coordination with the Lake Tahoe Bicycle Coalition to develop and implement a consistent, functional bicycle transportation ~~signage~~ system that serves the commuting needs of employees, students, business owners, shoppers, and tourists in the South Shore. The intent of the program is to implement a consistent way-finding signage system and provide trailside amenities such as benches and tool stations that can safely and ~~direct~~ efficiently deliver cyclists and pedestrians ~~traffic~~ to services, places of employment, and recreation opportunities ~~in a safe and efficient manner~~. | LTBC<br>CSLT |
| | Safe Pedestrian and Bicyclist Crossings: Coordinate with Caltrans to evaluate alternative crossings that create safe passage across US 50 and SR 89 for pedestrians and cyclist. | CSLT with CALTRANS coordination |
| | Bike Lane: Sign and stencil Class III bike routes as depicted in Figure 13 of the Tahoe Valley Area Plan. While progress has been made, it is an ongoing effort to maintain lane striping and paint as the lifespan is significantly reduced by snow removal activities. | CSLT |
| ~~Pedestrian Improvements~~ | ~~Pedestrian Improvements: Install sidewalks along US 50 and SR 89 as part of the US 50 and SR 89 Water Quality Improvement Projects.~~ | ~~CALTRANS (existing capital project)~~ |
| | Implement complete streets roadway design standards for Tahoe Keys Blvd. The project is awaiting funding and is estimated to begin in 2028. | CSLT |
| Transit Service | South Lake Tahoe Bus Shelters: Continue support of t~~T~~he Tahoe Transportation District's ~~is continuing a~~ program of constructing new shelters in the South Shore. The structures will enhance rider comfort and safety while adding visibility to encourage transit use. | TTD |
| | Seasonal Bus Service: Continue bus service from the Tahoe Valley Transit Center to Emerald Bay during the summer season. | TTD |

**Completed Transportation and Circulation Strategies**

Since the initial adoption of the Tahoe Valley Area Plan in 2015, the following transportation and circulation improvements have been implemented.

| Improvements | Description | Completed |
|---|---|---|
| US 50 and SR 89 Improvements | US 50 Airport to "Y" Junction Water Quality Improvement Project: As part of this water quality improvement project, Caltrans installed a 3- to 4-foot shoulder for a Class II bike lane and provided curbs, gutters, and sidewalks. | CALTRANS, 2014 |
| | US 50 "Y" to Trout Creek Water Quality Improvement Project: As part of this water quality improvement project, Caltrans will install Class II bike lanes, and replace traffic signals, curbs, gutters, and sidewalks. ~~The project is currently in the design phase and construction is expected to begin late 2016 and be completed by 2019.~~ | CALTRANS, 2018 |
| | SR 89 "Y" to Cascade Road Water Quality Improvement Project: As part of this water quality improvement project, Caltrans will install a Class III bike route. ~~Construction began in 2014 and is expected to be completed by October 2015.~~ | CALTRANS, 2016 |
| | Tahoe Keys Intersection Improvements: Install a right turn lane on US 50 at the Tahoe Keys Intersection. | CALTRANS, 2018 |
| Bike Paths, Lanes, and Routes Improvements | Bike Path Rehabilitation: This project focuses on rehabilitating and laying new asphalt on an existing Class I bike path that runs from Trout Creek to the Y intersection. ~~Project completion is expected in October 2014.~~ | CSLT, 2014 |
| Pedestrian Improvements | Pedestrian Improvements: Install sidewalks along US 50 and SR 89 as part of the US 50 and SR 89 Water Quality Improvement Projects. | CALTRANS 2016, 2018 |

# SECTION 9
# Public/Quasi-Public Facilities and Services

The Public/Quasi-Public Facilities and Services Section is a supplement to the Public/Quasi-Public Facilities and Services Element of the City of South Lake Tahoe General Plan and the Public Services and Facilities Element of the TRPA Regional Plan. This section provides the policy context for future public and quasi-public facilities and services within the Tahoe Valley area.

## 9.1 Goals and Policies

This subsection outlines public/quasi-public facilities and services goals and policies for the Tahoe Valley area.

**Goal PS-1: Public Facilities**
To improve public facilities in the Tahoe Valley area.

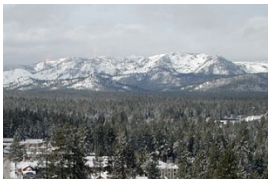
**Policy PS-1.1 – Co-Locate Public Facilities**
Locate appropriate public service facilities in commercial areas so as to add pedestrian/bicycle traffic and serve as a catalyst for private development, provided they do not detract from commercial activity in those areas.

**Policy PS-1.2 – Barton Hospital Campus Master Plan**

Encourage Barton Healthcare to prepare a Campus Master Plan for the Healthcare District that provides a blueprint for future development and redevelopment that connects existing and future facilities through an integrated pedestrian and bike friendly system. With an adopted Campus Master Plan, healthcare services in which Barton Hospital owns a majority interest and are located within the Healthcare District will be considered public services provided by a non-profit organization, and therefore will be exempt from the requirements for CFA entitlements

**Goal PS-2: Water and Wastewater**
To maintain adequate water and sewer service for all properties within the Tahoe Valley area.

**Policy PS-2.1 – Lukins Brothers Water**
Coordinate with South Tahoe Public Utility District and Lukins Brothers Water in upgrading water systems in the Tahoe Valley area.



**Goal PS-3: Power**
To promote the use of alternative energy to power structures in the Tahoe Valley area.

**Policy PS-3.1 – Solar Energy**
Encourage new and remodeled structures to design for peak solar orientation, include solar panels, and incorporate design techniques to reduce energy consumption.

**Goal PS-4: Broadband**
To promote economic prosperity by providing digital infrastructure in the Tahoe Valley area.

**Policy PS 4.1 – Fiber Optic**
Coordinate with the business community, Caltrans, and other public service and facility providers to plan for and construct fiber-optic conduit in the Tahoe Valley area.

# SECTION 10
# Natural and Cultural Resources

The Natural and Cultural Resources Section is a supplement to the Natural and Cultural Resources Element of the City of South Lake Tahoe General Plan and to the Conservation Element of the TRPA Regional Plan. Consistent with these plans, this section provides the policy context for the Tahoe Valley Area Plan to achieve its vision for future natural and cultural resource protection.

The City's many resources contribute to its economy and are important elements in the quality of life of South Lake Tahoe residents and quality of the recreation experience for visitors. The preservation of these resources is essential for a prosperous and sustainable future. This section contains goals and policies and implementation strategies that focus on the preservation and enhancement of scenic, water quality, air quality, soil conservation, and ~~stream~~ Stream ~~environment~~ Environment ~~zones~~Zones.

## 10.1 Goals and Policies

This subsection outlines natural and cultural resource goals and policies for the Tahoe Valley Area Plan. These goals and polices implement the vision and guiding principles discussed earlier.

**Goal NCR-1: Natural Resources**
To design neighborhoods, sites, and buildings that complement the natural environment.

**Policy NCR-1.1 – TRPA Coordination**
Coordinate with TRPA on annual monitoring, reporting, and recertification of the Tahoe Valley Area Plan to ensure that projects permitted by the City are consistent with the goals, policies, and standards of the Tahoe Valley Area Plan, the Regional Plan, and the Sustainable Communities Strategy.

**Goal NCR-2: Energy Conservation**
To improve design and construction practices so that new buildings last longer, are energy efficient, cost less to operate, and provide better working environments.

**Policy NCR-2.1 – Green Buildings**
Ensure that the design, construction, and operation of new construction and major renovations are consistent with the California Green Building Code and other state standards for energy efficiency. Promote and encourage property owners to use incentives provided for in the City's Green Building Incentive Program.

**Goal NCR-3: Scenic Resources**
To achieve threshold attainment for Scenic Roadway Unit #1, Unit #35, and Unit #36A within the Tahoe Valley Area Plan.

**Policy NCR-3.1 – Scenic**
Improve the visual quality of the built environment consistent with the general recommendations for site planning found in the TRPA Scenic Quality Improvement Program (SQIP) for Scenic Roadway Unit #1, Unit #35, and Unit #36A and ensure consistency with the Development and Design Standards contained in Appendix C.

**Policy NCR-3.2 – New Scenic Resources**
Designate the views of Tahoe Mountain, Monument Peak, and Heavenly Valley as scenic resources.

**Policy NCR-3.3 – Viewshed Protection**
Implement design standards and guidelines (Appendix C) to preserve, improve, and enhance the scenic quality of the natural environment and take full advantage of scenic views in the Tahoe Valley area through building orientation, setbacks, and design. Buildings greater than two stories shall not result in the net loss of views to an identified scenic resource.

**Policy NCR-3.4 – Open Space**
Maintain existing open spaces, SEZs, and stormwater drainage basins as view corridors to provide visual relief from the urban environment.

**Goal NCR-4: Stream Environment Zones**
To protect Stream Environment Zone (SEZ) restoration projects and areas of undisturbed SEZ within the Tahoe Valley area.

**Policy NCR -4.1 – Stream Environment Zones**
Increase the area of naturally functioning SEZ by preserving existing SEZ and restoring/rehabilitating disturbed SEZ in the Tahoe Valley area, prioritizing the Greenbelt area.

**Policy NCR -4.2 – Redirection and Transfer of Development**
Direct new development away from SEZs and encourage the removal and transfer of existing development from disturbed SEZs that can be feasibly restored. Encourage property owners to use TRPA's transfer incentives available in Chapter 51 of the TRPA Code. Development rights and existing development that are transferred from SEZs and other sensitive lands are eligible to earn residential bonus units, commercial floor area, and tourist accommodation bonus units, when transferred to Centers.

**Policy NCR-4.3 – Stream Environment Zone Mapping and Restoration**

Utilize the updated Bailey Mapped Land Capability Map to more accurately delineate the SEZs within the Tahoe Valley area (See Figure 15). Coordinate with public agencies and private property owners to prioritize and target the removal of development and land coverage from the delineated SEZs and from the TRPA designated Stream Restoration Plan Areas.

**Goal NCR-5: Water Quality**
To protect and enhance Lake Tahoe's unique transparency, color and clarity, and improve the water quality in the South Shore's rivers, creeks, marshes, and groundwater.

**Policy NCR-5.1 – Stormwater System**
Construct the Tahoe Valley Water Quality Improvement Project as part of the Greenbelt Project

to treat stormwater from Tahoe Valley and adjacent residential areas, in order to reduce fine sediment loads to the Upper Truckee River and Lake Tahoe, and restore disturbed SEZs.

**Policy NCR-5.2 – Low Impact Development (LID) Techniques**
Incorporate site design elements to mimic and enhance natural hydrologic functions such as preserving and protecting environmentally sensitive site features and providing runoff storage, infiltration and groundwater recharge BMPs to reduce the transport of runoff and pollutants from the site at which they are generated.

**Policy NCR-5.3 – Best Management Practices**
Ensure installation and maintenance of Best Management Practices (BMPs) as required by the City's NPDES Permit and memorandums of understanding with TRPA.

**Policy NCR-5.4 – Best Management Practices Retrofit Certification**
Coordinate with TRPA to support private property BMP certification with a near-term focus on commercial and multi-family land uses that have drainage directly connected to Lake Tahoe and/or the Upper Truckee River, or are in the same catchment as Environmental Improvement Program (EIP) projects or public water quality improvement projects.

**Policy NCR-5.5 – Environmental Improvement Program (EIP)**
Coordinate with TRPA to implement the EIP water quality improvement projects in the Tahoe Valley area, with priority on Total Maximum Daily Load (TMDL) pollutant load reduction opportunities.

**Policy NCR-5.6 – Lake Tahoe Total Maximum Daily Load**

Collaborate with Lahontan Water Quality Control Board and refine the *Pollutant Load Reduction Strategy* for load reduction targets beyond the year 2016 and update the *Pollutant Load Reduction Plan* as necessary to achieve the Lake Tahoe TMDL load reduction targets. The Tahoe Valley Area Plan hereby incorporates by reference all monitoring, operations, maintenance, and reporting required by the City's NPDES permit, the adopted *Pollutant Load Reduction Plan* and the *Stormwater Management Plan*, which will also be utilized by TRPA in the 4-year Area Plan recertification process pursuant to TRPA Code Sections 13.8.2 and 13.8.5.

**Policy NCR-5.7 – Source Water Protection**
Prevent contamination of source water in the Tahoe Valley area by requiring projects located in a Source Water Protection Zone, as defined by Chapter 60 of the TRPA Code, to incorporate appropriate source water protection and site-specific best management practices including pretreatment technologies.

**Policy NCR-5.8 – Drainage Incentive**
Allow projects within the Tahoe Valley area, to provide in-lieu funding for an area-wide municipal stormwater treatment if sufficient treatment capacity exists within an area-wide water quality treatment system, subject to the requirements of TRPA Code Section 13.5.3.B.3. Properties participating in an area-wide system would be considered as meeting their water quality mitigation and BMP requirements of the TRPA Code. Require that full pretreatment of drainage occurs on a private property before it is accepted into a City system.

**Policy NCR-5.9 – Off Site Improvements**
Ensure that all new development or redevelopment projects, and projects subject to a special

use permit install and maintain off-site water quality improvements, including but not limited to curb, gutter, drainage facilities, stabilized road shoulders, at the direction of the City engineer.

**Goal NCR-6: Historic and Archeological Resources**
To preserve cultural and historic resources in the Tahoe Valley area.

**Policy NCR-6.1 – Resource Protection**
Preserve identified historic and cultural resources where feasible. Where it is found that a resource has no economically viable future use, require mitigation for the loss of the resource that would preserve public access to its historic or cultural significance.

**Policy NCR-6.2: Archeological Investigations**

The City shall require archeological investigations for all applicable discretionary projects, in accordance with CEQA regulations, for areas not previously surveyed and/or that are determined sensitive for cultural resources (e.g., undeveloped parcels near water features). The City shall require the preservation of discovered archeologically significant resources (as determined based on TRPA, State, and Federal standards by a qualified professional) in place if feasible, or provide mitigation (avoidance, excavation, documentation, curation, data recovery, or other appropriate measures) prior to further disturbance.

**Policy NCR-6.3: Human Remains Discovery**

The City shall require/condition projects and other ground disturbance activities to notify the City if human remains are discovered and halt work. The County Coroner will be notified according to Section 5097.98 of the State Public Resources Code and Section 7050.5 of California's Health and Safety Code. If the remains are determined to be Native American, the coroner will notify the Native American Heritage Commission and Washoe Tribe, and the procedures outlined in CEQA Section 15064.5(d) and (e) shall be followed.

**Goal NCR-7: Excess Coverage Mitigation**
To maximize opportunities to remove and mitigate excess land coverage and facilitate environmental redevelopment in the Tahoe Valley area and to benefit environmental thresholds.

**Policy NCR-7.1 – Land Coverage**
Provide redevelopment incentives in centers that promote reduction, relocation, and transfer of land coverage to reduce onsite land coverage. The City will endeavor to reduce overall coverage in order to benefit the objectives of the Tahoe Valley Area Plan.

~~**Policy NCR-7.2 – Land Coverage Transfer Incentives**~~

~~To promote SEZ restoration in the Tahoe Valley plan area and the Upper Truckee Hydrologic watershed, all projects transferring and removing coverage from designated sending areas to offset existing excess coverage pursuant to Section 30.6 of the TRPA Code or to go up to the maximum coverage of 70 percent within land capability districts 4-7, inclusive, may be awarded coverage from the City's coverage pool, subject to availability and consistency with City Council policy. Bonus coverage from the City may be earned pursuant to the transfer ratios in the following table:~~

| ~~Sending Area~~ | ~~Bonus Coverage Earned (per sq. ft.)~~ |
|---|---|

| | |
|---|---|
| ~~TRPA Designated Stream Restoration Plan Area~~ | ~~1~~ |
| ~~Tahoe Valley Greenbelt and Associated SEZs~~ | ~~1~~ |
| ~~Other SEZs in the Upper Truckee Watershed Hydrologically Related Area Located within the City Limits~~ | ~~0.5~~ |

**Policy NCR-7.~~3~~ 2 – Landscape Treatment**
Encourage onsite landscaping in all private and public redevelopment projects. Landscape features should be integrated with BMPs to treat stormwater runoff and be consistent with fire standards for defensible space.

**Policy NCR-7.~~4~~ 3 – Transfer of Coverage**
Give priority to projects transferring hard and soft coverage from SEZs and other sensitive land to high capability lands within the Town Center Core District.

**Policy NCR-7.~~5~~ 4 – Stormwater Enhancement**
Collaborate with the California Tahoe Conservancy in identifying priority parcels in sensitive lands for public acquisition and coverage removal to facilitate construction of the Tahoe Valley Water Quality Improvement Project.

**Goal NCR-8: Air Quality**

To achieve air quality improvement and emission reductions in the Tahoe Valley Area Plan.

**Policy NCR-8.1 – Construction Emissions**
Incorporate measures to reduce construction-generated emissions to the extent feasible on a project-specific basis. Such measures may include, but are not limited to, the following:

- Implement measures recommended by the El Dorado County Air Quality Management District.
- Prohibit open burning of debris from site clearing unless involved with a fuels reduction project.
- Utilize low emission construction equipment and/or fuels and use existing power sources (e.g., power poles), wherever feasible.
- Restrict idling time for construction equipment and vehicles.
- Apply water to control dust as needed to prevent dust impacts.

## 10.2 Implementation

This subsection outlines Natural and Cultural Resources improvements that implement the vision, guiding principles and the goals and policies of the Tahoe Valley Area Plan. Figure 16 depicts proposed EIP and TMDL water quality improvement projects within the plan area and its vicinity to be implemented to improve the water quality, soils and SEZ thresholds.

**SCENIC RESOURCES**

As discussed in Section 3, Existing Conditions, TRPA Threshold Evaluations noted that the majority of roadway units with improved threshold scores fall partially or wholly within urbanized areas. Removal of degraded structures, improvement in architectural quality of new and remodeled structures, increased landscaping, creation of open space and landscaped drainage basins, installing curb, gutters and pedestrian sidewalks and consolidating highway curb cuts, and improved signage have all contributed to a transformation in many of these units. These improvements affect both travel route and scenic quality ratings.

Within the Tahoe Valley plan area, continued improvements in the built environment are anticipated through the implementation of the recommendations of the Scenic Quality Improvement Program, implementation of the design standards of the Area Plan that are intended to facilitate the upgrade of the overall architectural quality, the preservation of open space and viewsheds, and installation of curbs and gutters along US 50 and SR 89. The following implementation strategies are also intended to promote scenic threshold attainment:

| **Scenic Quality Improvement Strategies** | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| ~~US 50 and SR 89~~ | ~~Install curbs, gutters, sidewalks, street lights and landscaping to provide a "clean edge" along the roadway.~~ | ~~CSLT with CALTRANS coordination (existing capital project)~~ |
| Development and Design Standards | Implement the development and design standards and guidelines during project review to enhance the built environment, promote pedestrian mobility and provide for scenic viewshed protection. Incorporate design standards that enhance the scenic quality of the natural and built environment in Tahoe Valley for the following elements:<br>▪ Architectural Style<br>▪ Building Materials<br>▪ Building Colors<br>▪ Building Height<br>▪ Access Drives<br>▪ Parking<br>▪ Lighting<br>▪ Landscaping<br>▪ Signs<br>▪ Utility Lines | CSLT, ongoing |

| Scenic Quality Improvement Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| Land Use | Designate SEZ restoration sites and stormwater drainage basins as Open Space in the Tahoe Valley area. | CSLT |
| Scenic Quality Resources | Designate the following as scenic resources:<br>▪ The mountain and ridgeline viewshed of Tahoe Mountain as viewed from the "Y" intersection.<br>▪ The mountain and ridgeline viewshed of Monument Peak and Heavenly Ski Resort from the South "Y" intersection. | CSLT<br>TRPA |
| Business Façade Improvement Program | Implement a program to provide low-interest loans to local businesses and Business Improvement Districts to install aesthetically improved building facades. | CSLT |
| SQIP | Implement the SQIP recommendations in non-attainment scenic roadway units during project review. | CSLT |

**Completed Scenic Quality Improvement Strategies**

Since adoption of the Tahoe Valley Area Plan in 2015, the following strategies have been completed.

| **Improvements** | **Description** | **Completed** |
|---|---|---|
| US 50 and SR 89 | Install curbs, gutters, sidewalks, streetlights, and landscaping to provide a "clean edge" along the roadway. | CSLT with CALTRANS coordination, 2016, 2018 |

**STREAM ENVIRONMENT ZONES**

There has been extensive disturbance of SEZs in the planning area. The opportunities to implement area-wide BMPs, improve drainage systems, and increase SEZ restoration to benefit stream environment zone function exist in the planning area, but are dependent upon verifying and delineating accurate SEZ boundaries. The City hired Cardno/Entrix and Terra Sciences, experts in the field of soil science and hydrology, to review the existing mapped SEZs and verify the land capability districts for the Tahoe Valley Area Plan. The consultants analyzed previous land capability verifications, site assessments and land capability challenges that have occurred in the planning area, conducted a visual inspection of SEZs (reviewing vegetation, landforms, topography and aerial photography, and examined soil samples to closely examine near-surface soil conditions). The experts concluded that the SEZ boundaries adopted in the 1987 Land Capability Map are not accurate to the Area Plan scale. Based on analysis of soils, these efforts have resulted in a new SEZ and land capability district map, which is included as Figure 15 (Terra Science Inc., 2014). Though not mentioned in the Terra Science report, it is acknowledged that there are two ephemeral streams contained within the new SEZ boundaries. It should also be noted that even with an updated land capability map, property owners are still required to obtain parcel level site assessments and/or land capability verifications from TRPA prior to project submittal.

The following programs and key strategies are intended to promote SEZ restoration threshold attainment in the Tahoe Valley area.

| Stream Zone Restoration Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| SEZ Restoration | The Tahoe Valley Greenbelt: Restore disturbed SEZ as part of the construction of the Tahoe Valley Greenbelt and Tahoe Valley Water Quality Improvement Project. | CSLT<br>CTC |
| | ~~Tahoe Valley Land Capability Map: Amend and utilize an updated Bailey Mapped Land Capability Map that more accurately delineates the boundaries of the SEZs that are located in the Tahoe Valley area (Figure 15). Utilize the updated Land Capability Map and coordinate with the California Tahoe Conservancy to prioritize the removal of development and coverage from delineated SEZs.~~ | ~~CSLT~~<br>~~CTC~~ |
| | Coordinate with the California Tahoe Conservancy to prioritize and target the removal of development and land coverage in delineated SEZs and from TRPA designated Stream Restoration Plan Areas. | CSLT<br>CTC |

**Completed Stream Zone Restoration Strategies**

Since adoption of the Tahoe Valley Area plan in 2015, the following strategies have been completed.

| **Improvements** | **Description** | **Complete** |
|---|---|---|
| SEZ Restoration | Tahoe Valley Land Capability Map: Amend and utilize an updated Bailey Mapped Land Capability Map that more accurately delineates the boundaries of the SEZs that ~~are located in~~are in the Tahoe Valley area (Figure 15). Utilize the updated Land Capability Map and coordinate with the California Tahoe Conservancy to prioritize the removal of development and coverage from delineated SEZs. | CSLT, CTC, 2015 |

**WATER QUALITY**

The Tahoe Valley Area Plan responds to the needed improvements in water quality by continuing to require installation of on-site BMPs, construction and maintenance of water quality improvement projects within the Tahoe Valley plan area and implementation of the City's TMDL Pollutant Load Reduction Plan. The following programs and key strategies are intended to promote water quality threshold attainment:

| Water Quality Improvement Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| US 50 and SR 89 Water Quality Improvement Project | ~~US 50 Airport to "Y" Junction Water Quality Improvement Project: The project will collect and treat runoff along US 50. The project will provide a 3- to 4-foot shoulder for a Class II bike lane, and will provide curb, gutter and sidewalk. The project was completed in the fall of 2014.~~ | CALTRANS (existing capital project) |
| | ~~SR 89 "Y" to Cascade Road Water Quality Improvement Project: The project will collect and treat runoff along SR 89 from the "Y" junction to Cascade Road. The project will provide curbs, gutters, and sidewalks, and a 4-foot shoulder for a Class III bike route. Construction began in the Fall of 2014 and is expected to be completed by the Winter of 2015.~~ | |
| | ~~US 50 "Y" to Trout Creek Water Quality Improvement Project: The project will collect and treat stormwater runoff from the "Y" junction to Trout Creek. It will include 6-foot shoulders for Class II bike lanes, and replace traffic signals, curbs, gutters and sidewalks. The project is currently in the design phase and construction is expected to begin late 2016 and be completed by Winter of 2019.~~ | |
| Tahoe Valley Water Quality Improvement Project | The Tahoe Valley Water Quality Improvement Project: This project includes much of the densely developed commercial areas near U.S. Highway 50, both north and south of the "Y" is a priority for treatment as storm water runoff discharges directly to the Upper Truckee River, which drains to Lake Tahoe. The project includes design of water quality improvements to reduce pollutant loads discharged to the Upper Truckee River. This project is proposed to be implemented along with the Greenbelt project. | CSLT |
| Tahoe TMDL | Register Completed WQIPs (2004-2012) from the Pollutant Load Reduction Plan. The City has completed seven WQIPs. The Urban Planning Catchments (UPCs) that encompasses the seven completed project areas will be registered with the Lake Clarity Crediting Program. Of the seven WQIP projects completed by the City that will be registered, one is located within Tahoe Valley and treats runoff from within the plan area and from adjacent residential neighborhoods. The WQIP is Glorene and 8th Street. | CSLT |
| Stormwater System | The City will complete annual stormwater system inspections for ~~stormwater system,~~ construction, ~~and~~ commercial, industrial, and municipal sites as ~~inspections~~ required in the NPDES MS4 permit. | CSLT |

| Water Quality Improvement Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| BMP Compliance | Focus BMP installation and compliance on commercial and multi-family projects that are adjacent, have connected impervious surfaces, or the same catchment as EIP or public projects. | TRPA |
| | Ensure BMPs are incorporated in all projects reviewed under the City's MOU to capture a 20-year, one-hour storm or alternative BMPs if infiltration is not possible. | CSLT |
| | Coordinate with TRPA to support and/or enforce private property BMP certification with a near-term focus on approximately 290 acres of commercial land uses that directly discharge stormwater to Lake Tahoe | CSLT<br>TRPA |
| Road Operations | The City will continue to track abrasive applications and materials recovered by sweeping and vactoring in order to identify areas with high pollutant loads, and implement other actions to reduce pollutant loads. | CSLT |

**Completed Water Quality Improvement Strategies**

Since the initial adoption of the Tahoe Valley Area Plan in 2015, the following water quality improvements have been ~~implemented~~completed.

| **Improvements** | **Description** | **Completed** |
|---|---|---|
| US 50 and SR 89 Water Quality Improvement Project | US 50 Airport to "Y" Junction Water Quality Improvement Project: The project will collect and treat runoff along US 50. The project will provide a 3- to 4-foot shoulder for a Class II bike lane, and will provide curb, gutter and sidewalk. The project was completed in the fall of 2014. | CALTRANS, 2014 |
| | SR 89 "Y" to Cascade Road Water Quality Improvement Project: The project will collect and treat runoff along SR 89 from the "Y" junction to Cascade Road. The project will provide curbs, gutters, and sidewalks, and a 4-foot shoulder for a Class III bike route. Construction began in the Fall of 2014 ~~and is expected to be completed by the Winter of 2015~~and was completed in 2016. | CALTRANS, 2016 |
| | US 50 "Y" to Trout Creek Water Quality Improvement Project: The project will collect and treat stormwater runoff from the "Y" junction to Trout Creek. It will include 6-foot shoulders for Class II bike lanes, and replace traffic signals, curbs, gutters and sidewalks. ~~The project is currently in the design phase and construction is expected to begin late 2016 and be completed by Winter of 2019.~~ | CALTRANS, 2018 |

# SECTION 11
# Recreation and Open Space

The Recreation and Open Space Section is a supplement to the Recreation and Open Space Element of the City of South Lake Tahoe General Plan and Recreation Element of the TRPA Regional Plan. Consistent with these plans, this section provides the policy context for the Tahoe Valley Area Plan to improve recreational opportunities.

Tahoe Valley serves as a hub for numerous outdoor recreation activities. A variety of recreational opportunities, such as boating, campgrounds, beaches, and mountain bike trails are easily accessible from the plan area. Public beaches, campgrounds, trail heads, interpretive centers, and boat launching facilities are all located in close proximity to Tahoe Valley and are accessible by bike paths and routes that run through the plan area and by transit from the South "Y" Transit Center. In addition, Tahoe Valley has numerous established businesses that cater to the recreation user by providing recreation based commercial services such as the sale and rental of biking, kayaking, and paddle board equipment. To further expand and enhance the recreation opportunities in the plan area and its surroundings, the goals, policies, and implementation strategies of this section promote the preservation and creation of open space, construction of bike and trail connections, increased transit service, and establishment of recreation based businesses within the plan area. Furthermore, the plan promotes ecotourism that unites conservation, communities, and sustainable travel. This means that those who implement and participate in ecotourism activities should follow the following ecotourism principles:

- Minimize impact.
- Build environmental and cultural awareness and respect.
- Provide positive experiences for both visitors and hosts.
- Provide direct financial benefits for conservation.
- Provide financial benefits and empowerment for local people.
- Raise sensitivity to host countries' political, environmental, and social climate.

## 11.1 Goals and Policies

This subsection outlines recreation goals and policies for the Tahoe Valley Area Plan. These goals and polices implement the vision and guiding principles discussed earlier.

**Goal REC-1: Recreation System**
To create a recreation system for the enjoyment of both local residents and tourists.

**Policy REC-1.1 – Hierarchy and Interconnection**
Develop an interconnected system of open spaces, community parks, plazas, bike and pedestrian trails, and other types of public and private spaces as part of new development and redevelopment of existing sites.

**Policy REC-1.2 – Coordination with Commercial Uses**
Require public trails and plazas to be incorporated into the development and redevelopment of commercial, industrial, public, and multi-family projects.

**Policy REC-1.3 – Private Improvements**
Encourage the private sector to make recreational improvements on their land. Improvements may include establishing community event areas, providing paths and walkways that connect to adjacent sidewalks and bike paths, establishing appropriate space for the outdoor display of for sale or ~~rental~~ for rent recreation equipment.

**Policy REC-1.4 – Access**
Enhance the existing trail and bike system that connects the Tahoe Valley area to recreation opportunities in the South Shore.

**Policy REC-1.5 – Eco-Tourism Incentives**
Provide the following incentives to businesses and facilities that promote the South Shore as an eco-tourism recreation destination:

- Priority plan check, over all other project applications, by all City Departments; and
- Recognition at a televised City Council meeting and on the City Website.

**Goal REC-2: Open Space**
To preserve, protect, and maintain open spaces in the Tahoe Valley plan area.

**Policy REC-2.1 – Preservation**
Preserve and maintain open spaces within the Tahoe Valley plan area that provide a visual break from the urban environment as well as views of surrounding mountains, forests, and stream environment zones. Depending upon their ecological sensitivity, open spaces may incorporate paths, boardwalks, pedestrian and bicycle trails, and benches.

**Policy REC-2.2 – Public Access**
Ensure that public access does not jeopardize restoration activities and water quality and stormwater treatment projects on publicly-owned open space lands.

**Policy REC-2.3 – Multi-Use**

Encourage the multi-use of open spaces in the Tahoe Valley area for storm water treatment, pedestrian and bicycle connectivity, passive recreation uses and as a visual break from the developed environment.

**Policy REC-2.4 – Tahoe Valley Greenbelt**

Construct the Tahoe Valley Greenbelt Project as a multi-use area incorporating stormwater treatment facilities, pathways, and open space. Allow for the accommodation of active and passive recreation uses that include but are not limited to installing bike/pedestrian paths, pedestrian amenities, and interpretive signage.

**Policy REC-2.5– Adjacent Uses**

Encourage commercial uses located adjacent to the Tahoe Valley Greenbelt to provide direct access to the greenbelt and use it as a visual amenity.

**Policy REC-2.6– Coordination**

Coordinate with the California Tahoe Conservancy to ensure that implementation of the Tahoe Valley Greenbelt is consistent with recreation and restoration goals and objectives of the California Tahoe Conservancy and the State of California.

**Goal REC-3: Recreation Opportunities**

To connect Tahoe Valley to a network of parks, open spaces, and recreation sites that serve the needs of South Lake Tahoe residents and tourists.

**Policy REC-3.1 – Recreation Hub**

Promote the Town Center Core District as a recreation hub by allowing for a mix of uses that promote outdoor recreation concessionaires, recreation based commercial services, and temporary activities. Connect the recreation hub to recreation opportunities by upgrading existing bike and pedestrian trails, constructing new connections, and increasing transit service. Improve access to recreation opportunities by installing way-finding and interpretive signage within the Town Center Core District and improve access along bike trails.

**Policy REC-3.2 – Neighborhood/Pocket Parks**

Develop neighborhood/pocket parks within the Neighborhood Professional District and surrounding residential areas.

**Goal REC-4: Plazas**

To provide area within commercial centers for people to meet, socialize, relax, and interact.

**Policy REC-4.1 – Plaza Location**

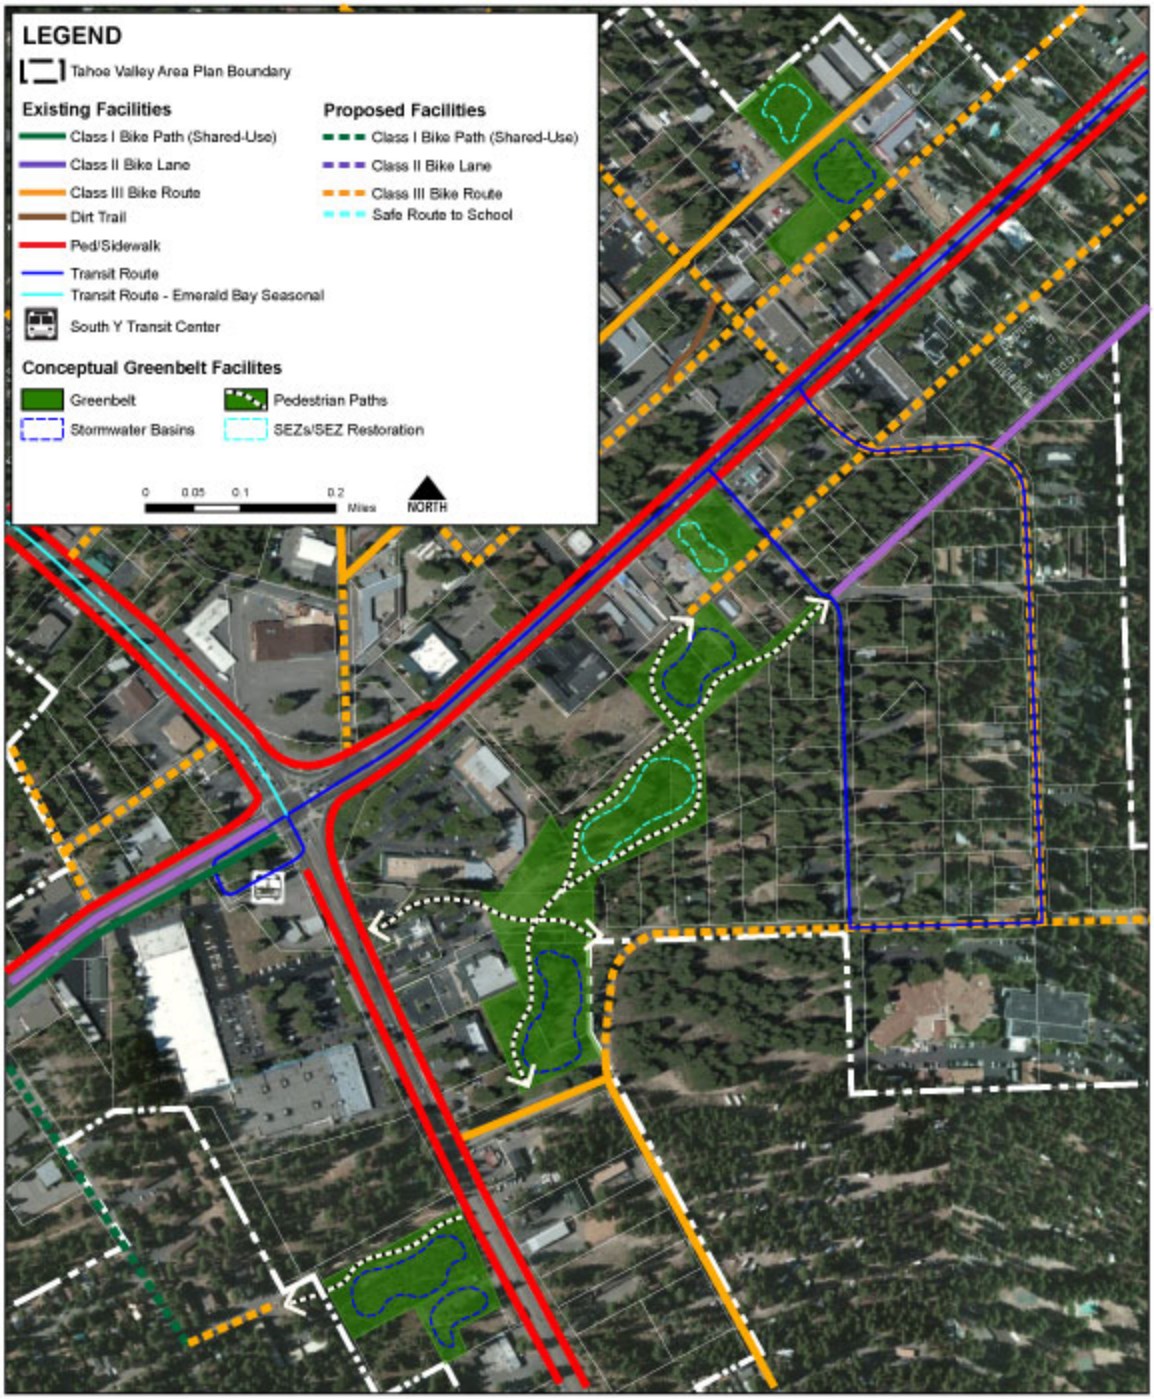
Require all large development within the Town Center Core District to provide informal public gathering areas and places for community activities.

**Policy REC-4.2 – Plaza Amenities**

Require all plazas to include seating, tables, and other amenities attractive to shoppers and pedestrians. Larger plazas should include trees, native landscaping, hardscape, year-round restrooms, formal eating areas, places for community activities, and possibly areas for spectator recreational activities such as climbing walls.

**Goal REC-5: Temporary Events**

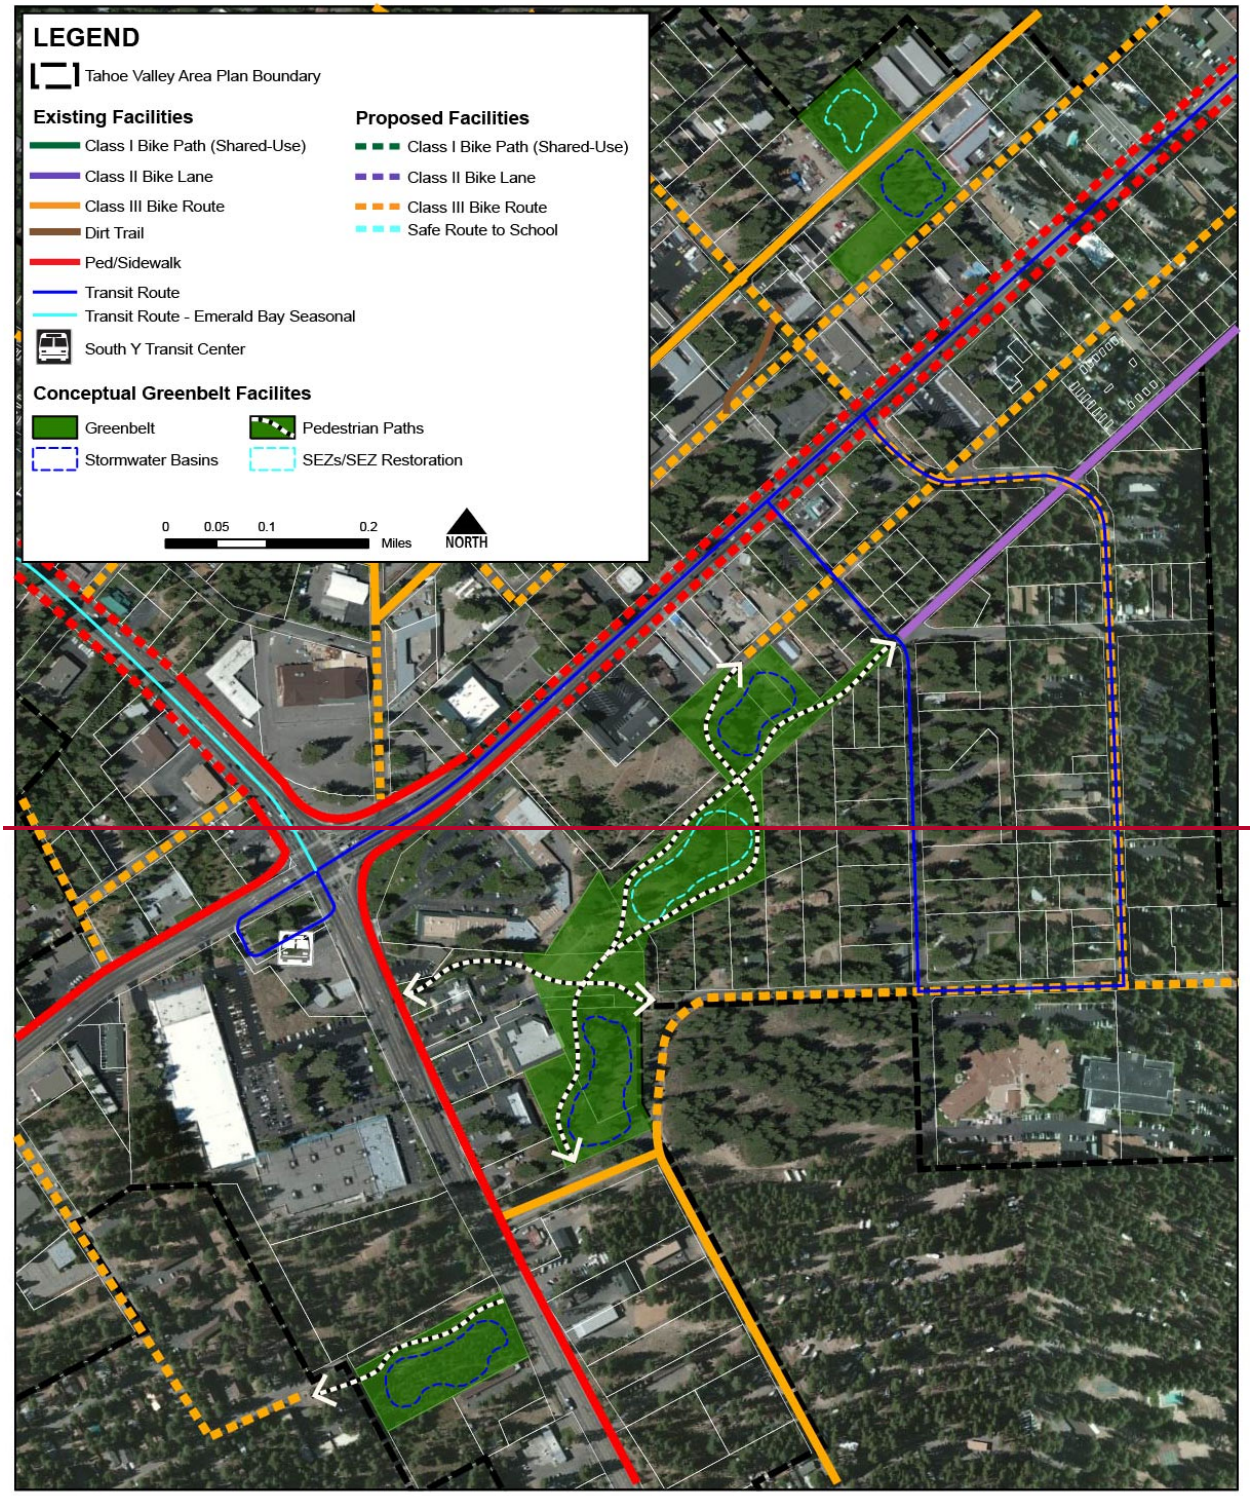
To provide areas for temporary events in the Town Center Core District.



**Policy REC-5.1 – Temporary Event Locations**
Encourage temporary events and activities within public and private plazas in the Town Center Core District to increase pedestrian and economic activity in commercial areas.

## 11.2 Implementation

This subsection outlines recreation improvements that implement the vision, guiding principles and the goals and policies of the Tahoe Valley Area Plan.



In addition to the implementation strategies proposed in the transportation section to enhance recreation opportunities, the following recreation projects or programs are planned:

| Recreation and Open Space Improvement Strategies | | |
|---|---|---|
| **Improvements** | **Description** | **Lead Agency** |
| Way-Finding Signage Program | Expand the City's Way-Finding program to direct pedestrian and bicycle traffic to recreation opportunities along the southwest shore of Lake Tahoe. | CSLT with CALTRANS and CTC coordination |
| Parks | Construct the Tahoe Valley Greenbelt and provide pedestrian and bicycle connectivity, passive recreation uses and provide a visual amenity for adjacent land uses. | CSLT with CTC coordination |
| Commercial Floor Area | Amend the CFA allocations procedures to add additional criteria for earning CFA from the City unallocated pool. The City should add criteria that allow projects that promote the South Shore as an eco-tourism recreation destination to access the City's CFA pool. | CSLT |

# SECTION 12
# Safety and Noise

The Safety and Noise Section is a supplement to the Health and Safety Element of the City of South Lake Tahoe General Plan, and the Natural Hazards Element of the TRPA Regional Plan. Consistent with these plans, this section provides the policy context for the Tahoe Valley Area Plan for future health and safety. Safety hazards are naturally induced, such as seismic, geologic, flooding, snow, avalanche, and wildland fire hazards. Other hazards are human-made including aircraft crash hazards and hazardous materials. In addition, the planning process should account for other issues related to community health and safety, including noise exposure. Protection from the risks of natural and human-made hazards is essential in establishing a sense of well-being for residents and visitors.

## 12.1 Goals and Policies

This subsection outlines safety and noise goals and policies for the Tahoe Valley Area Plan. These goals and polices implement the vision and guiding principles discussed earlier.

**Goal HNS-1: Safety**
To protect the community from injury and damage resulting from natural catastrophes and hazardous conditions.

**Policy HNS-1.1 – Overflight Zones**
Require all new projects located within the overflight safety area to meet the standards and requirements of the Airport Land Use Compatibility Plan (ALUCP)~~Lake Tahoe Comprehensive Land Use Plan (CLUP), or Airport Compatibility Land Use Plan (ACLUP),~~ in effect at the time the project is reviewed.

**Policy HNS-1.2 – Floodplains**
Support the restoration of floodplains through the use of incentives to relocate existing development to higher capability lands.

**Policy HNS-1.3 –Fire Protection**
Require any new structure or addition, to an existing structure to implement fire prevention techniques consistent with the current California Building and Fire Codes in order to obtain a building permit.

**Policy HNS-1.4 – Defensible Space and Fire-Safe Landscaping**
Require property owners to maintain defensible space through annual landscape maintenance, including the removal of dead/dying material and pruning/thinning of flammable vegetation.

Ensure that landscape plans in new and rehabilitated structures conform to defensible space requirements of Section 4291 of the California Public Resources Code.

**Policy HNS-1.5 – Water Lines**
Require all public water providers to maintain adequate water supply systems and flows to meet fire suppression needs throughout the City.

**Policy HNS-1.6 – Minimum Fire Flow Requirements**
Require that all new construction meet the minimum fire flow requirements as set forth in the current California Building and Fire Codes.

**Policy HNS-1.7 – Healthcare Campus District**
Collaborate with Barton Healthcare System to ensure adequate access is provided for emergency vehicles in any new construction or reconstruction of facilities in the Healthcare District.

**Policy HNS-1.8 – Tahoe Valley Greenbelt**
Ensure adequate access for paramedic and fire vehicles to the Tahoe Valley Greenbelt. Ensure the greenbelt can be accessed from adjacent streets and that bike and pedestrian paths can accommodate emergency vehicles.

**Goal HNS-2: Noise**
To protect residents from the harmful and annoying effects of exposure to excessive noise.

**Policy HNS-2.1 – Maximum Community Noise Equivalent Level**
Maintain a maximum community noise equivalent level (CNEL) of 65 CNEL for the Tahoe Valley Area, except for the Neighborhood Professional and Healthcare Campus Districts, where the standard is 55 CNEL. Require any new project that is determined to have the potential to exceed the noise standards submit a noise analysis as part of the environmental review process. Noise measurements conducted for noise analyses must follow TRPA protocols for the CNEL measurements. These projects must incorporate design features to ensure compliance with noise standards.

**Policy HNS-2.2 – Transportation Noise**
Require the mitigation of new transportation noise sources to the levels shown in Table HS-2 of the City General Plan at all outdoor activity areas and interior spaces of existing noise-sensitive land uses.

**Policy HNS-2.3 – Project Review**
Require an acoustical analysis as part of the environmental review process when noise-sensitive land uses are proposed in areas exposed to existing or anticipated exterior noise levels exceeding the levels shown in Table HS-1 and HS-2 of the City General Plan, so noise mitigation may be included in the project design. All acoustical analyses shall:

- Be the financial responsibility of the applicant;
- Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics;

- Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions and the predominant noise sources;
- Estimate existing and projected cumulative (20-year) noise levels in terms of Ldn or CNEL and/or the standards shown in Table HS-1, and compare those levels to the policies in this section;
- Recommend appropriate mitigation to achieve compliance with the adopted policies and standards of this section, giving preference to proper site planning and design over mitigation measures which require the construction of noise barriers or structural modifications to building which contain noise-sensitive land uses;
- Estimate noise exposure after the prescribed mitigation measure(s) has been implemented; and
- Describe a post-project assessment program that could be used to evaluate the effectiveness of the proposed mitigation measure(s).

**Policy HNS-2.4 – Construction Noise**

Require an analysis of potential vibration impact be conducted for all construction activities that include impact equipment and activities such as pile driving, soil compaction, or vibratory hammers that occur within 200 feet of existing structures. The analysis will address the potential for adverse vibration levels based on the criteria contained in Table 4.6-12 of the City General Plan Draft EIR. The City will ensure that construction operations are designed to avoid or mitigate for vibrations above 0.02 in/sec. (0.5 mm/sec.)

**Policy HNS-2.5 – Land Use Compatibility**

Incorporate measures to ensure noise/land use compatibility on a project-specific basis. Such measures may include, but are not limited to , the following:

- Construction of berms and/or acoustical shielding;
- Establishment of setback requirements for new development in specific areas exposed to roadway noise;
- Noise-reducing acoustical treatment of existing and proposed buildings; and
- Use of building layout and project features for noise-screening purposes.

# SECTION 13
# Incentive and Mitigation Programs

This section sets forth incentives and mitigation fee programs applicable to the Tahoe Valley Area Plan~~.~~.

## 13.1 Incentive Programs

Specific incentives are available to support implementation of the plan's vision and support attainment of TRPA's Thresholds. Some of these incentives are found in the plan itself, others are found in the TRPA Code of Ordinances, and additional incentives are provided through City programs.

**Alternate Water Quality Fee Program**

An Area Plan may propose to establish area-wide water quality treatments and funding mechanisms in lieu of certain site-specific BMPs, subject to the requirements outlined in TRPA Code Section 13.5.3.B.3. All properties within the Tahoe Valley area plan that participate in an area-wide treatment system implemented by the City will be considered as meeting the stormwater infiltration requirement of TRPA Code Chapter 60: Water Quality for drainage storage and treatment. Onsite BMP source treatment such as paving and revegetation are still required as part of this program where feasible.

Public and private entities which contribute financially are eligible to participate.

**Alternate Traffic and Air Quality Fee Program**

The purpose of this program is to implement the transportation improvements depicted on Figure 13 in the Transportation and Circulation Element and to provide a substitute to Subsection 65.2.4.C of the TRPA Code of Ordinances for collection of fees for offsite traffic and air quality mitigation.

Projects contributing to the construction of pedestrian and bicycle infrastructure depicted in Figure 13 will be credited with meeting the necessary mitigation equal to the value of the contribution. Fees or assessments paid equivalent to the requirements of TRPA Code Section 65.2.4 to construct the improvements, will be considered in lieu of the requirements of TRPA Code Section 65.2.4.

Public and private entities demonstrating equivalent contributions to the construction of the listed improvements may credit such contributions to TRPA Code Section 65.2.4 requirements.

**Land Coverage**

Maximum Coverage in a TRPA Designated Town Center
A conforming Area Plan is eligible for the transfer of coverage program pursuant to TRPA Code Section 30.4.2. Maximum coverage for facilities located in the TRPA designated Town Center, as depicted in the

Zoning Map (Figure 12), is 70 percent of the project area located within Land Capability Districts 4 – 7, inclusive. Coverage shall be transferred pursuant to TRPA Code Section 30.4.2 and 30.4.3.

Maximum Land Coverage in the Commercial Mixed-Use District

A conforming Area Plan is eligible for the transfer of coverage program pursuant to TRPA Code Section 30.4.2.B.2. Maximum coverage for commercial and mixed-use facilities located in the Commercial Mixed-Use District, as depicted in the Zoning Map (Figure 12) is:

1. For parcels upon which there is no development legally existing as of July 1, 1987, maximum land coverage shall be 70 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive;
2. For parcels upon which there legally exists development as of July 1, 1987, maximum land coverage shall be 50 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive; and
3. Land coverage shall be transferred to eligible parcels and eligible uses, in accordance with TRPA Code Sections 30.4.2 and 30.4.3.

Alternative Comprehensive Land Coverage Management Program

The purpose of this program is to promote project feasibility, revitalization, coverage reduction and SEZ restoration in the Tahoe Valley area. Property owners within the Town Center Core District, in coordination with the City and TRPA, may develop alternative comprehensive coverage management systems as alternatives to the parcel-level coverage requirements outlined in subsections 30.4.1 and 30.4.2 of the TRPA Code of Ordinances, provided that the alternative system complies with the provisions of subsection 13.5.3.B.1: *Alternative Comprehensive Coverage Management Systems* of the TRPA Code of Ordinances.

~~Bonus~~ Land Coverage Incentive~~s~~

~~The purpose for this program is to promote SEZ restoration in the Tahoe Valley Area Plan and the Upper Truckee Hydrologic Watershed. All projects transferring or removing coverage from designated sending areas may earn bonus coverage, subject to availability, from the City's coverage pool. Bonus coverage may be earned pursuant to the transfer ratios in the following table:~~

| ~~**Sending Area**~~ | ~~**Bonus Coverage Earned (per sq. ft.)**~~ |
|---|---|
| ~~TRPA Designated Stream Restoration Plan Area (see Figure 12, Zoning Map)~~ | ~~1~~ |
| ~~Tahoe Valley Greenbelt and associated SEZs~~ | ~~1~~ |

| | |
|---|---|
| ~~Other SEZs in the Upper Truckee Watershed Hydrologically Related Area Located within the City Limits~~ | ~~0.5~~ |

The following land coverage provisions in TRPA Code Section 30.6.4 are applicable throughout the Region:

- Non-motorized public trails are exempt from coverage subject to accessibility, trail route design, trail design, and designation provisions.
- Coverage exemptions for non-permanent structures and utility installations up to 120 square feet subject to BMPs, land capability verification, location, and aggregate limitation provisions.
- Coverage exemptions for new residential pervious decks subject to size, design, BMPs, location, and aggregate limitation provisions.
- Coverage exemptions for legally existing decks that meet all approval criteria ~~are met~~.
- Coverage exemptions for compliance with the Americans with Disability Act.

**Transfer of Nonconforming Land Coverage in Centers**

Pursuant to Subsection 30.4.2.C of the TRPA Code of Ordinances, existing development relocated to a Center where the sending site is restored and retired, may maintain nonconforming land coverage. The receiving site shall be developed in accordance with all applicable TRPA ordinances, and the site shall be either the same size or larger than the prior site. If the new project site is smaller, the amount of nonconforming coverage transferred shall be reduced on a proportional basis. The balance of nonconforming coverage may be banked and transferred elsewhere.

**Offsite Excess Coverage Mitigation**

A project may mitigate its excess land coverage by reducing coverage offsite in a different hydrologically related area provided the restoration occurs on more sensitive lands than the project area.

**Onsite Removal and Retirement of Excess Coverage**

Pursuant to Section 30.6.3 of the TRPA Code of Ordinances, onsite removal of remaining excess coverage in a Center may earn multi-residential bonus units, tourist accommodation bonus units, and/or commercial floor area.

**Commercial Floor Area Allocation**

The City of South Lake Tahoe provides a pool of Commercial Floor Area (CFA) at a reasonable cost and subject to availability to create an investment stimulant for creating change. CFA is provided as an incentive, not an entitlement, in order to encourage property owners to move forward with projects that are beneficial to the environment, community, and the economy.

Projects eligible for an allocation of CFA from the City's pools must meet the following criteria:

1. Be within an adopted community or area plan;
2. Meet the criteria for CFA allocations required by the applicable community or area plan;
3. Meet all applicable design standards;
4. Include the construction of improvements that will benefit the public and community which are more extensive than required by the applicable community plan or City Code; and
5. Provide an economic benefit to the community with enough significance to merit the allocation of the City's CFA resource.

~~15,000 square feet of CFA is available for use in Tahoe Valley.~~ CFA can be used to support infill, community-serving retail opportunities, and reuse of existing assets (such as land coverage and CFA), as well as for smaller-scale improvements that add ambiance, diversity, and commercial district vitality and that benefit quality of life.

~~Approximately 160,347 square feet of~~ CFA is available from the TRPA Pool as development transfer match to Town Centers and the Regional Center. See Transfer of Development Rights to the Tahoe Valley Area Plan and Transfer of Existing Development to the Tahoe Valley Area Plan program descriptions below.

**Tourist Accommodation Bonus Units**

~~A total of 82 t~~Tourist ~~b~~Bonus ~~u~~Units are available for use by projects from TRPA's Special Projects Pool in accordance with TRPA Code Section 50.6.4.D.

In addition to the TRPA Code provisions listed above, tourist bonus units may also be earned as a transfer match for the transfer of existing development to Town Centers in accordance with TRPA Code Section 51.5.3: Transfer of Existing Development to Centers. See Transfer of Existing Development to the Tahoe Valley Area Plan program description below.

**Residential Bonus Units**

~~A total of 488 residential bonus units remaining from the 1987 Regional Plan and a total of 600 new residential bonus units~~ Residential B~~b~~onus U~~u~~nits from TRPA are available for use in Town Centers. ~~only were made available under the 2012 Regional Plan and are available for use region wide.~~ Residential bonus units may be earned and used by projects in accordance with Section 52.3: Multi-Residential Incentive Program of the TRPA Code. Residential bonus units used for affordable housing under this section do not require residential allocations. ~~Residential bonus units used for moderate income housing require a residential allocation.~~ The City of South Lake Tahoe has a Certified Moderate Income Housing Program pursuant to Section 50.5.2.B and 52.3.6 of the TRPA Code, thus ~~moderate income~~moderate-income housing units are eligible to earn allocations from TRPA's unused allocation pool subject to TRPA's allocation procedures.

Pursuant to TRPA Code Section 21.3.2.B, residential bonus units can also be earned under the City's Local Government Housing Program certified by TRPA. The program allows for the conversion of illegal secondary units into deed restricted affordable housing units.

In addition, residential bonus units may also be earned and used for projects in accordance with TRPA Code Section 51.3.3.C: Transfer of Development Rights to Centers or TRPA Code Section 51.5.3: Transfer of Existing Development to Centers. See Transfer of Development Rights to the Tahoe Valley and Transfer of Existing Development to the Tahoe Valley Area Plan program descriptions below.

**~~Secondary Units~~Accessory Dwelling Units Residential Units of Use**

~~Secondary units are permitted on parcels located in the Town Center Professional Neighborhood District that are less than one acre in size where single family residential units are permitted. All secondary units must meet City development standards for minimum lot size, setbacks, and parking.~~

~~T~~The City of South Lake Tahoe has set aside ~~20~~ Tourist Accommodation Units for conversion to Existing Residential Units of Use for the construction of accessory dwelling units. The units are available at no cost and are provided on a first come-first-serve basis to eligible applicants.

**~~Multi-Family Incentive.~~**

The City of South Lake Tahoe has set aside ~~20~~ Tourist Accommodation Units for conversion to Multi-Family Residential Unit of Use for the construction of multi-family projects. The units are available at no cost and are provided on a first come-first-serve basis to eligible applicants.

~~In addition to the reserved units noted above, in June 2023 the City of South Lake Tahoe set aside 70 Tourist Accommodation Units that may be converted to Existing Residential Units of Use for either accessory dwelling units or multi-family rental units. These units are available at no cost and are provided on a first come-first-serve basis.~~

**Transfer of Existing Development to Tahoe Valley**

Pursuant to TRPA Code Section 51.5.3, residential bonus units, CFA and tourist bonus unit are available as development transfer match for existing development (residential, tourist accommodation and commercial uses) that is transferred to Centers. Receiving parcels in the plan area may earn residential bonus units, tourist bonus units or CFA at an enhanced transfer ratio based on the land capability of the sending parcels. Transfers of existing residential units are eligible for an additional enhanced transfer ratio based on the sending parcel's distance from Centers and primary transit routes. Residential bonus units earned under this program do not require an allocation to construct a residential unit.

**Transfer of Development Rights to Tahoe Valley**

Residential bonus units from the TRPA Pool are available as development transfer matches for transferring development rights to Centers. Receiving parcels in the plan area may earn residential bonus units at an enhanced transfer ratio based on the land capability of the sending parcel, and its distance from Centers and primary transit routes. Residential bonus units earned under this program do not require an allocation to construct a residential unit. The transferred development right is eligible to receive an allocation from TRPA's unused allocation pool pursuant to Section 51.3.3.C.4 of the TRPA Code.

**Persons At One Time**

Projects are eligible for the Persons At One Time (PAOT) allocations pursuant to TRPA Code Section 50.9: Regulation of Additional Recreation Facilities of the TRPA Code of Ordinances.

The TRPA Code requires that certain recreation uses and activities are assigned additional PAOTs from TRPA prior to a construction of a project or commencement of an activity. Uses such as marinas, boat launching facilities, information centers, recreation centers, day uses areas, beach recreation, commercial boating, water-oriented outdoor recreation concession, downhill ski facilities, developed campgrounds, group facilities, and recreational vehicle parks are eligible for PAOT allocations from the TRPA Pool.

**City of South Lake Tahoe Green Building Program**

In November 2010, the City Council adopted the City of South Lake Tahoe Green Building Program (Resolution 2010-92). The program encourages the incorporation of energy efficiency in City buildings and facilities, and provides clear incentives for private property owners to retrofit residential, commercial, and industrial buildings to save energy and reduce the carbon ~~foot print~~footprint.

~~Residential projects that incorporate green building measures will be given priority for plan check, by all City Departments, over projects that meet only mandatory requirements. For projects that propose to voluntarily achieve a third party certification such as LEED, Energy Star or Green Point Rated would be eligible for the following:~~

- Residential projects that voluntarily achieve third-party certification ~~would be~~are eligible for the following:

~~- Projects would receive priority plan check, over all other projects, by all City Departments.~~

  - Priority plan check, over all other projects, by all City Departments.
  - ~~Residential projects would have p~~Priority on the residential allocation waiting list~~ – 10% of residential allocations would be offered to Green Building projects before other projects on the waiting list~~.
  - ~~Projects would receive r~~Recognition at a televised City Council meeting and on the City Website.

- Commercial projects that voluntarily achieve ~~LEED certification or an Energy Star Label~~third-party certification ~~would be~~are eligible for the following:

  - ~~Projects would receive p~~Priority plan check, over all other projects, by all City Departments.
  - ~~Projects would be eligible for~~ CFA allocation from the City's unallocated CFA pool.
  - ~~Projects would receive r~~Recognition at a televised City Council meeting and on the City Website.

~~**Change in Use**~~

~~Commercial changes in use are exempt from project review if the following criteria are met:~~

~~1. The change in use is within the commercial use classification;~~

~~2. The change in use is to an allowed use;~~

~~3. The property is included in an approved parking assessment district;~~

~~4. The change does not increase the parking requirement to a greater requirement than 1 space for 200 square feet., or the number established upon creating the district;~~

~~5. The proposed activity is consistent with the Tahoe Valley Area Plan and is not considered a project under TRPA Code Chapter 2: Applicability of the Code of Ordinances; and~~

~~6. The change in use does not have the potential to intensify pollutant loads over and above the capability of treatment by existing installed BMPs.~~

**Offsite Parking**

Use of offsite and shared parking is permissible pursuant to the parking standards in Appendix ~~B~~ C of this Plan.

**Conversion of Use**

Pursuant to TRPA Code of Ordinances~~: Election of Conversion of Use, the following conversion incentives are available:~~, Chapter ~~4~~51, existing development rights consisting of commercial floor area, tourist accommodation units, and residential units of use may be converted from one development right to another provided the conversion complies with the provisions of Chapter 51.

When a Tourist Accommodation use is to be converted to a Residential use, TRPA Code of Ordinances Section 31.4.5 shall apply.

~~- Up to 200 existing Tourist Accommodation Units (TAUs) basin wide can be converted to Existing Residential Units of Use for multi-unit projects, in this region wide pilot program, subject to the following conditions:~~
~~1. Each converted unit maximum size is 1,250 square feet of residential floor area; and~~
~~2. The conversion must happen on the same parcel.~~

~~- Conversion of an existing residential unit of use or tourist accommodation unit to a residential, tourist or commercial use may be permitted when the units are transferred from sensitive lands.~~

~~- Conversion of an existing residential unit of use or tourist accommodation units to a residential, tourist, or commercial use may be permitted if the conversion results in the elimination of a non-conforming use.~~

~~- Conversion of an existing residential unit to tourist or commercial use or an existing tourist accommodation unit to a commercial use or multi-family unit may be permitted onsite or for transfers if the project meets the TRPA standards applicable for a project proposed on an~~

~~undeveloped project area.~~

- ~~Conversion of an existing residential unit of use to a tourist or commercial use or an existing tourist accommodation unit of use to a commercial use or a residential use may be permitted onsite or for transfer if the converted use is include as part of a project that has linked status pursuant to Chapter 15 of the TRPA Code.~~

- ~~Conversion of existing tourist accommodation units of use to residential may be permitted onsite if the converted units will be used for deed-restricted affordable housing.~~

**Density**

Mixed-use projects in conforming area plans may be developed to the maximum density allowed per the TVAP for each use.

Regarding legal, non-conforming tourist and residential densities, TRPA Code of Ordinances Section 31.4.6 shall apply.

# APPENDIX B

## ~~TRPA Height Findings~~South Lake Tahoe Design Guidelines

The South Lake Tahoe Design Guidelines shall serve as additional context and examples of the intention of standards in Appendix C, Development and Design Standards. ~~Height up to 56 feet in Town Centers is permitted with the adoption of a conforming Area Plan. To ensure compatibility with adjacent uses, viewshed protection, and mitigation for potentially significant scenic impacts resulting from three- or four-story buildings in the Town Centers, a project shall meet findings 1, 3, 5, and 9 of Section 37.7 of the TRPA Code of Ordinances.~~

~~**37.7.1. Finding 1**~~

~~When viewed from major arterials, scenic turnouts, public recreation areas, or the waters of Lake Tahoe, from a distance of 300 feet, the additional height will not cause a building to extend above the forest canopy, when present, or a ridgeline. For height greater than that set forth in Table 37.4.1-1 for a 5:12 roof pitch, the additional height shall not increase the visual magnitude beyond that permitted for structures in the shoreland as set forth in subsection 66.3.7, Additional Visual Magnitude, or Appendix H, Visual Assessment Tool, of the Design Review Guidelines.~~

~~**37.7.3. Finding 3**~~

~~With respect to that portion of the building that is permitted the additional height, the building has been designed to minimize interference with existing views within the area to the extent practicable.~~

~~**37.7.5. Finding 5**~~

~~The portion of the building that is permitted additional building height is adequately screened, as seen from major arterials, the waters of lakes, and other public areas from which the building is frequently viewed. In determining the adequacy of screening, consideration shall be given to the degree to which a combination of the following features causes the building to blend or merge with the background.~~

~~**A.** The horizontal distance from which the building is viewed;~~

~~**B.** The extent of screening; and~~

~~**C.** Proposed exterior colors and building materials.~~

~~**37.7.9. Finding 9**~~

~~When viewed from a TRPA scenic threshold travel route, the additional building height granted a building or structure shall not result in the net loss of views to a scenic resource identified in the 1982 Lake Tahoe Basin Scenic Resource Inventory. TRPA shall specify the method used to evaluate potential view loss.~~

# 1 SECTION ONE INTRODUCTION

The South Lake Tahoe Design Guidelines (Guidelines) provide visual imagery in order to support and clarify the intent of the City of South Lake Tahoe design standards. The Guidelines were developed to help project applicants and their designers understand the community's desired visual character and appearance for South Lake Tahoe. They apply to all projects except single family and multi-family residential projects within the City of South Lake Tahoe.

The Guidelines were developed as part of a collaborative outreach process. Community members were invited to take part of three public workshops and two online surveys. The first meeting and online survey focused on understanding what types of buildings, signage and landscape elements best represented the type of mountain architecture the community desired for South Lake Tahoe. The second meeting and online survey provided a venue for community members to comment on the Draft Design Guidelines. Survey and meeting results indicated that participants felt the imagery provided represented their desired aesthetic character for South Lake Tahoe. At the final public meeting the Final Draft Design Guidelines were presented, areas where the Draft Design Guidelines had been modified to respond to public input were identified and the community was provided another opportunity to provide input.

## PURPOSE & INTENT

The primary purpose of the South Lake Tahoe Design Guidelines (Guidelines) is to provide a visual tool to help guide project applicants on how to meet the required design standards in a manner that meets the desired aesthetic of the community. They are intended to assist landowners, developers, tenants and their consultants, such as architects, who propose any alteration, addition, construction, and/or development in understanding the basic design ideas related to the City of South Lake Tahoe's (City's)design standards in order to improve the area's visual quality.

The Guidelines are not intended to inhibit innovative design or espouse one style of mountain design. They are intended to allow freedom of expression, innovation and creativity while developing built elements that are timeless or do not appear overly trendy. They provide an illustrative and descriptive tool for establishing and maintaining an overall unifying character and image for the entire community.

The goal of the Guidelines is to communicate design principles regarding how structures relate to the land, respond to climate, step with natural grades, and harmonize with the character of the surrounding landscape. Since there is not a required theme or style of mountain architecture, it is all the more essential for structures to relate to each other through the use of design elements such as locally found materials, scale, fenestration, style, massing and exterior paint colors.

The Guidelines are intended to be an aid to enhance the existing visual quality and experience within the community and direct future development in ways that are responsive to the specific environmental conditions and natural setting of South Lake Tahoe. They were developed in conjunction with community input in order to establish parameters which align with the community's objectives for mountain architecture and the desire for enhanced visual quality throughout the city.

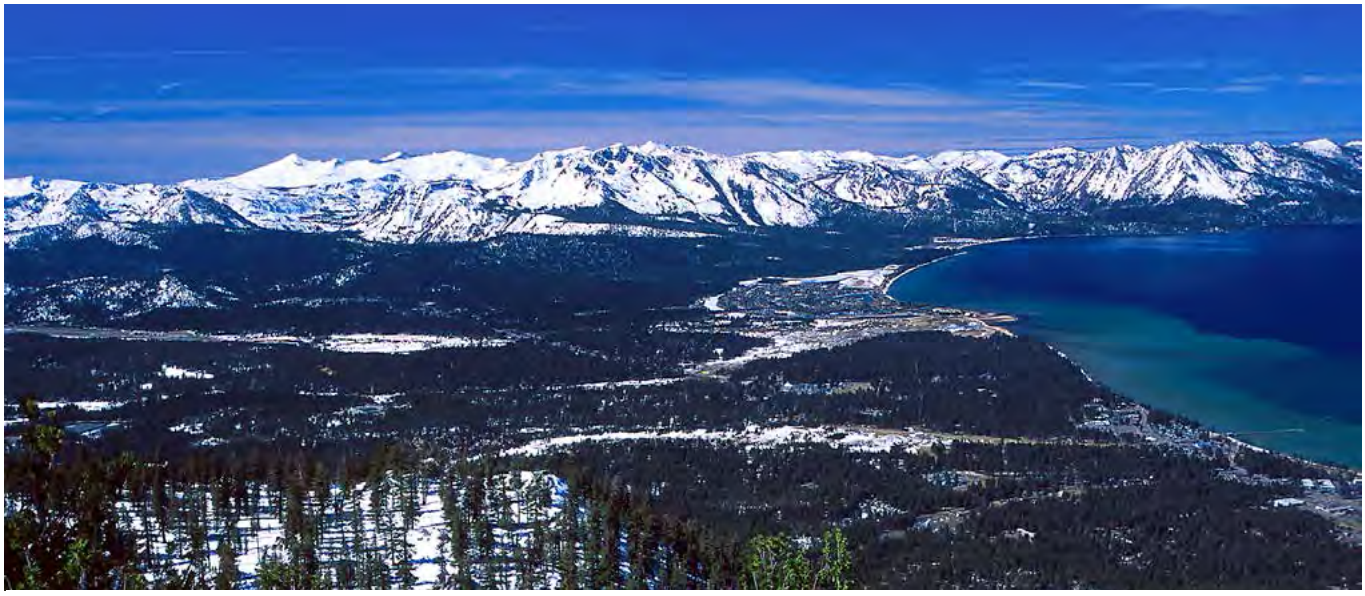
The Guidelines describe how to aesthetically and sensitively execute applicable design standards and codes in a manner that is compatible with the mountain environment. For example, there are codes that set the parameters for height and coverage, however, they do not describe how to aesthetically and sensitively apply them to a site. This manual provides the guidance to accomplish this.

## APPLICABILITY

The Design Guidelines apply to all commercial, tourist, mixed use, public/institutional and industrial projects (including additions, remodeling, relocation or new construction). They do not apply to single and multi-family residential projects. The Guidelines will be used during City review of permit applications as additional criteria for project review and communication with project applicants.

The Guidelines relate to aesthetic consideration of project development. Nothing herein alters current codes or best management practices (BMPs) requirements. All regulations and guidance in the City of South Lake Tahoe City Code, applicable Area Plans, the Tahoe Regional Planning Agency (TRPA) Code of Ordinance, TRPA BMP Handbook and other applicable documents shall remain in effect.

The Guidelines are not intended as a "blueprint" for approval, rather they outline the important design elements and features which should be considered. The City will consider these Guidelines in reviewing projects. Applicants are invited to submit creative and imaginative projects which build on these Guidelines and contribute to the overall character of South Lake Tahoe.



Individuals and entities proposing projects within the City of South Lake Tahoe should review these guidelines before initiating the design and development process. To facilitate project approvals, questions regarding the Guidelines, as well as other development-related questions, should be discussed with the City's Development Services staff as early in the development process as possible. The Guidelines have been developed in accordance with the City Code and Area Plans and TRPA's Code of Ordinances Design Standards and BMPs and are intended to further the broader goals and policies of the Regional Plan and the City's General Plan.

## DOCUMENT ORGANIZATION

The Guidelines have been organized to correlate with the City's citywide design standards and Area Plan design standards. They are presented in five sections:

- Site Design
  - General Design
  - Grading and Drainage
  - Building Placement
  - Parking
  - Bicycle Parking
  - Visual Screening
  - Pedestrian Circulation
  - Public Plazas and Open Space
- Building Design
  - Building Design and Articulation
  - Roofs
  - Building Height
  - Green Design
- Landscape
- Exterior Lighting
- Signage

Each section includes images, diagrams and illustrative examples in order to visually communicate how the Design Guidelines and existing city design standards can be met while developing a project that is compatible with the surrounding mountain environment. A summary of the section's design objective is provided at the start of each section. Image captions are provided to further communicate the design idea presented by the images, diagrams and illustrations.

The Design Guidelines apply to all projects within the City of South Lake Tahoe except single and multi-family residential projects. The unique natural setting of South Lake Tahoe is the best starting point for developing the site and building design.

# 2 SECTION TWO SITE DESIGN

## OBJECTIVE

Fit and blend man-made improvements into the topography and forest.

The way in which buildings and built elements relate to the land is an important factor in defining the character and enhancing the visual quality of South Lake Tahoe. The area's natural setting with its forested mountains, crystal blue lake and fragile meadows are South Lake Tahoe's most important features. This section describes design guidelines for site work elements including grading and drainage, building placement, parking areas, pedestrian circulation, and public plazas and open spaces in order to ensure that the character of South Lake Tahoe is maintained.

## LIMIT NEW DISTURBANCE AND KEEP EXISTING TREES, BOULDERS AND NATURAL ELEMENTS

Rock outcroppings and other natural elements should be incorporated into site design and public areas.

Retain existing natural features such as rock outcrops, trees and topographic features.

Site buildings and paved areas over existing disturbance to ensure the least amount of new site disturbance as possible.

## MAINTAIN AND HIGHLIGHT VIEWS OF THE MOUNTAINS, FORESTS AND LAKE

Organize and design buildings to maintain ridgeline and forest canopy views.

Site buildings and structures to maintain views of the mountains and lake.

Orient site features to capitalize and highlight views of the surrounding mountain and lake landscape.

Underground new utilities along commercial corridors in order to reduce visual distractions and enhance views of the surrounding landscape.

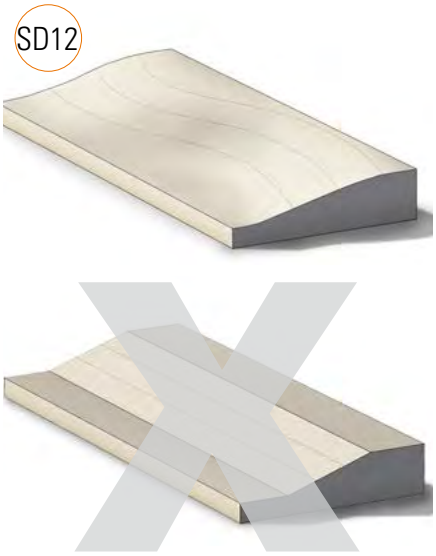
Buildings and site elements should be organized to preserve lake views of significant size to make a greater visual impact when viewed from public areas.

# GRADING AND DRAINAGE

## OBJECTIVE

Work with existing topography so that built elements appear to be an extension of the existing natural forms or nestle easily within the landscape setting.

The most aesthetically pleasing mountain towns are those that appear to nestle into their setting, working through and around the landscape instead of perching on top of it. The intent of these guidelines is to foster grading which results in built work that appears to sit easily within the landscape instead of being imposed upon it.



Minimize grading and work with existing topography to minimize the use of retaining walls and integrate buildings into the site.

Preserving existing trees and incorporating naturally functioning systems into the site design is integral to the establishing the aesthetics of the place.

Revegetate graded slopes.

Smoothly merge graded areas into existing terrain and undulate the graded surface to mimic existing landforms. Do not create sharp transitions with a flat graded surface.

Natural drainage courses and existing drainage patterns should be protected.

Design graded areas to appear as natural landforms. Smoothly merge graded areas into the existing terrain. Undulate slopes to mimic the surrounding landscape.

Gracefully blend stormwater features into the look and feel of the surrounding terrain. Do not use sharp transitions or flat slopes that do not appear natural.

## BUILDING PLACEMENT

### OBJECTIVE

Organize buildings in such a way that respond to and take advantage of Tahoe's natural setting while reinforcing the character of pedestrian and public areas in order to optimize visitor and resident enjoyment of outdoor spaces.

Building placement has a powerful impact on the perceptions of visitors and residents. Consideration should be given to all the aspects of the site: the physical characteristics, environmental conditions and social expectations to determine the arrangement and location for buildings that will provide the greatest benefit. The guidelines for siting of buildings are intended to encourage designs that respond to the natural setting.

Because each building's relationship to the street impacts the character and function of pedestrian areas, the guidelines also encourage designs which reinforce the character of public areas and optimize visitor and resident enjoyment of outdoor spaces. Well organized buildings can create comfortable pedestrian plazas, promote walkability, encourage commerce, improve building performance and reinforce community identity.

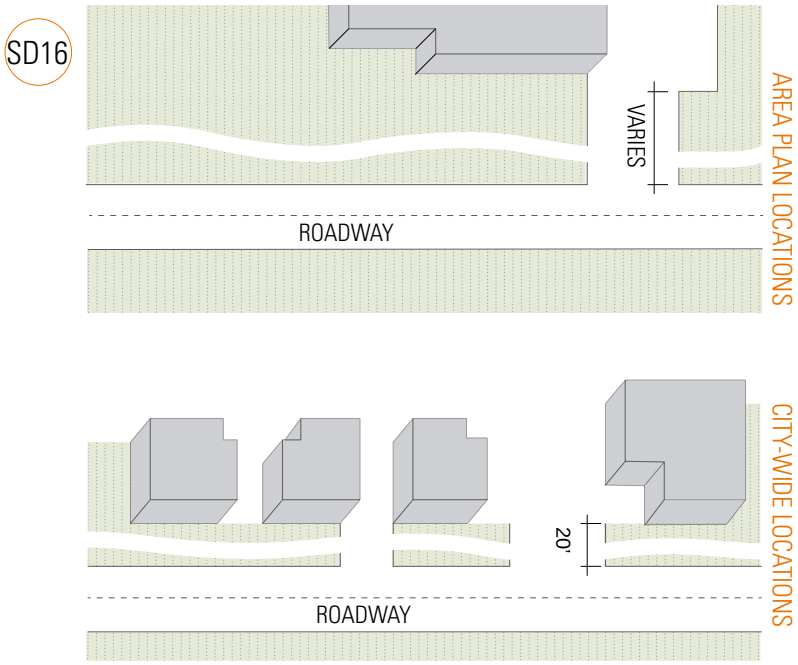


***Image courtesy of BSA Architects***

Site buildings at setback lines to create visual interest along the road corridors, allow for substantial landscape areas and pedestrian walkways.

***Image courtesy of Tahoe Donner Cross Country Ski Center; Tahoe Donner Association, Dale Cox Architects***

Modulate buildings to avoid creating a long row of buildings.

Locate corner buildings at the setbacks in order to create a strong street presence, define the pedestrian realm and encourage pedestrian activity.

Seating, outdoor dining and public gathering areas can be incorporated within the setback area.

Building placement should not intrude on or diminish the views of mountains or the lake as seen from public spaces and roadways.

## RELATIONSHIP TO PUBLIC SPACES AND OTHER BUILDINGS

Cluster buildings where appropriate to create desirable and comfortable public outdoor spaces.

Site buildings in a manner that complements adjacent buildings.

## RELATIONSHIP TO PEDESTRIAN MOVEMENT AND ACCESS

Site buildings so their spatial relationship provides for and promotes pedestrian access.

Highlight building entries through architecture and landscape.

Place building entries and frontage toward the primary linear street frontage to encourage and support a pedestrian environment.

Provide covered entries.

Orient the entry and major façade of commercial buildings toward the primary street frontage.

# PARKING

## OBJECTIVE

Provide convenient parking that is not visually obtrusive and does not impact pedestrian movement.

Parking with its related vehicular circulation and access points establishes the pattern of movement for trucks and automobiles and influences pedestrian and cyclist movement. The point where a driver enters or leaves a site affects both a project and the community as a whole.

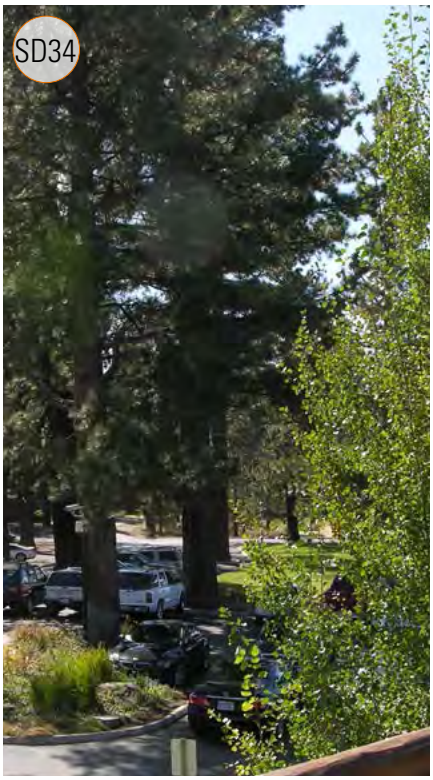
The guidelines focus on siting and designing parking areas which do not dominate views from the roadway and public areas and encourage pedestrian movement by minimizing vehicular/pedestrian conflict areas and creating opportunities to park once and walk to multiple destinations.

Divide parking into smaller lots to decrease the view of large parking expanses.

Parking located behind a building or on an interior side has less visual impact from the street in order to create a cohesive pedestrian environment and building frontage.

## USING LANDSCAPE AND EXISTING TREES TO BREAK UP PAVING AREAS

Best management practices (BMPs), such as infiltration basins, can be incorporated into parking areas as part of landscape areas and offer an aesthetically pleasing and lower cost alternative to conventional stormwater treatment strategies.



Integrate landscaping and barriers that prevent parking outside of designated areas as part of the overall parking and landscape design.

Incorporate islands of adequate size between parking areas to visually break up long lengths of parking as well as provide areas for snow storage that are out of the public rights of way.

Integrate boulders into the landscape design where appropriate to prevent parking in landscape areas.

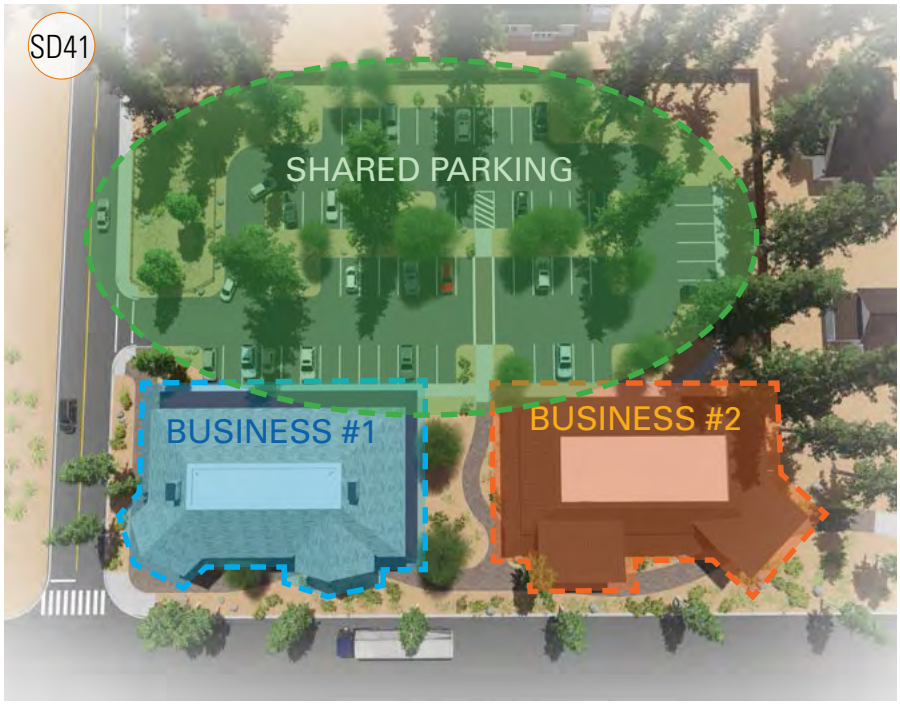
Incorporate existing trees into parking lot design and provide adequate buffer to maintain and enhance plant health.

## VISUAL SCREENING

Fencing can be incorporated as part of the landscape elements used to screen parking from the roadway.

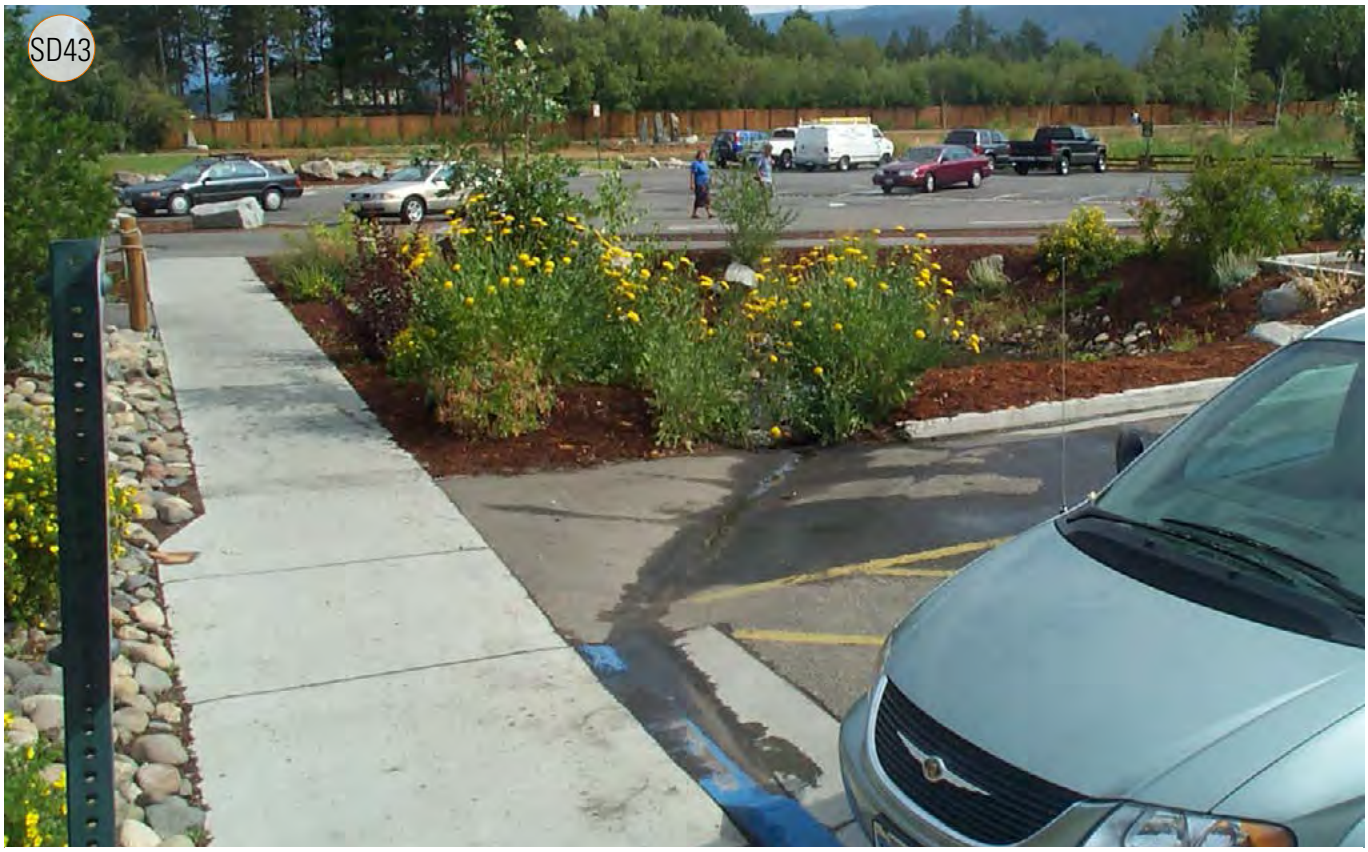
Incorporate landscaping in the setback area to screen parking from the street. Utilize informal planting strategies to create a more naturalized appearance of landscaping.

Utilize landscaping to screen underground parking that extends above natural grade.



Buffer parking from neighboring residential uses with fencing.

The use of vertical separation, landscape and fencing can help screen parking areas from the road.



## ENCOURAGING PEDESTRIAN MOVEMENT

Encourage walkability and a park once atmosphere by providing shared parking and shared parking access points.

Locating access drives from side streets and alleys fosters pedestrian movement along the primary street corridor by reducing the number of times vehicle and pedestrians interface.

Pedestrian walkways through parking areas provide a safe place for people to walk away from moving vehicles and should be separated from the building by a landscape area.

## BICYCLE PARKING

### OBJECTIVE

Encourage active transportation use with secure and convenient facilities.

Bicycle trail connections in combination with bike-friendly amenities help encourage use of alternative modes of transportation.

Locate bike racks within close proximity to the main building entry.

Locate bike racks so they do not obstruct pedestrian movement.

Incorporate long-term bike parking to serve people staying at a site for over four hours. Long-term bike parking can be provided indoors when possible.

Locate bike racks so they are visible to encourage use and enhance security.

Design dumpster enclosures using materials and finishes consistent with the building architecture to unify the appearance of site structures and help protect visual quality. Screen dumpster enclosures that are visible from the street with landscaping. Dumpsters should be covered whenever possible to prevent precipitation from entering the dumpster, mixing with contents and then leaking out.

Utilize site planning and building placement and design to minimize the visibility of parking, utilities, and service and maintenance areas from public rights of way.

Utilize a combination of fencing, walls and landscaping to provide attractive visual screening.

## VISUAL SCREENING

### OBJECTIVE

Minimize the visual impacts of parking and service areas.

The architectural design of a project shall include elements that screen from public view all external mechanical equipment, including refuse enclosures, electrical transformer pads and vaults, satellite receiving disks, communication equipment and utility hardware on roofs, buildings or the ground.

# PEDESTRIAN CIRCULATION AND DESIGN

## OBJECTIVE

Encourage safe and easy pedestrian movement within a site and between adjacent properties.

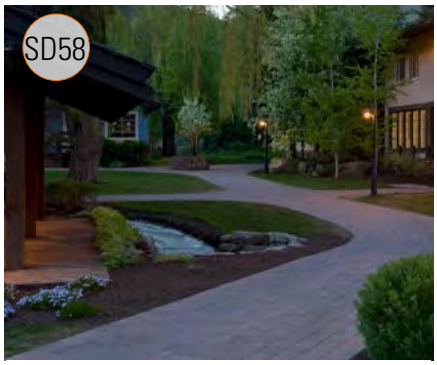
The design of the circulation system on a site is critical to creating safe travel routes between parking areas and building entrances. The guidelines identify the need for creating clearly defined and aesthetically pleasing circulation systems within and between project sites and providing connectivity to nearby transit stops and citywide pedestrian circulation systems.

Circulation systems should be separated from vehicular areas and provide convenient connections to pedestrian areas.

Integrate project walkways with the existing and planned active transportation network, community areas and transit.

Provide for pedestrian circulation within the site and between adjacent properties.

Create an interesting and inviting pedestrian environment with walkways and shared use paths that are separated from the roadway.



Design walkways for year-round circulation.

Provide wider sidewalks in heavily used commercial and tourist areas to accommodate higher numbers of pedestrians and provide opportunities for outdoor dining.

Sidewalks shall be provided along the full length of buildings that feature customer entrances.

Provide internal pedestrian connectivity to buildings, parking, open spaces and public amenities.

Separate walkways from vehicular areas in parking lots.

# PUBLIC PLAZAS AND OPEN SPACE

## OBJECTIVE

Create comfortable and desirable public gathering spaces.

Great public places are settings that bring people together—a place to see and to be seen. They provide a sense of character to the surrounding buildings and provide places for people to relax and enjoy themselves. They can serve as focal points and add to an area's visual enhancement. The guidelines describe the importance of designing high quality spaces that consider the surrounding landscape and scenic elements while providing for human comfort and visual interest.

Site public gathering spaces in locations with good solar exposure.

Provide desirable and comfortable public plazas. Site gathering spaces to take advantage of natural resources where possible.

Locate outdoor dining areas where solar exposure will maximize the opportunity for a comfortable year-round experience.

Site public gathering spaces where they are visible from the public street or other on-site pedestrian areas.

Use high quality plants, hardscape and pedestrian features that create an inviting atmosphere.

*Image courtesy of magazine.inspirato.com/featrued/family-time-in-vail-beaver-creek*

Enhance the site's comfort and aesthetics through the use of seating, public art, shade, information kiosks and other amenities and design elements.

Provide pedestrian amenities in convenient locations, including benches and trash receptacles. Consider providing ski and snowboard racks in commercial areas near ski resorts, where appropriate.

# 3 SECTION THREE BUILDING DESIGN

## OBJECTIVE

Design buildings and structures that harmonize with the character of the surrounding landscape, avoid a bulky and "box-like" appearance, and contribute to the quality and character of the mountain community.

The building guidelines establish a quality and character for the built environment that reflects the area's mountain setting and environmental conditions. These guidelines are not intended to restrict imagination, innovation or variety in design, but rather are intended to highlight design principles that can result in creative solutions that establish special characteristics for the built environment. Scenic and visual quality is not a question of style and therefore no specific architectural style or theme is proposed. The intent is to create design solutions that encourage a variety of architectural forms, scales, colors and materials that collectively fit within the natural mountain environment.

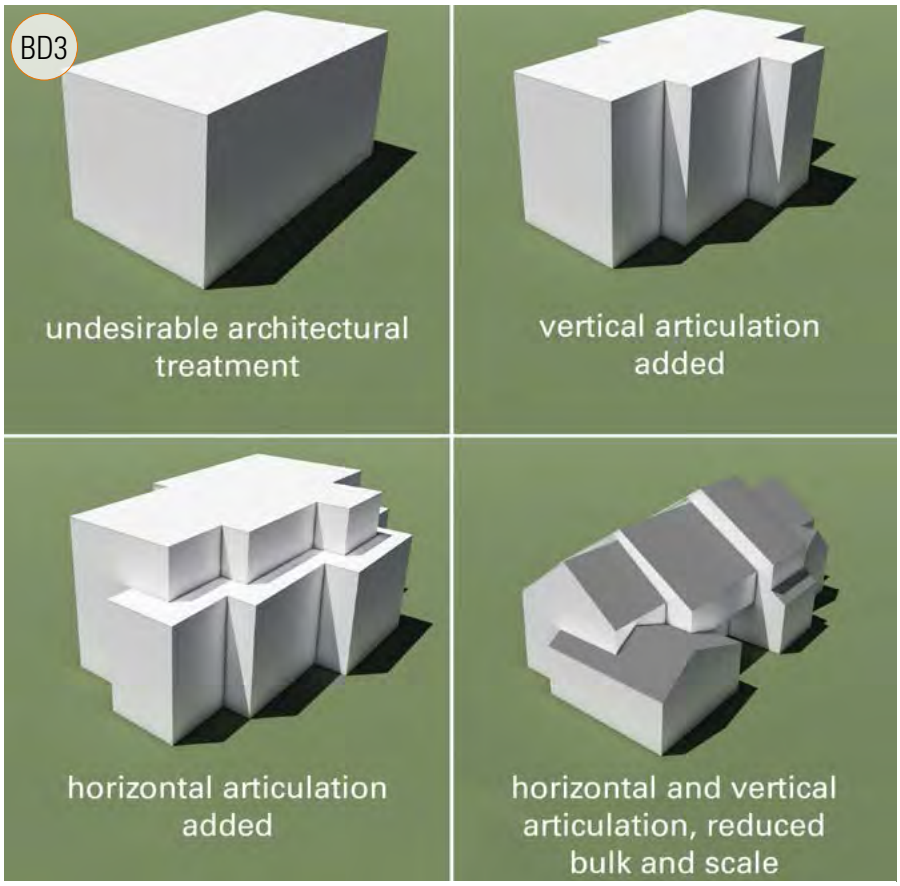
# BUILDING DESIGN AND ARTICULATION

## OBJECTIVE

Building form, articulation, materials and colors should be compatible with the surrounding Tahoe environment.

Building exteriors are typically designed with clear distinction between the three main building components; the base, middle and top. The base grounds the building to the site through the use of materials and forms that convey a sense of weight and stability. The base of a building is also the most visually dynamic zone due to its connection to the street level. The building's middle section should incorporate materials, textures, colors and detailing to provide interest and articulation. The tops of buildings are encouraged to be capped with well-proportioned, pitched roofs that act as the uppermost unifying component.

*Image courtesy of BSA Architects*



Buildings should have consistent architectural style and related detailing. All elevations visible to the public should have a complementary level of detailing.

*Image courtesy of Ben Fish*

Use gables, shed roof forms, cornices, balconies, roof terraces and other elements to step and articulate roof lines.

## BUILDING FORMS AND ARTICULATION

Use both horizontal and vertical articulation to reduce a building's scale and mass.

The visual mass of large buildings should be broken up through the use of elements such as roof forms, gables, projections and arcades.

Break up building facades with projections, recesses, piers, textured materials, trim and other architectural details to avoid a bulky or "box-like" appearance.

## BUILDING FORMS AND ARTICULATION

Screen all mechanical equipment from view.

Differentiated materials is one way to visually separate the base floors from the upper floors.

Protruding overhead canopies create interesting architectural façades and provide protection from falling snow.

## BUILDING FORMS AND ARTICULATION

The choice of quality, timeless materials is an investment in a place that will last for generations. Placement, shapes, materials, texture, details and colors should contribute to the overall building articulation. Design complex building forms with setback, overhangs, porches and varied skylines and avoid simple or monolithic forms.

Use brackets and overhangs to intercept sunlight and encourage building shadowing articulation where significant amounts of glazing is used. Windows and doors should relate to the structural expression of the building.

Glazing should avoid large amounts of reflective window planes without suitable overhangs or other mitigation.

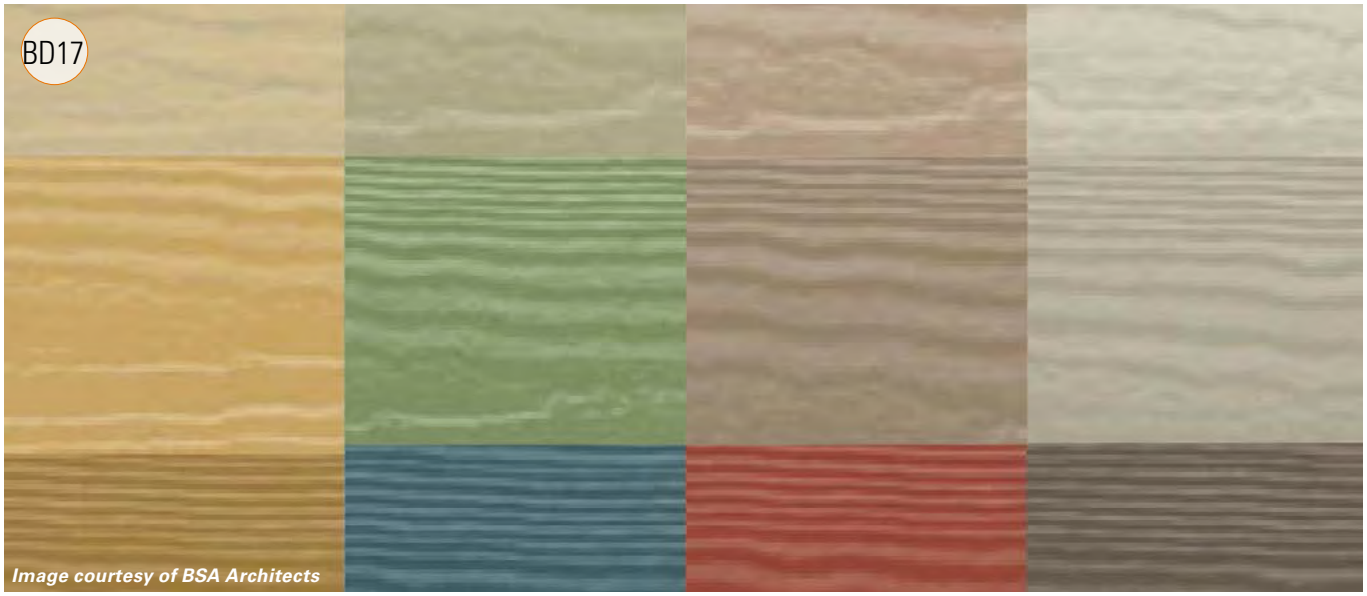
## PEDESTRIAN LEVEL DESIGN AND DETAILING

Views into a hotel lobby or retail space are visually inviting.

The quality and character of each building should contribute to the overall public space and create pleasing, usable outdoor spaces.

## PEDESTRIAN LEVEL DESIGN AND DETAILING

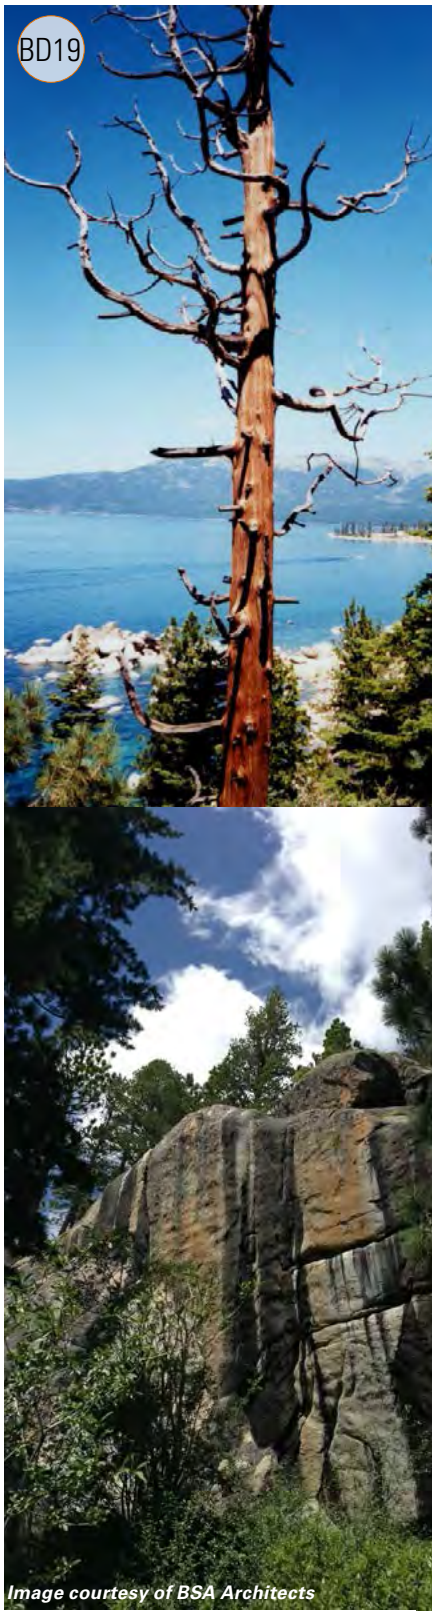
Store front detailing should be scaled to the pedestrian.



Massing of building elements should emphasize pedestrian scale, create intricacy and detail in the built environment and prevent a cold or impersonal aesthetic.

## COLOR SUGGESTIONS

Varying the texture and scale of wall materials of appropriate color adds visual interest. Textures shall be incorporated throughout each structure, in both materials and in the form and detailing of the building. Materials should appear closer to their natural state rather than a manufactured state.



Building Facade Color Suggestions

Doors and Windows Color Suggestions

Building colors shall draw from a natural palette in darker shades and minimize reflectivity. Avoid bright colors that compete with the natural surroundings and consider how the color may appear over large surface areas and in juxtaposition to other building materials. Use accent colors (maximum 10% of building face) for doorways, windows, graphics and storefront displays. Accent colors should complement base colors.

## USE OF NATURAL MATERIALS

Local Natural Palette

Textured Materials + Trim

Utilize natural building materials such as wood and stone to articulate design features. Natural stone can link building elements to the surrounding environment. The use of larger stone at the building's base gives it an anchored and structural appearance. Metal elements are typically incorporated as accents.

## SIMPLICITY IN FORM AND DETAILING

Incorporate metals and other more contemporary materials as accents.

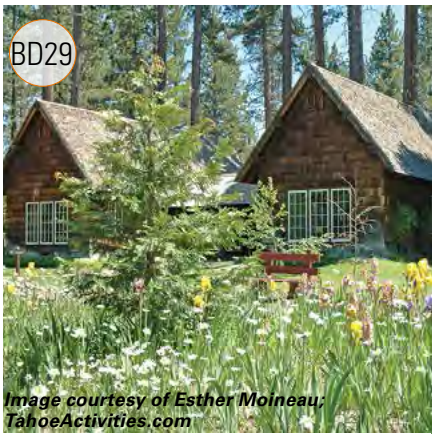
Remodels can enhance existing buildings by incorporating dormers for building articulation, adding windows and transparency to encourage pedestrian movement, and utilizing a neutral color palette that fits within the mountain landscape.

Use metals and other contemporary materials sparingly. Simplicity in overall composition should be the goal. Consider how metals and other contemporary materials relate to primary building materials such as wood and stone.

## SIMPLICITY IN FORM AND DETAILING

Use stucco sparingly and in combination with natural materials such as stone and wood.

Simplifying the number and types of materials used allow for greater emphasis to be placed on construction details such as bracket, joints and overhangs.



Materials which complement each other and respond to the natural surroundings can create a simple, seamless transition from building to landscape.

## DRAW FROM ELEMENTS OF HISTORIC ARCHITECTURE

Example of historic building from which to draw design elements and materials.

Examples of historic buildings from which to draw design elements.

Consider old Tahoe heritage historical references and incorporate stone and other design elements in a manner which takes into account the building's overall composition, massing and style.

## MOUNTAIN ENVIRONMENT DESIGN

©Vance Fox.com; Ward Young Architects and Clark and Sullivan Construction

Image courtesy of John Hitchcock

©VanceFox.com; Sierra Nevada College

Authentic building materials such as stone and timber are consistent with traditional mountain architecture, but they may also be incorporated into more contemporary designs that also fit within the natural mountain environment. Consider the importance of timelessness and do not create overly trendy designs that may quickly become dated.

# ROOFS

## OBJECTIVE

Create varied, sloping roof-scapes that complement natural forms and Tahoe architectural traditions.

Roof design is important to snow management as well as being a major contributor to building character. Roofscapes should be considered not only for their appearance from the pedestrian level, but also from the view of the overall skyline. South Lake Tahoe's alpine character and mountain backdrop can be reinforced through roof design.

Snow management shall be considered during the design of the architecture and landscape. The effects of snow and ice buildup, if improperly handled, can pose risks to property and pedestrians, and impose high maintenance and snow removal costs.

BD34

*Image courtesy of BSA Architects*

Roof forms should be designed to minimize ice dams and damage due to snow creep (glacial action) and freeze/thaw cycles.

BD35

*Image courtesy of Brent Bingham Photography; Tom Cole Architect*

Roof slopes shallower than 5:12 may be considered where they comply with snow load requirements, other design standards and guidelines, and provide architectural interest.

BD36

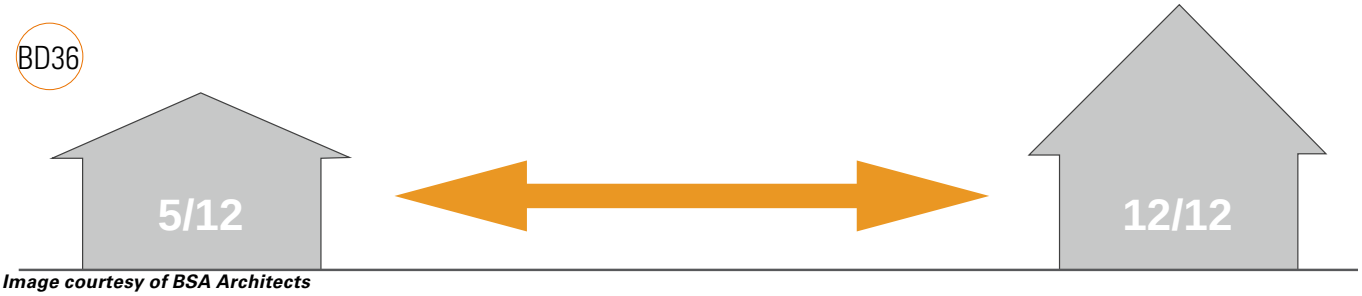


*Image courtesy of BSA Architects*

Pitch roofs that are no less than 5:12 and no more than 12:12 are preferred. Roof pitches below 5:12 may be considered on an individual basis.

## ROOF COLORS AND MATERIALS

Appropriate roof materials, colors and reflectivity should take their cue from the surrounding natural environment.

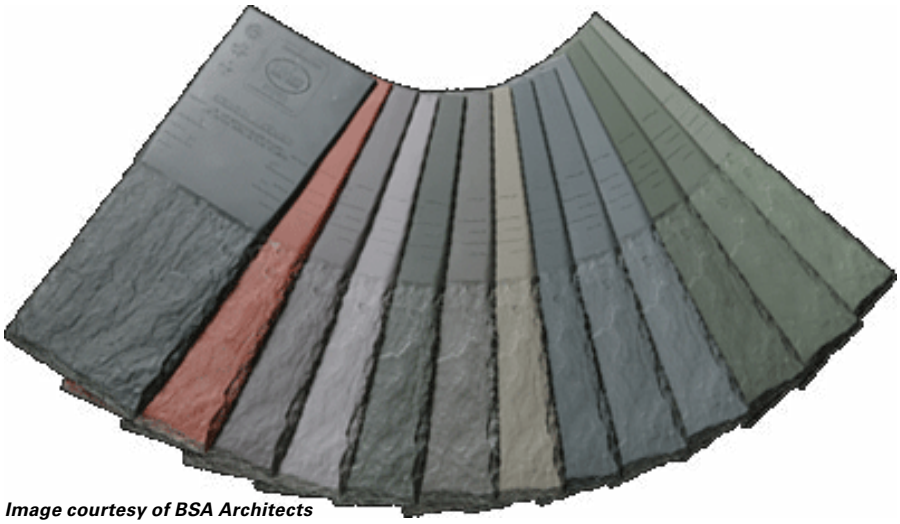

*Image courtesy of BSA Architects*

Roof material and colors should minimize reflectivity and blend with natural surroundings. Utilize nonglare and earthtone finishes to minimize reflectivity for roofs, mechanical equipment and skylights.

Use snow clips and snow fences where necessary. Consider retaining snow on the roof to minimize the impacts and liability of shedding snow and increase building insulation value.

## ROOF FORMS

The use of timbers and visible logs should appear consistent with the timbers' structural properties and ability to support roof elements.

Mansard roof forms and flat roofs should not be used.

Different roof shapes, heights and slopes helps to break up the appearance of a large mass of the buildings.

*Image courtesy of BSA Architects*

*Image courtesy of BSA Architects*

Roof forms should be designed to protect public entry ways and pathways from ice and shedding snow without using energy consuming snow melt systems.

## ROOF ARTICULATION

Roofs offer the opportunity to include distinctive design elements to relate the building to the mountain setting and prevent "block-like" structures by breaking up the rectangular form.

Roof design should have a definitive "top" that steps or breaks the rectangular form. Modulated roof forms that are varied in height or broken with architectural features and roof design elements are encouraged.

Cornices, balconies and other elements should be used, where appropriate, to terminate rooflines and accentuate setbacks between stories.

## BUILDING HEIGHT

### OBJECTIVE

Create a built environment that preserves views and visually corresponds with the surrounding mountain environment.

The skillful massing of building elements should emphasize pedestrian scale, create intricacy and detail in the built environment, and prevent a cold or impersonal aesthetic. The guidelines for building heights are intended to prevent structures from looming over the highway and overshadowing the naturalistic mountain aesthetic of the community.

Establish a consistent building frontage through the use of a minimum 15' height of the ground floor.

Relate building heights to open spaces to allow maximum sun and ventilation, protect from prevailing winds, enhance public views of surrounding mountains and minimize obstruction of view from adjoining structures.

BD50

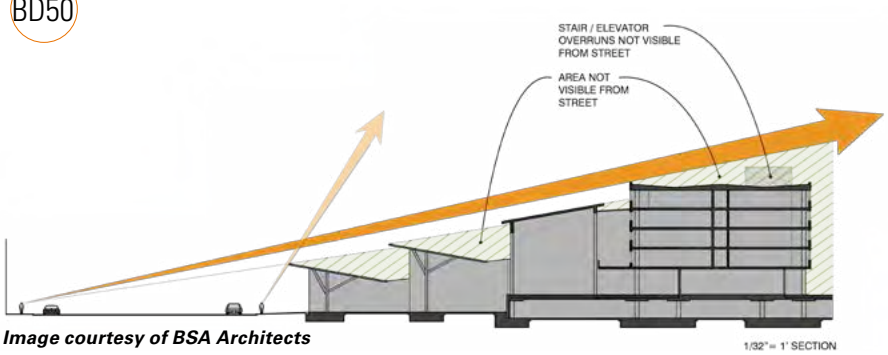

*Image courtesy of BSA Architects*

Step back building within a daylight plane along street frontages and adjacent residential areas to protect viewsheds, allow light and air, limit winter shading and preserve the pedestrian scale.

BD51

*Image courtesy of Scott Kennedy at Sierra Tahoe Realty*

Roof overhangs, projections and other architectural features can help visually step a building back from the street.

BD52

*Image courtesy of hannastepan.cz; stepan*

Ensure compatibility with adjacent uses. Provide additional buffering in addition to required setback for buildings permitted additional height.

BD53

Ensure compatibility with adjacent uses and viewsheds. Do not project building above forest canopy, ridge lines or detract from mountain or lake views.

BD54

Height and scale of buildings should be compatible with that of surrounding development. New development height should "transition" from the height of adjacent development to the maximum height of the proposed building.

## GREEN BUILDING

### OBJECTIVE

Minimize a building's impact on the environment while reinforcing the natural harmony of the Lake Tahoe landscape.

Incorporate durable buildings materials including the consideration of recycled materials and locally sourced building materials, e.g., stone and timber, when possible.

BD56

*Image courtesy of BSA Architects*

Reuse previously disturbed sites and incorporate new technologies to reduce the use of resources, including energy and water.

*Image courtesy of BSA Architects*

*Image courtesy of BSA Architects*

Exposed solar panels should be screened when possible and/or compatible with roof forms and the building's architectural character. Solar shingles can also be incorporated as part of green building design.

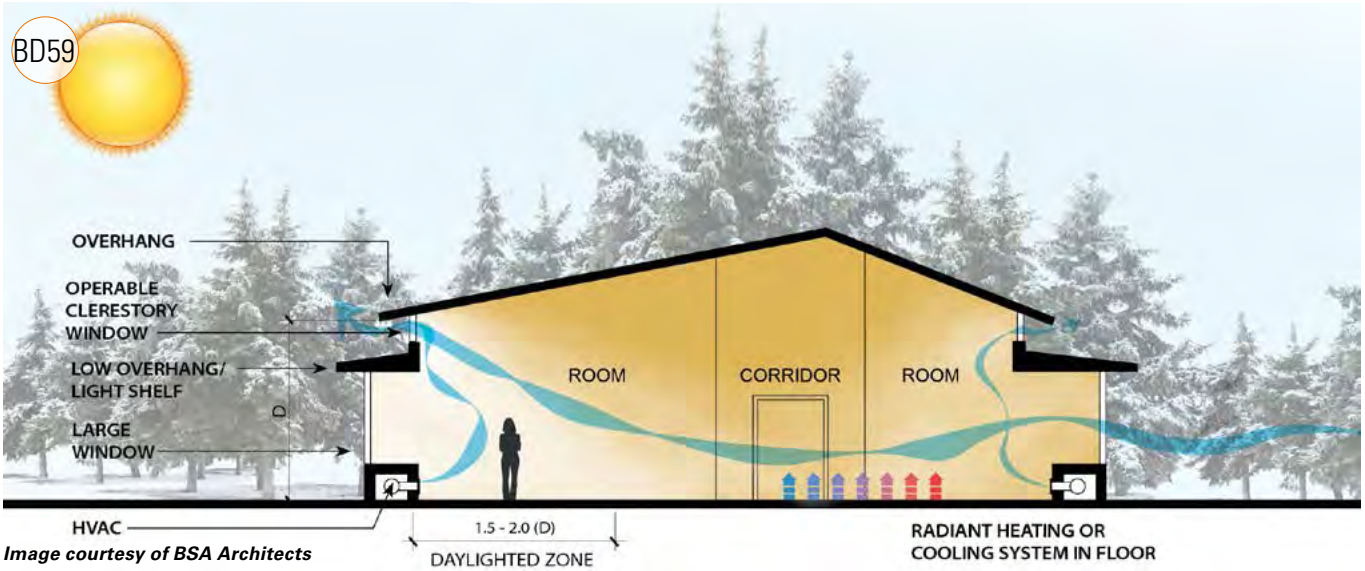

*Image courtesy of BSA Architects*

Use sustainable building materials that support indoor environmental health, passive environmental systems are encouraged.

# 4 SECTION FOUR LANDSCAPE

## OBJECTIVE

Create an aesthetically pleasing, maintainable landscape environment while continuously reinforcing a connection to the natural environment that defines South Lake Tahoe.

The design of landscapes should respond to the intended site function with consideration of issues such as safety, maintenance and desired aesthetic quality. In areas focused on commercial and tourist activities, the landscape should create an inviting environment for pedestrians. This may be accomplished by establishing a rhythm of elements that unify the streetscape, providing plazas and gathering spaces that respond to a site's environmental factors and by screening undesirable views or framing impressive vistas. In contrast, undeveloped areas and areas abutting natural landscapes should incorporate plant materials spaced in natural-looking groups to seamlessly transition into the natural environment.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES

Incorporate combinations of shrubs, groundcovers and boulders to create an attractive edge between the highway frontage and sidewalk while not blocking views of the lake.

Utilize vegetation to create pleasant outdoor spaces, reduce glare and heat, deflect wind, muffle noise, prevent erosion and integrate buildings into the surrounding landscape.

Create a quality built environment with the inclusion of amenities such as street furnishing, plantings and artworks to enhance the places that people will walk, gather or recreate.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES

Design landscapes to respond to seasonal environmental conditions to encourage outdoor spaces that are comfortable year-round.

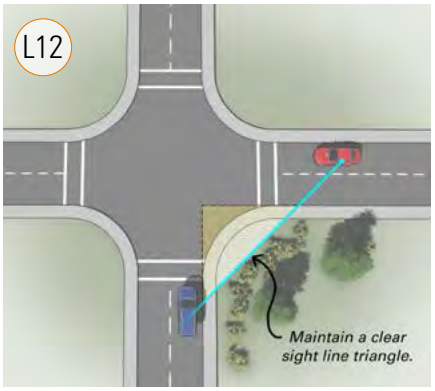
Utilize ornamental and accent plant materials at building entries, exterior dining areas and pedestrian areas.

Consider the use of deciduous trees in street frontages of commercial areas to allow for seasonal solar access and enhance the pedestrian zone.

Landscape materials should enhance the street environment and commercial areas.

Incorporating evergreens as part of the design of front yard setback areas can help restore a natural vertical element to the highway streetscape and integrate buildings into the surrounding landscape.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES



Vegetate setback areas. Consider opportunities to exceed minimum requirements for the appearance of a more established landscape.

Integrate stormwater facilities and bioswales as part of streetscapes, parking areas and other landscape areas. Landscaping should be recessed to receive stormwater runoff whenever feasible. Allowing for stormwater to flow into and infiltrate in landscape areas is preferred.

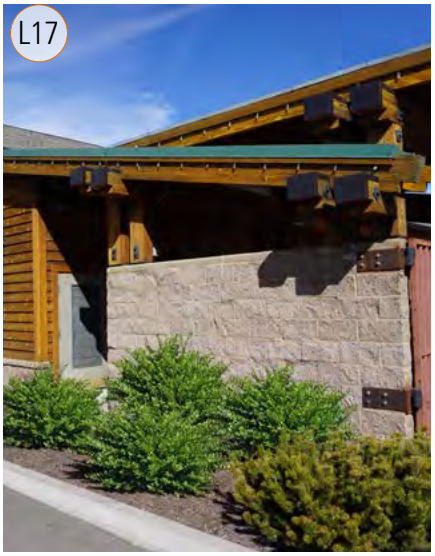
Maintain lines of site at intersections and driveways for vehicular traffic.

## USE OF LANDSCAPE TO ENHANCE PEDESTRIAN AREAS, STREETSCAPES AND PUBLIC SPACES

Utilize opportunities to incorporate natural drainage features as part of the landscape design.

Incorporating groupings of plant materials can add variety while also organizing the landscape to facilitate maintenance.

Consider the opportunity to incorporate pockets of color and seasonal interest as part of the design of public spaces.



## VISUAL SCREENING

Creating landscape berms with naturalized shapes and contouring should be considered as part of visual screening for parking and service areas.

Plant materials should be used to help block the view of trash enclosures from public areas and roads.

Screen parking and service areas with landscape materials. Incorporate a mix of plant materials to avoid a “wall” affect.

## PLANT SELECTION CONSIDERATIONS

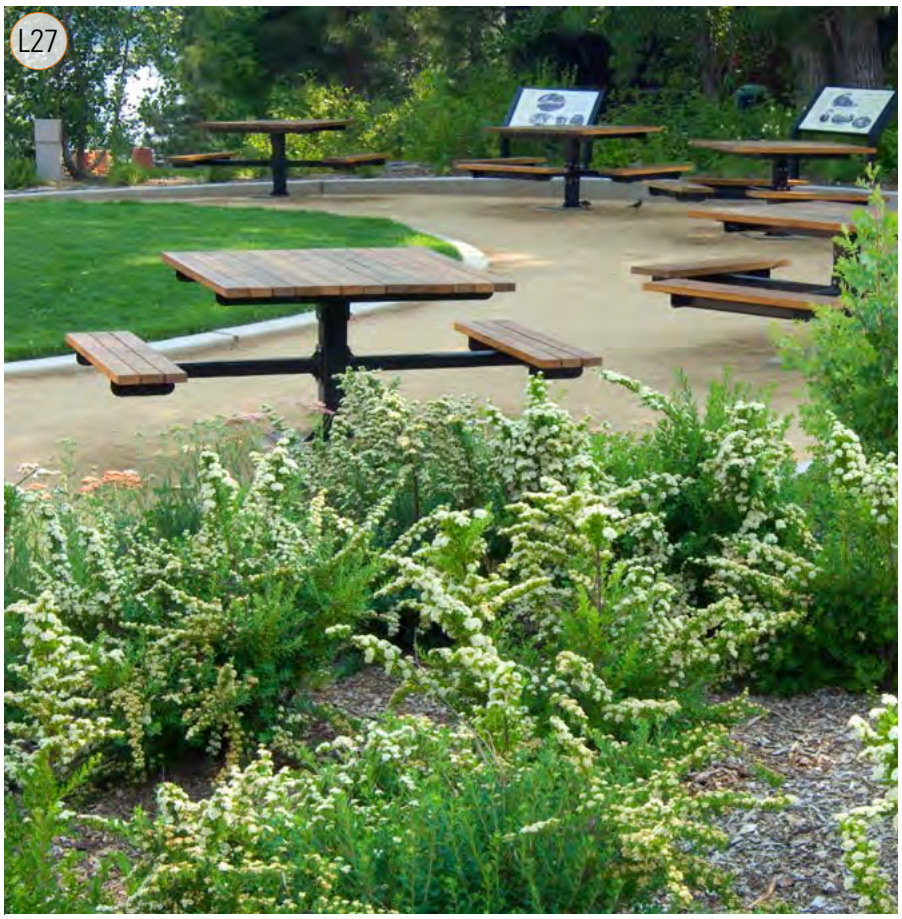
Select drought tolerant plant materials that are suited to the microclimatic variations in sunlight, soil and moisture conditions.

Utilize vegetation that is native or adapted to the region's climatic conditions while also considering the plant material's water needs. Limit ornamental species to accent plantings.

Preserve groups of existing trees where possible to increase the likelihood of survival.

In snow storage areas and roof shed zones, utilize plant materials that are durable enough to handle abuse from snow loading such as herbaceous ground covers, grasses or flexible stemmed shrubs that grow back from their base such as dogwoods.

Consider shade, sun exposure and wind blocking during the selection of trees.



## WATER CONSERVATION

Use efficient water methods, group plantings into similar hydro-zones, use low-water use plant material and use irrigation systems with moisture sensors to control and conserve the use of water.

Consider maintenance and water conservation/irrigation needs during landscape design.

Utilize turf grass only in focused, limited applications.

Irrigate plantings and provide correct water levels to support the long-term growth of landscape. Drip and low-flow systems can minimize irrigation inefficiencies and evapotranspiration in order to maximize the use of every drop of water.

# 5 SECTION FIVE EXTERIOR LIGHTING

## OBJECTIVE

Provide illumination for safety and security as well as enhancing the aesthetic appeal of a site.

Carefully designed lighting can reinforce the ambiance of streetscapes and public gathering areas as well as protect the night sky. These exterior lighting guidelines focus on limiting excess light, while still providing for safety and security and encouraging an enjoyable night time atmosphere for community spaces.

## ACCENT LIGHTING TO ENHANCE AESTHETIC APPEAL

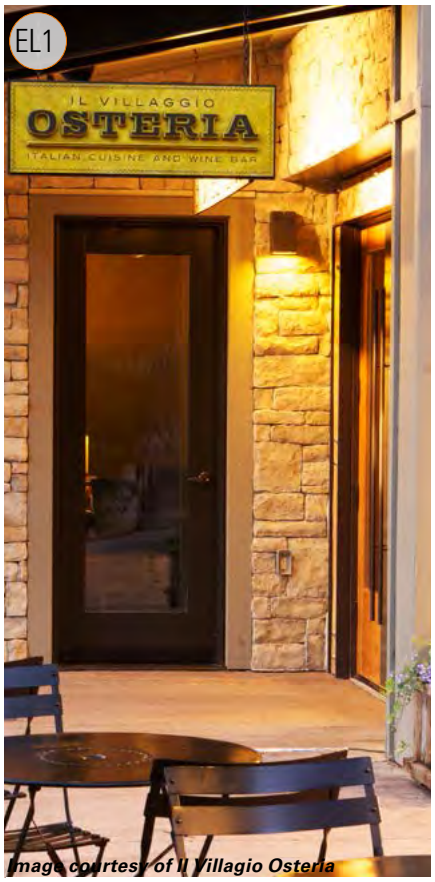


*Image courtesy of Il Villagio Osteria*

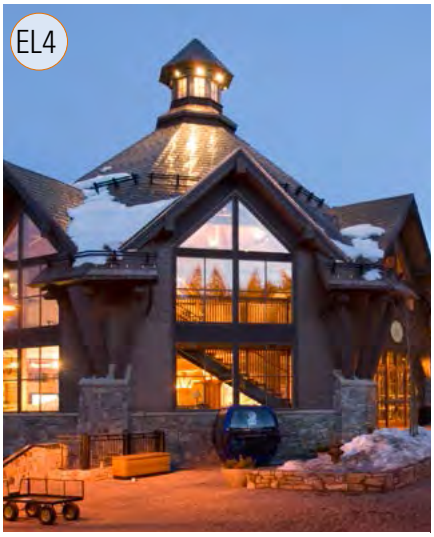
Accent lighting can be used to accentuate building entries and signage.



Illuminate areas necessary for safe and comfortable use and illuminate special features of a building or landscape to add to the aesthetic appeal of a site.

*Image courtesy of lampsplus.com*

Accent landscape elements with down lighting with concealed fixtures or fixtures with lens hoods.

Use lighting to accent features such as entries, arcades, chimneys, cornices, balconies, exterior trusses, highly textured material, knee braces, enriched architectural facades or landmark features. Do not light blank walls.

Use built in lighting and wall lighting to illuminate stairs and level changes.

## ACCENT LIGHTING TO ENHANCE AESTHETIC APPEAL

Use exterior lighting to activate public pedestrian retail space.

Utilize exterior lighting to accent architectural and landscape features and illuminate parking lots, streets and walkways. Seasonal lighting should only be used between November 1 and March 1 or as by approved permit.

Use pedestrian light poles that allow for approved banners to encourage an active pedestrian environment. Banners should be replaced as needed to maintain visual appeal and avoid showing damaged or faded banners. Plan for seasonal lighting. Consider the need for electrical outlets and incorporate as part of site design features such as tree wells, light poles and walls.

Use lighting to enhance the pedestrian zone, public gathering spaces and private outdoor gathering areas.

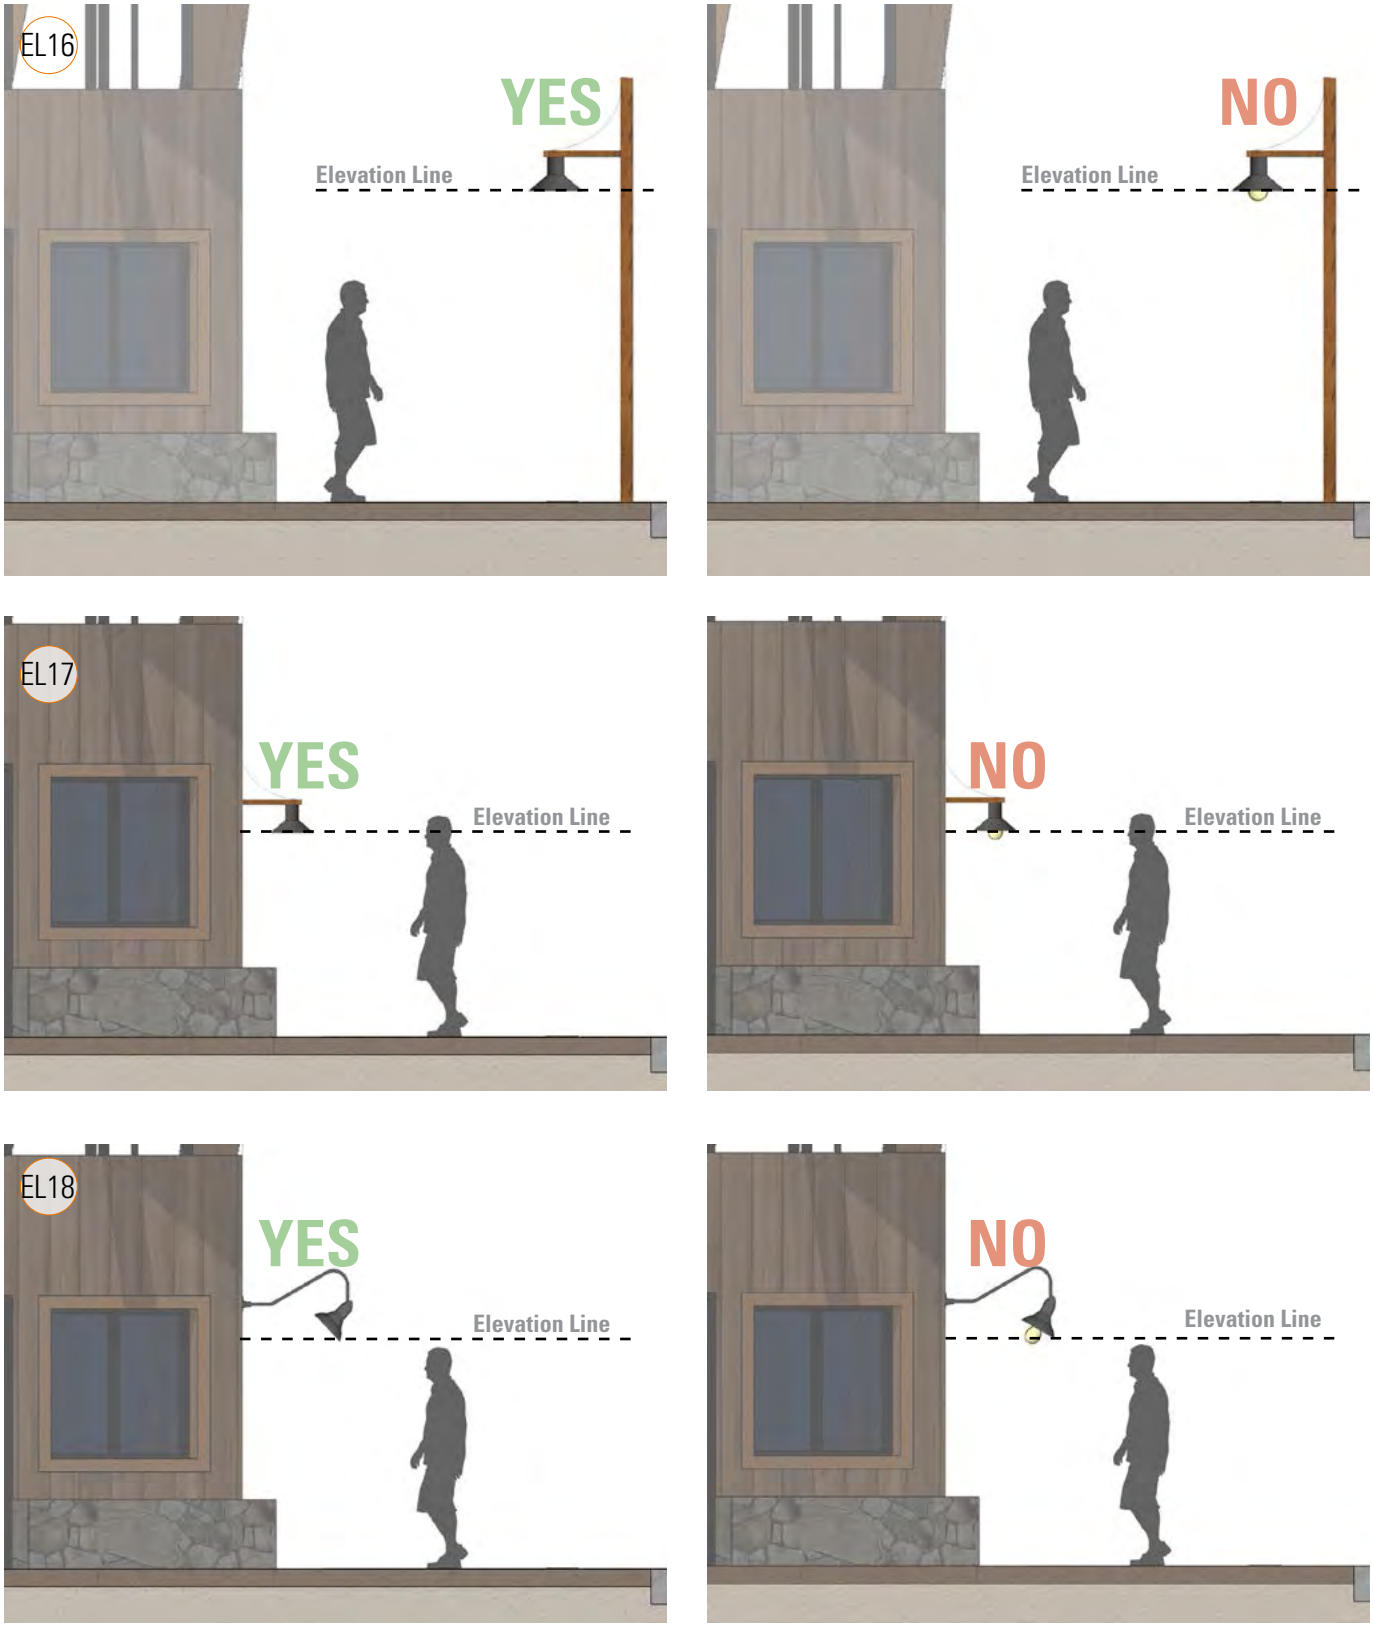
## ACCENT LIGHTING TO ENHANCE AESTHETIC APPEAL

Wall lights may be incorporated as part of the design to both provide accent lighting and illuminate the walking surface.

Direct accent lighting downward to illuminate landscape elements.

The combination of pedestrian lights, architectural lighting and interior lighting can create a more inviting pedestrian environment. Avoid the tendency to over-light which can create bright spots that tend to make adjacent unlit areas seem even darker. Carefully design lighting to consider both architectural/accent and functional lighting in order to provide reasonable levels for safety and security.

## LIGHTING TYPES: CONSISTENT COLOR WITH TRUE COLOR RENDERING



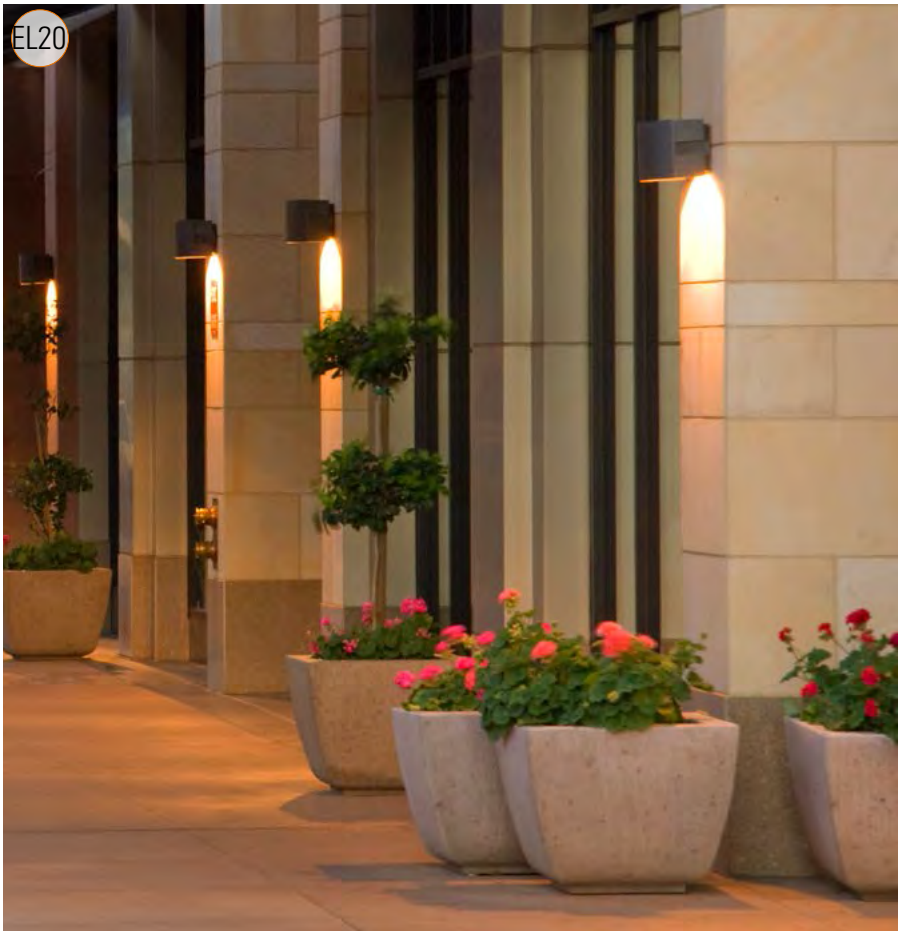
A consistent light color should be provided throughout a project and lighting that appears in the warm color range is preferred over a bluish/white light color. Energy efficient lighting types, including LED lighting, are recommended.

## NIGHT SKY PROTECTION: DIRECTING LIGHT

Face or direct light fixtures so light does not spill over to adjacent properties or up into the sky.

## NIGHT SKY PROTECTION: SHIELDED LIGHT SOURCES

Direct light downward and utilize luminaries that shield light sources from view so the light is not visible as seen in elevation in order to preserve night sky views and reduce glare.



## NIGHT SKY PROTECTION: SHIELDED LIGHT SOURCES

*Image courtesy of BSA Architects*

*Image courtesy of Chapler Lighting*

Luminaires that shield light sources and direct light downward should also complement the character of the public space and the building materials of adjacent architecture.

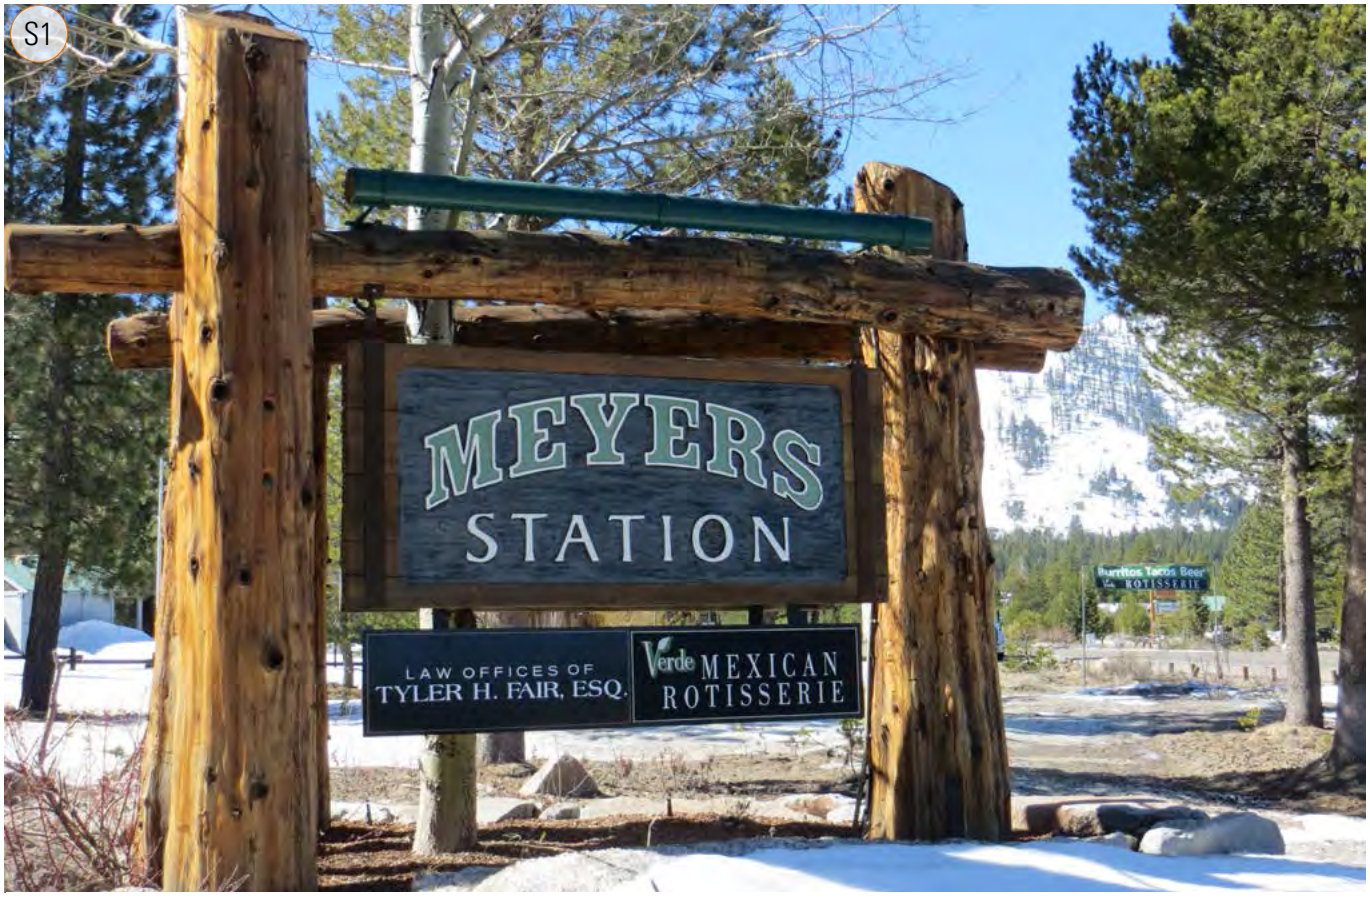
# 6 SECTION SIX SIGNAGE

## OBJECTIVE

Enhance the city's visual environment by complementing the building's architecture and enlivening the streetscape while clearly and succinctly communicating business information.

The sign guidelines recognize commercial communication requirements of all sectors of the business community as well as the need to enhance the area's visual quality. Well-designed signs can contribute to a district's overall identity and help pedestrians and drivers locate businesses and services.

South Lake Tahoe includes a range of pedestrian and automobile oriented environments which require different signage considerations. The Guidelines focus on design criteria that can enhance the ability for signage to communicate effectively while positively contributing to South Lake Tahoe's visual environment through proper placement, use of materials and being appropriate to its setting.



Along with architecture and landscape, signage is one of the most noticeable visual elements along South Lake Tahoe's roadways. Signs are an important part of the built environment in order to communicate information about area businesses and encourage economic vitality. Well-designed signs can contribute to a district's overall identity and help pedestrians and drivers locate businesses and services. However, poorly designed signs and the overabundance of signage can severely detract from the surrounding mountain and lake environment.

The following design principles are illustrated in this section and should be considered during the design and development of projects:

### LESS IS MORE

The purpose and message of a sign should be immediately apparent. Signage that merely attracts attention without communicating the message is not effective. Too much information can be visually distracting to viewers, especially motorists. Limiting the amount of information included on a sign intended to be viewed from a motorist's vantage point can enhance overall legibility and wayfinding.

- ***Keep the message brief and simple***: A succinct message that is simple and easy to read looks cleaner and is more visually appealing.
- ***Consider every word***: Every word should directly contribute to the sign's overall message. Remove any unnecessary words to create a clear message.
- ***Convey primary information***: Words and graphics should convey a business's identity or the services offered. Where possible, multi-tenant areas should consider branding the project area to reduce the information on the primary roadway sign and incorporate secondary level signage within the commercial center.
- ***Use easy to read typefaces***: Typefaces should be easy to read. Overly intricate and mixed fonts can take more time for a viewer to decipher. Faddish typefaces may also become dated.

Keeping the message simple and branding the commercial centers can help effectively direct people to community destinations while reducing the amount of signage seen from the roadways.

## PROPORTION AND BALANCE

The aesthetic quality of a sign arises from the relationships between sign design elements such as proportion and balance. Proportion is the relationship of one element to another. It is most often thought of in terms of the relative size and shape of elements. Proportion can help define the relationship among the sign elements and implies the order of significance.

Well-designed signs will have appropriate proportion between the various parts of the structure as well as between the various components of the graphic content. Sign proportions should be considered between the structure's height, width and depth, between elements of the graphic content, and between the graphic content to the overall sign.

Carefully consider the proportion of the copy to the overall sign background. If the letters take up too much of a sign, they may be harder to read. A general rule is that letters should not appear to occupy more than 75% of the sign panel area.

Physical balance is best described by two objects that are of equal weight, although they may not be of equal size. Visual balance is the perceived equilibrium of design elements. Balance on a horizontal axis can be achieved by having signs that do not appear "top-heavy". Monument bases that are proportional with the sign's height and other sign components can help achieve balance on the horizontal axis.

Balance on a vertical axis can be either symmetrical or asymmetrical. Symmetrical balance can be achieved when each half of the sign is a mirror image of the other half. In asymmetrical balance, each half is not identical, but the elements are arranged in a way that they feel balanced. This can be achieved by considering some of the following principles:

Visually,

- A large form is heavier than a smaller form
- Dark values are heavier than light values
- A textured form is heavier than a smooth form
- A complex form is heavier than a simple form
- Two or more smaller forms balance one large form

A sign's graphic content should relate to the overall proportions of the sign's structure. Aesthetic quality is enhanced when the relationships between sign design elements are balanced and in proportion with each other.

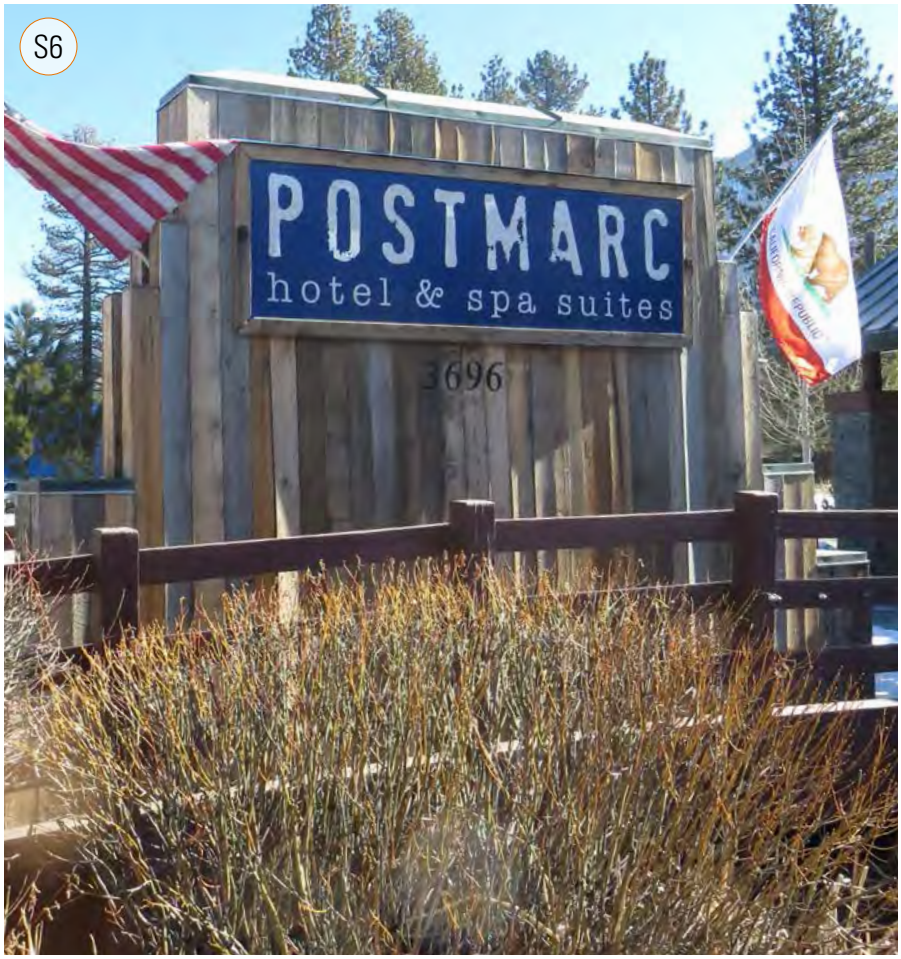
## COLORS AND MATERIALS

Similar to building design, sign colors and materials should draw from the area's natural palette, including darker backgrounds and the use of stone and wood. Bright colors should be limited and reflective, fluorescent and primary colors should not be used. Additionally, consideration should be given to the following:

- Colors and materials should contribute to overall legibility and design.
- Significant contrast should be provided between the sign background and the letters. Dark materials are recommended for sign backgrounds and light materials/colors are recommended for the sign letters.
- Too many colors can compete with content for the viewer's attention. Avoid too many different colors and limit the use of accent colors to increase visibility.

## MATERIALS AND CONTRIBUTION TO ARCHITECTURE

Signage that coordinates with the building architecture can add another opportunity for architectural expression.



Complement a project's architectural style and exterior lighting with signage. Select materials and supporting devices that positively contribute to the overall character of the area.

Use natural building materials such as wood and stone that is coordinated with site architecture.

Materials and font types should contribute to a sign's overall legibility and positively contribute to the area's overall visual character.

Colors should draw from a natural palette and dark, muted background colors are preferred. Limit the use of bright colors to accents and avoid reflective, fluorescent colors.

## SIGN PLACEMENT

*Image courtesy of Matthew Lehman @ Matthewy Lehman Real Estate*

Integrate freestanding signs into the landscape through the use of plants and sign bases that visually anchor the sign to the site.

*Image courtesy of Solaris Village Shopping; SolarisVail.com*

Provide pedestrian level identification of major buildings through flush building signage.

Utilize elevation signs hung from the soffit board of fascia for businesses that can be viewed from the street and sidewalk.

Pedestrian level signage can be smaller and attached under arcades to reduce the number of signs along a street.

Incorporate building signage with internally illuminated channel letters between appropriately spaced architectural features such as columns or dormers.

Signage placed in dormers can be incorporated as an architectural element.

## SIGN CONSTRUCTION ELEMENTS AND COPY

Sign construction elements that are well proportioned and balanced with the sign face area may be considered if they meet other design standards.

Support freestanding signs with two or more poles or a monument base. Supporting devices should provide aesthetic contributions to the sign structure.

Use trademarks on natural backgrounds to quickly convey messaging.

The visual quality of motor fuel price signs are enhanced by incorporating them within a thoughtfully designed stone monument base.

Keep copy simple and easy to read by keeping the amount of text to a minimum. Too many messages can be visually distracting. A sign with a brief, succinct message is more attractive and is typically more effective as it is easier to read quickly.

## ILLUMINATION

Lighting should comply with night sky standards, including being directed downward and being fully shielded in order to illuminate the sign face and avoid light spill into adjacent areas.

Use dark colors or opaque material as the background of interior illuminated signs to limit the amount of light transmitted.

Indirect backlighting of individual letters can create a soft glow while providing adequate illumination.

Use indirect and/or diffused lighting to prevent light sources from being visible from public rights of way or adjacent properties and to soften the light's appearance.

## MULTI-TENANT SIGNAGE

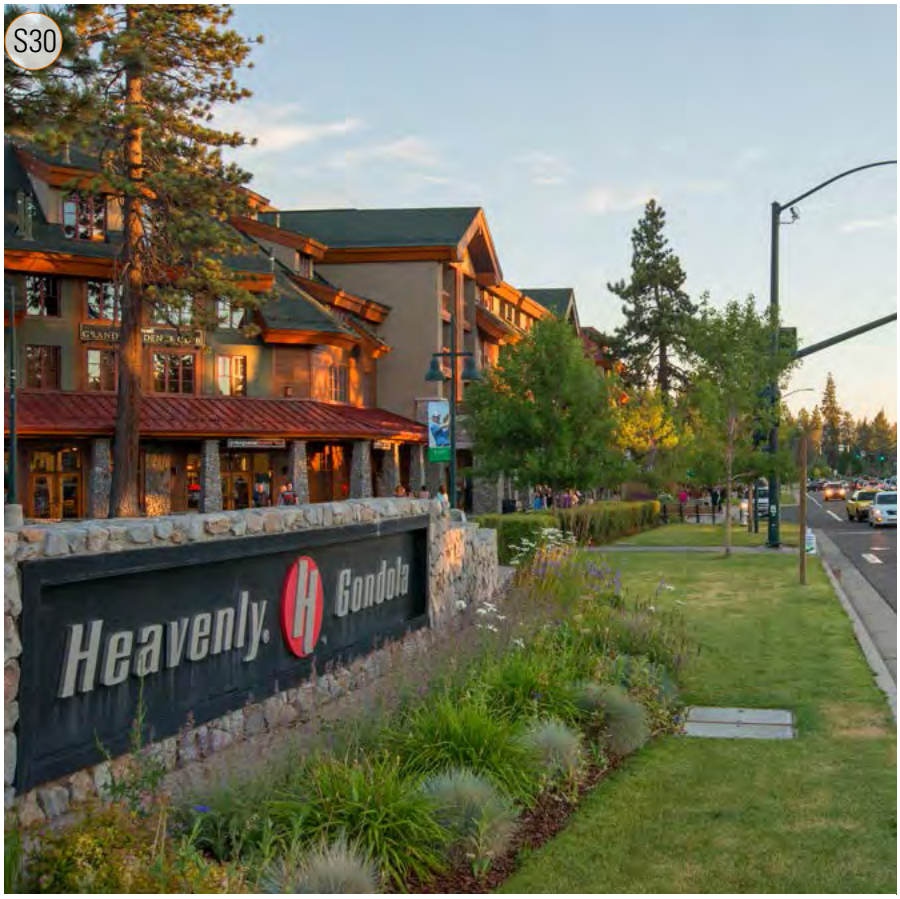
Consolidating signage into a unified system with consistent font types and colors can reduce sign clutter and helps to avoid overwhelming motorists with too many signs. Consider flexibility in design so tenants can be added or changed over time.

Branding multi-tenant commercial areas can help reduce the number of individual businesses listed on each street sign. Simplify tenant names and use logos where possible to reduce the amount of copy on each sign.

Develop signs with a high aesthetic quality and professional construction standards.

Signage carved into natural wood or high density foam core can help unify tenant signage.

Design and locate signs to be compatible with their surroundings in terms of size, shape, color, texture and lighting. Do not visually compete with other signs.



## INTEGRATING SIGNAGE AS PART OF BUILDINGS AND LANDSCAPE ELEMENTS

Signage presents an opportunity to convey unique and interesting aspects of a business through artful designs.

Incorporating signage as part of the building design can eliminate barriers for pedestrian movement and allow more space for other outdoor public spaces.

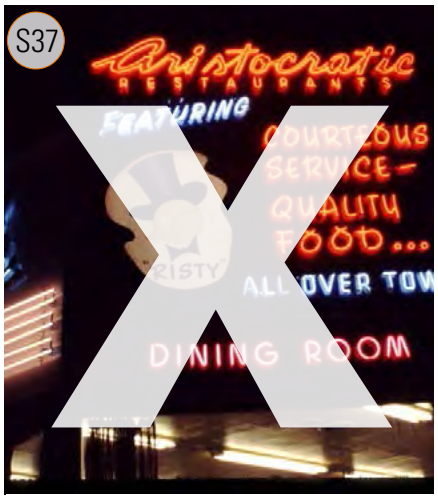
Integrating signs as part of the landscape feature can help reduce sign proliferation along the roadway. Incorporating plantings can soften the view of a sign from all sides.

Window signage that does not exceed 25 percent of the window area can be an elegant way to communicate business information to pedestrians and create interest at the street level.

## GENERALLY INAPPROPRIATE SIGNS

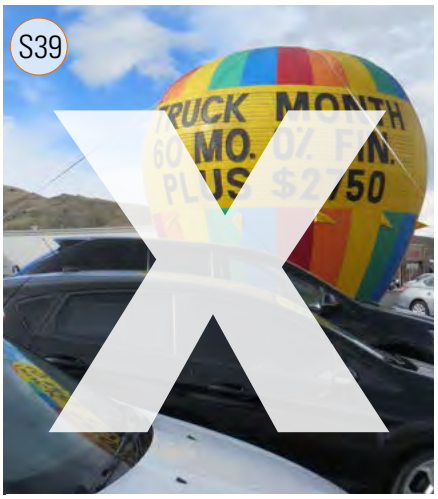
Pole signage

Banner signage and signage attached to mansard roof



Amount of sign copy and structural elements are not proportional

Signage attached to roof



Construction elements don't add to the overall aesthetics

Bright, neon signage

Signage that is dark, dated and has trendy typefaces

Inflatable sign displays

Flags and banner signs

# APPENDIX C
# Development and Design Standards

This section sets out the development and design standards and permissible uses for the Tahoe Valley Area Plan land use districts and has~~ve~~ been designed to achieve the desired community vision and urban form.

Applicability: All projects within the Tahoe Valley Area Plan boundaries shall meet the standards provided below. The South Lake Tahoe Design Guidelines (2016), included as Appendix B, shall supplement this section to provide visual examples of the standards and their intentions. In addition, all projects are required to meet the City-wide Design Standards when applicable. Should a conflict occur between the City-wide standards and the Tahoe Valley Area Plan standards, the standards of this Area Plan shall apply. All regulations in the TRPA Code of Ordinances shall remain in effect unless superseded by the provisions of this Area Plan.

## Permissible Uses

Table 1 lists the permitted primary land uses by district for the Tahoe Valley Area Plan and land use definitions are provided in Table 2. The regulations for the district are established by letter designations listed below. The designations apply strictly to the permissibility of land uses; applications for buildings or structures may require discretionary review. Uses not listed in the Table are prohibited.

Portions of the Tahoe Valley Area Plan lie within the safety zones established by the Lake Tahoe ~~Airport Comprehensive Land Use Plan (CLUP)~~Airport Land Use Compatibility Plan (ALUCP). Uses within these zones may be further restricted by the ~~CLUP~~ALUCP. Users of this Area Plan should refer to the ~~CLUP~~ ALUCP to determine if additional restrictions are applicable to the property they are interested in or consult with the City of South Lake Tahoe Planning Division.

**(A)** designates allowed uses subject to zoning compliance. An allowed use is one that can be established as the primary use of a building.

**(S)** designates uses that are permitted subject to approval of a Special Use Permit. A Special Use Permit requires discretionary approval by the City Planning Commission or Zoning Administrator following review and a determination that the nature of the proposed use, at the location proposed, is not detrimental to the public welfare or injurious to property or improvements in the neighborhood. To obtain a special use permit, the applicant must generally show that the contemplated use is compatible with the zoning ordinance and land use standards. Findings that such use would be essential or desirable to the public convenience or welfare~~,~~ and will not impair the integrity and character of the zoned district or be detrimental to the public health, safety, morals or welfare are required.

**(TRPA)** designates uses that require TRPA review and permitting.

**(-)** designates uses that are not permitted.

Note: All major design review projects that are visible from TRPA's designated Scenic Highway Corridor (US Highway 50, State Route 89) will require a Planning Commission public hearing.

1. Land use category is identified in TRPA Code Section 60.3 as a "possible contaminating activity," triggering special requirements pursuant to TRPA Code Section 60.4 if located within Source Water Protection Zone (see Figure 9).
2. Condominiums only. Refer to multiple family dwelling density standards.
3. As part of a mixed-use project only.
4. Limited to existing warehouse uses within the Town Center Gateway District (TC-G).
5. New non-emergency sites prohibited.
   ~~Allowed as part of a mixed-used project.~~
~~6. Secondary units require City Design Review.~~
   ~~Portions of the Tahoe Valley Area Plan lie within the safety zones established by the Lake Tahoe Airport Comprehensive Land Use Plan (CLUP). Uses within these zones may be further restricted by the CLUP. Users of this Area Plan should refer to the CLUP to determine if additional restrictions are applicable to the property they are interested in or consult with the City of South Lake Tahoe Planning Division.with~~ Vacation home rentals shall only be allowed in locations specified by City Code Title 3, Article V, ~~*Vacation Home Rentals.*~~per City Code Chapter 3.50.~~.~~
6. Facilities with the capacity for 200 or more persons require a special use permit.

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| **RESIDENTIAL** | |
| ~~Employee Housing~~ | ~~Residential units owned and maintained by public or private entities for purposes of housing employees of said public or private entity.~~ |
| Mobile Home Dwelling | A home built entirely in the factory on a non-removable steel chassis that is transported to the building site on its own wheels and was installed prior to June 15, 1976, when the Federal Manufactured Home Construction and Safety Standards (commonly known as the HUD Code) went into effect. |
| Multiple Family Dwelling | More than one primary residential unit located on a parcel. Multiple-family dwellings may be contained in separate buildings such as two or more detached houses on a single parcel, or in a larger building on a parcel such as a duplex, a triplex, or an apartment building. ~~Vacation rentals are included, up to but not exceeding a four-plex, provided they meet the Local Government Neighborhood Compatibility Requirements as defined in the TRPA Code of Ordinances. One detached secondary residence is included~~ This includes multi-family dwelling units owned and maintained by public or private entities for purposes of housing employees of said entity. |
| Multi-Person Dwelling | A building designed primarily for permanent occupancy by individuals unrelated by blood, marriage, or adoption in other than single-family dwelling units or transient dwelling units. A multi-person dwelling includes, but is not limited to, facilities such as dormitories and boarding houses, but not such facilities as hotels, motels, and apartment houses. This includes multi-person dwellings ~~units~~ owned and maintained by public or private entities for purposes of housing employees of said entity. |
| Nursing ~~and~~ & Personal Care | Residential establishments with in-patient beds providing nursing and health-related care as a principal use, such as skilled nursing care facilities, extended care facilities, convalescent and rest homes, and board and care homes. |
| Residential Care | Establishments primarily engaged in the provision of residential social and personal care for children, the aged, and special categories of persons with some limits on ability for selfcare, but where medical care is not a major element. The use includes, but is not limited to, children's homes, halfway houses, orphanages, rehabilitation centers, and self-help group homes. |
| Single Family Dwelling (includes condominiums) | One residential unit located on a parcel. A single-family dwelling unit may be contained in a detached building such as a single-family house, or in a subdivided building containing two or more parcels such as a town house condominium. ~~Vacation rentals are included provided they meet the Local Government Neighborhood Compatibility Requirements as defined in the TRPA Code of Ordinances. A caretaker residence is included.~~ Employee housing providing accommodations for six or fewer employees within a single unit pursuant to Division 13, Part 1 of the California Health and Safety Code, commencing with Section 17000, shall be deemed a single-family structure. |
| **TOURIST ACCOMMODATION** | |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Bed & Breakfast Facilities | Residential-type structures that have been converted to or constructed as tourist accommodation facilities where bedrooms without individual cooking facilities are rented for overnight lodging, and where at least one meal daily is provided. The use does not include "Hotels and Motels," which are defined separately; nor rooming and boarding houses (see "Multi-Family Dwellings"). |
| Hotel, Motel, Other Transient Dwelling Units | Commercial transient lodging establishments, including hotels, motor-hotels, motels, tourist courts, or cabins, primarily engaged in providing overnight lodging for the general public whose permanent residence is elsewhere. This use does not include Bed and Breakfast Facilities or Vacation Rentals. |
| Time Sharing | A right to exclusively use, occupy, or possess a tourist accommodation unit, according to a fixed or floating time schedule on a periodic basis occurring annually over a period of time in excess of three years. |
| **RETAIL COMMERCIAL** | |
| Auto, Mobile Home, and Vehicle Dealers | Retail trade establishments selling new and/or used automobiles, boats, vans, campers, trucks, mobile homes, recreational and utility trailers, motorcycles, golf carts, snowmobile and jet skis (except bicycles and mopeds; see "General Merchandise"). Such businesses are considered a primary use when the establishment sells more than six vehicles per calendar year. The use also includes establishments selling new automobile parts, tires, and accessories (including tire recapping establishments), as well as establishments dealing in used automobiles exclusively. Includes automobile repair shops only when maintained by an establishment selling new vehicles on the same site. Does not include establishments dealing exclusively in used parts (see "Recycling and Scrap") or outside sales (see "Secondary Storage" or "Sales Lots"). |
| Building Material & Hardware | Retail trade establishments within buildings primarily engaged in selling lumber and other building materials, including paint, wallpaper, glass, hardware, nursery stock, and lawn and garden supplies. The use includes all such stores selling to the general public, even if contractor sales account for a larger proportion of total sales. Outside storage or display is included as part of the use. Establishments primarily wholesaling plumbing, heating and air conditioning equipment, and electrical supplies are classified in "Wholesale and Distribution." |
| Eating & Drinking Places | Restaurants, bars, and other establishments selling prepared foods and drinks for on-premise consumption, as well as facilities for dancing and other entertainment that are accessory to the principal use of the establishment as an eating and drinking place. The use also includes drive-in restaurants, lunch counters, and refreshment stands selling prepared goods and drinks for immediate consumption. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| General Retail ~~and~~ & Personal Services | An establishment for the retail sale of merchandise or the provision of personal services. A retail facility includes but is not limited to antique or art shops, clothing, drug, dry good, florist, furniture, gift, grocery, hobby, mailing services, office supply, package liquor, paint, pet, shoe, sporting, bike or moped, boats, golf carts, snowmobiles, jet skis, automobile parts, books, toy stores, and other miscellaneous retail shopping goods (auto, mobile home and vehicle sales are not included in this definition). A personal service facility includes facilities primarily engaged in providing non-medical services generally involving the care of persons, such as: beauty and barber shops; shoe repair shops; ~~saunas and hot tubs~~ health and athletic clubs and gymnasiums; day spas that offer a variety of services intended to meet personal needs of individuals such as skin treatment, manicures and pedicures and massage; laundromats (self-service laundries); dry cleaning pick-up stores and small-scale dry cleaners without pick-up and delivery services; clothing rental; dating and escort services; funeral parlors, cemetery real estate sales, and related facilities; offsite rental of sporting equipment; and wedding chapels. The use may also include the accessory retail sales of products related to the services provided. |
| Nursery | Commercial retail and wholesale establishment where plants are grown or stored for transplanting at other sites. Outside storage or display is included as part of the use. |
| Outdoor Retail Sales | Retail trade establishments operating outside of buildings on a daily or weekly basis, such as: roadside stands; flea markets; swap meets; seasonal sales involving Christmas trees, pumpkins, or other seasonal items; regular sales of art or handcrafted items in conjunction with community festivals or art shows; and retail sales of various products from individual motor vehicles locations outside the public right-of-way, not including bakery, ice cream, and similar vending vehicles that conduct all sales within the right-of-way and do not stop in any location except on customer demand. Outside storage or display is included as part of the use. |
| Service Stations | Retail trade establishments primarily engaged in the sale of gasoline, which may also provide lubrication, oil change and tune-up services, and the sale of automotive products incidental to gasoline sales. The use may also include as accessory uses towing, mechanical repair services, car washing and waxing, and trailer rental. The use does not include storage of wrecked or abandoned vehicles, paint spraying body and fender work, and retail sale of gasoline as an accessory use to food and beverage retail sales when limited to not more than two pumps. |
| **ENTERTAINMENT COMMERCIAL** | |
| Amusement, ~~&~~ Recreation, & Entertainment Facilities | Amusement and recreation uses are ~~E~~establishments providing ~~amusement or~~ entertainment for a fee or admission charge, such as: arcades and coin-operated amusements; billiard and pool halls; bowling alleys; card rooms; clubs and ballrooms that are principal uses rather than being subordinate to an eating or drinking place; dance halls~~; gymnasiums; health and athletic clubs~~; ice skating and roller skating facilities; indoor sauna, ~~spa,~~ or hot tub facilities; motion picture theaters; live performance theatres; reducing salons; and tennis, |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| | handball, racquetball, indoor archery and shooting ranges, and other indoor sports activities. |
| Outdoor Amusements | Commercial establishments for outdoor amusement and entertainment such as: amusement parks; theme and kiddie parks; go cart and miniature auto racetracks; and miniature golf courses. Outside storage or display is included as part of the use. |
| ~~Privately Owned Assembly and Entertainment~~ | ~~Commercially operated facilities for public assembly and group entertainment with a capacity of greater than 300 people, such as: auditoriums; exhibition and convention halls; theaters, meeting halls and facilities for "live" theatrical presentations or concerts by bands and orchestras; amphitheaters; meeting halls for rent; and similar public assembly uses.~~ |
| **SERVICE COMMERCIAL** | |
| Animal Services | Establishments primarily engaged in performing services for animals, such as veterinary services, animal hospitals, animal kennels. The use does not include publicly operated animal control and wildlife care (see "Local Public Health and Safety Facilities"). |
| Auto Repair ~~and~~ & Service | Service establishment engaged in repair, alteration, painting, washing, or waxing of automobiles as a principal use. The use also includes storage and maintenance yards for rental of cars, trucks, or trailers. Outside storage or display is included as part of the use. The use does not include: automobile parking (see "Transportation"); repair shops subordinate to and maintained by a vehicle dealership; service stations (which are separately defined); or automobile wrecking yards (see "Recycling and Scrap"). |
| Business Support Services | Service establishments within buildings that provide other businesses with services including maintenance, repair and service, testing, and rental. This includes establishments such as: outdoor advertising services, mail advertising services (reproduction and shipping); blueprinting, photocopying, and photofinishing; computer-related services (rental, repair, and maintenance); commercial art and design (production); film processing laboratories; and services to structures such as window cleaning, exterminators, janitorial services, and business equipment repair services. |
| Health Care Services | Service establishments primarily engaged in furnishing medical, mental health, surgical, and other personal health services such as: medical, dental, and psychiatric offices; medical and dental laboratories; outpatient care facilities; and allied health services. Associations or groups primarily engaged in providing medical or other health services to members are included. Nursing homes and similar long-term personal care facilities are classified in "Nursing and Personal Care," and mental health-related services, including various types of counseling practiced by licensed individuals other than medical doctors or psychiatrists or unlicensed individuals, are included under Professional Offices. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Laundries & Dry-Cleaning Plant | Service establishments primarily engaged in high-volume laundry and garment services, such as power laundries (family and commercial); garment pressing and dry cleaning; linen supply; diaper service; industrial laundries; and carpet and upholstery cleaners. The use does not include coin-operated laundries or dry-cleaning pick-up stores without dry cleaning equipment (see "General Retail and Personal Services"). |
| Professional Offices | A place where the following kinds of business are transacted or services rendered: engineering, architectural and surveying; real estate agencies; educational, scientific and research organizations; financial services; writers and artists; advertising agencies; photography and commercial art studios; publishing with offsite printing facilities; broadcasting studios; employment services; off premise concessions (OPC); reporting services; computer services; management, public relations, and consulting services; organizational offices; detective agencies; professional services; attorneys; and counseling services (other than licensed psychiatrists; see "Health Care Services"). Incidental offices are considered accessory uses to a primary use. |
| Repair Services | Service establishment where repair of consumer products is the principal business activity, such as: electrical repair shops; television, radio, and other appliance repair; watch, clock, and jewelry repair; boat repair; small engine repair; and reupholstery and furniture repair. An outdoor storage yard associated with these uses is considered under "Secondary Storage." The use does not include businesses serving the repair needs of heavy equipment (see "Industrial Services"). |
| Sales Lot | Outdoor sales area for permanent display of motor vehicles, recreational vehicles, mobile homes, construction equipment, farm machinery, or other heavy equipment; outdoor equipment rental yards (not including recreational equipment rental); and large-scale, permanent outdoor sales activities such as livestock auctions and sales. Outside storage or display is included as part of the use. |
| Schools – Business & Vocational | Business and vocational schools offering specialized trade and commercial courses. |
| Secondary Storage | The outdoor storage of various materials or the public display of merchandise on the same site as a principal building or use that supports the activities or conduct of the principle use and does not increase the intensity of the use. This does not apply to primary uses that include outside storage and display as part of the use. |
| **LIGHT INDUSTRIAL COMMERCIAL** | |
| Food & Kindred Products | Manufacturing establishments producing or processing foods and beverages for human consumption and certain related products for distribution within the region, such as meat and poultry processing, dairy products processing, beverages and liquors processing, and miscellaneous food preparation from raw products. Outside storage or display is included as part of the use. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Fuel & Ice Dealers | Retail trade establishments primarily engaged in the sale to consumers of ice, bottled water, fuel oil, butane, propane, and liquefied petroleum gas (LPG), bottled or in bulk, as a principal use. Outside storage or display is included as part of the use. |
| Industrial Services | Service establishments providing other businesses with services, including maintenance, repair, service, testing, publishing, and rental. This includes establishments such as: welding repair, armature rewinding, and heavy equipment repair, vehicle repair; research and development laboratories, including testing facilities; soils and materials testing laboratories; equipment rental businesses that are entirely within buildings (for equipment rental yards, see "Sales Lots"), including leasing tools, machinery, and other business items; and other business services of a "heavy service" nature. Outside storage or display is included as part of the use. |
| Recycling & Scrap | Establishments engaged in assembling, breaking up, sorting, temporary storage, and distribution of recyclable or reusable scrap and waste materials, including auto wreckers engaged in dismantling automobiles for scrap. Outside storage or display is included as part of the use. The use does not include terminal waste disposal sites, which are prohibited and temporary storage of toxic or radioactive waste materials. |
| Small Scale Manufacturing | Establishments primary engaging in retail sales and secondarily as a fine art or craftsman demonstration workshop of light industrial nature such as sculptor, potter, weaver, carver, jeweler, or other similar art that requires artistic skill. Outside storage or display would require approval of a Special use Permit. |
| Light Manufacturing | Establishments considered to be light manufacturing or cottage industry that produce jewelry, silverware, and plated ware; musical instruments; toys; sporting and athletic goods; pens, pencils, and other office and artists' materials; buttons, costume novelties, miscellaneous notions; brooms and brushes; caskets; and other miscellaneous manufacturing industries. The use also includes artisan and craftsman-type operations that are not home occupations and that are not secondary to on-site retail sales. The use also includes small-scale blacksmith and welding services and the manufacture of trusses. Outside storage or display is included as part of the use. |
| **WHOLESALE/STORAGE COMMERCIAL** | |
| Storage Yard | Service establishments primarily engaged in the business of storing operative cars, buses, or other motor vehicles, construction equipment, materials or supplies, firewood lots, or industrial supplies. Outside storage or display is included as part of the use. |
| Vehicle & Freight Terminals | Transportation establishments furnishing services incidental to transportation, such as: freight forwarding services; transportation arrangement services; packing, crating, inspection and weighing services; freight terminal facilities; joint terminal and service facilities; trucking facilities, including transfer and storage; and postal service bulk mailing distribution centers. Outside storage or display is included as part of the use. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Parking Lots | Service establishments primarily engaged in storing operative cars, buses, or other motor vehicles. The use includes both day use and long-term public and commercial garages, parking lots, and structures. |
| Warehousing | ~~Transportation establishments furnishing services incidental to transportation, such as: freight forwarding services; transportation arrangement services; packing, crating, inspection and weighing services; freight terminal facilities; joint terminal and service facilities; trucking facilities, including transfer and storage; and postal service bulk mailing distribution centers. Outside storage or display is included as part of the use.~~ Establishments primarily engaged in the storage of furniture, household goods, or other commercial goods, such as warehouses and storage or mini-storage facilities offered for rent or lease to the general public. The use does not include warehouse facilities where the primary purpose of storage is for goods for wholesaling distribution. Outside storage or display is included as part of the use. The use does not include terminal facilities for handling freight (see "Vehicle and Freight Terminals"). |
| Wholesale & Distribution | Establishments engaged in the storage of merchandise for sale to retailers; to industrial, commercial, institutional, farm, or professional business users; or to other wholesalers; or acting as agents or brokers in buying merchandise for or selling merchandise to such persons or companies. The use includes such establishments as: merchant wholesalers; agents, merchandise or commodity brokers, and commission merchants; and assemblers. Outside storage or display is included as part of the use. |
| **GENERAL PUBLIC SERVICE** | |
| Airfields, Landing Strips & Heliports | Transportation facilities that are used for the landing or take-off of aircraft, including helicopters, such as airports, heliports, helipads, and seaplane bases. The use also includes any appurtenant areas used for airport buildings and accessory facilities, including terminals, aircraft sales and rentals, and fueling facilities. Outside storage or display is included as part of the use. |
| Collection Stations | Establishments engaged in the temporary accumulation and storage of recyclable or discarded materials, including toxic and hazardous wastes, which are subsequently transported to recycling centers or solid waste disposal sites for further processing on a regular and consistent schedule. Outside storage or display is included as part of the use. The use does not include automobile wrecking yards or any recycling processing facilities, which are listed under Recycling and Scrap or regional solid waste transfer stations, which are listed under Recycling and Scrap or Regional Public Health and Safety Facilities. |
| Cultural Facilities | Permanent public or quasi-public facilities generally of a noncommercial nature, such as art exhibitions, planetariums, botanical gardens, libraries, museums, archives, and arboretums. |
| Daycare Centers/Preschool | Establishments used for the care of seven or more children residing elsewhere. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Government Offices | Buildings containing office for public agencies, including administrative offices, and meeting rooms that are incidental and accessory to another government use such as transit terminals, vehicle storage, campground, or storage yards. |
| Hospitals | A public health and safety facility ~~-~~primarily engaged in providing diagnostic services and extensive medical treatment, including surgical and other hospital services. Such establishments have an organized medical staff, inpatient beds, and equipment and facilities to provide complete health care. |
| Local Public Assembly ~~& Entertainment~~Facilities | Facilities ~~for public assembly and entertainment~~ for ~~the~~ local community assembly, ~~not to exceed a capacity of 300 people,~~ such as community centers, meeting halls, and multi-purpose centers. |
| Local Public Health ~~and~~ & Safety Facilities | Facilities operated by public or quasi-public entities for the local protection of the public, such as: fire stations and other fire prevention facilities; police and sheriff substations; satellite highway maintenance and snow removal facilities; water tanks, pumps, wells, and related facilities; monitoring facilities; sewage pumps and related facilities; and emergency services. Outside storage or display is included as part of the use. |
| Membership Organizations | Permanent meeting facilities for organizations operating on a membership basis for the promotion of the interests of the members, such as: business associations; professional membership organizations; labor unions and similar organizations; civic, social, and fraternal organizations; political organizations; religious assembly or institutional facilities operated for worship or promotion of religious activities, including churches and incidental religious education; and other membership organizations. The use does not include country clubs in conjunction with golf courses (see "Golf Courses"); ~~religious organizations ("see Religious assembly"); and~~ and lodging (see "Multi-person Dwelling"). The use does not include other establishments maintained by religious organizations, such as full-time educational institutions, hospitals, and other potentially related operations (such as a recreational camp); these shall be classified according to their respective activities. |
| Post Office | Establishments providing mail service and delivery, such as postal substations and neighborhood delivery centers. |
| ~~Public Owned Assembly & Entertainment~~ | ~~Facilities owned and operated by a public or nonprofit entity for public assembly and group entertainment with a capacity of greater than 300 people, such as: public auditoriums; exhibition and convention halls; civic theaters, meeting halls and facilities for live theatrical presentations or concerts by bands, choirs, and orchestras; meeting halls for rent; community centers; and similar public assembly uses.~~ |
| Public Utility Centers | Public and quasi-public facilities serving as junction points for transferring utility services from one transmission to another or to local distribution and service, such as: electrical substations and switching stations; major telephone switching centers; natural gas regulating and distribution facilities; public water system wells, treatment plants and storage; and community wastewater treatment |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| | plants and settling ponds. Outside storage or display is included as part of the use. The use does not include office or service centers (see "Professional Offices or Government Offices"). |
| Regional Public Health ~~and~~ & Safety Facilities | Regional facilities operated by public or quasi-public entities for protection of the public, such as: water and sewage facilities; transportation maintenance/storage facilities; police and sheriff substations and headquarters, including secondary county short-term incarceration facilities; and solid waste transfer stations that TRPA finds to be regionally serving. Secondary county short-term incarceration facility means a county jail (not a state or federal prison facility) that is not the primary jail for the county. |
| ~~Religious Assembly~~ | ~~Religious organization assembly or institutional facility operated for worship or promotion of religious activities, including churches and incidental religious education. Other establishments maintained by religious organizations, such as full-time educational institutions, hospitals, and other potentially related operations (such as a recreational camp) are not considered a religious assembly and are classified according to their respective activities.~~ |
| Schools - College | Junior colleges, colleges, universities, and professional schools granting associate arts degrees, certificates, undergraduate and graduate degrees, and requiring for admission at least a high school diploma or equivalent general academic training. |
| Schools – Kindergarten through Secondary | Kindergarten, elementary, and secondary schools serving grades up to 12, including denominational and sectarian. |
| Social Service Organizations | Public and quasi-public establishments providing social services and rehabilitation services, counseling centers, welfare offices, job counseling and training centers, or vocational rehabilitation agencies, serving persons with social or personal problems requiring special services and the handicapped and the disadvantaged. The use includes organizations soliciting funds to be used directly for these and related services. The use also includes establishments engaged in community improvement and neighborhood development. |
| Threshold Related Research Facilities | Public or non-profit research establishments primarily engaged in implementing social, political, and scientific research relating to the Lake Tahoe Environmental Thresholds or the Lake Tahoe ecosystem. The use includes laboratories, monitoring stations, scientific interpretive centers, research and training classrooms, and related support facilities. Overnight multi-person facilities, outside storage, and caretaker facilities may be considered as accessory to this use. The use does not include facilities unrelated to threshold-related research, such as: general college administrative offices and classrooms (see Schools-College); and government administrative offices (see Government Offices and Facilities); or non- threshold-related research (which may be conducted under the Professional Office use). |
| **LINEAR PUBLIC FACILITIES** | |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Pipelines & Power Transmission | Transportation facilities primarily engaged in the pipeline transportation of refined products of petroleum, such as: gasoline and fuel oils; natural gas; mixed, manufactured, or liquefied petroleum gas; or the pipeline transmission of other commodities. The use includes facilities for the transmission of electrical energy for sale, including transmission and distribution facilities. Outside storage or display is included as part of the use. The use does not include offices or service centers (see "Professional Offices"); equipment and material storage yards (see "Storage Yards"); distribution substations (see "Public Utility Centers"); and power plants (see "Power Generating Plants"). |
| Transit Stations & Terminals | Passenger stations for vehicular and mass transit systems; also, terminal facilities providing maintenance and service for the vehicles operated in the transit system. The use includes, but is not limited to, buses, taxis, railway, and ferries. Outside storage or display is included as part of the use. |
| Transmission & Receiving Facilities | Communication facilities for public or quasi-public, commercial, and private electronic, optic, radio, microwave, electromagnetic, and photo-electrical transmission and distribution, such as: repeater and receiving facilities, feeder lines, and earth stations for satellite communications for radio, television, telegraph, telephone, data network, and other microwave applications. The use includes local distribution facilities such as lines, poles, cabinets, and conduits. Outside storage or display is included as part of the use. The use does not include uses described under Broadcasting Studios. |
| Transportation Routes | Public rights-of-way that are improved to permit vehicular, pedestrian, and bicycle travel. |
| **RECREATION** | |
| Day Use Areas | Land or premises, other than Participant Sports Facilities, designated by the owner to be used by individuals or the general public, for a fee or otherwise, for outdoor recreation purposes on a daily basis such as regional and local parks, picnic sites, vista points, snow play areas, rafting facilities, and playgrounds. |
| Outdoor Recreation Concessions | Facilities that are dependent on the use of outdoor recreation areas, such as onsite food and beverage sales, onsite recreational equipment rentals, parasailing, rafting, and onsite recreation instruction. The use also includes outfitter, guide service establishments, or rental service whose base facilities are located on or near a recreation area, such as horse packing outfitters, snowmobiling outfitters, or bike rental facilities. This use includes offsite rental of sporting equipment whose base facilities is a commercial use. Outside storage or display is included as part of the use. |
| Participant Sport Facilities | Facilities for various outdoor sports and recreation including, but not limited to, tennis courts, swim and tennis clubs, ice skating rinks, and athletic fields (non-professional). Outside storage or display is included as part of the use. |
| Recreation Centers | Indoor recreation establishments operated by a public or quasi-public agency providing indoor sports and community services, such as swimming pools, ice skating rinks, multi-purpose courts, weight rooms, and meeting and crafts rooms. |

| Table 2<br>LIST OF PRIMARY USES AND USE DEFINTIONS | |
|---|---|
| **USE** | **DEFINITIONS** |
| Riding ~~and~~ & Hiking Trails | Planned paths for pedestrian, bike, and equestrian traffic, including trail heads. |
| Visitor Information Centers | Nonprofit establishments providing visitor information and orientation. |
| **RESOURCE MANAGEMENT** | |
| Forest ~~and~~ & Timber Resource Management | Activities associated with the protection, restoration, and management of timber such as reforestation, regeneration harvest, sanitation salvage cut, selection cut, special cut, thinning and timber stand improvement. |
| Tree Farms | An area where trees or other vegetation on the TRPA-approved species list are grown for commercial harvest. The use includes establishments where Christmas trees are cultivated or where other native trees and plants are grown for harvest at a later date. |
| Vegetation Resource Management | Activities associated with the protection, restoration, and management of vegetation including fire detection and suppression, fuels treatment and management, insect and disease suppression, prescribed fire and burn management. |
| Water Quality Improvements ~~and~~ & Watershed Management | Activities associated with the protection, restoration, and management of watersheds including erosion control, runoff control and stream environment zone restoration. |
| Wildlife ~~and~~ & Fisheries Resource Management | Activities associated with the protection, restoration, and management of wildlife and fisheries resources. |
| Range Management | Activities associated with range management including range pasture management, range improvement, and grazing. |
| **OPEN SPACE** | |
| Allowed in all areas of the Region | Land with no land coverage and maintained in a natural condition or landscaped condition consistent with best management practices, such as deed-restricted properties and designated open space area. |

## Community Noise Equivalent Level

The maximum community noise equivalent level (CNEL) for this Area Plan are as follows:

| | TABLE 3<br>COMMUNITY NOISE EQUIVALENT LEVEL (CNEL) | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| **DISTRICT** | **TC-C** | **TC-MUC** | **TSC-G** | CMX-S | **TC-NP** | **TC-HC** | **EB-CC** | **OS** | **US 50** | **SR 89** |
| CNEL | ~~65~~60 | ~~65~~60 | ~~65~~60 | 65 | 55 | | | 55 | 65[1] | 65[1] |
| [1]These standards shall override district CNEL levels for areas within 300 feet of US Hwy 50 or SR 89. | | | | | | | | | | |

## Development Standards

The development standards for the Tahoe Valley Area Plan are intended to provide physical development requirements to implement the Plan's vision, goals, and policies; implement the goals and policies of the adopted General Plan and the TRPA Regional Plan~~;~~, and enable the

Tahoe Valley Area Plan to be found as a conforming Area Plan by the TRPA Governing Board. The standards were developed based on a review of the TRPA Regional Plan ~~Update~~ policies, the TRPA Area Plans Framework, the City General Plan, the Draft Tahoe Valley Community Plan, and the ~~City of~~ South Lake Tahoe City Code and Design ~~Manual~~Guidelines.

Form-based coding techniques are used for development standards. The standards of each district lists density, ~~and~~ lot coverage limits, ~~lot dimensional requirements,~~ building location standards, height requirements, parking and access provisions, and minimum open space and landscaping and other site requirements. Furthermore, substitute design standards address building orientation and design, pedestrian access, and bicycle parking. ~~Buildings are required to be oriented toward and include a public entrance on a public street and the Tahoe Valley Greenbelt. Building design standards are intended to avoid bulky and "box-like" buildings and encourage appropriate architectural features.~~

Tables 4 through 9 prescribe the development standards for the Area Plan. Individual letters in parentheses refer to additional regulations that directly follow the table. The numbers in each illustration below refer to corresponding regulations in the "#" column in the associated table.

## ~~LOT AND~~ DENSITY AND COVERAGE

Below are the minimum and maximum densities for residential and tourist accommodation uses.

~~Maximum allowed densities are consistent with the limits set in the Regional Plan Update. The Regional Plan Update allows maximum densities of 25 units per acre for multi-family residential development and 40 units per acre for tourist accommodation units with the adoption of an Area Plan. Existing lot size and dimension requirements are proposed to be carried forward. Lot coverage standards reflect the allowances established in the Regional Plan Update.~~

| | TABLE 4<br>DEVELOPMENT STANDARDS | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | DISTRICT | TC-C | TC-MUC | TC-G | TC-NP | TC-HC | EB-CC | CMX-S | OS |
| | | of the TRPA Code of Ordinances and is adopted as part of this Area Plan.~~(G)~~ | | | | | | | |

A. ~~**Secondary Units.** Lots less than an acre in size in the Town Center Neighborhood Professional District may have an authorized secondary unit pursuant to the following:~~**Accessory Dwelling Units:** Parcels zoned for multi-family or single-family dwellings may contain accessory dwelling units pursuant to City Code 6.85.050.

1. In accordance with TRPA Code of Ordinances Section 31.4.7, accessory dwelling units shall not be considered in the calculation of density.

B. **Exceptions to Minimum Density**

1. Mixed use developments may be exempt from the minimum density standards when the following are met.

   a. ***Vertical Mixed-Use.*** The first floor shall be dedicated to non-residential uses.

   b. ***Horizontal Mixed-Use.*** At least 25 percent of the gross floor area shall be dedicated to non-residential uses.

2. Where there is an existing multifamily development that does not meet the minimum density, the minimum density standard shall not apply. Units may be added and are not required to bring the parcel in compliance with the minimum density.

C. **No Net Loss of Residential Units.** When a parcel containing a residential use is redeveloped to a lower density or to a nonresidential use, the units not rebuilt on site shall be redeveloped elsewhere in the plan area and shall be equivalent in size and number of bedrooms as those being replaced. A deed restriction shall be placed on any resulting single-family dwelling, including condominiums, prohibiting use as a Vacation Home rental as defined in City Code Section 3.50.370.

D. **Density for Deed Restricted Developments**

1. **In Town Centers.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 13.5.3.I.

2. **Outside of Town Centers.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 31.4.1.

E. **Condominium Conversions.** Multiple Family Dwellings converted to condominiums after the date of this area plan amendment shall not be used as vacation rentals.

~~1. The unit is not intended for sale and may be rented for residential uses only.~~

~~2. The lot contains an existing single-family dwelling.~~

~~3. The second unit is either attached to the existing dwelling and located within the living area of the existing dwelling or detached from the existing dwelling and located on the same lot as the existing dwelling.~~

~~4. The total area of floor space for a secondary unit shall not exceed 640 square feet.~~

~~5. One covered or uncovered parking is required for the secondary unit.~~

~~6. Height, building setbacks, minimum lot size, architectural review and other zoning requirements generally applicable to residential construction in the zone in which the property is located shall apply.~~

~~7. Secondary units shall have the colors, materials and textures and architecture similar to the main dwelling unit.~~

~~8. A secondary unit shall be considered a residential unit subject to TRPA's residential allocation limitations and transfer provisions.~~

~~9. A secondary unit shall be subject to the land coverage and Best Management Provisions of the TRPA Code.~~

~~B. **Reduced Minimum Lot Size and Dimensions.** Smaller lots may be approved as part of a condominium, or other airspace subdivision pursuant to City Code Section 6.55.190~~

~~C. **Mobile Home Parks.** Minimum lot size for mobile home parks is 10 acres pursuant to City Code Section 6.55.180.~~

~~D. **Method of Transferring Coverage.** Land coverage shall be transferred to eligible parcels and eligible uses, in accordance with Sections 30.4.2 and 30.4.3 of the TRPA Code.~~

~~E. **Commercial and Mixed-Use Facilities in the Commercial Mixed-Use Service District.** The maximum land coverage (base coverage plus transferred coverage) shall be as follows:~~

~~1. For parcels upon which there is no development legally existing as of July 1, 1987, maximum land coverage shall be 70 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive; and~~

~~2. For parcels upon which there legally exists development as of July 1, 1987, maximum land coverage shall be 50 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive; and~~

~~3. Land coverage shall be transferred to eligible parcels and eligible uses, in accordance with Section 30.4.3 of the TRPA Code.~~

**Multi-Residential Facilities (Five or More Units), Public Service Facilities, and Recreation Facilities.** The maximum land coverage (base coverage plus transferred coverage) allowed on a parcel for tourist accommodation facilities, multi-residential facilities of five units or more, public service facilities, and recreation facilities shall be limited to 50 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive. Subdivisions into parcels of four or fewer residential units are not eligible for the maximum land coverage permitted under this subparagraph unless a deed restriction requiring maintenance of the units as affordable or moderate income housing, as defined by TRPA, is approved by TRPA and recorded against the property.

F. Uses defined as a hospital that legally exists on the effective date of this area plan (El Dorado County APNs 023-081-03 and 023-081-09), coverage shall be transferred pursuant to following transfer provisions:

1. Coverage transferred up to 70 percent shall be transferred pursuant to section 30.4.3 of the TRPA Code.

2. Coverage greater than 70 percent shall be transferred at a ratio of 1:1 from sensitive lands and at a ratio of 2.5:1 from non-sensitive lands up the minimum amount needed.

Coverage transferred from non-sensitives lands shall be transferred from parcels that have not installed permanent BMPs.

3.

F. **Linear Public Facilities and Public Health and Safety Facilities.** The maximum land coverage for linear public facilities and public health and safety facilities is limited to the minimum amount needed to achieve their purpose, except as provided for non-motorized public trails in subsection 30.4.6.D.3 of the TRPA Code. Such transfers may be permitted, provided TRPA makes the following findings:

1. The project complies with required findings for additional public service facilities if required pursuant to Section 50.8;

2. There is no feasible alternative that would reduce land coverage;

3. The project, because of its unusual configuration or service requirement, requires special consideration;

4. The facility primarily serves the needs of persons other than those who are or will be residents of the lands in question, or the owners of the land in question;

5. Coverage shall be transferred pursuant to section 30.4.3 of the TRPA Code except for the following use:

a. Uses defined as a hospital that legally exists on the effective date of this area plan (El Dorado County APNs 023-081-03 and 023-081-09), coverage shall be transferred pursuant to following transfer provisions:

i. Coverage transferred up to 70 percent shall be transferred pursuant to section 30.4.3 of the TRPA Code.

ii. Coverage greater than 70 percent shall be transferred at a ratio of 1:1 from sensitive lands and at a ratio of 2.5:1 from non-sensitive lands up the minimum amount needed.

iii. Coverage transferred from non-sensitives lands shall be transferred from parcels that have not installed permanent BMPs.

G. **Alternative Comprehensive Land Coverage Management System:** Property owners within the Town Center Core District, in coordination with the City and TRPA, may develop alternative comprehensive coverage management systems as alternatives to the parcel-level coverage requirements outlined in subsections 30.4.1 and 30.4.2 of the TRPA Code of Ordinances, provided that the alternative system complies with the provisions of subsection 13.5.3.B.1: *Alternative Comprehensive Coverage Management Systems* of the TRPA Code of Ordinances and is adopted as part of this Area Plan.

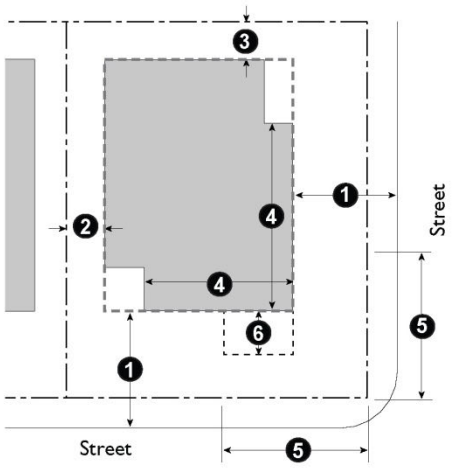
H. **Bonus Coverage Transfer Match** Facilities that transfer or remove coverage from designated sending areas may earn bonus coverage, subject to availability, from the City's coverage pool. Bonus coverage may be earned pursuant to the transfer ratios in the following table:

| Sending Area | Bonus Coverage Earned (per sq. ft.) |
|---|---|
| Stream Restoration Plan Area | 1 |
| Tahoe Valley Greenbelt and associated SEZs | 1 |
| Other SEZs in the Upper Truckee Watershed Hydrologically Related Area located within the City Limits | 0.5 |

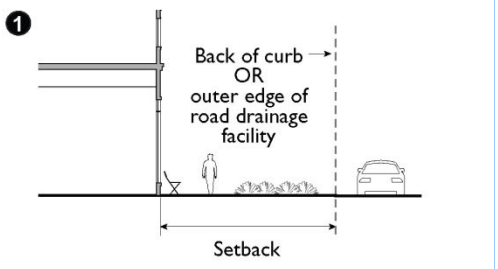
## BUILDING PLACEMENT AND ORIENTATION

All purely residential developments shall adhere to design standards of City Code Chapter 6.85, except when fronting Emerald Bay Road/Hwy 89 or Lake Tahoe Boulevard/Hwy 50.

Minimum building setbacks and street frontage improvements are established to create walkable districts and a vibrant town center character. Along Highway 50, Lake Tahoe Boulevard, and State Route 89, buildings are required to be setback 25 feet from the back of the curb. The setback area is to consist of a 10 foot sidewalk/use area in which a minimum of six feet clear must be reserved for pedestrian movement and the other area must be improved as part of a wider sidewalk or provide outdoor dining/seating or display area or landscaping.



Along Third Street and Tahoe Keys Blvd, buildings are required to be setback 20 feet. The setback is to consist of a five-foot sidewalk, while the remaining area would be improved as part of a wider sidewalk or provide outdoor dining/seating or display area or landscaping.



Along all other street frontages, with exceptions as noted in the standards, buildings are required to be setback 20 feet.

Standards require buildings to be built at ~~this~~ setback line~~s~~ for a certain percentage of the linear street frontage in order to establish a consistent and engaging street frontage and improve the pedestrian experience. ~~Additional regulations require pedestrian-oriented street frontage improvements such as the provision of street trees and lighting. Awnings, overhangs, and other elements to provide a covered walkway, public plaza, or outdoor eating area are allowed to project into the setback area.~~

With approval by the Director of Development Services, any of the following standard may be waived for public service uses where strict application would interfere with use of specialized equipment or operations or create an unsafe environment.

| Building Orientation and Entrances | (D) | | | | | | | |

A. **Street Frontage Improvements.** The improvement of the public right-of-way is necessary for the safety and convenience of residents and visitors, improving the quality of the community and unifying the appearance of the community with the establishment of a consistent set of improvement standards. ~~New development shall provide street frontage improvements in accordance with the following:~~

~~1.~~4. ***Street Trees.*** A minimum of two trees and four shrubs shall be planted for every 50 linear feet of street frontage.

5. ***Lighting.*** Pedestrian scaled lighting on sidewalks and pathways consistent with City pedestrian lighting standards. Lighting standards that include attachments from which banners identifying the area or announcing community events may be hung are encouraged.

6. ***Sidewalks.*** Unless noted in Table 5, sidewalk widths shall be consistent with City Code Section 6.10.180 and the City of South Lake Tahoe Public Improvement and Engineering Standards (PIES).

~~2.~~a. The requirement to construct a sidewalk may be waived by the Director of Public Works if it is found that construction of sidewalks could impede drainage or that the location has been identified for City initiated street improvements.

~~3.~~7. ***Alternatives through Director Review.*** Alternatives to the minimum setback requirement for the four parcels located at the South "Y" intersection may be approved if the Development Services Director finds that:

a. The increased setback is needed to maintain a sun angle plane to reduce icing on US 50, SR 89 and public sidewalks, or

b. The increased setback is needed to maintain visual open space, visual access, or preserve or increase views of the mountain ridgelines.

Request to deviate from this standard through the Alternative Director Review process will require a noticing of affected property owners and a public hearing before the Zoning Administrator.

8. ***Scenic Highway Corridors.*** See City Code Section 6.10.190.

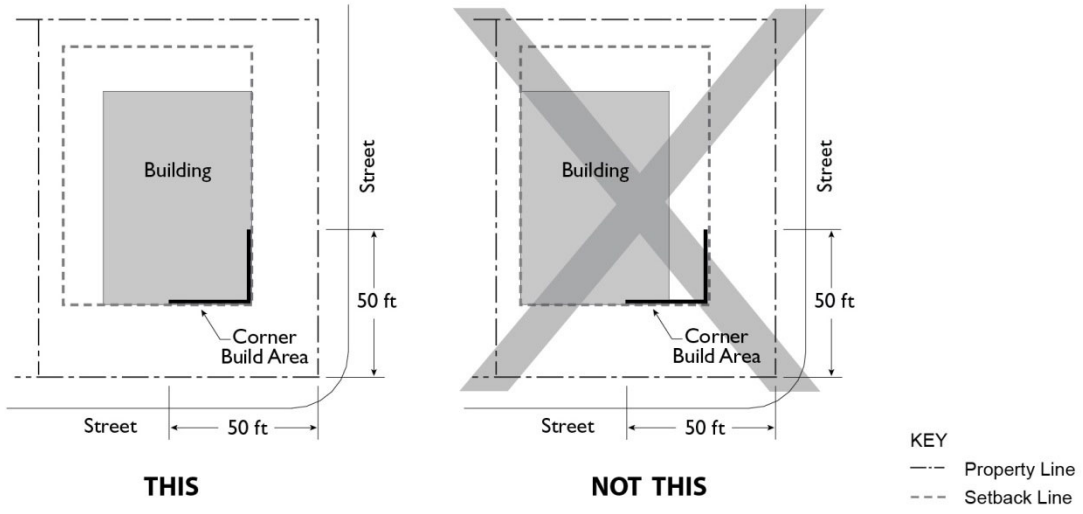
~~I.~~B. **Build-to Line.** Buildings shall be constructed at the required setback for the percent of linear street frontage identified in Table 5. This requirement may be modified or waived by the Director of Development Services upon finding that:

1. The area between the built-to line and the building are ~~Entry~~ entry courtyards, plazas, entries, ~~or~~and~~-~~ outdoor eating areas or other public spaces; ~~and~~or ~~are located between the build-to line and building, provided that the buildings are built to the edge of the courtyard, plaza, or dining area; or~~

2. The building incorporates an alternative entrance design that creates a welcoming pedestrian entry feature facing the street; ~~and~~or~~.~~

~~2.~~3. Topographic features, lot configuration, or other conditions make it impractical to require compliance with the build-to lines.

~~J.~~C. **Corner Build Area.** Buildings must be located at the point of intersection of the two setback lines at street corners and must occupy the street frontage at the setback line for at least 50 feet from the street corner property line. Public plazas may be at the



street corner provided buildings are built to the edge of the public plaza. Where a parcel is bounded by more than two streets, this requirement only applies to the primary street frontage and one side street frontage. This requirement may be modified or waived by the Director of Development Services upon finding that:

1. Where buildings placed on a corner would negatively impact a designated scenic view, visual open spaces, visual access or views of mountain ridgelines~~.~~; or

2. Where building placed on a corner would negatively affect the sun angle plane to reduce icing on US 50, SR 89, and public sidewalks~~,~~; or

3. Where buildings placed on a corner would encroach in a stream environment zone or require destruction or removal of significant natural features.

**FIGURE C-1**
**CORNER BUILD AREA**

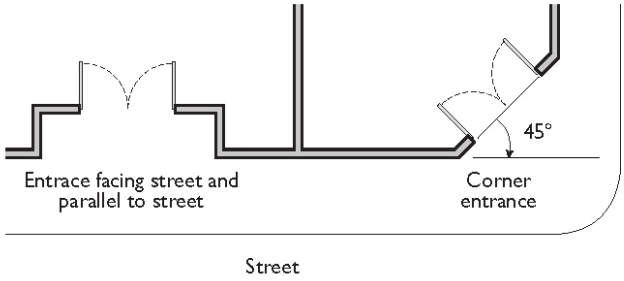
~~2.~~

~~K.~~D. **Building Orientation and Entrances**

1. Primary building entrances for all buildings shall be located facing a public street.

   ~~1.~~a. Where a commercial use is adjacent to a bike route, ~~or~~ lane, or path a business or business complex shall integrate access from the route to the primary entrance.

2. Building entrances shall be emphasized with special architectural and landscape treatments, shall provide covered overhead protection in the form of recessed arcades or protruding canopies, and shall ensure protection from unloading roof snow.



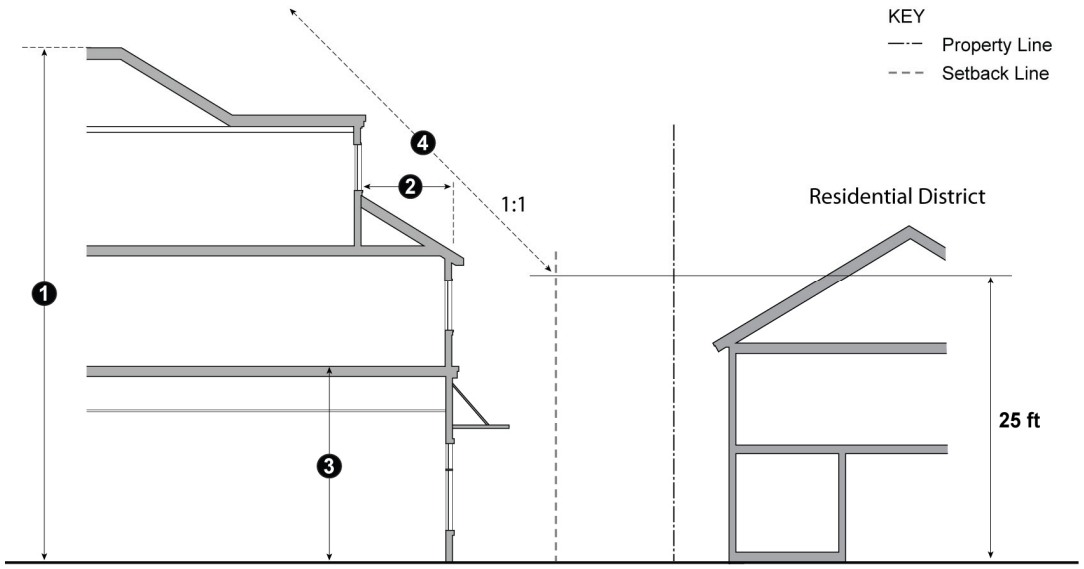
3. Entrances to commercial, tourist accommodation, and mixed-uses located at corners shall generally be located at a 45-degree angle to the corner and shall

have a distinct architectural treatment to animate the intersection and facilitate pedestrian flow around the corner. Different treatments may include angled or rounded corners, arches, and other architectural elements.

~~3.~~4. All building and dwelling units located in the interior of a site shall have entrances from the sidewalk that are designed as an extension of the public sidewalk and connect to a public sidewalk.

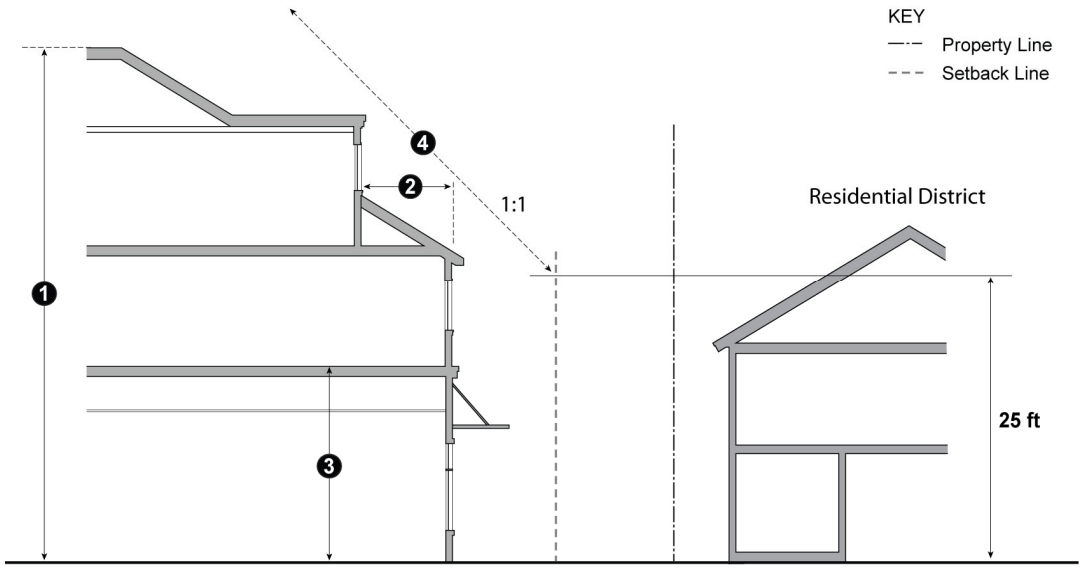
~~4.~~5. Entrances to residential units as part of mixed-use projects shall be physically separated from the entrance to the ~~permitted commercial~~ non-residential use~~s~~ and clearly marked with a physical feature incorporated into the building or an appropriately scaled element applied to the façade.

**FIGURE C-2**
**BUILDING ORIENTATION AND ENTRANCES**



**HEIGHT**

All purely residential developments shall adhere to design standards of City Code Chapter 6.85, except when fronting Emerald Bay Road/Hwy 89 or Lake Tahoe Boulevard/Hwy 50.



Maximum height limits proposed in the Regional Plan Update have been refined to reflect the nature of development in each sub district. Buildings are required to step back within a daylight plane along street frontages and adjacent to residential areas to address massing, protect viewsheds, and allow light and air, and limit winter shading in public areas and adjacent residential areas. Minimum heights are proposed for ground floors in order to establish a consistent building frontage along the street and to accommodate a wide range of uses. Roofs are required to be sloped to support alpine character in design. Limited areas of flat roofs are allowed as long as they are not visible from the public right-of-way.

## TABLE 7
## HEIGHT AND ROOF STANDARDS

| DISTRICT | TC-C | TC-MUC | TC-G | CMX-S | EB-CC | TC-NP | TC-HC | # |
|---|---|---|---|---|---|---|---|---|
| Building Height Maximum (feet) and Viewshed Protection | 45' (A, B) | 42', 36' for properties with Hwy 50 frontage east of Tahoe Keys Blvd. (A, B) | 36' (A, B) | See TRPA Code Section 37.4 (A, B) | See TRPA Code Section 37.4 (A, B) | 36' (A, B) | 42'(A, B) | ❶ |
| ~~Viewshed Protection and Building Height Maximum (stories)~~ | ~~3(AB)~~ | ~~3(AB)~~ | ~~2(AB)~~ | - | - | ~~2(AB)~~ | ~~3(AB)~~ | ~~❶~~ |
| Building Stepbacks | | | | | | | | |
| Upper Story along Street Frontage (ft.), applicable above the second story | 10' from second story building face | | | - | 10' from second story building face | - | | ❷ |
| Ground Floor Minimum Height, Non-Residential Uses (ft) | 15' | 15' | 15' | - | | | | ❸ |
| Roof Slope and Design | ~~5~~3:12 to 12:12 (~~B~~C) | | | | | | | |
| ~~Roof Height~~ | ~~The height of the sloped roof must be a minimum 40% of the height of the building. (B)~~ | | | - | | | | |
| Transition Height Adjacent to Residential District | Structures shall not interrupt a line of a 1:1 slope extending upward from 25 feet above existing grade of the setback line adjacent to the residential district. Buildings that are permitted additional height shall have additional buffering in addition to the required setback. Provisions may include, but are not limited to | | | | | | | ❹ |

**TABLE 7**
**HEIGHT AND ROOF STANDARDS**

| | | |
|---|---|---|
| | increased side yard or rear yard setbacks, building orientation, landscaping buffering with oversized trees. | |
| Chimneys and Other Rooftop Appurtenances | Chimneys, flues, vents, antennas, and similar appurtenances may ~~be erected to a height~~extend ten percent ~~of~~ beyond the otherwise permissible ~~height~~ maximum height of a building, or a height of six feet, whichever is less. | |

A. **Additional Height for Specific Projects**

1. **Public Service Facilities.** Building heights as specified above may be increased to the minimum necessary to accommodate facilities serving regional transportation and/or safety needs. Findings 1, 3, 5, and 9 of Section 37.7 of the TRPA Code of Ordinances shall be made.

2. **100% Deed Restricted Housing in Town Centers.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 13.5.3.I.

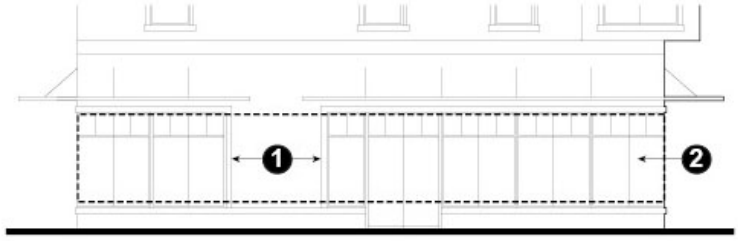
3. **100% Deed Restricted Housing outside of Town Centers.** Residential developments or mixed-use developments with a residential component where 100% of units are deed restricted for affordable, moderate, or achievable housing are subject to TRPA Code of Ordinances 37.5.5.

~~A.~~B. **Viewshed Protection.** To ensure compatibility with adjacent uses and viewshed protection, buildings must not project above the forest canopy, ridge lines, or otherwise detract from the viewshed and the review authority must make findings 1, 3, 5, and 9 of Section 37.7 of the TRPA Code of Ordinances in approving any project consisting of ~~three or more stories~~42 feet or greater ~~(see Appendix B).~~.

~~B.~~C. **Roof Slope and Design.** Buildings shall have a definitive "top" that steps, slopes, or otherwise breaks the rectangular form of the building. Dormer windows are encouraged within the sloping roof area. A portion of the roof area may be less than 3:12 ~~flat. Flat roof area is limited to 50 percent of the building footprint and shall not be~~ so long as it is not visible ~~within the predominant view of~~ from the public right-of-way or a TRPA scenic resource. Covered parking and parking structures are exceptions and may be permitted to have flat roofs, but must be concealed through architectural design or landscaping. Rooftop equipment shall be concealed from view and/or integrated within the building architecture.

~~C. **Transition Height Adjacent to Residential Districts.** To ensure compatibility with adjacent residential usesdistricts, buildings that are permitted additional height shall have additional buffering in addition to the required setback. Provisions may include, but are not limited to the following:~~

- ~~Reduced height~~
- ~~Increase side yard or rear yard setback~~
- ~~Building orientation~~
- ~~Landscaping buffering with oversized trees~~



~~D. **Chimneys and Other Rooftop Appurtenances.** Chimneys, flues, vents, antennas, and similar appurtenances may be erected to a height ten percent of the otherwise permissible height maximum height of a building, or a height of six feet, whichever is less.~~

**BUILDING FORM**

All purely residential developments shall adhere to design standards of City Code Chapter 6.85, except when fronting Emerald Bay Road/Hwy 89 or Lake Tahoe Boulevard/Hwy 50. ~~All purely residential developments in the TC-HC and TC-NP districts shall adhere to design standards of City Code Chapter 6.85. All other projects shall follow the commercial design guidelines as stated below.~~

Building form standards limit blank walls, require a minimum amount of building transparency (i.e. windows and doors providing views into work areas, display areas, sales areas, or similar active spaces) along street frontages, and require the modulation of building facades to create visual interest and engage pedestrians.

**TABLE 8**
**BUILDING FORM STANDARDS**

| DISTRICT | TC-C | TC-MUC | TC-G | CMX-S | EB-CC | TC-NP | TC-HC | # |
|---|---|---|---|---|---|---|---|---|
| Maximum Length of Blank Wall (feet) | 25(A) | 25(A) | 25(A) | - | 25(A) | - | | ❶ |
| Required Transparency (% of building wall area) (commercial only) | 75(A) | 75(A) | 60(A) | - | 60(A) | - | | ❷ |
| Building ~~Modulation~~Design and Articulation | ~~Any building over 50 feet wide shall be broken down to simulate a series of buildings no wider than 50 feet each~~ (B) | | | | (B) | | | |
| Dumpster and Trash Enclosures | In addition to requirements in SLCC Section 6.10.110.A.5, the materials and colors used for the enclosure shall be consistent with those of the primary structure. | | | | | | | |

A. **Building Transparency and Blank Wall Limits; Required Openings for Non-Residential Uses.** Exterior walls facing and within 20 feet of a front or street side property line or pedestrian walkway shall include windows, doors, or other openings for at least the percentage stated in Table 8 of the building wall area located between 2.5 and seven feet above the level of the sidewalk or adjacent ground grade. No wall may run in a continuous horizontal plane for more than 25 feet without an opening or transparency on the ground floor of a building.

1. ***Design of Required Openings.*** Openings fulfilling this requirement shall have transparent glazing and provide views into work areas, display areas, sales areas, lobbies, or similar active spaces, or into window displays that are at least three feet deep.

2. ***Exceptions for Parking Garages.*** Multi-level garages are not required to meet the building transparency requirement of this subsection. Instead, they are subject to the building setback standards in Table 5, Building Placement Standards and the following standard:

   a. *Parking Garage Rooftop Planting.* Uncovered parking on the top level of a parking structure shall have rooftop planters with a minimum

dimension of 24 inches along perimeter walls of the top floor that face public streets or other public areas.

3. ***Alternatives through Director Review.*** Alternatives to the building transparency requirement may be approved if the Development Services Director finds that:

a. The proposed use has unique operational characteristics with which providing the required openings is incompatible, such as in the case of a cinema or theater; and

b. Street-facing building walls will exhibit architectural relief and ~~detail, and~~detail and will be enhanced with landscaping in such a way as to create visual interest at the pedestrian level.

Request~~s~~ may be made to deviate from this standard through the Alternative Director Review process. ~~process will require a noticing of affected property owners and a public hearing before the Zoning Administrator~~.

B. **Building Design and Articulation.** Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance and materials and colors that shall reinforce the region's natural features and mountain identity.

1. ***Articulation for all Buildings.*** There shall be clear distinction between the base, middle, and top of the building as illustrated in Appendix B, South Lake Tahoe Design Guidelines (2016), Section 3.

a. The top of the building shall be accentuated by use of roof forms, gables, projections, bracket, and overhangs.

~~c.~~b. Building façades shall be articulated and include active facades, with building projections or recesses, doorways and windows, textured materials, differentiated piers and columns, awnings, and other details that provide architectural articulation and design interest while providing views into and out of the building.

~~d.~~c. Cornices, upper floor balconies, roof terraces, and other architectural elements should be used, as appropriate, to terminate rooflines and accentuate setbacks between stories.

d. All applied surface ornamentation or decorative detailing shall be consistent with the architectural style of the building.

e. Each side of the building that is visible from a public right-of-way shall be designed with a complementary level of detailing. Particular attention shall be given to the detailing within the pedestrian's range of touch and view, such as the use of special store-front detailing and façade ornamentation to reinforce the pedestrian character of the street.

2. ***Buildings Wider Than 50 Feet*** shall be broken down vertically and horizontally, so that any plane visible from the public right of way does not run continuously

for more than 50 feet without incorporating at least 2 of the following design elements through separate features:

a. A minimum 18-inch change in horizontal plane for at least 15 feet.

b. Use of pilasters or columns at a minimum of 12-foot increments and/or at each change in height or wall plane. Pilasters shall protrude a minimum of 4 inches. Columns shall be accentuated with stone or wood.

c. A minimum 3-foot or 10% change in height for at least 15 horizontal feet.

d. Ground floor courtyards or entryways that are recessed at least 8 feet into the building footprint.

e. Change in roof pitch or addition of dormers.

f. Decks or balconies.

3. ***Building Materials and Colors.*** Colors shall be used to help delineate windows and other architectural features to increase architectural interest while maintaining compatibility with the surrounding natural environment.

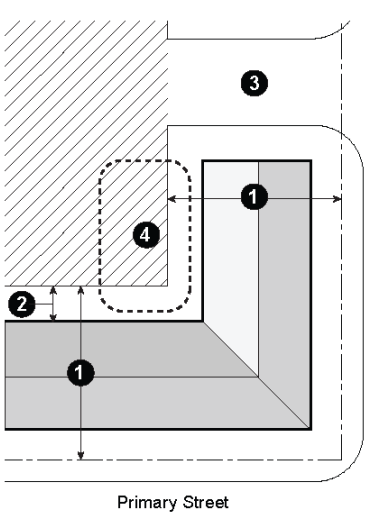
a. A variety of natural and natural-appearing materials (e.g., wood siding, rock wainscoting, rough sawn timber, log timbers, natural stained lumber) ~~should~~ shall provide contrast on building facades.

~~e.~~b. Stucco and plaster shall be limited to 40% of each building facade. ~~should be used sparingly and blended~~ Stucco areas shall blend with the natural materials to provide interest and variety. Rough textured materials are preferred.

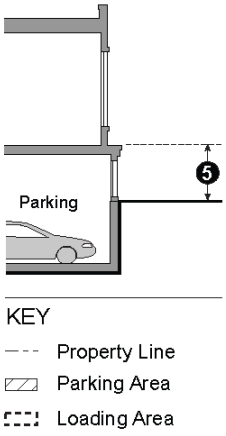
~~f.~~c. Natural earth tone colors (e.g., browns, greens, dark tans) should be chosen to blend in with the setting and to minimize reflectivity. Bright colors ~~should~~ may be used for accent only and ~~should be applied to a maximum of~~shall not exceed 10 percent of the total building façade. ~~For all~~ All structures' ~~visible from the Scenic Threshold Travel Routes (i.e., US 50, SR 89, and Pioneer Trail) or designated Class I or II bike paths,~~ colors shall be consistent with the Munsell Color palette set forth in the TRPA Approved Earth Tone Colors.

**PARKING, LOADING, LANDSCAPING, AND OPEN SPACE**

All purely residential developments shall adhere to design standards of City Code Chapter 6.85, except when fronting Emerald Bay Road/Hwy 89 or Lake Tahoe Boulevard/Hwy 50.



The proposed parking and loading location standards are intended to enhance walkability and reduce the visual dominance of surface parking lots in the area by setting them back from the street. ~~Parking in each district is required to be setback from the back of curb with access from a side street or alley wherever possible.~~ To support a "park once" atmosphere where visitors park



once and patronize multiple businesses, new parking facilities are to be designed to accommodate cross-access to/from adjacent properties to allow parking areas to become joint use facilities even if initially serving only one development.

~~Standards are established for the minimum amount of open space and landscaping. Residential open space is required in all residential and mixed-use development. A key component of the vision for the Tahoe Valley area is to provide areas for public gathering. To implement this vision, public open space is required with substantial developments (developments over 50,000 square feet of nonresidential floor area on sites greater than two acres in size) in the TSC-C district.~~

Outdoor parking areas shall be designed to decrease visual impacts associated with large expanses of pavement and vehicles. They can be divided into smaller parking areas and/or include landscaping within and around them. Consider using perimeter landscaping and landscaped islands as bio-swales with a lower grade than the paved surface to reduce irrigation requirements and meet stormwater retention requirements.

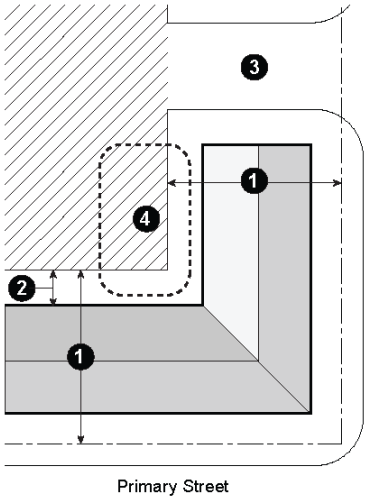


**TABLE 9**
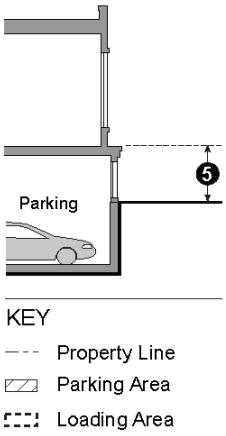
**PARKING, LOADING, LANDSCAPING, AND OPEN SPACE STANDARDS**



| DISTRICT | TC-C | TC-MUC | TC-G | EB-CC | CMX-S | TC-NP | TC-HC | # |
|---|---|---|---|---|---|---|---|---|
| Location of Parking: Minimum Setback from Streets (measured from back of curb or outer edge of road or drainage improvements if no curb) | 25(A), Parking shall be located underground, behind a building, or on the interior side or rear of the site. | | | | 20(A) | 20 (A) | | ❶ |
| Setback from Buildings and Public Plazas (ft.) | Above ground parking shall be setback from buildings and public plazas with a walkway and/or landscaping. | | | | - | - | | ❷ |
| Access Location | From adjacent parking areas, side street or alley wherever possible | | | | | | | ❸ |
| Shared Access | See additional regulations (B) | | | | | | | ❸ |
| Curb Cuts | Minimized and in areas least likely to affect pedestrian circulation. | | | | | | | |

**TABLE 9**
**PARKING, LOADING, LANDSCAPING, AND OPEN SPACE STANDARDS**

| DISTRICT | TC-C | TC-MUC | TC-G | EB-CC | CMX-S | TC-NP | TC-HC | # |
|---|---|---|---|---|---|---|---|---|
| Loading/Service Areas/Porte Cochere | Side or rear of lot; must be screened from public ROW | | | | | | | 4 |
| Underground Parking Visibility | Maximum height of underground parking area visible from the street (parking podium) is 3 feet from finished grade. | | | | | | | 5 |
| Automobile Parking, Driveway, and Loading Standards | ~~See South Lake Tahoe City Code, Chapter 5-10, Land Use Development Standards, Article VII. Parking, Driveway and Loading Spaces (C).~~ | | | | | | | |
| Minimum Residential Open Space (sq. ft. per unit) | 100~~(C)~~(D) | 100(D~~C~~) | 100(D~~C~~) | 150(D) | - | 150(D~~C~~) | | |
| Minimum Public Open Space, sites two acres or more in size | (D~~C~~) | - | - | - | - | - | | |
| Pedestrian Orientation and Access | (E) | | | | | | | |
| ~~Minimum Amount of~~ Landscaping (% of site) and Exterior Lighting | 10 (F) | 10(F) | 10(F) | 10(F) | 5(F) | 10(F) | | |
| Snow Storage | (E~~C~~G) | | | | | | | |
| Bicycle Parking | (H) | | | | | | | |

~~B.~~A. **Limitations on Location of Parking.** Parking may be located within the required setback, subject to the following requirements.

1. ***Completely* Underground *~~and Partially Submerged~~* Parking.** ~~Parking completely or partially underground~~Underground parking~~,~~ may be located ~~within~~ no closer than 5 feet to the front property line~~the required setback~~.

~~1.~~2. ***Adjacent to Residential Districts.*** When adjacent to a residential district the side and rear parking area setbacks shall be 50% of the required structure setback. City-approved parking barriers/bollards, vegetation, and a fence shall be installed in the setback.

~~2.~~3. ***Surface Parking.*** ~~Above ground s~~Surface parking may be located within the required setback with Development Services Director approval provided:

~~a. Buildings are built close to the public sidewalk to the maximum extent feasible;~~

a. A minimum, of 30% of the frontage is maintained for pedestrian only access through a courtyard, plaza, vegetated area, etc.; and

b. The parking area is screened along the public right-of-way with public art, hedge, trellis, and/or landscaping; and

c. ~~The site is small and/or constrained such that locating parking outside the required setback is not feasible.~~ Topographic features, lot configuration or other conditions make it impractical to require compliance with the setback requirements.

~~c.~~

~~C.~~B. **Shared Access.** To encourage shared parking and shared access points on public streets, new parking facilities shall be designed to accommodate cross-access to/from adjacent properties to allow parking areas to become joint use facilities even if initially serving only one development. When cross-access for vehicles is deemed impractical by the Development Services Director, the requirement for cross-access may be waived if bicycle and pedestrian connections are provided between adjacent development.

C. **Automobile Parking, Driveway, and Loading Standards.** See City Code Chapter 6.10, Article VII.

1. ***Commercial Parking Ratios ~~in Town Centers~~***. The number of parking spaces as stated in City Code 6.10.410 shall serve as the required number of spaces. Modifications may be made as follows. Area Plan or City Code parking requirements may be superseded where California State Law prohibits or limits parking requirements for qualifying projects.

a. When the project site is within a half mile of a transit stop, a 25% reduction in parking spaces may be applied.

b. ~~This number~~The required number of parking spaces may be further reduced should the project incorporate alternative transportation measures, including but not limited to those listed below, or provide a parking demand analysis that supports the number of proposed spaces. The extent of the reduction shall be at the discretion of the decision-making authority.

i. Installing or upgrading pedestrian, bicycle, transit, or other alternative infrastructure and/or facilities beyond improvements required by the area plan or City Code. Cost estimates and proposed infrastructure design and construction shall be approved by the Public Works Director.

ii. Creating shared parking areas between different parcels and land uses. Reduction of ingress/egress points and addition of connecting pedestrian infrastructure may be required. This shall be recoded through a deed restriction.

iii. Preparing a parking management plan and recording a deed restriction on the property ensuring on-going compliance with the approved plan to minimize parking impacts on adjacent property.

~~Parking management strategies may include but are not limited to:~~

~~Car-share programs~~

~~Additional bicycle, scooter, and motorcycle parking~~

~~Unbundling parking spaces from unit rentals~~

iv. Payment into a parking management district, established by the City or other entity responsible for parking facilities and management in the area.

c. The required number of parking spaces may be increased by 25% when the following findings are made.

i. Due to the nature or business patterns of the use, additional parking is required to meet vehicle demand.

ii. Applicant shall demonstrate the need for requested parking.

d. The required number of parking spaces may be increased beyond 25% through the issuance of a use permit per SLTCC 6.55.620, and when all the following are met.

i. A parking demand analysis justifies the proposed number of spaces.

ii. It is demonstrated that safety for pedestrians and other vehicles will be enhanced by the additional parking.

iii. The environmental impact of the use will be lessened by the increase in parking spaces.

iv. Any additional information as deemed necessary.

2. ***Multi-Family Parking Ratios.*** One parking space shall be permitted per residential unit. The number of required parking spaces may be reduced up to 20 percent if a deed restriction is placed on the property making the property owner responsible for parking management.

a. Parking for 100% deed-restricted affordable, moderate, or achievable housing shall adhere to TRPA Code of Ordinances Section 34.4.1.

D. **Open Space.** Site design shall consider pedestrian safety during snow conditions. Sidewalks, plazas, and other pedestrian areas should be designed for maximum solar exposure, with snow melt systems, or for efficient snow removal.

1. **Residential Open Space.** To promote community building, ~~R~~residential open space ~~may~~ shall be ~~common or private open space~~accessible to all residents and compliant with the Americans with Disabilities Act. ~~Private areas typically consist of balconies, decks, patios, fenced yards, and other similar areas outside the residence. Common~~ These areas typically consist of ~~landscaped areas,~~ walks, patios, swimming pools, barbeque areas, playgrounds, turf, or other such improvements as are appropriate to enhance the outdoor environment of the development. ~~Landscaped courtyard entries that are oriented towards a public street are considered common areas. All areas not improved with buildings, parking, vehicular accessways, trash enclosures, and similar items shall be developed as common areas.~~

i. ***Minimum Dimensions***. ~~Common~~ Open ~~S~~space shall have a ~~.~~ ~~M~~minimum horizontal dimension of 20 feet.

~~a.~~

~~i. *Private Open Space.* Private open space located on the ground level (e.g., yards, decks, patios) shall have no horizontal dimension less than 10 feet. Private open space located above ground level (e.g., balconies) shall have no horizontal dimension less than six feet.~~

~~ii.~~ ~~i. *Common Open Space.* Minimum horizontal dimension of 20 feet.~~

b. ***Usability.*** A surface shall be provided that allows convenient use for outdoor living and/or recreation. Such surface may be any practical combination of lawn, garden, flagstone, wood planking, concrete, or other serviceable, dust free surfacing. The maximum slope shall not exceed 10 percent. Seating areas and plazas should be located in areas with good solar exposure.

c. ***Accessibility***. The space shall be accessible to all the living units on the lot and ADA compliant.

~~i. *Private Open Space.* The space shall be accessible to only one living unit by a doorway to a habitable room or hallway.~~

i. ~~*Common Open Space.* The space shall be accessible to all the living units on the lot and ADA compliant.~~

~~ii.~~d. ***Limitations to Open Space*.** Open space may be limited to 10% of the parcel's maximum allowable coverage should the Director of Development Services deem that construction of open space to the extent required in Table 9 would result in a reduction of dwelling units.

2. **Public Open Space.** Developments with 50,000 square feet or more of nonresidential floor area on sites two acres or more in size shall provide public open space according to the following standards:

a. ***Minimum Area.*** Forty square feet for every 1,000 square feet of nonresidential floor area for the first 100,000 square feet of floor area, plus 20 square feet for every 1,000 square feet of nonresidential floor area over 100,000 square feet.

b. ***Minimum Dimensions*****.** Minimum horizontal dimension of 40 feet.

c. ***Usability.*** A surface shall be provided that allows convenient use for outdoor living, recreation, and public gathering. Such surface may be any practical combination of high-quality plant and hardscape materials such as bricks, stone, concrete, permeable paving, or tile. Surfaces shall be sloped for positive drainage and constructed to withstand snow removal and de-icing maintenance. The maximum slope shall not exceed 10 percent. Seating areas and plazas should be located in areas with good solar exposure.

d. ***Accessibility.*** On-site public space shall be visible from a public street and from on-site areas normally frequented by nearby retail uses.

e. ***Amenities.*** On-site public space shall include benches or other seating. Amenities shall be included that enhance the comfort, aesthetics, or usability of the space, including but not limited to trees and other landscaping, shade structures, drinking fountains, water features, public art, trash receptacles, information kiosks, or performance areas.

~~e.~~

E. **Pedestrian Orientation and Access.** On-site pedestrian circulation and access must be provided according to the following standards.

1. ***Internal Connections***. A system of pedestrian walkways shall connect all buildings on a site to each other, to on-site automobile and bicycle parking areas, and to any on-site open space areas or pedestrian amenities. Trash and recycling receptacles shall be provided and conveniently located in areas with heavy pedestrian use.

2. ***To Circulation Network***. Regular connections between on-site walkways and the public sidewalk shall be provided. An on-site walkway shall connect the primary building entry or entries to a public sidewalk on each street frontage.

3. ***To Neighbors***. Direct and convenient access shall be provided from commercial and mixed-use projects to adjoining residential and commercial areas to the maximum extent feasible while still providing for safety and security.

4. ***To Transit***. Safe and convenient pedestrian connections shall be provided from transit stops to building entrances.

5. ~~***Interior***~~ ***On-Site Pedestrian Walkway Design***.

a. Walkways shall have a minimum clear unobstructed width of six feet, shall be hard-surfaced, and paved with concrete, stone, tile, brick, pervious paving, or comparable material.

b. Where a required walkway crosses driveways, parking areas, or loading areas, it must be clearly identifiable through the use of a raised crosswalk, a different paving material, or similar method.

c. Where a required walkway is parallel and adjacent to an auto travel lane, it must be raised or separated from the auto travel lane by a raised curb at least four inches high, bollards, or other physical barriers.

~~c.~~F. **Landscaping and Lighting.** Landscape Design shall be consistent with City Code Section 6.10.150 and WELO as contained in City Code Chapter 6.80. Landscaping can be used to successfully integrate the built environment into the natural environment. It can also provide pleasant outdoor spaces for people, mitigate noise and air quality impacts, and help screen undesirable elements. Regional climatic and physiographic conditions generally impact landscape and plant materials, and must be taken into account early in the design process. It is recommended that landscape design and planning take advantage of the different visual environments in formulating a design theme or concept as well as to conserve water~~.~~ Exterior lighting shall be consistent with City Code Section 6.10.160.

~~F.~~G. **Snow Storage.** See SLCC Section 6.10.140.

~~G.~~ ~~.~~

~~improvements or City Code~~

~~Preparing a parking management plan, approved by the Development Services Director and recording a deed restriction on the property ensuring on-going compliance with the approved plan to minimize parking impacts on adjacent property. Parking management strategies may include but are not limited to:~~

~~Car-share programs~~

~~Additional bicycle, scooter and motorcycle parking~~

~~Shared parking between two or more land uses~~

~~Unbundling parking spaces from unit rentals~~

H. ~~Payment into a parking management district, established by the City or other entity responsible for parking facilities and management in the area.~~**Bicycle Parking.** Bicycle parking spaces for uses not listed and for multi-business complexes shall be required at staff discretion. Modifications may be granted at decision-making authority. In no case may fewer than one short term and one long term space be provided.

| Land Use | Examples | Short Term | Long Term |
|---|---|---|---|

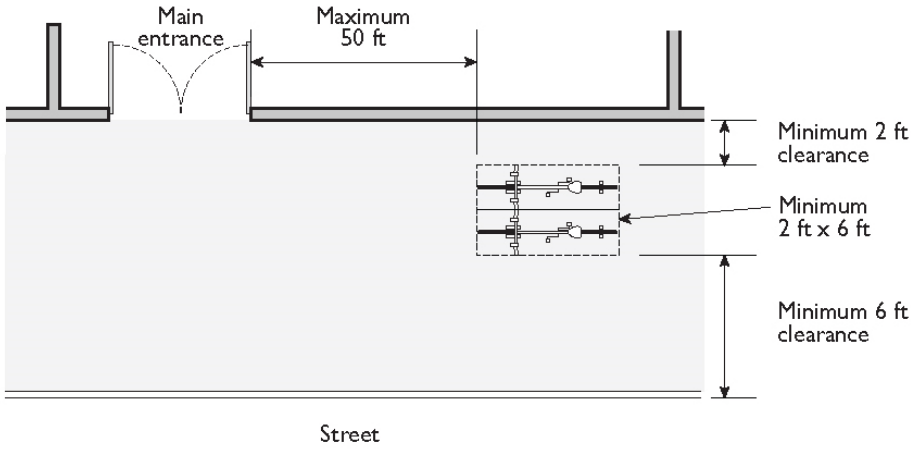
| | | | |
|---|---|---|---|
| High turnover, high-capacity commercial | Eating and drinking uses, coffee shop, | Minimum 5; 1/200 sf | 1 per 6 employees |
| Low turnover commercial | Fine dining, personal service, service station | 1/600 sf | 1 per 6 employees |
| High Density Residential | Multi-family, multi-person | 1 per 4 units | 1 per unit |
| Tourist Accommodation | All tourist accommodation uses | 1 per 5 units | 1 per 10 units |
| Professional Uses | Office space, medical offices, government offices | 1 per 2000 sf | 1 per 6 employees |
| Assembly Uses | Religious assembly, schools, membership organizations, most amusement and recreation use, library, athletic facilities | 20% of maximum occupancy | 3% of maximum occupancy |
| General commercial retail | Grocery, general retail, nursery, | 1 per 2500 sf | 1 per 6 employees |
| Industrial | Warehousing, manufacturing, hospital, post office | 1 per 6000 sf | 3% of maximum occupancy |
| Parking lots, garages, parking structures | | - | 1 per 15 vehicle spaces or 3% of the total area |
| Bicycle parking spaces for uses not listed and multi-business complexes shall be required at staff discretion. | | | |

~~1. ***Short-Term Bicycle Parking.*** Short-term bicycle parking shall be provided in order to serve shoppers, customers, messengers, guests and other visitors to a site who generally stay for a short time.~~

~~a. *Parking Spaces Required.* The number of short-term bicycle parking spaces shall be at least 10 percent of the number of required automobile parking spaces, with a minimum of two spaces per establishment, for commercial, mixed-use, and multi-family structures.~~with four or more units residential

1. Short Term Bicycle Parking Standards.

a. *Location.* Short-term bicycle parking must be located within 50 feet of a main entrance to the building it serves. Bicycle parking shall be visible ~~from the street or~~ from the main building entrance, from outdoor seating areas, or a sign must be posted at the main building entrance indicating the location of the parking area. Bicycle parking shall be located outside of the public right of way. ~~except with an encroachment permit in the~~



~~TSC-C and TSC-MUC districts, provided an unobstructed sidewalk clearance of six feet is maintained for pedestrians at all times.~~

~~b.~~i. *Exception.* Notwithstanding the above standard, when a commercial use is adjacent to a bike route or bike path, short-term bicycle parking may be provided near the route or secondary entrance.

~~c.~~b. *Anchoring and Security.* For each short-term bicycle parking space required, a stationary, securely anchored object shall be provided to which a bicycle frame and one wheel can be secured with a high-security U-shaped shackle lock if both wheels are left on the bicycle. One such object may serve multiple bicycle parking spaces. Preferred rack styles area inverted U shapes, post and ring, and wheel well-secured.

~~d.~~c. *Size and Accessibility.* Each short-term bicycle parking space shall be a minimum of two feet in width and six feet in length and shall be accessible without moving another bicycle. Two feet of clearance shall be provided between bicycle parking spaces and adjacent walls, poles, landscaping, street furniture, drive aisles, and pedestrian ways and at least five feet from vehicle parking spaces.

**FIGURE C-3**
**SHORT-TERM BICYCLE PARKING**

~~2.~~ ~~***Long-Term Bicycle Parking Standards.***~~ ~~Long-term bicycle parking shall be provided in order to serve employees, residents, commuters, and others who generally stay at a site for four hours or longer.~~

~~a.~~ ~~*Parking Spaces Required.*~~

~~i.~~ ~~Residential Uses. A minimum of one long-term bicycle parking space shall be provided for every five units for multi-unit residential and group residential projects.~~

~~ii.~~2. ***Long-Term Bicycle Parking Standards.*** ~~Parking Lots and Parking Structures. Long-term bicycle parking shall be provided At a minimum ratio of one space per 50 vehicle spaces.~~

~~b.~~a. *Location.* Long-term bicycle parking must be located on the same lot as the use it serves. In parking garages, long-term bicycle parking must be located near an entrance to the facility on the ground floor.

~~c.~~b. *Covered Spaces.* ~~At least 50 percent of required long~~Long-term bicycle parking must be covered. Covered parking can be provided inside buildings, under roof overhangs or awnings, in bicycle lockers, or within or under other structures.

~~d.~~c. *Security.* All long-term bicycle parking must be located in a secure area such as the following:

i. An enclosed bicycle locker;

ii. A fenced, covered, locked or guarded bicycle storage area;

iii. A rack or stand inside a building that is within view of an attendant or security guard or visible from employee work areas; or

iv. Other secure area approved by the Development Services Director.

~~e.~~d. *Size and Accessibility.* Each bicycle parking space shall be a minimum of two feet in width and six feet in length and shall be accessible without moving another bicycle. Two feet of clearance shall be provided between bicycle parking spaces and adjacent walls, poles, landscaping, street furniture, drive aisles, and pedestrian ways and at least five feet from vehicle parking spaces.

**SIGNAGE**

A. See SLCC Chapter 6.40.

1. Accessory uses may have signage independent from the primary use, but are subject to the maximum sign area and standards established by the City Code.

**OUTDOOR DINING AND SEATING**

Outdoor dining and seating are desirable and consistent with TVAP policies to activate streets.

A. **Location.** Outdoor seating and dining areas shall not encroach in pedestrian pathways, vehicle circulation areas, or the public right of way.

B. **Commercial Floor Area Requirement.** The first 20 seats or 300 square feet of outdoor dining, whichever is less, shall be exempt from obtaining CFA. CFA shall be required for outdoor dining areas beyond 20 seats or 300 square feet.

C. **Site Design.** New and modifications to outdoor seating and dining areas may be subject to Design Review.

1. Seating areas shall be separated from vehicle circulation and parking areas by parking barriers/bollards and vegetation.
2. No additional signage shall be associated with outdoor dining/seating areas.
3. In no case shall outdoor dining areas be used for storage. Furniture may remain when not in use but shall be maintained in a clean and orderly state.

## ~~Substitute Design Standards~~

~~Substitute Design standards address site design and amenities, building orientation and design, pedestrian access, bicycle parking, landscaping, lighting, signage, parking, driveway and loading spaces.~~

~~Buildings are required to be oriented toward and include a public entrance on a public street. Building design standards are intended to avoid bulky and "box-like" buildings and encourage appropriate architectural features.~~

~~On-site access and circulation standards require a system of pedestrian walkways that connect all buildings on a site to each other, to on-site parking areas, and open space or pedestrian amenities. Regular connections are to be provided to the public sidewalk as well as to adjoining commercial and residential areas. Walkway standards establish requirements for minimum width, paving, grade separations, bollards, landscaping, lighting, or other means to clearly delineate pedestrian areas for both day and night use.~~

~~Standards are for the amount, design, and location of bicycle parking is incorporated. The standards have different requirements for long- and short-term bicycle parking that reflect the varying needs of visitors, locals, and employees.~~
~~Landscape standards reinforce the resort destination experience in the Area Plan by guiding the desired design of planting and hardscape materials while providing for opportunities to accommodate stormwater runoff.~~

~~Lighting standards for streets and exterior spaces are necessary to provide safety and security as well as provide, in limited areas, the night lighting that will allow for a festive atmosphere enhancing the qualities of an active civic place.~~

~~All projects within the Tahoe Valley Area Plan shall meet the standards listed below and the standards in the Citywide Design Standards and the Parking, Driveway and Loading Space Standards in Chapter 5 of the City Code and the Sign Standards in Chapter 25 of the City Code. Should a conflict occur between the standards of this Area Plan and the standards of the City Code, the standards of the Area Plan shall apply. All regulations in the TRPA Code of Ordinances shall remain in effect unless superseded by the provisions of this Area Plan.~~

~~A.~~ **~~Site Design and Amenities.~~**

~~1. Site design shall consider adjoining properties to avoid creating nuisances such as noise, light intrusion, invasion of privacy, and traffic, particularly when development is adjacent to sensitive uses such as residential development.~~

~~2.~~1. ~~Outdoor parking areas shall be designed to decrease visual impacts associated with large expanses of pavement and vehicles. They can be divided into smaller parking areas and/or include landscaping within and around them. Consider using perimeter landscaping and landscaped islands as bio-swales with a lower grade than the paved surface to reduce irrigation requirements and meet stormwater retention requirements.~~

~~3.~~2. ~~Site design shall consider pedestrian safety during snow conditions. Sidewalks, plazas and other pedestrian areas should be designed for maximum solar exposure, with snow melt systems, or for efficient snow removal.~~

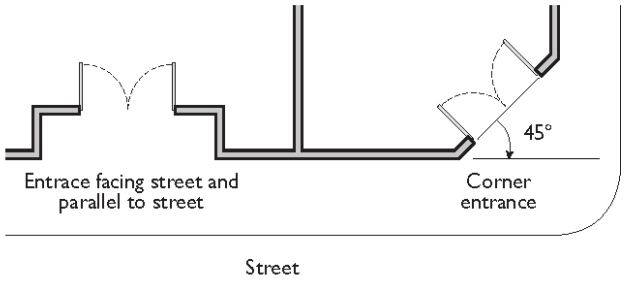
~~4.~~3. ~~Trash and recycling receptacles shall be provided and conveniently located in areas with heavy pedestrian use.~~

~~5. Ski and snowboard racks shall be provided in areas where there will be a need to temporarily store them. Racks should be located at areas adjacent to ski related facilities, public areas, transit stops, and destination locations.~~

~~6. For developments with multiple commercial or service tenants, include directional/directory maps on-site to orient and direct pedestrians.~~

~~7. Buildings should be sited to maximize views from public streets.~~

~~B.~~I. **~~Building Orientation and Entrances.~~**



1. ~~Primary building entrances for all buildings shall be located facing a public street.~~

2. ~~Building entrances shall be emphasized with special architectural and landscape treatments, shall provide covered overhead protection in the form of recessed arcades or protruding canopies, and shall ensure protection from unloading roof snow.~~

3. ~~Entrances~~ ~~to commercial, tourist accommodation, and mixed-use~~ ~~located at corners shall generally be located at a 45 degree angle to the corner and shall have a distinct architectural treatment to animate the intersection and facilitate pedestrian~~ ~~flow around the corner. Different treatments may include angled or rounded corners, arches, and other architectural elements. All building and dwelling units located in the interior of a site shall have entrances from the sidewalk that are designed as an extension of the public sidewalk and connect to a public sidewalk.~~

4. ~~Entrances to residential units shall be physically separated from the entrance to the permitted commercial uses and clearly marked with a physical feature incorporated into the building or an appropriately scaled element applied to the façade.~~

**FIGURE C-2: BUILDING ORIENTATION AND ENTRANCES**

~~C.~~J. **Building Design and Articulation.** ~~Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance and materials and colors that reinforce the Regional's natural and mountain identity.~~

~~1.~~ ~~***Exterior Building Materials and Colors.***~~

~~a. A unified palette of quality materials shall be used on all sides of buildings.~~

~~b.~~a. ~~Colors shall be used to help delineate windows and other architectural features to increase architectural interest.~~

~~c.~~b. ~~A variety of natural and natural-appearing materials (e.g., wood siding, rock wainscoting, rough sawn timber, log timbers, natural stained lumber) should provide contrast on building facades. Stucco should be used sparingly and blended with the natural materials to provide interest and variety. Rough textured materials are preferred.~~

~~d.~~c. ~~Natural earth tone colors (e.g, browns, greens, dark tans) should be chosen to blend in with the setting and to minimize reflectivity. Bright colors should be used for accent only and should be applied to a maximum of 10 percent of the building façade. For all structures visible from the Scenic Threshold Travel Routes (i.e., US 50, SR 89, and Pioneer Trail) or designated Class I or II bike paths, colors shall be consistent with the Munsell Color palette set forth in the TRPA Approved Earth Tone Colors.~~

~~e. Roofs, including mechanical equipment and skylights, shall be constructed of non-glare finishes and earth tone colors that minimize reflectivity. All mechanical equipment shall be screened and not visually evident.~~

2. ***Building Details.*** ~~Buildings shall provide adequate architectural articulation and detail to avoid a bulky and "box-like" appearance.~~

~~a. Building façades shall be articulated and include active facades, with building projections or recesses, doorways and windows, textured materials, differentiated piers and columns, awnings, and other details that provide architectural articulation and design interest while providing views into and out of the building .~~

b. Cornices, upper floor balconies, roof terraces, and other architectural elements should be used, as appropriate, to terminate rooflines and accentuate setbacks between stories.

c. All applied surface ornamentation or decorative detailing shall be consistent with the architectural style of the building.

d. Each side of the building that is visible from a public right-of-way shall be designed with a complementary level of detailing. Particular attention shall be given to the detailing within the pedestrian's range of touch and view, such as the use of special store-front detailing and façade ornamentation to reinforce the pedestrian character of the street.

3. ***Green Building***. New buildings and retrofits to existing buildings are long term investments and should feature quality design/materials, flexible design to deal with changing demands and be built green. The City encourages residential, commercial and industrial properties to consider incorporating green building measures. Property owners who participate in the City Green Building Incentive Program (See Appendix D) are eligible for the following incentives:

a. Projects will receive priority plan check by City Departments.

b. Residential projects will receive priority on the residential allocation waiting list.

c. Commercial projects area eligible for CFA allocations form the City's CFA pool.

d.a. Projects will receive recognition by the City Council.

D.K. **Pedestrian Orientation and Access.** On site pedestrian circulation and access must be provided according to the following standards.

1. ***Internal Connections.*** A system of pedestrian walkways shall connect all buildings on a site to each other, to on-site automobile and bicycle parking areas, and to any on-site open space areas or pedestrian amenities.

2. ***To Circulation Network.*** Regular connections between on site walkways and the public sidewalk shall be provided. An on site walkway shall connect the primary building entry or entries to a public sidewalk on each street frontage.

3. ***To Neighbors.*** Direct and convenient access shall be provided from commercial and mixed-use projects to adjoining residential and commercial areas to the maximum extent feasible while still providing for safety and security.

4. ***To Transit.*** Safe and convenient pedestrian connections shall be provided from transit stops to building entrances.

5. ***Interior Pedestrian Walkway Design***.

a. Walkways shall have a minimum clear unobstructed width of six feet, shall be hard-surfaced, and paved with concrete, stone, tile, brick, pervious paving, or comparable material.

b. Where a required walkway crosses driveways, parking areas, or loading areas, it must be clearly identifiable through the use of a raised crosswalk, a different paving material, or similar method.

c. Where a required walkway is parallel and adjacent to an auto travel lane, it must be raised or separated from the auto travel lane by a raised curb at least four inches high, bollards, or other physical barrier.

E.L. Bicycle Parking.

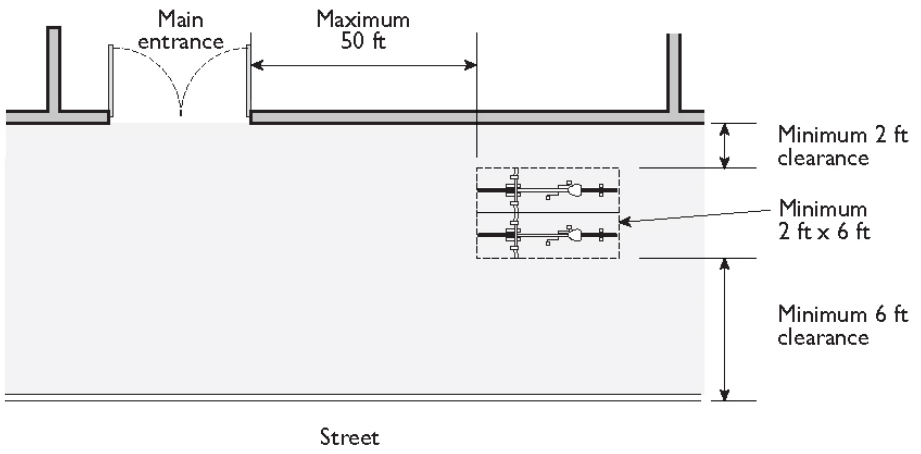
1. ***Short-Term Bicycle Parking.*** Short-term bicycle parking shall be provided in order to serve shoppers, customers, messengers, guests and other visitors to a site who generally stay for a short time.

a. *Parking Spaces Required.*

i. *Commercial Uses.* The number of short-term bicycle parking spaces shall be at a minimum 1 space per 200 feet of gross floor area. Decimals below .5 shall be rounded down, and above .5 rounded up. least 10 percent of the number of required automobile parking spaces, with a minimum of two spaces per establishment, for commercial, mixed-use, and multi-family structures.

a.ii. *Multifamily, multi person, and residential care uses.* The number of short-term bicycle parking spaces with four or more units shall be at a minimum one space per residential unit.

b. *Location.* Short-term bicycle parking must be located within 50 feet of a main entrance to the building it serves. Bicycle parking shall be visible from the street or from the main building entrance, from outdoor seating areas, or a sign must be posted at the main building entrance indicating the location of the parking area. Bicycle parking shall be located outside of the public right of way. except with an encroachment permit in the TSC-C and TSC-MUC districts, provided an unobstructed sidewalk clearance of six feet is maintained for pedestrians at all times.



c. *Anchoring and Security.* For each short-term bicycle parking space required, a stationary, securely anchored object shall be provided to which a bicycle frame and one wheel can be secured with a high-security U-shaped shackle lock if both wheels are left on the bicycle. One such object may serve multiple bicycle parking spaces.

d. *Size and Accessibility.* Each short-term bicycle parking space shall be a minimum of two feet in width and six feet in length and shall be accessible without moving another bicycle. Two feet of clearance shall be provided between bicycle parking spaces and adjacent walls, poles,

landscaping, street furniture, drive aisles, and pedestrian ways and at least five feet from vehicle parking spaces.

**FIGURE C-3**

**SHORT-TERM BICYCLE PARKING**

2. ***Long-Term Bicycle Parking.*** Long-term bicycle parking shall be provided in order to serve employees, residents, commuters, and others who generally stay at a site for four hours or longer.

a. *Parking Spaces Required.*

i. Multifamily, multi-person, and residential care usesResidential Uses. A minimum of one long-term bicycle parking space shall be provided for every five units for multi-unit residential and group residential projects.

ii. Parking Lots, Garages, and Parking Structures. Long-term bicycle parking shall be provided at a minimum of one per 15 vehicle parking spaces. At a minimum ratio of one space per 50 vehicle spaces.

ii.iii. Non-Residential Uses. A minimum of one long-term bicycle parking space shall be provided per 8 employees.

b. *Location.* Long-term bicycle parking must be located on the same lot as the use it serves. In parking garages, long-term bicycle parking must be located near an entrance to the facility.

c. *Covered Spaces.* At least 50 percent of required long-term bicycle parking must be covered. Covered parking can be provided inside buildings, under roof overhangs or awnings, in bicycle lockers, or within or under other structures.

d. *Security.* All long-term bicycle parking must be located in a secure area such as the following:

i. An enclosed bicycle locker;

ii. A fenced, covered, locked or guarded bicycle storage area;

iii. A rack or stand inside a building that is within view of an attendant or security guard or visible from employee work areas; or

iv. Other secure area approved by the Development Services Director.

e. *Size and Accessibility.* Each bicycle parking space shall be a minimum of two feet in width and six feet in length and shall be accessible without moving another bicycle. Two feet of clearance shall be provided between bicycle parking spaces and adjacent walls, poles, landscaping, street furniture, drive aisles, and pedestrian ways and at least five feet from vehicle parking spaces.

F. **Snow Storage:** See SLCC Section 6.10.140.

G. **Landscape Design**: See SLCC Section 6.10.150.

H. **Exterior Lighting**: See SLCC Section 6.10.160.

I. **Water Conservation**: See SLCC Section 6.10.170.

J. **Street Right-of-Way Improvements**: The improvement of the public right-of-way is necessary for the safety and convenience of the residents, improving the quality of the community and the lake and unifying the appearance of the community with the establishment of a consistent set of improvement standards.

1. Standard: All new road construction projects or the repair of existing improvements within the publicly owned right-of-way shall comply with the City of South Lake Tahoe Public Improvement Engineering Standards.

2. Standard: Road fixtures, including but not limited to retaining walls, safety barriers, traffic signals and controllers, light standards, and other structures, shall be designed and installed in compliance with the with the City of South Lake Tahoe Public Improvement Engineering Standards.

3. Standard: Color of road fixtures (other than signals, their auxiliary equipment and sign standards). Refer to the City of South Lake Tahoe Public Improvement Engineering Standards for specific details.

4. Standard: Signal poles and their ancillary equipment and sign structures. Refer to the City of South Lake Tahoe Public Improvement Engineering Standards for specific details.

5. Standard: Retaining walls and other erosion control devices. Refer to the City of South Lake Tahoe Public Improvement Engineering Standards and Chapter 36, City Grading Ordinance, for specific details.

6. Standard: Street improvements required. Public and private projects shall be required to construct off-site improvements including curb,

gutter, sidewalk and other improvements required by the city engineering division, consistent with the standards contained within the City of South Lake Tahoe Public Improvement Engineering Standards, including street right-of-way improvements and landscaping standards, SLTCC 5-24, or at the discretion of the city engineer provide in-lieu fees when:

a. A project located in the TC-C, TC-G, and TC-MUC involves a vacant lot and/or is a demolition and reconstruction project, or redevelopment or remodel with construction valuation of 50% or more than the structure valuation construction. The following are applicable:

i. The project is processed as a special use permit and is determined by the city engineering division that the off-site improvements are necessary for the orderly development of the area; or

ii. A public project, not subject to the special use permit process, is determined by the city engineering department to need off-site improvements for the orderly development of the area. (Ord. 903; Ord. 1002)

k. **Scenic Highway Corridors**: See SLCC Section 6.10.190**.**

**Parking, Driving and Loading:** See SLCC Section 6.10.290 through 6.10.410

**Signage:** See SLCC Chapter 6.40.maximum sign area and standards established by the City Code, vehicle circulation areasShall be made of quality materials such as wood ….. 8vehicle

# APPENDIX D
## CSLT Green Building Program

The City has identified LEED, Energy Star, Green Point, BREEAM, and the National Green Build Standard as certification programs in alignment with the City's sustainable building and emissions reductions goals as outlined in the Climate Action Plan. Obtaining one of these certifications makes the project eligible for one or all of the incentives below. Should an applicant wish to complete a certification program not listed, the program may be reviewed by City staff and the Sustainability Coordinator for consistency with this program's goals.

In addition to requirements of the third-party certification, the following measures are encouraged:

- Appliances – All kitchen appliances meet Energy Star rating if an Energy Star designation is available for that appliance.
- Reduction in cement uses – Foundation mixes contain at least 20% reduction in cement by replacing cement with products such as flyash, slag, silica fume, or rice hull ash.
- Renewable/Recycled materials – At least 20% of all hard floor covering in the home may be a recycled content material or be of rapidly renewable materials such as bamboo, cork, natural linoleum flooring, engineered wood products, or minimum of 50% recycled content tile.
- Low VOC flooring – At least 80% of the total area of resilient flooring installed may be certified under the Resilient Floor Covering Institute (RCFI) FloorScore program and at least 80% of the total area of carpet meet the CRI Green Label Plus requirements for carpet.
- Radon Resistant construction – Radon resistant construction that meets the criteria of the Basic Techniques for Radon Resistant Construction recommended by the US EPA, is included in the project and the owner has been provided with information on radon risks, the radon resistant construction in the home, and radon testing options.
- Sustainable deck products – All decks surfaces utilize Forest Stewardship Council (FSC) certified wood, salvaged wood, or recycled content plastic or composite decking. Plastic or composite decking materials must be approved by the Office of the State Fire Marshall for use in the Wildland Urban Interface area.
- Low water consumption landscaping – The project does not include lawn area greater than 5% of the lot area and all landscaping is irrigated with a drip irrigation system that includes soil moisture control sensors.
- Kitchen faucet – Maximum flow rate at sink faucets is not greater than 1.5 gallons per minute at 60 psi.

**RESIDENTIAL PROJECT INCENTIVES**

Residential projects that voluntarily achieve third-party certification would be eligible for the following:

- Priority plan check, over all other projects, by all City Departments.

- Priority on the residential allocation waiting list.
- Recognition at a televised City Council meeting and on the City Website.

~~**Level 1 – "Priority Plan Check"**~~

~~For residential projects, including new construction, additions and remodels, City staff has drafted a list of "Recommended Green Measures for Residential Projects." These measures are feasible to implement and do not require significant additional investment beyond the mandatory measures of building codes and the CalGreen Code. Additionally, they have a good "bang for the buck" and the City would like to encourage applicants to incorporate them into their residential projects.~~

~~Recommended Green Measures for Residential Projects~~

- ~~Appliances – All kitchen appliances meet Energy Star rating if an Energy Star designation is available for that appliance.~~
- ~~Reduction in cement uses – Foundation mixes contain at least 20% reduction in cement by replacing cement with products such as flyash, slag, silica fume, or rice hull ash.~~
- ~~Renewable/Recycled materials – At least 20% of all hard floor covering in the home must be a recycled content material or be of rapidly renewable materials such as bamboo, cork, natural linoleum flooring, engineered wood products, or minimum of 50% recycled content tile.~~
- ~~Low VOC flooring – At least 80% of the total area of resilient flooring installed must be certified under the Resilient Floor Covering Institute (RCFI) FloorScore program and at least 80% of the total area of carpet meet the CRI Green Label Plus requirements for carpet.~~
- ~~Radon Resistant construction – Radon resistant construction that meets the criteria of the Basic Techniques for Radon Resistant Construction recommended by the US EPA, is included in the project and the owner has been provided with information on radon risks, the radon resistant construction in the home, and radon testing options.~~
- ~~Sustainable deck products – All decks surfaces utilize Forest Stewardship Council (FSC) certified wood, salvaged wood, or recycled content plastic or composite decking. Plastic or composite decking materials must be approved by the Office of the State Fire Marshall for use in the Wildland Urban Interface area.~~
- ~~Low water consumption landscaping – The project does not include lawn area greater than 5% of the lot area and all landscaping is irrigated with a drip irrigation system that includes soil moisture control sensors.~~
- ~~Kitchen faucet – Maximum flow rate at sink faucets is not greater than 1.5 gallons per minute at 60 psi.~~

~~Projects that incorporate these measures will be given priority for plan check, by all City Departments over projects that meet only mandatory requirements. An applicant will be required to submit the checklist along with supporting materials, and a signed testimony that the project complies with the measures with the building permit application. Compliance with the recommended green measures would be verified during the plan check and building inspections. A fine would be imposed on projects that, at the time of building occupancy, have not incorporated the green measures but received priority plan check. Funds from the fine would be placed in an account that would be used for City sustainability efforts.~~

~~**Level 2 – "Priority Plan Check and Recognition"**~~

~~As part of this program, it is important to utilize the nationally recognized green building certification systems so that the City's green building success is recognized beyond the City limits. Builders and building owners may also find this important in their marketing efforts. An article in the January 2010 issue of Fined Homebuilding magazine emphasized this point when stating that, "builders are looking to certification programs not only because they want to build better homes but also because they want to differentiate themselves from those who aren't building homes of similar quality." Certification provides proof that the home has been built to a widely recognized standard. The article goes on to state that, "certification becomes a powerful marketing tool for builders as well as homeowners who plan to sell their home one day."~~

~~Therefore, the second level of voluntary measures requires third party green building certification. Residential buildings that obtain LEED, Energy Star or GreenPoint Rated certification would be eligible for the following:~~

- ~~Projects would receive priority plan check, over all other projects, by all City Departments.~~
- ~~Projects would receive recognition at a televised City Council meeting and on the City Website.~~

~~Proof of final certification will be required prior to issuing a certificate of occupancy. If certification is not obtained when occupancy is required, the applicant may post a security equal to $10,000 in order to receive a certificate of occupancy for the building. The security would be held until green building certification is obtained. If certification is not obtained within 1 year of occupancy, the security would be forfeited and deposited into the City fund to be used for City sustainability efforts. If the project is not requesting residential allocation(s) they can still qualify for the other incentives and would need to provide a signed testimony and documentation demonstrating their intent to obtain green building certification with their building permit application and provide final certification prior to occupancy.~~

**COMMERCIAL PROJECT INCENTIVES**

Commercial projects that voluntarily achieve third-party certification would be eligible for the following: ~~There is only one level of incentives provided for Commercial projects, "Priority Plan Check, Allocation, and Recognition."~~

- Priority plan check, over all other projects, by all City Departments.
- CFA allocation from the City's unallocated CFA pool.
- Recognition at a televised City Council meeting and on the City Website

**PROOF OF CERTIFICATION**

All applications for projects utilizing this program shall include a signed testimony and documentation demonstrating their intent to obtain green building certification and provide final certification prior to issuance of a certificate of occupancy. ~~Proof of final certification will be required prior to issuing a certificate of occupancy.~~ If certification is not obtained when occupancy is required, the applicant may post a security equal to $10,000 in order to receive a certificate of occupancy for the building. The security would be held until green building certification is obtained. If certification is not obtained within 1 year of occupancy, the security would be forfeited and deposited into the City fund to be used for City

sustainability efforts. ~~If the project is not requesting residential allocation(s) they can still qualify for the other incentives and would need to provide a signed testimony and documentation demonstrating their intent to obtain green building certification with their building permit application and provide final certification prior to occupancy.~~

~~Buildings that obtain LEED certification or an Energy Star Label would be eligible for the following:~~

- ~~Projects would receive priority plan check, over all other projects, by all City Departments.~~
- ~~Residential projects would have eligible for CFA allocation from the City's unallocated CFA Pool.~~
- ~~Projects would receive recognition at a televised City Council meeting and on the City Website.~~

~~When submitting a Design Review application for a new commercial project, applicants can include a request for Commercial Floor Area (CFA) form the City's unallocated CFA pool. Currently, these requests would require consideration by the City Planning Commission and eligible projects are required to meet the following criteria:~~

1. ~~Be within an adopted Community or Area Plan,~~
2. ~~Meet the criteria for CFA allocation required by the applicable Community or Area Plan,~~
3. ~~Meet all applicable design standards,~~
4. ~~Include the construction of improvements that will benefit the public and community which are more extensive than required by the applicable Community or Area Plan or City Code, and~~
5. ~~Provide an economic benefit to the community with enough significance to merit the allocation of the City's CFA resource.~~

~~This policy for allocation of CFA from the unallocated pool was adopted by the City Council on June 7, 2007. In order to provide CFA as an incentive for green building certification, the policy would be amended to include LEED or Energy Star green building certification as one of the criteria. As part of the Design Review application, the applicant would indicate which certification program they will pursue. Prior to issuing a building permit, documentation that demonstrates pursuit of the certification is required (application for Designed to Earn the Energy Star, or LEED Project Registration). Proof of final certification will be required prior to issuing a certificate of occupancy. If certification is not obtained when occupancy is required, the applicant may post a security in order to obtain occupancy of the building. The security would be held until green building certification is obtained. If certification is not obtained within 1 year of occupancy, the security would be forfeited and deposited into a City fund to be used for City sustainability efforts. If the project is not requesting commercial floor area they can still qualify for the other incentives.~~

**~~GREEN BUILDING CERTIFICATION CRITERIA~~**

~~Green building certification is required to obtain residential level 2 incentives or commercial incentives. Certification programs that have been found to be nationally recognized and achieve green building goals of the City are the LEED, GreenPoint Rated, and Energy Star programs.~~

~~Other green building certification programs are gaining recognition and there will likely be new ones in the future. In order to accommodate this trend, there would be an application process for other green~~

~~building certification programs to be added to the list of LEED, GreenPoint Rated and Energy Star programs that qualify for the level 2 residential incentives and commercial incentives. The application would be considered by the Planning Commission with a recommendation from the Sustainability Commission.~~

**EDUCATION AND OUTREACH**

It is important that knowledge of green building within the community in general be increased. Knowledge of green building and its benefits can reduce utility bills, increase the quality of construction, increase indoor quality, and increase comfort of buildings. The City has identified, and for the most part implemented, the following education and outreach strategies:

- City publication of Residential and Commercial Green Building Guides – Summer 2010
- Hold a workshop on the CalGreen Code mandatory requirements – Fall 2010
- Prepare a list of green building materials and products for local building and hardware stores and encourage them to carry them in their inventories – Fall 2010
- Establish Green Building Information Center at the Services Center building to provide clearinghouse information on Green Building – Continuous Effort
- South Lake Tahoe Green Building Website with information on green building certification programs and local architects, engineers, contractors, etc. with Green Building credentials or experience – Winter 2010
- Advertising at the Services Center for Green Building education and events put on by other organizations

CITY OF SOUTH LAKE TAHOE

# NOTICE OF AVAILABILITY /NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION FOR THE TAHOE VALLEY AREA PLAN AMENDMENTS

The City of South Lake Tahoe (City) is seeking public comments on a proposed amendment to the Tahoe Valley Area Plan (TVAP). The City of South Lake Tahoe proposes numerous amendments to the TVAP, specifically:

- Expand the Area Plan boundary to incorporate a new Emerald Bay Connection Corridor District (17.5 acres) to the south of the current boundary, and add parcels fronting Melba Drive and parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave to the Town Center (11.5 acres). See attached map.
- Update various area plan sections: land use, community design and housing; revitalization and economic development; development/design standards; and incorporate general changes throughout to improve consistency with state laws and other existing plans.

The amended plan will serve as a mutual plan for the City of South Lake Tahoe and TRPA by providing direction for how the applicable area shall be regulated to achieve regional environmental and land use objectives. The development standards and the specific policies referenced in the amendments are the land use standards intended to administer and regulate development within the 374 acre boundary of the TVAP.

The City has prepared an Initial Study/Mitigated Negative Declaration (IS/MND) for the proposed amendment in compliance with the California Environmental Quality Act (CEQA, Public Resources Code Section 21000 et seq.), the CEQA Guidelines. The IS/MND is being circulated for public review and comment pursuant to Section 15073 (a) of the CEQA Guidelines. The 30-day comment period begins on March 27, 2024, and ends on April 26, 2024. Comments should be submitted by email to jhitchcock@cityofslt.us or by mail to:

Anna Kashuba, Senior Plannner
City of South Lake Tahoe Planning Division
1052 Tata Lane
South Lake Tahoe, CA 96150

The City of South Lake Tahoe Planning Commission will hold a public hearing on the proposed amendments at their regularly scheduled meeting on May 16, 2024, at 3:00 p.m. The Planning Commission agenda packet for this item will be available three days prior to the hearing at www.cityofslt.us/114/Planning-Commission. The hearing will be held in the City Council Chambers at 1901 Lisa Maloff Way, South Lake Tahoe, CA.

The IS/MND and a track changes version of the proposed TVAP Area Plan amendments may be viewed and downloaded at the Planning Division web page: https://www.cityofslt.us/1108/Current-Projects. If you require additional information, please contact Anna Kashuba at (530) 542-7405. A hard copy of the IS/MND is also available for public review at 1052 Tata Lane, South Lake Tahoe, California.

Written public comments received 72 hours prior to the meeting will be distributed to the Planning Commission. Any writings or documents provided to a majority of the Planning Commission regarding any open session item will be made available for public inspection within the Agenda posted on the City's Website.

Every reasonable effort will be made to accommodate any person needing special assistance to participate in Planning Commission meetings. Contact the City Clerk at (530) 542-6005 in advance of the meeting for assistance [28 CFR 35.102.35.104 ADA Title II and Brown Act Government Code Sections 54953.2, 54954.1, 54954.2, and 54957.5].

# 2.0 PROJECT DESCRIPTION

## 2.1 AREA PLAN UPDATES OVERVIEW

The proposed project is an update to the Tahoe Valley Area Plan in which current goals, policies and implementation strategies for providing specific land use guidance within the plan's boundary are contained. The updated Tahoe Valley Area Plan includes the following changes to the plan boundary and zoning:

- Incorporate 19 parcels fronting US Highway 50 on the west side of the centerline from the existing southern boundary line south to H Street, including four APNs (032-161-012, 032-161-013, 032-161-009, and 032-161-008) located west of the fronting parcels and south of F Street. The addition of these former Plan Area 114 Special Area #1 parcels (totaling 17.5 acres) within the newly created Emerald Bay Connection Corridor (EB-CC) District is intended to increase opportunity for residential development and include potential sites for a future transit center. Permissible uses are consistent with the previous PAS of this area; however, as part of the area plan these parcels are allowed greater density, making future housing development more feasible. In addition, several low intensity commercial uses are added to support the development of a transit center, encouraging an active streetscape and providing interest for individuals when going to and from the Town Center Gateway and Core Districts.

- Incorporate one parcel west of US Highway 50 at the southern plan boundary and seven parcels fronting Melba Drive to the existing Town Center Gateway (TC-G) District so that the Area Plan is contained in this corner by the intersection of E Street and Melba Drive. The addition of these former Plan Area 114 Special Area #1 parcels (totaling 6.2 acres) is a benefit because of their high redevelopment potential, which may be incentivized by the benefits of being in an area plan Town Center.

- Incorporate 15 parcels east of Tahoe Keys Blvd between Eloise Ave and James Ave including one APN (023-221-020) north of Eloise Ave to the existing Town Center Neighborhood Professional (TC-NP) District (previously located within Plan Area 111 Special Area #2). These parcels (totaling 5.3 acres) were previously part of a PAS special area recognizing the legal, but nonconforming nature of the subject parcels. With the incorporation of these parcels into the Area Plan, various existing land uses (e.g., realty offices, professional offices) will become conforming, while giving the existing multi-family residential properties is this area the opportunity to be redeveloped at higher densities within a Town Center.

- Rezone two open space parcels. The first APN (032-191-004), recently identified as asset land between US Highway 50 and Melba Drive, would be rezoned from open space to Town Center Gateway (TC-G). A second APN (023-241-022) recently acquired by the California Tahoe Conservancy at the southwest corner of US Highway 50 and 4$^{th}$ Street would be rezoned from Town Center Mixed-Use Corridor (TC-MUC) to open space.

- Move one APN (023-081-011) from Town Center Gateway (TC-G) to Tourist Center Core (TC-C) south of the Raley's shopping center. This parcel was previously the location of the Barton Ranch House and has a high redevelopment potential for creating public gathering places with a high density multi-family residential component.

The Area Plan includes changes necessary to opt in to the TRPA Phase 2 Housing Code Amendments adopted in December 2023 for the areas within and outside of the Town Center – these amendments are

included in the proposed changes to density, height and land coverage limits applicable to deed restricted affordable housing as documented in Appendix C.

In addition to the changes to area plan boundaries and zoning districts described above, changes are proposed to various area plan sections: land use, community design and housing; revitalization and economic development; development/design standards; and general changes to improve consistency with state laws and other existing plans. These amendments are summarized below – the detailed list of the proposed amendments are documented using track changes (strike out and underline) in the Area Plan chapters and Appendices on the City's website (https://cityofslt.us/2290/Area-Plan-Proposals-and-Updates).

Residential Density – increase multi-family dwelling density to 65 units per acre in the Town Center Core, Town Center Mixed-Use Corridor, and Town Center Gateway Districts, and to 65 units in the Commercial Mixed-Use Services District but only as part of a mixed-use project. Set a minimum multi-family dwelling density of 12 units per acre in each District, though certain mixed-use projects may be exempt from the minimum density in the CMX-S District. To maintain consistency with the 2011 City of South Lake Tahoe General Plan, Table LU-2 (Development Intensity Standards) must be amended to permit up to 65 residential units per acre in the Town Center and Tourist Center land use designations and up to 25 residential units per acre in the High Density Residential land use designation. General Plan Land Use Diagram LU-1 must also be amended to maintain consistency with changes to TVAP Zoning District boundaries. These amendments include: 1) replacing High Density Residential with Town Center for the Gateway District expansion at the south end of the Area Plan and the Neighborhood Professional District expansion at the north end of the Area Plan; 2) replacing Low Density Residential with High Density Residential for the proposed Emerald Bay Connection Corridor District at the southern end of the Area Plan; and 3) replacing Neighborhood Center with Town Center to recognize those parcels locations within the existing Town Center Mixed-Use Corridor Zoning District.
Retention of Housing – each existing residential unit of use located within the area plan that is proposed for demolition must be rebuilt on the same parcel or elsewhere within the area plan boundary. In addition, the replacement unit must be equivalent in size and number of bedrooms, and will be prohibited from obtaining a vacation home rental permit. Further, new condominiums built after adoption of the amendments shall be prohibited from obtaining a vacation home rental permit.

Consistency with California state law – design standards have been updated to clarify accessory dwelling unit (ADU) applicability. Multi-person dwellings, nursing and personal care uses, and residential care uses have been expanded and are now allowed in all area plan Districts where multi-family dwellings are allowed (except CMX-S where multi-family dwellings are only allowed as part of a mixed-use project).

Residential Design Standards – Area Plan Appendix C has been updated to allow 100 percent residential projects in the Healthcare and Neighborhood Professional Districts to utilize standards in City Code 6.85 (Residential Development and Design Standards), adopted in compliance with California SB 35 and SB 330, rather than existing area plan standards that were adopted with commercial and mixed-use projects in mind.

Permissible Uses – Employee housing has been eliminated from the land use matrix as a stand alone category. Employee housing shall be classified as single family, multiple family, or multiple person dwellings based on the design and organization of accommodations.

The public owned assembly and entertainment use has been removed and is now included with local public assembly facilities. The amusement and recreation and privately owned assembly and entertainment uses have been consolidated under amusement, recreation, and entertainment facilities. The general retail and personal service use definition has been expanded to explicitly include health and athletic clubs;

gymnasiums; day spas that perform massages, manicures, etc.; and funeral parlors and related services. Tree farms, which were erroneously left out of the use matrix at the time of the area plan's initial adoption, has been added.

Commercial Floor Area and Outdoor Dining - To reduce barriers associated with establishing outdoor dining, 20 outdoor dining seats will be allowed by right for eating and drinking uses, without the need to obtain additional commercial floor area (CFA). The 20 seats of outdoor dining was selected based on a determination by the South Tahoe Public Utility District that restaurants may have up to 20 outdoor dining seats without an increase to the business' usage fee. TRPA Code (Section 50.6.1.B.2) also allows for additions to, or expansions of, legally existing CFA of up to 500 square feet which supports the proposed amendment to allow outdoor dining up to 20 seats. Outdoor dining and seating create more active streetscapes and do not have the same impacts as indoor seating due to their seasonal nature.

Advertising for Accessory Uses - accessory uses may advertise separately from the primary use; however, they are still subject to the signage area allowed per SLTCC Chapter 6.40.

Commercial Design Standards - Building articulation and modulation standards were previously included for commercial projects, but were unclear and subjective. Objective design standards have been added to Appendix C for new construction and major façade improvements. These standards draw heavily from the South Lake Tahoe Design Guidelines (2016), which are now included in the TVAP as Appendix B.

The roof height requirement and building height limitation applicable to the maximum number of stories has been eliminated, and the minimum roof pitch reduced from 5:12 to 3:12. Exceptions to the corner build area standard have been added for parcels where SEZ or other natural features are present and should be retained. Exceptions have been added for additional height when required for public safety and transportation uses, as well as flexibility in building placement and orientation.

Parking - A recent California law prohibits local governments from enforcing minimum parking requirements for residential and commercial projects within one-half mile of a major transit stop. While the City of South Lake Tahoe does not have major transit stops as defined by the California Public Resource Code Section 21064.3, in anticipation of improved transit services, parking standards have been adjusted to be in alignment with the intention of this state law. The update includes an automatic but optional 25 percent reduction in parking when the project site in within a half mile of a transit stop. Parking may be further reduced when the project includes contributions to alternative transportation. While most businesses wish to reduce onsite parking, some require additional parking due to seasonal demands and popularity. The plan offers flexibility for an applicant to provide a parking demand analysis, for review and approval by the Planning Commission, to build more parking than otherwise allowed. Bicycle parking has been adjusted so that it is no longer based on the number of automobile spaces.

General Code Corrections and Consistency Improvements - General improvements include correcting City Code and TRPA Code references, incorporating amendments implemented by TRPA through Ordinance 2021-01, and referencing new TRPA policies that support the proposed amendments. TRPA Code of Ordinances 31.4.6 will be referenced to ensure that legal, non-conforming tourist and residential densities can be maintained and managed pursuant to that section. The TVAP includes the TRPA interpretation that commercial and residential/tourist mixed-use projects are allowed to use the full parcel area in determining density, regardless of the amount of commercial floor area on the parcel. Commercial floor area shall also be the maximum allowable in that district.

Right of Way Improvements and Complete Streets Consistency - Transportation and Circulation Policies have been amended to reflect current areas of focus, and align with and progress the City's Complete Streets Program. Recent mobility improvement concepts from TRPA's Active Transportation Plan and Lake Tahoe

Unified School District's Safe Routes to School Master Plan have been incorporated. Implementation efforts have been updated to account for completed projects, and identify new areas of support, such as implementation of TRPA's SR 89 Recreation Corridor Management Plan.

**Table 2** provides an overview of the plan, maps, and ordinances that are relevant to the Tahoe Valley Area Plan, a synopsis of the proposed changes, and a brief description of those changes.

**Table 2**
**Elements of the Tahoe Valley Area Plan**

| Tahoe Valley Area Plan Element/ Section | Proposed Change from Existing Plans, Maps, and Ordinances | Summary Description |
|---|---|---|
| Land Use, and Land Use Map | Update maps to include newly incorporated parcels in existing Town Center Zoning Districts.<br><br>Add the Emerald Bay Connection Corridor District (EB-CC).<br><br>Expand on existing policy. | ▪ Elaborate Policy LU-2.1 to encourage mixed-use projects in the Town Center – Core District.<br>▪ Establish a vision for the newly formed Emerald Bay Connection Corridor District |
| Existing Conditions | Modified to reflect changes since area plan initial adoption.<br><br>Updated maps. | ▪ Existing land use table modified to reflect plan area expansion.<br>▪ The Airport Land Use Compatibility Plan section was updated to reflect the Airport Land Use Compatibility Plan which replaced the Comprehensive Land Use Plan.<br>▪ Updated Total Daily Maximum Load standards and compliance. |

| | | |
|---|---|---|
| Zoning Map Amendment (Zoning map) | Change zoning for newly incorporated parcels. | ▪ One (1) parcel from the TC-G (Town Center Gateway) rezoned as TC-C (Town Center Core).<br>▪ Eight (8) parcels from PAS 114, Special Area #1 rezoned as TC-G.<br>▪ Fifteen (15) parcels from PAS 111, Special Area #2 rezoned as TC-NP (Town Center Neighborhood Professional).<br>▪ Nineteen (19) parcels from PAS 114 and PAS 114, Special Area #2 included as Emerald Bay Connection Corridor District.<br>o The Emerald Bay Connection Corridor District was created to allow for high-density residential development adjacent to the town center as well as to provide potential sites for a transit center. This is a transitional area of mixed uses limited to those compatible with scenic restoration, the intensity of Highway 50/89, and the background residential areas. Permissible uses are drawn from to those allowed in the adjacent Bonanza Plan Area Statement (114), in which these parcels were previously included. These uses consist of residential, tourist accommodation, neighborhood compatible commercial uses, and public service. |
| Land Use and Community Design | Modification to existing policy | ▪ Modified Policy LU-8.1 to acknowledge the increase of residential uses in the Commercial Mixed-Use Service District. Recognize the need to maintain industrial services in a manner that is compatible with residential uses. |
| Economic Development | Include new economic development policies and modification of existing policies. | ▪ Create consistency between Policy ED-1.3 and Resolution 2023-051 regarding commercial floor area incentives.<br>▪ Addition of Policy ED-1.6 to clarify when Commercial Floor Area (CFA) is needed.<br>▪ Addition of Policy ED-1.7 indicating the City's intent to pursue a special event designation for the Tahoe Valley.<br>▪ Modify Policy ED-3.1 to encourage neighborhood compatible industrial uses. |
| Housing | Modify and add to policies. | ▪ Modify Policy H-1.2 to reflect current City housing incentives and include density bonuses per AB 682.<br>▪ Addition of Goal H-2 and associated policies (H-2.1 and H-2.2) to maintain long term housing. |
| Transportation and Circulation | Modifications to existing policies and addition of new policies regarding reduced parking strategies.<br><br>Updates to Transportation and Circulation Strategies table to indicate progress and completion. | ▪ Update Policy T-2.5 to allow projects to offset parking demand through additional parking management, contributions to shared parking facilities, public transportation and/or right of way improvements.<br>▪ Addition of Policy T-2.6 establishing reduced parking requirements for affordable housing projects that are not exempt from parking requirements by state law.<br>▪ Addition of Policies T-2.7 and T-2.8 to explore a parking benefit district and parking hub.<br>▪ Various other policy modifications to reflect evolved goals of pedestrian and bicycle circulation.<br>▪ Completed implementation strategies have been moved to a new table with completion dates. Strategies in progress have |

| | | |
|---|---|---|
| | | been updated to reflect current stages based on City or other agency action. |
| Natural and Cultural Resources | Updates to reflect completed and progressed scenic quality improvements, stream zone restoration, and water quality improvement strategies. | ▪ Completed implementation strategies have been moved to a new table with completion dates. |
| Incentive and Mitigation Programs | Update CFA allocation, Tourist Accommodation Bonus Units, and Residential Bonus Units sections to remove outdated numbers.<br><br>Include Accessory Dwelling Unit and Multi-family development right incentives. | ▪ The count of CFA, Tourist Accommodation Bonus Units, and Residential Bonus Units was removed to avoid having outdated numbers in the Area Plan.<br>▪ Secondary units have been replaced with accessory dwelling units.<br>▪ The City incentive of RUUs at no cost for ADUs and multi-family developments has been included.<br>▪ The Change in Use section was removed as it is no longer contained in the South Lake Tahoe City Code or TRPA Code of Ordinances.<br>▪ The Conversion of Use section was updated to reflect the current Chapter 51 of TRPA Code of Ordinances. |
| Appendix B, | Replaced with Commercial Design Guidelines | ▪ TRPA height findings were removed from this appendix. The findings are applicable through reference to TRPA Code of Ordinances.<br>▪ The South Lake Tahoe Commercial Design Guidelines have been included as Appendix B to provide visual representations of the intent of design standards in Appendix C. |
| Appendix C, Development and Design Standards | Modify existing use matrix for clarity and consistency.<br><br>Modification of existing standards for clarity. | ▪ Permissible use matrix and definitions have been modified for consistency and simplification.<br>▪ All items previously included in the Substitute Design Standards have been relocated to the main standards section. |
| Appendix D, CSLT Green Building Program | Include more recent sustainable building certification programs. | ▪ Additional green building certifications are being added to the Green Building Program to make projects eligible for development incentives. Development incentives are no longer tiered and shall be based on the discretion of the decision-making authority. |

As part of the Tahoe Valley Area Plan, the City of South Lake Tahoe will maintain compliance with all mitigation measures from the Regional Plan Update EIS certified by the TRPA Governing Board on December 12, 2012. The adoption of these measures includes compliance with measures that have already been incorporated into the TRPA Code, adopted on December 12, 2012, and effective on February 9, 2013.

Also part of the Tahoe Valley Area Plan is the City of South Lake Tahoe's continued compliance with all mitigation measures from the General Plan EIR certified by the City on May 17, 2011.

The following is a description of proposed updates to land use zoning districts identified in **Figure 3.**

Town Center Core District

This district is the heart of the Tahoe Valley area and intended to become a place of public gathering and retail activity meeting the needs of both area residents and tourists. This district allows for mixed-use projects with a focus on ground-level active storefronts and pedestrian- and transit-oriented development that encourages pedestrian activity and supports multi-modal transportation. Allowable uses include tourist accommodation, retail, commercial, entertainment, and office uses, as well as mixed-use residential development.

**Table 3** summarizes changes to development standards that apply to this district (refer to Appendix C of the draft Tahoe Valley Area Plan for more detail):

**Table 3**
**Development Standards for the Town Center Core District**

| Development Standard | | Existing Core | Proposed Core |
|---|---|---|---|
| Density | Multiple Family Dwelling | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | Not permitted | 65 persons/acre, no minimum |
| | Nursing and Personal Care | Not permitted | 65 persons/acre, no minimum |
| | Residential Care | Not permitted | 65 persons/acre, no minimum |
| | Single Family Dwelling | Condos only | Condos only. 12-65 units/acre |
| | Employee Housing | As per the limitations set forth for multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Nursing and Personal Care | Not permitted | Allowed by right |
| | Residential Care | Not permitted | Allowed by right |
| | Multi-Person Dwelling | Not permitted | Allowed by right |
| | Nursery | Not permitted | Requires special use permit |
| | Membership Organization | Not permitted | Allowed by right |
| | Religious Assembly | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (A)<br>Privately Owned Assembly & Entertainment (A)<br>Public Owned Assembly & Entertainment (A) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Small Scale Manufacturing | Requires a special use permit. | Allowed by right |
| | Local Public Assembly Facilities | Local Assembly & Entertainment (A) | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | The height of the sloped roof must be a minimum 40% of the height of the building | This standard was removed. |
| | Roof Slope | 5:12 to 12:12 | 3:12 to 12:12 |

Town Center Gateway District

The Gateway District, which includes properties surrounding the "Y" intersection and properties along Lake Tahoe Boulevard and Emerald Bay Road, is a key arrival area for travelers to South Lake Tahoe. This district is intended to create an attractive mixed-use commercial corridor that provides a welcoming gateway to South Lake Tahoe. The physical form varies to reflect the commercial mixed-use character of

the gateway corridor and to transition from surrounding, lower-density districts to the Town Center Core. Allowable uses include tourist accommodation, retail, commercial, recreation, office uses, as well as mixed-use residential development. **Table 4** summarizes development standards that apply to this district (refer to Appendix C of the draft Tahoe Valley Area Plan for more detail):

**Table 4**
**Development Standards for the Town Center Gateway District**

| Development Standard | | PAS 114 Special Area #1 | Existing Gateway | Proposed Gateway |
|---|---|---|---|---|
| Density | Multiple Family Dwelling | 15 units/acre | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | Not permitted | Not permitted | 65 persons/acre, no minimum |
| | Nursing and Personal Care | 25 persons/acre | Not permitted | 65 persons/acre, no minimum |
| | Residential Care | 25 persons/acre | Not permitted | 65 persons/acre, no minimum |
| | Single Family Dwelling | 1 unit per parcel | Condos only | Condos only, 12-65 units/acre |
| | Employee Housing | Not permitted | Not permitted | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Multi-Person Dwelling | Allowed by right | Not permitted | Allowed by right |
| | Nursing and Personal Care | Allowed by right | Not permitted | Allowed by right |
| | Residential Care | Allowed by right | Not permitted | Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (Not permitted)<br>Privately Owned Assembly & Entertainment (Not permitted)<br>Public Owned Assembly & Entertainment (S) | Amusement & Recreation (A)<br>Privately Owned Assembly & Entertainment (S)<br>Public Owned Assembly & Entertainment (A) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | Local Assembly & Entertainment (Not permitted) | Local Assembly & Entertainment (A) | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Religious Assembly | Not permitted | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Range Management | Not permitted | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | No applicable | The height of the sloped roof must be a minimum 40% of the height of the building | This standard was removed |
| | Roof Slope | TRPA Code Chapter 37.3.4 | 5:12 to 12:12 | 3:12 to 12:12 |

Town Center Mixed-Use Corridor

This district is intended to facilitate the transformation of the eastern and western portions of Lake Tahoe Boulevard into a multi-modal, mixed-use corridor. Allowable uses include a rich mixture of retail, service, public facility, recreation, entertainment, and housing organized in a compact development pattern, creating an aesthetically-pleasing and safe environment for pedestrians, cyclists, and automobile drivers. **Table 5** summarizes development standards that apply to this district (refer to Appendix C of the Tahoe Valley Area Plan for more detail):

**Table 5**
**Development Standards for the Town Center Mixed-Use Corridor District**

| Development Standard | | Existing TC-MUC | Proposed TC-MUC |
|---|---|---|---|
| Density | Multiple Family Dwelling | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | Not permitted | 65 persons/acre, no minimum |
| | Nursing and Personal Care | Not permitted | 65 persons/acre, no minimum |
| | Residential Care | Not permitted | 65 persons/acre, no minimum |
| | Single Family Dwelling | Condos only | Condos only, 12 – 65 units/acre |
| | Employee Housing | As per the limitations set forth for multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Multi-Person Dwelling | Not permitted | Allowed by right |
| | Nursing and Personal Care | Not permitted | Allowed by right |
| | Residential Care | Not permitted | Allowed by right |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (A)<br>Privately Owned Assembly & Entertainment (S)<br>Public Owned Assembly & Entertainment (A) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Local Public Assembly Facilities | Local Assembly & Entertainment (A) | New use category, previously Local Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Auto Repair and Service | Not permitted | Requires special use permit |
| | Religious Assembly | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously |
| | Small Scale Manufacturing | Requires a special use permit. | Allowed by right. Previously required a special use permit. |
| Height and Roof Standards | Roof Slope | 5:12 to 12:12 | 3:12 to 12:12 |
| | Roof Height | The height of the sloped roof must be a minimum 40% of the height of the building | This standard was removed. |

Town Center Neighborhood Professional

This district is intended to allow a variety of residential and non-residential uses to encourage a greater mix and intensity of uses in a pedestrian and bikeable environment at a scale and form that is appropriate to its neighborhood context and adjacent residential uses. Allowable uses include commercial, public service, healthcare, and office uses, social services, neighborhood parks, as well as all types of residential development. **Table 6** summarizes development standards that apply to this district (refer to Appendix C of the Tahoe Valley Area Plan for more detail):

**Table 6**
**Development Standards for the Town Center Neighborhood Professional District**

| Development Standard | | PAS 111 Special Area #2 | Existing TC-NP | Proposed TC-NP |
|---|---|---|---|---|
| Density | Multiple Family Dwelling | 8 units/acre | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | Not permitted | 25 persons/acre | 65 persons/acre, no minimum |
| | Nursing and Personal Care | 25 persons/acre | 25 persons/acre | 65 persons/acre, no minimum |
| | Residential Care | 25 persons/acre | 25 persons/acre | 65 persons/acre, no minimum |
| | Single Family Dwelling | 1 unit per parcel | 2 units per parcel, provide one is an authorized secondary residence | 1 unit per parcel, excluding ADUs |
| | Employee Housing | Not permitted | As per the limitations set forth for the multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | General Retail and Personal Service | Not permitted | Not permitted | Allowed by right |
| | Nursery | Requires a special use permit | Not permitted | Allowed by right |
| | Religious Assembly | Not permitted | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Range Management | Not permitted | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously. |
| Height and Roof Standards | Roof Height | Not applicable | Not applicable | Not applicable |
| | Roof Slope | TRPA Code Chapter 37.3.4 | 5:12 to 12:12 | 3:12 to 12:12 |

Town Center Healthcare District

The Healthcare District contains the area within the immediate vicinity of Barton Hospital, north and south of South Avenue and between Third Street and Winnemucca Avenue. Despite the upcoming relocation of Barton Hospital out of this district, it is intended to remain a core area for healthcare services and shall be expanded to include a broader range of commercial services related to and independent from healthcare. **Table 7** summarizes development standards that apply to this district (refer to Appendix C of the Tahoe Valley Area Plan for more detail):

**Table 7**
**Development Standards for the Town Center Health-Care District**

| Development Standard | | Existing TC-HC | Proposed TC-HC |
|---|---|---|---|
| Density | Multiple Family Dwelling | 25 units/acre | 12-65 units/acre |
| | Multi-Person Dwelling | 25 persons/acre | 65 persons/acre, no minimum |
| | Nursing and Personal Care | 25 persons/acre | 65 persons/acre, no minimum |
| | Residential Care | 25 persons/acre | 65 persons/acre, no minimum |
| | Single Family Dwelling | 1 unit per parcel | 1 unit per parcel, excluding ADUs |
| | Employee Housing | As per the limitations set forth for multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Single Family Dwelling (includes condominiums) | Requires a special use permit | Allowed by right |
| | General Retail and Personal Service | Not permitted | Allowed by right |
| | Nursery | Not permitted | Allowed by right |
| | Animal Services | Not permitted | Allowed by right |
| | Professional Offices | Not permitted | Allowed by right |
| | Business Support Services | Not permitted | Allowed by right |
| | Local Public Assembly Facilities | Not permitted | Requires a special use permit |
| | Membership Organizations | Not permitted | Allowed by right |
| | Religious assembly | Allowed by right | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Schools - College | Not permitted | Requires a special use permit |
| | Schools – Kindergarten through Secondary | Not permitted | Requires a special use permit |
| | Threshold Related Research Facilities | Not permitted | Allowed by right |
| | Cultural Facilities | Requires a special use permit | Allowed by right |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously |
| | Small Scale Manufacturing | Not permitted | Requires a special use permit. |
| Height and Roof Standards | Roof Slope | 5:12 to 12:12 | 3:12 to 12:12 |
| | Roof Height | Not applicable | Not applicable |

## Commercial Mixed-Use Service District

This district is intended to provide for a mix of small- and medium-scale commercial, support services, and light industrial uses to meet local and regional demand. **Table 8** summarizes development standards that apply to this district (refer to Appendix C of the draft Tahoe Valley Area Plan for more detail):

**Table 8**
**Development Standards for the Commercial Mixed-Use Services District**

| Development Standard | | Existing CMX-S | Proposed CMX-S |
|---|---|---|---|
| Density | Multiple Family Dwelling | 25 units/acre | 12-65 units/acre, allowed only as part of a mixed-use project. Certain mixed-use projects may be exempt from the minimum density standard. |
| | Multi-Person Dwelling | Not permitted | 255 persons/acre, allowed only as part of a mixed-use project. No minimum |
| | | | |
| | | | |
| | Single Family Dwelling | 1 unit per parcel | 1 unit per parcel, allowed only as part of a mixed-use project. |
| | Employee Housing | As per the limitations set forth for multi-family residential uses above | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Multi-Family Dwelling | Requires a special use permit | Allowed by right as part of mixed-use project |
| | Multi-Person Dwelling | Requires a special use permit | Allowed by right as part of mixed-use project |
| | Single Family Dwellings (includes condos) | Requires a special use permit | Allowed by right as part of mixed-use project |
| | Amusement, Recreation, & Entertainment Facilities | Amusement & Recreation (A)<br>Privately Owned Assembly & Entertainment (Not permitted)<br>Public Owned Assembly & Entertainment (Not permitted) | New use category made from combining previous uses: Amusement & Recreation, Privately Owned Assembly & Entertainment, Public Owned Assembly & Entertainment<br><br>Allowed by right. Facilities with capacity for 200 persons or more require a special use permit. |
| | Religious Assembly | Requires special use permit | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |
| | Range Management | Not permitted | Allowed by right. This use was erroneously left out of the use matrix previously |
| Height and Roof Standards | Roof Slope | 5:12 to 12:12 | 3:12 to 12:12 |
| | Roof Height | Not applicable | Not applicable |

Emerald Bay Connection Corridor District

The Emerald Bay Connection Corridor District is proposed to allow for higher-density residential development adjacent to the town center. This is a transitional area of mixed uses limited to those compatible with scenic restoration, the intensity of Highway 50/89, and the background residential areas. The City sees within this district a potential opportunity for a transit center close to high density development and along a major travel way. Permissible uses are drawn from those allowed in the adjacent Bonanza Plan Area Statement (114), in which these parcels were previously included. Permissible uses include residential, tourist accommodation, neighborhood compatible commercial uses, and public service and are listed below. Developments within this district shall meet all applicable standards of the TVAP. **Table 9** summarizes development standards that apply to this district (refer to Appendix C of the draft Tahoe Valley Area Plan for more detail):

**Table 9**
**Development Standards for the Emerald Bay Connection Corridor District**

| Development Standard | | PAS 114 Special Area #1 | Proposed EB-CC |
|---|---|---|---|
| Density | Mobile Home Dwelling | 8 units/acre, special use permit required | 8 units/acre, requires a special use permit |
| | Multiple Family Dwelling | 15 units/acre, allowed by right | 12-25 units/acre, allowed by right |
| | Multi-Person Dwelling | Not permitted | 25 persons/acre, allowed by right |
| | Nursing and Personal Care | 25 persons/acre, allowed by right | 25 persons/acre, allowed by right |
| | Residential Care | 25 persons/acre, allowed by right | 25 persons/acre, allowed by right |
| | Single Family Dwelling | 1 unit per parcel | Condominiums only, allowed by right. See multi-family density. |
| | Bed & Breakfast Facilities | 10 units/acre, special use permit required | 10 units/acre, requires a special use permit |
| | Hotel, Motel, and Other Transient Dwelling Units | 40 units/acre, special use permit required | 40 units/acre, requires a special use permit |
| | Employee Housing | Not permitted | Removed as own category. Is now included in Single family, Multiple Family, or Multi-Person Dwellings |
| Uses | Eating and Drinking | Not permitted | Requires a special use permit |
| | General Retail and Personal Service | Not permitted | Requires a special use permit |
| | Nursery | Requires a special use permit | Requires a special use permit |
| | Professional Offices | Requires a special use permit | Requires a special use permit |
| | Schools – Business & Vocational | Requires a special use permit | Requires a special use permit |
| | Parking Lots | Not permitted | Requires a special use permit |
| | Cultural Facilities | Requires a special use permit | Allowed by right |
| | Daycare Centers/Preschool | Requires a special use permit | Requires a special use permit |
| | Government Offices | Requires a special use permit | Requires a special use permit |
| | Local Public Assembly Facilities | Requires a special use permit | Requires a special use permit |
| | Local Public Health and Safety Facilities | Requires a special use permit | Allowed by right |
| | Membership Organizations | Requires a special use permit | Allowed by right |
| | Religious Assembly (churches) | Requires a special use permit | This category has been eliminated and is now included in the definition of Membership Organization, which is allowed by right. |

Open Space

This district is intended to preserve land in its present use that would: 1) conserve and enhance natural or scenic resources; 2) protect streams environment zones, sensitive lands, water quality or water supply; 3) promote soil and habitat conservation; 4) enhance recreation opportunities; and/or 5) preserve visual quality along highways, roads, and street corridors or scenic vistas. The land is predominantly open, undeveloped, or lightly developed with trails or water quality projects, and is suitable for any of the following: natural areas, wildlife and native plant habitat; erosion control facilities, stream environment zones, stream corridors; passive parks; and/or trails for non-motorized activities. One CTC parcel identified as an asset land, APN 032-191-004, was rezoned from open space to TC-G and one parcel recently acquired by the CTC (023-241-022) was rezoned from TC-MUC to open space. No changes to the development standards of the Open Space District were made.

TRPA Town Center Overlay

This overlay contains much of the region's non-residential services and has been identified as a significant source of sediments and other contaminants that continue to enter Lake Tahoe. Town Centers are targeted for redevelopment in a manner that improves environmental conditions, creates a more sustainable and less auto-dependent development pattern, and provides economic opportunities in the region. The overlay designation also establishes areas of the region that qualify for additional land coverage, height, and density incentives to encourage redevelopment activity and provide capacity for transfers of development from sensitive and outlying areas. These amendments propose to expand the TRPA Town Center Overlay by 11.5 acres to include additions to the TC-NP and TC-G Zones (see Figure 3).

Permissible Use List

The Tahoe Valley Area Plan updates propose modifications to the existing permissible use list to consolidate multiple similar uses under one category, to create more succinct criteria, and to increase compatibility within categories. "Employee Housing" has been eliminated as an independent use and shall be included in other residential uses where occupant organization is the defining criteria rather than ownership. Health and athletic clubs, day spas, and funeral parlors are now included under General Retail and Personal Service as they are consistent with the existing criteria of the category in that they are "non-medical services involving the care of persons." Categories in which there was overlap of criteria have been consolidated into one use encompassing amusement, recreation, assembly, and entertainment. Permissible uses in the Health Care District have been expanded to reflect those of the Neighborhood Professional District. This is a change made in anticipation of Barton Health downsizing their presence at this location.

Anticipated Development

By the year 2034, the Tahoe Valley Area Plan is anticipated to accommodate an additional 77,000 to 102,000 square feet of CFA that would consist of CFA allocated to the Area Plan by TRPA, CFA from the City Pool and the transfer of existing CFA that would be transferred from outside of the Area Plan. These projections are unchanged from the 2015 Area Plan adoption. Policy provisions in the Tahoe Valley Area Plan identify the desire for developing and repurposing existing commercial uses towards resident-serving and recreation-based retail uses, and turning Tahoe Valley into an entertainment and recreation center.

As analyzed for the 2015 Area Plan, residential development and redevelopment by 2034 would primarily occur as multi-family, live/work, and mixed-use units, and is anticipated to consist of 373 new dwelling units. The development and redevelopment would occur through a combination of the current City and TRPA allocation system, including provisions for bonus units for affordable, moderate, and market-rate housing, and the potential conversion of 100 tourist accommodation units in the Tahoe Valley plan area. This plan amendment identifies the need for additional housing in Tahoe Valley and expands the number of parcels that are eligible for residential development incentives under Area Plan Section 7 – Housing policies H-1.2 (Housing Incentives), H-1.3 (Residential Improvement), H-1.5 (Redirection of Development), H-1.9 (Housing Needs), H-1.10 (Conversions) and H-2.2 (Housing in the Town Center Core District). The addition of 11.5 acres of new parcels to the Area Plan Town Center and 17.5 acres of parcels to the newly formed Emerald Bay Connection Corridor District (outside of the Town Center boundary) would help increase the rate of predicted residential buildout for the Area Plan. It is also possible that the addition of new parcels within the Town Center would increase the number of new dwelling units assumed for Tahoe Valley Area Plan buildout in the Regional Plan Update EIS. However, the Area Plan amendments do not propose any changes to the TRPA growth management system, so overall residential development limits would remain unchanged.

Design and Development Standards

The Tahoe Valley Area Plan includes development and design standards that are specific to the Plan Area and replace the City of South Lake Tahoe City Code Chapters 6.10 and 6.55 development standards, and portions of the TRPA Code of Ordinances Chapter 30, land coverage, Chapter 31 regarding density, Chapter 36 regarding design standards, and Chapter 37 regarding height standards. Standards for the Area Plan are contained in Appendix C of the Tahoe Valley Area Plan. Further design and development standards are housed in the South Lake Tahoe Design Guidelines (2016). This document has historically been used as a supplemental document to Appendix C. As part of the updates to the plan, this document

shall be included as Appendix B and shall be used in conjunction with Appendix C to provide examples of the standards. Specific standards that have been changed through this process include:

- Allowing roof pitches of 3:12 to 12:12 (previously the minimum roof pitch was 5:12) and the removal of the roof height requirement.
- Shifting to more objective building modulation and articulation standards.
- Increased flexibility in corner build and build to line requirements.
- Increased bicycle parking requirements
- Reducing residential parking requirements by right, for example, each multi-family residential unit is permitted one parking space and that number may be reduced further if a deed restriction is placed on the property making the property owner responsible for parking management.
- Allowing for a reduction in commercial parking spaces, for example, a 25% reduction in parking supply for projects located within ½ mile of a transit stop.

Significant changes were made to the organization of Appendix C by incorporating design standards previously designated as "substitute" into the primary standards. Purely residential projects in certain districts may now follow the residential design standards contained in the City of South Lake Tahoe City Code Chapter 6.85.

Maximum Transferred Land Coverage

No changes to the land coverage system of the Tahoe Valley Area Plan are being proposed. 11.5 acres would be added to the Town Center under the amendments, increasing the allowable land coverage therein to a maximum of 70 percent on high capability lands with transfer. The newly created Emerald Bay Connection Corridor District shall adhere to coverage limitations set forth in TRPA Code of Ordinances Chapter 30: Land Coverage.

Building Height and Design

The maximum building height and number of stories for each district shall remain the same for commercial and mixed-use projects. Purely residential developments in TC-NP and TC-HC and all projects in the Emerald Bay Connection Corridor District shall meet the height requirements of City Code Chapter 6.85 and TRPA Code of Ordinances Section 37.4. In order to increase the efficiency and feasibility of large buildings, a minimum roof pitch of 3:12 is being proposed (previously 5:12) as well as elimination of the requirement that a building's roof be 40 percent of the building height.

Numerous other changes are being made for clarity and consistency, most notably the creation of objective design standards to achieve desired levels of building articulation.

Density

New density maximums and a minimum density standard are being proposed. For the first time the City is proposing a minimum density of 12 units per acre for multiple family dwellings in all Tahoe Valley area plan districts. Mixed-use projects meeting certain criteria may be exempt from the minimum density. The maximum density for multiple family dwellings in the TC-C, TC-MUC, and TC-G shall be increased from 25 to 65 units per acre. Residential projects in all other districts shall remain at 25 units per acre.

The Tahoe Valley Area Plan will incorporate the City's accessory dwelling unit (ADU) ordinance; however, these units are not counted towards density.

Redevelopment Incentives

The Tahoe Valley Area Plan already provides several incentives for redevelopment of properties in the plan area. These incentives are described in the draft Tahoe Valley Area Plan and have not undergone changes. Refer to Resolution 2023-051 passed by City Council on June 6, 2023, for the City's policy on distributing TRPA commodities.

Transportation

The Tahoe Valley Area Plan calls for various improvements to vehicle, bike, and pedestrian routes. No specific projects are approved through the plan and all future projects would be subject to applicable environmental review and permitting requirements. Section 8 of TVAP provides summaries of transportation and circulation strategies proposed and completed in the Tahoe Valley. Some improvements that have been completed remain in the table of strategies to ensure maintenance.

Recreation and Open Space

No changes are being made to the Recreation and Open Space elements of the Tahoe Valley Area Plan, except for the rezoning of one parcel, 1123 Emerald Bay Road, from Open Space to Town Center Gateway District and another parcel near Third Street and Barton Avenue from TC-MUC to OS. The first change is being made to allow for development of housing, as the parcel has been identified as an Asset Land. The second change recognizes the CTC's acquisition of a formerly private parcel.

The Tahoe Valley Area Plan does not propose an allocation of People at One Time (PAOT) summer day recreation use. However, the Plan includes a Recreation Section that contains policies to promote a range of recreation uses (e.g., public open space areas with and without recreational improvements, green spaces, plazas and public gathering places, dog park, neighborhood pocket parks/playgrounds, bike and pedestrian opportunities, and establishment of a "recreation hub" near the "Y" intersection area).

A major component maintained in the Tahoe Valley Area Plan is construction of the Tahoe Valley Greenbelt. The project calls for construction of a unique recreation and open space community amenity located just southeast of the Y intersection. The project will serve as an enhanced area-wide stormwater treatment system that includes SEZ restoration, installation of pedestrian-bicycle paths, pedestrian amenities, and interpretive signage. The Greenbelt will serve as a visual amenity for adjacent residential and commercial uses and provide a bicycle and pedestrian linkage connecting the commercial core to adjacent residential uses.

Public Services

The Tahoe Valley Area Plan includes policy provisions that support upgrading the Lukins Brothers Water System (though no specific improvements have been identified), encouraging new and remodeled structures to design for solar orientation and solar panels, and incorporating a greater variety of green technology design techniques to reduce energy consumption, and promoting access to broadband.

Conservation//Natural and Cultural Resources

In the Tahoe Valley Area Plan the City identifies natural and cultural resource goals, policies and implementation strategies to implement provisions of the Regional Plan and General Plan. The following is a summary of improvements identified in the initial Tahoe Valley Area Plan, which have not been modified:

- Zoning SEZ restoration sites and stormwater drainage basins as open space.
- Designate the view of Tahoe Mountain and the distant ridgeline views of Monument Peak as new scenic resources.
- Incorporate design standards to ensure that the built environment is compatible with the natural scenic qualities of the Lake Tahoe Basin.
- Complete construction of the US 50 and SR 89 Water Quality Improvement Project.
- Restore disturbed SEZs located within the Tahoe Valley Greenbelt.
- Coordinate with the California Tahoe Conservancy to prioritize the removal of development and land coverage from delineated SEZs and the TRPA designated Stream Restoration Plan Area.
- Amend the 1987 Bailey Mapped Land Capability Map to adopt an updated map that more accurately delineate the boundaries of the SEZs located within the Tahoe Valley plan area.
- Implement the area-wide stormwater system for the Tahoe Valley Water Quality Improvement Project.
- Implement the City's Pollutant Load Reduction Plan by registering the Glorene and 8th Street Water Quality Improvement Project.
- Promote the transfer of coverage from disturbed SEZs by creating a bonus coverage transfer match for transfers from the TRPA designated Stream Restoration Plan Area, the Tahoe Valley Greenbelt, and from the Upper Truckee River Hydrologically Related Area.

**NOTICE OF A PUBLIC HEARING CITY OF SOUTH LAKE TAHOE CITY COUNCIL**

NOTICE IS HEREBY GIVEN that in accordance with Sections 65090 and 65091 (Planning and Zoning Law) of the Government Code: the City of South Lake Tahoe City Council will conduct a public hearing on June 18, 2024 at 5:30 p.m., or as soon thereafter as possible, in the City Council Chambers, 1901 Lisa Maloff Way, South Lake Tahoe Airport, to consider the following:

- **South Tahoe Refuse Delinquent Fees Report**

*Summary: The City Council will be considering the South Tahoe Refuse Delinquent Fees Report and directing the Finance Department to send a Certified Copy of the Report to the El Dorado County Auditor-Controller to add the delinquent amounts to the county property tax rolls for collection, (gschooleman@cityofslt.us.*

- **Tahoe Valley Area Plan Amendments**

*Summary: Consideration of amendments to the Tahoe Valley Area Plan to eliminate regulatory inconsistencies, provide certainty in the project permitting process, increase redevelopment and property investments to revitalize the area's ageing infrastructure, and increase opportunities to activate the Town Center, increase housing, transportation, and circulation options (Anna Kashuba, akashuba@cityofslt.us).*

- **Tourist Core Area Plan Amendments**

*Summary: Consideration of amendments to the Tourist Core Area Plan to eliminate regulatory inconsistencies, provide certainty in the project permitting process, increase redevelopment and property investments to revitalize the area's ageing infrastructure, and increase opportunities to activate the Town Center, increase housing, transportation and circulation options (John Hitchcock, jhitchcock@cityofslt.us).*

Any interested person may appear at the public hearing and present written testimony or speak in favor or against the project proposal. Pursuant to Government Code Section 65009(b)(2), if you challenge the above application in court, you may be limited to raising only those issues, you, or someone else, raised at the public hearing described in this notice, or in written correspondence delivered to the South Lake Tahoe City Council at, or prior to, the public hearing. Written testimony may be addressed to the City Council in care of the City Clerk to PublicComment@cityofslt.us or mailed to 1901 Lisa Maloff Way, Suite 206, South Lake Tahoe, CA 96150. City Council agendas and related staff reports are available at least 72 hours in advance of regular meetings on the City's website https://cityofslt.us/84/Watch-City-CouncilCommission-Meetings or by contacting the City Clerk.

**Published: June 7, 2024**

# City of South Lake Tahoe

**Agenda Item Executive Summary**

Joe Irvin, City Manager

**Meeting Date:** June 18, 2024
**Agenda Item #:**20

**Agenda Item:** South Tahoe Refuse Delinquent Refuse Fees Report

**Executive Summary:** All properties within the City of South Lake Tahoe limits are required to pay refuse collection service fees. Fees that remain unpaid for 180 days after billing may be collected by South Tahoe Refuse pursuant to City Code 4.150.370. Properties for which fees are not paid will have a lien recorded on the property. The Planning Commission has conducted a public hearing to hear objections or protests from landowners liable for delinquent fees listed in the South Tahoe Refuse Delinquent Fees Report. The Planning Commission passed Resolution 24-015 recommending City Council to confirm the Final Delinquent Fees Reports.

**Requested Action / Suggested Motions:** Pass a Resolution confirming the Final Delinquent Fees Report and directing the Finance Department to send a certified copy of the Report to the El Dorado County Auditor-Controller to add the delinquent amounts to the county property tax rolls for collection.

**Responsible Staff Member:** Gretchen Schooleman, Assistant Planner

**Reviewed and Approved By:** Zachary Thomas, Director of Development Services Susan Blankenship, City Clerk Olga Tikhomirova, Director of Finance Heather Stroud, City Attorney

# City of South Lake Tahoe
# Report to City Council

**Meeting Date:** June 18, 2024

**Title:** South Tahoe Refuse Delinquent Refuse Fees Report

**Location:** Citywide

**Responsible Staff Member:** Gretchen Schooleman, Assistant Planner

**Background:** City Code Chapter 4.150 includes City regulations on refuse and garbage. Chapter 4.150.300 specifies the liability for residential or commercial property owners and/or occupants to pay for refuse services made available to the premises, regardless of the actual use of the refuse collection services. All properties within the City limits are subject to mandatory payment of collection fees.

Mandatory collection fees, authorized by City Code Section 4.150.340, which remain unpaid for a period of 180 days, may be collected by South Tahoe Refuse pursuant to City Code Section 4.150.370 (see Attachment 02). City Code Section 4.150.370 requires South Tahoe Refuse to prepare a delinquent fees report (Attachment 03), and for the report to be forwarded to the City Council after the Planning Commission holds a public hearing to hear any objections or protests of landowners liable for delinquent fees. A public hearing was held on May 16, 2024, during the regularly scheduled Planning Commission meeting. The Planning Commission passed Resolution 2024-015 recommending the City Council confirm the South Tahoe Refuse Final Delinquent Fees Report (Attachment 04).

**Issue and Discussion:** The delinquent fees set forth in the report constitute a special assessment against the respective parcels of land and are a lien of the property for such delinquent fees. Once the City Council confirms, a certified copy of the report is filed with The El Dorado County Auditor and County Recorder's office on or before August 1, 2024.

Properties for which the delinquent amount is paid prior to the Planning Commission and City Council public hearings are removed from the list prior to the Finance Department submitting the report to the El Dorado County Auditor and County Recorder's office.

**Public Notice** Pursuant to City Code Section 4.150.370.B, all delinquent account property owners on the report were mailed certified letters and a copy of the public notice indicating the time and place of the City Council hearing on May 20, 2024, and a public notice was published in the Tahoe Daily Tribune on June 7, 2024.

**Environmental Considerations – California Environmental Quality Act:** Confirming the Final Delinquent Fees Report and directing the Finance Department to send a certified copy of the Report to the El Dorado County Auditor-Controller to add the delinquent amounts to the county

property tax rolls for collection will not result in a direct or reasonably foreseeable indirect physical change in the environment, pursuant to the California Environmental Quality Act, Statute & Guidelines (CEQA), Section 15060.

**Financial Implications:** There are no adverse financial impacts to the City from this action.

**Policy Implications:** Passing a Resolution confirming the Final Delinquent Fees Report will support Priority 3 of the City of South Lake Tahoe Strategic Plan 2021-2026 by assisting South Tahoe Refuse to continue the operation of reducing the amount of litter through responsible waste management. The action will support City Code Chapter 4.150.300 which specifies the responsibility for all properties within the City limits are requiered to pay collection fees for refuse services made available to the premises.

# Resolution 2024-XX

**Adopted by the City of South Lake Tahoe**
**City Council**

**June 18, 2024**

## Confirming the South Tahoe Refuse Final Delinquent Fees Report

### BACKGROUND

A. South Lake Tahoe City Code Section 4.150.300 specifies the liability for residential and commercial property owners and/or occupants to pay for refuse service made available to the premise, irrespective of the actual use or the refuse collection service.

B. South Lake Tahoe City Code Section 4.150.370 makes delinquent refuse fees civil debts owed to the City and subject to collection.

C. Government Code Section 25831 authorizes the collection of delinquent solid waste (refuse) fees by the County, and Government Code Section 38790.1 states, “any city collecting garbage fees or charges may collect delinquent fees or charges in the manner provided in Section 25831 for counties.”

D. Pursuant to South Lake Tahoe City Code Section 4.150.370, South Tahoe Refuse has prepared a Final Delinquent Fees Report of unpaid fees for 180 days or more.

E. South Tahoe Refuse, on April 8, 2024, mailed certified letters to individuals on the report notifying them of the lien process, and informing them of the public hearings to consider objections and protests

F. On April 12, 2024, a public notice was published in the Tahoe Daily Tribune providing notice that the Planning Commission would consider the delinquent fees report at their regular scheduled meeting on May 16, 2024.

G. The Planning Commission held a duly noticed public hearing to hear objections or protests from landowners liable for delinquent fees on May 16, 2024 and passed a Resolution recommending City Council to confirm the South Lake Tahoe Refuse Final Delenquent Fees Report.

H. South Tahoe Refuse, on May 20, 2024, mailed certified letters to individuals on the report notifying them of the lien process, and informing them that the Hearing Boards met and confirmed delinquent fees and will be sent to Public Hearing before the City Council on June 18, 2024.

I. On June 7, 2024, a public notice was published in the Tahoe Daily Tribune providing notice that the City Council would consider to confirm the South Lake Tahoe Refuse Final Delenquent Fees Report at its regular scheduled meeting on, June 18, 2024.

**BASED ON THE FACTS SET FORTH IN THE BACKGROUND, BE IT RESOLVED**, that the City Council of the City of South Lake Tahoe:

1. Confirms the City of South Lake Tahoe Final Delinquent Fees Report (attached hereto as Exhibit A) and directs the Finance Department to send a Certified Copy of the Report to the El Dorado County Auditor-Controller to add the delinquent amounts to the county property tax rolls for collection.

Adopted by the City of South Lake Tahoe City Council on June 18, 2024 by the following vote:

Yes:
No:
Absent:
Abstain:

_____ Date:_____
Cody Bass, Mayor

Attest:

_____
Susan Blankenship, City Clerk

# Resolution 2024-015

**Adopted by the City of South Lake Tahoe**
**Planning Commission**

**May 16, 2024**

# RECOMMENDING THE CITY COUNCIL CONFIRM THE SOUTH TAHOE REFUSE FINAL DELINQUENT FEES REPORT

## BACKGROUND

A. South Lake Tahoe City Code section 4.150.300 specifies the liability for residential and commercial property owners and/or occupants to pay for refuse service made available to the premise, irrespective of the actual use or the refuse collection service.

B. South Lake Tahoe City Code section 4.150.370 makes delinquent refuse fees civil debts owed to the City and subject to collection.

C. Government Code section 25831 authorizes the collection of delinquent solid waste (refuse) fees by the County, and Government Code section 38790.1 states, “any city collecting garbage fees or charges may collect delinquent fees or charges in the manner provided in Section 25831 for counties.”

D. Pursuant to South Lake Tahoe City Code section 4.150.370, South Tahoe Refuse has prepared a Final Delinquent Fees Report of unpaid fees for 180 days or more.

E. South Tahoe Refuse, on April 8, 2024, mailed certified letters to individuals on the report notifying them of the lien process, and informing them of the public hearings to consider objections and protests.

F. On April 12, 2024, a public notice was published in the Tahoe Daily Tribune providing notice that the Planning Commission would consider the delinquent fees report at their regular scheduled meeting on May 16, 2024.

G. The Planning Commission held a duly noticed public hearing to hear objections or protests from landowners liable for delinquent fees.

**BASED ON THE FACTS SET FORTH IN THE BACKGROUND, BE IT RESOLVED**, that the Planning Commission of the City of South Lake Tahoe:

1. Recommends that the City Council of the City of South Lake Tahoe confirm the Final Delinquent Fees Report (Exhibit 1) and direct the Finance Department to send a Certified Copy of the Report to the El Dorado County Auditor-Controller to add the delinquent amounts to the county property tax rolls for collection.

Adopted by the City of South Lake Tahoe Planning Commission on May 16, 2024 by the following vote:

Yes: Wieczorek, Feiger, Howard, Lucksinger, Realo

Natalia Wieczorek (May 24, 2024 14:22 PDT)

Natalia Wieczorek, Chair

Date: May 24, 2024

Attest:

Susan Blankenship (May 24, 2024 10:41 PDT)

Susan Blankenship, City Clerk

NOTICE OF A PUBLIC HEARING CITY OF SOUTH LAKE TAHOE CITY COUNCIL

NOTICE IS HEREBY GIVEN that in accordance with Sections 65090 and 65091 (Planning and Zoning Law) of the Government Code: the City of South Lake Tahoe City Council will conduct a public hearing on June 18, 2024 at 5:30 p.m., or as soon thereafter as possible, in the City Council Chambers, 1901 Lisa Maloff Way, South Lake Tahoe Airport, to consider the following:

- South Tahoe Refuse Delinquent Fees Report

*Summary: The City Council will be considering the South Tahoe Refuse Delinquent Fees Report and directing the Finance Department to send a Certified Copy of the Report to the El Dorado County Auditor-Controller to add the delinquent amounts to the county property tax rolls for collection, gschooleman@cityofslt.us*

Any interested person may appear at the public hearing and present written testimony or speak in favor or against the project proposal. Pursuant to Government Code Section 65009(b)(2), if you challenge the above application in court, you may be limited to raising only those issues, you, or someone else, raised at the public hearing described in this notice, or in written correspondence delivered to the South Lake Tahoe City Council at, or prior to, the public hearing. Written testimony may be addressed to the City Council in care of the City Clerk to PublicComment@cityofslt.us or mailed to 1901 Lisa Maloff Way, Suite 206, South Lake Tahoe, CA 96150. City Council agendas and related staff reports are available at least 72 hours in advance of regular meetings on the City's website https://cityofslt.us/84/Watch-City-CouncilCommission-Meetings or by contacting the City Clerk.

# City of South Lake Tahoe

**Agenda Item Executive Summary**

Joe Irvin, City Manager

**Meeting Date:** June 18, 2024
**Agenda Item #:**21

**Agenda Item:** Cannabis Revenues Grant Program Award Recommendations

**Executive Summary:** On June 20, 2023, The City Council adopted Resolution No. 2023 - 016 updating the Cannabis Revenue Policy, Grant Program Process and Guidelines. Under the City Council policy for these grants (adopted May 18, 2021), up to half the previous year's cannabis revenues received is available for 2023 awards. $400,000 was reserved for this program for the 2024 - 2025 project year. The application period for the City's Cannabis Revenues Grant Program was April 15 - May 15. The review team met and considered 34 applications for $1,125,873, and 14 are recommended for awards totaling $411,861.32.

**Requested Action / Suggested Motions:** 1) Pass a Resolution appropriating an additional allocation of $6,257.45 of Cannabis Program Revenue toward the 2024 Cannabis Revenue Grant Program for a total amount of $411,861.32; 2) Pass a Motion authorizing Councilmember Wallace to execute the Resolution; and 3) Pass a Motion approving the grant awards to the projects recommended by the grant application review committee.

**Responsible Staff Member:** Sara Letton, Sustainability Coordinator

**Reviewed and Approved By:** Sue Blankenship, City Clerk Heather Stroud, City Attorney Olga Tikhomirova, Finance Director Joe Irvin, City Manager

# City of South Lake Tahoe
Report to **City Council**

## Meeting Date: June 18, 2024

**Title: 2024 Cannabis Revenues Grant Program Recommendations for Awards**

**Location:** Citywide

**Responsible Staff Member:** Sara Letton, Sustainability Coordinator, (530) 542-6175

**Background:** On May 18, 2021, City Council adopted Resolution No. 2021-039, establishing the Cannabis Community Benefit Fee Revenue Allocation Policy. Under this policy, City Council committed to allocating up to 50 percent of the previous year's cannabis revenue to a community benefit grant program. On March 15, 2021, the City Council adopted Resolution No. 2022-030 to establish the Cannabis Revenue Grant Program Process and Guidelines. On March 14, 2023 those guidelines were updated and adopted by City Council. Under these Guidelines, grants are to be awarded annually to South Lake Tahoe organizations whose projects contribute to mitigating the potential impacts of the cannabis industry in the city, and which help promote and address the priorities of the City Strategic Plan, including Built Environment, Recreation and Equitable Access, Community for All, Economic Development and Core Services & High Performing Government. Pursuant to these policies, $400,000 of cannabis revenue was committed towards this grant program for 2024, which is the same amount as 2023 and 2022.

**Issue and Discussion:** The review team engaged in a process developed by staff, within the council-adopted guidelines, and informed by the pilot year experience. All applications received at least two reviews by team members. Application questions were scored and totaled for each applicant. An average absolute score was ascribed to each. An efficiency score was calculated by dividing the average score by the amount requested. The applications were ranked. Projects were then selected for recommendation of award by the review team by consensus.

Thirty-four (34) applications were reviewed by the grant review committee, consisting of the Mayor Pro Tem, one City Council Finance Committee member, the City Manager, and the City's Finance Director. For Council's discussion and/or approval, the committee brings recommendations for awarding fourteen (14) projects that were most consistent with the criteria. All projects are recommended for funding at their full request. The following is the list of organizations recommended for awards, the amount they have requested, and with a brief project description, in no order:

| Applicant | Brief Project Description, as written by the applicants | Request |
|---|---|---|
| St. Theresa Bread and Broth | All funding from this grant would be used to purchase fresh food for our "Green Goals" project. The "Green Goal" project was instituted several years ago to ensure that each week we purchase fresh dairy products and fresh fruits and vegetables to distribute to diners that attend our Monday Meal hot dinner meal service. Each Monday, dinner guests receive bags of groceries as well as our "Green Goal" bag. This bag contains a minimum of 8 fruits and vegetables and fresh dairy. Families receive two bags. Although we get other groceries from the El Dorado Food Bank, the Food Bank of Northern Nevada, and donations from local grocery stores and restaurants, we must purchase fresh produce and dairy each week. Over the last year, we have increased the budget allocation for the "Green Goal" project to $1200 per week. The Bread and Broth Advisory Board has approved this due to the rising cost of food as well as the increasing average number of dinner guests we serve each Monday (85 - 135 guests per week). | $15,000.00 |
| Encompass Youth | Our project is framed within three focus areas that provide the information, skills and support needed to transition successfully to adulthood: Education/Job Readiness, Health and Well-being, and Independent Living.<br><br>The funding will be spent to provide services and resources within these three areas needed to help fill the gaps that exist within the community for these young people. Following are examples of how the funding will be spent:<br><br>1. Supplies: Supplies to best serve the youth.<br>2. Essential Needs: Food, toiletries, clothing, emergency shelter, rental & utilities assistance, transportation.<br>3. Health Needs: Substance use and mental health counseling, dental, and physical health support.<br>4. Positive Youth Development: Pro-social enrichment, academic recognition, educational and job training programs, social and emotional growth with support from caring adult Volunteer Navigators.<br>5. Training and Development: Webinars and other training support.<br>6.Telecommunications: Website maintenance and hosting, and newsletter platform for outreach and communication.<br>7. Indirect costs: Supporting a portion of the operations of the organization. | $25,000.00 |

| | | |
|---|---|---|
| Gateway Mountain Center | Over the past 3 years, Gateway Mountain Center has served more than 90 distinct youth in South Lake Tahoe, with a significant portion from communities facing the greatest inequities regionally. In 2021 we created a new program called Youth Ecology and Adventure (YEA!) to support South Lake Tahoe's growing need for equitable access to outdoor recreation programming for youth.<br><br>YEA! programs feature Summer Camps, School Year Programs, and Junior Guide Internships. All programs are free for referred youth and include adventures in nature, environmental education, mindfulness, and life skills to build confidence and resilience.<br><br>Funding supports planning, administration, and implementation of our programming in South Lake Tahoe including staff time (guiding & training), transportation costs, campsite/location fees, recreation services, food, supplies and equipment.<br><br>Funding will also support crafting Gateway Mountain Center's strategic planning for a South Lake Tahoe Youth Wellness Center for teens while school is out of session and continued youth support through our Junior Guide Internship program. The Youth Wellness Center will also serve as a gear lending locker and office space for YEA! Programs. | $50,000.00 |
| Marcella Foundation | We aim to pioneer a tech-driven, data-centered food recovery solution for SLT, leveraging our experience in engineering and entrepreneurship. SLT has the highest food insecurity rating in our region, with 16% in "great need." We seek $25K to address food insecurity and climate change through a custom-built, white label app that will help organize charitable food rescue logistics. Total cost is $155K, with Foundation covering staff time, project supplies, app fees, and Food Rescue Hero contributing $10K in seed funding. The app takes six weeks to develop and will be ready to power a brand-new food rescue initiative starting in Sept 2024. This incredible technology is used nationwide to manage food donations, mobilize volunteer drivers, coordinate real-time food rescue, and report GHG reduction. The app will have one dashboard to onboard, receive, and dispatch every food donation to local nonprofits, with live rescue tracking. It's volunteer-friendly, providing detailed reporting on pounds of food rescued, meals served, and GHGs reduced. Local nonprofits and food banks support the idea, noting they struggle with food recovery logistics, data management, volunteer recruitment, and the need for more food donations. | $25,000.00 |
| South Tahoe Amateur Hockey | Youth participation is vital to our program's success in achieving our mission of promoting youth ice hockey at all ages. We will use these funds to replace our rink dividers for our 8 and under program and secure new loaner gear for up to 20 players. Our current rik dividers are 15 years old and are in disrepair. Newer dividers are available that do not require volunteers to hold them throughout an 8U game. Rink dividers are essential for our youngest ages as it helps us divide the rink into appropriate sized rink for 8U players and enhances their development by allowing more involvement in the play and more touches of the puck. The dividers are essential for our youngest players to travel elsewhere and play on 8U rinks. They also allow us to host local tournaments and NorCal Jamborees, inviting families from all over to visit Tahoe and play hockey. These families stay in local hotels and eat at local restaurants boosting the local economy. The loaner gear is essential for erasing the financial barrier to local kids to jin and try our program. If gear is provided, the cost of playing hockey is similar to other sports such as soccer and basketball. | $24,400.70 |

| | | |
|---|---|---|
| TASK | TASK is excited to move our mission forward as our own 501c3. Funds will be used to continue our Did You Know Campaign, which was successfully launched last year. The Campaign provided a space for engagement and positive conversation around our monthly topics helping to connect resources to support our community. The campaign has been an effective way to share resources and tips, especially through our social media site. Our followers grew on social media this past year, but we realized our website needs to be updated to act as a functioning resource for information. Once the website is updated it will house our Did You Know Campaigns and resources that can be easily accessed. Funds will support a staff member to keep the site relevant, launch a monthly newsletter, and engage on our social media sites. Funds will also support the Social Emotional Learning (SEL)Programs. Working in the schools allows us to meet students where they are and give them space to build and practice SEL skills. Through programs like Challenge Days, students have opportunities to voice ideas, connect with peers and staff, and practice SEL skills. The pilot of Soul Shoppe last year at Sierra House Elementary School was successful at building SEL skills to deal with big emotions, build healthy relationships, and learn tools for positive communication during conflict. TASK will use funds to help bring the program to Tahoe Valley Elementary School to support their students. | $50,000.00 |
| Lake Tahoe Historical Society | Our project is to connect the community to the history of the south shore of Lake Tahoe through the annual Western Days. The City of South Lake Tahoe would sponsor a wagon led by two horses in the 76th annual Highway 50 Wagon Train on the second weekend of June 2025. It will have a City of South Lae Tahoe banner on the side throughout the one-week journey between Stateline and Placerville. It will carry four local children with an adult on the kickoff day of the event. The funds will also support the festivities at the museum complex the day before the wagons proceed through South Lake Tahoe. | $6,650.00 |
| High Sierra Softball | This is a one-time equipment purchase to replace existing worn and outdated gear as well as to acquire new equipment to improve the quality of instruction HSS can provide to players. We expect this would benefit the local softball program for many years to come. In a perfect world HSS would acquire gear to outfit 5 teams in each of the 4 divisions: 60 helmets, 60 bats, 20 sets of catcher's gear, 200 balls, 20 gear bags, 6 sets of bases (3 in ground, 3 heavy duty on ground), 6 field rakes, 3 field brooms, 3 sifting scoop shovels, 2 field tampers, 4 base anchor dugout tools, 2 nail drags, 4 hand drags, 6 batting tees, 2 pitching machines, 2 line chalkers, 2 line painters, chalk and paint, string line, 2 x 100' tape measures, and 6 hitting/pitching nets. Of note, some equipment is per team and other equipment is per practice location. At current market prices the total cost is $24,725.62. However, manufacturers and vendors for this type of equipment sometimes offer bulk purchase/youth sports/closeout discounts and we hope to gain some efficiency through strategic purchasing. A partial award would allow us to make proportional progress towards project objectives. | $24,725.62 |

| | | |
|---|---|---|
| Mountain High Recovery Center | MHRC will partner with South Tahoe High School to provide early intervention treatment services to adolescents with cannabis, vaping, or other identified substance use issues. Students will be identified voluntarily through the Wellness Center or required to attend services as a condition of disciplinary action if under the influence or possessing substance use paraphernalia on campus 2 or more times during a school year. MHRC will provide a 6-week, early intervention substance use treatment group 3x per week during students' flex periods. Additional individual services and family support will be provided based on severity of substance use identified during initial screening. In addition, MHRC will attend school events throughout the year to gather additional data related to student substance use trends and provide information regarding risks of substance use to reduce substance use in low-risk population. Funding from the grant will supplement funding secured through the El Dorado County Opiate Grant. This funding will allow MHRC to hire a part-time substance use counselor dedicated to this program. | $48,000.00 |
| Tahoe Art League | For two years, we have received Cannabis funds to support art classes for at risk kids/adults and murals around town. Both programs have been a success. We are seeking funds to expand them once again this year and hope to make them self-sustaining in the future. ART CLASSES: Last year, we piloted art classes into the FRC to better target kids in need. We also piloted a few classes for kids/adults with Special Needs. This is a very underserved group and those classes were a huge hit. We would like to continue to refine those classes and offer 2 classes/month at FRC for 1st - 8th grade students. As well we would offer 2 classes/month for Special Needs kids/adults. MURALS: We have just gotten 2 new murals approved and have 3-5 additional murals we hope to fund. With this grant and matching funds, we can have 2-3 more installed. We are very excited as one is a mural done by a member of the Washoe Tribe. Another will be done with help from members of the Special Needs Community. The third is a striking depiction of a man coming out of the lake with his dog. The fourth is a close up of bees inside a flower depicting the importance of local pollinators. Our future model is to find businesses that can supply matching funds. | $15,620.00 |
| Tahoe Rim Trail Association | his project will help students facing barriers gain practical and personal skills through two programs at the TRTA: the Youth Backcountry Camp (YBCC) program and Trail Stewards program. In the YBCC program, 150 middle and high-school students from 12-17 years-old will discover resilience and practice sustainable recreation on a four-day, technology free backpacking trip in Tahoe's backcountry. This fully-outfitted program is offered at no cost to youth facing barriers to outdoor access, who are recruited through collaboration with local organizations such as SOS Outreach. In the Trail Stewards program, a 10–15-person cohort of college students will attend a series of trail work days to learn first-hand about the principles that guide sustainable trail building and maintenance. Students will explore a new career field while connecting with a world-class recreation system in their own backyard. CRGP funding would support inclusion training, staff time for project planning and implementation, material workday support, printing and reproduction for promotion and registration, software expenses to use ArcGIS StoryMaps for project reporting and promotion, and a 10% de minimis in-direct cost rate. | $29,700.00 |

| | | |
|---|---|---|
| STMS PTA | After piloting afterschool enrichment clubs at the middle school this past year, we want to continue to grow the program. We would use these funds to sponsor 10 afterschool enrichment clubs with stipends and supplies for fall and spring clubs. Before we had the grant last year, there were few options for afterschool activities that were free and on campus. This was exactly the time when kids tend to get into trouble and experiment with drugs and alcohol. There is interest in many of the same six clubs that we ran this year in addition to a football club and a volleyball club for next year. We plan to pay the Club Advisors $1500 stipend and provide approximately $600 for supplies per club. | $21,000.00 |
| El Dorado Community Foundation | EDCF is fiscally sponsoring two projects: The Drug Store Project and Christmas Cheer All Year. The Drug Store Project funds will be spent toward 300 6th graders to participate in the DSP, a reality-based presentation provided by 45 agencies and 200+ volunteers at LTCC, teaching what can happen with substance use/abuse. Funds will cover the majority of the program costs. The goal is to educate youth on the dangers of drugs. They will bring home educational materials and harm reduction materials for families to make homes safer. Christmas Cheer All Year was founded with the goal of serving as many varying needs of our most marginalized community members. The program services include food assistance, as well as clothing distribution. Rather than just spreading the hope and joy of the holiday season once a year, this operates year round. Funding will be allocated to secure more food for distribution to all food insecure families, as well as purchase and register a delivery truck to help ensure that no community member goes unserved with these essentials. | $46,765.00 |
| Sober Grad Night | rad Night's funding request primarily covers entertainment and vendor expenses. As costs for individual hires have risen significantly over time, and donations have declined substantially, this funding is crucial to ensure the event's success. The grant will support these essential elements of our event, providing a memorable and enjoyable experience for each graduating senior. Additionally, we plan to allocate funds towards purchasing a memorable gift to enhance their experience and commemorate their achievements. We have chosen to partner and rotate through 3 local vendors; Tahoe Heartbeat, Made in Tahoe, and Lovin Lake Tahoe. We also plan to collaborate with Visit Lake Tahoe Visitors Authority to provide sustainable water bottles for attendees and volunteers, promoting environmental responsibility. This partnership aligns with our commitment to sustainability and community engagement. Last year's City Cannabis Grant facilitated the essential purchase of a new storage container and shelving, demonstrating the impact of such funding on our event's infrastructure. With continued support, Grad Night's ability to provide a safe and enjoyable celebration for graduates would be protected. | $30,000.00 |
| | Total of all recommended project requests | $411,861.32 |

**Financial Implications:** $400,000 was originally designated for this program in the midyear budget request, according to the Policy. The recommendations for awards totals $411,861.32. At least $5,608.87 was left unspent from the 2023 grant program allocation of $408,625. The review team recommends allocating and additional $6,257.45 to fund the 14 projects at their full requested amount.

**Environmental Considerations:** This is not a “project” subject to review under the California Environmental Quality Act (CEQA) under CEQA Guidelines section 15378(b)(2) (continuing administrative activities).

**Policy Implications:** The program is guided by the Cannabis Community Benefit Revenue Allocation Policy and was funded according to that Policy. The awarded projects fall within the guidelines approved by City Council, and all will help achieve progress on the City's Strategic Plan. To be eligible, each applicant had to name at least one Strategic Priority addressed by their project. More points were earned by projects that addressed more Priorities.

# Resolution 2024-XXX

## Adopted by the City of South Lake Tahoe City Council

## June 18, 2024

## Appropriating an Additional Allocation of $6,257.45 of Cannabis Program Revenue toward 2024 Cannabis Revenue Grant Program

**BACKGROUND**

A. On February 19, 2019, the City Council adopted Ordinance No. 2019-1126 which regulates cannabis businesses in order to ensure the health, safety, and welfare of the residents of the city of South Lake Tahoe and visitors.

B. Cannabis businesses pay a cannabis business license tax equal to six percent of gross receipts.

C. On May 18, 2021, City Council adopted Resolution 2021-039 which established the Cannabis Community Benefit Fee Revenue Allocation Policy, and on June 20, 2023, adopted Resolution 2023-016 which updated the Cannabis Revenue Grant Program Process and Guidelines.

D. Pursuant to these policies, $400,000 of cannabis revenue was committed towards this program for 2024.

E. The City's grant review committee received and reviewed thirty-four eligible (34) applications and selected fourteen (14) projects, resulting in a total recommended award amount of $411,861.32.

F. At least $5,608.87 was left unspent from the 2023 grant program allocation of $408,625.

G. Sufficient fund balance is available in the Cannabis Special Revenue Fund to allocate additional funding and cover the remaining budgeted expense through the end of the fiscal year of 9/30/2024.

**BASED ON THE FACTS SET FORTH IN THE BACKGROUND, BE IT RESOLVED**, that the City Council of the City of South Lake Tahoe:

1. Appropriates additional allocation of the Cannabis Community Benefit Fee revenue to the City's Cannabis Revenues Grant Program of $6,257.45.

2. Approves the amendment to the budget in account 223-02120 as follows:
   Expense 44032 Contributions/Sponsorship $6,257.45

Adopted by the City of South Lake Tahoe City Council on June 18, 2024, by the following vote:

Yes:
No:
Absent:
Abstain:

_____ Date:_____

# Resolution 2023-016

**Adopted by the City of South Lake Tahoe**
**City Council**

**March 14, 2023**

## Adopting the 2023 Cannabis Revenue Policy, Grant Program Process and Guidelines

### BACKGROUND

A. On May 18, 2021 the City Council adopted the cannabis community benefit fee revenue allocation policy to create a community-wide benefit grant program. This program will provide funding opportunities to local schools, government agencies and non-profit organizations with programs or projects designed to mitigate potential impacts of the cannabis industry in South Lake Tahoe and which promote the priorities of the City Strategic Plan.

B. Cannabis businesses pay a business license tax pursuant to Measure G, adopted by voters on November 8, 2022, equivalent to six (6) percent of Gross Receipts and $20/square foot of canopy for cultivation.

C. The proposed 2023 community-wide cannabis revenue grant program application process and guidelines (Exhibit A) to this Resolution have been developed to assist the City in an annual review of proposals for funding opportunities to local schools, government agencies and non-profit organizations with programs or projects designed to mitigate potential negative impacts of the cannabis industry in South Lake Tahoe and which promote the priorities of the City Strategic Plan.

D. The 2022 grant program pilot year has, to date, successfully managed 14 grant projects in the community. Projects will close out in spring and summer 2023.

**BASED ON THE FACTS SET FORTH IN THE BACKGROUND, BE IT RESOLVED**, that the City Council of the City of South Lake Tahoe:

1. Approves the 2023 Cannabis Revenue Policy, Grant Program Process and Guidelines attached hereto as Exhibit "A."

Adopted by the City of South Lake Tahoe City Council on March 14, 2023 by the following vote:
Yes: Creegan, Friedrich, Robbins and Wallace
Recused: Bass

Cristi Creegan
Cristi Creegan (Mar 16, 2023 15:36 PDT)

Date: Mar 16, 2023

Cristi Creegan, Mayor

Attest: Sue Blankenship (Mar 15, 2023 10:46 PDT)

Susan Blankenship, City Clerk

*The presence of electronic signature certifies that the foregoing is a true and correct copy as approved by the South Lake Tahoe City Council.*

**CANNABIS REVENUE POLICY**

**GRANT PROGRAM**

**2023 Process & Guidelines**

To assist the City Council in the evaluation of the community-wide cannabis revenue grant program, the following process and guidelines have been developed to assist the City in an annual review of proposals for funding opportunities to local public agencies and nonprofit organizations with programs or projects designed to mitigate potential negative impacts of the cannabis industry in South Lake Tahoe and which promote the priorities of the City Strategic Plan. The City's Strategic Priorities are Built Environment, Recreation and Equitable Access, Community for All, Economic Development and Continuous Improvement. The Strategic Plan can be found here: https://www.cityofslt.us/DocumentCenter/View/15828/City-of-SLT- Strategic-Plan-web-version

Please note that this is a grant program for project funding. It is not a donation or sponsorship program. Strong applications will directly address one or more Strategic Priorities while also addressing potential negative impacts of the cannabis industry.

## GRANT DETAILS

- Grant amounts will range from $1,000 to $50,000.
- Funds must be expended within one year
- No more than a 10% de minimus indirect cost rate allowed; unless the organization can provide a separate approved federal cognizant agency indirect cost rate.
- The City shall disburse 90% up front, and the final 10% shall be reimbursed upon successful completion of final reporting.
- Detailed documentation of eligible expenses is required.

## WHEN CAN I APPLY?

The City grant program will open on April 15, and the submittal period will remain open until 11:59 p.m. on May 15.

## ELIGIBILITY

- You must have a current City of South Lake Tahoe Business License at the time of application submittal.
- Your entity and proposal must be focused on efforts to mitigate potential impacts of the cannabis industry in South Lake Tahoe and promote the priorities of the City Strategic Plan.
- Your entity must be located within the city limits or serve the community of South Lake Tahoe, CA.
- One application per entity
- If you are a past year recipient you must be in compliance with the annual reporting requirement, which includes the submittal of a written report detailing how your previous award was expensed to the City no later than March 31 following a previous year's grant award.
- Must meet all requirements outlined in the city's "Financial Policy for Granting Funds for

Community Benefit and Enhancement"

**APPLICATION REVIEW**

- Please be sure your application is complete when you send it in. The City reserves the right to not consider incomplete applications.
- Applications will be reviewed by the grant committee, consisting of the Mayor, one City Council Finance Committee member, the City Manager and the City's Finance Director.
- The grant committee will make recommendations to the City Council no later than June 30 annually for consideration and approval.
- To provide transparency, the City of South Lake Tahoe will post a list on the City's website showing all grant recipients and the amount received. By signing and submitting a grant program application with the City of South Lake Tahoe, you agree to have your entity's name along with the grant amount listed on the website. Please note that anything submitted to the City is considered public record and can be made available via a public records request.

**SUBMITTING YOUR APPLICATION**

You will be required to submit the following required documentation along with your signed application form:

1. A photo or copy of your current City of South Lake Tahoe Business License
2. A current IRS Form W-9 showing your Taxpayer ID
3. For nonprofits, attach your IRS letter with proof of tax-exempt status and a screenshot of Secretary of State Business Search website showing ACTIVE status of your nonprofit
4. For governmental agencies, attach federal TIN documentation
5. Federal tax return 990/990-PF or previous year audited financial statement OR a previous year audited financial statement

**Please submit the application form and the supporting documentation via email to**

Grantprogram@cityofslt.us

**Or**

**Send to:**
City of South Lake Tahoe City Hall
Attn: Grant Program
1901 Lisa Maloff Way, Suite 210
South Lake Tahoe, CA 96150

**Or bring to the Finance drop box at the above address.**

**To be considered for the grant, your materials must be in by 11:59 p.m. on May 15.**

**Contact the City of South Lake Tahoe at Grantprogram@cityofslt.us with questions.**

# City of South Lake Tahoe

**Agenda Item Executive Summary**

Joe Irvin, City Manager

**Meeting Date:** June 18, 2024
**Agenda Item #:**22

**Agenda Item:** Presentation of Elections Code Section 9212 Report for Vacancy Tax Citizens Initiative Petition

**Executive Summary:** On May 7, 2024, City Council requested that staff prepare a report under Elections Code section 9212 for the Vacancy Tax Citizens Initiative ("Initiative"), which has qualified to be on the ballot on November 5, 2024. The purpose of this report is to assist the electorate in making an informed decision on the Initiative. To that end, City staff, with assistance from HdL on quantitative analysis, has prepared the report covering the topics as directed by City Council. In summary, the report estimates that if adopted and implemented as written, the Initiative would have a net positive fiscal impact. First year revenue estimates, based on assumptions on a portion of the potentially vacant properties being subject to exemptions and some vacant properties being undiscovered/noncompliant, are between $4.16 million to $8.33 million, with first year implementation costs including startup costs estimated at $986,000. Second and subsequent year revenue estimates, based on similar assumptions, range from $10 million to $20 million, with ongoing implementation costs of $608,200 per year. The report also includes analysis on the effect on use of land, availability of housing, and ability of the City to meet its regional housing needs, impact on funding for transportation infrastructure, a high-level legal analysis, privacy impacts, impacts on the market value of real estate, and the best methods to determine vacancies.

**Requested Action / Suggested Motions:** Pass a Motion to accept Elections Code Section 9212 Report and direct City Clerk to post final version online.

**Responsible Staff Member:** Heather Stroud, City Attorney, and Olga Tikhomirova, Director of Finance

**Reviewed and Approved By:** Susan Blankenship, City Clerk

**Attachments:**

01 - Staff Report - Presentation of Elections Code 9212 Report.docx
02 - 9212 Report for Vacancy Tax Initative.pdf

# City of South Lake Tahoe
Report to **City Council**

## Meeting Date: June 18, 2024

**Title: Presentation of Elections Code Section 9212 Report for Vacancy Tax Citizens Initiative Petition**

**Location:** Citywide

**Responsible Staff Members:** Heather Stroud, City Attorney (530) 542-6046
Olga Tikhomirova, Director of Finance (530) 542-7431

**Background:** On April 22, 2024, the City Clerk received the citizens initiative petition entitled "An Initiative Measure to Establish a Tax on Owners of Vacant Residential Units in the City of South Lake Tahoe" back from Locals for Affordable Housing with 2,471 signatures purporting to be signatures of qualified electors. The City Clerk delivered the petition via El Dorado County courier to the El Dorado County Elections Department in Shingle Springs for examination. On May 15, 2024, the County Elections Department notified the City Clerk that the petition exceeded the necessary number of valid signatures, which is 1,159 signatures from South Lake Tahoe registered voters.

Meanwhile, on May 7, 2024, City Council passed a motion requesting an Elections Code section 9212 report for the Vacancy Tax Citizens Initiative to be presented at the June 18 City Council meeting, to cover its fiscal impact (positive and negative), its effect on the use of land, availability of housing, and the ability of the City to meet its regional housing needs, and its impact on funding for infrastructure including transportation infrastructure, contingent on the City Clerk certifying the sufficiency of the petition. Council's motion also requested that the report include other matters: methods for determining vacancy, impact on property values, a list of differences with vacancy taxes adopted by other cities, and an initial high-level legal analysis. The motion directed that the report be as broad as possible given the time constraints.

The City Clerk presented a certificate of sufficiency of the petition to City Council at its meeting on June 4, 2024.

**Issue and Discussion:** In its entirety, Elections Code section 9212 states:

> (a) During the circulation of the petition, or before taking either action described in subdivisions (a) and (b) of Section 9215, the legislative body may refer the proposed initiative measure to a city agency or agencies for a report on any or all of the following:
>
> (1) Its fiscal impact.

(2) Its effect on the internal consistency of the city's general and specific plans, including the housing element, the consistency between planning and zoning, and the limitations on city actions under Section 65008 of the Government Code and Chapters 4.2 (commencing with Section 65913) and 4.3 (commencing with Section 65915) of Division 1 of Title 7 of the Government Code.

(3) Its effect on the use of land, the impact on the availability and location of housing, and the ability of the city to meet its regional housing needs.

(4) Its impact on funding for infrastructure of all types, including, but not limited to, transportation, schools, parks, and open space. The report may also discuss whether the measure would be likely to result in increased infrastructure costs or savings, including the costs of infrastructure maintenance, to current residents and businesses.

(5) Its impact on the community's ability to attract and retain business and employment.

(6) Its impact on the uses of vacant parcels of land.

(7) Its impact on agricultural lands, open space, traffic congestion, existing business districts, and developed areas designated for revitalization.

(8) Any other matters the legislative body requests to be in the report.

(b) The report shall be presented to the legislative body within the time prescribed by the legislative body, but no later than 30 days after the elections official certifies to the legislative body the sufficiency of the petition.

The purpose of this report would be to provide the electorate "the opportunity to make an informed decision on a proposed initiative." *DeVita v. County of Napa*, 9 Cal. 4th 763, 778 (1995) (citing the legislative history of AB 2202 (1997-1998)).

Staff has prepared the report requested by City Council, which is included with this item.

**Financial Implications:** The City Manager executed a contract with HdL for assistance with the fiscal impact and other quantitative portions of this report for an amount not to exceed $10,000.

**Environmental Considerations:** This action is not a "project" requiring review under the California Environmental Quality Act (CEQA) under CEQA Guidelines 15378(b)(3) (the submittal of proposals to the vote of the people that does not involve a public agency sponsored initiative).

**Policy Implications:** The City Council has ordered the report under the Elections Code to provide the electorate with more information about the proposed initiative.

# DRAFT

California Elections Code 9212 Report

# An Initiative Measure to Establish a Tax on Owners of Vacant Residential Units in the City of South Lake Tahoe

June 2024

## Introduction

The members of Locals for Affordable Housing have circulated a petition to have an initiative measure entitled "An Initiative Measure to Establish a Tax on Owners of Vacant Residential Units in the city of South Lake Tahoe" (Initiative) placed on the ballot in the upcoming election. On May 7, 2024, the City Council directed staff to prepare a report on the impacts of the Initiative in accordance with the provisions of California Elections Code Section 9212(a). On June 4, 2024, the South Lake Tahoe City Clerk presented a Certificate of Sufficiency to the City Council indicating that the petition has sufficient valid signatures to be submitted to the voters at the next regular municipal election to be held on November 5, 2024.

The Initiative will be on the November 2024 ballot for consideration by South Lake Tahoe voters. The Initiative would amend the City of South Lake Tahoe City Code to add Chapter 3.60 establishing an annual tax on owners of certain residential housing units that are unoccupied more than 182 days within a calendar year.

This report evaluates the potential impacts of the proposed initiative as requested by the City Council at its May 7, 2024 meeting.

## Scope and Assumptions

Elections Code section 9212 report allows to address the Initiative's potential impacts on the following:

(1) Its fiscal impact.

(2) Its effect on the internal consistency of the city's general and specific plans, including the housing element, the consistency between planning and zoning, and the limitations on city actions under Section 65008 of the Government Code and Chapters 4.2 (commencing with Section 65913) and 4.3 (commencing with Section 65915) of Division 1 of Title 7 of the Government Code.

(3) Its effect on the use of land, the impact on the availability and location of housing, and the ability of the city to meet its regional housing needs.

(4) Its impact on funding for infrastructure of all types, including, but not limited to, transportation, schools, parks, and open space. The report may also discuss whether the measure would be likely to result in increased infrastructure costs or savings, including the costs of infrastructure maintenance, to current residents and businesses.

(5) Its impact on the community's ability to attract and retain business and employment.

(6) Its impact on the uses of vacant parcels of land.

(7) Its impact on agricultural lands, open space, traffic congestion, existing business districts, and developed areas designated for revitalization.

(8) Any other matters the legislative body requests to be in the report.

The analysis included in this report covers its fiscal impact, its effect on the use of land, availability of housing and ability of the City to meet its regional housing needs, its impact on funding for infrastructure including transportation infrastructure, and other matters requested by City Council to include a high-level legal analysis, implementation costs, privacy impacts, market value real estate impact, and best method to determine vacancies.

The analysis included in this report assumes that the Initiative is adopted by the voters and implemented as proposed. In order to address the issues requested by City Council, it is important to note that some assumptions were necessary, where indicated throughout this report.

## Description of Initiative

The full text of the Initiative is included as Appendix A of this report. The Initiative is summarized as follows:

- Beginning on January 1, 2026, every owner of a residential unit in the City would be required to submit an annual declaration of occupancy.
- The owners of certain residential units that are vacant more than 182 days within a calendar year, would be required to pay annual tax.
- Beginning on January 1, 2026, annual tax rates would be established, subject to an annual CPI adjustment, as follows:
    - $3,000 per vacant residential unit for the first year of vacancy.
    - $6,000 per vacant residential unit for the second consecutive calendar year and each subsequent consecutive calendar year thereafter of vacancy.
- The tax would apply to various types of vacant residential units, including houses, apartments, and one or more rooms consisting of separate living quarters, but not to hotel rooms used for transient occupancy, accessory dwelling units, rooms in nursing homes, units owned by nonprofits or governmental agencies, or units not usable in the winter season.
- Units would not be considered vacant when an occupant using the unit as their principal residence is hospitalized or absent while service as a firefighter, emergency service worker, or in the military, when the residential unit is uninhabitable because of natural disaster, renovation, or construction, or because of the death of the owner who was the sole occupant, or during a declared emergency.
- This would be a special tax, meaning that use of the tax revenue would be restricted to specified purposes, including for repayment of bonds or other debt for the specified purposes: for housing purposes including constructing, purchasing, and operating housing properties and housing assistance, subsidy, and incentive programs; for roadworks and related infrastructure programs including construction, repair, maintenance, and replacement of roads, bicycle and multi-use paths, and stormwater infrastructure; for transit and related infrastructure purposes including bus and rail infrastructure within the

City and operational and capital equipment costs of public transit services to serve areas within and outside the City; and for City costs of administering the tax and any legal defense of the Initiative.

- A five-member Vacancy Tax Oversight Committee would be established to oversee the administration of the tax and make recommendations to City Council.
- The Initiative would authorize the City to adopt rules and regulations for the implementation and administration of the tax, and would allow the City Council to amend Chapter 3.60 by majority vote to increase penalties and fees or reduce the applicability of exemptions, or by two-thirds vote to add new exemptions.

## Potential Impacts of the Initiative

---

### (1) Fiscal Impact.

*Vacancy Tax*

By using South Lake Tahoe property tax data, the City's consultant, HdL, employed a multi-step filtering process to estimate the number of vacant residential properties. Tax bill mailing addresses not located within the city limits were excluded, along with properties classified as commercial, industrial, or other non-residential types. This initial cleaning aimed to ensure that the property dataset contained only potentially residential properties. The owner-occupied properties, focusing on addresses where mail was sent directly to the properties, were filtered out to reflect actual occupancy. In furtherance, property parcels without addresses were also filtered out. These steps led to identifying 8,229 potential vacant residential properties within South Lake Tahoe. To further refine the dataset, properties where the mailing address matched the physical address were excluded, assuming these were owner-occupied and not vacant. Finally, remaining properties were cross-referenced with voter data to exclude those classified as "permanent vote by mail," resulting in a total of 7,714 potentially vacant properties. There is no currently available data to determine how many of these potentially vacant properties would be subject to the tax because they are vacant, as defined by the Initiative, for more than 182 days per year, and not subject to an exemption. Therefore, for the purpose of estimating potential revenue, HdL prepared a range of potential revenue based on assumptions that 30 to 60 percent of these potentially vacant properties would be subject to the tax and 60% would comply by paying the tax.

Under this scenario, HdL laid out hypothetical revenue outcomes to show the impact of the new tax (see Appendix B). First-Year Revenue Estimates range from $4.16 million to $8.33 million. Two factors strongly influence the outcome of revenue:

i. The overall number of vacant residential units not subject to an exemption in the City.
ii. The extent and success of compliance efforts to register and collect the tax on vacant properties.

Subsequent years' annual revenues are estimated to range between $10.0 million and $20.0 million. Hypothetical revenue outcome based on the assumption that 100 percent of the potentially vacant properties are subject to vacancy tax (i.e., no property is subject to an exemption) is also provided for comparative analysis and informational purposes.

City staff anticipates that the annual revenue will also largely depend on the behavior of the property owners if the tax is adopted. Each owner could:

1. Sell the vacant unit;
2. Reduce the number of days vacant to below the 182 days by renting out for intermediate-term (30 days or longer);
3. Landlords could lower rents to attract full-time tenants to vacant units, though the opportunity cost of lost rental income tax might exceed the tax;
4. Pay tax.

*Sales Tax*

The measure could modestly increase Sales Tax revenue if vacancies are transitioned to permanent residency or long-term leases.

The current Sales Tax Revenue Impact ranges from $235,000 to $670,000 annually. HdL constructed their estimates with three assumptions:

1. Permanent residency would increase by approximately 540 to 1,543 residencies, with one to two residents per property.
2. Estimated household income will be approximately $67,686 per property based on 2022 US Census data.
3. Retail sales per property will be approximately $17,386 based on 2022 US Census data.

These figures are to be considered as upper and lower limits, giving a sense of the potential impact of the Vacancy Tax on the City's Sales Tax.

*A note on Transient Occupancy Tax*

The Initiative does not exempt residential units used as vacation home rentals from the tax. (Appendix A, Section 3.60.010(D)(1)(b)).

Presently, the City restricts vacation home rentals of less than 30 days, also called short-term rentals (STR) in residential areas, except for properties located within the Tourist Core area and property zoned for commercial or recreation, which constitute a small portion of the City. Given the significant initial costs and time commitments associated with converting a property into an STR, only a limited number of property owners are likely to pursue such a venture within the City. Furthermore, as short-term rental eligibility is limited to a small percentage of properties, HdL anticipates minimal to no impact on the transient occupancy tax with this tax measure.

Overall, City staff estimates the overall fiscal impact from vacancy tax to be positive.

Implementation costs are discussed below in Section (5).

## (2) Effect on the use of land, availability of housing, and ability of the City to meet its regional housing needs.

The implementation of the Initiative may have impacts on use of land, availability of housing, and ability of the City to meet its regional housing needs. The Initiative will likely have no effect on the use of land since the land use will continue as residential for existing residential properties. If the Initiative influences behavioral change with regard to property owners occupying or renting properties for longer periods of time, there may be related impacts associated with traffic patterns and other impacts.

The Initiative's impact on availability of housing will largely depend on the behavior of the property owners if the tax is adopted. Property owners may decide to sell their unit, reduce the number of vacant days at the residence, rent the property to full time tenants, or pay the tax. If property owners choose to rent their properties in response to the tax, this may increase the supply of moderate-income and above moderate-income housing, but at a level that cannot be determined with existing data.

It is difficult to predict how owners of vacant residential units will respond to the Initiative. Based on experience with the Lease to Locals program, in which only 40 homes were converted to long-term rental properties with a $10,000 per year incentive, it appears that financial incentives are not particularly effective to motivate owners of vacant property in South Lake Tahoe to rent out their homes for longer terms.

Compliance with the state mandated Regional Housing Needs Allocation (RHNA) is met through the development of new deed-restricted homes. As such, the Initiative will only positively affect RHNA compliance if City Council ultimately decides to use funds from the Initiative in any of the new construction programs listed below.

For the purpose of this report, staff assumes that funds from the Initiative would be used to support the strategies set forth in the certified 2022-2027 Housing Element and 2023-2028 Strategic Plan. The Housing Element and the 2023-2028 Strategic Plan, both adopted by City Council, include comprehensive housing strategies aimed at addressing the diverse housing needs within the city.

The Housing Division Expenditure Plan, presented to City council on September 26, 2023, specifies the annual financial needs across six broad housing program categories: New Construction, Local Rental Incentive (Lease to Locals), Multifamily and Special Needs Acquisition and Rehab program, Housing Issues Hotline & Affirmatively Furthering Fair Housing programs, Rental/Deposit Assistance, and Rehabilitation Loan/Homebuyer Assistance Programs. These categories are structured to align with the 45 programs set forth in the 2022-2027 Housing Element and further prioritized by the City's Strategic Plan.

Section 3.60.100 (Use of Residential Vacancy Tax Ordinance Revenue) includes the purposes the tax revenue may be used for, including a list of housing purposes including: (1) the

construction of housing; (2) the purchase of property to create new housing opportunities; (3) paying property owners to add deed restrictions; (4) purchase of property containing existing housing to continue its operation; (5) renovation, maintenance, expansion, or operation of housing units including rehabilitation loan programs; (6) housing assistance programs; (7) housing incentive programs; (8) housing support services; and (9) enforcement of allowed uses of residential purposes. These allowed uses of revenue are in general alignment with the Housing Element and Strategic Plan strategies.

However, there are no parameters for a minimum or maximum share that must be used for housing in general or for any specific housing program listed. The allocation decision is left to City Council with input from the Vacancy Tax Oversight Committee. The revenue generated by such a tax, if enacted, could potentially support any, all, or none of the existing housing programs, depending on evolving priorities and funding requirements of the city. Section 3.60.100 also allows funds to be used for "Roadworks and related infrastructure purposes" and "Transit projects and related infrastructure."

However, for the purposes of this report, we assume that some portion of the tax revenue would be directed to the following housing programs:

1. New Construction Program (Housing Element Goals: HE-1, HE-2, HE-6, HE-7): This program supports the construction of affordable housing by leveraging local funds to access state and federal resources, including significant projects. Key projects within this program include Sugar Pine Village (248 units) and the 3900 Lake Tahoe Blvd. (75 units) affordable housing projects. Currently, local funding primarily comes from existing Redevelopment Agency and HOME program income, as well as a Land Coverage Loan from the general fund, which helped finance Phases 1A and 2A (128 units) of Sugar Pine Village. These projects, such as Sugar Pine Village which is part of the Governor's Executive Order (N-06-19) to expedite State Excess Lands projects, typically face a highly competitive funding environment. Obtaining grants for affordable housing projects often involves multiple applications due to the competitive nature of the funding sources and the high demand for such funds across the state. Local funding is used a leverage to compete for grants.

2. Local Rental Incentive Program (Lease to Locals) (Housing Element Goal: HE-1): This initiative, also known as Lease to Locals, has been effective in converting properties into long-term rentals, initially supported by a one-time federal grant from the American Rescue Plan Act (ARPA). Since its inception, the program has helped numerous individuals find homes in units that were not previously under-utilized or vacant homes. Since the program launched in 2021 until April 2024, 40 grants have been provided and housed 94 people, including children, and 16 leases were renewed after the first year.

3. Multifamily and Special Needs Housing Acquisition and Rehab Programs (Housing Element Goals: HE-3, HE-4): The Multifamily and Special Needs Housing Acquisition and Rehab Programs focus on acquiring and rehabilitating housing for seniors, disabled individuals, individuals experiencing homelessness, and large

families. These programs collaborate with developers, property owners, and affordable housing providers to improve existing multifamily or hotel properties, thereby enhancing housing options for low- and moderate-income tenants. At present, the program's primary funding source is similar to grants required for New Construction Program.

4. Housing Issues Hotline and Affirmatively Furthering Fair Housing Programs (Housing Element Goal HE-5): Annual funding is required to support the Housing Issues Hotline and enhance services to support tenants and other deliberate action to explicitly address, combat, and relieve disparities in accordance with the Federal Fair Housing Act and California AB 686 statutory mandate to affirmatively further fair housing (AFFH). AFFH requires all jurisdictions to address community housing issues related to segregation, concentrated poverty, and disparities in housing needs and access for protected groups under the Fair Housing Act.

   The Housing Issues Hotline and Affirmatively Furthering Fair Housing Programs are designed to combat housing discrimination and promote fair housing practices. Currently, the primary funding source is the Multifamily/SRO Inspection program and depends on referrals for legal services regarding civil issues.

5. Rental/Deposit Assistance Program (Housing Element Goal HE-2): The Rental/Deposit Assistance Program in South Lake Tahoe aims to support individuals and families who can afford their monthly rents but struggle with the initial move in costs associated with security deposits. Upon its launch, this program will allocate surplus funds from the Cannabis Revenue fund, as approved by the City Council on March 12, 2023, to those earning less than 80% of the area median income (AMI).

6. Rehabilitation Loan Program/Homebuyer Assistance Program (Housing Element Goals HE-2, HE-3, HE-7): These programs in South Lake Tahoe are designed to provide loans to low- and moderate-income property owners for housing rehabilitation or downpayment assistance. These efforts include improving living conditions, enhancing fire safety, and implementing energy efficiency upgrades. Currently, the program has no funding.

For the purpose of this report, it is assumed that the revenue would be split equally between the three broad funding categories in the Initiative of housing, roads, and transit. With first year revenue estimates totaling $4.16 million to $8.33 million, and first year implementation costs estimated at $986,400, a range of $1.06 million to $2.44 million would be assumed to be dedicated to these housing programs in the first year. In the second year and subsequent years, a range of $3.13 million to $6.46 million would be available for housing programs, deducting ongoing implementation costs of $608,200 and making the same assumptions. This could be an ongoing source of revenue to support these housing programs.

RHNA is met by the development of new housing by the following income levels: low-income, moderate income, and above moderate income. If funding from the Initiative is used for the new construction of deed-restricted low-income and moderate-income housing, it would help the City to meet its RHNA goals. Likewise, having an ongoing revenue source for the other housing programs would increase the City's ability to implement these programs and could have a positive impact on the City's ability to increase the availability of housing.

## (3) Impact on funding for infrastructure including transportation infrastructure.

According to HdL, the Initiative has the potential to raise revenue to contribute to developing an effective and comprehensive transportation network while simultaneously financing transit projects in the City's Capital Improvement Program (CIP), helping to expand and improve transit services as outlined in City General Plan policies TC-2.1 (Transit Service Expansion) and TC-2.4 (Transit Centers). Continued implementation of these General Plan policies, which were adopted in 2012, is reflected in the current City Strategic Plan Priority 1.4 (Transportation) which calls for development of a local funding mechanism that will allow for greater investment into the transportation system. The revenue from the Initiative could contribute to the ongoing maintenance of bicycle and pedestrian facilities, supporting the City's goal of developing a cohesive and continuous active transportation network. The initiative could generate revenue to implement parking management strategies, trail and complete street projects, expanded micro-transit services, electrifying transit vehicles, and developing a corridor plan for Highway 50 from the "Y" to Stateline, as directed in the City Strategic Plan, to reduce travel by private auto.

As discussed in the housing section above, for the purpose of this report, it is assumed that the revenue would be split equally between the three broad funding categories in the Initiative of housing, roads, and transit. One-third of the available revenue from the first year of implementation would be between $1.06 million to $2.44 million for road infrastructure and the same amount for transit. In the second and subsequent years, using the same assumptions, one-third of the available revenue would be between $3.13 million to $6.46 million annually for road infrastructure and the same amount for transit.

Since the passage of the Measure S (one percent sales tax) in 2020, the City has spent an average of $2.4 million per year on road repair, and in the same timeframe, the City has contributed $650,000 to the South Shore Transportation Management Association to support micro-transit. The additional revenue could be used to scale up these efforts.

## (4) High-Level Legal Analysis.

Because vacancy taxes in California are a relatively recent concept, there is no binding appellate case law regarding the authority of local governments to adopt them. There have been several

lawsuits challenging vacancy taxes in Canada[1] and Washington, D.C.,[2] but those decisions do not have precedential value here. Thus, this high-level legal analysis does not include a detailed discussion regarding lawsuits outside of California. The only pending lawsuit in California is regarding the City and County of San Francisco's Measure M, which is discussed below. City Council also requested that this legal analysis include a discussion of the materials submitted to City Council by the Lake Tahoe Taxpayers Association on May 7, 2024.

City Council requested that this report include a comparison of the South Lake Tahoe Initiative to vacancy taxes in other jurisdictions, which is set forth in Appendix C. It is important to note at the outset that there are differences between the Initiative and other jurisdictions' vacancy taxes, differences in South Lake Tahoe's circumstances from those present in other jurisdictions, and differences in governing law and appellate districts that could lead to a different result if a legal challenge were to be brought to the Initiative as opposed to the result to legal challenges to vacancy taxes in other jurisdictions. Because of this uncertainty, it is not possible at this time to predict with certainty how a court would be likely to decide a potential legal challenge to the Initiative.

**Status of Lawsuit Against San Francisco Vacancy Tax**

San Francisco's voters passed citizen's initiative Measure M by majority vote in the November 2022 election. Measure M established a tax on owners of residential units in buildings with three or more units if the units are vacant for more than 182 days in a year. This is a special tax with revenue dedicated to rent subsidies and affordable housing. Measure M was set up as an excise tax on the use of certain residential property.

On February 9, 2023, a legal challenge to Measure M was filed, entitled *Debbane et al. v. City & County of San Francisco et al.*,[3] San Francisco County Superior Court Case No. CGC-23-604600. The First Amended Complaint ("FAC") alleges that Measure M:

> (1) violates the Takings Clause of the Fifth Amendment to the U.S. Constitution because it "seeks to compel property-owners to rent residential units that they own by imposing a significant monetary penalty on vacant units" and thereby "seeks to compel property-owners to forfeit their constitutional 'power to exclude'" without just compensation (FAC ¶¶ 69-70);
>
> (2) violates the Ellis Act, Government Code section 7060(a), which provides that "No public entity . . . shall, by statute, ordinance, or regulation, or by administrative action

[1] The Vancouver, B.C. "Empty Homes Tax" has resulted in at least five lawsuits against the city since it was enacted in 2017. On July 28, 2023, Li Dan and Danice Macleod filed suit arguing the tax is unreasonable and invalid and seeking to quash it in its entirety, which is currently pending. The other four lawsuits involved challenges regarding individual properties' tax bills and whether certain exemptions applied.

[2] The Washington, D.C. vacant property tax has resulted in at least two lawsuits against the district since it was enacted in 2003, both of which were challenges of the tax as applied to individual properties and whether certain exemptions applied, and were both decided in 2024.

[3] The plaintiffs are: Eric Debbane, Andrew Debbane, Robert Friedland, Natasa Zec, San Francisco Apartment Association, Small Property Owners of San Francisco Institute, and San Francisco Association of Realtors. The defendants are: City and County of San Francisco and San Francisco Treasurer Jose Cisneros.

> implementing any statute, ordinance or regulation, compel the owner of any residential real property to offer, or to continue to offer, accommodations in the property for rent or lease . . . .” (FAC ¶75);
>
> (3) violates Substantive Due Process of the Fourteenth Amendment to the U.S. Constitution because it does not exempt leases to certain family members from the definition of “vacancy” and the U.S. Supreme Court has held that “the protection of close familial relationships is a fundamental liberty interest protected by the due process clause” (FAC ¶¶ 81-82);
>
> (4) violates the Equal Protection Clause of the Fourteenth Amendment to the U.S. Constitution because it “exempt[s] residential units that are leased to strangers from taxation but subject[s] residential units leased to close family members to taxation” (FAC ¶ 86); and
>
> (5) violates the right of privacy in Article I, Section 1 of the California Constitution because it seeks to “compel property-owners to allow units they own to be occupied” when they “do not wish to share their homes with others.” (FAC ¶ 90.)

The lawsuit seeks a declaration that Measure M is unenforceable, a writ of mandate commanding the City and County of San Francisco to refrain from enforcing it, a permanent injunction prohibiting enforcement, and for an award of costs and attorneys’ fees. (FAC at 28-29.)

On October 25, 2023, San Francisco filed a demurrer to the First Amended Complaint, arguing that the challenge to Measure M is premature because:

(1) The lawsuit is subject to the “pay first, litigate later” rule in Article XIII, Section 32 of the California Constitution;

(2) Measure M is not subject to a reverse validation action under either Government Code section 50077.5 (because it is a citizens initiative) or 53979 (because it is not a special tax for fire or police protection services);

(3) Measure M is not subject to a claim under Revenue & Taxation Code section 4808 because it is not a property tax collected on a property tax bill, but a use tax on keeping property vacant; and

(4) Measure M is not subject to a taxpayer claim under Code of Civil Procedure section 526a because that statute requires payment of the tax before bringing a lawsuit.

(Demurrer to FAC at 7-8.) The demurrer focused on these threshold procedural issues and did not address the merits of the plaintiff’s claims. On January 5, 2024, the San Francisco Superior Court issued an order overruling San Francisco’s demurrer. The court found that the lawsuit could be brought prior to payment of the tax:

> Petitioner states a claim for a declaration of validity of Proposition M. The facts giving rise to the tax have not yet occurred and the payment on such facts have

> not become due. Plaintiff's may obtain a declaration on essential validity of the tax without payment of the not yet accrued tax.

(Order, Jan. 5, 2024.)

On May 24, 2024, San Francisco filed a Motion for Summary Judgment or in the Alternative Summary Adjudication ("MSJ"), which is scheduled to be heard on August 9, 2024. San Francisco argues that each of the five causes of action fail as a matter of law, as summarized below.

(1) Takings Clause

San Francisco argues that as a tax, Measure M is not subject to that Takings Clause, citing *Koontz v. Johns River Water Management District*, 570 U.S. 595, 615 (2013). (MSJ at 17.) San Francisco further argues that the plaintiff cannot state a viable claim under the Takings Clause because such a claim must be brought under 42 U.S.C. section 1983, and state courts do not have jurisdiction to hear challenges to local taxes under Section 1983 so long as there is an adequate legal remedy under state law, citing *Writers Guild of America, West, Inc. v. City of Los Angeles*, 77 Cal. App. 4th 475, 478-79 (2000). (MSJ at 18.) San Francisco asserts that the state law remedy of a postpayment refund process, where taxpayers may raise constitutional challenges, is adequate. (MSJ at 19.)

San Francisco also argues that Proposition M is not unconstitutional under the Takings Clause because it does not seek to coerce owners into renting their residential units and similar local ordinances have been upheld by the U.S. Supreme Court, citing *Yee v. City of Escondido*, 503 U.S. 519, 528 (1992) (holding that mobile home park rent control ordinance was not a physical taking because it did not require owners to continue to rent property to tenants). (MSJ at 19.) San Francisco notes that Proposition M seeks to encourage owners to "occupy, inhabit, or use" their residential units for more than 182 days per year and does not require owners to rent their units. (*Id.*)

(2) Ellis Act

The Ellis Act, California Government Code section 7060 *et seq.*, prohibits a city or county from enacting legislation that compels the owner of residential real property to offer or continue to offer the property for rent. San Francisco argues that the Ellis Act does not restrict local governments from exercising their police powers to regulate the use of a landlord's property on matters such as zoning, demolition, and development, so long as those regulations do not otherwise prevent a landlord from going out of the rental business, citing Government Code section 7060.7. (MSJ at 21.)

San Francisco asserts that Measure M does not violate the Ellis Act because it does not require owners to rent their units, and further argues that Measure M is a "municipal affair" within San Francisco's authority as a charter city. (MSJ at 20.) San Francisco further asserts that plaintiffs have not established that they have meet the requirements of the Ellis Act necessary to remove their units from the rental market to state a claim under the Ellis Act. (MSJ at 21-22.)

(3) Substantive Due Process

The Due Process Clause of the Fourteenth Amendment affords certain substantive protections against deprivation of life, liberty, or property, but a cause of action must be brought under 42 U.S.C. section 1983. Substantive due process prevents the government from engaging in conduct that "shocks the conscience" and violates the "decencies of civilized conduct." *County of Sacramento v. Lewis*, 532 U.S. 833, 846 (1998).

San Francisco argues that state courts do not have jurisdiction to hear challenges to local taxes under Section 1983, citing *Writers Guild of America, West, Inc.*, 77 Cal. App. 4th at 478-79. (MSJ. At 22-23.) On the merits of this claim, San Francisco asserts that the right to exclude people from rental property has not been recognized by courts as a fundamental right subject to a substantive due process claim. (MSJ at 23.) As a non-fundamental right, San Francisco asserts that rational basis review would apply and that Measure M would survive rational basis review because it serves several legitimate governmental purposes, citing the Measure itself. (MSJ at 24.) San Francisco also points out that the plaintiff's argument that Measure M does not treat a lease to close family members to the same exemption as leases to strangers is based on a misunderstanding of the provisions of Measure M, and a lease to close family members who are actually occupying the unit would not be considered a vacancy. (MSJ at 24-25.)

(4) Equal Protection

The Equal Protection Clause generally requires people or groups who are similarly situated to be treated alike under the law. *Cleburne v. Cleburne Living Center, Inc.*, 473 U.S. 432, 439 (1985). San Francisco asserts that the plaintiff's claim fails because it is based on the same misunderstanding of the language regarding leases to close family members discussed above. (MSJ at 27.)

(5) Right of privacy

The California Constitution provides a right of privacy: "All people are by nature free and independent and have inalienable rights. Among these are enjoying and defending life and liberty, acquiring, possessing, and protecting property, and pursuing and obtaining safety, happiness, and privacy." San Francisco repeats its argument that there is no fundamental right at stake and nothing in Measure M requires property owners to share their homes with others. (MSJ at 28.)

Based on the arguments above, San Francisco requests that the Superior Court issue an order granting its motion for summary judgment and entering judgment in San Francisco's favor, or in the alternative requests that the Superior Court issue an order granting its motion for summary adjudication on individual causes of action. Plaintiffs have not yet filed a response to San Francisco's motion. The Superior Court will grant the motion if it finds "no triable issue as to any material fact." Cal. Code Civ. Proc. § 437c(c). If the Superior Court grants San Francisco's motion for summary judgment, the plaintiffs may file an appeal. If San Francisco's motion for summary judgment is not granted, the Superior Court will hold a trial, currently scheduled for December 9, 2024. Either party may file an appeal following a trial. Given the relative novelty of

San Fransico's tax, it is probable that the legal issues will ultimately be decided in the appellate courts.

**Lake Tahoe Taxpayers Association Materials**

At the City Council meeting on May 7, 2024, the Lake Tahoe Taxpayers Association (Taxpayers) provided written materials to the City Clerk and City Council regarding Agenda Item 18, Option for Elections Code Section 9212 Report for Vacancy Tax Citizens Initiative. The materials request that the City file a petition for writ of mandate to remove the Initiative from the ballot on the basis that the Initiative creates a "special tax district" consisting only of "vacant homes" that must be established by vote of property owners, not by the electorate, and is therefore beyond the power of the voters to adopt.[4] (Taxpayers' Materials at 1.)

As an initial matter, courts disfavor pre-election challenges such as the petition for writ of mandate requested by the Taxpayers. Courts prefer to defer ruling on the substantive validity of a ballot measure until after the election. *See, e.g., Brosnahan v. Eu*, 31 Cal. 3d 1, 4 (1982) ("it is usually more appropriate to review constitutional and other challenges to ballot propositions and initiatives after an election rather than to disrupt the electoral process by preventing the exercise of the people's franchise, in the absence of some clear showing of invalidity"). The initiative power is "jealously guard[ed]" by the courts, and reasonable doubts are resolved in favor of its exercise. *Legislature v. Eu*, 54 Cal. 3d 492, 501 (1991).

To the extent that the Taxpayers assert that the Initiative is beyond the power of the voters to adopt, a court deciding a pre-election challenge on these grounds may apply a balancing test that balances the interest in deferring resolution of the challenge until after the election to have more time to fully consider the legal issues, against the costs that would be incurred by postponing the challenge until after the election. *E.g., Independent Energy Producers Ass'n v. McPherson*, 38 Cal. 4th 1020, 1030 (2006) (noting that deciding this type of challenge after the election "often will be the wiser course"). *Cf. Gates v. Blackmore*, 39 Cal. App. 5th 32, 38-39 (2019) (holding the trial court properly decided a pre-election challenge where the citizens initiative measure was clearly invalid because it impermissibly impeded on budgetary and administrative matters that were within the exclusive constitutional authority of the county board of supervisors).

As discussed above, legal issues regarding local government authority to adopt residential vacancy taxes in California have not yet been decided by the courts. The San Francisco case is pending in the Superior Court without any ruling on the merits to date, and the issues raised by the Taxpayers have not been raised in the San Franscico lawsuit. A court reviewing a pre-election challenge to the Initiative, therefore, may have difficulty finding a clear showing of invalidity sufficient to grant a petition to remove the Initiative from the ballot.

With respect to the Taxpayers' argument that the Initiative is a "special tax district," the Taxpayers assert that "the election must be conducted a special district" because "the tax applies

[4] The materials include several other legal assertions that are not explained in detail and are therefore not addressed in this report, including that the Initiative violates the right to privacy and is unfair and that the Initiative is a tax on real property that must be applied uniformly.

ONLY to residential units that sit vacant for the majority of the year" and "The Vacancy tax introduces an annual fee for residential housing units that sit vacant for the majority of the year . . ." (Taxpayers' Materials at 8, citing text of Initiative.) The Taxpayers further assert that the special tax district "is a public agency created to provide one or more specific services to a community, such as water service, sewer service, parks, fire protection and others." (Taxpayers' Materials at 11.) The Taxpayers assert that the Local Agency Formation Commission (LAFCO) must approve the formation of the special tax district, and that it must be created with the approval of two-thirds of the voters in that district.[5] (Taxpayers' Materials at 17.)

Similar to the vacancy taxes in Berkeley and San Francisco, however, the Initiative is structured as an excise tax on the use of certain property. An excise tax is generally defined as a tax on a voluntary act: "The obligation to pay an excise tax is based upon the voluntary action of the person taxed in performing the act, enjoying the privilege, or engaging in the occupation which is the subject of the excise, and the element of absolute and unavoidable demand is lacking." 71 Am. Jur. 2d, State and Local Taxation § 23. The Initiative requires that owners of residential units that are vacant and not subject to any exemptions pay a tax for the privilege of keeping those residential units vacant. This appears to fit the definition of an excise tax.

As noted by the Taxpayers, the process to create a new special district is different than the process for imposing a special tax like the Initiative. An authorizing statute is necessary for formation of a special district. It is not clear what type of special district the Taxpayers are referring to or what authorizing statute is asserted to apply, because their materials reference dependent special districts that are governed by the city council, independent special districts, enterprise special districts, non-enterprise special districts, special districts formed under general state law, and special districts formed under special legislation. (Taxpayers' Materials at 11-13.) While creating a special district with taxing authority may be another way to impose a vacancy tax, it is not clear from the Taxpayers' materials the basis for their assertion that the Initiative cannot be adopted by the voters as an excise tax on the use of property.

## (5) Implementation costs.

The initial implementation of the Initiative would involve setting up the necessary administrative infrastructure, including staffing, systems for filing declarations, and public outreach. To manage the tax effectively, it is estimated that the City will need to hire additional staff to handle tax collection, enforcement, and ordinance revision. Given the city's 16,000 residential units, each unit will need to file a declaration of occupancy annually. Ongoing costs will be incurred annually to maintain the vacancy tax system, including handling declarations, enforcement, and periodic reviews of the ordinance.

With the assistance from HdL, the Finance Department performed its research and analysis of the implementation cost estimates by holding discussions with City Departments, such as Finance, Information Technology, City Manager's Office, City Attorney's Office, Development Services,

[5] The Taxpayers included several pages of information about benefit assessment districts but do not appear to argue that the Initiative is a benefit assessment district. (Taxpayers' Materials at 14-17.)

as well as by conversing with SCI Consulting Group, the contractor for the City of Oakland's Measure W Vacant Property Tax.

The measure requires the City to "provide clerical assistance, administrative support, and technical assistance to the Committee and may be present at the Committee meetings." (Appendix A at Section 3.60.110(D).) The Committee will be made up of 5 members who are residents of the City and appointed by the City Council. (*Id.* at Section 3.60.110(B).) The Committee will be formed "for community oversight of the Tax, to review expenditures and appropriations of the Tax revenue, to recommend new expenditures, and to make recommendations to the City to improve the implementation, compliance, and enforcement of the Tax." (*Id.* at Section 3.60.110(A).) "The Committee may convene community meetings to solicit community testimony and other input to build trust between the community, neighborhoods, and the City, and to address other similar and relevant subjects as determined by the Committee within its jurisdiction." (*Id.* at Section 3.60.110(E).)

The Initiative allows the City to use tax revenue for both the initial administrative expenses involved in setting up the tax collection program and ongoing administrative costs associated with its management. These administrative expenses cover a range of activities, including independent third-party audits to oversee fund usage, ensuring compliance with the relevant regulations, drafting ordinances and regulations for implementation, tax collection efforts, public communications regarding the tax, and any legal defense[6] required for this program.

Using the data provided by the City's Finance Department, HdL estimated the annual ongoing cost to administer this measure with City staff to be approximately $527,800 and the ongoing committee costs to be $80,400. The administration costs may increase or decrease depending on the enforcement efforts selected by the City Council. Furthermore, initial startup expenses are estimated to amount to approximately $378,200, covering the financial database infrastructure, web development, ordinance implementation, legal counsel, committee formation, and process development.

As an alternative to using City staff to administer the tax, according to HdL, an experienced third-party vendor would likely be able to administer this measure for approximately $350,000 to $400,000 per year in administrative costs. These figures include initial contact with all property owners with additional contact to be made to identify unresponsive owners whose properties are vacant. Additionally, the initial compliance activities could be expected to be a one-time cost of approximately $300,00 to $500,000 (depending on the actual scope). Or, if the City were interested in self-funding through a contingency fee, a rate of 10% of the first year of

[6] For the purpose of this report, to be conservative, it is assumed that legal defense would be handled by outside counsel. The cost is estimated at $400/hour for an experienced tax litigation attorney. The overall cost of legal defense is not included in the implementation costs table because it is currently difficult to estimate as it will depend on a variety of circumstances such as the type of lawsuit filed and relief requested, whether there are preliminary motions filed, whether the case goes to trial, and whether one or more appeals are filed. However, the cost of defending such a lawsuit would likely be over $100,000.

revenue for the initial compliance phase and a 35% contingency on additional compliance activities in year two and beyond. For the purposes of this report and projections of potential revenue available for housing, roads, and transit, it is conservatively assumed that City staff would be used to administer the tax instead of a third-party vendor.

City staff also discussed the implementation and maintenance costs with the contractor for the City of Oakland. According to the SCI Consulting Group, at least 5 to 6 people from their staff are dedicated to administering responses from 4,000 property owners on an ongoing basis with the implementation stage incurring a higher overhead cost than the regular tax would have. SCI developed a reporting portal for the City of Oakland at a cost of approximately $300K. In further discussion with SCI, staff learned that their scope of work does not cover all work needed to administer the tax, and the City of Oakland has dedicated staffing of approximately 1.5-2.0 FTEs for audits, processing appeals and preparing for hearings.

## (6) Privacy impacts.

HdL was not able to ascertain specific privacy impacts. One can surmise, however, that with more than 16,000 property owners that will need to be contacted to verify vacancy status and/or exemptions, there is some likelihood of notices being sent to old addresses or other mailing issues that could disclose information to other than the intended recipient. Additionally, since the City will need to store information on the occupancy of a property, that information ought to be treated as sensitive personal information and will need some safeguards to avoid unnecessary disclosures. (Source: HdL)

In terms of legal issues regarding privacy impacts, the plaintiffs in the San Francisco lawsuit have raised invasion of the right to privacy in the California Constitution as one of the legal arguments against the San Francisco vacancy tax. San Francisco disputes that the tax is an invasion of privacy, and the court has not yet ruled on the merits of this issue.

## (7) Market value real estate impact.

The Notice of Intention to Circulate Initiative Petition states the following intent for the Initiative: “This measure addresses South Lake Tahoe’s housing crisis by introducing a tax on vacant houses. The Vacancy Tax simultaneously encourages the use of existing vacant properties while generating tens of millions of dollars in revenue.” If the tax is adopted, owners of properties with longer-term vacancies would generally have three options:

1) Sell the property containing the vacant unit. Given that the maximum rate of tax, $6,000 per unit, is less than 1% of the average sales price of a home in South Lake Tahoe, it is uncertain what effect the tax would have on property sales.
2) Reduce the number of days the unit is vacant to less than 182 days. In practice this could take several forms:

a) Owners of units that are vacant due to inability to rent could lower rents to attract full-time tenants, though the opportunity cost of lost rental income might exceed the tax. However, according to the 2022 ACS data for South Lake Tahoe, relatively few units are kept vacant for more than 6 months because they are listed for rent.
b) Owners could consider intermediate-term renting to visitors or seasonal occupants (i.e. "ski lease") for 30 days or longer to ensure the unit is not vacant for more than 182 days.

3) Pay the tax

The extent that the tax will motivate property owners to change the use of their property is unknown. Very little data from other California cities that have implemented similar taxes is available due to the taxes going into effect only recently. The vacancy tax in Oakland went into effect in 2019 and was implemented in 2020. The number of units subject to the tax dropped by 24% between 2019 and 2021[7] indicating potential conversion of units to rentals. However, median gross rents have increased in Oakland by 15% between 2019 and 2022.[8] The median sales price of homes has also continued to increase.[9]

Generally, cities in other states and countries that have implemented vacancy taxes have based the tax on assessed value of vacant properties rather than assessing a per vacant unit flat rate. In 2017, Vancouver, B.C. in Canada, implemented the Empty Homes Tax with a rate of 1% of the value of a vacant unit. The City of Vancouver experienced a 36% decrease in the number of vacant properties between 2017 to 2021.[10] In the Vancouver region, the condominium apartment segment is a significant source of rental housing supply. 2019, 2020, 2022 and 2023 increases in rental condominium apartments are attributed to a combination of newly constructed units coming online and property owners converting existing units to long-term rental, creating new rental supply.[11] However, in 2021 growth in the number of condominiums in long-term rental was attributed entirely to newly constructed units entering the rental market while there was a net decrease in the number of existing units on the rental market. Whether the converted units were rented at a price affordable to local renters is unknown. Rents in Vancouver continued to increase at rates between 2% and 9.7% between 2020 and 2023.

The City of South Lake Tahoe could experience similar trends if the Initiative is implemented, however market forces and housing policies in Vancouver and Oakland do not specifically correlate to South Lake Tahoe. As an example, in Vancouver, 15% of the total dwellings are

[11] Canada Mortgage and Housing Corporation, *Rental Market Report, Canada and Selected Markets,* January 2024

single-family detached houses[12] and in Oakland 42% of the dwelling units are single-family detached[13], while in South Lake Tahoe single-family detached units make up 63% of the housing stock.[14] In Vancouver, the housing market is also subject to a provincial rent increase limit, speculation and vacancy tax, a foreign buyers tax and a nationwide mortgage stress test. The City of Oakland has also adopted an annual rent increase limit.

If property owners are motivated to rent their vacant residential units long term resulting in more rental units entering the market due to the vacancy tax, the increased inventory may reduce upward pressure on rent prices, however, experiences in Vancouver and Oakland indicate that other market forces may still cause rents to increase.

Conversely, some vacant residential unit owners might choose to sell their properties to avoid the tax, potentially leading to a short-term increase in listings and a decline in property values. The introduction of a vacancy tax might also alter the perception of South Lake Tahoe as a favorable investment for long-term residents or a less favorable investment for second homeowners. However, data is not currently available to extrapolate the potential impacts on the local South Lake Tahoe rental or real estate market and it is unknown whether the affects will cause a significant shift of the real estate market away from second homeowners to long-term residents.

## (8) Best methods to determine vacancies.

Based on the report prepared by HdL and from the discussion with SCI Consulting Group, the following methods are potentially available to determine vacancy, with the methods not currently available to South Lake Tahoe noted:

1. Contacting all residential properties and asking for vacancy (or, conversely, occupancy) information.
2. Using utility records (requires an agreement with utility company).[15]
3. Comparing utility usage on suspected vacant properties against average utility usage at know, non-vacant exemplars.[16]
4. Using landlords' Business License rental gross receipts information (applicable only to landlords with two or more units).

[13] U.S. Census Bureau. "Selected Housing Characteristics." American Community Survey, ACS 1-Year Estimates Data Profiles, Table DP04, 2022, https://data.census.gov/table/ACSDP1Y2022.DP04?q=oakland, ca median gross rent&y=2022. Accessed on May 25, 2024.
[14] U.S. Census Bureau. "Units in Structure." American Community Survey, ACS 5-Year Estimates Detailed Tables, Table B25024, 2022, https://data.census.gov/table/ACSDT5Y2022.B25024?q=South Lake Tahoe Housing&t=Physical Characteristics:Units and Stories in Structure. Accessed on May 23, 2024.
[15] South Tahoe Public Utilities District staff has indicated in initial conversations that water usage data, which tends to be the best utility usage to determine vacancy, may not be a reliable indicator of vacancy in South Lake Tahoe because of summer use from landscape irrigation, and has additionally indicated that their policy is not to release customers' utility use privacy reasons. Further coordination with STPUD and other utilities will be required if this method were to be used to determine vacancy.
[16] See footnote 15.

5. Using county data for exemption value (indicative of primary residence).
6. Using building permits data.
7. Verifying data reported by community members.
8. Vacancy data is also available for use by governmental and non-profit entities from the U.S. Postal Service (USPS) through an agreement with the U.S. Housing and Urban Development Department. This data provides information on the number of vacant addresses at the census tract level and is produced quarterly. USPS vacancy data relies on postal workers observing and reporting an apparent vacancy or residents reporting their units as vacant. It therefore is a useful source but likely excludes housing units that have not been so reported. A second category of "No Stat" addresses captures addresses where mail is undeliverable for a variety of reasons including addresses under construction, PO boxes with a "fictitious" street address, or multiple units without individual delivery (i.e. gated community or some apartment buildings). (Source: City and County of San Francisco Budget and Legislative Analyst's Office)
9. Using blight records from code compliance.[17]
10. Tying property records to meters database.[18]

Of the methods mentioned above, HdL has identified those they believe are the most and least useful, as follows:

Most useful:

i. Contacting all residential properties and asking for vacancy (or, conversely, occupancy) information.
ii. Using utility records (requires an agreement with utility company).
iii. Using county data for exemption value (indicative of primary residence).

Least useful:

i. Using building permits data.
ii. Using blight records from code compliance.

[17] This method was used in the City of Oakland, but in South Lake Tahoe many of the vacant residential units are second homes and not blighted.
[18] See footnote 15.

## Appendix A - Full Text of the Initiative

Susan Blankenship, City Clerk
1901 Lisa Maloff Way
City of South Lake Tahoe
South Lake Tahoe, CA, 96150

December 19, 2023

**Re: Request for Preparation of Ballot Title and Summary of Proposed Initiative**

Dear Ms. Blankenship,

Enclosed please find a Notice of Intent to Circulate an Initiative entitled the "City of South Lake Tahoe Residential Vacancy Tax Ordinance," the text of the proposed initiative, and the proponent's certifications required by Elections Code Section 9608. Please immediately transmit a copy of this measure to the City Attorney for preparation of a ballot title and summary.

Please direct all questions and correspondence regarding this matter to us via email at [redacted]

Respectfully,

[redacted]

Amelia Richmond
President, Locals for Affordable Housing

[redacted]

RECEIVED
DEC 19 2023
City of South Lake Tahoe
Office of the City Clerk

**Notice of Intention to Circulate Initiative Petition**

Notice is hereby given of the intention of the persons whose names appear hereon of their intention to circulate the petition within the City of South Lake Tahoe for the purpose of enacting a residential vacancy tax. A statement of the reasons for the proposed action as contemplated in the petition is as follows:

Median home prices in South Lake Tahoe have more than doubled since 2013. Half of Lake Tahoe's workers now live outside the region, and of those who do live here, nearly two-thirds do not earn enough to afford the living expenses of a typical family.

As families struggle to find housing and local businesses struggle to find employees, 44% of all housing units in South Lake Tahoe - now over 7,000 houses - sit empty most of the year. Since 2000, the increase in vacancies has outpaced new housing construction, resulting in more vacant houses and fewer homes for residents.

This lack of local housing has contributed to a shortage of workers, a shrinking population, and a severe drop in school enrollment and attendance-based funding.

This measure addresses South Lake Tahoe's housing crisis by introducing a tax on vacant houses. The Vacancy Tax simultaneously encourages the use of existing vacant properties while generating tens of millions of dollars in revenue. As a special-use tax, Vacancy Tax revenue can be used ONLY for local housing, road infrastructure, and transit, as well as enforcement and administration of the tax. Allowed uses include development of affordable housing, rental and home-buyer assistance, incentives for property owners to rent to residents, and addressing the $500 million backlog of deferred road repairs, and stormwater and infrastructure needs.

The tax applies ONLY to residential units that sit vacant for the majority of the year, with exclusions for properties under renovation, seasonal cabins, elderly residents in care facilities, wildland firefighters, and active-duty military, among others. As long as a home is occupied by an owner, tenant, or guest for more than 182 days throughout the year, consecutively or not, there is no tax.

Without bold action, the housing crisis will continue to escalate and roads will continue to deteriorate. The Vacancy Tax is the only housing and funding solution that addresses the scale of our community's critical needs.

Signature of Proponent

Dated this 19 day of December, 2023

RECEIVED

DEC 19 2023

City of South Lake Tahoe
Office of the City Clerk

The people of the City of South Lake Tahoe do ordain as follows:

## Section 1. Title

This Act shall be known and may be cited as the "City of South Lake Tahoe Residential Vacancy Tax Ordinance."

## Section 2. Findings and Declarations

The People of the City of South Lake Tahoe find and declare as follows:

A. Residential vacancies are an increasing concern in South Lake Tahoe.

B. The 2022 American Community Survey (ACS) census indicates 7,150 out of 16,275 total housing units in the City of South Lake Tahoe are vacant. These vacant homes now account for approximately 44 percent of the total housing supply in South Lake Tahoe, up from approximately 33 percent in 2000.

C. The increase in vacant units has reduced available housing, contributing to a shrinking population, shortage of local workers, decline in school enrollment, and rising housing costs. Median home prices in the area have more than doubled since 2013. Approximately half of workers in the Tahoe area now live outside the region, and of those who do live here, nearly two-thirds do not earn enough to afford the living expenses of a typical family.

D. The housing affordability crisis has created an urgent need to fund additional services and programs including, but not limited to, construction of new affordable housing, housing acquisition and renovation, rental/deposit assistance programs, and homeowner assistance programs.

E. Existing funding from City, County, State, and Federal resources has been insufficient to meet the community's current housing needs. The City currently has a growing waitlist of over 1,000 residents seeking affordable housing, and will need an additional 3,290 housing units to house the local workforce by 2026.

F. The City's current transportation infrastructure is failing to meet the needs of the community and the environment. The City's Public Works department has cited the need for $500 million to resolve existing deferred maintenance to the City's roads, stormwater, and critical infrastructure. Additionally, the City will require significant funding to expand and improve public transit for the local workforce and community.

G. The City has identified the need to establish a local discretionary funding source to establish sufficient housing, road repair, and transit in the City of South Lake Tahoe's adopted 2023-2028 Strategic Plan.

H. The Vacancy Tax establishes a local discretionary funding source for housing, road repair, and transit, as outlined by the City's Strategic Plan.

RECEIVED
DEC 19 2023
City of South Lake Tahoe
Office of the City Clerk

I. The Vacancy Tax introduces an annual fee for residential housing units that sit vacant for the majority of the year, with exemptions and exclusion periods for properties under renovation, elderly residents in care facilities, wildland firefighters, and active-duty military, among others. If a home is partially or fully occupied by an owner, tenant, or guest for more than 182 days throughout the year, no tax will be owed.

J. The Vacancy Tax is projected to generate more revenue than any other new funding source evaluated by the City by a significant margin, and could become the City's single largest revenue source.

K. The taxes imposed under this ordinance are to be used solely for the purpose of funding the creation and operation of local housing, road infrastructure, transit infrastructure and operations, and related programs, described below. Because the proceeds of the Tax will be deposited into a special fund restricted for the services and programs specified in this Ordinance, the Tax is a special tax.

L. The Vacancy Tax addresses the City's most pressing needs by simultaneously generating funds, adding available housing units, encouraging the active use of vacant property, and discouraging the loss of more housing units to vacancy, thereby promoting a healthy residential community and local economy.

## Section 3. City of South Lake Tahoe Residential Vacancy Tax Ordinance

Chapter 3.60 is added to the City of South Lake Tahoe City Code to read as follows:

**Chapter 3.60: Residential Vacancy Tax**

**Section 3.60.010 Definitions**

Unless otherwise defined in this Chapter, the terms in this Chapter shall have the meanings given to them in Chapter 3 of the City Code, as amended from time to time. For purposes of this Chapter, the following definitions shall apply:

A. "Act" means the City of South Lake Tahoe Residential Vacancy Tax Ordinance.

B. "City" means the City of South Lake Tahoe.

C. "City Council" means the City Council of the City of South Lake Tahoe.

D. "Residential Unit" means a house, an apartment, a group of rooms, or a single room that is designed as separate living quarters. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and which have a kitchen and direct access from the outside of the building or through a common hall. For purposes of this Chapter, a Residential Unit shall not include:

1. A unit in a hotel, as defined below:

(a) Any lodging house, dwelling, motel, hotel, condo-hotel, inn, bed and breakfast, or other building or structure or portion thereof, maintained, advertised, or otherwise

held out to the public in any manner as a place where sleeping, rooming, or any other type of visitor accommodations are furnished to transients, composed either in whole or in part of members of the public, whether with or without meals.

(b) Vacation home rentals and time-sharing arrangements are not hotels for purposes of this Chapter.

2. An Accessory Dwelling Unit or Junior Accessory Dwelling Unit, as defined in City Code Chapter 6.85.050.

3. A unit in a currently operational nursing home, residential care facility, or other similar facility.

4. Any unit that is fully exempt from property tax under the welfare exemption under section 214(g) of the California Revenue and Taxation Code, as may be amended from time to time.

F. "Tax" means the Residential Vacancy Tax imposed by section 3.60.020.

G. "Vacant" means unoccupied by any natural person for more than 182 days, whether consecutive or nonconsecutive, within a given calendar year, except for the Exclusion Periods defined in section 3.60.030.

**Section 3.60.020 Imposition of Tax**

A. Except as otherwise provided in this Chapter, the City imposes an annual Residential Vacancy Tax on each person who owns a Residential Unit if that Residential Unit is Vacant.

B. The Residential Vacancy Tax on an owner of a Vacant Residential Unit shall be as follows:

1. For the first calendar year that the Residential Unit is Vacant, the tax shall be $3,000 per Residential Unit;

2. For the second consecutive calendar year and each subsequent consecutive calendar year thereafter that the Residential Unit is Vacant, the tax shall be $6,000 per Residential Unit.

C. The Residential Vacancy Tax shall take effect on January 1, 2026.

D. The rates set forth in subsection B shall be adjusted annually, beginning in 2027, in accordance with the increase in the Consumer Price Index: All Urban Consumers, or appropriate alternative or successor Consumer Price Index chosen by the City Manager or their designee, as reported by the United States Bureau of Labor Statistics, for October of the year preceding the subject year. The City shall publish the adjusted tax rates for the subject year no later than December 31 of the preceding year.

E. The Residential Vacancy Tax shall be payable by the person who owns the Vacant Residential Unit. Not more than one tax per Residential Unit shall be imposed under this section for a calendar year by reason of multiple liable owners. If there are multiple liable owners, each owner shall be jointly and severally liable for the Tax, which shall be the highest amount of tax payable by any owner for that Residential Unit for that calendar year.

F. In determining whether a Residential Unit is Vacant during a calendar year, days within any Vacancy Exclusion Period shall be counted as if occupied if that Vacancy Exclusion Period applies to an owner or tenant of that Residential Unit, as shall days in which the Residential Unit was not owned by the owner.

**Section 3.60.030 Vacancy Exclusion Period**

In determining whether a Residential Unit is Vacant during a calendar year, days within any Vacancy Exclusion Period shall be counted as if occupied if that Vacancy Exclusion Period applies to an owner or tenant of that Residential Unit.

Vacancy Exclusion Period means any of the following:

A. Care Period. The period during which a Residential Unit is unoccupied because the occupant of the Residential Unit who uses that Residential Unit as their principal residence is staying in a hospital, long term or supportive care facility, medical care or treatment facility, or other similar facility.

B. Civilian Service Period. The period during which a Residential Unit is unoccupied because an occupant of the Residential Unit who uses that Residential Unit as their principal residence is serving as a firefighter or other emergency service worker.

C. Disaster Period. The three-year period following the date that a Residential Unit was made uninhabitable or unusable due to fire, natural disaster, or other catastrophic event, except where a negligent, reckless or willful act or omission by the owner or agent of the owner contributed to or caused the Residential Unit to become uninhabitable or unusable due to fire, natural disaster, or other catastrophic event.

D. Emergency Period. The declared period during which the City Council, by a two-thirds vote of the City Council, finds that a declared emergency has undermined the ability of owners to fill vacancies in their Residential Units. Such a period shall last for no more than 60 days from its enactment by the City Council, but may be extended by 60-day increments, on or before its expiration, by a two-thirds vote of the City Council, for a total of no more than one year, so long as the emergency continues and the required findings continue to be made.

E. Military Service Period. The period during which a Residential Unit is unoccupied because an occupant of the Residential Unit who uses that Residential Unit as their principal residence is serving in the Military.

F. Owner Death Period. The period, with respect to a co-owner or decedent's estate, heirs, or beneficiaries, during which a Residential Unit is unoccupied because of the death of any owner of a Residential Unit who was the sole occupant of that Residential Unit immediately prior to such owner's death, provided that such period shall not exceed the longer of two years or the period during which the Residential Unit is subject to the authority of a probate court.

G. Rehabilitation Period. The period of active renovation or construction of a Residential Unit, for which a building permit was issued, and for which the City Manager or their designee

determines, by way of documentation submitted by an owner, reasonably negatively impacted the habitability of that unit for a duration of time that the City Manager or their designee determines was reasonable for the permitted renovation or construction.

**Section 3.60.040 Exemptions**

A. For only so long as and to the extent that the City is prohibited by the Constitution or laws of the State of California or the Constitution or laws of the United States from imposing the Residential Vacancy Tax on any person, that person shall be exempt from the Residential Vacancy Tax.

B. Any organization that is exempt from income taxation under section 501(c)(3) of the Internal Revenue Code of 1986, as amended, shall be exempt from the Residential Vacancy Tax.

C. The federal government, the City, the State of California, and any county, municipal corporation, district, and other political subdivision of the State shall be exempt from the Residential Vacancy Tax, except where any constitutional or statutory immunity from taxation is waived or is not applicable.

D. Any Residential Unit on a parcel accessed by a road subject to seasonal winter road closures, or for which year-round access to the Residential Unit is otherwise seasonally restricted by agreement with a local, state, or federal government or government agency, or by a deed restriction that existed prior to January 1, 2024, shall be exempted from the Residential Vacancy Tax. The City Manager or their designee shall prescribe a manner for owners of Residential Units to claim this exemption.

E. Any Residential Unit that lacks suitable insulation or heating for winter habitability as of January 1, 2024 shall be exempted from the Residential Vacancy Tax. The City Manager or their designee shall prescribe a manner for owners of Residential Units to claim this exemption, which shall include an inspection of the Residential Unit. The City may charge a reasonable fee for this inspection. New Residential Units that are constructed without suitable insulation or heating for winter habitability, or existing Residential Units that are altered to remove suitable insulation or heating for winter habitability, after January 1, 2024, shall not be exempted from the Residential Vacancy Tax.

**Section 3.60.050 Declaration of Occupancy & Returns**

A. Vacancy Tax Due Date. The City Manager or their designee shall specify a Vacancy Tax Due Date, not to exceed six (6) months from the end of the subject year. The City Manager or their designee shall publish the Vacancy Tax Due Date no later than December 31 of the year preceding the subject year.

B. Declaration of Occupancy. Every owner of a residential unit, or a representative authorized to act on their behalf, shall file an annual Declaration of Occupancy with the City.

1. The City Manager or their designee shall prescribe the means and manner for submitting an annual Declaration of Occupancy for a Residential Unit, that shall include, but are not limited to, the following components:

(a) A means to declare the Residential Unit as Vacant, or not Vacant, or subject to an Exemption, and which may include the submission of supporting documentation;

(b) A website or online portal which explains the Tax and allows electronic submission of the Declaration of Occupancy; and

(c) A paper declaration form which explains the Tax and provides for mail or in-person submission of the Declaration of Occupancy. Paper declaration forms shall be mailed to owners no later than October 31 of the subject year for which the Residential Vacancy Tax is being imposed. The City may allow owners to opt out of receiving paper forms related to this Tax.

2. All persons who own a Residential Unit, or their agent, or a representative authorized to declare on their behalf, shall submit an annual Declaration of Occupancy, by either electronic submission or paper declaration form, for each Residential Unit owned at any time during a calendar year, on a date specified by the City Manager or their designee and which is no later than the Vacancy Tax Due Date. The City Manager or their designee may elect to waive this requirement for owners who are exempt from the Residential Vacancy Tax with respect to that Residential Unit under Section 3.60.040.

3. Any person who fails to file a Declaration of Occupancy, as required by this Section for a Residential Unit, shall be presumed to have kept that Residential Unit Vacant for the calendar year for which the Declaration is required.

4. Any owner who submits a Declaration of Occupancy less than twelve (12) months late, and which declares the Residential Unit as not Vacant, or subject to an Exemption, shall have the Tax and any associated penalties and interest waived, but the owner shall pay a Late Fee as defined in section 3.60.070.

5. Any person who fails to file the required Declaration of Occupancy may, at any time, rebut the presumption by producing satisfactory evidence, in a manner prescribed by the City Manager or their designee, that a Residential Unit that they owned was not Vacant during the calendar year for which the Declaration is required. If satisfactory evidence is provided, the Tax and any associated penalties and interest shall be waived, but the owner shall pay a Late Fee as defined in section 3.60.070.

C. Each person who is required to pay the Residential Vacancy Tax, as outlined in Sections 3.60.020 to 3.60.040, shall file a return, along with a payment of the tax, in the form and manner prescribed by the City Manager or their designee. The return shall be submitted by the owner, their agent, or a representative authorized to file on their behalf, for each Residential Unit owned, no later than the Vacancy Tax Due Date. The Declaration of Occupancy and return may be combined into a single form to be submitted electronically, by mail, or in-person.

**Section 3.60.060 Administration of the Residential Vacancy Tax**

A. The City Manager or their designee shall enforce the provisions of this Chapter and may prescribe, adopt, and enforce rules and regulations relating to the administration and enforcement of this Chapter.

B. Audits. The City Manager or their designee shall establish reasonable processes for auditing Residential Units to verify an associated return or Declaration of Occupancy and for owners to provide any supporting documentation as may be required to make a determination of vacancy. Audits may take place at any time for up to five (5) years after the applicable calendar year.

C. Any Residential Vacancy Tax owed is delinquent if not received by the City on or before the Vacancy Tax Due Date.

**Section 3.60.070 Failure to Remit Tax - Penalties and Fees**

A. Late Fee. Any owner who submits a return or Declaration of Occupancy late, shall pay a late fee not less than $35.

B. Delinquency penalty. Any owner who fails to remit any delinquent remittance on or before a period of 30 days following the date on which the remittance first became delinquent shall pay a delinquency penalty of 10 percent of the amount of the Residential Vacancy Tax.

C. False Declaration. For each subject year within the preceding five (5) years, if the City Manager or their designee determines that:

1. A Residential Unit was Vacant for that subject year; and

2. The Tax was not paid in full for that subject year; and

3. A false statement was made on a Declaration of Occupancy for that subject year

then a penalty of no less than 100 percent of the amount owed, exclusive of fees, interest, and penalties, shall be added thereto in addition to the penalties imposed in this section.

D. Repeated False Declaration. The City Manager or their designee may specify an increased penalty for owners who make repeated False Declarations.

E. Transactions with the principal purpose of avoiding or evading all or a portion of the Residential Vacancy Tax shall be disregarded for purposes of determining the amount of the Residential Vacancy Tax and whether the Residential Vacancy Tax is due. Any owner determined to have engaged in one or more transactions with the principal purpose of avoiding or evading all or a portion of the Residential Vacancy Tax shall be liable for the Residential Vacancy Tax and also liable for a penalty in an amount not less than the Residential Vacancy Tax.

F. Charge for Audits and Collection of Attorney's Fees. A reasonable fee equal to the City's costs for the audit of a Declaration of Occupancy, shall be charged to the owner of the Residential Unit where unpaid taxes are discovered as a result of the audit. If the City is the

prevailing party in litigation filed to collect taxes, penalties, and/or interest due under this chapter, the City shall be entitled to recover reasonable attorney's fees and costs.

G. Interest. In addition to the penalties imposed, any owner who fails to remit any tax imposed by this Chapter shall pay interest at the rate of one and one-half percent per month or fraction thereof on the amount of the tax, inclusive of penalties, from the date on which the remittance first became delinquent until paid.

H. Penalties Merged with Tax. Every penalty imposed and such interest as accrued under the provisions of this section shall become a part of the tax required to be paid.

I. Any tax required to be paid by an owner under the provisions of this Chapter shall be deemed a debt owed by the owner to the City. Any person owing money to the City under the provisions of this Chapter shall be liable to an action brought in the name of the City for the recovery of such amount, along with any collection costs incurred by the City as a result of the person's noncompliance with this Chapter, including, but not limited to, reasonable attorney's fees, plus interest and penalties as herein provided.

**Section 3.60.080 Appeals**

A person who owns a Residential Unit may, within fifteen (15) days of notification of an adverse decision by the City Manager or their designee under this Chapter, file with the City Clerk a written notice of appeal pursuant to the procedures described in Section 2.35 of the City Code.

**Section 3.60.090 Residential Vacancy Tax Fund**

There is hereby established in the Treasury of the City of South Lake Tahoe a special fund entitled the Residential Vacancy Tax Fund. All revenues generated by the Residential Vacancy Tax, together with any interest and penalties, shall be collected each fiscal year and deposited into the Fund. Revenues in the Fund shall be used exclusively to carry out the purposes of this Act as specified in Section 3.60.100.

**Section 3.60.100 Use of Residential Vacancy Tax Ordinance Revenue**

Monies in the Residential Vacancy Tax Fund may be used for the following purposes:

A. Housing purposes:

1. The construction of housing within the City of South Lake Tahoe;
2. The purchase of property within the City of South Lake Tahoe for the purposes of creating new housing opportunities;
3. Paying property owners to add deed restrictions to property within the City of South Lake Tahoe;
4. The purchase of property containing existing housing within the City of South Lake Tahoe for the purpose of continuing its operation;

5. The renovation, maintenance, expansion, or operation of housing units, including rehabilitation loan programs;

6. Housing assistance programs, including but not limited to rental subsidies, security deposit assistance programs, and home buyer assistance programs;

7. Housing incentive programs, including but not limited to, property developer incentive programs, and landlord incentive programs;

8. Housing support services, including but not limited to, housing issues hotlines, legal aid, and fair housing programs; and

9. Enforcement of allowed uses of residential properties.

B. The City Council shall establish eligibility standards for each housing expenditure made under paragraphs 1 through 7 of subdivision A based on one or more of the following factors:

1. Occupant or household income;

2. Occupant or household wealth;

3. Occupant geographic employment;

4. Occupant disability;

5. Previous occupancy in government-subsidized housing;

6. Previous occupancy in housing with eligibility standards based on wealth, income, disability, or geographic employment; or

7. Prohibition on the property from becoming Vacant.

C. Roadworks and related infrastructure purposes:

1. The repair, maintenance, replacement, or new construction of road infrastructure within the City of South Lake Tahoe;

2. The repair, maintenance, replacement, or new construction of bicycle or multi-use paths within the City of South Lake Tahoe; and

3. The repair, maintenance, replacement, or new construction of infrastructure related to the management of stormwater as defined in section 7.15.030 of the City Code.

D. Transit projects and related infrastructure purposes:

1. The operational or capital equipment costs of public transit services, including but not limited to transit vehicles, transit related personnel, or transit related contract services, which operate within the City of South Lake Tahoe and which may additionally serve destinations outside of the City of South Lake Tahoe; and

2. The repair, maintenance, replacement, or new construction of public transit infrastructure, including but not limited to bus or rail infrastructure, within the City of South Lake Tahoe.

E. Reimbursing the City for the administrative costs of establishing the program for collecting the Residential Vacancy Tax, as well as all continuing costs of administering the Tax. Administrative costs include, but are not limited to costs associated with:

1. Independent third-party audits of the use of monies in the Fund;
2. Monitoring and enforcing compliance with this Chapter;
3. Developing ordinances and regulations to implement this Chapter;
4. Collecting the Tax;
5. Public communications relating to the Tax; and
6. Any legal defense of this Chapter.

F. Held in reserve and accumulated for spending in subsequent years for purposes listed in this section.

**Section 3.60.110 Vacancy Tax Oversight Committee**

A. The Vacancy Tax Oversight Committee is hereby established for community oversight of the Tax, to review expenditures and appropriations of the Tax revenue, to recommend new expenditures, and to make recommendations to the City to improve the implementation, compliance, and enforcement of the Tax.

B. The Committee shall consist of at least five (5) members who are all residents of the City, and appointed by City Council. Members of the Committee shall serve a term of four years, and no member may serve more than two consecutive four-year terms. A member's position shall become vacant upon their death, resignation, or removal by the Council. In the case of such a vacancy, the Council shall appoint a successor to fill the unexpired term, subject to the approval of the majority of the Council.

C. A quorum of the Committee shall never be fewer than three (3) members. If there are vacancies on the Committee due to a lack of applicants, or the failure to appoint members, the Committee may operate with three (3) members.

D. The City Manager or designee shall provide clerical assistance, administrative support, and technical assistance to the Committee and may be present at the Committee meetings, or may send a designee.

E. The Committee may convene community meetings to solicit community testimony and other input to build trust between the community, neighborhoods, and the City, and to address other similar and relevant subjects as determined by the Committee within its jurisdiction.

**Section 3.60.120 Legal Defense**

A. If this Act is approved by the voters of the City of South Lake Tahoe and thereafter subjected to a legal challenge, the City Attorney or appointed independent counsel shall, to the best of their abilities, faithfully defend this Chapter against any litigation and until all reasonable appeal options are exhausted. Costs associated with any defense of this Chapter may be reimbursed from monies in the Fund.

B. Nothing in this section shall prohibit the proponents of this Act from intervening to defend this Act.

**Section 3.60.130 Annual Reports**

Beginning in 2025, the City Manager shall file annually with the Council a report on the implementation, auditing, and enforcement of the Tax.

**Section 3.60.140 Authorization and Limitation on Issuance of Bonds**

The City shall be authorized to pledge revenues generated by the Residential Vacancy Tax to the repayment of limited tax bonds or other forms of indebtedness authorized under this section. The Council shall by ordinance or resolution, as applicable, establish the terms of any limited tax bonds or other forms of indebtedness authorized hereby, including but not limited to, the amount of the issue, date, covenants, denominations, interest rate or rates, maturity or maturities, redemption rights, tax status, manner of sale, and such other particulars as are necessary or desirable.

**Section 3.60.150 Severability**

If any word, phrase, sentence, part, section, subsection, or other portion of this ordinance, or any application thereof to any person or circumstance is declared void, unconstitutional, or invalid for any reason, then such word, phrase, sentence, part, section, subsection, or other portion, or the prescribed application thereof, shall be severable, and the remaining provisions of this Chapter, and all applications thereof, not having been declared void, unconstitutional or invalid, shall remain in full force and effect. The People of the City of South Lake Tahoe hereby declare that they would have passed this ordinance, and each section, subsection, sentence, clause, and phrase thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases had been declared invalid or unconstitutional.

**Section 3.60.160 Savings Clause**

No section, clause, part, or provision of this Chapter shall be construed as requiring the payment of any tax that would be in violation of the Constitution or laws of the United States or of the Constitution or laws of the State of California.

**Section 3.60.170 Liberal Construction**

This Chapter shall be liberally construed to effectuate its purpose.

## Section 4. Increase Appropriations Limit

Pursuant to California Constitution Article XIII B and applicable laws, for four years from November 5, 2024, the appropriations limit for the City shall be increased by the aggregate sum collected by the levy of the special tax imposed under this ordinance.

## Section 5. Amendments

The City Council may, by majority vote of the entire City Council, amend this Chapter in furtherance of the purposes of the Act, to increase penalties and fees, reduce the applicability of Vacancy Exclusion Periods, reduce the applicability of Exemptions, or to correct ambiguities or errors in language, provided that such amendments do not decrease the dollar amounts of the tax, penalties, or fees.

The City Council may, by two-thirds vote of the entire City Council, amend this chapter, in furtherance of the purposes of the Act, to add new Vacancy Exclusion Periods or Exemptions.

## Section 6. Effective Date

This Ordinance, and all the provisions hereof, shall become effective only upon affirmative passage by a fifty (50) percent plus one (1) majority of the voters voting on the Ordinance. This Ordinance shall be considered adopted on the date that the City declares the results of the election at which it was voted upon and shall be effective ten (10) days thereafter.

## Appendix B – Analysis of Properties and Potential Vacancy Tax Revenue (prepared by HdL)

| | Scenario 1: Excludes All Owner-Occupied | Scenario 2: Includes Half Owner-Occupied | Scenario 3: Includes All Owner-Occupied |
|---|---|---|---|
| Property Tax Data Record Count | 43,342 | 43,342 | 43,342 |
| Removed Property Address Outside of South Lake Tahoe | (519) | (519) | (519) |
| Removed Non-Residential Properties | (944) | (944) | (944) |
| Removed Records Without A Property Address | (29,916) | (29,916) | (29,916) |
| Removed Properties Not Listed As Absentee | (3,734) | (3,734) | (3,734) |
| Initial Target Group Subtotal | 8,229 | 8,229 | 8,229 |
| Removed Likely Owner-Occupied Properties (Mailing Address = Property Address Or In-City) | (485) | (242) | (0) |
| Removed Properties With Voters Not Listed As "Permanent Vote By Mail" | (30) | (30) | (30) |
| Potential Vacant Properties In South Lake Tahoe | 7,714 | 7,257 | 8,199 |

Under the first scenario, we've laid out hypothetical revenue outcomes to show the impact of the new tax rate.

| | 30% of Potential Vacancies | 60% of Potential Vacancies | 100% of Potential Vacancies |
|---|---|---|---|
| Potential Vacancy After Reduction | 2,314 | 4,628 | 7,714 |
| | | | |
| First Year | | | |
| Discovery Response Rate Year 1 (60%) | 1,388 | 2,777 | 4,628 |
| **First Year Revenue @$3,000** | **$4,164,000** | **$8,331,000** | **$13,884,000** |
| | | | |
| Second Year | | | |
| Remaining Unresponsive | 926 | 1,851 | 3,086 |
| Discovery Response Rate Year 2 (60%) | 556 | 1,111 | 1,852 |
| Revenue From Newly Responded @$3,000 | $1,668,000 | $3,333,000 | $5,556,000 |
| Continued Vacancy | 1,388 | 2,777 | 4,628 |
| Revenue From Continued Vacancy @$6,000 | $8,328,000 | $16,662,000 | $27,768,000 |
| **Total Second Year Revenue** | **$9,996,000** | **$19,995,000** | **$33,324,000** |

## Appendix C - Comparison with Vacancy Taxes in Other Jurisdictions

| City (effective date of tax) | Amount of tax | How vacancy defined | Types of homes subject to tax | Exemption periods | Special or general tax | Type of tax |
|---|---|---|---|---|---|---|
| **South Lake Tahoe (Jan. 1, 2026)** | $3,000 per housing unit for first year, $6,000 per housing unit for subsequent years (adjusted by CPI). | Unoccupied by a natural person for more than 182 days in a calendar year | Single-family, condo, duplex, townhome, apartment, VHR, time shares.<br><br>Does not apply to hotel units used for transient occupancy, ADUs, nursing home rooms. | Occupant is hospitalized or absent when serving as firefighter, emergency service worker, or in military, death of owner who was sole occupant, during renovation, property uninhabitable because of natural disaster, during declared emergency. | Special. Can be used only for housing, roads and related infrastructure, transit, costs of administering tax, and legal defense. | Excise tax. |
| **Berkeley (Jan. 1, 2024)** | For condo, duplex, single family dwelling, townhome: $3,000 per housing unit for first year, $6,000 per housing unit for subsequent years (adjusted by CPI).<br><br>For all other types of residential unit: $6,000 per housing unit for first year, $12,000 per housing unit for subsequent years (adjusted by CPI). | Unoccupied, uninhabited, or unused for more than 182 days in a calendar year. | Single-family, condo, duplex, townhome, apartment, VHR.<br><br>Does not apply to hotel units or nursing home rooms.<br><br>Does not apply to property with 4 or fewer units that is owner's principal place of residence. | Unit is owner's principal residence, occupant is hospitalized, death of owner who was sole occupant, during renovation, property uninhabitable because of natural disaster, during declared emergency. | General. | Excise tax. |
| **San Francisco (eff. Jan. 1, 2024; filing and payment begin in 2025)** | 2024 Rates: Less than 1,000 SF: $2,500. 1,000 to 2,000 SF: $3,500. | Unoccupied, uninhabited, or unused for more than 182 days in a calendar year. | Condo, townhome, apartment, mobile home with three or more units on property. | Unit is owner's principal residence, occupant is hospitalized, death of owner who was sole occupant, during renovation, property | Special. # City of South Lake Tahoe

**Agenda Item Executive Summary**

Joe Irvin, City Manager

**Meeting Date:** June 18, 2024
**Agenda Item #:**23

**Agenda Item:** General Municipal Election Consolidation

**Executive Summary:** Under section 10403 of the California Elections Code, the City shall at least 88 days prior to the date of the election, file with the El Dorado County Board of Supervisors, and a copy with the City Clerk, a Resolution of the City Council ordering the election to be held and requesting consolidation with the statewide general election.

**Requested Action / Suggested Motions:** Pass a Resolution calling and ordering to be held in the City of South Lake Tahoe, County of El Dorado, a General Municipal Election to be consolidated with the Statewide General Election to be held on Tuesday, November 5, 2024, for the purpose of submitting to the electorate a Citizen's Initiative entitled "An Initiative to Establish a Tax on Owners of Vacant Residential Units in the City of South Lake Tahoe" and for the purpose of the election of two (2) Council Members.

**Responsible Staff Member:** Susan Blankenship, City Clerk

**Reviewed and Approved By:** Susan Blankenship, City Clerk Olga Tikhomirova, Director of Finance Heather Stroud, City Attorney

# City of South Lake Tahoe
Report to **City Council**

## Meeting Date: June 18, 2024

**Title: General Municipal Election Consolidation**

**Location:** Citywide

**Responsible Staff Member:** Susan Blankenship, City Clerk

**Background:**

**Citizen's Initiative**

On April 22, 2024, Locals for Affordable Housing filed a citizen's initiative containing 2,471 signatures purporting to be signatures of qualified electors with the City Clerk. The City Clerk delivered the petition via El Dorado County courier to the El Dorado County Elections Department in Shingle Springs for examination (Elections Code 9114, Examination of signatures and certification, full check).

On May 7, 2024, City Council passed a motion requesting an Elections Code section 9212 report for the Vacancy Tax Citizens Initiative to be presented at the June 18 City Council meeting to cover its fiscal impact, its effect on the use of land, availability of housing, and ability of the City to meet its regional housing needs, and its impact on funding for infrastructure including transportation infrastructure, contingent upon the City Clerk certifying the sufficiency of the petition. Council provided direction for this report to include fiscal impacts (positive and negative), methods for determining vacancy, impact on property values, a list of differences between comparable cities, implementation costs, an initial high-level legal analysis, and direction for the report to be as broad as possible given the time constraints.

On May 15, 2024, the City Clerk notified the proponents the petition exceeded the necessary number of valid signatures as certified by the El Dorado County Elections Department (1,159 or 10% of registered voters of the City of South Lake Tahoe at the time the Notice of Intent to Circulate was published) and found sufficient (Elections Code 9114 and 9211).

On June 4, 2024, the City Council *Received and Filed* the Certificate of Sufficiency of a petition entitled "An Initiative to Establish a Tax on Owners of Vacant Residential Units in the City of South Lake Tahoe." The Initiative has qualified for the November 5, 2024, Election.

**Elected Officials**

Two (2) Council members terms of office expire in November 2024 (Councilmembers Creegan and Friedrich).

The City holds elections for elective offices concurrently with statewide general elections as required by South Lake Tahoe City Code section 2.01.030.

**Consolidated Election with El Dorado County**

Under section 10403 of the California Elections Code, the City shall at least 88 days prior to the date of the election, file with the El Dorado County Board of Supervisors, and a copy with the City Clerk, a Resolution of the City Council ordering the election to be held and requesting consolidation with the statewide general election.

**Financial Implications:** Costs associated with administering elections will be budgeted for within City Clerk Budget FY 2024-2025.

**Environmental Considerations:** This is not a “project” subject to review under the California Environmental Quality Act (CEQA) under CEQA Guidelines section 15378(b)(2) (continuing administrative activities).

**Policy Implications:** An order calling the election and requesting consolidation with the County conforms to the City Code and California Elections Code.

**Resolution 2024-XXX**

**Adopted by the City of South Lake Tahoe**
**City Council**

**June 18, 2024**

**Calling and Ordering an Election in the City of South Lake Tahoe and Requesting the El Dorado County Board of Supervisors to consolidate a General Municipal Election with the Statewide General Election on November 5, 2024**

**BACKGROUND**

A. The City Council of the City of South Lake Tahoe must order a General Municipal Election to be held on November 5, 2024, for the purpose of submitting to the electorate a Citizen's Initiative entitled "An Initiative to Establish a Tax on Owners of Vacant Residential Units in the City of South Lake Tahoe", and for the purpose of the election of two (2) Council Members.

B. Under South Lake Tahoe City Code section 2.01.030 and California Elections Code section 10403, the City Council is requesting that the General Municipal Election be consolidated with the Statewide General Election to be held on November 5, 2024.

**BASED ON THE FACTS SET FORTH IN THE BACKGROUND, BE IT RESOLVED**, that the City Council of the City of South Lake Tahoe:

1. Pursuant to the laws of the State of California relating to General Law Cities, calls and orders to be held in the City of South Lake Tahoe, County of El Dorado, a General Municipal Election to be consolidated with the Statewide General Election to be held on Tuesday, November 5, 2024, for the purpose of the election of two (2) Council Members, and for the purpose of submitting to the electorate a Citizen's Initiative entitled "An Initiative to Establish a Tax on Owners of Vacant Residential Units in the City of South Lake Tahoe".

2. Submits the Ordinance attached hereto as Exh. A to the qualified voters of the City on the general election on November 5, 2024, to impose a special tax on owners of certain vacant residential units.

3. Directs that the ballot label for the proposed Citizen's Initiative Measure shall be submitted for a "Yes" or "No" vote as follows:

> Shall the measure to tax property owners who keep nonexempt residential units in the City of South Lake Tahoe vacant more than 182 days/year, $3,000/unit for the first year of vacancy and $6,000/unit for subsequent consecutive years, subject to CPI adjustment, with exceptions, generating between $10,000,000 to $20,000,000 annually until ended by voters, to be used only for housing, roadworks, transit, and administrative and legal costs, with administration overseen by oversight committee, be adopted?

4. Declares that the type, rate, and method of collection of the tax are set forth in the Ordinance, the full text of which shall be printed and made available to voters pursuant to Sections 9119 and 9223 of the California Elections Code

5. Directs that arguments for and against the measure may be filed in accordance with applicable law, and that neither City Council as a body or any individual member of Council is directed to file a written argument or any rebuttal argument for or against the measure.

6. Directs the City Clerk to consider arguments for and against the measure and rebuttal arguments filed by bona fide associations or individual residents who are eligible to vote in accordance with California Elections Code sections 9282 and 9285, and directs the City Clerk to send copies of the arguments selected for and against the measure that will be printed and distributed to the voters to the opposing authors of the primary arguments, pursuant to California Elections Code section 9285. The authors, or a majority of the authors of the primary arguments, may prepare and submit rebuttal arguments not exceeding 250 words, or may authorize, in writing, others to submit a rebuttal argument. The rebuttal arguments shall be filed with the City Clerk, accompanied by the printed name(s) and signature(s) of the person(s) submitting it, or if submitted on behalf of an organization, the name of an organization, and the printed name and signature of at least one of its principal officers, not more than ten (10) days after the final date for filing direct arguments. Rebuttal arguments shall be printed in the same manner as primary arguments. Each rebuttal argument shall immediately follow the primary argument that it seeks to rebut.

7. Directs the City Clerk to transmit a copy of the Measure to the City Attorney who is directed to prepare an impartial analysis of the measure in accordance with California Elections Code section 9280.

8. Requests that the Board of Supervisors of the County of El Dorado approve consolidation of said election with the Statewide General Election to be held on November 5, 2024.

9. Acknowledges that the consolidated election will be held and conducted in the manner prescribed in California Elections Code section 10418.

10. Directs the City Clerk to file a certified copy of this resolution with the El Dorado County Board of Supervisors and the El Dorado County Recorder Clerk-Elections Division.

Adopted by the City of South Lake Tahoe City Council on June 18, 2024, by the following vote:
Yes:
No:

Abstain:

_____ Date:_____
Cody Bass, Mayor

Attest:

_____
Susan Blankenship, City Clerk

*The presence of electronic signature certifies that the foregoing is a true and correct copy as approved by the South Lake Tahoe City Council.*

**INITIATIVE MEASURE TO BE DIRECTLY SUBMITTED TO THE VOTERS**

**AN INITIATIVE MEASURE TO ESTABLISH A TAX ON OWNERS OF VACANT RESIDENTIAL UNITS IN THE CITY OF SOUTH LAKE TAHOE**

**If approved by the voters, this initiative would add Chapter 3.60 to the South Lake Tahoe City Code, establishing a tax on owners of residential units that are vacant more than 182 days within a calendar year. This would be a special tax, meaning that revenue could be used only for purposes specified in the measure. The tax would apply to various types of vacant residential units, including houses, apartments, and one or more rooms consisting of separate living quarters, but not to hotel rooms used for transient occupancy, accessory dwelling units, rooms in nursing homes, units owned by nonprofits or governmental agencies, or units not usable in the winter season.**

**Units would not be considered vacant when an occupant using the unit as their principal residence is hospitalized or absent while serving as a firefighter, emergency service worker, or in the military, when the residential unit is uninhabitable because of natural disaster, renovation, or construction, or because of the death of the owner who was the sole occupant, or during a declared emergency.**

**Beginning on January 1, 2026, annual tax rates would be established, subject to an annual CPI adjustment:**

- **$3,000 per vacant residential unit for the first year of vacancy**
- **$6,000 per vacant residential unit for the second consecutive calendar year and each subsequent consecutive calendar year thereafter of vacancy**

**This measure would require every owner of a residential unit in the City to submit an annual declaration of occupancy. The City would be required to establish a process to annually audit residential units to confirm occupancy. Making a false declaration would result in a penalty of at least 100 percent of the tax owed in addition to other penalties and interest.**

**The use of the tax revenue would be restricted to specified purposes, including for repayment of bonds or other debt for the specified purposes: for housing purposes including constructing, purchasing, and operating housing properties and housing assistance, subsidy, and incentive programs; for roadworks and related infrastructure programs including construction, repair, maintenance, and replacement of roads, bicycle and multi-use paths, and stormwater infrastructure; for transit and related infrastructure purposes including bus and rail infrastructure within the City and operational and capital equipment costs of public transit services to serve areas within and outside the City; and for City costs of administering the tax and any legal defense of the measure.**

**A five-member Vacancy Tax Oversight Committee would be established to oversee the administration of the tax and make recommendations to City Council.**

**The measure would authorize the City to adopt rules and regulations for the implementation and administration of the tax, and would allow the City Council to amend Chapter 3.60 by majority vote to increase penalties and fees or reduce the applicability of exemptions, or by two-thirds vote to add new exemptions. A simple majority of votes is required to pass the measure.**

The people of the City of South Lake Tahoe do ordain as follows:

Section 1. Title

This Act shall be known and may be cited as the "City of South Lake Tahoe Residential Vacancy Tax Ordinance."

Section 2. Findings and Declarations

The People of the City of South Lake Tahoe find and declare as follows:

A. Residential vacancies are an increasing concern in South Lake Tahoe.

B. The 2022 American Community Survey (ACS) census indicates 7,150 out of 16,275 total housing units in the City of South Lake Tahoe are vacant. These vacant homes now account for approximately 44 percent of the total housing supply in South Lake Tahoe, up from approximately 33 percent in 2000.

C. The increase in vacant units has reduced available housing, contributing to a shrinking population, shortage of local workers, decline in school enrollment, and rising housing costs. Median home prices in the area have more than doubled since 2013. Approximately half of workers in the Tahoe area now live outside the region, and of those who do live here, nearly two-thirds do not earn enough to afford the living expenses of a typical family.

D. The housing affordability crisis has created an urgent need to fund additional services and programs including, but not limited to, construction of new affordable housing, housing acquisition and renovation, rental/deposit assistance programs, and homeowner assistance programs.

E. Existing funding from City, County, State, and Federal resources has been insufficient to meet the community's current housing needs. The City currently has a growing waitlist of over 1,000 residents seeking affordable housing, and will need an additional 3,290 housing units to house the local workforce by 2026.

F. The City's current transportation infrastructure is failing to meet the needs of the community and the environment. The City's Public Works department has cited the need for $500 million to resolve existing deferred maintenance to the City's roads, stormwater, and critical infrastructure. Additionally, the City will require significant funding to expand and improve public transit for the local workforce and community.

G. The City has identified the need to establish a local discretionary funding source to establish sufficient housing, road repair, and transit in the City of South Lake Tahoe's adopted 2023-2028 Strategic Plan.

H. The Vacancy Tax establishes a local discretionary funding source for housing, road repair and transit, as outlined by the City's Strategic Plan.

I. The Vacancy Tax introduces an annual fee for residential housing units that sit vacant for the majority of the year, with exemptions and exclusion periods for properties under renovation, elderly residents in care facilities, wildland firefighters, and active-duty military, among others. If a home is partially or fully occupied by an owner, tenant, or guest for more than 182 days throughout the year, no tax will be owed.

J. The Vacancy Tax is projected to generate more revenue than any other new funding source evaluated by the City by a significant margin, and could become the City's single largest revenue source.

K. The taxes imposed under this ordinance are to be used solely for the purpose of funding the creation and operation of local housing, road infrastructure, transit infrastructure and operations, and related programs, described below. Because the proceeds of the Tax will be deposited into a special fund restricted for the services and programs specified in this Ordinance, the Tax is a special tax.

L. The Vacancy Tax addresses the City's most pressing needs by simultaneously generating funds, adding available housing units, encouraging the active use of vacant property, and discouraging the loss of more housing units to vacancy, thereby promoting a healthy residential community and local economy.

Section 3. City of South Lake Tahoe Residential Vacancy Tax Ordinance

Chapter 3.60 is added to the City of South Lake Tahoe City Code to read as follows:

Chapter 3.60: Residential Vacancy Tax

Section 3.60.010 Definitions

Unless otherwise defined in this Chapter, the terms in this Chapter shall have the meanings given to them in Chapter 3 of the City Code, as amended from time to time. For purposes of this Chapter, the following definitions shall apply:

A. "Act" means the City of South Lake Tahoe Residential Vacancy Tax Ordinance.

B. "City" means the City of South Lake Tahoe.

C. "City Council" means the City Council of the City of South Lake Tahoe.

D. "Residential Unit" means a house, an apartment, a group of rooms, or a single room that is designed as separate living quarters. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and which have a kitchen and direct access from the outside of the building or through a common hall. For purposes of this Chapter, a Residential Unit shall not include:

1. A unit in a hotel, as defined below:

(a) Any lodging house, dwelling, motel, hotel, condo-hotel, inn, bed and breakfast, or other building or structure or portion thereof, maintained, advertised, or otherwise held out to the public in any manner as a place where sleeping, rooming, or any other type of visitor accommodations are furnished to transients, composed either in whole or in part of members of the public, whether with or without meals.

(b) Vacation home rentals and time-sharing arrangements are not hotels for purposes of this Chapter.

2. An Accessory Dwelling Unit or Junior Accessory Dwelling Unit, as defined in City Code Chapter 6.85.050.

3. A unit in a currently operational nursing home, residential care facility, or other similar facility.

4. Any unit that is fully exempt from property tax under the welfare exemption under section 214(g) of the California Revenue and Taxation Code, as may be amended from time to time.

F. "Tax" means the Residential Vacancy Tax imposed by section 3.60.020.

G. "Vacant" means unoccupied by any natural person for more than 182 days, whether consecutive or nonconsecutive, within a given calendar year, except for the Exclusion Periods defined in section 3.60.030.

Section 3.60.020 Imposition of Tax

A. Except as otherwise provided in this Chapter, the City imposes an annual Residential Vacancy Tax on each person who owns a Residential Unit if that Residential Unit is Vacant.

B. The Residential Vacancy Tax on an owner of a Vacant Residential Unit shall be as follows:

1. For the first calendar year that the Residential Unit is Vacant, the tax shall be $3,000 per Residential Unit;

2. For the second consecutive calendar year and each subsequent consecutive calendar year thereafter that the Residential Unit is Vacant, the tax shall be $6,000 per Residential Unit.

C. The Residential Vacancy Tax shall take effect on January 1, 2026.

D. The rates set forth in subsection B shall be adjusted annually, beginning in 2027, in accordance with the increase in the Consumer Price Index: All Urban Consumers, or appropriate alternative or successor Consumer Price Index chosen by the City Manager or their designee, as reported by the United States Bureau of Labor Statistics, for October of the year preceding the subject year. The City shall publish the adjusted tax rates for the subject year no later than December 31 of the preceding year.

E. The Residential Vacancy Tax shall be payable by the person who owns the Vacant Residential Unit. Not more than one tax per Residential Unit shall be imposed under this section for a calendar year by reason of multiple liable owners. If there are multiple liable owners, each owner shall be jointly and severally liable for the Tax, which shall be the highest amount of tax payable by any owner for that Residential Unit for that calendar year.

F. In determining whether a Residential Unit is Vacant during a calendar year, days within any Vacancy Exclusion Period shall be counted as if occupied if that Vacancy Exclusion Period applies to an owner or tenant of that Residential Unit, as shall days in which the Residential Unit was not owned by the owner.

Section 3.60.030 Vacancy Exclusion Period

In determining whether a Residential Unit is Vacant during a calendar year, days within any Vacancy Exclusion Period shall be counted as if occupied if that Vacancy Exclusion Period applies to an owner or tenant of that Residential Unit.

Vacancy Exclusion Period means any of the following:

A. Care Period. The period during which a Residential Unit is unoccupied because the occupant of the Residential Unit who uses that Residential Unit as their principal residence is staying in a hospital, long term or supportive care facility, medical care or treatment facility, or other similar facility.

B. Civilian Service Period. The period during which a Residential Unit is unoccupied because an occupant of the Residential Unit who uses that Residential Unit as their principal residence is serving as a firefighter or other emergency service worker.

C. Disaster Period. The three-year period following the date that a Residential Unit was made uninhabitable or unusable due to fire, natural disaster, or other catastrophic event, except where a negligent, reckless or willful act or omission by the owner or agent of the owner contributed to or caused the Residential Unit to become uninhabitable or unusable due to fire, natural disaster, or other catastrophic event.

D. Emergency Period. The declared period during which the City Council, by a two-thirds vote of the City Council, finds that a declared emergency has undermined the ability of owners to fill vacancies in their Residential Units. Such a period shall last for no more than 60 days from its enactment by the City Council, but may be extended by 60-day increments, on or before its expiration, by a two-thirds vote of the City Council, for a total of no more than one year, so long as the emergency continues and the required findings continue to be made.

E. Military Service Period. The period during which a Residential Unit is unoccupied because an occupant of the Residential Unit who uses that Residential Unit as their principal residence is serving in the Military.

F. Owner Death Period. The period, with respect to a co-owner or decedent's estate, heirs, or beneficiaries, during which a Residential Unit is unoccupied because of the death of any owner of a Residential Unit who was the sole occupant of that Residential Unit immediately prior to such owner's death, provided that such period shall not exceed the longer of two years or the period during which the Residential Unit is subject to the authority of a probate court.

G. Rehabilitation Period. The period of active renovation or construction of a Residential Unit, for which a building permit was issued, and for which the City Manager or their designee determines, by way of documentation submitted by an owner, reasonably negatively impacted the habitability of that unit for a duration of time that the City Manager or their designee determines was reasonable for the permitted renovation or construction.

Section 3.60.040 Exemptions

A. For only so long as and to the extent that the City is prohibited by the Constitution or laws of the State of California or the Constitution or laws of the United States from imposing the Residential Vacancy Tax on any person, that person shall be exempt from the Residential Vacancy Tax.

B. Any organization that is exempt from income taxation under section 501(c)(3) of the Internal Revenue Code of 1986, as amended, shall be exempt from the Residential Vacancy Tax.

C. The federal government, the City, the State of California, and any county, municipal corporation, district, and other political subdivision of the State shall be exempt from the Residential Vacancy Tax, except where any constitutional or statutory immunity from taxation is waived or is not applicable.

D. Any Residential Unit on a parcel accessed by a road subject to seasonal winter road closures, or for which year-round access to the Residential Unit is otherwise seasonally restricted by agreement with a local, state, or federal government or government agency, or by a deed restriction that existed prior to January 1, 2024, shall be exempted from the Residential Vacancy Tax. The City Manager or their designee shall prescribe a manner for owners of Residential Units to claim this exemption.

E. Any Residential Unit that lacks suitable insulation or heating for winter habitability as of January 1, 2024 shall be exempted from the Residential Vacancy Tax. The City Manager or their designee shall prescribe a manner for owners of Residential Units to claim this exemption, which shall include an inspection of the Residential Unit. The City may charge a reasonable fee for this inspection. New Residential Units that are constructed without suitable insulation or heating for winter habitability, or existing Residential Units that are altered to remove suitable insulation or heating for winter habitability, after January 1, 2024, shall not be exempted from the Residential Vacancy Tax.

Section 3.60.050 Declaration of Occupancy & Returns

A. Vacancy Tax Due Date. The City Manager or their designee shall specify a Vacancy Tax Due Date, not to exceed six (6) months from the end of the subject year. The City Manager or their designee shall publish the Vacancy Tax Due Date no later than December 31 of the year preceding the subject year.

B. Declaration of Occupancy. Every owner of a residential unit, or a representative authorized to act on their behalf, shall file an annual Declaration of Occupancy with the City.

1. The City Manager or their designee shall prescribe the means and manner for submitting an annual Declaration of Occupancy for a Residential Unit, that shall include, but are not limited to, the following components:

(a) A means to declare the Residential Unit as Vacant, or not Vacant, or subject to an Exemption, and which may include the submission of supporting documentation;

(b) A website or online portal which explains the Tax and allows electronic submission of the Declaration of Occupancy; and

(c) A paper declaration form which explains the Tax and provides for mail or in-person submission of the Declaration of Occupancy. Paper declaration forms shall be mailed to owners no later than October 31 of the subject year for which the Residential Vacancy Tax is being imposed. The City may allow owners to opt out of receiving paper forms related to this Tax.

2. All persons who own a Residential Unit, or their agent, or a representative authorized to declare on their behalf, shall submit an annual Declaration of Occupancy, by either electronic submission or paper declaration form, for each Residential Unit owned at any time during a calendar year, on a date specified by the City Manager or their designee and which is no later than the Vacancy Tax Due Date. The City Manager or their designee may elect to waive this requirement for owners who are exempt from the Residential Vacancy Tax with respect to that Residential Unit under Section 3.60.040.

3. Any person who fails to file a Declaration of Occupancy, as required by this Section for a Residential Unit, shall be presumed to have kept that Residential Unit Vacant for the calendar year for which the Declaration is required.

4. Any owner who submits a Declaration of Occupancy less than twelve (12) months late, and which declares the Residential Unit as not Vacant, or subject to an Exemption, shall have the Tax and any associated penalties and interest waived, but the owner shall pay a Late Fee as defined in section 3.60.070.

5. Any person who fails to file the required Declaration of Occupancy may, at any time, rebut the presumption by producing satisfactory evidence, in a manner prescribed by the City Manager or their designee, that a Residential Unit that they owned was not Vacant during the calendar year for which the Declaration is required. If satisfactory evidence is provided, the Tax and any associated penalties and interest shall be waived, but the owner shall pay a Late Fee as defined in section 3.60.070.

C. Each person who is required to pay the Residential Vacancy Tax, as outlined in Sections 3.60.020 to 3.60.040, shall file a return, along with a payment of the tax, in the form and manner prescribed by the City Manager or their designee. The return shall be submitted by the owner, their agent, or a representative authorized to file on their behalf, for each Residential Unit owned, no later than the Vacancy Tax Due Date. The Declaration of Occupancy and return may be combined into a single form to be submitted electronically, by mail, or in-person.

Section 3.60.060 Administration of the Residential Vacancy Tax

A. The City Manager or their designee shall enforce the provisions of this Chapter and may prescribe, adopt, and enforce rules and regulations relating to the administration and enforcement of this Chapter.

B. Audits. The City Manager or their designee shall establish reasonable processes for auditing Residential Units to verify an associated return or Declaration of Occupancy and for owners to provide any supporting documentation as may be required to make a determination of vacancy. Audits may take place at any time for up to five (5) years after the applicable calendar year.

C. Any Residential Vacancy Tax owed is delinquent if not received by the City on or before the Vacancy Tax Due Date.

Section 3.60.070 Failure to Remit Tax - Penalties and Fees

A. Late Fee. Any owner who submits a return or Declaration of Occupancy late, shall pay a late fee not less than $35.

B. Delinquency penalty. Any owner who fails to remit any delinquent remittance on or before a period of 30 days following the date on which the remittance first became delinquent shall pay a delinquency penalty of 10 percent of the amount of the Residential Vacancy Tax.

C. False Declaration. For each subject year within the preceding five (5) years, if the City Manager or their designee determines that:

1. A Residential Unit was Vacant for that subject year; and
2. The Tax was not paid in full for that subject year; and
3. A false statement was made on a Declaration of Occupancy for that subject year

then a penalty of no less than 100 percent of the amount owed, exclusive of fees, interest, and penalties, shall be added thereto in addition to the penalties imposed in this section.

D. Repeated False Declaration. The City Manager or their designee may specify an increased penalty for owners who make repeated False Declarations.

E. Transactions with the principal purpose of avoiding or evading all or a portion of the Residential Vacancy Tax shall be disregarded for purposes of determining the amount of the Residential Vacancy Tax and whether the Residential Vacancy Tax is due. Any owner determined to have engaged in one or more transactions with the principal purpose of avoiding or evading all or a portion of the Residential Vacancy Tax shall be liable for the Residential Vacancy Tax and also liable for a penalty in an amount not less than the Residential Vacancy Tax.

F. Charge for Audits and Collection of Attorney's Fees. A reasonable fee equal to the City's costs for the audit of a Declaration of Occupancy, shall be charged to the owner of the Residential Unit where unpaid taxes are discovered as a result of the audit. If the City is the prevailing party in litigation filed to collect taxes, penalties, and/or interest due under this chapter, the City shall be entitled to recover reasonable attorney's fees and costs.

G. Interest. In addition to the penalties imposed, any owner who fails to remit any tax imposed by this Chapter shall pay interest at the rate of one and one-half percent per month or fraction thereof on the amount of the tax, inclusive of penalties, from the date on which the remittance first became delinquent until paid.

H. Penalties Merged with Tax. Every penalty imposed and such interest as accrued under the provisions of this section shall become a part of the tax required to be paid.

I. Any tax required to be paid by an owner under the provisions of this Chapter shall be deemed a debt owed by the owner to the City. Any person owing money to the City under the provisions of this Chapter shall be liable to an action brought in the name of the City for the recovery of such amount, along with any collection costs incurred by the City as a result of the person's noncompliance with this Chapter, including, but not limited to, reasonable attorney's fees, plus interest and penalties as herein provided.

Section 3.60.080 Appeals

A person who owns a Residential Unit may, within fifteen (15) days of notification of an adverse decision by the City Manager or their designee under this Chapter, file with the City Clerk a written notice of appeal pursuant to the procedures described in Section 2.35 of the City Code.

Section 3.60.090 Residential Vacancy Tax Fund

There is hereby established in the Treasury of the City of South Lake Tahoe a special fund entitled the Residential Vacancy Tax Fund. All revenues generated by the Residential Vacancy Tax, together with any interest and penalties, shall be collected each fiscal year and deposited into the Fund. Revenues in the Fund shall be used exclusively to carry out the purposes of this Act as specified in Section 3.60.100.

Section 3.60.100 Use of Residential Vacancy Tax Ordinance Revenue

Monies in the Residential Vacancy Tax Fund may be used for the following purposes:

A. Housing purposes:

1. The construction of housing within the City of South Lake Tahoe;
2. The purchase of property within the City of South Lake Tahoe for the purposes of creating new housing opportunities;
3. Paying property owners to add deed restrictions to property within the City of South Lake Tahoe;
4. The purchase of property containing existing housing within the City of South Lake Tahoe for the purpose of continuing its operation;
5. The renovation, maintenance, expansion, or operation of housing units, including rehabilitation loan programs;
6. Housing assistance programs, including but not limited to rental subsidies, security deposit assistance programs, and home buyer assistance programs;
7. Housing incentive programs, including but not limited to, property developer incentive programs, and landlord incentive programs;
8. Housing support services, including but not limited to, housing issues hotlines, legal aid, and fair housing programs; and
9. Enforcement of allowed uses of residential properties.

B. The City Council shall establish eligibility standards for each housing expenditure made under paragraphs 1 through 7 of subdivision A based on one or more of the following factors:

1. Occupant or household income;
2. Occupant or household wealth;
3. Occupant geographic employment;
4. Occupant disability;
5. Previous occupancy in government-subsidized housing;
6. Previous occupancy in housing with eligibility standards based on wealth, income, disability, or geographic employment; or
7. Prohibition on the property from becoming Vacant.

C. Roadworks and related infrastructure purposes:

1. The repair, maintenance, replacement, or new construction of road infrastructure within the City of South Lake Tahoe;
2. The repair, maintenance, replacement, or new construction of bicycle or multi-use paths within the City of South Lake Tahoe; and
3. The repair, maintenance, replacement, or new construction of infrastructure related to the management of stormwater as defined in section 7.15.030 of the City Code.

D. Transit projects and related infrastructure purposes:

1. The operational or capital equipment costs of public transit services, including but not limited to transit vehicles, transit related personnel, or transit related contract services, which operate within the City of South Lake Tahoe and which may additionally serve destinations outside of the City of South Lake Tahoe; and
2. The repair, maintenance, replacement, or new construction of public transit infrastructure, including but not limited to bus or rail infrastructure, within the City of South Lake Tahoe.

E. Reimbursing the City for the administrative costs of establishing the program for collecting the Residential Vacancy Tax, as well as all continuing costs of administering the Tax. Administrative costs include, but are not limited to costs associated with:

1. Independent third-party audits of the use of monies in the Fund;
2. Monitoring and enforcing compliance with this Chapter;
3. Developing ordinances and regulations to implement this Chapter;
4. Collecting the Tax;
5. Public communications relating to the Tax; and
6. Any legal defense of this Chapter.

F. Held in reserve and accumulated for spending in subsequent years for purposes listed in this section.

Section 3.60.110 Vacancy Tax Oversight Committee

A. The Vacancy Tax Oversight Committee is hereby established for community oversight of the Tax, to review expenditures and appropriations of the Tax revenue, to recommend new expenditures, and to make recommendations to the City to improve the implementation, compliance, and enforcement of the Tax.

B. The Committee shall consist of at least five (5) members who are all residents of the City, and appointed by City Council. Members of the Committee shall serve a term of four years, and no member may serve more than two consecutive four-year terms. A member's position shall become vacant upon their death, resignation, or removal by the Council. In the case of such a vacancy, the Council shall appoint a successor to fill the unexpired term, subject to the approval of the majority of the Council.

C. A quorum of the Committee shall never be fewer than three (3) members. If there are vacancies on the Committee due to a lack of applicants, or the failure to appoint members, the Committee may operate with three (3) members.

D. The City Manager or designee shall provide clerical assistance, administrative support, and technical assistance to the Committee and may be present at the Committee meetings, or may send a designee.

E. The Committee may convene community meetings to solicit community testimony and other input to build trust between the community, neighborhoods, and the City, and to address other similar and relevant subjects as determined by the Committee within its jurisdiction.

Section 3.60.120 Legal Defense

A. If this Act is approved by the voters of the City of South Lake Tahoe and thereafter subjected to a legal challenge, the City Attorney or appointed independent counsel shall, to the best of their abilities, faithfully defend this Chapter against any litigation and until all reasonable appeal options are exhausted. Costs associated with any defense of this Chapter may be reimbursed from monies in the Fund.

B. Nothing in this section shall prohibit the proponents of this Act from intervening to defend this Act.

Section 3.60.130 Annual Reports

Beginning in 2025, the City Manager shall file annually with the Council a report on the implementation, auditing, and enforcement of the Tax.

Section 3.60.140 Authorization and Limitation on Issuance of Bonds

The City shall be authorized to pledge revenues generated by the Residential Vacancy Tax to the repayment of limited tax bonds or other forms of indebtedness authorized under this section. The Council shall by ordinance or resolution, as applicable, establish the terms of any limited tax bonds or other forms of indebtedness authorized hereby, including but not limited to, the amount of the issue, date, covenants, denominations, interest rate or rates, maturity or maturities, redemption rights, tax status, manner of sale, and such other particulars as are necessary or desirable.

Section 3.60.150 Severability

If any word, phrase, sentence, part, section, subsection, or other portion of this ordinance, or any application thereof to any person or circumstance is declared void, unconstitutional, or invalid for any reason, then such word, phrase, sentence, part, section, subsection, or other portion, or the prescribed application thereof, shall be severable, and the remaining provisions of this Chapter, and all applications thereof, not having been declared void, unconstitutional or invalid, shall remain in full force and effect. The People of the City of South Lake Tahoe hereby declare that they would have passed this ordinance, and each section, subsection, sentence, clause, and phrase thereof, irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases had been declared invalid or unconstitutional.

Section 3.60.160 Savings Clause

No section, clause, part, or provision of this Chapter shall be construed as requiring the payment of any tax that would be in violation of the Constitution or laws of the United States or of the Constitution or laws of the State of California.

Section 3.60.170 Liberal Construction

This Chapter shall be liberally construed to effectuate its purpose.

Section 4. Increase Appropriations Limit

Pursuant to California Constitution Article XIII B and applicable laws, for four years from November 5, 2024, the appropriations limit for the City shall be increased by the aggregate sum collected by the levy of the special tax imposed under this ordinance.

Section 5. Amendments

The City Council may, by majority vote of the entire City Council, amend this Chapter in furtherance of the purposes of the Act, to increase penalties and fees, reduce the applicability of Vacancy Exclusion Periods, reduce the applicability of Exemptions, or to correct ambiguities or errors in language, provided that such amendments do not decrease the dollar amounts of the tax, penalties, or fees.

The City Council may, by two-thirds vote of the entire City Council, amend this chapter, in furtherance of the purposes of the Act, to add new Vacancy Exclusion Periods or Exemptions.

Section 6. Effective Date

This Ordinance, and all the provisions hereof, shall become effective only upon affirmative passage by a fifty (50) percent plus one (1) majority of the voters voting on the Ordinance. This Ordinance shall be considered adopted on the date that the City declares the results of the election at which it was voted upon and shall be effective ten (10) days thereafter.

## Notice of Intention to Circulate Petition

Notice is hereby given of the intention of the persons whose names appear hereon of their intention to circulate the petition within the City of South Lake Tahoe for the purpose of enacting a residential vacancy tax. A statement of the reasons for the proposed action as contemplated in the petition is as follows:

Median home prices in South Lake Tahoe have more than doubled since 2013. Half of Lake Tahoe's workers now live outside the region, and of those who do live here, nearly two-thirds do not earn enough to afford the living expenses of a typical family.

As families struggle to find housing and local businesses struggle to find employees, 44% of all housing units in South Lake Tahoe - now over 7,000 houses - sit empty most of the year. Since 2000, the increase in vacancies has outpaced new housing construction, resulting in more vacant houses and fewer homes for residents.

This lack of local housing has contributed to a shortage of workers, a shrinking population, and a severe drop in school enrollment and attendance-based funding.

This measure addresses South Lake Tahoe's housing crisis by introducing a tax on vacant houses. The Vacancy Tax simultaneously encourages the use of existing vacant properties while generating tens of millions of dollars in revenue. As a special-use tax, Vacancy Tax revenue can be used ONLY for local housing, road infrastructure, and transit, as well as enforcement and administration of the tax. Allowed uses include development of affordable housing, rental and home-buyer assistance, incentives for property owners to rent to residents, and addressing the $500 million backlog of deferred road repairs, and stormwater and infrastructure needs.

The tax applies ONLY to residential units that sit vacant for the majority of the year, with exclusions for properties under renovation, seasonal cabins, elderly residents in care facilities, wildland firefighters, and active-duty military, among others. As long as a home is occupied by an owner, tenant, or guest for more than 182 days throughout the year, consecutively or not, there is no tax.

Without bold action, the housing crisis will continue to escalate and roads will continue to deteriorate. The Vacancy Tax is the only housing and funding solution that addresses the scale of our community's critical needs.

Amelia Richmond

**INITIATIVE MEASURE TO BE DIRECTLY SUBMITTED TO THE VOTERS**

**The city attorney has prepared the following title and summary of the chief purpose and points of the proposed measure:**

**AN INITIATIVE MEASURE TO ESTABLISH A TAX ON OWNERS OF VACANT RESIDENTIAL UNITS IN THE CITY OF SOUTH LAKE TAHOE**

**If approved by the voters, this initiative would add Chapter 3.60 to the South Lake Tahoe City Code, establishing a tax on owners of residential units that are vacant more than 182 days within a calendar year. This would be a special tax, meaning that revenue could be used only for purposes specified in the measure. The tax would apply to various types of vacant residential units, including houses, apartments, and one or more rooms consisting of separate living quarters, but not to hotel rooms used for transient occupancy, accessory dwelling units, rooms in nursing homes, units owned by nonprofits or governmental agencies, or units not usable in the winter season.**

**Units would not be considered vacant when an occupant using the unit as their principal residence is hospitalized or absent while serving as a firefighter, emergency service worker, or in the military, when the residential unit is uninhabitable because of natural disaster, renovation, or construction, or because of the death of the owner who was the sole occupant, or during a declared emergency.**

**Beginning on January 1, 2026, annual tax rates would be established, subject to an annual CPI adjustment:**

- **$3,000 per vacant residential unit for the first year of vacancy**
- **$6,000 per vacant residential unit for the second consecutive calendar year and each subsequent consecutive calendar year thereafter of vacancy**

**This measure would require every owner of a residential unit in the City to submit an annual declaration of occupancy. The City would be required to establish a process to annually audit residential units to confirm occupancy. Making a false declaration would result in a penalty of at least 100 percent of the tax owed in addition to other penalties and interest.**

**The use of the tax revenue would be restricted to specified purposes, including for repayment of bonds or other debt for the specified purposes: for housing purposes including constructing, purchasing, and operating housing properties and housing assistance, subsidy, and incentive programs; for roadworks and related infrastructure programs including construction, repair, maintenance, and replacement of roads, bicycle and multi-use paths, and stormwater infrastructure; for transit and related infrastructure purposes including bus and rail infrastructure within the City and operational and capital equipment costs of public transit services to serve areas within and outside the City; and for City costs of administering the tax and any legal defense of the measure.**

**A five-member Vacancy Tax Oversight Committee would be established to oversee the administration of the tax and make recommendations to City Council.**

**The measure would authorize the City to adopt rules and regulations for the implementation and administration of the tax, and would allow the City Council to amend Chapter 3.60 by majority vote to increase penalties and fees or reduce the applicability of exemptions, or by two-thirds vote to add new exemptions. A simple majority of votes is required to pass the measure.**

**This measure would require every owner of a residential unit in the City to submit an annual declaration of occupancy. The City would be required to establish a process to annually audit residential units to confirm occupancy. Making a false declaration would result in a penalty of at least 100 percent of the tax owed in addition to other penalties and interest.**

**The use of the tax revenue would be restricted to specified purposes, including for repayment of bonds or other debt for the specified purposes: for housing purposes including constructing, purchasing, and operating housing properties and housing assistance, subsidy, and incentive programs; for roadworks and related infrastructure programs including construction, repair, maintenance, and replacement of roads, bicycle and multi-use paths, and stormwater infrastructure; for transit and related infrastructure purposes including bus and rail infrastructure within the City and operational and capital equipment costs of public transit services to serve areas within and outside the City; and for City costs of administering the tax and any legal defense of the measure.**

**A five-member Vacancy Tax Oversight Committee would be established to oversee the administration of the tax and make recommendations to City Council.**

**The measure would authorize the City to adopt rules and regulations for the implementation and administration of the tax, and would allow the City Council to amend Chapter 3.60 by majority vote to increase penalties and fees or reduce the applicability of exemptions, or by two-thirds vote to add new exemptions. A simple majority of votes is required to pass the measure.**

**INITIATIVE MEASURE TO BE DIRECTLY SUBMITTED TO THE VOTERS**

**The city attorney has prepared the following title and summary of the chief purpose and points of the proposed measure:**

**AN INITIATIVE MEASURE TO ESTABLISH A TAX ON OWNERS OF VACANT RESIDENTIAL UNITS IN THE CITY OF SOUTH LAKE TAHOE**

**If approved by the voters, this initiative would add Chapter 3.60 to the South Lake Tahoe City Code, establishing a tax on owners of residential units that are vacant more than 182 days within a calendar year. This would be a special tax, meaning that revenue could be used only for purposes specified in the measure. The tax would apply to various types of vacant residential units, including houses, apartments, and one or more rooms consisting of separate living quarters, but not to hotel rooms used for transient occupancy, accessory dwelling units, rooms in nursing homes, units owned by nonprofits or governmental agencies, or units not usable in the winter season.**

**Units would not be considered vacant when an occupant using the unit as their principal residence is hospitalized or absent while serving as a firefighter, emergency service worker, or in the military, when the residential unit is uninhabitable because of natural disaster, renovation, or construction, or because of the death of the owner who was the sole occupant, or during a declared emergency.**

**Beginning on January 1, 2026, annual tax rates would be established, subject to an annual CPI adjustment:**

- **$3,000 per vacant residential unit for the first year of vacancy**
- **$6,000 per vacant residential unit for the second consecutive calendar year and each subsequent consecutive calendar year thereafter of vacancy**

**This measure would require every owner of a residential unit in the City to submit an annual declaration of occupancy. The City would be required to establish a process to annually audit residential units to confirm occupancy. Making a false declaration would result in a penalty of at least 100 percent of the tax owed in addition to other penalties and interest.**

**The use of the tax revenue would be restricted to specified purposes, including for repayment of bonds or other debt for the specified purposes: for housing purposes including constructing, purchasing, and operating housing properties and housing assistance, subsidy, and incentive programs; for roadworks and related infrastructure programs including construction, repair, maintenance, and replacement of roads, bicycle and multi-use paths, and stormwater infrastructure; for transit and related infrastructure purposes including bus and rail infrastructure within the City and operational and capital equipment costs of public transit services to serve areas within and outside the City; and for City costs of administering the tax and any legal defense of the measure.**

**A five-member Vacancy Tax Oversight Committee would be established to oversee the administration of the tax and make recommendations to City Council.**

**The measure would authorize the City to adopt rules and regulations for the implementation and administration of the tax, and would allow the City Council to amend Chapter 3.60 by majority vote to increase penalties and fees or reduce the applicability of exemptions, or by two-thirds vote to add new exemptions. A simple majority of votes is required to pass the measure.**
